By convention the king is chosen from among the sons of Abdul Aziz, who themselves have preponderant influence on the choice. Senior religious scholars and other princes also have a voice. The king serves concurrently as prime minister, the head of government. Officials from the highest levels down maintain contact with citizens by regularly holding open-door audiences. There are no elected assemblies or political parties, and non-religious public assemblies and demonstrations are not permitted. The legitimacy of the regime rests on its perceived adherence to the defense of Islam, particularly the austere Hanbali school of Islamic jurisprudence. Rulers and ruled share a respect for laws believed to be divinely inspired and ancient customs that call for authority based on consensus in government, internal social cohesion, and private economic enterprise. Social custom mandates the separation of the sexes.

The king rules the country in secular and religious matters within limits established by religious law, tradition, and the need to maintain consensus among the ruling family and religious leaders. The king's legitimacy is based on his descent, his selection by consensus, his adherence to the tenets of Islam, and his perceived concern for the welfare of the nation. With the consent of other senior princes, the king appoints the crown prince, who is the first deputy prime minister. All other ministers are appointed by the king. They in turn appoint subordinate officials with cabinet concurrence. There were no elected officials in Saudi Arabia prior to the 2005 municipal elections, in which women were not allowed to participate as either candidates or electorate.

Traditionally, public opinion has been expressed through client-patron relationships and interest groups such as tribes, families, and professional hierarchies. The open-door audience (*majlis*) remains the primary forum for expression or grievance. Subjects typically raised at a *majlis* are complaints about bureaucratic dilatoriness or insensitivity, requests for redress or assistance, or criticism of particular acts of government affecting personal or family welfare. Broader political concerns—Saudi social, security, economic, or foreign policy—are not considered appropriate and are seldom raised. The king meets weekly with religious leaders; this informal consultative means of ascertaining public opinion has limitations. Participation by women in the process is severely restricted. Rural-urban migration has weakened tribal and familial links. Citizens are not directly able to change policies or officials through the *majlis* system, which is largely a forum in which grievances are aired and favors sought.

Assisting the king as head of state and prime minister is the royal cabinet, which was formally established in 1958.

Saudi Arabia has had a fairly stable government during the past 50 years. Transitions of power from King Saud to King Faisal, from King Faisal to King Khalid, and from King Khalid to King Fahd were smooth.

PARLIAMENT

Saudi Arabia has no parliament. There is a 150-member Consultative Council, which plays no decisive role, though its role has expanded over the years. The only other power group is the ulema, or council of Muslim theologians, who serve as the guardians of orthodoxy and who express approval or disapproval by issuing a fatwa, or canonical ruling. The real power of the ulema has waned in recent years, as it has been overruled on some occasions. In 1992, as part of the enactment of the Basic Law, the ulema was expanded from 24 to 90 members. While the body can suggest courses of action, its recommendations are not binding in any manner.

POLITICAL PARTIES

Political parties are not legally permitted to function in the country. The clandestine Green Party of Saudi Arabia was created in 2001 to espouse worldwide green-party concerns.

LOCAL GOVERNMENT

Through the provincial regulations of 1963 the kingdom was divided into five provinces (*mintaqat*), subdivided into districts, further subdivided into *raiz* or *markez* (sub-districts); as of 2005 there were 13 provinces. Each province is administered by a governor-general (*bakem*), each district by a governor, and each subdistrict by a headman. Provincial councils composed of not more than 30 members are elected for two-year terms by tribal chiefs. In municipalities local councils assist chief administrative officers. Authority over tribes is indirect and is exercised through sheikhs, some of whom are semiautonomous. Tribal government is conducted through the *majlis*. The central government's control over local government is maintained through territorial emirs. Tribal loyalty is reinforced through a system of subsidies.

LEGAL SYSTEM

Justice is administered in accordance with the Koran and Islamic sharia, as supplemented by decree law. Some of

the penalties specified in the sharia are extremely severe, including stoning, mutilation, and lashing. The 1977 beheading of a princess of the Saudi royal house for adultery vividly illustrated both the severity of the sharia as interpreted by the Wahhabis and its application to all citizens without discrimination. The right of habeas corpus is not recognized. In 2002 a new criminal justice system came into force, banning torture and giving criminal suspects the right to legal representation.

At the apex of the judicial system is the Judicial Supervisory Committee, consisting of a president and three members. Below are three tiers of courts: the courts of appeal or cassation, the Mahkamat al-Sharia al-Koubra, and the Mahkamat al-Omour al-Mostajalah. The grievance board of the Council of Ministers functions as the final arbiter in cases of decree law.

The grievance board arbitrates claims against the state. The president and vice president of the board are experienced jurists; they are aided by board members with expertise in administrative, contract, corruption, civil-service, and forgery legislation. The president is directly responsible to the king, and the members of the board are guaranteed considerable independence. The board has vigorously wielded powers granted by a 1983 decree to call erring officials to account.

HUMAN RIGHTS

In strict terms of civil and political rights Saudi Arabia is classified as not free; however, the nation is a good example of one that, within the context of a traditional value system, adheres to many of the standards of a free society. Saudi justice may appear harsh by Western standards, but it is neither capricious nor cruel. On the other hand, the Saudi sense of justice and fairness is extremely intense, and occasional instances of torture, the amputation of hands, capital punishment for adultery, and public flogging are regarded not as inhumane but as divinely ordained. In all cases, the law follows the sharia closely. People can be imprisoned for nonpayment of debts; there is no habeas corpus, and arrestees are held for weeks pending trial. As long as they are found in the sharia, no rules are regarded as draconian or uncivilized. Most trials are open, and defenders are assisted by counselors or sometimes, in the case of non-Arab-speaking persons, interpreters. People have the right to appeal, even to the king. Indeed, as in other tribal societies, the king is expected to receive any petition or listen to any complaint that a subject may wish to present. On the other hand, political activities and organizations as such are banned as subversive. The press is not formally censored but remains within safe bounds through the exercise of sound journalistic instinct. When a newspaper oversteps these bounds, as happens on occasion, it simply fails to appear for a period of time. Criticism does

appear in newspaper pages, but it is respectful, even deferential, and is smothered in the ornate and adulatory prose that Arabs love so much. Pictures are regarded as anti-Islamic, so some papers appear as sheets of unrelieved text.

FOREIGN POLICY

After the 1950s Saudi Arabia emerged as the leading conservative power in the Arab world. It has tried to halt the spread of republican ideas and to shore up like-minded monarchies. In the 1970s the nation became a prime mover in the pan-Islamic movement and subsequently used its wealth to mediate in disputes such as the Lebanese civil war and the Iran-Iraq War. As an influential Organization of Petroleum Exporting Countries (OPEC) member, Saudi Arabia has a restraining influence on the more radical members who want to cut production and hike prices as a means of pressuring the West to capitulate on major issues, such as those involving Israel. Although opposed to U.S. positions with regard to Israel, Saudi Arabia has been a consistent friend of the United States and one of its top customers for arms and armaments.

During the Iran-Iraq conflict, tensions rose between Iran and Saudi Arabia. In 1987 a major confrontation at Mecca's Grand Mosque resulted in the deaths of 400 Iranian pilgrims. Following Iran's call for the immediate "uprooting" of the Saudi royal family, Saudi Arabia became the first Arab nation to sever diplomatic relations with Iran. These relations were restored in 1991 following the rise of more moderate leadership in Iran.

Saudi Arabia's greatest foreign crisis came about following Iraq's invasion of Kuwait (and implicit threat to invade Saudi Arabia). The conflict caused a rupture in relations with a number of Muslim allies, such as Jordan, Yemen, and the Palestine Liberation Organization (PLO). Saudi Arabia played a pivotal role in the Desert Storm phase of the conflict by allowing sorties from its airfields. Since then the nation has remained a reliable ally in allowing the establishment of U.S. bases on Saudi soil, buying U.S. commercial airliners, resuming aid to the PLO as an inducement to its joining Middle East peace talks, and persuading the Gulf Cooperation Council to drop its boycott of companies doing business with Israel.

In 2001 Saudi Arabia, one of only three countries to have recognized the Taliban as the legitimate government of Afghanistan, agreed to cut all diplomatic relations with the country. Saudi Arabia also pledged to aid the U.S.-led coalition against international terrorist networks. In 2003, however, the nation did not allow the United States to use its bases to launch military operations against Iraq.

DEFENSE

The defense structure is headed by the king, who is also commander in chief of the National Guard, or the White Army.

Armed forces service is voluntary, and recruits enlist for three-year terms. Recruiting for the regular armed forces is done nationally, while recruitment for the National Guard is done on a tribal basis.

The strength of the armed forces was 215,000 in 2002 (including 10,000 in the National Guard's regular forces). The nation spent \$18 billion, a high 10 percent of gross domestic product (GDP), on the military.

The Saudis built up their defense capabilities through the end of the 20th century, buying sophisticated equipment, armament, and other military hardware, most of which may not be in operation for many years still to come because of a lack of skilled manpower. It is not clear whether this buildup has been designed for use against Israel or against potential dissidents at home. If the present pace of arms purchases continues, it is expected that the Saudi armed forces will be among the most effective in the Middle East.

The National Guard consists of 10,000 regular tribal enlistees along with 20,000 reserves and 26,000 tribal levies equipped with antitank weapons and armored cars. The National Guard is distinguished by its special loyalty to the Saud royal family. Military officers are trained at the Royal Military College, at Riyadh. Advanced training is provided in war colleges in the United Kingdom and the United States.

Saudi Arabia is a major recipient of U.S. military aid. The United States has maintained a military mission in the nation and, following the Iraqi invasion of Kuwait, stationed 100,000 troops in the country, though these troops had largely been withdrawn by 2003.

Saudi Arabia has formed a multinational arms consortium with Egypt, the United Arab Emirates, and Qatar for defense production. Ammunition, small arms, and rockets are manufactured at the El Kharj arsenal, which is staffed by U.S. and German experts.

ECONOMY

The Saudi Arabian economy is based on oil, with strong government controls over major economic activities.

Saudi Arabia has the largest reserves of petroleum in the world (25 percent of the proved total), ranks as the largest exporter of petroleum, and plays a leading role in OPEC. The petroleum sector accounts for roughly 75 percent of budget revenues, 45 percent of GDP, and 90 percent of export earnings. About 40 percent of GDP comes from the private sector. Roughly 5.5 million foreign workers play an important role in the Saudi economy, especially in the oil and service sectors. Saudi Arabia was a key player in the successful efforts of OPEC and other oil-producing countries to raise the price of oil in 1999–2000 to its highest level since the Gulf War through reduced production. In 1999 the government announced plans to begin privatizing electricity companies, following the ongoing privatization of the telecommunications company. The government is expected to continue calling for private-sector growth to lessen the kingdom's dependence on oil and increase employment opportunities for the swelling Saudi population. Shortages of water and rapid population growth will constrain government efforts to increase self-sufficiency in agricultural products.

ENVIRONMENT

Saudi Arabia's harsh desert climate underscores the chief environmental concern: the supply of freshwater. With no permanent freshwater sources, the country has had to rely on the desalination of seawater to support the growing population. In addition, coastal waters suffer from environmental damage caused by frequent oil spills.

Environment

LIVING CONDITIONS

The standard of living in Saudi Arabia is relatively high. Per capita GDP in 2004 was \$12,000, although much of the nation's wealth is concentrated in the hands of a few royal families, and unemployment is a high 25 percent. The state provides free education and medical care. Literacy rates have steadily risen to nearly 79 percent, and although they remain higher for men (85 percent) than for women (71 percent), the gap has been diminishing. Oil revenues have enabled the country to establish an extensive road system that reaches every part of the kingdom, modern port cities, 72 airports with paved runways, and a modern telecommunications system. Because punishments are severe, violent crime is rare, although incidents of terrorist bombings have risen in the 21st century.

HEALTH

Health care is reasonably good. In 2005 life expectancy at birth was over 75 years, and the infant mortality rate was under 14 deaths per 1,000 live births. About 91 percent of births are attended by trained medical personnel. Nearly 100 percent of the population has access to sanitation facilities. The nation maintains a network of modern Western clinics and hospitals, although many wealthy Saudis continue to receive specialized medical care in Europe and the United States.

FOOD AND NUTRITION

Some observers have noted increases in the consumption of foods rich in sugar as well as of meat and other foods high in saturated fats, leading to the increased incidence of heart disease, cancer, obesity, diabetes, gallstones, and other chronic diseases. Medical researchers are puzzled that the rate of prostate cancer has remained

low, in light of the connection between higher-fat diets and that disease.

Saudi food tends to be spicy. A major staple is flat, unleavened pita bread, which accompanies nearly every meal. Saudis also consume large amounts of chickpeas, in the form of hummus, lentils, rice, and cracked wheat. Beef is rarely served, but chicken and lamb are common; pork is forbidden under Islamic law. The main meal is served at midday and typically consists of soup, vegetables, and kebabs. Saudi Arabia strictly forbids the consumption of alcohol, for Muslims and non-Muslims alike.

STATUS OF WOMEN

Due to orthodox religious beliefs and traditional social practices, women do not enjoy equality with men. By Koranic precept, a daughter's share of an inheritance is less than that of a male offspring. Women are obliged to demonstrate legally specified grounds for divorce, whereas men may divorce without such grounds. In sharia courts, the testimony of one man is equal to that of two women. Women may not drive motor vehicles, and there are restrictions on their use of public facilities when men are present. By custom, women do not travel alone. They are restricted to reserved women's sections on urban buses. Women may travel abroad only with the written permission of their nearest male relative. Employment opportunities for Saudi women either in the civil service or with public corporations are extremely limited; in practice their employment is largely restricted to the teaching and health-care professions. In public, women are required to dress with extreme modesty. Free but segregated education through the university level is not available to Saudi women.

On the progressive side, the number of civil service jobs available to women (in segregated offices) has increased somewhat. Polygamy is becoming less common, particularly among younger Saudis; this may be due in part to economic factors. In October 1999, 20 women attended the session of the Consultative Council for the first time. Still, in 2000 Amnesty International described the country's treatment of women, particularly foreign domestic workers, as "untenable" by any legal or moral standards. In 2003 women were among 300 Saudi intellectuals who signed a petition calling for far-reaching government reforms. In the 2005 municipal elections—the nation's first ever—women were not allowed to participate.

WORK

The Saudi labor force numbered about 6.6 million in 2004, though many workers were nonnationals, so the rate of unemployment is high, at about 25 percent. About 12 percent were employed in agriculture, producing wheat, barley, tomatoes, melons, dates, citrus, mutton, chickens, eggs, and dairy products, primarily in irrigated regions. About 25 percent of the labor force is employed in industry, primarily oil production and refining, including the production of petrochemicals, but also in cement, construction, fertilizers, and plastics. The remaining 63 percent are employed in services. The government has been trying to wean the nation from its near total dependence on the oil industry by encouraging new businesses through no-interest loans. Many such businesses are located in industrial "cities" (what would be called industrial parks in the United States), which have been created near sources of raw materials and transportation networks.

EDUCATION

Public education is free but not compulsory at all levels, and grants are provided for poorer children. Schooling consists of 12 years, of which the first, or elementary, level lasts six years, the intermediate level three years, and the secondary level three years. Islamic emphasis is strong at all levels. In a few schools the first two or three years are coeducational, but after age nine girls attend segregated schools and wear veils in public.

Vocational schooling is organized in two cycles of three years each: intermediate and secondary.

The academic year runs from September to May. The language of instruction is Arabic. English is the most commonly taught second language.

The three government bodies that administer education are the Ministry of Education; the Office of the Grand Mufti, which oversees female education; and the

Supreme Educational Council, which formulates educational policy and administers the educational budget. The country is divided into 23 educational districts for purposes of administration.

Higher education in Saudi Arabia is provided by at least seven universities: King Saud University, in Riyadh; Imam Muhammad bin Saud Islamic University, in Riyadh; the Islamic University at Medina; King Abdul Aziz University, in Jidda; King Faisal University, in Dammam; King Fahd University of Petroleum and Minerals, in Dhahran; and Umm al-Qura University, in the Holy City of Makkah.

SCIENCE AND TECHNOLOGY

The Saudi Arabian National Center for Science and Technology was established in 1977. Its goals were to harness science and technology "for the developmental needs of the kingdom," foster applied research, manage science and technology manpower, develop scientific policy, award scholarships and grants, and coordinate research and development among government, the universities, and other organizations. In 1985 the facility was renamed the King Abdul Aziz City for Science and Technology.

MEDIA

There are some 11 major daily newspapers in Saudi Arabia, three of which are published in English. The largest

weekly is the Ministry of Information's English-language bulletin. Most newspapers depend on state subsidies in the form of duty-free newsprint and advertising.

There is no official censorship, but any publication that offends the state or Islam or praises, or even mentions, Israel is immediately suspended.

The national news agency is the Saudi News Agency, founded in 1970.

Broadcasting is a state monopoly under the direction of the Saudi Arabian Broadcasting Service, a department of the Ministry of Culture and Information. Several other radio stations broadcast religious and educational programming. There are two television channels, one in English, the other in Arabic.

CULTURE

Islam discourages both music and dance, so the primary means of cultural expression in Saudi Arabia is literature, especially poetry. Much of this literature is written in classic Arabic, but much is also written in colloquial forms of the language. Poetry is often recited on public and ceremonial occasions, such as weddings. What little there is in the way of graphic arts tends to be composed of abstract or geometrical shapes (since Islam forbids depiction of the human form) or to come in the form of folk arts, such as weaving, furniture making, and the like.

FOLKLORE AND MYTHOLOGY

Saudi Arabia shares much of its folklore and mythology with surrounding Islamic countries, but some of the na-

tion's stories are unique because they focus on the holy city of Mecca. One story tells of the creation of Mecca: Allah laid out the city and then created the rest of the world around it. Allah made angels from light; from fire he made jinn, or Muslim spirits. Much of the rest of the creation myth is very similar to that of the Judeo-Christian tradition. Allah created Adam from clay and then created Eve for Adam. He ordered the angels to bow to Adam, but one refused, to become Iblis, or Satan. Iblis then tempted Eve in the garden of paradise, leading to the fall of humankind.

An ancient wise man named Lukman, "the Aesop of the Arabs," was the source of many proverbs and sayings, such as "He who does good has good done unto him" and "Walk quietly, lower your voice, for the voice of the jackass is the loudest and most ugly of voices."

ENTERTAINMENT AND RECREATION

Saudi Arabia strictly enforces the tenets of Islam, so there is little of what in the West would be called entertainment. For example, there are no movie theaters, and music and dance are strongly discouraged. Radio and television broadcasts are closely screened for violations of sexual propriety or religious unorthodoxy. Most recreation tends to be private, although Saudis enjoy camping and walking in the nation's network of national and local parks. Some Saudis enjoy water sports in the Red Sea or the Persian Gulf.

ETIQUETTE

Traditionally, Saudi Arabia was a tribal culture, so the notion of taking a strong interest in relatives, especially those through the male line, is ingrained. Saudis place a great deal of emphasis on hospitality and generosity toward guests and others. Greetings are detailed and elaborate and include inquiries about the other's family. It is considered rude to ask personal questions, and it is rude to directly refuse a request from others. Sexual modesty is highly valued. Men, for example, greet one another with handshakes and frequently with kisses on the cheek, but a man would never greet an unrelated woman with a kiss. Similarly, it would be inappropriate for a man to ask another man directly about the welfare of his wife. Most social interactions tend to take place in groups of people of the same gender and similar age.

FAMILY LIFE

Traditionally, most Saudi marriages were arranged by parents, usually between first cousins in the father's line;

the couple would not even meet until the wedding. In modern times, many marriages are still arranged, but the couple's parents tend to take a less obvious role in doing so. Marriage is regarded as a necessary part of life, and most people marry. Divorce is difficult for women but easy for men, and men will commonly remarry. Traditionally, the bride would live with her husband in the husband's father's household and was often dominated by her mother-in-law, but this practice, too, has changed in modern times, with more couples establishing their own residences. Women remain very restricted socially. They do not congregate with men who are not close relatives, travel alone, or drive. Women who attend university must watch lectures given by men on closed-circuit television.

PERSONAL APPEARANCE

Most Saudis wear traditional clothing. Women are covered entirely and wear a head covering such as a *shayla*, a scarf held in place with a hat often decorated by jewelry. Most Saudi women adorn their clothing with sequins, coins, colored thread, or appliqués. Men wear ankle-length robes, usually in earth tones or white. On their heads they wear a *ghutra*, a folded cotton square worn over a skullcap.

SPORTS

Saudis enjoy volleyball, basketball, tennis, and soccer, the national game. In 1984 the Saudi National Football (Soccer) Team won the Asian Cup, and that year the Saudis competed in the Olympics for the first time. Also popular are the traditional sports of horse and camel racing, and the King's Camel Race draws upwards of 2,000 competitors and tens of thousands of spectators. Hunting with falcons or dogs remains a popular traditional sport, and the saluki hunting dog is one of the world's oldest breeds. Responsible for the development of sport in Saudi Arabia is the General Presidency of Youth Welfare, which provides facilities for training and competition in 12 integrated sports "cities" throughout the kingdom; as of 2005 three more such cities were under construction. Similar, but smaller, such establishments are found in sports centers in smaller towns and sports clubs in rural areas.

CHRONOLOGY

- 1945** Saudi Arabia joins the Arab League.
- 1949** United States establishes an embassy in Jidda.
- 1951** Saudi Government Railroad connecting Dammam and Riyadh is completed.
Ministry of the Interior is established.
Saudi Arabia is included in the Military Assistance Act and Point-Four Program in return

- for granting the United States usage rights at the Dhahran airfield for five years.
- 1952** Saudi Arabian Monetary Agency is established.
- 1953** Council of Ministers is established.
King Saud dies; his son Saud bin Abdul Aziz al-Saud succeeds him as king.
- 1955** Clashes with United Kingdom occur over Buraimi Oasis.
- 1956** Diplomatic relations with United Kingdom and France are broken over British and French invasion of Egypt and the Buraimi dispute.
- 1957** "Kings' Alliance" is formed with Jordan's Hussein and Iraq's Faisal.
Riyadh University is founded.
- 1958** Crown Prince Faisal is appointed prime minister and virtual ruler.
Cabinet is established on modern lines.
- 1960** Faisal is ousted from post as prime minister; King Saud reassumes reins of power.
Saudi Arabia becomes founding member of OPEC.
Saudi riyal is devalued.
- 1961** Islamic University is founded in Medina.
Supreme Planning Council is established.
- 1962** In major cabinet reshuffle, Faisal returns to power as deputy prime minister; he proposes a basic constitutional law.
Saudi Arabia sides with royalists in Yemeni civil war and breaks with United Arab Republic over Egyptian military aid to the council with Jordan against Egypt (Taif Pact).
Slavery is officially abolished.
Red Crescent Society is founded.
General Petroleum and Mineral Organization is founded.
Dhahran air base is taken over from United States.
Social Security Administration is established.
- 1963** Provincial regulations are promulgated.
Saudis and Egyptians reach agreement calling for disengagement in Yemen.
Ties with United Kingdom are resumed.
- 1964** King Saud is deposed and replaced as king by Faisal.
The joint Saudi-Kuwait neutral zone is partitioned.
- 1965** Khalid is named crown prince.
Border with Qatar is delimited.
Saudi Arabian Government Television Service is launched.
- 1967** King Abdul Aziz University is founded in Jidda.
- 1968** Continental shelf agreement is concluded with Iran.
- 1969** Saudi Arabia sponsors Islamic summit meeting at Rabat, Morocco, following fire in al-Aqsa Mosque in Jerusalem.

- 1970** Islamic Secretariat is established at Jidda. Saudi Arabia signs pact ending Yemeni civil war and recognizes Yemen.
- 1973** In retaliation against U.S. military aid to Israel, Saudi Arabia joins other OPEC members in hiking the price and cutting the production of oil.
- 1974** Saudi Arabia increases its share of the concessions and assets of the Arabian American Oil Company (ARAMCO) to 60 percent under an interim agreement.
- 1975** King Faisal is assassinated; Crown Prince Khalid succeeds him as king, and Prince Fahd is named crown prince.
- 1978** U.S. President Jimmy Carter announces plans to sell Saudi Arabia 60 F-15 fighter-bombers.
- 1979** Members of a fanatical fundamentalist Muslim sect known as the Safiyeen Salfiyeen take over the Grand Mosque at Mecca; most of the attackers are killed or taken alive after two weeks of fighting; Saudi Arabia takes steps to improve its military readiness against similar threats in the future; Saudi Arabia cuts diplomatic ties and aid to Egypt in protest after Egypt and Israel sign a peace treaty.
- 1980** Saudi Arabia assumes full control of ARAMCO.
- 1981** Saudi Arabia concludes treaty with Iraq partitioning the neutral zone.
- 1982** King Khalid dies; he is succeeded as monarch by Crown Prince Fahd.
- 1984** A series of attacks on Saudi Arabian oil tankers in the Gulf by warring Iraqi and Iranian aircraft leads to urgent commissioning of improved defense systems from the United States.
- 1985** The Iranian-based al-Jihad group claims responsibility for two bomb explosions in Riyadh, causing increased hostility between the two countries.
- 1986** After serving for 24 years as minister of petroleum and mineral resources, Sheikh Ahmad Zaki Yamani is dismissed from office by King Fahd.
- 1987** More than 400 die when Iranian Shiite pilgrims clash with Saudi police; Saudi Arabia resumes diplomatic relations with Egypt.
- 1988** The disclosure that Saudi Arabia had taken delivery of an unspecified number of Chinese medium-range missiles provokes threats by Israel of a preemptive strike on the missile base at al-Kharj.
- 1989** Iran boycotts the hajj because of Saudi Arabia's refusal to abandon the quota system restricting the number of pilgrims. Saudi Arabia recognizes the Afghan Mujaheddin government-in-exile, formed following the Soviet withdrawal from Afghanistan. King Fahd signs a nonaggression pact with Iraq.
- 1990** King Fahd blasts the Iraqi invasion of Kuwait as "the most vile aggression known to the Arab nation in its modern history"; U.S., Egyptian, Moroccan, Pakistani, and Syrian troops land in Saudi Arabia; Saudi Arabia gives refuge to Kuwait's exiled emir as well as 350,000 Kuwaiti refugees; Iraqi troops build up at the Saudi border; King Fahd invites Western and Arab forces to deploy in the kingdom in support of Saudi defense forces; diplomatic ties are restored with the USSR and China; Taiwan breaks ties with Saudi Arabia.
- 1991** The Persian Gulf War is fought from January 16 to February 27; Iraq is defeated, and its leader, Saddam Hussein, retreats to Iraq with his troops; Iraq breaks ties with Saudi Arabia; King Fahd criticizes Jordan for supporting Iraq's invasion of Kuwait.
- 1992** King Fahd establishes political reforms, including a bill of rights and a consultative council to advise the king.
- 1993** King Fahd introduces the Basic Law, which articulates the government's rights and responsibilities; the consultative council holds its first meeting.
- 1994** PLO leader Yasser Arafat and King Fahd discuss peace in the Middle East; Saudi Arabia opposes an OPEC proposal to decrease oil production in an effort to raise oil prices.
- 1995** King Fahd suffers a stroke, and his half brother, Crown Prince Abdullah bin Abdul Aziz, formally acts on his behalf; following months of intermittent border fighting, Yemen and Saudi Arabia agree to negotiate their long-standing border disagreement.
- 1996** Terrorists bomb U.S. military housing near Dhahran, killing 19 and injuring 300.
- 1998** Saudi Arabia begins oil extraction in a region claimed by the United Arab Emirates, straining mutual relations.
- 1999** Reversing its earlier position, Saudi Arabia successfully leads an OPEC proposal to decrease oil production for one year, raising world oil prices; Saudi Arabia cuts production by 7 percent; the Consultative Council is opened to women, and women hold 20 of the council's 90 seats.
- 2000** Yemen and Saudi Arabia settle their border disagreement.
- 2002** On March 28 the Arab League adopts its first Pan-Arab initiative for peace in the Middle East; the initiative is based on a proposal by Crown Prince Abdullah. It offers Israel security and normal relations in exchange for a withdrawal from occupied Arab territories, the creation of an independent Palestinian state, with

2058 Saudi Arabia

- East Jerusalem as its capital, and the return of refugees.
- 2002** New criminal justice system is created, banning torture.
- 2003** Suicide bombers kill 35 at a housing complex for Westerners in Riyadh.
- 2005** Saudi Arabia conducts its first-ever municipal elections. King Fahd dies. He is succeeded by Crown Prince Abdullah. Saudi Arabia becomes a member of the World Trade Organization.

SENEGAL

Basic Fact Sheet

OFFICIAL NAME

Republic of Senegal (République du Sénégal)

ABBREVIATION

SN

CAPITAL

Dakar

HEAD OF STATE

President Abdoulaye Wade (from 2000)

HEAD OF GOVERNMENT

Prime Minister Macky Sall (from 2004)

NATURE OF GOVERNMENT

Republic under multiparty democratic rule

POPULATION

11,126,832 (2005)

AREA

196,190 sq km (75,749 sq mi)

MAJOR ETHNIC GROUPS

Wolof, Pular, Serer, Jola, Mandinka

LANGUAGES

French (official), Wolof

RELIGION

Islam

UNIT OF CURRENCY

Communauté financière d'Afrique franc

NATIONAL FLAG

A tricolor of green (left), yellow, and red vertical stripes, with a green star at the center of the yellow stripe

NATIONAL EMBLEM

A shield divided into vertical halves, one side in red displaying a gold lion and the other side in yellow displaying a baobab tree; below the tree is a wavy green line representing the Senegal River. The shield is enclosed within black-and-white palm branches opening at the top to frame a green star. From the wreath is suspended the white jeweled National Order of the Republic and a white ribbon entwined among the branches bearing the motto *Un peuple, un but, une foi* (One people, one goal, one faith).

NATIONAL ANTHEM

"Pluck Your Koras, Strike the Balafons"

NATIONAL HOLIDAYS

January 1 (New Year's Day), April 4 (National Day), May 1 (Labor Day), four Islamic holidays, various Christian holidays including Christmas, Assumption, All Saints' Day, Ascension, Easter Monday, Whitmonday

DATE OF INDEPENDENCE

April 4, 1960

DATE OF CONSTITUTION

March 3, 1963; revised 1991, 1995, 2001

GEOGRAPHICAL FEATURES

Senegal is the westernmost country in Africa, situated on the continent's western bulge, with a total land area of 196,190 sq km (75,749 sq mi), extending 690 km (429 mi) southeast to northwest and 406 km (252 mi) north-east to southwest. Its Atlantic coastline stretches 531 km (330 mi). Senegal shares its total international boundary of 2,640 km (1,639 mi) with five countries: Mauritania, Mali, Guinea, Guinea-Bissau, and the Gambia, a narrow enclave within Senegal centered around the Gambia River.

Senegal constitutes the western segment of the broad savanna that extends across Africa at the southern edge of the Sahara. Variations in elevation are minor, and contrasts among the six primary geographical regions are not sharp. The six regions are the Senegal River Valley, the Coastal Belt, the Western Plains, the Ferlo, Casamance, and the East.

The floodplain of the Senegal River is broken by many marshes and branching channels. Where the river approaches the sea, its various channels form an extensive network in a wide area resembling a delta. In the middle reach of the valley above Dagana is Île à Morfil, a nar-

Senegal

row island between channels, several hundred kilometers long. The Coastal Belt, north of Cap Vert Peninsula, is covered by small swamps or pools separated by dunes, often as high as 30 m (100 ft). This belt, extending 24 km (15 mi) inland, is known as Cayor. Among the dunes are freshwater swamps that are transformed into green oases in the summer. South of Dakar the Coastal Belt narrows into a maze of meandering creeks, channels, and flats. The Western Plains extend southeastward from Thies to Koalack and consist, in the summer, of dry, barren land, which springs to life with the rains, turning into green farmlands. The Ferlo is an inland continuation of the Western Plains and is semidesert. The Casamance is the region south of the Gambia, encompassing the Casamance River. The East is a plain extending southeastward from the Ferlo to the borders of Mali and Guinea and consists of poor, seasonal pastureland.

Saint-Louis	154,555
Thiès	237,849
Ziguinchor	153,269

CLIMATE AND WEATHER

Senegal has a varied climate. The northern coast is cooled by the prevailing northeasterly trade winds and the Canary Current. The Casamance, in the south, lies on the fringe of the tropical monsoon area. The rest of the country has a predesert Sudanese climate, with the northern part having semidesert Sahelian conditions. There are two well-defined seasons: the dry season and the rainy season, the latter of which extends from June to October in the Sahelian zone, from May to October in the Sudanese zone, and from May to December in the Casamance. Dakar, on the coast, has a mean maximum temperature of 27°C (81°F) in January and 33°C (91°F) in August and a

mean minimum temperature of 18°C (64°F) in January and 25°C (77°F) in August. Temperatures rise rapidly inland, reaching over 37.8°C (100°F).

Rainfall is subject to wide seasonal variations. Average annual precipitation varies from 1,000 mm (40 in) in the north to 1,500 mm (60 in) in the south and 500 mm (20 in) in the east. Senegal, among the other Sahelian countries, is periodically affected by serious drought. The cumulative effects of these droughts made the early 1970s, particularly 1973, a period of unprecedented disaster, irreparably damaging the nation's ecology.

Winds of gale strength occur at the beginning and end of the rainy season. Known as *tornades*, they are accompanied by thunder, lightning, and squalls.

Climate and Weather

Temperature Range
 Dakar: January 64°F to 87°F
 August: 77°F to 91°F
 Inland: 92°F to 100°F
 Average Rainfall
 North: 40 in
 South: 60 in
 East: 20 in

FLORA AND FAUNA

Most of Senegal's terrain is savanna, as covered with grasses, acacia, various species of bushes, and baobab trees. The size of the tropical forest has diminished and is today limited to the Casamance region, where common species of flora include *fromagers*, *palmers*, coconut palms, and mango trees. Mangroves are present on the banks of the Sine-Saloum and the Casamance; large numbers of oysters attach themselves to the roots of the mangroves. The more wooded southern part of the country is home to big game such as lions, elephants, and antelopes, as well as various species of monkeys. In the more desertified north can be found warthogs, jackals, and tortoises. Fish species near the coastline include swordfish, marlin, barracuda, and carrague.

ETHNIC COMPOSITION

As in other African countries, the ethnic configuration of Senegal is diverse. The Wolof, Serer, and Diola are primarily Senegalese tribes, while other groups are branches of larger communities originating in the northwestern quarter of the country that are more evenly dispersed. The Wolof are the largest group and dominate the political and economic life of the country; they represent 43 percent of the population and the majority in most major cities. Through a long process of assimilation they have incorporated many of the cultural traits of their neighbors and, in turn, have influenced others. The Serer are the largest non-Muslim group and are traditionally divided into several groups speaking mutually unintelligible languages, including Serer-Sine and Serer-Non. Most Serer are cultivators in the Sine-Saloum region, although a few of the better educated, such as former president Léopold Sédar Senghor, have made significant contributions to national life. The Fulani and the related Toucouleur are mostly stock raisers and cultivators, but because of their dispersion, Islamic fundamentalism, and resistance to modernization, they participate less than others in national politics or the national economy. The Diola are the people of the Casamance and are divided into at least seven linguistic subgroups. The Mandingo and the Bambara are ethnically related, but the former are Muslims, while the latter are mainly animists. The Lebou, who live along the coast, have a number of cultural and social traits in common with the Wolof and Serer.

The largest single non-African group is the French; their continued presence is encouraged by Senegal's being one of the most Francophile nations in Africa; the number of Frenchmen has decreased by only 26 percent since independence in 1960. The second-largest alien group is the Lebanese, most of whom are small-scale commercial middlemen. Relations between the Senegalese and the French are amicable and in some cases warm, and the Senegalization of the economy has not been seen by the French as a threat. On the other hand, the Lebanese have often been accused of economic ex-

ploitation and have been subjected to periodic outbursts of animosity.

LANGUAGES

The official language is French, although only a small minority, estimated at no more than 12 percent, is literate in the language.

The major indigenous languages are Wolof, Serer, Pulaar (the mother tongue of the Fulani and Toucouleur), Diola, Mandingo, and Sarakole. All these languages are members of the Niger-Congo linguistic family.

The national lingua franca is Wolof, which is spoken by over 80 percent of the population either as their mother tongue or as an acquired language. Competing with Wolof in the south are the two dialects of Diola: Fogny and Casa. About 2 percent of the population, including the Maures, speak Arabic, and Pulaar is sometimes written with an Arabic script.

RELIGIONS

Senegal has no state religion, but it is one of the most Islamized nations in West Africa, with 94 percent of the population adhering to one of two sects: Sunni and Shia. In addition, most Senegalese Muslims belong to one of three Islamic brotherhoods, with 57 percent belonging to the Tidjani, 26 percent to the Mouridia, and 16 percent to the Qadiriyyah. These brotherhoods are not separated by doctrinal differences but share a common Sufi-type mystical approach to religious activity and emphasize various spiritual disciplines.

Christianity, introduced around 1845, is followed by only 5 percent of the population, mainly the Serer and the Diola, but Christians are found among almost every ethnic group. The European and Lebanese minorities are almost entirely Christian. Most Christians are Roman Catholics, who number about half a million, as distributed among seven dioceses. There also are a few thousand Protestants. Although outnumbered by Muslims in the general population, Christians are heavily represented in the government, commerce, and education and occupy many important public positions.

Animists constitute about 1 percent of the population. Most of the smaller ethnic groups and, among the larger ethnic groups, the Serer and the Diola, follow traditional religions. Common elements in indigenous religions include beliefs in intermediary spirits, sacrifices, witches, fertility rites, and magic.

Christian	556,000

HISTORICAL BACKGROUND

The early history of Senegal can be traced back to the eighth century, when the region was part of the Ghana Empire. When the empire waned, Senegal became part of the Djolof kingdom. The kingdom flourished between the Senegal River and Dakar during the 13th and 14th centuries.

Senegal's contacts with Europeans began with the Portuguese in the middle of the 15th century. The French arrived in the 17th century; Saint-Louis was established as a fortified trading post in 1659. French rule was largely confined to trading posts until its expansion under the Second Empire during the governorship of Gen. Louis Faidherbe. French control was consolidated and extended under the Third Republic. From 1871 on, Senegal regularly sent a deputy to the French legislature, and municipalities were established in Saint-Louis, Dakar, Gorée, and Rufisque. In 1895 Dakar became the administrative capital of the newly created Federation of French West Africa (*Afrique Occidentale Française*).

Senegal was the only French colony where the policy of assimilation was applied to a relatively large segment of the population; it was also the only African colony in which the French made a determined effort to educate the natives. In addition, the French introduced social institutions that brought about fundamental changes in the Senegalese way of life.

Senegal's first tentative step toward self-government was the establishment in 1919 of the Colonial Council, part of whose membership was elected. In 1946 limited suffrage was granted, and a territorial assembly was set up. Universal suffrage was granted in 1957. In 1958 Senegal accepted the new French constitution and became an autonomous republic within the French Community. From 1959 until 1960 Senegal was a member of the short-lived Mali Federation.

Senegal seceded from the federation in June 1960 and proclaimed itself the Republic of Senegal in September. Initially, the government was organized under a parliamentary system with Léopold Sédar Senghor, the leader of the country's strongest political party, the Senegalese Progressive Union, serving as president. His political rival, Mamadou Dia, served as prime minister. Two years later, following an alleged coup, Senghor established a presidential form of government under tight control. Dia was arrested and imprisoned but released in 1974. Opposition parties were prohibited, and the country effectively became a one-party state. Senghor and his party won all elections from 1963 to 1978.

Political discontent grew during the 1960s, culminating in a general strike by trade unions and a strike at the University of Dakar in 1968. In response to demands for reform, the post of prime minister was reinstated in 1970, and a limited number of political parties were legalized during the decade.

Senghor resigned as president in 1980. He was succeeded by the prime minister, Abdou Diouf. Political liberalization continued, and by 1981 most restrictions on political parties had been lifted. However, political coalitions continued to be prescribed. Diouf abolished the office of prime minister in 1983.

Opposition to the government, attributed to worsening economic conditions and economic austerity measures, grew again during the 1980s. Student unrest became serious in 1985 and 1987. Workers and trade unions pushed for changes in labor laws, and the police went on strike in 1987.

Demands for greater local autonomy came to a head in the province of Casamance in 1982 and 1983, where the Diola were involved in clashes with the police. Despite moves toward provincial autonomy, sporadic unrest continued. However, the opposition was unable to take advantage of this political unrest. Attempts at unifying the diverse parties were unsuccessful, and the ban on coalitions limited their action. In 1985 five parties tried to form an alliance, but it was banned and their leaders arrested. Three years later the opposition parties threatened to boycott elections unless steps were taken to prevent ballot rigging, but Diouf refused to instigate reform. Opposition leaders declared the election results fraudulent; they were arrested and charged with threatening the security of the state. More than two months of urban unrest followed the election. In an attempt to defuse the crisis, Diouf announced a reduction in the prices of basic foodstuffs and promised plans to create 2,000 jobs. He also began talks with the opposition. However, these broke off without agreement. Unrest remained a problem.

In 1982 plans to merge Senegal and the Gambia were announced, and the Confederation of Senegambia was formed. In September 1989 the confederation was dissolved.

The 1990s were marked by increasing violence in the Casamance region over the possibility of secession. The fighting between the government and rebels increased after the reelection of Diouf in 1993. A cease-fire was declared in July, and by 1994 peace and tourists (a major source of revenue) returned to the region. Political and economic unrest persisted in other parts of the country, however. When the government devalued the currency in 1994, angry mobs marched on the presidential palace. According to some reports, six guards were hacked to death by the protesters. The opposition leader, Abdoulaye Wade, was arrested and accused of conspiracy.

The 2000 presidential election pitted the incumbent President Diouf against Wade. After two rounds of balloting Wade emerged victorious. While the transition went smoothly, violence in the Casamance region increased after Wade took office. In January 2001 a new constitution was approved by public referendum; a coalition led by Wade's Senegalese Democratic Party won a

strong majority in parliamentary elections held in April. In September 2002 more than 1,800 people were killed when the Joola ferry capsized off the Gambian coast; later that year, Wade dismissed the prime minister and the rest of the government, allegedly over the government's handling of the disaster. In 2003 the leader of the Casamance Movement of Democratic Forces (MFDC) claimed that the secessionist war was over, and in 2004 the government and the MFDC signed a pact to end secessionist violence.

LIST OF MODERN RULERS

1960–80 Léopold Sédar Senghor
1980–2000 Abdou Diouf
2000– Abdoulaye Wade

CONSTITUTION

The legal basis of the government of Senegal is the constitution of 1963, as amended subsequently in 1991, 1995, and 2001. The constitution established a strong presidential form of government. The prime minister is appointed by the president. The constitution provides explicit guarantees for a broad range of civil liberties and human freedoms.

The president is elected by universal direct suffrage for five years, although the 2000 election was held under the old constitution, which called for seven-year terms. Thus, the first new election under the new constitution will not take place until 2007. Among the president's extraordinary powers are the proclamation of an emergency, during which he may rule by decree and submit draft laws to referendum with the consent of the president of the National Assembly and of the Supreme Court. The president may not veto legislation, but he may ask the National Assembly to reconsider an act it has passed, in which case it must be passed again by a three-fifths majority before it becomes law. The Secretariat General, attached to the presidency, has emerged during the years of presidential rule as a major organ of the government; the Secretariat General includes the High Council of the Judiciary, the High Council for National Defense, the Inspectorate General, and the Fiscal Control Office.

The Council of Ministers comprises ministers and state secretaries. Each minister is assisted by a personal cabinet of five civil servants. The ministers are divided into departments or services, and these are divided into divisions or bureaus. Legislative power is vested in the National Assembly, a unicameral body elected by universal direct suffrage. The judicial system is headed by the Supreme Court, whose justices are appointed by the president, as advised by the Superior Court of Magistrates.

Suffrage is universal for all adults over the age of 18. Elections are usually uncontested.

PARLIAMENT

The National Assembly is a unicameral body consisting of 120 members elected for five-year terms by direct, universal adult suffrage. Half of the members are elected by region and half by proportional representation from a national slate.

The National Assembly holds two regular sessions per year. The budget is debated in the first session. No ordinary session lasts longer than two months. Legislation may be initiated either by the president or by the National Assembly. Draft legislation is reviewed by standing committees, and there is an executive committee known as the bureau, which is headed by the president of the National Assembly. Both bills introduced by members (called *propositions de loi*) and bills introduced by the executive (called *projets de loi*) are referred to standing committees before being debated on the floor. The legislative powers of the National Assembly may be delegated to the president or suspended only during states of siege or states of emergency or when the independence and territorial integrity of the nation are threatened.

POLITICAL PARTIES

Senegal has a multiparty political system with several strong parties. The Socialist Party of Senegal (PSS), under Abdou Diouf, dominated the legislature in the 1980s and 1990s. In the 2000 elections a coalition led by the Senegalese Democratic Party (PDS) won 89 of 120 seats in the Assembly; this centrist labor party was founded by Abdoulaye Wade in 1974.

LOCAL GOVERNMENT

For purposes of local government the country is divided into four levels of units—regions, departments, arrondissements (or districts), and villages—with parallel units, or municipalities, in urban areas. The Cap Vert region, containing the capital district, is considered a separate unit.

Each of the 11 regions is headed by a governor, who is assisted by two deputy governors, one for administration and the other for coordination of economic development. The regions are subdivided into 30 departments, each headed by a prefect. Almost all administrative activities take place at the departmental level or lower. The prefect is also responsible for maintaining law and order and has plenary police powers. Departments are divided into 320 arrondissements or districts, each headed by a

chief or subprefect. Like the prefect, the subprefect has investigative and police powers. Each *arrondissement* is made up of 100 to 600 villages, under the nominal authority of village chiefs.

LEGAL SYSTEM

The legal system is based on French civil law. Senegal has an active, independent, and well-trained judiciary that is constitutionally independent of the executive, the legislature, and the military. Court officials are trained lawyers who have completed a number of years of required apprenticeship. Trials are open to the public, and defendants have the right to defense counsel, many of whom are very skilled and aggressive in the protection of their clients. Ordinary courts hold hearings that are presided over by panels of judges and, in the case of criminal charges, include a jury. There are three categories of courts: the High Court of Justice, security (“political”) courts, and military courts. There are four superior courts: the High Council of the Magistrature, which determines the constitutionality of civil laws and international agreements; the 16-member High Court of Justice, elected by the National Assembly from among its own members; the Supreme Court; and the Court of State Security.

HUMAN RIGHTS

In terms of civil and political rights, Senegal is classified as a partly free country.

Senegal is a model African state in terms of human rights practices, although theoretically it is only a partial democracy. Partly because of President Senghor’s guiding hand and intellectual stature and partly because of strong francophone influences, Senegal has not been subjected to ordeals of dictatorship, as many of its sister African republics have been. The nation has at the same time achieved a record of political stability unequalled in West Africa. Constitutional freedoms exist not only on paper but also in practice. In the National Assembly the opposition is vehement and courageous. The judiciary has demonstrated its independence by overturning government decrees. In openly contested local elections, the opposition is able to unseat government candidates. The income tax structure is progressive and does not favor the entrenched rich and privileged. There is no discrimination based on race, ethnic origin, or religion. Further, Senegal has taken an active role in human rights in Africa. In 1979 Senghor submitted a proposal for the creation of a human rights commission as part of the Organization of African Unity, now the African Union. Africa’s first institute for human rights education began work in Dakar in 1979. President Wade is committed to democratization, although the watchdog group Reporters without Borders

saw some signs of increasing media censorship in 2003, principally in connection with the Casamance issue.

FOREIGN POLICY

Senegal is the showcase of French culture in West Africa, and relations with France are as close as they were before independence. At the same time, Senegal places great importance on regional cooperation with African countries. Senegal has generally maintained a conservative posture in African affairs. For example, it has opposed the Cuban presence in Angola and other African countries and Libyan interference in sub-Saharan Africa. Relations with Angola and Libya as well as Algeria were mended in the mid-1980s.

Senegal’s most prominent regional interest lays in the Gambia, the English-speaking enclave in the middle of the nation. An effort to establish a Senegambia confederation never got off the ground because of Gambian suspicions.

Border disputes with Mauritania and Guinea-Bissau flared intermittently in the 1990s. The dispute with Mauritania was fueled by charges of the persecution of blacks by the Moorish elite in Mauritania and by the expulsion of Moors from Dakar; Nouakchott accused Senegal of aiding antigovernment rebels, while Dakar charged Mauritania with arming Casamance separatists. The border dispute with Guinea-Bissau led to clashes in 1991 amid reports that Guinea-Bissau was also supporting the Casamance rebels. However, these disputes were resolved by the mid-1990s, and Senegal now enjoys improved relations with its neighbors. Nonetheless, both the Gambia and Guinea-Bissau continue to deal with refugees, arms smuggling, and ongoing border violence.

DEFENSE

The defense structure is headed by the president as commander in chief of the armed forces. He is assisted by the Supreme Defense Council, whose other members include the secretary general of the office of the president, the prime minister, the minister of state for the armed forces, the chief of staff of the armed forces, and the ministers of foreign affairs, interior, and finance.

Military manpower is obtained through voluntary enlistment. Although a conscription service period of two years is provided for by law, in practice it has not been implemented.

The total strength of the armed forces in 2003 was 18,600. In 2004 the country spent \$107.3 million, or about 1.5 percent of gross domestic product (GDP), on the military.

Under the Accord on Cooperation in Matters of Defense, France is accorded base rights and transit

2066 Senegal

and flyover privileges, while Senegal receives military training and equipment grants. Dakar is the headquarters for France's Zone d'Outre-Mer 1, and a permanent French garrison of 1,500 men remains there, guarding the airfield and certain key installations. This force is said to be ready for deployment anywhere in Africa and is also available to assist the government in maintaining internal security. The naval units of this force are two coastal escorts; the air force units have six transports.

ECONOMY

In 1994 Senegal undertook a bold and ambitious economic reform program with the support of the international donor community. This reform began with the 50 percent devaluation of the CFA franc, which is widely used in francophone West Africa and is linked at a fixed rate to the French franc. Government price controls and subsidies were steadily dismantled. After seeing its economy contract by 2.1 percent in 1993, Senegal made an important turnaround, thanks to the reform program, with real growth in GDP averaging 5 percent annually from 1995 to 2003. Growth for 2003 was estimated at 5.5 percent. Annual inflation was pushed down to 0 percent in 2003, and the fiscal deficit was cut to less than 1.5 percent of GDP. Investment rose steadily, from 13.8 percent of GDP in 1993 to 20.4 percent in 2004. As a member of the West African Economic and Monetary Union, Senegal is working toward greater regional integration, with a unified external tariff. Senegal realized full Internet connectivity in 1996, creating a miniboom in information technology-based services. Private activity now accounts for 82 percent of GDP. On the negative side, Senegal faces deep-seated urban problems of chronic unemployment, juvenile delinquency, and drug addiction.

ENVIRONMENT

Senegal's environmental challenges are similar to those of many of its neighbors. The land suffers from soil erosion caused by deforestation and poor agricultural techniques. The deforestation and soil erosion contribute to growing desertification. In addition, Senegal's wildlife is endangered by poaching and overfishing.

Environment

Forest Area % of total land area: 32.2

 Nationally Protected Areas % of total land area: 11
 Emissions of Organic Water Pollutants kg per day: 6,642
 CO2 Emissions per capita ton: 0.44

LIVING CONDITIONS

Economic reforms instituted in the 1990s produced a higher standard of living for many Senegalese, especially in comparison with their neighbors. For example, while Senegal had a per capita GDP of \$1,700 in 2004, neighboring Guinea-Bissau's was just \$700. Still, 54 percent of the population was living below the poverty line in 2001. In some areas, such as Dakar, many people live in modern homes with plumbing and electricity. In the rural areas, on the other hand, most people live in mud brick homes with thatched roofs and dirt floors, and many homes are partially finished, as people build them in stages as they can afford to do so; water has to be gathered from communal wells and carried in pails to homes. Senegal has a good road system: At independence, the nation had just 765 km (475 mi) of paved roads, but as of 2000 there were over 4,000 km (2,500 mi) of paved roads. The most common means of transportation is the bush taxi.

HEALTH

The state of health care in Senegal is generally poor, which is not surprising in a nation where about \$27 per person per year is spent on health care. In 2004 life expectancy at birth was below 57 years; the infant mortality rate was 55.5 deaths per 1,000 live births, and just 50 percent of births were attended by trained medical personnel. AIDS is a significant problem: In 2003, 0.8 percent

of the adult population was living with the disease, and there were 3,500 deaths. Also problematic is malaria, with nearly 12,000 new cases each year, and diseases such as intestinal parasites, hepatitis, trachoma, and tuberculosis are common, largely because just half the population has access to adequate sanitation facilities.

FOOD AND NUTRITION

Nutrition is poor in Senegal. Between 1995 and 2001, 14 percent of children under the age of five were moderately underweight, and an additional 4 percent were severely underweight. Some 8 percent suffered from moderate to severe wasting, 19 percent from moderate to severe stunting. The basic staples in Senegal are rice, beans, peanuts, sorghum, millet, and corn. The national dish is *tiébou dienn*, or, in Wolof, *chep-bu-jen*, which is a fish stew cooked with various vegetables, garlic, and spices and served on rice. The most common meat is chicken. People eat with their right hands from a communal dish; it is generally regarded as ill-mannered to look at others while they eat.

STATUS OF WOMEN

Women are active participants in the political process, and several parties, including the dominant Socialist Party, have sections promoting women's rights. However, traditional values, both societal and religious (chiefly Islamic), have limited women's access to certain types of employment and higher education. Still, there are no le-

gal hindrances to advancement for women, and they are present in respectable numbers in the governmental and private sectors. Women, including several professors at the University of Dakar, are prominent among Senegal's intellectual elite. Senegal also has several organizations actively promoting women's rights, including the Federation of Women's Rights. The federation has ties to a number of women's groups in Africa and, since 1979, has been a sister organization of the National Council of Negro Women in the United States.

WORK

The labor force in 2003 numbered 4.65 million, with the unemployment rate in 2001 approaching 50 percent. About 70 percent of the labor force is involved in agriculture, about half of that number in subsistence agriculture. Major crops include peanuts, millet, corn, sorghum, rice, vegetables, cattle, poultry, and fish. Key problems for Senegal's agricultural industry are periodic severe droughts and a lack of arable land, which constitutes only about 13 percent of the nation's land area. A small industrial sector, which contributes about 21 percent to the nation's GDP, is engaged in food processing, phosphate mining, fertilizer production, oil refining, and construction materials. Services, including tourism, contribute 63 percent of GDP.

EDUCATION

Education is free, universal, and compulsory for six years, between ages six and 12.

Schooling lasts for 13 years total, as divided into six years of elementary education, four years of middle school, and three years of upper secondary school. The curriculum is based on the French model, with African elements added.

The school year runs from October to June. The language of instruction is French, but secondary students are

required to learn either English or Arabic as a second language. Elementary school teachers are trained at normal schools, secondary teachers at the Higher Teacher Training School.

There are two types of vocational training schools: The first, called training centers (*centres de formation*), offer a three-year program leading to a certificate; the second, called technical agent schools (*écoles d'agents techniques*), offer a four-year program leading to a diploma. Shorter programs are offered by the National Center of Professional Courses.

The educational system is administered by four government departments: the Ministry of National Education, the Ministry of Technical Education and Vocational Training, the Ministry of Popular Education, and the Ministry of Youth and Sports.

Higher education is provided by the University of Dakar and the University Gaston Berger, of Saint-Louis, a second national university established in 1990, with France meeting half the cost.

MEDIA

Five daily newspapers were published in Dakar as of 1998. *Le soleil* is owned by the PSS, and *Le democrat* is a monthly published by the PDS. Major French dailies, such as *Le monde*, *Le figaro*, and *France-soir*, are available in Dakar on the day of publication. There were some 139 periodicals and nondaily publications.

The national news agencies are Agence de Presse Sénégalais and the Pan-African News Agency. Foreign agencies represented in Dakar include AFP, Reuters, UPI, AP, ITAR-TASS, Novosti, ANSA, and DPA.

The Office de Radiodiffusion-Télévision du Sénégal operates both radio and television broadcasting as an autonomous public body. It provides just one television channel. Additionally, Senegal has five private radio stations.

CULTURE

Senegal has a long tradition of oral literature. The nation's first leader after independence, Léopold Senghor, was himself a poet and philosopher and one of the guiding lights behind the negritude movement, oriented around boosting pride in Africa's cultural heritage. More recently, the nation has produced prominent filmmakers such as Safi Faye and Ousmane Sembene. Traditional music is performed with the *kora*, a stringed calabash instrument, and many modern musical groups have adapted Senegalese traditional music to modern forms such as rap. Griots, traditional bardic storytellers, perform this type of music to narrate stories about Senegal's past and its traditions. One popular performer is Youssou N'dour, who has collaborated with Western performers such as Paul Simon and Branford Marsalis.

FOLKLORE AND MYTHOLOGY

Much of Senegal's folklore and mythology is connected with its religious traditions. While the country is largely Muslim, the people have incorporated traditional animistic beliefs into their religious outlook. For example, many Wolof wear protective amulets to protect them from evil spirits. Traditionally, the Wolof also carried small bags called gris-gris filled with protective medicines and herbs; they now carry verses of the Koran in the bags.

Senegal has a long tradition of oral storytellers called griots. These figures are similar to the minstrels of the Middle Ages. Using props, song, narration, and musical instruments, they perform works that preserve the nation's culture and history.

ENTERTAINMENT AND RECREATION

The Senegalese pursue many forms of recreation, including folk dancing, theatrical performances, and music. These activities are common in cities such as Dakar, but in rural areas Muslim leaders often discourage music and dance. Listening to the radio is commonplace, and several radio stations broadcast popular music such as hip-hop. Sports, movies, video rentals, and films have grown in popularity, again especially in the cities. Many older men play checkers. Another popular form of entertainment is simply visiting friends and family, and unannounced visits are not regarded as ill-mannered; what would be ill-mannered would be to allow visitors to leave without serving a meal, or at least tea.

ETIQUETTE

As in many Muslim and African countries, greetings are an important part of social interactions, and they can often last for protracted periods of time, with inquiries about the health and well-being of the other person as well as of that person's family—all interspersed with comments in praise of Allah, the Muslim deity. In Dakar, the French custom of kissing another on the cheek is common, but in the villages hand shaking is more common; however, men and women do not shake each other's hands. Great respect is accorded those of higher social standing, and girls still curtsy to their elders. Pointing is considered rude, although it is acceptable to point with the tongue. Many friends and people who belong to extended clans carry on joking relationships, called "dialogue," that consist of putdowns about such matters as the other's intelligence or cleanliness.

FAMILY LIFE

In the rural areas of Senegal, marriages are still arranged. The man's father usually appoints a go-between to de-

termine if the woman he has chosen is suitable. If she is, the man's father approaches the woman's father to discuss the matter, usually bearing a gift. If the woman's parents accept the gift, that means they agree to the marriage. Among the Wolof, a matrilineal group, the brother of the prospective groom's mother approaches the prospective bride's family. After marriage, the wife is likely to live with her husband's family in the same compound, with the nuclear family as the key domestic unit. Families in Senegal tend to be large; in 2005 there were over 35 births per 1,000 population, and the fertility rate that year was nearly five children per woman.

PERSONAL APPEARANCE

In the cities, the Senegalese wear Western-style clothing, and great value is placed on having a neat and groomed personal appearance. Women generally wear dresses, while men wear shirts and trousers. Few people wear shorts, which are reserved for children; few women wear pants, and fewer still wear jeans. Traditional dress includes the boubou, a cotton tunic, often elaborately embroidered, with openings under the arms, which men wear over pants and women wear over a sarong. Women devote considerable time to tying matching turbans or scarves on their heads.

SPORTS

A traditional sport among the Wolof is *laamb*, which is translated as "fight" and refers to a form of wrestling. Such a match is an elaborate event, with singers, storytellers, and dancers all on hand to comment on the fight and praise the contestants. Modern sports that are popular include basketball, track and field, and soccer. In 2002 the Senegalese national soccer team advanced to the quarterfinals in World Cup play and returned home to a heroes' welcome; even the president and prime minister joined the throng greeting the team at the airport.

CHRONOLOGY

- 1960** Senegal withdraws from the Mali Federation and declares its independence. Léopold Senghor is elected president and Mamadou Dia prime minister.
- 1962** Dia leads abortive coup against Senghor; with the help of the army, Senghor arrests Dia; office of prime minister is abolished.
- 1963** New constitution is promulgated.
- 1968** Senghor declares an emergency in the wake of student riots.
- 1970** Electorate approves new constitutional amendment by overwhelming vote; Abdou Diouf is named to the re-created post of prime minister.

- 1973** Catastrophic drought strikes the Sahel. Senegal breaks domestic relations with Guinea and Israel. The Senegalization of employment is adopted as official policy.
- 1974** Parti Démocratique Sénégalais (PDS) is formed as the first legal opposition since 1964.
- 1975** All political prisoners are released under a general amnesty; three political parties are authorized, representing the right, center, and left, respectively.
- 1978** Léopold Senghor is reelected president with 82 percent of the national vote; the opposition PDS gains 17 of 100 seats in the National Assembly. President Senghor attends the summit of reconciliation at Monrovia with Guinea and Liberia.
- 1981** President Senghor steps down and names Prime Minister Abdou Diouf as his successor. On the request of President Sir Dawda Jawara of the Gambia, Senegal sends troops to Bathurst to quell a military coup. The Gambia and Senegal agree on a confederation of two states, known as Senegambia, with a common president, military forces, and monetary institutions. In a major cabinet reshuffle, Diouf drops two cabinet ministers: Adrien Senghor, the ex-president's nephew, and Louis Alexandrenne, the powerful planning minister.
- 1982** The Confederation of Senegambia comes into effect.
- 1983** In his first presidential election, Diouf wins an easy victory and carries his PSS to a dominant position in the National Assembly, with 111 of 120 seats. Prime Minister Habib Thiam is demoted to president of the National Assembly and is later forced to vacate that post as well.
- 1984** Casamance separatists battle police, claiming 24 lives in one of the most violent civil disturbances in the country's history.
- 1985** Opposition parties attempt to unify, forming the Senegalese Democratic Alliance, which is banned.
- 1988** Diouf is reelected, and his party wins a majority of seats in the National Assembly; urban violence erupts as a result of declining economic conditions and charges of election irregularities.
- 1989** Relations between Senegal and Mauritania reach a crisis in a dispute over farming rights along the two countries' border; the attempted Senegambia union is dissolved.
- 1990** Ethnic violence continues against Senegalese in Mauritania and against Mauritians in Senegal, as the border war between the two countries continues; Senegal sends troops to back U.S.-led UN forces in the Persian Gulf.
- 1991** Senegal and the Gambia sign a treaty of cooperation.
- 1993** Diouf is elected to a third term as president; anti-government demonstrations turn violent, and a state of emergency is briefly declared to restore order.
- 1998** Casamance separatists suspend violence as parliamentary elections take place; opposition members charge election fraud when Socialist Party candidates win a large majority; separatist activities resume; parliament passes a law making Diouf president for life.
- 2000** On his fifth attempt, Abdoulaye Wade of the Democratic Party is elected president, breaking 40 years of Socialist Party rule; Diouf relinquishes control peacefully; Senegal and Guinea-Bissau agree to cooperate to restore peace along the common border, particularly in the Casamance region; the government attempts to negotiate peace with Casamance separatists.
- 2001** A new constitution is approved by public referendum. The Democratic Party wins an overwhelming majority in parliamentary elections.
- 2002** In September, more than 1,800 people are killed when the Joola ferry capsizes off the Gambian coast; later that year, Wade dismisses the prime minister and the rest of the government, allegedly over the government's handling of the disaster.
- 2003** The leader of the Casamance Movement of Democratic Forces (MFDC) says that the secessionist war is over.
- 2004** The government and the MFDC sign a pact to end secessionist violence.

A red shield containing a two-headed silver eagle behind a quartered shield containing the national symbols of Montenegro (the golden lion of the Petrovic dynasty) and of Serbia (four fire steels).

NATIONAL ANTHEM

“Hej Sloveni” (O Slavs)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 15 (Serbia National Day), April 27 (Constitution Day), May 1 (Labour Day), May 9 (Victory Day), November 29 (Communist Yugoslavia Day), various Orthodox holidays

DATE OF INDEPENDENCE

April 27, 1992

DATE OF CONSTITUTION

February 4, 2003

GEOGRAPHICAL FEATURES

Serbia and Montenegro is located in southeastern Europe, on the Balkan Peninsula. The nation has a total land area of 102,350 sq km (39,517 sq mi). Serbia accounts for 83 percent of the total territory. Serbia and Montenegro’s greatest distances are 465 km (289 mi) from the northwest to the southeast and 400 km (249 mi) from the southwest to the northeast. The nation shares its total boundary length of 2,246 km (1,396 mi) with seven neighbors: Hungary, Romania, Bulgaria, Macedonia, Albania, Croatia, and Bosnia and Herzegovina. The total Adriatic coastline is 199 km (124 mi). The capital is Belgrade.

Geographically, Serbia and Montenegro are very different. On the north of Serbia there are the Pannonian

plains, rich and fertile land up to 100 m (328 ft) above sea level. The central part of Serbia, Sumadija, is characterized by hills and mountains that terminate in the southwest with Mount Kopaonik, which reaches 2,017 m (6,617 ft). The eastern part of Serbia is marked by the Carpathian Mountains, with the highest peak, Stara Planina, reaching 2,167 m (7,109 ft). Situated in the south is the Metohija Basin, which finishes with the Prokletije Mountains, which have the highest peak in all of Serbia and Montenegro: Djeravica (2,656 m; 8,714 ft). The Kosovo Basin lies to the east of Metohija.

Montenegro is largely mountainous, especially along the borders with Kosovo and Albania. The highest peak in Montenegro is Bobotov Kuk, at 2,522 m (8,274 ft). In the southwest the Adriatic Sea binds Montenegro. Near the coast is Lake Skadarsko Jezero (Scutari), the largest

Serbia and Montenegro

lake in the country. Its surface area is 369.7 sq km (142.7 sq mi). The Skadarsko Jezero is shared with Albania.

Most of the nation's drainage belongs to the Danubian system and after that to the Black Sea. The most im-

portant rivers are the Danube, Drina, Sava, Tisa, Great Morava, and Tara. The Tisa and the Danube are connected with the Grande Canal, which is 123 km (76.4 mi) long.

CLIMATE AND WEATHER

Serbia and Montenegro has a continental climate, with hot summers and cold winters. Only the southern part of Montenegro and the coastal zone have a Mediterranean climate, with dry, hot summers and mild, rainy winters. The northern part of Yugoslavia, Vojvodina, also has hot summers, with temperatures up to 40°C (104°F), and cold winters, when the temperature drops to -20°C (-10°F). The average temperature in Belgrade in July is 21°C (69°F), in January 0°C (32°F). The average temperature in Podgorica is 27°C (81°F) in July and 6°C (43°F) in January. Summer temperatures in the mountains are cooler, and winters are characterized by heavy snowfall.

Precipitation in Serbia ranges between 560 and 1,900 mm (22 and 75 in). Montenegro's mountainous areas receive one of the highest levels of rainfall in Europe. The annual precipitation at Crkvice, in the Gulf of Kotor, is 4,930 mm (194 in).

FLORA AND FAUNA

Serbia and Montenegro is covered with forests, which vary in type by region. The Dinaric Alps are home to

giant pine trees, while linden trees are more common in the Fruska Gora mountains. Many species of herbs and medicinal plants, such as mint and chamomile, grow wild. Animals include foxes, lynx, wild boars, deer, marten, woodpeckers, nightingales, and partridges. Many of the nation's animals fled to Bulgaria during the war, but they are gradually returning.

ETHNIC COMPOSITION

Serbia and Montenegro is a multinational state with 37 different nationalities, most of which have historically had difficulty getting along. Most of the population is of South Slavic origin. The largest ethnic groups are Serbs (62 percent), followed by Albanians (16 percent), Montenegrins (5 percent), and Hungarians (3 percent). Serbs are the largest ethnic group in Serbia (constituting almost two-thirds of the population), while Montenegrins are the majority in Montenegro (62 percent). More than 90 percent of Albanians live in the province of Kosovo, and most of the Hungarians live in the province of Vojvodina. Smaller ethnic communities, such as those of Slovaks, Romanians, Valachians, and Germans, are concentrated in Vojvodina and in eastern Serbia. Turks live primarily in Kosovo, as do Egyptians and Gorrans. The Muslim population is concentrated in the southwestern part of Serbia called Sandzak.

The ethnic composition of the nation has been in flux for some years. During the years of war, Serbs from other former Yugoslav republics immigrated to Serbia, while resident Bosnians and Croats fled the country. Serbian police expelled ethnic Albanians from Kosovo

in 1999, but those Albanians returned after North Atlantic Treaty Organisation (NATO) forces entered Serbia. Ethnic tensions between Serbia and Montenegro continue.

LANGUAGES

The official language of Serbia and Montenegro is Serbian. The Serbian language belongs to the Southern Slavic subgroup of the Slavic group of the Indo-European family of languages. Serbs and Montenegrins speak different variants of the Serbian language. The variant used in Serbia is called *ekavica*, and the variant used in Montenegro is called *ijekavica*. National minorities speak their own languages. Albanians use the Albanian language, which is also derived from the Indo-European family of languages (the so-called Satemic or Thracillyrian language). Hungarians speak the Hungarian language, which belongs to the Finno-Ugric group of the Uralic family of languages.

Two types of alphabetic script are in use. Serbian-speaking peoples use primarily the Cyrillic alphabet, a script developed in the ninth century by the Orthodox missionary brothers Saint Cyril and Saint Methodius. The Cyrillic alphabet is mostly in use among Orthodox peoples. The Latin alphabet is in use among other ethnic and religious communities, such as Catholics or Protestants, including Croats and Hungarians, as well as among Albanians and Muslims.

RELIGIONS

The predominant religion in Serbia and Montenegro is Orthodox Christianity, which is adhered to by 65 percent of the population. The Serbian Orthodox Church was the main church in Serbia and Montenegro until 1993, when the autonomous Montenegro Church was established. Most Albanians are Muslims, of the Sunni branch. The Muslim population (19 percent) is concentrated in Kosovo, as well as in the Sandzak region. Roman Catholics (5 percent) and Protestants (1 percent) are concentrated in Vojvodina Province, where most Catholic and Protestant Hungarians live. Some Albanians in Kosovo are Catholics. A small Jewish community also exists.

Religious Affiliations

Muslim	2,057,500
Roman Catholic	433,000
Protestant	108,500
Other	1,191,000

HISTORICAL BACKGROUND

The Yugoslavia that existed until early 2003 was the third state in history with the same name. The first state called Yugoslavia was proclaimed on December 1, 1918, as the Kingdom of the Serbs, Croats, and Slovenes. Its name was changed to the Kingdom of Yugoslavia in 1929. It had 12 million inhabitants and covered an area of 247,542 sq km (95,576 sq mi). The second state bearing the name Yugoslavia was proclaimed on November 29, 1943, as the Federal People's Republic of Yugoslavia, which was ruled by a Communist regime. Its population was nearly 24 million, and it covered an area of 255,804 sq km (98,766 sq mi). The most recent Yugoslavia was proclaimed on April 27, 1992, as the Federal Republic of Yugoslavia. It consisted of the Republic of Serbia and the Republic of Montenegro. It encompassed 40 percent of the area and 45 percent of the population of the former Yugoslavia.

The South Slavic population inhabiting Serbia and Montenegro converted to Christianity in the eighth and ninth centuries. In the 12th century two kingdoms were established: Zeta (on the territory of today's Montenegro) and Raska (today's Serbia). Stephen Nemanja was the founder of the Serbian royal dynasty and the king who united the two kingdoms in the 12th century. His youngest son, Rastko, became the first Serbian archbishop in the independent Serbian archbishopric. Subsequently, he was canonized as St. Sava. After him, Serbian Orthodoxy is also known as St. Sava Orthodoxy (Svetosavlje).

From the 14th century Turks occupied all of the Serbian territory, although the tiny principality of Montenegro was never fully subdued. The first Serbian uprising occurred in 1804, as led by Djordje Petrovic, who was known as Black George (Karadjordje), the second in 1814, as led by Milos Obrenovic. Serbia was fully recognized as an independent state in 1878 by the Congress of Berlin. In 1882 Milan Obrenovic took the title of king and declared Serbia a kingdom. Montenegro was ruled by the Petrovic-Njegos family, and in 1878 the Congress of Berlin made it an independent state. In 1910 Prince Nikola I Petrovic-Njegos took the title of king.

After the First World War, on December 1, 1918, Montenegro became a part of the Kingdom of the Serbs, Croats and Slovenes. Serbia's King Alexander I (Karadjordjevic) ruled the first Yugoslavia until he was assassinated in 1934 in Marseilles, France. Germany attacked Yugoslavia on April 6, 1941, and after just 11 days Yugoslavia capitulated. Peter II, the successor of Alexander I, left the country and went with the government to London. During the war two guerrilla groups were formed: Chetniks and partisans. The first group was the so-called royal army, under the command of Colonel Dragoljub-Draza Mihailovic. The second group was under the command of the Communist leader Josip Broz Tito. Tito's forces defeated the Chetniks and together with the Russian Red Army liberated Yugoslavia. The monarchy was

abolished, and on October 29, 1945, the Federal People's Republic of Yugoslavia was proclaimed; Tito became the Yugoslavian president. The country was to become one of the satellites of the Soviet Union, but Tito split from Stalin in 1948 to preserve Yugoslavia's independence while remaining a Communist state.

After the break with Stalin, Tito proclaimed reforms and decentralized administration. Yugoslavia was a federation of six republics—Croatia, Montenegro, Serbia, Slovenia, Bosnia and Herzegovina, and Macedonia—along with the two provinces in Serbia: Kosovo and Vojvodina. Relationships between the federal state and the republics eventually led to conflicts. The 1974 constitution gave equal rights of sovereignty to the federal state and to each of the six republics. Yugoslav leadership tried to solve the economic problems the country faced in the 1980s through massive foreign borrowing. Disagreement on how to resolve economic discrepancies between the richer western part of the country and poorer east led to political conflicts, which in turn led to the disintegration of Yugoslavia.

As of 1989 Yugoslavia witnessed the rise of ethnic tensions, which quickly turned into violent civil war that was largely engineered by the Serbian leader Slobodan Milosevic. In 1991 Slovenia, Croatia, and Bosnia and Herzegovina declared their independence from Yugoslavia; Macedonia followed suit in 1992. On April 27, 1992, Serbia and Montenegro established the Federal Republic of Yugoslavia, a country that was not formally recognized by the United Nations.

In 1999 the Serbian police and the Yugoslav army began crackdowns on ethnic Albanian rebels in the Serbian provinces of Kosovo and Metohija. Hundreds of thousands of Albanians were forced to leave their homes. In March 1999 NATO forces began massive air strikes against Serbian forces; after 78 days the Serbian forces and Yugoslav army withdrew from Kosovo and Metohija, and NATO soldiers under the UN flag came in.

In March 2002 Serbia and Montenegro reached an agreement signed by the Montenegrin president Milo Đukanović and Yugoslav president Vojislav Koštunica to create a loose union to be called Serbia and Montenegro. The EU-negotiated accord radically restructured Yugoslavia, with both republics gaining greater autonomy. The republics planned to vote on full independence after at least three years of unified government. Although parliaments in both republics signed the agreement, Prime Minister Filip Vujanović of Montenegro and various ministers resigned in April over the independence issue.

The new state of Serbia and Montenegro came into existence in February 2003, when the Yugoslav parliament approved the new constitutional charter. The two states both experienced some difficulty in creating their own governments, with a series of inconclusive elections occurring in each of them. Vujanović became president of Montenegro in May 2003, but Serbia did not manage

to elect a president until Boris Tadić won the election in June 2004. The assassination of the Serbian prime minister in March 2003 was a major disruption to the new government, which immediately cracked down on organized crime.

The leadership of both states has been plagued by allegations of war crimes committed in the 1990s. Serbia indicted Milosevic in 2003 and began the process of trying suspects of war crimes in 2004.

Ethnic tension has remained a major problem, as has the legal status of Kosovo. Many ethnic Albanians live in Kosovo and want to see their state become independent of Serbia. Ethnic violence between Serbs and Albanians was a regular problem in the early 2000s. The fate of the union as a whole was in some doubt in early 2005. Montenegro's leaders disliked ties to Serbia, which has had more economic difficulties, and suggested that the two republics end the union ahead of schedule. Serbia's leaders did not agree to such action. Serbia's president has supported European integration but has not received sufficient support from the citizenry.

LIST OF MODERN RULERS

President

2003– Svetozar Marović

CONSTITUTION

Serbia and Montenegro declared themselves the successor to the former Yugoslavia in 1991 and adopted the constitution of the Federal Republic of Yugoslavia in 1992. Under this constitution each of the two republics had its own president, parliament, and constitution.

In March 2002 Serbia and Montenegro agreed to abolish the Federal Republic of Yugoslavia and create a new union, called Serbia and Montenegro. Under the EU-negotiated accord, Serbia and Montenegro share defense and foreign policies and a seat at the United Nations but maintain separate economies, currencies, and customs services. The Constitutional Charter for the new state was ratified on February 4, 2003.

The nation has a federal president who functions as the chief of state and head of government. The president is elected by parliament to a four-year term. The president of Yugoslavia, Vojislav Koštunica, ceased to hold office when the position was terminated with the election of Svetozar Marović as president of Serbia and Montenegro.

The Council of Ministers acts as the cabinet. There are five ministries: foreign affairs, defense, international economic relations, internal economic relations, and protection of human and minority rights. The president and two ministers come from one member state, and the other three ministers come from the other. The presi-

2078 Serbia and Montenegro

dent proposes candidates for ministries, who must then be approved by the parliament. Ministers serve four-year terms.

The legislative branch is filled by a unicameral parliament. The Federal Court has an equal number of judges from each republic and fulfills both constitutional and administrative functions.

According to the Constitutional Charter, the union was to remain in place for at least three years, whereupon the republics could vote on whether to stay together or separate. In early 2005 Montenegro's leaders wrote to the Serbian leadership suggesting that the union be ended early because it was inefficient and expensive to run. The Serbian leadership rejected this proposal.

PARLIAMENT

The Republic of Serbia and the Republic of Montenegro each have their own parliaments through which internal matters are handled. Each of these parliaments supplies members to a unicameral federal Parliament. The federal Parliament has 126 seats—91 for Serbia and 35 for Montenegro. These seats were originally filled with nominees selected by the two state parliaments. The most recent constitution called for general elections to be held in 2005 to choose elected representatives.

POLITICAL PARTIES

The political climate has been tumultuous since the republic was founded in 2003. The main Serbian parties are the Serbian Radical Party (SRS), the Democratic Party of Serbia (DSS), the Democratic Party (DS), the G17 Plus, the Serbian Renewal Movement in coalition with New Serbia (SPO-NS), and the Serbian Socialist Party (SPS).

Parties from Montenegro include the Democratic Party of Socialists (DPS), the Socialist People's Party (SNP), the Social Democratic Party (SDP), and the Liberal Party of Montenegro (LSCG).

Kosovo has numerous political parties participating in local elections. In 2004 the Democratic League of Kosovo (LDK) won 46 percent of the vote, while the Democratic Party of Kosovo (PDK) came in second. The LDK later formed a coalition with the Alliance for the Future of Kosovo (AAK).

LOCAL GOVERNMENT

Serbia and Montenegro consists of the two republics of Serbia and Montenegro and two nominally autonomous provinces, Kosovo and Vojvodina. Both republics have their own constitutions, presidents, parliaments, and governments. The Serbian parliament is the unicameral Na-

tional Assembly, with 250 seats. The president of Serbia is Boris Tadic, of the Democratic Party. The parliament of Montenegro is the unicameral National Assembly, with 85 seats. Montenegro's president is Filip Vujanović. Both republics are divided into regions and communes, which handle local affairs.

The status of Kosovo was not defined as of early 2005. The region is legally part of Serbia and Montenegro but exists as an independent protectorate of the United Nations. Kosovo's politicians established a coalition government in March 2002, and the United Nations has assisted the state in creating internal ministries. Kosovo held its own parliamentary elections in 2004.

LEGAL SYSTEM

The constitutional charter created the Court of Serbia and Montenegro, which functions as the highest legal authority of the nation. It can invalidate Serbian or Montenegrin laws and regulations that violate the constitutional charter and national laws. The court contains an equal number of judges from Serbia and Montenegro. The Parliament appoints judges to six-year terms. The court sits in Podgorica.

HUMAN RIGHTS

The human rights record in Serbia and Montenegro has been relatively good since the departure of Milosevic, and the government has been moving ahead with the prosecution of war crimes, though there are still many problems. The police forces have arrested people arbitrarily, and there have been reports of torture and lengthy detention. Trials are lengthy, and the judiciary does not cooperate well with other branches of the government. Organized crime is still a viable presence. There were some suggestions that the government overreacted to the assassination of Serbian Prime Minister Zoran Djindjic in 2003 in declaring a state of emergency, which resulted in police brutality, torture, and the arrests of several thousand citizens.

Ethnic violence and discrimination remain significant problems. Human trafficking and violence against women and children have continued to occur.

FOREIGN POLICY

The Yugoslavia of the 1990s was fairly isolated in the world, with few other nations recognizing its existence. This ended in 1999, just before NATO bombings, when the United States and numerous other nations reestablished diplomatic relations. The nation of Serbia and Montenegro is a member of the United Nations, the Or-

ganization for Security and Cooperation in Europe, and other organizations, including the Council of Europe. It has expressed interest in joining NATO's Partnership for Peace. It depends on a large amount of foreign aid, much of which has been contingent on its cooperation in the prosecution of war criminals.

DEFENSE

National defense is provided by the Army of Serbia and Montenegro, which has a ground force, naval forces, an air force, and a civil defense force. The ground army handles both internal security and border issues. Citizens must perform nine months compulsory service upon reaching the age of 19.

Since the assassination of Djindjic the Ministry of Defense has been attempting to reform the military to move the nation closer to integration in Europe and the Atlantic region. The government has dismissed many officers and has made the military subordinate to the civilian defense minister. It has also disbanded the Red Berets, a paramilitary unit of the old secret police.

ECONOMY

Serbia and Montenegro are struggling to rebuild their economy, which was devastated during the 1990s by mismanagement under Milosevic, NATO air strikes, and extended economic sanctions. The coalition government began stabilizing the economy in 2000 with help from the World Bank and the European Bank for Reconstruction and Development. Montenegro handles its own internal economic policies, using the euro instead of the Serbian dinar. Kosovo also functions autonomously but requires a great deal of international assistance. The economy is still awaiting large-scale privatization. A lack of foreign investment, uncertainty over property rights, and high unemployment (of approximately 30 percent) are major obstacles to economic growth.

ENVIRONMENT

Air, soil, and drinking-water pollution in Serbia and Montenegro are very high, due to heavy industrialization. In Montenegro, sewage runoff from tourist areas has polluted coastal waters. The nation was long one of the most important European centers of biodiversity, containing a variety of plant and animal life, but the heavy bombing in 1999 was fairly destructive to the environment. According to the Regional Environmental Center for Central and Eastern Europe, based in Szentendre, Hungary, NATO bombings caused high levels of pollution around the main military targets, particularly chemical industry plants. More than 1,000 tons of ethylene dichloride and nearly 1,000 tons of hydrogen chloride spilled from the Pancevo petrochemical complex into the Danube. Vinyl chloride monomers reached a concentration ten thousand times greater than the acceptable level. Scientists anticipate serious effects on human health, including the longer-term effects of toxic, carcinogenic substances and radiation.

LIVING CONDITIONS

About half the people in Serbia and Montenegro live in rural areas, half in urban. Rural people live in small houses with yards. In the cities most people live in high-rise apartments. Many buildings were destroyed during the war, and housing is in short supply. The transition from state-owned housing to private property ownership has been difficult. The cost of living in most of the nation is low compared to that in western Europe, though

coastal Montenegro can be quite expensive. Trains and buses are slow but fairly inexpensive.

HEALTH

Health in Serbia and Montenegro has improved tremendously since the 1930s, when the people of Yugoslavia were some of the unhealthiest in Europe, as the Communists modernized the health care system and provided medical insurance for everyone. The individual republics administer their own health-care systems. Life expectancy in 2005 was almost 75 years. The biggest health problems are now cancer and circulatory diseases caused by smoking and pollution.

FOOD AND NUTRITION

Food in Serbia and Montenegro is heavy on potatoes, meat, and dairy products. For breakfast many people eat bread or pastries with butter, cheese, jam, sausages, eggs, sour cream, and yogurt. Lunch is the largest meal of the day, with the evening meal usually lighter. Main dishes include soups, grilled meat, sauerkraut or cabbage, and salads. Cooking has been influenced by that of Greece, Turkey, and Hungary, and people eat many ethnic dishes, such as moussaka, goulash, and shish kebabs. Alcoholic beverages such as wine, beer, and plum brandy are very popular.

STATUS OF WOMEN

Women gained an unprecedented level of equality under the Yugoslav government during the 20th century; women in Serbia and Montenegro are fully integrated into the labor force, working in all the professions and in governmental positions. Nevertheless, women still suffer some discrimination and are typically expected to do most child care and housework. The law requires that women be paid equal wages for equal work, but in practice women are paid less than men on average. Women in rural areas and minority communities tend to have less freedom to work and control property than women in cities. Some rural and minority husbands tell their wives how to vote in elections. Human trafficking in sex slaves is a major problem.

WORK

About half the country is still rural and predominantly agricultural; crops include grains, fruits, vegetables, tobacco, olives, and livestock. Industry brings in about 28 percent of GDP, employing people to build vehicles and weapons, produce consumer goods such as textiles, and work in metallurgical facilities. Many people in Serbia and Montenegro are unable to find jobs. A large proportion of the workforce is employed by state-owned corporations or the government, and they are extremely resistant to the privatization of the economy. Ethnic tensions remain a problem in the workplace, and some groups, such as Albanians and Serbs, do not like to work with one another.

Employment and Labor

Labor Force Total: 3,200,000
 Female Participation Rate %: 43.1

 Unemployment %: 30

EDUCATION

The Communist government built up a comprehensive, modern system of public education, with compulsory primary school, instruction in minority languages for minority students, several tracks of secondary education, and free university tuition. Since the creation of the new

2082 Serbia and Montenegro

republic, Serbia and Montenegro have each run their own educational systems. Each state has a wide variety of educational institutions and universities, though many of them suffer from a lack of funding due to the poor state of the economy. International donors have been furnishing educational aid. Literacy is high.

SCIENCE AND TECHNOLOGY

The nation's infrastructure declined during the 1990s due to war and neglect. Since the creation of the new republic, both the state and private individuals have been attempting to rebuild facilities up to modern standards. Each republic is attempting to increase the implementation of information technology in an effort to improve economic possibilities. Both Serbia and Montenegro have universities and technical institutes that teach engineering and scientific topics. The nation still lacks a full telecommunications system. In 2003 there were about 2.6 million telephone lines and 3.6 million cellular telephones in operation. Only about 847,000 people were using the Internet, though local Web sites had begun to appear rapidly.

MEDIA

The Serbian news media has enjoyed an unprecedented level of freedom since the ouster of Milosevic. Although journalists still censor themselves to some degree, gov-

ernment restrictions are gone. Some publications and radio stations are outspoken and opinionated on matters of government and ethnicity. Numerous private television stations and perhaps 1,000 new radio stations sprang up in 2003–04, enough to crowd the airwaves; many of these were not likely to survive for long. The state-run television and radio stations are still on the air, and the government is working to develop these into public service enterprises. There are numerous private daily and weekly publications.

Montenegro has historically had a freer press than Serbia. It has had 10 or more privately run publications and broadcasters competing successfully with the state's media outlets, Montenegrin TV and Radio. The journalist Dusko Jovanovic was murdered in May 2004, after he had suggested that the Montenegrin government was corrupt and criticized Montenegrin independence.

In Kosovo, a UN commission has been creating a journalists' code of conduct in an effort to prevent the media from stirring up ethnic hatred and violence. The UN-sponsored Blue Sky Radio broadcasts impartial news reports. International groups have been aiding the development of independent media.

CULTURE

The people of Serbia and Montenegro love attending cultural events, and the country has many regularly occurring festivals and fairs. Belgrade has theater, jazz, film, and classical-music festivals. Montenegro hosts various summer festivals and music festivals. An agricultural fair and a children's poetry festival take place in Novi Sad. The Dragacevo Trumpet Festival occurs in Fuca every August. Writers', musicians', and artists' communities have all been reinvigorated since the end of Communism.

FOLKLORE AND MYTHOLOGY

The Communists attempted to repress folk culture and religion, but since independence the people have embraced traditional culture with enthusiasm. In truth, folk music and art have never disappeared from Serbia and Montenegro. Local people have played the *gajde* bagpipes for perhaps 1,600 years. Gypsies still perform their traditional songs and dances. Albanians in Kosovo play Arabic instruments to produce a Turkish sound. Painters employ folk motifs in their art, and writers have used folktales in their work. St. Sava, the son of Serbia's first king, from the 1200s, is revered as one of the founders of the Serbian nation.

ENTERTAINMENT AND RECREATION

People in Serbia and Montenegro love outdoor recreation, such as hiking, white-water rafting, fishing, camping, bicycling, and jogging. Most cities have outdoor paths where people can walk or bicycle amid attractive surroundings. Skiing and other winter sports are extremely popular. Montenegro's beaches attract many residents during the hot summer months.

Urban recreational facilities, including restaurants, bars, and shops, were somewhat disrupted by the years of civil war, and as of 2005 the nation was still working on rebuilding its infrastructure. Locals spend their free time sharing coffee at home or in cafés, watching television, listening to the radio, visiting museums or attending concerts, and reading books and newspapers.

ETIQUETTE

Local people readily invite guests to their homes. When a guest visits a home, the hosts will immediately offer a glass of *rajka* (plum brandy) or coffee. They will often continue to offer food and drink even if a guest declines them. At work, employees hesitate to criticize their superiors publicly, instead trying to communicate concerns indirectly through third parties.

FAMILY LIFE

In the past 50 years households in Serbia and Montenegro have transformed from large extended-family groups

living together under the leadership of an older man to smaller nuclear families with fewer children. In 2004 the average woman had about 1.7 children. Gender roles changed during Communism, and it is now common for women to work outside the home, though they usually still handle most household responsibilities. Families remain loyal to their relatives, and most older people live with family members who care for them. The godparent relationship remains strong.

PERSONAL APPEARANCE

People in Serbia and Montenegro dress in typical European clothing. Most people dress up for work; jeans are not acceptable. Men usually wear suits, and women wear dresses or skirts.

SPORTS

The people of Serbia and Montenegro love to play sports. Most communities and schools organize sporting activities and provide facilities for children and the general public. Soccer, hockey, and basketball are extremely popular spectator sports, and many local players have been drafted by teams in the United States. Athletes from the former Yugoslavia have participated in most Olympic sports and have brought home many medals.

CHRONOLOGY

- 1945** Josip Broz Tito leads the Partisans to victory against the Axis powers; the Russian army and Partisans liberate Belgrade; Communists conduct mass executions in Belgrade.
- 1946** Communists take power, a new constitution is promulgated, and the country's name is changed to the Federal Republic of Yugoslavia.
- 1948** Tito breaks with Stalin, resulting in Yugoslavia's expulsion from the Communist Information Bureau and boycotts by other communist countries.
- 1953** Tito becomes president of Yugoslavia, a post he holds for the next 27 years.
- 1961** Yugoslavia, India, Indonesia, Ghana, Guinea, and Egypt form the Movement of Non-Aligned Nations, a loose association of states with no formal connection with the United States or the USSR during the cold war.
- 1963** The country is renamed the Socialist Federal Republic of Yugoslavia.
- 1974** A new constitution proclaims Tito president for life and grants full autonomy to each of six republics within Yugoslavia.

2084 Serbia and Montenegro

- 1980** Tito dies, and executive power is transferred to a collective presidency.
- 1989** Serbia, under President Slobodan Milosevic, proclaims a new constitution for Yugoslavia and suspends the autonomy of Vojvodina and Kosovo.
- 1991** Slovenia votes for secession in the first free multiparty elections in Yugoslavia and declares independence; Croatia, Bosnia and Herzegovina, and Macedonia also proclaim independence. War erupts in Croatia between Serbs, backed by the Yugoslav military, and Croats.
- 1992** Civil war erupts in Bosnia and Herzegovina among ethnic Serbs, ethnic Croats, and Bosnian Muslims. Serbia and Montenegro, the remaining states of Yugoslavia, consolidate as the Federal Republic of Yugoslavia (FRY) and adopt a new constitution. Slobodan Milosevic is re-elected president of Serbia, and Dobrica Cosić is elected the first president of the FRY. The United Nations imposes sanctions and excludes the FRY from its General Assembly. Albanian parties in Kosovo organize illegal elections and elect Ibrahim Rugova as president of Kosovo.
- 1993** Dobrica Cosić is dismissed and replaced by Zoran Lilic; in response to the worst inflation in its history, the FRY adopts the new dinar; opposition leader Vuk Drašković and his wife are beaten and arrested following public protest.
- 1994** Milosevic severs Serbia's links with Bosnian Serbs when they reject a peace proposal; Yugoslavia introduces the "super dinar" in its ongoing fight against hyperinflation.
- 1995** The presidents of Bosnia and Herzegovina, Croatia, and Serbia sign a peace accord in Dayton, Ohio, ending the war in Bosnia and Herzegovina; the resettlement of 650,000 Serb refugees from Croatia to Kosovo increases racial tensions in the ethnically Albanian region.
- 1996** Kosovo rebels begin a campaign of violence against Serbian police and civilians; the United Nations lifts sanctions against Yugoslavia.
- 1997** Milo Đukanović is elected president of Montenegro, and Slobodan Milosevic is elected president of Yugoslavia; after three months of demonstrations, Milosevic recognizes opposition victory in major Serbian cities and acknowledges Milan Milutinović as the elected president of Serbia.
- 1998** Momir Bulatovic, an ally of Milosevic, is elected prime minister of Montenegro despite widespread opposition; Montenegro refuses to recognize the federal government. The Albanian separatist group Kosovo Liberation Army (KLA) attempts to unify Kosovo with Albania; violence escalates as Serbian police attempt to regain regional control. The United Nations again imposes economic sanctions against Yugoslavia for humanitarian violations.
- 1999** The Yugoslav army and Serbia's police forces pursue ethnic Albanian rebels in Kosovo, forcing hundreds of thousands of Albanians to flee; after 78 days of massive air strikes by NATO, Serbian and Yugoslav forces withdraw from Kosovo. Albanians in turn engage in the ethnic cleansing of almost all remaining Serbs in Kosovo. The International Crime Tribunal for Yugoslavia levels charges of war crimes against humanity upon Slobodan Milosevic of Yugoslavia, Milan Milutinović of Serbia, and other Yugoslavian ministers.
- 2000** Milosevic is ousted in national election and replaced as president by Vojislav Koštunica. Milosevic is arrested.
- 2001** Milosevic is handed over to the International Court of Justice at The Hague.
- 2002** Serbia and Montenegro reach an EU-negotiated agreement to abolish the Federal Republic of Yugoslavia and replace it with a loose union to be called Serbia and Montenegro. The republics will be allowed to vote on full independence in three years; Montenegrin Prime Minister Filip Vujanović resigns over the independence issue.
- 2003** Serbia and Montenegro's federal Parliament approves the Constitutional Charter for the union of the two republics. The Parliament elects Svetozar Marović as national president. Serbian prime minister Zoran Djindjic is assassinated. Filip Vujanović is elected president of Montenegro in the third attempt at an election. Milosevic is indicted for murder. Serbia's elections fail to produce a president or parliament; coalition talks begin.
- 2004** Vojislav Koštunica becomes Serbia's prime minister, at the head of a Socialist-center-right coalition. A war crimes trial begins in Belgrade. Serbs and ethnic Albanians fight in Mitrovica. Boris Tadic, of the Democratic Party, is elected president of Montenegro.
- 2005** Serbian border guards shoot an Albanian youth trying to cross the border with Macedonia, sparking protests from ethnic Albanians. Montenegro's leaders write to Serbia's to suggest ending the union early; Koštunica rejects the idea.
- 2006** Milosevic is found dead in his cell in the Hague.

DATE OF INDEPENDENCE

June 29, 1976

DATE OF CONSTITUTION

March 26, 1979; revised 1991 and 1993

GEOGRAPHICAL FEATURES

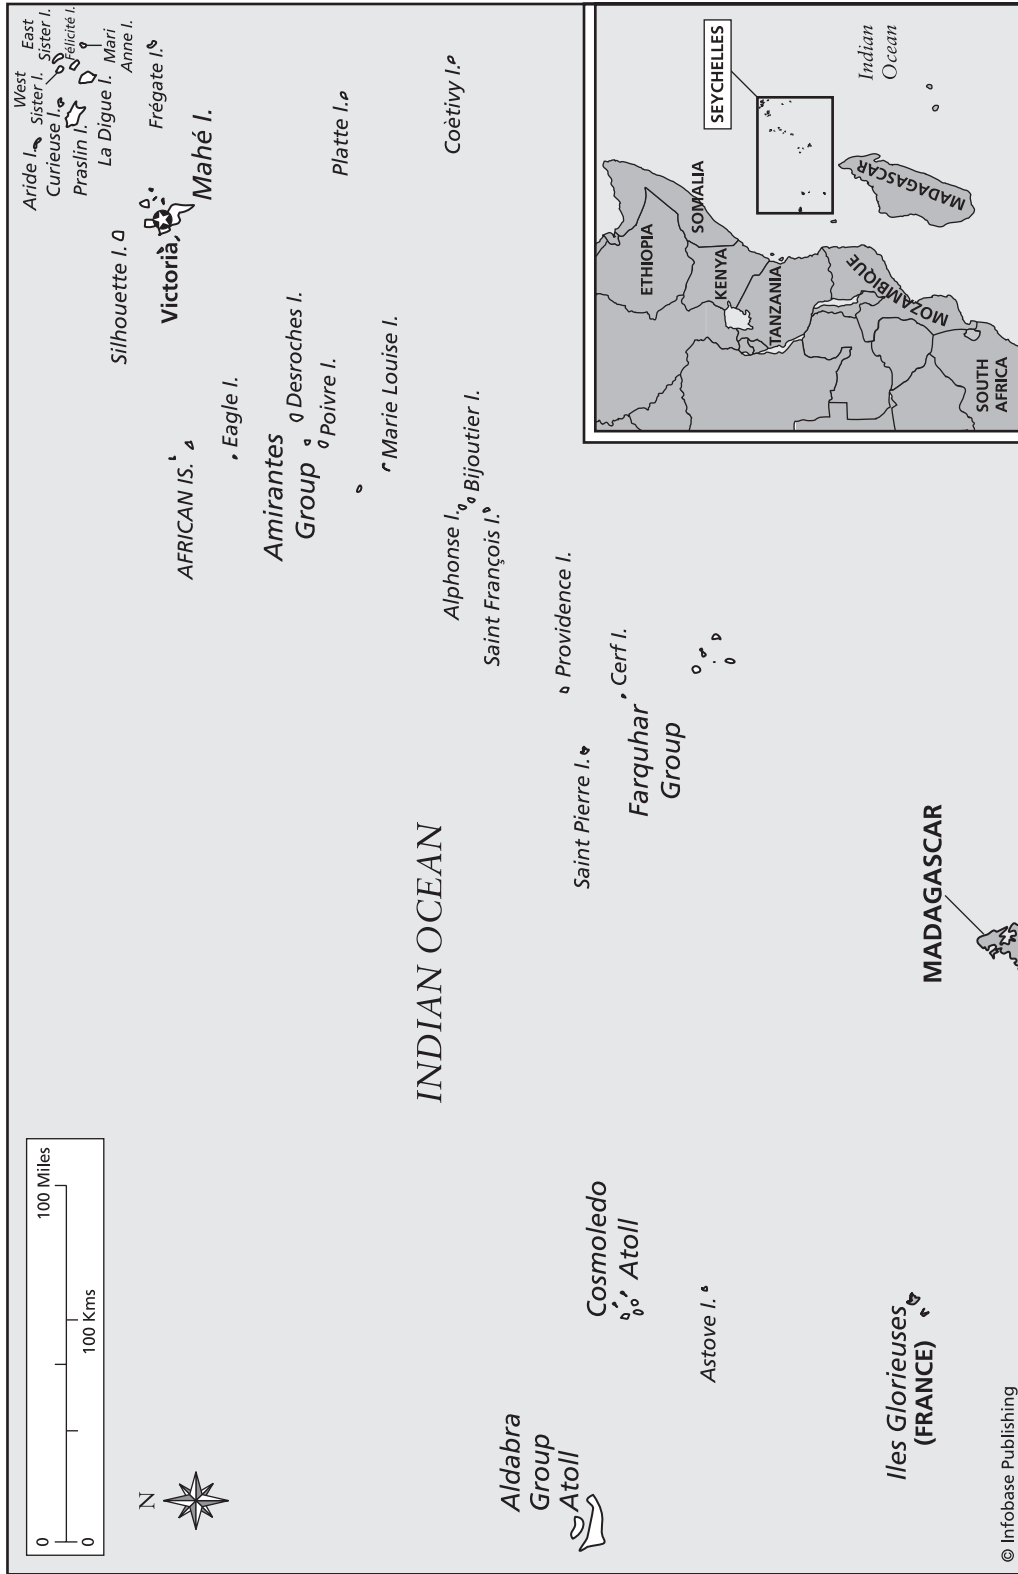

Seychelles consists of the Seychelles Archipelago, a group of some 115 islands widely scattered in the western Indian Ocean, and a number of other island groups, the southernmost of which is 209 km (130 mi) north of Madagascar. Of these islands, 83 have geographical names, and 33 are permanently inhabited. The total land area of the country is 455 sq km (176 sq mi). Mahé, the principal island, is 1,600 km (1,000 mi) off the coast of Kenya and extends 27 km (17 mi) north to south and 11 km (7 mi) east to west, with a coastline of 127 km (79 mi). The total length of the coastline of all the islands is 491 km (305 mi).

The Seychelles islands are generally divided into two groups, of which the granitic islands total 40 and

the coralline islands the remainder. The granitic islands rise above the sea, forming peaks or ridges, while the coralline islands are low-lying, rising only a few feet above the surface of the sea. Besides Mahé, whose land area of 142 sq km (55 sq mi) accounts for one-third of the national territory, the other islands form two principal groups: Praslin, La Digue, Felicité, East Silver, West Silver, Curieuse, and Aride; and Silhouette and North Island. The most easterly island is Frégate, the most southerly is Platte, and the most northerly are Bird and Denis.

Most of Mahé is mountainous; in general the hills rise abruptly from the sea. The highest peaks are Morne Seychellois (905 m; 2,968 ft) and Trois Frères (728 m; 2,390 ft). Towering and rugged crests, cliffs, and boul-

Seychelles

ders contribute to the great natural beauty of the island. Many waterfalls descend from the heights to the white, sandy beaches, which are fronting flats of coral and shell known locally as plateaus. After Mahé, the three largest islands are Praslin, with a maximum elevation of 384 m (1,260 ft); La Digue, with a maximum elevation of 358 m (1,175 ft); and Silhouette, with a maximum elevation of 754 m (2,473 ft). The distance from Mahé to the island farthest from the main group is 1,014 km (630 mi).

---------------	--------

CLIMATE AND WEATHER

Although Seychelles lies close to the equator, the climate is equable and healthy because of the maritime influence. The hot season lasts from October to April, the cool season from May to September. Temperatures at sea level are fairly constant, at about 26.6°C (80°F) throughout the year, and rarely exceed 29.4°C (85°F). At higher elevations, temperatures are proportionately lower, falling to 16°C (61°F) at night.

The southeasterly monsoon blows from May to October, during the dry season, while the west-northwesterly monsoon blows from December to March, bringing frequent and heavy rains. The average rainfall on the coast is 2,280 mm (90 in); it increases to about 3,040 mm (120 in) at elevations of up to 183 m (660 ft) and to about 3,810 mm (150 in) at higher levels.

Seychelles lies outside the cyclone belt, and such storms are rarely encountered.

Climate and Weather

Mean Temperature
 Coastal Regions: 80°F to 85°F
 Average Rainfall
 Coastal Region: 90 in
 Inland Higher Elevations: 120 in to 150 in

FLORA AND FAUNA

The nation's plateau area has been restored to forest, with species such as the mapou, the Indian mulberry, and the *bwa sousouri*. This area is home to numerous birds, including shearwaters and terns. Along the coasts can be found habitat made up of vegetation such as *vouloutye* and *bwa matlo*, in which five of Seychelles' 11 endemic bird species can be found, including robins, sunbirds, fodies, pigeons, and warblers. Cousin Island is the most important nesting site in the Indian Ocean for turtles, and the island is also home to various species of geckos, tortoises, and skinks. The island has the highest density of lizards in the world. On Bird Island, a giant land tortoise named Esmeralda is the largest such tortoise in the world, at 304 kg (670 lbs). At over 200 years old, the tortoise is thought to be the world's oldest living creature.

ETHNIC COMPOSITION

Seychelles has a relatively homogeneous population, in which persons of mixed African and European origin, called Creoles, compose the majority. There is a small white group claiming pure French ancestry, and there are also more recent white arrivals, most of whom are retired British colonial administrators.

Alien minorities include Indians and Chinese, both of whose numbers are very small. The Indians have resisted assimilation, while the Chinese have married freely with the Creoles.

LANGUAGES

The official languages are French, English, and Creole, which is the mother tongue of 91 percent of the Seychellois. It is a colorful language based on a simplified French syntax and enriched by many African loanwords.

RELIGIONS

Almost all native Seychellois are Christians, with some 87 percent Roman Catholic and 7 percent Anglican. Hinduism, Islam, and Buddhism are practiced mainly by Asian immigrants, accounting for just over 4 percent of the population.

The cathedral of the Seychelles Catholic diocese is in Port Victoria, on Mahé. Most of the Catholic clergy are foreign. The church has considerable social influence and a virtual monopoly over education. Despite the lasting influence of the René regime's socialist bent, there has remained complete freedom of religion.

HISTORICAL BACKGROUND

The French first claimed Seychelles (then uninhabited) in 1756, naming it after their finance minister, Vicomte de Sechelles. Colonization began in 1768, when a party of 22 Frenchmen arrived with slaves. Between 1793 and 1813 the French and the British fought for control of the islands, and twice—in 1794 and 1804—the French were forced to yield. The islands were eventually ceded to Great Britain under the terms of the 1814 Treaty of Paris. Thenceforth the islands were administered from Mauritius as a dependent colony. With the abolition of slavery in 1834, many of the French landowners departed, taking their slaves with them; this population loss was offset by the arrivals of thousands of liberated slaves as well as Indian and Chinese indentured laborers. In 1903 the islands became a British crown colony no longer subordinate to Mauritius. However, the British presence on the islands never consisted of more than a handful of civil servants, and the Seychellois continued to remain culturally more French than English.

The progress of Seychelles toward self-government began in 1888, when a legislative council and an executive council were created. The first popular elections were held in 1948, universal adult suffrage was introduced in 1967, and a house assembly, cabinet, and prime minister

were named in 1975. Independence was achieved in 1976, when Seychelles became a republic within the Commonwealth. At that time the United Kingdom transferred the islands of Aldabra, Farquhar, and Desroches from its Indian Ocean Territory to Seychelles. Control of the Chagos Archipelago atoll of Diego Garcia, the site of a controversial joint U.S.-U.K. base in the Indian Ocean, remained in the hands of the United Kingdom.

At independence in 1976, the former chief minister James R. Mancham became president, and the leader of the opposition, France Albert René, became prime minister. The following year Mancham was deposed in a near-bloodless coup that made René head of state. In 1979 he was confirmed in office, and he was reelected again in 1984 and 1989; he received a reported 92.8 percent of the vote in 1984 after the passage of an ordinance under which those who failed to vote lost their right to public assistance.

The number of coups and attempted coups that occurred following independence reflect Seychelles' deep-seated political instability. One year after independence President Mancham was deposed. In 1979 René announced the discovery of an antigovernment plot that he maintained was sponsored by the exiled president and a group of South African mercenaries; two years later he discovered a more serious plot led by Michael Hoare, a mercenary with a history of involvement in African destabilization efforts. An internal mutiny by some members of the armed forces in 1982 was also put down, with the assistance of Tanzanian troops then in Seychelles. (In 1984 all Tanzanian troops were removed by mutual agreement.) The British police discovered a plan to overthrow the Seychelles government in 1987. France Albert René was again reelected president in 1993, 1998, and 2001. In 2002 René's People's Progressive Front won the parliamentary elections, but the opposition party, the Seychelles National Party, increased its representation from one to 11 seats. In 2004 René stepped down and handed the presidency to his vice president, James Michel. In December 2004 the tsunami that devastated much of the region caused widespread damage to three of the nation's islands.

LIST OF MODERN RULERS

1976–77	James R. Mancham
1977–2004	France Albert René
2004–	James Michel

CONSTITUTION

The constitution of 1979 made Seychelles a socialist state and declared the Seychelles People's Progressive Front (SPPF) the one legal party. Under its provisions the

president is elected by popular vote for a five-year term; he may be elected for a maximum of three consecutive terms. He appoints an advisory council of ministers. The unicameral legislature, the National Assembly, is elected for a five-year term. The president appoints the judiciary on the advice of a judicial tribunal. Modifications to the constitution adopted in 1991 and 1993 legalized additional political parties.

PARLIAMENT

The unicameral National Assembly has 25 directly contested seats along with nine seats allocated on a proportional basis to parties winning at least 10 percent of votes. The term of parliament is five years. Suffrage is universal at the age of 17.

POLITICAL PARTIES

The four major political parties are the Democratic Party, founded in 1992 as the successor to the Seychelles Democratic Party, which ruled from 1970 to 1977; the Mouvement Seychellois pour la Démocratie, founded in 1992, which is the smallest of the four; the Seychelles National Party, which grew out of a number of opposition parties to adopt its current name in 1995; and the Seychelles People's Progressive Front, the party that took power in 1978 and ruled as the sole party from 1978 to 1991.

LOCAL GOVERNMENT

Until 1968 there were district-level governments on the islands of Mahé, Praslin, La Digue, and Silhouette. Local government was abolished in 1971, and the functions of the district councils were taken over by the national government. There remain, however, 23 administrative districts.

LEGAL SYSTEM

Seychelles' legal system is a blend of French and English codes. The civil and commercial codes are French. The criminal law was French until 1952, when the British system was introduced.

There are three court levels: the Court of Appeal, the Supreme Court, and the magistrate courts. The Court of Appeal hears appeals from the Supreme Court in both civil and criminal cases, while the Supreme Court hears appeals from the magistrate courts. The president of the Court of Appeal and the chief justice of the Supreme Court are appointed by the president on the advice of the public service commission. Nonpolitical prisoners are granted fair public

trials. Most judges are aliens, mostly British, on short-term contracts. Appellate judges come once a year from Britain. Except for in security cases, judges have exhibited considerable independence from both the executive and legislative branches of the government.

Defendants in nonpolitical cases (both civil and criminal) have access to counsel and have enjoyed speedy and fair trials. The right to trial is patterned in large measure on English common law, although there is also heavy influence from Napoleonic law.

HUMAN RIGHTS

In terms of political and civil rights, Seychelles is classified as an unfree nation. In practice, however, a considerable degree of freedom is enjoyed by the people, especially since the end of one-party rule in 1993.

Still, the judiciary lacks the power to protect individuals against abuses by the state. Political prisoners are denied legal representation and have been held without being formally arraigned or tried. Emergency powers permit detention without trial if the president signs a detention order. The police have broad powers of search, seizure, and arrest without warrant; these powers, however, have been used very sparingly. Released political prisoners have complained of the intimidating surveillance of their homes. For the Seychellois, antigovernment statements can result in imprisonment; for expatriates such would mean expulsion on 24 hours' notice and without explanation.

FOREIGN POLICY

The principal objectives of Seychelles' foreign policy following independence were the return of a number of small islands and island groups that were administered since 1965 as part of the British Indian Ocean Territory along with the designation of the Indian Ocean as a zone of peace. The 1995 closing of a U.S. space tracking station on the island of Mahé cost the Seychelles government about \$4.5 million a year in rent. Relations with South Africa were soured because of the coup attempt staged by South African mercenaries, but by 1992 relations had noticeably improved. Seychelles is a founding member of the Indian Ocean Commission, whose other members are Madagascar, Mauritius, Comoros, and Reunion. In 1995 Seychelles drew international criticism for securing the passage of a constitutional amendment that, in return for an investment of \$10 million, would provide immunity to money launderers, drug smugglers, and other criminals. Relations with the United States were strained further after the issuance of a U.S. State Department report criticizing Seychelles' human rights record and the pervasive corruption of René's one-party rule. In 2003 the nation

withdrew from the Southern African Development Community and closed three diplomatic missions.

DEFENSE

In 2003 the Seychelles People's Defence Forces was composed of about 800 army personnel, including 300 in the presidential protection unit. The army has one infantry battalion and two artillery elements. Paramilitary forces include a national guard consisting of 1,000 people and a coast guard estimated at 250 and divided into two divisions, the naval wing and the security, or infantry, division. In 2004 military expenditures totaled \$12.3 million, or about 1.8 percent of gross domestic product (GDP).

ECONOMY

Seychelles is one of the lower-middle-income countries of the world, with a free-market economy in which the dominant sector is private.

Since independence Seychelles has moved away from a subsistence economy to one increasingly dependent on upscale tourism, and it has increased its per capita output about sevenfold, to about \$7,600 per year. The government is also attempting to diversify by modernizing and expanding the fishing and forestry industries.

The vulnerability of the tourist sector was illustrated by the sharp drop in revenues first in 1991–92 due largely to the Persian Gulf War and again after the terrorist attacks of September 11, 2001. Although the industry rebounded each time, the government has recognized the need to continually upgrade the sector in the face of stiff international competition. Other issues facing the government are the curbing of the budget deficit and further privatization of public enterprises; public debt in 2003 was 129 percent of GDP. Growth slowed in 1998–2000, due to sluggish tourist and tuna sectors, and in 2002 it was just 1.5 percent. Tight controls on exchange rates and the scarcity of foreign exchange have hindered short-term economic prospects. The black-market value of the Seychelles rupee is half the official exchange rate; without a devaluation of the currency the tourist sector should remain sluggish, as vacationers seek cheaper regional destinations such as Comoros, Mauritius, and Madagascar.

ENVIRONMENT

Over 40 percent of all land in Seychelles is protected as public sanctuaries, making the nation one of the most protected in the world. However, the country still has problems regarding coastal erosion and the loss of arable lands as water levels rise. The government is well aware of its challenges and has committed time and resources to secure solutions.

LIVING CONDITIONS

In many respects, living conditions in Seychelles are reasonably good. The climate is moderate and healthful, the rates of infectious disease are low, the government provides reasonably good health-care services, the people eat a healthful diet, and the government's human rights record has improved since the early 1990s. Nonetheless, problems such as poverty and lack of education remain. The isolation of the islands leads to a measure of boredom, especially among younger people, and rates of juvenile delinquency, alcoholism, and domestic abuse remain high, while drug abuse has been increasing. Another problem for many is the islands' informal but powerful caste system, with whites and "near whites" controlling power and influence; among the black population, skin tone determines social status, with lighter-skinned people enjoying more prestige.

HEALTH

Health care in Seychelles is good. Life expectancy at birth in 2005 was almost 72 years overall, more than 77

years for women. The infant mortality rate was under 16 deaths per 1,000 live births, a figure down sharply from 50 in recent years. The islands enjoy a healthful climate, so such diseases as malaria, yellow fever, sleeping sickness, and cholera have largely been eliminated—or never took hold on the islands in the first place. Still, hookworms and tapeworms among children remain problems. The government provides health-care services, and there is a hospital in Port Victoria, although people needing specialized care must find it in other countries.

FOOD AND NUTRITION

Standards of nutrition in Seychelles are quite high. Between 1990 and 1998, among children under the age of five only 6 percent were moderately underweight, 0 percent severely underweight. Just 2 percent of children suffered from moderate to severe wasting, just 5 percent from moderate to severe stunting. The nation's diet, rich in fish, lentils, and fruits, is healthful. The dietary staple is rice, though equally important is fish, which the Seychellois consume at a rate of some 15 pounds per person per month. Cuisine is a blend of French, Indian, Chinese, and English styles, creating a unique, hot and spicy creole style.

WORK

The most recent estimate holds that the size of the labor force is roughly 31,000. Traditionally, Seychelles relied on a plantation-based economy, but agriculture has declined, such that only 10 percent of workers are employed in agriculture. More than two-thirds of the labor force is employed in the public sector, including government and state-owned enterprises. In 2001 tourism, employing nearly 30 percent of the labor force, accounted for nearly 13 percent of GDP; industry, including commercial fishing, accounted for nearly 29 percent of GDP.

EDUCATION

The national literacy rate was 91 percent in 2004. Schooling lasts for 13 years, as divided into nine years of primary school, two years of lower-secondary or middle school, and two years of upper-secondary school. Primary schooling is free and compulsory. The school system consists of 24 primary schools, nine secondary schools, one vocational and technical school, and one teacher-training school. Of the primary schools, the vast majority are run by bodies aligned with the Roman Catholic Church, the Church of England, or the Seventh-Day Adventist Church. All private schools receive state aid. The voluntary National Youth Service, launched in 1981, now provides secondary education to most children between ages 15 and 17.

The school year runs from January through December. The language of instruction is English in the upper grades, French in the middle grades, and Creole in the lower grades.

2094 Seychelles

Seychellois pursuing higher studies in fields other than education have to go abroad. The government provides scholarships for higher studies in Commonwealth countries.

SCIENCE AND TECHNOLOGY

As a very small nation with no university, Seychelles sponsors little scientific and technological research on its own. However, the nation's location and unique ecosystems have drawn international researchers in such areas as marine biology, botany, ornithology, and geology, and numerous books are available about the birds, fish, seashells, and other inhabitants and elements of the islands' natural environment.

MEDIA

Seychelles has five daily newspapers, including the *Seychelles Nation*; also well circulated is an opposition weekly titled *Regar*.

The government controls the major newspapers in the country as well as all radio and television broadcasting. The Catholic Church publishes an increasingly lively paper, *Echos des îles*, which is not subject to government control or censorship, though there is some self-censorship because the government frequently sues the press for

libel. Foreign broadcasts are widely listened to and are uncensored. Except for opposition material, foreign publications, including those critical of the government, have been imported and sold without hindrance.

Seychelles Agence de Presse is the national news agency.

The Seychelles Broadcasting Corporation broadcasts in English, French, and Creole. The Far East Broadcasting Association, a Christian missionary outreach, operates FEBA Seychelles, broadcasting in 12 languages and on nine frequencies beamed to South Asia, including India, as well as the Middle East and eastern and southern Africa.

CULTURE

Seychelles has little in the way of a written literary tradition apart from records of oral legends and folktales, although one modern poet, Antoine Abe, has achieved some renown. The main forms of cultural expression are music and dance, which blend African, French, and Asian styles into a unique style. Drums, violins, and accordions have often been used as accompaniment, although the acoustic guitar has become more popular. Common dances include a French import, the *contredanse*, which was brought to the islands by early colonists. Also popular are the *sokoué*, a type of masked African dance in which performers depict trees, animals, and birds, and the *moutia*, which features uninhibited body, especially hip, movements. Folk arts and crafts are widely practiced and include landscape painting, sculpture, wood carving, jewelry, and batik cloth making.

FOLKLORE AND MYTHOLOGY

Seychelles has a rich tradition of proverbs, songs, fables, and storytelling; folkloric traditions are often practiced at night around bonfires. One of the most prominent folk performances is the *moutia*, an African slave dance with storytelling that began when the islands were a French colony. The usual pattern of the *moutia* was for two male performers to begin with a dialogue on the day's work; women would then join in, to the accompaniment of chanting and singing. The dance would use characteristically African hip movements and rhythms, while drummers beat on coconut trunks covered with animal skins. Many of these performances offered satirical social commentary.

ENTERTAINMENT AND RECREATION

The Seychellois often gather in the evening to play cards, checkers, dominoes, and backgammon or to dance and play music. Television and video rentals have also become popular, and listening to music on the radio is commonplace.

ETIQUETTE

The Seychellois are generally regarded as easygoing, relaxed, and informal. Rarely do people dress formally (except when they attend church), and impromptu social gatherings, where dance and music are enjoyed, are common. Greetings tend to be simple, and inquiring about another's health or welfare is avoided because doing so is considered to bring bad luck. Interpersonal relations on the islands are governed in part by an informal caste system, where people are identified by the color and tone of their skin, ranging from *ble* (blue) to *bla-rose* (white-pink), that is, from dark plantation workers to white European landowners. While such distinctions are not officially recognized, people respond to one another in a manner based on skin color, which generally determines one's place in the social order.

FAMILY LIFE

Family life tends to be fluid in Seychelles. A large proportion of children—between 50 and 75 percent—are born out of wedlock, and many people engage in sexual relationships outside of formal marriage. Many engage in serial monogamy, with the domestic unit consisting of the woman, her current partner, her children, and often children from previous relationships. This practice is more common among the lower classes; among the upper

classes, traditional marriage is the norm. The culture is strongly matriarchal, so women control the family budget and expenditures, and the man, regarded as a breadwinner, may have little role in the rearing of children. Women frequently bring their own property into marriage, and they retain that property in the event of divorce. The fertility rate is quite low by African standards: In 2005 there were just 1.75 children born per woman.

PERSONAL APPEARANCE

Most Seychellois dress in clothing similar to that worn in the United States. When attending church or other special events, people tend to dress up, but for everyday wear, and even in the workplace, clothing is informal. Women tend to wear smocks or African sarongs, sandals, and straw hats. Men wear trousers and loose-fitting short-sleeved shirts. Shorts are also frequently worn because of the tropical climate.

SPORTS

The most popular sports in Seychelles, both for spectators and participants, are basketball and especially soccer. While the islands offer a wide range of water sports—including swimming, diving, sailing, windsurfing, and water skiing—these sports tend to be enjoyed more by tourists and the leisure classes.

CHRONOLOGY

- 1976** Following the London Constitutional Conference, Seychelles is granted independence as a republic within the Commonwealth, with James R. Mancham as president; the United Kingdom transfers the Aldabra, Desroches, and Farquhar islands of the British Indian Ocean Territory to Seychelles.
- 1977** President Mancham is ousted in a coup led by Prime Minister France Albert René, who assumes the presidency.
- 1979** New constitution is promulgated. France Albert René is elected president, and a new National Assembly is elected. Violent demonstrations against a proposed compulsory national youth service force the government to revise the plan.
- 1981** South African mercenaries attempt an unsuccessful coup.
- 1983** Elections are held for the National Assembly. Seychelles joins Madagascar and Mauritius in setting up the Indian Ocean Commission.
- 1984** In the presidential election, the sole candidate France Albert René is reelected.

2096 Seychelles

- 1987** British police uncover a plot to overthrow the Seychelles government.
- 1989** René is accorded a third term as president.
- 1991** Constitutional changes legalize the formation of additional political parties.
- 1993** A new constitution is adopted. René is elected president against two opponents.
- 1998** René is reelected.
- 2001** René is reelected president, receiving 54.2 percent of the vote.
- 2002** René's People's Progressive Front wins the parliamentary elections, but the opposition party, the Seychelles National Party, increases its representation from one to 11 seats.
- 2004** René steps down and hands the presidency to his vice president, James Michel.
In December a tsunami devastates much of the region, causing widespread damage to three of the nation's islands.

January 1 (New Year's Day), April 19 (Republic Day, National Day), April 27 (Independence Day), various Christian and Islamic festivals

DATE OF INDEPENDENCE

April 27, 1961

DATE OF CONSTITUTION

October 1, 1991, amended 2001

GEOGRAPHICAL FEATURES

Sierra Leone is a loosely circular-shaped country in the southwestern part of West Africa, with an area of 71,740 sq km (27,699 sq mi). Its greatest distance north to south is 338 km (210 mi); that east to west, 304 km (189 mi). The total length of the Atlantic coastline is 402 km (250 mi). Sierra Leone's total international land border of 958 km (595 mi) is shared with two countries: Guinea (652 km; 405 mi) and Liberia (306 km; 190 mi).

Sierra Leone is divided topographically into four regions: the interior plateaus and mountains, the interior low plains, the coastal swamplands, and the Sierra Leone peninsula. In the east and northeast, plateaus rise sharply in a flight of steps to mountains such as the Tingi Hills

and the Loma Mountains, which reach 1,948 m (6,391 ft), one of the highest points in West Africa. Below these hills are the Nimini and Sula mountains and the Gola, Gori, and Jojina hills. The plateaus and the mountains encompass nearly half of the country. Between the highlands and the coastal swamps are rolling lowlands up to 96 km (60 mi) broad, covered in the northeastern part by swampy grasslands known as *bolilands*. The coastal swamplands sit on a plain with an average width of 32 km (20 mi) that stretches along the coastline, as marked by numerous estuaries and peninsulas. The Sierra Leone peninsula, on which Freetown, the capital, is situated, is a central mountainous area with a maximum elevation of nearly 900 m (2,960 ft), with a strip of flatland running around the base of the mountains.

CLIMATE AND WEATHER

As in all tropical countries, the climate is marked by sharp alterations between wet and dry seasons. The wet season lasts from May to October, the dry season from November to April. The coastal regions receive the highest annual rainfall, of over 5,080 mm (200 in), while Freetown receives an average of 3,810 mm (150 in). Rainfall decreases inland toward the north, with Kabala averaging 2,160 mm (85 in). The rainiest months are July, August, and September.

Both temperature and humidity are consistently high throughout the country, with maximum diurnal variations of up to 16.6°C (61.9°F) in the interior. The mean temperature in the interior and coastal lowland plains is 26.6°C (80°F), while the eastern plateau region has a mean of 25°C (77°F).

The prevailing wind systems are the southwestern monsoons in the wet season and the hot and dry harmattan, which blows from the northeastern Sahara.

 Freetown: 150 in
 Kabala in the North: 85 in

FLORA AND FAUNA

Sierra Leone is home to 2,090 species of higher plants, 147 species of mammals, 172 species of birds, 67 species of reptiles, 35 species of amphibians, and 99 species of fish. In the northern part of the country, savanna, with shrubs and grassland, is dominant. In the southeast, dense forests of teak, mahogany, and palm predominate and provide habitat for such species as monkeys, chimpanzees, porcupines, pygmy hippopotamuses, elephants, antelopes, and crocodiles. Sierra Leone has a number of distinctive bird species, including the Rufous fishing owl, the Gola malimbe, and the white-necked picathartes.

ETHNIC COMPOSITION

Sierra Leone is an ethnic mosaic of 18 groups, of whom two—the Mende and Temne—constitute about 60 percent of the population, while a third, the Limba, constitute nearly 10 percent of the population. The major ethnic groups also have ecological zones in which they have established their dominance.

The dominant factor in interethnic relations is competition between northern and southern peoples, especially among the Temne and Mende. Historic divisions and rivalry between Creoles and non-Creoles have lost much of their edge as the influence of Creoles has declined. Despite economic tensions, interethnic relations are characterized by a lack of the virulence common in other African countries. Politically, the Sierra Leone People's Party is a Mende organization, while the ruling All People's Congress is a Temne-Creole-Limba alliance.

Ethnic alien groups include both Africans and non-Africans. Among African aliens the largest community is Liberian, comprising about 67,000 refugees. There also are about 4,000 Lebanese—who began migrating to the country in the 1890s and came to dominate commerce and trade—500 Indians, and 2,000 Europeans.

LANGUAGES

The official language of Sierra Leone is English, though its use is restricted to administrative, business, and technical communications.

The most widespread lingua franca is Krio, the mother tongue of the Creoles. Krio is based on a pidgin English core with essentially African syntax and words borrowed from English, Portuguese, and African languages. However, Krio has no standardized orthography. It is a first language for only about 10 percent of the population but is understood by 95 percent.

Of the African languages, only Mende, Temne, and Vai exist in written form. Mende and Temne are written in the Roman alphabet, with the addition of a few specially devised letters to accommodate African sound patterns.

RELIGIONS

Generally speaking, over 30 percent of Sierra Leoneans follow traditional religious beliefs, 60 percent adhere to Islam, and 10 percent are Christian. Islam is strongest in the north among the Mandinka, Fula, and Vai, while Christianity is strongest in coastal areas among the Creoles, Sherbro, and Mende.

Christian influence in Sierra Leone transcends religion and extends to politics, education, and health services. Both Anglicans and Roman Catholics have archbishoprics in Freetown.

Most Sierra Leonean Muslims are Sunni. The Ahmadiyya, a militant Muslim sect of Pakistani origin, is active in the country.

Christian	600,000

HISTORICAL BACKGROUND

The Bulom people were probably the earliest inhabitants of Sierra Leone; they were joined in the 15th century by the Mende and Temne. The history of the country's poetic name of Sierra Leone dates to 1462, when a Portuguese explorer, Pedro da Cintra, sailed down the coast of West Africa and saw the long range of mountains of what is now known as the Freetown Peninsula. As a result of the topographic configuration and climatic conditions experienced by the explorer at the time, he called the lands Sierra Lyoa, meaning "lion mountains." In the 16th century an English sailor called it Sierra Leoa, by the 17th century it was Sierra Leona, and by 1787 the region saw the first of several British administrations under the Sierra Leone Company. Through the years of British colonization the original name was modified, becoming Sierra Leone, the name by which the country is known today.

Before the area was discovered by Europeans, the original local name for what is now Freetown was Romarong, meaning "the place of the wailers," so called because of the constant weeping and screaming of victims of storm and cross-current disasters at the mouth of the Sierra Leone River. (Interestingly, when the Portuguese sailor Pedro da Cintra named the country, he deviated

little from the nature-based naming notions of the indigenous people.)

The colony of Sierra Leone was founded by British philanthropists in the late 18th century as a home for freed African slaves. From 1791 to 1808 it was administered by the Sierra Leone Company; it was transferred to the British Crown in 1808. In 1896 a British protectorate was declared over the hinterland, or mainland. Sierra Leone became independent in 1961.

Sierra Leone is among the few countries of Africa that have retained Western traditions in their political and economic systems. The major legacies of British rule—the English language, legal system, and educational and administrative structures—have been preserved almost intact. Following independence, political leadership was left in the hands of the Sierra Leone People's Party (SLPP), which was led by Sir Milton Margai until 1964 and then by his half-brother Sir Albert M. Margai until 1967. Both served as prime minister. Attempts by the SLPP to impose a one-party system were successfully resisted by the All People's Congress (APC), headed by Siaka P. Stevens; in 1967 the APC won a majority of seats in the House of Representatives, and Stevens was appointed prime minister. He was prevented from assuming office, however, by a coup that installed Lt. Col. Andrew Juxon-Smith as leader of a National Reformation Council (NRC). The council suspended the constitution and dissolved the political parties. In 1968 a group of junior officers, the Anticorruption Revolutionary Movement, overthrew the NRC and restored civilian government, with Stevens as prime minister.

Instability and insecurity characterized the Stevens regime. There were attempted coups in 1971 and again in 1975. In 1970 the government banned a new opposition party, the United Democratic Party, and arrested its leaders. Three years later general elections were held in which there were many irregularities. Official intimidation contributed to an SLPP boycott of the event. Following the election, in which the APC won all but one of the seats, Sierra Leone became a de facto one-party state; it was officially declared so under the 1978 constitution.

Stevens retired in 1985, naming Maj. Gen. Joseph Saidu Momoh his successor. Momoh's assumption of power was greeted favorably by Sierra Leoneans troubled by endemic economic problems and government corruption. However, Momoh's largely ineffective attempts to deal with these problems caused his popularity to wane, and there was an unsuccessful coup in 1986.

Early in 1991 the Liberian civil war spilled over into Sierra Leone. As government forces fought back Liberian guerrillas, a Sierra Leonean rebel group, the Revolutionary United Front (RUF), sprang up to take territory of its own, and a brutal civil war ensued. A new constitution, which provided for the restoration of a plural political system, was adopted in 1991.

In 1992 Captain Valentine Strasser ousted Momoh and replaced the government with a military junta. He announced the installation of a transitional government that would lead until the restoration of civilian government, which would occur by January 1996. In fact, Strasser was replaced in a bloodless coup led by his defense minister, Brigadier Julius Maada Bio, in January 1996, allegedly to prevent efforts by Strasser to remain in power. Presidential and legislative elections indeed took place in February, as monitored by international observers. Some 27 people were killed during the elections; the killings were generally attributed to efforts by the RUF to disrupt the electoral process. The reconstituted SLPP won 36.1 percent of the votes cast in the legislative elections, while its presidential candidate, Ahmed Tejan Kabbah, received 35.8 percent of votes to win the presidential election.

On May 25, 1997, Kabbah was ousted in a coup led by Major Johnny Paul Koroma. International efforts to restore Kabbah to power led to his return from exile in March 1998. A year later he signed a peace agreement with the RUF leader Foday Sankoh, outlining a transitional government that would include several RUF members. However, the peace agreement collapsed in May 2000, following the RUF's abduction of 500 UN peacekeeping troops. By the spring of 2001 more than 12,000 peacekeeping troops were stationed in Sierra Leone. In January 2002 the war was declared over, and the United Nations announced that the disarmament of combatants was complete. That year, too, Kabbah won a landslide victory, with his party securing a majority in the parliament. In 2004, war-crimes trials began, and the first local elections in more than three decades were held. In September 2004 the United Nations turned control of the capital over to local forces.

LIST OF MODERN RULERS

1961–64	Milton Margai (prime minister)
1964–67	Albert M. Margai (prime minister)
1967–85	Siaka P. Stevens (prime minister)
1985–92	Joseph Saidu Momoh (prime minister)
1992–96	Valentine Strasser (junta leader)
1996	Julius Maada Bio (coup leader)
1996–97	Ahmed Tejan Kabbah (president)
1997–98	Johnny Paul Koroma (coup leader)
1998–	Ahmed Tejan Kabbah (president)

CONSTITUTION

Under tremendous popular pressure, the government of Maj. Gen. Joseph Saidu Momoh drafted a new constitution that was approved by referendum on August 30, 1991. The 1991 constitution provided for the formation of political parties and created a unicameral 80-

member legislature. The constitution also established a president who would serve as both head of state and head of government. However, before elections could be held, Momoh was overthrown by Capt. Valentine Strasser. Strasser himself was overthrown by Brig. Gen. Julius Bio, who promised to bring about civilian government. Elections for 68 of the 80 seats were held in February 1996; the other 12 seats are filled to represent the 12 provincial districts. Voting is universal at the age of 18. In the 1996 elections Ahmad Tejan Kabbah was elected president. Rebel conflict in 1997 forced him to flee the country, and he was not reinstated until 1998, when West African peacekeepers restored some national stability. UN peacekeepers remained in the country, and elections were again held in May 2002. The number of legislative seats filled through general elections was increased to 112.

PARLIAMENT

The parliament, the House of Representatives of Sierra Leone, consists of 124 members, 112 of whom are elected by popular vote and 12 of whom are paramount chiefs chosen in separate elections. Members serve terms of five years and are elected by universal suffrage.

POLITICAL PARTIES

Sierra Leone is a multiparty state. In the 2002 elections 11 parties registered to participate. The most dominant party is the Sierra Leone People's Party (SLPP), which won over 70 percent of the vote in the most recent elections. Only the All People's Congress and the Peace and Liberation Party also hold seats—27 and two, respectively.

LOCAL GOVERNMENT

For administrative purposes, Sierra Leone is divided into three provinces and one area. The provinces are further divided into districts. The 12 districts are divided into some 148 chiefdoms, each under the control of a paramount chief and a council of elders known as the tribal authority. Of these chiefdoms, 143 can raise and disburse funds; maintain law, order, and public health; operate local courts and the local police force; and allocate land.

The Western Area has a slightly different regional administrative setup. Therein, Freetown has a city government with an elected city council, aldermen for each of the city's wards, permanent committees, and an elected mayor. Outside Freetown, the Western Area is administered by rural area councils, rural district councils, and village communities, in descending order.

LEGAL SYSTEM

Sierra Leone has retained the English legal system, which it inherited during colonial days. Most of the judges and lawyers are trained in England.

The court system consists of five levels. The Supreme Court, Court of Appeal, and high courts in Freetown and in the provinces constitute the superior courts. Below this level the country is divided into 12 judicial districts, one for each province and nine for the Western Area. At least one magistrate's court is found in each district. Local courts, formerly called native courts, are located at the chieftaincy level.

The independence of the judiciary is guaranteed by the constitution. All judges have tenure and may be removed only by a two-thirds vote of the House of Representatives. All judges are appointed by the president on the advice of the prime minister, but magistrates and other court officers are appointed on the advice of the judicial service commission.

HUMAN RIGHTS

Sierra Leone was once hailed as a model African democracy. However, its history did not live up to that billing. The country developed into a one-party state where no legal opposition existed. The constitutions of 1961, 1971, and 1978 each represented a step in the direction of a controlled democracy where the interests of the ruling party were supreme. In recent years civil war marred the civil rights record of the country, which struggled to establish a stable democracy. In 1999 Armed Forces Revolutionary Council (AFRC) and RUF forces killed thousands of unarmed civilians, including many women and children, in the east and north of the country. While the exact number of those killed remains unknown, as many as 4,000 men, women, and children suffered mutilation, through crude amputations of hands, arms, legs, lips, or ears; others suffered lacerations and gunshot wounds. Survivors of attacks recounted that many others from their villages had been killed or had fled into the bush, where many died of their injuries. In January 2002 the Kabbah government and the United Nations agreed to set up a war-crimes tribunal.

FOREIGN POLICY

Sierra Leone's civil war impeded the elaboration of coherent domestic and foreign policies. The country has maintained good relations with the West, especially the United Kingdom. It also maintains diplomatic relations with the republics of the former Soviet Union, as well as with China, Libya, and Iran. In 2003 the country received about \$60 million in aid from the United States for development and health education, especially for combating AIDS.

DEFENSE

The defense structure is headed by the president, who is also the commander in chief and the minister of defense. Military manpower is provided through voluntary enlistment. In 2003 armed forces personnel totaled about 13,000. During the civil war, which lasted for most of the 1990s, various unofficial military groups existed alongside the Sierra Leone army. The largest was the Sierra Leone Civil Defence Force, which was formed to help protect civilians from rebel atrocities. In 2004 the country spent \$13.2 million, or about 1.7 percent of gross domestic product (GDP), on the military.

ECONOMY

Sierra Leone has substantial mineral, agricultural, and fishery resources. However, the economic and social infrastructure is not well developed, and serious social disorders continue to hamper economic development. The resurgence of internal warfare in 1999 brought a substantial drop in GDP. Still, by 2003 economic growth was estimated at 6.5 percent. An estimated two-thirds of the working-age population engages in subsistence agriculture. Manufacturing consists mainly of the processing of raw materials and light manufacturing for the domestic market. Bauxite and rutile mines were shut down by civil strife, but plans were made to reopen them. The major source of hard currency is found in the mining of diamonds, the large majority of which are smuggled out of the country. The fate of the economy will depend on the maintenance of peace and the continued receipt of substantial aid from abroad.

ENVIRONMENT

Sierra Leone suffers from rapid population growth, which has put stress upon natural resources. The overharvesting of timber for fuel and construction materials, the expansion of grazing, and the use of slash-and-burn agricultural techniques has led to deforestation and rapid declines in the quality of the soil. The nearly 10 years of civil war took their toll on the land as well, through deforestation and contamination.

LIVING CONDITIONS

Living conditions in Sierra Leone are generally difficult. In 2004 per capita GDP was a mere \$600, making Sierra Leone one of the poorest nations in Africa and indeed the world. Because a large proportion of the population is engaged in subsistence agriculture, it is difficult to arrive at accurate figures for poverty and unemployment, but some estimates hold that fully two-thirds of the population live below the poverty line. Making matters worse are wide disparities in income: The poorest decile receive just 0.5 percent of the nation's income, while the richest decile receive over 43 percent. Life expectancy is low, death rates are high, and only about one-third of the population is literate.

HEALTH

The state of health care in Sierra Leone is extremely poor. The nation spends just \$6 per person per year on health care. Life expectancy at birth in 2005 was just 42.5 years, among the lowest in the world. The infant mortality rate was an astonishing 144 out of 1,000 live births, one of the highest rates in the world (third only to Angola and Afghanistan). Only about 42 percent of births are attended by trained medical personnel. An enormous problem in Sierra Leone is AIDS: In 2001, 7 percent of the adult

population—about 170,000 people—were living with the disease, which that year claimed 11,000 lives.

FOOD AND NUTRITION

Nutrition in Sierra Leone is generally poor. Between 1995 and 2003, some 9 percent of children under the age of five were severely underweight, while an additional 18 percent were moderately underweight. Some 10 percent of children suffered from moderate to severe wasting, 34 percent from moderate to severe stunting. The predominant staple is rice, which is eaten at virtually every meal, usually with sauces made from various vegetables (such as eggplant, tomatoes, okra, hot peppers, cassava leaves, potato leaves, and onions) as well as from peanuts, fish, and sometimes beef and chicken. Another staple is *foo-foo*, a paste made from cassava tubers that are pounded into flour and covered with a spicy sauce.

STATUS OF WOMEN

Women in Sierra Leone are guaranteed equal rights by the constitution. In practice, access to education remains more limited for women than for men. Still, gradual improvements have been made since independence. The status of women varies substantially among different parts of the country in that it depends on the cultural values of individual tribal groups. In some areas of the nation women have been elected to the prestigious position of paramount chief. In other areas, this would simply not

happen. In the modern sector women are prominent in the professions, and one woman has served as a Supreme Court justice. The political sphere continues to be overwhelmingly male dominated.

WORK

It is estimated that about two-thirds of the nation's workers are involved in agriculture, primarily subsistence agriculture, growing such crops as coffee, cocoa, peanuts, and vegetables. The nation's small industrial sector employs about 15 percent of the labor force, primarily in mining but also in oil refining and small-scale manufacturing for domestic consumption; significant revenue has come from mines for rutile, a titanium ore, and although these were shut down during the civil war, plans were made in 2003 to reopen them. The remaining 18 percent or so of the labor force is employed in services.

EDUCATION

Sierra Leone has not yet introduced free, universal, and compulsory education. Schooling consists of 14 years divided into seven years of primary school, five years of lower secondary school, and two years of upper secondary school, the latter for those who wish to pursue higher studies. The academic year runs from September to July. The medium of instruction at all levels is English.

Christian missionary schools account for significant proportions of enrollment: 78 percent at the primary level and 87 percent at the secondary level. The Muslim Ahmadiyya movement also runs secondary schools.

Only about 60 percent of primary-school teachers and 52 percent of secondary-school teachers are qualified. Non-Sierra Leoneans constitute 10 to 15 percent of teachers in secondary schools and over 36 percent of university teachers; non-Sierra Leonean teachers include

volunteers from Britain and Canada and members of the U.S. Peace Corps. The state of education in Sierra Leone was put in flux because of the civil war. Many schools that were damaged or shut down were beginning to reopen in the early 2000s. In 1996 primary-school enrollment was about 367,000; by 2000 that figure had climbed to over half a million; at the secondary level enrollment increased from about 21,000 to over 130,000.

The University of Sierra Leone, established in 1966, comprises two campuses: Fourah Bay College, in Freetown, and Njala University College, in Njala.

SCIENCE AND TECHNOLOGY

As an extremely poor nation, Sierra Leone supports little in the way of scientific and technological research. The University of Sierra Leone, the first university in West Africa, suffers from a lack of funds and decaying facilities. Education in Sierra Leone emphasizes vocational and technical training for purposes of economic development. Organizations such as the International Education and Resource Network attempt to teach computer and other skills to young people displaced by the civil war. The nation's Ministry of Agriculture, Natural Resources, and Forestry conducts some research in these areas, as does the University of Sierra Leone, but the number of researchers employed is small.

MEDIA

The daily press includes one government-owned newspaper, the *Daily Mail*, published in Freetown; in actuality it appears irregularly. Dozens of additional newspapers and periodicals are printed, primarily in Freetown.

The national news agency is the Sierra Leone News Agency. ITAR-TASS, UPI, Xinhua, and AFP are the only foreign news agencies with bureaus in Freetown.

The Sierra Leone Broadcasting Service operates Radio Sierra Leone. Over 60 percent of programs are in English; the rest are in Mende, Temne, Krio, and Limba. The network regularly carries commercial advertising. Television broadcasting is also offered by the Sierra Leone Broadcasting Service, which serves the Freetown area with one channel.

CULTURE

Most artists in Sierra Leone are self-supporting because of a lack of government funds. The nation has a long tradition of oral storytelling, and even today there are those, affectionately called “liars,” who can make a living as storytellers. Syl Cheney-Coker achieved international repute with the novel *The Last Harmattan of Alusine Dunbar*. Graphic arts are limited primarily to folk arts and crafts, such as tie-dyeing, textiles, wood carving, and basket making. Dance is an important part of the nation’s culture, and the nation’s National Dance Troupe is internationally famous. During the 19th century Creoles tended to prefer “high” culture and rejected African Creole culture as uncivilized, but more recently there has been a revival of indigenous culture, especially through poets such as Thomas Decker, who writes in Krio.

FOLKLORE AND MYTHOLOGY

Traditionally, Creoles used ancestral folktales to teach children about their traditions, values, and folkways. A chief character in many of these folktales is the Spider, who often gets himself into difficulties as a result of his tricks.

ENTERTAINMENT AND RECREATION

Watching television and listening to the radio have become more prevalent activities in recent decades. Other favorite pastimes include checkers and other board games and the exchanging of visits with friends. Many towns have a market day, when people dress up and attend not only to buy and sell produce and crafts but also to socialize and trade gossip. Among girls, hair braiding provides hours of entertainment.

ETIQUETTE

Sierra Leoneans are thought of as warm and hospitable people who often carry on teasing and joking relationships with one another, often as accompanied by hand shaking and slapping. Elders are accorded great respect, and greetings between people tend to be elaborate. Because a major form of entertainment is visiting family and friends, often unexpectedly, great value is placed on being a good host or hostess and providing visitors with food and drink. In Sierra Leone, it is considered polite for a dinner guest to leave some food on the plate.

FAMILY LIFE

Among Creoles, marriage is often seen as a relationship not just between the spouses but also between their two families, so marriages still tend to be arranged, or at least encouraged, when parents find a suitable mate of the right social class for their son or daughter. In many of the nation’s cultures, the groom pays a bride-price, usually a mix of money and something like fine cloth. In modern times, more-educated Sierra Leoneans are more likely to choose their own spouses.

The basic domestic unit tends to be the extended family, especially in rural areas, where polygyny is still common, although in the cities and among Christians monogamous relationships are far more typical. Families tend to be large: In 2004 the fertility rate was 5.7 children per woman, and the overall birthrate was 43 per 1,000 population. However, the high infant mortality rate and rate of death of children under five keep families somewhat smaller than these numbers might suggest. Large

families, especially in rural areas, are seen as a means to provide enough hands to perform farmwork and also as a means to forge alliances with other families when children are of marriageable age.

PERSONAL APPEARANCE

Sierra Leoneans generally dress in modern, Western-style clothing. During the colonial period Creoles in particular imitated the dress of the European colonists and were often given clothing by them. Upper-class Creoles placed great emphasis on looking respectable and on following the latest fashions from Europe. In modern times clothing tends to be more casual, especially among the young, although older people dress more conservatively, with men in suits and women in dresses.

SPORTS

Throughout most of Africa soccer is the national passion, and Sierra Leone is no exception. Virtually every city has its own teams, as do schools, and children play soccer, often barefoot, wherever they can find open space. The Canadian organization Right to Play has set up sports camps in Sierra Leone to provide recreational outlets for younger people displaced by the civil war as well as for child soldiers who had previously known little but violence. While Sierra Leone has not fared well at the Olympics in recent years, the efforts of its team, which trains with virtually no equipment and in secondhand sneakers, were seen as rays of hope and courage during the civil war years.

CHRONOLOGY

- 1961** Sierra Leone becomes an independent country within the Commonwealth of Nations, with Milton Margai as prime minister.
- 1962** In first national elections, Margai's Sierra Leone People's Party (SLPP) wins a plurality and forms a government with independents' support.
- 1964** Milton Margai dies and is succeeded as prime minister by his half-brother, Albert Margai.
- 1967** In second national elections, the opposition All People's Congress (APC), led by Siaka Stevens, wins a plurality; Stevens is sworn in as prime minister; Brig. David Lansana declares martial law and prevents Stevens from taking office; Lansana is ousted within two days by a group of officers opposed to both Margai and Stevens; Col. Andres Juxon-Smith is named leader of the new junta, which names itself the National Reformation Council.
- 1968** Soldiers' revolt led by Private Morlai Kamara and Warrant Officer Alex Conteh restores John Bangura as army head and Siaka Stevens as prime minister.
- 1969** SLPP leaders are arrested in the wake of widespread riots.
- 1970** The newly formed United Democratic Party is banned and its leaders arrested in the wake of widespread riots in the north.
- 1971** Under a new constitution Sierra Leone becomes a republic within the Commonwealth, with Stevens as president. Army units attempt to kill Stevens; Commander Bangura is tried and executed after loyal army units suppress coup.
- 1973** Sierra Leone and Liberia join in the Mano River Union. SLPP boycotts national elections, citing APC's terror tactics.
- 1975** Christian Kamara-Taylor is named prime minister. House of Representatives passes motion calling for a one-party state.
- 1976** Stevens is reelected president.
- 1977** In elections to the House of Representatives, the APC wins 74 seats and the SLPP 15 seats.
- 1978** Constitutional referendum approves new constitution under which the APC became the sole legal political party; President Stevens is reelected for another seven-year term; Kamara-Taylor becomes first vice president.
- 1980** Sierra Leone hosts Organization of African Unity summit conference at Freetown, at a cost of 123 million leones.
- 1982** Elections are held for the House of Representatives.
- 1983** Tribal violence erupts in Pujehan District, leading to the arrest of hundreds.
- 1984** First Vice President Kamara-Taylor resigns.
- 1985** President Stevens steps down and nominates Gen. Joseph Saidu Momoh as his successor; Momoh is installed as president.
- 1987** Momoh declares state of economic emergency and issues stringent regulations against government corruption and the smuggling of essential commodities such as diamonds. An aborted coup is linked to disenchantment with the government's antismuggling campaign.
- 1989** The APC adopts a code of conduct for political leaders and public servants in an effort to eradicate corruption.
- 1990** A number of political groups and organizations call for a return to a multiparty system, but Momoh opposes the idea. Several thousand Liberian refugees fleeing civil war enter Sierra Leone. Under the auspices of the Economic Community of West African States, West Afri-

2108 Sierra Leone

- can leaders agree to send a peacekeeping force to intervene in the Liberian civil war.
- 1991** Civil war is waged by the Revolutionary United Front against the government.
- 1994** Fighting in the northern town of Kambia produces 30,000 refugees.
- 1996** The RUF announces a two-month cease-fire following elections in order to negotiate with President Kabbah.
- 1997** President Kabbah is overthrown by a military junta led by Major Johnny Paul Koroma.
- 1998** A Nigerian-led force attacks the military junta and forces the return of President Kabbah from exile in Guinea.
- 1999** The Lomé Peace Accord, between the rebel AFRC and the government, is signed in July.
- 2000** Several hundred UN peacekeeping troops are taken hostage by the rebels.
- 2002** The Kabbah government and the United Nations agree to set up a war-crimes tribunal. The first elections since the end of the civil war are held in May; Kabbah is elected president by a landslide, and his party secures a majority in the parliament.
- 2004** War-crimes trials begin. The first local elections in more than three decades are held. The United Nations hands control of the capital over to local forces.
- 2005** UN peacekeeping troops leave the country.

Basic Fact Sheet

OFFICIAL NAME

Republic of Singapore (Republik Singapura)

ABBREVIATION

SG

CAPITAL

Singapore

HEAD OF STATE

President Sellapan Rama Nathan (from 1999)

HEAD OF GOVERNMENT

Prime Minister Lee Hsien Loong (from 2004)

NATURE OF GOVERNMENT

Parliamentary republic

POPULATION

4,425,720 (2005)

AREA

693 sq km (268 sq mi)

ETHNIC MAJORITY

Chinese

LANGUAGES

English, Mandarin Chinese, Tamil, Malay

RELIGIONS

Buddhism, Taoism, Islam, Hinduism, Christianity

UNIT OF CURRENCY

Singapore dollar

NATIONAL FLAG

Two stripes, red at the top and white at the bottom. On the red stripe, near the hoist, are a white crescent, opening to the fly, and five white stars.

NATIONAL EMBLEM

A shield with five stars arranged in a circle over an upturned crescent moon. The shield is flanked by a lion (the name Singapore in Sanskrit means “the lion city”) and a black-striped gold tiger. Beneath the device is a blue scroll with gold letters proclaiming the national motto, *Majulah, Singapura* (Onward, Singapore).

NATIONAL ANTHEM

“Long Live Singapore”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labour Day), August 9 (National Day), also various Buddhist, Chinese, Hindu, Muslim, and Christian festivals

DATE OF INDEPENDENCE

August 9, 1965

DATE OF CONSTITUTION

June 3, 1959 (as amended in 1965 and 1991)

GEOGRAPHICAL FEATURES

Singapore is an island city-state located in Southeast Asia off the southern tip of the Malay Peninsula. It consists of the island of Singapore and some 60 smaller adjacent islets, with a total land area of 693 sq km (268 sq mi), of which Singapore Island comprises 542.6 sq km (209.5 sq mi). Singapore has a total coastline of 193 km (120 mi) and is connected to the southern tip of Malaysia by a road and rail causeway 1.2 km (.75 mi) in length across the narrow Johore Strait. The island is separated from Indonesia by the Strait of Malacca and the Singapore Strait, among the busiest sea passages in the world. The land area of Singapore is being constantly expanded by an ambitious program of land reclamation. The capital, the city of Singapore, officially covers an area of 60 sq km (23.2 sq mi), but the entire

republic is one large metropolis. The islands are generally flat and low. The highest point, Bukit Timah, has an elevation of only 166 m (544 ft).

Population of Principal Cities (2002 est.)

Singapore	4,163,700
-----------	-----------

CLIMATE AND WEATHER

Located less than two degrees latitude north of the equator, Singapore has a hot, humid, tropical climate. The range of temperature variations is slight; the average daily maximum is 30.6°C (87°F), the average minimum 24°C (75°F). Sea breezes and constant humidity keep temperatures relatively moderate. Rainfall, averaging about 2,410 mm (95 in) annually, is distributed fairly evenly throughout the year, with rain falling on at least 180 days in a given year. Serious floods are common during the north-east monsoon, while the southwest monsoon is usually accompanied by violent squalls. Nonetheless, Singapore is dependent on neighboring Malaysia for some two-thirds of its water supply.

Climate and Weather

Mean Temperature: 75°F to 87°F
Average Rainfall: 95 in

FLORA AND FAUNA

Singapore was once covered with jungles and swamps but is now almost entirely urban, such that most of its native plants and animals are gone. The city has planted decorative trees in strategic locations. The remaining animals are mostly birds, reptiles such as lizards and snakes, and insects.

POPULATION

Population Indicators

Total Population 2005: 4,425,720
World Rank: 118th
Density per sq km: 6,343.3
% of annual growth (1999-2003): 1.6
Male %: 49.0
Female %: 51.0
Urban %: —
Age Distribution %: 0-14: 16.0
15-64: 75.9
65 and over: 8.1
Population 2025: 5,101,000
Birth Rate per 1,000: 9.49
Death Rate per 1,000: 4.16
Rate of Natural Increase %: 0.5
Total Fertility Rate: 1.05
Expectation of Life (years): Males 79.05
Females 84.39
Marriage Rate per 1,000: 5.6
Divorce Rate per 1,000: 0.7
Average Size of Households: 4.2
Induced Abortions: 13,734

ETHNIC COMPOSITION

Singaporeans belong to one of three major ethnic groups: Chinese, Malay, and Indian. The racial proportion of roughly 77 percent Chinese, 14 percent Malay, and 8 percent Indian has remained fairly stable over the years, although none of the three main communities is homogeneous. Although ethnic differences persist, relations between the major groups are fairly harmonious, and the government has successfully managed to quell any divisiveness. Multiracialism has been stressed as a national value, and a Singaporean national identity has evolved that has no ethnic frame of reference. Other ethnic groups (1.4 percent) include sizable British and U.S. communities, mainly businesspeople and their families.

LANGUAGES

Malay is the official and national language. Other official languages are Mandarin Chinese, Tamil, and English. English is the main medium for government, business, and industry and is the primary language of instruction in schools. The government has stressed the importance of developing bilingualism.

RELIGIONS

Singapore is a completely secular state, and religious affiliations are not recorded in the census. Nevertheless, most of the Chinese are Buddhists, though some are Confucianists or Taoists. The Indians are Hindus and Sikhs, and the Malays, Pakistanis, and Bangladeshis are Muslims. There are sprinklings of Christians in the Chinese and Indian communities, whereas the Eurasians and Europeans are overwhelmingly Christian. The rapidly growing total of Christians is now almost 15 percent of the population. Singapore is the seat of an Anglican diocese and a Roman Catholic archdiocese.

Religious Affiliations

Buddhist	1,881,000
Taoist	376,000
Muslim	708,000
Christian	619,500
Other	841,000

HISTORICAL BACKGROUND

Singapore was an almost uninhabited island when Sir Stamford Raffles established a trading station for the British East India Company there in 1819. Five years later the island was ceded outright to the company by the sultan of Johore and was incorporated with Malacca and

2112 Singapore

Penang to form the Straits Settlements, which became a Crown colony in 1867.

With the opening of the Suez Canal in 1869 and the coming of steamships, prosperity grew rapidly in Singapore, as symbolized in part by the construction of miles of wharves. Exports of tin and rubber made Singapore one of the world's greatest ports. With its excellent harbor and strategic location, the city became a flourishing commercial center.

After World War I, the British developed a large naval base on the island that became a symbol of British power in Southeast Asia. Singapore was captured by the Japanese in 1942 and recaptured by the British in 1945. In 1946 Singapore was detached from the Straits Settlements to become a separate Crown colony. The British were concerned that Singapore's largely Chinese population would be a source of possible conflict with the Malays across the strait. In 1959 Singapore became a fully internally self-governing state, in 1963 joining the new Federation of Malaysia. The federation was an uneasy one, and Singapore and Malaysia terminated the union in 1965. In December the Republic of Singapore was officially proclaimed, with a president as constitutional head of state.

By 1971 the British had ended their military presence in Southeast Asia; the Anglo-Malayan Treaty, which had committed Britain to the defense of the region, was terminated and replaced by a five-power defense arrangement, among the United Kingdom, Australia, Malaysia, New Zealand, and Singapore. Singapore began to take a more active role in regional diplomacy and became a leader in the Association of Southeast Asian Nations (ASEAN).

Politics in Singapore have been dominated by the People's Action Party (PAP), initially led by Lee Kuan Yew, who served as prime minister from the time Singapore achieved internal self-government in 1959 to November 1990. Through its control of parliament, where it still held all but a handful of seats through the 2001 elections, the PAP has been able to mold the nation around its beliefs. Becoming increasingly intolerant of dissent, in the 1980s the Lee government passed amendments to the Parliament Act that enabled parliament to imprison, fine, or expel members who abused their privileges and also adopted the Newspaper and Printing Presses Act, which permitted the government to restrict the sale of foreign publications that it considered to be interfering in domestic affairs. In 1989 parliament adopted legislation abolishing an individual's right to appeal to the privy council in cases brought under the Internal Security Act. Under both Lee and his 1991 successor, Goh Chok Tong, the government directed a program of economic growth designed to promote sophisticated, capital-intensive industries. The program gave Singapore one of the highest per capita gross domestic product (GDP) figures in Asia.

Singapore held its first presidential elections in 1993, and Ong Teng Cheong of the PAP became Singapore's first directly elected president. In 1999 Ong, who chose not to seek a second term as president, was succeeded by Sellapan Rama Nathan, who became president without an election after being declared the only candidate eligible to run. Lee Hsien Loong became prime minister in 2004. He pledged to open up Singaporean society, possibly by removing some of the restrictive rules that constrain behavior.

CONSTITUTION

The Republic of Singapore is a republic within the Commonwealth. In form, the structure of government established by the constitution is a parliamentary democracy based on the British tradition, but in substance and practice Singapore is an authoritarian and paternalistic state in which opposition is barely tolerated and in which the People's Action Party (PAP) has assumed a preemptive role.

The legal basis of government is the charter called the Singapore (Constitution) Order in Council, 1959, under which Singapore became a self-governing colony. The transition to a republic was accomplished through two amendments.

The head of state is the president, elected since 1991 by popular vote for a six-year term. The presidency is a primarily ceremonial office, although the president is vested with the power to appoint the prime minister and dissolve parliament, as well as with limited responsibility over civil service appointments and government and statutory board budgets. By convention the prime minister is the leader of the majority party in parliament, and he, along with all cabinet ministers, is responsible to the parliament. The second most powerful office is that of the deputy prime minister, who is also appointed by the president.

The cabinet is composed of members of parliament appointed by the president, on the advice of the prime minister. Led by the prime minister, the cabinet is responsible for all government policies and day-to-day administration.

The 21-member presidential council, chaired by the chief justice, examines material of racial or religious significance, including legislation, to see whether it differentiates between racial or religious minorities or contains provisions inconsistent with the fundamental liberties guaranteed by the constitution.

Elections are held every five years. Suffrage is universal and compulsory for citizens age 21 and older.

PARLIAMENT

The parliament is an 84-member unicameral body elected by direct compulsory universal suffrage for five-year terms. Parliament convenes at least once a year, and discussions are conducted in any of the four languages: English, Mandarin Chinese, Tamil, and Malay. All bills passed by parliament require the immediate assent of the president.

Most of the members of parliament are elected to represent single-member constituencies or in some cases group-representation constituencies. In the latter, parties provide teams of three to six candidates, one of whom must belong to a minority race. This ensures that candidates must contest the election as a multiracial party and that minority races will always be represented in parliament. Singapore's constitution also provides for the appointment of up to three nonconstituency members of parliament from among the opposition political parties; the objective is to ensure that there will be a minimum number of opposition representatives in parliament.

In 1991 a constitutional provision was made for the appointment of up to nine nominated members of parliament, to ensure a wider representation of views. These officials are appointed by the president for terms of two years on the recommendation of a special select committee of parliament chaired by the speaker.

POLITICAL PARTIES

The People's Action Party (PAP) has been the ruling party since 1959 and has held the majority of seats in parliament since 1966. The only other parties with any parliamentary representation are the Workers' Party (WP) and the Singapore People's Party (SPP), each of which has one representative. Other parties include the Democratic Progressive Party, the National Solidarity Party, the Singapore Democratic Alliance, the Singapore Democratic Party, the Singapore Justice Party, and the Singapore National Malay Organization.

LOCAL GOVERNMENT

Singapore has no local government. There are two intermediary institutions at the local level that serve as

pipelines between the people and the government: the citizens' consultative committees in each district and the 172 management committees of the community centers run by the People's Association, a statutory body headed by the prime minister. Each citizens' consultative committee is headed by a civil servant who reports to the prime minister's office.

LEGAL SYSTEM

The Singaporean legal system is based on English common law. At the apex of the judiciary is the Supreme Court, with three chambers: the High Court, the Court of Appeal, and the Court of Criminal Appeal. The High Court exercises original civil and criminal jurisdiction in appeals from the subordinate courts (10 magistrate's and six district courts). An appeal from the High Court goes to the Court of Criminal Appeal or the Court of Appeal, or, in certain cases, to the Privy Council in the United Kingdom.

Judges of the High Court are appointed by the president on the advice of the prime minister and may not be removed from office except on the recommendation of an independent tribunal of judges. Subordinate judges are appointed by the president on the recommendation of the chief justice.

The Criminal Procedures Code provides that a charge against a defendant must be read and explained to him or her as soon as it is framed by the magistrate. The accused has the right to be defended by an attorney. Individuals are tried by a magistrate or judge and do not have the right to trial by jury. In most cases defendants may appeal the verdicts to higher courts.

The right to a fair public trial is one of the strongest features of Singapore's human rights picture. The judicial system operates in accordance with the basic tenets, practices, and precedents of British jurisprudence. The rights of the defendant are ensured at every stage. The courts are independent of the executive and the military. Appeals, except in cases brought under the Internal Security Act, are made to the Judicial Committee of the Privy Council.

HUMAN RIGHTS

Singapore has been described as a bureaucratic state under one-party rule. On the positive side, it has succeeded in providing an efficient and incorruptible government, stability, and economic prosperity, along with minor elements of participatory democracy. It has also created a national image and a set of national values that emphasize austerity, discipline, and unity. The strategy has been to speed up the orderly march of progress through the elimination of divisive and unproductive partisan politics and other forms of dissent.

2114 Singapore

In terms of civil and political rights, Singapore is classified as a partly free country. Political power is concentrated in one party. The government exhibits characteristics of democracy and authoritarianism. The government has many powers to limit citizens' rights and block political opposition, using internal security laws to have political dissidents held indefinitely without trial. The use of preventive detention is common; although there have been no terrorist incidents in recent years, the government cites the threat of insurgency and the possibility of renewed communal conflict to justify preventive detention. The government also occasionally uses punishments such as caning. Freedom of speech and of the press are limited, and the government does not hesitate to use defamation lawsuits to suppress dissenting viewpoints. The government also limits the freedoms of assembly and association. Foreign workers are occasionally victims of abuse. Violence against women and children and human trafficking are problems.

FOREIGN POLICY

A member of the Commonwealth, Singapore is also an influential member of the Association of Southeast Asian Nations (ASEAN) and the Asia Pacific Economic Conference (APEC). As a nation dependent almost entirely on a healthy economy, Singapore has reached out to a variety of possible trading partners; it has become a prime mover in Asia-Europe meetings. At the same time, strong and moralistic federal policies, as well as a lack of toleration for political opposition, have earned Singapore's government sharp international criticism, including some from the United States.

As a tiny island nation, Singapore is susceptible to crises that develop in larger neighbors, especially Indonesia, another Muslim country. Friction in all sorts of areas (like trade and communications) with the closest neighbor, Malaysia, has cropped up frequently.

Singapore has participated in international peace-keeping exercises in Kuwait, Angola, Namibia, Cambodia, and East Timor. The nation sent a naval ship and an air transport plane to the Persian Gulf in 2003. The United States and Singapore have a bilateral free-trade agreement that went into effect in 2004.

DEFENSE

The defense structure is headed by the president. The line of command runs through the minister of defense, who is a civilian, to the senior officer of the armed forces, who holds the rank of brigadier and heads the General Staff division. The army is the largest of the services; the navy patrols the nation's waters and shipping lanes. The Armed Forces Council, a civilian body, determines military policy.

Military manpower is obtained through compulsory national service, in effect since 1967. All male citizens are called up for 24 months' full-time military duty at age 18. Citizens may volunteer for the armed forces at the age of 16.

ECONOMY

Singapore has one of the highest GDPs in Asia, and its residents enjoy among the highest standards of living in the world. The nation's economy is based largely on international trade and finance. It has an honest government free of corruption, a highly skilled and industrious workforce, a solid infrastructure, and an ideal location for international trade.

Singaporean industries manufacture drilling equipment and rigs for offshore oil operations, and the nation is one of the world's leading refiners of petroleum. Manufacturing employs 18 percent of the workforce and, along with other industry, constitutes 33 percent of GDP. Leading industries are transport equipment and electronic products. Most manufactured goods are exported. More than 100 commercial banks operate in Singapore; most are foreign owned. Alongside its rapid growth in manufacturing and world status in banking, Singapore remains one of the world's largest ports in annual tonnage.

Singapore's government has played a major role in the nation's economic development. The government holds about 75 percent of all land and is the chief supplier of surplus capital. Increasingly, however, extensive government intervention in the economy has eased. Reliance on market forces, the privatization of formerly federal enterprises, and greater support for private business have become official policies. The government's \$1 billion Technopreneurship Investment Fund is designed to attract to Singapore venture companies and people who can assess and value start-up ventures and share the risk of backing promising ideas.

The government promotes high levels of savings and investment through a mandatory savings scheme and spends heavily in education and technology. It also owns government-linked companies, particularly in manufacturing, that operate as commercial entities. As Singapore looks to a future increasingly marked by globalization, the country is positioning itself as the region's financial and high-tech hub.

The economy suffered from the global recession and technology slump of 2001–03. The government has been working to cut costs for foreign businesses in the face of rising wages, lowering taxes and reducing rents. Singapore signed free-trade agreements with Japan in 2002 and with the United States the following year.

ENVIRONMENT

Singapore is a small nation and lacks both land and fresh-water. The lack of land makes it difficult for the nation to dispose of wastes. Other environmental problems are industrial pollution and seasonal smoke that drifts to Singapore from forest fires in Indonesia. Deforestation is a serious problem. Most of the original rain forest is now scrubland, if not covered by apartment blocks; the remainder, about 3 percent of the national area, is managed by the Nature Reserves Board. The greatest density of rain forest is found in the Bukit Timah Nature Reserve.

LIVING CONDITIONS

Singapore is a clean modern city. Most people live in high-rise apartments, many of them owned by the Housing Development Board. Individuals must apply to the

government to get apartments, and strict rules regulate who is eligible. Public transportation is excellent and inexpensive; there are buses, subways, and taxis. The Singapore airport is considered one of the best and most modern airports in the world. Traffic can be bad.

HEALTH

The people of Singapore are quite healthy. Life expectancy is over 81 years. The government provides health care for citizens, deducting money from paychecks and placing it in funds that cover medical care and act as savings schemes for education, housing, and retirement. There are both public and private hospitals and clinics, and the quality of care is very good. Many people still consult Chinese medical practitioners as well as Western-style doctors; the government regulates these practitioners through its Traditional Chinese Medicine Unit.

FOOD AND NUTRITION

Singaporeans have access to a plethora of Asian cooking styles, including Chinese, Malay, Indian, and Peranakan food. The city is full of hawker centers, with food stalls selling different styles of food. Common dishes include Chinese dim sum, Malaysian *satay*, Indian curries, and *otak-otak*, which is fish mixed with coconut milk, wrapped in coconut leaves, and grilled over charcoal. The British also influenced Singaporean cuisine. The drink called the Singapore Sling was invented in Singapore in 1915 at the Raffles Hotel.

STATUS OF WOMEN

Women generally enjoy equal rights, primarily under the 1969 Women's Charter and the constitution. Women have voting rights and the right of equality of economic opportunity under the law. Women occupy 103 of 495 senior-level positions in the civil service but none of the top 29 positions. Following the 1997 election, there were only two female members of parliament, both belonging to the People's Action Party; by 2004 there were 15 women in 94 parliamentary seats. Female incomes in 1995 remained only 59 percent of male incomes, though both groups were earning higher incomes than in previous years. Shortages of workers have led the government to encourage women to work.

Singaporean women do not have equal rights with men in the transmission of citizenship to their children. A Singaporean woman married to a foreigner cannot pass citizenship to children born outside the country, although a Singaporean male can in fact do so. Additionally, the wife of a Singaporean male can receive permanent resident status and citizenship based on the marriage, whereas the husband of a Singaporean woman cannot.

WORK

The Singaporean work ethic is strong, and most people work long hours out of a genuine desire to excel. Unemployment is low, at 3.4 percent in 2004. Most residents are well educated and capable of performing highly technical tasks. About half the workforce is employed in services, especially banking, financial services, and business. The manufacturing sector employs about 18 percent of the workforce; factories produce such goods as electronics, chemicals, and rubber products. Clothing is also a major export. Oil refining is an important industry, and Singaporeans process the oil drilled by several nearby countries, including Malaysia, Brunei, Indonesia, and nations in the Middle East. The main port employs many people to manage the huge volume of cargo that passes through Singapore every day. Tourism is also an important employer.

EDUCATION

Primary education is free and compulsory. Schooling lasts for 12 years, as divided into six years of primary school, four years of lower secondary school, and two years of upper secondary school. Over 92 percent of the population can read and write.

Primary and secondary education is available in the four official languages of Malay, Mandarin, Tamil, and English. In 1978, as part of a policy of bilingualism, examinations in English and Mandarin became compulsory for pupils seeking to enter secondary education. In 1987 English became the medium of instruction in all schools.

The new education system allows less-able pupils to complete their education over a longer period of time, if they so choose. After three years' primary education, pupils are tracked into a bilingual course (six years), an extended bilingual course (eight years), or a monolingual course (eight years). Secondary-school streamlining depends on the results of the Primary School Leaving Examinations.

Singapore has begun to invest heavily in computers for education, with the goal of providing one computer for every two students, allowing pupils access to the Internet through a multimedia network.

The National University of Singapore was founded in 1980. There are also Nanyang Technological University, Singapore Management University, four polytechnics, and 14 junior colleges.

SCIENCE AND TECHNOLOGY

Singapore has invested a great deal of money in developing itself as a high-tech electronics center. It produces computer equipment, general electronics, and technology for the petroleum industry. The Singapore Science Park, founded in 1981, houses many research institutes and technology corporations. In 2003 Singapore opened Biopolis, a center for biomedical research near the Singapore Science Park; the nation's hope is that Biopolis will become a world-class research hub.

MEDIA

Singapore's media is highly regulated and often censored. Singapore's leaders generally acknowledge the absence of a free press, but they claim that this intolerance of full freedom of speech is only part of a broad philosophy that places self-discipline and civil order above such freedom. Singapore Press Holdings, a private corporation with close ties to the government, publishes nearly all newspapers and periodicals. Most radio and television stations are run by MediaCorp, which is owned by a state investment agency. Citizens are not allowed to own satellite dishes and so are unable to view programming from other countries.

CULTURE

The Singapore Symphony Orchestra performs about 110 concerts each year; the Singapore Lyric Theatre presents both popular musicals and opera. Some 40,000 students each year take examinations for the Associated Board of the Royal Schools of Music. The Singapore Dance Theatre is known for its wide repertoire of classical and contemporary dance fusing Eastern and Western elements.

Several Singaporean artists have achieved international repute. The visual arts community is active in

organizing cultural exchanges and group exhibitions to showcase their work overseas. A notable overseas exhibition to seven cities was organized in China in 1995. The growth of the film industry in Singapore has been highlighted by the Singapore International Film Festival, which grew from a 50-film event in 1968 to a 200-film festival with an audience of 47,000 in 1997.

Significant in the realm of literature was the introduction of three new awards by the Malay Language Council of Singapore in 1993.

FOLKLORE AND MYTHOLOGY

Singapore has numerous myths and legends similar to those from Malaysia and influenced by the many Chinese immigrants; some people worry that the nation is losing its native culture to Westernization, so schools teach some legends to young children. One story involves the naming of Singapore: A king who traveled to the island saw a magical creature with golden eyes, a white neck, a red body, and a large mane. He learned that the animal was called a "singa" and named the island after it.

ENTERTAINMENT AND RECREATION

Singapore is a modern city with vibrant recreational offerings, from shopping to fine dining. The markets and shops in Chinatown and Arab Street attract many visitors. Sentosa Island has museums, beaches, sporting facilities, aquariums, walks, rides, restaurants, and campgrounds. When people go out at night, they may go to restaurants, bars, or lounges where they sing karaoke. Popular activities include kite flying, top spinning, dragon-boat races, and bird-singing competitions, in which bird owners enter their musical pets. Festivals occur nearly every month, with each ethnic group celebrating its own holidays.

ETIQUETTE

Singaporean social behavior is complicated by the many restrictive social laws that have been passed by the gov-

ernment. Among illegal behaviors are littering, chewing gum or smoking in public, using a toilet without flushing it, and bringing durians (foul-smelling fruit) on the subway. Most people use only their right hands for social interaction and eating because of the presence of Muslims and Indians. People always remove their shoes when entering homes or places of worship. It is considered rude to point the bottoms of one's feet at someone else. Chinese rules of etiquette are immensely complicated, and a non-Chinese visitor should always obtain advice from a Chinese person when encountering a potentially difficult situation.

FAMILY LIFE

Women are marrying later and delaying childbearing, although one incentive toward marrying is a law prohibiting single women from qualifying for their own apartments before the age of 35. Arranged marriages are still common, and interracial marriages occur frequently. Singaporean families tend to be very small. Most households consist of parents with one or two children. In 2005 the fertility rate was a very low 1.05 children per woman. Alarmed by the low birthrate, the government has recently changed its family planning messages; it formerly encouraged people to stop at two children but now suggests that they have three or more if they can afford to do so. Parents still value male children more highly and will often throw a party to mark the birth of a son.

PERSONAL APPEARANCE

Singaporeans dress in typical Western clothing, for the most part attiring themselves well and neatly. They tend to disapprove of people who wear untidy or revealing clothing or who have disreputable or disheveled appearances. People of Chinese descent avoid dressing in all white or all black, which are colors used for mourning.

SPORTS

Singapore has numerous sporting facilities and many national sports associations. The government encourages all citizens to participate in sports so as to keep fit. Soccer is the most popular sport, and the Singaporean national team vies with Malaysian states for the Malaysia Cup. People also play cricket, rugby, lawn bowling, tennis, and field hockey, which were introduced by the British. Traditional games include *sepak raga*, which involves kicking a rattan ball, and *carom*, an Indian game that resembles billiards. Many people practice martial arts such as tai chi, *qi gong*, and *si lat*.

CHRONOLOGY

- 1959** Singapore promulgates its first constitution and becomes a self-governing state in the Commonwealth of Nations; Lee Kuan Yew of the People's Action Party (PAP) becomes prime minister, and parliament elects Inche Yusuf bin Ishaq as president.
- 1963** Singapore amends the constitution to join with Sarawak, North Borneo (later called Sabah), and the Federation of Malaysia to form Malaysia.
- 1965** Singapore leaves Malaysia to form its own republic.
- 1971** Benjamin Henry Sheares becomes president; Singapore joins an anti-Communist defense alliance with Australia, the United Kingdom, Malaysia, and New Zealand.
- 1981** President Sheares dies; parliament names Chengara Veetil Devan Nair president.
- 1985** Wee Kim Wee becomes president.
- 1990** Singapore extends diplomatic recognition to China; Prime Minister Lee resigns.
- 1991** The PAP wins 77 out of 81 parliamentary seats in national elections, making Goh Chok Tong the new prime minister.
- 1993** Ong Teng Cheong, a deputy of Prime Minister Goh Chok Tong, becomes Singapore's first directly elected president, winning 57.4 percent of the vote; observers suggest that the 40.4 percent election pull of a self-declared weak candidate indicates increasing public dissatisfaction with the long-ruling PAP.
- 1994** Singapore's strong criminal laws draw international attention when an American expatriate is sentenced to imprisonment and caning (a sentence President Clinton called "extreme"), a Dutch engineer is hanged for trafficking in heroin, and several people are convicted and fined for publishing estimates of economic growth before they were officially released.
- 1995** A trader for Barings Bank causes operational losses of over \$1 billion on the Singapore International Monetary Exchange; Barings collapses and the trader is arrested.
- 1996** The Organization for Economic Cooperation and Development reclassifies Singapore as a "more advanced developing economy," only one step below "developed" status; at the first Asia-Europe meeting in March, delegates propose an Asia-Europe Foundation, to be based in Singapore.
- 1997** The PAP overwhelmingly wins reelection to power, capturing two of the four former opposition seats in parliament, but PAP tactics, especially with regard to opposition leaders,

2120 Singapore

provoke international criticism; Singapore begins to feel the effects of the Asian financial crisis when nearby trading nations (accounting for more than 25 percent of foreign trade) are badly hurt.

- 1998** Despite its economic strength, Singapore is deeply affected by the Asian financial crisis, but the nation begins a recovery toward year-end; fearing an influx of refugees as a result of the Indonesian crisis, Singapore steps up military patrols of its borders.
- 1999** With an upturn in the economy, Singapore continues to liberalize important sectors, including banking and finance; when President Ong Teng Cheong announces that he will not seek a second six-year term, the ambassador-at-large Sellapan Rama Nathan is elected, without a ballot.
- 2001** The first legally sanctioned demonstration outside an election campaign is held in April in support of the opposition leader J. B. Jeyaretnam. In early elections held on November 4, the PAP wins 82 of 84 seats in parliament.
- 2002** Singapore and Japan sign a free-trade agreement.
- 2003** The infectious SARS breaks out in Singapore. Singapore signs a free-trade agreement with the United States. Biopolis, a \$500 million research center, opens.
- 2004** Lee Hsien Loong becomes prime minister.
- 2005** Singapore and Malaysia settle a border dispute.

Roman Catholic, Protestant, Greek Catholic

UNIT OF CURRENCY

Slovak koruna

NATIONAL FLAG

Three equal horizontal bands of white (top), blue, and red, superimposed by the Slovak cross in a shield centered on the hoist side; the cross is white centered on a background of red and blue.

NATIONAL EMBLEM

The national emblem of Slovakia is a shield with the white cross of Lorraine on a blue mount composed of three hills against a red background. The Lorraine cross symbolizes three important saints: St. Benedict, St. Constantine, and St. Method. The hills are taken from the coat of arms of Hungarian kings (where they are green) and represent the three mountains of Tatra, Matra, and Fatra.

NATIONAL ANTHEM

“Lightning Flashes over the Tatra”

NATIONAL HOLIDAY

January 1 (New Year’s Day), January 6 (Epiphany), May 1 (Labor Day), July 5 (Cyril and Methodius Day), August 29 (Slovak National Uprising), September 1 (Slovak Constitution Day), November 17 (Struggle for Freedom and Democracy Day), December 24–25 (Christmas), various Christian holidays

DATE OF INDEPENDENCE

January 1, 1993

DATE OF CONSTITUTION

September 1, 1992; fully effective January 1, 1993; amended 1998, 2001

GEOGRAPHICAL FEATURES

The Slovak Republic is a landlocked country in central Europe. It has a total area of 48,845 sq km (18,860 sq mi), including 45 sq km (17 sq mi) of water. The nation borders Austria, the Czech Republic, Hungary, Poland, and Ukraine. The capital is Bratislava, which lies on the Danube. The highest point in Slovakia is Gerlachovsky, at 2,655 m (8,711 ft), and the lowest point is on the Bodrok River, at 94 m (308 ft).

The Carpathians extend into northern Slovakia, starting near the Danube as the Little Carpathian Range.

This joins with the White Carpathians, the Javorniky Mountains, and the Bezkydy Mountains to form the first Carpathian bow. The mildly elevated ranges are dissected by numerous river valleys and passes. The Orava and Vah valleys separate the outer Carpathians from the inner crystalline zone. Several intermontane basins—the Lip-tov, Turiec, Poprad, and Honrad—divide the Carpathians into fragments. The High and Low Tatra Mountains have atypical alpine landscapes. They extend in a narrow ridge along the Polish border and are a popular summer resort. The highest peak in the country—Gerlachovsky—is in this ridge. The tree line is at about 1,500 m (4,922 ft). An

icecap extended into this area during glacial times, leaving pockets that became mountain lakes. The southern part of the Carpathian bow is defined by fractures marked by the volcanic hills of the Slovak Ore Mountains, which are characterized by steep slopes. Finally, a more typical region is formed by the Slovak lowlands on the northern fringes of the Danube basin, known as the Little Alföld, and parts of the Great Alföld to the east, where the Ipel and Košice basins are much smaller.

The Danube is the main river and has several major tributaries, including the Vah, Nitrah, Hron, Ipel, and tributaries of the Tisza, of which the Hornad is the most important. As it leaves Bratislava, the Danube divides into two channels, the Danube proper and the Little Danube.

Košice	235,281

CLIMATE AND WEATHER

Slovakia is under the influence of the continental weather system predominant in eastern Europe. Winters are fairly cold, cloudy, and humid; high levels of humidity and cloud cover tend to be more prevalent in the valleys and areas of lower elevation. The mountains are snow covered from early November through April, with some locations registering deep accumulations. Summers are generally pleasant, and at lower elevations frosts are rare between the beginning of April and the end of October.

The mean average temperature nationwide ranges from 6°C to 10°C (43°F to 50°F). The lowlands are warmer than the western parts of the country. Spring is usually cooler than fall. Rainfall increases to the east, and the maximum rainfall occurs in the summer, although the Danubian plains receive a second pattern of higher rainfall in October. Although the western part of the nation receive less precipitation overall, seasonal distribution of rain makes the region more arable.

Climate and Weather

Mean Temperature
 July: 70°F
 January: 30°F
 Average Rainfall: 19.3 in
 High Tatras: 80 in

FLORA AND FAUNA

Some 45 percent of Slovakia, especially the mountainous part, is still covered in forests—mostly spruce and beech, with some larch, maple, pine, and oak. Other areas were formerly forested, but centuries' worth of humans have gradually cut down many of the nation's trees. The High Tatras are home to wolves, bears, lynxes, chamois, mink, marmots, and otters; these animals also live in some national parks. Numerous deer live throughout the country. Birds include wild geese, eagles, vultures, partridges, ducks, storks, pheasants, and grouse.

ETHNIC COMPOSITION

Ethnic Slovaks account for some 85 percent of the population. Hungarians make up the largest minority group, with some 10 percent of the total citizenry; other minorities include Germans, Czechs, Poles, Ruthenians, and Ukrainians, with none of their populations amounting to more than 0.3 percent of the total. There exists a substantial Romany, or Gypsy, community, constituting around 2 percent of the population.

Relations between Slovaks and Hungarians have been tense owing to the history of the two peoples; the majority of Hungarians live close to the border with Hungary. Along with the Hungarians, groups such as the Ruthenians are requesting greater resources for education, media, and cultural development. These minority groups especially feel discrimination in the political sphere.

LANGUAGES

Slovak is the official language of the republic. However, all of the ethnic groups tend to speak their own languages within their own communities, and as such Hungarian is the second-most widely spoken language. In 1994 a law was passed making Hungarian an official language in those areas where Hungarians account for 20 percent or more of the population, but restrictions on this act were later passed.

There exist a variety of regional Slovak dialects that can be broadly divided into western, central, and eastern versions. Recently, English and German have become popular as second languages, with English especially prevalent in universities.

RELIGIONS

Christianity was first propagated by German Catholic missionaries, and later by Orthodox Slav missionaries. Catholicism remains the most popular religion in the republic, accounting for some 60 percent of the nation's people. Almost 10 percent of Slovaks identify themselves as atheists. The various Protestant sects account for 8 percent of the population, Orthodox Christians 4 percent. Lutheranism is the dominant Protestant sect, followed by the Hussite Church.

Religious Affiliations

Roman Catholic	3,275,000
Atheist	527,000
Protestant	456,000
Orthodox	222,500
Other	950,500

HISTORICAL BACKGROUND

The earliest inhabitants of the present Slovak lands were Celtic tribes such as the Contini who settled in the eastern parts of the nation around 500 B.C.E. The Celts were displaced by German tribes, including the Quadi. The Germans were in turn dislodged, and the area fell under Slav domination in the fifth century. The sixth century witnessed the onslaught of the Avars, a pastoral people

speaking a Ural-Altai language. They were repelled by the Samo, who unified the Slav tribes and in 625 established the Samo Empire, which lasted until 658 as the first Czechoslovak polity. Early in the ninth century the Moravian Empire emerged, within which German missionaries began to spread Christianity.

The Moravian Empire disintegrated with the Magyar invasions. The Czech tribes broke away and swore allegiance to the Franks, while the Slovaks remained under Magyar rule for successive centuries. Magyar authority over Slovakia was greatly augmented as a result of the influx of Magyar refugees following the defeat of the Hungarian armies by the Ottomans at Mohacs in 1526. Slovakia remained part of the greater Hungarian Empire, which was absorbed into the Austrian Empire in the 1800s. The Hungarians attempted a campaign of Magyarization to suppress the cultural identities of the various ethnic minorities within their territory. However, during the 19th century there was a Slovak revival. A Slovak literary language was developed by a Jesuit priest, Anon Bernolak. Meanwhile, the Protestant Slovaks adopted a different literary language, combining elements of Czech grammar with the central Slovak dialect.

The major political event of the 19th century was the Revolution of 1848, which was crushed by imperial forces. Absolutism was restored under the Hapsburg emperor Franz Josef (1848–1916).

The establishment of the Dual Monarchy and the reconfiguration forming the Austro-Hungarian Empire did not bring any concessions to the Slovaks, who lacked the political clout generally given to the Czechs. When World War I began, both the Czechs and the Slovaks intensified their efforts to break away from the empire. Czech and Slovak leaders joined together to establish the Czech National Council and set up centers of resistance in Vienna, Prague, Budapest, and Bratislava. In the fall of 1918 the Allies recognized the council as the government of an independent republic. At the Paris Peace Conference the Allies approved the establishment of the Czechoslovak Republic, encompassing Bohemia, Moravia, Silesia, Slovakia, and Ruthenia.

Czechoslovakia was officially founded on October 28, 1918. A new constitution was adopted, and a national assembly and president were elected. Czech and Slovak were recognized as the national languages, and special protections were granted to minorities. In an effort to defuse potential separatist movements, the national government was set up as highly centralized, and provincial assemblies were given only nominal powers.

Between 1918 and 1938 Czechoslovakia had relatively stable governments, but there soon emerged a struggle between the national government and the Sudeten Germans. A strong sense of German nationalism among the minority fueled the rise of the Sudeten Nazi Party, which supported Adolf Hitler's Pan-Germanism.

After Hitler's annexation of Austria on March 13, 1938, Czechoslovakia became the next target. Hitler wished to use the Sudetenland as a bridgehead for further expansion into eastern Europe. Neither Great Britain nor France desired war and capitulated to Hitler's demands at the Munich Conference for the swift return of the Sudetenland to Germany. The Munich Agreement stripped Czechoslovakia of 38 percent of Bohemia and Moravia; the nation also yielded 11,882 sq km (4,586 sq mi) to Hungary and part of the region of southern Tesin to Poland. Meanwhile, encouraged by Hitler, both Slovakia and Ruthenia asserted their independence. In November 1938 a new republic was established, as consisting of three autonomous units: Bohemia-Moravia, Slovakia, and Carpatho-Ukraine, as sub-Carpathian Ruthenia was renamed. Hitler completed his conquest of the republic on March 15, 1939, when he forced the Czechoslovak government to capitulate and become a German protectorate.

German rule was moderate at first but, following student demonstrations in November 1939, became brutal under the direction of the notorious Reinhard Heydrich and, after his assassination, Gen. Kurt Daluge. A government-in-exile was established in London, and Czech and Slovak resistance was active throughout the war.

The postwar settlement resulted in numerous boundary and population changes. Ruthenia was ceded to the Soviet Union, and all Sudeten Germans were expelled under harsh conditions. Territory that had been ceded to Poland was returned, and the nation engaged in a population exchange with Hungary.

In 1946 a Communist-led coalition government assumed power following elections in which the Communists polled 38 percent of the vote. In 1948 the Communists staged a coup and charged the non-Communist political parties with subversion. All non-Communists were purged from the government, which began nationalizing private industry. A new constitution was enacted, and the provinces of Bohemia, Moravia, and Slovakia were replaced by 19 administrative provinces. Numerous arrests, confiscations, and executions occurred as the Communists sought to enhance their power. There were also restrictions placed on churches, and church property was confiscated.

In 1950 the government banned all books published in Czechoslovakia before 1948. That same year all monastic houses were seized, and a new criminal code was adopted. A year later there were mass purges. In 1960 a new constitution was adopted, and the nation's name was changed to the Czechoslovak Socialist Republic.

However, in 1968 pro-reform Communists gained power, and Alexander Dubček was named the first secretary. The so-called Prague Spring saw the initiation of a series of reforms, but the Soviet Union responded by organizing an invasion of the nation by its Warsaw Pact

allies. Thousands were executed or exiled, and Dubček was replaced by Gustáv Husák.

The reform spirit remained strong, and in 1977 a group of dissidents and reform-minded intellectuals issued Charter 77. These efforts culminated in 1989 with Husák's resignation, and the so-called Velvet Revolution led to the demise of the Communist Party. Playwright Václav Havel became president, and a non-Communist cabinet took power. The following year the Communists were defeated in national elections, and Havel was re-elected president.

In 1992 a leftist government came to power in Slovakia. The new government pressed for a dissolution of Czechoslovakia; the eventual result was the break-up of the nation in the so-called Velvet Divorce. That year a new constitution was adopted by the Slovaks, and elections under the new basic law were held in 1994. The new nation applied for membership in the North Atlantic Treaty Organisation (NATO) and the European Union and in 1994 joined NATO's Partnership for Peace program. Elections in 1998 gave the center-left Movement for a Democratic Slovakia the most seats, but a centrist coalition government was formed by the Slovak Democratic Coalition. In May 1999 the country held its first direct presidential elections, and pro-Western candidate Rudolf Schuster became president. That year parliament passed a law giving minority languages more recognition.

The government spent the early 2000s improving state administration and negotiating Slovakia's entry into NATO and the European Union. Parliament amended the constitution in 2001 and created eight new regional parliaments in 2002, pursuant to constitutional amendments and EU membership requirements. Mikuláš Dzurinda won a second term as prime minister in 2002, and his center-right coalition government remained in power.

At the end of 2002 the European Union invited Slovakia to join. Citizens voted in favor of doing so, and in May 2004 Slovakia and nine other states became new EU members. The nation also joined NATO in March of that year. In April 2004 Ivan Gašparovič was elected president. His government has faced continuing difficulties with regard to Hungarians and Romanians, who have suffered discrimination at the hands of ethnic Slovaks and high levels of unemployment. The state has been attempting to restore economic prosperity by reforming state programs such as pensions and benefits, which changes may lead to the desired effects but have thus far proved unpopular with the Slovak people.

1994–98 Vladimír Mečiar

1998– Mikuláš Dzurinda

CONSTITUTION

After the Velvet Divorce, in which Czechoslovakia broke into two nations, the new Slovak Republic adopted a constitution on September 1, 1992, that went into effect in January 1993. The constitution established a parliamentary democracy, with both a president and prime minister and a unicameral legislature. The constitution was changed in September 1998 to allow the direct election of the president. The president appoints the prime minister, who heads the government; the prime minister is usually the leader of the majority party in parliament. The president also names the cabinet, with the advice of the prime minister. There is also an independent judiciary, which is headed by the Supreme Court. All Slovak citizens who are at least 18 years old are eligible to vote.

The constitution was further amended in 2001 so that Slovakia could apply for EU and NATO membership. The amended constitution decentralized power by increasing the power of the state audit office. In addition, it introduced greater recognition of minority rights and increased the independence of the judiciary.

PARLIAMENT

The nation's parliament is a unicameral chamber known as the Slovak National Council. There are 150 representatives who are chosen by popular election and serve four-year terms. Voting is proportional, and parties must pass a 5 percent threshold in order to gain seats in parliament. The leader of the majority party in parliament serves as prime minister.

POLITICAL PARTIES

The governing coalition formed in 2002 includes the Slovak Democratic and Christian Union (SDKÚ), the Party of the Hungarian Coalition (SMK), the Christian Democratic Movement (KDH), and the New Citizens Alliance (ANO). The opposition parties include the Movement for a Democratic Slovakia–People's Party (HZDS-ĽS), Direction (SMER), the Slovak Communist Party (KSS), Free Forum, and People's Union.

LOCAL GOVERNMENT

The Slovak Republic is divided into eight administrative regions; within these regions are 79 districts. The na-

tional government is highly centralized, and the regions are directly responsible to Bratislava. The national parliament appoints regional governments. While districts are under the direct control of regions, district governments are chosen through direct elections by the citizens.

LEGAL SYSTEM

Fundamental rights are guaranteed by the constitution, and the legal system is based on Austro-Hungarian codes. In addition, there are still modified elements of Marxist-Leninist legal theory within the system. The court system includes regional, district, and military courts. The highest court is the Supreme Court. Constitutional matters are decided by a constitutional court, which has 13 judges. In 2002 parliament created an 18-member Judicial Council that nominates all judges; the president then chooses judges from among those nominees. The Judicial Council also appoints Disciplinary Senates to handle charges of judicial misconduct.

HUMAN RIGHTS

The constitution guarantees basic civil liberties, but many minorities have perceived erosions of liberties in relation to the relatively high degree of autonomy they enjoyed while citizens of Czechoslovakia. Discrimination is common against Romany communities, and victims have claimed that judges have been too lenient in sentencing those convicted of racial violence and other discriminatory acts. In particular, there have been reports of Romany women being sterilized without consent and also of skinheads attacking Romanies and other minorities. Violence against women and children and human trafficking are problems.

FOREIGN POLICY

Since independence, Slovakia has pursued a policy oriented toward closer integration with western Europe, although Westernization efforts have proceeded more slowly in Slovakia than in the Czech Republic. Slovakia finally joined the European Union and NATO in 2004; the nation also belongs to the United Nations, the World Trade Organization, the Organization for Economic Cooperation and Development, the Organization for Security and Cooperation in Europe, and the Visegrád 4, which includes Hungary, Poland, and the Czech Republic. Slovakia and the Czech Republic have shared a Customs Union since 1993, allowing the free flow of goods and services between the two countries. While overall relations have been cordial between the two nations of the former Czechoslovakia, there remain differences arising from the division of resources.

Tensions between Slovakia and Hungary have persisted over the treatment of ethnic Hungarians in the republic and over the Hungarian-controlled Gabickovo Dam, which diverts water from the Danube. Ties between Slovakia and the United States have been especially close since the election of a pro-Western government in 1998. The United States has given Slovakia millions of dollars since 1990 for the building of democracy and a free-market economy, and the U.S. Department of Defense has been helping the nation rebuild its military.

DEFENSE

As of 2003 Slovakia's armed forces numbered about 22,000 personnel, in Land, Air, and Air Defense forces and various special-forces regiments. All 18-year-old males must serve in the armed forces for six months; both men and women can volunteer at 17. The nation is planning a transition to a slightly smaller all-volunteer professional force by 2007. The Slovak people think highly of their military.

ECONOMY

Slovakia has had a difficult transition from a central-command to a free-market economy. Unemployment and corruption have been persistent problems for the post-cold war governments, and exports have significantly declined as the nation's traditional markets, including Russia and the Ukraine, have endured their own economic problems. Services now account for the majority of jobs, followed by industry (including construction) and agriculture. The main industries are metal products, mining, electricity, gas, coke, oil, machinery, textiles, chemicals, and paper and printing. Weapons manufacturing was a major industry during the cold war, but the industry declined dramatically following the dissolution of the USSR. The main exports are machinery and transport equipment, manufactured goods, and chemicals. Agriculture remains a significant component of the Slovak economy. The country imports large quantities of oil, natural gas, and machinery. The nation's main trade partners are Germany, the Czech Republic, Russia, and Italy.

Slovakia suffered record account deficits in 2001 and 2002, but debts dropped precipitously in 2003, and growth was strong in 2003 and 2004. Foreign direct investment has increased, largely because of favorable tax treatment. The banking sector is controlled mostly by foreign concerns, and most of the enterprises formerly owned by the government have been completely privatized. The biggest thorn in the side of the economy is unacceptably high unemployment. Inflation, the budget deficit, and the weak health-care system are other problems.

ENVIRONMENT

Since the end of the cold war, public concerns over environmental damage from chemical and manufacturing plants have steadily increased. Major environmental issues include damage to forests from acid rain and heavy air pollution from metallurgical plants. Air pollution in particular has produced health risks for urban populations. There is also concern over the lasting impact of the Gabickovo Dam, which diverts water from the Danube.

LIVING CONDITIONS

About 40 percent of Slovaks live in the countryside, usually in small houses with gardens. The rest live in cities in apartments, though many city dwellers also own country homes, visiting them on weekends and holidays and using the land to grow vegetables for their own consumption.

The cost of living has increased since the end of Communism, which has caused difficulty for many people. Bratislava is by far the most expensive part of the country. Public transportation via trains and buses is widely available and inexpensive, with buses costing more than trains. Many people travel by motorcycle or bicycle. Air pollution is a problem in the cities.

HEALTH

Slovakia has both public and private health facilities. The country has struggled to find the money to pay public health doctors, and the pharmaceutical distribution system sometimes breaks down because the government does not pay pharmacists. Respiratory diseases caused by smoking and air pollution, high cholesterol, and alcoholism are the biggest health problems. Lyme disease occurs occasionally. Life expectancy is over 74 years. Fertility is low, with about 1.3 children born per woman in 2005.

Health

FOOD AND NUTRITION

Slovak cuisine is based around potatoes, dumplings, and rice, with meat or sausage, thick sauce, and boiled vegetables or sauerkraut. Cheese, butter, and eggs also appear on the table frequently. Salt, bacon, and caraway seeds are the predominant spices, and paprika is popular in the south, near Hungary. Typical dishes include *kapustnica*, or cabbage soup with pork sausage, and *bryndzov halusky*, or potato dumplings topped with sheep cheese. Sweets include honey cakes and dumplings stuffed with cherries or apples. Breakfast is usually coffee and a pastry. Lunch is usually the largest meal of the day. Dinner is often a light, cold meal. Slovaks drink a great deal of wine, and the Tokaj region is particularly noted for its fine vintages. Beer is also well liked.

Food and Nutrition

 Daily Available Calories per capita kcal: 3,100
 Amount of Cereal Available per person per year kg: 128.2
 Amount of Fruits and Vegetables Available per person per year kg: 124.3

STATUS OF WOMEN

Since the fall of Communism the status of women has generally improved. Women are equal under the law and have the same rights to property and inheritance as men. However, the nation suffers from many of the problems associated with the transformation to a market economy. Poverty has significantly increased among single mothers, and many families have seen real declines in their living standards. Women earn on average 30 percent less than men. Child-care centers, which were once free, closed in large numbers after privatization. Women are often the victims of domestic violence; Romany women and other ethnic minorities are especially vulnerable to violence and rape, and there have been reports of Romany women being surgically sterilized without their consent. Prostitution has dramatically increased. Human trafficking in female sex slaves is a major problem.

Women

 Seats Held in Parliament by Women %: 17
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 52.1

WORK

Unemployment is a major problem; the unemployment rate was 13.1 percent in 2004. About 29 percent of the workforce is employed in industry, producing metal and metal products, gas, coke, oil, nuclear fuel, machinery, textiles, and various other items. Food processing, such as brewing beer or making cheese, is an important industry. Some 56 percent of workers are employed in services. Agriculture now employs less than 6 percent of the workforce. Students often get summer jobs on farms.

Employment and Labor

Labor Force Total: 2,200,000
 Female Participation Rate %: 47.6
 Labor by Sector %:
 Agriculture: 5.8
 Industry: 29.3
 Construction: 9.0
 Services: 55.9
 Unemployment %: 13.1

EDUCATION

The state has compulsory education for children ages six to 14. Primary education involves grades one through five. After primary school, students may choose one of three educational paths: vocational or technical schools; gymnasia, which offer general education in preparation for university; and teacher training. There are also some conservatories for students who want to specialize in the arts. Students are instructed in Slovak and are required to study two foreign languages in addition to their mother tongue; English and German are the most popular choices.

When students finish gymnasium, they take a written examination to enter university. The oldest college in Slovakia is Comenius University, in Bratislava, which was founded in 1467. In total there are 14 institutions of higher education, including technical schools. Universities offer many programs for older adults who want to continue their studies.

SCIENCE AND TECHNOLOGY

Slovakia has been gradually improving its telecommunications systems, adding digital equipment and fiber-optic cable to its telephone networks. The country is slowly privatizing the industry and reducing the waiting period between applying for and receiving a telephone line. Cellular telephones are increasingly popular; in 2003 some 3.7 million cellular telephones were in operation. About 1.4 million people were using the Internet.

Science and Technology

Scientists and Engineers in R&D per 1 million people: 1,707

MEDIA

Many new publications and broadcast enterprises have appeared in Slovakia since 1990. The country now has several private daily publications, hundreds of nondailies and periodicals, and over 20 private radio stations competing with the five national networks run by the public Slovak Radio. Major dailies include *Pravda*, *Nový čas*, and *Sme*. The *Slovak Spectator* is an English-language weekly.

Slovak TV, the public television station, operates two national networks but has declined in popularity as private stations have begun competing with it. TV Markiza is the most popular commercial station. Many people watch cable or satellite television; Czech and Hungarian channels are particularly popular.

CULTURE

After years of domination by the Hungarians, Austrians, and later the Communists, Slovakia experienced a cultural revival in the wake of the end of the cold war. The literary tradition of the 19th century has been resurrected, and the works of such figures as the poet Pavol Országh Hviezdoslav have been reissued. Famous musicians include Johann Nepomuk Hummel, Alexander Moyzes, Edita Gruberova, and Lucia Poppov. Traditional holidays such as various saints' days, along with a new generation of festivals, including the Bratislava Jazz Days and the Bratislava Lyre rock festival, that have been added to the folk festivals people have long held, provide opportunities for cultural enrichment throughout the year.

FOLKLORE AND MYTHOLOGY

The Slovaks held on to their ancient folk traditions during Hungarian and Communist rule, and in modern times folk practices are still an important part of village life. Traditional folk costumes and instruments, including the shepherd's flute and bagpipes, remain integral parts of Slovak culture, especially in the eastern portion of the nation. Each town and region has its own dancing styles; there are wedding dances, shepherds' dances, and dances performed by men on their way to join the army. Every summer dancers from all over the country participate in the Vychodna Folklore Festival.

ENTERTAINMENT AND RECREATION

Slovaks enjoy outdoor recreation. In the winter they travel to the Tatras for skiing and other cold-weather sports; the Poprad Tatry region can be covered with snow for more than six months a year and has been a popular destination for athletes since 1909. In the summer, people return to the mountains for hiking, camping, and fishing in the rivers and lakes.

ETIQUETTE

When two people shake hands, it is important for flesh to touch flesh, so Slovaks always remove their gloves; failure to do so is an insult. Many Slovaks in urban areas speak German or English in addition to Slovak; though some people speak Russian, many Slovaks look with disfavor on that language. Slovaks love to use titles when addressing one another. Relationships are built on trust and socializing, and when Slovaks get together they always spend some time talking and perhaps drinking plum brandy; if they must discuss business, they wait until a good personal relationship has been established. Within companies, one person at the top usually makes or approves all decisions.

FAMILY LIFE

Rural Slovaks live more traditional lifestyles than urbanites. Women in the country are more likely to be housewives, caring for the home and children and doing farmwork; urban women typically work outside the home. Day-care facilities have dwindled since the end of Communism, which has made life harder for families with two working parents. Many young Slovak couples live with one or the other's parents for the first few years of marriage, saving money to buy their own home. Though modernity has changed some aspects of family life, Slovaks still value extended family and like to socialize with relatives.

PERSONAL APPEARANCE

Slovaks dress in typical Western clothing. Many people own traditional clothing that they wear for weddings and festivals; styles vary by region, but most are variations on the theme of a white shirt with embroidery.

SPORTS

Sports are an important part of Slovak life. All students participate in physical education and sports in school. Ice hockey is extremely popular, and the Slovak national team has done well in international competitions, including the Olympics; many Slovaks play for North American hockey teams. Soccer is popular in the summer. Other popular sports include basketball, volleyball, baseball, tennis, skiing, snowboarding, ice skating, swimming, and windsurfing. The Slovak athlete Michal Martikán won gold at the 1996 Olympic Games in white-water slalom canoe.

CHRONOLOGY

- 1945** Post-World War II peace settlements result in the expulsion of Sudeten Germans and Hungarians from Czechoslovakia, territory losses to Russia, and the acquisition of land from Poland.
- 1946** After elections in which they received 38 percent of the vote, the Communists establish a coalition government.
- 1948** A Communist coup results in the purge of all non-Communists from the government and numerous arrests and executions; the government begins to nationalize private land and industry.
- 1949** Council for Mutual Economic Assistance is formed; government places restrictions on churches and confiscates church property; thousands are arrested in purges.
- 1950** Government bans all books published in Czechoslovakia before 1948; most monastic houses are confiscated; new criminal code is passed.
- 1951** In mass purges, members of the Party Central Committee are arrested, tried, and executed.
- 1960** New constitution is promulgated; the official name of the state is changed to Czechoslovak Socialist Republic.
- 1968** Pro-reform communists gain power; Alexander Dubček is named first secretary; the Prague Spring witnesses a series of reforms that end the more ruthless aspects of the Communist regime; in response, the Soviet Union organizes an invasion of Czechoslovakia by its Warsaw Pact allies. Thousands are arrested, executed, or exiled. Dubček is replaced by Gustáv Husák.

2132 Slovakia

- 1977 A group of dissidents and intellectuals issues Charter 77.
- 1989 Husák resigns, and the Communists give up power in what is known as the Velvet Revolution; human rights activist and playwright Václav Havel becomes president, and a new, non-Communist-controlled cabinet is sworn in.
- 1990 In general elections the Communists are soundly defeated, and Havel's party, Civic Forum, captures 170 seats in the National Assembly, as compared to the 47 won by the Communists; Havel is reelected president.
- 1992 A leftist government comes to power in Slovakia; Czechoslovakia dissolves into two nations, the Czech Republic and Slovakia, in the Velvet Divorce; a new constitution is established.
- 1994 The first parliamentary elections are held under the new constitution; Slovakia joins NATO's Partnership for Peace program in the hope of eventually gaining membership in the alliance.
- 1995 Slovakia applies for membership in the European Union.
- 1998 In elections, the Movement for a Democratic Slovakia gains the most seats, while the government that is formed is led by the Slovak Democratic Coalition. The constitution is changed to allow for direct presidential elections.
- 1999 Rudolf Schuster wins the country's first direct presidential elections.
- 2001 The constitution is amended so that Slovakia can apply for EU membership; amendments also decentralize power, make the judiciary more independent, give more recognition to minority rights, and increase the power of the state audit office. The parliament votes in favor of joining NATO.
- 2002 Eight new regional parliaments are created as per EU membership requirements. Mikuláš Dzurinda wins a second term as prime minister. The European Union invites Slovakia to join in 2004.
- 2003 Slovaks vote in favor of joining the European Union.
- 2004 Slovakia gains NATO and EU membership. Ivan Gašparovič is elected president.
- 2005 The parliament signs the proposed EU constitution.

UNIT OF CURRENCY

Tolar

NATIONAL FLAG

Three equal horizontal bands of white (top), blue, and red, with the Slovenian national emblem on the upper hoist side of the flag centered in the white and blue bands.

NATIONAL EMBLEM

A shield with the image of Triglav, Slovenia's highest peak, in white against a blue background at the center. Beneath are two wavy blue lines depicting seas and rivers, and above are three six-sided stars arranged in an inverted triangle as taken from the coat of arms of the counts of Celje, the greatest Slovene dynastic house of the late 14th and early 15th centuries.

NATIONAL ANTHEM

"My Friends, the Vines Have Produced Again Sweet Wine, Which Enlivens Our Veins"

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 8 (Prešeren's Day), April 27 (Day of Uprising against Occupation), May 1 (Labour Day), June 25 (Statehood Day), October 31 (Reformation Day), November 1 (Remembrance Day), December 25 (Christmas), December 26 (Independence Day), various Christian festivals

DATE OF INDEPENDENCE

June 25, 1991

DATE OF CONSTITUTION

December 23, 1991

GEOGRAPHICAL FEATURES

Slovenia is located in southeastern Europe, bordering Austria, Croatia, Italy, Hungary, and the Adriatic Sea. It has a total area of 20,273 sq km (7,827 sq mi). Its total coastline is only 46.6 km (29.1 mi) long, while its total land boundaries stretch 1,334 km (833.8 mi). The capital and largest city is Ljubljana, which is located in the center of the nation. Other major cities include Maribor, Celje, Kranj, and Koper.

The geography of Slovenia is varied. Mountains in the north rise to over 2,500 m (8,200 ft), while in the

southeast are wide plateaus more than 1,000 m (3,280 ft) high. The south and southwest are marked by the Karst region of limestone caves and the short Adriatic coastline; the east contains rolling hills. The Dinaric Alps divide the southern, coastal region from the central lowland areas and the more rugged northeast. Along the Adriatic coast the terrain is marked by coastal plains and sandy beaches. Most of the rest of the nation is mountainous, with deep valleys, rivers, and broad plateaus. Much of Slovenia is covered by dense forests. Along the border with Italy is an Alpine mountain region. The highest peak is Mt. Triglav, with an elevation of 2,864

Slovenia

m (9,390 ft). The longest river is the Sava, which flows for 221 km (138 mi) through Slovenia. There are over 200 lakes in the nation, the largest of which is Cerknica, which has an area of 26 sq km (10 sq mi). The rugged nature of the terrain and the numerous rivers have created abundant waterfalls, some 300 in total, with the highest, at Cedca, falling some 130 m (426 ft).

Of special note is the Karst region, in the hinterlands of the Bay of Trieste, a limestone area of sinks, caves, and underground caverns. The Karst begins where Ljubljana intersects the Alpine region. The land is fairly desolate,

with poor pastures and windswept hills and plateaus, as most water is absorbed into the underground network of streams. The area contains the world's largest sinkhole and numerous underground rivers and caves.

CLIMATE AND WEATHER

The climate of Slovenia varies along the topographical divisions. The coastal areas have a warm Mediterranean climate, while the interior areas have a continental, sub-Alpine climate, with mild to hot summers. The Alpine regions have cool summers and cold winters. The annual precipitation ranges from less than 610 mm (24 in) in the coastal and continental areas to over 3,200 mm (130 in) in the mountains, mainly due to heavy snowfall in the winter. The average temperature varies from region to region, with these differences most pronounced in the summer. In January, in the mountains the average temperature is below 0°C (32°F), while the temperature ranges from 0 to 2°C (32 to 36°F) in the interior and from 2 to 4°C (36 to 39°F) on the coast. In July, the average temperature ranges from 20 to 22°C (68 to 72°F) in the interior and from 22 to 24°C (72 to 74°F) in the east, although it is much cooler in the mountains.

Climate and Weather

Mean Temperature	
July:	72°F
January:	31°F
Average Rainfall: 24 in	

FLORA AND FAUNA

Slovenia is one of the greenest countries in Europe. More than half of the land is covered in forests, while farmland, vineyards, orchards, pastures, and fields cover about 43 percent. Almost 3,000 plant species, some of them endemic, grow in Slovenia. Triglav National Park contains a large number of endemic flowering plants.

Animals also thrive in the country. Large mammals include lynx, bear, boar, deer, and chamois. The so-called human fish, *Proteus anguinus*, lives in Karst caves. Rare species include the scarab beetle, dormice, the moor tortoise, and the cave hedgehog.

ETHNIC COMPOSITION

Slovenes, ethnically a Slavic group, make up some 92 percent of the population, making Slovenia a highly homogeneous nation. The largest minority groups in the country are Croats, with about 1 percent of the population; Serbs, with 0.5 percent; Hungarians, with 0.4 percent; and Bosnians, with 0.3 percent. Many of the Croats, Serbs, and Bosnians are refugees from the various ethnic conflicts in the former Yugoslavia. There are also Italians and other groups in the country who have been granted the status of indigenous minorities and receive special political and cultural concessions.

LANGUAGES

Over 92 percent of the population speaks Slovene, which is the nation's official language. Although Slovene is a Slavic language, it uses the Latin alphabet and is quite distinct from Serbo-Croatian, which is spoken by 6.2 percent of the nation. English, Italian, and German are common second languages.

RELIGIONS

There is no state religion in Slovenia, and the constitution guarantees freedom of religion. The dominant religion is Christianity, with some 70 percent of the nation identifying themselves as Roman Catholic. The Lutherans make up the largest Protestant denomination, with 1 percent of the population. The largest non-Christian faith is Islam,

also with 1 percent of the population. Some 4 percent of Slovenes identify themselves as atheists, 23 percent as adherents of other religions. Foreign missionaries are allowed to move about and operate freely and unhindered in the country.

HISTORICAL BACKGROUND

The capitol of Slovenia, Ljubljana, was founded as the Roman town of Emona during the first century c.e. Slavs began settling in the area that is now Slovenia at the end of the sixth century in an effort to escape pressure from the Avars. In the seventh century Western Slavic tribes formed an alliance with the duchy of Carantania and began centuries of orientation to the West. In 745 Carantania became part of the Frankish Empire, and the Slavs of the region were converted to Christianity and gradually lost their independence. There was a brief period of independence under the leadership of Prince Kocelj, who established a Slovene state in Lower Pannonia (869–874). During this period there was increased use of the Slovene language, and the Freising Manuscripts, the oldest written documents in Slovene, were recorded. Slovenia gradually fell under Austrian domination, and by the 14th century all of Slovenia was part of the Hapsburg Empire.

In spite of Hapsburg domination, the Slovene language survived, and the people resisted efforts at Germanization. In 1584 the Bible was translated into Slovene. Napoleon attempted to break the region away from Austria in 1809 when he established the Illyrian provinces from areas of Slovenia and Croatia. Ljubljana was the capital of the provinces. The territory reverted to Austria in the wake of Napoleon's defeat. During the revolutions of 1848 Slovenian intellectuals began calling for a united, independent nation. By the 1860s nationalist parties had formed to work toward independence.

In 1917 the Declaration of Corfu called for the creation of a Yugoslav state. Following World War I, Slovenia became independent of Austria, but it was then incorporated into the Kingdom of the Serbs, Croats, and Slovenes, with Prince Aleksandar Karadjordjevic as sovereign. In 1929 the name of the country was changed to Yugoslavia. After the Germans invaded in 1941, Slovenes mounted widespread resistance to occupation. By 1943 the Communists had gained a leading role within the resistance movement. Fighting between the Germans and partisan units continued until the end of the war.

At the end of the war, in 1945, Josip Broz Tito became premier of Yugoslavia. That same year collectivization began with restrictions on land ownership, and in 1946 the government began nationalizing businesses and corporations.

Unlike the other Communist states of Europe, Tito endeavored to develop a policy of nonalignment for Yugoslavia, with ties to neither Moscow nor the West. Tito was elected president of the country in 1953. Throughout the post–World War II era, ethnic tensions persisted between the various groups in Yugoslavia. Through an effort to reduce these tensions, the Communist League was formed in 1969. Purges were conducted two years later, wherein supporters of free-market reforms were removed from the government. This was followed by the 1974 revision of the constitution to establish a collective presidency in order to grant greater power to the individual regions.

The stability that marked Yugoslav history in the post–World War II era began to erode after the death of Tito in 1980. With the end of the cold war, several groups asserted their independence. Among them, the General Assembly of Slovenia declared its right to secede. In 1990 Slovenia and Croatia held their first multiparty elections in 50 years, and a referendum in Slovenia called for independence. This was followed by a brief war with Serbia, after which independence was recognized and a new constitution was adopted.

In 1992 Slovenia was recognized by the European Union and joined the United Nations. The country joined several other international institutions, including the Partnership for Peace initiative, which was established by the North Atlantic Treaty Organisation (NATO), and the World Trade Organization. Slovenia entered into negotiations with the European Union regarding membership in 1995, signing an association agreement in 1996. In 1999 Slovenia allowed NATO to use its airspace during the bombings of Kosovo and Serbia under the Partnership for Peace program.

During the early 2000s the government focused on integrating Slovenia more fully into Europe. Prime minister Janez Drnovšek was elected president in 2002. The following year Slovenian voters approved of joining both NATO and the European Union, and the nation became a formal member of both associations in 2004. Janez Janša, of the Slovenian Democratic Party, was elected prime minister in late 2004. His administration pledged to increase privatization and to reduce the costs of government preparatory to the adoption of the euro as the national currency.

CONSTITUTION

Slovenia is a parliamentary democracy. The constitution was adopted on December 23, 1991, following the brief struggle for independence from Yugoslavia. The head of state is the president, who is elected for a five-year term and can serve only two terms in succession. The president is commander in chief of the military. The head of the government is the prime minister, who is elected for a four-year term by the National Assembly. The cabinet or council of ministers is made up of the prime minister and 21 cabinet ministers, including three without portfolios. These ministers are nominated by the prime minister and approved by the parliament. The nation's parliament is a bicameral body with a legislative chamber, the National Assembly, and a consultative body, the National Council. The National Assembly is the nation's highest legislative authority. The elected National Council serves in an advisory role and may propose laws to the Assembly. Members of the National Council represent specific legal, economic, professional, and trade interests.

The constitution established an independent judiciary, and constitutional issues are overseen by the Constitutional Court. Suffrage is universal for those over the age of 18 and for employed 16- and 17-year-olds. The constitution provides for direct democracy through referendums and popular initiatives. Referendums can be presented to the populace for approval. Parliament must call for a referendum if requested by at least 20 deputies. In addition, initiatives to amend the constitution can be put on ballots if sponsors are able to collect the signatures of at least 30,000 voters.

PARLIAMENT

Slovenia has a bicameral legislature made up of the 90-member National Assembly and the 40-member National Council. Representatives in the Assembly are elected for four-year terms; 40 are directly elected, while 50 are elected on a proportional basis. Members of the Council are elected for five-year terms and represent various interests; there exist four members to represent employers, four for farmers, four for small businesses and the self-employed, six for nonprofit organizations, and 22 for localities. Members of the Council may also

be members of the Assembly or hold a government post. Elections for the Assembly and Council are held in alternate years.

The Assembly has almost complete control over the legislative process. The Council essentially serves as an advisory body, although it may propose legislation in certain areas. The Council can also review the decisions of the Assembly. The leader of the majority faction in the Assembly is usually chosen to be the prime minister and lead the government.

POLITICAL PARTIES

The great number of political parties in Slovenia has fostered the need for governments to be formed by coalitions, even of parties diametrically opposed to each other, as in 1996, when a leftist party joined with a conservative, rural party to establish the government. Parties include the pensioner-backed Democratic Party of Retired People of Slovenia (DeSUS), the center-left Liberal Democracy of Slovenia (LDS), New Slovenia (NSi), the center-left Slovene Democratic Party (SDS), the conservative, rural Slovene People's Party (SLS), the Slovene Youth Party (SMS), and the United List of Social Democrats (ZLSD), a successor to the Communist Party.

LOCAL GOVERNMENT

There are 193 local administrative units, including 182 municipalities, called *občine*, and 11 urban municipalities, known as *mestne občine*. The national government has engaged in a broad program of devolution, whereby political power is being returned to local communities, which have the authority to tax and are subject to referendums and initiatives.

LEGAL SYSTEM

Slovenia has an independent judiciary. The highest judicial body is the Supreme Court; the lower court system is divided into local and district courts. Supreme Court judges are elected by the National Assembly after nomination by the Judicial Council. There is also the Constitutional Court, which decides issues related to the constitution; its nine judges are nominated by the president and elected by the National Assembly. Individual judges hold their positions for life, although there is an age limit, and are constitutionally independent. The Judicial Council is composed of six sitting judges elected by their peers and five justices nominated by the president and approved by the parliament.

The legal system is based on the concept of civil law. All defendants are innocent until proven guilty and have

the right to due process and a fair trial. Court proceedings are open, and there is a right to appeal.

HUMAN RIGHTS

The constitution and laws of Slovenia provide for civil rights and liberties. The constitution forbids arbitrary arrest and self-incrimination and provides for the freedoms of privacy, speech, assembly, religion, and movement. In addition, authorities must provide written charges within 24 hours of arrest. There is a government ombudsman who deals with human rights and citizenship cases. The Hungarian and Italian minorities in Slovenia have special statuses and are constitutionally guaranteed representation in the National Assembly. The court system has a well-developed appeals process. The constitution also specifically provides for the right of political asylum, and since 1991 Slovenia has taken in some 16,000 refugees from conflicts in the former Yugoslavia.

For the most part, the human rights situation in Slovenia is good. There are some cases of police brutality and media self-censorship. Violence against women and human trafficking are problems.

FOREIGN POLICY

When Slovenia declared independence from Yugoslavia in 1990, the nation's first priority was to gain international recognition; only after a 10-day war in 1991 did the nation gain formal independence. A year later Slovenia was recognized by the European Union and became a member of the United Nations. After gaining independence from Yugoslavia, Slovenia endeavored to develop a market economy and integrate itself into the institutions of the West, including the European Union and NATO, both of which the nation joined in 2004. Successive governments sought to distance themselves from the former Yugoslavia and return to the nation's traditional Western orientation. Slovenia and Italy are negotiating to resolve property and minority issues dating from World War II. Slovenia also has a maritime dispute with Croatia over access to the Adriatic Sea.

Slovenia was a founding member of the World Trade Organization in 1994 and joined NATO's Partnership for Peace program. Slovenia provided troops for the NATO peacekeeping mission in the former Yugoslavia and has worked to preserve stability in Bosnia. The United States has supported Slovenia's efforts to develop democracy and a market economy; the two nations have collaborated on a variety of endeavors.

One of the nation's pressing issues regards the status of some 18,000 undocumented non-Slovenian residents, who were in Slovenia when independence was declared

but lost all records when they did not take Slovenian citizenship. In 2004 voters rejected a law that would have restored their rights.

DEFENSE

As of 2004 the nation was in the process of reorganizing the Slovene Armed Forces, transforming them from conscription-based defense forces to professional, combat-ready forces that could participate in NATO activities. Conscription ended in 2003, and compulsory reserve service will end by 2010. The armed forces consist of a fully professional motorized infantry brigade and two cadre/reserve-force mechanized brigades, a small air force, and a naval attachment with one coastal patrol boat. In 2003 the military comprised about 11,000 soldiers and 12,000 reservists.

In 1994 Slovenia joined NATO's Partnership for Peace initiative, and the country has participated in NATO-led peacekeeping operations in the former Yugoslavia. Slovenia has been the recipient of significant military aid, in the form of both finances and training, from Western nations such as the United States and Germany.

ECONOMY

Slovenia was the most prosperous of the Yugoslav republics. Since independence, the nation has made substantial progress in reorienting its economy toward free-market capitalism. Slovenia has the highest gross domestic product (GDP) of all the transition economies of eastern Europe. Successive governments have pursued policies of economic openness and have endeavored to keep inflation and labor costs low in order to attract international firms. Much of the economy was privatized in 2002–03, and the budget deficit had dropped to 1.6 percent of GDP by 2003; growth was 3 percent. Unemployment has decreased, and foreign investment has increased, partly due to structural reforms that encourage foreign companies to locate in Slovenia. Remaining issues include corruption and the close relationship between the government, the central bank, and businesses.

The service sector is the largest single aspect of the economy; financial service firms have done especially

well in Slovenia. Industry and construction account for one-third of GDP. The government has encouraged the establishment and growth of mid- and high-technology firms in an effort to maintain an employment base. The nation's main industries are ferrous metallurgy and mill products, aluminum production, lead and zinc smelting, electronics, trucks, textiles, chemicals, and machine tools. Agriculture, forestry, and fishing constitute 3 percent of GDP. The country has sought to capitalize on natural resources to develop a thriving tourist trade. Slovenia's main exports include manufactured goods, machinery and transport equipment, chemicals, and foodstuffs; the main imports are machinery and transport equipment, manufactured products, chemicals, and fuels. Slovenia's main trade partners are Germany, Italy, France, Austria, Croatia, and Bosnia and Herzegovina.

ENVIRONMENT

Much of Slovenia's waterways have significant pollution. The Sava River is contaminated with domestic and industrial waste. Coastal waters are polluted with heavy metals and toxic chemicals from industrial production. Extensive damage to forested areas has been caused by acid rain produced by sulfur dioxide emissions from chemical and manufacturing plants. Pollution is an especially significant concern in light of the growing tourist market in Slovenia.

LIVING CONDITIONS

The cost of living is substantially lower in Slovenia than in neighboring Italy and Austria, though prices have risen steadily as the economy has improved. Gasoline prices are relatively low for Europe, and traffic is light. There is a thorough bus network, with frequent departures, and some slower train service. Most housing is modern and comfortable.

HEALTH

Slovenia has good health overall. Life expectancy is over 76 years, and infant mortality is quite low. HIV/AIDS has not yet become a major problem. There are both public and private health-care facilities. Many Slovenians like to go to spas for health treatments and relaxation.

FOOD AND NUTRITION

Slovenian food resembles that of Austria, Hungary, and northern Italy. It is heavy, with plenty of meat, beans, and potatoes but few vegetables and fruits. People eat sausage, Wiener schnitzel, goulash, other paprika-flavored stews, strudel, potato dumplings, risotto, and ravioli. Pastries called *burek* are popular snacks; they can be filled with meat, cheese, or fruit such as apples. Alcoholic beverages include locally brewed beers, a brandy called *zganje*, and excellent red and white wines.

STATUS OF WOMEN

Slovenian women are guaranteed equal protection under the constitution. The prime minister's office even has an agency whose function is to promote the participation of women in politics. The level of violence and discrimination against women is relatively low, and women are common in both government and industry, although in overall terms they remain most prominent in lower-paying jobs. In rural areas, discrimination is much more common in both the economic sector and in the areas of household work and family care. Marriage and divorce laws are based on the concept of the equality of both genders.

Prostitution occurs frequently, and in some cases women have been sold as sex slaves by human traffickers.

WORK

The unemployment rate was 11.3 percent in 2003 but was down to 6.4 percent in 2004; the government was attempting to lower this figure by encouraging foreign investment. Slovenians are quite prosperous, with a per capita GDP of \$19,600 in 2004. The workforce is well educated and industrious. Services employ a large proportion of workers, in banking, education, medicine, the government, and other areas. Industry brought in over one-third of GDP in 2004; industrial workers are employed in manufacturing electronics, trucks, electric power equipment, textiles, chemicals, and metal products. Some Slovenians still work in agriculture, growing grapes for wine, wheat, potatoes, and other crops as well as raising livestock.

EDUCATION

The educational system in Slovenia is similar to those in most European nations. Primary education covers ages

seven through 15; at 15 students may pursue a vocational path or enter the gymnasium for preparation for university. Each path is further subdivided. Those students who pursue a vocational path may attend either a two- or four-year secondary technical school. Students who attend gymnasium can obtain either a general certificate or a scientific/technical degree. Higher education in Slovenia is protected by the constitution, and academic freedom is respected in the nation's two universities. In addition, there are 36 other institutions of higher education. The Higher Education Act of 1994 converted the nation's two-year higher education institutes into three-year facilities, and several of the larger bodies were broken up into smaller institutions.

SCIENCE AND TECHNOLOGY

The Ministry of Higher Education, Science, and Technology is responsible for establishing national policy on scientific and technological matters. The ministry wants to increase the amount of science education and improve the nation's technological infrastructure to allow Slovenia to compete with other Western nations. The telecommunications infrastructure was good as of 2003; there were over 800,000 telephone lines and 1.7 million cellular telephones in use, and 750,000 people were using the Internet.

MEDIA

There are several major dailies and weekly publications in Slovenia. The major print media are all private, but the major radio and television broadcasters are government owned. There is a mix of public and private television and radio stations. The main television stations are the public RTV Slovenia and the commercial Kanal A and Pop TV. All major towns and villages have access to radio and television. There is also an Italian-language television station and numerous Hungarian-language radio stations. Most of the prominent minority groups have newspapers printed in their native languages. About two-thirds of Slovenes have access to foreign broadcasts through satellite and cable television.

While there is freedom of the press, years of government- and self-censorship and new political pressures have combined to continue to influence reporting on domestic issues. By law, stations are required to provide free air time to politicians running for office.

CULTURE

Slovenia's most famous writer is France Prešeren, an early-19th-century poet who wrote nationalist lyric poems that raised Slovenian national consciousness. Many of Slovenia's buildings and parks were designed in the first half of the 20th century by the architect Jože Plečnik, whose face has since been placed on one of the Slovenian banknotes. The artists' cooperative IRWIN and the multimedia group Neue Slowenische Kunst have produced a great deal of postmodern painting and sculpture since the 1980s. Punk music was extremely popular in the 1970s and 1980s.

FOLKLORE AND MYTHOLOGY

The ancient Slavs believed that a three-headed god, the ruler of heaven, earth, and the underworld, inhabited the three-pronged Mt. Triglav. This mountain became a symbol of Slovene national identity, and for centuries people made pilgrimages there to confirm their patriotism. Slovenes were heavily influenced by Greek and Roman mythology; for example, they believed that the horse Pegasus was the first discoverer of the Slatina spring.

Slovenia lost many of its folk traditions in the years following World War II and under Yugoslav domination. Recent musicians such as the group Trutamora Slovenica have been reviving folk musical styles. Most towns and villages celebrate their own folk music festivals every year.

ENTERTAINMENT AND RECREATION

The capital city, Ljubljana, is an attractive town with many centuries-old buildings, parks, walkways along the river, museums, and a large university. There are restaurants, bars, discos, theaters, cinemas, and places to hear live music. Tivoli Park contains a recreational center with a skating rink, swimming pools, bowling alleys, and tennis courts. The small Adriatic coast has some pleasant beaches. The Julian Alps are a popular site for hiking, trekking, and viewing Lake Bohinj. The Škocjan Caves contain stalactites, stalagmites, bats, and 250 types of plants and receive many visitors every year. There are spas in Rogaška Slatina and vineyards in the Haloze Hills and the Jeruzalem-Ljutomer region.

ETIQUETTE

Rules of etiquette in Slovenia are similar to those in Germany and Austria. When entering or leaving a room, it is polite to shake hands with everyone; men shake the hands of women first. Businesspeople always hand out business cards when meeting others. Titles such as "doctor" or "professor" are very important and always used. People are extremely friendly, and it is acceptable to smile and say hello to strangers.

FAMILY LIFE

Slovenians may legally marry at the age of 18. The number of marriages occurring every year has been dropping steadily since 1990, as more couples are choosing to live together without marrying. Divorces have increased. Most families are quite small, and few women choose to have more than one child.

PERSONAL APPEARANCE

Slovenians dress in typical Western clothing. They are fairly conservative, especially in business settings, and ostentatious or excessively colorful clothing is frowned upon.

SPORTS

Soccer is the most popular sport in Slovenia. The national team plays other European nations, and most towns and villages have their own local teams. Slovenians also engage in sports such as basketball, volleyball, hockey, golf, tennis, and swimming. In the winter many people ski. Sports are administered at the national level by the Ministry of Education and Sport.

CHRONOLOGY

- 1945** Josip Broz Tito becomes premier and defense minister of liberated Yugoslavia; the process of collectivization begins with restrictions on land ownership.
- 1946** Nationalization law is implemented that gives the government control of most commercial companies.
- 1948** Tito breaks with Moscow and embarks on a policy of nonalignment.
- 1953** Tito is elected president of Yugoslavia.
- 1969** League of Communists is formed in an effort to bring the ethnic and national groups in Yugoslavia together.
- 1971** Prominent politicians and public officials are purged for their support of the free market.
- 1974** The constitution is revised to establish a collective presidency.
- 1980** Tito dies.
- 1989** General Assembly of Slovenia declares right to secede from Yugoslavia.
- 1990** Slovenia and Croatia hold their first multiparty elections in over 50 years; in a referendum the Slovenian people vote for independence.
- 1991** After a brief war Slovenia gains its independence from Yugoslavia; new constitution is adopted.
- 1992** Slovenia is recognized by the European Union; Slovenia becomes a member of the United Nations; the first free elections for parliament take place.
- 1994** Slovenia joins Partnership for Peace; the republic becomes a founding member of the World Trade Organization; Slovenia and Croatia reach an agreement to decommission a nuclear power facility on the countries' shared border.
- 1995** The European Union and Slovenia begin negotiations on EU membership; Slovenia reaches an agreement with Italy regarding compensation for property confiscated from Italians who fled Slovenia after World War II.
- 1996** Slovenia becomes an associate member of the European Union; national elections in November result in a 45–45 split between center-left and center-right coalitions in the National Assembly.
- 1997** In January the center-left coalition gains a narrow majority, and Janez Drnovšek of the Liberal Democracy of Slovenia is reelected prime minister; in November President Milan Kučan is elected to a third term.
- 2000** Drnovšek loses a no-confidence vote in April; Andrej Bajuk becomes prime minister; elections in October are won by Drnovšek, who regains power at the head of a four-party coalition.
- 2002** Slovenia is invited to join NATO and the European Union. Prime Minister Drnovšek wins the presidency.
- 2003** Slovenes vote in favor of NATO and EU membership.
- 2004** Slovenia joins NATO and the European Union. A right-wing referendum rejects a law that would have restored rights to nationals of other former Yugoslav republics. The Slovenian Democratic Party wins a majority in the general elections, and Janez Janša becomes prime minister; he forms a coalition government.
- 2005** Slovenia's National Assembly ratifies the EU constitution.

SOLOMON ISLANDS

Basic Fact Sheet

OFFICIAL NAME

Solomon Islands

ABBREVIATION

SB

CAPITAL

Honiara

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Nathaniel Waena (since 2004)

HEAD OF GOVERNMENT

Prime Minister Allan Kemakeza (since 2001)

NATURE OF GOVERNMENT

Parliamentary democracy tending toward anarchy

POPULATION

538,032 (2005)

AREA

28,450 sq km (10,985 sq mi)

ETHNIC MAJORITY

Melanesian

LANGUAGES

English (official), Melanesian pidgin

RELIGION

Christianity

UNIT OF CURRENCY

Solomon Islands dollar

NATIONAL FLAG

Light blue (upper left) and green fields separated by a narrow yellow stripe running diagonally from the lower hoist to the upper fly; five white stars in an X pattern are found in the blue section near the hoist.

NATIONAL EMBLEM

A shield in the center of the emblem shows an eagle and two frigate birds in the upper one-third and indigenous weapons and two turtles in the lower two-thirds. An alligator and a shark flank the shield; a canoe and a shining sun are above; and a stylized frigate bird and a scroll with the national motto, "To lead is to serve," are below.

NATIONAL ANTHEM

"God Save Our Solomon Islands"

NATIONAL HOLIDAYS

January 1 (New Year's Day), July 7 (Independence Day), December 25 (Christmas), most Christian festivals

DATE OF INDEPENDENCE

July 7, 1978

DATE OF CONSTITUTION

July 7, 1978

GEOGRAPHICAL FEATURES

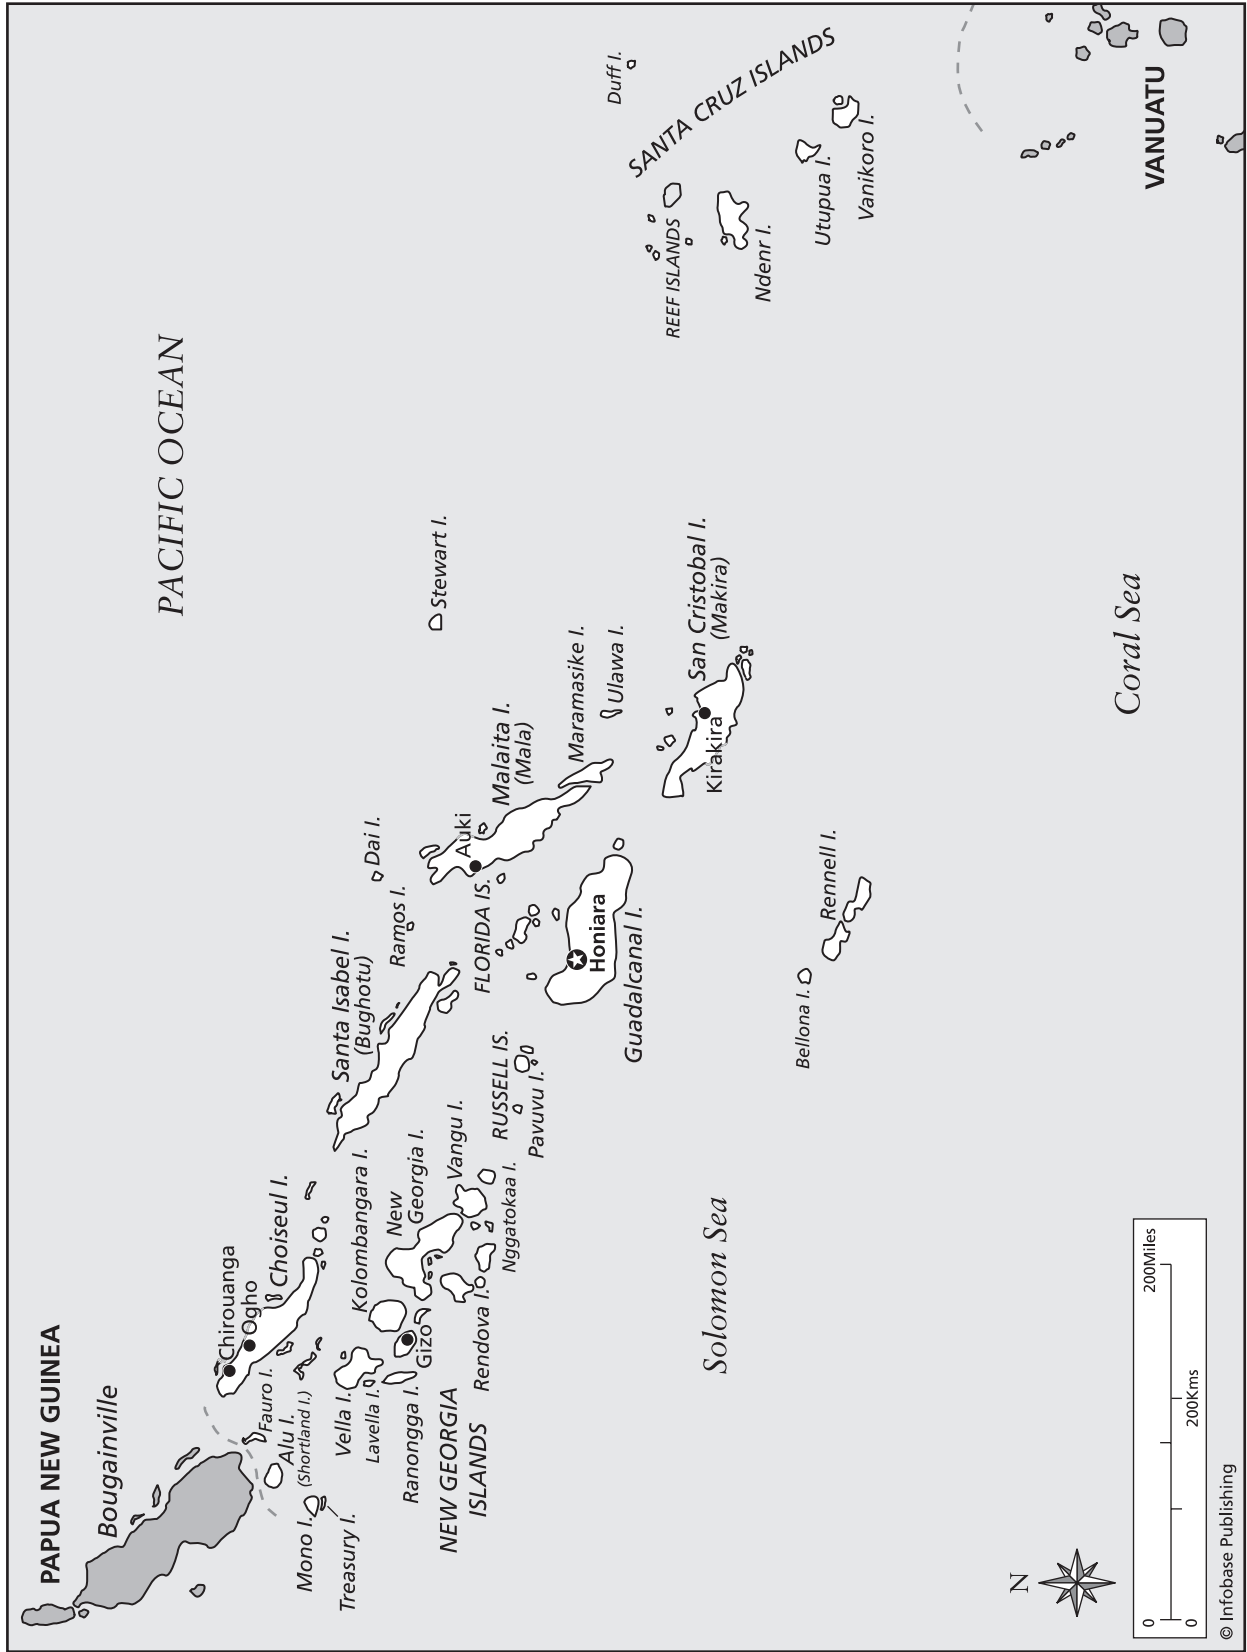

The Solomon Islands comprises a double chain of high continental islands formed from the exposed peaks of the submerged mountain chain that extends from Bougainville to northern Vanuatu. The total area is 28,450 sq km (10,985 sq mi), and the total coastline is 5,313 km (3,300 mi).

The largest island in the group is Guadalcanal, the fabled site of one of the fiercest battles in World War II; its area is 6,475 sq km (2,500 sq mi). Only five other

islands are large enough to be named on most maps: Choiseul, New Georgia, Santa Isabel, Malaita, and San Cristobal.

Almost all of the larger islands are volcanic in origin and are covered with steaming jungles and mountain ranges intersected by narrow valleys. The highest peak is the 2,447 m (8,026 ft) Mount Makarakomburu. Guadalcanal also contains the nation's only extensive alluvial plains. Most rivers are short and narrow and nonnavigable except by canoe. Most of the smaller islands are raised coral or low atolls.

---------	--------

CLIMATE AND WEATHER

The Solomon Islands lies wholly within the tropics, such that the country's climate is uniformly hot and humid, as tempered by continual sea breezes. Temperatures rarely exceed 29.4°C (85°F) or drop below 21.1°C (70°F); the typical variation may be only a degree or two all year long. There are no true changes of season; rather, the year is divided into seasons of greater and lesser rainfall, the former occurring between November and March and the latter from April to November. During the drier season the islands are cooled by southwesterly trade winds. The annual mean rainfall is about 3,050 mm (120 in), although the city of Honiara receives only 2,290 mm (90 in). During the rainy season the islands are subject to typhoons with the capacity for much destruction.

Climate and Weather

Mean Temperature: 70°F to 85°F
 Average Rainfall: 120 in
 Honiara: 90 in

FLORA AND FAUNA

There are about 4,500 species of plants in the archipelago, including 230 types of orchids and the poisonous nalato plant. The Solomons are covered with rain forests; about 10 percent of these forests have been cut down by the timber industry, but the government has introduced a reforestation program in an effort to prevent total deforestation. There are coconut trees, mangroves, and scrubby bushes.

The islands are full of animal life, including many species of insects, lizards, snakes, turtles, and crocodiles. Mammal species are fairly small; the largest mammals are the wild pigs. The waters surrounding the Solomons contain some of the most beautiful underwater scenery and

marine life in the world, including many types of tropical fish, sharks, whales, and dugongs.

POPULATION

ETHNIC COMPOSITION

Melanesians constitute 93 percent of the population. Minority groups include Polynesians (4 percent), Micronesians (1.5 percent), Caucasians (0.8 percent), Chinese (0.3 percent), and others (0.4 percent). Generally, the inhabitants of the high islands are Melanesians, while those on the outliers are predominantly Polynesian.

LANGUAGES

The official language of the Solomon Islands is English, but the lingua franca of the marketplace is a Melanesian pidgin; only about 2 percent of the people can speak standard English. The various islanders speak over 120 Melanesian languages and dialects, all of which are derived from the Austronesian linguistic family. In the interior regions the Melanesian languages give way to earlier and more primitive Papuan languages.

RELIGIONS

Fully 95 percent of the population is Christian, with the Anglican, Roman Catholic, Methodist, and Baptist churches dominant. In certain parts, particularly in the interiors, people have retained varying degrees of adherence to traditional religions.

Because Christian missionaries were responsible for introducing literacy, medicine, crafts, technology, and other aspects of Western civilization to the islands, the Christian influence is pervasive and deeply interwoven into every facet of national life.

Religious Affiliations

Anglican	242,100
Roman Catholic	96,800
United (Methodist/Presbyterian)	64,600
Baptist	48,400
Seventh-Day Adventist	37,700
Other Protestant	26,900
Indigenous Beliefs	21,500

HISTORICAL BACKGROUND

There is archaeological evidence that inhabitants first arrived on the Solomon Islands nearly 30,000 years ago. Organized agricultural settlements date back more than 6,000 years. For more than 5,000 years the islands were settled by a vast array of peoples, including Polynesians, Lapitas, and Melanesians. The settlements were also subject to frequent attacks by Tongan and Tokelauan peoples. In 1568 the Spanish explorer Don Alvaro de Mendaña y Neyra sighted a large island and called it Santa Isabel. He fought with the locals for food and gold and eventually returned to Peru. By 1570 the islands were being referred to as Yslas de Salomon, in reference to the biblical king Solomon. In 1595 Mendaña finally raised enough funds for another voyage to the islands, where he established a short-lived colony.

For nearly 150 years the islands were free from further European influence because of poor mapping. In 1767 the British captain Philip Cartaret rediscovered the Solomons, and they were subsequently used as whaling and trading stops for Europeans and Americans. Conflict grew between islanders and traders; the islands gained a reputation for being inhospitable, as whites were often killed on sight.

The northern Solomon Islands became a German protectorate in 1885, while the southern Solomon Islands came under the hegemony of the United Kingdom in 1893. Germany ceded most of its possessions in this region to the United Kingdom between 1898 and 1900, and the whole territory, called the British Solomon Islands Protectorate, was placed under the jurisdiction of the Western Pacific High Commission, which had its headquarters at Fiji and was represented locally by a resident commissioner. World War II brought the islands into contact with both Japan and the United States, who became locked in mortal combat on Guadalcanal. The widespread destruction caused by the war fostered strong anti-European sentiments, which led to the development

of pro-independence political movements, such as the "Marching Rule" in Malaita.

The territory's first step toward self-government was the establishment of executive and legislative councils in 1960. A new constitution was promulgated in 1970, and the nation's first general elections were held that year. A second constitution, adopted in 1974, created a single legislative assembly of 24 members, who chose a chief minister with the right to appoint his own council of ministers. In 1975 the country's name was officially changed from the British Solomon Islands Protectorate to the Solomon Islands. A year later the country achieved internal self-government, as followed by full independence in 1978.

At independence, Peter Kenilorea, the chief minister, was designated prime minister. The national parliament overwhelmingly reelected him in 1980. In 1981, however, parliament approved a motion of no confidence and chose Solomon Mamaloni as prime minister. Kenilorea was reinstated after the general elections in 1984 resulted in the formation of a coalition government. He was forced to resign in 1986 amid accusations of misappropriating typhoon relief funds. The national assembly then chose Deputy Prime Minister Ezekial Alebua to replace him. Following the 1989 elections, the legislature reinstated Mamaloni as prime minister.

Mamaloni formed his third government in 1994, when Francis Billy Hilly was forced to resign after one year in office. In 1997 Bartholomew Ulufa'alu was elected prime minister. Six months of ethnic tension led the government to declare a state of emergency in 1999; the Isatabu Freedom Fighters (IFF) had been leading a campaign to drive settlers from Malaita Island, off the main island of Guadalcanal. Ulufa'alu was forced to resign, and in June 2000 Manasseh Sogavare was elected prime minister. In February 2001 the Mauru peace agreement, aimed at ending years of fighting, was signed by both the IFF and the Malaita Eagle Force. However, the peace agreement was threatened in September 2001 when the IFF leader Selwyn Sake was murdered. In 2001 Allan Kemakeza was elected prime minister.

International donors urged Kemakeza to restore law and order to the nation, but in 2002 the situation descended into anarchy. International peace monitors left the country, and the tribal warlord Harold Keke, leader of the Isatabu Freedom Movement, ordered the murder of member of parliament Father Augustine Geve. The nation was in shambles by June 2003, when Kemakeza asked Australia and New Zealand for military help.

The next month Australian soldiers arrived on the islands. They captured Harold Keke, quelled widespread violence, collected weapons, and arrested numerous rebel commanders; in November, Australia declared the islands back in order. Nevertheless, as of 2005 the Solomon Islands faced a difficult future. Timber, the nation's main export, remained vulnerable to price fluctuations and sustained deforestation, and the country lacked the finances

needed to develop the infrastructure and attract tourists. The security situation, meanwhile, remained unstable.

LIST OF MODERN RULERS

Prime Minister

1978–81	Peter Kenilorea
1981–86	Solomon Mamaloni
1986–89	Ezekial Alebua
1989–93	Solomon Mamaloni
1993–94	Francis Billy Hilly
1994–97	Solomon Mamaloni
1997–2000	Bartholomew Ulufa'alu
2000–01	Manasseh Sogavare
2001–	Allan Kemakeza

CONSTITUTION

Under the constitution of 1978, which took effect upon independence, the Solomon Islands is a constitutional monarchy, with the British sovereign as titular head of state, represented on the islands by a governor-general, who is required to be a citizen of the country. The governor-general is appointed for a term of five years on the advice of the national parliament. The governor-general appoints the 20 members of the cabinet, choosing them from members of parliament on the advice of the prime minister. The prime minister is the head of government; he or she is elected by parliament but is usually the leader of the majority party. Each ministry is headed by a cabinet member.

Suffrage is universal for all Solomon Islanders over age 18. An electoral commission oversees electoral rolls and ensures free elections.

The constitution provides for the gradual devolution of power to proposed provincial governments and the incorporation of traditional leadership structures within the government. The details of such decentralization have not yet been worked out.

PARLIAMENT

The unicameral national parliament is a 50-member body elected by popular vote from single-member constituencies to four-year terms. The parliament may be dissolved by majority vote among its members before the end of a term. Parliament selects the governor-general, who serves a five-year term.

Only Solomon Islanders can own land. When the Solomon Islands became independent, citizenship was granted to all members of native tribes. Resident expatriates, such as the Chinese and Kiribatians, may become naturalized citizens.

POLITICAL PARTIES

Political party membership in the Solomon Islands is fluid, with large numbers belonging to nondescript independent parties. The two largest organizations are the People's Alliance Party (PAP), founded in 1977, which advocates the establishment of a federal republic, and the Solomon Islands Alliance for Change Coalition (SIACC). Other parties include the People's Progressive Party (PPP) and the Solomon Islands Labor Party (SILP).

LOCAL GOVERNMENT

For purposes of local government the country is divided into nine provinces—Central, Choiseul, Guadalcanal, Isabel, Makira, Malaita, Temotu, Western, and Rennell and Bellona—and one capital territory, Honiara.

The provinces are divided into area councils, which are governed by elected councils. Honiara is governed by the Honiara Town Council.

All areas except Tikopia, Anuta, and the small outlying Reef Islands are under the authority of their own local councils. Choiseul, Santa Isabel, Malaita, San Cristobal, and Guadalcanal have islandwide councils, while others administer subdistricts. Members of these councils are elected by universal adult suffrage. Malaita and Honiara have town councils with wider ranges of powers and responsibilities.

LEGAL SYSTEM

The judicial system is three tiered, with the High Court at the top. Magistrate courts have both civil and criminal jurisdiction. Local courts, each comprising a president and a panel of judges drawn from the village or subdistrict, deal with indigenous customs and litigation concerning customary rights to land.

The chief of police is also the superintendent of prisons and in this capacity runs the islands' four penitentiaries. The largest is the central prison at Honiara; smaller prisons, called district prisons, are established at the headquarters of the other police divisions. Penal policies are oriented toward rehabilitation rather than punishment and emphasize adult and vocational training. The average prison population rarely exceeds a few hundred.

HUMAN RIGHTS

In terms of civil and political rights, the Solomon Islands is classified as a free country. For the most part the government respects the human rights of citizens, although there is some violence and discrimination against women.

Until the eruption of armed conflict between Guadalcanalese and Malaitan militants, no violations of human rights had been reported in the country. Democratic institutions and practices seem to have struck firm roots, and there are no restrictions on the freedoms of speech, press, religion, and assembly. Preventive detention does not exist, and habeas corpus is honored in practice.

The armed conflict between Malaitan and Guadalcanalese militants led to a serious deterioration of the human rights situation. Many current and former police officers, many believed to be from two national police units dominated by Malaitans, sided with armed Malaitan political groups, and police and militants from both sides committed numerous human rights abuses, including killings, abductions, torture, rape, forced displacement, looting, and the burning of homes. Militants prevented Red Cross officials and volunteers from taking food and medical supplies to rural clinics, leaving 60,000 persons without access to medical care, nutritional supplements, and fuel.

FOREIGN POLICY

The Solomon Islands retains close links with Britain, Australia, New Zealand, and Japan. Regionally, Honiara has been a strong supporter of the South Pacific Nuclear Free Zone and an opponent of "French imperialism." The United States and the Solomon Islands have had diplomatic relations since 1978. Both nations are members of the South Pacific Commission and the South Pacific Regional Environmental Program. The United States grants \$18 million per year to the tuna fishing industry.

Since 1990 one of the principal concerns of the Solomon Islands has been the insurrection in Papua New Guinea's province of Bougainville, whose people are ethnically akin to Solomon Islanders. Papua New Guinea had accused Bougainvillean rebels of using the Solomon Islands as a conduit for arms and as a safe haven. In 1992 the Solomon Islands protested when Papua New Guinean military units crossed into Solomon territory on search-and-destroy missions and abducted villagers. Tensions eased in 1996 with the signing of a border treaty, and in 2004 the two nations regularized border operations.

DEFENSE

The Solomon Islands has no defense force, as the nation is under the protection of UK military guarantees. There is a small civilian police force responsible for domestic security and law enforcement. The United States carries out regular exercises in the Solomons and provides military training to national security officials.

ECONOMY

The Solomon Islands has very few sources of income and a per capita gross domestic product (GDP) of \$1,700. Three-quarters of the workforce are engaged in agriculture and fishing, mostly at the subsistence level, effectively earning no income at all. Until 1998 the nation's largest source of income was tropical timber, which grows wild, but timber prices have dropped in recent years, and forests are becoming overexploited. Other cash crops are copra and palm oil. Fisheries have great potential for growth, although a Japanese fish cannery operating in the Solomons closed in 2000 due to fears of ethnic violence. The plant reopened under local management but had not resumed tuna exports as of 2005. Possible alternative sources of income include mined gold; other mineral resources, such as lead, zinc, and nickel; and tourism. The scuba diving industry brings in substantial income, but growth in tourism has been hampered by the lack of infrastructure and transportation.

In general, severe ethnic violence, the closing of key business enterprises, and an empty government treasury have led to a continuing economic downslide. Deliveries of crucial fuel supplies (including those for electrical generation) by tankers have become sporadic because of the government's inability to complete payments and also because of attacks against ships. Telecommunications are threatened by the lack of technical and maintenance staff, many of whom have left the country. The Asian economic crisis of the early 2000s hit the nation hard, particularly devastating the timber industry. The government was insolvent in 2002, and by mid-2003 the disintegration of law and order had nearly destroyed the entire economy. In the summer of 2003 Australian soldiers entered the country as part of an effort to restore order and resume basic services. The government reassessed its budget and priorities so as to put the nation's economy back on track. The Solomon Islands receives economic aid from Australia, New Zealand, the European Union, Japan, and China.

ENVIRONMENT

The Solomon Islands lacks a coherent system of protected areas and has poorly enforced environmental legislation. Chief among concerns is the rate of deforestation caused by the logging industry; the government is attempting to reform timber-harvesting policies to allow for the sustainable harvesting of trees. The nearly 1,000 islands that make up the country are home to a wide variety of species that are threatened by an increasing population and the exploitation of natural resources. The United States has been supporting the nation's efforts to protect biodiversity by establishing local conservation areas and protecting reefs as part of the International Coral Reef Initiative.

LIVING CONDITIONS

The Solomon Islands is a very poor nation; most people still live in primitive conditions. They cut down trees to build their houses, grow their own food in gardens, and make their own clothing from plants. Some houses are basic huts with leaf walls. Many people still travel by canoe or dugout. There are very few roads on the islands, and most of them are unpaved. Water supplies can be contaminated, and people must boil water to be sure it is safe to drink.

HEALTH

Despite the poverty of the nation, health conditions are fairly good. Life expectancy is quite high, at almost 73 years, and infant mortality is relatively low, at 21 deaths per 1,000 live births. The average woman gives birth to more than four children. Endemic tropical diseases include malaria, yellow fever, tetanus, typhoid, hepatitis A, and polio. Some strains of malaria are resistant to chloroquine. Solomon Islanders still use local plants as medicines.

FOOD AND NUTRITION

People eat a great deal of fish, along with fresh fruit and vegetables. Common starches are sweet potato, taro, cassava, and rice. Poi is fermented taro root, eaten as porridge or as a starch with fish. Mud crab is a local delicacy. Meat is rare and expensive, though people do raise pigs. Coconut milk straight from the coconut is a popular beverage. Imported canned food is available but expensive.

 Amount of Fruits and Vegetables Available per person per year kg: 57.2

STATUS OF WOMEN

Women suffer from low social status as a result of centuries of subjugative tribal traditions. Nominally, women have equal legal rights, but traditional culture has hampered their moving into leadership roles. There are no women in senior governmental positions or in the national parliament, although women are involved in politics and have run for national office. Violence against women is a major problem that is still often ignored or considered a family matter; women rarely bring accusations of violence to court because their male relatives refuse to allow it. Women have begun organizing themselves into groups to speak out against mistreatment.

The Solomon Islands has one of the highest rates of population growth in the world. The government is committed to the promotion of family planning and the gradual reduction of the rate of population growth. A voluntary planned parenthood association has been funded, with government approval.

WORK

Three-quarters of Solomon Islanders are farmers and fishermen. They mostly grow, hunt, and gather their own food and do not use money very often. About 5 percent of workers are employed in industry. Some islanders work in forestry, although this industry has been suffering in recent years. Others process tuna fish or work in mines. About 20 percent of the workforce is employed in services, including the tourist industry. Unemployment is high, and young people have difficulty finding jobs that provide decent income.

EDUCATION

Education is not compulsory, and most schools charge nominal fees. Schooling lasts for 11 years, as divided into six years of primary, three years of middle, and two years of secondary education. Primary education is mostly provided by state schools but was pioneered by Christian missions; churches play a more significant role in secondary education. Provincial secondary schools (formerly new secondary schools) provide practical education, mainly in agriculture. The school year runs from January through December. The language of instruction is English.

Schools lack teachers and supplies, especially in remote areas. About 85 percent of children attend elementary school, but only 14 percent continue on to secondary school. Illiteracy is high.

Scholarships are provided by the government for higher education overseas. In 1977 the University of the South Pacific opened a center in Honiara.

SCIENCE AND TECHNOLOGY

The Solomon Islands is still fairly primitive technologically. Many areas have no electricity, and a fair proportion of people are illiterate, which makes computerization problematic. In 2002 there were only 6,600 telephone lines and 1,000 cellular telephones in use, and only about 2,200 people used the Internet. There are no telecommunications facilities in some areas, and international calls require the use of satellite services. Violence and disorder in the early 2000s only worsened the telecommunications infrastructure, as services were discontinued due to lack of staff and the nonpayment of bills.

MEDIA

Radio is the most important form of media in the Solomon Islands, due both to widespread illiteracy and the remoteness of many habitations. The Solomon Islands Broadcasting Corporation (SIBC) provides a public radio service, mainly in pidgin English, with some broadcasts in standard English. The Australian government has given some equipment to the SIBC and has sponsored programming promoting peace and an end to ethnic violence. There is no television service based within the islands, though some satellite channels reach them. The *Solomon Star* is the only daily newspaper. There are a few other weekly and monthly publications.

Freedom of the press improved in the early 2000s, due partly to Australia's efforts to restore peace to the country. Militia leaders had been known to threaten journalists, but they have recently been punished by imprisonment, which has led to better working conditions for journalists.

CULTURE

Solomon Islanders maintain many cultural traditions and have not been excessively influenced by outside sources. Local musicians play traditional music on bamboo pipes, which are either tied together in sets or played alone as flutes. Musicians also use bamboo as a percussion instrument, hitting it with a piece of rubber to produce interesting sounds. Custom dancing, the traditional folk dance form, is still performed frequently at festivals, with dancers attired in the full regalia of grass skirts and shell jewelry. Wood carving is a common craft; carvers produce a variety of objects, such as miniature canoes and bowls.

FOLKLORE AND MYTHOLOGY

Though Christianity is the predominant religion, most Solomon Islanders still follow traditional beliefs as well; many believe in magic. Most people believe that dead people's spirits live on in sharks, birds, or reptiles, and living relatives will not eat whatever kind of animal houses a known spirit for a specified period of time. Many people worship sharks, and the people in the Laulasi and Busu islands used to hand-feed them; such hand-feeding no longer occurs, but local boys still ride sharks around as part of a ritual. Islanders living in villages hold regular festivals, with dancing, songs, and stories about hunting, war, agriculture, or nature.

ENTERTAINMENT AND RECREATION

The city of Honiara and a few other towns have restaurants, bars, cafés, and shops. Visitors to the Solomon

Islands usually come to scuba dive or snorkel; beautiful coral reefs and World War II wrecks make for some of the best diving in the world. There are many outdoor activities to do on land, too, such as hiking, mountain climbing, caving, and mountain biking.

Public holidays are occasions for parades, sporting events, and custom dancing, the local folk dance form. Whitmonday, the Queen's birthday, and Independence Day are major national celebrations. Each province has its own provincial holiday.

ETIQUETTE

The Solomon Islanders observe a complex assortment of taboos. Property rights are extremely important; most land and the plants on it belong to someone, and so it is usually inappropriate to simply pick fruit that appears to be growing wild. Property rights can apply to the ocean as well. It is considered improper for a woman to stand higher than a man or for a man to place himself below a woman. In some areas it is taboo to wear certain colors. Most locals understand that visitors do not know the social rules and will usually forgive unwitting breaches of etiquette.

Tipping is not done because the recipient of the tip would feel obligated to return a favor to the tipper. Bargaining is not customary.

FAMILY LIFE

Every island and clan has its own rules regulating marriage, children, and land ownership. Ancestors exert influence over the living even after death, and families continue to acknowledge the presence of their dead relatives. Generally, a tribe owns land communally, and families within the tribe share its produce. Relatives live in neighboring houses and share all their possessions in addition to assisting one another with jobs such as raising children. Within families, women generally have lower status than men.

PERSONAL APPEARANCE

Many Solomon Islanders still wear traditional dress, especially for festivals. Garments include grass skirts and very brief loincloths, shell jewelry, and elaborate head-dresses. Despite the fact that islanders sometimes wear very little clothing, visitors are expected to dress modestly, with their legs mostly covered.

SPORTS

The Solomon Islands does not have many facilities for playing Western sports, but the nation does have an

Olympic Committee and trains athletes in sports such as soccer, tennis, basketball, track, and volleyball.

CHRONOLOGY

- 1978** The Solomon Islands becomes an independent state within the Commonwealth; the legislative assembly becomes the national parliament, and the chief minister, Peter Kenilorea, is named the nation's first prime minister.
- 1980** The Solomon Islands holds its first postindependence elections to the national parliament.
- 1981** Solomon Mamaloni is chosen to succeed Peter Kenilorea as prime minister because of a realignment of independent members.
- 1983** The East Kwaio Council of Chiefs declares Malaita independent.
- 1984** Peter Kenilorea forms a new coalition government upon the fall of the Mamaloni government.
- 1986** Ezekial Alebua becomes prime minister.
- 1989** Solomon Mamaloni regains the office of prime minister.
- 1990** Mamaloni resigns from the People's Alliance Party and appoints five members of the opposition to his cabinet.
- 1994** Moses Pitakaka becomes governor-general.
- 1995** The central bank suspends the payment of interest and principal on government bonds and treasury bills.
- 1997** Bartholomew Ulufa'alu becomes prime minister as the head of a coalition government.
- 1999** State of emergency is declared in June after six months of ethnic tension.
- 2000** Manasseh Sogavare is elected prime minister.
- 2001** In February the Mauru peace agreement is signed by the Isatabu Freedom Fighters and the Malaita Eagle Force; in September, IFF leader Selwyn Sake is murdered, threatening the peace agreement.
Allan Kemakeza is elected prime minister.
- 2002** Lawlessness increases, and tribal warlords begin destroying the government.
- 2003** Prime Minister Kemakeza asks Australia for assistance in restoring order. Australian peacekeepers arrive and remove warlord Harold Keke, leader of the Isatabu Freedom Movement, from power. In November peacekeepers declare the Weather Coast safe.

- 2005** Warlord Harold Keke goes on trial for murdering a member of parliament, Father Augustine Geve, in 2002.

September 23, 1979

GEOGRAPHICAL FEATURES

Somalia, on the Horn of Africa in East Africa, has an area of 637,657 sq km (246,199 sq mi), extending 1,847 km (1,148 mi) north-northeast to south-southwest and 835 km (519 mi) east-southeast to west-northwest. The total coastline, on the Gulf of Aden to the north and the Indian Ocean to the east, is 3,025 km (1,880 mi) in length. Somalia shares its international borders of 2,340 km (1,454 mi) with three neighbors: Kenya, Ethiopia, and Djibouti. All borders are arbitrary lines drawn during colonial times and ignore ethnic bound-

aries; none of these borders has been formally accepted by Somalia.

The capital is Mogadishu. Other major urban centers are Marka, Berbera, Kismaayo, and Hargeysa, the former capital of British Somaliland.

Topographically, there are four natural divisions: the Guban; the northern highlands; the Ogo, including the Mudug Plain; and the Somali Plateau, including the Hand. In general, there is only limited contrast among these regions. The country has only two permanent rivers, the Juba and Shabele, both originating in the Ethiopian Highlands and flowing into the Indian Ocean.

Mogadishu	2,450,000

CLIMATE AND WEATHER

Somalia has a generally arid and tropical climate, as determined principally by the northeast and southwest monsoonal winds. There are two wet seasons: the *gu*, beginning in March and extending into May and sometimes June; and the *dayr*, the shorter wet season in October and November. June to August is the hottest season of the year, when temperatures may soar to 48.9°C (120°F). The temperatures are moderated along the coast by cooling sea breezes. The average mean temperatures range from 29.4°C to 40.6°C (85°F to 105°F) in the north and from 18.3°C to 40.6°C (65°F to 105°F) in the south. Most of the country receives less than 500 mm (20 in) of rain annually.

Climate and Weather

Mean Temperature
 North: 85°F to 105°F
 South: 65°F to 105°F
 Average Rainfall: 20 in

FLORA AND FAUNA

Somalia has several different climate zones with different flora and fauna. Parts of the northern mountains are wet enough for cedar, frankincense, and myrrh trees to grow and for agriculture to be supportable. The Ogaden Plateau is covered with tall, thorny grass. The area between the Juba and Shabele rivers is farmland, supporting bananas, sorghum, corn, and millet. The rest of the country is arid savanna, with some deep-rooted acacia trees.

Animals on the savanna include zebras, gazelles, antelopes, wild asses, rhinoceroses, giraffes, warthogs, lions,

and leopards. There are many bird species, including bustards, storks, and eagles. The coastal waters harbor crocodiles and many fish species. The dry areas are home to scorpions and snakes.

ETHNIC COMPOSITION

Somalia has one of the most homogeneous populations in Africa, with 85 percent of its people belonging to Hamitic stock and only 1 percent to Bantu stock. As a result of intermixture, 98 percent of the people are considered ethnic Somalis. The Somalis are united by language, culture, and religion as well as common descent. All Somalis trace their origin to two brothers, Samaal and Saab, who are said to have been members of the Arabian tribe of Quraysh, to which Muhammad belonged. The descendants of these two brothers constitute six clan-families, or tribes: The Dir, Darod, Isaq, and Hawiye make up an estimated 75 percent of the population and belong to the Samaal line. The Ralianweyn and Digil belong to the Saab line. The Samaal are nomadic or seminomadic pastoralists, while the Saab are farmers and sedentary herders.

Relationships among clans and subclans are based on the principle of contracts (*beers*). Clans are usually associated with given territory, as defined by circuits of nomadic migration; the territories of neighboring clans tend to overlap, resulting in conflicts. Clans have ceremonial heads known as *soldaans* (sultans), or *bokors*, but their internal affairs are managed by informally constituted councils known as *shirs*, of which all adult males are members. Interlineage or interclan alliances are known

as *dia*-paying groups, or groups that accept the burden of paying blood compensation (*dia*) for homicide. Traditionally, every Somali belongs to a certain *dia*-paying group, of which there are over 1,000 in the republic. These groups also are important social and economic units and function as mutual-aid associations and political blocs.

There also are a number of generally despised groups that are believed to have inhabited the country before the arrival of the Somalis. Known as Sab among the Samaal and as Bon among the Saab, they follow so-called inferior occupations such as hunting, blacksmithing, weaving, tanning, and shoemaking. The most numerous of these groups are the Midgaan, Yibir, Tumul, Dardown, Gaggab, and Madarrala. Along the Indian Ocean coast and in the valleys of the Juba and Shabele rivers are groups known as *habasho*, who are believed to be descendants of black slaves. Many of these groups, such as the Gobawein, Helai, Tunni Torre, Shidle, Rer Issa, Kabole, Makanne, and Gosha, have been partially Somalized.

LANGUAGES

The national and official language is Somali, a Cushitic language with dialectal differences that follow clan divisions. Of the several dialects, the most widely used is Common Somali, which is spoken by Somalis not only within Somalia but also in Ethiopia, Kenya, and Djibouti. Other dialects are regional, such as Central Somali and Coastal Somali, but all dialects are mutually intelligible. Until the 1970s Somali was a purely oral language, with no script of its own. In 1972 a written form of Somali with a script based on the Latin alphabet was adopted as the official language. Most Somalis have some knowledge of Arabic, which is the language of religion, and educated Somalis have some familiarity with Italian, English, and Swahili.

RELIGIONS

The state religion is Islam in its Sunni form, which is adhered to by some 98 percent of the population. Although freedom of religion is the state policy, Christian schools have been closed since 1972, and Christians are not permitted to proselytize. Most Somalis belong to any one of four brotherhoods, or religious orders (called *tariqa* in Arabic, from *tariq*, meaning “way” or “path”): Qadiriyyah, Salihyyah, Ahmadiyyah, and Rifaiyyah.

Religious Affiliations

Sunni Muslim	8,420,000

HISTORICAL BACKGROUND

The ancient Egyptians knew the region that now includes Somalia as Punt, and the inhabitants were referred to as the Black Berbers. The first known use of the term Somali was recorded in the 15th century. For five centuries (from the second to seventh centuries c.e.) much of the area came under the rule of the Ethiopian kingdom of Aksum. By the ninth century Arabs and a few Persians had established a number of coastal towns, from Zeila in the north to Brava in the south. In the southern interior negroid peoples had settled as cultivators along the Juba and Shabele rivers.

Also in the south were bands of hunters and gatherers who were racially akin to the San. Much of southern and central Somalia and parts of northern Somalia were inhabited by the Galla, who call themselves Oromo.

The process of the conversion of the Somali to Islam began sometime in the ninth and 10th centuries through the Arab impact on coastal areas. By the 12th century the ancestors of many of the clan-families, like the Dirs, Bimals, and Darods, were established, but the movements of specific clans and lineages continued into the 19th century. The heads of these clan-families were sometimes referred to as sultans. By the early 15th century the Muslim emirate of Adale, part of the Arab state of Ifat, was strong enough to attack Abyssinia, under the leadership of Ahmed Gran. The defeat of Gran by the Abyssinians led to a period of turmoil, which saw the rise to prominence of more clan-families, like the Rahanwein and Digil, as well as confederations like Ajuran.

Britain, France, and Italy began to dominate the region in the 19th century. British authority in Somalia dates from the period 1884–86, when the British signed a number of protectorate treaties with Somali chiefs in the northern areas. From 1899 to 1920 British rule was constantly challenged by the jihad, or holy war, waged by Mohammed bin Abdullah (better known in the West as “the Mad Mullah”). Italian entry into Somalia began in 1889, when the Somali sultans of Obbya on the Indian Ocean coast and Alula on the Gulf of Aden accepted the protection of Italy in return for annual payments. That same year Italy leased the ports on the Benadir coast (from Adale to Brava), partly through a sublease from the Imperial British East Africa Company and partly through a direct 25-year lease from the owner of the coast, the sultan of Zanzibar.

Direct administrative control of the territory known as Italian Somaliland was not established until 1908. The Italian colony was enlarged as a result of a 1925 treaty that transferred the region between the Juba River and the Kenyan frontier to Italy. Italian Somaliland came under British control in 1941 and remained so until 1950, when it became a UN trust territory. In the summer of 1960 both British Somaliland and Italian Somaliland became independent, thus enabling the two territories to

join in the united Somali Republic on July 1, 1960. On the same day Aden Abdullah Osman was elected the new republic's first president.

During the 1960s the Somali Youth League (SYL), a pro-Western party, dominated the country's politics. Dr. Abdirashid Ali Shermake, formerly prime minister, was elected president in June 1967; in October 1969 he was assassinated, and six days later the army seized control in a coup.

Power was assumed by the commander in chief of the armed forces, Major General Mohammed Siad Barre. The 1960 constitution was suspended, all political parties were abolished, and the country's name was changed to the Somali Democratic Republic. The People's Assembly was dissolved and replaced with the Supreme Revolutionary Council (SRC), with Siad Barre as its chair. Siad Barre declared Somalia a socialist state in 1970; he dissolved the SRC and transferred its power to the newly formed Somali Revolutionary Socialist Party (SRSP) in 1976. All members of the SRC became members of the ruling party's central committee, while Siad Barre became the secretary-general of the SRSP. His rule was marked by the lack of political freedom and the widespread toleration of corruption.

A longtime territorial dispute erupted again in 1977, when Somalia launched an attack on Ethiopia to enforce its claims to the Ogaden Plateau. Ethiopia, with Soviet and Cuban aid, defeated the Somalian army in 1978. Later that year a military coup in Somalia was attempted but crushed; political unrest grew. Economic stagnation, growing indebtedness, and continued drought added to Siad Barre's problems in the 1980s, leading to clamp-downs on human rights and frequent government reshuffles. Increasing dissident attacks prompted Siad Barre to declare a state of emergency and reinstate the SRC from 1980 to 1982.

A new constitution approved in 1979 provided for a people's assembly of 177 members, which, at its first session in January 1980, elected Siad Barre as president of the republic. The constitution was amended in 1984, and in 1986 Siad Barre was reelected as president. In January 1987 Siad Barre appointed a prime minister for the first time, Lt. Gen. Muhammad Ali Samatar.

In 1988 Somalia concluded a nonaggression pact with Ethiopia. Consequently, two dissident groups that had maintained bases in Ethiopia—the Somali Democratic Salvation Front (SDSF) and the Somali National Movement (SNM)—were forced out. Their response was to launch a full-scale invasion of their own country. The fighting escalated into a civil war; a third rebel group, the United Somali Congress (USC), led by Mohammed Farah Aidid, joined the fighting.

The three rebel groups, each drawing its membership from a regional clan, loosely allied themselves in 1990. They accused the Siad Barre regime of being repressive and corrupt and criticized Siad Barre for stockpiling the government almost exclusively with members

of his own clan (whose numbers made up 1 percent of Somalia's population). Civilians were slaughtered by both the government and rebel groups. By 1990 an estimated 50,000 to 60,000 civilians had been killed by Siad Barre's armed forces alone. Over half a million refugees had fled the country, which slipped into a devastating famine.

In 1990 the United States cut off all military and financial aid to Somalia. Later that year 114 prominent political intellectuals and traditional elders called for the resignation of Siad Barre and signed a manifesto calling for free elections and human rights. They were arrested and brought up on capital charges but were found not guilty and released. In 1991 northern Somalia withdrew from the ongoing conflict, declaring itself the independent Republic of Somaliland and electing Mohammed Haji Ibrahim Egal as president in 1993.

In 1992 the United Nations involved itself in the Somalia conflict, first by imposing an arms embargo, then by sending 500 UN Operation for Somalia (UNOSOM) peacekeeping troops. The humanitarian operation was expanded in December as the Unified Task Force (UNITAF), a force with members from 21 nations led by 1,800 U.S. troops; UNITAF comprised 33,000 troops by 1993. At that point the United Nations changed its mission's focus from strictly peacekeeping to rebuilding; hence, it replaced UNITAF with UNOSOM II, an operation that was given the additional mandate of rebuilding the country's infrastructure and resettling refugees. After 18 U.S. soldiers were killed in a clash with Aidid's forces in Mogadishu, the United States withdrew its forces from the UN operation. Although Aidid and his rival Ali Mahdi signed a peace accord in Nairobi, Kenya, that year, little came of it. Nonetheless, the United Nations withdrew the remainder of its troops from Somalia in 1995 under the protection of U.S. forces. Rival clans agreed to another cease-fire in 1996, but that, too, proved abortive.

In 1997 the 41-member National Salvation Council was assembled to draft a new national charter and put together a national reconciliation conference, although Hussein Aidid, the country's most powerful clan leader, refused to recognize the group's legitimacy. The council agreed to reestablish a presidential council, prime minister, and parliament within three years. By late 1999 there was little indication that this deadline would be met, and fighting continued. However, in August 2000, after three months of talks in neighboring Djibouti, delegates to a national reconciliation conference elected the businessman Abdiqasim Salad Hassan as Somalia's first civilian president since the overthrow of the central government nearly 10 years earlier. In October, the new prime minister of Somalia, Ali Khalif Galaydh, announced his government.

The new cabinet consisted of 25 ministers, all of them men drawn from Somalia's different clans. In April 2001 Somali warlords, backed by Ethiopia, announced their intention to form a national government within six

months, in direct opposition to the country's transitional administration. In May 2001 dozens of people were killed in fighting between the militia led by Aidid and transitional government forces.

In the period of uncertainty that ensued after the terrorist attacks of September 11, 2001, the United Nations and the European Union evacuated foreign aid workers from Somalia. In addition, the United States froze the funds of Somalia's main bank, Al-Barakaat, for suspected links to the al-Qaeda terrorist network, threatening the country with economic collapse.

Somalia had no real government between 2001 and 2004. The transitional government was supposed to unite the country and install a new form of government, but that did not happen. Eventually, after many rounds of talks in Kenya, the leading politicians and warlords signed a deal to create a new parliament. In October 2004 the new parliament elected Abdullahi Yusuf Ahmed as president, with Ali Mohammed Ghedi as prime minister. The new administration faced a nation that had no government offices or civil service and was still plagued by rival warlords and clan fiefdoms. Yusuf Ahmed appointed a cabinet that contained several powerful warlords among its members. Yusuf Ahmed and his government remained in exile in Kenya during his first months in office, waiting for security guarantees from Mogadishu. They finally met in Somalia for the first time in February 2006. Heavy fighting between rival militia continued in Mogadishu.

The Republic of Somaliland continued to operate as an independent country and was relatively stable during the 1990s and early 2000s, despite the fact that the rest of the world declined to acknowledge its independence.

LIST OF MODERN RULERS

(Note: As of 1991 no single head of state has earned undisputed international recognition.)

1960–67	Aden Abdullah Osman Daar
1967–69	Abdirashid Ali Shermake
1969–91	Mohammed Siad Barre
1991–95	Ali Mahdi Muhammad
1995–96	Mohammed Farrah Aidid
1996–98	Hussein Aidid
1998–2000	none
2000–04	Abdiqasim Salad Hassan
2004–	Abdullahi Yusuf Ahmed

CONSTITUTION

In effect, Somalia has been stateless, with no functioning government or constitution, since the ouster of Mohamed Siad Barre on January 27, 1991.

In 1997 the country's 26 major clans, including those of the rivals Hussein Aidid, son of Mohammed Aidid, and

Ali Mahdi Mohammed, signed the so-called Cairo Declaration, providing for a 13-person council of presidents, a prime minister, a 189-seat parliament, and a general election within three years. A 41-member National Salvation Council was established to draft a new national charter and put together a national reconciliation conference.

Finally, in August 2000, after three months of talks in neighboring Djibouti, delegates to the national reconciliation conference elected businessman Abdiqasim Salad Hassan as Somalia's first civilian president since the overthrow of the central government nearly 10 years earlier. A transitional 245-seat parliament was also named.

In October 2000 the new prime minister of Somalia, Ali Khalif Galaydh, announced his government. The new cabinet had 25 ministers, all of whom were men drawn from Somalia's different clans. Galaydh said he had named a government of reconciliation that would not use force to implement its agenda, which entailed disarming clan militias.

The transitional government was supposed to have created a new constitution by 2003. That did not happen, and president Abdullahi took office in 2004 without the benefit of a functioning constitution.

PARLIAMENT

The unicameral People's Assembly, or Golaha Shacbiga, has not functioned since 1991. In August 2000 a transitional 275-seat parliament was inaugurated in neighboring Djibouti following a new round of peace talks. Four large clan groups—the Darod, Digil-Mirifle, Dir, and Hawiye—each received 61 seats, and the other 31 seats were divided among minority clans.

POLITICAL PARTIES

There are no formal political parties in the country; instead, numerous clans and subclans contend for power on a regional basis.

LOCAL GOVERNMENT

Somalia is divided into 18 regions, each of which formerly had its own government. In the early 2000s local government was in the hands of clan leaders and did not answer to the national government, which was in disrepair. In some areas there was nothing resembling regional government.

LEGAL SYSTEM

Throughout the 1990s and early 2000s there was no functioning legal system in the country. Legal disputes are settled by clan elders following Islamic sharia law. There are secular courts in some areas.

HUMAN RIGHTS

Somalia's human rights situation has been very poor for some years. Fighting among rival clans and factions resulted in the death, dislocation, and starvation of tens of thousands of Somalians in the 1990s. Political violence and banditry have been endemic since the ouster of Siad Barre in 1991. Kidnappings, especially of foreign aid workers for ransom, remains common. The absence of a formal legal system has meant that criminals and political dissidents have had little recourse to legal representation. The right to privacy is nonexistent, and there have been reports of forced, or "slave," labor being used in the agricultural sector. There are occasional public whippings and stonings. The abuse of women and children is common. Ethnic and religious discrimination occur frequently. Child labor and human trafficking are both problems.

FOREIGN POLICY

Somalia has had not a formal coordinated foreign policy since 1991, the year Siad Barre was ousted. Individual clans were either working with or fighting against UN forces brought into the country to restore order between 1992 and 1995. Because the country has had no recognized government, there have been few foreign diplomatic missions active in the country as of the latter half of the 1990s. Although Somalia had no diplomatic representation abroad through the end of the 1990s, the country began to break out of its isolation late in 2000 with the election of a civilian government aimed at reconciliation. The northern Republic of Somaliland spent the turn of the century seeking international recognition with little success.

The United States never formally severed diplomatic relations with Somalia, but the absence of a real government made it impossible to maintain strong formal ties. The American government retains informal contact with various Somali entities.

DEFENSE

Since the collapse of the government in 1991 the country has lacked an organized national defense force. Protection of territory is left to individual clan militias. The unrecognized republics of Somaliland and Puntland have their own security and police forces.

ECONOMY

Even before the civil war that began in the 1990s Somalia was one of the world's poorest and least developed nations. Per capita gross domestic product (GDP) was estimated at \$600 in 2004, although all facts and figures are vague estimates at best. The country has few resources. Its economy is mainly pastoral and agricultural, with live-stock, mostly camels, cattle, sheep, and goats, representing the main form of wealth. A small fishing industry is active in the north of the country, though it is hampered by poaching. The national infrastructure, poor before the start of the civil war, deteriorated in the 1990s, and most roads are impassable on a long-haul basis. The country had little industry before 1991, and virtually nothing new has been established since then. The small industrial sector accounts for 10 percent of GDP. Several international oil companies have prospected off the Somali coast, but development has been stalled by the civil war. Meanwhile, in the northern Republic of Somaliland, the European Union agreed in 1996 to finance the reconstruction of the port of Berbera.

Despite the unrest, Somalia's economy has continued to function after a fashion, at least on a local level. There is no formal banking, so ad hoc currency exchangers have cropped up throughout the country. The cellular telephone industry has thrived, and Somalia has some of the lowest rates for international telephone calls within Africa. Mogadishu has a market with a tremendous variety of goods for sale. Militias offer security services, and hotels still operate.

Ongoing civil disturbances in Mogadishu and outlying areas have interfered with any substantial economic advances and with international aid arrangements.

ENVIRONMENT

The main environmental issues in Somalia have been the constant threat of famine, especially as caused by the civil war, and recurring droughts, dust storms, deforestation, overgrazing, soil erosion, pest and locust infestation, and desertification. Freshwater contamination is another hazard.

Environment

LIVING CONDITIONS

Living conditions are quite primitive in many areas. The country lacks roads and public transportation as well as reliable electricity and anything resembling an infrastructure. Many people use camels for transportation. Most Somalians live in the countryside, where they can farm and raise animals. Settlements grow up around wells; water is in short supply and is increasingly contaminated. Some people live in collapsible huts made of wood and animal skins, with grass mats placed on the floor. Others live in one-room mud huts with thatched roofs; a metal roof is a sign of wealth. In the cities people live in more modern housing, with Arabic or Western furniture. Many buildings suffered damage during the years of fighting. Crime is a major problem in some areas.

HEALTH

Health conditions are poor. The state health-care system was destroyed by the war, and hospitals still lack supplies and staff. Most people go to traditional healers, for treatments such as cauterization, scarification, bloodletting, and teeth pulling, or visit exorcists, who use dances and songs to drive out evil spirits. The infant mortality rate is high, and life expectancy is only about 48 years. Fertility is extremely high, with each woman bearing nearly seven children. Women often suffer injuries or die during childbirth, partly due to the custom of female genital mutilation. Only 1 percent of the population is infected with HIV/AIDS. Diseases such as cholera and malaria are common.

FOOD AND NUTRITION

Malnutrition is a major problem. Many people do not have nearly enough food or clean water.

Somalia cannot produce a wide variety of food, so Somali cuisine uses just a few main ingredients. Flat bread, rice, noodles, cereal, and porridge made from millet or cornmeal are staples. These starches are supplemented with salad, beans, fruit, and the occasional meat. Milk is an important component of the diet; people drink the milk from camels, sheep, and goats. Fermented camel milk turns into a kind of yogurt called *jinow*. People make butter by shaking milk, turning it into liquid ghee so that it will keep in the hot climate. Spiced tea is a popular drink. Pork and alcohol are forbidden by Islamic rules.

STATUS OF WOMEN

Women suffered disproportionately during the Somali civil war. Somalia's patriarchal culture remains overwhelmingly traditional, as based around extended clan families and subservient roles for women. Polygyny is permitted. Under the tradition of blood compensation, those found guilty in the death of a woman must pay only half as much to the aggrieved family as if the victim had been a male. Long-established practices such as female circumcision remain prevalent; the Somali version, infibulation, is particularly devastating. Abortion is illegal in Somalia. Women are expected to show modesty and shame, and wives are supposed to follow behind their husbands, with their children behind them.

WORK

Almost three-quarters of the Somali population engage in subsistence agriculture, living off the land primarily through pastoral nomadism. Clans have long-developed herding routes that distribute the use of water sources. All family members help care for animals, with boys feeding and milking camels and girls tending goats and sheep.

The remaining workers are employed in various services and industries, such as sugar refining and textiles, though most of these enterprises were destroyed in the years of fighting. Somalia's labor force is largely unskilled and uneducated. Wages are very low, and people who work for wages must often work two jobs. Family members run many small businesses. Women constitute one-third of the workforce, and many of them own their own businesses.

EDUCATION

In Somalia prior to 1991, eight years of primary education were compulsory for children between the ages of six and 14, although most children did not attend; nomadic herders found it especially difficult to get their children to school. Following the ouster of Siad Barre in 1991, the country's education system collapsed. By 2001 an estimated 62 percent of the adult population was considered illiterate. Only a few schools were operating within the country by the late 1990s, most of which were run by Islamic aid groups. Among the children who do attend school, two-thirds are male. Somalia has one university: the Somali National University, in Mogadishu, which opened in 1970.

MEDIA

Because of the country's low literacy rate, newspapers—usually short photocopies of a few pages—play a secondary role to radio broadcasts. Most major clans control at least one broadcast outlet. Religious organizations also run radio stations, the most important of which is Holy Koran Radio. Radio Mogadishu, the Voice of the Masses of the Somali Republic—the former government-run Radio Mogadishu—is in the hands of Aidid's clan. Several private television stations broadcast in Somalia; people can view CNN and Al-Jazeera on the Somali Television Network (STN). The unrecognized republics of Somaliland and Puntland have their own television and radio stations.

CULTURE

Somalis have long been famous for their oral poetry. Many people still memorize centuries-old poems, and poetic skill is important in social interactions. The government has traditionally employed poets to praise its actions, and opposition parties employ poets to criticize the government. Clans use poetry to negotiate with one another and resolve differences. Men and women have separate poetic traditions. Both sexes compete in poetry contests. Famous Somali writers include the poet and playwright Mohamamed Warsame Ibrahim and the novelist Nurudin Farah.

Somalis love music. The native style combines Arabic and African techniques and instruments, which include trumpets, lutes, and lyres. Maryam Mursal is a famous musician. Somali crafts include wood carvings, baskets, and leather bags and dagger sheaths. Somali women paint intricate designs on one another's hands and feet using henna or *khidaab*.

FOLKLORE AND MYTHOLOGY

Folklore survives through oral tradition, and many Somalis can still recite ancient poems telling stories of clans and wars. Somalis still adhere to their ancient belief system, which includes the worship of ancestors, holding ceremonies and offering gifts to the spirits of dead relatives to get them to help the living. Clan leaders are widely believed to have the ability to curse enemies. Somalian Muslims believe in evil spirits such as *jinn* and *zar*, which can make people sick or crazy. People afflicted with the evil eye may be treated by an exorcist. Many wear amulets containing verses from the Koran as protection or treatment for illness.

ENTERTAINMENT AND RECREATION

Somalis love to talk with one another. They view conversation as an art form and judge others based on wit and eloquence. Relatives and friends spend their free time visiting one another to talk and drink tea. The sexes usually do not mingle. Women entertain one another in the

home, scenting their hair over incense burners while they talk. Men go to coffee shops to drink tea, play chess, and chew khat, a mild stimulant. Families like to sit outside at night to listen to folktales and songs.

ETIQUETTE

Somalis use humor as a means of saving face; the best way to avoid insult or embarrassment is to make a joke of the situation. They value verbal eloquence. Because most people are Muslims, they observe many Islamic rules of behavior. Men and women do not touch one another or make too much eye contact. People use their right hands to eat.

FAMILY LIFE

The clan is the most important social structure in Somali life. Most marriages are arranged with a view to lineage and the exchange of a bride-price. Men may have multiple wives. Divorce and remarriage are common, and women can keep their possessions after divorce. Though fathers are titular and economic leaders, mothers function as the managers of household affairs. Women feel free to speak their minds to their husbands. Most people live with or near extended family.

PERSONAL APPEARANCE

Urban Somalians generally wear Western clothing. Most people, however, still dress in traditional styles. Women wear full-length dresses called *guntiino*, which are similar to Indian saris. Married women cover their heads with scarves. Clothing is usually colorful. Women paint their hands and feet with intricate patterns, using henna or *khidaab* as dyes. Men wear cotton cloths tied like sarongs and cover their heads with a cap called a *benadirya kufia*.

SPORTS

Soccer and basketball are the most popular sports in Somalia. Most families cannot afford balls, so children play with whatever objects they can find. Other popular games include volleyball and table tennis. Boys play more sports than girls, who have more household duties.

CHRONOLOGY

1960 British Somaliland and Italian Somaliland become independent and unite as the Somali Republic on July 1, 1960; Aden Abdullah Osman is elected president.

- 1967** Dr. Abdirashid Ali Shermake, a former prime minister, is elected president.
- 1969** Shermake is assassinated; six days later the army seizes power in a coup led by Major General Mohammed Siad Barre; as chair of the Supreme Revolutionary Council (SRC), Siad Barre suspends the constitution, abolishes political parties, and changes the country's name to the Somali Democratic Republic.
- 1970** Siad Barre declares Somalia a socialist state.
- 1974** A drought lasting through 1975 results in widespread famine.
- 1976** Siad Barre dissolves the SRC and transfers control to the new Somali Revolutionary Socialist Party (SRSP), with Barre as secretary general.
- 1977** Somalia attacks Ethiopia to claim sovereignty over the Ogaden region.
- 1978** As aided by the USSR and Cuba, Ethiopia repels Somali forces; refugees seek asylum in Somalia.
- 1979** A new constitution creates a People's Assembly of 177 members.
- 1980** The People's Assembly elects Siad Barre as president of the Republic of Somalia; Siad Barre puts down an attempted military coup; in the face of increasing social unrest, Siad Barre declares a state of emergency and reinstates the SRC until 1982.
- 1981** Somalia grants the United States use of the Berbera military base, formerly Soviet, in return for military and humanitarian aid.
- 1986** Siad Barre is reelected.
- 1987** Siad Barre appoints a prime minister for the first time, Lieutenant General Muhammad Ali Samatar.
- 1988** Somalia concludes a nonaggression pact with Ethiopia; Somali dissident groups respond by launching a full-scale invasion, beginning a civil war in Somalia.
- 1991** Siad Barre is ousted; the northern part of the country declares itself an independent republic, the Republic of Somaliland.
- 1992** The United Nations imposes an arms embargo on Somalia and sends 500 UNOSOM troops; in December the larger UNITAF replaces UNOSOM.
- 1993** UNITAF contingent reaches a high of 33,000 troops; UNOSOM II, an armed humanitarian force, replaces UNITAF; 18 U.S. soldiers are killed in a clash with Aidid's forces in Mogadishu; Mohammed Ibrahim Egal is elected president of the Republic of Somaliland.
- 1994** U.S. forces withdraw from the UN's Somalia operation; Aidid and his rival Ali Mahdi sign a peace accord in Nairobi, Kenya, but fighting continues.
- 1995** Siad Barre dies in exile in Nigeria; the United Nations withdraws all troops from Somalia in February.
- 1996** Aidid, Ali Mahdi, and other clans' members agree to yet another cease-fire in Nairobi; fighting continues.
- 1997** A 41-member National Salvation Council is established to draft a new national charter and put together a national reconciliation conference; the Republic of Somaliland announces a three-year interim constitution and reelects Mohammed Ibrahim Egal as the territory's president.
- 1998** The Puntland region, in northern Somalia, declares independence.
- 2000** In August, delegates to a national reconciliation conference elect Abdiqasim Salad Hassan as Somalia's first civilian president in nearly 10 years; in October, the new prime minister of Somalia, Ali Khalif Galaydh, announces his government, drawn from numerous Somali clans.
- 2001** Dozens are killed in fighting between the militia led by the warlord Hussein Aidid and the transitional government forces. Following the terrorist attacks of September 11, the United Nations and European Union evacuate foreign aid workers from Somalia. The United States also freezes the funds of Somalia's main bank, Al-Barakaat, for suspected links to the al-Qaeda terrorist network.
- 2002** Warlords in the southwest declare independence and form a regional government. Dahir Riyale Kahin becomes president of the unrecognized Republic of Somaliland after the death of Mohammed Ibrahim Egal. Some 21 warring factions sign a cease-fire and agree to participate in peace talks.
- 2003** Riyale Kahin is elected president of the unrecognized Republic of Somaliland.
- 2004** The warlords sign a peace agreement in Kenya and agree to set up a new parliament. Fighting continues. The new transitional parliament is inaugurated in August and elects Abdullahi Yusuf Ahmed president in October. A tsunami in the Indian Ocean hits the Somali coast, displacing tens of thousands of people.
- 2006** The transitional parliament meets in Somalia for the first time.

ABBREVIATION

ZA

CAPITALS

Pretoria (administrative), Cape Town (legislative), Bloemfontein (judicial)

HEAD OF STATE & HEAD OF GOVERNMENT

President Thabo Mbeki (from 1999)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

44,344,136 (2005)

AREA

1,219,912 sq km (471,008 sq mi)

MAJOR ETHNIC GROUPS

Black, white, mulatto

LANGUAGES

Afrikaans, English, Ndebele, Northern Sotho, Southern Sotho, Swazi, Tsonga, Tswana, Venda, Xhosa, Zulu

RELIGIONS

Christianity, animism

UNIT OF CURRENCY

Rand

NATIONAL FLAG

Two equal-width horizontal bands of red (top) and blue separated by a central green band which splits into a horizontal Y, the arms of which end at the corners of the hoist side, embracing a black isosceles triangle from which

the arms are separated by narrow yellow bands; the red and blue bands are separated from the green band and its arms by narrow white stripes.

NATIONAL EMBLEM

At the base of the coat of arms is the motto *!ke e: /xarra //ke* (Diverse people unite), written in the Khoisan language in a green arc, from which extend two symmetric pairs of elephant tusks pointing upwards. Within the tusks are two sheaves of wheat, which in turn frame a gold shield. The shape of the shield makes reference to a drum and contains two human figures from Khoisan rock art; the figures face one another in greeting and in unity. Above the shield are placed a crossed spear and knobkerrie. Above is a protea plant, the petals of which are rendered in a triangular pattern reminiscent of African crafts. A secretary bird with uplifted wings is placed above the protea, with the flower forming the bird's chest. A rising sun is placed between the wings of the bird.

NATIONAL ANTHEM

A combination of "Nkosi sikelel' iAfrika" and "Die Stem van Suid-Afrika" (The call of South Africa)

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 21 (Human Rights Day), day after Easter Monday (Family Day), April 27 (Freedom Day), May 1 (Labour Day), June 16 (Youth Day), August 9 (National Women's Day), September 24 (Heritage Day), December 16 (Day of Reconciliation), December 25 (Christmas), December 26 (Day of Goodwill), all major Christian festivals

DATE OF INDEPENDENCE

May 31, 1910

DATE OF CONSTITUTION

December 10, 1996

GEOGRAPHICAL FEATURES

South Africa is located at the southern end of the African continent, with a total land area of 1,219,912 sq km (471,008 sq mi). Extraterritorial holdings included in the total area are two small islands—Prince Edward and Marion—south-

east of the African mainland. Entirely bounded by South Africa is Lesotho, with a boundary length of 909 km (565 mi); the remainder of South Africa's land boundaries total 3,953 km (2,456 mi). A number of small landforms off the southwestern coast include Dassen, Robben, and Bird Islands, among which only Robben Island is inhabited.

South Africa

The country's general physiography is characterized by a broad, centrally depressed plateau edged by a prominent escarpment overlooking marginal slopes that descend to the eastern, southern, and western coasts. The mountainous edges of the plateau extend in a sweeping arc from the country's northeastern tip to its southwestern extremity. Collectively, these edges are known as the Great Escarpment, probably the nation's most fundamental topographical feature.

The Great Escarpment runs almost unbroken from the Zambezi River in Zimbabwe around the southern

edge of the continent and arcs northward, following the western edge of the landmass through Namibia and into Angola. In South Africa the escarpment lies from 55 to 240 km (34 to 149 mi) behind the coastline and has a variety of local names. To the east and southeast it is known as the Drakensberg Mountains. Traced westward through the Cape Province, it becomes the Stormberg, Suurberg, Sneeuwberg, Nuweveld Reeks, and Roggeveldberge. The escarpment attains its most majestic form in the great wall of the Natal Drakensberg, along the Lesotho border between Mont-aux-Sources in the north and

Xalanga Peak in the south. In many places the scarp face is vertical, fully 2,000 m (6,562 ft) from foot to crest. The highest points in the country occur in this stretch: Njesuthi Mountain (3,408 m; 11,178 ft) Champagne Castle (3,376 m; 11,077 ft), Giant's Castle (3,313 m; 10,870 ft), and Mont-aux-Sources (3,299 m; 10,824 ft). The highest point in all of southern Africa, Thabana Ntlenyana (3,482 m; 11,424 ft), is not on the escarpment itself but on an obscure plateau block in Lesotho. The Natal Drakensberg is such a formidable wall that in the 250 km (155 mi) between Oliviershoek and Qachas Nex, it is dissected by only a single pass. West of Sneeuwberg there is a gap of 80 km (50 mi) in the escarpment, but the Nuweveld rises again after Beaufort West and continues into Namaqualand as the Roggeveld.

Lack of water is the principal characteristic of the country's hydrology. Worldwide, 31 percent of all rain returns to the sea as river discharge, but only 9 percent does so in South Africa. The chief reason for this is the high rate of evaporation, which is to be expected in such a sunny country. In certain areas the loose, sandy soil and the nature of surface cover further restrict runoff. The combined runoff of all South African rivers amounts to 54 billion cu m (1,907 trillion cu ft), only half that of the Zambezi and roughly equal to that of the Nile, at Aswan, and the Rhine, at Rotterdam. The eastern plateau slopes, covering 12 percent of the area, account for some 40 percent of total runoff, most of which is distributed over a large number of small and strongly dissected river basins, thus limiting its potential use. The Orange River system drains almost the entire interior plateau, or 47 percent of the total land area, but accounts for only 22 percent of total runoff. Truly perennial rivers exist over one-quarter of the surface, chiefly in the southern and southwestern cape and on the eastern plateau slopes. Rivers flowing periodically—that is, which are stationary during the dry season—are found over a further quarter of the surface. Over the entire western interior, rivers are episodic—that is, they flow only sporadically, after infrequent storms, with their beds dry for the rest of the year. In the absence of lakes or permanent snowfields to stabilize water flow, even perennial rivers flow irregularly and according to rainfall. Further, most South African rivers carry heavy loads of silt. The Orange carries more silt to the sea than any other African river, including the Nile, which has a water discharge five times as large.

The Great Escarpment divides the South African river system into two groups: the plateau rivers and those of the marginal areas. The large interior plateau surface is drained by the northern Limpopo and the central Orange river systems as well as the latter's tributary, the Vaal. In contrast, the marginal zones below the Great Escarpment are drained by numerous smaller, intermittent streams. The Orange is the giant among South African rivers. Almost the entire plateau south of the Vaal-Limpopo divide—which runs east to west along the Witwatersrand—is drained by the Orange and its tributaries. From the Mont-aux-Sources area it runs 2,250

km (1,398 mi) east to west to the Atlantic. Its major tributaries are the Caledon and the Vaal, the latter of which is actually longer and drains a much larger area than the main Orange headstream but contributes only 40 percent of the combined volume. Some 32 km (20 mi) beyond Kakamas the Orange plunges 147 m (482 ft) over Augrabies Falls to enter the final desolate stretch of its gorge tract. Of the marginal river basins the largest is the Tugela, in Natal, which rises only a few hundred meters from the Orange on the Mont-aux-Sources plateau, plunging almost immediately over a spectacular 600 m (1,969 ft) fall to the foot of the escarpment. From there it runs to the Indian Ocean, a mere 250 km (155 mi) to the east. Despite its short course and small drainage basin of 29,000 sq km (11,194 sq mi), the Tugela has a larger volume than the Vaal. In southern Cape Province the mountains have caused the main streams to adopt a trellis drainage pattern. The major rivers in this area are the Gamtoos, Gouritz, Breede, and Olifants.

With the exception of Lake Fundudzi in the Southpansberg, there are no true lakes of any size in the country. The "lakes" at the Wilderness on the southern coast and at St. Lucia; Sibayi; and Kosi, on the Zululand coast, are all really freshwater lagoons. Innumerable pans are found in a wide belt from Northern Cape Province to the southern section of the former Transvaal Province. Pans are shallow stretches of water usually found on flat ground and varying in size from a few thousand square meters to hundreds of square kilometers. The largest, Groot Vloer, is 64 km (40 mi) long and a maximum of 40 km (25 mi) wide.

CLIMATE AND WEATHER

Climatically, South Africa is the least typically African of African countries and is more similar to California and Mediterranean countries. Its climate is influenced by its subtropical location, on either side of latitude 30° south, and the wide expanses of ocean on three sides. More immediately apparent are the effects of the warm Agulhas and cold Benguela currents along the eastern and western coasts, respectively. Even more significant is the nation's location within the subtropical belt of high pressures. Because eastern coast air masses are warmer, they tend to be less stable and more likely to give rise to abundant rain. Moist, warm Indian Ocean air masses are in fact the chief sources of rain for most of the country. Over the western coast, on the contrary, air masses are chilled at their base by the cold Benguela waters, producing an upper air inversion that discourages rain formation.

Common weather patterns vary among regions. The interior plateau and the eastern plateau slopes have summer rain and are dry in winter. The opposite conditions prevail in the Western Cape and adjacent areas, where summers are hot, dry, and rainless. In winter, when the high-pressure belt has shifted to the north, an inflow of cool, humid, subpolar air brings showery cold weather and often snow on the cape ranges. Occasionally, if the cold air mass behind the cold front is sufficiently deep and unstable, it may succeed in surmounting the Great Escarpment itself, producing a sudden cold snap over the interior, with snow on the highlands.

On the whole, South Africa is a dry country. It has average annual rainfall of 450 mm (18 in), as against a world mean of 860 mm (34 in). A total of 21 percent of the country receives less than 200 mm (8 in) annually, 48 percent between 200 and 600 mm (8 and 24 in), and only 31 percent over 600 mm (24 in). Less than 65 percent of the land receives the minimum of 500 mm (20 in) required for successful dry-land farming.

Like other countries in similar latitudes, South Africa is periodically ravaged by severe and prolonged droughts. The greater part of the country was drought stricken from 1960 to 1966 and again from 1980 to 1984, while the rainless years of the early 1930s are still well remembered. Droughts often end in severe floods; the eastern seaboard has been the scene of some of the worst floods. In August 1970 large areas of East London were devastated when more than 450 mm (18 in) of rain fell over a period of 24 hours.

Temperatures show three main features: First, they tend to be lower than in other countries in similar latitudes, reflecting the influence of the plateau. Second, despite a latitudinal span of 13 degrees, mean annual temperatures are remarkably uniform throughout the country. The third feature is the contrast between the eastern and western coast temperatures, with the mean annual figures for Durban and Port Nolloth differing by a full 7°C (12.6°F).

Wind directions over the interior in winter clearly reflect the dominating influence of the continental anticyclone. In the eastern Transvaal region, directions are predominantly easterly, in the central Transvaal northeasterly, in the central interior northerly, and in the western and southern interior northwesterly or westerly. Along the coast, the prevailing winds always blow parallel to the coastline. Gale-force winds are frequent on all coastlines. Velocities in the interior are generally lower. Dust devils are common in the interior on hot summer days. Tornadoes are rare, however, averaging perhaps five a year.

Climate and Weather

Mean Temperature

Cape Town: 62.6°F

Pretoria: 63.5°F

Transvaal Lowveld: 73.9°F

Sutherland in the Roggeveld Mountains: 54.3°F

Average Rainfall: 18.6 in

Cape Town: 20 in

Durban: 39.7 in

Pretoria: 30.9 in

FLORA AND FAUNA

South Africa has some of the world's most spectacular plants and animals. Some areas are covered in wildflowers; the Cape Floral Kingdom is particularly rich in flowers. The northern part of the country is covered in savanna grasses, along with thorn trees and acacias. Some forest remains in the northeast and along the southern coast.

Animals include elephants, black and white rhinoceroses, giraffes, cheetahs, hippopotamuses, crocodiles, ostriches, bustards, flamingos, weaver birds, and tiny creatures such as pygmy shrews. Many of these animals live in national parks, where they are protected.

ETHNIC COMPOSITION

South Africa is home to several ethnic groups. Blacks make up 75.2 percent of the population, whites 13.6 percent, mulattoes (often still referred to as “coloured”) 8.6 percent, and Indians 2.6 percent. The major groups are not homogeneous. Blacks include Ndebele, Swazi, Xhosa, Zulu, Sotho, Tsonga, and Venda. Those of mixed race include Cape Coloureds, Griquas, and Cape Malays. Among whites, Afrikaners and Germans predominate.

LANGUAGES

There are eleven official languages in South Africa: Afrikaans, English, Ndebele, Northern Sotho, Southern Sotho, Swazi, Tsonga, Tswana, Venda, Xhosa, and Zulu. In 2000 there were about 2.5 million more Afrikaans speakers than English speakers and, further, most mulattoes speak Afrikaans as their first language. The State Language Services, a division of the Department of National Education, is responsible for implementing multilingualism. In addition, terminology work is performed by the Terminology Bureau.

Among the nine officially recognized Bantu languages, Zulu, Xhosa, Swazi, and Ndebele represent the Nguni group, while the others represent the groups so named. In addition to these, there are numbers of smaller language clusters or dialects. Some 12 such interrelated language clusters form the Nguni group, 11 the Sotho group, and four the Tsonga group. Despite phonetic and grammatical differences within these language groups, they are mutually intelligible, and speakers converse with one another without serious difficulty. However, this is not true with regard to the various speakers of the main language groups.

RELIGIONS

The religious affiliations of South Africans are associated with ethnic backgrounds, but the links are neither

simple nor uniform. While the intensity of participation varies a good deal, relatively few claim no religious affiliation at all. There are religious dimensions to all social and political issues and moral implications to every challenge to the established order.

Christianity has made steady progress since the 19th century. Nearly 73 percent of the population are professing Christians, including 93 percent of whites, 90 percent of mulattoes, 70 percent of blacks, and 8 percent of Asians. Almost all Afrikaners belong to one of the Dutch Reformed churches or the Apostolic Faith Mission. Most English-speaking Europeans are members of the Anglican, Methodist, Presbyterian, or Catholic churches, living mainly on the eastern coast or in Natal. Although 90 percent of mulattoes speak Afrikaans, only 31 percent are Dutch Reformed, while 41 percent belong to English-speaking churches. Among blacks, independent churches claim the allegiance of 18 percent, while 52 percent remain attached to historic churches. Lutherans claim the highest percentage of black membership, with 85 percent; Methodists claim black membership of 79 percent; Catholics, 72 percent; Anglicans, 57 percent; Congregationalists, 55 percent; and Dutch Reformed, 30 percent.

Black indigenous religious systems have persisted, although in vastly changed environments, as they do not have the social structures and linkages that formerly supported them. Only parts of these religions, different in emphasis, are significant today. For example, rituals directed toward spirits involved lineages, and others required the performance of chiefs in their priestly roles; in modern black societies, lineages are less cohesive, and chiefs no longer have the same status, such that rituals have fallen into disuse or are masked in Christian rites. Traditionally, a particular indigenous religious system was specific to each section of officially recognized ethnolinguistic categories. All were concerned primarily with the invocation and appeasement of spirits, whether benevolent or malevolent. The core of such practices were connected with both the spirits of ancestors and the structure of the social order. The wrath of ancestors, who were characterized as capricious, jealous, and easily offended, was held responsible for all kinds of afflictions. Diviners were often called upon to determine the nature of complaints and specify remedies. There was a good deal of variation from one group to another as to the depth of genealogy specifically invoked. There are two classes of rituals: kinship rituals, in which the congregation is a family group, and communal rituals, performed to guarantee the welfare of a chiefdom or tribe as a whole. Witchcraft and sorcery are also widely prevalent and represent some of the oldest beliefs of all African religions. The universality of these two practices accounts for the power of a class of parapriests, including herbalists, sorcerers, witches, and diviners.

HISTORICAL BACKGROUND

In the late Stone Age, about 10,000 years ago, the San and the Khoikhoi (also known as Bushmen and Hotentot, respectively) roamed South Africa as hunters and gatherers. The ancestors of the Bantu speakers, moving southward from the Congo region, entered the area around the Zambezi River at the beginning of the Common Era and around 400 c.e. established the Zimbabwe state. Before 500 they crossed the Limpopo, settling in the eastern portion of what became Transvaal Province. Around 1300 the ancestors of the Nguni, especially the Swazi, Xhosa, and Zulu, crossed the Limpopo and drove out the earlier inhabitants, such as the Khoi, south and west while absorbing others. In time, the Nguni absorbed all of modern South Africa south of the Limpopo to the Great Kei River and between the Drakensberg Mountains and the Indian Ocean. The forward elements of the Nguni reached the Great Fish River by 1500. When the Portuguese arrived in 1488 they found dense Nguni settlements, but the arrival of the Westerners halted any further Nguni advance.

In the early months of 1488, four years before the discovery of America, the Portuguese explorer Bartolomeu Dias, in command of two caravels, discovered what is now the Cape of Good Hope and rounded the southernmost tip of the African continent, an event that may be said to mark the beginning of the Republic of South Africa. As the Dutch, English, and French set up chartered companies of shareholders to exploit the East Indies trade, the bay under Table Mountain, at the cape, acquired a new importance. Only in 1652, however, was the first European settlement founded, by Jan van Riebeeck on behalf of the Dutch East India Company. After 1671 the small Dutch community, confined until then to the cape peninsula, began a process of expansion that was not arrested until well into the 19th century, when the limits of present-day South Africa were reached. The number of colonists increased after 1688, when French Huguenots followed German and Dutch settlers. By 1713 most of the indigenous Khoi inhabitants had been wiped out by an epidemic of smallpox, while the San, the other black tribe, was decimated in frontier warfare. As the population increased, more and more land was needed. The hardier pioneers piled their belongings into wagons and trekked to new sites with greener pastures. Thus they came to be called Trekboers, or "wandering farmers," a term that came to be accepted particularly in its shortened form of Boer as a title of honor by all frontiersmen. Also at this

time, colonists came to think of themselves as Afrikaners rather than Dutch. All assisted immigration from Europe was stopped in 1707, and from then on the white population increased only very slowly. Meanwhile, the Boers advanced, reaching the vanguard of the Bantu peoples at the Fish River by 1770. Over the course of the next century there were nine wars between the two groups, until by the mid-1850s the whites had obtained a bridgehead across the Orange River.

In 1795 the government of the prince of Orange in the Netherlands was replaced by a French-imposed republic that sided with France in the war against Britain. With the assent of the deposed prince, British forces occupied the Dutch cape possessions, ending 143 years of rule by the Dutch East India Company. The advent of the British affected South African history in various ways, first because of the anglicization policy of the new rulers, second through the altered composition of the white population, and third through increasing social and political conflicts between the Boers and the British.

Meanwhile, events on the eastern frontier led to a dramatic northward spread by the Boers to the interior. After 1835 the whites crossed the Orange River and the Highveld Plateau south and north of the Vaal River northward to the Limpopo River, westward to the Kalahari semidesert, and eastward to Natal, where in 1824 a small group of pioneer English traders had settled at the port now called Durban. This migration, called the Great Trek, was started in 1834 by Boer frontier farmers, the Voortrekkers, to put distance between themselves and the British government. A crucial point in the deterioration of relations between the British and the Boers was the abolition of slavery and the establishment of equality between blacks and whites before the law. The Coloured Labour Ordinance of 1820 ended legal guarantees for the continued availability of cheap labor, thus hurting the economic position of whites. The emancipation of all slaves in the British Empire in 1833 came as a great blow to the Boers; the abolition of slavery and the Master and Servant Ordinance of 1841 brought financial ruin to a number of cape farmers. Further, Boer hopes of taking advantage of new lands were dashed when the British government decided to restore land annexed between the Great Fish and Great Kei rivers back to the Xhosa. The Boers were also smarting under the cultural and legal impact of British rule. English had become the medium of instruction in schools and the language of the courts, while the common-law system and its procedures were superimposed on the earlier Roman-Dutch legal system.

The Boer flight from the cape was as much an attempt to escape from all governmental authority as from British rule in particular. Trekking in groups that had been depopulated by wars with the black nations, the Voortrekkers established their first major settlement at Winburg in an area ceded to them by an ally, the chief of a small Sotho tribe. The first Boer republic was that of Natal. It

lasted only four years before it was annexed by the British in 1843. Another party of Trekboers crossed the Vaal River and then descended into the Lowveld, where they established a new republic, Transvaal, with its capital at Lydenburg.

The British authorities, who continued to regard the Voortrekkers as British subjects, had a tenuous alliance with the Griquas and the Sotho and Pondo tribes but finally proclaimed the Orange River Sovereignty in 1848, bringing the entire region up to the Vaal River under their control. The Boers and the Griquas were to have limited self-government, with elected legislative councils under British resident commissioners.

From the 1850s the British policy changed to one of jettisoning rather than acquiring new territories. Recognizing the need to come to terms with the Boers, they signed the Sand River Convention in 1852, allowing for the independence of the Boer state across the Vaal. Although many Boers living in the Orange River Sovereignty were prepared to retain links with the Cape Colony, the British remained unwilling to shoulder the financial burden of defending the territory. In a convention signed in Bloemfontein in 1854, the British literally thrust independence upon the land between the Orange and the Vaal, which then became the independent Boer republic of the Orange Free State (OFS). The events set in motion by the Great Trek had, in the space of 20 years, balkanized South Africa into two Boer republics, one north and one south of the Vaal River, and two British colonies, Cape and Natal.

The spectacular discoveries of diamonds in Griqualand West between 1867 and 1871 led to another shift in British policy. In an effort to end disputes between the Boers and Griqua and Tswana chiefs over the mineral-rich territory, Britain annexed Griqualand in 1871 and Transvaal in 1877. The Boers thereupon took up arms and in the ensuing First War of Independence defeated the British at the battle of Majuba Hill.

The next two decades of South African history were dominated by two men: Paul Kruger, who became president of Transvaal in 1883, and Cecil Rhodes, who became prime minister of Cape Colony in 1890. Rhodes was an empire builder bitterly opposed to Kruger, whose independent Transvaal he saw as the main obstacle to a united South Africa under British rule. Rhodes used British subjects—the so-called Uitlanders—in the abortive Jameson raid of 1895–96 to overthrow the Kruger government. Even after Rhodes's exit in 1895, tensions continued to mount, principally over the status and political rights of British subjects in Witwatersrand, and erupted into the Anglo-Boer War (or Second War of Independence), which broke out on October 11, 1899. Britain's war on "Krugerism" lasted 32 months and ended with Boer defeat and the signing of the Treaty of Vereeniging on May 31, 1902. The cost of the war was high. As a result of the British scorched-earth policy, every farmstead in the

two Boer republics lay in ruins; 26,000 Boer women and children perished in concentration camps; and the Boers lost 6,000 fighting men, the British 7,792.

The peace treaty required the surrender of all Boer forces in return for the promise of internal self-government and financial compensation to the Boers for their losses. Britain also agreed not to extend the franchise to blacks.

Upon the fall of the Conservative government in Westminster in 1905, the new cabinet of the Liberal Party, which had all along opposed the war, set out to gain the friendship of the Boers. Responsible government was granted to both Transvaal and the OFS, with purely white electorates; the new governments came into being in 1907. Two former generals of the Boer army, Louis Botha and Jan Smuts, were the principal political leaders of the Transvaal. The pro-Afrikaner party also won the 1908 elections in Cape Colony. These three colonies supported the call for the Union of South Africa, seeking Afrikaner strength through unity; Boer leaders ironically came out in favor of a strong unitary state in the hope of assuring their dominance. A national constitutional convention met in 1908 and 1909, and a new constitution was approved by it and enacted by the British Parliament in September 1909. The new constitution provided for a strong parliamentary government, with only two clauses of the document protected from alteration by a simple majority vote of the new legislature: The first guaranteed legal equality between the English and Afrikaans languages, while the second offered weak protection of the franchise of the "coloureds" (mulattoes) and relatively few blacks in the Cape but did not extend the electoral rolls to cover any nonwhite voters in other provinces.

The new Union of South Africa came into being on May 31, 1910, as a dominion of the British Empire, with the four provinces of Cape, Natal, Orange Free State, and Transvaal. The first elections under the new constitution were held in 1911. The Afrikaner parties of the four provinces had merged to form the South African Party (SAP), under Botha and Smuts, which won the elections. Another Boer general, J. B. M. Hertzog, was initially included in the cabinet but broke away from it in 1912 to form the National Party. The principal British-oriented opposition parties were the Unionist and Labour parties.

Botha was prime minister from 1911 to 1919, and his administration was marked by the rise of political consciousness among blacks, who were almost completely excluded from the political process. The first successful acts of civil disobedience and passive resistance carried out by Mohandas Gandhi, as leader of the indigenous community in India, served as an example for blacks in South Africa. The period was also marked by growing Afrikaner support for hard-core nationalists under Hertzog. In 1912 the South African National Congress was founded, led by J. L. Dube, a minister, and K. I. Seme.

During World War I both Botha and Smuts led South Africa on the British side and seized the neighboring German colony of South-West Africa. Most Afrikaners found this action distasteful; Boer commandos, with a strength of some 12,000 men, rebelled when Botha ordered them to invade the German colony. The rebellion petered out by 1915, and most of its leaders, including Gen. Christian de Wet, were captured. South Africa became a charter member of the League of Nations in 1919 and was assigned South-West Africa to administer as a mandated territory. Botha died in 1919 and was replaced by Smuts as prime minister. A strike by white mine workers against the recruitment of blacks led to the defeat of the South African Party at the polls in 1924. Hertzog became prime minister, leading a Nationalist and Labour coalition. The primary goals of the new government were to create a state-owned steel industry as a first step toward economic independence from Britain, improve the position of white workers, and establish the bases for ultimate political independence by adopting a national flag and a national anthem. Such developments were inspired by the activities of a semisecret Afrikaner organization, the Broederbond. In 1931 the British Parliament passed the Statute of Westminster, relaxing controls over the administration of the Union of South Africa.

The Labour Party left the government coalition in 1928, and in the ensuing elections the Nationalists won again. For the first time racial issues were introduced in such a way as to polarize the nation and capitalize on the traditional fears of white voters. The Nationalist platform called for permanent *basskap* (white dominance). After the elections, the Union parliament diluted the mulatto vote by extending the white franchise to women and removing all property qualifications for white voters.

The idea of a united national government had been put forward by Judge Thielman Roos, and, fearing a loss at the polls in 1934, Hertzog seized upon the idea and invited Smuts into a coalition government as deputy prime minister. There were misgivings on both sides over what was known as the fusion, later institutionalized as the United South African National Party (UP), founded in 1934. The SAP ceased to exist, although a small number of Smuts's supporters left to form the Dominion Party. The original National Party was kept alive by Daniel F. Malan. In the amicable general election of 1934 the main parties did not oppose one another, and Hertzog emerged with a majority of 138 members and was opposed by only six members. With such a solid majority, the UP was able to initiate a series of legislative measures aimed against blacks. The Representation of Natives Bill removed black voters from the common roll in Cape Province, while the Native Land and Trust Bill authorized an increase in native reserves to 13 percent. Both bills were strongly opposed by blacks. In the 1938 elections the UP won a large majority, although Malan's National Party greatly increased its electoral strength.

Hertzog attempted to keep the union neutral upon the outbreak of World War II, but the majority in parliament supported Smuts and took the country into war with Germany on the side of Britain, a step strongly opposed by the right wing of the UP as well as the National Party. The latter was heavily pro-Nazi and attracted by Hitler's ideology of racial superiority as well as his enmity toward Britain. Other pro-Nazi Afrikaner groups openly worked for a German victory and sabotaged official war efforts. These included the Handhewersbond (literally, "mountaineer's league"), organized on the Brown Shirt model; the New Order; and the Ossewa-Brandwag (ox-wagon guards), among whose members was Johannes B. Vorster, a future prime minister.

Wartime elections in 1943 again returned the UP to power with a large majority, but Malan's National Party was rapidly gaining by playing upon white fears of black encroachment. The National Party offered voters a new policy to ensure continued white dominance, as expounded by Hendrik F. Verwoerd, the editor of the leading Nationalist newspaper, and presented by P. O. Sauer. Called "apartheid," the Sauer report called for the rigid and legalized separation of the races. The program paid off when the National Party catapulted into power after the 1948 elections with an eight-seat majority. The National Party remained in office for four decades, first under Malan and later under other hard-line leaders such as Johannes Strijdom, Hendrik F. Verwoerd, Johannes Vorster, and Pieter Botha.

The next two decades were marked by the largest and harshest corpus of racial laws passed by any legislature in modern times. In the very first year of the Nationalist government, interracial marriages were declared illegal, and sexual relations between whites and nonwhites were made punishable by up to seven years in prison. Blacks were deprived of all protection under unemployment insurance laws, and the Natives Representative Council was abolished. The Population Registration Act of 1950 provided for the classification by race of the entire South African population. These designations, based on family history, appearance, and social acceptance, determined an individual's status in all areas of public life. The Group Areas Act of 1950 demarcated residential and business areas in all cities on the basis of race. Under the Suppression of Communism Act of 1950, black political organizations were banned as "subversive." The 1951 Bantu Authorities Act reinstated the hierarchy of tribal organizations in order to tribalize black political institutions. In 1951 colored voters were removed from the common roll, and all public amenities were racially segregated. The 1953 Bantu Education Act removed black education from the Department of Education and placed it under the Department of Native Affairs. Black children were henceforth to receive an education markedly different from and inferior to that given to white

children. The 1956 Industrial Conciliation Act reserved entire professions to whites.

Shortly after the death of Prime Minister Strijdom in office in 1958, Verwoerd, the foremost exponent of apartheid, became prime minister. One of his first acts was to lead his country out of dominion status and establish the Republic of South Africa. South Africa withdrew from the Commonwealth in 1961 and became more isolated on the international front. The controlling white population became increasingly concerned about their safety and survival as more and more European powers pulled out of Africa in the 1960s and 1970s; South Africa often engaged in military activity that it saw as preventative in countries like Lesotho, Angola, and Namibia.

Growing violence within South Africa's townships in the 1980s, international isolation, and economic sanctions brought an end to the presidency of Pieter Botha and saw the installation of Frederik Willem de Klerk, a reformist, as president in 1989. De Klerk followed a path of reform that included the lifting of almost all apartheid regulations and the release of political prisoners. Among those released was African National Congress (ANC) leader Nelson Mandela, who was elected president in 1994 in the country's first openly multiracial elections. Later that year South Africa rejoined the Commonwealth.

The country had its share of political intrigue and adjustment to the new social order but, generally speaking, made the transition well. In 1999, five years after the country's first election, the second presidential elections were held, and Thabo Mbeki became president. Mbeki, also of the ANC, replaced the retiring Mandela. Mbeki was reelected in 2004.

AIDS came to the political forefront around 2000. Mbeki has come under criticism for his reluctance to admit an established link between HIV and AIDS, but his government has gradually implemented measures to provide antiretroviral drugs to South Africans who need them. Other intentions of the Mbeki administration include fighting poverty, reducing crime, and stimulating the economy.

LIST OF MODERN RULERS

President

1961–67	Charles Robberts Swart
1967–68	Jozua François Naudé (acting)
1968–75	Jacobus Johannes Fouché
1975–78	Nicolaas Johannes Diederichs
1978	Marais Viljoen (acting)
1978–79	Balthazar Johannes Vorster
1979–84	Marais Viljoen
1984–89	Pieter Willem Botha
1989–94	Frederik Willem de Klerk
1994–99	Nelson Mandela
1999–	Thabo Mbeki

CONSTITUTION

The constitution of the Republic of South Africa was approved by the Constitutional Court (CC) on December 4, 1996, signed by President Mandela on December 10, 1996, and took effect on February 4, 1997. Certain provisions regarding the national executive and parliament from the 1993 constitution remained in place until April 30, 1999. The constitution was drawn up by the Constitutional Assembly and reaffirms South Africa as a constitutional and republican state.

Government is structured at the national, provincial, and local levels. The powers of the lawmakers (legislative authorities), governments (executive authorities), and courts (judicial authorities) are separate from one another. The president is the head of state and head of government. He or she is elected by the National Assembly from among its members and leads the country in the interest of national unity and in accordance with the constitution and the law. The cabinet consists of the president as head of the cabinet, a deputy president, and ministers. The president appoints the deputy president and ministers, assigns their powers and functions, and may dismiss them. The president may select any number of ministers from among the members of the National Assembly and may select no more than two ministers from outside the Assembly.

PARLIAMENT

The legislative structure of South Africa consists of two separate bodies. The National Assembly contains 400 members directly elected through universal suffrage by all citizens age 18 and over. Half of the members are selected from provincial lists, the other half from national lists. Members of the Assembly serve five-year terms. The second body is the National Council of Provinces, which is composed of 90 indirectly elected representatives from the country's 10 geopolitical subdivisions. The Council has special powers to protect regional interests, such as preserving the languages and traditions of ethnic minorities.

The legislature meets for a single six-month session that begins in late January. Additional ad hoc sessions may be called if circumstances dictate the need. Most legislation is introduced into the National Assembly by the responsible minister, deputy minister, or a member of the relevant portfolio committee. Only the minister of finance may introduce money bills into the assembly. After the Assembly has acted, bills then proceed to the National Council of Provinces, which may alter bills. Once five delegations from among the nine provinces approve measures, they are adopted. A mediation committee is used to resolve any conflicts between the Assembly and Council on bills.

POLITICAL PARTIES

South Africa has numerous active political parties. The African National Congress (ANC) won a majority of the seats in parliament in the first free elections in 1994 and has been the ruling party since then. The ANC had been the traditional party of opposition and was allied with the South African Communist Party and the Congress of South African Trade Unions. The Inkatha Freedom Party (IFP) is a moderate party that espouses self-help and self-reliance and a more decentralized approach to South Africa's problems. The New National Party (NNP) is a right-of-center party that seeks a smaller, more effective government than that proposed by the ANC. In November 2001 the ruling ANC and the New National Party announced a merger. The Democratic Alliance (DA) was formed from the merger of the Democratic Party and the Freedom Alliance. Other parties include the African Christian Democratic Party, the Pan-Africanist Congress, and the United Democratic Movement.

LOCAL GOVERNMENT

The country is now divided into nine provinces: Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Mpumalanga, North West, Northern Cape, Limpopo, and Western Cape. These provinces are represented at the federal level in the National Council of Provinces. Additionally, the provinces have their own constitutions to address local matters. There are more than 680 metropolitan, town, and rural councils.

LEGAL SYSTEM

South African law is derived from English common law and Roman-Dutch law. Judicial authority in South Africa is vested in the courts, which are independent and subject only to the constitution and the law. Most cases go before one of the many magistrates courts and high courts. The Constitutional Court is the highest court interpreting constitutional issues. The Supreme Court of Appeal is the highest court for matters that do not involve the constitution. The Department of Justice, under the auspices of the national government, is responsible for the administration of the courts.

HUMAN RIGHTS

While the creation of the government that ended apartheid was a large step in rectifying South Africa's most blatant human rights violations, the country has not had a smooth transition to a more open and free society. There are still many documented cases of human rights activists,

lawyers, and members of official investigation bodies being subjected to malicious prosecutions, death threats, or physical attacks as a result of their work.

Police use excessive force, and some people have died in police custody or in prison. The court system is overburdened, and accused people must wait long periods of time for trials. Discrimination against women and minorities, violence against women and children, child labor, and human trafficking are serious problems. The country still suffers from vigilante violence and mob justice.

FOREIGN POLICY

The dismantling of apartheid in 1991 yielded significant diplomatic gains for Pretoria, both within Africa and globally. Most Western nations terminated their economic sanctions and restored normal trade relations with South Africa, and President Mandela made a number of symbolic visits to world capitals to signify South Africa's status as a free society and nation. In 1994 South Africa reentered the international community from which it had been excluded as a pariah during the apartheid era. It rejoined the Commonwealth after a break of 33 years and later became the 53rd member of the Organization of African Unity, which was succeeded by the African Union. At the same time, the United Nations lifted its long-standing suspension of South Africa's participation in the General Assembly.

Having rejoined the international community, South Africa has become a leader in African affairs. Mandela exercised South Africa's influence in mediation efforts in such countries as Lesotho, the Democratic Republic of the Congo, and Sierra Leone, and the nation remains an important force for good in the African continent. Mandela strengthened South Africa's relations with not only Western nations but also Communist countries and anti-Western regimes such as Libya, Iraq, and North Korea.

The United States and South Africa once again enjoy close relations. The U.S. Agency for International Development and the Peace Corps provide assistance to the country. The two nations are working together to fight terrorism and HIV/AIDS.

DEFENSE

The South African National Defense Force handles both external and domestic security; it comprises an army, a navy, an air force, and medical services. The South African Police Service has primary responsibility for internal security. The two units share responsibility for border control. The Directorate of Special Operations, called the Scorpions, fights organized crime and corruption. People can volunteer for military service at the age of 18. The National Defense Force was deemed completely integrated by 2003.

ECONOMY

South Africa has many natural resources, including valuable metals, a good infrastructure, a thriving stock exchange, and excellent financial, legal, energy, transport, and communications sectors. Despite these advantages, the country's growth has not been strong; gross domestic product (GDP) growth was only 1.9 percent in 2003, though this is expected to improve. Unemployment is high, and crime is a major problem. Foreign investors are reluctant to locate their businesses in a nation where over 20 percent of adults are infected with HIV.

South Africa's government has accepted free-market principles, and in some areas the economy rivals that of other developed nations. The mining of gold, platinum, coal, and chromium brings in sizable income. The chemical industry, automobile assembly, iron and steel production, and other industries are also successful. Services regarding transportation and telecommunications are well developed.

Income distribution is still extremely uneven, and many blacks cannot find jobs. Half the population lives below poverty; most of those people are black. Racial cooperation is much better than it was in 1990, but whites still have a greater share of the nation's wealth. The prevalence of HIV is likely to have an extreme effect on the economy; some experts estimate that it could cost the nation 17 percent in GDP growth by 2010.

ENVIRONMENT

South Africa faces a number of environmental challenges, perhaps the largest of which is the lack of important arterial rivers or lakes. The lack of water resources means that extensive water conservation and control measures are needed to meet growing water usage, which threatens to outpace supply. In addition to shortages of water, the water itself has increasing levels of pollutants from agricultural runoff and urban discharge. Other problems include increasing air pollution in urban areas, resulting in acid rain. The country is also facing soil erosion and desertification because of a number of factors, including poor agricultural practices, the lack of water, and the loss of trees and scrubs.

LIVING CONDITIONS

Living conditions vary widely by ethnic group and level of income. Whites are generally the richest South Africans and have high standards of living, with modern houses, good education, servants, and amenities. Blacks can be very poor indeed, living in shantytowns that lack running water and electricity. Mulattoes and Asians are usually better off than blacks but not as wealthy as whites.

South Africa's public transportation system is somewhat slow and expensive. Most of the nation's transportation involves the use of private automobiles. Many blacks use the complicated public taxi system to get to and from their jobs.

HEALTH

South Africa has a public health-care system administered at the provincial level. Since 1994 all ethnic groups have received the same level of care. The government provides free health care for children under six and pregnant

women, free school lunches for poor children, and community health centers for use by all. Most wealthy people have private health insurance. Most medical facilities are in the cities or near game parks, beaches, and other areas that attract visitors, and rural areas are underserved. Many rural blacks still use traditional medicine.

AIDS is a major problem. Over one-fifth of adults were infected with HIV in 2005. In some areas over 35 percent of women of childbearing age are infected; they can pass the virus on to their babies, and they often die before their children are grown. It is possible that by 2010, over one million South Africans will be sick with AIDS, and some five to seven million people will have already died of the disease. The government has begun efforts to stem the tide of AIDS infections by providing antiretroviral drugs to pregnant women and to patients at public hospitals.

FOOD AND NUTRITION

The staple of black South African cuisine is a maize-meal porridge called *pap*, which resembles couscous. It is eaten for breakfast with milk and sugar and for other meals with vegetable or meat stews. White South Africans tend to eat common British foods, including meat or sausage, fried fish, boiled vegetables, and fried potatoes. Malaysian spices sometimes enhance dishes. People drink beer and brandy as well as locally made wines, which are becoming known throughout the world. Blacks drink a sorghum beer called *umqombothi*.

Food and Nutrition

 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 187.2
 Amount of Fruits and Vegetables Available per person per year kg: 75.1

STATUS OF WOMEN

Women's access to human rights in South Africa is complicated by high levels of violence, poverty, and racism and general societal inequality between men and women. Although South Africa has one of the most progressive constitutions in the world, women still face the challenge of translating these legal rights into reality. There are epidemic proportions of violence against women; rape is extremely common, and a number of women are killed every year by their husbands or partners.

Poverty affects rural and black women in particular. Women-headed rural households are the poorest in South Africa, experiencing a 30 percent higher poverty rate than male-headed households. Overall, women have reduced abilities to take part in decisions that affect their daily lives, including national processes such as elections, especially where traditional practices limit women to the roles of wife and mother. Women suffer discrimination in the workplace and in economic transactions. On the positive side, women occupy a full third of parliamentary seats.

Female genital mutilation has decreased in recent years and now only occurs in a few isolated areas.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 33
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.01

WORK

Unemployment was 26 percent in 2004. The lack of jobs is particularly problematic for young black males, many of whom are uneducated and lack skills; even the ones who finish school have difficulty finding decent employment. Blacks are more likely to work difficult jobs for low pay, such as mining. Many black people must commute to nearby cities to work manufacturing jobs, spending several hours in transit. Black families often supplement their income by selling sundries from their homes. Women make up less than 40 percent of the workforce but perform the bulk of agricultural work.

EDUCATION

The South African Schools Act passed in 1996 provides for compulsory education for children between the ages of seven and 15 years of age and also for public and independent schools. Schools were segregated under apartheid, but such is no longer the case, and the educational system is coming to grips with racial integration. Some white families still refuse to allow their children to attend school with blacks, sending their children to private school instead. De facto segregation occurs simply because racial groups remain concentrated in particular areas.

Pupils enroll for three years of junior primary education at the beginning of the year in which they turn seven. Basic learning activities during this phase involve learning to read, write, and calculate, developing language proficiency, and studying one foreign language. During the three-year senior primary phase, learning activities focus on reading and oral proficiency in both the mother tongue and second language, mathematics, history, geography, general science, and a skill such as needlework, woodwork, or art.

Learners enter further education and training after the completion of the compulsory phase of education at grade nine. This education and training may consist of the equivalents of grades 10 to 12 in the school system or the national-certificate levels one to three in technical colleges. At the end of grade 12 of the senior secondary phase, pupils write a public examination on a minimum of six subjects to obtain a senior certificate. The examination in each subject is conducted at three levels—higher, standard, and lower grade. The country has an extensive system of universities and vocational schools that are largely built upon British and European models.

SCIENCE AND TECHNOLOGY

South Africa has the most advanced telecommunications system in Africa, with fiber-optic cable, local wireless local loops, and radio-telephone services. In 2002 over three million people were using the Internet. The South African Society for Science and Technology Advancement works to increase the understanding of science, engineering, and technology through educational programs, contests, and research projects in biotechnology, genetic engineering, and other subjects.

MEDIA

South Africa has more publications and broadcasters than any other African country. The constitution guarantees the freedom of the press, and journalists work without restrictions. Newspapers criticize the government regularly and with impunity.

The South African Broadcasting Corporation (SABC) is the state radio and television broadcaster. It operates three television stations, two pay-television channels, and over 30 radio stations in 11 languages. There are several other television stations. Since radio was deregulated in 1996, there have been explosions of new radio stations throughout the country.

Among the country's many print publications, the *Star* is Johannesburg's oldest newspaper, while *Beeld* is the oldest Afrikaans daily.

CULTURE

South Africa has been inhabited for millennia. Cave paintings done by San bushmen date back 26,000 years. More modern painting includes wall murals and landscapes influenced by Dutch traditions.

Music is an extremely important art form. South African singers perform a type of music called *isicathamiya*, which originated in the mines, where workers would entertain themselves after work by singing and dancing in a subtle way, so as not to disturb security guards. Miners brought the singing style home with them and eventually began competing with one another. Ladysmith Black Mambazo is one of the most famous and successful of these singing groups.

During apartheid, blacks were forbidden to practice traditional art forms and in some cases were jailed for producing or owning paintings. The white government destroyed some areas that were havens for artists, such as Cape Town's District Six and Johannesburg's Sophiatown.

FOLKLORE AND MYTHOLOGY

South Africa has a variety of folkloric traditions among its many ethnic groups. Some originated with bushmen and were adapted by Hottentots or Zulus; some come from the Dutch. Bushmen tell stories that depict themselves as members of the earliest race of humans, who lived in the area before other tribes arrived. Many of the black tribes believe in a world of spirits, sometimes led by a supreme spirit, that is full of influence by dead ancestors. Blacks still make ritual offerings to the spirit world to persuade the spirits to treat them kindly and bring them good fortune.

ENTERTAINMENT AND RECREATION

South Africa's cities are modern and offer a variety of entertainment options, including restaurants, bars, discos, museums, and shopping. South Africans love to go to movies. They also like to go out to listen to music and dance.

The climate and landscape make outdoor recreation appealing. People go to the beach to swim, surf, windsurf, and snorkel. Scuba diving is very good off the coast. The national parks are excellent places to hike and view wild animals.

ETIQUETTE

Tipping 10 to 15 percent is expected in most situations. South African naming conventions are complicated and vary according to ethnic group. It is usually not necessary to use titles such as "Doctor" when addressing people, and it is considered rude to address a woman as "Miss." Firm handshakes are an important part of greetings. Blacks use the "African handshake," in which they slip their free hand over the other person's thumb, but whites do not use this practice. Eye contact is important when speaking to someone. Pointing or putting one's hands in one's pockets is considered rude. Men generally go ahead of women when walking through a doorway.

FAMILY LIFE

Family life varies according to ethnic group. South Africa's immigrant populations, especially Indians and whites, generally adhere to the customs of their nations of origin. Blacks and mulattoes, especially those in rural areas, adhere to local traditional practices. Extended families and clans are important, and people know and live with large groups of relatives. Marriage is seen as a bond between families, not just between a man and a woman. Polygamy is practiced in some areas.

AIDS is a major problem and is affecting family structures. Young adults are dying at an alarming rate, leaving orphans who are unable to care for themselves and often lack relatives willing to take them in. The country is expected to have some 1.6 million AIDS orphans by 2008.

PERSONAL APPEARANCE

In the cities and much of the countryside people wear Western clothing. In some rural areas people still wear the traditional clothing associated with their ethnic groups. Businessmen wear long-sleeved shirts and ties and women wear dresses or skirts. Winters are cool enough to require sweaters. Women avoid wearing low-cut or revealing clothing. Most people wear safari boots; athletic shoes are only acceptable during exercise or sports.

SPORTS

Most South Africans were forbidden to play particular sports during apartheid, but since apartheid's end sports have served to bring different ethnic groups together. Soccer, cricket, and rugby are the most popular sports, along with cycling, surfing, sailing, running, tennis, field hockey, and squash. The Rugby World Cup was held in South Africa in 1995, and the national team won the

event. The government is working to improve sporting facilities and make them available to all citizens.

CHRONOLOGY

- 1961** South Africa becomes a republic and leaves the Commonwealth. Charles R. Swart steps down as governor-general and is named state president.
- 1966** Prime Minister Hendrik F. Verwoerd is assassinated and is succeeded in office by Johannes B. Vorster.
- 1967** Jozua Naudé is elected acting state president.
- 1968** Jacobus Fouché is elected state president. Christiaan Barnard performs world's first heart transplant.
- 1971** Parliament passes Black States Constitution Act.
- 1974** South African army starts recruiting blacks into its service.
- 1975** Nicolaas Diederichs is elected state president.
- 1976** Violent racial riots erupt in the black township of Soweto and are put down after much bloodshed. Transkei becomes the first "independent" homeland.
- 1977** The black activist leader Steve Biko dies in police custody. Bophuthatswana is granted "independence."
- 1978** Vorster is elevated to the state presidency, and Pieter W. Botha replaces him as prime minister. Conservative leader C. P. Mulder is disgraced in "information scandal."
- 1979** Marais Viljoen is elected acting state president. Venda is granted "independence."
- 1981** Ciskei is granted "independence."
- 1984** New constitution adopts state presidential form of government; office of prime minister is abolished; Botha is elected first state president under the new constitution; separate houses of parliament are established for "coloureds" and Indians. Bishop Desmond Tutu is awarded the Nobel Peace Prize.
- 1985** Botha announces limited reform of apartheid, including repeal of the Mixed Marriage Act and the Immorality Act and amendment of the Prohibition of Political Interference Act. Continued racial violence forces the government to ban press and television coverage of anti-apartheid demonstrations. United States announces limited sanctions against South Africa.
- 1987** Military coup topples government in Transkei.
- 1988** Military coup in Bophuthatswana is crushed by Pretoria. Government announces new curbs on 17 leading black opposition groups. South Africa celebrates the 500th anniversary of the landing of Portuguese explorer Bartolomeu Dias at the Cape of Good Hope.
- 1989** State president Botha suffers stroke and is incapacitated; following long power struggle Botha resigns; Frederik de Klerk is elected National Party leader and state president. Amenities Act is repealed, and beaches are opened to all races. Johannesburg, East London, Durban, and other cities desegregate buses and pools.
- 1990** ANC leader Nelson Mandela is released from prison.
- 1992** A referendum by white voters overwhelmingly approves the government's plan to remove apartheid.
- 1993** Mandela and de Klerk are jointly awarded the Nobel Peace Prize.
- 1994** Country holds its first fully inclusive multiracial elections, with Mandela elected president. De Klerk becomes a vice president.
- 1996** The new constitution is fully instituted. De Klerk and the cabinet resign the day after the constitution is approved.
- 1997** Race riots take place in Johannesburg suburbs among mulattoes who think blacks are being favored by the new government.
- 1999** Thabo Mbeki replaces Nelson Mandela as head of the ANC and is elected president of South Africa.
- 2001** Some 39 multinational pharmaceutical companies withdraw from their legal battle to stop South Africa from importing generic AIDS drugs. The High Court rules that pregnant women must be given AIDS drugs to protect their babies. The ruling ANC and the New National Party announce a merger.
- 2002** Dr. Wouter Basson, also known as Dr. Death, is acquitted of murder and conspiracy; the ANC condemns the verdict. The constitutional court orders the government to pay for AIDS drugs at public hospitals. Right-wing extremists detonate bombs in Soweto and Pretoria.
- 2003** The prominent anti-apartheid activist Walter Sisulu dies. The government approves a nationwide AIDS prevention program.
- 2004** The ANC wins 70 percent of votes in April elections. Mbeki wins a second term as president. Public workers strike over pay.

NATIONAL FLAG

Three horizontal stripes, the middle yellow one equal in height to the two red stripes combined, with the national coat

of arms on the hoist side of the yellow band; the coat of arms includes the royal seal framed by the Pillars of Hercules, which are the two promontories (Gibraltar and Ceuta) on either side of the eastern end of the Strait of Gibraltar.

NATIONAL EMBLEM

An ornately crowned shield with quarters representing the kingdoms united to create the Spanish nation; Castile and León are represented by gold castles on red and red royal lions on white, respectively. Aragon's red and yellow vertical stripes bear Spain's national colors. Navarre features golden chain nets, also against red. The lower tip of the shield bears a symbolic image: against a white background between green leaves is a red pomegranate, whose Spanish name is *granada*, the state it represents. The two silver Pillars of Hercules, both capped with royal crowns, flank the emblem as symbols of Gibraltar and Punta Leona, which guard the Spanish Straits. The red ribbons draping the columns read *Plus ultra* (More beyond).

NATIONAL ANTHEM

"Marcha Real Granadera" (March of the grenadier)

NATIONAL HOLIDAYS

January 1 (New Year's Day), Good Friday, May 1 (Labor Day), August 15 (Assumption), October 12 (National Day), December 8 (Immaculate Conception), December 25 (Christmas), all major Catholic festivals

DATE OF INDEPENDENCE

GEOGRAPHICAL FEATURES

Spain is the third-largest country in Europe, occupying the greater part of the Iberian Peninsula, which it shares with Portugal. Including the Balearic Islands and the Canary Islands, Spain covers an area of 504,782 sq km (194,896 sq mi), extending 1,085 km (764 mi) east to west and 950 km (590 mi) north to south. Spain's coastline extends 4,964 km (2,914 mi).

The capital and largest city is Madrid, on the Manzanares River, close to the nation's geographical center. Barcelona is Spain's second-largest city, followed by Valencia, Seville, and Zaragoza.

Peninsular Spain consists of a central plateau known as the Meseta, which is enclosed by high mountains on the northern, southern, eastern, and part of the western sides. Topographically, Spain is divided into four parts. The north and northwest is a temperate region comprised

Spain

of Galicia and the provinces adjacent to the Bay of Biscay. Marginal mountain ranges characterize the coastal region. The Cordillera Cantábrica range extends across the country parallel to the Bay of Biscay and descends

into it. Generally, peaks in this range rise from 2,150 m to 2,450 m (7,000 ft to 8,000 ft), with a major pass between Santander and Valladolid and another between Oviedo and León.

The Pyrenees are a notable part of Spain's region of mountain ranges. They extend for about 420 km (260 mi) between the Bay of Biscay and the Mediterranean. The Spanish-French border connects six of the highest peaks in the Pyrenees. Three of these peaks on the Spanish side exceed 3,350 m (11,000 ft), with Pico de Aneto reaching 3,403 m (11,165 ft). The mountains along the northern two-thirds of Spain's Mediterranean coast are less spectacular. The Andalusian Mountains (Sistema Penibético) extend into the lower Mediterranean region and southern Spain, from Valencia Province to Gibraltar. The most impressive part of the Andalusian range is the Sierra Nevada, and its highest peak, Mulhacén (3,478 m; 11,411 ft), is the highest point on the Iberian Peninsula.

A third region is the vast tableland of the Meseta, which dominates central Spain from the Cordillera Cantábrica in the north to the Sierra Morena in the south and from the Portuguese border in the west to the Sistema Ibérico range in the east. The northern portion of the Meseta includes most of the Río Duero basin and extends over the flatter lands of León and Old Castile. The southern portion of the Meseta covers the Río Tajo and Río Guadiana basins, extending over most of Extremadura, New Castile, northern Murcia, and Andalusia.

Higher land in western Spain marks the region between the basins of three large rivers. This region includes the Cordillera Carpetvetónica, Toledo Mountains, and Sierra Morena in northern Andalusia; it also comprises the Río Ebro valley and the basin of the Guadalquivir in the southwestern Andalusian plain. The lower Guadalquivir valley is marshy and frequently saline, although some of Spain's best agricultural areas are found around Seville. The Ebro basin in the northeast, which resembles the Meseta, is also part of this region.

Spain has some 1,800 rivers and streams, although many of the riverbeds are dry most of the year. The high mountain ranges divert rain-bearing weather systems from the interior of the peninsula. Most of the land slopes to the west and drains toward the Atlantic. The Ebro, rising in the Pyrenees, is the only major river flowing into the Mediterranean. The Meseta and surrounding mountains nearly all drain to the Atlantic via four major rivers: the Duero, Tajo, Guadiana, and Guadalquivir. The first three of these drain nearly half the country; nevertheless, the Guadalquivir is the country's most important river since it drains the Andalusian plain and reaches the Gulf of Cádiz, making Seville the only inland port. Other major rivers include the Río Ebro, whose basin covers one-sixth of Spain, and the Río Miño, which rises in Galicia and flows south and southwest to the Atlantic.

CLIMATE AND WEATHER

Spain has three climatic zones: maritime in the north and northwest, continental in the interior, and Mediterranean along the Mediterranean coast.

In the maritime zone the winters are mild, the summers cool, with relatively little temperature variation from season to season. There is also adequate and well-distributed rainfall. In the continental zone the temperatures vary greatly, both daily and seasonally. The winters are raw and cold, and the summers are hot; rainfall is generally restricted to brief periods in the spring and fall. In the Mediterranean zone the temperatures vary considerably, but less so than in the interior. Winters are mild and sometimes rainy, summers are dry and sunny, and rains may be torrential in the spring and fall.

July and August are the hottest months. The north and northwest and high terrain in mountainous areas average below 20°C (68°F) in summer. Valencia and Barcelona, on the Mediterranean coast, average 25°C (77°F) and 24°C (75°F) in the hottest months. The average

July–August temperature in Madrid—as typical of the entire Meseta—is 26°C (75°F). The coldest months are December and January, when the average temperature is 10°C (50°F) in La Coruña, 4°C (40°F) in Madrid, 10°C (46°F) in Valencia, and 9°C (48°F) in Barcelona.

Only the north and northwest, which receive 890 mm (35 in) or more of precipitation annually, are considered rainy areas. Precipitation in the Meseta ranges from 300 to 630 mm (12 to 25 in). The largest area of very low precipitation—under 380 mm (15 in)—is on the leeward side of the Sistema Penibético range.

Average Rainfall: North and Northwest 35 in

Southern Coastal Belt 16 in to 31 in

Inland 25 in to 35 in

Leeward side of the Sistema Penibético 15 in

FLORA AND FAUNA

Spain has several different types of vegetation, as varying by climate. Wet areas have beech and oak forests; dry areas are home to cork trees, holm oaks, and dry, thorny scrub. Coastal areas intersperse cork and oak trees with conifers such as larch and Scotch pine. The Mediterranean coast has some prickly pear and aloe plants.

Spain's animals have been hunted for so long that many species have disappeared completely. Remaining animals include deer, chamois, ibex, wolves, genets, red squirrels, and various snakes and lizards. Some 25 species of birds of prey breed in Spain, and many water birds live in the wetlands. Barbary macaques live on Gibraltar.

ETHNIC COMPOSITION

Although the Spanish people may appear to be a monolithic ethnic group, strong ethnic differences have persisted. These ethnic divisions are deeply rooted in history and represent the different nationalities that were unified in the 16th century. In fact, separatist movements, particularly the Basque movement, have become a key feature of life in present-day Spain. Divisions are also fueled by the existence of four different languages—Basque, Catalan, Galician, and the Aranese dialect of Occitan—in addition to Castilian. Catalans compose some 17 percent of the population and, like the Basques, give primary loyalty to members of their ethnic group. The different ethnic groups deeply resent the Castilian control of the government and the institutions of the Spanish state.

The ethnic differentiation of modern Spain began after the Reconquest, when Granada was recaptured from the Moors in 1492. Paradoxically, the process of unification intensified regionalization and the convergence of regional and ethnic loyalties.

Of the several major Spanish ethnic groups, the best known are the Basques, who have waged an often violent struggle for a separate status or even separation in the face of repression, which has at times come through outright force. The Basques make up 2 percent of the population and live in the region in and around the Pyrenees that straddles the border between France and Spain, comprising four provinces in Spain and three in France. The Basque country is heavily industrialized and contains most of Spain's steel and shipbuilding industry. Though a small minority, the Basques resisted assimilation with increasing militancy in the latter decades of the 20th century. They have felt threatened by heavy influxes of immigrants from other regions and official pressures to adopt Spanish as the medium of instruction and the language of communication.

Other groups, constituting less than 1 percent of the Spanish population, include Jews and Roma (Gypsies). In addition, large numbers of North African workers came to Spain in the mid-1900s.

LANGUAGES

The official and national language is Spanish, the third-most important language in the world after English and Mandarin

Chinese in terms of number of speakers. The standard form of Spanish is known as Castilian, which is used by about 74 percent of the population as their mother tongue and by the rest of the nation as a second language. Castilian has three dialects: Aragonese, Leonese, and Andalusian.

Catalan, Galician, Basque, and Aranese are all co-official languages in certain communities. Catalan, spoken by more than six million people, is the mother tongue of Catalonia, the cultural region that extends along the Valencia coast to historic Roussillon in France, inland to Andorra, and to Alghero in Sardinia; Catalonia also includes the Balearic Islands. Since the 1960s the Catalan separatist movement has promoted the widespread use of the language in literature. In contrast, Galician is losing ground to Castilian even in most areas of Galicia itself. Similarly, use of the Basque language has been declining even as Basque militancy has risen; thus, few Basques are literate in their own language, which may become a dead language within the next century.

RELIGIONS

Spain is one of the most Catholic countries in Europe, with 94 percent of the population nominally Catholic; for much of its history Spain recognized Roman Catholicism as the official state religion. Catholic dominance began when it became the state religion and continued through the Reconquest and the expulsion of the Moors and Jews in 1492. The church's power was further consolidated by the colonization of Spanish America in the 16th and 17th centuries, as inspired in large part by the Inquisition. In the 18th and 19th centuries the prestige and influence of the church declined, although Catholicism remained the religion of most Spaniards. Under Franco's regime, from 1939 to 1975, the church once more played a vital role in government and society and was recognized as the official religion.

The constitution of 1978 disestablished Catholicism as Spain's official religion, though it recognized the church's leading role in society. Also therein, freedom of religion was guaranteed to the followers of all faiths.

The Catholic Church in Spain is linked to the Vatican by a hierarchy of archdioceses, dioceses, and parishes under the authority of the archbishop of Toledo, the primate of Spain. The church's presence is strongest in education, with some 4,300 Catholic educational institutions, including trade schools, and four Catholic universities.

Muslims constitute the largest religious minority (1.2 percent), composed largely of immigrants and workers from North Africa. Protestants represent another small religious group (less than 1 percent).

HISTORICAL BACKGROUND

The history of the Iberian Peninsula may be traced back to the Paleolithic age. The earliest people left a remarkable legacy in the cave paintings at Altamira, which date from 15,000 to 25,000 years ago. Spain's recorded history begins with the arrival of the Celts, Iberians, and Basques. Over a span of 2,000 years the peninsula was overrun by four invaders: Carthaginians, from the sixth to the second century B.C.E.; Romans, from 133 B.C.E. to the fifth century C.E.; the Visigoths, from the fifth century to 711 C.E.; and the Arab-Berbers, who established a Muslim (Moorish) kingdom in Spain around the seventh century and ruled the region as part of a vast Islamic empire for nearly 800 years.

Resistance to Muslim rule began in the ninth century and became the dominant theme of medieval Spanish history. In the centuries that followed the Muslims were pushed back bit by bit, until Toledo was reconquered in 1085, and Arab forces were finally decisively defeated in the battle of Las Navas de Tolosa in 1212. Seville was recaptured in 1248, and in 1492 the last Muslim stronghold, Granada, fell. The Reconquest was complete, and for the first time in its history Spain was united, through the marriage of Isabella of Castile and Ferdinand of Aragón. The Catholic monarchs gave Muslims the choice of exile or conversion to Christianity, which became the official state religion in 1525. Religious uniformity was enforced by the Inquisition.

In 1492, the same year that Granada fell, Christopher Columbus took possession of the Americas in the name of the Catholic monarchs of Spain. Ferdinand and Isabella were the last native dynasty. Their successors, the Hapsburg monarchs, ruled over a vast domain that included the Netherlands, the Hapsburg Empire, Naples, the Americas, and the Philippines. The Hapsburgs drew Spain into European dynastic wars for the next 200 years.

Spain's Golden Age was in the 16th century, when the nation's culture and power reached their heights and Spain became the preeminent country in Europe. Spanish fleets defeated the Turks at Malta (1565) and at Lepanto (1572), preventing the Mediterranean from falling under their control. Spain was also the military, diplomatic, and spiritual standard-bearer of the Counter-Reformation.

The defeat of the Spanish Armada in 1588 marked the beginning of Spain's decline as a great power. The 17th century saw the beginning of a long struggle over succession to the Spanish Hapsburgs when that dynasty ended with the death of Charles II. The War of the Spanish Succession was fought by several European powers on more than one continent; the conflict ushered in a long period of political instability that ended, though only briefly, in 1807 when Napoleon conquered Spain.

Spain's 19th-century history opened with the revolution and the successful struggles for independence in most of its American colonies, ending with the losses of

Cuba, the Philippines, and Puerto Rico in the Spanish-American War in 1898. For most of this period the monarchists and radical Republicans engaged in a struggle over control of the Spanish government.

Spain remained neutral in World War I but in the postwar period engaged in extensive military action in order to maintain possession of its colonial territory in Morocco. Primo de Rivera established a military dictatorship in Spain in 1923 but was driven from office by King Alfonso XIII in 1930. The following year the king was forced to abdicate, and a republic replaced the monarchy. Under the republic, the disestablishment of the Catholic Church and secularization of schools caused deep political polarization. The 1936 electoral victory of the Popular Front government, a left-wing coalition of Communists, Socialists, and anarchists, led to the Spanish civil war, through which Francisco Franco and the nation's military forces ended the republic, establishing a dictatorship in 1939. The bloody civil war resulted in over 600,000 casualties, huge losses of property, and the destruction of much of the nation's economy.

Spain remained neutral during World War II. Although Franco sympathized with the Axis powers, which had supported his side in the civil war, his nation's weakness required neutrality. In the postwar years and until 1975 Franco's regime was viewed by many nations as a remnant of the Axis dictatorships and was isolated for a time from world affairs. Spain was not admitted to the United Nations until 1955.

To many Spaniards living in the decades after the civil war, Franco represented stability and peace after years of instability and bloodshed. Franco consolidated his power with the support of the military and the Catholic Church. In 1947 the Law of Succession made Spain a monarchy once more, though the future king was not to take the throne until the end of Franco's regime. The economy was perhaps the central concern of the nation. With the help of an International Monetary Fund stabilization plan, Spain began to open up to foreign investment and trade. The United States provided significant economic and military aid, in part because of the prolonged cold war with the Soviet Union. Tourism from European nations and the United States both strengthened the economy and helped end Spain's isolation.

By the 1960s Spain was no longer an agrarian nation, instead becoming a modern industrialized power. During the 1960s and 1970s the growth of the middle class and Franco's continued hold on power reflected the rapid development of the economy. In 1969 Franco and the Cortes (parliament) designated Prince Juan Carlos as future king and head of state, ensuring a peaceful transition of power. When Franco died in 1975, Juan Carlos became king and ruler of Spain, and free elections for parliament were held in 1977. King Juan Carlos I and the new prime minister, Adolfo Suárez, undertook a series of moves to liberalize the nation after Franco. A new constitution drafted by the

Cortes was approved by Spanish voters and took effect in 1978. In 1980 the Basque country and Catalonia were granted home rule, although terrorist activities continued in those regions.

In the 1980s and 1990s, under its monarchy, Spain played a greater role in world affairs, joining the North Atlantic Treaty Organisation (NATO) in 1982 and the European Community in 1986. The Socialist Workers' Party (PSOE) held electoral majorities in the Cortes almost continually from 1982 to 1996, as led by Prime Minister Felipe González Márquez. During the 1990s, under González, the country's economic growth accelerated, despite some downturns and spikes in unemployment, and Spain's prosperity continued.

After nearly a decade in power the PSOE began to lose its luster and experienced a sharp drop in popularity. In 1993 the party lost its majority in parliament but managed to hold on to power with the support of independents. Buffeted by Basque terrorism and flagrant corruption at the highest levels of government, the Socialists were ousted in 1996. José María Aznar López, the leader of the conservative Popular Party, swept into power at the head of a coalition. In 1998 the Basques finally agreed to end their terrorist campaign against Spain, but the cease-fire was ended in 1999. Aznar's Popular Party won 183 seats in the 350-seat Congress of Deputies in the 2000 general elections. After the terrorist attacks in New York and Washington, D.C., in 2001, Aznar aligned Spain's policy with that of the United States, sending 1,300 soldiers to Iraq to serve with multinational forces.

In March 2004 José Luis Rodríguez Zapatero, the leader of the PSOE, won a surprise victory in the presidential election; just three days before the election several commuter trains in Madrid were bombed by terrorists, killing nearly 200 people, which cast a shadow on the elections. Aznar's government blamed the Basque separatist group Euskadi Ta Askatasuna (ETA, "Basque Homeland and Liberty"), but it was later established that an Islamic group related to al-Qaeda was responsible. Zapatero called the U.S. war in Iraq a disaster and quickly withdrew Spain's troops from Iraq. Zapatero announced that his first priority would be to fight terrorism. His other goals were to increase economic growth, improve social welfare, simplify taxation, and encourage compromise with nationalist groups within Spain.

LIST OF MODERN RULERS

President	
1976–81	Adolfo Suárez González
1981–82	Leopoldo Calvo-Sotelo Bustelo
1982–96	Felipe González Márquez
1996–2004	José María Aznar López
2004–	José Luis Rodríguez Zapatero

CONSTITUTION

Spain is a constitutional monarchy built on foundations laid by Francisco Franco. The constitution of 1978 provided for the transition and continued evolution of the Spanish state. However, it is not a document that expresses broad principles; rather it deals with basic issues in ambiguous and even contradictory language.

The executive consists of the king, who is head of state; the prime minister (officially known as the “president”); and the Council of State (the cabinet). The crown is hereditary, descending through sons in order of seniority or, if there are no sons, through daughters. The king’s powers are specified in detail; they include convening and dissolving the Cortes, calling elections and referendums, proposing the prime minister for the approval of the Cortes—and dismissing him—and commanding the armed forces.

The powers of the prime minister and the Council of State are regulated by organic law as well as Article 97 of the constitution. Cabinet meetings are held in closed sessions every two weeks. In addition, the prime minister meets more frequently with an inner cabinet. The Council of State makes decisions in common, and ministers share collective responsibility. As of 2005 there were 17 ministers in the council.

Three of the most controversial constitutional issues relate to the army, the church, and the economic system. Article 8 suggests the special mission for the armed forces of “guaranteeing the sovereignty and independence of Spain and of defending its territorial integrity and the constitutional order.” Roman Catholicism is established as a state religion, but the state is required to “take the religious beliefs of the Spanish people into account” and to “cooperate with the Catholic Church and other confessions.” Articles dealing with the economy aim to please advocates of both free enterprise and socialism. The constitution’s most unambiguous provisions relate to basic freedoms, which are spelled out in detail. The sensitive issue of regional autonomy is covered in a number of articles.

PARLIAMENT

The national legislature is the bicameral Cortes Generales (General Courts). The lower house, the Congress of Deputies, has 350 members directly elected for four-year terms through proportional representation from 50 provinces. The upper house, the Senate (Senado), has 259 members, of which 208 are directly elected for four-year terms by a simple plurality vote and 51 are appointed to four-year terms by the regional legislatures.

The powers of the Senate are subordinated to those of the Congress of Deputies, which can override a Senate vote by a simple majority. Because the Senate gives

greater weight to rural communities, it is generally more conservative than the Congress.

The constitution provides for referendums under two conditions: through a popular initiative of at least 500,000 signatures and through the authorization of the Congress. In addition, the constitution may be amended by a three-fifths majority in each of the chambers of the Cortes.

Members of the Cortes enjoy judicial immunity from prosecution and may not be recalled. Expulsion is possible only upon judicial sentence, but indictment and prosecution require the authorization of the particular house.

Each house determines its own rules of procedure. There are two sessions of the Cortes each year, the first from September through December and the second from February through June. All parliamentary work is guided by the president of each chamber.

All legislative bills are automatically referred to committees. Private members also have the right to introduce legislation, though most private bills die in committee. Members may propose amendments to any bill within 10 days of its publication, but amendments to reduce revenue or increase public expenditures require governmental approval.

Parliamentary control over the executive is exercised principally through questions and interpellations. Parliament can also set up committees of inquiry. Motions of censure against the government must be proposed by one-tenth of the total membership. Article 82 of the constitution permits decree laws during states of emergency but limits the duration of such periods.

Each province has a minimum of two deputies, with the remainder allocated in proportion to population. Parties are required to win at least 3 percent of the vote in any given province to win a seat in that province. In elections to the Congress of Deputies the voter may indicate preference only for a list of candidates. For the Senate, voters mark their preferences for individual candidates, with the four candidates receiving the highest number of votes in each province and autonomous city declared winners. Suffrage is universal at age 18.

POLITICAL PARTIES

Although Spain has hundreds of national and regional parties, political life revolves around two major parties: the conservative Popular Party (PP) and the leftist Socialist Workers’ Party (Partido Socialista Obrero Español, PSOE). In the 2004 elections 88 percent of the seats went to those two parties. Nevertheless, regional parties wield considerable influence on electoral outcomes even when they do not gain many seats. The most important of these regional parties represent Valencians, Catalans, Basques, Galicians, and Canarians.

LOCAL GOVERNMENT

The constitution of 1978 modified Spain's long tradition of centralized government in authorizing the formation of regional governments, known as autonomous communities. In accordance with the constitution, 17 autonomous regions have been established. The federal government continues to grant more powers to regional governments, which will eventually will all of their own education, health-care, and other social programs.

The government of the autonomous regions is based around legislative assemblies elected by universal suffrage and proportional representation. In each region, a president is elected by the assembly from among its members, and a governing council has executive and administrative functions.

The 1978 constitution established full local government at the municipal level as well. Both mayors and municipal councils are popularly elected. Still, certain legacies of centralized control have endured. The central government controls the preparation of municipal budgets and restricts the use of local taxing powers. The consequent chronic shortage of funds has increased local dependency on the Ministry of Finances.

LEGAL SYSTEM

The basis of Spanish law is the Civil Code, modeled after the Napoleonic Code. The jury system is not used in the criminal justice system. Prosecutors and defense attorneys present their cases directly to a judge or judges.

There are five levels of regular courts sitting in both criminal and civil cases. At the lower level are more than 9,000 municipal courts, rural district courts, and justice-of-the-peace courts. At the next level are 600 courts of original jurisdiction, each presided over by a single judge, whose most important functions are to act as courts of instruction in regard to more serious crimes.

Each of the 50 provinces has a provincial high court primarily concerned with criminal indictments forwarded from courts of original jurisdiction. These high courts also investigate charges against municipal and provincial officials and hear civil appeals. At the next level Spain is divided into 15 judicial districts, each with a district court. They are courts of final appeal in all but the most serious cases and deal primarily with civil law. The highest court in the land is the Supreme Court of Justice, presided over by a chief justice appointed by the head of state for a six-year term. The Supreme Court has regulatory and disciplinary authority over the lower courts and is empowered to impeach judicial officers. Its jurisdiction extends to civil and criminal cases involving high government officials.

HUMAN RIGHTS

The Spanish constitution of 1978 guarantees its people all fundamental freedoms. Most charges of abuses of human rights have occurred in connection with antiterrorist laws designed to curb violence associated with the Basque and Catalan separatist movements. Suspected terrorists have been arbitrarily detained and have waited long periods of time for trials. Investigations of abuses by security forces are prolonged, and punishments are usually light.

Racial discrimination is not considered a serious problem in Spain because relatively few nonwhites reside there. Nevertheless, Arabs from North Africa, illegal aliens from Argentina and Chile, farm workers from West Africa, and Roma and other immigrants often complain of bias caused by racist attitudes.

Women have been the victims of violence and discrimination. Human trafficking in sex slaves and prostitution have been problems.

FOREIGN POLICY

Within a decade of Franco's death in 1975, Spain, once a pariah among Western nations, became fully rehabilitated, and the diplomatic isolation of the Franco years ended. Spain was admitted to the Council of Europe in 1977 and became a member of NATO in 1982; although the Socialist Workers' Party had long campaigned against Spain's membership in NATO, in a national referendum in 1986 voters favored membership by a majority of 53 percent. That same year Spain joined the European Community, now the European Union, and completed its return to normal diplomatic relations by establishing ties with Israel and Albania.

Spain maintains a deep interest in Latin America, where its foreign policy emphasizes the common linguistic, religious, ethnic, cultural, and historical ties that bind the region to Spain. These ties have been strengthened by visits to the region by King Juan Carlos I and Spanish prime ministers. Spain has also maintained congenial relations with the Arab world, relinquishing its claim to Spanish Sahara, now Western Sahara, in 1976, though retaining its interest in the area, which is disputed by Morocco and Mauritania.

Spain established good relations with the United States in the decades following World War II. The cold war hastened Spain's rehabilitation with respect to American foreign policy, beginning with \$1 billion in foreign and military aid and the establishment of American bases in 1953. Spain's admission to NATO was followed by a treaty of friendship in 1982, renewed in 1989 and revised in 2003, that authorizes the continued use of American air bases at Torrejón, Zaragoza, and Morón de la Frontera as well as the U.S. naval base at Rota.

Spain has paid particular attention to its relations with the Arab world since 2001. It has been involved in the territorial dispute between Western Sahara and Morocco and has been instrumental in dialogues between Arab nations and Europe. It has been increasing contacts with sub-Saharan Africa. Al-Qaeda is known to operate cells in Spain and is suspected to have detonated bombs in Madrid in March 2004.

DEFENSE

The 1978 constitution redefined the role and status of the military in Spanish society. The government has taken a number of steps to reassert civilian control over the armed forces, including a reduction in their size.

Spain maintains an army, a navy, an air force, and marines. The king is the supreme commander of the armed forces. Each service has its own staff and ministry. The ministers and chiefs of staff of the services, the chief of the supreme staff, the prime minister, and other co-opted ministers and officials form the National Defense Junta.

Internal security is provided by the National Police, the Civil Guard, and regional police forces.

ECONOMY

In the latter half of the 20th century Spain evolved from a rural agricultural nation into an urban industrial power. Spain's mixed capitalist economy of industries and services was freed of many government regulations, and major state-owned sectors were returned to private ownership.

Spain's gross domestic product (GDP) grew on average almost 5 percent between 1986 and 1990, and business investment increased by over 10 percent annually. Economic growth slowed in 1992, however, and joblessness increased sharply, to nearly 22 percent. Prime Minister Aznar took office in 1996 determined to reverse this economic decline and in large measure proved successful. By 2003, GDP growth had climbed to 2.4 percent, inflation had declined to 3 percent, and unemployment had fallen to 10.4 percent of the workforce, all reasonable numbers in light of the weak European economy.

Aznar's economic policies increased the deregulation and privatization of the economy, with the goal of meeting the strict fiscal requirements for membership

in the European Monetary Union and introducing the single European currency, the euro, in Spain; the euro was adopted in 1999. The government then made further progress in changing labor laws and reforming pension schemes. Zapatero took office in 2004 intending to reduce government interference in business and end tax fraud but also to reintroduce some of the labor market regulations that Aznar's government had removed.

Spain's leading industries are textiles, apparel and footwear, metals and metal manufactures, chemicals, shipbuilding, automobiles, machine tools, and tourism. Its major agricultural products include grains, vegetables, olives, wine grapes, sugar beets, and citrus. The majority of the nation's foreign trade is carried out with members of the European Union. Adjusting to the monetary and other economic policies of an integrated Europe—and further reducing unemployment—will pose challenges to Spain in the early 21st century.

ENVIRONMENT

Spain confronts several major environmental problems. Spain's large cities suffer from air pollution that exceeds the average in western Europe. Sewage and water treatment facilities are inadequate, and raw sewage along with offshore oil and gas production contribute to the severe pollution of the Mediterranean. The ever-increasing amounts of nitrogen fertilizers used by farmers threaten river water purity in many areas. The entire nation suffers from poor water quality and a general lack of water. Tourism, a pillar of the economy, has led to beach erosion and environmental stress, particularly along the Mediterranean coast, where nearly half the urban population lives. Other problems include deforestation and desertification in the countryside.

Government programs instituted to address these environmental issues are relatively recent and, for the most part, inadequate for the nation's needs. One notable success, however, is the government's reforestation program, which has promoted soil conservation and increased timber production.

LIVING CONDITIONS

Spain is a modern, developed nation with a high standard of living. People have comfortable homes with ample furniture and modern amenities. Public transportation is widely available. Costs are lower than in European neighbors, though housing prices rose substantially in 2003 and 2004. Theft is a problem, especially in areas frequented by tourists. Air pollution is a major problem in cities.

HEALTH

Health is quite good in Spain. Life expectancy is over 79 years, and the infant mortality rate is only about 4.4 deaths per 1,000 births. Fertility is very low, at 1.3 children per woman in 2005; as such, population growth has slowed to a near standstill, and the population as a whole is aging. In 2001, 0.7 percent of the population was infected with HIV.

FOOD AND NUTRITION

Spain has tremendously varied cuisine and some very skilled cooks. *Tapas*, snacks served with drinks, are very popular. Well-known dishes include *gazpacho* (cold tomato and vegetable soup), *paella* (a rice and fish dish), and *chorizo* sausage. *Churros* are fried dough sticks that many people eat for breakfast with coffee. Spanish wines are excellent.

The main meal of the day is served between 1:30 and 4 p.m. People eat their evening meal quite late, around 10 or 11 p.m.; this meal is usually lighter than lunch.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 98.2
 Amount of Fruits and Vegetables Available per person per year kg: 266.2

STATUS OF WOMEN

The constitution provides for equal rights for all citizens, and in recent years women have moved toward equality under the law. Fair numbers of women are now in the workforce—women accounted for 38 percent of all workers in 2003. Women received 57 percent of university degrees in 1997. Nevertheless, discrimination in the workplace and in hiring persists. Women's salaries remain 27 percent lower than men's, and women are more apt to have temporary or part-time jobs than men. The female unemployment rate, at about 30 percent in 1997, is roughly double that of male workers. Despite a 1989 law barring sexual harassment in the workplace, such practices are still often reported, and very few are brought to trial.

Domestic violence and general violence against women is a major problem. The government has introduced programs to prevent domestic violence and provides shelters for battered women.

Women

WORK

Almost two-thirds of Spain's workforce is employed in services. About 30 percent work in manufacturing, mining, and construction, producing textiles, footwear, food and beverages, chemicals, ships, automobiles, and metal products. Only 5 percent work in agriculture, producing

wine, olives, grains, vegetables, fruits such as oranges, and some meats. Unemployment has been fairly high, at 10.4 percent in 2004, but the government has pledged to find more jobs for its people.

Employment and Labor

Labor Force Total: 19,330,000
 Female Participation Rate %: 37.8
 Labor by Sector %:
 Agriculture: 5.3
 Manufacturing, Mining, and Construction: 30.1
 Services: 64.6
 Unemployment %: 10.4

EDUCATION

Education is compulsory and begins at age six and continues until age 14. The eight-year primary school program is followed by four years of secondary school, either academic high school leading to university entrance or vocational school leading to a job. The academic year runs from October to July, with a long summer vacation. Some 70 percent of students attend public schools and universities, while the other 30 percent attend private institutions, which receive government subsidies and are for the most part operated by the Catholic Church. Spain has many universities and technical colleges offering instruction in all major fields.

The Ministry of Education nominally oversees all schools and universities, but the Organic Law of 1984 transferred real control over education to the autonomous regions. One notable result has been the teaching of Basque, Catalan, and other vernacular languages in Spanish schools.

Education

Literacy Rate %: 97.9
 Male %: 98.7
 Female %: 97.2
 School Life Expectancy years of formal schooling: 16.2

SCIENCE AND TECHNOLOGY

Spain has a modern technological infrastructure. In 2003 there were 17.6 million telephone lines and 37.5 million cellular telephones in use, and nearly 10 million people were using the Internet. Broadcast media are increasingly using digital equipment. Spanish universities such as the Mediterranean University of Science and Technology are doing cutting-edge research and education. Spanish scientists and engineers have collaborated with European colleagues on a variety of enterprises since the 1980s; topics include genomics, space exploration, the synchrotron light source, and technology for cleaning up oil spills.

Scientists and Engineers in R&D per 1 million people: 2,036
 Expenditures in R&D as % of GDP: 1.03
 High-Tech Exports \$billion: 8.9
 Patent Applications by Residents: 4,330

MEDIA

The constitution of 1978 protects press freedom. Although Spain has a huge variety of print publications and media outlets expressing a full range of views, some people are concerned about the government's influence on the media, especially in public broadcasting.

The government operates several radio and television networks. In addition, three regional television stations were set up by a 1983 law, and three privately run television channels were authorized by the Cortes in 1987. Cable and satellite television is expanding rapidly, and several digital channels have been launched. The government hopes to end analog television transmission by 2010. Favorite television shows include soap operas and reality shows.

Spain has dozens of newspapers. *El país*, *La vanguardia*, *El mundo*, and *ABC* are some of the nation's most influential newspapers. The state-run news wire service is EFE. Europa Press and Vasco Press are private news services.

CULTURE

Spain has a rich and varied culture that is the product of millennia of occupation and colonization by different peoples, from the Romans to the Arabs. Famous Spanish artists include El Greco, Diego Velázquez, Francisco Goya, Pablo Picasso, and Salvador Dalí. Authors include Miguel de Cervantes, who wrote the famous epic *Don Quixote*; Adelaida Garcia Morales; Montserrat Roig; and Camilo José Cela, who won the 1989 Nobel Prize for Literature. Architectural styles have long been original, especially Islamic and Gothic structures. Famous filmmakers include the surrealist Luís Buñuel and the Oscar-winner Pedro Almodóvar. The guitar was invented in Spain through the adding of a sixth string to the Arab lute, and Spanish guitarists have long been among the best musicians in the world.

FOLKLORE AND MYTHOLOGY

The Spanish consider flamenco the main expression of their folklore. Flamenco includes dancing, music, and folk poems, as accompanied by colorful costumes. The form seems to have risen from a combination of Arabic, Jewish, and Roma cultures. Bullfighting is another folk custom that has become a major tourist attraction in modern times.

Spain is believed to have ancient connections with Celtic peoples in Scotland and Ireland. Similar stone carvings exist in both places, and Irish myth tells of people traveling from Spain to settle in Ireland.

ENTERTAINMENT AND RECREATION

Spain has an immense array of entertainment possibilities, including restaurants, bars, discos, shopping, museums, archaeological sites, and medieval castles. Skiing and hunting are both common outdoor activities. The Mediterranean coast is a popular vacation destination for people from all over Europe, who come to enjoy the beaches, water, and nightlife.

ETIQUETTE

Service charges are usually added to restaurant bills, so tipping is unnecessary, though people usually leave the small change left over from paying the bill. Spaniards shake hands with everyone in a group when entering or leaving a room. Family members hug and kiss one another. Spaniards tend to value close, personal relationships and like to establish friendships before discussing business. Lateness to meetings is typical; southern Spaniards tend to be later than northern ones. It is appropriate to bring a gift when visiting a home. *Machismo* is still prevalent, despite the growing equality of women, and a man will almost never allow a woman to buy him a meal.

FAMILY LIFE

Marriage rates have declined in Spain, as in the rest of western Europe, and in the early 2000s it was becoming increasingly common for couples to live together without marrying. Contraceptives were banned under Franco, but since they were legalized in 1978 Spaniards have made good use of them: Families are now very small; most couples have one child, or at most two. A 2004 law reducing the time it takes to get a divorce from two years to 10 weeks worried conservatives and the Catholic Church, who feared that the concepts of marriage and family were disintegrating. The majority of Spaniards like the ideas of liberalizing divorce and making gay marriage and abortion legal; in 2005 the country became the third in the world to legalize same-sex marriage.

PERSONAL APPEARANCE

Spaniards dress in typical Western clothing; they like to dress well and fashionably. Service in some establishments varies according to attire, with the best-dressed people receiving the best service. Adults do not wear shorts, athletic shoes, or sandals away from the beach or playing field. Nice shoes are particularly important. Spanish people favor dark colors in the winter.

SPORTS

Spaniards play the full range of Western sports, both recreationally and professionally. Soccer is by far the most popular. There are many soccer leagues throughout the country; in the Golden League, various cities sponsor teams that compete against one another. Golf is increasingly popular, and Spanish golf clubs host international tournaments such as the Ryder Cup. Spain has also produced numerous professional tennis players and has be-

come a favored training ground for professional players from other countries.

CHRONOLOGY

- 1939** Francisco Franco becomes dictator of Spain in the wake of the bloody civil war that began in 1936; hundreds of thousands of “anti-Spain” dissidents are imprisoned, and as many as 37,000 are executed in vindictive purges over the next four years.
- 1941** Through 1945 Spain rides out World War II as a neutral power but sends 40,000 troops to fight the Soviet Union.
- 1952** Agricultural and industrial production, devastated by the civil war, finally return to pre-civil war levels.
- 1953** Spain agrees to allow the establishment of U.S. military bases in exchange for aid.
- 1955** Spain is admitted to the United Nations.
- 1957** After two years of demonstrations by students and labor groups, Franco conducts a major cabinet reorganization, allowing for greater business and labor representation.
- 1958** Coal-worker strikes prompt the government to grant workers the right to negotiate wages and working conditions with their employers; Spain ends its occupation of Spanish Morocco.
- 1959** Franco approves a financial austerity plan to strengthen the currency.
- 1962** The tourism industry begins to surge amidst a general economic upturn; Franco declares martial law after strikers and dissidents assert liberal demands.
- 1966** Reformist legislation expands the freedom and influence of the press.
- 1968** Spain relinquishes control of its West African colony of Spanish Guinea, which declares independence as Equatorial Guinea.
- 1969** The ailing Franco recognizes Juan Carlos, the heir to the Spanish throne, as his legal successor.
- 1970** Trials of members of the ETA garner international condemnation of Basque terrorist tactics.
- 1973** Franco turns over the office of prime minister to Admiral Luis Carrero Blanco in June; in December Blanco is assassinated by the ETA; Carlos Arias Navarro assumes the premiership.
- 1974** Arias Navarro announces liberalization policies, including the legalization of political parties, which had been outlawed since 1939.
- 1975** Five Basque terrorists are executed despite vigorous international protests; Franco dies; the constitutional monarchy is restored, with Juan Carlos I as king.
- 1976** Premier Arias Navarro steps down at the request of King Juan Carlos I; Adolfo Suárez González, a onetime minister under Franco, becomes prime minister; Suárez champions the Law for Political Reform, which allows for the election of the Cortes through universal suffrage.
- 1977** Suárez legalizes the Communist Party despite opposition by the military; Spain holds free parliamentary elections.
- 1978** Referendum endorses a democratic constitution.
- 1981** Suárez resigns as prime minister; during the inauguration of Leopoldo Calvo-Sotelo Bustelo, of the Union of the Democratic Center (UDC), an attempted military coup fails thanks to the diplomatic skill of King Juan Carlos.
- 1982** Shortly before October elections, a coup plot is discovered, and four military officers are arrested in connection with the plot; the Socialist Workers’ Party (PSOE) comes to power, with Felipe González Márquez as prime minister; Spain joins NATO; separatist Basques continue their campaign of terrorism.
- 1986** Spain joins the European Community; elections confirm González and the PSOE.
- 1988** With unemployment at 19 percent, the workers’ commissions call a general strike to protest the government’s economic policies.
- 1991** Spain’s limited support of UN forces in the Persian Gulf War inspires massive demonstrations by pro-neutralist Spaniards.
- 1992** Expo ’92 and the Barcelona Olympic Games give Spain’s economy a boost.
- 1993** In elections, González and the PSOE remain in office but must form a coalition government.
- 1996** The conservative Popular Party comes to power, with José María Aznar as president; the terrorist group ETA refuses to comply with the government’s demand for a permanent cease-fire, leading to stalled negotiations on Basque independence.
- 1997** Aznar’s deficit-reduction budget comes into effect, paving the way toward euro currency adoption in 1999; ETA terrorists kidnap a minor member of Aznar’s Popular Party, killing him when their demands are not met; millions of Spanish march in protest of the ETA’s violence.
- 1998** ETA agrees to a unilateral cease-fire in return for the transfer of 21 offshore Basque prisoners to the Spanish mainland.
- 1999** ETA announces that it will end its cease-fire.
- 2000** Aznar and his Popular Party are reelected in a landslide victory.
- 2001** Britain and Spain agree to reach a deal on the future status of Gibraltar by the summer of 2002.

2200 Spain

- 2002** The euro becomes the national currency. Spain assumes the rotating presidency of the European Union for six months. Spain and Morocco dispute ownership of Perejil Island.
- 2003** Spain bans the Basque separatist group Batasuna.
- 2004** Terrorists blow up several trains in Madrid, killing 191 people; an Islamic group with ties to al-Qaeda is blamed. In elections held only three days after the bombings, José Luis Rodríguez Zapatero wins the presidency.
- 2005** Spanish voters approve the EU constitution. The country becomes the third in the world to legalize same-sex marriage.

SRI LANKA

Basic Fact Sheet

OFFICIAL NAME

Democratic Socialist Republic of Sri Lanka (Sri Lankā Prajathanthrika Samajavadi Janarajaya)

ABBREVIATION

LK

CAPITALS

Colombo (executive), Sri Jayawardenepura Kotte (legislative)

HEAD OF STATE

President Mahinda Rajapakse (from 2005)

HEAD OF GOVERNMENT

Prime Minister Ratnasiri Wickremanayake (from 2005)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

20,064,776 (2005)

AREA

65,610 sq km (25,332 sq mi)

MAJOR ETHNIC GROUPS

Sinhalese, Tamil, Moor

LANGUAGES

Sinhala (official and national), Tamil (national), English

RELIGIONS

Buddhism, Hinduism, Christianity, Islam

UNIT OF CURRENCY

Sri Lankan rupee

NATIONAL FLAG

Two narrow green and orange vertical stripes on the left side, with a yellow lion carrying a sword in its upraised right front paw against a dark red background occupying the rest of the flag. A golden bo leaf is found in each corner of the red field. The flag is bordered by a yellow band, with a vertical yellow band separating the green and orange stripes from the dark red background.

NATIONAL EMBLEM

The main symbols in the national emblem are the *punkalasa* (a filled vessel), a heraldic lion within the *palapeti vataya* (a lotus petal border), and the *dhammachakka* (the wheel of Buddhist doctrine). The sun and moon appear on either side of the filled vessel.

NATIONAL ANTHEM

“Hail, Hail, Motherland”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 4 (Independence Day), May 22 (National Heroes’ Day), April 13 (Sinhala New Year’s Day), April 14 (Tamil New Year’s Day), May 1 (May Day), Christmas, Good Friday, Easter, Poya holidays every lunar month on the day of the full moon, Maha Sivaranthri, Tamil Thai Pongal, Deepavali, Ramadan, Id-ul-fitr, Milad-un-nabi, Id-ul-Azha

DATE OF INDEPENDENCE

February 4, 1948

DATE OF CONSTITUTION

August 31, 1978

GEOGRAPHICAL FEATURES

Sri Lanka, a pear-shaped island in the Indian Ocean, is 804 km (500 mi) north of the equator and separated from the Indian mainland by 29 km (18 mi) at the closest point. Sri Lanka is often referred to as the Resplendent Isle or the Isle of Delight. It has a total area of 65,610 sq km (25,332 sq mi) and a total coastline of 1,340 km (832 mi). The longest distance north to south is 435 km (270 mi), that east to west 225 km (140 mi).

Sri Lanka has two geographical regions. A flat or gently rolling plain, occupying four-fifths of the country, makes up the entire northern half of the island and continues around the coast of the southern half. The south-central part is hilly and mountainous, ranging from 900 to 2,100 m (3,000 to 7,000 ft) above sea level, with two abruptly ascending platforms flanking the Uva Basin, the Hatton Plateau, the Kandy Plateau, the Knuckles Group, and the Piduru Ridges.

Sri Lanka

There are 16 significant rivers, of which the longest are the Mahaweli Ganga (332 km; 206 mi) and the Aruvi Aru (167 km; 104 mi).

CLIMATE AND WEATHER

Sri Lanka has a generally uniform tropical climate, with little variation in daily or seasonal temperature. Humidity is high throughout the year, frequently around 90 percent. The average annual temperature for the whole country ranges from 26.7°C to 28.3°C (80°F to 83°F). The highest temperature recorded is 36.7°C (98°F), in the region around Trincomalee. The island has two monsoon seasons, from the southwest in May and from the northeast in November. The dry zone, in the north, the central plain, and the southeastern plain, receives 1,270 to 1,900 mm (50 to 75 in) of rainfall annually, while the wet zone, in the southwestern plain and southwestern uplands, receives 2,540 to 5,080 mm (100 to 200 in) per year. Two small arid zones, stretching from Puttalam to Jaffna and from Tangalla to Pottuvil, receive some 630 to 1,260 mm (25 to 50 in) per year.

Climate and Weather

Mean Temperature: 80°F to 83°F

Average Rainfall

North (Central Plain and Southeastern Plain): 50 in to 75 in

Southwestern Plain and Southwestern Uplands: 100 in to 200 in

Arid region (Puttalam to Jaffna and Tangalla to Pottuvil): 25 in to 50 in

FLORA AND FAUNA

Most of Sri Lanka is covered in rain forest, with teak, ebony, and silkwood trees present. Orchids grow wild. The drier northern part of the country has grasslands and shrubs. Stunted forests and rhododendrons grow in the highlands. Many animals inhabit the island, including elephants, wild boars, deer, sloth bears, leopards, monkeys, crocodiles, turtles, and snakes. Migratory birds stop in Sri Lanka between January and April. Flamingos are one of the most noticeable bird species.

ETHNIC COMPOSITION

Sinhalese, the ethnic majority (74 percent), form a fairly homogeneous group, though they are sometimes divided on the basis of geography and culture into the low-country Sinhalese and the Kandyan Sinhalese. The next most populous group is the Sri Lankan Tamils (18 percent), who have never been fully assimilated into the social or cultural mainstream. Moors constitute about 7 percent of the population, while Burghers and Malays form smaller ethnic groups. Some thousands of Veddahs, the original inhabitants of Sri Lanka, survive in Uva and the north-central areas.

The caste system is reportedly breaking down among Buddhists, but it remains important when marriages are arranged and continues to be widely observed among Hindu Tamils. Members of virtually all of Sri Lanka's ethnic minorities occupy prominent positions in all walks

of public and private life, but since independence the Sinhalese majority has steadily strengthened its position of influence in most sectors of society.

LANGUAGES

Sinhala and Tamil are the official languages, as spoken by about 74 percent and 18 percent of the population, respectively. The government commonly employs English, and about 10 percent of the population speak it well.

RELIGIONS

Buddhists constitute 70 percent of the population, Hindus 15 percent, Muslims 7 percent, and Christians 8 percent. Buddhism in its Theravada form is the religion of most of the Sinhalese, Hinduism that of the Tamils, and Islam that of the Moors and Malays. The constitution makes no reference to an official religion. However, Buddhism is generally identified with Sinhalese nationalism and the Sinhala language. Christianity cuts across ethnic lines, with about 1.6 million followers, most of them descendants of converts to Roman Catholicism from the Portuguese era.

Though Sri Lanka is officially secular, since the advent of the Sri Lanka Freedom Party there has been increasing Buddhization of public life. Buddhist observances and activities are promoted through official participation and in some cases receive public funds. The Buddhist clergy is also becoming increasingly politicized. There is no discrimination against religious minorities, but a number of recent reforms have worked against the Christian minority, such as the abolition of Sundays as weekly rest days and the nationalization of Christian missionary schools.

Religious Affiliations

Buddhist	14,045,000
Hindu	3,010,000
Muslim	1,405,000
Christian	1,605,000

HISTORICAL BACKGROUND

As early as the sixth century B.C.E. Sri Lanka's first settlers, the Veddahs, a dark, nomadic "pygmy" people, occupied the region. During the fourth century B.C.E., a number of Sinhalese kingdoms existed. In the third century Buddhism was introduced to the region by Mahinda, the son of the Indian Mauryan emperor Ashoka. The region was subject to constant invasion and had any number of claimants to power over the course of the next millen-

nium. In 1070 King Vijayabahu drove out the Indians and established the capital at Polonnaruwa. The new kingdom prospered, especially under King Parakramabahu; however, it fell to Indians again in 1215 and remained under Indian control for the next 300 years.

Sri Lanka was under the control of three major Western colonial powers from the mid-16th century to the mid-20th century. The Portuguese were in control of coastal Sri Lanka for nearly 150 years, beginning in 1505. The Dutch supplanted them beginning in 1658 and were, in turn, supplanted by the British, who were successful in bringing the entire country under their control. British rule was relatively benevolent, compared to that of the Dutch and the Portuguese; by permitting indigenous participation in the governmental process, through the Donoughmore Constitution of 1931 and the Soulbury Constitution of 1946, the British prepared Sri Lankans for eventual self-government. Ceylon, as Sri Lanka was originally called, became an independent nation within the Commonwealth in 1948. After independence, political power oscillated between the United National Party (UNP), a moderate pro-Western party, and the Sri Lankan Freedom Party (SLFP), a nationalist party that stressed nonalignment, Buddhism, and democratic socialism. Ceylon was governed from independence until 1956 by the UNP, under the leadership of first Don Stephen Senanayake, then his son Dudley Senanayake, and finally Sir John Kotalawela.

The SLFP, under Solomon Bandaranaike, came to power in 1956 following a campaign in which it demanded that Sinhala be made the country's sole official language. The SLFP's aggressively Sinhalese program was met with a wave of Tamil civil disobedience, which, in turn, generated violent anti-Tamil programs. Bandaranaike, attempting to work out a compromise between the two factions, was assassinated in 1959 by a militant monk who felt he had betrayed the Sinhalese cause. Bandaranaike was eventually succeeded by his wife, Sirimavo R. D. Bandaranaike, who pursued an increasingly nationalist, anti-Western program.

The UNP won the 1965 election under the leadership of Dudley Senanayake, who modified the strict language policy of the SLFP. Economic issues—especially inflation and unemployment—dominated the 1970 campaign, which was won by the United Front, composed of the SLFP, the former Trotskyist Lanka Sana Samaja Party (LSSP), and the Communist Party. In 1971 a radical Sinhalese group, the Maoist Janatha Vimukthi Peramuna (JVP), launched an abortive revolt that was quickly suppressed by the army.

The United Front government proclaimed a new constitution in 1972 that declared the nation a republic and changed its name to Sri Lanka. Although much of the government economic program was implemented, the various elements of the front quarreled over the pace

of nationalization, and by 1977 LSSP and Communist Party members had been removed from the government.

Following an extremely bitter campaign in 1977, the UNP won an unprecedented victory over the SLFP, capturing 142 out of 168 seats in the legislature. The National Assembly adopted a constitutional amendment providing for a presidential system on the French model, and Junius R. Jayewardene was sworn in as president in 1978. He was reelected in 1982. That year the term of the National Assembly (by then renamed the Parliament), due to expire in 1983, was extended to 1989 through a constitutional amendment.

During the 1980s politics was dominated by the conflict between the Sinhalese majority in the south and the Tamil minority in the north. In 1983 a state of emergency was declared in an attempt to contain the Tamil rebellion. The level of violence escalated in the mid-1980s, and by 1987 the militant Tamil groups, primarily the Liberation Tigers of Tamil Eelam (LTTE) and the Eelam People's Revolutionary Liberation Front (EPRLF), had fought government forces to a standstill.

India, concerned that the revolt might spread to the Tamils in southern India, persuaded the Sri Lankan government to sign an agreement allowing Indian forces to disarm the rebels in return for political reform in Tamil areas. Initially, several rebel groups cooperated with the Indians, but violent opposition to the agreement grew in the south, leading to a resurgence of the extremist JVP. The agreement split the UNP, and Prime Minister Ranasinghe Premadasa won the 1988 presidential election, barely avoiding a runoff. The UNP maintained a majority in the 1989 legislative elections but with fewer than the two-thirds majority necessary for implementing constitutional changes.

India and Sri Lanka ended a protracted dispute over the withdrawal of Indian troops in September 1989. The deadline for withdrawal was December 1989, but changes in the Indian government resulted in delays, and the last troops were not withdrawn until March 1990.

The JVP insurgency was crippled in 1989 when the government killed or arrested all its leaders. For the next three years the country was plunged into a reign of terror in which 30,000 to 60,000 people were murdered. A breakaway Tamil group declared an independent homeland, and fighting between internal combatants continued until 1995, when the parties agreed to a truce. The truce was short-lived, however, and the government retook the Jaffna Peninsula by force. Despite overwhelming numbers, the government was unable to end the violence.

The country continued to move between truce and warfare into 2002. The government and the Tamil Tigers finally signed a cease-fire agreement in February, and the state spent most of the year decommissioning weapons, re-opening roads, and engaging in talks with the rebels. The situation appeared to be on its way to resolution when the two sides agreed to a power-sharing deal in December.

Yet in April 2003 the Tamil Tigers pulled out of the peace talks, claiming that they were being marginalized.

President Kumaratunga found herself in the midst of a political crisis that resulted in her suspending Parliament and dismissing three ministers. Parliament quickly reopened, but talks with the Tigers were still suspended. In April 2004 Kumaratunga's party won only 105 of 225 parliamentary seats, short of a majority. The rebels continued to agitate; a renegade Tamil Tiger commander, Karuna, went underground with his supporters after splitting off from the main rebel group, and in July a suicide bomber hit Colombo, raising fears of renewed terrorism. The year 2004 ended on a particularly disheartening note after a massive tsunami hit the coastline, killing more than 38,000 people in Sri Lanka alone and leaving many thousands homeless. In mediated talks in Geneva in early 2006 the Tamil Tigers and the government reaffirmed the 2002 cease-fire.

LIST OF MODERN RULERS

President

1972–78	William Gopallawa
1978–89	Junius Richard Jayewardene
1989–93	Ranasinghe Premadasa
1993–94	Dingiri Banda Wijetunge
1994–2005	Chandrika Kumaratunga
2005–	Mahinda Rajapakse

Prime Minister

1970–77	Sirimavo Ratwatte Dias Bandaranaike
1977–78	Junius Richard Jayewardene
1978–89	Ranasinghe Premadasa
1989–93	Dingiri Banda Wijetunge
1993–94	Ranil Wickremasinghe
1994–2000	Sirimavo Ratwatte Dias Bandaranaike
2000–01	Ratnasiri Wickremanayake
2001–04	Ranil Wickremasinghe
2004–05	Mahinda Rajapakse
2005–	Ratnasiri Wickremanayake

CONSTITUTION

The constitution of May 22, 1972, was amended by the National Assembly on October 4, 1977, and promulgated on September 7, 1978. The constitution incorporates a chapter dealing with fundamental rights and a chapter on principles of state policy. These principles include the establishment of Buddhism as the "foremost" religion and Sinhala as the official language, the progressive advancement of socialist democracy, and the abolition of social and economic privileges.

The amended constitution established a strong presidential form of government on the French model. The president is the head of state, and the presidential term of

office is six years. He may serve no more than two terms. The president has the power to appoint and dismiss members of the cabinet, including the prime minister, and to dissolve Parliament.

Sri Lanka was the first country in Asia to adopt universal suffrage for both men and women over age 21 (later reduced to 18).

PARLIAMENT

Legislative power is vested in the Parliament, a 225-seat unicameral body elected for a six-year term through universal suffrage in a system of modified proportional representation. There are no by-elections; successors to members of the Parliament leaving before general elections are appointed by the head of the party that nominated the outgoing member. The Parliament has supreme legislative authority;

Under the 1972 constitution the National Assembly, renamed the Parliament in 1978, is the supreme instrument of legislative, executive, and judicial powers. The president cannot veto legislation. The legislature can remove the president through a two-thirds vote following a finding of misconduct by the Supreme Court. Laws passed by the Parliament are also not subject to judicial review, although there is a provision for a constitutional court to determine whether a provision in a bill is inconsistent with the constitution.

Members of the Parliament are required to take an oath of loyalty to the unified state of Sri Lanka under a 1983 constitutional amendment.

POLITICAL PARTIES

Since 1947 political power has alternated between the two principal parties, the Sri Lanka Freedom Party (SLFP), which also operates as the center of an alliance called the People's Alliance (PA), and the United National Party (UNP). The UNP is a right-wing party that appeals to the upper-middle class and noncommunal groups. The SLFP/PA leans more toward the left and espouses a bigger role for the state. By 1977 each party had held power for a total of 15 years. In the 2004 elections, the SLFP won 105 parliamentary seats, the UNP 82. The remaining seats went to an assortment of minor parties.

LOCAL GOVERNMENT

Sri Lanka is divided into eight provinces: Central, North Central, North Eastern, North Western, Sabaragamuwa, Southern, Uva, and Western. There has been talk of dividing North Eastern into two provinces, Northern and Eastern. Each province is led by an elected council and

a governor appointed by the president. Councils share power with the central government on matters such as education, health, social services, rural development, agriculture, security, and taxation.

LEGAL SYSTEM

The administration of justice is based on Roman-Dutch civil law, the British common law tradition, and three customary codes—Sinhalese, Tamil, and Muslim. Sinhalese law is also known as Kandyan law, Tamil law as Desawalamai law. Criminal law comes mainly from the British tradition. Family and inheritance law comes from local practices.

At the apex of the court system is the Supreme Court, with a chief justice, 10 puisne judges, and a commissioner of assizes, who enjoys the same rights and powers as a Supreme Court judge. There also exist a Court of Appeal and a High Court. For judicial administration the country is divided into five judicial circuits, and each circuit is subdivided into districts and divisions, the former with district courts and the latter with magistrates' courts. Lower courts include courts of requests, municipal courts, and rural courts. At the lowest level are conciliation boards that try minor civil and criminal cases. Court systems and court procedures were simplified and standardized by the 1973 Administration of Justice Law.

The constitution guarantees the independence of the judiciary, and lawyers and judges are held in high esteem. Members of the court are appointed by the president.

HUMAN RIGHTS

In terms of civil and political rights, Sri Lanka is classified as a partially free country.

Sri Lanka has been under democratic governments continuously since independence, but pressures on the political system have been intense because of Tamil uprisings. An extremely militant minority of Tamils, a well-directed leftist alliance, and an entrenched Buddhist right-wing group have brought Sri Lanka to the brink of totalitarianism a number of times. There have been cases of arbitrary imprisonment, disappearance, torture, and rape of women in police custody. Some civilians have died in fighting between the military and the LTTE. The government has interfered with privacy rights and with freedom of the press.

Violence against women and human trafficking in women and children are problems.

FOREIGN POLICY

The island's major foreign policy orientation is toward India. The relationship between the two countries is compli-

cated by the fact that the Tamils (a people of Indian origin related to the Tamils of South India) have been waging a bitter struggle for independence over the course of several decades. Although the Indian government is officially neutral in this struggle, it is suspected that the principal guerrilla group, the LTTE, receives clandestine help from its ethnic kinsmen across the straits. The ongoing civil war has not only cost Sri Lanka billions in physical losses but has also turned international public opinion against the nation on account of the serious violations of human rights, assassinations, bombings, and extrajudicial killings.

In world diplomacy, Sri Lanka has been active with the Non-Aligned Movement and has promoted sovereignty and growth in the developing world. It has friendly relations with the United States, which has given the country more than \$1.6 billion since 1948.

DEFENSE

Sri Lanka has an army, navy, air force, and police force. Total membership in 2003 was over 240,000, all volunteers. The police force controls internal security and participates in occasional military operations against the LTTE. The rest of the military has been primarily occupied in dealing with LTTE terrorism. There is also a 20,000-member Home Guard that supplies security in the villages near the war zone. The defense structure is headed by the president, and the line of command runs through the minister of defense.

ECONOMY

Since 1977 Sri Lanka's government has moved away from state control of the economy and has enthusiastically privatized, deregulated, and encouraged foreign investment. The economy has recovered from a crisis in 1999 and 2000. Relative peace in 2003 allowed the economy to grow, though continued political uncertainty and disasters such as major floods have impeded development. The 2004 tsunami was somewhat devastating to the economy, especially on the local level; the country has received billions of dollars in aid to assist in recovery from the disaster.

As of 2004 the most active economic sectors were textile and clothing manufacture, food processing, in-

surance, banking, and telecommunications. Textiles and garments accounted for 63 percent of gross domestic product (GDP) in 2003. Plantation crops such as tea are becoming less important.

ENVIRONMENT

Sri Lanka has suffered from a series of environmental problems common to developing nations. As land has been cleared for agricultural and other purposes, deforestation and soil erosion have increased. The country has witnessed a growing threat to its unique animal life from poachers. Freshwater is being polluted by industrial waste and raw sewage. Largely unregulated mining activities are increasing pollution and threatening coastal areas. The nation is prone to flooding and natural disasters such as the 2004 tsunami.

Environment

Forest Area % of total land area: 30.0

 Nationally Protected Areas % of total land area: 15
 Emissions of Organic Water Pollutants kg per day: 88,943
 CO2 Emissions per capita ton: 0.55

LIVING CONDITIONS

Sri Lanka is a relatively poor nation, and the civil war has harmed the infrastructure. Many areas have been dangerous due to sporadic fighting. The electrical supply is unre-

liable and many people do not have access to clean water. Public transportation consists of overcrowded buses and slow trains. Traffic is unpredictable and dangerous. In the cities Sri Lankans live in high-rise apartments; in the countryside houses are made of mud with thatched roofs. The tsunami of December 2004 destroyed many homes, and the island has been slow to recover.

HEALTH

Sri Lanka provides free health care to its people, though some citizens choose to pay for private care. Both Western and Ayurvedic medicine are widely available. Life expectancy is high, at 73 years, and the infant mortality rate is low, with fewer than 15 deaths per 1,000 live births in 2004. Common diseases include cholera, malaria, dengue fever, and hepatitis. The HIV infection rate has so far been quite low, but some cases have appeared, probably as caused by foreign tourists visiting prostitutes.

Health

FOOD AND NUTRITION

Rice is the staple of Sri Lankan cuisine and can appear at every meal; it comes in white and red varieties and can be cooked in water, milk, coconut milk, or meat stock. People make pancakes out of rice flour, topping them with eggs, honey, or yogurt. Many Sri Lankans are vegetarian. Common foods include curry, lentils, vegetables, fruits, fish, and chicken. Sri Lankan food can be very spicy. A popular alcoholic beverage is toddy, made from palm-tree sap.

Amount of Fruits and Vegetables Available per person per year kg: 75.3

STATUS OF WOMEN

Women have equal rights under the law, including equal property and inheritance rights. Still, the various ethnic and religious groups have their own "personal" laws, which place some limitations on women. Some Tamil families believe women should not be seen working in public. Some Muslim women are discouraged from seeking higher education or employment. One important result of the plantation workers' strike in 1984 was the adoption of equal wages for men and women in that sector. The Ministry of Labor is reportedly considering equalizing wages in all organized sectors of the economy. Women fill important posts in the civil service, the professions, and business, but the majority are found in manual or semiskilled jobs. Women vote in large numbers but otherwise play a more limited role than men in the political process. Sri Lankans are proud that they had the world's first woman prime minister, Sirimavo Bandaranaike. In 1983 the president created the Ministry of Women's Affairs and Teaching Hospitals and gave the minister, a woman, cabinet rank.

Women are still expected to play the main role in caring for homes and families and as such have a great deal of power within the household. Fertility is low; in 2004, each woman bore an average of 1.85 children.

 Seats Held in Parliament by Women %: 5
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 43.2

WORK

Most Sri Lankans are not overly poor; per capita GDP was about \$4,000 in 2004, although as late as 1997 about 22 percent of the population was estimated to be living below the poverty line. Unemployment was 7.8 percent in 2004. About 38 percent of the workforce is employed in agriculture, 45 percent in services, and the rest in industry. Tea is one of Sri Lanka's most important agricultural products, for which most of the work must be laboriously performed by hand; in general, agriculture is still mostly done by hand and with the assistance of water buffaloes. Industries include rubber processing, clothing manufacture, and petroleum refining. Women make up over one-third of the labor force, with many working in formerly male-dominated professions. About 800,000 Sri Lankans work abroad, most of them in the Middle East; these expatriates send home about \$1 billion annually.

Employment and Labor

 Industry: 17
 Services: 45
 Unemployment %: 7.8

EDUCATION

In theory, schooling is free, universal, and compulsory for 10 years, from ages five to 15. Large proportions of children of both sexes attend school, though dropout rates are high for the children of poor parents. The academic year begins in January and is divided into three terms. The medium of instruction is Sinhala or Tamil, depending on the region, but English is a compulsory second language from the third primary grade onward. Religion is a compulsory subject. Children wear uniforms and treat their teachers with great formality.

Sri Lanka has 12 state-run universities. Students must pass a national entrance examination before attending; the pass rate is about 15 percent. The nation also has technical and vocational colleges, teacher-training colleges, and institutes offering certification in a variety of fields.

SCIENCE AND TECHNOLOGY

Sri Lanka's technological infrastructure is hampered by a sporadic electricity supply. Telephone services are inadequate, especially in rural areas, but the government has privatized the national telephone company and hopes

that this will result in improvements. The Internet is becoming an increasingly important source of information, and most Sri Lankan newspapers now have online editions.

MEDIA

Sri Lanka has a variety of news media, public and private, broadcasting and publishing in all major languages. Though prepublication censorship does not exist, a copy of every newspaper, book, and periodical published in Sri Lanka has to be deposited with the registrar of newspapers, while film, concert, and theater productions require official permits. Despite this, government restrictions on the press and media have decreased, and both newspapers and broadcasters regularly criticize the government and debate politics. There have been some threats against journalists, especially in the east.

In 2004 there were eight privately run television stations and more than a dozen private radio stations. The Sri Lankan Broadcasting Corporation runs two television stations and broadcasts radio programming in Sinhala, Tamil, and English.

CULTURE

Sri Lankan culture combines Buddhist and Hindu traditions, with some remnants of Dutch and British colonialism. The island is covered with Buddhist sculptures and pagodas called *stupas*. Art forms include metalwork, weaving, pottery, and wood carving. Sri Lankan gem carvers are world renowned. Sinhalese dancing is characterized by acrobatic moves and narrative symbolism. Devil dancing is a dance style used to exorcise demons. The drum is the most important musical instrument.

FOLKLORE AND MYTHOLOGY

Storytelling is a common recreational activity in rural areas. Both children and adults enjoy listening to folktales, which usually have some moral or religious lesson. Folk dramas include masked plays depicting folktales, dancing, drumming, and exorcisms.

The Sacred Bo-Tree in Anuradhapura, Sri Lanka's first capital, is believed to have been grown from the tree under which Buddha received enlightenment. The Buddha's right collarbone is said to reside in the Thuparama Dagoba.

ENTERTAINMENT AND RECREATION

Sri Lankans love to visit friends and relatives and receive visitors in their homes. Men and women usually go into separate rooms, women to talk and weave baskets, men to play bridge. Children play games such as cat's cradle, dice, and simple board games. Television is very popular. Schools serve as community entertainment centers, hosting sporting events and performances of plays, music, and folk dramas. In the cities, people go to bars, restaurants, discos, and movies. People who live near the ocean enjoy going to the beach.

ETIQUETTE

Sri Lankans value politeness, gentleness, and restraint. They remove their shoes when entering shrines and temples. The standard greeting consists of placing the palms together in front of the chest and saying "*Ayubowan*," which means "long life" in Sinhalese. Most people eat with their fingers, using their right hands.

FAMILY LIFE

Sri Lankans love their children, holding celebrations to mark milestones in children's lives and diligently attending school performances and sporting events. Family ties are quite strong, and it is common for extended families

to live near one another, sometimes in compounds that include several houses. Though the husband is considered the head of the household, the wife is often in charge of finances and has the last word on who her children marry. Marriages are usually arranged by parents.

Most Sri Lankans belong to castes, into which they are born, but castes do not have the same socially stratifying effect that they do in India.

PERSONAL APPEARANCE

Men wear Western clothing in the cities, while in the countryside they dress in sarongs. Women wear Indian saris or skirts called *redde*. Clothing is often brilliantly colored.

SPORTS

Cricket is the most popular sport, and the players on the national team have the status of heroes. Other sports include soccer, volleyball, and *elle*, a game similar to baseball. Schools sponsor sporting events, and many children play on teams. Horse racing is a popular spectator sport, and many Sri Lankans enjoy betting on races.

CHRONOLOGY

- 1947** United National Party (UNP) wins the country's first election; Don Stephen Senanayake becomes first prime minister. Ceylon Independence Act is passed.
- 1948** Ceylon Independence Act comes into force; Ceylon becomes a dominion within the Commonwealth. Soulbury Constitution of 1946 is adopted as constitution of Ceylon.
- 1949** Indian Tamils are disenfranchised. Royal Ceylon Army is organized. Rupee is devalued. Central Bank is established.
- 1950** Colombo Plan for Cooperative Economic Development in South and Southeast Asia is launched. Royal Ceylon Navy and Royal Ceylon Air Force are organized.
- 1951** Solomon Ridgeway Dias Bandaranaike founds the Sri Lanka Freedom Party (SLFP).
- 1952** Prime Minister Don Stephen Senanayake dies and is succeeded in office by Dudley Senanayake.
- 1953** Dudley Senanayake retires; Sir John Lionel Kotalawela becomes prime minister and leader of the UNP.
- 1955** The UNP loses in general elections; the SLFP forms a coalition government under Bandaranaike. Ceylon is admitted to the United Nations.

- 1956** SLFP wins elections. Sinhala is proclaimed the official language of Ceylon.
- 1957** Great Britain begins phased withdrawal from naval base at Trincomalee.
- 1958** Tamil-Sinhalese language riots occur; "reasonable" use of Tamil is permitted in administration and education.
- 1959** Coalition government is dissolved. Bandaranaike is assassinated by a Buddhist monk; Wijeyananda Dahanayake forms a new cabinet.
- 1960** Dahanayake dissolves the National State Assembly; the UNP wins 50 seats in the general elections and, as the largest legislative group, forms a new government, under Dudley Senanayake. Senanayake's government falls; in fresh elections the SLFP is returned to power, under Sirimavo Bandaranaike. Most of the private denominational schools are nationalized.
- 1961** Sinhala is made the sole official language.
- 1962** William Gopallawa is named the new governor-general. Expropriation of U.S. oil companies' distribution facilities leads to suspension of U.S. aid under the Hickenlooper Amendment.
- 1963** Barter agreement is reached with People's Republic of China.
- 1964** Agreement is reached with India (Sirimavo-Shastri Accord) over status of Indian Tamils in Ceylon.
- 1965** In general elections the UNP is returned to power, under Dudley Senanayake.
- 1966** Use of Tamil for official purposes is permitted in Tamil-speaking areas. Army chief Richard Udugama is arrested in coup attempt.
- 1967** Rupee is devalued.
- 1970** SLFP wins landslide victory in general elections; Sirimavo Bandaranaike heads coalition cabinet with Trotskyite and Communist support. U.S. Peace Corps and Asia Foundation programs are terminated.
- 1971** The Janatha Vimukthi Peramuna (JVP) leads a nationwide uprising that is suppressed within weeks.
- 1972** The nation adopts new constitution and is proclaimed a republic within the Commonwealth. Ceylon is renamed Sri Lanka. All existing universities are amalgamated as the University of Sri Lanka. Ceilings of 10.11 ha (25 acres) of paddy land and 20.23 ha (50 acres) of other land are placed on all landholdings under new Land Reform Act. Tamil United Liberation Front (TULF) is formed to counter rising Sinhala nationalism.
- 1973** Press Council is established as a statutory body; public body takes over majority ownership in Associated Newspapers group.
- 1974** Accord is reached with India over Kachchativu Islands in Palk Strait; India agrees to take back more Indian Tamils.
- 1975** All plantations and domestic banks are nationalized. Trotskyites leave the cabinet.
- 1977** Increasing defections erode the SLFP's strength in the National Assembly. New Leftist Front is formed by Trotskyites and Communists. Prime Minister Sirimavo Bandaranaike and her SLFP are swept out of power in general elections; Junius Richard Jayewardene, leader of the UNP, which wins 139 of 166 seats in the National Assembly, is sworn in as prime minister. In post-election Tamil-Sinhalese riots, 54 people die; nearly 15,000 Tamils flee homes under attack by Sinhalese. Constitution is amended to establish a strong presidential form of government.
- 1978** Under new constitutional amendment, Jayewardene becomes president; Premadasa is named prime minister; National Assembly is renamed as Parliament.
- 1979** State of emergency is declared in Jaffna as Tamil violence escalates.
- 1980** Commission probing abuse of power under Bandaranaike from 1970 to 1977 suspends her civil rights for seven years.
- 1981** As Sinhalese-Tamil relations worsen, the government declares a state of emergency for five days.
- 1982** Jayewardene calls for early presidential elections after Parliament amends the constitution, permitting him to do so. Jayewardene is reelected with 53 percent of the vote. A new state of emergency is declared, as armed Tamil insurrection leads to breakdown of law and order in the north.
- 1983** Term of Parliament is extended for another six years, until 1989, under a national referendum. In by-elections the UNP wins 14 of 18 contested seats. Leftist parties are banned. TULF members boycott and are ousted from Parliament. Parliament passes anti-separatism amendment to the constitution, under which those who espouse the breakup of Sri Lanka lose their civil rights. The state of emergency is ended.
- 1984** All-Party Conference convenes to resolve Tamil separatist demands but is abandoned in December after failing to reach agreement. Government restricts movement of Tamils across Palk Strait.
- 1985** Sri Lanka joins the South Asian Regional Conference.
- 1986** Tamils blow up a plane at Colombo airport.
- 1989** Premadasa becomes president, and Dingiri Banda Wijetunge becomes prime minister; Indian

- troops increase the speed of their withdrawal from Sri Lanka.
- 1990** India withdraws the last of its troops from Sri Lanka.
- 1993** President Premadasa is assassinated on May 1; Chandrika Kumaratunga is elected president.
- 1994** The People's Alliance ends the 17-year rule of the United National Party.
- 1995** A cease-fire fails to hold, as Tamil rebels set off bombs in Colombo in protest of the government's plan to divide the nation into autonomous zones.
- 1998** Fighting between the government and Tamil rebels continues.
- 1999** Norway offers to mediate a round of Sri Lanka-Tamil Tiger peace talks; Chandrika Kumaratunga is reelected president.
- 2000** In elections People's Alliance maintains control of Parliament by a narrow majority; Sinhalese-Tamil violence continues; former president Bandaranaike dies of natural causes and is widely mourned in a state funeral; Sri Lanka bans all live radio and television broadcasts.
- 2001** Parliament is suspended by President Kumaratunga hours before a no-confidence vote, which her minority government was not expected to win. On December 9 the United National Party narrowly wins the parliamentary election.
- 2002** The government and Tamil Tigers sign a permanent cease-fire agreement. During the year, weapons are decommissioned, roads reopen, flights resume, and the government lifts its ban on Tamil Tigers. In December, the government and rebels agree to share power.
- 2003** The Tamil Tigers stop participating in peace talks. President Kumaratunga suspends Parliament after disagreement over the peace process.
- 2004** The Tamil Tiger leader Karuna leads a split in the rebel movement and goes underground. Kumaratunga's party wins 105 seats in parliamentary elections. A suicide bomb is detonated in Colombo. In December a tsunami kills more than 38,000 people and leaves many more homeless.
- 2005** Mahinda Rajapakse is elected president. Ratnasiri Wickremanayake is appointed prime minister.

- 2006** Tamir Tigers and the government reaffirm 2002 cease-fire agreement.

SUDAN

Basic Fact Sheet

OFFICIAL NAME

Republic of the Sudan (Jumhuriyat as-Sudan)

ABBREVIATION

SD

CAPITAL

Khartoum

HEAD OF STATE & HEAD OF GOVERNMENT

Gen. Omar Hasan Ahmad al-Bashir (from 1989)

NATURE OF GOVERNMENT

Military dictatorship with progovernment parliament

POPULATION

40,187,486 (2005)

AREA

2,505,810 sq km (967,493 sq mi)

MAJOR ETHNIC GROUPS

Blacks, Arabs

LANGUAGES

Arabic (official), Nubian, Ta Bedawie, English

RELIGIONS

Sunni Islam, animism, Christianity

UNIT OF CURRENCY

Sudanese dinar

NATIONAL FLAG

Horizontal red (top), white, and black stripes, with a green triangle extending from the staff to one-third of the flag's length

NATIONAL EMBLEM

A lammergeier, or desert hawk, with stylized wings, shown between two scrolls, both with writing in Arabic; the upper scroll reads "Victory to our cause," the lower the state's official name

NATIONAL ANTHEM

"Nahnu Jund Allah Jund al-Watan" (We Are the Army of God and of Our Land)

NATIONAL HOLIDAYS

January 1 (National Day, Independence Day), March 3 (Unity Day), April 6 (Uprising Day), July 1 (Decentralization Day), December 25 (Christmas), various Islamic festivals

DATE OF INDEPENDENCE

January 1, 1956

DATE OF CONSTITUTION

April 12, 1973; suspended following coup of April 6, 1985; interim constitution of October 10, 1985, suspended following coup of June 30, 1989; new constitution implemented June 30, 1998, partially suspended December 12, 1999 by President Bashir

GEOGRAPHICAL FEATURES

Sudan is the largest country in Africa and lies across the middle reaches of the Nile River. With an area of 2,505,810 sq km (967,493 sq mi), it is slightly over one-quarter the size of the United States. Sudan has a coastline of 853 km (530 mi) and shares its international land boundary of 7,687 km (4,776 mi) with nine neighbors: Egypt, Ethiopia, Eritrea, Kenya, Uganda, the Democratic Republic of the Congo, the Central African Republic, Chad, and Libya.

The capital is Khartoum. Along with Omdurman and Khartoum North, the capital city forms an urban

complex that serves as the main industrial, commercial, and communications center.

Sudan has three distinct physical regions. Most of the country is made up of a flat plain extending some 800 to 950 km (500 to 600 mi) east to west and more than 1,600 km (1,000 mi) north to south. The heart of this region is the confluence of the Blue Nile and White Nile rivers, especially the broad wedge of land between the two rivers south of Khartoum. In the southern part of this region, permanent swamplands, known as the Sudd, cover an area of 80,450 sq km (31,426 sq mi). The northern quarter of the country is covered by the Libyan and Nubian deserts. Four mountain zones constitute the third region.

Sudan

The country's vast areas of contrasting terrain are linked together by the Nile River. The White Nile enters Sudan from Uganda and is fed by a number of tributaries draining the southwest. The Blue Nile rises in the Ethiopian Highlands and joins the White Nile at Khartoum.

CLIMATE AND WEATHER

Sudan has a wide range of tropical, continental climates. The dry season ranges from three months in the humid south to nine months in Khartoum. In the north, high temperatures are common throughout the year. The mean daily maximum reaches about 40°C (104°F) in Khartoum in May and June, with a high of 47.8°C (118°F). In the south, mean maximums are only slightly lower in the hot months of February and March. January, the coolest month, has a mean maximum of 32.2°C (90°F) in the north. In the south the rainy season produces over 1,270 mm (50 in) of rainfall. Levels of rainfall are reduced to 380 to 760 mm (15 to 30 in) in the central area and to 130 to 250 mm (5 to 10 in) in the Khartoum region. Much of the northern desert area receives only a few scattered showers each year, and northern border areas may not receive any rain at all during some years.

Climate and Weather

Summer: 104°F to 118°F
Winter: 90°F
Average Rainfall
South: 50 in
Central Region: 15 in to 30 in
Khartoum: 5 in to 10 in

FLORA AND FAUNA

The southern part of Sudan is wetter than the north and is covered with lush tropical vegetation and forests. Vegetation follows the Nile north through the swampy Sudd region. The Nile is the main source of water in many of

the more arid parts of the country. The northern portion is very dry, featuring desert plants. People in the northern desert areas depend on the annual haboob winds to blow rain in from the Congo River basin, an unpredictable and unreliable phenomenon. Most of Sudan's large animals live in the southern portion, where the climate is similar to that of Kenya; species include elephants, rhinoceroses, hippos, lions, leopards, giraffes, zebras, antelopes, monkeys, and crocodiles.

ETHNIC COMPOSITION

Ethnically, Sudan is fragmented into all of 56 ethnic groups and 597 subgroups, but the basic division of the country is into the Arab north and the black African south. About one-third of the people of Sudan are Arabs, although the term "Arab" is used loosely, as indeed throughout the Middle East, to cover Arabized inhabitants who may only speak Arabic. Their historical position as conquerors and their concentration in the more developed regions have made the Arabs the dominant group in national affairs, and Sudan is officially considered an Arab country.

The Nubians, who constitute the next major ethnic element, are the oldest settlers of the land. They include the northern Maha, the Danagla, the Gerkid, and the Midob. Most of the people of southern Sudan are called Nilotics because of their association with the Nile. The Dinka are the largest Nilotic group, constituting 11.5 percent of the total population and 41 percent of the southern regional population in the 1983 census. Interethnic relations are colored by historic conflict between Arabs and blacks. Southern Sudan was one of the principal catch-

ment areas of the Arab slave trade, and memories of Arab indignities and slave raids linger in the south. Islam, with its strong assimilationist tendencies, poses a continuing threat to the fragile social structure of the black tribes.

LANGUAGES

Over 115 languages are spoken in Sudan, including 12 major ones. No single language is understood by all Sudanese. Arabic is used by slightly less than half the population and has been the official language since 1956, although it is spoken by less than 1 percent of the population in the southern region. English is recognized as a working language in the south. The major vernaculars in the south are Dinka, Nuer, Lango, Zande, and Moru-Madi.

RELIGIONS

Sunni Islam, introduced in the 14th century, is the official religion and is followed by about 70 percent of the population, particularly in the north. Except among Arabs, Islam has not totally displaced vestiges and observances of older traditional forms. The roughly four million people in the southern provinces adhere mainly to indigenous, animistic beliefs and have long resisted the call of Islam. Christianity is followed by approximately 5 percent of the population, mostly among the Dinka in the south.

Religious Affiliations

Sunni Muslim	28,131,000
Indigenous Beliefs	10,047,000
Christian	2,009,000

HISTORICAL BACKGROUND

Egyptian dominance of northern Sudan began around 2755–2255 B.C.E., when the country was known as Nubia, or the Land of Cush. It proved to be a rich source of trade and plunder for Egypt, with goods such as gold, ebony, and ivory, as well as slaves, bought and sold or stolen. By 1570 B.C.E. Nubia had been reduced to the status of an Egyptian province.

A Nubian revolt in the eighth century B.C.E. ended Egyptian rule and led to a series of independent kingdoms. The Romans invaded in 23 B.C.E. and annexed a large part of present-day Sudan. From the 16th century C.E. onward, Turkish influence grew stronger under the Ottomans, and Islam gained a firm hold as the most popular religion. In 1822 Egypt won a great victory, and Nubia once again became an Egyptian province, known as Egyptian Sudan.

Sudan was effectively under British rule (though technically an Anglo-Egyptian condominium) from 1899 to 1956. Yet not until 1916, when the last stronghold of Mahdism was taken, was the country completely pacified. The “colony” was administered by a governor-general appointed by the khedive of Egypt on the recommendation of the British government. However, in reality Egyptian participation in the government was nonexistent and was only maintained until the end for diplomatic and political convenience and to prevent a popular revolt. The British nature of rule became more obvious after 1924, when all Egyptian civil servants were evacuated. British colonial policy had three objectives: to encourage tribalism as an alternative to nationalism, to detach the southerners from Arabic and northern influences, and to prevent a linkup of Egyptian and Sudanese nationalists. The British were successful in the last only; Sudan decisively rejected union with Egypt and unilaterally became independent in 1956.

Independence was marred by a war of secession that erupted in the south in 1955. The civil war, which pitted the Arab and Islamic north against the black, mainly Christian and animist south continued into the 1990s. The multiparty parliamentary government that led the nation at independence was overthrown in a 1958 army coup led by Lt. Gen. Ibrahim Abboud. Six years later the military regime collapsed in a wave of strikes and riots, clearing the way for a second period of parliamentary politics (1965–69), which lasted until Jaafar Muhammad al-Nemieri’s 1969 coup.

After an initial two-year “radical” period, Sudan under al-Nemieri pursued a policy of reconciliation at home and abroad. A new constitution was promulgated in May 1973, recognizing the Sudan Socialist Union (SSU) as the only legal political organization. In 1983 al-Nemieri introduced Islamic (sharia) law.

Al-Nemieri survived unsuccessful coup attempts in 1971 and 1976 but was overthrown in 1985 by Gen. Abdul Rahman Swar al-Dahab following food riots and a general strike in Khartoum. A transitional military council governed until the return of civilian rule in 1986. Elections were held in 1986 but were canceled in the rebel-controlled south. Sadiq al-Mahdi was elected prime minister of a coalition government composed of the Umma and Democratic Unionist parties. The coalition proved fragile, and the government failed to adequately address the challenges presented by a ruined economy and the continuing civil war. The civil war escalated in 1986–87, and in 1987 a state of emergency was declared following demonstrations and strikes in protest of food price increases. Al-Mahdi was overthrown in 1989 in a military coup led by Brig. Omar Hasan Ahmad al-Bashir. Despite international attempts to mediate the civil war, peace talks stalled as a result of the government’s determination to apply sharia to the south. The government survived two coup attempts in 1990. In 1991 the government passed a law applying sharia in the north but not in the south.

In 1993 the Government Revolutionary Command Council, which had ruled since the 1989 coup, dissolved itself after appointing al-Bashir president, and a year later the government agreed to hold elections in two years' time. Elections were held in 1996, but no political parties were allowed. Hoping to end fighting in the south, the government signed a peace agreement with five of six southern rebel groups in 1997. However, the Sudanese People's Liberation Army (SPLA), the main rebel force, was not included in the pact. Meanwhile, the United States slapped economic sanctions on Sudan, claiming that the government supported terrorism, and a year later fired missiles at a Khartoum factory supposedly making chemical weapons; Sudan denied the charges. By 1999 the government had ended its ban on political opposition within the country, and the United States decided to at least partially lift sanctions, allowing for the greater importation of food and medical supplies. The 2000 elections were boycotted by Sudan's main opposition parties. As a result, al-Bashir was reelected with 86.5 percent of the vote. In 2001 the Sudanese government accepted a Libyan-Egyptian initiative to end the civil war that called for reforms and a national reconciliation conference, and in January 2002 the SPLA and the Sudanese government signed a landmark peace agreement providing for a six-month renewable cease-fire in the Central Nuba Mountains.

Fighting broke out in the western Darfur region in early 2003, as sparked by rebels who claimed to want greater autonomy than the government and the southern rebels appeared likely to offer. Over the next two years over 1.5 million people fled their homes. Many thousands were killed by pro-Arab militias called *janjaweed*, who were carrying out a program of ethnic cleansing against blacks, while many more women were raped by Arabs who wanted them to bear Arab children. Starvation and disease became major problems, leading to the deaths of many of the refugees who were not killed by soldiers. Living conditions fell for all Sudanese, and the conflict spilled over into neighboring Uganda, Libya, and Egypt.

The government and the rebels signed a peace deal in January 2005 that was hoped would end the 21 years of civil war between the Islamic north and the black south. The United Nations issued a report at that time accusing the militias and the government of continuing to systematically abuse civilians in Darfur; with over 10,000 people murdered each month through mid-2005, the international community widely recognized the acts carried out by the militias and the government as genocide.

LIST OF MODERN RULERS

Head of State

1965–69 Ismail al-Azhari

1969–85 Jaafar Muhammad al-Nemieri

1985–86 Abdul Rahman Swar al-Dahab

1986–89 Ahmad al-Mirghani

1989– Omar Hasan Ahmad al-Bashir

CONSTITUTION

In 1996 President al-Bashir handily won the first elections in Sudan since the 1989 coup, capturing 75.8 percent of the vote. However, no opposition political parties were permitted to formally contest the election, and international observers dismissed the poll as less than free and fair. A 1998 national referendum saw the overwhelming passage of a new constitution (with 96 percent voting in favor), which was meant to be the first step in the return of the country to civilian rule and multiparty democracy. The constitution establishes Islamic law as the national standard but also guarantees more religious freedom than previously. Under the constitution's terms, executive power would be vested in a council of ministers, which would be appointed by the president but be responsible to the new National Assembly. The new constitution was partially suspended by al-Bashir on December 12, 1999.

PARLIAMENT

The Majlis Watani, or unicameral National Assembly, has 360 members, with 270 directly elected for four-year terms and the rest indirectly elected by a national conference of interest groups known as the National Congress. In the 1996 elections no political parties were allowed to formally participate, but the Assembly is dominated by the National Islamic Front and other fundamentalist Islamic groups. Al-Bashir dissolved the National Assembly in December 1999 following a power struggle with the Assembly speaker. The 2000 elections were boycotted by Sudan's main opposition parties.

POLITICAL PARTIES

Political parties were banned in 1989, but under the 1998 constitution and also a new law adopted in 1999, the government allowed "political associations" to be formed as a prelude to a return to a multiparty system. Elections in 2000 were boycotted by Sudan's main opposition parties. The largest and most powerful organization is the National Congress, which represents the "legal front organization" of the banned National Islamic Front (Muslim Brotherhood) political party—the dominant force in the government. There are over 20 minor progovernment parties.

LOCAL GOVERNMENT

In February 1994 Sudan adopted a federal system that divided the country into 26 states, each administered by a

governor with the assistance of between five and six ministers per state. All states are economically dependent on the central government.

LEGAL SYSTEM

The judiciary is largely subservient to the government. The chief justice of the Supreme Court is appointed by the president. The judicial system includes four types of courts: regular criminal and civil courts, security courts led by both military and civilian judges, military courts, and tribal courts. The legal system is based on a mixture of English common law and religious law. In 1991 the country enacted a new penal code based on Islamic sharia law, instituting harsh punishments such as stonings and amputations. The government officially exempts the 10 southern states, whose populations are non-Muslim, from the application of sharia, but the 1991 law leaves open the possibility of sharia being introduced in the south.

HUMAN RIGHTS

In terms of civil and political rights, Sudan is classified as an unfree country. The government's human rights record remains extremely poor. Security forces routinely torture criminal suspects and political dissidents, and there is little access to fair trials or judicial representation. Severe restrictions are placed on the freedoms of assembly and the press, though there were some indications that these restrictions would be eased in the 21st century. While religious freedom is supposedly guaranteed by the 1998 constitution, in practice Islam is the only religion that is tolerated. Since 1995 there has been the systematic demolition of Christian schools and prayer centers under the pretext that they fell where government officials had planned highways.

Atrocities have been committed by all sides throughout the civil war, especially by the *janjaweed* in the Darfur region through 2005; their actions, which have included mutilation, murder, rape, and the destruction of entire villages, have been deemed outright genocide. The principal insurgent faction, the Sudan People's Liberation Army, is known to have executed prisoners, looted villages, raped women, and kidnapped women and children—sometimes for sale into bondage.

FOREIGN POLICY

Following the 1989 revolution, Sudan abandoned its pro-Western foreign policy in favor of nonalignment. However, by the end of the 1990s the nation was left with few close allies due to border disputes, links to global terrorism, and support of antigovernment rebels in Eritrea, Egypt, and Uganda. Sudan broke diplomatic relations

with Uganda and Eritrea in the 1990s but had restored them by the end of the decade. The country's regional and international stature was damaged when it sided with Iraq during the Persian Gulf War in 1991, which alienated Western donor countries and further crippled the war-ravished economy, and when it played a role in a failed assassination attempt against Egyptian leader Hosni Mubarak in 1995, for which the United Nations imposed economic sanctions. Sudan's strongest allies remained Iran and Libya, the latter proposing a political and economic union in 1995. By 2000 the United States, despite the easing of some sanctions, still labeled Sudan a "state of concern" because of its support for terrorism and led opposition within the United Nations that cost Sudan a temporary seat on the Security Council.

As of 2005 Sudan's position in world affairs was especially tense. The nation has tried to solidify ties to other Arab countries, especially since 2000, raising concerns in the United States and the European Union, which hope to stifle Islamic terrorism. The United States and United Nations have strongly disapproved of Sudan's actions in the civil war, and the massacre of civilians in Darfur has been widely labeled genocide. Pressure from the international community and the UN Security Council helped drive the government and the SPLA to sign a Comprehensive Peace Agreement on January 9, 2005.

DEFENSE

The Sudan People's Armed Forces include a standing army, navy, and air force, which had about 100,000 members in 2004. The country also maintains civilian militia called the Popular Defense Forces and numerous police forces. Sudan's military equipment is outdated, and the nation has been unable to procure new equipment since the United States ended assistance in 1989. Military service is compulsory for males from the age of 18, and service is three years. Sudan's soldiers have committed many abuses against civilians, during the civil war and in the Darfur region, without repercussions from leadership.

ECONOMY

Although Sudan has many natural resources that could be exploited, its economy in early 2005 was in a terrible state.

2220 Sudan

Perhaps four million people were displaced and living as refugees. The government was still heavily involved in the economy, though it was making small efforts toward liberalizing trade. Infrastructure was devastated by the war, and transportation and irrigation remained major problems.

Agriculture employs four-fifths of the workforce and contributes about 40 percent of gross domestic product (GDP), but frequent droughts impair the country's ability to depend on its crops. As a result, Sudan is a net importer of food. The few cash crops include cotton and gum arabic; people grow wheat, sesame seeds, and peanuts for domestic consumption. Sudan exports many camels and sheep to other Arab nations, especially Egypt and Saudi Arabia.

Sudan has very little industry, though there are some factories producing civilian and military vehicles. Oil production has some potential. There are signs that the Upper Nile region may contain vast petroleum deposits, which could turn around Sudan's economy. As of 2003 oil was already bringing in nearly \$2 billion annually. In order to pull itself out of its economic slump, Sudan will need continued infusions of foreign aid, especially in order to manage its enormous foreign debt of about \$21 billion.

LIVING CONDITIONS

Sudan's average standard of living has fallen since 2003, when the fighting began in Darfur. There is not enough water or food for the population. Housing styles vary by ethnic group and location, but people typically live in round huts with thatched roofs. Through 2005 many blacks lived in fear of being driven from their homes by Arab militias. The infrastructure is in tatters, with a lack of electricity and few roads or railroads. The thousands of people who have died as a result of the atrocities in Darfur have left a profound gap in society. Widows and orphans are common.

HEALTH

Sudan suffers from serious health problems, not the least of which are injuries caused by fighting. There are no doctors, nurses, medicines, or clinics in many rural areas. The war has led to the closure of many medical facilities; the ones that remain open are typically controlled by militias. Life expectancy in 2005 was 58.5 years, and the infant mortality rate was 62.5 deaths per 1,000 live births. Fertility is high, with each woman bearing almost five children. Most women use midwives to assist with births. HIV/AIDS is a growing problem: In 2001 about 2.3 percent of the population was infected. Other common diseases are malaria, sleeping sickness, tuberculosis, and dysentery.

FOOD AND NUTRITION

Food is a major preoccupation for many Sudanese people, especially refugees from the violence in Darfur. Malnutrition is common and causes health problems, especially among children.

Sudanese cuisine is built around wheat and sorghum, which are often made into breads or pancakes. Millet porridge is a common breakfast food. There are many Arab dishes, such as the flat bread *kbubz* and the fava bean puree *fool medamas*. People eat beef, lamb, and chicken, which are often made into a stew with tomatoes, onions, and garlic. For dessert, fresh fruits and custards are popular. Coffee and tea are ubiquitous; Sudanese coffee is brewed in a special pot and flavored with cloves and spices. Non-Islamic Sudanese enjoy drinking wine made from dates and honey, a clear liquor distilled from dates called *aragi*, and a locally brewed beer called *merissa*. Muslims do not drink alcohol or eat pork.

Amount of Cereal Available per person per year kg: 132.1

Amount of Fruits and Vegetables Available per person per year kg: 58.2

STATUS OF WOMEN

Although men and women retain traditional roles within Sudanese society, women are active in the professions and in higher education; still, they remain underrepresented in both. Some aspects of the law and traditional societal views foster discrimination against women. For example, a daughter inherits only half of what a son would receive from parents. Separate educational facilities for men and women are the rule.

In urban areas females drive automobiles and work in offices with men, although a 2000 law issued by the governor of Khartoum forbids women to work in public places. In urban parts of the north women often wear the Arabic female wrapping, or chador, over Western clothing. Sudanese women participate in both national and international forums. In rural areas men and women work side by side, although a division of labor exists.

Violence against women remains a serious problem, and there have been credible reports of women being sold as laborers and domestic servants. Female genital mutilation, though illegal, is widely practiced throughout much of Sudan.

Many black women have reported being raped by Arab militias, often while Arab women cheer on the men. This has reportedly been done to dehumanize black women and humiliate black men, as well as to force black women to bear Arab children. There have also been cases

of black women being made sex slaves for the Arab militias. Women are often afraid to report rapes for fear of being ostracized by their own societies. They also run the risk of being imprisoned for becoming pregnant outside of marriage.

WORK

About 80 percent of Sudanese work as farmers or raise livestock. Most families have small farms on which they grow millet, fruits, and vegetables for personal consumption; women do most of the work on these home farms. The government operates some large farms in central Sudan that produce cotton, gum arabic, and other crops. In the cities, some people work in government offices, schools, and businesses. Some people sell handicrafts and food in local markets. Many young people have moved from the countryside to Khartoum seeking work, but jobs are scarce and wages low. Families often depend on relatives working in other countries to send home money.

EDUCATION

During the 1990s the Sudanese government transformed the public educational system from one that taught a Western curriculum and emphasized English into one that teaches an entirely Arabic-language, Islamic curriculum. All courses are based on the Koran. The people in the south have resented the Arabization of schools, which has been a contributing factor in the years of war.

Many schools have been closed due to warfare, and school attendance has dropped to about 45 percent of children at the primary level. Parents must pay fees to send their children to school, which adds to the difficulty of doing so. Sudan's literacy rate is relatively low, at around 61 percent.

Most of the nation's colleges and universities are in the north. In the past, women attended universities and entered professions along with men, but most university studies have been disrupted by fighting.

SCIENCE AND TECHNOLOGY

Sudan lacks even basic technological infrastructure, including roads and electricity. The telephone system is adequate by regional standards, and the government is expanding it. In 2003 there were about 900,000 telephone lines and 650,000 cellular telephones, which are rapidly growing in popularity. About 300,000 people were using the Internet.

MEDIA

All major media in Sudan are government owned. The government controls all television and radio broadcasts, and the main television station, Sudan TV, employs a permanent military censor. The government also controls radio broadcasts. Privately owned television and radio stations are not permitted, although the government does jointly own a cable service with private investors. There are broadcasts from foreign stations, such as BBC World Service and Radio Monte Carlo, and some opposition groups broadcast into Sudan from abroad.

There are a few private newspapers and publications that have slightly more freedom to publicize a variety of views, but the government still censors their content. Major dailies include *al-Ra'y al-Amm*, *al-Ayam*, and *Al-wan*. The *Khartoum Monitor* is a privately owned English-language paper.

CULTURE

Sudanese people love music. Local styles blend Arabic lyrics and melodies with African rhythms. Poetry is considered an important art form. Famous poets include Taban Lo Liyong and SIRR Anai Kelueljang. Tayeb Salih is a popular novelist. Decorative arts include carvings in ebony or ivory and elaborate daggers and sheaths. Calligraphy is popular.

FOLKLORE AND MYTHOLOGY

Many Sudanese still practice ancestor worship and animism. Ancestors are believed to influence the weather, the outcome of war, and other aspects of life. The tribes that raise cattle, such as the Nuer and the Dinka, attach spiritual importance to their animals, naming them and killing them according to ritualistic rules.

ENTERTAINMENT AND RECREATION

Men and women often socialize separately, especially in Islamic and urban areas. Women receive their friends at

home, while men go out to meet friends. Rural men meet in huts called *dirwanya*.

The sexes do get together for traditional dances, especially in the south, where sex segregation has not been nearly as strict as in the Islamic regions. Fishing and hunting are popular outdoor activities, though they are often done more out of necessity than for sport.

ETIQUETTE

Hospitality is extremely important in Sudan. When Sudanese people receive visitors, they immediately offer their guests tea or fruit juices. Meals are usually eaten around low tables covered with several stews, which people scoop up with pieces of flat bread. Tea and coffee are served with ritualistic flair, and hosts will sometimes light incense to honor visitors.

FAMILY LIFE

Family life varies according to culture. Traditionally, most Sudanese maintain close ties with extended family and keep track of their genealogy through several generations. Family status among herders depends on the size of the herd. People still follow practices such as paying for brides with cattle. Ethnic groups have begun mixing in urban areas, which has changed family structures. Some Arabized tribes practice polygamy.

PERSONAL APPEARANCE

Islamic Sudanese dress in Arabic style, with turbans, robes, long-sleeved tunics called *djellabas*, and sandals. Women cover their heads and take care to dress modestly.

SPORTS

Sudanese people love soccer, and the nation has produced some of Africa's best players. Basketball and volleyball are also popular. Men enjoy wrestling and a form of traditional fighting done with shields and sticks.

CHRONOLOGY

- 1954** The first elected, all-Sudanese government assumes office.
- 1955** Southern army units mutiny against the "Sudanization" program; United Kingdom and Egypt withdraw their troops; sidestepping the scheduled plebiscite, the parliament declares Sudan an independent state.

- 1956** Egypt and the United Kingdom recognize the Republic of Sudan; the Arab League and United Nations extend membership to the nation.
- 1958** Umma Party wins a parliamentary majority in February; in November the military overthrows the government, as led by Lieutenant General Ibrahim Abboud; Abboud dismisses parliament, declares martial law, suspends the constitution, and appoints himself prime minister.
- 1964** Abboud resigns, and a supreme council of state assumes control of Sudan; parliamentary government resumes.
- 1969** Colonel Jaafar Muhammad al-Nemieri seizes power in an army coup, which rules by revolutionary council.
- 1972** Al-Nemieri is elected president.
- 1973** Al-Nemieri promulgates a new constitution.
- 1978** Al-Nemieri is reelected president.
- 1983** Elected to a third term as president, al-Nemieri announces a replacement of the penal code with Islamic sharia law.
- 1985** In the aftermath of food riots, al-Nemieri is ousted in a bloodless coup led by General Abdul Rahman Swar al-Dahab.
- 1986** Civilian rule is restored, bringing Sadiq al-Mahdi to power as prime minister; elections in the south are cancelled, as the civil war there intensifies.
- 1987** As demonstrations over soaring food prices increase, al-Mahdi declares a state of emergency.
- 1989** Brigadier Omar Hasan Ahmad al-Bashir assumes power in a coup.
- 1991** Sharia law is imposed in northern Sudan; Sudan sides with Iraq in the Persian Gulf War.
- 1992** A transitional National Assembly is created, to be replaced by an elected Assembly in 1996.
- 1993** The Government Revolutionary Command Council, which had ruled since the 1989 coup, dissolves itself after appointing al-Bashir president.
- 1994** Eritrea severs diplomatic relations with Sudan; the government agrees to hold elections in two years' time.
- 1995** Sudanese agents stage a failed assassination attempt against Egyptian leader Hosni Mubarak.
- 1996** The first elections since the 1989 coup take place, but political parties are not allowed; UN resolution condemns and imposes sanctions on Sudan for participation in the assassination attempt against Mubarak.
- 1997** The government signs a peace agreement with five of six southern rebel groups, but the influential SPLA is not included in the pact; Sudan protests Eritrea's occupation of Sudanese territory to the United Nations; the United States

- imposes sanctions against Sudan, claiming the country supported international terrorism.
- 1998** A new constitution is adopted in a national referendum; famine grips much of country; following bombings of U.S. embassies in Kenya and Tanzania, the United States launches a missile attack against an alleged chemical weapons factory in Sudan.
- 1999** The government allows registration of political associations, ending a 10-year ban; the United States eases sanctions, allowing for greater importation of food and medical supplies.
- 2000** Sudan and Eritrea agree to restore diplomatic relations; United States declares Sudan a "state of concern" because of its support for terrorism; presidential and legislative elections are boycotted by Sudan's main opposition parties.
- 2001** The Sudanese government accepts a Libyan-Egyptian initiative to end the civil war, with the initiative calling for reforms and a national reconciliation conference; the UN Security Council lifts the sanctions it had imposed in 1996 over the alleged harboring of those suspected of attempting to assassinate President Mubarak, of Egypt; the United States imposes sanctions on Sudan due to its record with regard to human rights violations and terrorism.
- 2002** The SPLA and the Sudanese government sign a landmark peace agreement providing for a six-month renewable cease-fire in the Central Nuba Mountains.
- 2003** Rebels in Darfur rise up, claiming that the government is neglecting the region.
- 2004** The national army goes to Darfur to put down the rebellion. Civilians flee to Chad. Progovernment Arab *janjaweed* militias carry out systematic killings and rapes of black Africans. U.S. Secretary of State Colin Powell calls these abuses genocide.
- 2005** The government and southern rebels sign an agreement to end the civil war, promising to share power and implement a permanent cease-fire. Genocide continues in Darfur.

CAPITAL

Paramaribo

HEAD OF STATE & HEAD OF GOVERNMENT

President Runaldo Ronald Venetiaan (from 2000)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

438,144 (2005)

AREA

163,270 sq km (63,039 sq mi)

MAJOR ETHNIC GROUPS

Hindustani, Creole, Javanese, black, Amerindian, Chinese, white

LANGUAGES

Dutch (official), English, Sranang Tongo (Taki-Taki), Hindustani, Javanese

RELIGIONS

Christianity, Hinduism, Islam, indigenous beliefs

UNIT OF CURRENCY

Surinamese dollar

NATIONAL FLAG

Five horizontal stripes, of green (top), white, red, white, and green, with the green stripes twice the height of the white stripes and the red stripe twice the height of a green stripe; in the center of the red stripe is a five-pointed yellow star.

NATIONAL EMBLEM

Two Amerindian warriors flank an oval shield divided vertically into two halves. On the left appears a sailing ship on an ocean, on the right a palm tree. In a green diamond in the center is a five-pointed yellow star. The shield and the two Amerindians stand on a scroll proclaiming the national motto: *Justitia, pietas, fides* (Justice, piety, faith).

NATIONAL ANTHEM

“God Be with Our Suriname”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 25 (Revolution Day), May 1 (Labor Day), July 1 (National Union Day), November 25 (Independence Day), various Christian, Hindu, and Islamic festivals

DATE OF INDEPENDENCE

November 25, 1975

DATE OF CONSTITUTION

September 30, 1987

GEOGRAPHICAL FEATURES

Suriname, on the northeastern coast of South America, has a total land area of 163,270 sq km (63,039 sq mi) and is the smallest independent nation on the continent. Suriname extends 662 km (411 mi) northeast to southwest and 487 km (303 mi) southeast to northwest. The Atlantic coastline stretches 386 km (240 mi).

Suriname shares its total international land border of 1,707 km (1,061 mi) with three countries: French Guiana, Brazil, and Guyana. Suriname claims an area within French Guiana between the Litani and Maroni rivers

(both headwaters of the Lawa) as well as an area within Guyana between the New and Kutari rivers (both headwaters of the Courantyne).

The capital is Paramaribo. Much smaller cities are Nieuw Nickerie and Lelydorp.

The land is divided into four distinct natural regions: a coastal belt, an intermediate plain, a region of mountainous rain forest, and a high savanna in the southwest. The coastal belt, beyond which early settlers seldom penetrated, covers about 16 percent of the national territory and is approximately 15 km (10 mi) wide on the eastern border, broadening to about 80 km (50

Suriname

mi) to the west. Most of the region is at sea level, and diking is necessary to utilize the land. The intermediate plain runs to the edge of the vast rain forest and is about 50 to 65 km (30 to 40 mi) wide. The mountainous rain forest region, rising gradually to an elevation of 1,230 m (4,034 ft) at Juliana Top, makes up about 75 percent of the national territory and has been only partially explored. The central chain of the Van Asch-Van Wijk range runs south to the Tumac-Humac Mountains on

the Brazilian border, with the Wilhelmina and Kayser ranges on the west and the Orange Mountains on the east.

Numerous rivers dissect the land, all interconnected by a remarkable system of channels. The principal rivers are the Courantyne, Nickerie, Coppename, Saramacca, Suriname, Commewijne, and Marowijne. The largest lake is the Professor Doctor Engineer W. J. van Blommestein Meer.

CLIMATE AND WEATHER

Suriname has a tropical climate characterized by high rainfall and equable temperatures, with a narrow seasonal range moderated by the northeasterly trade winds on the coast and the modestly high altitudes in the interior. There are four seasons, none of which is completely wet or dry. The mainly dry seasons are from August to November and from February to April, while the mainly wet seasons are from April to August and from November to February. Rainfall varies from east to west, with annual averages of 2,200 mm (86.6 in) in Paramaribo, 1,970 mm (77.6 in) in Nickerie, 2,230 mm (87.8 in) in Commewijne, 2,160 mm (85 in) in Saramacca, 2,220 mm (87 in) in the middle Suriname River region, and 1,640 mm (64.6 in) in Coronie.

The daytime temperature range is between 23°C (73°F) and 31°C (88°F), with an annual mean of 27°C (81°F). The diurnal variation is slight, at about 4°C (7.2°F).

Suriname lies outside the Caribbean hurricane zone and does not experience destructive wind systems.

Climate and Weather

Mean Temperature: 81°F
 Average Rainfall
 Paramaribo: 86.6 in
 Nickerie: 77.6 in
 Commewijne: 87.8 in
 Saramacca: 85 in
 Suriname River region: 87 in
 Coronie: 64.6 in

FLORA AND FAUNA

Most of Suriname's interior is dense rain forest that has remained largely undisturbed by humans. The nation contains some of the richest biodiversity on the planet.

Animals species include the blue poison dart frog, the cock-of-the-rock, 650 bird species (including weaver birds and colonial nesting birds), howler monkeys and other monkey species, deer, tortoises, and innumerable other creatures. The jungles are home to wide varieties of vegetation, including cacti, bromeliads, and rare orchid species. More than 1,450 plant species have been collected in the Brownsberg Nature Park alone.

ETHNIC COMPOSITION

Suriname has one of the most varied ethnic configurations in the Western Hemisphere, with at least eight groups, including indigenous Amerindians, represented in the population.

Creoles are persons of mixed European and African descent. The Hindustani, also referred to as East Indians, are descendants of immigrants who arrived from northern India in the late 19th century. The Javanese are descendants of indentured estate laborers brought from Indonesia. The nation's blacks, sometimes called "Bush Negroes," are descended from Maroons, African slaves brought to South America in the 17th and 18th centuries who escaped to the interior and thrived there. The shrinking Amerindian community includes the Arawak, Carib, and Warrau tribes, who live along the riverbanks and on the coastal plains, and the Trios, Akurios, and Wyanas, who live along the upper reaches of the rivers. There are also a few Chinese and white people. The Asian Indians, with a history of high fertility rates, have increased their proportion in the population and have replaced the Creoles as the largest group.

Within this ethnic quilt, interethnic relations are fairly harmonious.

LANGUAGES

The official language is Dutch. The other main languages are English, Hindustani (a dialect of Hindi) and Javanese. Additionally, the majority speaks a pidgin English, or creole, called Sranang Tongo, also known as Taki-Taki. French, Spanish, and Chinese are also spoken.

RELIGIONS

Religious affiliations generally reflect ethnicity. Creoles are either Roman Catholic or Protestant, Asian Indians are either Hindu or Muslim, and Indonesians are Muslim. The majority of blacks follow traditional religions.

Both the Roman Catholic and Moravian churches have bishoprics in Paramaribo.

There is complete freedom of religion in Suriname.

Religious Affiliations	
Hindu	120,000
Protestant	110,400
Roman Catholic	99,900
Muslim	85,900
Indigenous Beliefs	21,900

HISTORICAL BACKGROUND

Suriname's earliest inhabitants were of course Amerindian peoples; Europeans did not arrive until the 17th century, when several countries sought to establish trading posts and settlements. Suriname was alternately a British and Dutch colony—it was exchanged by the British in 1667 for New Amsterdam, now New York—until it was definitively awarded to the Netherlands through the 1815 Treaty of Vienna. The colony's economy depended on large sugar plantations, for which labor was provided by African slaves. Following the abolition of slavery in 1863, laborers from India, the Dutch East Indies, China, and Portugal emigrated to Suriname. Many settled permanently, giving the country the diverse racial character that remains today.

In 1954 Suriname gained full autonomy in domestic affairs in partnership with the Netherlands. The nation achieved full independence in 1975. At independence, Suriname was a parliamentary republic, led by Johan Ferrier as president and Henck Arron as prime minister. In 1980 the government was overthrown in a military coup led by the army chief of staff, Desiré "Desi" Bouterse. Parliament was dissolved and the constitution suspended.

From 1980 until the early 1990s the armed forces were heavily involved in Surinamese politics. Bouterse ruled from 1980 to 1987 through a series of appointed governments. A civilian cabinet was appointed in 1982, but the army remained in effective control. That year, faced with political unrest, the army killed 15 leading citizens. In response, the United States and the Netherlands suspended all aid. Following the emergence of a guerrilla movement in 1986, the government declared a state of emergency in eastern and southern Suriname. Reports that civilians were massacred by government troops in search of guerrillas led to further protests by the Netherlands and the United States.

Growing political pressure forced Bouterse to return the country to civilian rule in 1987. Elections were held that year, and an anti-Bouterse coalition, the New Front for Democracy, won 80 percent of the vote and gained 40 of the 51 seats in the newly constituted National Assembly. In 1988 the Assembly unanimously elected Ramseswank Shankar president and Henck Arron prime minister. Bouterse remained commander in chief of the armed forces and the leader of a military council formed to oversee the transition to democracy. In 1990 Bouterse's second in command led a bloodless coup that ousted President Shankar.

In May 1991 national elections were held that were widely seen as a referendum on military involvement in politics. The New Front for Democracy won 30 of the 51 seats in the National Assembly; the military-supported National Democratic Party (NDP) won 12 seats, while the Democratic Alternative '91 (DA '91) won nine seats. With no party either able to form the two-thirds majority needed to pick a president on its own or willing to form a working coalition, a special people's assembly was convened and selected the New Front for Democracy's Ronald Venetiaan as president.

Venetiaan moved quickly, as supported by the Netherlands and the United States, to amend the 1987 constitution to strip the military of its power. Bouterse made threatening statements in response but ultimately resigned as military commander in order to lead the NDP. Venetiaan also worked toward rapprochement with the guerrillas in the interior, with partial success.

Venetiaan's unwillingness to come to terms with the International Monetary Fund (IMF) regarding a structural adjustment package, for fear of alienating those in his coalition whose constituents depended on trade protections, led the Dutch to continue to suspend economic aid. Even so, the Venetiaan administration embarked on an austerity program along IMF lines, yielding short-term distress. Throughout 1993–95, living conditions deteriorated, inflation rose to triple digits, and youth unemployment neared 75 percent. Meanwhile, Bouterse conducted antigovernment demonstrations, and his party's popularity soared. Amsterdam quietly resumed aid to the government. This stabilized the economic situation

enough for the NF to win the largest number of seats in the 1996 election, but with no party gaining a majority, another people's assembly was formed, this time choosing the NDP's Jules Wijdenbosch as president.

Wijdenbosch had promised to keep Bouterse out of his government, but in 1997 he named the former ruler to his advisory Council of State; around the same time the Dutch government obtained an arrest warrant for Bouterse from Interpol on charges of drug trafficking. Bouterse was dismissed from the Council in 1999.

The 2000 elections returned Venetiaan to the presidency, with a New Front majority in the Assembly. In taking office, Venetiaan faced the consequences of Wijdenbosch's free-spending regime, including high inflation, a huge bureaucracy, a devalued currency, and a devastated health-care system. He announced an austerity program, as he had in his first term, and the economic situation had greatly improved by 2004. That year he replaced the Surinamese guilder with the new Surinamese dollar, in an effort to restore confidence in the national currency. He was reelected in 2005.

LIST OF MODERN RULERS

President

1975–80	Johan Henri Eliza Ferrier
1980–82	Hendrick Rudolf Chin A Sen
1982–88	Lachmipersad Frederick Ramdat Misier
1988–90	Ramsewak Shankar
1990–91	Johannes Samuel Petrus Kraag
1991–96	Runaldo Ronald Venetiaan
1996–2000	Jules Albert Wijdenbosch
2000–	Runaldo Ronald Venetiaan

CONSTITUTION

The original constitution of 1975 was suspended in August 1980, following the overthrow of the elected government that February. In 1982, an interim president was appointed by the National Military Council, and martial law was imposed, although a predominantly civilian cabinet was appointed. The National Assembly was created in January 1985 to prepare a new constitution. The draft constitution was approved by the National Assembly in March 1987 and by 93 percent of the voters in a national referendum that September.

Executive authority is vested in the president, who is elected for a term of five years by two-thirds of the National Assembly. If no candidate wins votes from two-thirds of the National Assembly, a people's assembly is formed from all national, regional, and municipal representatives and delegates, from among which whomever receives a majority vote wins. The president, who is head of state and head of government, chairs the Council of

State, which advises the government on policy and supervises the execution of the decisions of the National Assembly. The president appoints the cabinet (Council of Ministers) from among the members of the National Assembly. The vice president is the prime minister and head of the cabinet. He is responsible to the president. There is no provision for removing a president from office unless he resigns.

Legislative power is exercised by the 51-member National Assembly. The judiciary is composed of the Court of Justice and three cantonal courts. The voting age is 18, and suffrage is universal.

PARLIAMENT

Suriname's legislative body is the 51-member National Assembly, which is elected for a five-year term by universal suffrage through proportional representation. The Assembly elects the president and vice president. In a situation where no party's candidate can muster support from a two-thirds majority in the Assembly, a special people's assembly is convened, as consisting of the members of the National Assembly plus representatives from local and district councils, to vote for a president by simple majority. The National Assembly is fairly strong relative to the executive branch. In addition to presidential selection, electoral law and constitutional amendments require two-thirds majorities; other legislation needs only an ordinary majority to pass.

POLITICAL PARTIES

The political-party situation in Suriname is fluid. The constant has been the National Democratic Party (NDP), the party founded by the former military ruler Desiré Bouterse. After the NDP won the 1996 presidential vote, its chief rival, the New Front for Democracy alliance, split into its constituent parties, some of which joined the government in coalition, including the largely Javanese Party for National Unity and Solidarity and part of the predominantly Indian Progressive Reform Party. The other parties from the alliance—the mainly Creole Surinamese National Party, the Suriname Labour Party, and the rump of the Progressive Reform Party—reconstituted the New Front (NF) and, together with a small Javanese party, won the 2000 elections. Several groups won small numbers of Assembly seats in 2000, notably the Democratic National Platform 2000 and the Democratic Alternative '91.

Insurgency outfits of note are the Surinamese Liberation Army (SLA), led by Ronnie Brunswijk, and the Amerindian Tucayana Amazonica, which was originally armed by Bouterse's military regime to combat the blacks of the SLA.

LOCAL GOVERNMENT

For the purposes of local government Suriname is divided into 10 districts, each governed by a district commissioner appointed by the president along with representatives from the central ministerial departments in the district. The 10 districts are the urban district of Paramaribo and the districts of Wanica, Commewijne, Marowijne, Saracca, Coronie, Nickerie, Brokopondo, Para, and Sipaliwini. The administration remains fairly centralized, but some legislative functions have been devolved to district and local councils, including the right to a say in national and regional development policies.

The district councils report to the central government. Local councils are elected through proportional representation, and district council seats are assigned to parties on the basis of their share of total local council seats in the district.

LEGAL SYSTEM

The legal system is based on Dutch civil law. The judiciary is headed by the Court of Justice (Supreme Court), with six judges nominated for life by the president in consultation with the National Assembly. There are three subordinate courts, known as cantonal courts.

HUMAN RIGHTS

Suriname's brief history as an independent nation has featured two military coups, and unresolved issues relating to abuses by those regimes still hang over the country. A 1992 amnesty law pardoned both soldiers and guerrillas for crimes committed between 1985 and 1992, except for those crimes deemed to be "against humanity."

The most egregious example of political violence occurred in December 1982, when 15 prominent opposition leaders were killed while in the custody of Bouterse's military government. No one was ever brought to trial for those killings. Chronic battling between the army and insurgents in the backcountry, particularly in the 1980s and early 1990s, involved abuses on all sides but most disturbingly by the military. The most serious allegation, in a case that has not been resolved, is that the army massacred some 50 blacks, including women and children, at a settlement called Moiwana in November 1986. The Inter-American Court of Human Rights has pursued several cases against the former military regime, but the government has not always complied with the court's judgments.

Human rights groups have been allowed to function freely for the most part, though with little active cooperation from the government, which has hoped to

avoid stirring up trouble. The administration of Ronald Venetiaan successfully resisted pressure to set up a truth commission to look into past human rights abuses. The succeeding government of Jules Wijdenbosch acceded to the demands of rights groups and set up a five-member committee, but it was later revealed that the committee chairman had close ties to Bouterse, damaging confidence in its ability to conduct a fair investigation.

Since the reestablishment of civilian rule, rights and freedoms enumerated in the constitution generally appear to have been respected. Citizens now vote freely, and there has been peaceable transition from one civilian government to another. There is freedom of speech, press, and religion, although news outlets still practice a certain degree of self-censorship. Unions are allowed to work freely, and strikes are permitted, except by civil servants (who in fact constitute about half the working population and who strike even in defiance of the law).

There are ongoing problems with societal discrimination against women, Amerindians, and the descendants of Maroons. The justice system is overwhelmed and inefficient. Police and prison guards still abuse those in custody, and prisons are overcrowded and offer poor living conditions. The law allows for the police detention of suspects for 14 days before formal charges must be brought, and judges may authorize further detention for up to 164 days. There is a separate court system governing the military.

When the National Democratic Party gained the presidency in 1996, human rights groups and others expressed skepticism about its commitment to respecting human freedoms, owing to its association with Bouterse and the military. However, civilian control over the military grew considerably, and outside monitors' worst fears were not realized during Wijdenbosch's term, which ended in 2000.

FOREIGN POLICY

The main issues in Suriname's foreign relations are the long-standing border disputes with French Guiana and Guyana and economic and political ties with the Netherlands. In 1975 the Netherlands offered a \$1 billion loan to Suriname, to be provided in three stages over 10 to 15 years. This aid was suspended in 1982 following the execution of opposition leaders. In 1988 an agreement was reached for the resumption of aid, but this was held up again by a second military coup and then by the successor civilian government's refusal to negotiate an IMF agreement. The withholding of Dutch aid was a serious blow to the economy.

A rapprochement of sorts took place between Amsterdam and the Venetiaan government as the 1996 elections loomed, which threatened to restore to power Bouterse's

party. Once the NDP did in fact win, with Bouterse becoming a member of the Council of State, relations with the Netherlands became further strained; the Dutch later formally accused Bouterse of drug trafficking and sought his arrest.

Suriname and Guyana agreed on a joint commission to resolve their territorial dispute, concerning about 15,400 sq km (6,000 sq mi) in the Courantyne River basin, but this has made little headway. In 2000 Suriname's navy forced a foreign oil prospector that had been granted a concession by Guyana to operate in disputed waters to dismantle its rig. Relations between France and Suriname have been tense over the border dispute in the region east of the Litani River and over cross-border incursions by Surinamese rebels seeking sanctuary in French Guiana. In 2004 the United Nations created a tribunal to resolve this dispute.

Suriname and the United States are party to various agreements and treaties covering aviation, consuls, economic and technical cooperation, extradition, judicial assistance, maritime affairs, mutual security, postal matters, telecommunications, trade and commerce, and visas. Since the restoration of civilian rule, Suriname has maintained generally friendly relations with Washington, cooperating with U.S. offers to train military personnel and antinarcotics police. Suriname depends on American firms for foreign investment and more than 30 percent of its imports.

Suriname joined the United Nations in 1975. It is a member of nine UN organizations as well as the International Bauxite Association, the Group of 77 non-aligned nations, the Association of Caribbean States, and the Organization of American States. Suriname enjoys preferential trade privileges for some of its exports to the European Union under the Lomé Convention. In 1995 the nation became a full member of the Caribbean Community and Common Market.

DEFENSE

Suriname has a national army controlled by the minister of defense and a civil police force controlled by the minister of justice and police. As of 2003 there were about 1,800 members in the armed forces, most of them light infantry security forces. The Suriname constitution provides for equal representation for all ethnic groups in the armed forces, the terms of service being voluntary. The Netherlands and the United States have provided assistance in training, while China has donated some military equipment and logistical material.

ECONOMY

Suriname's economy is heavily dependent on bauxite, which is refined into alumina and aluminum for export. The bauxite industry accounts for approximately 77 percent of export earnings. Other exports include rice, bananas, shrimp, and timber. The country is a minor oil producer and has the potential to generate much more, though some of that potential depends on the outcome of the border dispute with Guyana. The nation also has considerable hydroelectric resources. The government has been eyeing the tropical hardwoods in the rain forests, but environmentalists and human rights activists have been protesting moves in this direction. Tourism could be an attractive growth sector, but as of 2005 the potential for ecotourism remained largely untapped due to lack of infrastructure.

Until 1982 Suriname was a relatively prosperous country as a result of its metals exports and generous aid from the Netherlands, which amounted to about \$950 million between 1975 and 1982. When Dutch aid was halted in 1982, however, the economy went into a tailspin. In 1983 Suriname was forced to draw on its foreign reserves to finance an escalating budget deficit and costly capital expenditure programs. By 1984 the country's total nongold reserves, which had stood at \$207 million in 1981, had slumped to \$18.7 million. An IMF loan of \$300 million was withdrawn in February 1984 after the government rescinded proposed tax increases that were built into the IMF package. A drop in world bauxite prices that started in the late 1970s and continued until late 1986 also damaged the economy. This was followed by the outbreak of a guerrilla insurgency in the interior. The guerrillas targeted the economic infrastructure, crippling the important bauxite sector and shutting down other export industries. These problems created both high inflation and high unemployment.

The New Front government of Ronald Venetiaan elected in 1991 made a pact with guerrillas and embarked on a stabilization program along the lines of IMF demands. There were large budget cuts, the liberalization of price controls and trade restrictions, and a sharp devaluation that unified the currency rate and curbed the black market. This, along with a resumption of Dutch assistance and a commitment to support the currency by backing it with locally produced gold, restored price stability, but at a huge short-term cost in terms of job losses and attendant social ills (including increased crime and spreading child malnutrition in the capital). Unemployment ap-

proached 75 percent of the under-30 population by 1995, and protests against the government mounted.

The recovery of aluminum and alumina prices in the mid-1990s helped get a general economic recovery under way. However, the 1996 election brought in a National Democratic Party government determined to cast off the constraints of IMF-style macroeconomic discipline and raise public sector wages, borrowing, and social spending. A new surge of inflation, combined with slumping exports, prompted strikes and demonstrations in 1998. In 1999 the estimated fiscal deficit was 11 percent of gross domestic product (GDP). The government sought to cover this deficit through monetary expansion, which led to a dramatic increase in inflation and exchange-rate depreciation. Venetiaan implemented an austerity program when he took office in 2000, reducing spending and raising taxes, which improved economic conditions to the point where the Dutch government agreed to resume aid, allowing the nation to obtain international development financing. The nation's GDP grew 5 percent in 2003, and Suriname has the potential to improve its economy if it can rein in inflation and further develop the bauxite and gold industries.

ENVIRONMENT

Owing to Suriname's small population (in a country little larger than the U.S. state of Georgia) and the concentration of human development in the coastal belt,

vast swaths of the interior are both inaccessible and relatively pristine. Some 90 percent of the country is covered by forest, and 80 percent of the land is primary tropical forest.

In 1993, desperate for foreign investment, the government asked Asian companies to bid on logging concessions. Three were to be granted rights to large tracts, potentially amounting to 25 to 40 percent of the country's land area, in the east-central and west-central parts of the country, to the south of where any previous logging activity had taken place. The environmental records of these firms at home and elsewhere caused international ecology-minded groups to voice concerns. New roads would have to be built into the interior, opening up the way for further degradation. The hilliness of these areas means that logging could result in serious erosion. There is also apprehension about disrupting the way of life of the 10,000 or so Amerindians and black descendants of Maroons in the forest.

Objections to projected logging deals found a domestic voice as well, resulting in years of delay. In 1997 the newly elected Wijdenbosch administration declared that it would grant logging concessions of up to 125,000 hectares only per company, instead of the one million originally proposed.

Beyond logging, illegal gold mining causes environmental damage in isolated areas. Trade in endangered species of plants and animals has been brought under control, at least officially so, through 1980s legislation requiring dealers to have export licenses and permits from the Convention on Trade in Endangered Species. Nongovernmental organizations hope to steer Suriname away from destructive logging contracts and toward sustainable development through a process known as "biodiversity prospecting."

In 1998 the government announced that Conservation International would help the nation set aside 1.6 million hectares of virgin rain forest, amounting to 10 percent of the country's land area, as a protected reserve.

Although Suriname is not prone to violent tropical storms, the coastal regions are low-lying and subject to periodic flooding from frequent, heavy rains.

LIVING CONDITIONS

Suriname is a poor country; in 2002, 70 percent of the population lived below the poverty line. People inhabit-

ing the interior live in primitive conditions, with some residing in wooden houses raised up on stilts to avoid floods. The city of Paramaribo has homes made of brick and wood, the latter of which is vulnerable to termites. Some urban housing is inadequate, and a housing deficit in the capital is exacerbated by the in-migration of rural people. Over one-quarter of Surinamese lack access to safe drinking water, and about 12 percent lack access to sanitary waste disposal systems. There are buses and taxis in the cities. Access to the interior is limited; the region is often best reached by river.

HEALTH

Life expectancy in Suriname is 69 years. The infant mortality rate is under 24 deaths per 1,000 live births. In 2004, each woman had an average of 2.3 children; with the fairly low fertility rate and limited immigration, Suriname's population is growing quite slowly. The government furnishes some health services but does not have enough money to create effective programs, so malnutrition and afflictions such as worms, respiratory infections, and gastrointestinal diseases are fairly common. Endemic diseases include malaria, dengue fever, typhoid, cholera, and rabies.

FOOD AND NUTRITION

Surinamese cuisine combines aspects of Indian, Indonesian, Creole, and Chinese cooking. Rice and noodles are ubiquitous starches; cassava and flat Indian breads are also common. People eat a great deal of fish. Beans, peanuts, chicken, eggs, vegetables, and fresh fruits are also part of the diet. People like to drink fruit juices, beer, and *sap*, a thick fruit syrup mixed with water or poured over ice.

Food and Nutrition

Undernourished % of total population: 10.6

 Amount of Cereal Available per person per year kg: 129.1
 Amount of Fruits and Vegetables Available per person per year kg: 138.6

STATUS OF WOMEN

Traditional social and cultural attitudes still present obstacles to the advancement of women in the worlds of politics and business. Most people still consider it inappropriate for women to be involved in politics, and women seeking public office are disadvantaged. Nevertheless, women occupy one-fifth of the seats in the National Assembly, and President Wijdenbosch chose a female minister of regional development.

Domestic violence, a problem that transcends socioeconomic status, has largely been neglected by the government. Nor are there laws to protect women against sexual exploitation. There have been reports of trafficking in women as sex slaves.

Women experience discrimination in terms of both pay and access to jobs, and, here again, the government has taken little action. The government-run National Women's Center deals with women's issues but is understaffed and underfinanced. Women's rights groups are active and have been somewhat more effectual than the government in redressing grievances.

Girls have the same access to education as boys and are not treated differently at school.

WORK

The unemployment rate was 17 percent in 2000. About half the workforce is directly or indirectly on the government payroll. Civil servants are among the better-paid employees, and President Venetiaan gave them a large pay raise in 2002. Agriculture employs a large number of people, in the production of export crops such as rice, bananas, and vegetables. Some people work as miners, especially of bauxite. Women are typically paid less than men for the same jobs. The most educated citizens have left the country to live abroad, especially in the Netherlands, where there are greater opportunities for high-paying work and where the military is not likely to oppress them.

Employment and Labor

EDUCATION

Education is free, universal, and compulsory, in principle, for six years, between the ages of six and 12. The school year runs from September to August. The language of instruction is Dutch. Total schooling lasts for 11 or 12 years, as divided into six years of primary school and either six years of general academic secondary school, leading to the university level, or five years of specialized secondary school, leading to a certificate. Private schools account for more than half of enrollment. Three-quarters of school-age children are engaged in primary or secondary education, and literacy is high. Some children in rural areas, however, lack transportation or nearby facilities. Families must pay certain fees for schooling, which presents a problem for some parents.

Higher education is provided by the University of Suriname, in Paramaribo, and by technical and vocational colleges.

SCIENCE AND TECHNOLOGY

Suriname has good international telecommunications capabilities. In 2003 there were almost 80,000 telephone lines and about 170,000 cellular telephones in use; some 20,000 people were using the Internet. Suriname has plentiful and inexpensive electricity thanks to the hydroelectric dam built by Alcoa at Afobaka. In 2005 the Alcoa Foundation announced that it would invest more

than \$100,000 over four years to strengthen research capabilities in the Department of Geology and Mining at the University of Suriname, allowing students to earn master's degrees and doctorates.

MEDIA

Suriname has two daily newspapers, *De ware tijd* and *De west*, both published in Dutch. In addition, the Catholic and Moravian churches publish small weekly newspapers that often carry articles critical of the government. The Lutheran and Reformed churches publish a combined monthly journal. The government itself publishes a twice-weekly information bulletin, and the civil servants' union puts out a bulletin at irregular intervals.

The national news agency is Surinaams Nieuws Agentschap. Foreign news bureaus are represented in Paramaribo by Inter Press Service of Italy.

The government-owned Stichting Radio Omroep Suriname operates a medium-wave transmitter and an FM transmitter at Paramaribo, which broadcast in Dutch, Hindustani, Javanese, and English. There are several commercial radio stations broadcasting in Dutch and other languages.

Television, introduced in 1968, is operated by two government-owned commercial networks: Surinaamse Televisie Stichting has a main transmitter at Paramaribo, with relay stations at Moengo and Brokopondo, broadcasting in Dutch, English, and local languages; Algemene Televisie Verzorging has some programming in Spanish and Portuguese, in addition to the aforementioned languages.

CULTURE

Suriname does not have a thriving cultural scene, partly because many of the most educated citizens spend much of

their time in the Netherlands. Artistic practices stem from the traditions of the different ethnic groups. The Amerindians and descendants of Maroons in the forests still create sculptures and wood carvings, as they have for centuries. Blacks perform dances accompanied by drummers. The Indonesian community enjoys *gamelan* music and Javanese dancing. The Hindu population celebrates Holi Phagwah, the Hindu New Year, in March or April. Muslims celebrate Islamic festivals, such as Ramadan and 'Id al-Fitr.

FOLKLORE AND MYTHOLOGY

Suriname has a mix of mythologies and folkloric traditions due to its ethnic diversity, including elements from India, Indonesia, and Africa. Many people combine traditional African practices such as obeah and *winti* with Christian worship. Indonesian puppet shows portray traditional Javanese myths.

ENTERTAINMENT AND RECREATION

Paramaribo has restaurants serving a variety of ethnic cuisines. People enjoy sitting at sidewalk cafés to drink, eat, and watch passersby. There is some modest nightlife. There is a market on the Waterkrant boulevard near the river. Tourists come to the country to explore the pristine rain forest, especially in Brownsberg Nature Park.

ETIQUETTE

Surinamese shake hands when greeting one another, even if they meet several times a day. Bargaining is a tradition, in markets, hotels, and elsewhere. Fares for buses and shared taxis may be negotiated. It is appropriate to tip 10 percent in restaurants and to round up a taxi fare.

FAMILY LIFE

Women are expected to take on the roles of wife and mother, handling all of the housework and child care.

Many poor families cannot afford to adequately feed their children. Extended families play important roles in family life, as people rely on their relatives for assistance with food, child care, and other endeavors. The age of marriage is low: 13 years for girls and 14 years for boys. Because children learn Dutch when they go to school, they sometimes become alienated from their parents, who may only speak other languages.

PERSONAL APPEARANCE

For the most part Surinamese dress in casual, Western-style clothing. They dress up for formal occasions, however, and do not always approve of shorts or T-shirts. Women typically dress in cotton dresses and scarves. People from different ethnic groups sometimes wear clothing associated with those groups, such as Javanese sarongs.

SPORTS

Suriname does not have a well-developed sports infrastructure. Some sporting facilities are available to wealthy people; Paramaribo has places to play tennis and golf or go swimming. Surinamese athletes have taken part in international competitions in sports such as badminton and have participated in the Summer Olympics since 1968.

CHRONOLOGY

- 1941** American company Alcoa begins mining and processing bauxite in eastern Dutch Guiana.
- 1954** Dutch Guiana becomes self-governing.
- 1975** Dutch Guiana achieves independence as Republic of Suriname, under Prime Minister Henck Arron.
- 1980** Army chief of staff Desiré Bouterse overthrows government.
- 1982** Army tortures and kills 15 opposition leaders; Netherlands cuts off aid in response.
- 1985** Military allows National Assembly to meet and political parties to form.
- 1986** Surinamese Liberation Army, led by Ronnie Brunswijk, starts guerrilla war in name of restoring constitutional rule.
- 1987** New constitution is approved; civilian government is restored under leadership of Front for Democracy and Development.
- 1988** Ramsewak Shankar is elected president by National Assembly.
- 1990** Bouterse overthrows Shankar government.
- 1991** New civilian government is organized; Ronald Venetiaan is elected president at head of New Front for Democracy coalition.

2238 Suriname

- 1992** Government secures passage of constitutional reforms dispensing with the military's role in politics; tenuous peace agreement is reached with insurgent groups in the interior; Netherlands agrees to resume its aid package only on the condition that Venetiaan's government sign an agreement to implement an IMF structural adjustment program.
- 1993** Bouterse resigns as military commander to lead his party, the National Democratic Party, and is replaced by a civilian-appointed chief; Venetiaan begins an austerity regime, conforming to the principles of a structural adjustment program but without reaching a formal IMF agreement.
- 1994** Crime and youth unemployment soar; Bouterse leads antigovernment demonstrations, some of which turn violent; Suriname Liberation Front overwhelms a hydroelectric plant south of Paramaribo, taking 30 hostages; Netherlands resumes its funding program.
- 1996** New elections result in the New Front falling short of a majority; a people's assembly elects NDP's Jules Wijdenbosch president.
- 1997** Wijdenbosch names Bouterse to the Council of State; Netherlands obtains warrant from Interpol for Bouterse's arrest on drug trafficking charges; coup plot is foiled in October, resulting in arrest of 17 people.
- 1998** Widespread strikes take place in protest of Wijdenbosch's trade and exchange-rate policies; many call for the president's resignation.
- 1999** Wijdenbosch dismisses Bouterse from the Council of State; a parliamentary motion of no confidence in the president passes, but he refuses to resign.
- 2000** Elections return Ronald Venetiaan to the presidency, and the New Front gains a majority in the National Assembly.
- 2002** The state-owned banana company closes, a victim of low prices.
- 2004** In an effort to restore economic confidence, the state replaces the Surinamese guilder with the Surinamese dollar as the unit of currency. The United Nations sets up a tribunal to resolve the border dispute between Suriname and Guyana. The government announces that Bouterse will stand trial for killing political opponents in 1982.
- 2005** Venetiaan is reelected president.

SWAZILAND

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Swaziland (Umboso weSwatini)

ABBREVIATION

SZ

CAPITALS

Mbabane (administrative), Lobamba (royal and legislative)

HEAD OF STATE

King Mswati III (from 1986)

HEAD OF GOVERNMENT

Prime Minister Absalom Themba Dlamini (from 2003)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

1,173,900 (2005)

AREA

17,363 sq km (6,704 sq mi)

ETHNIC MAJORITY

Swazi

LANGUAGES

Siswati, English

RELIGIONS

Zionism, Roman Catholicism, Islam

UNIT OF CURRENCY

Lilangeni

NATIONAL FLAG

Five horizontal stripes—blue (top), yellow, crimson, yellow, and blue, with the blue stripes approximately three times

the height of the thin yellow stripes and the crimson stripe approximately equal to the height of all the other stripes combined—with a black-and-white shield, two silver-tipped gold spears, and a tasseled staff superimposed on the crimson stripe

NATIONAL EMBLEM

A bright blue shield displaying the insignia of the Masotja Regiment: an oval, black-and-white inner shield with pointed ends, silver-tipped gold spears, and a tasseled staff. The shield is flanked by a lion (representing the king, the *ngwenyama*) and an elephant (representing the queen mother, the *indovuzaki*). The emblem is crested by a Masotja headdress made of otter skin and adorned with the green tail feathers of the *lisakabuli* (widow) bird. The national motto, *Siyinqaba* (We are the fortress), is written on a scroll at the base.

NATIONAL ANTHEM

“Nkulunkulu Mnikati Wetibusiso temaSwati” (O God, Bestower of the Blessings of the Swazi)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), April 25 (National Flag Day), second Monday in June (Commonwealth Day), second Monday in July (Umhlanga, or Reed Dance Day), July 22 (King’s Birthday), September 6 (Somhlolo, or Independence Day), Good Friday, Holy Saturday, Easter Monday, Christmas, Boxing Day; Incwala Day, an annual ceremony roughly translated as the Feast of the First Fruits, is held in December or January.

DATE OF INDEPENDENCE

September 6, 1968

DATE OF CONSTITUTION

November 14, 2003; not in force as of March 2005

GEOGRAPHICAL FEATURES

Landlocked Swaziland, in southern Africa, has an area of 17,363 sq km (6,704 sq mi), extending 176 km (109 mi) north to south and 135 km (84 mi) east to west. Swaziland shares its international boundary of 535 km (332 mi) with two neighbors: South Africa and Mozambique.

Swaziland is topographically part of the South African Plateau and is generally divided into four well-defined regions of nearly equal breadth. From the High Veld in the west, averaging 1,050 to 1,200 m (3,500 to 3,900 ft) in elevation, there is a steplike descent eastward through the Middle Veld (450 to 600 m; 1,475 to 1,970 ft) to the Low Veld (150 to 300 m; 490 to 980 ft). To the east of the

Swaziland

Low Veld is the Lubombo Plateau (450 to 825 m; 1,475 to 2,700 ft), which separates the country from the Mozambique coastal plain.

Swaziland is well watered, with four large rivers flowing eastward across the nation into the Indian Ocean. These are the Komati and Umbeluzi rivers in the north, the Great Usutu River in the center, and the Nggwavuma River in the south.

Geography

Area sq km: 17,363; sq mi 6,704

Population of Principal Cities (1997)

Manzini	25,571
Mbabane	57,992

CLIMATE AND WEATHER

Swaziland as a whole is a subtropical country, but the climate varies sharply from region to region. The High Veld has a humid, near-temperate climate, with average annual rainfall of 1,000 to 2,300 mm (40 to 90 in), while the Middle Veld and the Lubombo Plateau are subtropical and somewhat drier, with 900 to 1,150 mm (35 to 45 in) of rainfall, and the Low Veld is tropical and semiarid, with 500 to 900 mm (20 to 35 in) of precipitation. Mean annual temperatures range from 15.6°C (60°F) in the High Veld to 22.2°C (72°F) in the Low Veld. There are frequent frosts during the cool season (June to August) and occasional snow on the high peaks.

Climate and Weather

Mean Temperature
 High Veld: 60°F
 Low Veld: 72°F
 Average Rainfall
 High Veld: 40 in to 90 in
 Middle Veld and Lubombo Plateau: 35 in to 45 in
 Low Veld: 20 in to 35 in

FLORA AND FAUNA

Swaziland has a surprisingly large number of ecological zones for such a small country. There are hardwood forests

in the highlands to the west; swamps, savanna, and subtropical woodlands in the east; rain forest in the northwest; and patches of *finbos*, or “fine bush,” throughout. Animals include black and white rhinoceroses, elephants, lions, hippopotamuses, and crocodiles. There are hundreds of species of birds. The country has managed its natural resources well, and animal populations are large and healthy, especially in the Mlilwane Wildlife Sanctuary.

ETHNIC COMPOSITION

The population is less heterogeneous than that of other countries in sub-Saharan Africa. Of the black African population, which makes up 97 percent of the total population, the large majority are Swazi. Others belong to the Zulu, Tsonga, and Shangaan tribes.

The Swazi call themselves Bantu Bakwa Ngwane, or People of Ngwane. The clans of Swaziland are divided into three groups: the Bemdzabuko, or the true Swazi; the Emakhandzambili, or the forerunners; and the Emafikem Amuva, or the latecomers.

Ethnic minorities include Europeans (Afrikanders, Britons, and Portuguese), other non-Africans, and “Eurafricans” (as mulattoes are called in Swaziland).

LANGUAGES

The official and national language is Siswati, a Nguni language related to Zulu, but English is a co-official language and the effective language of administration, commerce, and education.

RELIGIONS

Swaziland is home to many different religious beliefs, with considerable mixing of practices. About 40 percent of Swazis describe themselves as Zionist, following a mixture of Christianity and indigenous animism. The traditional religions ascribe a special spiritual role to the king. Tribal festivals such as Umhlanga (Reed Dance) and Incwala are celebrated throughout the country.

Some 20 percent of Swazis are Roman Catholic. A number are Protestant, including Anglicans and Methodists. The Swaziland Conference of Christian Churches represents 24 denominations and three organizations. Both the Roman Catholic and the Anglican churches have bishoprics in the country, the former at Manzini and the latter at Mbabane.

Perhaps 10 percent of Swazi are Muslim. The remainder practice the Baha'i, Mormon, and Jewish faiths, as well as others.

Religious Affiliations	
Zionist	470,000
Roman Catholic	235,000
Muslim	120,000
Other	350,000

HISTORICAL BACKGROUND

The history of the people who have settled Swaziland is relatively recent. While human remains have been found that date back more than 100,000 years, the Dlamini king, Ngwane III, did not lead his people south and around the Pongola River until the middle of the 18th century. Ngwane is considered the first king of the Swazi people. Under pressure from the Zulu, Sobhuza I, who succeeded Ngwane III, moved the center of the kingdom to the Ezulwini Valley.

The earliest contact between Swaziland and a Western power took place in the 1840s, when King Mswati II appealed to the British for help against the Zulu. In 1877, after the United Kingdom temporarily annexed Transvaal, the kingdom's northern, eastern, and western borders were demarcated. In 1894, as a result of the Anglo-Transvaal Agreement, Swaziland came under Boer protection. Yet after the Boer War, fought from 1899 to 1902, Swaziland returned to the British fold as a high commission territory. The relationship between the British Crown and Swaziland was defined by the order-in-council of 1903. The first constitutional talks on self-government were held in London in 1964, and on September 6, 1968, Swaziland became an independent nation within the Commonwealth.

Since independence Swaziland has had a relatively stable government. The two reigning monarchs of the

postindependence period, King Sobhuza II (1968–82) and King Mswati III (1986–), contrived to centralize power in the traditional office of king. At independence King Sobhuza II became head of state. Prince Makhosini Dlamini, a member of the royal family and also head of the Imbokodvo National Movement, a royalist party, was appointed prime minister by the king. A nominated Senate and elected House of Assembly formed the legislative branch of government, which exercised little real power. The king ruled with the Liqoqo, the Supreme Council of State.

In 1973, in response to a parliamentary motion, Sobhuza repealed the constitution, banned all political activity, and took over all executive, legislative, and judicial power. The Ngwane National Liberatory Congress, the leading opposition party, was banned in 1975.

A new constitution was promulgated in October 1978. It provided for an advisory bicameral parliament (Libandla) consisting of a 20-member Senate and a 50-member House of Assembly, with both bodies indirectly elected. Elections later in the month put in place an 80-member electoral college, which chose from among its numbers 10 senators and 40 members of the House. The king appointed an additional 10 members each to the Senate and the House.

King Sobhuza died in August 1982, leaving an underage heir. A power struggle ensued in the Liqoqo between traditionalist and modernists that ended with the triumph of the former. In 1983 conservative Prince Bhekimpi Dlamini replaced Prince Mabandla Dlamini as prime minister, and Ntombi, the mother of the crown prince, replaced Queen Mother Dzeliwe as regent. All opposition to the dismissal of Dzeliwe was suppressed. The coronation of the crown prince was moved up three years, and in April 1986 Prince Makhosetive was crowned King Mswati III.

Once in power, Mswati moved to eliminate opposition and consolidate power. He dissolved the Liqoqo, appointed a new prime minister, Sotsha Ernest Dlamini, and announced that he would rule by decree until the adoption of a new constitution and the holding of new elections. In 1987 Prince Bhekimpi and Prince Mfanasibili were among 12 prominent persons charged with treason and sedition in the removal of Dzeliwe. The following year 10 of them were sentenced to jail terms of three to 15 years, although in July 1988 all but Prince Mfanasibili were released. Opposition leaders continued to criticize the king and the government. As a result Mswati agreed to the first direct elections of a majority of the members of the House of Assembly in 1993. New elections were held in 1998, when candidates for the House of Assembly competed on a nonparty basis. The elections were boycotted by prodemocracy forces and labor unions, who criticized the general lack of reform and progress.

The government made half-hearted efforts at reform in the early 2000s but accomplished little. The king appointed a team to draft a new constitution, which went before the parliament in 2003, but as of 2005 the document

had still not been adopted. Meanwhile, the king's powers increased, and political opposition was silenced, as were contrary views in the media. The king has met with severe criticism for spending much of the nation's money on such items as a new jet and new houses for his many wives. His activities have been sharply juxtaposed with famine and AIDS, which have devastated much of the population.

LIST OF MODERN RULERS

1968–82	King Sobhuza II
1982–83	Queen Dzeliwe (regent)
1983–86	Queen Ntombi (regent)
1986–	King Mswati III

CONSTITUTION

Swaziland was established as an independent constitutional monarchy within the Commonwealth on September 6, 1968. The original constitution recognized the king of Swaziland as head of state and provided for an advisory bicameral parliament composed of a nominated Senate and an elected House of Assembly.

In 1973 King Sobhuza II repealed the constitution, banned all opposition political activity, and personally assumed all executive, legislative, and judiciary powers.

In October 1978 a new constitution was promulgated, although it was never formally presented to the people. The new constitution served to confirm the king's powers and set up a carefully controlled electoral system. The king exercises executive power through the prime minister and a cabinet of ministers, all of whom he appoints. The Liqoqo (the Supreme Council of State) was until May 28, 1986, a recognized segment of the executive branch. At that time it was dissolved by King Mswati III as a means to consolidate his power.

An elected bicameral parliament (Libandla) acts as the legislative branch of government. It consists of the Senate, with 10 indirectly elected members, and the House of Assembly, with 55 elected members.

The judiciary branch has a High Court, which is presided over by a chief justice. Each of the four administrative districts has subordinate courts. There is a Court of Appeals in the capital. Traditional Swazi courts exercise exclusive jurisdiction in cases of Swazi law and custom. Their jurisdiction in civil and criminal matters is limited, however, and is nonexistent for nonnationals.

The government proposed a new constitution in 2003, which was signed into law in August 2005. Some critics argued that the new constitution would make the king more powerful, while others argued that it would make him less powerful by introducing divisions. The constitution maintains a ban on political parties.

PARLIAMENT

The bicameral parliament of Swaziland is almost inconsequential. The lower house, the House of Assembly, currently has 65 members, of which 55 are directly elected and 10 are appointed. The upper body, the Senate, has 30 members, of which 10 are indirectly elected and 20 are appointed by the king. All legislators serve five-year terms.

POLITICAL PARTIES

Political parties are not permitted in Swaziland, having been banned in 1973.

LOCAL GOVERNMENT

For purposes of local government, Swaziland is divided into four districts: Hhohho, Lubombo, Manzini, Shishelweni. Each district is governed by an administrator appointed by the king. There is a parallel system of tribal government, which includes the king and his councilors; traditional chiefs ruling the nation's 55 *tinkhundia*, or tribal districts; and a system of traditional courts.

LEGAL SYSTEM

The Swazi legal system is an amalgam of South African Roman-Dutch law (as introduced by the Boers) and Swazi traditional law.

The judiciary consists of the Court of Appeals, the High Court, and various subordinate magistrates' courts. The head of state appoints members of the Court of Appeals and the High Court. The justices of the Court of Appeals all resigned in December 2002 to protest the government's refusal to abide by their rulings in two important cases. In the High Court, meanwhile, the chief justice also resigned, and the state removed two other justices.

Parallel to the modern judicial structure is a traditional structure consisting of traditional courts and 40 regional councils. The 17 traditional courts, including two lower courts of appeal and a higher court of appeal, dispense customary law. Subordinate courts are presided over by magistrates, one in each of the four administrative districts. All judges are nominated by the king.

HUMAN RIGHTS

In terms of political and civil rights, Swaziland is classified as a partly free country.

Starting in late 2002 the government interfered with the independence of the judiciary, refusing to accept rulings by the Court of Appeals and removing justices from the High Court. The king also interfered

with the workings of the parliament. Freedom of speech is not guaranteed by law, and the government has been limiting press freedom, having announced new censorship rules.

There is no organized political opposition. The concept of such opposition runs counter to traditional Swazi ideas of monarchical rule.

FOREIGN POLICY

Swaziland's foreign policy is oriented toward its immediate neighbors, South Africa and Mozambique; the nation maintains close relations with South Africa in particular as a result of not just geographic proximity but also administrative tradition and economic dependency. More than 95 percent of Swaziland's imports come from South Africa, and a substantial portion of the nation's income is derived from Swazis employed in South Africa. In 1989 South Africa formally agreed to transfer the KaNgwane homeland to Swaziland. Relations with Mozambique were strained in 1997 when Swaziland claimed Mozambique's Maputo Province.

Swaziland belongs to the United Nations, the African Union, the Common Market for Eastern and Southern Africa, and the Southern African Development Community. The nation has had good relations with the United States since 1968, receiving assistance through the U.S. Agency for International Development, Centers for Disease Control and Prevention, Peace Corps, African Development Foundation, Department of Defense, and Department of Labor. The United States has been particularly involved in efforts to slow the spread of HIV/AIDS.

DEFENSE

Swaziland's armed forces are called the Umbutfo Swaziland Defense Force, which has an army and an air wing. The defense structure is headed by the king as the commander of the Royal Defense Forces, which consist of *emabutfo* (singular: *libutfo*) regiments, which are organized according to tribal—not modern—lines. Members of the *emabutfo* serve as royal warriors, and their loyalty is to the king as a person.

ECONOMY

Swaziland is relatively prosperous for an African nation. Although an estimated 80 percent of the population works in subsistence agriculture, most households have at least one wage earner. The crown holds about 60 percent of the nation's territory in the trust of the Swazi nation, while foreigners own most of the rest of it. Foreigners run the majority of the nation's businesses, which include coal and diamond mining, sugar production, and lumber and wood pulp production. Pineapple, cotton, and citrus fruit are lucrative export crops, although soft-drink concentrate is the largest export earner. Mining has declined in importance in recent years.

The government is trying to improve the climate for foreign investment. The nation has close economic ties with South Africa, which purchases 60 percent of Swaziland's exports and supplies 95 percent of imports. Industrial firms have begun locating at an industrial estate near Manzini, where they produce garments, textiles, and other goods. Tourism brought in 256,000 visitors in 2002. On the negative side, the population has been growing too rapidly for job growth to keep up, and AIDS is becoming a major problem.

ENVIRONMENT

Swaziland's environmental problems include a limited supply of potable water, the overhunting of wildlife, and soil erosion caused in part by overgrazing. Droughts occur frequently, forcing the nation to depend on emergency food aid. The soil has become depleted from years of agriculture. Floods occasionally devastate the countryside.

Environment

LIVING CONDITIONS

The administrative capital of Mbabane is modern and has a large shopping mall and other outlets. On the whole, Swaziland has good roads and railroads. Most Swazis, however, live in rural areas in primitive conditions and are plagued by chronic poverty. Food shortages are common. Traditional rural houses are round structures made of sticks and mud.

HEALTH

HIV/AIDS is a major problem for Swaziland, and HIV has been spreading rapidly through unsafe sexual practices and promiscuity. Almost 40 percent of the population was infected with the virus in 2003, which the United Nations cited as the highest rate in the world. The nation's life expectancy has been falling because of AIDS, and by 2005 the figure was under 36 years. Fertility is not as high as in other African nations; in 2005 each woman had an average of 3.7 children. The infant mortality rate is high, at 69 deaths per 1,000 live births, and has been increasing. Malaria and schistosomiasis are common. The government does not provide much in the way of health care because it "lacks resources"—many of which are usurped by the king—and the burden of the population and disease is too great.

Health

FOOD AND NUTRITION

Acquiring adequate food is problematic for many Swazis. Frequent droughts and other difficulties associated with the growing of crops have led the country to depend on foreign food aid.

The staple food is maize, which is usually made into porridge. Most rural Swazis supplement maize porridge with vegetables and milk. People eat some meat, mostly beef, and occasionally serve porridge with meat stew. Beer is brewed locally from sorghum or maize.

Food and Nutrition

Undernourished % of total population: 19.0
 Daily Available Calories per capita kcal: 2,570
 Amount of Cereal Available per person per year kg: 114.1
 Amount of Fruits and Vegetables Available per person per year kg: 84.6

STATUS OF WOMEN

The ability of Swazi women to deal with the problems of a developing society is hampered by both legal and cultural constraints, as traditional values remain major influences on the roles of women. Since men are away from their homesteads working much of the time, women perform most agricultural tasks and have virtually all responsibility for child rearing and domestic chores. However, they are not given the authority to make crucial decisions, spend in order to acquire additional capital, or try new approaches. Women are in some cases not legally equal to men, and a married woman is virtually a minor; she is not responsible for contracts she signs, and she cannot own or inherit property under normal circumstances. She must obtain her husband's permission to borrow money, leave the country, or, often, take a job. A divorced woman has no right to the custody of her children, although she may nevertheless have to care for them with no support from the father. A small but growing number of women are beginning to participate in social, economic, and political life outside of the traditional fields of teaching, nursing, and clerical work. Women have equal access to schools and constitute about half the student body nationwide.

Women

 Seats Held in Parliament by Women %: 11
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.03
 Women's Share of Wage Employment Non-agricultural %: 31.3

WORK

About 80 percent of Swazis are subsistence farmers and live-stock herders. Cattle are among the most important symbols of wealth and status, though people are becoming increasingly willing to sell them for profit. A few people work in mining, commercial agriculture, and manufacturing, and overall the number of people working in the formal economy is increasing rapidly. Indeed, the population is growing too fast for the economy to keep up, and the unemployment rate is very high, at 34 percent in 2000. Some men go to South Africa to work in mines. Native Swazis are gradually starting to open their own businesses.

EDUCATION

Swaziland has not yet introduced universal, free, and compulsory education. Schooling lasts for 12 years, as divided into seven years of primary school, three years of middle school, and two years of secondary school. The majority of primary and secondary schools are run by missions, with grants from the government. The school year runs from January to December. The language of instruction is Siswati in the lower primary grades and English from the middle primary grades on. About 83 percent of students who finish primary school progress to secondary school, and the government is working to reduce the dropout rate. Parents must pay school fees and contribute to building funds, although the government provides free textbooks and assists destitute and orphaned children with costs.

Swaziland has one university, the University of Swaziland, with campuses in Mbabane, Luyengo, and Kwaluseni. A very small number of Swazi students continue on to higher education in foreign institutions. Most of those who study abroad go to either the United States or the United Kingdom.

SCIENCE AND TECHNOLOGY

Swaziland's communications infrastructure is relatively modern but not advanced. In 2003 there were 46,200 telephone lines and 88,000 cellular telephones in operation in the country; 27,000 people were using the Internet. Cities are the centers of technology, with Internet cafés and other modern facilities available. The University of Swaziland offers a program for teachers in information technology as part of an effort to introduce computer education in schools.

MEDIA

The state controls most of the media. Journalists are not allowed to criticize the government, and most media representatives censor content themselves to avoid getting into trouble. Swazi TV and the Swaziland Broadcasting and Information Service, which runs three radio stations, are both operated by the government. The only radio station not run by the government is the U.S.-based evangelical Christian station Trans World Radio. The main daily newspapers are the privately owned *Times of Swaziland* and the *Swazi Observer*.

CULTURE

Much of Swazi culture centers on tribal unity. People frequently congregate for celebrations and sacred ceremonies that emphasize oneness and the importance of the king. Women and men dance together wearing traditional costumes. The most important festival is Incwala, the “first fruits” ceremony, which occurs in December or January. Men make pilgrimages from the Indian Ocean to the king’s palace in Lobamba, bringing offerings of plants, river water, and ocean foam; the king concludes the ceremony by dancing in front of the people and eating a pumpkin, to symbolize the readiness of the new year’s crops. In August or September people celebrate Umhlanga, in which young unmarried women go to the queen mother’s house to perform upkeep and offer themselves as potential royal brides.

FOLKLORE AND MYTHOLOGY

Swazis still maintain oral traditions, passing stories down from one generation to the next. Grandmothers are usually the ones to tell tales in the evenings before bedtime. One famous tale is an account of how the rock rabbit failed to get its tail in refusing to attend the tail-distribution event. Folklore plays an important part in traditional ceremonies.

ENTERTAINMENT AND RECREATION

For Swazi people, entertainment often takes the form of attending traditional festivals to dance and sing. The cities have some restaurants and shopping facilities, including the Swazi Plaza in Mbabane and local markets. There are various possibilities for outdoor recreation, including horseback riding, trekking, white-water rafting, mountain biking, and wildlife safaris. The city of Lobamba has a National Museum, which includes a model of a traditional village with beehive houses.

ETIQUETTE

Swazis observe elaborate rules of etiquette around the king. When greeting the king, they keep their eyes cast

downward and clasp their right forearms with their left hands before offering their right hands to shake.

FAMILY LIFE

In many Swazi families, men leave home to work, and women function as heads of households, raising children, growing food, and making daily decisions. AIDS is transforming the shape of families, killing young adults and leaving many orphans and elders unable to care for themselves. The king is notable for his family practices; Swazi kings traditionally have multiple wives and many children. The current king has nine wives, and his father was said to have had 100 wives and 600 children.

PERSONAL APPEARANCE

Although Western clothing has become common, Swazis frequently wear traditional garb for ceremonies. The king in particular wears colorful traditional robes and animal skins. Warriors wear loincloths made of leopard skins and carry spears. Women dress in colorful sarongs, with shell rattles on their ankles.

SPORTS

Swazis play a variety of sports, including soccer, boxing, track, and volleyball. The national soccer team competes against teams from South Africa, Lesotho, and other neighboring countries. The queen mother has introduced a Special Olympics program to allow disabled people to participate in sports.

CHRONOLOGY

- 1968** Swaziland gains independence following successful talks in London.
- 1972** Nation holds first parliamentary elections; the royalist Imbokodvo National Movement wins, while the opposition gains three seats.
- 1973** King Sobhuza II declares constitution unworkable and voids it. Royal Defense Forces are reactivated.
- 1974** Royal Constitutional Commission concludes study for new constitution. Swaziland introduces new national currency, the lilangeni.
- 1976** Prince Maphevu Dlamini is named prime minister, replacing Prince Makhosini Dlamini. Swaziland establishes diplomatic relations with Mozambique.
- 1979** Prime Minister Maphevu Dlamini dies and is succeeded in office by Mabandla Dlamini.

- 1982** King Sobhuza dies. Power of head of state is transferred to Queen Mother Dzeliwe, who is named regent. In power struggle in the Liqoqo, traditionalists gain the upper hand.
- 1983** Prime Minister Prince Mabandla Dlamini, head of a liberal faction, is dismissed and replaced by the conservative Prince Bhekimpi Dlamini. Queen regent is presented with document transferring most of her power to the Liqoqo and the "authorized person." On her refusal to sign, she is ousted in favor of Ntombi, the mother of the heir apparent. Prince Gabeni, who championed the cause of Dzeliwe, is dismissed from his post as minister of home affairs. Ntombi is installed as regent.
- 1984** Prime Minister Bhekimpi Dlamini arrests the "Gang of Four," the ministers of foreign affairs and finance and the chiefs of the army and police, for plotting against the state. Prince Sozisa Dlamini, head of the Liqoqo, is dismissed. Agreement is reached with South Africa on trade representation for Swaziland at Pretoria.
- 1986** Prince Makhosetive is installed as King Mswati III.
- 1987** King Mswati III dissolves parliament in September—one year early. In November, elections are held, the government is reorganized, and a treason trial involving 12 former leaders begins. Princes Mfanasibili and Bhekimpi Dlamini are among those tried.
- 1988** In March, 10 of the accused are found guilty and sentenced to prison terms. In July, all except Prince Mfanasibili are freed. Prince Mfanasibili is sentenced to an additional six-year prison term.
- 1989** Four workers are injured by police gunfire during a riot over pay at the Havelock asbestos mine.
- 1990** Police seize a large arms cache in Manzini, arresting two South Africans and one Swazi.
- 1993** A majority of the House of Assembly is directly elected for the first time.
- 1995** The National Assembly and the homes of the deputy prime minister and the vice chancellor of the University of Swaziland are burned in student riots.
- 1996** Sibusiso Barnabas Dlamini is appointed prime minister.
- 1997** The heads of Mozambique and South Africa hold talks with the king on further democratization in Swaziland.
- 1998** Opposition groups boycott elections to the House of Assembly, protesting lack of reform progress.
- 2001** In an effort to stop the spread of AIDS, the king forbids men to sleep with teenage girls for the next five years. The king appoints a team to draft a new constitution.
- 2002** People starve after a drought harms crops. The United Nations sends food aid. King Mswati buys a \$45 million jet.
- 2003** Prodemocracy activist Obed Dlamini wins a seat in parliament in the general elections.
- 2004** Drought continues, and the prime minister declares a humanitarian crisis. Swaziland records the world's highest rate of HIV infection. The king plans to build new homes for some of his wives.
- 2005** King Mswati signs a new constitution.

SWEDEN

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Sweden (Konungariket Sverige)

ABBREVIATION

SE

CAPITAL

Stockholm

HEAD OF STATE

King Carl XVI Gustaf (from 1973)

HEAD OF GOVERNMENT

Prime Minister Göran Persson (from 1996)

NATURE OF GOVERNMENT

Parliamentary democracy, constitutional monarchy

POPULATION

9,001,774 (2005)

AREA

449,964 sq km (173,731 sq mi)

MAJOR ETHNIC GROUPS

Swedes, Finns, Sami

LANGUAGES

Swedish (national), Romani, Yiddish, Finnish, Sami, Meänkieli

RELIGIONS

Church of Sweden, Roman Catholicism, Pentecostalism

UNIT OF CURRENCY

Krona

NATIONAL FLAG

A yellow cross with an extended right horizontal on a blue field

NATIONAL EMBLEM

A main shield quartered by a gold cross whose arms taper toward the center. Panels alternately display three jeweled gold crowns on blue and a gold, crowned lion on diagonal blue and silver stripes, the emblem of the Folkung dynasty. A small heart shield superimposed at the center of the cross combines the symbols of the Vasa dynasty and the ruling Bernadottes; the charges include a gold urn displayed against a silver band on a red field, a gold eagle on a blue field with silver stars, and a silver twin-turreted castle on a blue background. Gold, crowned lions flank the main shield, which is topped by a royal crown and encircled by the cherub-decorated collar of the Order of the Seraphim, its medal suspended below. Red bunting and another royal crown appear above the entire motif.

NATIONAL ANTHEM

“Du Gamla, Du Fria” (Thou Ancient, Thou Free)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (May Day), June 6 (Flag Day), Saturday falling between June 20 and 26 (Midsummer Day), all major Christian festivals

DATE OF INDEPENDENCE

June 6, 1523

DATE OF CONSTITUTION

January 1, 1975

GEOGRAPHICAL FEATURES

Located in northern Europe, Sweden is the largest of the Scandinavian nations. It is also one of Europe’s northernmost nations, with some 15 percent of its territory within the arctic circle. Its total area is 449,964 sq km (173,731 sq mi); of this, some 411,406 sq km (158,844 sq mi) are land, and 38,558 sq km (14,887 sq mi) are water. Sweden has some 96,000 lakes and 3,218 km (2,000 mi) of coastline. There are also a number of islands; the two largest are Gotland, with a coastline of 400 km (249 mi), and Öland,

with a coastline of 72 km (45 mi). The nation is bordered on the north and northeast by Finland; on the east by the Gulf of Bothnia; on the southwest by the Baltic Sea; on the southeast by the Øresund, the Kattegat, and the Skagerrak; and on the west by Norway. One of the most significant geographic features of the nation is its length. While the nation extends only 499 km (310 mi) from east to west, it stretches 1,574 km (984 mi) from north to south. The nation has no outstanding border disputes.

Stockholm is the capital, with a population 1.87 million when including suburbs; the city is located on an in-

Sweden

let of the Baltic Sea. The second- and third-largest cities are Göteborg and Malmö, respectively. There are nine other cities with populations of over 100,000.

Sweden has many geographic features similar to those of its sister state of Norway, but the land is lower and less dissected; the terrain is mostly flat or dominated by rolling lowlands, although there are major mountains in the west, along the Norwegian border. There are four major topographical divisions. The broad Baltic slopes from the lower reaches of the Dal River northward are known as Norrland. This region constitutes three-fifths of the country and consists of rolling landscapes of hills and mountains. Many of the nation's main resources, including iron and other ores, are located in Norrland. The second region is central Sweden, which is a shatter zone of lakes and plains. This area is faulted with pronounced depressions. The wooden highlands region of Småland in the south is the third region. The fourth region is in the southernmost part of the nation and is known as Scania, a continuation of the fertile plains of Denmark and northern Germany.

The border between Norway and Sweden is demarcated by the Scandinavian mountain range, which has peaks that rise some 1,000 to 2,000 m (3,000 to 7,000 ft) above sea level. The nation's main rivers originate from these peaks. The highest point in Sweden is Kebnekaise, at 2,111 m (6,924 ft), in the western highlands of Norrland. Much of the Swedish landscape is dominated by coniferous forests, which are blended in southern Sweden with such deciduous trees as birch and aspen. Several major rivers in the Norrland region bisect the country from the Norwegian frontier to the Gulf of Bothnia; these include the Gotä, Dal, Angerman, Ume, and Lule. Ice fields dominate the north. Since the Ice Age the land in northern and central Sweden has been rising, in some places up to 0.9 m (3 ft) per century.

CLIMATE AND WEATHER

Swedish weather is affected by both the Arctic zone and the Atlantic zone, the latter with its warm Gulf Stream. Because of Gulf Stream influences, the nation enjoys a more favorable climate than its northern location might otherwise suggest. Stockholm's temperatures average -3°C (26°F) in February and 18°C (63°F) in July. There is wide climatic divergence between northern Norrland and southern Sweden. Most of Norrland has a winter of seven months and a summer of less than three, while Scania, in the south, has a winter of two months and a summer of more than four. Even the short northern summers are marked by relatively high temperatures.

Annual rainfall is heaviest, at 580 mm (23 in), in the southwest and along the border with Norway, while the average for Lapland is only 300 mm (12 in). The maximum rainfall occurs in the late summer, the minimum in early spring. There is considerable snowfall in the north, where snow remains on the ground for half the year, such that most ports on the Gulf of Bothnia remain snow-bound throughout the winter.

Lapland: 12 in

Stockholm: 22.4 in

FLORA AND FAUNA

The northern 60 percent of the country is covered with forests of fir, birch, and pine. Farther south, forests contain deciduous trees such as maple, beech, and oak underpinned with berry bushes and mushrooms. The arctic areas support a few birch and willow trees and mosses and lichens.

Sweden is home to many species of large mammals, including moose, deer, fox, lynx, and brown bear. There are a few wolverines left, but they have become endangered as a consequence of their habit of preying on livestock. There are various species of birds, such as woodpeckers and kingfishers. Salmon and trout populate the streams and rivers.

ETHNIC COMPOSITION

Until the end of World War II, Sweden was a very homogeneous nation. Almost the entire population was ethnically Swedish, with two major exceptions: the Finnish-speaking people of the northeast and the Sami, also referred to as Lapps. However, in the postwar period Sweden has acquired some one million aliens from various ethnic groups.

This alien population constitutes some 12 percent of the total population. Of the resident aliens, or first-generation immigrants, the overwhelming majority are from EU nations. Finns make up the largest single group, as followed by Danes, Norwegians, and Germans. The need for workers has prompted the immigration of large numbers of Yugoslavs, Turks, and Greeks.

The largest non-Swedish indigenous ethnic group is the Sami. This group has inhabited Sweden since pre-Christian times. The area of Sami settlement extends over the entire Scandinavian arctic region, stretching over the mountain districts on both sides of the Swedish-Norwegian border. The Sami remain agricultural, with many dependent on reindeer breeding. The total Sami population is estimated to be 85,000, of whom 17,000 live in Sweden.

LANGUAGES

The national language is Swedish, a North German branch of the Germanic languages and the Nordic language with the largest number of speakers. Swedish is also the second official language of Finland, where it is spoken by about 300,000 ethnic Swedes. English is required as a second language in all schools and is widely spoken throughout the nation.

The language of the Sami belongs to the Finno-Ugric group.

RELIGIONS

Christianity was introduced into Sweden in the 10th century by English missionaries. Although there is no official religion, the nation is overwhelmingly Christian, with some 98 percent of the population belonging to some branch of the faith. The Reformation swept through Sweden in the 1500s, and the Lutheran Church became the dominant denomination. Evangelical Lutheranism, under the auspices of the Church of Sweden, is practiced by 87 percent of the population. Under a 1995 law the church and government became separate in 2000, although the state still provides some monetary support.

In addition to the main Lutheran church, there are a number of other denominations. Roman Catholics constitute some 1.5 percent of the population. There is also a small, but growing, Pentecostal movement that makes up some 1 percent of the population. With the influx of Turks and Muslims from the former Yugoslavia, there is a small Islamic community. There is also a small Jewish community.

Religious Affiliations

Lutheran	7,830,000
Other	1,170,000

HISTORICAL BACKGROUND

The earliest humans in Sweden probably crossed into the country via a land bridge from Denmark. During the Iron Age the area remained dominated by Denmark, and cattle and stock raising became increasingly important. Beginning around 500 C.E. the Sami population was driven north by Germanic expansion. Central and southern Sweden came to be ruled by a Germanic people known as the Svear. From 800 to 1050 the region was dominated by the Vikings. The Svea kingdom established a capital in Gamla, in Uppsala, and developed regular trade with Russia.

In 829 the German bishop Ansgar introduced Christianity into Sweden. However, pagans rebelled against the new religion and exiled him from Svealand. Sweden was united into a single kingdom dominated by Svealand, with Skara an autonomous province and with an elected king. In 1250 Stockholm became the capital of the kingdom. During the 12th and 13th centuries Swedes engaged in a series of crusades, spreading Christianity to present-day Finland.

Norway and Sweden were joined in 1319 under the infant king Magnus VII, but Waldemar IV, the king of Denmark, overran the southern part of Sweden. By the 1397 Union of Kalmar all of Scandinavia was united under the Danish throne. Sweden resisted the union, and after a century of conflict the state elected Gustavus Vasa

(Gustaf I) to the throne. Gustavus laid the foundations for the modern Swedish state by establishing a hereditary monarchy, making Lutheranism the state religion, and creating a modern army and navy. His successors expanded the empire by incorporating Estonia and parts of eastern Europe. The reign of Gustavus Adolphus (1611–32) is considered the golden age of Sweden. The nation rose to become one of the great powers of the day. Gustavus Adolphus created one of the first modern European armies and one of the first modern governmental administrations. His intervention in the Thirty Years' War assured the survival of Protestantism. Following his reign, Sweden was the hegemonic power in the Baltic region. Through the Peace of Bromsebro, Sweden regained the Danish-controlled areas of southern Sweden, and through the Treaty of Westphalia (1648) Sweden gained Pomerania and Bremen.

The reign of Charles XII, "the Great," marked the end of the Swedish ascent, as the monarch's military exploits drained the limited resources of the nation. Following a series of wars against a coalition of Russia, Denmark, Poland, and Saxony, Sweden was left exhausted. The 1721 Peace of Nystad reduced the country to a second-rate power. Russia regained Livonia, Estonia, and areas of Finland; Russia gained other Finnish areas in 1743 and the whole nation in 1809, following the War of Finland. In reaction to perceived abuses of power, the monarchy became an essentially ceremonial position in 1756. In 1772, however, Gustav III initiated a coup to restore the power of the monarchy, and in 1789 he managed to abolish the state council and restore absolutism.

Throughout the 18th century the kingdom was torn by internal dissent between the pro-French faction (the Hats) and the pro-Russian faction (the Caps). From 1751 to 1814 the throne was occupied by the House of Oldenburg-Holstein-Gottorp, although in 1809 a new constitution ended the autocracy. In 1810 one of Napoleon's marshals, Jean-Baptiste Jules Bernadotte (1764–1844), gained the throne. In 1814 Bernadotte brought his adopted nation over to the side of the Allies, against Napoleon. This marked the last full-scale war fought by Sweden. In 1818 Bernadotte adopted the title Carl XIV Johan. From 1814 to 1905 Sweden and Norway were united under one crown.

In the 19th century Sweden laid the foundations of its modern liberal democracy, which would be dominated by the Social Democratic Party (SDP). In 1842 public education was established. In 1845 property rights were extended to women, and parliament was reformed in 1866. Although Sweden had established some minor colonies in the 1700s, the nation remained aloof from the European scramble for colonies during the height of imperialistic expansion in the 1800s. Sweden also remained neutral during the conflicts of the 1800s and the two world wars. When Prussia attacked Denmark

in 1864, parliament refused to back the monarch's call to support their Nordic neighbor. From 1873 to 1914 Sweden, Denmark, and Norway were joined in a postal and monetary union.

Domestic reforms dominated Swedish politics through the 1920s and 1930s. Women were granted the right to vote in 1921, and the death penalty was abolished. In time, the eight-hour work day and mandatory two-week paid vacations were introduced, and a national pension plan was established. Sweden remained neutral during World War II but was criticized for trading with Germany during the conflict.

In 1949 parliament passed a new Freedom of the Press Act, greatly expanding media freedoms. The following year King Gustav V died, after a nearly 50-year reign; he was succeeded by Gustav VI Adolf. Reforms in the nation continued in 1951, as religious laws were relaxed, members of the church were allowed to resign, and other basic religious freedoms came into being. Six years later women were allowed to be ordained for the first time.

In 1971 the Riksdag, the Swedish parliament, became a unicameral body. King Gustav VI Adolf died in 1973 and was succeeded by his grandson Carl XVI Gustav. The next year the Riksdag passed the new Instrument of Government, which withdrew the main political powers of the monarchy—including the right to form the cabinet. Throughout the 1970s Sweden was one of the most socially progressive nations in western Europe. In 1976 ethnic minority groups were granted special rights to maintain their own languages and cultures, and in 1979 a referendum banned the use of nuclear energy.

Swedish politics were marred by the assassination of Prime Minister Olof Palme by an unknown assailant in 1986. That year the nation also faced contamination from the nuclear accident in the Ukraine, which led to the government-mandated slaughter of reindeer and restrictions on the consumption of various plants and foodstuffs.

In 1994 a national referendum supported Swedish entry into the European Union, and in 1995 Sweden gained EU membership. In 2000 the Riksdag voted to eventually hold a national referendum to put the choice of adoption of the euro to the public.

Göran Persson, of the Social Democratic Party, was elected to a third consecutive term as prime minister in 2002. He organized a minority government supported by the Greens and the Left Party. His foreign minister, Anna Lindh, strongly supported the adoption of the euro as Sweden's currency, despite rampant opposition. She was murdered in September 2003, just before the referendum vote on the issue. In the referendum, a large majority voted against adopting the single European currency; as of 2005 Sweden was one of three EU member states not using the euro.

LIST OF MODERN RULERS

1991–94	Carl Bildt
1994–96	Ingvar Carlsson
1996–	Göran Persson

CONSTITUTION

Sweden is a constitutional monarchy, although the powers of the king are largely ceremonial. The power to govern rests with the prime minister and cabinet, who are dependent on the support of a unicameral legislature known as the Riksdag. The constitution is based on the theory of the separation of powers, but contemporary practice reflects more of a fusion of powers. The cabinet has influence over the Riksdag but is not as powerful as its counterparts in other European states. The Riksdag has considerable autonomy. The judiciary is independent, but there is no tradition of judicial review. The governmental administration is semiautonomous and is not subject to detailed and direct control by the ministry.

Although there is no explicit bill of rights, there is great concern for due process, and the rights of Swedish citizens are clearly implicit in many legal provisions.

At 100 pages, the constitution is quite lengthy. It is highly specific, covering many laws that are dealt with in ordinary statutes in most other nations. The constitution can be easily amended, either formally or informally, and this has been done more than 300 times. There are four separate documents: the Instrument of Government, which was passed in 1974 as based on similar documents adopted in 1634, 1720, 1772, and 1809; the Riksdag Act of 1974, which updated the 1866 act; the Act of Succession of 1810, amended in 1979, which is the shortest of the four documents and details the line of succession; and the Freedom of the Press Act, which was first passed in 1766 and has been amended several times, most recently in 1949.

The current monarch is Carl XVI Gustav, who came to power in 1973. The Act of Succession makes the monarchy hereditary. The heir apparent is the firstborn child, whether male or female. The present heir is Princess Victoria Ingrid Alice Désirée Bernadotte. The monarch holds little significant political power but is the ceremonial

head of the nation. Real power rests with the prime minister and the cabinet. Cabinet ministers are usually members of parliament. Governmental functions are carried out by 13 ministries, or departments, and 200 agencies, many of which are semiautonomous and report directly to the prime minister. The major check on governmental power is the Parliamentary Standing Committee, which annually inspects governmental programs to ensure constitutional compliance. Established in 1809, the office of the ombudsman serves as a check on public administration and guards against unresponsiveness to the interests of the general public.

Suffrage is universal for those citizens over the age of 18. In addition, resident aliens may vote if they have resided in Sweden for at least three years.

PARLIAMENT

Since 1971 Sweden has had a unicameral legislature known as the Riksdag. The bicameral system was abolished by constitutional amendment in 1969. In the Riksdag there are 349 deputies who serve four-year terms. Representation is based on the performance of parties in proportional elections, in which the parties must gain at least 4 percent of the vote to be represented. Single-member districts account for 310 of the seats, with the remaining 39 seats split among the parties with the largest numbers of surplus votes. The Riksdag meets annually in two sessions, one in spring and one in autumn.

The majority of legislative work is done through a system of standing committees.

The parliament elects the prime minister and may propose votes of censure against members of the government. This can lead to the resignation of the individual member or of the entire government.

POLITICAL PARTIES

Sweden has historically had a two-party system, with the moderates and conservatives forming one bloc and the socialists and Communists the other. The two groups are essentially evenly matched. The Social Democratic Party (SDP) is the largest single party in Sweden and has dominated Swedish politics for most of the century. While the SDP has collaborated with the Communists, its ideology is based less on Marxism and more on traditional liberal economic theories such as those espoused by John Kenneth Galbraith and Gunnar Myrdal. Women are broadly represented in the Riksdag, holding some 45 percent of seats in 2005.

Other parties that won seats in the 2002 elections are as follows: the center-left Center Party, formerly the Agrarian Party, which is the main coalition partner with the SDP; the moderate, center-right Christian Demo-

cratic Party; the environmental Green Party; the Left Party, formerly the Communist Party; the moderate/conservative Liberal Party, the main rival to the SDP; and the conservative Moderate Party, which has promoted economic liberalization and entry into the European Union and other Western institutions. There are also a number of minor or regional parties that lack parliamentary representation.

LOCAL GOVERNMENT

There are three basic forms of local government. The largest units are counties, which are led by elected governors. There are 21 counties, and the independent cities of Stockholm, Göteborg, and Malmö each have the same status as a county. While governors serve as representatives of the national government, county councils (*landsting*) operate in an autonomous manner and are primarily concerned with local issues. The next unit of local government is the municipality, of which there are 289 of various types; these are divided into cities, rural communes, market boroughs, and historical municipalities. The Church of Sweden's parishes form a third unit of local government. These parishes coexist within the other two forms of local governance.

The basic powers of the local governments are outlined in the 1977 Local Government Act. Local governments have the right to conduct their own affairs in almost complete autonomy, provided that their actions do not conflict with any national law or encroach upon the jurisdiction of other governments. Governments are funded mainly by local taxes and by subsidies from the national government. Localities employ some one million employees and oversee public education, social welfare policies, public health care, care for the elderly, public transportation, and fire services.

LEGAL SYSTEM

The nation's legal system is based on civil law, although it is influenced by customary law. Sweden accepts compulsory jurisdiction from the International Court of Justice, with some reservations. Civil and criminal law are based on the National Law Code of 1734, which has been heavily amended. Swedish law does not have the large body of codification that the French and German models do and relies less on case law than do the American or British systems. Hence, the system occupies a position midway between the continental European and Anglo-American systems.

Sweden has a three-tiered hierarchy of courts, comprising district courts, intermediate courts of appeal, and the Supreme Court. There are 100 district courts, each presided over by a single professional judge who is often

assisted by a panel of lay assessors. There are six courts of appeal. Approximately 10 percent of district-court cases are appealed to the intermediate courts, which are presided over by three to four judges. The Supreme Court is the highest legal body in the nation. Therein, a special panel of three justices determines whether or not to hear cases. If accepted, cases are then brought before the full bench of five justices.

There are also a number of special courts in Sweden. These include the administrative courts and the Supreme Administrative Court, the Labor Court, the Insurance Court, and the Supreme Rent Court. The number of attorneys per capita is low in Sweden as compared with other industrialized nations. Publicly funded law offices exist in each county. The death penalty is forbidden by the constitution.

HUMAN RIGHTS

Respect for human rights is a basic value within Sweden's social and political system. Swedes enjoy all civil liberties, including the freedoms of speech and press, peaceful assembly and association, religion, and movement. Ombudsmen serve as official government monitors of individual rights. As in other Nordic countries, women enjoy full equality with men in public life, and their rights in the workplace are protected by the equality ombudsman.

Some human rights organizations, such as the Swedish section of Amnesty International, have complained of violations, particularly with respect to refugees seeking asylum who are denied entry at the border. There are some charges that policemen use excessive force in making arrests. Persons considered to be dangerous may be held for up to six hours without charges. The time between arrest and arraignment before a magistrate is set at a maximum of five days. Bail does not exist, but suspects who are not considered to be dangerous or likely to flee may be released until their trial date. Public defenders are available for cases where the accused may face six months or more of prison. There has been a dramatic increase in the use of electronic surveillance equipment, including wiretaps, in recent years.

Of particular concern are the rights of the Sami and occasional accusations of racism. In 1985 the UN Human Rights Commission commented that Sweden lacked forceful legislation against racism. In response, in 1986 the nation appointed a special ombudsman to monitor racism and discrimination.

FOREIGN POLICY

The main components of Swedish foreign policy are a strong defense, as backed up by self-sufficiency in military equipment and strategic supplies; support for multilateral

disarmament, a comprehensive nuclear weapons freeze, and the strengthening of the Nuclear Non-Proliferation Treaty; respect for human rights and self-determination movements; specific support for the Palestinians; support for sustainable economic development in less-developed nations and a new international economic order; and the promotion of Nordic cooperation and unity.

The keystone of Swedish foreign policy is neutrality, with the nation officially defined as “alliance-free in peace and noninvolved in war.” Though Sweden’s policy of neutrality is not codified, successive governments have constantly reaffirmed it and refused to form alliances that could lead to war. Sweden avoided involvement in both world wars and, overall, has sidestepped entanglements in foreign alliances since 1814. Since the end of the Napoleonic Wars the nation has maintained a realistic international role as a minor power, in keeping with its resources, and has devoted its energies to internal development. Sweden initially chose not to join the European Economic Community, despite the considerable advantages that membership would have brought.

Sweden does not equate neutrality with isolationism. In 1946 it joined the United Nations, and Swedish troops have participated in more UN peacekeeping missions than forces from any other nation. The nation joined the European Union in 1995 (though not without misgivings) and belongs to the Partnership for Peace, which operates under the auspices of the North Atlantic Treaty Organisation (NATO). Sweden has been a staunch promoter of Nordic integration. It was one of the founding members of the Nordic Council and has supported regional economic integration.

DEFENSE

Authority over security matters is jointly exercised by the king and the Riksdag, although actual constitutional control is vested in the parliament’s Permanent Defense Committee. The prime minister serves as chairman of the National Defense Council as the supreme commander. Policy decisions are executed by the Total Defense Staff Committee on the civilian side and by the supreme commander on the military side. Sweden is divided into three military command areas, with each headed jointly by a commanding general and a civilian commissioner. The National Board of Economic Defense coordinates efforts to maintain self-sufficiency in military equipment and to stockpile arms. It also promotes the Swedish arms industry.

All male citizens must perform compulsory military service upon reaching the age of 19. The length of service ranges from seven to 17 months, depending on branch and position. After leaving full-time service, men remain members of the reserves until age 47. Two years after leaving service, reserve members receive refresher training.

The Swedish army has not seen combat since 1814, although military units have served in a variety of UN peacekeeping missions. In 1999 Sweden had troops serving in 11 different UN missions. Sweden receives no foreign military aid, and there are no foreign military bases on the nation’s soil. Sweden softened its neutrality in joining NATO’s Partnership for Peace program and becoming an associate member of the defense-oriented Western European Union.

ECONOMY

As a result of the nation’s neutrality, Sweden avoided the economic hardships brought on by the two world wars and the cold war and has maintained one of the highest standards of living in the world. While one of the most socialist nations in Europe, Sweden has effectively utilized the free market to uphold a sound economy. Despite the mixed economy and heavy tax burden, 90 percent of businesses are privately owned.

The nation has a highly skilled and mobile workforce and a modern, high-tech infrastructure. Increasingly high unemployment and inflation clouded the otherwise strong economy at the end of the 20th century, but the nation joined the European Union in 1995 and has reaped the economic benefits of membership. The government has been committed to fiscal discipline, which resulted in a budget surplus in 2001, although that surplus fell precipitously during the economic downturn of 2002. Growth was slow in 2003.

Agriculture accounts for only about 2 percent of the economy, while services account for 69 percent and manufacturing 29 percent. Sweden’s major industries are iron and steel production, the manufacture of precision equipment, automobiles, military equipment, and wood-pulp and paper products. The nation’s main exports are machinery, motor vehicles, paper products, wood and paper, iron and steel, and chemicals; its main imports are machinery, petroleum, chemicals, motor vehicles, foodstuffs, and clothing. Sweden’s most significant trading partners are Germany, the United Kingdom, Denmark, France, Norway, Finland, the Netherlands, Belgium, and the United States.

Sweden’s government has tried to persuade the populace to adopt the euro as the national currency, but many people are concerned about the effect this would have on

2258 Sweden

national sovereignty. In a 2003 referendum on the matter, a large majority rejected the proposed adoption of the continentwide currency.

ENVIRONMENT

Sweden has long been at the forefront of environmental awareness and was one of the first European nations to develop a national park system to protect wilderness, establishing its first parks in 1910. Efforts to curb auto emissions and industrial discharge have been very successful, such that over half of all air pollution is a result of foreign emissions crossing into Swedish territory.

In 1999 Sweden adopted a new environmental code. This act replaced 15 different environmental laws with a single, comprehensive law that set concrete goals for the following 20 to 25 years. The legislation aims to cut pollution, encourage recycling and the use of low-energy resources, and preserve biologically diverse resources and areas.

The Green Party, which is popular with young people, supports a variety of environmental agendas, such as the elimination of nuclear energy and the introduction of environmentally friendly energy sources. The Greens oppose EU membership because they believe it detracts from Sweden's environmental autonomy. Since joining the European Union, Sweden, alongside Austria and Finland, has worked to strengthen EU environmental policy.

In addition to internal issues, Sweden has assumed a leading role in global environmental issues, working

within the framework of both regional and global institutions on environmental policy. The 1992 Rio Conference on Environment and Development was the result of a Swedish initiative. The nation has endeavored to use the Convention on Transboundary Air Pollution to combat regional acid rain.

The main environmental concerns in Sweden center around the damage to groundwater and soil produced by acid rain, as primarily caused by pollution from industrial plants and coal-burning energy plants. The reduction of pollution of the waters of the North and Baltic seas is also a major priority.

LIVING CONDITIONS

Sweden has a very high standard of living, with many services provided by the state. Consequently, the cost of living is fairly high. Housing is comfortable and modern. Most people live in apartment buildings that include gardens and playgrounds. Families take long summer vacations. The state provides day care for small children. A wide variety of foodstuffs and consumer goods is available. Roads are of high quality. There is an efficient public transportation system.

HEALTH

Sweden has one of the highest life expectancies in the world, at over 80 years in 2004. The nation has an infant mortality rate below three deaths per 1,000 live births. Fertility is low; in 2005 each woman had 1.66 children on average. The national health service covers all residents; individual counties and municipalities handle the details of delivering health care to their respective residents. Patients pay small fees to see doctors or receive prescriptions. Dental care is free for those under 19 and subsidized for everyone else. Children can receive free eye examinations and subsidized corrective lenses. The state provides allowances to people who must stay home due either to their own illness or to that of a family member.

FOOD AND NUTRITION

Swedes eat a great deal of fish and potatoes. Fish may be smoked, pickled, or cooked. Also eaten are yogurt and soft cheeses, hot and cold cereals, crisp breads, pancakes, and eggs. Meat features heavily in the Swedish diet; popular forms include meatballs, cold smoked ham and reindeer, roasted meat, hot dogs, and sausages. The smorgasbord is a buffet of assorted hot and cold foods. Swedes drink coffee with every meal. Aquavit, a spirit made from potatoes, is a popular drink on festive occasions.

 Amount of Fruits and Vegetables Available per person per year kg: 186.5

STATUS OF WOMEN

Women in Sweden have the same legal protections as men, and Swedish society has made great strides toward gender equality. Some 45 percent of parliamentary seats are held by women, and service by women in all levels of government is common; half of the members of the government are female. Likewise, almost half of the workforce is female, and efforts have been undertaken to erase workplace inequality. In 1980 legislation was passed against discrimination in the workplace on the basis of sex. In 1995 court cases upheld the principle of equal pay for equal work. In addition, the National Labor Market Board offers programs specifically geared toward worker training and retraining for women. The Labor Ministry operates programs to educate employers about sexual harassment and encourage businesses to intervene in such cases, lest they be forced to pay damages to victims. There is also a national officer, the equality ombudsman, who investigates gender discrimination cases.

Since 1994 the government has provided electric alarms and bodyguards for victims of domestic abuse, and

both the national and local governments fund shelters for abused women. The Ministry of Foreign Affairs has granted funds to international organizations to fight trafficking in women.

When a child is born, its parents are entitled to a full year of paid leave, which they can divide between them. Both sexes may work three-quarters time for reduced pay if they have children under the age of eight. In the home, Swedish women still do more housework and child care than men, though men help.

WORK

Most Swedes work in services, although some are employed in manufacturing. The nation produces cars, steel, weapons, furniture, and various other products for export. The unemployment rate was less than 6 percent in 2004. The Swedish workweek is limited to 35 or 40 hours, and all workers are guaranteed five weeks' paid vacation. All people receive extensive welfare benefits at all stages of employment, along with a pension upon retirement. Such provisions do not come cheap; Swedes pay some of the highest taxes in the world. Women participate in all areas of the workforce. The Sami people of the north still live by herding reindeer and fishing, though their ability to do so has been limited by deforestation and the law.

EDUCATION

Sweden has a long and rich educational tradition. The first university in Sweden was founded in Uppsala in 1477; this was also the first university in the Nordic countries. The first grammar schools were established soon after the Reformation, in 1571. By the 17th century the major secondary academic institution, the gymnasium, was in place.

Unlike many European nations, Sweden chose to break down the distinction between the college preparatory school (the gymnasium) and the vocational school. Preschool education is common, and primary school is divided into three levels, each of which is three years in duration: junior, intermediate, and senior. Courses in English as a second language are compulsory from grade three or four onward. There are nationalized tests, and Sweden has one of the lowest pupil-teacher ratios in the world, with 11 pupils per teacher at the secondary level.

Private schools account for only about 2 percent of the student population.

The higher education system in Sweden encompasses not only traditional universities but also business, professional, and technical schools. The Higher Education Act of 1977 reorganized higher education into five broad areas, including technology, administration and economics, medicine and health, teaching, and culture and information. All 50 institutions of higher education in Sweden are regulated by the National Board of Universities and Colleges. All institutions are state run, and employees are granted civil-servant status.

The cost of early education is split between municipalities and the national government. Postsecondary students receive state subsidies, regardless of income, which include both grants and no-interest loans. Higher education is financed entirely by the central government through block grants.

SCIENCE AND TECHNOLOGY

Sweden is very advanced in the sciences and technology. Swedish scientists and engineers have produced many advances in computer technology, telecommunications, industrial processes, and electricity. Dynamite was invented

by Alfred Nobel, the founder of the Nobel Prize. The Swedish government spends large amounts of money on medical research. The telecommunications infrastructure is excellent for both domestic and international purposes. Use of the Internet is widespread.

MEDIA

Swedes are among the most avid readers in the world. Some 90 daily newspapers are published in the nation, along with many weekly and monthly publications. Most Swedish households read at least one daily newspaper. Press ownership is diverse and falls into three categories: private, foundation, and organizational. The government provides subsidies to all newspapers.

Most television and radio broadcasting was once public, but many private stations have appeared since the mid-1990s. Two-thirds of Swedish households have cable or satellite television services. The nation is in the process of converting all television broadcasts to digital and plans to finish by 2008. Commercial radio was legalized in 1993, and there are now nearly 100 private stations, many of them consolidations of multiple regional stations.

The nation has a unique perspective on the press, which is considered to be a public utility. All disputes between labor and management are subject to arbitration in order to avoid interruptions. Sweden was the first nation in the world to establish the principle of freedom of the press. In 1766 the parliament adopted the Freedom of the Press Act as part of the constitution, and new regulations have been put in place to account for broadcast media. One of the main principles of Swedish press law is unlimited access to public documents. This gives all citizens, even aliens, the right to obtain documents from a state agency regardless of whether the documents concern him or her personally.

State support for the press is both direct and indirect. The government exempts the press from some corporate taxes and the national sales tax. The government also provides loans and subsidies for both print and broadcast media. Subsidies are administered by the Press Subsidies Board.

CULTURE

Sweden has produced numerous authors, including August Strindberg, Pär Fabian Lagerkvist, Vilhelm Moberg, and Astrid Lindgren, the creator of Pippi Longstocking. The Swedish film industry has been known for its innovation since the 1920s; famous film personalities have included Ingrid Bergman, Ingmar Bergman, and Greta Garbo. The government subsidizes cultural events and activities such as opera, theater, art exhibits, and the restoration of historic buildings. Artistic products include ceramics, glass, textiles, and functionalist furniture. Many Swedes like music and participate in choirs and instrumental ensembles. Swedish rock groups such as ABBA and Ace of Base have had their moments of international fame.

FOLKLORE AND MYTHOLOGY

In ancient times, people in what is now Sweden believed in the Norse gods, who included Odin, Thor, Frigga, Freya, and the trickster Loki. People told stories about the deities' adventures with one another and with giants, dwarfs, and various monsters.

The Swedish state supports the preservation of folk traditions and crafts, and the country has hundreds of folk dancing clubs. Folk music is traditionally performed on harps, violins, dulcimers, zithers, and concertinas.

ENTERTAINMENT AND RECREATION

Sweden offers a variety of entertainment possibilities, including bars, restaurants, discos, shopping, museums, and cultural activities. The country has numerous medieval

ruins, which are popular sites for visits. Hiking and camping in national parks are popular summer activities. A law gives hikers the right to walk, camp, or swim on private property as long as they do no damage. People also enjoy sailing, kayaking, white-water rafting, canoeing, hunting, and fishing.

ETIQUETTE

Swedish society is very egalitarian. Swedes typically address one another by first name. There is usually no obvious social hierarchy, and most decisions are made by consensus. People speak directly to one another and do not usually touch while talking. When shaking hands, it is appropriate to remove gloves first. Punctuality is extremely important, and lateness is considered rude.

FAMILY LIFE

Swedes are marrying less and less, choosing instead to cohabit outside of wedlock; about half of all children are born to parents who are not married. The law guarantees common-law couples almost all the rights accorded to married ones, so there is little legal incentive to marry. Most families have only one or two children. Families with children tend to socialize with one another. Large numbers of Swedes, particularly older women, live alone.

PERSONAL APPEARANCE

Swedish people usually dress well and conservatively, avoiding flashy clothing or anything else that might make them stand apart from everyone else.

SPORTS

Swedes love skiing, both downhill and cross country. They also like ice skating, ice hockey, and ice fishing. They sometimes play a sport called bandy, which is similar to ice hockey. In the summer, they go cycling, hiking, and play soccer and other sports. Orienteering is popular; in July, thousands of people compete in a national orienteering competition called the O-Ringen. Tennis has gained in popularity since the 1970s, when Björn Borg began winning Wimbledon. Most Swedes belong to health or sports clubs.

CHRONOLOGY

1939 Through 1945, Sweden remains neutral during World War II.

- 1949** The Riksdag passes the new Freedom of Press Act.
- 1950** King Gustav V dies after a reign of nearly half a century; Gustav VI Adolf ascends the throne.
- 1951** Members of the Church of Sweden are allowed to resign from church; basic religious freedom are established.
- 1958** Women are allowed to be ordained in the Church of Sweden.
- 1971** The Riksdag becomes unicameral.
- 1973** King Gustav VI Adolf dies, and his grandson Carl XVI Gustav ascends the throne.
- 1974** The Riksdag passes the new Instrument of Government and the Riksdag Act; the king loses political influence, including the right to form the cabinet.
- 1976** Ethnic minority groups are given special constitutional rights to maintain their own languages, cultures, and traditions.
- 1979** A referendum is passed banning nuclear energy.
- 1986** Prime Minister Olof Palme is assassinated by unknown parties; nuclear radiation from Ukraine is discovered in northern Sweden, leading to the slaughter of reindeer and restrictions on plant consumption.
- 1994** National referendum supports Swedish entry into the European Union.
- 1995** Sweden joins the European Union.
- 1996** Social Democrat Göran Persson becomes prime minister.
- 1998** Following a general election, Persson forms a minority government, as supported by the former Communists.
- 1999** Sweden chooses not to participate in the January 4 adoption of the euro, the EU's unitive currency.
- 2000** The Riksdag votes to hold a national referendum putting the choice of adoption of the euro to the public.
- 2001** Sweden takes over six-month presidency of the European Union.
- 2002** Göran Persson wins a third term as prime minister.
- 2003** Foreign Minister Anna Lindh is murdered. Swedish voters defeat a proposal to adopt the euro as the national currency.
- 2004** Lindh's murderer confesses and is sentenced to life in prison.

SWITZERLAND

Basic Fact Sheet

OFFICIAL NAME

Swiss Confederation (Schweizerische Eidgenossenschaft; Confédération Suisse; Confederazione Svizzera; Confederaziun Svizra; Confoederatio Helvetica)

ABBREVIATION

CH

CAPITAL

Bern

HEAD OF STATE & HEAD OF GOVERNMENT

The nominal title of president is held on a rotating basis by one of the seven members of the Swiss Federal Government for a one-year period.

NATURE OF GOVERNMENT

Federal republic; parliamentary democracy

POPULATION

7,489,370 (2005)

AREA

41,290 sq km (15,942 sq mi)

MAJOR ETHNIC GROUPS

German, French, Italian, Romansh

LANGUAGES

German, French, Italian, Romansh

RELIGIONS

Catholicism, Protestantism

UNIT OF CURRENCY

Swiss franc

NATIONAL FLAG

An equilateral white cross on a red background, with each arm of the cross one-sixth longer than its width

NATIONAL EMBLEM

A white cross on a red field, the original emblem of the Schwyz Canton, from which the name Switzerland is derived

NATIONAL ANTHEM

“Swiss Psalm”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), August 1 (National Independence Day), all major Christian festivals

DATES OF INDEPENDENCE

August 1, 1291 (foundation of Swiss Confederation); September 22, 1499 (Swiss Confederation becomes independent from Holy Roman Empire)

DATE OF CONSTITUTION

May 29, 1874; revised 1998; entered into force January 1, 2000

GEOGRAPHICAL FEATURES

A landlocked country in west-central Europe, Switzerland has a land area of 41,290 sq km (15,942 sq mi), extending 164 km (102 mi) north to south and 220 km (137 mi) east to west. Its total boundary length of 1,852 km (1,151 mi) is shared with five countries: Germany, Liechtenstein, Austria, Italy, and France.

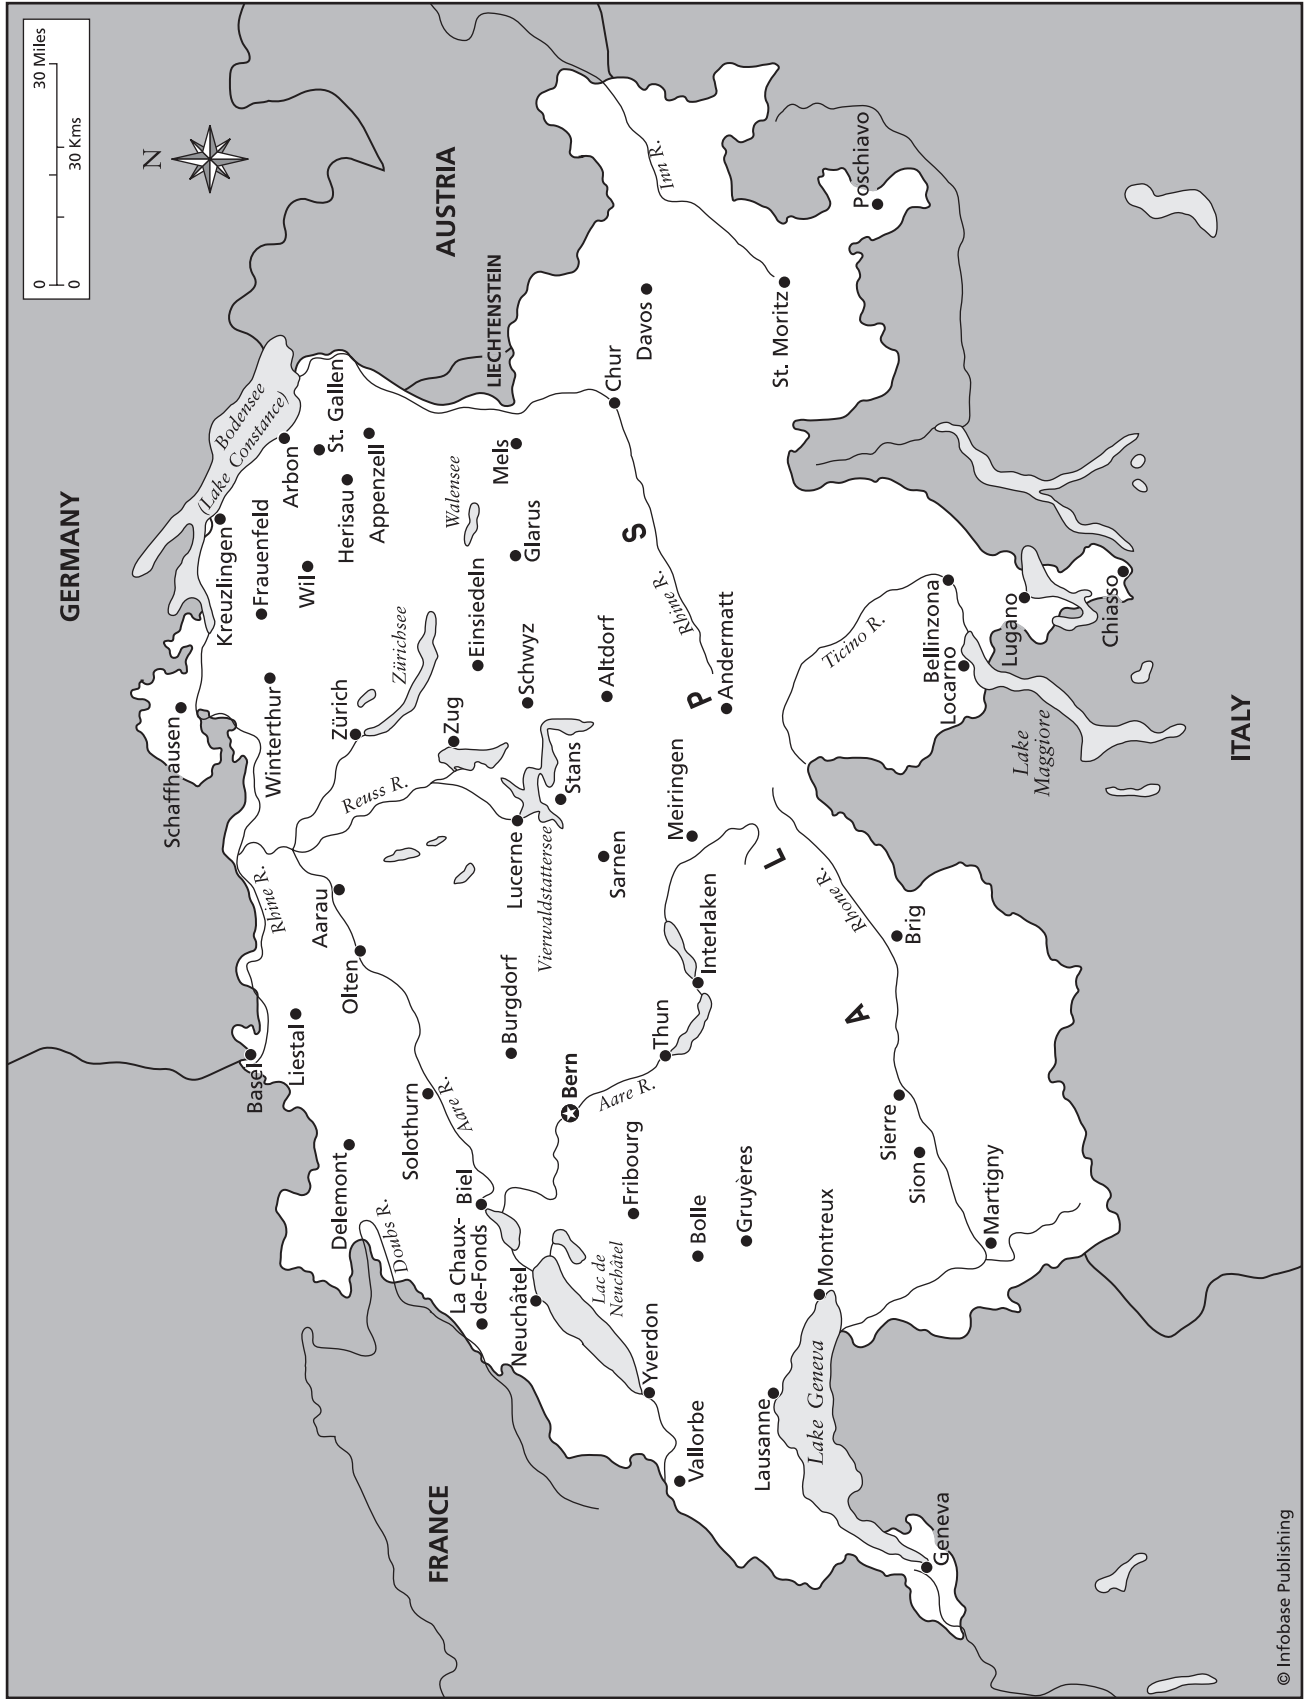

Switzerland forms part of the Alpine arc that stretches almost 1,000 km (622 mi) from Nice in the French Maritime Alps to Vienna in the Austrian Alps. Topographically, the country is divided into three regions: the Jura Mountains, in the northwest, making up 10 percent of the territory; the Alps, in the south, covering 60 percent of the territory; and the Central Plateau, or Mittelland,

covering 30 percent of the territory and including the fertile plains and rolling hills between the Alps and the Jura.

Switzerland contains the central part of the Alps, roughly one-fifth of the total range. The massif is divided by the Rhône and upper Rhine valleys lengthwise and the Reuss and Ticino valleys crosswise, creating three groups of ranges. The highest peak in Switzerland is Dufourspitze, at 4,634 m (15,200 ft). The Alpine landscape is rich and varied; glacial and fluvial erosion have carved out valleys, terraces, and peaks whose continuing evolution makes the Alps a constantly changing region.

The Jura Mountains have a much less complex structure than the Alps. The Jura Mountains have a mean altitude of 700 m (2,297 ft), with some peaks rising to about

Switzerland

2266 Switzerland

1,600 m (5,250 ft) and the range's highest peak, Mount Trendre, in the Vaud Jura, reaching 1,679 m (5,509 ft). The Jura can be roughly divided into three types of mountains: the Folded Jura in the south, and the Jura Plateau and the Jura Tables in the north and the east.

Switzerland is part of three main river basins. Two-thirds of the country is drained by the Rhine into the North Sea; 18 percent is drained by the Rhone into the Mediterranean; and 10 percent is drained by the Swiss tributaries of the Po, such as the Ticino and the Adige, into the Adriatic. Also, less than 5 percent of the land is drained by the Inn, a tributary of the Danube, which flows into the Black Sea.

Lakes are a striking feature of the Swiss landscape; no part of the country is farther than 15 km (9.3 mi) from a lake. The major lakes are at the foot of the Jura Mountains and the Central Plateau. Lake Geneva (Lake Lemman), lying on the Swiss-French border and covering an area of 581 sq km (224 sq mi), is the largest, while Lake Neuchâtel, with an area of 215 sq km (83 sq mi), is the largest entirely within Switzerland.

All the lakes on the Central Plateau between Lakes Constance and Geneva were formed during the ice ages, when depressions and basins were formed by glacial ice or moraines. The Swiss Alps have more glaciers—some 3,000 sq km (1,158 sq mi) in all—than the rest of the range. Although some of the glaciers are still advancing, the majority have been retreating during the past century.

CLIMATE AND WEATHER

Because of Switzerland's central position, its climate is influenced by all four main European air currents: the

Atlantic, the eastern continental, the northern subpolar, and the southern Mediterranean. These external factors, along with the varied relief of the country itself, with sudden transitions from mountain to plateau, give rise to many local and regional microclimates.

In general, Switzerland has more rain- and snowfall than most of the rest of Europe, although the amount varies from region to region. The level of precipitation in the interior Alpine region, for example, contrasts sharply with that in the exterior regions. In the Monte Moro Pass, where a ridge of the Alps acts as a trap, precipitation reaches monsoon proportions, amounting to 4,000 mm (156 in) or more annually, while in the Stalden area, only 40 km (25 mi) away, precipitation amounts to no more than 520 mm (20 in). Average annual temperatures range from 7°C (45°F) on the plateau to 1.6°C (35°F) in the mountains. South of the Alps, the canton of Ticino has a warm, moist Mediterranean climate, and frost is almost unknown.

Monte Generoso: 82 in

FLORA AND FAUNA

About 30 percent of Switzerland is covered in forests, with conifers such as spruce, fir, pine, and larch in the mountains and deciduous trees such as oak and beech lower down, along with bushes and scrub. Alpine meadows are famous for their wildflowers, including edelweiss, gentian, poppies, valerian, and columbine. Palm trees grow on the shores of Lake Lugano. Much of the land has been taken over by agriculture or livestock grazing. Wild animals include ibex, chamois, and marmot, which live in the mountains. Foxes, deer, and rabbits are still plentiful, while wolves and bears are nearly extinct. Switzerland has many species of birds, but their numbers are dwindling, and many are faced with extinction.

ETHNIC COMPOSITION

The Swiss are not a homogeneous people. Rather than a melting pot, Switzerland is an ethnic salad bowl where each of the four ethnic groups that make up the population—German, French, Italian, and Romansh—have retained their individualities. The dominant group is the German-speaking Alemanni, who constitute about 65 percent of the population. The French-speaking Swiss, also called Romans, constitute about 18 percent. The Italians are concentrated exclusively in Ticino, where they constitute 90 percent of the population; nationwide they make up only 10 percent. The Romansh speakers were originally Celts; they are now concentrated in Grisons and constitute just 1 percent of the population. Switzerland has attracted large numbers of immigrants who come to take the menial jobs the Swiss do not want.

LANGUAGES

Switzerland is a quadrilingual nation, reflecting its quadriethnic composition. The four official languages are German, French, Italian, and Romansch. The language boundaries are fairly simple and distinct, except for small German-speaking enclaves of Bernese Anabaptists in the generally French-speaking Jura.

Within each language group are dialect groups, each with its own territorial imperatives. There are fewer dialects in French-speaking cantons, as the old Franco-Provençal idioms died out many years ago. In the Ticino and southern Grisons valleys, Italian is the official language, but in rural areas Lombard dialects may still be heard. The widest variety of dialects is found in German-speaking Switzerland, more a geographical than a linguistic phenomenon. Each major canton, including Bern, Basel, and Zurich, has its own dialect, while isolated villages and valleys cling to their own highly distinctive idioms.

Romansh, or Rhaeto-Roman, was adopted in 1938 as the fourth national language. It has five distinct dialects. Romansh is an endangered language and may become extinct within the next century.

RELIGIONS

Since 1970 Catholicism has become the religion of the majority of people. About 46 percent of Swiss are Roman Catholic; 40 percent are Protestant; 5 percent follow other religions, such as Islam, Hinduism, Buddhism, and Judaism; and 9 percent have no religion. Population movements have changed traditional configurations; the historically Protestant cities of Bern, Vaud, Zurich, and Basel are becoming increasingly Catholic, while the Catholic strongholds of Fribourg, Valais, and Tessin are becoming more Protestant.

The principal Protestant body is the Federation of Protestant Churches, which comprises 18 cantonal reformed churches, including the Free Church of Geneva and the Evangelical Methodist Church. Each cantonal church is autonomous, there being no single national church. The legal status of these churches varies; some have concordat relations with the state, some are state churches, and others are entirely independent. The churches also display surprising diversity in liturgy and constitution.

Under the Swiss constitution, it is the duty of the federal government to legislate for its member cantons on matters concerning church-state relations and also to maintain religious liberty and peace. According to the constitution, cantons may freely determine their relationships with churches. Separation of church and state is followed by Geneva and Neuchâtel, though incompletely. The Catholic and Reformed churches are officially recognized by the constitutions or legislations of all cantons, with the exception of Basel Town (which recognizes the Reformed Church only) and Tessin (which recognizes the Catholic Church only). The Christian Catholic Church, a schismatic offshoot of the Roman Catholic Church that does not acknowledge papal infallibility, is juridically recognized in the cantons of Zurich, Bern, Lucerne, Soleure, Basel, St. Gallen, and Argovie. State departments of religion exist in a few cantons. More generally, the cantonal departments of justice deal with church-related issues.

HISTORICAL BACKGROUND

The first known inhabitants of Switzerland (or Helvetia, as it was known in antiquity) were the Helvetii, a Celtic tribe conquered by Julius Caesar in 58 B.C.E. Helvetia was one of the more prosperous provinces of the Roman Empire for over 200 years. However, on the heels of the Barbarian invasions of the Roman Empire, the region was occupied by the Alemanni, a Germanic tribe, in 250 C.E. and by the Burgundians in 433. In turn, the Alemanni and the Burgundians were defeated in 496 and 534, respectively, by the Franks, who incorporated the region into the Frankish Empire. It was at this time that the major cities, such as Zurich and Lausanne, were founded and Christianity was introduced.

In 1032, with the Frankish kingdom in decline, Switzerland became part of the Holy Roman Empire, and in the 13th century it came under the house of Hapsburg. Revolts by several cantons against the harsh Hapsburg rule led to the “eternal alliance” among the three forest cantons of Schwyz, Uri, and Unterwalden on August 1, 1291. The Hapsburgs thereupon invaded the three provinces but were repulsed. Within the next 38 years the confederation was joined by five other cantons: Lucerne, Zurich, Glarus, Zug, and Bern. All these allies were called the Schwyzer, after the largest canton. Switzerland gained four victories over Austria, in 1386, 1388, 1476, and 1499, and also defeated Charles of Burgundy and gained complete independence by the Treaty of Basel in 1499 with the Holy Roman Empire. The country’s struggle for independence was led by a number of real and legendary heroes, such as William Tell, Arnold von Winkelried, and Nikolaus von der Flue. By 1513 Aarga, Thurgau, Fribourg, Solothurn, Basel, Schaffhausen, and Appenzell joined the federation, bringing the number of units to 13. Swiss sovereignty crossed south of the Alps into Ticino, controlling many of the vital mountain passes linking southern and northern Europe.

The Reformation era witnessed a prolonged internal struggle between the Catholic and Protestant cantons, the latter led by Ulrich Zwingli in Zurich and John Calvin in Geneva. As the Catholic cantons allied themselves with Savoy and Spain, Switzerland was caught in the vortex of the Thirty Years’ War (1618–48). The Treaty of Westphalia, ending that war, also granted Switzerland formal recognition of independence by all European powers.

Catholic-Protestant religious disputes dragged on in Switzerland in the Villmergen wars of 1656 and 1712. At this time the Catholic cantons were sucked into a dangerous alliance with France, which could have split the confederation beyond repair had matters truly come to a head, but the Catholic factions reluctantly agreed to religious freedom. To this conflict was added a number of abortive risings in Geneva and Vaud against oligarchic control. The oligarchies were swept from power as the shock waves of the French Revolution hit the country. In

1798 the Helvetic Republic was proclaimed, and during the Napoleonic era Switzerland became an appendage of the French Republic.

The 1815 Congress of Vienna reconstituted the Swiss Federation as an independent nation with 22 cantons and recognized its neutrality. Switzerland, however, did not remain immune to the liberal movements of the time, and under their goading progressive governments were established in many cantons. In 1848 a new federal constitution was promulgated in the middle of the Sonderbund War, in which the Catholic cantons attempted to secede from the federation. The secessionist movement was overcome, however, and the foundations of modern Switzerland were firmly established.

The pressure for social and economic reforms provided common ground on which the various opposition groups could unite against the liberal regime. In 1869 the Democrats won the constitutional battle in Zurich. Henceforth the government would be elected directly by the people, and all parliamentary bills would be submitted to popular vote. The success of the Democrats in the cantons made a revision of the federal constitution essential; in 1874 the new federal constitution was promulgated.

Between 1914 and 1918 Switzerland came close to violating its much vaunted neutrality. German-speaking Switzerland was pro-Germany. Swiss industry profited during the war, but the rewards did not filter down to the working classes. In general, economic life in the interwar years was marked by a slow rate of growth and a shift away from production toward services. Switzerland faced much heavier foreign pressure during the Second World War than it had during the first. After the fall of France in 1940 the Swiss Confederation was surrounded by the Axis powers.

Following the war, Switzerland did not join the United Nations but did assume an active role in the UN’s specialized agencies and programs, and Geneva became the organization’s European headquarters. The country also remained reserved in the face of European integration efforts and did not become a member of the Council of Europe when it was first founded in 1949. Instead, in 1960 Switzerland joined other countries not a part of the European Economic Community to form the European Free Trade Area (EFTA), which would not strive for ultimate political union. In 1986, over 75 percent of the electorate voted against Swiss entry into the United Nations, a rejection to be interpreted less as a well-defined stand on foreign policy than as a reaction to diffuse fears of losing autonomy and an expression of general unease. In the same year the Swiss Federal Assembly approved a series of measures aimed at curbing the influx of Tamils, Turks, and Africans into the country and making political asylum more difficult to obtain. When participation in the European Economic Area (EEA) was defeated by a small margin in 1992, the motives were much the same. Switzerland saw the appointment of its first woman presi-

dent in 1999, when Ruth Dreifuss was installed as head of state.

In 2001, moves to open talks about joining the European Union were rejected by voters. However, the Swiss parliament did vote in favor of UN membership. In 2002 a narrow majority of voters approved of joining the United Nations.

The right-wing Swiss People's Party (SVP), which campaigned against foreigners and the European Union, took the largest block of seats in parliament in the 2003 elections, winning 28 percent of total votes. As such, the party took the one of the governmental seats away from the centrist Christian Democrats, changing the shape of Swiss politics for the first time since 1959. Some observers saw in this a rightward shift in Swiss attitudes, as also marked by votes against making naturalization easier and against granting new rights to the disabled.

2006	Moritz Leuenberger

CONSTITUTION

Switzerland is a federal state with strong regional governments, as centered in the nation's 26 cantons. Cantons hold all powers not given to the national government. The federal government consists of a seven-member executive called the Federal Council, a bicameral legislature called the Federal Assembly, and a judiciary. The three branches' powers are completely separate.

The seven-member Federal Council holds executive authority. Its members are elected to four-year terms by the Federal Assembly. Every year the Federal Assembly elects a president and vice president from among the seven members of the Federal Council; the vice president usually becomes president the following year. From 1959 until 1993 the Federal Council was constituted according to the "magic formula," in which two representatives came from the Christian Democrats, two from the Social Democrats, two from the Free Democrats, and one from the Swiss People's Party. In 2004 the composition

changed, with the Swiss People's Party taking a seat away from the Christian Democrats. Federal councilors are supposed to act jointly, not individually. Each councilor heads one of the seven governmental departments.

The Swiss people hold ultimate authority on national matters. The Federal Assembly must put all proposed laws up for national vote, by referendum; if the voters do not approve, the proposal does not become law. Voters constantly propose referenda on new laws, which the nation then votes upon. Voters can also try to change the constitution through popular initiative. The voting age is 18.

PARLIAMENT

The Swiss Federal Assembly is the most powerful branch of the government. It elects the members of the Federal Council and every year chooses a president and vice president from among them. The Assembly has two houses with equal powers: the National Council and the Council of States. The Council of States has 46 members, two from each of 20 cantons and one from each of 6 "half cantons," all of whom are directly elected by majority voting within the cantons. The National Council has 200 members directly elected in each canton through proportional representation. Representatives from both houses serve four-year terms. Each house can introduce legislation. The executive cannot veto laws, and the judiciary is not allowed to review them for constitutionality. The Assembly can be dissolved after the adoption of a popular initiative calling for the complete revision of the constitution.

POLITICAL PARTIES

The Swiss party system has remained relatively unchanged since 1959. There are three bourgeois center-right parties and one left-of-center party. These four parties are the Radical Democratic Party, the Christian Democratic People's Party, the Swiss People's Party, and the leftist Social Democratic Party. The majority of Swiss voters belong to one of these parties. In addition, as in most multiparty nations, there are a number of smaller political parties, including a growing Green Party.

LOCAL GOVERNMENT

Switzerland is divided into 26 cantons, which handle their own internal affairs. Each canton has a republican form of government headed by a collegiate executive called the government council or council of state. At the cantonal level, too, coalitions and annual changes in presidency are the rule. The numbers of council members are constitutionally fixed and vary from five to nine. Cantonal parliaments are also elected by the people (in the two

Appenzells by male voters only). Party strengths are so stable that newspapers use the term “landslide” for fractional parliamentary changes.

Because cantons administer both federal and cantonal laws, their administrative machinery is overburdened. About 3,000 general-purpose local government units—communes—share this burden. They have substantial financial resources, including income tax, company tax, wealth tax, and fees and loans, with no ceilings on their rates. Some communes are as large as Zurich, with about 500,000 inhabitants, while others are very small, with fewer than 50 inhabitants. The legislative and executive bodies are the communal assemblies (communal parliaments in the case of larger communes) and executive councils, respectively. The responsibilities of the communes are wide ranging, encompassing public utilities; the administration of public properties such as forests, bridges, and tolls; schools; police and fire services; health; and civil defense. The communes also collect direct and indirect taxes.

Between the commune and the canton are political units known as urban districts (*bezirke*), which are sometimes referred to as administrative districts.

LEGAL SYSTEM

Most judicial matters are handled at the cantonal level, with each canton having its own civil and criminal courts and procedures. The only exception to this is the Federal Tribunal, which hears appeals of civil and criminal cases from cantonal courts and reviews cantonal decisions involving federal law. The Federal Tribunal has 30 full-time and 30 part-time judges elected to six-year terms by the Federal Assembly. The legal system is based on civil law, as influenced by customary law. Most law is codified in the Civil Law Code, the Penal Code, and the Code of Obligations (which includes the laws of contracts, sales, torts, and other commercial matters).

HUMAN RIGHTS

Switzerland has no significant human rights problems. The constitution guarantees all basic freedoms and provides safeguards for the rights of citizens.

Freedom from arbitrary arrest, detention, or exile is provided by law. A detained person may not be held for more than 24 hours without a warrant of arrest issued by a magistrate. A suspect may be detained with a warrant until an investigation is completed, but the length of the investigative detention is subject to review by higher judicial authorities. Bail or release on personal recognizance is granted except in the most unusual circumstances. There is no summary exile. All trials are held in public. Minor cases are tried by single judges, difficult cases by

panels of judges, and murders and other serious crimes by public juries.

An independent press, an effective and independent judiciary, and a functioning democratic political system combine to ensure freedom of speech and press. Groups labeled as subversive do not have this freedom, but no such group is so designated at the present time. While police permits are required for holding public meetings or demonstrations, such permits are rarely refused. Like many other western European countries, Switzerland adheres to a narrow definition of the eligibility criteria for asylum. Although traditionally a haven for refugees, the nation passed laws limiting the influx of foreigners in 1987 and refused to relax naturalization laws in 2004.

FOREIGN POLICY

Historically, Switzerland has prided itself on its neutrality, which has saved the country from the devastations of numerous European and world wars. The nation also avoids foreign military alliances. Switzerland maintains diplomatic relations with many countries and has often been used as a neutral ground for international negotiations. It joined the United Nations in 2002, after years of participating in various UN activities, and also belongs to the World Trade Organization, the Organization for Economic Cooperation and Development, the Council of Europe, and many other organizations. It does not, however, belong to the European Union.

Switzerland has been involved in many humanitarian activities intended to facilitate world peace. The nation participated in UN sanctions against Iraq and the Taliban and has furnished military observers and medical teams for many UN operations. Switzerland has had good relations with the United States since the early 1800s, and the two nations cooperate economically as part of the U.S.-Swiss Joint Economic Commission.

DEFENSE

Switzerland has traditionally been a nation of citizen soldiers, with all male citizens conscripted to serve 15 weeks at the age of 19 and then periodically called back into service over the next 22 years to log a total of 300 days of service. In 2003 the nation passed a law to drastically reduce the size of the army, from 524,000 to 220,000, and lower the military budget; this process began in 2004. Some “single-term conscripts” will now serve out their entire 300 days of active duty at once, while other soldiers’ terms of service will be reduced to 260 days. Soldiers between the ages of 30 and 37 will be assigned to civil protection duties.

Switzerland has four army corps and an air force, all equipped with modern, well-maintained gear. The armed forces have a permanent professional staff of about 3,600

but no full-time active combat units; still, units can mobilize completely within 72 hours. Women are now allowed to volunteer for the armed forces and may join combat units, though they may not use weapons for purposes besides self-defense.

Military Indicators

Total Active Duty Personnel: 27,500
 Military Manpower Availability: 1,707,694
 Military Expenditures \$billion: 2.548
 as % of GDP: 1.0
 as % of central government expenditures: 5.5
 Arms Imports \$million: 41
 Arms Exports \$million: 35

ECONOMY

Switzerland is very prosperous, with a gross domestic product (GDP) of \$251.9 billion and a per capita GDP of \$33,800 in 2004. Unemployment is low, and the workforce is well educated and diligent. Growth was negative in 2003, at -0.5 percent, due mainly to the slowness of the economy throughout Europe. Although Switzerland is not a member of the European Union and has no intention of joining in the near future, it has brought many of its economic practices in line with EU practices to make doing business with EU countries easier. Commercial law is clearly defined, trade policies are liberal, and the government is fiscally conservative.

Switzerland is particularly known as a safe haven for foreign investors, with discreet bankers and a stable currency. The nation also makes a tidy income from the precision-machinery and electronics industries. Tourism is another important sector of the economy, with a well-developed infrastructure and a year-round supply of visitors.

ENVIRONMENT

Like many postindustrial nations, Switzerland's environment is largely affected by vehicular emissions and acid rain, which constitute growing concerns in major urban areas. Open-air burning adds to air pollution. The increased use of fertilizers and associated runoff also raise about some water resources. The nation has suffered serious losses of biodiversity due to widespread development and agriculture. Switzerland is party to a number of international environmental treaties and conventions, including the Kyoto Protocol.

LIVING CONDITIONS

The vast majority of Swiss live in cities. The cost of living is high, and housing is in short supply, which forces young people to share small apartments. Homes have a variety of modern amenities. Swiss people keep their homes and yards very neat, with fences and window boxes full of flowers. The public transportation system is thorough, clean, reliable, and efficient, and roads are in excellent condition.

HEALTH

Health care is administered at the cantonal level. Most Swiss hospitals are publicly funded by the cantons, although there are also a few private clinics. All Swiss citizens pay for state health insurance, and most people end up spending about 10 percent of their income on health care, including insurance premiums, doctors' fees, and medicines. Health care is subsidized for the poor. Coverage for alternative medical practices such as homeopathy, massage, and acupuncture is available for an additional premium. The Swiss have one of the highest life expectancies in the world, at over 80 years, and an infant mortality rate below five deaths per 1,000 live births.

FOOD AND NUTRITION

The Swiss eat a great deal of dairy products and meat. Swiss cheeses such as Gruyère and Emmentaler (commonly referred to as Swiss cheese) are popular, as are cheese dishes such as fondue and raclette. There are many varieties of sausages, and people also eat veal, pork, and fish. Pastries and chocolate are commonly eaten for dessert. Each canton has its own specialties, as derived from the ethnic group that composes the majority of its population. Beer is a popular drink, and people also like tea, coffee, and hot chocolate.

STATUS OF WOMEN

Switzerland was one of the last countries in Europe to grant women the right to vote. Only in 1971 were women permitted full political equality with men at the federal level, and the progress of women toward full political equality at all levels has been relatively slow. Women's representation in parliament has climbed steadily, from 21 percent in 1997 to 25 percent in 2005.

A certain degree of inferiority remains inherent in the world of work. Women are paid less than men; women's salaries generally amount to two-thirds of men's salaries. During times of recession women are the first to be laid off. Discrimination against women in the workplace is one of the major concerns of the Swiss Commission on Women. Many women do not bother going to work at all, largely because there is little day care available.

The position of women in civil law is also inferior. The Swiss Civil Code of 1912, which still regulates the status of women to a degree, contains a number of provisions reflecting the conditions of an earlier era. The code's financial provisions are particularly disadvantageous to wives. Most of these limitations were rectified through constitutional amendments in 1985. The law of

employment does not provide for any special status for women, except in regard to pregnancy.

WORK

Switzerland has very low unemployment, at 3.4 percent in 2004. Almost 70 percent of Swiss work in services, especially banking, financial services, and insurance. Tourism also employs many people year-round. Another 26 percent work in industry, manufacturing machinery, watches, scientific instruments, and other products. The Swiss are known for their diligence and skill in precision work. They generally take pride in their jobs, seldom missing workdays. All workers receive four weeks of paid vacation yearly. Disagreements between workers and employers are typically settled through negotiation, and strikes are rare. Trade unions and professional associations have a great deal of political influence.

EDUCATION

Each canton has its own education system and its own curriculum. Teaching is done in the language of the individual canton. Kindergartens are provided for five- and six-year-olds. All children are required to attend primary school between the ages of seven and 15 or 16, depending on the canton. After primary school, students may continue on to secondary school, called gymnasium, or serve a two to four-year apprenticeship in a trade. Students who attend gymnasium specialize in particular academic subjects. All gymnasium students are required to study a foreign language.

After graduating from gymnasium, a student may go to one of Switzerland's 10 universities or two institutes of technology. The level of study at these institutions is very high.

The Swiss value education to a great degree. Literacy is near universal. Most adults continue to study subjects

2274 Switzerland

of interest, as encouraged by employers and financed by educational organizations. Language study is especially popular.

SCIENCE AND TECHNOLOGY

Switzerland is extremely advanced in matters of science and technology. Swiss watches and clocks are prized the world over. The nation has two institutes of technology that produce excellent scientists and engineers. The telecommunications system is excellent and extensive. In 2002 there were over five million telephone lines in the country, along with 2.5 million Internet users. Cellular telephones are growing in popularity, with over six million of them in use in 2003.

MEDIA

Switzerland has a high-quality and diversified press, reflecting the nation's high literacy and affluence. There is complete press freedom. Most newspapers and other print publications are published only in particular linguistic regions, and as a result most have small circulations and concentrate on local news. Political and religious groups also publish newspapers and magazines. One of the most prestigious newspapers is the German-language *Neue Zürcher Zeitung*, founded in 1780.

The Swiss Broadcasting Corporation dominates television and radio broadcasting, operating 18 radio stations and seven television stations. There are some private regional television and radio stations, and many Swiss people watch cable and satellite broadcasts from France, Germany, and Italy.

CULTURE

The Swiss enjoy cultural events, and the country hosts various such events every year, including international book fairs, music and jazz festivals, contemporary art fairs, and film festivals. The country has nearly 500 museums and publishes over 15,000 books a year. Famous writers and scholars from Switzerland's past include Jean-Jacques Rousseau, Jacob Burckhardt, Johanna Spyri, Johann David Wyss, Max Frisch, Carl Gustav Jung, and Jean Piaget. The Swiss architect Le Corbusier was famous in the 1920s and 1930s. Artists have included Paul Klee, Alberto Giacometti, and Jean Tinguely.

FOLKLORE AND MYTHOLOGY

The Swiss love their folk culture and maintain customs such as yodeling, alpenhorn playing, embroidery, folk singing, and folk dancing. Folk festivals include a shooting contest for teenagers in Zurich and an onion market in Bern. Between March and October farmers hold contests among their cows to find herd leaders; these are called *combats de reines*, or "combats of queens." The story of William Tell, the 13th-century woodsman who shot an apple off his son's head, is still

popular and is reenacted every summer in the Rügen Woods, near Interlaken.

ENTERTAINMENT AND RECREATION

Swiss cities offer a plethora of restaurants, bars, discos, hops, museums, and cultural events. The country has many tourist attractions, such as the Château de Chillon. Many Swiss men belong to guilds, which in the past were associated with particular professions but are now mainly social or political clubs. Membership is by invitation only. The Swiss love hiking in the countryside, and the nation has more than 50,000 km (31,000 mi) of footpaths designated for walkers. Citizens also enjoy riding trains or driving through the beautiful mountain scenery and visiting picturesque towns such as Lucerne.

ETIQUETTE

The Swiss are fairly formal and address one another by title and surname unless they are very familiar. It is now common practice to use the titles *Frau*, *Madame*, or *Signora* with all adult women, regardless of marital status. Tipping is not necessary, as most restaurants, bars, and taxis automatically charge for service.

FAMILY LIFE

Most Swiss have small families; in 2004 the fertility rate was 1.42 children per woman. The number of couples living together without marrying has been increasing steadily, and the average age of marriage is rising. Also, more people are divorcing now than in the past. Children expect their parents to support them until they finish their university studies. Day care is not widely available, and most women stay home to raise their children, although more young women today want careers.

PERSONAL APPEARANCE

The Swiss dress well but conservatively, avoiding flashy or ostentatious clothing or jewelry. Cleanliness and neatness is important. Businesspeople usually dress formally, in suits for both sexes; women may wear pants.

SPORTS

The federal government provides financial support for sports under a 1972 law, all schools provide physical education, and the country has many sports associations, such

as the large Swiss Association for Football and Athletics. People engage in a wide variety of sporting activities, including soccer, basketball, ice hockey, swimming, sailing, and bicycling. The nation is full of world-class ski slopes that are packed in the winter. The tennis players Martina Hingis and Roger Federer each became number one in the world rankings. During the Swiss Alpine Herdsmen's Festival in Interlaken, men participate in *schwingen*, a kind of wrestling, and in boulder-throwing contests. Another traditional sport is *hornussen*, a team sport played with long metal rods, wooden shields, and a disc called a *hornus*.

CHRONOLOGY

- 1945** World War II ends, Switzerland having successfully maintained its historic neutrality while serving as a safe haven for political refugees during the war; Switzerland rejects membership in the United Nations on the grounds that certain UN provisions would compromise its neutrality but accepts permanent observer status and takes part in neutral UN efforts.
- 1948** Switzerland becomes a member of the General Agreement on Tariffs and Trade (now the World Trade Organization); Switzerland joins the Organization of European Economic Co-operation.
- 1959** Switzerland becomes a founding member of the European Free Trade Association.
- 1963** Switzerland joins the Council of Europe.
- 1971** Women's right to vote and to stand for office is accepted at the federal level; a constitutional article regarding the protection of the environment is accepted.
- 1973** Constitutional restrictions on Jesuits and Roman Catholic monasteries are removed; the economy slows into a recession; Switzerland and the European Community sign a 20-year treaty establishing a duty-free trade area for industrial goods.
- 1974** Voters reject a referendum that would have granted special economic powers to the confederation.
- 1976** The shrinking economy has eliminated more than 400,000 jobs since 1973; Switzerland establishes an unemployment insurance fund.
- 1978** A referendum creates the canton of Jura, a francophone enclave formerly part of the canton of Bern.
- 1981** The constitution is amended to provide equal rights for women.
- 1984** Elizabeth Kopp is inducted as the first female member of the Federal Council.
- 1986** Voters reject an initiative on Swiss membership in the United Nations by a margin of three to one.

2276 Switzerland

- 1989** Elizabeth Kopp resigns after she is implicated in a money-laundering scheme.
- 1990** Kopp is acquitted of the alleged violations.
- 1991** Switzerland achieves the industrial world's highest per capita income.
- 1992** Switzerland becomes a member of the International Monetary Fund and the World Bank; voters reject a referendum to join the European Community.
- 1993** Voters approve referenda to use casino gambling revenues to fund social security and to make the Swiss tax structure more like that of European Community member countries.
- 1994** A constitutional amendment makes it illegal to discriminate on the basis of race, to disseminate racist propaganda, or to deny the occurrence of the Nazi Holocaust; voters reject a referendum to allow Swiss military participation in UN peacekeeping missions.
- 1995** Under pressure from Jewish groups, the Swiss Banking Association (SBA) agrees to look for unclaimed bank accounts belonging to victims of the Holocaust.
- 1996** The SBA turns up \$30 million in funds of suspected Holocaust victims; Jewish groups object, asserting that such funds should amount to billions of dollars.
- 1997** Facing threats of international sanctions, the Swiss government proposes establishing a \$4.7 billion fund, the interest of which would compensate Holocaust victims and survivors of other human rights abuses; the proposal faces strong domestic opposition.
- 1998** Swiss banks agree to pay \$1.25 billion directly to Holocaust survivors.
- 1999** Ruth Dreifuss takes office as Switzerland's first female president and first Jewish president; the anti-immigrant People's Party places second in Federal Council elections, gaining 23 percent of the vote, but its leader, Christoph Blocher, is not granted a cabinet post.
- 2001** Moves to open talks about joining the European Union are rejected by voters. Parliament votes in favor of UN membership. A proposal to eliminate the nation's army is rejected in a referendum.
- 2002** UN membership is accepted by a narrow majority of voters. Voters approve a measure to decriminalize abortion during the first 12 weeks of pregnancy and reject a measure that would have made abortion laws stricter.
- 2003** Citizens vote in favor of military cuts and against new rights for the disabled, car-free Sundays, and the abolition of nuclear power. The right wing Swiss People's Party wins 28 percent of

the vote and takes the largest chunk of parliamentary seats. The Federal Assembly grants the Swiss People's Party a second seat in the seven-seat Federal Council, taking a seat away from the Christian Democrats.

- 2004** Switzerland signs an agreement with the European Union allowing the taxation of Swiss accounts held by EU members. Voters reject a law that would have made naturalization easier and approve a law allowing scientific research on embryonic stem cells.
- 2005** Citizens approve laws extending rights to same-sex couples, banning use of genetically modified crops, and joining Schengen and Dublin agreements of the EU.

NATIONAL FLAG

Three horizontal stripes of red (top), white, and black, with two small green five-pointed stars in a horizontal line centered in the white band

NATIONAL EMBLEM

An erect golden falcon with outstretched wings, its head and beak facing to its left. Its body is represented as a shield, on which the motif of the flag is displayed vertically. At the feet of the eagle are crossed stalks of grain, beneath which is a scroll reading, in Arabic, “The Syrian Arab Republic.”

NATIONAL ANTHEM

“Protectors of the Homeland, Peace Be Upon You”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 22 (Unity Day), March 8 (1963 Revolution Day), April 17 (Independence Day, Evacuation Day), May 1 (Labor Day), May 6 (Martyrs’ Day), October 6 (Anniversary of 1973 War), various Islamic festivals, Easter and Christmas according to both Western and Eastern Orthodox reckoning

DATE OF INDEPENDENCE

April 17, 1946

DATE OF CONSTITUTION

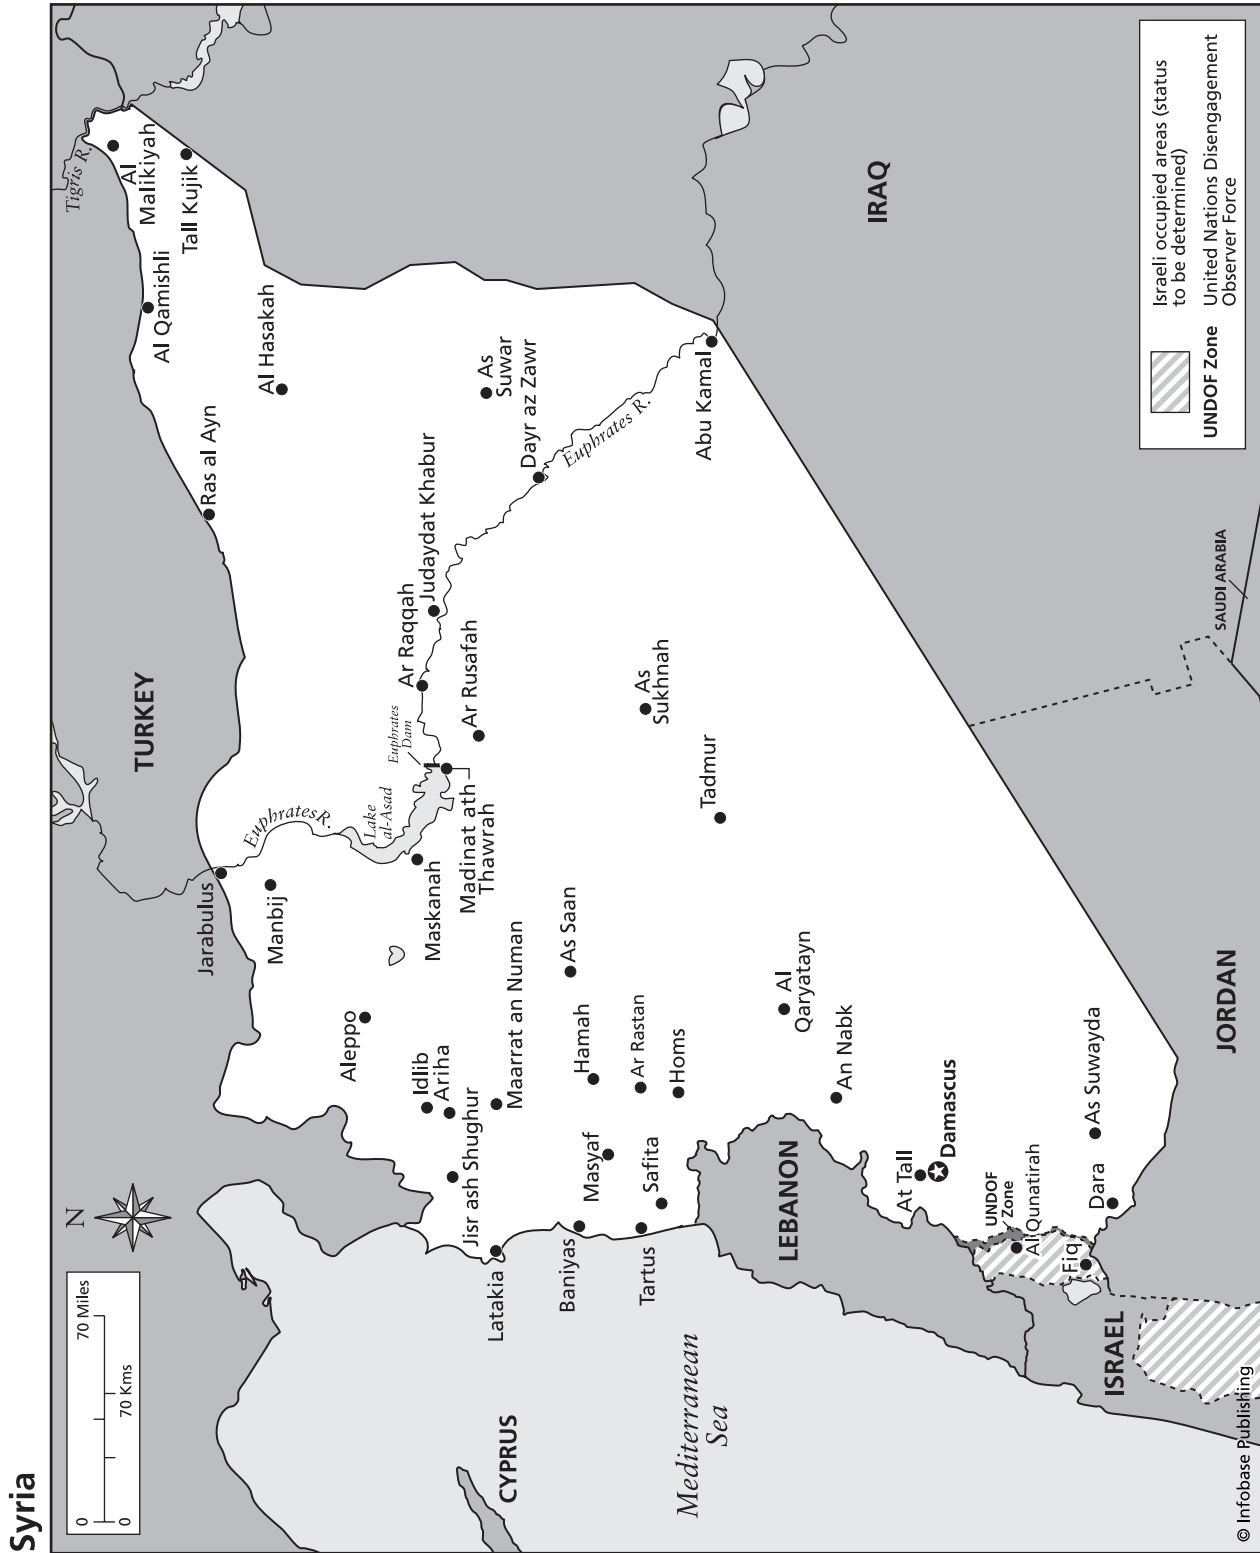

March 13, 1973

GEOGRAPHICAL FEATURES

Syria is located in southwest Asia and is bounded by Turkey to the north, Lebanon and the Mediterranean Sea to the west, Israel and Jordan to the south, and Iraq to the east. The total land area is 185,180 sq km (71,498 sq mi) of which around 20 percent has been properly surveyed. The length of the Mediterranean coastline is 193 km (120 mi).

The frontiers of Syria are largely artificial. The 822 km (510 mi) border with Turkey is defined by a railway line, while the 76 km (47 mi) border with Israel includes the demilitarized zone and the Israeli-occupied Golan Heights.

Geographically, Syria consists of four main zones. A narrow coastal plain stretches from the Turkish border to Lebanon. Its maximum width is 32 km (20 mi), but it practically disappears in some places where the mountains meet the sea. The second zone is a series of mountains opening out fanlike from the southwest; Jabal Ansariyeh (the Anti-Lebanon range) has Mount Hermon, the highest peak in Syria at 2,814 m (9,230 ft), and the Jabal al-Shaykh descends to the Hawran Plateau. To the southeast of this plateau lies the Jabal Druze range, home of the Druze. The third zone lies east of the mountain ranges, a high plateau that slopes southeast and contains the fertile regions of Aleppo, Homs, Hama, the valley of the Buqaa, the Ghab depression, and the portion of

the Jazirah district between the Tigris and the Euphrates. The fourth zone, south of this region and separated from it by a low chain of mountains, is the barren desert region known as the Hamad, covering one-third of the country's total land area.

Syria's most important waterway is the Euphrates River, flowing diagonally across the country for some 644 km (400 mi) and providing more than 80 percent of the nation's water resources. The Orontes is the next major river; though shallow, nonnavigable, and subject to destructive flash floods, it is a valuable source of irrigation.

CLIMATE AND WEATHER

On the coastal strip winters are mild, but humidity is high in the summer. The temperatures ranges from 0.5°C (33°F) to 34.8°C (95°F). The mountain regions have moderate summers, with temperatures ranging from 3.5°C (38°F) to 38°C (100°F). The interior plateaus have very hot summers, with temperatures ranging up to 42.2°C (108°F), but the winters are cold, with frost on many nights. The Hamad region has a true desert climate, with temperatures in July exceeding 43.3°C (110°F) and severe sandstorms occurring during February and May. The coolest month in all regions is January, while the hottest months are July and August. The average annual rainfall is 3,050 mm (10 in), with great variations between regions. In general, rain is heaviest in the west and north, with the mountains receiving annual precipitation of up to 1,010 mm (40 in), mainly between November and May. The interior plateau receives less than 2,030 mm (8 in) of rain annually. The southeastern desert receives only half of that amount; in some years it receives no rain at all.

Climate and Weather

Temperature Range: 33°F to 95°F
 Mountain Regions: 38°F to 100°F
 Interior Plateau High: 108°F
 Hamad Region High: 10°F
 Average Rainfall: 10 in
 Mountain Region: 40 in
 Interior Plateau: 8 in

FLORA AND FAUNA

Though Syria was once covered with forests, the land is now almost entirely devoted to agriculture. A scattering of wild firs, yews, and lime trees remain. Otherwise, plants are cultivated species such as olive, fig, citrus, and banana trees; grapevines; and date palms. Bulbs such as irises and tulips grow wild, and the Damascene rose grows in the Damascus area. Wildlife is scarce. At one time animals such as wolves, bears, foxes, badgers, hyenas, jackals, wild boar, and deer roamed the land, but in modern times the majority of animals are domesticated camels, goats, and donkeys.

ETHNIC COMPOSITION

The Syrian government does not officially recognize ethnic communities. Nevertheless, ethnicity is the most important factor in Syrian political and social life. Although more than 90 percent of the people are Arabs, they do not constitute a unified or monolithic force because of internal divisions. Distinctions with regard to language, religion, region, and race cut across Syrian society, pro-

ducing a large number of separate communities, each with its own system of shared values and loyalties. There are also further divisions into villagers and townsmen and into settled people and nomads. Although there is a vague commitment to the general idea of Arab unity, primary loyalties are to family, clan, tribe, and sect. Ethnic minorities derive their strengths from their concentration in certain regions or domination of certain occupations. Over 90 percent of non-Arabs are clustered in the northern part of Aleppo Governorate and in the Jazirah region in the northeast. Non-Arabs also live in partial isolation in their own villages or clusters of villages or in ethnic quarters in towns and cities.

Although the vast majority of Syrian Arabs are Sunni Muslims, the term Arab may also be loosely applied to Christians, Ismailis, Druze, Alawis, Shiites, Palestinian refugees, and Bedouins. The government's policy of Arabization has tended to reinforce the broader identification of all these communities as a single group.

The Kurds, who constitute roughly 9 percent of the population, are a fiercely independent people, most of whom arrived as refugees from Turkey between 1924 and 1938. They are still being assimilated into Arab society; increasing numbers have adopted Arabic speech and dress.

The Armenians form the largest unassimilated group in Syria. Adamantly dedicated to the maintenance of Armenian identity, they have found themselves threatened by the Arabism of Syrian rulers and have emigrated in large numbers to foreign countries. Minor ethnic groups include Turkomans, Circassians, Assyrians, and Jews. Both the Turkomans and Circassians, being Sunni Muslim, are being gradually assimilated and may eventually cease to be distinct groups. The Assyrians, on the other hand, are Nestorian Christians who fled persecution in Iraq in 1933. Syrian Jews publicly dissociate themselves from Zionism and Israel but are nevertheless looked upon with suspicion as possible traitors.

There is a Palestinian community of some 400,000, predominantly refugees from the Arab-Israeli wars. Palestinians are free to choose their places of residence and occupation, and they occupy several senior positions in the Syrian bureaucracy. They are issued special Palestinian travel documents by the government in lieu of Syrian passports. They may not acquire citizenship or vote in Syrian elections, however.

Syrians are traditionally xenophobic and are particularly hostile toward Americans, whom they consider pro-Zionist. Russians and eastern Europeans form the largest and most influential foreign communities in Damascus.

LANGUAGES

The official language of Syria is modern standard Arabic, a literary derivation of classical Arabic. Dialects of spoken

Arabic vary widely throughout the Arab world; the Syrians speak the dialect known as Syrian Arabic, which is common to Syria, Lebanon, and parts of Jordan and Iraq. The majority of Kurds speak Kurdish, an Indo-European language written in the Arabic and Latin alphabets; the majority of Armenians speak Armenian, an Indo-European language with a highly developed literature; and the majority of Assyrians speak Syriac, a form of the ancient Aramaic language.

Most Syrians speak a Western language in addition to Arabic. French is the most common; most educated Syrians are as fluent in French as in Arabic, and it is taught as a compulsory second language in all schools from the intermediate level onward. English is coming into increasing use.

RELIGIONS

Unlike most Arab states, Syria has no official religion, though the 1973 constitution prescribes Islamic law as the source of Syrian jurisprudence and requires that the president be a Muslim. The 1950 constitution guaranteed freedom of belief for all theistic religions. In matters of personal status, minority religions are allowed to follow their own legal systems. Although all religions theoretically enjoy equal status before the law, Islam is the most favored. The condition of non-Muslim minorities, particularly Christians and Jews, has steadily deteriorated. Tens of thousands of Christians are believed to have immigrated to Western countries since 1960. In 1967 all Christian schools were nationalized.

Muslims constitute almost 90 percent of the population, and this percentage is growing as a result of their higher birth rate. Of the Muslims, 74 percent are members of the Sunni sect, while the rest are Alawi, Druze, or members of other sects. Christians, divided among a number of denominations, form an estimated 10 percent of the populace. Two tiny minorities, the Yazidis and the Jews, together make up less than 0.5 percent.

About 90 percent of Sunni Muslims are Arabs, while the remainder are Kurds, Circassians, and Turkomans. The Alawis, historically also known as Nusayris (which eventually became an epithet), form the largest religious minority, practicing a Shiite form of Islam with Christian and pagan elements. With the rise of President al-Assad, an Alawi, they have achieved considerable power and prestige in the army and government.

The Christian community is composed of three religious traditions: the Western Roman Catholic and Protestant churches; the Eastern Churches, including the autonomous Greek Orthodox churches, the Nestorian Church, and the Monophysite Syrian Jacobite and Armenian churches; and the Uniate churches in communion with Rome. The largest denomination is the Greek Orthodox Church, also known as the Melkite Church; the second

largest is the Armenian Orthodox, or Gregorian Church. With the exception of the Armenians, most Christians are Arabs, and they have participated in nationalist movements out of proportion to their actual numbers.

The Jews, numbering several thousand, are officially described as *musawiyin* (followers of Moses) rather than as *yahudin* (Jews), since the latter is a pejorative term applied to Israelis. Nevertheless, they remain objects of suspicion and hostility and are under constant surveillance.

There are about 12,000 Yazidis, also known as devil worshippers, in the Jazirah and Aleppo regions.

HISTORICAL BACKGROUND

Syria, which historically included Jordan, Israel, and Lebanon as well as the area now known as Syria, has a history that dates back to earliest times of civilization. The remains of Ebla, discovered a few years ago on Tel Mardikh, south of Aleppo, confirm the fact that a prosperous kingdom existed in the second half of the third millennium B.C.E. The finds at Tel Hariri Marie, on the Euphrates River, have furnished valuable information about the ancient history of Syria and its relations with the kingdoms of Mesopotamia. Ancient Syria was the target of more powerful neighboring kingdoms. The Akkadians controlled Syria after defeating the kingdom of Ebla in 2250 B.C.E., and the Egyptians sought to rule the entirety of Syria in the second millennium B.C.E.

In 637 C.E. Damascus fell to the Arabs. During the succeeding centuries, most Syrians were converted to Islam, and Arabic became the national language. Damascus was the capital of the Arab empire under the Umayyad caliphs, but the Abbasids moved the capital to Baghdad, reducing Syria to provincial status. Thereafter Syria fell prey to a succession of invaders, including the Christian Byzantines and Crusaders as well as the Muslim Seljuks and Ayyubids, the latter a Kurdish dynasty of which Saladin was a member. During the 13th century the Mongol hordes frequently invaded Syria, leaving trails of death and destruction. For the next 200 years parts of Syria were under the control of the Mamluks, who ruled from Egypt through local governors. In 1516 the Ottoman forces of Sultan Selim I defeated the Mamluks, and for the next four centuries Syria was a part of the Ottoman Empire. After World War I, Emir Faisal, the son of Sherif Husayn, of Mecca, was proclaimed king of Syria by a congress, but the French, who had received both Syria and Lebanon under the 1920 Agreement of San Remo, established themselves as masters of Syria.

From 1920 to 1946 Syria was under French rule, which was considered oppressive. The franc became the base of the Syrian economy, which was managed by French bankers. The French language became compulsory in schools, and the French controlled nearly every feature of Syrian life. A quarter century of such rule left politically minded Syrians with strong antagonism to France. Independence was declared in September 1941 and fully achieved in April 1946. In 1948 Syria left the franc bloc, and French influence declined steadily thereafter. Hostility toward France became more marked as France became a major supplier of military equipment to Israel and later joined Great Britain in the 1956 invasion of Egypt. Relations between the two countries improved following de Gaulle's tilt toward the Arab side in 1967. The principal legacy of French rule is the French language, which is spoken fluently by most educated Syrians and remains the major channel of communication between Syria and the West.

Throughout the early years of independence, weak parliamentary governments alternated with unstable military regimes. Syria merged with Egypt in 1958 to form the United Arab Republic but seceded in 1961 to reestablish the independent Syrian Arab Republic.

In 1963 a military junta supported by the Baath Party assumed power, and that party has dominated Syrian politics ever since. The Arab Socialist Renaissance Party (the Arabic *ba'ath* meaning "renaissance" or "rebirth") was established in 1953. The party's philosophy stresses social and economic reform, land redistribution, Pan-Arabism, and the relationship between Arabism and Islam. Internal disputes within the party, between the civilian, Marxist, "progressive" faction and the more pragmatic, military-dominated "nationalist" faction, culminated in a coup in 1970 that brought the nationalist Hafez al-Assad to power. Al-Assad's rise to power was accompanied by the growing political and economic prominence of his own Alawi community, a minority Muslim sect in northwestern Syria that constituted less than one-fifth of the population. Tensions between Alawis and the Sunni Muslim majority led to insurgency between 1976 and 1982, when Sunni fundamentalists, known as the Muslim Brotherhood, frequently attacked urban centers. In 1982 the brotherhood staged an open insurrection at Hama, which the al-Assad government was able to suppress only with a brutality that led to the destruction of one-fourth of the city.

During the mid-1970s and 1980s Syria became increasingly involved in Lebanon, which it traditionally considered part of Syria. It intervened militarily in 1976 at the height of the Lebanese civil war in an effort to maintain order between the various Lebanese factions and the Palestine Liberation Organization. Syria intervened again in 1987 in an effort to end the fighting in Beirut.

Syria's relations with the Arab world were strained by its perceived support for terrorism and its outright support of Iran during the Iran-Iraq War, in the 1980s, while its relations with the United States were strained because

of its opposition to Israel's presence in Lebanon in the beginning of that decade. Increasing hostility to Syrian politics left the nation isolated in the mid-1980s. During the Persian Gulf War, Syria finally aligned itself with the majority of the international community, participating in the U.S.-led, UN-sponsored coalition against Iraq. Hafez al-Assad was reelected in both 1991 and 1999; in 2000 he died after a long illness and was succeeded as president by his son Bashar al-Assad.

The government seemed to relax in the days just after Hafez al-Assad's death. Bashar al-Assad began his rule as a reformist open to new ideas. He released hundreds of political prisoners and removed some restrictions on the media, allowing public criticism of the government.

The Baath Party, the Alawi minority, and the army disliked these changes and soon forced the government to resume its old ways. During the early 2000s Syria became increasingly isolated in the international community, which accused the republic of supporting terrorist insurgents in Iraq and censured its years of military presence in Lebanon. By 2005, the United States had imposed economic sanctions on Syria, and the United Nations had called for an end to the Syrian military presence in Lebanon. Following the February assassination of the popular former Lebanese prime minister Rafik Hariri, pressure brought on by peaceful civic actions collectively referred to as the Cedar Revolution led to the complete withdrawal of Syrian troops from Lebanon on April 26, 2005.

LIST OF MODERN RULERS

Note: Does not include acting presidents.

1943–49	Shukri al-Kuwatli
1949	Husni az-Zaim
1949–51	Hashim al-Atassi
1951–53	Fawzi as-Silu
1953–54	Adib ash-Shishakli
1954–55	Hashim al-Atassi
1955–58	Shukri al-Kuwatli
1958–61	Gamal Abdal Nasser (president of United Arab Republic)
1961–63	Nazim al-Kudsi
1963	Louai al-Atassi
1963–66	Amin al-Hafez
1966–70	Nureddin al-Atassi
1970–71	Ahmed Khatib
1971–2000	Hafez al-Assad
2000–	Bashar al-Assad

CONSTITUTION

The present constitution of Syria was approved by referendum in 1973. The 157-article constitution defines

Syria as a “socialist popular democracy,” with a planned socialist economy. Under the constitution the head of state is the president, who is also the commander in chief, the secretary-general of the socialist Baath Party, and the president of the National Socialist Front coalition. The principles of the Baath Party are written into the constitution, which also provides for a People's Council and a Council of Ministers. Although Islam is not the official state religion, the constitution contains two concessions to the religious establishment: The president of the republic is required to be a Muslim, and Islamic law is recognized as the principal source of legislation.

The constitution vests supreme power in the president, who is elected for a seven-year term by universal suffrage. He has the rights to appoint or dismiss the vice president, the prime minister, and state officials; to declare war and states of emergency; and to amend the constitution. He also has the rights to convene and dissolve the People's Council, to issue laws and ordinances when the council is not in session, and to veto legislation, although the veto may be overridden by the People's Council during a second review. The constitution requires that the president be a member of the regional command of the Baath Party and that presidential acts conform to Baath principles.

The constitution provides for popular and direct elections to the People's Council on the basis of universal suffrage over age 18. The first general election to the council under the constitution was held in 1973.

PARLIAMENT

The legislature of Syria is the People's Council, a directly elected unicameral body consisting of 250 members serving four-year terms. Among the powers delegated to the People's Council by the constitution are the rights to monitor the actions of cabinet ministers and to withdraw its confidence from an individual minister or from the cabinet as a whole.

Candidates for parliament are selected by the ruling Baath Party and, in theory, by the other parties that are part of the National Progressive Front coalition. Personal loyalty to the regime and the president are necessary qualifications. Opposition lists of independent candidates have been offered but until recently have rarely been considered.

POLITICAL PARTIES

All political parties are included in the governing National Progressive Front, founded by Hafez al-Assad in 1972. The ruling Baath Party, formally known as the Regional Command of the Arab Socialist Renaissance Party, is the Syrian branch of an international Arab move-

ment founded in 1953 through the merger of Akram al-Hourani's Syrian Socialist Party and the Arab Resurrection Party of Michel 'Aflaq and Salah al-Din al-Bitar. The party set forth a pan-Arab, Marxist, secular ideology, with the motto "Unity, Freedom, Socialism." The Baathism of Hafez al-Assad differs in methodology and attitude from that of Aflaq and Bitar, emphasizing democratic centralism and pragmatism. Never forming a mass popular movement, Baathists infiltrated and indoctrinated the armed forces and seized full power in 1963. The party has dominated the political system since then.

There are several other Syrian political parties, including the Socialist Unionist Democratic Party, the Syrian Communist Party, the Unionist Socialist Party, the Arab Socialist Unionist Movement, the Syrian Arab Socialist Party, and the Syrian Social Nationalist Party.

LOCAL GOVERNMENT

Syria is divided into 14 governorates, or *muhafazat*. The city of Damascus is an independent municipality with the status of a governorate. Each governorate is divided into administrative districts known as *manatik*, which in turn are divided into localities known as *nawabi*. The smallest unit of local administration is the village, headed by a *mukhtar*.

Popular government at the governorate level is vested in provincial assemblies, of whose members three-fourths are elected and one-fourth are appointed by the Ministry of Interior and the governor. Nomadic tribes usually govern themselves, with the *shaykh* (sheikh), or chief, acting as the government's principal representative in fiscal and legal matters.

LEGAL SYSTEM

The constitution specifies that the source of Syrian jurisprudence is the Islamic sharia, but in many areas the sharia is so antiquated that it has been superseded by French civil, commercial, and criminal codes, as well as some Ottoman law. Under the constitution the judiciary is theoretically independent, and the appointment, transfer, and dismissal of judges is in the hands of the High Judicial Council. The court system is headed by the Court of Cassation, under which there are 30 courts of appeal in 30 prefectures, each presided over by three judges. At the next lower level are 110 summary courts presided over by judges of the peace. At the base of the system are 41 first instance courts, each with one judge. Religious courts handle family law matters. There are also juvenile courts and personal status courts for Muslims, Druze, and non-Muslim communities, such as Catholics, Armenians, and Jews. Criminal cases with no political implications are conducted according to the

French legal code. Defendants are entitled to legal representation of their choice.

HUMAN RIGHTS

In terms of civil and political rights, Syria is ranked as an unfree nation.

Under Hafez al-Assad, Syria enjoyed its longest period of stable rule since independence. Despite this stability, Syria experienced considerable internal strife, which culminated in serious domestic violence in 1979–80. Persons charged with security or political offenses fall under the jurisdiction of the military courts or the state security court. Under this system the accused have no recourse to habeas corpus and may not choose their lawyers. All court sessions are closed.

The government interferes with the private lives of its citizens in a number of ways. Electronic surveillance is believed to be widespread. Intelligence organizations maintain networks of guards to protect officials and important buildings, as well as to monitor the activity of people living in associated neighborhoods. The postal system censors the mail, although not every letter or package is checked. Private schools are carefully inspected by the government and follow the governmental curriculum. Although the legal system provides safeguards, including the requirements of arrest and search warrants before police are allowed to enter private homes, regulations under the state of emergency currently in effect suspend such safeguards in security-related cases.

Emigration and foreign travel are discouraged. Exit visas are difficult to obtain and are often subject to the posting of large bonds.

In November 2000 President Bashar al-Assad ordered the release of 600 political prisoners. However, despite the relaxation of restrictions associated with the presidential succession, Syrians continue to be denied civil and political rights.

Violence and discrimination against women are problems.

FOREIGN POLICY

The three constants in Syrian foreign policy are opposition to Israel, Arab nationalism, and independence from, and defiance of, the West. In pursuit of these goals, Syria has antagonized not merely Western powers but many Arab nations as well.

Under Hafez al-Assad, Syria gained a reputation for being a difficult and intransigent power, somewhat ruthless as an enemy and untrustworthy as a friend. Al-Assad's only true success (from the Syrian standpoint) was his intervention in Lebanon, which converted the latter country into a vassal state. In 1991 Presidents al-Assad and

Elias Hrawi of Lebanon signed a historic treaty that called for Syrian withdrawal from Lebanon. Although Syria was invited to participate in peace talks with Israel, al-Assad always balked at doing so. The two sides have disagreed on the extent and timing of an Israeli pullout from the Golan Heights, permanent security arrangements, and the future of Jewish settlers in that territory. Syria finally withdrew its troops from Lebanon in April 2005.

Although both Syria and Iraq were Baathist in ideology, they largely remained implacable antagonists because of personality clashes between Saddam Hussein and Hafez al-Assad. In the Iran-Iraq War, Syria supported Iran, and Syria contributed troops to the U.S.-led coalition that drove Iraqi forces from Kuwait in 1991. In 2001 Prime Minister Mohammed Miro made the first official Syrian visit to Iraq since ties were severed between the two nations over Syria's support of Iran in the Iran-Iraq War. Syria gave qualified support to the interim Iraqi government in 2004 and promised to make its border secure, although later that year the United States accused Syria of permitting Islamic militants and weapons to enter Iraq, thwarting peace efforts.

Suspected Syrian participation in international terrorist activity dates from 1986, when the nation was accused of involvement in a bombing at London Heathrow Airport. As a result, Syria has been ostracized by Western nations, particularly the United States; President George W. Bush eventually included Syria in his "axis of evil" in 2002. The United States has imposed sanctions on Syria for supporting terrorism and in 2005 withdrew its ambassador from Damascus.

DEFENSE

Syria has one of the largest armed forces in the Middle East. The defense structure is headed by the president of the republic, who is also the commander in chief. Military service is compulsory and is required of every Syrian citizen by the constitution. Upon completion of the mandatory conscript term of 30 months, every soldier joins the reserve for 18 years. The total strength of the active armed forces was about 427,000 in 2003. The bulk of the Syrian army is stationed on the three hostile borders, with Israel, Iraq, and Jordan.

Syria's military receives considerable financial aid from Persian Gulf Arab states. The nation formerly acquired most of its equipment from the Soviet Union and since 1990 has had some difficulty updating its weapons and vehicles. The nation is known to be attempting to acquire weapons of mass destruction.

ECONOMY

Syria's predominantly statist economy is on a shaky footing because of Damascus's failure to implement extensive economic reforms. The dominant agricultural sector remains underdeveloped, with roughly 80 percent of agricultural land still dependent on rain-fed sources. Although the nation has sufficient water supplies in the aggregate at normal levels of precipitation, the great distances between major water supplies and population centers pose serious distribution problems. The water problem is exacerbated by rapid population growth, industrial expansion, and increased water pollution.

Private investment is critical to the modernization of the agricultural, energy, and export sectors. Oil production is leveling off, and efforts on behalf of the non-oil sector to penetrate international markets have fallen short. Syria's inadequate infrastructure, outmoded technological base, and weak educational system make it vulnerable to future shocks and hamper competition with neighbors such as Jordan and Israel. Poverty is a major problem, with one-fifth of the population living below the poverty line. Unemployment was 20 percent in 2002.

The government recognizes the need to open the economy to additional domestic and foreign investment. It has passed laws allowing private banks to operate in the country, but as of 2004 the private banking sector was not well developed.

ENVIRONMENT

Like many arid Middle Eastern countries, Syria suffers from growing desertification, as caused by a number of factors, including rapid deforestation, the overgrazing of livestock, and soil erosion. The dumping of raw sewage and wastes from petroleum refinement pollutes the country's already inadequate water supply. Finding enough potable water for the population will be increasingly difficult in the near future.

LIVING CONDITIONS

Syria has a relatively high standard of living. City dwellers typically live in apartments that they own. People in the countryside have houses with courtyards, though villagers are usually poorer than urban residents. Most homes have electricity and indoor plumbing. A number of Syrians can afford vacation homes on the beach or in the mountains. The train system is modern and efficient, and bus services are also good. Roads are excellent, although gasoline is quite expensive. Poverty is a problem for some people, as is overcrowding caused by rapid population growth; this growth has put particular strain on the nation's water supply, some of which is polluted.

HEALTH

Syria's government provides free public health care, and there is also a private health-care system for those who wish to pay for it. The government requires most doctors and dentists to spend some time working in underserved rural areas; doctors are allowed to work in both the public and private systems, which is usually necessary for them because government pay is low. Syria's population is growing rapidly, and the average age is fairly young. Life expectancy is high, at over 70 years in 2005. Smoking is one of the country's biggest health problems, and the government is trying to limit smoking.

FOOD AND NUTRITION

Syrians eat a typical Middle Eastern diet, built around flat bread, rice, vegetables and salads, beans and lentils, olives, cheese, yogurt, and fruit. Many dishes are dips that people scoop up with pieces of bread; popular dips include hummus, a puree of chickpeas and tahini, and baba ghanoush, a puree of eggplant and tahini. Falafel, fried balls of ground chickpeas, are a popular snack. Common meats are chicken, lamb, and sheep; Muslim Syrians do not eat pork. Street vendors sell *shawarma*, sliced roasted lamb served in flat bread. Garlic, olive oil, and tahini are common seasonings. People eat pastries or fruit for dessert. Fresh fruit drinks and drinks combining fruit juice with milk are very popular; Syrians love very sweet drinks and foods. People drink strong coffee or tea with every meal.

Undernourished % of total population: 3.8
 Daily Available Calories per capita kcal: 3,050
 Amount of Cereal Available per person per year kg: 169.3
 Amount of Fruits and Vegetables Available per person per year kg: 167.6

STATUS OF WOMEN

The equality of women in Syria is guaranteed by the constitution. Women participate extensively in the workforce, particularly in Damascus, and a women's union works to expand the participation of women in all sectors of society, utilizing the media and a network of chapters throughout the nation to convey its message. At the same time, traditional religious law continues to apply in matters of personal status; particularly among the majority Muslim population, this continues to limit women's rights in matters such as marriage, divorce, and inheritance. Less than one-third of members of the workforce are women, and few of them hold positions of authority.

In general, women are not considered the equals of men, and they do not socialize with men except within the family. Men have a prickly sense of "family honor" and are known to defend it by killing wives and daughters; this is commonly done if the woman has been raped, which defiles that family honor. In such instances, the

women are not given the chance to defend themselves, and the men who commit the actual crimes are rarely punished. The penal code actually exempts men who kill or injure women caught committing adultery or performing illegitimate sexual acts with another person.

 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 0.96
 Women's Share of Wage Employment Non-agricultural %: 18.2

WORK

Syria's main exports are oil, cotton, textiles, fruits, vegetables, and grains. Almost one-third of the workforce is employed in the agricultural sector, which brought in 25 percent of gross domestic product (GDP) in 2003. Petroleum is a major industry, and many people also work in silk and cotton cloth production, food processing, and phosphate mining. The government encourages the manufacture of Syrian handicrafts such as jewelry and carpets. A lack of electricity is a problem for many factories. Services generate 44 percent of GDP; service workers include doctors, teachers, and government officials.

As Syria's population has grown, it has become increasingly difficult for people to find gainful employment; in 2002 one-fifth of Syrian workers could not find jobs. Salaries are low. Many workers must have more than one job to support their families.

 Unemployment %: 20

EDUCATION

Schooling is universal, compulsory, and free from ages six to 11, and textbooks are free in primary schools. In all, schooling consists of six years of primary school; three years of intermediate school, both general and vocational; and three years of secondary school, both general and vocational. The academic year runs from September to May. The school week is six days long. The medium of instruction is Arabic, but both French and English are taught as second languages. Because of severe overcrowding, many schools must teach their students in two shifts, half in the morning and half in the afternoon.

There are not enough places for all young people at secondary schools, so students must pass an examination to enter them. While there are both general and vocational secondary schools, most Syrian students avoid the vocational track. At the end of secondary school, students must pass another examination. Higher education is provided by four universities: the University of Damascus (also known as the Syrian University), the University of Aleppo, the University of Latakia, and the University of Homs (the Baath University). There are also agricultural and technical colleges. Tuition is low, but classes are overcrowded, and facilities are poor; students who can afford to do so usually attend foreign universities.

Syria's educational system has made great strides since 1980, and literacy has improved tremendously. As of 2003 almost 77 of the population was literate, although many more men than women can read. Illiteracy is a bigger problem in rural areas.

SCIENCE AND TECHNOLOGY

Syria suffers from unpredictable electrical supplies, which impedes the use of technology. In 2002, with slightly more than two million telephone lines in the country, the telephone system was barely adequate; the government was in the process of upgrading to digital signals and fiber-optic cables. That year there were also about 400,000 cellular telephones in use, and perhaps 220,000 people were using the Internet.

MEDIA

The Syrian press has functioned as a mouthpiece of the government. On foreign issues and matters relating to domestic security, the media adhere to governmental guidelines. Foreign-language publications are not generally censored, but articles that criticize the republic are removed. Arabic-language publications from outside the country are banned when they present viewpoints opposed to those of the government. Although there was a moment of press freedom following Bashar al-Assad's election in 2000, with several new private publications appearing, the Baath Party quickly reined in added freedoms. Bashar has called for freer Internet access, but the government blocks access to opposition Web sites and Israeli material.

Both radio and television are run by the state. Some Syrians can view foreign television networks through satellite receivers. The government has set rules for licensing private radio stations but still bans news and political commentary.

CULTURE

Syrian culture is influenced by Islamic and Arabic traditions, although the landscape is dotted with the remains of Greek, Roman, Byzantine, European, and Muslim visitors from past centuries. Visual arts do not depict living beings and are instead concentrated around calligraphy and geometric patterns as well as architecture. Bedouins make decorative knives, silver jewelry, and cloth. Syria was the site of a burst of classical Arab poetry during the 10th century; the Koran and *Al-Mu'allahaat* were written then.

FOLKLORE AND MYTHOLOGY

Syria is one of the oldest continuously inhabited places in the world. Humans lived there about 6,000 years ago, and early Syrians invented an alphabet, studied astronomy, and invented stories about the stars. The city of Aleppo, Arabic for "fresh milk," obtained its name because Abraham supposedly milked his cow there. The Greeks and Romans contributed their own mythological traditions. The famous collection of stories *The Book of One Thousand and One Nights* was written in Syria, assembling folktales from several centuries of Arab culture.

ENTERTAINMENT AND RECREATION

Syrians enjoy socializing with friends and families, spending time talking and drinking coffee and tea. Family meals can last for hours. Women usually entertain one another at home, while men go out to coffeehouses, where they smoke water pipes and play cards or chess. Older men go to bathhouses called hammam. Young men spend hours driving around in cars. Families go on walks together, lingering in parks or getting ice cream. Mountain resorts are popular destinations in good weather.

ETIQUETTE

Syrians, like all Arabs, value hospitality highly, and it is not unusual for a visitor to receive an invitation to a meal or a cup of tea. Hosts give their guests the best portions of any meal and insist that guests eat a great deal of food; it is considered high praise of the host for the guest to consume everything on the table. If a guest does not want more food, he should leave food on his plate to avoid having it refilled. People use their right hands to eat.

FAMILY LIFE

Family is extremely important to Syrians. Several generations typically live together, and the elderly are treated with great deference. Children are valued highly, and parents are often identified by the name of their eldest son. Most people want several children; in 2005 Syrian women bore an average of 3.5 children each. Parents are heavily involved in their children's marriages, and even if they do not actually arrange the marriage, children cannot wed unless both sets of parents agree to the match. Among some groups, first cousins are considered the ideal marriage partners. The groom usually pays a bride-price to his bride's family.

PERSONAL APPEARANCE

Syrians value a neat appearance and usually dress in their best clothes for going out in public. Western clothing is typical. Women dress very modestly, always covering their heads.

SPORTS

Syria's most popular sport is soccer. Men and boys play soccer for fun, sometimes in the streets, and the national team draws huge audiences both live and on television. Cycling and mountain biking are popular. A Syrian athlete won the gold medal in the heptathlon in the 1996 Summer Olympics. Syrian women traditionally have not played sports, but more women and girls are now competing in soccer, basketball, and other sports.

CHRONOLOGY

- 1946 French evacuate Syria. Independent Syrian Republic is proclaimed, with Shukri al-Kuwatli as president and Khalid al-Azm as premier.
- 1948 Syrian troops invade Israel and share Arab defeat. Syria leaves the franc zone.
- 1949 Husni az-Zaim seizes power in the first of a series of army coups. Az-Zaim is overthrown after four and one-half months by another army coup, under Sami Hinnawa, who is then unseated by Adib ash-Shishakli; civilian government is allowed to continue, under Hashim al-Atassi as president. Women vote for the first time in national elections.
- 1950 New constitution is promulgated by constituent assembly.
- 1951 Conflict between the army and the civilian government leads to a showdown in which ash-Shishakli seizes absolute power, abolishes all political parties, and dissolves the chamber of deputies. Fawzi as-Silu is appointed by ash-Shishakli as premier.
- 1952 Arab Liberation Movement is founded by ash-Shishakli as the nation's sole political party.
- 1953 Syrians approve new constitution by referendum, making Syria a presidential republic, with Shishakli as president. Martial law is imposed, as Druze revolt against the government. Baath Party is founded.
- 1954 Ash-Shishakli is ousted in country's fourth coup. Constitution of 1950 is restored; new civilian government is formed, with Hashim al-Atassi returning as president.
- 1955 Syria and Egypt agree to the creation of a joint military command, with headquarters at Damascus. Shukri al-Kuwatli succeeds Atassi as president.
- 1956 Anglo-French invasion of Suez swings Syria into the Soviet camp; Syrian troops put oil pipelines out of order; Syria breaks off relations with Britain and France. Oil is found at Karachuk field. USSR offers to supply arms.
- 1957 Baathists and Communists win elections. Syria sides with left-wing forces in political crisis in Jordan. U.S. Sixth Fleet is ordered to the eastern Mediterranean to avert possible Syrian military intervention in Jordan; Syria withdraws forces from Amman.
- 1958 Syria and Egypt announce the creation of the United Arab Republic through a union of the two countries; union is confirmed by a plebiscite; Gamal Abdal Nasser is elected first president of union. Akram Howrani and, later, Abdul Hamid Sarraj become chairmen of the executive council for the Syrian province.
- 1960 Syrian opposition to the union grows as Nasser attempts to complete the integration of the two countries.
- 1961 United Arab Republic is dissolved following coup in Damascus; Syria rejoins United Nations. Conservatives win elections; Nazim al-Kudsi is elected president, with Maruf Dawalibi as prime minister.
- 1962 Brief army coup succeeds in holding power for 12 days; al-Kudsi regime is restored.
- 1963 The government, weakened and demoralized by internal and external dissent, is swept out of power by Baathist coup; a National Revolutionary Command Council is formed as the supreme ruling body, with a Baathist-dominated cabinet headed by Salah al-Bitar. Pro-Nasserists are expelled from the cabinet and the army; attempted Nasserist revolt is crushed. Amin al-Hafez emerges as the strong man and chairman of the Presidential Council.
- 1964 Provisional constitution is announced, making Syria a "socialist people's democratic republic." Banks and industrial enterprises are nationalized. Al-Hafez is elected head of state.
- 1966 Extremist wing of the Baath Party, led by Salah al-Jadid and Nureddin al-Atassi, topples al-Hafez. Yusuf Zeayen is appointed prime minister.
- 1967 Arab-Israeli war breaks out; Israel overruns the Golan Heights and occupies the town of Quneitra; Syria breaks off diplomatic relations with the United States and the United Kingdom.
- 1970 Moderate wing of the Baath Party led by Lt. Gen. Hafez al-Assad seizes power and ousts al-Jadid and al-Atassi; al-Assad assumes post of premier, with Ahmed Khatib as president. Oil pipeline

- passing through Jordan, Syria, and Lebanon is sabotaged.
- 1971** Under a provisional constitution, al-Assad is elected president for a seven-year term, with Abdul Rahman Khulayfawi as premier. People's Council is established as the national legislature. Federation of Arab Republics is formed, with Syria, Egypt, and Libya as members. Syria accedes to the Tripoli Charter States Alliance.
- 1972** Assad forms the National Progressive Front, an alliance of left-wing political parties dominated by the Baath Party. Mahmoud al-Ayyoubi is named prime minister.
- 1973** New constitution is promulgated. The National Progressive Front gains absolute majority in People's Council in new elections.
- 1975** Diplomatic relations with United States and United Kingdom are restored.
- 1976** Al-Ayyoubi resigns as prime minister and is replaced by Khulayfawi. Syria intervenes by force in the Lebanese civil war.
- 1977** President al-Assad denounces Egyptian President Anwar Sadat's visit to Jerusalem and declares a national day of mourning; Egypt breaks relations with Syria and recalls ambassador.
- 1978** Running as the only candidate, al-Assad is re-elected president for a second seven-year term by 99.9 percent of the electorate; Prime Minister Khulayfawi is replaced by Mohammed Ali al-Halabi. Al-Assad is reelected president. Soviet Union agrees to step up arms flow. Egypt cuts diplomatic ties.
- 1979** Some 60 Alawi army cadets are gunned down by Sunni fanatics; Alawi-Sunni clashes erupt in major cities. Al-Assad vows to suppress the Muslim Brotherhood. Army moves into northern Syria to quell mass violence.
- 1980** Relations with Iraq worsen as personal animosity between President al-Assad and President Saddam Hussein of Iraq intensifies; Iraq cuts diplomatic ties; Syria moves to the brink of war with Jordan but yields to Saudi mediation. Syria and the Soviet Union sign 20-year treaty of friendship calling for stronger military as well as political and economic ties. Libya proposes merger with Syria; Syria and Libya rally behind Iran in its war with Iraq. Abdul Rauf al-Kassem is named prime minister, replacing al-Halabi.
- 1981** Elections to the People's Assembly are held in which the National Progressive Front wins all seats.
- 1982** A Muslim Brotherhood uprising in Hama is brutally suppressed.
- 1983** Syria helps anti-Yasser Arafat faction of Palestine Liberation Organization oust him from Syria. Al-Assad suffers a heart attack and is hospitalized for months.
- 1985** Al-Assad is reelected for a third seven-year term in office.
- 1986** In general elections the Baath Party and other members of the National Progressive Front win 152 of 195 parliamentary seats. Jordan appoints its first ambassador to Syria since 1980. In the United Kingdom a Jordanian is convicted for planting a bomb on an Israeli airliner in London. Syrian diplomats are accused as coconspirators.
- 1987** Abu Nidal's Fatah Revolutionary Council is closed in Damascus, and many of its members are exiled. A reconciliation is reported between Presidents al-Assad and Hussein. A government reshuffle follows the resignation of Prime Minister Abdul Rauf al-Kassem, whose administration is accused of inefficiency and corruption.
- 1989** Diplomatic relations are reestablished with Egypt.
- 1990** President al-Assad's visit to Moscow confirms the continuing strength of the Syria-Soviet relationship. Kuwait's exiled leader, Crown Prince Sheikh Saad al-Abdullah as-Salim as-Sabah, is warmly received in Damascus. The Syrian defense of Saudi Arabia following the incursion of Iraq into Kuwait leads to President al-Assad's first meeting with President George H. W. Bush. Progress is seen in Syria's relations with Britain.
- 1994** Syria offers to normalize relations with Israel in exchange for the Golan Heights.
- 2000** President Hafez al-Assad dies and is succeeded by his son, Bashar.
- 2001** Syria wins a two-year seat on the UN Security Council. Pope John Paul II visits Syria. Syrian troops leave Beirut and move to other parts of Lebanon in reaction to criticism of Syria's presence in Lebanon. Prime Minister Mohammed Miro makes the first visit to Iraq since ties were severed between the two nations over Syria's support of Iran in the Iran-Iraq War in the 1980s.
- 2002** U.S. Undersecretary of State John Bolton claims that Syria is acquiring weapons of mass destruction; U.S. President George W. Bush includes Syria in his "axis of evil."
- 2003** The United States threatens economic sanctions if Syria aids fugitive Iraqis and develops chemical weapons. President al-Assad appoints Mohammed Naji al-Otari as prime minister of his new reformist government. Israel launches an air strike against a Palestinian camp near Damascus.
- 2004** Al-Assad visits Turkey. The United States imposes economic sanctions on Syria for supporting terrorism. The United Nations tells Syria to withdraw its security forces from Lebanon.

2005 The United States withdraws its ambassador from Beirut, claiming that Syria is influencing Lebanon. Syria withdraws all troops from Lebanon.

January 1, 1947; amended 1992, 1994, 1997, 1999, and 2000

GEOGRAPHICAL FEATURES

Taiwan, officially the Republic of China, consists of the island of Taiwan, about 115 miles off mainland Asia; a few small offshore islands; and the larger Pescadores Islands, a group of 64 islands. The capital is Taipei, in the north of the extremely mountainous Taiwan. High and rugged mountains occupy more than half of the island, extending in a north-south direction from the northern tip to the southern extremity. In the far north is a short range of volcanic origin called Tatun Shan, which rises to over 1,220 m (4,000 ft). In the central range there are more than 60 peaks with elevations of over 3,050 m (10,000 ft). The highest of these, Yu Shan, 3,952 m (12,963 ft) high, lies near the geographical center of the island. On the east coast the central range drops precipitously to the Pacific Ocean. In the west the high mountains are succeeded by

foothills that gradually give way to flat alluvial plains broken up by short mountain streams and rivers. Taiwan lies within the Pacific earthquake belt, and over 200 shocks are recorded each year.

Taoyuan	368,765

CLIMATE AND WEATHER

The climate is subtropical, except for that of the extreme southern tip, which is tropical. Average annual temperatures vary from 21.8°C (71.2°F) in Taipei in the north to 24.6°C (76.2°F) on the Hengchun Peninsula in the south. The island receives abundant rainfall, with a mean annual average of over 2,540 mm (100 in). Much of this rain is brought by the northeast monsoon, which ordinarily blows from November through March, and by the southwest monsoon, which ordinarily blows from May through September. The island lies within the typhoon belt and receives an average of 3.6 typhoons per year, usually between May and November.

Climate and Weather

Average temperature
January (lowland): 61°F in the north and 68°F in the south
July: 82°F (north and south)
Average rainfall: 101 in
Middle of the western coast: 50 in
Exposed mountain slopes: 250 in

FLORA AND FAUNA

Native vegetation has mostly disappeared from the lower coastal areas, but many of the island's plants have been protected by inaccessibility. Taiwan's mountains are covered with cyprus forests, with a few camphor trees left. Animal species include the Formosan black bear, the Formosan sika deer and the Formosan landlocked salmon. The country has six national parks and 67 reserves, along with tough preservation laws, created in an effort to combat rampant environmental destruction and the extinction of both animals and plants.

ETHNIC COMPOSITION

Almost all Taiwanese are Chinese, but there is a loose distinction between the descendants of those who were natives of the island before 1945, who constitute 84 percent of the population, and mainlanders who migrated from China along with the Kuomintang (KMT), constituting 14 percent. The descendants of natives, also simply called Taiwanese, trace their descent from immigrants from Fujian and Guangdong provinces in southern China. They form several distinct groups: The Hakka are descendants of refugees and exiles from Guangdong who came to Taiwan before the 19th century. The more numerous Fujians are descendants of people from Fujian who immigrated to Taiwan in the 18th and 19th centuries. About 2 percent of the population are aborigines, primarily of Indonesian descent or Malay origin, in central and eastern Taiwan. They are divided into some eight major tribes, of which the Ami, Atayal, Paiwan, and Bunan account for 88 percent and the Puyuma, Rukai, Tsou, and Yami account for 12 percent.

LANGUAGES

Although all Taiwanese Chinese use the same written language, spoken dialects are mutually unintelligible. The three major dialect groups are Min, Hakka, and Mandarin. Min and Hakka are spoken by Chinese whose ancestors came from China before 1949. Mandarin is the dialect of those who came after the Communist takeover of mainland China. Min is the mother tongue of the majority of the people and is a variant of the Amoy dialect in southern Fujian and of the Swatow dialect in north-eastern Guangdong and on Hainan Island. Min Nan, or Southern Min, speakers are the majority in the western plains and in the north; the Taiwanese language is a form of Min Nan. Hakka is spoken by a minority in the north-

west and to the east and south of the mountains. Mandarin is spoken by about 70 percent of the population, including many Min Nan and Hakka speakers. It is the official language and benefits from government programs oriented around its use. The aboriginal inhabitants of the island speak several Malayo-Polynesian languages.

RELIGIONS

The traditional religions of Taiwan are Confucianism and Buddhism. A person may simultaneously subscribe to Confucianism, folk Taoism, animism, and Buddhism without formally belonging to any one of them. About half the population do not subscribe to any organized religion, but even those without formal affiliations are influenced by the Confucian value systems, rituals, and philosophical points of view. The principal values associated with Confucianism are filial piety as expressed through ancestor worship, *jen* (meaning love, benevolence, and humanity), and *li* (encompassing ceremonies, rituals, and good manners). Confucianism prescribes proper ethical and moral conduct for relations at all levels: between parents and children, siblings, emperors and their subjects, and friends. Among organized religions, Buddhism exerts the most influence, and millions of people who may not belong to Buddhist sects adhere to some form of Buddhist doctrine. Buddhist monasteries and temples are also centers of learning.

Folk Taoism is the third-largest religious tradition in Taiwan. Taoism is not an organized religion. Taoist priests do not play an important role in the religious lives of the people, and beliefs are passed on informally within the family. Taoists do not gather in congregations for worship, nor do they have fixed centers of worship. The most important ceremony revolves around processions carrying the statues of particular deities.

Christianity is a more recent phenomenon in Taiwan and has met with only limited success. English and Canadian Presbyterians were the first to evangelize the island, and as a result Presbyterians constitute the largest Protestant group. Roman Catholics are slightly fewer than Protestants, but they are equally active in educational and medical activities.

HISTORICAL BACKGROUND

Before the Chinese settlement of Taiwan, the island was occupied by aborigines of Indonesian or Malay descent.

The earliest Chinese settlements in Taiwan date from the seventh to the 10th centuries under the Tang dynasty. Under the Ming dynasty (1368–1644) Japanese pirates and Chinese outlaws displaced the aboriginal tribes from the coastal areas in the west and north. The modern history of Taiwan may be said to have begun from this time.

In 1517 Portuguese explorers sighted the island and named it Ilha Formosa, or “beautiful island.” The Dutch who came after the Portuguese captured the Pescadores in 1622 and used them as a base for controlling trade in the Far East. In 1624 the Dutch were persuaded by the Chinese to move their base of operations to Formosa. The Dutch thereupon built two forts, Zeelandia and Providentia, in the southwest. Meanwhile, the Spanish seized Keelung in the north in 1626 and extended their sway by capturing Tanshui. The Japanese settlers withdrew in 1628 under the policy of national seclusion adopted by the Tokugawa shogunate. The Dutch drove out the Spanish in 1656 and brought the entire island under their control.

Dutch rule lasted for only five years, as in 1661 Ming forces led by Cheng Cheng-kung routed them. Ming rule came to an end in 1682, when the new Manchu emperors invaded the island and annexed it as a part of Fujian Province, of China. From 1683 to 1886 Taiwan, as Formosa was renamed in Chinese, was totally Sinoized, as Chinese colonists drove the aboriginals into the mountains or assimilated them into Chinese society. Imperial control over the island was slight, however, and the unchecked corruption of local officials met with armed rebellions from the local populace. To bring the island more closely into the imperial administrative system, it was made a province in 1886.

At the conclusion of the Sino-Japanese War of 1895 Taiwan was ceded to Japan. Japanese rule was consolidated over the early years of the 20th century, despite armed resistance from the native Chinese and aboriginals. The Japanese era was marked by the introduction of Japanese as the national language, general Japanization, rapid industrialization, and the development of agriculture and transportation. With the defeat of Japan at the end of World War II in 1945, the island reverted to China under the Potsdam Declaration.

When the Communists took over mainland China in 1949, Kuomintang (Nationalist) forces under Chiang Kai-shek were pushed back to Taiwan. When it became evident that further defense of the mainland was impossible, the Nationalist government and many of its best troops were transported from China, and the seat of the Republic of China was set up in Taipei. In the following decades the KMT entrenched itself as a political party, and when Chiang Kai-shek died in 1975, his son, Chiang Ching-kuo, took up the mantle as the leader of the party and nation.

Meanwhile, the legal status of China became a cold war issue and nearly led to war between the United States and China under the Eisenhower administration. The

Republic of China was ousted from the Chinese seat at the United Nations and the Security Council in 1971. In 1972 the United States abandoned its two-China policy, voting in favor of the resolution to unseat the Republic of China and award the seat to the People's Republic of China. Nevertheless, Taiwan maintained an unofficial presence in Washington. In 1988 Chiang Ching-kuo died and was succeeded by the Taiwanese-born Lee Teng-hui.

Direct, if limited, relations with the mainland were initiated in 1989. Taiwan attended a series of meetings in Beijing, also participating in the 1990 Asian Games there, and began investing in mainland industries. Reformers within the KMT urged the abandonment of the "one China" policy in favor of a divided nation model. In 1993 formal contacts were established when a Taiwanese group met with the mainland's nonofficial Association for Relations across the Straits. In 1997 the Dalai Lama visited Taiwan, leading to a storm of protests from Beijing. In 2000 the KMT was dislodged from its status as the ruling party when its candidate was defeated in the presidential election by Democratic Progressive Party (DPP) candidate Chen Shui-bian. A year later the KMT also lost its majority in parliament to the DPP.

The KMT and DPP spent the early 2000s with a fairly precise balance of power, neither one able to wrest control of the country for itself. Though Chen Shui-bian won a second term as president in 2004, his party's coalition lost the parliamentary majority it had won in the previous election. Chen refused to accept China's claim that Taiwan belonged to it, and he campaigned on a pro-independence platform, but he toned down his rhetoric in the face of substantial opposition to Taiwanese independence, promising that he would not declare independence if China did not attack. The United States maintained its own "one China" policy, refusing to recognize Taiwan as a sovereign nation (while continuing to sell it weapons). The Taiwanese people remained divided, some favoring close ties with China and some favoring independence in various forms, some more radical than others.

LIST OF MODERN RULERS

1948–49	Chiang Kai-shek
1949–50	Li Tsung-jen
1950–75	Chiang Kai-shek
1975–78	Yen Chia-kan
1978–88	Chiang Ching-kuo
1988–2000	Lee Teng-hui
2000–	Chen Shui-bian

CONSTITUTION

Taiwan is governed under the provisions of the 1947 constitution (as amended in 1992, 1994, 1997, 1999, and

2000), which was promulgated before the Communist takeover of mainland China. The constitution was initially administered by the first National Assembly, which was elected on the mainland in 1947 to oversee presidential elections and amendments to the constitution. The members of the first National Assembly technically held office until they were forced to "retire" in 1991. The second National Assembly consisted of 325 members elected in 1991. It amended the constitution in 1994 to allow for the direct election of the president and vice president. The body has the authority to amend the constitution, impeach the president, and ratify some presidential appointments. The National Assembly voted in 2000 to allow their terms of office to expire without new elections to choose replacements.

The government is based on a five-power system that has the major features of both cabinet and presidential government. The president is elected by popular vote for a term of four years, with eligibility for a second term. The vice president is elected on the same ticket. The first direct elections were held in 1996.

The special feature of the constitution is the establishment of the system of five branches known as *yuans*: the Executive Yuan, Legislative Yuan, Judicial Yuan, Examination Yuan, and Control Yuan. The president has authority over the five *yuans*. The Executive Yuan is the administrative branch and consists of the Executive Yuan Council, ministries, commissions, and 19 subordinate bodies, including the Directorate of the Budget. The Examination Yuan conducts examinations for entry into public service and deals with civil-service personnel. The Control Yuan is a body elected by local councils to investigate the work of the Executive Yuan and the ministries and executives. It meets once a month and comprises 29 members serving six-year terms.

PARLIAMENT

According to the constitution, the Legislative Yuan is the highest legislative body in the nation. It has 225 elected seats: 168 by popular vote, 41 on the basis of proportion of islandwide votes received by participating political parties, eight by overseas voters, and eight by the aboriginal population. At least 11 seats are reserved for women. The term of legislative office is four years.

The Legislative Yuan sits in session twice a year: from February to the end of May and from September until the end of December. Emergency sessions may also be held. The Legislative Yuan sits twice a week while in session.

POLITICAL PARTIES

The Chinese Nationalist Party, or Kuomintang (KMT), created by Chiang Kai-shek and supported by Sun Yat-

sen, was until 1999 the dominant political party. Its traditional structure was similar to that of the Communist Party, with a National Congress, a Central Committee, and party cells. It suffered a major split in 1993 when a new alliance emerged within the party, with most of the younger reform-minded members withdrawing to launch the New Party. The KMT still maintains that Taiwan is part of the People's Republic of China.

In the 1990s the chief opposition party, the Democratic Progressive Party (DPP), gradually took a majority of the seats in the Legislative Yuan. In the 2004 elections the DPP took 89 seats, the KMT 79. The DPP's members are mostly native Taiwanese, and the party maintains that Taiwan is a country independent of China.

The People First Party (PFP), also made up of former KMT members, formed an alliance called the Pan-Blue Coalition with the KMT and the New Party in 2000. The Taiwan Solidarity Union (TSU) formed in 2001 under the leadership of former president Lee Teng-hui. The TSU wants to change Taiwan's name and replace the 1947 constitution with a completely new one. It is allied with the DPP in the Pan-Green Coalition.

LOCAL GOVERNMENT

Taiwan is divided into 18 counties, five municipalities, and two special municipalities (Taipei and Kaohsiung). As of 1998, all counties and cities were directly administered by the Executive Yuan.

LEGAL SYSTEM

The Judicial Yuan is the highest judicial organ of the state. It is headed by a president and vice president appointed by the president of the republic with the consent of the National Assembly. The four organs of the Judicial Yuan are the Council of Grand Justices, the Supreme Court, the Administrative Court, and the Committee on the Discipline of Public Functionaries. The Council of Grand Justices is charged with the responsibility of interpreting the constitution and arriving at uniform interpretations of laws and decrees. It has 15 members appointed by the president for nine-year terms.

The Chinese system of justice is based on trials in three grades of courts. The Supreme Court is the highest tribunal and consists of a number of civil and criminal divisions, each of which is formed by a presiding judge and four associate judges. The Supreme Court has no original jurisdiction but hears appeals and sets guidelines. Below are the high courts and the district courts. The district courts, found at the municipal and county levels, handle civil and criminal cases of the first instance, and the provincial-level high courts hear appeals against the judgments of the district courts and also certain cases of

first instance. In addition, there is an administrative court charged with the adjudication of disputes between citizens and the state.

HUMAN RIGHTS

Taiwan's human rights record has been good in recent years. The government no longer uses wiretaps to spy on citizens. There have been, however, other complaints of governmental infringement on citizens' privacy. Prisons are overcrowded, and police are known to abuse detainees on occasion. Workers' rights are not always well protected. Discrimination against aborigines and women, violence against women, child prostitution, and human trafficking in women and children are all problems.

FOREIGN POLICY

Taiwan's foreign policy is affected by the fact that many countries refuse to recognize it as a sovereign nation. In early 2005 Taiwan had diplomatic relations with 25 countries. The United States, following the lead of the People's Republic of China, insists that it can maintain relations with only one China and so officially recognizes only the government of mainland China and considers Taiwan part of that nation. The United States has maintained unofficial relations with Taiwan since 1979, when President Jimmy Carter signed the Taiwan Relations Act, and has long sold defensive military equipment to Taiwan. The United States does not support Taiwanese independence and wants Taiwan and China to resolve their differences in accordance with the "one China" policy.

Taiwan has not had a seat in the United Nations since 1971, when the People's Republic of China replaced it there. The government has been cultivating ties with various nations and has been lobbying to be admitted to the United Nations.

China and Taiwan continue to have tense relations. China has missiles aimed at the island and claims the right to use force against Taiwan should the island declare independence.

DEFENSE

Taiwan has a large military for its size. All males between 19 and 35 years of age must serve in the armed forces for 18 months, an obligation that will be shortened to 12 months in 2008. The defense force's priority is defending the island from mainland China. The United States has sold Taiwan some weapons, and the republic has recently begun procuring weapons from other nations as part of a program of military self-reliance.

ECONOMY

Taiwan is an economic success story. It has transformed itself from the agricultural nation it was in the 1940s to a world player in the high-technology market. In the 1960s the government encouraged foreign investors to build factories that could make use of Taiwan's inexpensive labor supply. As the economy grew and the Taiwanese currency became more valuable, the nation shifted its focus to developing the service sector and building technology-intensive products for export, with companies that had used cheap Taiwanese labor moving their operations to Southeast Asia and mainland China. By the early 2000s Taiwan was one of the world's leading exporters of computer equipment.

In late 2004 Taiwan was a creditor economy, with reserves of \$175 billion. The republic suffered from a brief economic downturn between 2001 and 2003, as exacerbated by the outbreak of SARS, but recovered in 2004, with growth of 5.9 percent.

ENVIRONMENT

Water pollution from raw sewage and industrial pollutants is a major problem that is regulated by the 1974 Water Pollution Control Act. Despite the existence of this law, there have been cases of the drinking water supply becoming contaminated. Air pollution is also a problem, though all factories are required to comply with air- and water-quality standards and to have antipollution devices installed. In the 1980s emission standards were set for

automobiles, and in 1987 an islandwide pollution monitoring system was established. The island has low-level radioactive waste that must be disposed of. There have been reports of trade in endangered species. The main responsibility for implementing environment policy lies with the Environment Protection Agency. Wildlife management is the function of the National Wildlife Protection Association.

LIVING CONDITIONS

Taiwan has one of the highest population densities in the world, and as such it can be extremely crowded, especially in cities. Families typically live in close quarters, and most people are accustomed to a bare minimum of personal space. Housing is modern, and most people own various amenities, such as televisions. Public transportation is cheap and efficient; there are both train and bus services. Drinking water is contaminated in some areas.

HEALTH

Taiwanese people are covered by a national health-insurance scheme; the costs are divided between employees, employers, and the government. Local health stations provide services in rural mountainous areas and on the outlying islands. Medical and dental facilities are of high quality and modernity and are inexpensive for a developed country. Many people use traditional Chinese medicine in addition to Western techniques and drugs. Practices such as tai chi, *qi jong*, and acupuncture are widely used by people who want to increase their longevity. Life expectancy is quite high, at 77 years, and the infant mortality rate is very low.

FOOD AND NUTRITION

Food is a major part of social life, and Taiwanese frequently get together over food and drink. Rice is the ubiquitous starch and appears at all meals. Most Taiwanese food is like that of mainland China, with meat and vegetable stir-fries, fried rice, fish, vegetables, and snacks such as spring rolls. Fruit is commonly served for dessert. Unusual ingredients such as bear organs appear on the table from time to time; they are typically eaten for medicinal reasons. Festivals have special snacks associated with them; people eat moon cakes during the Moon Festival, red turtle cakes on birthdays, and rice dumplings during the Dragon Boat Festival. Tea accompanies all meals, and Taiwanese take pains to brew their tea correctly, according to the type of leaves.

STATUS OF WOMEN

Violence against women is a serious problem, and domestic violence is widespread. The Women's Development Committee has claimed that 35 percent of married women are victims of spousal abuse, and domestic-violence hotlines have handled 17,000 cases over the past decade. Because of strong social pressures, many women do not report incidents of abuse to the police. In 1998 the Legislative Yuan passed new legislation requiring all city and county governments to set up domestic-violence prevention and control centers. The centers provide victims with protection, shelter, legal counseling, and other services around the clock. Rape also remains a serious problem, with as many as 7,000 incidences every year. Legalized prostitution has been discontinued, but there are still reports of young women entering into prostitution voluntarily as well as of child prostitution. There are also credible reports of women being shipped to the island by human traffickers to work as prostitutes.

The law prohibits gender-based discrimination, and portions of the legal code that discriminated against

women have been revised. Thus, wives are no longer required to adopt their husbands' last names, and fathers no longer have priority in child-custody disputes. However, a wife may not legally own property that she acquired before marriage. There is no equal employment rights law, and women do not commonly receive maternity leave, nor do they receive equal pay for performing the same work as men. The government is addressing the problem of sexual harassment.

WORK

Taiwanese people are known for their diligence and willingness to work long hours. The workweek was formerly six days long but has been shortened to five days. Unemployment is quite low, at 5 percent in 2003, and at times Taiwan has even suffered from labor shortages. As a result of its economic success, Taiwan has very little poverty and a high per capita income, representing a major transformation from the nation's poverty-stricken agricultural state in the years before World War II. Most Taiwanese work in industry or services. Industrial products include electronics, refined petroleum, textiles and clothing, iron and steel, cement, machinery, and processed food. Fewer than 10 percent of workers are now employed in agriculture.

EDUCATION

Taiwanese children attend six years of compulsory primary school. Four-fifths of students attend three more years of school, through then ninth grade. The government pays for these first nine years. Students who want to enter secondary school must pass an examination, as must those who want to enter university three years later. Higher education is provided by nine national universities and 15 colleges. The Academia Sinica is the highest academic institution in Taiwan; it consists of 13 institutes

whose academicians (*yuan-shih*) carry on programs of scientific research.

Taiwanese people take education very seriously. Children do homework every night, as well as during summer vacation, and parents check and sign homework before children turn it in to their teachers. Teachers are highly respected.

MEDIA

Taiwan's media is very free and very competitive. The country has about 350 privately owned newspapers, over 150 radio stations, and more than 100 television stations, all of which express a range of views with impunity. Though laws ostensibly prohibit criticizing Communism or promoting Taiwanese independence, they are not usually enforced. The government is actively removing government controls from broadcast media and has introduced new public television stations.

Prior to the easing of long-standing restrictions in 1997, the total number of newspapers was limited to 31, nearly half of which were owned either by the government or by the Kuomintang, with the remainder controlled by individuals with close KMT ties. In 1988 the government announced that it would accept applications for new papers for the first time since 1951 and would increase the page limit from 12 to 24, although it would remain illegal for journalists to advocate Communism or support Taiwanese independence.

Some political influence over the electronic media still exists, particularly with regard to television. The KMT continues to be one of the largest shareholders in three of the five islandwide broadcast television stations. However, the existence of over 100 television stations, some of which carry programs openly hostile to the ruling party, has greatly diminished the importance of KMT control over broadcast television stations. The government has abolished the Publications Law, which had empowered the police to seize or ban printed material that was seditious, treasonous, sacrilegious, interfered with the lawful exercise of public functions, or violated public order or morals. The closest thing to a censor in the media is the Government Information Office, which has the right to screen materials before publication or sale, but this right is rarely enforced.

CULTURE

Taiwanese culture shares many traits with Chinese culture. Taiwan has a form of traditional opera very similar to that of China, with colorful costumes and an evocative atmosphere. Taiwanese music features Chinese gongs, trumpets, flutes, and string instruments. Taiwanese artists create calligraphy, sculpture, cloisonné, lacquer painting, embroidery, and other art forms like those in China. Taiwanese people also create art by cutting paper or tying cords into elaborate patterns.

Taiwanese puppetry has evolved into an art form separate from the Chinese version, and Taiwanese puppeteers use shadow puppets in addition to marionettes. Traditional Taiwanese dances include the dragon dance and the lion dance.

FOLKLORE AND MYTHOLOGY

Many Taiwanese worship folk deities along with practicing Buddhism and Taoism and following the tenets of Confucianism. These folk gods and goddesses traveled from mainland China with immigrants in past centuries and were adapted and incorporated into Taiwanese society and the particular needs of time and place. Folk gods and goddesses are welcome in Buddhist temples, such that, for example, people may worship the Buddhist goddess Kuan Yin and the Taiwanese sea goddess Matsu in the same temple.

ENTERTAINMENT AND RECREATION

Taiwan's cities have many entertainment options, including shopping, restaurants, clubs, and discos. Families usually spend weekends together, often going to the country for picnics. Many cities and towns have night markets that attract crowds of people who come to shop, eat, and socialize. Older men spend their free time sitting in groups on the street or in temples and drinking tea. Older women play a great deal of mah-jongg.

Taiwan offers plenty of outdoor recreation. People go hiking in the mountains and swimming and surfing at the beaches. Though snow skiing is usually impossible, many Taiwanese enjoy grass skiing.

ETIQUETTE

Emotional restraint is highly valued, and Taiwanese rarely show strong emotions. Displaying anger is considered weak and rude. Saving face is important, and in social interactions Taiwanese people are supposed to allow one another to save face even in adversity. Exchanging gifts and favors are a large part of maintaining face. Taiwanese people smile when they are embarrassed, as a way of offering an apology for their behavior.

Taiwanese people are very suspicious about death and avoid symbols associated with it. They do not talk about death, they do not wear white, and they avoid anything that comes in sets of four, a number associated with death.

FAMILY LIFE

Confucian traditions dictate Taiwanese attitudes toward family life. Family reputation is extremely important, and the behavior of one family member reflects on all others. Families tend to keep personal matters private and hide their opinions of one another when in public. Older people outrank younger ones, and men outrank women. Men are considered the heads of families, though their primary duty is always toward their parents. Wives are supposed to be subservient to their husbands and their mothers-in-law. Most people have few children, and it is common for three or more generations to live together.

Taiwanese people list their last names first. Women sometimes keep their maiden names after marriage.

PERSONAL APPEARANCE

Taiwanese people dress in typical Western clothing. They value neatness and sometimes choose expensive designer clothes to impress one another. They remove their shoes when entering homes or temples. Sandals are considered rural attire and are not allowed in some establishments.

SPORTS

Taiwanese people play many sports, including soccer, baseball, softball, basketball, ping-pong, and badminton. Many people belong to health clubs and exercise at gyms or go to parks to do aerobics, jog, or practice folk dancing. Martial arts such as kung fu and tai chi are very popular.

CHRONOLOGY

- 1945** At the end of World War II, the island is returned to China under the Potsdam Agreement. The KMT establishes full control.
- 1949** The KMT, expelled from mainland China by the Communists, flees to Taiwan and establishes its capital in Taipei under the name of the Republic of China, with Chiang Kai-shek as president.
- 1954** United States and Taiwan conclude mutual defense treaty.
- 1971** Taiwan is expelled from the United Nations, and its seat is awarded to the People's Republic of China.
- 1975** Chiang Kai-shek dies and is replaced as president by his son, Chiang Ching-kuo.
- 1979** United States severs diplomatic relations and annuls defense pact with Taiwan, as normal diplomatic relations are restored between Beijing and Washington.
- 1987** Martial law is lifted, press restrictions are lifted, and opposition parties are legalized.

- 1988** President Chiang Ching-kuo dies and is succeeded by Taiwanese-born Lee Teng-hui.
- 1991** Lee Teng-hui declares an end to civil war with mainland China. Constitution is amended. KMT wins landslide victory in elections to parliament.
- 1993** Cooperative pact is signed with China.
- 1996** Lee Teng-hui is elected president in the first-ever democratic election.
- 2000** The KMT candidate is defeated in presidential election, marking the end of an era. Chen Shui-bian becomes president. Chang Chun-hsiung is sworn in as prime minister.
- 2001** The Dalai Lama meets with President Chen during a visit that is opposed by China. Despite protests by China, the United States sells Taiwan submarines, warships, and antisubmarine aircraft. Taiwan test-fires its Patriot antimissile defense system. At the same time, China carries out military exercises simulating an invasion of Taiwan. Taiwan lifts its ban on direct trade with China, which had been in effect for nearly 50 years. The KMT loses its majority in parliament.
- 2002** Taiwan officially enters the World Trade Organization, just after mainland China.
- 2003** Taiwan suffers many cases of the SARS virus. Taipei 101, said to be the world's tallest building, is unveiled. Parliament approves a bill allowing a referendum on independence from China if China attacks.
- 2004** Chen Shui-bian wins a second term as president and promises that he will not try to force the independence and sovereignty issues. The KMT pro-China alliance wins a slight majority in the December parliamentary elections.
- 2005** On the Lunar New Year, airplanes fly between Taiwan and China for the first time since 1949. Taiwan condemns a Chinese law giving China the right to use force against Taiwan if Taiwan declares itself independent. KMT leader Lien Chan visits Communist Party leaders in China for the first meeting between party leaders since 1949.
- 2006** The government dissolves the National Unification Council, established in 1990 to promote unification with mainland China.

TAJIKISTAN

Basic Fact Sheet

OFFICIAL NAME

Republic of Tajikistan (Jumhurii Tojikiston)

ABBREVIATION

TJ

CAPITAL

Dushanbe

HEAD OF STATE

President Emomali Sharipovich Rakhmonov (from 1992)

HEAD OF GOVERNMENT

Prime Minister Okil Okilov (from 1999)

NATURE OF GOVERNMENT

Republic

POPULATION

7,163,506 (2005)

AREA

143,100 sq km (55,251 sq mi)

MAJOR ETHNIC GROUPS

Tajik, Uzbek, Russian

LANGUAGES

Tajik (official), Russian

RELIGION

Sunni Islam, Shia Islam

UNIT OF CURRENCY

Tajikistani Somoni

NATIONAL FLAG

Three horizontal stripes of red (top), white, and green, with the white stripe one and one-half times the height of either of the other stripes; a stylized gold crown surmounted by a semicircle of seven five-pointed gold stars is found in the center of the white stripe.

NATIONAL EMBLEM

The national coat of arms consists of the crown-and-stars motif from the flag, in dark red. Behind, a sun rises over mountains, recalling the Pamirs and other mountains. The crown is situated over a rising yellow sun and an open Koran and flanked by wreaths of cotton and wheat bound by a banner with the colors of the flag.

NATIONAL ANTHEM

“Surudi Milli”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 8 (International Women’s Day), May 1 (Labor Day), May 9 (Victory Day), September 9 (Independence Day), November 6 (Constitution Day), November 9 (National Reconciliation Day), various Muslim festivals

DATE OF INDEPENDENCE

September 9, 1991

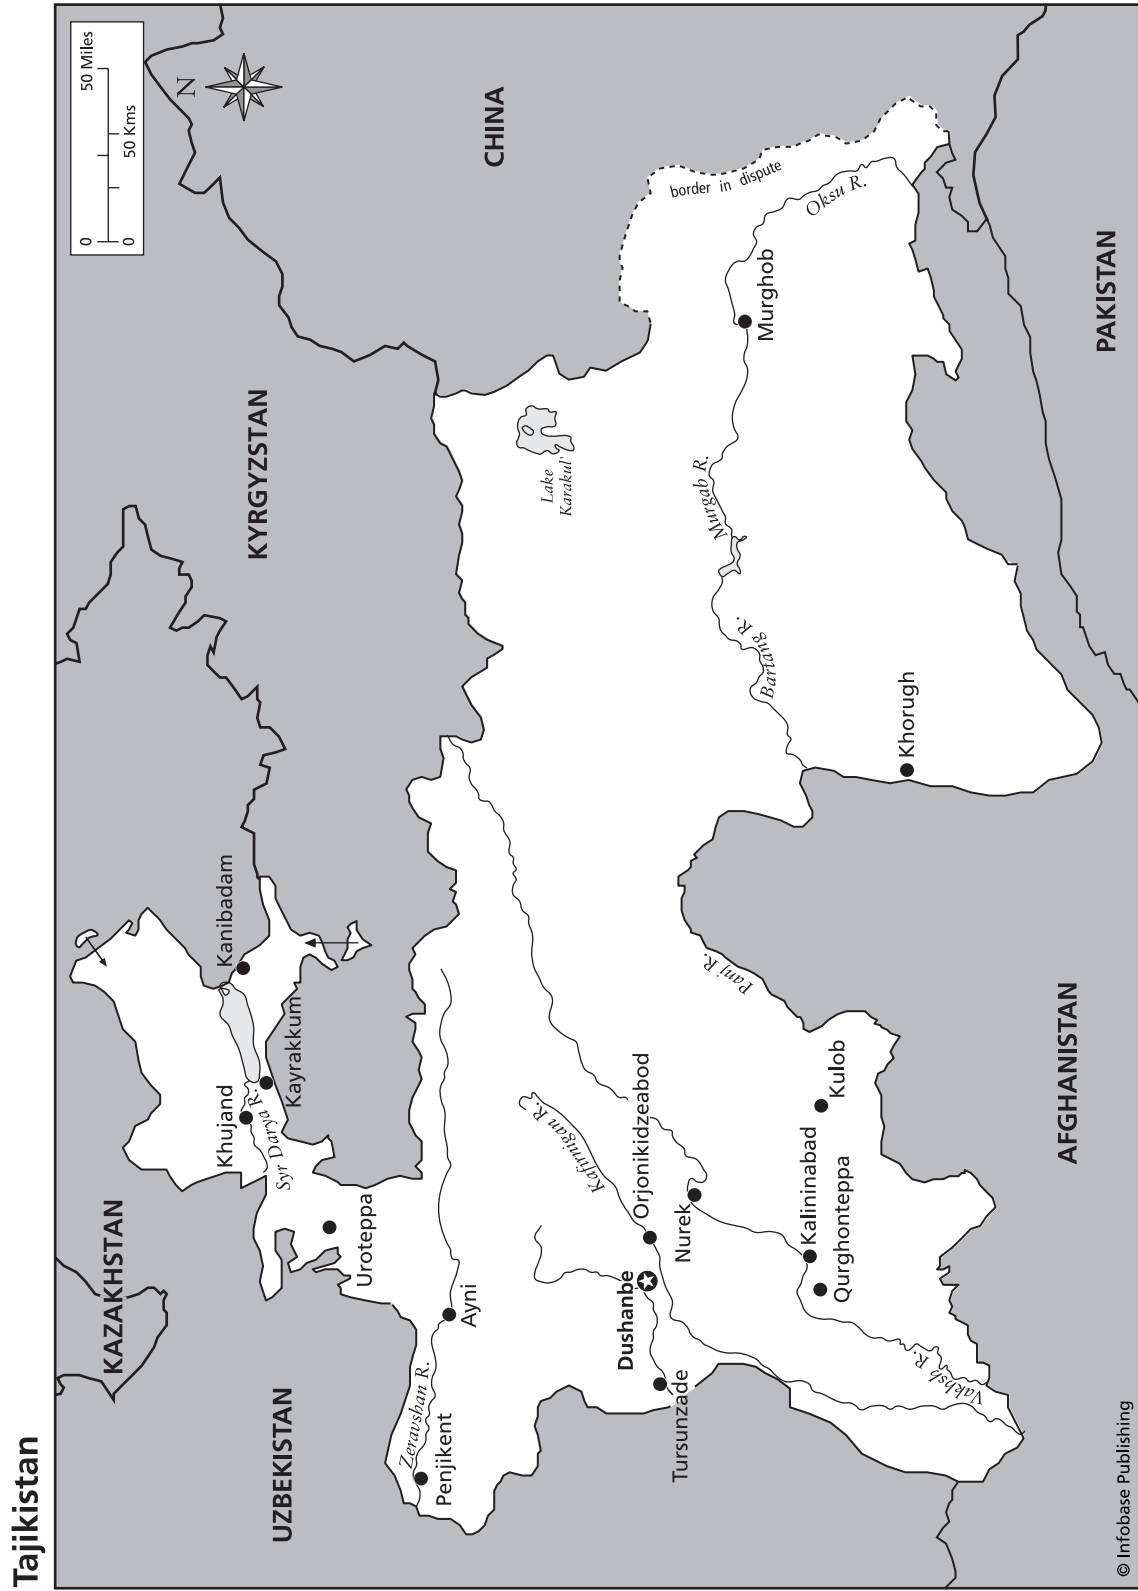

DATE OF CONSTITUTION

November 6, 1994

GEOGRAPHICAL FEATURES

Tajikistan is located in central Asia between Uzbekistan and China. The capital, Dushanbe, is located in the western part of the country. Parts of the Pamir and Trans Alai mountain systems cross the country in the east, including the highest and third-highest mountain peaks in the former Soviet Union, Ismail Samani Peak (7,495 m; 24,584 ft) and Lenin Peak (7,134 m; 23,400 ft), respectively. Massive

ranges that form parts of the Tian Shan mountain system occupy the northern and central parts of the nation. The southeast is occupied by an arid plateau. The only extensive low districts are Fergana Valley, in the north, and the hot, dry Gissar and Vakhsh valleys in the southeast. The chief rivers are the Panj, Amu Darya, Syr Darya, and Zeravshan. The Panj River separates southern Tajikistan from northern Afghanistan. Most of the population is concentrated in the narrow intermontane valleys.

 Other: 89.7

Population of Principal Cities (2002 est.)

Dushanbe	575,900
Khujand	147,400

CLIMATE AND WEATHER

The climate is semiarid to polar in the Pamir and Tien Shan mountains. The mean temperature is 30°C (86°F) in July and 0°C (32°F) in January. Rainfall averages only 122 mm (4.8 in). Dust storms strike the plains in the summer, filling the air with dust for several days at a time.

Climate and Weather

Mean temperature
 July: 86°F
 January: 32°F
 Average Rainfall: 4.8 in

FLORA AND FAUNA

Tajikistan's mountains are covered with forests of larch, juniper, and Tian Shan spruce as well as with meadows where wildflowers bloom in the spring. The lowlands are mostly grassy plains. Animal species include snow leopards, ibex, brown bears, wolves, lynx, wild boars, pikas, and marmots. Birds of prey such as eagles and lammergeiers live in the mountains. Streams are full of trout.

POPULATION

Population Indicators

Total Population 2005: 7,163,506
 World Rank: 95th
 Density per sq km: 44.8
 % of annual growth (1999-2003): 0.6

 Divorce Rate per 1,000: —
 Average Size of Households: 6.1
 Induced Abortions: 35,709

ETHNIC COMPOSITION

Ethnic Tajiks constitute 65 percent of the population, Uzbeks (mainly in the northwest) about 25 percent. The Russian population has been declining since 1990 due to emigration and now makes up only 3.5 percent of the total.

LANGUAGES

The official language is Tajik, an Indo-European language related to Farsi and Pashto. Russian is a co-official language, while Uzbek is spoken by the Uzbek minority. Some Tajik vocabulary words are borrowed from Russian, Arabic, and Uzbek; its alphabet is rendered in Cyrillic characters.

RELIGIONS

Almost all Tajiks and Uzbeks are Sunni Muslims of the Hanafi sect, although south of the Pamirs the Ismailis (Shia) are more numerous. Most of the Russians belong to the Russian Orthodox Church.

Religious Affiliations

Sunni Muslim	6,089,000
Shia Muslim	358,200
Other	716,400

HISTORICAL BACKGROUND

Tajiks are probably descended from the inhabitants of ancient Sogdiana. The territory was under Persian control from the sixth century B.C.E. until 329 B.C.E., when it was conquered by Alexander the Great. For the next two centuries it was part of the Greek-Bactrian kingdoms of central Asia. The Greeks were displaced by the Kushans, whose rule lasted for several centuries. Arabs conquered the region in the eighth century C.E. and introduced Islam. From then on a number of kingdoms succeeded one another in central Asia: those of the Samanides, Ghaznavids, Kharakhanids, Ghorids, Karaki-

tai, and Khwarazmites. The territory was conquered by the Mongols in the 13th century and incorporated into the khanate of Bukhara in the 16th century. By the 19th century the Tajiks were divided among several weak khanates and thus easily fell prey to advancing czarist armies in the 1880s and 1890s. Bukhara and Samarkand were incorporated into Russia in 1868. In 1917 the Tajiks overthrew Russian rule, but the Red Army reestablished control in 1921. Tajikistan was made an autonomous republic within Uzbekistan in 1924 and a constituent republic of the USSR in 1929.

Following the implosion of the Soviet Union in 1991 Tajikistan declared its independence within the Commonwealth of Independent States (CIS) under President Rakhmon Nabiyev. In 1992 a series of dismissals of members of the administration led to violent protests, which continued throughout the year, leading Nabiyev to secure legislative approval for a six-month period of direct presidential rule. The government and the opposition reached a power-sharing arrangement that was not accepted by prodemocracy rebels. President Nabiyev was forced to resign and was replaced by Akbarsho Iskandarov. However, pro-Nabiyev forces recaptured the capital, drove out Iskandarov, and installed Emomali Rakhmonov as president. Concurrently, the presidential system was scrapped in favor of a parliamentary system. In 1993 Russia sent a CIS peacekeeping force to Tajikistan to maintain the fragile peace and to keep the warring factions apart. Eventually, opposition groups were banned, many opposition leaders went into exile, and the government regained control over most of the country. Nevertheless, conflict continued in the border region, with pro-Islamic forces receiving aid from Afghan guerrillas and Iran. In 1994 the first post-civil war presidential election resulted in 58 percent of the votes giving the presidency to Rakhmonov. In the 1995 legislative elections former Communists won one-third of the seats. In 1997 Rakhmonov and the opposition leader Sayed Abdullah Nuri signed a peace agreement in Moscow officially ending the civil war. The agreement provided for the legalization of opposition parties, the return of refugees and Afghan-based guerrillas, the integration of the latter in the regular army, and the allocation of five seats in the cabinet to opposition leaders. Still, sporadic fighting continued in border areas. In 1999 Rakhmonov was reelected president, winning 96 percent of the vote, but Western observers criticized the elections as undemocratic. A new bicameral parliament was set up in 2000.

In 2001 the leaders of Russia, China, Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan launched the Shanghai Cooperation Organization (SCO) to fight militancy and promote trade investments. That year Tajikistan continued sparring with warlords, and three senior government officials were assassinated. Neighboring Afghanistan was a major problem, and Tajikistan was quick

to offer support to the United States after the terrorist attacks of September 11.

In 2003 Tajik voters approved a referendum that, among other things, would allow President Rakhmonov to run for two more terms after his term ending in 2006. Opposition parties were very critical of the referendum, which grouped many measures together in a single package and which was voted on by a largely ill-informed populace. The government persisted in efforts to suppress Islamic insurgencies and terrorism and maintained close relations with Russia, allowing the nation to open a military base in Dushanbe in 2004.

LIST OF MODERN RULERS

1991	Rakhmon Nabiyev
1991	Akbarsho Iskandarov (acting)
1991–92	Rakhmon Nabiyev
1992	Akbarsho Iskandarov (acting)
1992–	Emamoli Rakhmonov

CONSTITUTION

The first constitution of independent Tajikistan was ratified in 1994; Tajikistan was the last of the former Soviet republics in central Asia to enact its own constitution. The document defines Tajikistan as a democratic, unitary, and secular state. The president is elected for a maximum of two consecutive seven-year terms and is vested with extraordinary powers to appoint the prime minister as well as judges and other senior state and regional officials. Constitutional amendments passed in 2003 allow Rakhmonov to be elected to two more seven-year terms after the close of his term in 2006. Despite having a constitution, Tajikistan is an authoritarian state that maintains the Soviet traditions of intolerance of opposition, a weak legislature, and a subordinate judiciary. As part of the peace accords that ended the civil war, members of the opposition hold nearly one-third of all high-level positions in the government.

Tajikistan is still developing its integrated government and political process. The voting age is 18, and suffrage is universal. The elections of 1999 and 2000 were considered unfair and flawed but were also peaceful.

PARLIAMENT

A new bicameral Supreme Assembly (Majlisi Oli) was set up in 2000, in which the Assembly of Representatives (Majlisi Namoyandogan) has 63 members and the National Assembly (Majlisi Milliy) 33, all serving five-year terms. The members of the Assembly of Representatives are elected by popular vote. Eight members of the Na-

tional Assembly are appointed by the president, while the remaining 25 are selected by local deputies. Because the presidency is all-powerful, the legislature plays a subservient role in the government.

POLITICAL PARTIES

The Tajik political system is still evolving, as former and present Communists still dominate the government. The People's Democratic Party of Tajikistan (PDPT) won a majority of parliamentary seats in the 2000 election, while the Tajik Communist Party (CPT) won one-fifth of the votes. The opposition is divided between the Islamic fundamentalist parties and the Socialist and secular parties; opposition parties include the Islamic Rebirth Party, the Democratic Party (DPT), the Social Democratic Party (SDPT), and the Socialist Party (SPT).

In February 2005 the PDPT solidified its hold on the government, winning almost all of the seats in the Assembly of Representatives, leaving just a few for the Communist and Islamic parties. Western observers criticized the election for being unfair.

LOCAL GOVERNMENT

Administratively, Tajikistan is divided into three provinces, or oblasts (*viloyatho*)—Sughd, Khatlon, and Karotegin—and one autonomous province (*viloyati mukbtur*)—Gorno-Badakhshan. The area surrounding the capital, Dushanbe, is administered separately.

LEGAL SYSTEM

There are courts at the national, regional, district, and city levels. National and regional courts are essentially appellate courts. The system suffers from a lack of trained lawyers and judges and also from the pressures exerted by political factions and armed paramilitary groups. Trials are public, and defendants in criminal cases have the right to appointed counsel. As per the 1994 constitution, a constitutional court has been established.

HUMAN RIGHTS

The legacy of the civil war still clouds the human rights situation in Tajikistan, which has a generally poor human rights record. Some regions in the country remain effectively outside government control, while in others true government control exists only by day or at the sufferance of local military commanders. Many of these commanders are involved in crime and corruption and commit serious human rights abuses. Members of the security forces are

responsible for killings, torture, extortions, looting, and the arbitrary arrest and detention of civilians. Lengthy pretrial detention remains a problem. The government continues to severely restrict the freedoms of speech and of the press and denies the opposition access to state-run radio and television. The government also restricts the freedoms of assembly and association by exercising strict control over political organizations and by hindering the registration of opposition parties. Violence against women, child labor, and human trafficking in sex slaves have all been problems. In 2003 parliament abolished the death penalty for women, and the following year it imposed a moratorium on the death penalty without restriction.

FOREIGN POLICY

Neighboring Afghanistan is Tajikistan's primary security concern, though relations between the two countries have improved since the Taliban was ousted. Threats from the Islamic Movement of Uzbekistan, a Taliban ally, have decreased greatly. Trafficking in Afghan heroin and opium remains a problem and spreads corruption, crime, and HIV/AIDS.

Relations with Russia have remained close since independence, with Russia taking the majority of responsibility for the security of the Tajik-Afghan border; Russian troops form the bulk of the CIS troops patrolling there. Although Tajikistan is a secular state trying to contain the spread of Islamic fundamentalism within its borders, it has tried to foster good relations with Iran. Postindependence relations between Tajikistan and Uzbekistan have been complicated by the persecution of ethnic Tajiks in Uzbekistan. Tajik nationalists have made territorial claims on historic Uzbek cities, such as Samarkand and Bukhara. In 1998 Tajikistan accused Uzbekistan of complicity in the failed November revolt in Khujand. At the same time, Tajikistan is dependent on Uzbekistan for almost all overland traffic and trade.

The United States and Tajikistan have good relations, and the United States is committed to helping Tajikistan develop its government and economy. Tajikistan was quick to offer support for the U.S.-led war on terrorism in Afghanistan. The nation opened an embassy in Washington, D.C., in 2004.

DEFENSE

Tajikistan began developing its own defense force after gaining independence from the Soviet Union in 1991. All males must serve two years in the military upon reaching the age of 18. In 2003 the military comprised about 7,200 troops. A border guard of mostly Russian troops and international peacekeeping forces numbering about 25,000 are also stationed in the country; most of the "Russian"

troops are in fact local Tajik soldiers. In 2004 Russia opened a military base in Dushanbe and took control of a former Soviet space-monitoring center in Nurek.

ECONOMY

Tajikistan is the poorest of the former Soviet republics, and its economy was hard hit by the civil war that followed independence. Continuing problems include weak government, high unemployment, poverty, and lack of structural reform. The transition from a state-controlled to a market-based economy has been slow, but the nation hopes that the continued privatization of medium and large businesses will help the economy grow. The country remains dependent on aid from Russia and the United States.

The failure of the economic system has been accompanied by a rise in narcotics trafficking from Afghanistan and other forms of corruption. There is a flourishing criminal sector controlled by warlords.

Most of the workforce is engaged in agriculture, part of which remains collectivized. Government revenue remains dependent on state-controlled cotton production. The small industrial sector is dominated by aluminum production. Only 7 percent of the land is arable, and mineral resources are limited.

ENVIRONMENT

Since the time of Soviet Premier Nikita Khrushchev, increased irrigation to support agricultural activity has resulted in harmful levels of soil salinity. The nation's water supply is threatened by pollution and inadequate sanitation facilities. Some 18 percent of the country's total land area is protected, but several mammal and bird species remain endangered.

Environment

Forest Change (1990-2000) hectares 000: 2
Nationally Protected Areas % of total land area: 18
Emissions of Organic Water Pollutants kg per day: —
CO2 Emissions per capita ton: 0.64

LIVING CONDITIONS

Some 60 percent of Tajiks live in abject poverty. Water supplies are polluted, and poor sanitation is a problem. The weather also poses difficulties, with extremely hot summers and winters so cold that much of the country can be shut down. Public transportation is minimal, as supplied mainly by bus. Gasoline is very expensive, and spare auto parts are scarce. Costs are unpredictable, and cash flow is minimal. Some areas are dangerous due to the presence of drug smugglers and armed men.

HEALTH

Tajikistan's health-care system is inadequate. Health care is no longer free. The life expectancy is under 65 years, and the infant mortality rate is more than 110 deaths per 1,000 live births. Low birth weights and malnutrition are common. Fertility is high, with each woman having more than four children on average in 2004; as such, the median age of the population is very low, at less than 20 years, and over 38 percent of the population is 14 or younger. Common diseases include hepatitis, typhoid, cholera, and diphtheria, as well as malaria in the south.

Health

Number of Physicians: 13,393

FOOD AND NUTRITION

Most Tajiks cannot afford meat, so their diet is based mainly around vegetables. Beans, chickpeas, milk, and eggs are common ingredients. People eat soups containing milk, beans, and herbs; porridges made of chickpeas; ravioli filled with eggs; and curds mixed with herbs. Flat bread is a typical accompaniment to most meals. When meat is available, it is usually mutton. Malnutrition is a problem for many people; some one-third of children are malnourished. The government has worked with international aid organizations to institute school lunch programs.

Food and Nutrition

Undernourished % of total population: 60.7
 Daily Available Calories per capita kcal: 1,790
 Amount of Cereal Available per person per year kg: 153.5
 Amount of Fruits and Vegetables Available per person per year kg: 103.8

STATUS OF WOMEN

Domestic violence is a common problem in Tajikistan, and there are currently no legal remedies for it. In many cases, young women are abducted, raped, and further forced to marry their abductors. There are no special police units to handle rape cases, which are fairly widespread. In rural areas, women can be harassed by conservative Muslims for not wearing attire deemed proper. Polygamy is illegal but widely practiced, as is prostitution. Many women and children have been victims of human traffickers.

Though women have equal rights with men in the workplace in principle, in practice they are paid less and are statistically more likely to be poor than are men. On the other hand, mothers are given three years' maternity leave and monthly subsidies for each child. Girls have fewer educational opportunities than boys. The government and

various local women's groups and nongovernmental organizations are working to improve the status of women.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 13
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 52.3

WORK

Unemployment is extremely high; the unemployment rate was estimated to be 40 percent in 2002. The people who do have jobs are primarily employed in the growing of cotton, in the country's limited industrial sector, or in the government. Illegal narcotics traffickers and warlords tend to have incomes much higher than those of the majority of the population. Some children work, voluntarily or forcibly.

Employment and Labor

Labor Force Total: 3,187,000
 Female Participation Rate %: 45.5
 Labor by Sector %:
 Agriculture: 67.2
 Industry: 7.5
 Services: 25.3
 Unemployment %: 40

EDUCATION

The educational system follows the former Soviet model. Education is free and compulsory between the ages of seven and 16. In practice, however, the law is not enforced, and many children do not receive the full compulsory education. The public school system suffers from a severe lack of resources. Parents who can afford to do so send their children to private school or hire tutors. Among poorer families, many children drop out of school to help out at home. Some areas maintain the old Soviet practice of closing schools and making students work in the cotton fields at harvest time. There are 10 schools of higher education, including the universities of Dushanbe and Khujand.

SCIENCE AND TECHNOLOGY

Tajikistan's telecommunications infrastructure is poorly developed and ill maintained. Many towns have no telephone service. In 2002 there were about 240,000 telephone lines and 48,000 cellular telephones in operation. Only about 4,000 people were using the Internet.

MEDIA

Despite relaxations of restrictions on the press instituted immediately after independence, the press remains largely government controlled, and journalists face great pressure to censor their content. There are over 200 registered newspapers, none of them dailies, including *Narodnaya gazeta* (People's gazette), the Russian-language government organ; *Jumburiyat* (Republic), in Tajik; *Khalk ovozi* (People's voice), in Uzbek; and *Galos Tajikistana* (Voice of Tajikistan), in Russian. The domestic news agency, Khover, is the successor to the Tajik Telegraph Agency. The state-owned Tajik Radio and Tajik Television broadcast from Dushanbe, in Russian and Uzbek as well as Tajik. There are more than 30 local and regional private television stations and several private radio stations.

CULTURE

Under the Soviets, Tajiks were forced to give up their traditional culture and assume a new set of cultural practices, which led to some excellent opera, ballet, and dramatic productions. The novelist Sadridin Aini became famous for his efforts to eliminate all Islamic and Arabic traces from the Tajik language. Tajiks have been trying to re-create their national culture since independence. The most popular writer at the beginning of the 21st century was Taimur Zulfikarov, who imitated the ancient Persian writing style, as patterned on such 10th century Persian writers as Abu Ali ibn Sina and Rudaki.

FOLKLORE AND MYTHOLOGY

Tajikistan, like other central Asian nations, wants to revive its folklore. The nation sponsors folklore clubs and encourages the teaching of folklore in schools. Scholars at Tajikistan's universities have been studying the folk traditions of the ethnic Tajiks.

ENTERTAINMENT AND RECREATION

There is not a great deal to do in Tajikistan. Dushanbe has some markets where people sell a variety of goods and two museums, as well as a theater. Local markets provide places for people to shop and socialize. Trekking in the mountains attracts some foreign tourists, although certain areas are too dangerous for visitors. As of 2005 Tajikistan had not yet developed its entertainment infrastructure but had elaborate plans to build hotels, mountain chalets, sports centers, aqua parks, and entertainment centers.

Most entertainment revolves around rituals and parties celebrating various events, which are affairs for family and friends. Such celebrations feature dancing, drinking, toasts, and speeches.

ETIQUETTE

As a rule, Tajiks do not tip and may even be offended by offers of tips, as the practice goes against Islamic tradi-

tions of hospitality. Bargaining is appropriate at bazaars and markets but not usually in shops. At a meal, the oldest man at the table tears up and distributes the round flat bread; it is very rude to discard bread on the ground or throw it away. Blowing one's nose in public is also considered rude, though spitting is acceptable.

FAMILY LIFE

Women's rights are protected in marital and family matters, but in practice women often do not inherit as much as men, and some women are forced to marry much older men. Polygamy still occurs. Rural women tend to marry younger, have larger families and be less educated than urban women. Tajik families in general tend to be large, and the country as a whole has a large number of children. Most mothers stay home to care for their houses and offspring. Girls often leave school after the first eight years to help their families.

PERSONAL APPEARANCE

Tajik women wear long colorful dresses with head scarves and striped trousers. Men wear high boots, long quilted jackets, and embroidered caps. Western clothing is becoming popular.

SPORTS

Soccer is a popular sport. There were some professional Tajikistani players during the Soviet era, and some of them are still playing on the national team. The nation has had an Olympic committee since 1992.

CHRONOLOGY

- 1929** Tajikistan becomes a constituent republic of the Soviet Union.
- 1989** Rastokhez ("Revival") Popular Front is established, and Tajik is declared official language.
- 1991** President Kakhar Makhamov is forced to resign after supporting failed anti-Gorbachev coup in Moscow. Independence is declared. Tajikistan joins the Commonwealth of Independent States. Rakhmon Nabiyev is elected president.
- 1992** Violent demonstrations by Islamic and prodemocracy groups force Nabiyev to resign. Civil war between pro-Nabiyev and anti-Nabiyev forces claims 20,000 lives. Emomali Rakhmonov, a pro-Nabiyev Communist, takes over the government as president.
- 1993** Government forces regain most of the western part of the country. CIS forces are drafted to

patrol the Tajik border with Afghanistan, the base of Islamic rebel forces.

- 1994** Cease-fire ends the civil war. Rakhmonov is elected president in an election marked by fraud. A new constitution is promulgated.
- 1995** Renewed fighting flares up near the Afghan border.
- 1996** Rebels capture many towns in the southwest. The United Nations arranges cease-fire between factions.
- 1997** Four-stage peace plan is signed. Rakhmonov is seriously injured in a grenade attack.
- 1998** Rakhmonov announces a general amnesty for opposition leaders in exile; rebels are crushed in the north.
- 1999** Rakhmonov is returned to the presidency in an election that is widely criticized as fraudulent.
- 2000** A new bicameral parliament is set up in March; a new national currency is introduced.
- 2001** Deputy Interior Minister Habib Sanginov is assassinated; China, Russia, Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan launch the Shanghai Cooperation Organization, promoting trade in the region. Tajikistan is granted World Trade Organization observer status. Following the September 11 attacks on the United States, Tajikistan offers support to the U.S.-led antiterrorism coalition that invades Afghanistan.
- 2002** Tajikistan doubles its guards on the Afghan border to prevent the entry of al-Qaeda members.
- 2003** Numerous Islamic militants are sentenced to death or prison for murder and kidnapping during the 1990s civil war. Russian President Vladimir Putin visits and promises to increase Russian military assistance. A referendum vote allows Rakhmonov to run for two more consecutive terms as president after his term ends in 2006.
- 2004** Russia opens a military base in the capital and takes over a former Soviet space-monitoring center. Opposition leader Mahmadrusi Iskandarov is arrested in Moscow; Tajik authorities claim that he is involved in terrorism and corruption.
- 2005** A car bomb blows up in Dushanbe, possibly a terrorist attack. The ruling party wins a large majority in parliamentary elections, which international observers claim are flawed.

Basic Fact Sheet

OFFICIAL NAME

United Republic of Tanzania (Jamhuri ya Muungano wa Tanzania)

ABBREVIATION

TZ

CAPITAL

Dar es Salaam; legislative offices have been transferred to Dodoma, which is scheduled to become the new capital

HEAD OF STATE

President Jakaya Kikwete (from 2005)

HEAD OF GOVERNMENT

Prime Minister Edward Lowassa (from 2005)

NATURE OF GOVERNMENT

Republic

POPULATION

36,766,356 (2005)

AREA

945,087 sq km (364,898 sq mi)

MAJOR ETHNIC GROUPS

Sukuma, Haya, Nyakusa, Nyamwezi, Chagga

LANGUAGES

Kiswahili, English, Arabic

RELIGIONS

Christianity, Islam, animism

UNIT OF CURRENCY

Tanzanian shilling

NATIONAL FLAG

Diagonal black band running from the lower corner of the hoist to the upper corner of the fly, flanked by thin yellow bands, separating a green triangular field at the upper left from a blue triangular field at the lower right.

NATIONAL EMBLEM

A native shield divided horizontally into four parts: from top to bottom, a flashing red torch on a yellow field; the national flag; crossed war axes and spears in gold on a red background; and wavy blue and white lines. The shield is flanked by a barefoot youth and a girl wearing an orange head scarf, each supporting an elephant tusk, standing on a mound representing Mount Kilimanjaro. The national motto, *Uhuru na umoja* (Freedom and unity), appears at the base on a white ribbon in red-gold letters.

NATIONAL ANTHEM

"Mungu Ibariki Afrika" (God Bless Africa)

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 12 (Zanzibar Revolution Day), February 5 (Chama Cha Mapinduzi Day), April 26 (National Day, Union Day), May 1 (Labor Day), July 7 (Saba Saba Day, Foundation of the Independence Movement Day), August 8 (Peasants' Day), December 9 (Republic Day), Christmas, Good Friday, Easter Monday, Boxing Day, three Islamic festivals

DATES OF INDEPENDENCE

December 9, 1961 (Tanganyika); December 10, 1963 (Zanzibar)

DATE OF CONSTITUTION

April 25, 1977; revised 1984

GEOGRAPHICAL FEATURES

Tanzania is in East Africa, south of the equator, and includes the islands of Mafia, Pemba, and Zanzibar. The nation occupies an area of 945,087 sq km (364,898 sq m), extending 1,233 km (760 mi) north to south and 1,191 km (740 mi) east to west. Zanzibar is separated from the mainland by a channel 36 km (22.5 mi) across at its narrowest point and has an area of 1,658 sq km (640 sq mi).

To the northeast, some 40 km (25 mi) away, is the island of Pemba, with an area of 984 sq km (380 sq mi). The total length of Tanzania's coastline is 1,424 km (884 mi), of which that of Zanzibar is 212 km (132 mi), that of Pemba 177 km (110 mi), and that of Mafia 113 km (70 mi). Tanzania shares its international land boundary of 3,861 km (2,399 mi) with eight countries: Uganda, Kenya, Mozambique, Malawi, Zambia, the Democratic Republic of the Congo, Burundi, and Rwanda.

Tanzania

The topography of the country is determined by the Great Rift Valley, which runs through the middle of the country from north to south. As defined by this valley, the major physical regions are the Western Rift, the Central Plateau, Lake Victoria basin, the Eastern Rift and mountains, the Eastern Plateau, and the coastal belt and islands. The greater part of the country consists of the Central Plateau, with elevations of 1,000 to 1,400 m (3,500 to 4,500 ft). The nation's mountain systems are grouped mainly along the Eastern Rift. Its western wall comprises the Kondoa and Mbulu ranges, the Gogoland Hills, the Mpwapwa Mountains and the Southern Highlands. The northern part of the Eastern Rift contains the Winter

Highlands, including the volcanic region comprising Mount Loolmalsin, Ngorongoro Crater, and Mount Lengai, one of the most famous game preserves in the world. Within the lower part of the rift lies Olduvai Gorge, where, according to paleontologist Louis Leakey, the earliest forms of man originated. In the Northern Highlands are two of the highest peaks in Africa: Mount Kilimanjaro (5,895 m; 19,336 ft) and Mount Meru (4,566 m; 14,980 ft). Toward the south is a dry steppe merging into the Masai Steppe, part of the Eastern Plateau. The north-eastern part of the Masai Steppe is bounded by the Pare and Usambara mountains, cut by deep, broad valleys. In the south are the Livingstone Mountains, the Kipengere

Range, the Poroto Mountains, Mount Rugwe, and, farther west, the Ufipa Highlands and the isolated Uluguru Mountains. In Songea District lies another range, the Matengo Highlands.

The coastal belt is 15 to 65 km (10 to 40 mi) wide, broader in the center and narrower to the north and south. The coast contains numerous coral reefs and shifting sandbars.

Zanzibar is a low-lying coral island covered by bush and grass plains. The highest point on the island is Masingini Ridge (104 m; 340 ft). Siniongoni, the highest point on Pemba, is 95 m (311 ft) above sea level.

CLIMATE AND WEATHER

Tanzania has a tropical, equatorial climate modified by altitude. Broadly, the country is divided into three climatic zones: the northern coastal belt, from Dar es Salaam to the Kenya border; the region around Lake Victoria; and the interior plateau and southern coastal belt. In general, temperatures are lower than those of other countries in similar latitudes. The mean daily maximums range between 22.2°C and 32.2°C (72°F and 90°F). The north has two distinct wet seasons: a longer one from March to May and a shorter one from November to December. The rest of the country has only one rainy season, from November to April or May. The overall rainfall is not of great quantity. About half the country receives 760 mm (30 in) annually, the maximum being recorded at Lake Nyasa (2,540 mm; 100 in) and the minimum in parts of the Central Plateau and the Masai Steppe (510 mm; 20 in).

The prevailing winds are the southeasterly trade winds from November to March and the northeasterly trade winds from April through October.

Lake Nyasa Region: 100 in

Interior Plateau: 30 in to 40 in

Pemba Island: 80 in

Zanzibar Island: 60 in to 80 in

FLORA AND FAUNA

Tanzania is world famous for its large mammal life, which attract tourists interested in wildlife safaris. Serengeti National Park is home to large herds of gazelles, antelopes, wildebeests, and zebras. Other animals in game preserves as well as other areas include elephants, lions, rhinoceroses, hippopotamuses, chimpanzees, crocodiles, buffalo, and hunting dogs. Most of the large animals migrate to Kenya during the winter months, between June and September.

Most of the country's plants are savanna grasses and bushes that can survive in an arid climate. In the drier areas only desert plants grow.

ETHNIC COMPOSITION

Black Africans, who form 99 percent of the population, are divided into over 130 groups, each with its own physical and social characteristics and languages. These tribes have been broadly categorized into five ethnic families: Bantu, Nilotic, Nilo-Hamitic, Khoisan, and the unclassified Iraqw, the latter comprising Iraqw, Gorowa, Burungi, and others. About 95 percent of Tanzanians are classified as Bantu, a blend of Hamitic and African stocks. Bantu tribes range in membership from a few thousand to more than one million, the latter population found among the Sukuma. The Nyamwezi, Ha, Makonde, Gogo, Haya, Chagga, and Hehe each number more than 250,000. The only tribe of Nilotic origin is the Luo. The Nilo-Hamites are generally grouped into two clusters: the Masa and Tātog. Scattered throughout the north-central region of the country are small groups of Bushmen-like people.

The population of the offshore islands is equally heterogeneous. The African population is composed of the indigenous Watumbatu, Wahadimu, Wapemba, and others belonging to 50 mainland tribes. Non-Africans belong primarily to a group called the Shirazi, who consider themselves descendants of immigrants from Shiraz, in Iran, although they show evidence of mixed descent.

Ethnic aliens belong to one of three groups: Asians, from the Indian subcontinent; Arabs; and Europeans. The cultural and economic influences of these groups far exceed their numbers, although their position is increasingly insecure in a nation that has adopted Africanization as an official ideology. Apart from some ill will toward Asians for their exclusivity, there is no discrimination against any foreign group.

LANGUAGES

The official language and the lingua franca is Swahili, more properly referred to as Kiswahili, which is spoken as a mother tongue by a large number of inhabitants. Kiswahili is basically a Bantu language in structure and origin, but its vocabulary is drawn from a variety of sources, particularly Arabic and English. The form of Kiswahili spoken in Zanzibar is known as Kiunguja. English enjoys the status of a co-official language, but its use is restricted to the educated elite.

More than 100 African languages are spoken in the country. These languages belong to four groups: Bantu, Nilo-Hamitic, Nilotic, and Khoisan. The Bantu languages belong to the Congo-Kordofanian language family; the Nilo-Hamitic and Nilotic languages to the Nilo-Saharan language family; and the Khoisan languages to the Khoisan language family, which includes languages spoken by the San and Khoikhoi peoples of southern and southwestern Africa. All these languages are mutually unintelligible, but dialects within the same

language may be intelligible to a degree. In general, Bantu languages are agglutinative, their syntax being formed by adding prefixes and suffixes to various roots. The languages of the Iraqw, Gorowa, and Burungi tribes have not been classified.

Within the Asian community a number of languages are spoken, including Hindi, Punjabi, and Urdu. Most Asians also speak English and Kiswahili.

RELIGIONS

About 35 percent of Tanzanians adhere to tribal religions. Another 35 percent are Muslim, and 30 percent are Christian. The population of Zanzibar is almost entirely Muslim.

Tribal religions have their strongest hold in rural Tanzania. Although each tribe has its own set of practices, there are certain common denominators, such as belief in a high god whose common name, Mulungu, is often also used interchangeably for "sky" or "sun." Most religious activities center on ancestral spirits, rites of passage, witchcraft, and sorcery. Although there is no priesthood as such, there are religious specialists in all tribes who are concerned with the performance of rituals and with divination.

Christianity is the most recently adopted religion, as first introduced by French Catholic missionaries in the 1860s. Lutherans followed in the 1880s, Moravians in the 1890s, and Mennonites and Seventh-Day Adventists after World War I. By informal agreement the Catholics and the Protestants concentrated their activities in different areas. The Catholic Church has two apostolic administrations. Both archdioceses, the Eastern Province at Dar es Salaam and the Western Province at Tabora, are headed by native Africans. The church runs 26 general hospitals, schools, and adult-education centers; five newspapers; book-publishing houses; and radio programs. More than seven Protestant denominations are represented in the country, of which the largest are the Lutherans, Baptists, Moravians, and Presbyterians. The Christian Council of Tanzania is composed of 17 member bodies. Ecumenism appears to be on the increase, with both Catholics and Protestants cooperating in a number of areas of mutual concern. Although Africanization of the clergy has made considerable progress, there are no independent African churches or messianic movements, as in other countries of the continent. Many Tanzanian Christians practice a form of Christianity in which residual elements of former religious traditions persist, and there is unorthodox flexibility in beliefs and practices, particularly in the areas of charms and taboos.

Muslims are concentrated on the offshore islands; in the coastal region; around the towns of Kondoa, Singida, Tabora, and Kigomai; and along the Ruvuma River. There are three distinct ethnic groups among Muslims:

Arabs, Indo-Pakistanis, and Africans. The nature of religious beliefs among these groups varies from the strict and exclusive Islam of Arabs and Indo-Pakistanis to the blend of Islam and tribalism practiced by Africans. With few exceptions, both Arab and African Muslims are Sunni. Two elements that make Islam compatible with African traditions are its approval of polygamy and its belief in the existence of spirits.

Hinduism, Sikhism, and Buddhism are represented by small groups of Indians.

Muslim	12,868,000
Christian	11,030,000

HISTORICAL BACKGROUND

If anthropologists Mary and Louis Leakey are right, Tanzania's Olduvai Gorge is where the human species originated. There is evidence that the original inhabitants of the country were hunter-gatherers in the late Stone Age. They were displaced by successive waves of Cushitic, Bantu, and Nilotic peoples. By the seventh century the region was under the control of the Arabian Ausan and later the Himyarites. For the next 500 years there were prosperous Arabian and Persian colonies along the coast. Inter-marriage between the natives and Arabs or Persians led to the creation of the Swahili peoples and language. Zanzibar was completely Islamized by the ninth or 10th century. The first European expedition to reach the East African coast was that of the Portuguese explorer Vasco da Gama, in 1498. Subsequently, a number of Portuguese posts were established on that coast. Within a century the Portuguese hegemony was supplanted by Ibadhi Arabs of Oman, whose Ya'aruba imam Saif bin Sultan established undisputed Muslim control over the region. Yet during the 18th century the Ya'aruba imams declined in Oman, and the Masrui, a local Omani tribe, proclaimed their independence. Omani influence was revived around 1822 by Sayyid Sa'id bin Sultan, who united Zanzibar and Pemba under the Al Bu Sa'id dynasty and made the islands the capital of a vast empire that included Oman, Zanzibar, and the East African coast inland to the Great Lakes and the Congo. Sa'id bin Sultan is best remembered for introducing the clove tree to the region. Around 1857 the first Europeans to explore the East African interior, Richard F. Burton and John Hanning Speke, reached the dominion of the sultan in search of the source of the White Nile.

Tanganyika, as mainland Tanzania came to be known, came under German influence in 1884–85 after Karl Peters concluded treaties with the chiefs of the interior on behalf of the German East Africa Company. In 1890 Germany and the United Kingdom partitioned the

territory, establishing a British zone of influence in the Upper Nile, Zanzibar, and Pemba, while Tanganyika and Ruanda-Urundi together became German East Africa. The British took over Tanganyika during World War I and administered the region after the end of the war as a mandate of the League of Nations. The main goals of the colonial administration were to develop political institutions and to promote intertribal cooperation. The first organized nationalist movement appeared in Tanganyika in 1954. It took only seven more years for Tanganyika to receive its independence and one additional year to become a republic. Zanzibar became independent in 1963.

Following an armed uprising by African nationalists in 1964, the Arab-dominated government of Zanzibar was deposed and a republic proclaimed. The two countries combined in 1964 to form the United Republic of Tanganyika and Zanzibar. The nation was renamed the United Republic of Tanzania later that year.

Tanzania's 20th-century history was dominated by Julius Nyerere, who as leader of the Tanganyika African National Union (TANU) led the nation to independence and served as its first president. Nyerere effectively established a one-party state in 1965, although TANU and the Afro-Shirazi Party merged to form the Revolutionary Party of Tanzania (CCM) in 1977. Nyerere also experimented with cooperative forms of economic development, issuing the Arusha Declaration of 1967, which drew up plans for the development of rural communities known as *ujamaa* villages. These were to be the basic blocks of his form of African socialism. The government also aimed to either take control of the principal means of production or invest control of economic resources in cooperatives run by the workers themselves. Peasants proved reluctant to adopt collectivization, however, and the government was forced to use coercive methods of resettlement. Almost 10 million people lived in *ujamaa* villages by 1975, such that Nyerere could claim that "villagization" had been a success. Yet workers did not produce as efficiently as was hoped, and consequently, Nyerere's policies worsened the country's economic problems.

Nyerere was reelected in 1965, 1970, 1975, and 1980. He stepped down, as he had promised, in 1985 but remained chairman of the CCM until 1990, when the handpicked succeeding president Ali Hassan Mwinyi assumed the post. Mwinyi had been serving as the president of Zanzibar and vice president of Tanzania; running as the sole candidate for office, he received 92 percent of the vote in the 1985 election. Mwinyi pursued a more pragmatic policy than Nyerere, with the two men differing over the propriety of Mwinyi's moves toward a more market-oriented economy and away from Nyerere's *ujamaa* brand of socialism.

Mwinyi's elevation to the presidency temporarily stemmed secessionist sentiments in Zanzibar. But by 1987 an open rift had developed between the Muslim leaders in Zanzibar and the mainland CCM party. Mwinyi was re-

elected in 1990, with John Malecela as vice president. In 1992 the president signed a bill legalizing multiparty elections. In 1993 Zanzibar was forced to withdraw its membership in the Organization of the Islamic Conference; the affair highlighted the continuing debate over the respective roles of the two regions as well as a growing schism between Christians and Muslims, which was evidenced by the anti-Muslim rhetoric of the increasingly popular Democratic Party leader, Rev. Christopher Mtikila, and the activities of the militant Council for the Dissemination of the Koran (Balukta) in Tanzania. In 1995 the National Assembly approved a constitutional amendment that reduced Zanzibar's influence in the national government by specifying that the island's president would no longer automatically be a union vice president. In the nation's first multiparty presidential and legislative elections in 1995 CCM candidate Benjamin William Mkapa won handily, with 61.8 percent of the vote, and the CCM garnered 186 of 232 elective Assembly seats. Of the 13 opposition parties, only four gained legislative representation. Mkapa was reelected president in 2000, winning 72 percent of the vote. In March 2001 the CCM and the main opposition party in Zanzibar, the Civic United Front, agreed to form a joint committee to restore calm to the island.

Mkapa maintained an anticorruption reputation through the early 2000s, despite accusations leveled at some of his colleagues. His overall accomplishments included liberalizing Tanzania's economy, to the praise of the World Bank and the International Monetary Fund (IMF), and forming a customs and trade union with Uganda and Kenya. He stepped down as president at the end of 2005. Jakaya Kikwete won the presidential elections.

LIST OF MODERN RULERS

1964–85	Julius Nyerere
1985–95	Ali Hassan Mwinyi
1995–2005	Benjamin William Mkapa
2005–	Jakaya Kikwete

CONSTITUTION

In 1979 a new Tanzanian constitution was promulgated by the Revolutionary Council after being approved by the ruling CCM party. Major revisions were approved in 1984. Executive power is vested in the president, the head of state, who is nominated by the CCM and elected through universal adult suffrage for a five-year term. The president and vice president are elected on the same ballot. The president chooses his cabinet, including the prime minister, from among members of the National Assembly. The president has no legislative powers; if any bill from which he has withheld his assent should be passed again by the National Assembly by a two-thirds

majority, he is required to give his assent within 21 days or dissolve the Assembly, in which latter case he must also run for reelection to be eligible to remain president.

The constitution stipulates the legislative supremacy of the National Assembly and states that the president has no power to legislate without recourse to that body. Should the president dissolve the National Assembly for overriding his veto, he is obliged to run for reelection to be eligible to remain president. In practice, the National Assembly is generally subservient to the president.

Zanzibar has its own president and House of Representatives for dealing with matters internal to Zanzibar. In 1985, for the first time the majority of Zanzibar's representatives were elected directly, albeit within the one-party structure. This marked a sharp break from the past, as all but 10 of the members had been elected through district and regional "revolutionary committees" or had been directly or indirectly appointed by the Zanzibar president. Under the terms of the revised constitution, the Zanzibar House of Representatives consists of 50 directly elected members, 10 members appointed by the president of Zanzibar, five ex officio members, 15 women in specially reserved seats, and an attorney general appointed by the president.

PARLIAMENT

The Tanzanian National Assembly is a unicameral legislature elected for five-year terms. Of its 274 seats, 232 are directly elected, 37 are held by nominated women, and five are filled by the Zanzibar government. The National Assembly has six standing committees: Finance and Economics, Political Affairs, Public Accounts, Social Services, Standing Orders, and General. In addition to enacting laws that apply to the entire United Republic of Tanzania, the Assembly enacts some laws that apply only to the mainland.

Zanzibar has a regional legislature, an 81-member House of Representatives. Legislators are directly elected by universal suffrage to five-year terms.

POLITICAL PARTIES

While the country is a multiparty state, the legislature is dominated by the Chama Cha Mapinduzi (CCM, Revolutionary Party). Other parties include the Civic United Front (CUF), the Chama Cha Demokrasia na Maendeleo (CHADEMA), the unregistered Democratic Party, the Tanzania Labor Party (TLP), and the United Democratic Party (UDP).

LOCAL GOVERNMENT

For the purposes of local government, Tanzania is divided into 26 regions: 21 on the mainland, three on Zanzibar,

and two on Pemba. Each region is administered by a regional commissioner appointed by the central government; regional commissioners are concurrently members of the National Assembly. The regions are divided into districts, each under an area commissioner. District and town councils handle government at the local level.

LEGAL SYSTEM

The legal system is a blend of English common law, Islamic law, African customary law, and German civil law. In Zanzibar the Islamic element predominates, but on the mainland it has only limited juridical status.

The judicial system is headed by the High Court, consisting of a chief justice and 14 judges. The Court of Appeal, formed in 1979, hears civil and criminal appeals, as presided over by the chief justice and four judges of appeal. District courts are found in each district and are presided over by a resident magistrate or a district magistrate. The subordinate courts are the primary courts, presided over by primary court magistrates. There is also a commercial court, which was established in 1999.

The president appoints justices to the High Court and the Court of Appeal. The chief justice appoints all other judges.

Although an independent judiciary is constitutionally mandated, some members of the legal community, including judicial officers, have complained that the legal system is being corrupted through bribery. Although allegations remain largely undocumented, there is at least one confirmed report of a magistrate demanding a bribe to issue a court order. There have been no suggestions that the Court of Appeal and the High Court are corrupt.

HUMAN RIGHTS

The government's human rights record is poor, and older problems are compounded by newer ones. Although the 1995 multiparty elections represented an important break with one-party rule, elections have been marred by serious abuses and limitations on civil liberties.

Police often harass and intimidate members of the political opposition. Extrajudicial killings and the mistreatment of suspects are common practices. In Zanzibar there have also been reports of torture and floggings. Arbitrary arrest and detention, and prolonged detention, continue to plague the criminal justice system. The judiciary is corrupt and inefficient and does not provide fair or expeditious trials.

The government does not respect citizens' privacy rights and severely limits the freedoms of speech and the press as well as those of association, assembly, and movement. The government obstructs the formation of domestic human rights groups.

Violence and discrimination against women are prevalent. The abuse of children, female genital mutilation, and child prostitution remain problems. There are some instances of forced labor, and there have been reports of trafficking in children.

FOREIGN POLICY

Under Julius Nyerere, Tanzania was one of the frontline African states vigorously opposed to colonialism and racialism. For many decades Tanzania has given asylum to political refugees and various liberation groups headquartered in Dar es Salaam. Relations with Britain were severed from 1965 to 1968 to protest British Rhodesian policy, and relations with the United States have been similarly strained from time to time over U.S. African policy. The high point of Tanzanian foreign relations was the successful campaign to topple Uganda's Idi Amin in 1978. The situation placed Tanzania on the moral high ground as a foe of both black and white dictators and as a champion of human rights on a continent descending into lawlessness. Tanzania also stood up against the Tutsi ruler of Rwanda bent on expelling and murdering Hutu refugees. Tanzanian efforts to impose regional sanctions on Burundi helped to reduce the scope of the bloodbath, and diplomatic relations with Rwanda were resumed in 1999. Relations with Kenya deteriorated in the early 1980s with the collapse of the East African Community, but they have improved since then.

Overall, Tanzania has good relations with its neighbors. In 2002–04 Tanzania created a customs union with Uganda and Kenya; the union took effect in January 2005 and is expected to lead to complete integration in the region. The nation also has close relations with the United States, which relations became even closer after terrorists bombed the U.S. embassy in Dar es Salaam in 1998. The U.S. Agency for International Development gives Tanzania substantial annual contributions.

DEFENSE

The Tanzanian People's Defense Force includes an army, a naval wing, and an air defense command. The defense structure is headed by the president, who also exercises operational control over the armed forces. The entire military establishment is nominally commanded by the chief of staff, but in practice his authority is limited to the mainland; Zanzibar's forces are commanded by a senior colonel in Zanzibar.

Citizens may volunteer to serve in the military at the age of 15. The conscription of men occurs when they reach the age of 18 or finish secondary school and is for a term of two years.

The Tanzanian armed forces had their finest moment with the successful invasion of Uganda and overthrow of

2322 Tanzania

Idi Amin in 1979. As the first such military operation in modern African history, it helped to establish the superiority of the Tanzanian armed forces in relation to those of its East African neighbors. The army has improved its firepower and logistical reach and has also acquired the capability to perform sustained operations.

ECONOMY

Tanzania remains one of the world's poorest countries, with a per capita gross domestic product (GDP) of only \$700 in 2004. The government has been gradually liberalizing the economy to introduce free-market principles and encourage local entrepreneurship and foreign investment. To this end, it has discontinued most price controls, restructured the financial sector, liberalized trade and marketing rules, and freed up interest rates. In 2003 the government negotiated a new Poverty Reduction and Growth Facility. Despite these efforts, Tanzania has tremendous foreign debt and remains dependent on external donors; it qualifies for debt relief under the Highly Indebted Poor Countries initiative.

Agriculture is the largest sector of the economy, employing four-fifths of workers and accounting for 43 percent of GDP. Cash crops include coffee, tea, cotton, cashews, cloves, sisal, and pyrethrum. The transport and sale of agricultural products is extremely inefficient.

About 17 percent of GDP comes from industry. The main activities include agricultural processing and raw material production. Power shortages make it difficult for factories to operate with regularity. In 2001 a sizable gold mine opened near the town of Mwanza, making Tanzania the third-largest gold producer in Africa.

Zanzibar's local government has done a better job of liberalizing the economy than has the mainland. Historically, Zanzibar has earned most of its income from the production and export of cloves, but the clove market has declined in recent years, so the island is now emphasizing tourism. The government has plans to make the port of Zanzibar a free port.

ENVIRONMENT

Tanzania suffers from a number of environmental problems, including deforestation and desertification. Associated with these is soil erosion, which has been exacerbated by drought in recent years. The coral reefs that line much of the coast are threatened by overfishing, which is destroying marine habitats. The nation's wildlife is threatened by illegal hunting and the persisting ivory trade, which targets elephants and rhinos.

LIVING CONDITIONS

The standard of living in Tanzania is low. Electricity is unreliable and not universal. Not everyone has ready access to water, and water supplies are often contaminated. Roads are in poor condition, and drivers are sometimes reckless, leading to numerous accidents. There are trains and buses, but buses are not permitted to travel at night.

HEALTH

Tanzania has both public and private health facilities. Government facilities in particular suffer from a lack of

funding, which makes it difficult to get basic supplies. Most hospitals are concentrated in the cities, and rural people often cannot get adequate health care. There is a shortage of doctors, which is partially remedied by the presence of trained health workers and traditional healers. Overall, health conditions are not good. Endemic diseases include malaria, sleeping sickness, measles, tuberculosis, dysentery, yellow fever, cholera, schistosomiasis, and typhoid. HIV/AIDS is a growing problem; in 2002 almost 9 percent of the adult population was infected. Life expectancy is only about 45 years, and the infant mortality rate is quite high, at just under 100 deaths per 1,000 live births. On average, each woman has slightly more than five children.

FOOD AND NUTRITION

The staple starch is a stodgy, solid paste called *ugali*, which is made from maize, millet, sorghum, or cassava flour. Along with *ugali*, people usually eat a stew with vegetables, meat, or fish. On the coast, seafood is popular and common, and rice is the preferred starch; a common coastal dish is pilau, or rice flavored with cinnamon. Cloves and coconut milk are other common flavorings. In the highlands people eat plantains. Barbecued meats are a popular food in restaurants; beef, chicken, goat, and lamb all appear on menus. A variety of starches go into homemade alcoholic beverages; *mbege* is made from millet and bananas. Tea is the ubiquitous drink and is always offered to guests.

STATUS OF WOMEN

For most of Tanzania's ethnic groups, women's traditional role has been that of mother and field laborer, and women are still underrepresented in government, the professions, and skilled occupations. Social limitations on the roles women play are generally more pervasive on Zanzibar than on the mainland. Women in many parts of the country continue to suffer discriminatory restrictions on inheritance and ownership of property because of concessions to custom and Islamic law. In many areas these laws dictate that daughters receive smaller shares of their father's property than do sons. Although the practice is declining, female circumcision is still performed by a minority among approximately 20 of the country's 120 mainland ethnic groups. Despite obstacles, the government has made progress in attaining equality for women, especially in urban areas, where traditional values have a weaker hold on the population. The Union of Women of Tanzania, a wing of the ruling CCM party, is dedicated to the eradication of inequality for women in all spheres of society. Women have been encouraged to take an active role in politics. Using its powers of direct appointment, the government has ensured that about 20 percent of the membership of village councils is female.

WORK

Most Tanzanians work as farmers, the majority of them in subsistence agriculture. Some farmers work for pay, producing cash crops such as coffee, tea, cashews, fruits, and spices. Subsistence farmers sell surplus crops at local markets. They may supplement their income by making craftwork, fishing, or selling snacks and sundries to passersby. A few people work in factories or mines. Most Tanzanians are unskilled or semiskilled.

Child labor is very common. Many children, especially girls, must leave school to care for younger siblings, farm, or obtain paying jobs.

EDUCATION

Education is theoretically free, universal, and compulsory for seven years, from ages seven to 14. In all, schooling lasts for 13 years, as divided into seven years of primary school, four years of middle school, and two years of secondary school. The primary grades are called standards, while the middle and secondary grades are called forms. The curriculum has been diversified through a growing emphasis on nonacademic subjects and has been Africanized through the incorporation of purely African materials. The school year runs from November to September. The language of instruction is Kiswahili, except in 12 schools for foreign children. English is taught as a subject beginning in standard one (first grade).

All Tanzanian students must pay at least some school fees and buy school uniforms. Dropout rates are high, and only about 3 percent of children attend secondary school. There are not many secondary schools in the country, and students who do attend must often live far away from their immediate families. Students who want to attend university must complete six years of secondary school and pass two examinations. The country has six universities, including the National University of Dar es Salaam, the University of Zanzibar, and the Open University of Tanzania, the latter established expressly to provide distance education. The nation also has many vocational centers to train people with incomplete educations.

Secondary, vocational, and teacher-training schools are administered directly by the Ministry of Education; primary schools are administered by local authorities. Primary education was nationalized in 1969, while private secondary schools continue to function as subject to government supervision.

SCIENCE AND TECHNOLOGY

Tanzania's technological infrastructure is inadequate, but the government is taking steps to improve it. Unreliable electrical supply and the widespread lack of education among the populace hamper efforts to improve technology. As of 2003 there were about 150,000 telephone lines and almost 900,000 cellular telephones operating in the country. Only about 250,000 people were using the Internet.

MEDIA

Since the introduction of multiparty government in the mid-1990s, Tanzania's media has developed rapidly. There are hundreds of newspapers and other publications. The government-owned *Daily News* is the nation's oldest newspaper. Television was not introduced until 1994, but several stations are now broadcasting. In 2001 the state launched its own television station, *Televisheni ya Taifa*. Radio is still the main broadcast medium, and there are dozens of private radio stations. Television is enjoyed predominantly in urban areas. Zanzibar has separate media policies and does not allow private newspapers or broadcasters, though many residents can pick up mainland broadcasts and read mainland newspapers.

CULTURE

Tanzanian culture blends the practices of many African ethnic groups with Arab, Indian, and European influences. Tanzanian music is very popular throughout East Africa; Remmy Ongala is the most famous Tanzanian musician. On Zanzibar, people still practice the sung poetry style called *taraab*. There are many traditional dance styles, including a belly dance called *chakacha* and another

women's dance called *lelemama*, which showcases elaborate hand movements.

Tanzanian craftspeople produce a variety of artistic objects, including carvings of wood, ivory, and ebony and Masai shields and spears. The Stone Town of Zanzibar features architecture decorated with elaborate Islamic-style carvings. Tanzanian writers have contributed to the corpus of Swahili literature, and filmmakers such as Flora M'mbugu-Schelling have advanced local filmmaking.

FOLKLORE AND MYTHOLOGY

Many Tanzanians still practice traditional religions, which involve ancestor worship, rituals marking transitions through life, witchcraft, and sorcery. Masked dances are important parts of rituals. People believe that spirits called *majini* can take possession of living humans. Many tribes believe in a god called Mungu, who is a kind of sky or sun deity. Masai priests claim to have descended from a man named Kindong'oi, who as a child was sent down to earth by the god Engai and raised by Masai warriors.

ENTERTAINMENT AND RECREATION

Tanzanians like to spend time visiting friends and relatives and drinking coffee and tea while talking. Families enjoy going on picnics or to the beach. Many people play a board game called *bao*, in which players try to capture their opponents' markers. Dar es Salaam is a large city, with shopping, restaurants, and other entertainment possibilities. Outdoor activities include wildlife safaris, climbing Mount Kilimanjaro, sailing, and water sports.

ETIQUETTE

Most Tanzanians eat two meals a day. Before and after a meal diners wash their hands in a bowl of water that is passed around the table. In Zanzibar, hosts present their guests with cloves upon arrival; the guests chew the cloves before eating dinner.

FAMILY LIFE

In most of Tanzania's ethnic groups men and women occupy separate spheres, women doing all the household work and farming and men considering themselves the "heads" of the household. Most people live near relatives and help out family members with raising children. Elders are held in high esteem, and children are expected to obey all adults. Girls typically marry in their early teens, and arranged marriages are fairly common. Women are considered adults after marriage, especially after giving birth. It is common for Tanzanians to address women by the name of their first children; for example, if a woman's first child is named "Ali," her neighbors may call her "Mama Ali." Under traditional rules, inheritance could go through female lines, but in modern times many groups, as influenced by Christianity and Islam, have limited inheritance to male lines.

PERSONAL APPEARANCE

Western apparel has become increasingly common. Women are expected to dress modestly. Tanzanian women wear long dresses, Indian saris, or the traditional dress called the *kanga*. Muslim women cover their heads with scarves; this is especially common in Zanzibar. Adults never wear shorts in towns. Women do not typically wear pants.

SPORTS

Soccer is the most popular spectator sport, and most boys and men play recreationally. Girls play netball, which is similar to basketball. Both sexes run races, and Tanzania has produced many world-class runners.

CHRONOLOGY

- 1961** Tanganyika gains full internal self-government, with Julius Nyerere as prime minister; the former National Legislative Council becomes the National Assembly. Tanganyika becomes a fully independent republic.
- 1962** Nyerere takes office as president, defeating his only rival, Zuheir Mtemwu, by an overwhelming majority in the first elections held on the basis of universal adult suffrage. Regional commissioners are appointed.
- 1963** Zanzibar gains full independence.
- 1964** Some 600 armed insurgents overthrow the government of Zanzibar and install in its place a revolutionary council headed by Abeid Karume. Tanganyika and Zanzibar unite to form Tanzania.

- nia. The Tanganyika Rifles 1st Battalion rises in mutiny and seizes Dar es Salaam; the mutiny is quelled with the help of British troops.
- 1965** An interim constitution is proclaimed for the United Republic of Tanzania; the constitution establishes the Tanganyika African National Union (TANU) as the sole legal political party and an integral part of the government. Diplomatic relations with Britain are broken over Rhodesia issues.
- 1966** The Tanzanian shilling is introduced as the national currency, replacing the East African shilling.
- 1967** The East African Community (EAC) is formed as a common market, with Uganda, Kenya, and Tanzania as members. Nyerere issues the Arusha Declaration, defining *ujamaa*-oriented socialism as the national goal.
- 1968** Kiswahili becomes the sole official language and the medium of instruction in primary schools. Diplomatic relations with Britain are restored.
- 1969** All primary schools are nationalized.
- 1970** University College, in Dar es Salaam, is founded. Nyerere is reelected president.
- 1972** Vice President Abeid Karume is assassinated. Armed followers of Milton Obote, the deposed president of Uganda, invade Uganda from Tanzania but are repulsed.
- 1975** TanZam rail line, built with Chinese aid, is opened for traffic.
- 1977** TANU and SP merge to form the Chama Cha Mapinduzi (CCM, Revolutionary Party of Tanzania). Edward Sokoine is named prime minister. Border with Kenya is closed, as the EAC disintegrates in a welter of recriminations.
- 1978** Ugandan forces occupy the Kagera salient, advancing as far south as the Kagera River; Tanzania counterattacks with 40,000 troops, including Ugandan dissidents; after a six-month campaign the invaders rout Idi Amin's forces and occupy Kampala; Amin flees Uganda.
- 1980** Nyerere is reelected president in national elections. Zanzibar is granted a new constitution, under which it elects its own president.
- 1981** Tanzanian troops are withdrawn from Uganda.
- 1983** The Human Resources Deployment Act authorizes the government to round up vagrants and unemployed people and forcibly resettle them in productive sectors. Kenya and Tanzania reach accord on distribution of EAC assets and border issues.
- 1984** Prime Minister Edward Sokoine is killed in an auto accident; Salim Ahmed Salim is named prime minister.
- Vice President Aboud Jumbe, president of Zanzibar, resigns and is replaced by Ali Hassan Mwinyi. Constitution is amended, reducing the number of presidential terms for Nyerere's successors to two and creating two vice presidents.
- 1985** The National Assembly amends the Preventive Detention Act of 1962, removing many potential abuses. Julius Nyerere steps down from the presidency, and Ali Hassan Mwinyi is elected to the office by an overwhelming 92 percent vote in national elections; Mwinyi names Joseph S. Warioba as prime minister.
- 1990** Nyerere steps down as chairman of the CCM and is succeeded by Mwinyi.
- 1991** A presidential commission recommends the creation of a multiparty system.
- 1992** Opposition parties are legalized.
- 1993** Regional parliaments for Zanzibar and mainland Tanzania are established; refugees arrive from Burundi.
- 1994** Hutu-Tutsi violence in Rwanda prompts some 700,000 refugees to flee to Tanzania.
- 1995** Multiparty elections are held, with the ruling CCM winning 214 seats in the Assembly; CCM's Benjamin Mkapa is elected president. As violence resumes in Burundi, additional refugees seek asylum in Tanzania, bringing the number of Burundian refugees to about 60,000.
- 2000** President Mkapa is reelected; reports of election irregularities on Zanzibar are investigated.
- 2001** The ruling CCM and the main opposition party in Zanzibar, the Civic United Front, agree to form a joint committee to restore calm to the islands. Tanzania opens a huge gold mine near Mwanza. Tanzania, Uganda, and Kenya create a regional parliament to handle trade and immigration issues.
- 2002** Nearly 300 people die in a train wreck. The president buys a jet costing \$21 million.
- 2004** Tanzania, Uganda, and Kenya form a customs union to promote regional trade.
- 2005** President Mkapa retires and CCM candidate Jakaya Kikwete is elected president.

NATIONAL EMBLEM

Known as the Krut, the national emblem represents Garuda, the winged creature of Hindu mythology used as a mount by Vishnu, one of the gods in the Hindu pantheon. The bird appears with a human torso wearing a gold headdress and the ritual mask of Asian demons.

NATIONAL ANTHEM

“Thailand Is the Unity of Thai Blood and Body”; the royal anthem, “Sanrasorn Phra Barami” (Anthem eulogizing his majesty), is also sung at all public functions.

NATIONAL HOLIDAYS

January 1 (New Year’s Day), April 6 (Chakri Day), April 13 (Songkran, Thai New Year’s Day by the Maha Sakaraj calendar), May 5 (Coronation Day), August 12 (Queen’s Birthday), October 23 (King Chulalongkorn Memorial Day), December 5 (King’s Birthday, National Day), December 10 (Constitution Day)

DATE OF INDEPENDENCE

Never under foreign rule

DATE OF CONSTITUTION

October 11, 1997

GEOGRAPHICAL FEATURES

Thailand, in the middle of mainland Southeast Asia, has a total land area of 514,000 sq km (198,455 sq mi), extending 1,555 km (966 mi) north to south and 790 km (491 mi) east to west. Its total coastline, on the Gulf of Thailand and the Andaman Sea, extends 3,219 km (2,000 mi). The land area includes numerous offshore islands, the largest of which is Phuket, at the northern end of the Strait of Malacca. Thailand shares its international boundary of 4,932 km (3,062 mi) with four

neighbors: Myanmar (Burma), Malaysia, Cambodia, and Laos.

The heart of Thailand is the central valley, dominated by the Chao Phraya River and watered by an extensive network of canals. It stretches from the foothills of northern mountains at Uttaradit to the Gulf of Thailand and is flanked on the west by the Bilaukthang Range and on the east by the Khorat Plateau. The central valley, which constitutes 22 percent of the national territory, is about 482 km (300 mi) from north to south, with an average width of 160 to 240 km (100 to 150 mi).

Thailand

The northeastern Khorat Plateau region, constituting one-third of the national territory, is an undulating tableland about 122 to 213 m (400 to 700 ft) above sea level to the north and 61 m (200 ft) above sea level to the

south. It is rimmed on the south by the Phanom Don-grak Mountains, along the Cambodian border, and on the west by the Phetchabun Mountains. Much of the land is poor and consists of sandstone and saline soil.

The northern and western mountain regions are a series of parallel mountain ranges separated by deep and narrow alluvial valleys. These ranges have an average elevation of 1,585 m (5,200 ft) and contain the highest peak in the country, Doi Inthanon (2,576 m; 8,449 ft). The notorious Death Railway, built by the Japanese during World War II, ran through the Three Pagodas Pass, one of the few natural gaps through this region.

The small southeastern coast region, on the Gulf of Thailand, is a lush, fertile plain separated by low mountains from the central valley.

The southern peninsular region is a long sliver of land extending from Myanmar to Malaysia that is no wider than 19 km (12 mi) in some places near the Isthmus of Kra. South of the isthmus, Thailand widens to include the full width of the peninsula, facing the Andaman Sea on the west and the Gulf of Thailand on the east. A series of north-to-south parallel ridges divides the peninsula into a narrow, swampy, indented western coastal plain and a broad, smooth eastern coastal plain.

CLIMATE AND WEATHER

Thailand has a tropical climate dominated by monsoons. In most regions there are four distinct seasons: the dry season, from January through February; the hot season, from March through May; the rainy season, from June through October; and the cool season, from November through December.

For most of Thailand the temperature rarely falls below 13°C (55°F) or goes above 35°C (95°F), although there are occasional recordings above 37.8°C (100°F). The mean temperature is considerably lower in the dry season.

About 90 percent of precipitation falls during the wet monsoon season, from June to October, but some parts of peninsular Thailand receive rain during all seasons. The amount of precipitation varies from between 1,020 mm (40 in) and 1,520 mm (60 in) in the northern highlands, central lowlands, and Khorat Plateau to between 2,030 mm (80 in) and 3,050 mm (120 in) in the western mountains and the southern peninsula.

Twice a year, toward the end of the dry and rainy seasons, Thailand experiences typhoons of considerable violence. Thunderstorms are common between May and October in the north and between March and November in the south.

	Western Mountains and Southern Peninsula: 120 in

FLORA AND FAUNA

Some 25 percent of the country is covered by rain forest, whereas just a quarter century earlier half of the country was rain forest. Though logging was banned by the government in 1989, much of the damage had already been done. Forests consist of hardwoods such as teak. Rubber trees are not indigenous; rather, they were brought from Brazil over a century ago. Native to Thailand and the rest of Southeast Asia are bamboo, rattan, palms, and ferns. Orchids are very abundant. About 20 percent of the land is covered in grass, shrubs, or swamps, and lotuses and water lilies grow thickly in the latter.

With the shrinking of the rain forests, natural habitat has been lost for the once-large elephant population, which has also been diminished by poaching. At one time numbering in the hundreds of thousands, elephants now number only about 5,000. A system of national parks and wildlife sanctuaries has preserved some of the rain forest and has also provided a safe haven for elephants as well as tigers, leopards, and the Asiatic black bear. The tapir and rhinoceros have also become endangered with the reductions in the amount of forestland. Monkeys, however, are still numerous, as is avian life, including orange-bellied leaf birds, purple swamp hens, and painted storks. Reptiles and amphibians, including lizards, frogs, toads, water snakes, the king cobra, and crocodiles, are abundant, but overfishing has depleted stocks of freshwater and marine fish and crustaceans. The silk industry in Thailand is strong, as supported by several species of wild and domesticated silkworms. Insect life is plentiful, including the malaria-carrying mosquito, white ants, and moths.

ETHNIC COMPOSITION

Thailand is one of the most cohesive and integrated societies in Southeast Asia, with over 75 percent of the population composed of Thai stock. The Central Thai, or Thai Bhak Klang, formerly known as the Siamese, form the largest component of this majority. Their cultural and social patterns have set nationwide standards. There are three other major Thai groups: the Thai Isan, or Thai Lao, of the northeastern region, who are distinguished from the Central Thai by food habits and their use of the Lao language; the Thai Yuan, also known as Lana Thai, or Yonock, of the northern region, who have been independent of Central Thai control for centuries; and the Thai Pak Tai of the southern region, along the Isthmus of Kra, whose physical features reveal Malay admixtures. There are three minor Thai groups: the Phu Thai, an agricultural people of the northeast; the Lu, or Lue, whose ancestors are believed to have emigrated from Yunnan, in China; and the Shans, also called Ngiaw, Thai Yai, Thai Long, or Great Thai, who are ethnically related to the Shans of Myanmar.

The Chinese are the largest ethnic minority, constituting 14 percent of the population as a whole and 33 percent of the population of Bangkok. The Chinese moved into Thailand in large numbers for hundreds of years, until immigration quotas were enforced in 1948.

The second-largest minority are the Thai Malay, or Thai Islam, a Malayo-Polynesian group separated from the Thai by religion, race, and, to some extent, language. They reside for the most part in the four provinces of the southern region: Pattani, Yala, Narathiwat, and Satun. They have proved highly resistant to assimilation and

have sometimes been implicated in secessionist movements. In the 1980s they were estimated to number between 600,000 and 800,000.

Under the general category of hill tribes, there are at least eight major groups and nearly 20 minor ones. The best known of these tribes is the Miao (also Hmong or Mong), an opium-growing tribe in the northern region divided into the Blue Miao, White Miao, and Gua M'ba Miao. They revolted unsuccessfully against the government in 1967. The other hill tribes are the Soai or Kui, Mon, Lawa, Yao, Akha, Lahu, and Lisu. Sometimes included in this category are the Karens, a Tibeto-Burmese people.

Even before the present influx of refugees from the Indochinese peninsula there were large Laotian, Cambodian, and Vietnamese communities in Thailand. The Khmer, or Cambodian, minority live in provinces east and southeast of Bangkok and in the southern Khorat Plateau, once a Cambodian territory. The Vietnamese in northern and northeastern Thailand are a much smaller group. More-recent ethnic alien groups include Indians and Pakistanis, who have no fixed niche in Thai society.

There is a large Western community in Bangkok.

LANGUAGES

The official language of Thailand is Thai, which in its various dialects is the mother tongue of 80 percent of Thai peoples. Its linguistic affinities have not been established, but most linguists assign it to the Chinese-Tai branch of the Sino-Tibetan family of languages.

Thai has four dialectal forms, of which Central Thai is the official standard and the language of the media. Central Thai and Lao are mutually intelligible. The other dialects of Thai are Kham Muang and Southern Thai, also called Tamprue.

English is the universal second language. In many private schools it is taught from the elementary grades onward, while in public schools it is taught as a compulsory foreign language. English is used extensively, particularly by the Thai elite and businessmen. Many official documents are published in both Thai and English. Bangkok has two English newspapers.

RELIGIONS

The state religion is Buddhism in its Theravada or Hinayana form, which is professed by 95 percent of the population. Religion is perhaps the most pervasive and visible force in Thai life, and temples—known as *wats*—dot the landscape, as Buddhist festivals do the calendar. The number of monks in the population has led to the description of the country as “the land of the yellow robes.”

Thai Buddhism is an amalgam of pre-Buddhist Hindu beliefs and practices and animist spirit worship interwoven with Buddhist theology and rituals. Popular religious beliefs and institutions have changed little over the centuries. Cosmological and astrological concepts pervade not only religious but also social and economic life.

Buddhism in Thailand has an elaborate ecclesiastical structure. That structure is headed by the supreme patriarch of the Sangha, whose title is *sakala sanghaparinaya-aka somdech phra sangharaja*. With a membership of over 250,000, the Sangha, or the order of Buddhist monks, is the nearest thing to a clergy that Buddhism has. The patriarch, who is appointed by the king, presides over the supreme council, Mahathera Samagom, which has both judicial and legislative functions.

The king is required by the constitution to be a practicing Buddhist. The affairs of the Sangha are regulated by the Department of Religious Affairs in the Ministry of Culture. The state is closely involved in the promotion of Buddhism, and relations between the two are defined in the Buddhist Order Act of 1962. The government is the legal owner of all *wat* lands, administers religious education, and operates a large Buddhist publishing house. The monarch himself maintains 115 royal *wats* and two ecclesiastical colleges.

Minority religious groups constitute an estimated 5 percent of the population, but they have contributed little to Thai cultural traditions. The Chinese practice a traditional mixture of Mahayana Buddhism, Taoism, Confucianism, and ancestor worship. Muslims constitute almost 4 percent of the population, and the vast majority are the ethnic Malay of the southern region; the remainder are Pakistanis in urban centers and ethnic Thais who practice what is known as Thai Islam in rural areas of the central region. The government provides financial assistance to Thai Muslims for their annual pilgrimage to Mecca. The head of the Muslim establishment, the *chularajamontri*, has a semiofficial status. Most of the Indians are Hindus.

Although Christianity was introduced into Thailand as early as 1511, it has met with only modest success in winning converts. The size of the Christian community is estimated at 330,000, including Catholic Chinese, Vietnamese, and Laotians. The Catholic Church, accounting for the large majority of the Christian population, has two archdioceses, in Bangkok and Sakonnakohn. The Church of Christ in Thailand, the major Protestant denomination, has over 140 congregations; independent Protestant denominations have an additional 180. Christian missions have played an influential role in the Westernization of Thailand; Catholic missions run 125 schools and six hospitals, and Protestants operate 50 schools and 10 hospitals.

HISTORICAL BACKGROUND

The original inhabitants of present-day Thailand were the Tai, a people racially related to the Chinese who migrated from south China to mainland Southeast Asia. By the first century c.e. they had entered the valley of the Chao Phraya River, defeated and dispersed the earlier Khmer and Mon settlers, and established the Tai Kingdom. By the middle of the 14th century the Tai, known as Siamese to the Mon and Khmer, had expanded their presence at the expense of the Lao, Burmese, and Khmer. In the central Chao Phraya valley they adopted many of the features of the Mon, especially adherence to Theravada Buddhism. According to tradition, Tai chieftains overthrew the Khmer at Sukothai, the capital of Angkor's province, and established the first Tai kingdom. The Thai traditionally regard the founding of this kingdom as marking their emergence as a distinct nation; it was in Sukothai, the cradle of Thai civilization, that they took the name Thai (rather than Tai). The greatest king of Sukothai was Ramkhamhaeng (Rama the Great, r. 1277–1317). He is credited with devising the Thai alphabet and bringing the Chinese artisans who developed the ceramic industry that was the mainstay of the Thai economy for 500 years. Sukothai remained a powerful state until 1378, when it was overcome by the Thai king of the city of Ayutthaya, Rama Thibodi (r. 1350–69). In 1360 Rama Thibodi declared Theravada Buddhism the official religion of the land. He also adopted the Dharmashastra, the Hindu legal code. By the end of the 14th century Ayutthaya was the strongest power in Southeast Asia.

The first contact with Europeans came in 1511, when Ayutthaya received a diplomatic mission from the Portuguese. Five years later Ayutthaya and Portugal concluded a treaty granting the Portuguese trading rights. A similar treaty was concluded with the Dutch in 1592. During the reign of King Narai commercial ties were forged with the Japanese, Dutch, English, and French. As influenced by his foreign minister, the Greek adventurer Constantine Phaulkon, Narai and his son were reported to have become Christians. In retaliation, the Buddhist clergy and Thai nobles instigated General Phra Phetracha to kill the royal heir along with a number of Christian missionaries. The arrival of English warships sparked a massacre of more Europeans. Phetracha seized the throne, expelled all foreigners, and ushered in a 150-year period during which Thailand was walled off from the West.

In 1767 the Thai territory was invaded by three Burmese armies that converged on Ayutthaya. After two years of siege, the city capitulated and was burned. The Thai made a rapid recovery under a brilliant military

leader, Phraya Thaksin (r. 1767–82), who quickly reorganized an army and drove out the Burmese conquerors. After assuming the royal title, he moved the capital to Thon Buri, a fortress town across the river from modern Bangkok. By 1776 Thaksin had reunited the Thai kingdom and annexed Chiang Mai, in the north. Eventually, Thaksin developed delusions of divinity and was deposed and executed. The Thai throne fell to Chao Phraya Chakri, one of Thaksin's generals, who assumed the throne as Rama I (r. 1782–1809). He founded the present Thai ruling house and moved the throne to Bangkok. The Chakri dynasty brought the kingdom the political stability necessary for transition to the modern age. The third king of this dynasty, Mongkut (Rama IV, r. 1851–68), is the Thai king best known in the West, through the book *Anna and the King of Siam*. During his reign as well as that of his son, Chulalongkorn (Rama V, r. 1888–1910), Thailand emerged from feudalism and entered the modern world. A cabinet of foreign advisers was formed, commercial treaties of friendship were signed with Britain (1855) and with the United States and France (1856), the power of the nobles was curtailed, slavery was abolished, and the legal system was brought into conformity with Western standards. However, royal rule continued to be an absolute monarchy until it was transformed into a constitutional monarchy through a bloodless revolution in 1932. That year a permanent constitution was promulgated, providing for a quasi-parliamentary regime in which an executive would share power with a unicameral legislature, half of whose members would be elected through limited suffrage, the other half appointed. The first parliamentary elections were held in 1933. From 1932 through the 1940s Thai politics was dominated by Pridi Phanomyong and Phibun Songkhram. At the start of World War II, Thailand, after annexing Burmese and Malayan territories, signed an alliance with Japan and declared war on the United States and the United Kingdom. After the war Thailand became an ally of the United States.

Following World War II Pridi Pramroj, of the Free Thai Movement, came into power and led the first post-war government. However, his rule was soon undermined, and in 1947 he fled to Beijing. Phibun once again seized power and remained in control for a decade, until Field Marshal Sarit Thanarat assumed effective control in 1957. He appointed a constituent assembly in 1959 but ruled through martial law until his death in December 1963. Sarit was succeeded by Gen. Thanom Kittikachorn, who assumed the position of prime minister. In June 1968 a constitution was promulgated, but an increase in Communist insurgency efforts and internal political conflict led to the dissolution of the National Assembly, the annulment of the constitution, and the imposition of martial law. In 1973 rioting students brought about the fall of the government. Dr. Sanya Dharmasakti took on the leadership of the interim government.

A new constitution promulgated in October 1974 legalized political parties. Free elections for the House of Representatives were held in January 1975, and a coalition government was formed, with Seni Pramroj, the leader of the Democrat Party, in control. By March the coalition had been dissolved by a no-confidence vote. Power was juggled back and forth several times during 1975 and 1976 between Seni and his younger brother, Kukrit Pramroj, until October 6, 1976, when Admiral Sangad Chaloryu led a military coup that ousted Seni. On October 22 King Bhumibol approved the establishment of a military-rule government under the leadership of the former Supreme Court justice Thanin Kraivichien.

One year later, on October 20, 1977, the military assumed power and appointed Gen. Kriangsak Chomanan prime minister. Kriangsak maintained a tentative hold on power under a new constitution adopted December 18, 1978. His power to appoint the upper house of the National Assembly outweighed the overwhelming plurality of votes won by Kukrit's Social Action Party (SAP) on April 22, 1979. However, economic problems threatened his leadership, and in February 1980 he resigned. Gen. Prem Tinsulanond was named prime minister. Prem became the longest-serving prime minister at the end of 1982, having remained in office for 33 months. In the parliamentary election held April 18, 1983, no single party won a clear majority, and Prem remained the leader of a non-partisan four-party coalition government.

An attempted coup took place on September 9, 1985, while Prem and the armed forces commander, Gen. Arthit Kamland-Ek, were out of the country. Former prime minister Kriangsak was subsequently arrested and implicated for his alleged involvement. A premature election was held on July 27, 1986, because of dissension within the SAP, the largest of the coalition parties. A new four-party coalition government was created on August 11, with Prem continuing as leader.

On April 19, 1988, in the face of a no-confidence vote, Prem scheduled an election for July 24. Once again, no single party won an overall majority, and a new six-party government was formed. Surprisingly, Prem refused the position of leadership, and Maj. Gen. Chatichai Choonhavan, head of the plurality Thai Nation Party, was appointed prime minister.

Chatichai's leadership philosophy emphasized the transformation of Southeast Asia from a "battlefield into a marketplace." He broke with the tradition of his predecessors and actively promoted improved relations with Thailand's neighbors Laos, Vietnam, and Cambodia. Tension between Chatichai and the minister of foreign affairs, Siddhi Savetsila, who was also the leader of the Social Action Party, led to a near crisis in the coalition in March 1989. However, discussions between the leaders of the SAP and Thai Nation resolved the crisis, and the stability of the coalition was maintained.

Chatichai's government was ousted by the military in a bloodless coup in February 1991. The regime, led by the armed forces' supreme commander, Gen. Sunthorn Kongsompong, announced that the country would be ruled by a "National Peace and Order-Keeping party, consisting of army, navy, air force, police and civilians." The 1978 constitution was abolished, and martial law was imposed. The regime also banned political meetings of more than five persons and dissolved both houses of parliament.

The coalition government lasted until May 1995, when it collapsed under pressure from land-reform scandals. Banharn Silpa-Archa was then appointed prime minister; he lasted just over a year. He was replaced by the former general and deputy prime minister Chavalit Yongchaiyudh, who lasted until late 1997, when he was replaced by Chuan Leekpai. Compounding the problems of political instability were growing economic problems. In August 1997 the International Monetary Fund (IMF) stepped in with a bailout package of austerity measures. The measures seemed to have the desired effect of curbing Thailand's free fall; however, fully rebuilding the country's economy would be a major challenge.

In January 2001 the first general elections were held under the reformist 1997 constitution. The populist Thai Love Thai (TRT) party became the first party in Thailand's history to secure a simple majority in parliament. They were joined by political allies, including the Chart Thai and Khwam Wang Mai (New Aspiration) parties, in making Thaksin Shinawatra of the TRT the new prime minister. Troubles beset the billionaire politician at the outset of his rule, as he was accused by an anticorruption commission of concealing his assets. If convicted, he would have been banned from politics for five years. Thailand's high court, however, cleared him in a close decision in 2001.

Shinawatra's new government began a program of privatizing a number of state-owned companies and also pursued a heavy-handed crackdown on the drug trade, in which 2,000 suspects were killed in 2003 alone. In 2004, attacks by Muslim separatists in Thailand's three southern provinces reawakened the secessionist movement there. Muslims, who are in the majority in the southern provinces, have complained of discrimination in education and employment. The situation worsened as a result of the excessive responses of the Thai police and military. Almost 100 protestors died, many of suffocation, while in police custody following a rally in October 2004.

In December 2004 areas of southern Thailand along the coast were devastated by the huge Indian Ocean tsunami. Over 5,000 people, many of them foreign tourists, died, infrastructure was destroyed, and the fishing and tourist industries were hard hit.

In March 2005, after a landslide election victory by his TRT party, Thaksin Shinawatra was elected to a second four-year term by the Thai House of Representatives.

LIST OF MODERN RULERS

	Prime Minister (except as noted)
1944–45	Khuang Aphaiwong
1945	Tawee Boonyaket
1945–46	Seni Pramroj
1946	Khuang Aphaiwong
1946	Nai Pridi Phanomyong
1946–47	Luand Thamrong Nawasawat
1947–48	Khuand Aphaiwon (interim)
1948–57	Phibun Songkhram
1957	Pote Sarasin
1958	Thanom Kittikachorn
1959–63	Sarit Thanarat
1963–73	Thanom Kittikachorn
1973–75	Sanya Dharmasakti Thammasak
1975	Seni Pramroj
1975–76	Kukrit Pramroj
1976	Seni Pramroj
1976–80	Sangad Chaloryu (chairman, National Administrative Reform Council)
1976–77	Thanin Kraivichien
1977–80	Kriangsak Chomanan
1980–88	Prem Tinsulanond
1988–91	Chatichai Choonhavan
1991	Sunthorn Kongsompong (chairman, National Peace-Keeping Council)
1991–92	Anand Panyarachun
1992	Suchinda Kraprayoon
1992	Meechai Ruchupan (acting)
1992	Anand Panyarachun
1992–95	Chuan Leekpai
1995–96	Banharn Silpa-Archa
1996–97	Chavalit Yongchaiyudh
1997–2001	Chuan Leekpai
2001–	Thaksin Shinawatra

CONSTITUTION

The modern constitutional history of Thailand begins with the constitution of 1932, which has been replaced by 12 other constitutions, most recently in 1997. The only principle common to all these constitutions has been the inviolability of the monarch, the head of state. Successive changes of government have not diminished the role of the monarchy as the most visible symbol of national unity. The monarch also provides the imprimatur of legitimacy to both civilian and military administrations in appointing the prime minister on the advice of the National Assembly and in acting as the head of the Thai armed forces. At the same time, his effectiveness in influencing the composition and policies of the government is limited. In other words, the monarchy has a more symbolic than political role.

Despite the constitutional facade, Thailand was ruled from 1932 to 1997, except for brief, intermittent periods,

by military strongmen supported by an elite and conservative oligarchy. The main organs of government are the cabinet and the 14-member Privy Council, which advises the king. Together they formulate policy.

Under the 1997 constitution, as under its predecessors, the most important government office is that of the prime minister, the head of government, who is the chief executive and leader of the ruling party. He also supervises the office of the royal household and heads the National Economic Development Board, the National Security Council, and the National Research Council. Under military governments he is also the commander of one of the branches of the armed forces. All laws and royal decrees must be countersigned by him. He presides over cabinet meetings and controls their agendas. In a national emergency he has unlimited powers over national security and the economy. He makes all appointments and conducts all investigations in the name of the king.

The cabinet consists of the prime minister, two deputy prime ministers, and 12 ministers. Under each ministry are a number of quasi-autonomous statutory agencies, each headed by a director-general appointed by the king with the approval of the prime minister. Within these departments are divisions and sections as well as provincial and district offices. The country's bicameral National Assembly (Rathasapha) consists of the Senate (Wuthisapha), a 200-member elected body wherein members serve four-year terms, and the House of Representatives (Sapha Phuthaen Ratsadon), which currently has 500 members elected by popular vote to serve four-year terms.

PARLIAMENT

Under the old constitutional order the Senate represented the entrenched interests of the military and oligarchy. Their seats were appointed. However, with the 1997 changes to the constitution the 253-member body was converted to a 200-member body elected for terms of four years. The House of Representatives has 500 seats, with members elected for four-year terms through universal suffrage. The National Assembly has limited powers. Perhaps its most important relevance is that the prime minister and the government are formed out of the majority of the body.

POLITICAL PARTIES

Following the military coup in February 1991, all political meetings of more than five people were banned. However, with the promulgation of the new constitution, political parties were once again authorized. Dozens of parties stood for elective office in 1992, and more than 10 were represented in the Assembly. The current four largest parties are the Democratic Party (Phak Prachatipat),

the Thai Nation Party (Phak Chart Thai), the Great People Party (Phak Machacon), and the populist Thai Love Thai (Thai Rak Thai, TRT) party, which was formed in 1999 by business tycoon Thaksin Shinawatra. In the 2001 elections the TRT became the first party in Thailand's history to secure a simple majority; in the 2005 elections it repeated this accomplishment, winning 377 of the 500 seats in the House of Representatives.

LOCAL GOVERNMENT

For the purposes of local government Thailand is divided into 76 provinces, each under the control of a governor. These provinces are further divided into 744 districts and 81 subdistricts, over 7,255 communes, and about 70,000 villages. Local government bodies have very little autonomy and are only units of the national government. However, there are no central government officials below the district level. *Kammans*, heads of communes, are chosen from among the headmen of the constituent villages; *phuyai bans*, heads of villages, are chosen by the villagers for fixed terms of five years, although they tend to remain in office until death or retirement.

LEGAL SYSTEM

The criminal justice system provides for three levels of courts: courts of first instance, the Court of Appeal, and the Supreme Court. The courts of first instance are divided into five categories: *sarn kwaeng* (magistrate courts of small causes), *sarn kadee dek lae yaochon* (juvenile courts), *sarn paeng* (civil courts with two judges), *sarn aya* (criminal courts), and *sarn changwad* (provincial courts). The Sarn Uthorn (Court of Appeals) is composed of a chief judge and 51 other judges and comprises 17 divisions. The Supreme Court consists of a president and 21 judges. The courts are supervised and their integrity ensured by the Judicial Service Commission, composed of 11 members. Thailand's civil and criminal codes follow western European models. The constitution guarantees all citizens access to the courts and also to lawyers during trial. Except in cases of crimes in progress, arrest warrants are generally required, and specific charges must be brought against those detained within a limited time period. Suspects frequently spend long periods in detention before trial because of heavy case backlogs, and trials often take years to complete. Still, defendants generally receive adequate due process rights at trial.

HUMAN RIGHTS

In terms of civil and political rights, Thailand is considered a partly free nation.

Thailand has a mixed track record with regard to human rights, just as it has a mixed form of government. The nation is a military dictatorship that is also a constitutional monarchy and a modified democracy. Although restrictive and undemocratic laws remain on the statute books, they are only lightly enforced. The main problems seem to come not so much from official policies as from venal and insensitive officials.

Police officers kill a number of suspects during chase and apprehension, and security forces accused of extrajudicial killings are rarely prosecuted. Suspects are beaten to coerce confessions. Renewed international criticism of such practices arose as a result of the 2003 crackdown on the drug trade, in which 2,000 suspects were killed in a matter of months, and in the 2004 detention of suspected Islamic militants from the south of the country. An ingrained culture of corruption in the civilian bureaucracy undermines the rule of law and encourages illegal activities such as gambling, tax evasion, smuggling, and prostitution. Police are notably lax in enforcing laws against vice, as a result of which Thailand leads the world in forced prostitution and the trafficking of women and children. Societal discrimination against indigenous people and religious and ethnic minorities persists. Many of Thailand's estimated one million members of hill tribes, who live mainly in the north, have never been fully integrated into society. Reportedly, roughly half of hill-tribe members lack citizenship, rendering them ineligible to vote, own land, or be covered under labor laws and making it harder for them to gain access to education and health care.

FOREIGN POLICY

Thailand was firmly aligned with the United States after World War II and was a signatory of the now-defunct Southeast Asia Treaty Organization. As a corollary the nation has been antagonistic to its three Communist neighbors, Vietnam, Cambodia, and Laos, and also to Myanmar (which is still officially recognized by the United States as Burma). Relations have been complicated by the presence of Cambodian and Laotian refugees and the question of their repatriation.

Since the end of the war in Vietnam and Cambodia, Thailand has embarked on a program of mending fences with its neighbors. In 1994 the Australian-financed Friendship Bridge across the Mekong was finally opened, providing the first such connection between Thailand and Laos. In 1996 a border-trade agreement was signed with Myanmar, and in 2001 Prime Minister Thaksin visited Myanmar to discuss drugs and border tensions, leading to a normalization of the relationship between the two countries. Still, relations with Myanmar were strained in 2002, following a border incident, and with Cambodia in 2003, following remarks by a Thai actress that Cambodia's Angkor Wat temple complex was stolen from Thailand.

Thailand is a member of the Association of Southeast Asian Nations (ASEAN) and the World Trade Organization (WTO).

DEFENSE

The Thai defense structure is headed by the king, who is also commander in chief of the armed forces. Real control, however, is exercised by the prime minister and the minister of defense. The line of command runs through the supreme commander of the armed forces to the commanders in chief of the three armed services. Defense policy is determined by the National Security Council, which is presided over by the prime minister, while budget allocations, mobilization, training, and deployment are supervised by the Defense Council.

The Thai have no firm military tradition despite the fact that throughout history they have waged a constant struggle to maintain their freedom and national identity. The military establishment had no professional capability until 1950, when the United States undertook a military assistance program to modernize the nation's armed forces. Since then the combat-worthiness, morale, and logistical reach of the Thai forces have become at least equal to those of its sometimes hostile neighbors Cambodia and Laos. Most of the Thai forces are deployed on the eastern border, where they are engaged in a drawn-out struggle with guerrillas supported by the Communist regimes across the border.

The military, over 425,000 strong in 2003, comprises the Royal Thai Army, Royal Thai Navy (including the Royal Thai Marine Corps), and Royal Thai Air Force. Compulsory service of two years begins at age 21; volunteers may join at 18. Military spending in 2003 totaled \$1.827 billion, or 1.8 percent of gross domestic product (GDP).

ECONOMY

After enjoying the world's highest economic growth rate from 1985 to 1995—averaging almost 9 percent annually—increased speculative pressure on Thailand's currency in 1997 led to a crisis that uncovered financial sector weaknesses and forced the government to float the baht. Long pegged at 25 to the dollar, the baht reached its low-

2338 Thailand

est point of 56 to the dollar in January 1998, and the economy contracted by nearly 10 percent that year. Thailand entered a recovery stage in 1999, with the economy expanding by 4.2 percent, and grew about the same amount in 2000, largely due to strong exports—which increased about 20 percent in 2000. An ailing financial sector and the slow pace of corporate debt restructuring, combined with a softening of global demand, slowed 2001 GDP growth to 2.1 percent. Beginning in 2002, however, domestic stimulus and export revival fueled better performance, with real GDP growth at 6.8 percent in 2003. Prime Minister Thaksin Shinawatra has embarked on a campaign of privatization of some government industries.

The Indian Ocean tsunami that hit the coast of Thailand in December 2004 was a tragedy not only in terms of human lives lost but also in its negative effects on the tourist and fishing trades.

LIVING CONDITIONS

The United Nations 2004 Human Development Report listed Thailand 76th out of 177 countries in terms of life expectancy, education, and standard of living. The average Thai's life expectancy in 2005 was 71.6 years, while literacy stood at 92.6 percent in 2002, with 73 percent of eligible students enrolled in primary, secondary, and tertiary schools. Per capita GDP was \$8,100 in 2004. Overall, living conditions in Thailand are average for the East Asia and Pacific region.

The great majority of Thais, some 69 percent, live in rural areas, while the only major urban center, Bangkok, had a population of over six million. Some of the amenities that are more common in cities, such as health care, clean water, sanitation, and electricity, have been developed in the countryside as well, making life easier for the rural population. Housing in the countryside consists largely of wood or thatch houses built on stilts and clustered together in villages or strung out along rivers or canals. The space under houses is well used: People often sit there during the heat of the day doing small chores, and some farm animals may also be kept there. Rice farming is the traditional occupation, and much of life is geared around the rhythm of the planting seasons and the Buddhist holy days.

Rapid urbanization and industrialization are changing the Thai way of life. Consumerism has taken the place of tradition for many eager to buy brand-name products. Housing values are quickly rising. Takeout food is as prevalent in Bangkok as in New York. The traffic in the capital not only costs commuters hours each day but also creates noise pollution and a real health hazard in smog.

HEALTH

The father of the present king studied at Harvard Medical School and consequently introduced Western medicine to Thailand. Today, the country has both government-subsidized health-care facilities and hospitals, where fees are charged according to patients' incomes, and private practices and hospitals, where the physicians set fees. In rural areas, public health centers offer primary care. As of 2004 there was an average of 30 physicians per 100,000 people. Almost all births are attended by trained health-care providers. The infant mortality rate in 2005 was 20.5 deaths per 1,000 live births. Thais also use many traditional forms of healing, including roots, herbs, and massage, called *nuat boraan*.

Air pollution in Bangkok is a major contributor to health problems, as is smoking. As of 2000, 44 percent of males smoked. Malaria and tuberculosis still affect the population; in 2000 there were 130 cases of malaria per 100,000 people, and in 2002 there were 179 cases of tuberculosis per 100,000 people. HIV/AIDS is also on the

rise; the 2003 prevalence rate was 1.5 percent. That year 58,000 died of HIV/AIDS and over half a million were living with the disease. SARS and deadly avian flu have also been found in the country. Waterborne diseases have been reduced through more modern sanitation. As of 2002, 99 percent of the population had access to improved sources of sanitation, 85 percent to safe drinking water. The government provides routine vaccines. In 2003, immunization rates for year-old children were high: 99 percent for tuberculosis, 97 percent for polio, 96 percent for DPT, and 94 percent for measles. Public expenditures on health care in 2002 totaled 3.1 percent of GDP.

FOOD AND NUTRITION

Rice is the major staple of Thai cooking. In fact, as with the Chinese, in Thai the verb “to eat” is literally “to eat rice,” or *kin khao*. The finest Thai rice is *khao hawm mali* (jasmine rice). In the north and northeast *khao niaw* (sticky rice) is common. Thai meals are normally served family style. Each person is given a plate of rice, and three or four meat or vegetable dishes are placed in the center of the table. Each person takes a helping from one dish at a time and eats it with the rice.

Thai cuisine is spicy and flavorful, as seasoned with garlic and chili, lime juice, lemongrass, and fresh coriander. Other typical ingredients include galangal root, basil, ground peanuts, tamarind juice, ginger, coconut milk, and fish sauce or shrimp paste. Typical main dishes include hot and sour fish stew, green and red curries, various soups, and noodle dishes. Thai food is served with a variety of condiments and dipping sauces.

Snacks and appetizers include fried peanuts, chicken, chopped ginger, peppers, and slices of lime. *Yum* (mixed hot and sour salad) is another popular dish, with many variants. There is a wide variety of fruit available, either fresh or juiced. Sugarcane juice, beer, tea, and rice whiskey are favorite drinks.

Nutrition is generally adequate in Thailand, though between 2000 and 2002 about 20 percent of the population was considered undernourished.

 Amount of Cereal Available per person per year kg: 122.3
 Amount of Fruits and Vegetables Available per person per year kg: 129.9

STATUS OF WOMEN

The status and roles of women have continued to progress at a moderate but noticeable pace over recent years. For the most part, women have equal legal rights in Thailand, with specific guarantees of property and divorce rights, and there are no allegations that these rights are denied. Women are not, however, permitted to fully participate in Buddhist religious institutions or to become monks. They are well represented in the labor force and are becoming increasingly well represented in professional positions, particularly those in the commercial sector. Women make up more than half of university graduates in Thailand and are increasingly often entering the professions, but they continue to face discrimination by private employers in hiring and wages.

Thailand does have limitations on women serving in the armed forces, and in rural areas sex stereotypes exist with respect to occupational and social roles. Such barriers are being modified as mass communications bring modern role models to even the most remote communities. In 1980 a group called Friends of Women was founded to advance the cause of women's rights in Thailand. Their efforts have been aided by other groups, with some focusing on issues such as the exploitation of women as prostitutes.

Women vote in numbers equal to men and participate fully in the political process. There are several female members of the national legislature. However, women are underrepresented in national politics and in high government positions.

Some 200,000 or more Thai women work as prostitutes, many of them being trafficked to cities from their villages and working under debt bondage, as forced to repay loans by traffickers to their parents. Traffickers go largely unpunished as a result of bribery. Domestic violence is on the increase in Thailand.

 Seats Held in Parliament by Women %: 9
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 46.9

WORK

The workforce in 2004 totaled 36.4 million, almost half of whom were engaged in agriculture. Thailand is a major exporter of rice, and many are employed in rice cultivation. Other products include tapioca, corn, sugar, rubber, coconuts, and soybeans. Fisheries also employ large numbers. Another 14 percent worked in industry, while 37 percent were employed in the service sector. Industries include tourism, textiles and garments, agricultural processing, beverages, tobacco, cement, light manufacturing, electric appliances and components, computers and parts, integrated circuits, furniture, and plastics. Thailand is the world's second-largest tungsten producer and third-largest tin producer. The unemployment rate in 2004 was only 1.5 percent.

The organized labor movement remains weak and divided in Thailand. Less than 2 percent of the work force is unionized. Unions can bargain collectively on behalf of workers, but in practice private employers generally set wages. Employers regularly violate labor laws, including those related to child labor (15 is the minimum legal work age), workplace safety standards, and minimum wage. The workweek is set at 48 hours. Poor children in urban areas sell newspapers and small jasmine wreaths on the streets. Some survive by finding sanctuary in Buddhist temples, becoming temple boys who eat and sleep there and help with chores.

 Unemployment %: 1.5

EDUCATION

Schooling is free, universal, and compulsory for seven years, from ages seven to 14. Total schooling lasts for 12 years, as divided into six years of elementary and primary education (*prathom*) and six years of secondary education (*matthayom*). Primary education is divided into two cycles: a lower cycle of three years and an upper cycle of three years. Nearly 11 percent of primary students and 32 percent of secondary students are enrolled in private schools. Coeducation is the exception rather than the rule and is discouraged by the state. The language of instruction is Thai, but English is taught as a compulsory second language in the secondary grades.

There has long been a shortage of teachers in rural elementary schools, as caused by poor salaries and urban migration. Nearly one-third of rural teachers lack diplomas.

Vocational education is offered in 172 vocational institutes. There has been a recent trend toward comprehensive schools that offer both academic and vocational training. Nearly 15.5 percent of secondary-school students are enrolled in the vocational stream.

Higher education is provided in 16 public universities and a plethora of technical schools. Among them are the Asian Institute of Technology, Chiang Mai University, Chulalongkorn University, Kasetsart University, Khonkaen University, King Mongkut's Institute of Technology, Mahidol University, Silpakorn University, Srinakharinwirot University, and Thammasat University. In addition, there are over a score of private colleges.

The government spent 5.2 percent of GDP on education in 2000.

SCIENCE AND TECHNOLOGY

Much of the research in Thailand is coordinated by various government ministries. The Ministry of Agriculture and Cooperatives has numerous departments for its varied activities. The Department of Agriculture conducts research in areas such as agricultural chemicals, rubber, rice, and entomology through its divisions and institutes. Likewise, the Department of Fisheries, the Department of Forestry, and the Department of Livestock all manage numerous research projects. The Ministry of Science, Technology, and Energy conducts biotechnology research through its Genetic Engineering Center.

Numerous institutions of higher education also have research centers. These include Chiang Mai, Chulalongkorn, Khonkaen, Kasetsart, Mae Joe Agricultural, and Mahidol universities, which focus on agricultural, veterinary, and food-processing research. The country has a

distinct shortage of trained engineers in high technology, however.

Between 1994 and 1997 an average of 21 percent of students enrolled in higher education were in math, engineering, or science programs. There were 289 researchers per million population as of 2002, with research and development expenditures totaling 0.24 percent of GDP.

MEDIA

Thailand has dozens of daily newspapers, most of which are published in Bangkok, and many are linked by common ownership. The *Bangkok Post* and the *Nation* are the major English-language dailies, while the *Daily News* and *Thai Rath* are the major Thai-language dailies.

While the press is privately owned and there is no pre-publication censorship, the media are always under pressure to conform to government-established guidelines. However, there is lively criticism of government policies within the framework of the regulations, and wide latitude is permitted in reporting nonpolitical news. In general, Thai print media are among the healthiest in Asia. Newspapers freely report allegations of official corruption and human rights abuses, although several journalists have been jailed in recent years on libel charges filed by politicians. Journalists also practice some self-censorship when reporting on the monarchy and national security issues.

There is no national news agency. Some 22 foreign news agencies, three radio services, eight television services, and three photographic agencies are represented in Bangkok, including AP, UPI, AFP, Reuters, and ITAR-TASS.

Radio broadcasting is a state monopoly. Most of the numerous radio stations are owned by the government, either directly or indirectly through the Royal Thai Army, the office of the prime minister, the Public Relations Department, the Ministry of Education, the national Police Department, and the Royal Household.

Television, introduced in 1955, is operated by Television of Thailand. In addition, the Thai Television Company (a commercial concern with state participation), the Royal Thai Army, and two smaller companies also operate networks, some in color. Broadcast media tend to be less outspoken than their print counterparts. ITV, a major television network, has become more muted since a company owned by Thaksin family members, Shin Corporation, increased its ITV ownership stake to 50 percent in 2000. A series of media reforms underway are aimed at

reducing military interest and influence in the media and opening up more opportunities to the private sector.

In 2004 the international media watchdog group Reporters without Borders ranked Thailand 59th out of 167 countries in its press freedom index.

The government does not restrict Internet use. As of 2003 there were over six million Internet users and 26 million cellular telephone users.

CULTURE

Thailand's twin threads of monarchy and religion are woven throughout every aspect of Thai cultural life. Masked drama, or *khon*, of the royal court, is the most stylized and visual of Thai performing arts. Episodes from the Indian epic the *Ramayana*, or *Ramakien* in Thai, are the only content for such *khon* performances, which involve elaborate silk costumes, masks, dance, and musical accompaniment (all of which are considered sacred). Some clowns and comic incidents are added to attract audiences. Shadow-puppet theater, *nang talung*, is also popular in the south.

Classical Thai music takes inspiration from Chinese, Japanese, Indian, and Indonesian music. The traditional Thai orchestra is composed of woodwind, string, and percussion instruments. There are three orchestral types: *pi phat*, which are used at court ceremonies and in the theater; *kruang sai*, which perform at village festivals; and *mabori*, which accompany vocalists. The *khaen*, a mouth-organ instrument made of tubes of bamboo, is over three millennia old. There are several forms of classical dance in Thailand. Most are part of drama presentations, such as the tale of the epic journey of Prince Rama in his search for his beloved Princess Sita, who was abducted by the demon Ravana.

At times the monarchy and religion join forces. The royal palace often sponsors state ceremonies marking important times in the Buddhist calendar. One such state function is the *kathina*, or robe-offering, ceremony, marking the end of monastic retreat, or *vassa*. Religion has had a strong influence on Thai art, such as the sculpture of Buddhist images. Traditional Thai architectural is best represented by temple compounds, or *wats*. Wood is usually the basic construction material, with walls made of bricks and plaster. Gilding, glass mosaic, gold leaf, porcelain, stucco, lacquer, and inlaid mother-of-pearl all serve as ornamental devices.

Thai folk literature is primarily based on oral tradition. Most early literature was written by monks and the Thai court elite. The oldest and greatest epic is the 15th-century *Thao Hung Khun Cheung*, a poem of about 20,000 lines telling the story of a legendary hero.

Training in traditional Thai fine arts, such as music and drama, is offered at Bangkok's Silpakorn University. The Royal Institute, the Siam Society, and the National Museum, all located in Bangkok, also help to preserve traditional Thai culture.

FOLKLORE AND MYTHOLOGY

Thai folklore tradition is a mixture of indigenous myth and Buddhist teachings. The original pre-Buddhist creation myth features the sky god Than, who created everything on earth from a gourd; when he broke this open, five different types of humans entered the earth, and Than taught them how to survive. Rice figures strongly in such early myths. The spirit of rice is Mae Phosop, and human greed was supposedly responsible for reducing the size of the original rice seed. Trickster tales feature Si Thanonchai, who survives misadventures with kings and monks. Mae-nam, the great holy river of central Thailand, is ruled by "the Mother of the Waters," the goddess Djaio Phraya.

From Hindu myth comes the *naga*, a serpent-god and ruler of the netherworld who possesses immense wealth. In Thailand, the *naga* is often sculpted in temples as a dragon with five heads. It is the symbol of Narayana.

Proverbs are integral to the Thai folklore tradition. Some typical proverbs include "Bald people can always find a comb," "Life is so short we must move very slowly," "With one stump you can't make a good fire," "Wait until the tree has fallen before you jump over it," and "At high tide the fish eat ants; at low tide the ants eat fish."

Astrology still plays an important part in Thai life.

ENTERTAINMENT AND RECREATION

At the local level traditional Thai theater, dance, and music are dying out. Such events are now staged for the elite few. The vast majority of the population take their enter-

tainment instead from television and movies. Soap operas are particularly popular. The cult of stardom is found in Thailand, as it is in many other countries. Movie stars and popular singers take on major celebrity status.

In the cities, karaoke bars, discos, and cinemas all supply entertainment, while in rural areas entertainment is of a simpler nature. Kite-flying contests are held between February and April, when winds are strong and farmers have some free time after harvesting the rice. People also enjoy flying kites in parks on the weekends. Male kites, called *chulas*, are large and difficult to maneuver, while female kites, *pakpaos*, are smaller and more graceful. The male kites chase the female kites, and the females try to elude them or bring them down.

Children have their own favorite games. Girls play a game with small stones that is similar to the game of jacks. Children also play *mon sorn pha*, a skipping game, and *pio*, which is similar to Red Rover.

ETIQUETTE

The typical Thai greeting is *wai* (pronounced "why"). This is accompanied by a physical gesture of hands at chest level, palms together, and a bow. A greeting with a kiss is not usual, though handshakes are generally acceptable. Greetings with monks never include physical touching.

Shoes should be removed before entering temples or homes. The head is the most revered part of the body, and it is therefore considered rude to pat or touch it, even with infants. Feet, being the lowliest part of the anatomy, should not be prominently displayed. Punctuality is observed in matters of propitious cosmological or astrological moments, less so in social and business situations. Eating is done Western style, but with fork and spoon used simultaneously. The fork is held in the left hand, while the spoon is held in the right and is used for cutting food (with its side). The fork then pushes food onto the spoon.

FAMILY LIFE

A typical rural family includes grandparents, aunts, uncles, cousins, and sometimes distant relatives. The Thais believe that these "stem" families, as they are called, promote courtesy, tolerance and mutual respect. Urban families share these values, although they may not live with their extended families. Children are brought up to respect their parents, teachers, and the elderly. The avoidance of conflict is considered very important in Thai culture.

Until marriage, the young usually live with their parents. Most young people seek the approval of their parents and relatives when choosing marriage partners. A

member of the prospective groom's family will formally ask for the bride's hand. After the marriage has been registered at the local district office, a ceremony is held to bless the couple. Some couples do not have ceremonies; instead, they live together without registering a marriage. Traditionally, the groom moves to the home of the wife's family, but this tradition has changed over the years. Families, once large, have also changed with the times; the norm is one to two children in cities, perhaps more in rural areas, with a 2004 fertility rate of 1.9 children per woman. In rural areas women play active parts not only in the home but also in the rice fields and in the community. Divorce is not uncommon and requires only mutual consent or proof of desertion.

PERSONAL APPEARANCE

As with much of the world, the clothing in Thailand is a mixture of Western styles and local traditional attire. The hot, humid climate is perfect for sandals and T-shirts. Jeans are also popular. Schoolchildren often wear shorts as part of their uniform.

The *pha sin*, or *pha thung*, the most typical traditional garment for women, is a long tube of material worn from waist to ankles. Men wear the knee-length *phakhaoma*, a strip of material that can also double as a belt, towel, or head cloth.

SPORTS

Thai kickboxing is a very popular spectator sport and is regularly televised. Boxers can attack their opponents with feet, knees, or elbows or a combination of them. Such matches are accompanied by the gongs and drums of a *pi phat* orchestra. Another popular game is *takraw*, in which a woven rattan ball is kept in the air using any part of the body except the hands.

More-international sports such as badminton and soccer are widely enjoyed and draw large crowds. The national soccer team competes in the Asian Cup, ASEAN Championship, Tiger Cup, and King's Cup, and the matches of Thailand's domestic professional league are followed closely by fans. Tennis has also gotten a boost since the appearance on the men's professional tour of Paradorn Srichaphan, who was ranked as high as ninth in the world in 2003.

CHRONOLOGY

1946 Nai Pridi Phanomyong's party wins national elections; Khuang Aphaiwon is elected prime minister but later resigns; Pridi is elected prime minister.

King Ananda Mahidol (Rama VIII) dies under mysterious circumstances; his brother Bhumibol Adulyadej is proclaimed king.

Pridi resigns and is succeeded as prime minister by Luand Thamrong Nawasawat.

1947 Military strongman Luang Phibun Songkhram returns to power in a bloodless coup; Pridi is exiled; Khuand is reelected prime minister.

1948 Phibun replaces Khuand as prime minister.

1949 Pridi leads unsuccessful coup and later flees to Beijing.

Siam is discarded as the official name of the country, and the name Thailand is restored.

1951 Phibun is kidnapped by naval malcontents, but the uprising is quelled by loyal army and air force units.

Phibun is ousted by Sarit Thanarat and Phao Siyanon but is reinstated after 10 days.

1952 Anti-Communist Activities Act is passed by National Assembly.

1954 Thailand signs the Southeast Asia Collective Defense Treaty, establishing SEATO, with headquarters at Bangkok.

1955 The Seri Manang Khasila party is victorious in elections.

1957 Sarit replaces Phibun as virtual dictator; new government is formed by Pote Sarasin, former secretary-general of SEATO; Sarit organizes a new party, Phak Chat Sangkhom (National Socialist Party), under General Thanom Kittikachorn. Sarit, now a field marshal, assumes dictatorial powers, suspends the constitution, proclaims martial law, bans all political parties, dissolves the National Assembly, and arrests all leftist leaders. Thanom becomes prime minister.

1958 Thanom yields prime ministership to Sarit.

1959 Sarit proclaims new constitution.

1962 World Court rules in favor of Cambodia in Thai-Cambodian dispute over border temple.

1963 Sarit dies; Thanom succeeds him as prime minister.

1968 New constitution is proclaimed, the sixth since 1932.

1969 Elections are held under new constitution.

1971 Thanom proclaims martial law, citing Communist insurgency in the northeastern region.

1973 Mass student demonstrations against government lead to two days of street fighting in which at least 100 persons are killed; Thanom falls; the king appoints Sanya Dharmasakti Thammasak as prime minister; a 299-member interim National Assembly is elected.

United States begins closing air bases in Thailand.

1975 Kukrit Pramoj is elected prime minister and moves toward rapprochement with Beijing and

- Hanoi; diplomatic relations are established with China.
- 1976** U.S. bases in Thailand are phased out. Seni Pramoj replaces his brother Kukrit Pramoj as prime minister following national elections. Military junta under Admiral Sangad Chaloryu deposes Seni and suspends the National Assembly; new constitution is promulgated. Thanin Kraivichien is named prime minister and reverses the left-wing domestic and foreign policies of the former democratic administrations.
- 1977** Clashes occur on the Thai-Cambodia border, as relations between Thailand and its Communist neighbors deteriorate. Kraivichien is deposed by a moderate military group led by Kriangsak Chomanan, who is named prime minister; the new Revolutionary Council proclaims interim constitution and pledges return to civilian government by 1979.
- 1978** New constitution is promulgated.
- 1979** In first National Assembly elections since 1976, no party wins clear majority in the House of Representatives, but Kukrit Pramoj's Social Action Party wins the largest bloc of votes. Prime Minister Kriangsak visits Laos. Thailand condemns Vietnamese invasion of Cambodia.
- 1980** Kriangsak steps down in face of public criticism of his handling of the economy. Defense Minister Prem Tinsulanond is named prime minister.
- 1981** An abortive coup by disgruntled army colonels is foiled when the king publicly supports Prime Minister Prem. Social Action Party is brought into the government.
- 1983** National Assembly is dissolved. In new elections no party gains an absolute majority. Prem heads a coalition government. Amnesty is offered to outlawed Communists.
- 1985** A brief, unsuccessful military coup is led by Col. Manoon Roopkachorn.
- 1986** Following rumors of a possible coup, General Arthit is replaced as supreme commander of the armed forces by Gen. Chaovalit Yongchaiyut. House of Representatives is dissolved, and a general election for an enlarged House results in the Democrat Party winning 100 of 347 seats. Prem continues as prime minister and head of a coalition government.
- 1988** Prime Minister Prem calls for dissolution of the Assembly when faced with a vote of no confidence and schedules new election. No single group gains overall majority, and Maj. Gen. Chatichai Choonhavan, leader of the plurality Thai Nation Party, assumes post of prime minister as leader of a six-party coalition government. Military coup in Burma causes thousands of Burmese students to flee to Thailand. Thai government's involvement in repatriation of Burmese students is condemned by Amnesty International.
- 1989** General Chatichai meets in Bangkok with Vietnamese-backed Cambodian Prime Minister Hun Sen. Chatichai announces an end to all high-level contact between Thailand and Vietnam and renewed support for Cambodian government-in-exile.
- 1991** The government of Premier Chatichai is ousted by the military in a bloodless coup.
- 1992** Parliamentary elections take place but are widely believed to have been manipulated by the military; protests are brutally suppressed; the king appoints Anand Panyarachun to lead a caretaker government; new elections bring a five-party civilian coalition to power under Chuan Leekpai of the Democrat Party; during its tenure, the government spends heavily on infrastructure and maintains an 8 percent growth rate.
- 1995** Banharn Silpa-Archa of the Thai Nation Party becomes prime minister.
- 1996** A new constitution is drafted that will allow for greater separation of powers between the branches of the government; the New Aspiration Party wins elections led by Chavalit Yongchaiyudh.
- 1997** The king accepts the new constitution; the baht collapses under speculative pressure, spurring fiscal crisis that affects the entire Pacific Rim; the IMF and the United States agree to loans of \$4 billion to aid the Thai recovery; Chavalit resigns, and Chuan Leekpai returns to the office of prime minister.
- 1998** As part of its response to the economic crisis, the government attempts to repatriate illegal immigrants, including 60,000 refugees from Cambodia and 100,000 refugees from Myanmar; by midyear the economic recovery has begun to take effect.
- 2000** Human Rights Watch criticizes Thailand's forced repatriation efforts.
- 2001** The populist Thai Love Thai Party, under billionaire telecommunications tycoon Thaksin Shinawatra, wins a clear majority of seats in parliamentary elections.
- 2002** Myanmar briefly closes its border with Thailand as a result of shelling by Thai forces.
- 2003** Crackdown on the drug trade begins in February. In three months 2,000 suspects are killed in what human rights groups dub extrajudicial killings.
- 2004** Muslim separatists in the southern provinces begin a wave of attacks in January that last throughout the year. Martial law is declared.

2346 Thailand

The Indian Ocean tsunami hits Thailand in December, killing over 5,000 and causing millions of dollars of damage.

- 2005** In February elections the Thai Love Thai Party wins 375 seats in the House of Representatives, forming a one-party government. Violence breaks out in the south when Muslim separatists set off two bombs. Thaksin Shinawatra is elected to a second term by the House of Representatives.

DATE OF INDEPENDENCE

April 27, 1960

DATE OF CONSTITUTION

September 27, 1992

GEOGRAPHICAL FEATURES

Togo, in West Africa, has an area of 56,785 sq km (21,925 sq mi), extending 510 km (317 mi) north to south and 110 km (68 mi) east to west. Its coastline, on the Gulf of Guinea, stretches 50 km (31 mi). Togo shares its international border of 1,623 km (1,008 mi) with three neighbors: Benin, Ghana, and Burkina Faso.

The country consists primarily of two savanna plains separated by a southwest-to-northeast range of hills known as the Chaîne du Togo. From south to north the country is composed of six topographical regions: the sandy beaches, estuaries, and inland lagoons of the coastal

plain; the Ouatchi Plains in the immediate hinterland; the higher Mono River tableland; the Chaîne du Togo, which begins in Benin's Atakora Mountains and ends in Ghana's Akwapim Hills and where Togo's highest elevation is found, at Mont Agou (986 m; 3,234 ft); the northern sandstone Oti Plateau; and the northwestern granite regions in the vicinity of Dapango.

The Mono River basin and its affluents occupy the southern half of the country. Northern Togo is drained by the Oti, a tributary of the Volta, and the Kara and Mo rivers, which drain into the Oti. The only rivers whose mouths are in Togo are the Sio, or Chio, and Haho. Of the many inland lagoons, the largest is Lac Togo.

CLIMATE AND WEATHER

Togo is a tropical country. In the south there are two rainy seasons: from March to early July and from the end of September to early November. The north has only one rainy season, between April and July. The heaviest rainfall occurs in the mountains of the west, southwest, and center, while the coastal regions are essentially dry. Annual rainfall averages 1,020 mm (40 in) in the north and 1,790 mm (70 in) in the west, southwest, and center. Average temperatures range from 22°C to 35°C (72°F to 95°F). Temperatures increase inland from the coast. Northern Togo has a savanna climate with longer dry seasons.

Climate and Weather

 Average Rainfall
 North: 40 in
 West, southwest, and center: 70 in

FLORA AND FAUNA

With two large savanna plains covering the country, much of the vegetation of Togo consists of savanna-type grasses and shrubs. During the rainy season the land is thick and green, browning during the dry season. Baobab trees are found on the southern plateau, while tropical forests cover river valleys and highland regions. Reed and mangrove swamps and lagoons can be found along the coastal zone.

Much of the large wildlife has been killed off in south and central Togo, while in the north elephants, lions, and leopards can still be found, though not in great numbers. Reserves, such as the Keran Forest Reserve in the north, are home to antelope, deer, and buffalo. Monkeys are still

common, and along rivers snakes, crocodiles, and hippopotamuses are found. Snakes heavily inhabit swamps in the coastal zone. Bird life is numerous and varied, and marine life includes red snapper, mackerel, bass, dorado, sole, and ray. Shrimp and lobster are caught along Togo's shoreline.

ETHNIC COMPOSITION

Over 37 tribal groups make up Togo's heterogeneous ethnic configuration, and most of these have more in common with racial groups living outside the national borders than with other groups within the country. A major distinction is sometimes made between tribes of Sudanic origin inhabiting the northern areas and those of the Negroid type in the south. Non-Africans in the population include around 2,000 Europeans and some Lebanese.

In terms of ethnic and linguistic homogeneity, Togo ranks 27th in the world, with 29 percent homogeneity (on an ascending scale in which North and South Korea are ranked 135th, with 100 percent homogeneity, and Tanzania is ranked first, with 7 percent homogeneity).

LANGUAGES

The official language is French, which is also the language of commerce and the media.

More than 44 different dialects are spoken in Togo, of which the principal one in the south is the language of the Ewe. Ewe has many subdialects, such as Anlo, Mina (or Ge), and Ouatchi. There is a considerable body of

vernacular literature, especially in Anlo. Of the numerous languages spoken in the north, Kabye, Hausa, Twi, Dagomba, Tim, and Fongbi are the most widely used. Most of the traders in the major market towns use a form of pidgin English.

RELIGIONS

Approximately half of the Togolese adhere to some form of traditional religion, while Christians make up 30 percent of the population and Muslims 20 percent. There are over 5,400 mission centers under the Roman Catholic archdiocese of Lomé. There are 170 Protestant mission centers under the administrative control of a synodal council.

Muslim	1,136,000

HISTORICAL BACKGROUND

The first inhabitants of the area that today makes up Togo were Ewe who left the Niger River region as early as the 11th century. There were also large migrations to the Togo region during the 18th and 19th centuries. From the west, people were forced to move from the Ashanti Kingdom and the Akwamu confederacy. From the east, the migration flowed from the Kingdom of Dahomey. Additionally, Togo was a part of the Slave Coast, a primary area of European slaving activities; small slave posts were established in that region in the 17th century, but most of the trade was conducted in Dahomey (now Benin) and the Gold Coast (now Ghana).

Togo was Germany's first African acquisition. In 1884 a treaty was signed between Gustav Nachtigal, a German explorer, and the chief of the tiny coastal village of Togo, on which basis the German flag was raised over the area and the German penetration of the hinterland began. At the Berlin Conference of 1884–85 the German occupation of Togo was acknowledged by France; the western borders were settled with the United Kingdom by the Treaty of Zanzibar of 1890 and the Treaty of Paris of 1897.

The German era falls into two periods: pacification, until 1900, and development, until 1914, when Germany tried to transform Togo into a *Musterkolonie* (model colony). The Germans went further than other Western powers in protecting the natives from non-African, especially Christian, influences. German rule ended in 1914 when French troops moved in from Dahomey and occupied Lomé. At the same time, British troops invaded

the colony from the Gold Coast. Togo was subsequently divided into French and British spheres of occupation. After World War I the Allies redrew the borders, with France occupying two-thirds of the country, and mandates were granted by the League of Nations over what came to be called British and French Togoland. Despite its brevity and certain harsh aspects, such as forced labor, the Togolese remembered German rule fondly and in the interwar period petitioned the League of Nations to return Togo to Germany.

Except for a brief period, French Togo was not part of French West Africa; from 1922 to 1934 the territory was under the direct control of the minister of Overseas France and between 1934 and 1936 it was merged with Dahomey as an economic measure. In 1945 the French Union was created, and Togo was given representation in the French National Assembly. Within the union Togo was classified as an associated territory rather than as a colony. In 1955 the passage toward autonomy was accelerated by the creation of the Autonomous Republic of the Togo. In 1956 a plebiscite in British Togo resulted in a 3–2 vote in favor of a merger with the Gold Coast, shattering Togolese hopes of an eventual union of the two territories under the control of Lomé.

French Togo became independent in 1960 following a UN-supervised election. Relations between France and its former colony have remained good despite Togo's gradual drift to the left since the rise to power of Gen. Gnassingbé Eyadéma.

Since independence Togo has suffered from prolonged instability. There have been several attempted coups, in 1966, 1970, 1977, 1978, and 1986, as well as two successful coups: in 1963, when the first president, Sylvanus Olympio, was assassinated; and in 1967, when Eyadéma seized power.

President Eyadéma proved to be one of the most durable political leaders in West Africa, remaining in power from 1967 to 2005. He maintained his power by dividing the opposition as well as through the murder of his political opponents. In 1991, following a two-year series of protests and strikes, he agreed to transfer power to a prime minister elected by a national conference. The conference thereupon stripped Eyadéma of all but ceremonial powers, elected Joseph Koffigoh as prime minister, and replaced the National Assembly with the interim High Council of the Republic (HCR). The HCR formally ousted Eyadéma, but troops loyal to the president arrested the prime minister. In 1992 the government agreed to a new presidential election, which was later abandoned because of an attempt to kill the opposition leader, Gilchrist Olympio. A new constitution was endorsed in a referendum, but the democratization process was halted when pro-Eyadéma troops seized the National Assembly and held 40 legislators hostage. A constitutional crisis followed, in response to which the United States suspended aid payments and Togolese labor unions launched a general strike. Nation-

wide clashes between prodemocracy demonstrators and government forces were sparked by rampages by pro-Eyadéma soldiers in which hundreds were killed. Negotiations in France between representatives of the president and the opposition failed to achieve any solution. In a disputed 1993 presidential poll, which was boycotted by the opposition and marked by fraud, Eyadéma was reelected. In a multiparty legislative election held in 1994, the opposition won 43 seats, while Eyadéma's Rally of Togolese People (Rassemblement du Peuple Togolais, RPT) won 35, but the progovernment Supreme Court invalidated many of the opposition's seats. By 1996 Eyadéma had regained the initiative and his former powers. In the 1998 presidential election, again marred by intimidation and violence, Eyadéma was credited with a vote share of 52 percent. In 1999 the charade continued when the RPT won 77 of 79 legislative seats in an election boycotted by the opposition. The president appointed Eugène Koffi Adoboli as prime minister.

Elections in 2002 were again boycotted by the opposition, and the RPT won more than two-thirds of the seats in the National Assembly. A presidential election was held in 2003, for which Gilchrist Olympio, the popular leader of the Union des Forces du Changement (UFC, Union of Forces for Change), was disqualified, as he was living in exile in France. Eyadéma, who had the constitution changed to eliminate term limits, was reelected, amid allegations of widespread vote rigging. In 2005 Eyadéma died. He was succeeded by his son, Fauré Gnassingbé, whom the military backed. According to the constitution the speaker of the Parliament was supposed to take over in case of the death of a president; the constitution was thus changed retroactively, and it was declared that Fauré Gnassingbé would serve out his father's term. However, faced with condemnation from the United Nations and from the African Union, as well as internal demonstrations and rioting, Gnassingbé instead called for an early election, in April 2005. It was later announced that he would stand for president in these elections, running against opposition candidate Emmanuel Bob-Akitani, of the UFC. The interim president was the deputy speaker of the National Assembly, Abbas Bonfoh. Fauré Gnassingbé won the April election, though international observers complained of election irregularities.

LIST OF MODERN RULERS

1960–63	Sylvanus Épiphanio Olympio (president)
1963	Emmanuel Bodjollé (chairman of Insurrection Committee)
1963–67	Nicolas Grunitzky (president)
1967	Kléber Dadjo (chairman of National Reconciliation Committee)
1967–2005	Gnassingbé Eyadéma (president)
2005–	Fauré Gnassingbé (president)

CONSTITUTION

The country has had five constitutions: the provisional constitution of 1960, which provided for a parliamentary form of government; the constitutions of 1961 and 1963, both providing for a strong presidential form of government; the 1979 constitution; and the most recent constitution, of 1992.

Adopted by national referendum, the 1992 constitution provides for a president who serves as the chief executive officer for a term of five years. Directly elected, the president selects the prime minister from among those elected to the unicameral legislature. Also elected by universal suffrage for a period of five years, the legislature consists of 81 members from multiple parties. The prime minister is charged with selecting the other members of the cabinet in order to form the government. In 2002 the National Assembly altered the constitution, eliminating a clause about presidential term limits.

PARLIAMENT

Under the 1992 constitution the single-chambered National Assembly is composed of 81 members who are popularly elected for five-year terms.

POLITICAL PARTIES

There are scores of political parties active in Togo. Most of these parties have little influence either in terms of following or at the polls. The largest of the parties is the Rassemblement du Peuple Togolais (RPT), which was the sole legal party from 1969 until 1991. The RPT controls over 90 percent of the seats in the National Assembly. The major opposition party is Union of Forces for Change (UFC), which boycotted the last parliamentary election, in 2002, but whose nominee, Emmanuel Bob-Akitani, won 34 percent of the votes in the 2003 presidential election and was in strong contention in the 2005 emergency election as well.

LOCAL GOVERNMENT

For the purposes of local government, Togo is divided into five administrative regions. These regions are further subdivided into 30 prefectures.

LEGAL SYSTEM

Togolese jurisprudence is based on French civil law and African customary law.

The judiciary is headed by the Supreme Court, located in Lomé, with four chambers: constitutional, ju-

dicial, administrative, and audit. Below the Supreme Court, criminal justice is administered by a *cour d'appel*, four *tribunaux correctionnels*, and eight *tribunaux de simple police*, while civil and commercial law is enforced by a *cour d'appel*, four *tribunaux de droit moderne*, and eight *tribunaux coutumiers de premier instance*. The State Security Court was established in 1970 to deal with crimes related to internal and external state security.

The Togolese legal system does not include the right of habeas corpus, nor does this right exist in practice. Detention without trial and administrative detention are used against those whom the government considers guilty of "crimes against the public trust" (i.e., corruption or political opposition thought to pose a security threat). Those held in administrative detention are usually not formally charged and cannot obtain redress through the courts. Preventive detention has no fixed term. Pretrial proceedings are sometimes protracted. When the defendant cannot afford the cost of an attorney, counsel is appointed by the government. An attorney is accorded permission to talk with the defendant. The courts are heavily influenced by the executive branch and cannot be said to operate independently.

No information is available on the nature of the penal system or on the number and location of penal institutions. Courts are understaffed and inadequately funded, pretrial detentions are lengthy, and prisons are severely overcrowded.

HUMAN RIGHTS

In terms of civil and political rights, Togo is classified as an unfree country.

Togo is a one-party authoritarian state. The adoption of the constitution of 1979 and the proclamation of the so-called Third Republic made no difference in the nature and philosophy of government. Security problems have frequently led to a siege mentality and periodic harsh repressions. Prison conditions are harsh and primitive, with forced marches and hard labor standard.

In 2000 the United Nations and the Organization of African Unity, now the African Union, launched an inquiry into allegations made by Amnesty International that Togo's armed forces executed hundreds of people during the run-up to the 1998 presidential election. In 2001 an international commission concluded that there were systematic human rights violations after the presidential election of 1998.

Legal procedures are still based on the French system and thus afford some semblance of due process. There are no media to speak of outside of government-owned publications. Security forces commit abuses with impunity, and illegal detention is common. Killings, arbitrary arrests, and torture continue.

FOREIGN POLICY

Togo is an authoritarian state in which foreign policy is determined on the basis of the president's whims and fancies. In 1994 Ghana and Togo were described as being close to war after Lomé accused Accra of aiding alleged anti-Eyadéma insurgents in an attack on the president's palace. Notwithstanding, relations between the two countries were restored within a year. Lomé's relations with France, soured by French decisions to suspend aid, also improved by 1995 when France forgave all Togolese debts. Building on a 1997 agreement with the signatories of the 1977 Nonaggression and Defense Agreement, Lomé issued a blueprint for the establishment of a Pan-African peacekeeping force. As part of this commitment, Togo sent 150 soldiers to Liberia in 2003 to bolster the West African peacekeeping force there.

DEFENSE

The defense structure is headed by the president, who holds the positions of commander in chief, minister of defense, chief of staff, and commander of the 1st Battalion of Togolese Infantry. As a result, the president has direct operational control of the armed forces, and there is no extended chain of command. As of 2001, the enlistment age was 18 for both voluntary and compulsory service.

The total strength of the armed forces (including the Gendarmerie) in 2003 was about 9,300. There are 1,550 personnel in paramilitary forces. In 2004 the defense budget was estimated at \$35.5 million, or 1.9 percent of gross domestic product (GDP). The Togolese armed forces have no offensive capability and have only limited defensive capability. The bulk of military aid and training has been obtained from France.

ECONOMY

Togo is one of the low-income countries of the world, with a free-market economy dominated by the private sector. Per capita GDP was \$1,600 in 2004.

The economy is heavily dependent on agriculture, especially subsistence agriculture, which overall employs

65 percent of the labor force and accounts for almost 40 percent of GDP. Togo is self-sufficient in foodstuffs, except in conditions of drought. The primary agricultural exports are cocoa, coffee, and cotton, which account for 30 percent of export earnings.

Phosphate mining is Togo's most important industrial activity, providing 40 percent of total export exchange earnings. However, earnings in this vital industry fell by over 20 percent in 2002 because of power shortages and costs incurred developing new mining deposits. In 2003 Togo experienced 3.3 percent growth in real GDP; future economic progress depends heavily on several factors, including the privatization of industry, increased openness in government financial operations, progress toward legislative elections, and continued support from foreign donors.

ENVIRONMENT

Togo suffers from serious environmental problems, including rapid deforestation, a growing population whose incomes are tied to natural resources, and soil and coastal erosion. The once-dense forests of the country declined from 4,500 sq km (1,740 sq mi) in 1970 to 1,300 sq km (500 sq mi) in 1993. Since that time, considerable further cutting has occurred, for both lumber and fuel. There is no governmental or societal management of Togolese for-

ests, outside of the 11 percent of the country's land area that has been given protected status. The country suffers from growing urbanization without the water, waste, or land management needed to cope with the concentrated population.

LIVING CONDITIONS

Togo is among the poorest countries in the world. The United Nations 2004 Human Development Report ranked Togo 143rd out of 177 countries in terms of life expectancy, education, and standard of living. The average Togolese's life expectancy in 2004 was under 53 years, while literacy stood at 60.9 percent in 2003, with 67 percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$1,600 in 2004. In general, life in Togo is difficult and, with the advent of an HIV/AIDS epidemic, relatively brief.

Rural living emphasizes the communal aspects of the village. Houses are built of various materials. Along the coast huts are roofed with coconut tree branches, while elsewhere in the south there are some simple square and rectangular cabins. Toward the north, houses are round and made of sun-dried clay or mud bricks, with mud plaster and straw roofs. As grouped together in a compound and enclosed by a fence, they are known as *soukлас*. Urban dwellings are made of cement blocks or bricks, with brick or iron-sheeted roofs.

About one-third of the population lived in urban areas as of 2002, with most of those living in the capital, Lomé, whose population was over 700,000. With rapid urbanization, there is inadequate housing, and many reside in shantytowns on the edges of urban areas, where there is little infrastructure such as electricity, running water, and sewage. In rural areas life is mainly agrarian and follows the rhythm of the seasons. Voodoo, or voodoo, is a very strong tradition in Togo and in neighboring countries, and much of domestic life is determined by its tenets.

HEALTH

Like other elements of life in Togo, health care is badly in need of an infusion of funds. The country is plagued by high incidences of malaria, tuberculosis, gastrointestinal

diseases, and HIV/AIDS, yet the medical delivery system is ill equipped to deal with these crises.

In 2002 only 51 percent of the population had access to improved water sources. In 2000 the malaria incidence rate was 7.7 percent. In addition to malaria, sleeping sickness, leprosy, and yellow fever are also problems for the population. HIV/AIDS has grown to near epidemic proportions in Togo, as it has in other African nations; as of 2003 there was a 4.1 percent prevalence rate, with 10,000 HIV/AIDS deaths, 100,000 people living with the disease, and 54,000 AIDS orphans. Antiretroviral drugs have not been readily available.

Infants traditionally experience low immunization rates. In 2003, 58 percent of one-year-olds were immunized for measles, 84 percent for tuberculosis, 64 percent for DPT, and 63 percent for polio. The 2004 infant mortality rate was almost 67 deaths per 1,000 live births. The death rate in 2004 was 11.8 deaths per 1,000 population.

Hospitals exist only in the leading towns. Between 1990 and 2003 there were six doctors per 100,000 population. Government expenditures on health care in 2002 totaled 5.1 percent of GDP. Many people go to neighboring Benin for hospital care.

In rural areas, large numbers still use traditional health-care methods; villages usually have someone who knows how to treat simple bone fractures, for example. Traditional cures are mixed with beliefs about magic, with fetishes and incantations used. Some herbal remedies may also be used.

FOOD AND NUTRITION

Millet is the staple Togolese food and is generally served in a mixture of corn, plantains, yams, or manioc called *pâte*. *Ablo* is another millet paste, made with corn and sugar, while *monplé* is made with fermented corn. *Foufou*

is a ball of millet paste like a heavy dumpling. Nearly everything is served in a sauce. One of the more common meals is rice with peanut sauce, known as *riz sauce arachide*.

Specialties vary from region to region. Along the coast, *lamounou déssi*, or *sauce de poisson*, a fresh fish sauce, is popular. Other popular sauces include *aglam* (crab), *gboma* (spinach), *tomate* (tomato), *aubergine* and *épinard* (eggplant and spinach), *abobo* (snails), *egbo pinon* (smoked goat), *koklo mémé* (grilled chicken with chili sauce), and *koliko* (fried yams).

Popular drinks include palm wine and *tchakpallo* (fermented millet).

Nutrition is problematic in Togo. While starvation is atypical, undernourishment is common. Between 1999 and 2001, 26 percent of the population was undernourished.

Food and Nutrition

 Daily Available Calories per capita kcal: 2,370
 Amount of Cereal Available per person per year kg: 138.4
 Amount of Fruits and Vegetables Available per person per year kg: 38.4

STATUS OF WOMEN

The economic and social rights of Togolese women are spelled out in the Family and Individual Code, which was adopted in 1980. Under this code, women's rights include ownership of property, control of all money earned, and maternity leave benefits. Article 88 of the Labor Code stipulates equal pay for equal work and qualifications for both sexes. Women dominate both local market activities and commerce with Togo's neighbors and often amass considerable wealth. Formal equality under the law and success in the local marketplace do not mean total equality for all women throughout Togo, however. Traditionally, laws place barriers in the paths of women seeking to break with custom. Civil law, for example, recognizes a woman's property rights, but customary law gives all property to the male in the event of separation or divorce. Economic conditions in rural areas often leave women with little time for anything other than carrying water, finding firewood, cooking, caring for the family, and raising food crops. The government has undertaken a campaign to make women throughout Togo aware of their expanded opportunities under the Family and Individual Code. The government's prioritized emphasis on developing water resources in rural areas should help to mitigate one of the most onerous burdens on rural women, that of carrying water over long distances. Domestic violence is on the increase in Togo, and though the government passed a law in 1998 banning female genital mutilation, it is still practiced in many locations.

WORK

In 1996 the Togolese workforce numbered 1.74 million. Of these, 65 percent are employed in agriculture, many at the subsistence level. Cocoa is one of the largest cash crops. Other agricultural products include coffee, cotton, yams, cassava (tapioca), corn, beans, rice, millet, and sorghum. Fishing and raising livestock are also important areas of production. The service sector employs another 30 percent of the population, industry only 5 percent. Industrial activities and products include phosphate mining, agricultural processing, cement, handicrafts, textiles, and beverages.

Togo's constitution includes the right to form and join unions, except for "essential" workers. Only 20 percent of the labor force is unionized. Unions have the right to bargain collectively, but this right is restricted. The minimum work age is 14, but children as young as five work in private agriculture. The workweek is 72 hours, and the minimum wage in 2003 was \$20 to \$30 per month.

 Unemployment %: —

EDUCATION

The 2003 literacy rate was 60.9 percent, up from the rates of 51.7 percent in 1998 and 31.4 percent at the beginning of the 1980s. This improvement reflects the emphasis the government put on a literacy campaign at the beginning of the 1980s. The campaign suffered, however, as a result of the government's austerity measures. The proportion and absolute amount of the budget allocated to education has dropped; between 1999 and 2000 public expenditures on education equaled 4.4 percent of GDP, down more than a full percentage point from a decade earlier; by 2002 education expenditures were only 2.6 percent of GDP. In 1988 it was estimated that school attendance had dropped by almost 25 percent since 1983. There appeared to be improvement on this front in the 1990s: While net primary school enrollment in 1991 was 75 percent, in 2002 it was up to 91 percent.

Schooling lasts for 13 years, as divided into six years of primary school, four years of the lower secondary cycle, and three years of the upper secondary cycle. Christian mission schools account for nearly half of total enrollment.

The school year runs from October to June. The language of instruction is French, but prevailing vernaculars are used in preprimary and primary grades in rural schools, and proficiency in Ewe and Kabye is compulsory.

Higher education is provided by the University of Benin at Lomé, which also serves the Republic of Benin and Burkina Faso. Scholarships to French universities are available. Lomé also has colleges of administration, architecture, and urban planning.

SCIENCE AND TECHNOLOGY

Agricultural research is the primary focus of science and technology in the country. The Ministry of Agriculture sponsors research programs in crops, livestock, fisheries, forestry, and natural resources. The National Institute of Scientific Research, another scientific coordinating body, and several French research institutes have branches in the capital. There are pilot farm projects throughout the country. The University of Benin at Lomé has faculties of sciences and medicine and schools of engineering and agriculture. The institution pursues research in crops, forestry, livestock, and postharvest issues. There is another agricultural school at Kpalimé and a technical college at Sokodé.

Between 1994 and 1997, 11 percent of university students were enrolled in science, engineering, or math programs. Between 1987 and 1997 expenditures for research and development totaled 0.5 percent of GDP; 98 scientists and engineers and 63 technicians per million people were engaged in research and development.

MEDIA

Three daily newspapers, *La nouvelle marche* (circulation 10,000), *Togo press*, and *Journal officiel de la République du Togo*, are published in the country. They are owned by the government and are published in French. Privately owned newspapers, such as *Le regard* and *Le combat du peuple*, are published weekly. Most of the periodicals are published by the government, except for a few independent publications that are periodically subject to press control. In 2002 the National Assembly passed an amendment to the media bill that imposes heavy sentences for “defaming or insulting” any of the president, state institutions, the courts, the armed forces, and public administration bodies. Journalists are routinely harassed and even imprisoned for reporting information that the government deems seditious. In 2004 the international media watchdog group Reporters without Borders ranked Togo 75th among 167 nations in terms of press freedom.

The national news agency is Agence Togolaise de Presse. Both AFP and DPA have bureaus in Lomé. The principal book publisher is the state-owned Les Etablissements des Editions du Togo. Togo adheres to the Berne Convention.

The state-owned Radiodiffusion Télévision de la Nouvelle Marche and Radiodiffusion Kara broadcast in French and six vernaculars: Ewe, Hausa, Bassari, Moba, Cotocolis, and Cabrais. Television, introduced in 1973, is operated by Télévision Togolaise, with programs in French and the vernaculars.

There is no domestic film production. The largest libraries are the National Library of the Togolese Institute of Humane Sciences, with 5,600 volumes, and the library of the University of Benin in Lomé, with 5,000 volumes. There is only one museum in the country, with a reported annual attendance of 8,000.

As of 2003 there were 220,000 cellular telephone users and 210,000 Internet users.

CULTURE

Togo is a land of many cultures. Its scores of ethnic groups each have distinctive tribal customs and cultural mores. Drumming and dance are important to almost all. The largest ethnic group, the Ewe, use drumming and dance as an integral part of community life and in pursuit of what is thought of as their collective destiny. Thus, everybody in a community participates in some way; nonparticipation amounts to self-excommunication from society and carries severe consequences. Most severe is the denial of a proper burial. The type of participation—drumming, dancing, or organizing—is dependent on rank in the tribe and age. Vodoun traditions also figure in many types of dances among various ethnic groups; trance dancing is still common. Traditional dances can be seen at celebrations such as harvest festivals and the Ekpe-Ekpe, the festival of the Guins, in September or late August. The African Ballet of Togo has aimed to popularize the finest traditional dances.

Like other African peoples, the Togolese have a strong oral tradition. The professional praise singers, or *djeli*, perform at funerals and social gatherings, reciting names and histories of past rulers. Literature, mostly in French, has emerged since independence largely among playwrights and novelists of the Ewe people.

Vodoun, incorporating an animist belief in the spirit in all things, is dominant in Togolese culture. Vodoun artifacts are for sale in bazaars, and local people engage in aspects of the belief system.

Rural architecture throughout the country is noted for its distinctive mud-plastered look. In 2004 the Koutammakou cultural landscape was listed as a World Heritage site; this area of northeastern Togo, which extends into neighboring Benin, is home to the Batammariba people, whose remarkable mud tower-houses have come to be seen as a symbol of Togo.

The French Cultural Center is located in Lomé, as are several other smaller cultural centers.

FOLKLORE AND MYTHOLOGY

With the welter of ethnic groups constituting its population, Togo has numerous myths. Legions of gods and cult

figures exist. The Ewe, for example, have Anyiewo, the great snake, while the Basari have their great god Unumbotte.

More than half of the population is animist. In the south many people practice vodoun or cults based on the worship of major spirits such as Legba, Hebiesso, Dan, and Egou. Those initiated use a secret language and observe rigorously religious customs and taboos. During vodoun ceremonies, believers enter deep trances and communicate with spirits.

Proverbs also form a part of Togolese folklore. Some popular sayings include, "The tears running down your face do not blind you," "The strength of the elderly is in the ears and on the lips," and "When a mother has twins she must sleep on her back."

ENTERTAINMENT AND RECREATION

In Lomé the populace enjoy many Western-style forms of entertainment, including clubs and discos. Television and movies are also popular.

In the countryside entertainment and recreation revolve more around traditional activities, such as harvest festivals. Storytelling and singing are important traditions among all ethnic groups. The radio is a popular form of entertainment for people in all parts of the country. The West African game of *is warri* is enjoyed among the older generation.

ETIQUETTE

As throughout Africa, the right hand is used for greetings, offerings, and eating, while the left hand is taboo. Failing to greet or show respect to elders is considered a grave infraction of the etiquette code. Respect is demonstrated in numerous ways, including prostration.

FAMILY LIFE

Marriages are generally conducted within ethnic groups, and while formerly a bride price was always paid, that tradition is slowly dying out. Polygamy is relatively common. Roles are strictly established so that families can survive. Men traditionally work the fields or tend the livestock, while women take care of domestic chores. Children help to gather fuel and water and to watch over the family's animals. Women have no economic rights in divorce, and men control the earnings of their wives, who are increasingly entering the workforce in addition to being homemakers. Additionally, women have no rights to inheritance if their husband dies. All of this is traditional rather than legal, as a 1980 law forbids all such practices.

Family size is decreasing, though in 2004 the fertility rate was still 4.6 births per woman. Even though the death rate was 11.8 per 1,000 population, the infant mortality rate was 66.6 deaths per 1,000 live births, and life expectancy was only 52.6 years, the population growth rate was 2.27 percent in 2004.

PERSONAL APPEARANCE

With dozens of ethnic groups and tribes making up the populace, there is no one physical look or attire. Generally, the people of the north have a more Sudanic appearance, while those in the south are more Negroid. Clothing varies from brightly colored wraps to grass skirts to elaborate feathered headpieces for ceremonies. Western-style clothing, including T-shirts, shorts, jeans, skirts, and blouses, can be seen alongside more traditional forms of dress.

SPORTS

Soccer is the most popular sport in Togo, with the national team playing in international competitions and ranked above several European teams in FIFA listings. There are several soccer leagues in the country. Togo's national team has qualified for the final stages of several African Nations Cup competitions. Several Togolese players earn a living as professional soccer players in Europe. The most successful of them is Bachirou Salou.

Wrestling is an important feature of cultural life amongst the Kabye people of northern Togo. A large number of people play basketball and handball, and the strong French influence has made cycling quite popular. Togo sent a small team to the 2004 Olympics, including participants in track and field events.

CHRONOLOGY

- 1960** Republic of Togo becomes a sovereign nation, with Sylvanus Olympio as president.
- 1963** Olympio is assassinated by military insurgents; Nicolas Grunitzky, exiled leader of the Togolese Party for Progress, returns to Togo at the request of insurgents and forms a government as president.
- 1966** Popular uprising by Olympio's supporters in Lomé is put down by the military.
- 1967** A plot led by Noe Kutuklui is foiled; the military decides that Grunitzky is a political liability and forces him to step down in favor of a military junta led by Kléber Dadjo and Étienne (latter Gnassingbé) Eyadéma; Eyadéma assumes su-

- preme power as president; the constitution and the National Assembly are suspended.
- 1969** Rassemblement du Peuple Togolaise (RPT) is founded.
- 1970** Anti-Eyadéma coup is uncovered, and plotters are arrested.
- 1972** National referendum approves indefinite continuation of the Eyadéma regime.
- 1974** Eyadéma launches cultural authenticity campaigns by renaming people and places. French-owned phosphate mines are nationalized.
- 1978** At West African summit meeting, Togo supports the Economic Community of West African States.
- 1980** Eyadéma proclaims Third Republic under a new constitution and has himself elected for another seven-year term.
- 1985** Multicandidate elections are held for the National Assembly.
- 1986** Eyadéma is reelected unopposed for another seven-year presidential term.
- 1987** Direct elections are allowed for local government bodies.
- 1990** Eyadéma is forced out of office by democratic reformers, who elect Joseph Kokou Koffigoh as prime minister.
- 1992** Eyadéma regains the presidency. Violent protests for democratic reforms ensue. A new multiparty constitution is adopted in September.
- 1994** Edem Kodjo is elected prime minister in multiparty elections.
- 1996** Kwassi Klutse is elected prime minister.
- 1998** Eyadéma is once again elected president, but observers from the United Nations and the United States say the vote was fraudulent.
- 2000** Following a no-confidence vote in parliament, Prime Minister Eugène Adoboli resigns. Agbeyome Kodjo is appointed prime minister.
- 2000** The United Nations and the Organization of African Unity launch an inquiry into allegations made by Amnesty International that Togo's armed forces executed hundreds of people during the run-up to the 1998 presidential election.
- 2001** An international commission concludes that there were systematic human rights violations after the presidential election of 1998.
- 2002** The National Assembly alters the constitution to allow Eyadéma to run for a third presidential term.
- In October opposition parties once again boycott parliamentary elections.
- 2003** Eyadéma wins the June presidential elections with 57 percent of the vote.
- 2004** In a move toward reconciliation, Eyadéma pardons 500 prisoners.
- 2005** Eyadéma dies in February, and his son Faure Gnassingbé is named by the army to succeed him.
- International pressure forces Gnassingbé to establish an interim president and schedule new presidential election in April.
- In March the opposition Union of Forces for Change nominates Emmanuel Bob-Akitani to run for president against Gnassingbé. After a bloody and contested election, in early May the Constitutional Court in Togo officially announces the victory of Gnassingbé, who becomes president. He appoints Edem Kodjo prime minister.

UNIT OF CURRENCY

Pa'anga

NATIONAL FLAG

A red field with a red cross in a white canton on the hoist

NATIONAL EMBLEM

A quartered shield with an ornate yellow border backed by red and white national flags and surmounted by a crown within a garland. Within the four quarters appear, clockwise from the upper left, three six-pointed white stars on gold, a royal crown on red, three crossed white swords on gold, and a white dove on blue. A red cross on a six-pointed white star is centered in the design. At the bottom, in blue on a white scroll, is the national motto, *Ko e Otua mo Tonga ko boku tofi'a* (God and Tonga are my heritage).

NATIONAL ANTHEM

"O Almighty God Above, Thou Art Our Lord and Sure Defense"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 4 (Crown prince's birthday), June 4 (Emancipation Day), July 4 (National Day, king's birthday), November 4 (Constitution Day), December 4 (Tupou I Day), December 25 (Christmas), various Christian festivals

DATE OF INDEPENDENCE

June 4, 1970

DATE OF CONSTITUTION

November 4, 1875; revised 1967

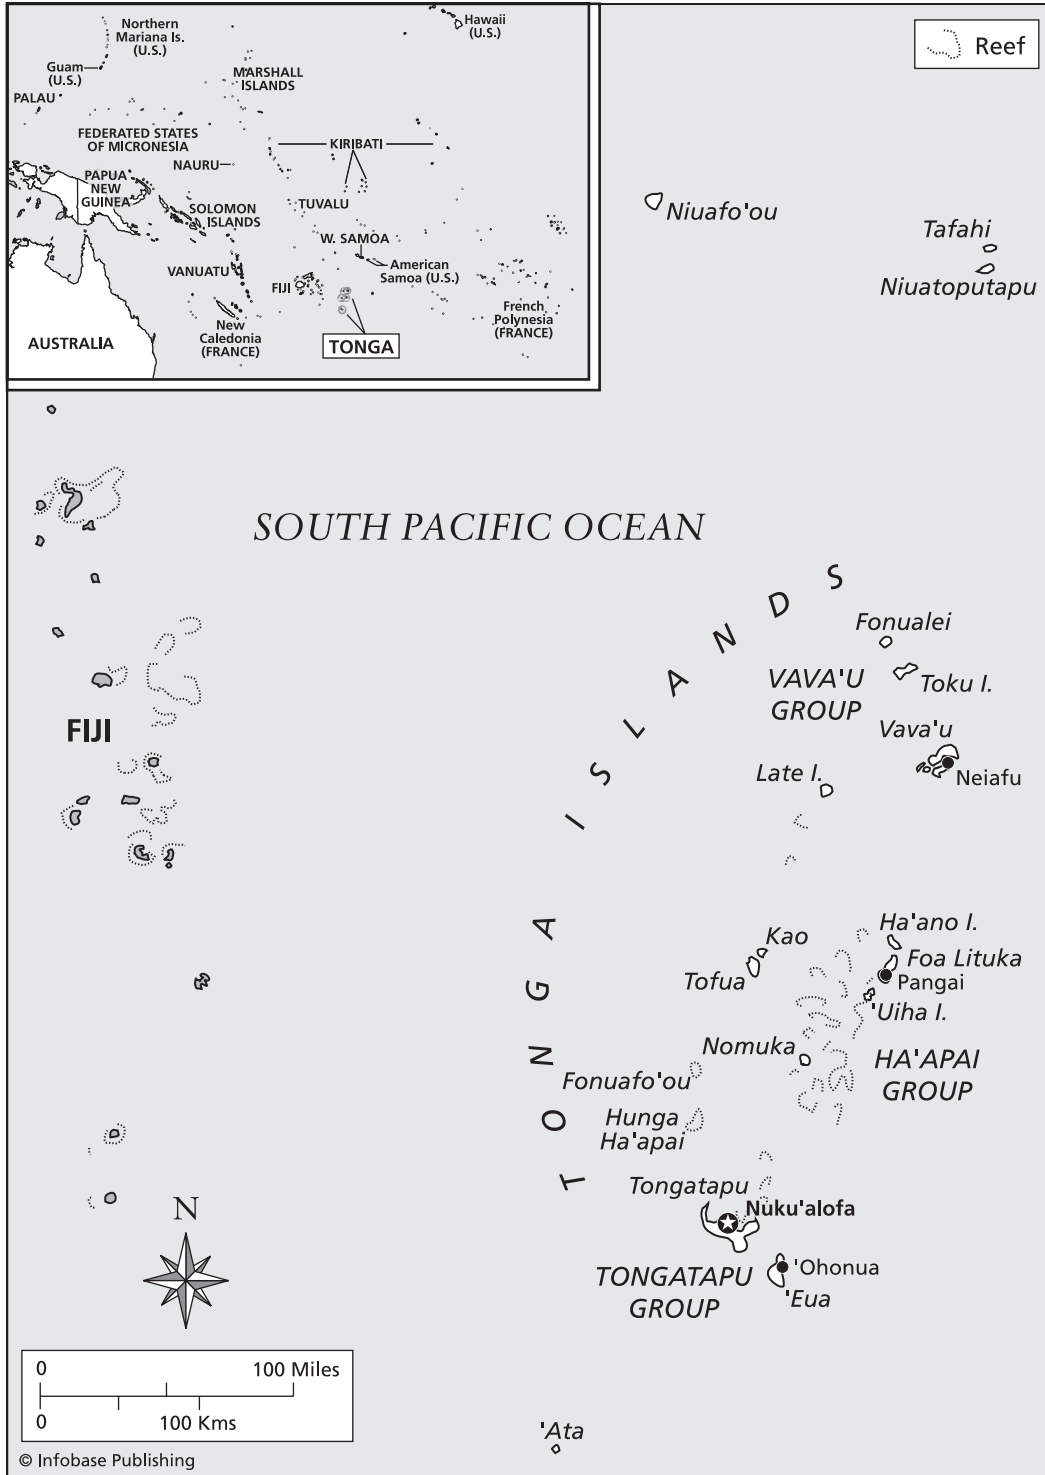

GEOGRAPHICAL FEATURES

Tonga, an archipelago previously known as the Friendly Islands, is in the southwestern Pacific about 643 km (400 mi) southeast of Fiji and about 1,770 km (1,100 mi) northeast of Auckland, New Zealand. Tonga comprises 169 islands, of which only 36 are permanently inhabited. Including the Minerva Reefs, which the nation has claimed, the total land area is 748 sq km (289 sq mi).

The islands making up Tonga are dispersed in two parallel chains: volcanic to the west, with limestone formations superimposed on them, and uplifted coral for-

mations to the east. The islands fall into three latitudinal groups: the northern, or Vava'u, group, including Hunga, Kapa, and Vava'u; the central, or Ha'apai, group, which contains seven major islands; and the Tongatapu Group—the largest—on which the capital, Nuku'alofa, is located. Other major islands in the last group include 'Eua, Ata, Atata, Euaki, Kalaau, and Kenatea. Of the 36 islands in the Ha'apai group, only 20 are inhabited, and one is an active volcano containing a steaming lake. Of the 34 islands in the Vava'u group, 14 are uninhabited. Toward the east the islands are bordered by the Tonga Trench, an ocean formation over 11.2 km (7 mi) deep. Most of the

Tonga

uninhabited islands are active or extinct volcanic cones; at least one, Falcon, rises above sea level only during eruptions and disappears at other times.

Except for creeks on 'Eua and a stream on Niuatoputapu, there is no running water on the islands. Inhabitants rely on wells and stored rainwater.

CLIMATE AND WEATHER

The climate is subtropical, with a warm period from December to April and a cool period from May to November. The mean annual temperature varies from about 10°C (50°F) in winter to 32°C (90°F) in summer. Both temperature and rainfall increase from the south to the north. Most of the rainfall is concentrated from December to March. Average rainfall is 1,680 mm (66 in), with the least rainfall on Tongatapu and the most on Vava'u.

The prevailing winds are the southwesterly trade winds.

Climate and Weather

Mean Temperature	
Summer:	90°F
Winter:	50°F
Average Rainfall: 66 in	

FLORA AND FAUNA

Though quickly disappearing because of land clearance, the forests on islands such as 'Eua are original and contain a wide variety of trees. These include the coconut palm, the *ngatata*, the *toi*, mulberry, and the *tavahi*. Hibiscus and other tropical trees, bushes, and flowers are abundant on many of the islands.

The best know of Tonga's animal life is the fruit bat, commonly called the flying fox. It is found mainly on Tongatapu Island. Avian life is particularly varied. Land birds include owls, shrikes, cuckoos, starlings, doves, kingfishers, and swamp hens. 'Eua is home to the brilliantly colored blue-crowned lory and the red-breasted musk parrot. Shore birds include the long-billed curlew, golden plover, and reef heron. The waters of the Tonga archipelago are filled with fish, principal among which are the tuna and marlin.

ETHNIC COMPOSITION

The population is extremely homogeneous, with native Tongans constituting 98 percent of the total. Caucasians and mixed Caucasians make up the remainder.

The Tongans are of almost pure Polynesian origin, with only traces of Melanesian traits. They are generally tall, large boned, and light skinned, with wavy or straight hair.

LANGUAGES

The official language is Tongan, properly called *Tongatapu*, a member of the Polynesian subfamily of the Malayo-Polynesian family of languages. Not until the 19th century did Tongan acquire a script, as a result of the efforts of Christian missionaries.

English, a co-official language, is extensively used. It is taught as a second language in schools, and all official publications are issued in both Tongan and English. In addition to being bilingual in these languages, Tongans are adept at learning other Polynesian languages, such as Hawaiian.

RELIGIONS

Almost all Tongans are professed Christians; there are virtually no vestiges of ancient indigenous religions. Most of the people belong to the Church of Jesus Christ of Latter-Day Saints, which claims approximately 43 percent of the population as adherents, or the Free Wesleyan Church of

Tonga, which claims approximately 27 percent. The Roman Catholic Church also has a strong following.

Religious Affiliations	
Free Wesleyan	30,000
Latter-Day Saints	49,000
other Christian	33,000

HISTORICAL BACKGROUND

Archaeological evidence indicates that the islands of Tonga were settled at least 500 years before the Common Era. However, little is known of the country's pre-European history. According to mythology, the great paramount chiefs, the Tu'i Tonga, were of divine origin, the descendants of the creator god Tangaloa 'Eitumatupu'a. The Tu'i Tonga were the supreme rulers, and their influence reached its height in the 13th century, when their domain covered part of the Lau Group in Fiji, Rotuma, Futuna, 'Uvea, Tokelau, Samoa, and Niue. The collapse of this empire dealt a severe blow to the power of the Tu'i Tonga. After a series of assassinations, the 24th Tu'i Tonga, Kau'ulufonuafekeai, created the new office of *hau*, or temporal ruler. The first *hau*, Mo'ungamotu'a, was a younger brother of the Tu'i Tonga; he founded the dynasty Tu'i Ha'atakalaua in the late 15th century. Later, in the 17th century, the sixth in his line created another dynasty, the Tu'i Kanokupolu. The administration of the duties of the three dynasties was carried out throughout the islands by close relatives, resulting in a period of peace and prosperity throughout the 16th and 17th centuries.

The Tongan archipelago was first visited by the Western world in the person of the Dutch explorer Abel Tasman in 1643. Continuous contact with Europeans began only in 1773, with the visit of Captain James Cook to the archipelago, which he named the Friendly Islands. With the conversion of Prince Taufa'ahau and his ascension to the throne as King George Tupou I, Christianity began to spread throughout the islands. Tonga came under British protection in 1900 with the signing of the Treaty of Friendship and Protection. Tonga retained its independence and autonomy, while the United Kingdom agreed to handle the nation's foreign affairs and guarantee security from external attack. Two more treaties were later signed, in 1958 and 1968, both of which reaffirmed Tonga's internal autonomy. Full independence, which came in 1970, involved few changes other than the addition of foreign affairs to the government's responsibilities. Strong links are maintained by independent Tonga with Britain, Australia, and New Zealand.

The present monarch, King Taufa'ahau Tupou IV, had been prime minister as of 1949 and ascended the throne in 1965. He appointed his brother, Prince Fatafahi Tu'ipelehake, as prime minister in 1965.

In the 1980s the king supported the French program for testing nuclear weapons in the Pacific and signed a friendship treaty with the United States permitting the passage of ships capable of carrying nuclear weapons.

Traditionalists have maintained control of the Legislative Assembly since independence. However, in 1986 members of the legislature were charged with the misuse of public funds, and in legislative elections the following year they were replaced by representatives severely critical of the government. After 1990 the prodemocracy movement headed by Akilisi Pohiva gained strength. In 1992 an unofficial convention was held to consider constitutional changes to the royalist government. In general elections in 1993 the reformists won six of the nine seats reserved for people's representatives in the legislature. In 1994 Tonga's first political party, the Tonga Democratic Party (subsequently renamed the People's Party) was founded by the prodemocracy movement. The party changed its name to the Human Rights and Democracy Movement (HRDM) in 1998. In the 1999 elections five prodemocracy members were elected to the Legislative Assembly.

In January 2000 King Taufa'ahau Tupou IV named to the prime ministership his youngest son, Prince Lavaka Ata 'Ulukalala, who became the fourth to hold the office since 1950. Financial scandal hit the island kingdom in 2001 when it was revealed that \$26 million, raised mainly through the sale of citizenship to residents of Hong Kong before the Chinese takeover, had disappeared. The king's official court jester, a former businessman from the United States, supposedly invested the money in a firm that went bankrupt. Legal wrangling continued for several years until a settlement was reached in 2004. The jester, Jesse Bogdonoff, agreed to pay \$1 million to Tonga, without admitting liability. The \$26 million represented half the country's annual budget.

In the 2002 general elections the HRDM won seven seats. The following year, despite heavy protests, the Legislative Assembly accepted a media operators bill, limiting media freedom. Amendments made to the constitution in 2003 also permitted the restriction of freedom of speech, a move that was used to silence publications critical of the government. However, parts of the amendments, as well as other restrictive media laws passed in 2003, were subsequently declared void. In 2005 the HRDM once again won seven of the nine seats open to the public in the general elections. Two of these legislators subsequently entered the cabinet, becoming the first commoners ever to do so. Following months of public protests demanding democratic reforms Fred Sevele became the first commoner to be appointed prime minister.

 1965– King Taufa'ahau Tupou IV

CONSTITUTION

Tonga is a hereditary constitutional monarchy governed by the constitution first promulgated in 1875 and little modified since then. Under this constitution the sovereign is the head of state and the head of government. He is assisted by the privy council, which consists of seven other members, including the prime minister, who is chosen by the king for a life term. The privy council advises the monarch on affairs of state and, between legislative sessions, makes ordinances that become law when confirmed by the Legislative Assembly. Lesser executive decisions are made by the cabinet, which consists of privy council members and is presided over by the prime minister. The governors of the Vava'u and Ha'apai island groups are members of the privy council and are responsible to it for the administration of the islands under their jurisdiction.

The Legislative Assembly is made up of the speaker, the cabinet members, nine nobles elected by the 33 Tongan nobles, and nine commoners elected by universal suffrage. Elections are held every three years, with the Legislative Assembly required to meet at least once each year.

The Supreme Court is presided over by the chief justice, who is resident in Tonga. The privy council acts as a court of appeal for the Supreme Court.

In 2003 clause 7 of the constitution, which guaranteed freedom of speech, was amended to limit press freedom. Legislation was also passed to regulate newspapers and, potentially, control their content.

PARLIAMENT

The unicameral Legislative Assembly is made up of nine nobles, who are elected by the 33 hereditary nobles of Tonga; nine people's representatives, elected through universal adult suffrage for a three-year term; the prime minister; and eight cabinet ministers. In addition, the governors of the Ha'apai and the Vava'u districts serve as ex officio members. The Legislative Assembly is presided over by a speaker appointed by the king from among the Assembly's members. Of the nine popularly elected members, three represent the Tongatapu district and two each the Ha'apai and Vava'u districts. Sessions must be held at least once every calendar year and generally last two or three months. Legislation is usually introduced by the government, and all privy council decrees must be confirmed by the Legislative Assembly. The king has the absolute right of veto.

Suffrage is limited to literate males who pay taxes and literate females over age 21. Women voted for the first time in 1960.

POLITICAL PARTIES

The only active political party is the Human Rights and Democracy Movement (HRDM), which was founded in 1994. The party was originally called the Tonga Democratic Party and subsequently renamed the People's Party; before the 1999 elections the party changed its name again. The HRDM is a prodemocracy movement that seeks increased political reforms and the further adoption of parliamentary government. In the 2005 elections the HRDM took seven of the nine people's seats.

LOCAL GOVERNMENT

For the purposes of local government Tonga is divided into three districts: Vava'u in the north, Ha'apai in the center, and Tongatapu in the south. The first two are administered by governors who are also members of the privy council. Town and district officials have been popularly elected since 1965.

LEGAL SYSTEM

The legal system is based on English common law.

The judiciary consists of the Supreme Court, the court of appeal, the land court, and magistrates' courts. There are eight magistrates' courts, from which appeals are heard by the Supreme Court. In cases that come before the Supreme Court, the accused or either party in a civil suit may choose a jury trial. Appeals from the Supreme Court are heard by the privy council sitting as a court of appeal.

Tonga's penal system consists of a prison at Huatolotoli, near Nuku'alofa, and three smaller jails, at Ha'apai, Vava'u, and Niuatoputapu. Prisoners sentenced to six months or more are incarcerated in Huatolotoli. Most prisoners are required to labor on public works.

HUMAN RIGHTS

In terms of civil and political rights Tonga is classified as a partly free country. The principal human rights abuses remain severe restrictions on the rights of citizens to change their government and discrimination against women. The constitution, dating from 1875, has been increasingly challenged by commoners who are disadvantaged by it, most dramatically by the November 1992 prodemocracy convention held in the capital and by the results of elections since 1993, in which reformists have consistently won a minimum of five of the nine seats reserved for commoners. More recently, in 2002 and 2005, reformists have won seven of the nine seats open to the public.

In 2003 the king's power was increased through a constitutional amendment and legislation limiting free speech, especially for the media.

FOREIGN POLICY

Tonga is a member of the Commonwealth, South Pacific Forum, Food and Agriculture Organization, United Nations, World Health Organization, and International Monetary Fund and is affiliated with the European Union. A new treaty was concluded with the United States in 1988 that superseded the 1888 treaty; the most important component of this new accord is a provision guaranteeing the transit of U.S. military vessels, including nuclear-armed craft, in the Tongan archipelago. Tonga shifted its diplomatic ties from Taiwan to China in 1999, resulting in a military aid package from the Chinese. In July 2001 annual discussions between Tonga and New Zealand led to the signing of a bilateral aid agreement, whereby Tonga would receive an allocation of \$2.3 million.

DEFENSE

The defense structure is headed by the king. The Tonga Defense Services (TDS) consist of the Royal Guard, the Royal Tongan Marines, the Maritime Force, and the police. A new Air Wing, subordinated to the Defense Ministry, is being developed. The Tonga Ministry of Defense has noted that "Military Operations Other Than War (MOOTW) have increasingly become common and demanding on the TDS." The enlistment age is 18; there are no statistics on the size or budget of the TDS.

ECONOMY

The fertile soil of most of Tonga's islands have led agriculture, including forestry and fishing, to be the most important sector of the economy, employing approximately 65 percent of the labor force and contributing 23 percent of gross domestic product (GDP). Coconuts and bananas have traditionally been the two major crops; vanilla beans were introduced in 1979 and have since become a third major crop. These three crops constitute two-thirds of exports. Tonga is not self-sufficient in food production and imports much of its food from New Zealand.

Manufacturing contributes about 4 percent to GDP, with most production concentrating on coconut processing plants. There has been steady growth and diversification in the manufacturing sector, with emphases on a variety of small-scale industries. The country established its first brewery in 1987 in a joint venture with the Swedish government.

Tourism is an important contributor of hard currency and, along with external aid and income received from Tongans working overseas, helps to offset a large trade deficit.

A financial setback was encountered in 2001 when it was discovered that \$26 million had disappeared from the state treasury, lost to supposed bad investments by the king's court jester, a former businessman from the United States. In 2002 Cyclone Waka hit the Vava'u islands in the north, causing \$50 million in damage to crops and property.

The monarchy is pursuing a policy of developing the private sector in the hope of attracting investment funds from abroad. Unemployment among the young remains high, as does the inflation rate, at 10.3 percent as of 2002.

ENVIRONMENT

The environment of Tonga is faced with the growing impact of tourism, which is leading to greater development in some areas. Additionally, there are signs of overfishing. The diminishing availability of land for agriculture has led to the introduction of chemical fertilizers and other harsh forms of farming, including continuous cropping. Additionally, there is increasing damage to coral reefs from starfish and from indiscriminate coral and shell collectors. Overhunting also threatens native sea turtle populations.

LIVING CONDITIONS

The United Nations 2004 Human Development Report ranked Tonga 63rd out of 177 countries in terms of life expectancy, education, and standard of living. The average Tongan's life expectancy in 2005 was 69.5 years, literacy stood at 98.8 percent as of a 2002 estimate, and 82 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$2,300 in 2002. In general, Tonga ranks in the upper third of East Asian and Pacific countries in terms of quality of life.

About 67 percent of the population lives in rural areas and villages stretched over the nation's 169 islands. Each traditional Tongan village is loosely organized around a central, grassy area for public gatherings. A series of pathways link households, which are often traditional, made with reed sides and thatched roofs of sugarcane or coconut leaves. Posts for such traditional structures are made of ironwood, and in place of nails, braided cord is used to hold the structures together. More-modern wooden structures are becoming predominant, and in towns and cities bungalows and brick or concrete structures are found. The capital city, Nuku'alofa, had an estimated population of 38,000 in 2005; the city is on the island of Tongatapu, where some two-thirds of the population reside.

Water is a problem for the islanders. Only a few of the islands have streams; on most islands people must gather rainwater or dig wells. Tongan taxpayers are entitled to an allotment of land from the government. Each urban Tongan taxpayer receives an annual rent subsidy in lieu of this land allotment.

Christian missionaries have greatly changed the traditional way of life of the Tongans.

HEALTH

The health-care system in Tonga provides citizens with free medical care. As of 2004 there were an average of 34 physicians for 100,000 people. Between 1995 and 2003, 92 percent of births were attended by trained health-care providers; the infant mortality rate stood at 12.6 deaths per 1,000 live births in 2005. There is one government medical department hospital in each of Tongatapu, Vava'u, Ha'apai, and 'Eua, with several dispensaries.

As compared to other Pacific islands, Tonga has a good record in health care. There is no malaria or tropical disease. However, typhoid fever and dysentery are

problems. Tuberculosis is also a health risk; in 2002 there were 41 cases per 100,000 population. In 1999 there were 12 reported cases of HIV/AIDS and eight deaths from the disease.

The government spent 5.1 percent of GDP on health care in 2002 and is determined to commit higher percentages. As of 2002, 100 percent of the population had access to safe drinking water. Immunization rates are high, with routine vaccines financed by the government. In 2003 the measles and tuberculosis immunization rates for children under one year of age in 2003 were 99 percent; for DPT and polio they were 98 percent.

Some islanders resort to traditional methods of health care, making propitiations to ancient gods.

FOOD AND NUTRITION

Tongan food consists mostly of root vegetables such as taro and sweet potato, coconut products, fresh fruit, roasted suckling pig, chicken, corned beef, fish, and shellfish. The traditional Tongan feast is cooked in an underground oven, an *umu*, which method is common throughout Polynesia. Much of the food is imported from New Zealand.

Coconut juice is a popular drink, as are beer, coffee (which is locally grown), and kava, or *Piper methysticum*, a relaxant consumed throughout the Pacific.

There are no reported incidents of undernourishment on the island. In general, for islands, which naturally have restricted dietary variety, the nutritional level in Tonga is adequate.

STATUS OF WOMEN

In Tonga's male-dominated society, women generally occupy subordinate roles. While the strong Polynesian cultural tradition has discouraged the rise of women to positions of leadership, some have become members of the legislature and have served in responsible positions in various occupations. However, few women participate in the formal labor force. Additionally, women cannot own land or hold titles of nobility.

WORK

In 1996 the Tongan workforce was about 34,000 strong. Unemployment that year was over 13 percent, while agriculture employed almost two-thirds of laborers. Much of agriculture is done at the subsistence level. Major cash crops include squash, coconuts, copra, bananas, vanilla beans, cocoa, coffee, ginger, and black pepper. Fishing and tourism are the major industries. There are not many skilled jobs; unemployment is therefore greatest among the young, who are fresh out of school.

Workers gained the right to form unions under the 1963 Trade Union Act, but regulations on the formation of unions were never written, and there remained no unions as of 2003. The union act also provides workers with the right to strike; however, there as well regulations have never been formulated. Collective bargaining is permitted by law, but there was no record of it being utilized during 2003. There is no law against child labor, but it does not exist in the wage economy. The workweek is 40 hours, with a mandatory day of rest on Sunday. There is no established minimum wage.

EDUCATION

Education is universal and compulsory for all Tongans for eight years. Education is free in government schools;

mission schools charge small fees. Most primary schools are coeducational.

Schooling lasts for 13 years, as divided into six years of primary school, four years of middle school, and three years of secondary school. Selected students prepare for the New Zealand Secondary School Certificate examination.

The academic year runs from February to December. The language of instruction is Tongan, while English is also taught from the middle grades on.

The pupil-teacher ratio at the primary level was 22 to 1 in 2002. The literacy rate was 98.8 percent, and 82 percent of eligible students were enrolled in primary, secondary, and tertiary schools. Government expenditures on education totaled 4.9 percent of GDP and 13 percent of the total budget.

SCIENCE AND TECHNOLOGY

Agricultural research is carried out through the Ministry of Agriculture and Forests, which employs a couple dozen researchers in crop production and yield. There are also two institutes of higher education. Hango Agricultural College, which is part of the Free Wesleyan Church Education System, offers diploma and certificate courses. The Tonga Maritime Polytechnical Institute is located in Nuku'alofa.

MEDIA

Three nondaily newspapers are published, of which the *Tonga Chronicle*, an illustrated weekly issued by the government, has a significant circulation in Tongan and also in English. Various missions issue church newspapers periodically. There is no national news agency. In 2003 an online newspaper, *Matangi Tonga*, began posting articles in English.

The government-sponsored Tonga Broadcasting Commission operates a network in conjunction with Cable and Wireless, broadcasting in Tongan and English. There are two television channels.

Several unsuccessful attempts were made in 2003 to ban *Taimi 'o Tonga* (Times of Tonga), which is published in New Zealand but distributed in Tonga. The Supreme Court declared as unconstitutional related law changes made by King Taufa'ahau Tupou IV in the privy council. The government's response was to legislate general media controls and to amend clause 7 of the constitution, which guaranteed freedom of speech. Legislation was passed to regulate newspapers and potentially control their content. Reporters without Borders, an international media watchdog group, ranked Tonga 119th out of 167 nations worldwide in its 2004 press freedom index.

In 2004 there were 9,000 cellular telephone users and 2,900 Internet users in Tonga.

CULTURE

Tongan dance blends legends and folktales that honor famous chiefs and historical events. Singing rather than musical instruments accompanies such dances, as is typical on many Pacific islands. Among other popular dances are the paddle dance, called *me'etu'upaki*; the *kailao*, a war dance; the *lakalaka*, a group action song performed while standing; the *ma'ulu'ulu*, an action song performed while seated; and the *tau'olunga*, an individual dance that is accompanied by singing. There is an annual National Music Festival in Tonga each June. Additionally, there is a ritual surrounding the consumption of the mildly narcotic kava drink, which comes from the root of the pepper plant. Such a ritual is also shared with other Pacific islands, including Samoa and Fiji.

Crafts are an important part of traditional Tongan culture. Basket weaving with palm leaves is a particular specialty, as is carving. Women also make tapa cloth from the inner bark of the paper mulberry.

Oral tales and folklore form another rich vein of cultural tradition.

FOLKLORE AND MYTHOLOGY

Tongans have a rich body of folklore, mythology, oral history, and proverbs, much of which is extant in contemporary Tonga. The very name of the island is derived from myth; alternately, Tonga was the name of either the first woman on the island (Atu was the name of the first man) or the Polynesian southwest wind, the last of the winds to be brought under control by Maui, an offspring of the two original twins who created the universe. Maui is also credited with the creation of Tongatapu, the main Tongan island. Tonga-Hiti is the name of the Polynesian headache demon; Hikuleo is the Tongan god of the afterworld, dwelling in the land of the dead to the west; and Ahoeitu is the legendary first ruler of Tonga, the son of the sky god.

There is also a large body of stories that recount the various battles of cultural heroes from Tongan history. Many of these stories deal with the 19th-century king of Tonga, Taufa'ahau, and with his warlord and cousin, Tongapoteiki.

Proverbs form an integral part of the Tongan folkloric tradition. A favorite one, often repeated, is "Friendship is a furrow in the sand."

ENTERTAINMENT AND RECREATION

Singing is still an important form of entertainment for Tongans. Radio and television are also popular, as are videos and DVD imports. American movie and rock stars are popular, especially with younger Tongans who wish to demonstrate their international outlook. Storytelling is a popular form of recreation in some of the more remote islands.

There are a number of traditional children's games, including *lanita*, a simplified form of cricket. Other games involve skill in tossing sticks of various sizes. Children's games usually stress cooperation.

ETIQUETTE

Dubbed the Friendly Islands by early explorers, Tonga maintains a sense of ease in its typical verbal greeting, *Malo e lelei*, "A warm welcome to the Friendly Islands." Lip touching was traditional between those of equal social class; if two were of unequal status, the inferior would kiss the hand of the other, or even the foot. However, in modern Tonga a handshake is the usual form of greeting.

Sundays are days for worship, as set aside by the constitution, and very little activity takes place on Sundays. In general, modest behavior is the norm on the islands, as mingled with a sense of cooperation and sharing.

FAMILY LIFE

Tongan life is centered on the extended family. Indeed, so central are the ideas of family and of communal life that children often grow up in several different households and call several different places home. Courtship in more traditional times was arranged by families and was dependent on caste. Virginity was a valuable asset in such times and has also been emphasized in Christian teachings on the islands. Feasts, put on by the bride's family, were the traditional wedding ceremony, but Tongans are now married in Christian ceremonies. Divorce, once only available to men, is now available to both men and women. Family size is shrinking; the fertility rate in 2004 was three children per woman.

PERSONAL APPEARANCE

Both Western and traditional attire are worn in Tonga. Traditional clothing for men is the *tupeno*, a wraparound cloth suitable for formal as well as leisurely occasions. Women wear the wraparound skirt called the *ngatu*, which goes to the ankles. Traditionally, this was made from *tapa*, material created from the inner bark of the paper mulberry or the breadfruit tree.

SPORTS

A holdover from colonial past, rugby is still popular among the Tongans. The Tonga Rugby Football Union fields a national team that takes part in regional tournaments through the Federation of Oceania Rugby Union.

The country also has national volleyball and surfing teams. Tonga's only athlete in the 2004 Athens Paralympic Games, 'Alailupe Valeti, placed 10th in the shot put. Basketball, boxing, cricket, and soccer are also popular sports in Tonga.

CHRONOLOGY

- 1965** Taufa'ahau Tupou IV becomes king.
- 1970** Tonga becomes a fully independent nation within the Commonwealth.
- 1972** Tonga claims the Minerva Reefs, some 482 km (300 mi) southwest of Nuku'alofa.
- 1975** Tonga signs the Lomé Convention.
- 1981** Legislative elections result in a surprise upset among people's representatives and new dominance by traditional conservatives.
- 1982** Cyclone Isaac causes substantial damage to all island groups, requiring emergency aid.
- 1986** Charges of the misuse of public funds are lodged against Legislative Assembly members.
- 1987** Elections of people's representatives to the Legislative Assembly are dominated by newcomers who are severe critics of the government.
- 1988** Tornado causes extensive damage in Nuku'alofa. Tonga signs friendship treaty with the United States allowing for the safe transit of U.S. ships, including those capable of carrying nuclear weapons, in Tongan waters.
- 1990** In general elections, Akilisi Pohiva and his reformist supporters win six of the nine seats reserved for people's representatives in the legislature.
- 1991** Baron Vaea becomes prime minister.
- 1992** Critics of Tonga's monarchical government organize a prodemocracy convention, which the monarchy boycotts.
- 1994** The prodemocracy movement founds the Tonga Democratic Party, Tonga's first political party.
- 1999** Tonga is granted membership in the United Nations; in general elections, prodemocratic candidates claim five of the nine elective seats in the Assembly.
- 2000** The king's youngest son, Prince Lavaka Ata 'Ulu-kalala, is appointed prime minister in January.
- 2001** A financial scandal involving the king's court jester and the disappearance of \$26 million shocks the nation.
- 2002** Vava'u islands in the north are struck by Cyclone Waka, which causes over \$50 million in damages but no loss of life. Seven of nine legislative seats open to the public are won by the HRDM, furthering the county's prodemocracy movement.

- 2003** Changes to the constitution are passed giving the king greater powers and restricting the media.
- 2004** Tonga's former court jester pays \$1 million to settle the dispute over his alleged misappropriation of funds.
- 2005** Elections again return seven HRDM candidates to the Legislative Assembly. For the first time, some of these enter the cabinet.
- 2006** Following protests demanding democratic reforms Fred Sevele becomes the first commoner to be appointed prime minister.

OFFICIAL NAME

Republic of Trinidad and Tobago

ABBREVIATION

TT

CAPITAL

Port-of-Spain

HEAD OF STATE

President George Maxwell Richards (from 2003)

HEAD OF GOVERNMENT

Prime Minister Patrick Manning (from 2001)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

1,088,644 (2005)

AREA

5,128 sq km (1,980 sq mi)

MAJOR ETHNIC GROUPS

Black, Indian

LANGUAGE

English

RELIGIONS

Christianity, Hinduism, Islam

UNIT OF CURRENCY

Trinidad and Tobago dollar

NATIONAL FLAG

A black band edged with white extending from the leftmost part of the upper border to the rightmost part of the lower border, on a red field

NATIONAL EMBLEM

A shield divided by an angled white border, with two gold hummingbirds in the black upper portion and three gold, white-sailed ships on a red background (representing the vessels of Christopher Columbus) in the lower and larger part. The shield is flanked on the left by a long-billed scarlet ibis standing on an island with three peaks (the trinity from which Trinidad derives its name) and on the right by a brown, white, and yellow strutting cocrico bird perched on an island representing Tobago. The device is crested by a gold queen's helmet with a red and white mantle, on which are placed a helmsman's wheel and a green palm tree. A scroll at the bottom proclaims the national motto, "Together we aspire, together we achieve."

NATIONAL ANTHEM

"Forged from the Love of Liberty"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 30 (Spiritual Baptist/Shouter Liberation Day), May 30 (Indian Arrival Day), June 19 (Labour Day), August 1 (Emancipation Day), first Monday in August (Discovery Day), August 31 (Independence Day), September 24 (Republic Day), various Christian festivals, including Good Friday, Easter Monday, Boxing Day, Whitmonday, Corpus Christi, Christmas; one Hindu and one Islamic festival are also celebrated

DATE OF INDEPENDENCE

August 31, 1962

DATE OF CONSTITUTION

August 1, 1976

GEOGRAPHICAL FEATURES

Trinidad and Tobago are the southernmost islands of the Lesser Antilles chain, in the Caribbean, and are separated from Venezuela by 11 km (7 mi) of the Gulf of Paria. The two islands cover an area of 5,128 sq km (1,980 sq mi). Trinidad, the larger of the islands, has an area of 4,828 sq km (1,864 sq mi); Tobago, 31 km (19 mi)

northeast of Trinidad, has an area of 300 sq km (116 sq mi). The country of Trinidad and Tobago also includes 16 smaller islands. The total length of the coastlines, on the Atlantic Ocean, the Caribbean Sea, and the Gulf of Paria, is 362 km (224 mi).

The most prominent natural features of Trinidad are the three east-to-west mountain ranges called the Northern, Central, and Southern ranges. The Northern Range,

Trinidad and Tobago

a rugged chain that is a continuation of the mountains of the Paria Peninsula of Venezuela, includes the highest point in the country, El Cerro del Aripo, with an elevation of 940 m (3,083 ft). Between the Northern and Central ranges is the broad Caroni Plain, and between the Central and Southern ranges are the Naparima and Nariva plains. There are extensive swamps and lagoons

along the eastern, southern, and western coasts. Tobago is geologically part of the Lesser Antilles and has an uneven terrain dominated by the Main Ridge, a series of volcanic mountains rising to 550 m (1,804 ft). The southwestern part of the island consists of an extensive coral platform. Tobago has a number of satellite islands, including Little Tobago and St. Giles.

2374 Trinidad and Tobago

Rivers are numerous on both islands. The longest on Trinidad are the Ortoire, flowing into the Atlantic in the south, and the Caroni, flowing into the Gulf of Paria in the north. On Tobago, the Courland runs westward into the Caribbean Sea. There are no natural lakes, but Trinidad has the world's largest natural asphalt bog, the 46-hectare (114-acre) Pitch Lake, on the southwestern coast at La Brea, containing 45 million tons of pure asphalt. The islands are geologically unstable, and earthquakes are common.

Port-of-Spain	49,031
San Fernando	55,419

CLIMATE AND WEATHER

Although Trinidad is in the tropics, its climate is moderated by the cooling effects of the trade winds and the marine environment. Climatically, the year is divided into two seasons: a dry season from January to May and a wet season from June to December. The mean temperatures are 27.8°C (82°F) in the daytime and 23.3°C (74°F) at night; the mean annual average temperature is 21°C (70°F). In Port of Spain, where the annual average temperature is 25°C (77°F), the variation between the warmest month (July) and the coldest month (January) is 19.4°C (35°F). The climate of Tobago is similar to that of Trinidad, although Tobago's temperature levels are generally lower because of the island's small size and greater exposure to trade winds.

The wettest months are June through November; rainfall, although occasionally heavy, is of short duration and is interspersed with periods of bright sunshine. In the Northern and Central ranges on Trinidad and on the main ridge of Tobago, rainfall ranges from 2,540 to 3,810 mm (100 to 150 in) annually, decreasing to 1,500 to 1,950 mm (59 to 77 in) on the western belt of Trinidad and 1,140 mm (45 in) on the coastal belt of Tobago. There are occasional droughts in the drier areas of both islands.

Climate and Weather

Mean Temperature: 74°F at night to 82°F in the daytime
Average Rainfall
Northern and Central ranges in Trinidad and on the main ridge in Tobago: 100 in to 150 in
Western belt of Trinidad: 59 in to 77 in
Coastal platform of Tobago: 45 in

FLORA AND FAUNA

While the flora and fauna of Trinidad resemble those of its mainland neighbor, Venezuela, Tobago's plant and animal life are more similar to those of the volcanic islands of the Lesser Antilles, of which it is a part. At higher elevations on both islands, rain-forest vegetation is found, including wildflowers, many flowering shrubs and trees, palms, giant aroids, and large broad-leaf varieties. The large flowering tree called the mountain immortelle colors the hillsides with its orange blossoms from January to May. Sugarcane is found in abundance on the central plains of Trinidad.

Animal life is varied. Monkeys inhabit the forests, and reptiles such as lizards, snakes, crocodiles, and turtles are also abundant. Bird life is rich on both islands; flamingos, egrets, and the scarlet ibis make Trinidad's Caroni Swamp bird sanctuary their home, and the greater bird of paradise has been introduced to Tobago. Other animals include the paca, the agouti (a rodent with rabbit-like features), the armadillo, a wild hog locally called the *quenck*, and a type of porcupine with a prehensile tail.

ETHNIC COMPOSITION

Trinidadian society is based on the complex interaction of as many as 13 ethnic groups, of which two predominate: blacks, the descendants of African slaves, and East Indians, the descendants of indentured laborers imported from India between 1845 and 1917. There also exist five groups of whites (foreign whites, or *bekes*; local whites, or French Creoles; Portuguese; Middle Easterners; and Spanish-speaking Venezuelans), three groups of mixed race, and one group of Chinese. On a different level are the 2,000 Caribs and Arawaks (both called Caribs), who represent the original Amerindian population; it is doubtful that they are unmixed. According to the official census of 1990, blacks constituted 43 percent of the population, East Indians 40 percent, whites 2 percent, Chinese 1 percent, and those of mixed race 14 percent. By 2000 this ethnic mix had altered somewhat, with East Indians in the majority at 40.3 percent, blacks at 39.5 percent, those of mixed race at 18.4 percent, Chinese at 1.2 percent, and whites down to 0.6 percent.

Ethnic differences are reinforced by occupational and geographic segregation. Most residential areas are divided into black, white, or East Indian districts. On Trinidad, blacks are concentrated in industrial urban areas in and around Port of Spain, San Fernando, Arima, and Pitch Lake and in the oil fields in the southwest. East Indians provide the bulk of rural agricultural labor, especially in the sugar belt in the west. Other non-Creole groups are generally urban. Those of French descent live in the north. On Tobago the bulk of the population is black.

LANGUAGES

The official language is English, but varieties of English are spoken throughout Trinidad and Tobago, ranging from the creole of the lower classes to the Standard English of the British upper classes. The most common form of English spoken on the islands is called Trinidad English, a creole that differs from Standard English in both the flexibility of pronunciation and the incorporation of African and other words; it is so different that some linguists classify it as a separate language.

One of the most interesting characteristics of Trinidad's language scene is the persistence of French and Spanish patois. The French patois, not readily intelligible to a Frenchman, is widely spoken, particularly in the rural areas north of Trinidad. French and Spanish have also influenced Trinidad English in its vocabulary, intonation, and tempo of speech.

The older East Indians still speak any one of numerous Indian languages, particularly Hindustani, also called Desi Bhasa, but the use of these languages is decreasing, and they may eventually die out.

RELIGIONS

About 44 percent of the population belongs to various Christian denominations, 24 percent are Hindu, 6 percent are Muslim, and 26 percent are other. The majority of the Christians are Roman Catholic (29 percent) or Anglican (11 percent), with the remainder belonging to smaller groups. There are both a Roman Catholic archbishopric and an Anglican bishopric at Port of Spain.

There are two sects of African origin: Shouter and Chango, the latter including a variant called Rada. The Shouters, who call themselves Spiritual Baptists, are a fundamentalist cult who place great emphasis on participatory and demonstrative worship, with hand clapping, singing, dancing, shouting, and trances. The Chango are marginally Christian, with most of their beliefs and practices, as well as their pantheon of gods, derived from African animism.

The constitution guarantees freedom of religion and also authorizes grants to religious organizations for ecclesiastical expenses. Under this provision, aid is extended to 16 religious groups.

Presbyterian	37,000
Other	290,700

HISTORICAL BACKGROUND

The indigenous inhabitants of Trinidad and Tobago were Arawak and Carib Indians. Trinidad was discovered by Christopher Columbus in 1498, but the Spanish ignored the islands and did not appoint a governor until 1552. Spanish rule over the next 268 years was uneventful except for skirmishes with the native Arawak Indians and raids by English buccaneers. In time the colonists established plantations and imported slaves from West Africa to work them. In 1797 a British expedition from Martinique captured Trinidad, which was formally ceded to the United Kingdom in 1802 by the Treaty of Amiens. Tobago, also discovered by Columbus in 1498, changed hands many times before coming under the British Crown in 1814. Tobago was at first ruled as a separate colony; during the 19th century it was under the administrative jurisdiction of Grenada. It became a Crown Colony in 1877 and was amalgamated with Trinidad in 1888. In 1958 Trinidad and Tobago formed the Federation of the West Indies together with Jamaica, Barbados, and the Windward and Leeward islands; Port of Spain was the capital. The federation collapsed in 1961.

Trinidad and Tobago was granted full independence within the Commonwealth in 1962. Dr. Eric Williams, founder and head of the People's National Movement (PNM), became prime minister. The first significant threat to Williams's government occurred in 1970, when a black-power movement organized by students of the University of the West Indies and supported by various dissident groups launched a series of disturbances, which they called "revolution." Some 10,000 persons joined a black-power march through Port of Spain, and more than 65,000 attended the funeral of a young student shot dead by a police officer. In response, Williams declared a state of emergency. Shortly thereafter a small army group mutinied and tried to organize a march on the capital but was foiled by the intervention of the coast guard. Political instability continued in 1971, when only 33 percent of registered voters participated in legislative elections and labor unrest prompted the reimposition of the state of emergency.

In 1976 a new constitution came into effect, making Trinidad and Tobago a republic, with a president replacing the governor-general. After a long struggle, Tobago was granted limited autonomy in 1980 with the formation of the Tobago House of Assembly.

Williams died unexpectedly in 1981 and was succeeded as prime minister and leader of the PNM by George M. Chambers. The PNM's uninterrupted control of the government ended in 1986 when, in response to the government's handling of a severe economic decline, a coalition of opposition groups, the National Alliance for Reconstruction (NAR), won a majority in the federal House. Arthur Napoleon Raymond Robinson, the leader of the coalition, succeeded Chambers as prime minister.

On July 27, 1990, a group of black Muslims, Jamaat al-Muslimeen, staged a coup attempt against Robinson. The group, which had little domestic support, acted because it thought that Robinson's economic austerity measures had impoverished and destroyed the country. The group took Robinson and several cabinet members hostage as the ministers were meeting in the parliament building. Reportedly, Robinson was shot in the leg after refusing to sign a letter of resignation. Robinson was freed on July 29, and the rebels surrendered the following day.

In the 1990 elections the PNM won 21 out of 37 seats in the legislature, enabling its leader, Patrick Manning, to become prime minister. In 1995 both leading parties were overtaken by scandals. In an effort to regain political momentum, Manning called early elections, in which the PNM and the United National Congress (UNC) won 17 seats each and the NAR only two seats. Thereupon, the UNC concluded a partnership agreement with the NAR, and Basdeo Panday was sworn in as the country's first prime minister of Indian descent. In the 2000 elections the UNC won 19 seats in parliament, while the PNM

gained 16 seats and the NAR one. In 2001 Panday called early elections when dissent within the UNC threatened its slim majority. The election yielded an unprecedented tie, in which the governing party and the main opposition party won 18 seats each. Patrick Manning was appointed prime minister.

The split in votes resulted in a deadlocked parliament, a situation that was alleviated by the 2002 elections, in which the PNM won a clear majority of 20 seats. In 2003 the electoral college elected Maxwell Richards to serve a five-year term as president. Manning's government faced economic setbacks when the state-owned sugar company closed down. Protestors took to the streets in 2005 to march against high levels of crime.

LIST OF MODERN RULERS

Prime Minister

1961–81	Eric Eustace Williams
1981–86	George Michael Chambers
1986–91	Arthur Napoleon Raymond Robinson
1991–95	Patrick Augustus Mervyn Manning

CONSTITUTION

Trinidad and Tobago is a parliamentary democracy under the republican constitution of 1976. The constitution provides for a largely ceremonial president as head of state, a prime minister as the effective head of government, and a bicameral legislature. The principal provisions of the constitution are described as "entrenched," and the more important of these are described as "specially entrenched." The entrenched provisions relate to human rights, the prorogation of parliament, the appointment and dismissal of judicial and police officers, and the protection of pension rights. The specially entrenched provisions relate to parliament, elections, and amendments to the constitution.

The constitution provides for a bicameral legislature, with an elected House of Representatives and an appointed Senate. The president is elected by an electoral college of members of both the Senate and the House of Representatives. His term of office is five years. The prime minister is formally appointed by the president and is the leader of the party that commands the majority of the members of the House of Representatives. The prime minister chooses the ministers of the cabinet and allocates their portfolios. The cabinet also includes an attorney general appointed by the president on the advice of the prime minister.

The judiciary is headed by the chief justice and includes a Court of Appeal, High Court, and lower courts.

PARLIAMENT

Under the constitution of 1976, the bicameral national parliament comprises an appointed Senate and an elected House of Representatives. The Senate consists of 31 members appointed by the president for maximum terms of five years; 16 of the senators are named on the advice of the prime minister, six on the advice of the leader of the opposition, and nine at the president's discretion. The House of Representatives has 36 members directly elected for five-year terms. The House initiates money bills, while other bills may be initiated by either house.

Suffrage is universal over age 18. Elections are held every five years and are supervised by the Elections Commission, comprising a chairman and two to four other members. The members of the Elections Commission are also members of the Boundaries Commission.

POLITICAL PARTIES

As of 2002 the largest political parties in Trinidad and Tobago included the People's National Movement (PNM), which was founded in 1956 as a moderate nationalist and conservative party and held 20 of the 36 House seats; the United National Congress (UNC), a social-democratic party that was formed in 1989 out of the United Labour Front and held 16 seats in the House; and the National Alliance for Reconstruction (NAR), which was formed in 1983 as a coalition of moderate opposition parties. Additional parties, representing other elements of the political spectrum, include a union-oriented party (Movement for Social Transformation), the Citizen's Alliance, and a left-wing faction (National Joint Action Committee).

LOCAL GOVERNMENT

Trinidad is divided into nine regional corporations, two city corporations, three municipal councils (or boroughs), and the internally autonomous Tobago. Municipalities have elected mayors and deputy mayors; councillors and aldermen serve for three-year terms. In each county council are one councillor for each electoral district and two aldermen; one alderman is elected from all the qualified persons in the electoral area and another from qualified persons who are members of village councils in the electoral area. The chairman and vice chairman of the county councils are elected annually, while councillors and aldermen serve three-year terms.

The counties of Trinidad are in turn subdivided into 30 wards. One ward encompasses all of Tobago, which is subdivided into nine parishes.

LEGAL SYSTEM

The legal system of Trinidad and Tobago is based on English common law.

The Supreme Court consists of the High Court and the Court of Appeal. The High Court comprises a chief justice and 10 junior judges; the Court of Appeal has a chief justice and five other judges.

The lower judicature is headed by a chief magistrate, under whom are seven magisterial districts—St. George West, St. George East, Eastern Counties, Caroni, Victoria, St. Patrick, and Tobago—each presided over by a senior magistrate. There are also 18 stipendiary magistrates presiding over petty civil courts.

An unusual constitutional feature is the right of appeal to the Privy Council in the United Kingdom in grave civil or criminal cases.

There are three prisons in the country: the Royal Gaol, in Port of Spain; the island prison on Carrera Island; and Golden Grove Prison, near Arouca. Capital punishment was reinstated in 1999.

There is a large backlog of cases awaiting trial, many of them over five years old. As of 2003 an estimated 20,000 cases were awaiting trial.

HUMAN RIGHTS

As in many other former British colonies, democracy took firm root in Trinidad and Tobago. As multiracial, multireligious, and multilingual, the country is a stable, multiparty parliamentary democracy with a good track record in human rights. The judiciary is independent, the economy is based on free enterprise with mixed ownership of major sectors, the tax system is progressive, elections are based on universal adult suffrage, and fair elections are held regularly. The constitutional guarantees of fundamental rights and freedoms are generally observed in practice, as are the constitutional prohibitions of cruel and inhuman punishment, torture, and invasion of the home. Political participation is open to all citizens and is reinforced by the freedoms of speech, press, and assembly. In May 1999 the government withdrew as a state party from the American Convention on Human Rights, which prohibits countries from extending the death penalty beyond those crimes for which it was in effect at the time of the treaty's ratification. There were more than 100 prisoners on death row as of 2005.

FOREIGN POLICY

Trinidad and Tobago was the first Commonwealth country to be admitted to the Organization of American States. The nation's anticolonial but democratic and pro-Western foreign policy is oriented chiefly toward the

2378 Trinidad and Tobago

Western Hemisphere and includes active participation in the Caribbean Community. Port of Spain's objections to the U.S. invasion of Grenada cooled relations with the United States and eastern Caribbean states for a time. Diplomatic relations were established with the Soviet Union and China in 1974, and a broad trade agreement was signed with China in 1984. Trinidad cooperates with the United Kingdom and United States in monitoring drug trafficking in the region. In 1997 a long-simmering dispute erupted with Venezuela over oil drilling in the straits separating the two countries. Boundary disputes exist with two other countries, Barbados and Guyana.

DEFENSE

The Trinidadian armed forces have no offensive capability. In fact, the lack of a purposeful mission is cited as one of the causes for low morale and restiveness in the army.

Military aid has been received exclusively from the United Kingdom. In 2003 the size of the military was 2,700 active personnel. The military is all volunteer; 18 is the minimum age for enlistment. In 2003 military expenditures were \$66.7 million, or 0.6 percent of gross domestic product (GDP).

ECONOMY

Trinidad and Tobago has earned a reputation as an excellent investment site for international businesses. Successful economic reforms were implemented in 1995, and foreign investment and trade are flourishing. Persistently high unemployment remains one of the chief challenges of the government. The petrochemical sector has spurred growth in related sectors, reinforcing the government's commitment to economic diversification. Tourism is growing, especially in the pleasure-boat sector. Trinidad and Tobago is the leading Caribbean producer of gas and oil. A rise in violent crime has hurt the country's economic growth, but the government is attempting to get control of that situation. Sugarcane, once one of the major industries, suffered a setback in 2003 with the closure of the state-run Caroni plant and the losses of 8,000 jobs. Nevertheless, long-term economic prospects are good.

ENVIRONMENT

Trinidad and Tobago suffers from a number of common regional environmental problems, including deforestation and increased water pollution from both chemical runoff and an inadequate sewage system. The development of natural resources, especially oil, has often left the country with increased pollution. Increased tourism threatens the country's coral reefs because of overfishing and the impact of divers and boats. The country has suffered increased land erosion, as much of the high-quality agricultural land has been developed for residential, commercial, and industrial uses.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Trinidad and Tobago 54th out of 177 countries in terms of life expectancy, education, and standard of living. The average Trinidadian's life expectancy in 2005 was 68.9 years, literacy stood at 98.6 percent as of 2003, and 64 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$10,500 in 2004. Overall, Trinidad and Tobago ranks in the upper third of Latin American and Caribbean countries in terms of quality of life.

At one time the traditional housing of Trinidadians consisted of mud and thatch. Nowadays, most homes are constructed of wood, with metal roofs. Indoor plumbing and electricity are standard, but with a housing shortage many city dwellers inhabit substandard slum housing and squatter sites. The Ministry of Housing and Settlements has been involved in a five-year plan to upgrade such residences and to construct simple concrete dwellings for low-income families. As of 2001 about three-fourths of the population lived in urban areas.

In general, the ethnically mixed society of Trinidad and Tobago is one of the most cosmopolitan in the Caribbean. As indentured Indians came to the islands to work on plantations, they gained the opportunity to become landowners. Many Indians live in rural communities, and farming is the group's main occupation, but many are taking up various other professions. Blacks are most heavily represented in urban areas. The offspring of African and European parents are culturally seen as black Trinidadians. Some mixed-race people are called French Creoles, although many families bear Spanish, Portuguese, Scottish, and English names.

HEALTH

A national health plan was instituted in 1967, creating a modern system with both public and private facilities. Public facilities deliver care free of charge or with minimum charge. The oil companies have their own clinics and medical services for their employees. With over 100 health centers, eight district hospitals, and two major government hospitals, the population is relatively well served. As of 2004 there were 79 physicians for every 100,000 people. The incidence rates of both malaria and tuberculosis have been reduced; in 2000 there was just one case of malaria per 100,000 people, while in 2002 there were 19 cases of tuberculosis per 100,000 population. Between 1995 and 2002, 96 percent of births were attended by trained health-care providers; the infant mortality rate in 2005 was 24.3 deaths per 1,000 live births.

With improved sanitation, health risks such as hookworm and dysentery have decreased. As of 2002, 91 percent of the population had access to safe water, 100 percent to adequate sanitation. The HIV/AIDS prevalence rate, however, is increasing; in 1999 it was 1.1 percent, while by 2003 it had grown to 3.2 percent. There were 1,900 deaths from HIV/AIDS in 2003, and 29,000 people were living with the disease. Smoking is another major health hazard. With 42 percent of males smoking in 2000, the incidence rates of heart problems and cancer are relatively high. Government expenditures on health care in 2002 were 1.4 percent of GDP. Part of this funding went to vaccines provided free of charge. As of 2003, 91 percent of one-year-olds were immunized against polio and DPT, and 88 percent were immunized against measles.

FOOD AND NUTRITION

The food of Trinidad reflects the multiethnic population that settled the islands. French and African cooking come together in creole food. Typical of this tradition is *sans coché*, a stew containing pork, salted beef, pig's tails, onions, chives, and various other spices, served with dumplings. The Spanish influence can be seen in *pastilles*, minced-meat patties steamed in banana leaves. The East Indian influence is most strongly felt in the round Indian bread, *roti*, which is served at most meals and is used as a dipping tool for curries and other stews. Chinese and Amerindian foods are also prevalent.

A typical meal is the combination of spinach and crab called *callaloo*. Other favorites are curried crab and *coocoo*, a cornmeal and okra pie, and chicken *pelau*, with chicken in a spicy chili and coconut milk sauce. Seafood is a typical part of the Trinidadian diet, as are rice and vegetables of all sorts. The Sunday meal is the major culinary event of the week. Breakfasts usually consist of coffee or cocoa and bread. Lunch and dinner are the main meals.

As with many other Caribbean islands, Trinidad and Tobago has a long history of rum consumption. The sorrel flower yields a nonalcoholic drink, and ginger beer, or ginger ale, is also popular.

Nutrition is adequate in Trinidad and Tobago. Between 2000 and 2002, 12 percent of the general population was considered undernourished, while 7 percent of the under-five population was considered underweight between 1995 and 2002.

Food and Nutrition

Amount of Fruits and Vegetables Available per person per year kg:	91.3

STATUS OF WOMEN

Women enjoy equality under the law. Many have positions in the government, civil service, political-party leadership, business, and other professions, although their presence in these positions is not in proportion to their numbers in the population. Women serve in parliament, and women's groups are quick to speak out on women's rights. Violence against women, however, is extensive and remains a low priority for police and prosecutors.

 Women's Share of Wage Employment Non-agricultural %: 41.3

WORK

As of 2003 the labor force of Trinidad and Tobago numbered 590,000. Of these, 9.5 percent were engaged in agriculture, producing cocoa, sugarcane, rice, citrus, coffee, vegetables, and poultry. Industry—including manufacturing, mining, construction, and utilities—employed 26.4 percent of people, the service sector the remaining 64.1 percent. Despite large petroleum and tourism industries, unemployment was 10.4 percent in 2003. The nation's asphalt industry is one of its oldest. When the British explorer Sir Walter Raleigh was anchored in Trinidad in 1595, he used the asphalt from Pitch Lake to caulk his leaking ships.

The freedoms of association and assembly are respected. Labor unions are well organized, powerful, and politically active, although union membership has declined. The principal national labor federation is the Trinidad and Tobago Labor Congress. As of 2002, 25 to 30 percent of the workforce was organized into 19 labor unions. Strikes are legal and occur frequently. The minimum work age is 12; however, between the ages of 12 and 14 children are only allowed to work in family businesses. In 2005 the minimum wage was set at \$1.50 an hour. The usual workweek is 40 hours, and health and safety standards are generally observed.

 Construction and Utilities: 12.4
 Services: 64.1
 Unemployment %: 10.4

EDUCATION

Education is free, universal, and compulsory for seven years, between ages six and 12.

Schooling lasts for 12 years, as divided into seven primary grades (known as standards), three years of secondary school (known as forms), and a two-year pre-university course known as the sixth form. Those completing the first five primary grades must take a common entrance examination. Those who are not admitted to secondary school take a two-year senior primary cycle or a five-year intermediate cycle.

The school year runs from September to July. The language of instruction is English throughout.

Primary school teachers are trained at three government and two private colleges. There is no institution for training secondary-school teachers.

About 41 percent of secondary-school enrollment is private. Vocational and technical programs offered in state as well as private institutions are two or three years in duration. Part-time schools make up half of the enrollment in the vocational stream.

The literacy rate in 2003 was 98.6 percent. Net enrollment in 2002 was 91 percent at the primary level, 72 percent at the secondary level. Public expenditures on education in 2002 totaled 4.3 percent of GDP.

Because Trinidad and Tobago claims the highest rate of literacy in the Caribbean and South America, adult education programs are oriented around subjects such as nutrition, culture, and handicrafts.

Both government and assisted schools (the latter owned and operated by voluntary agencies) are financed by the federal government.

Higher education is provided by the University of the West Indies at its St. Augustine campus, which has faculties of engineering, arts, and agriculture. John F. Kennedy College is a liberal arts school outside Port of Spain that was built with a grant from the U.S. Agency for International Development. The Trinidad and Tobago Hotel School offers courses for the hotel, catering, and travel industries, while the Eastern Caribbean Institute of Agriculture and Forestry trains students in ecological subjects. In 2002, 12,316 students were enrolled at universities and equivalent institutions.

SCIENCE AND TECHNOLOGY

Numerous publicly financed research projects are carried out by various government ministries. Primary among these is the Ministry of Agriculture, Land and Marine Resources, which operates research divisions in crops, animal health, fisheries, and forestry. The Institute of Marine Affairs, part of the Office of the Prime Minister, is responsible for fishery and natural resource research. The University of the West Indies has research faculties focusing on agriculture engineering as well as medical sciences and natural sciences.

Learned societies in Trinidad and Tobago include the Commonwealth Institute of Biological Control, the Agricultural Society of Trinidad and Tobago, the Tobago District Agricultural Society, the Pharmaceutical Society of Trinidad and Tobago, and the Sugar Manufacture Association of Trinidad and Tobago. As of 2001 there were 393 researchers per million population. Government expenditures on research and development totaled 0.1 percent of GDP in 2001. As of 1997 science and engineering students accounted for 41 percent of college and university enrollments.

MEDIA

Four daily newspapers are published in the country. Six weeklies are also published, including one in Chinese.

The Trinidadian press has a long tradition of freedom. The media's boldness and irreverence have occasionally alarmed the authorities, but few government efforts have been made to muzzle it or make it subservient to the ruling party's interests. Press censorship laws have been enforced only sporadically. Until 1974 Prime Minister Williams conducted a campaign against the two

leading newspapers, the *Guardian* and the *Evening News*, both owned by Lord Roy Thomson, which resulted in his relinquishing ownership. Subsequent prime ministers have tried to bend the news to fit their political tastes, with little success. In 2002 Prime Minister Manning signed the Inter-American Press Association's declaration on press freedom. The international media watchdog group Reporters without Borders ranked Trinidad and Tobago 14th out of 167 countries in its 2004 press freedom index.

There is no national news agency.

There are two radio networks: The National Broadcasting Service, or Radio 610, with one FM and one medium-wave transmitter, broadcasts a home service in English for 119 hours a week; Radio Trinidad, a subsidiary of Radiodiffusion International, of London, with one FM and one medium-wave transmitter, broadcasts for 130 hours a week.

Television, introduced in 1961, is operated by the Trinidad and Tobago Television Company, which is state-owned and on the air for 73 hours a week. There are three stations. NBN, a public broadcaster that operated two TV and four radio stations, closed in 2005 after more than 40 years on the air. A new state-owned company, the Caribbean News Media Network, planned to start broadcasting later in 2005.

The largest library is the Central Library in Port of Spain. There are two other public libraries and one university library.

In 2002 there were about 362,000 cellular telephone users and 138,000 Internet users. The government makes no attempts to curtail access to the Internet.

CULTURE

Calypso music, steel bands, and carnival are some of the cultural diadems Trinidad and Tobago has shared with the world. Steel drums, made from discarded oil drums, are an integral part of the pyrotechnics of carnival, celebrated in the days before Lent. The roots of calypso are also found in Trinidad, dating back to the time when slaves sang in their own languages or in patois and made fun of their masters; calypso lyrics still provide a medium for social satire. Two famous calypso musicians are Mighty Spar-

row and Lord Kitchener. Soca, which is derived from soul and calypso, is another well-known Trinidadian musical form. Similarly, the music of indentured servants from India, known as chutney music, has become popular.

Literature is another Trinidadian specialty. For a small country, it has turned out an amazing variety of world-class authors, including the brothers V. S. and Shiva Naipaul. V. S. Naipaul is a Nobel laureate, as is another longtime resident who was born in St. Lucia, Derek Walcott. Other writers of note are Samuel Selvon and C. L. R. James.

FOLKLORE AND MYTHOLOGY

Much of the folklore of Trinidad and Tobago is African in origin and bears French, Spanish, and English influences. Folk traditions can be seen enacted during carnival, when costumed revelers assume the guise of staple mythological entities, including the devilish Diabla, similar to the Greek Circe, who attracts men and then transforms them into pigs. This Trinidadian devil woman is personified both as a crone and as a beautiful woman. Numerous folktales are told about Papa Bois, the most widely known of all Trinidadian folklore characters. He is the old man of the forest and is known by many names, including Maître Bois (master of the woods) and Daddy Bouchon (hairy man). Dressed as a deer or in ragged clothes, he is the protector of forest animals and trees. His son, Calaloo, fought a legendary battle with Man crab that is used in carnival themes.

Other major and minor characters in Trinidadian folklore include Mama Dlo, whose name is derived from the French *maman de l'eau*, which means “mother of the water”; a hideous creature, her lower half takes the form of an anaconda. She is sometimes thought to be the lover of Papa Bois. The Soucouyant, yet another spirit, takes the form of an old woman during the day and turns into a ball of fire at sundown, searching for victims from whom she steals blood. *Duennes*, or *douens*, the spirits of children who died before they were baptized, entice other children into the woods, where they abandon them. Ligahoo, also called Lagahoo or Loup Garou, is the shape-changing wolf man of Trinidadian lore. Witch tales also abound in the nation. Tobago has its own special tale of the African

witch Gang Gang Sara, as well as numerous mermaid and fairy maid (river spirit) tales.

ENTERTAINMENT AND RECREATION

Having a party, or *fête*, and hanging out, or “liming,” are two particularly Trinidadian forms of entertainment. Carnival in Trinidad is a celebration that goes beyond age or ethnic origin; it lasts two days and is looked forward to the entire year. The art of liming has gained new dimensions in Trinidad, where friends spend time at the beach, in bars, or on street corners. The term has become synonymous with loitering, and “No Liming” signs can be seen posted at many locations.

Music dominates much of leisure time in Trinidad, especially calypso and soca. Bands play at clubs, and people listen to their favorite groups on radio, tape, or CD.

Television is another favorite form of entertainment. Privately-run TV6 dominates ratings with its soap opera *Westwood Park*, which chronicles the lives of several wealthy Trinidadian families. Movies from India are also particularly popular.

ETIQUETTE

A casual way of life informs the system of etiquette in Trinidad and Tobago. Greetings can be very informal, including “Yo, what’s happening,” which was in use in the islands long before it became popular in North America. People generally nod or politely greet one another as they pass in the streets. Handshakes are typical, and kissing on the cheek is also a traditional greeting.

Such informality is lost when it comes to the use of more formalized forms of address. Titles are often used with names, and the use of first names is reserved for friends.

Dining is continental style, with both fork and knife used simultaneously.

FAMILY LIFE

Women wield a good deal of power in families of African descent but less in Indian families. In both, the extended family is important, and relations usually live close to one another. Children are valued, and strict discipline is common. Children typically live with their parents until they marry, and arranged marriages are common in all communities. Though divorce is legal, it is not socially acceptable. As of 1997 only one in 1,000 people were divorced. Families, once large, have become smaller in modern times. The 2004 fertility rate was 1.75 children per woman.

PERSONAL APPEARANCE

Western dress is usual for Trinidadians. Urban men often wear what is known as a shirt *jac*, a belted jacket accompanied by a scarf instead of a shirt. The Indian population tend to wear some traditional clothing, including turbans and saris.

During carnival the most flamboyant clothing is on display, with vibrant colors and myriad styles and fabrics. Feathers, shells, sequins, and even leaves are part of such costumes, as are body paint and glitter.

SPORTS

Trinidad and Tobago reveals its colonial roots in some of the sports still enjoyed. Perhaps the most important spectator sport is cricket; there are numerous local clubs as well as the all-Caribbean West Indies team, which competes with other Commonwealth teams. Trinidad and Tobago nationals, as part of the West Indies cricket team, have dominated the game of cricket internationally for years. Brian Lara, a Trinidadian who plays for West Indies, is one of the stars of Caribbean cricket, a leading batsman and runs scorer. Another athlete with an international reputation is Ato Boldon, of track and field fame; the sprinter is the winner of six world championship events and has been to four Olympic Games.

Other popular sports are soccer, rugby, volleyball, field hockey, horse racing, and boat racing. There are many beautiful golf courses on Trinidad.

CHRONOLOGY

- 1962 Following the breakup of the West Indies Federation, Trinidad and Tobago is granted independence, with Eric Williams as prime minister.
- 1965 The Trinidad and Tobago dollar is introduced, replacing the West Indian dollar.
- 1967 The United States returns the Chaguaramas naval base to Trinidad.
- 1970 Black power-inspired riots lead to the declaration of a state of emergency; radical armed forces units mutiny and try to march on the capital but are foiled by the coast guard.
- 1971 Opposition boycotts elections; as a result, the ruling People's National Movement (PNM) wins all seats in the House of Representatives.
- 1976 Trinidad and Tobago adopts a republican constitution; Governor-General Ellis Clarke becomes first president of the republic; in national elections the PNM gains 24 seats, thus retaining a solid majority.
- 1980 Tobago is granted internal autonomy and a parliament; in the first elections to the Tobago parliament the separatist Democratic Action Congress wins 54 percent of the vote and eight of 12 seats.
- 1981 Prime Minister Williams dies. George Chambers is named prime minister. In new legislative elections the PNM retains its majority in the House of Representatives.
- 1986 A. N. R. Robinson becomes prime minister.
- 1990 On July 27, members of the Muslim sect Jamaat al-Muslimeen stage a coup attempt against Robinson during which Robinson and several cabinet members are held hostage. Robinson is freed on July 29, and the rebels surrender the following day.
- 1992 The Muslim militants are granted amnesty by the government.
- 1993 Economic growth is spurred by the discovery of large supplies of natural gas.
- 1995 The United National Congress and the National Alliance for Reconstruction form a coalition government, with Basdeo Panday as prime minister, and the PNM officially becomes the opposition party.
- 1997 The PNM loses two additional seats as members of the party announce themselves as independents. Robinson is easily elected president.
- 1999 Trinidad and Tobago restores capital punishment.
- 2000 Panday wins another term in office after his UNC wins 19 of 36 seats in parliament.
- 2001 Early general elections yield an unprecedented tie, in which the governing party and the main opposition party win 18 seats each. The president appoints Patrick Manning prime minister.
- 2002 October elections give the PNM a clear majority of 20 seats in parliament.
- 2003 Opposition protestors take to the streets in May to protest high crime levels. The state-run sugar company, Caroni, closes its doors; 8,000 jobs are lost.
- 2004 A Trinidadian becomes the president of the newly formed Caribbean Court of Justice.
- 2005 The Manning government raises the minimum wage to \$1.50 an hour.

March 20, 1956

DATE OF CONSTITUTION

June 1, 1959; amended 1988, 2002

GEOGRAPHICAL FEATURES

Tunisia, Algeria, and Morocco form the Berber-influenced area of North Africa known as the Maghreb (west), and Tunisia is the smallest and easternmost of the three. It is bordered by Algeria to the west and Libya (which is sometimes also included in the Maghreb) to the southeast. Because the country has not been completely surveyed, there is disagreement on the total area, but official estimates place it at 163,610 sq km (63,170 sq mi). The nation has a total coastline of 1,148 km (713 mi), including offshore islands in the Mediterranean Sea. The

greatest distance north to south is 792 km (492 mi), that east to west 350 km (217 mi).

The boundaries with Algeria and Libya, largely undemarcated, run 965 km (600 mi) and 459 km (285 mi), respectively.

Tunisia has three distinct physical regions. In the north are the mountains of the Tell Atlas and the Dorsale, separated by the fertile valley of the Medjerda River. The Tell is generally divided into the coastal, central, and high Tells. South of the Dorsale ridge is a wide expanse of barren plateau, which the Tunisians call the center. Its western half is known as the high steppe

Tunisia

and its eastern half as the low steppe. Eastward, the low steppe gives way to the flat coastal plain of the Sahel, between the Gulf of Hammamet and the Gulf of Gabes. Southward, beyond the extensive salt lakes dominated by the Chott Djerid, lies the country's vast Saharan desert sector.

CLIMATE AND WEATHER

Tunisia has two distinct Mediterranean-type seasons: a cool rainy season from October to April and a warm dry season from May to September. The temperatures in the Tell region vary between 5°C and 26°C (41°F and 79°F), with a mean of 17.8°C (64°F), while southern Tunisia experiences desert conditions, with temperatures rising to 40°C (104°F). Rainfall, concentrated during the winter months, is greatest to the north of the Dorsale, where it exceeds 460 mm (16 in) a year, reaching over 1,520 mm (60 in) in the Kroumirie Mountains, which form the wettest area in North Africa. South of the Dorsale rainfall is reduced to 200 to 400 mm (8 to 16 in) annually. In the southern desert rainfall is less than 350 mm (10 in) annually and occurs only at rare intervals.

FLORA AND FAUNA

Vegetation and animal life in Tunisia reflect the varying landscapes and extreme climatic variations. The country has numerous types of trees. In the Kroumirie Mountains, in the north, the cork oak is common. Other northern trees include pine and oak. In drier, hotter regions the jujube and gum tree predominate. In the central and southern steppes, esparto grass is the major vegetation.

Large forms of animal life include wild boar and wild sheep in the northern mountains and jackals and gazelles

in the steppes. Scorpions are found throughout the country, and cobras and horned vipers are among the poisonous snakes. Locusts are a crop nuisance in the south.

ETHNIC COMPOSITION

Though Tunisians are the most completely Arabized people of the Maghreb, persons of unmixed Arab blood have never constituted more than 10 percent of the population. Most Tunisians belong to mixed Arab-Berber stock. While elements of traditional Berber culture were adopted by the Arabs, the term Berber properly refers only to the few small, scattered communities that have completely rejected Arabization. The largest of these Berber communities are found in enclaves on the island of Djerba, in the Ksour Mountains, around Qafsah near the Libyan border, and in the mountains bordering Algeria. The ethnic composition of the Arab-Berber population has been only slightly affected as a result of Turkish and later French domination.

The country's Jewish population, numbering 60,000 in 1956, has declined to a few thousand, or less than 1 percent of the population. The French presence similarly eroded after the nationalization of French estates. Europeans are estimated to number no more than 50,000. The main non-French foreign communities are Greek and Italian.

LANGUAGES

Arabic is the official language, but French remains entrenched as the language most widely used by business-

people, the media, and even the government itself. About two million persons are estimated to have some knowledge of French, of whom about 15 percent are fluent. The native Berber language is no longer a written language and survives only among a small Berber-speaking minority.

RELIGIONS

Islam in its Sunni form is the state religion, and Muslims form about 98 percent of the population. There are small minorities of Christians and Jews. Carthage is a Roman Catholic archbishopric.

Despite the official status of Islam and the generally traditionalist character of Tunisian society, Habib Bourguiba, during his presidency, initiated a number of reforms in areas where Muslim religious injunctions and observances seemed to conflict with the secular needs of modern Tunisia. He was successful in abolishing polygamy, the use of the veil, and Muslim inheritance laws, but he was unsuccessful in his attempt to abolish the Ramadan fast.

While Islam is the state religion, the constitution guarantees religious freedom. Proselytizing for religions other than Islam, however, is prohibited.

Jewish and Other	101,000

HISTORICAL BACKGROUND

Tunisia was inhabited in antiquity by the seafaring Phoenicians. A wide-ranging mercantile state was founded at Carthage by the Phoenicians, whose great general Hannibal was the terror of Rome around 211 B.C.E. Carthage was eventually captured by Rome and burned to the ground in the Punic Wars in 146 B.C.E. The Romans subsequently rebuilt the city, making it one of the great cities of the ancient world. The decline of Roman Carthage was hastened by the invasions of the Vandals.

In the seventh century C.E. the region fell to Arab invaders, who Arabized and Islamized its inhabitants permanently. A series of Arab dynasties held sway over the country in the succeeding centuries: those of the Aghlabids (ninth century), Fatimids (10th century), Zirids (11th century), and Hafsids (13th to 16th centuries). The Hafsids made Tunisia one of the most flourishing regions in the Maghreb, as the Arabs called the western Mediterranean, and their power lasted until the arrival of the Ottomans in the 16th century.

The Ottomans ruled Tunisia through vassal rulers known as beys who were in power until 1957. The

beys were fiscally irresponsible and fell in debt to British, French, and Italian interests. To restore order, the French invaded Tunisia in 1881 and imposed a protectorate through the Treaty of Bardo and the Convention of La Marsa (1882), which allowed the beys to remain nominally in charge in return for the cession of power to the French. After a half century of French rule the nationalist movement within the country became more assertive. In 1934 Habib Bourguiba founded the Neo-Destour Party in order to seek autonomy. Little progress was made until World War II weakened the French position and France recognized Tunisia as a semiautonomous state. Yet the French continued to resist until 1956, when they finally yielded and recognized independent Tunisia.

Elections for a constitutional assembly were held shortly after independence, and Habib Bourguiba became prime minister. In 1957 the assembly abolished the monarchy and established a republic. A new constitution was promulgated two years later, establishing a presidential system. The first National Assembly was elected in November 1959, with the Neo-Destour Party the dominant force. The only parliamentary opposition came from the Parti Communiste Tunisien (PCT), which was outlawed in 1963. The Neo-Destour Party, renamed the Parti Socialiste Destourien (PSD) in 1964, was the only legal party from 1963 to 1981, although a one-party state was never institutionalized.

Led by Bourguiba, the government pursued a socialist program, collectivizing agriculture and expropriating foreign property. Bourguiba consolidated his power and ruthlessly suppressed opposition; in 1964 the PSD declared him president-for-life, a constitutionally dubious move that was validated only the following year when the National Assembly, all of whose members belonged to the PSD, voted to amend the constitution.

By the mid-1970s Bourguiba was over 70 and in failing health, and opposition groups were demanding greater political freedom. In 1978 the most influential unofficial opposition group, the Union Générale de Travailleurs Tunisiens (UGTT, General Union of Tunisian Workers), joined with the unemployed and major political dissidents in a general strike. Armed forces were called to intervene, and 51 people were killed. Some voting regulations were liberalized in 1979, but the government clung to the entrenched one-party system. Muslim fundamentalists proved a threat to the government during the early 1980s, when Bourguiba's refusal to deal with UGTT demands pushed many into the more fundamentalist Mouvement de la Tendance Islamique (MTI).

In 1981 Bourguiba announced his willingness to officially recognize other political parties provided that they rejected violence and religious fanaticism, and in July the PCT was granted official recognition.

Widespread rioting in January 1984 was set off by a 115 percent increase in the price of bread and the cessation of government food subsidies. Bourguiba's personal

intervention to cancel price increases reestablished peace. However, unrest continued into 1985, with students and Islamic militants holding strikes and demonstrations; the UGTT also became involved in calling a series of strikes. As a result, Habib Achour, the dominant UGTT leader, was sentenced to prison. By 1987 the government had forced the UGTT to support the PSD.

A general election for the National Assembly was held in 1986, in which the PSD won all 125 seats. In 1986 and 1987 the government took a hard-line stance against Islamic fundamentalism, sentencing four to death and imprisoning 22 others for a variety of offenses.

In November 1987 seven physicians declared Bourguiba unfit to govern because of senility and ill health. The constitution provided for the prime minister, Zine El Abidine Ben Ali, to assume the office of president. Hedi Baccouche was named prime minister.

The new administration adopted a policy of national reconciliation. The publication of opposition newspapers was once again allowed in 1987, and political and other detainees were released. In 1988 the name of the PSD was changed to the Rassemblement Constitutionnel Démocratique (RCD, Constitutional Democratic Rally), in line with the new government's moves toward democratic reform. That year the National Assembly instituted a multiparty system affording the legal recognition of other political parties, provided that they agreed to adhere to the constitution and avoid pursuing religious, racial, and linguistic objectives.

In July 1988 the National Assembly amended the constitution to abolish the post of president-for-life, providing for the president to be elected to no more than three consecutive five-year terms. The cabinet was reshuffled, with seven members from the Bourguiba regime dismissed; Hedi Baccouche remained the only significant representative from the earlier administration.

Legislative and presidential elections took place on April 2, 1989. Ben Ali was elected president for a five-year term, and the RCD won all 141 seats in the National Assembly, the number of seats having been increased from 125 to 141 in March. The electoral system, which had been reformed in December 1988, continued to favor the ruling party, such that even though the strongest opposition party, the MTI, by then renamed the Parti de la Renaissance, had won approximately 10 percent of the votes, it did not win any seats. The RCD denied any electoral misconduct. Local elections held in 1990 highlighted the growing tension between the government and the opposition: Opposition parties boycotted the elections, and the RCD won control of all but one of the 245 municipal councils.

In 1993 electoral law was changed to assure opposition parties representation in the general election. Regardless, the RCD won 98 percent of the vote, gaining 144 seats in the 163-member house, and President Ben Ali was reelected without challenge. In 1995 the RCD

won control of all 257 local councils in municipal elections. In 1999 Ben Ali was elected to the presidency for the third time.

On April 6, 2000, Bourguiba died at age 96. A seven-day period of mourning was declared, and thousands of mourners lined the route of his funeral procession. Tunisia condemned the terrorist attacks in New York and Washington, D.C., in 2001, and in 2002 the nation was the victim of such an attack itself when a truck bomb exploded outside a synagogue on the resort island of Djerba. Ben Ali called for an international conference on terrorism.

In 2002 Tunisian voters passed several constitutional amendments. One ended presidential term limits, allowing Ben Ali to seek a fourth term, while another called for the establishment of a second legislative body, the Council of Advisors, to balance power. In 2004 Ben Ali was again elected president, with 95 percent of the vote, amid charges of vote rigging and electoral fraud. Parliament established a second legislative body in July 2005.

LIST OF MODERN RULERS

President

1957–87 Habib Ali Bourguiba

1987– Zine El Abidine Ben Ali

CONSTITUTION

The original constitution of the Republic of Tunisia, promulgated in 1959, was amended in 1988 and 2002. The document as amended in 1988 established the president as head of state, head of the executive branch of government, and commander in chief of the armed forces. He is elected by universal suffrage at the same time as the National Assembly, for a five-year term; he was to serve no more than three consecutive five-year terms. The president must be between 40 and 70 years of age. The president has the power to designate the prime minister and the Council of Ministers and to rule by decree when the National Assembly is not in session. He also has supreme military command and appoints all civil and military officials. Amendments in 2002 ended the term limit for the presidency and also provided for a second legislative house, the Council of Advisors, due to be established in 2005. The 2002 amendments also increased the age limit of the president to 75, expanded civil liberties, and guaranteed human rights.

The Tunisian judicial system is based on the French and Koranic systems. The Court of Cassation, in Tunis, serves as the nation's supreme court. The judicial system also comprises three courts of appeal, 13 courts of first instance, and 51 cantonal courts. The president appoints all judges.

PARLIAMENT

The National Assembly (Majlis al-Umma) is a unicameral body consisting in 2005 of 189 members elected by direct popular vote for five-year terms, coinciding with the presidential term. The National Assembly holds two annual sessions of three months' duration each. The real legislative work is done by four permanent committees—political, general legislative, economic and financial, and social and cultural—which remain in constant session. The president of the republic has the right to propose legislation. He also may decree laws when the National Assembly is not in session, but the Assembly must ratify them.

Ultimate control of legislation rests with the National Assembly Bureau, whose members are chosen by the Political Bureau of the ruling RCD party. No item can be placed on the National Assembly agenda until it has been discussed in committee. The National Assembly Bureau coordinates the work of the committees and decides which proposals shall pass out of committee to be considered in plenary session.

In 2002 a constitutional amendment provided for the establishment of a second legislative body, the Council of Advisors which was formed in July 2005.

POLITICAL PARTIES

The Constitutional Democratic Rally (Rassemblement Constitutionnel Démocratique, RCD) won 152 of 189 seats in the 2004 elections. The RCD is a West-leaning party that nominally espouses democracy but is largely undemocratic in its tactics. The Islamic opposition movement Al-Nahda was disbanded by the government in 1991. Currently, none of the other six legal political parties, including the Movement of Social Democrats (Mouvement des Démocrates Socialistes, MDS) and the Communism-oriented Al-Tajdid, threaten the control of the RCD. In the 2004 election the MDS won 14 seats, the socialist Popular Unity Party 11, the Arab-nationalist Unionist Democratic Union seven, Al-Tajdid three, and the Social Liberal Party two. The main opposition group, the Democratic Progressive Party, boycotted the vote, saying its participation would only legitimize what it termed a masquerade of democracy. Regardless of the outcome of elections, the law stipulates that 20 percent of National Assembly seats be allocated to opposition parties. The 37 seats allotted to the opposition parties in 2004 were done so according to the proportion of votes each party won; for example, while the MDS won only 4.6 percent of the vote, they were allotted 14 seats as the winningest opposition party.

LOCAL GOVERNMENT

Tunisia is divided into 24 administrative districts known as *wilayats*, or governorates. Each is named for the major

population center in the area. Each *wilayat* is headed by a *wayi*, or governor, who is appointed by the president. The *wilayats* are divided into *mutamadiyats*, or delegations, each administered by a civil servant called a delegate. The smallest unit of local administration is the *secteur*, formerly known as the *sheikhat*.

LEGAL SYSTEM

The Tunisian legal system is an amalgam of French, Islamic sharia, and executive laws. The whole body of Tunisian law has been codified and includes seven codes promulgated since independence. The most important of these codes is the Code of Personal Status, which secularized the legal system, raised the status of women, abolished polygamy, made divorce subject to court decisions, and raised the age of marriage.

At the head of the court system is the Court of Cassation, consisting of four chambers, each with a president, the first president being the chief justice. Immediately below are the three courts of appeal, in Tunis, Sousse, and Sfax. Courts of first instance are found in all principal administrative centers and constitute the third tier of the judicial system. At the base of the system are the cantonal (*nahiyah*) courts, which have taken the place of the old sharia courts. Special courts include boards of arbitration, realty courts, the High Court of Justice (to try cases of treason), the Security Court, and administrative courts.

The judiciary is not independent, as it is subject to the executive. Judges are appointed by the president on the recommendation of the Supreme Council of the Magistracy.

HUMAN RIGHTS

In terms of civil and political rights, Tunisia is classified as a partly free country. Citizens still do not have full political freedom. There are curbs on the press and on freedom of speech.

In the 1980s Tunisia made impressive strides toward achieving a more open and responsive society. All political prisoners were released, and some exiles were permitted to return. Efforts were made to ensure probity in the government. Trade union freedoms were restored, and students achieved national representation.

During the mid-1980s there was a loosening of controls over the media and over the rights of public assembly. The opposition and independent press continued to voice constant, if guarded, criticism.

Following the bloodless coup that deposed Bourguiba in 1987, the new administration adopted a policy of national reconciliation. One of the measures promulgated permitted the publication of opposition newspapers. However, human rights reports in 2000 charged that hu-

man rights defenders and their families were increasingly targeted, as were other activists, such as trade unionists and journalists, and government opponents and critics from across the political spectrum. Scores were arrested, and many were subjected to harassment and intimidation, were prevented from leaving the country, and had their communication lines intercepted and disrupted. Political trials grossly violated minimum standards for fairness. Reports of torture and ill-treatment during secret detention and in prisons continued to be received. At least one detainee was reported to have died in custody as a result of ill-treatment. No executions were reported. Human-rights reports have continued to make charges against the government regarding arbitrary arrest, harassment, and police brutality. The 2004 U.S. State Department report on human rights in Tunisia listed numerous incidents of such violations.

FOREIGN POLICY

Tunisia is a moderate Arab state and is generally pro-Western on most foreign policy issues, though it is officially nonaligned. Relations with Libya were ruptured in 1980 over the Libyan seizure of a southern town in Tunisia, as followed by the expulsion of Tunisian workers from Libya. Relations were patched up in 1989 at the time of the formation of the Arab Maghreb Union. The Iraqi invasion of Kuwait in 1990 precipitated a change in Tunisia's hitherto pro-Western orientation: Tunisia condemned the U.S. deployment of troops in Saudi Arabia and the allied bombing of Iraq. Along with Algeria, Tunisia is engaged in a struggle with Islamic militants. In 1991 the nation broke relations with Sudan over Khartoum's support of terrorist groups. Under Ben Ali, Tunisia has aimed to maintain internal stability and regional security. It has actively worked to broaden the activities of the Arab Maghreb Union and strengthen relations with the West, and it supports the Middle East peace process. The Tunisian authorities, public, and press were unanimous in condemning the attacks on New York and Washington, D.C., on September 11, 2001. Good relations between Tunisia and the United States survived the U.S.-led invasion of Iraq in 2003. Relations with the country's number-two trading partner, Italy, have deteriorated over the issue of illegal immigration.

DEFENSE

The president of the republic heads the defense structure and is also the commander in chief of the armed forces. Manpower is provided by conscription at age 20, as followed by one year of active service. Volunteers can join at age 18. As of 2002 Tunisia had an army of 47,000 personnel, excluding paramilitary forces. The defense forces include a gendarmerie of 2,000.

Since 1960 the United States has been Tunisia's major arms supplier. Between 1966 and 1983 military aid from the United States consisted of \$319.5 million in loans and \$70.7 million in grants. A formal U.S. Military Assistance and Advisory Group was established in Tunis in 1968. Arms purchases in 1998 totaled \$40 million, of which \$8.6 million came from the United States. Military spending in 2001 was \$328 million, or 1.6 percent of gross domestic product (GDP).

Tunisia has no defense-related industries.

ECONOMY

Tunisia has a diverse economy, with important agricultural, mining, energy, tourism, and manufacturing sectors. Governmental control of economic affairs, while still heavy, has gradually lessened over the past decade, with increasing privatization, simplification of the tax structure, and prudence regarding debt. Real growth averaged 5.5 percent between 1996 and 2000, and inflation is slowing; increased tourism and trade have been key elements with regard to this steady growth. Tunisia's associative agreement with the European Union entered into force on March 1, 1998, becoming the first such accord between the European Union and a North African country to be activated. Under the agreement Tunisia will gradually remove barriers so as to increase trade with the European Union through 2008. Broader privatization, further liberalization of the investment code to increase foreign investment, and improvements in government efficiency are among future challenges. Economic growth slowed to 1.9 percent in 2002 as a result of drought and a falloff in tourism due to terrorism. Better weather conditions restored GDP growth to 6 percent in 2003 and 2004.

ENVIRONMENT

Tunisia suffers from a number of increasingly serious environmental problems, including threats to human health from poor toxic and hazardous waste-disposal techniques, water pollution produced by unprocessed sewage, and limited freshwater. In addition to these, the country's continued clearing of land for agriculture and development leads to soil erosion, deforestation, and desertification.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Tunisia 92nd out of 177 countries in terms of life expectancy, education, and standard of living. The average Tunisian's life expectancy in 2005 was almost 75 years, literacy stood at 74.2 percent as of 2003, and 75 percent of eligible students were enrolled in primary, secondary, and tertiary schools in the 2002. Per capita GDP was \$7,100 in 2004. Tunisia ranks about in the middle of Arab states in terms of quality of life.

Though Tunisians are almost all Muslims, they see themselves as more secular and liberal than their Arab neighbors. They absorb influences from abroad but consciously attempt not to allow Westernization to dominate their society. With an estimated 75 to 80 percent of the population in the middle class, Tunisia offers an alternative to kingdoms in the region where wealth is concentrated in the hands of the few. Most of the Tunisian population has access to good drinking water, and there is electricity in almost all homes. The ownership of consumer goods is on the rise. In 2003, 92 percent of households owned televisions, while 37.2 percent had landline phones and 18.8 percent owned cars.

Tunisia is increasingly becoming an urban nation. In 2003, 67.4 percent of the population lived in towns and cities. Tunisia has very little lumber, such that most

homes are built of stone, adobe, or concrete. Regardless of the materials used, facades tend to be similar: white walls and blue doors. Tunis, the capital, is crowded, as are the other Tunisian cities, due to rapid urbanization and the steadily growing middle class. Most single-family homes are small, and it is common for neighboring walls to touch each other. To make use of small building spaces, houses are several stories high, and flat rooftops become additional living spaces.

HEALTH

About 80 percent of all health care in Tunisia is free and administered through a pyramidal network of local clinics and small hospitals, regional hospitals, and specialized urban hospitals. The number of doctors in the country grew from 4,482 in 1991 to 6,459 in 2004, which was equal to about one doctor for every 1,400 people. Also as of 2004 there were about 26,000 nurses, 1,200 dentists and 1,600 pharmacists. Despite such impressive numbers, there remain regional shortages of medical providers, as most physicians practice in the cities, leaving rural areas understaffed.

Contagious diseases have largely been controlled in Tunisia. In 2002 there were 26 cases of tuberculosis per 100,000 people. About 260 AIDS cases were reported in 1996, a sharp increase from the 46 cases reported in 1994; by 2003 about 1,000 people were living with HIV/AIDS, and almost 200 died of the disease that year. Smoking is a major health risk among adult males, 62 percent of whom use tobacco. As of 2002, 82 percent of the population had access to safe drinking water, 80 percent to adequate sanitation.

The government finances routine immunizations. Immunization rates for children up to one year of age for 2003 were as follows: tuberculosis, 93 percent; diphtheria, pertussis, and tetanus, 95 percent; polio, 95 percent; and measles, 90 percent. The government supports a family-planning program. As of 2005 the crude birth rate and overall mortality rate were estimated at 15.5 and 5.1 per 1,000 people, respectively. About two-thirds of women used contraception between 1995 and 2003. The fertility rate in 2005 was 1.75 children per woman; the infant mortality rate was under 25 deaths per 1,000 live births. Government spending on health totaled 2.9 percent of GDP in 2002.

FOOD AND NUTRITION

Couscous is the most popular dish in Tunisia; steamed grains of semolina wheat serve as a bed for spicy vegetable or meat stews, with such a meal a staple for lunch or dinner. Lamb is a popular meat, served as cutlets or in shish kebabs. Seafood is plentiful and popular. *Chakachouka* is a Tunisian salad made of tomatoes, onions, peppers, and hard-boiled eggs. Another popular dish is *mechouia*, a combination of grilled tomatoes, peppers, and onions with olive oil, tuna fish, sliced hard-boiled eggs, lemon juice, and capers. Stews cooked in earthenware go by the name of *tajines*. Spinach *tajine* is particularly popular; others are made from chicken and even prunes.

Tunisians commonly drink strong Turkish coffee and sweet mint tea. Pork is forbidden by the Islamic religious code. Alcohol, usually also prohibited as such, is widely available, and Tunisia produces a number of good wines.

Nutrition is improving in Tunisia. Only 4 percent of children under five were underweight between 1995 and 2002. Iodized salt was used in 97 percent of households between 1997 and 2003.

Food and Nutrition

 Amount of Fruits and Vegetables Available per person per year kg: 256.3

STATUS OF WOMEN

Legal equality between men and women is vigorously supported by the government. Equal rights in the areas of divorce and child custody, for example, are guaranteed by legislation. A small number of women serve in the government at all levels. Nevertheless, the centralized nature of decision making generally limits the influence of women at the national level. Despite the government's efforts, in many cases traditional practices keep women from fully attaining their legal rights, especially in rural areas.

WORK

In 2003 the Tunisian labor force was over 3.5 million strong. About 55 percent of workers are employed in the service sector, 23 percent in industry, and 22 percent in agriculture. Industrial sectors include petroleum, mining (particularly phosphate and iron ore), tourism, textiles, footwear, agribusiness, and beverages, while agricultural products include olives, olive oil, grain, dairy, tomatoes, citrus fruit, beef, sugar beets, dates, and almonds. Tourism is one of the largest employment sectors. There is a distinct shortage of skilled labor in the country. The 2004 unemployment rate was 13.8 percent.

The constitution and the labor code provide workers with the right to organize and form unions, and the government generally respects these rights in practice. The General Union of Tunisian Workers (UGTT) is the country's only labor federation. Approximately 30 percent of the workforce belongs to the UGTT, including civil servants and employees of state-owned enterprises, and a considerably larger proportion of the workforce is covered by union contracts. The rights to collectively bargain and strike are observed. In 2004 minimum wages were \$173 per month in industry and \$5.94 per day in agriculture. The workweek is 48 hours, and the minimum age for employment is 16; however, children as young as 14 can work part-time in industry. In the agricultural sector 13 is the minimum working age.

EDUCATION

Schooling is free but neither universal nor compulsory in primary and secondary schools. The academic year runs from October 1 to June 30. The language of instruction is Arabic for the first two years of primary school; thereafter both French and Arabic are used.

The school system is organized into three levels: elementary, intermediate (secondary), and higher. Since 1958 the traditional Koranic schools have been incorporated within the secular school system. The elementary level consists of six years of schooling. The secondary level is divided into an academically oriented seven-year program and a trade-oriented six-year program; both begin with a three-year lower cycle, as followed by a four-year upper cycle in the academic program or a terminal three-year cycle in the trade program. Overall, the secondary level consists of six tracks, of which four are general, one is commercial, and one is technical. Nearly 17 percent of secondary students are enrolled in the technical track. Private schools account for 1 percent of primary enrollment and 6 percent of secondary enrollment.

Adult education is emphasized as a development process. The Institute of Adult Education is charged with two programs: short-term literacy training and a continuing course of social education. Of the 316 literacy training centers, 172 are run by the army, which uses conscription to combat illiteracy.

Control of education is centralized with the state; all educational facilities are nationalized and integrated within a single system. A large corps of inspectors is charged with monitoring the school system to ensure conformity with officially established standards. Curricula are drawn up by technical committees appointed by the secretary of state for national education; textbooks are authorized and approved in a similar manner.

The tertiary level consists of four years of schooling in specialized academic or technical courses, as similar to the North American university system. Technical and vocational schools are also available. The country's oldest institution of higher learning is the University of Tunis. Two new universities were opened in Monastir and Sfax in 1986. French is used almost exclusively at the university level. In 2002 all higher-level institutions had over 263,000 students and almost 13,000 instructors.

The literacy rate was 74.2 percent in 2003. In 2002 net primary school enrollment was 97 percent, net secondary enrollment 65 percent. Public expenditures on education totaled 6.9 percent of GDP in 2001, or 18.2 percent of the nation's overall budget.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture administers several research institutes, including the Institut de la Recherche et de l'Enseignement Supérieur Agricole; Institut National de la Recherche Agronomique de Tunisie; and Institut National de la Recherche en Génie Rural, Eaux, et Forêt, which together carry out projects in crops, food technology, livestock, forestry management, and water-resource management. Additionally, the Secrétariat d'Etat à la Recherche Scientifique et la Technologie administers research institutes for fisheries, biotechnology, and arid-zone utilization technologies.

Medical research is conducted through the Pasteur Institute, founded in 1893. The University of Sciences, Technologies, and Medicine, in Tunis, has a comprehensive science program, and the University of Sfax has faculties of medicine and science. Between 1994 and 1997, 27 percent of university students were enrolled in science, mathematics, or engineering courses. In 2002 Tunisia had 1,013 scientific researchers per million people.

MEDIA

As of 2002 seven major daily newspapers were published in Tunisia, including *as-Sabab* (Arabic), *Assabafa/La Presse* (Arabic), *Le Renouveau* (French), *al-Amal* (Arabic), *La presse de Tunisie* (Arabic/French), *L'action* (French), and *Errai el-Am* (Arabic). The Arabic *ach-Chourouk* and the French *Le temps* are major weeklies. The daily press also consists of two organs of the government party, including *L'action*. The best known periodical is *Jeune Afrique*, which circulates widely in 10 African countries.

The national news agency is Tunis-Afrique Presse (TAP), a public corporation founded in 1961. Major foreign news bureaus in Tunisia include AFP, UPI, Reuters, and ITAR-TASS.

Broadcasting is a state monopoly controlled by Radiodiffusion Télévision Tunisienne (RTT), which operates stations at Djedeida, near Tunis; Sidi Mansour, near Sfax; Gafsa; and Monastir. In addition, three shortwave services (with 50 and 100 kw transmitters) are beamed throughout North Africa and the Middle East.

Television was introduced in northern and central Tunisia in 1966, with a transmitter at Jabal Zagħwan. By 1972 transmission spanned the country. RTT's seven main TV transmitters broadcast a national program, and a second channel was introduced in 1983. The two channels accepted advertising beginning in 1988. The nation's first independent television station was scheduled to begin broadcasting in 2005.

Though the freedoms of speech and the press are guaranteed, the government does not abide by the laws in question. It limits press freedom and intimidates journalists, editors, and publishers into practicing self-censorship. Security forces closely monitor press activity. The harassment of journalists by the government is common, and in rare cases security forces have used violence against them. The government routinely withholds press passes from journalists critical of the government and tightly controls the broadcast media, most of which it owns. Attempts at censorship extend to the foreign press, as well: Foreign periodicals critical of the government are not allowed inside the country, and government regulations require foreign correspondents to obtain written approval before videotaping any public area. Such policies earned Tunisia the ranking of 152nd out of 167 countries from Reporters without Borders, an international media watchdog group, in its 2004 press freedom index.

The government blocks access to a number of Internet sites, including nearly all sites belonging to domestic human rights, opposition, and Islamist groups, as well as many pornographic Web sites. In 2003 there were 630,000 Internet users and 1.9 million cellular telephone users in the country.

CULTURE

Tunisian culture bears a mixture of many influences. From the Roman past are ruins and well-preserved frescoes and mosaics from the houses of the wealthy. These can be

found in Tunis's Bardo Museum. The influence of Islam is everywhere to be seen in modern Tunisia, particularly in the architecture and rich ornamentation of the many fine mosques. The Turks left behind the culture of the bathhouse, and from the French came the high culture of painting and literature. Tunisia is something of an artistic corner in the African world, with modern galleries and a wide variety of contemporary artists, from the geometric forms of Hédi Turki to the Arabic calligraphy of Nja Mahdaoui. Other prominent Tunisian painters are Ammar Farhat and Jallah bin 'Abdallah. Tunisia has been a place of pilgrimage for European artists searching for the high contrast of North African sunlight. More than 50 Tunisian art galleries display the work of local and international artists alike.

Modern Tunisian literature includes work by such authors as the social essayist Tahar Haddad, the satirist Ali Douagi, and the poet Aboul Kacem Chabbi. Also prominent are the French-writing Albert Memmi, the author of *The Statue of Salt*, and Mahmoud Messadi, who writes in Arabic. Despite press censorship, Tunisian writers employ unique realism. Theater is also a popular art form, with the National Theater and the National Puppet Center primary among such cultural institutions.

Tunisian music ranges from the sad refrains of *malouf*, a traditional Arab style of music that is closely associated with Tunisia; to classical forms such as *nouba* (the oldest, of Andalusian origin), *chghoul*, and *bachraf* (of Turkish origin); to *foundou* and *zindali*, two main popular forms of music. The major music conservatory, the Rashidia Institute, in Tunis, preserves these musical forms as well as the European tradition.

Tunisian cinema has had some successes, such as *The Silence of the Palaces* and *A Summer in La Goulette*. Additionally, Tunisia has served as the location for major motion picture productions such as *The English Patient* and *Star Wars*. Tunisia is home to the Carthage International Film Festival.

Numerous other festivals, such as the Testour Malouf Festival (with traditional Andalusian *malouf* music), the Sousse International Cultural Festival, and the International Jazz Festival (in Tabarqah), blend music and the arts in a distinctly Tunisian manner. Other well-known museums include the Archaeological Museum of Carthage; the Museum of Kairouan, with its Islamic arts collection; and the Museum of El Jem, a Roman coliseum.

FOLKLORE AND MYTHOLOGY

Stories and legends of Muslim leaders form much of the folklore of Tunisia. Historical figures may have fought the Crusaders or Turkish invaders; often from religious backgrounds, these leaders were thought to be holy men who possessed a grace that allowed them to perform miracles. The graves of such holy men have become pilgrimage destinations.

Folktales in Tunisia also have religious significance, with many of them relating stories of the Prophet, Muhammad. Evil spirits are also a feature of Libyan and Arab folklore in general. These sprits, or jinn, are able to take on human form and need to be warded off by different methods, both religious and animistic. Under the leadership of the country's first president, Bourguiba, the belief in such legends and folklore was discouraged through efforts to create a modern secular state.

Many of Tunisia's traditional proverbs use metaphors of the Tunisian landscape. One rather jaundiced proverb about the difficulties of kin is "Relations are scorpions."

ENTERTAINMENT AND RECREATION

Tunisia is a country rich in festivals, with themes varying from cinema to music to falconry. In cities, towns, and villages, sidewalk cafés are places where mostly men gather to socialize, play chess or dominoes, drink tea and coffee, smoke *chichas* (water pipes), and play cards. Unlike other Muslim countries, Tunisia allows alcohol, and there are bars. Evening entertainment may also consist of a visit to the cinema or an evening at home. Camel races and soccer matches are well attended.

Listening to the radio and watching television—even though the content of both is strictly controlled by the government—are popular. Along the coast, outings to the beach are common, as are water sports such as swimming and scuba diving. The public bathhouse, a holdover from the Ottoman occupation, is still popular among both men and women, who use it for socializing as well as hygiene.

ETIQUETTE

Shaking hands is the typical form of greeting in Tunisia. Men who have not met in a long time may exchange kisses on the cheeks, but this does not occur publicly between the sexes in this Muslim country. Titles, often French, are used for formal situations. The right hand is used for greetings and for eating.

Islam has numerous other taboos, most prominently with respect to food and drink. Though alcohol is available in Tunisia, pork is generally not eaten. Bread is considered sacred, and bread crumbs should not be brushed

off the table to the floor. Shoes are removed before entering a home or mosque, and the soles of neither shoes nor feet are shown to others. The North American thumbs-up gesture is rude in Muslim countries. The role of the female in Muslim society is generally a subservient one, and it is considered impolite to ask about female members of a family if the topic is not brought up by the male head of the household. Dining is continental style.

FAMILY LIFE

Kinship ties formed the basis of traditional Tunisian society. The extended family living in one household was the rule; male children would bring new brides to live in the homes of their parents. Children were the responsibility of the entire extended family, and marriages were strictly arranged. Such traditions have broken down in the modern world, especially with the moves toward a more secular state that began in 1957. Nowadays, nuclear families predominate, marriages are matters of choice between bride and groom, and the size of the family has shrunk. In 2005 the fertility rate was 1.75 children per woman.

The traditional female role has changed as well. Increasingly, Tunisian women work outside the home in addition to performing household duties. The government has recognized such changing roles through a series of laws allowing for more equality between the sexes—laws often ignored in more-traditional enclaves. New stresses put on the family have led to a high incidence of divorce: Almost half of Tunisian marriages end in divorce, an unusually high rate for a Muslim country.

PERSONAL APPEARANCE

Western-style clothing and traditional attire coexist in Tunisia; everything from suits to jeans are worn. In 2003, however, the government reinstated public decency laws from the 1940s, and authorities have actually detained young women for wearing jeans deemed too tight or revealing.

More traditional clothing is especially common in rural areas. Older village men often wear the fez-like *chebia* as well as the robe-like *jalabiyya*, along with baggy pants. Women's traditional clothing includes the *sifsari*, a long outer garment with loose folds that may cover Western-style dress worn underneath. Rural women often wear the loose head covering called the *mellia*.

SPORTS

The most popular modern sport in Tunisia is soccer. The national team has competed for the African Cup and the World Cup. The sport's popularity has in large part led to

widespread demand for satellite television, as fans wish to watch foreign competition. In addition to being a spectator sport, soccer is one of the most popular participatory games in the country.

Track and field has become increasingly popular, as well. Tunisian runners have achieved international renown in middle- and long-distance events. More Western-style sports, such as golf, windsurfing, and diving, have also become more commonly enjoyed, in part because of the tourist trade.

The traditional sport of wild boar hunting is found mostly in the dunes, hills, and mountains of the Tabarqah region, and camel races are well enjoyed, as witnessed during the Sahara Festival in January and December.

CHRONOLOGY

- 1955** France grants internal self-government.
- 1956** France grants full independence on March 20. Neo-Destour Party wins absolute majority in elections for a constitutional assembly, and Habib Bourguiba is appointed prime minister. Tunisia joins the United Nations.
- 1957** Bey of Tunis is deposed. Republic of Tunisia is proclaimed, with Bourguiba as the first president.
- 1958** Tunisia joins Arab League. Dinar is introduced as unit of currency. Central bank is established.
- 1959** Constitution of the republic is promulgated. National elections are held. Under the Code of Personal Status, polygamy is outlawed, the legal system is secularized, Muslim marriage and divorce laws are reformed, the status of women is raised, and the age of marriage is raised.
- 1960** Bourguiba makes an unsuccessful attempt to abolish the Muslim fast during Ramadan.
- 1961** University of Tunis is reorganized. Crisis occurs over Tunisian call for withdrawal of French forces from naval base at Bizerte. The 10-year prospective plan of development is launched.
- 1962** Relations with Algeria are suspended.
- 1963** Tunisia joins the Organization of African Unity.
- 1964** French evacuate Bizerte; all French-owned estates are nationalized. Dinar is devalued. Name of Neo-Destour Party is changed to Destourian Socialist Party at the so-called Congress of Destiny; new socialist program is adopted. National elections are held.
- 1965** Bourguiba calls for Arab negotiations with Israel; this counsel of moderation is rejected by Arab nations; Syria and Iraq break relations with Tunisia.
- 1966** Television is introduced. Oil is found at El Borma field.
- 1967** Ties are restored with Arab countries following Arab-Israeli Six-Day War.
- 1968** Students riot against U.S. and U.K. embassies.
- 1969** National elections are held. Ban Salah, the powerful minister of planning and finance, is dismissed.
- 1970** Hedi Nouria replaces Bahi Ladgham as prime minister. Treaty is concluded with Algeria.
- 1971** Ahmed Mesteri, minister of the interior, falls into disgrace and is dismissed.
- 1974** National elections are held; Bourguiba is elected president for life and given enlarged powers. Union with Libya is first proposed, then repudiated.
- 1978** UGTT-led general strike erupts into violent riots, the worst in the nation's history, in which more than 46 are killed. Habib Achour, secretary-general of the UGTT, is sentenced to 10 years in prison for his part in fomenting the strike.
- 1979** Arab League establishes new headquarters in Tunis, following expulsion of Egypt.
- 1980** Prime Minister Hedi Nouria leaves office on account of illness; moderate Muhammed Mzali is named to succeed him as prime minister and secretary-general of the ruling PSD.
- 1981** One-party political system ends, with three opposition parties accorded legitimacy.
- 1982** Diplomatic relations are reestablished with Libya.
- 1983** Tunisia signs Maghreb Fraternity and Cooperation Treaty with Algeria.
- 1984** Bread riots break out following steep hike in food prices; Bourguiba rescinds price increases.
- 1985** Libya expels Tunisian workers.
- 1986** Colonel (later General) Zine El Abidine Ben Ali is appointed minister of the interior. Four Islamic fundamentalists are sentenced to death.
- 1987** Tunisia severs diplomatic relations with Iran. More than 3,000 Islamic fundamentalists are detained. Ben Ali is appointed prime minister and secretary-general of PSD. Bourguiba is declared unfit to govern, and Ben Ali is sworn in as president. Policy of national reconciliation is undertaken.
- 1988** PSD's name is changed to Rassemblement Constitutionnel Démocratique (RCD) to reflect administration's support of democratic reform. Multiparty system is instituted by National Assembly. Constitutional amendments abolish the post of president-for-life and institute new regulations for presidential elections. Seven cabinet ministers from Bourguiba's regime are dismissed.
- 1989** Presidential and legislative elections take place on April 2. Ben Ali is reelected president. RCD wins all 141 legislative seats.
- 1990** Local elections are held; the RCD wins control of all but one of the 245 municipal councils; Presi-

2400 Tunisia

- dent Ben Ali voices disapproval of U.S. actions leading to the Persian Gulf War.
- 1994** Radical Islamic groups threaten Tunisian political stability. Ben Ali is reelected president.
- 1998** The European Union agrees to lower trade barriers with Tunisia.
- 1999** Ben Ali is reelected president.
- 2000** Bourguiba dies in April; thousands mourn his passing.
- 2001** Several high-profile human rights cases puts Tunisia in the international spotlight.
- 2002** In April, 19 are killed in a terrorist bombing on tourist island of Djerba; al-Qaeda claims responsibility. A referendum ends term limit for the presidency and calls for the creation of a second legislative house, the Council of Advisors.
- 2003** The decree banning the wearing of the *hijab*, or veil, first passed in 1981, is renewed. Human rights cases again focus international attention on Tunisian treatment of dissidents and opponents.
- 2004** Ben Ali wins a fourth term as president.
- 2005** Council of Advisors is established in July.

Large white crescent facing a star on a red field

NATIONAL EMBLEM

An elliptical red shield bearing the republic's name in gold at the top, with a white crescent beneath and a white star in the center

NATIONAL ANTHEM

"İstiklal Marsi" (The March of Independence)

NATIONAL HOLIDAYS

January 1 (New Year's Day), April 23 (National Sovereignty and Children's Day), May 1 (Spring Day), May 19 (Youth and Sports Day), August 30 (Victory Day), October 29 (Republic Day), various Islamic festivals, Seker Bayram, Kurban Bayram

DATE OF INDEPENDENCE

October 29, 1923

DATE OF CONSTITUTION

November 7, 1982

GEOGRAPHICAL FEATURES

Turkey is the sixth-largest nation in Asia, occupying the landmass of the Anatolian Peninsula, in western Asia, together with the city of Istanbul and its Thracian hinterland, in southeastern Europe. The Asian and European portions of Turkey are divided by the Bosphorus Strait, the Sea of Marmara, and the Dardanelles Strait. Of its area of 780,580 sq km (301,382 sq mi), the vast majority is in Asia; the area in Europe is equal to 23,720 sq km (9,158 sq mi), or about 3 percent of the total. The total length of the coastline is 7,200 km (4,474 mi). Turkey shares its international border with eight nations: Bulgaria, Greece, Armenia, Azerbaijan, Georgia, Iran, Iraq, and Syria.

Turkey is one of the most earthquake-prone regions of the world, with a major structural fault line running

from the Sea of Marmara eastward in the general direction of Ankara. Over 85 percent of the land is over 450 m (1,476 ft) in elevation, with a median altitude of 1,125 m (3,691 ft).

The capital is Ankara, with a 2000 population of 3.2 million. The commercial and intellectual center of Turkey is Istanbul (2000 pop. 8.8 million).

Turkey is divided into five physical regions. The heartland of the country is the Anatolian Plateau, an arid, steppelike region with limited rainfall and cold winters. The eastern highlands, constituting the entire eastern third of Turkey, are a vast stretch of wild, barren wasteland with higher elevations and a more severe climate. The productive regions of the country are the Aegean coastlands, which contain half the agricultural wealth in the broad, cultivated valleys of the Bursa Plains; the Plains

of Troy; Izmit Valley; the Mediterranean coastland; and the narrow coastal ribbon of the Black Sea region.

The longest river completely within Turkey is the Kizil Irmak, which runs 96 km (60 mi) east of Sivas and reaches the Black Sea at Bafra.

CLIMATE AND WEATHER

Because of the proximity of mountain ranges to the coast and the great elevation of the interior plateaus, the Turkish climate is characterized by great extremes and wide temperature variations among regions and seasons—sometimes over 50°C (122°F). The coastal regions have a continental, temperate climate, with mild winters and moderately hot summers and a median of 19°C to 20°C (66.2°F to 68°F).

August is the hottest month, with a mean temperature of 28°C (82.4°F), and January the coldest, with a mean temperature of 8°C to 11°C (46.4°F to 51.8°F). In the interior plateaus, winters are cold, and frost occurs for more than 100 days a year. The summers are hot, with temperatures rising to 43°C (109.4°F). The climate of eastern Turkey is inhospitable, with bitter, cold winters and hot summers. Around the Aegean the summers are tempered by the northerly *meltemi*, or Etesian, wind. Rainfall, too, is variable. Winters are generally the wettest months on the coast. Rainfall averages 508 to 722 mm (20 to 30 in) annually along the Aegean and Mediterranean seas to over 2,540 mm (100 in) along the Black Sea. May is generally

the wettest month in the interior, where annual rainfall amounts to only 254 to 431 mm (10 to 17 in).

Climate and Weather

Mean Temperature

Coastal Regions: 66.2°F to 68°F

Interior: 82.4°F in August to 46.4°F to 51.8°F in January

Summer High: 109.4°F

Average Rainfall

Along the Aegean and Mediterranean: 20 in to 30 in

Along the Black Sea: 100 in

Interior: 10 in to 17 in

FLORA AND FAUNA

Turkey's flora is largely determined by its geography and climate. Along the coast of the Black Sea, where rainfall is relatively heavy and temperatures mild, trees such as the chestnut, oriental spruce, oak, fir, pine, and alder are common. Along the Mediterranean coast, myrtle, wild olive, pine, cypress, oak, and carob are typical. Shrub growth in the same region includes the laurel, holly, hazel, and rhododendron. There are deciduous forests along the coast. In the interior, where much of the land is steppelike and drier, much of the terrain is grassland. Some forests of cedar, beech, maple, and juniper also exist.

Animal life includes the beaver, marten, jackal, hyena, bear, deer, Turkish leopard, wolf, fox, boar, gazelle, and mountain goat. Domesticated animals include the Angora goat, camels, donkeys, horses, and other livestock. Game birds include the partridge, quail, snipe, woodcock, and wild goose. The country is also home to about 30 snake species.

POPULATION

ETHNIC COMPOSITION

In terms of official policy, there are no ethnic minorities in Turkey, the only distinctions being those of language and religion. However, ethnic homogeneity has been the goal of Turkish administrations, and national identity is limited to ethnic Turks; thus, only a person who speaks Turkish as his primary language, follows Islam, and owes allegiance to the Republic of Turkey qualifies as a Turk.

Estimates of the number of Turks in the population vary, with some placing the proportion as high as 80 percent. The Kurds form by far the most significant minority, with an estimated population approaching 14 million in 2005. They have long demanded an autonomous state (along with Kurdish groups in Iraq and other neighboring countries) and have just as long been suppressed, often ruthlessly, by the Turks.

The Kurds are traditionally a mountain people, largely pastoral, but many have made the transition to settled village life. Government attempts to fully integrate them into national life have not been particularly successful.

Another important minority are the 900,000 Arabs concentrated along the Syrian border. Both the Kurds and the Arabs have historically engaged in smuggling across the Syrian (and to a lesser extent, the Iraqi) border.

There is also an interesting community known as the Donme, descendants of the Jewish followers of a false messiah, Sabbatai Zebi, from the 17th century. They consider themselves Muslims but are not accepted as such by the Turks in general.

Except for the Kurds and Arabs, no ethnic minorities number over 100,000. Deportations and periodic exchanges of population have eroded the Greek community, which now numbers only some 70,000. There are about the same number of Armenians, survivors of the Armenian massacres of the 19th and 20th centuries. About 38,000 Jews remain in the country, fewer than in 1948. The Greeks, Armenians, and Jews are concentrated in Istanbul.

LANGUAGES

The official language of Turkey is Turkish, which is spoken by about 90 percent of the population. The most basic of Kemal Atatürk's reforms was the Dil Devrimi, or language revolution, which produced a new, more practical and precise language. Dil Devrimi consisted of two elements: the introduction of a new alphabet and the purification of the vocabulary by purging it of Arabic and Persian words. The new Turkish alphabet is composed of Latin letters or variants, with one symbol for each sound in standard Turkish.

Minority languages include two Kurdish dialects, Arabic, Syriac, Greek, and Armenian. The latter two are protected under the Treaty of Lausanne, and Arabic is acceptable, but the use of the others is severely proscribed.

RELIGIONS

Turkey is officially a secular state, but about 99 percent of Turks are Sunni Muslims. The reforms of Atatürk essentially disenfranchised the Islamic governing structure and thereby separated religion and state.

Since the founding of the secular state, however, there has been a drift back toward Islam-state intercommunication. Under the constitution, all Muslim students are compelled to receive Islamic instruction. Other religious communities, including those who adhere to the Orthodox, Catholic, Jewish, and Protestant faiths can be found throughout the country.

Religious Affiliations

Muslim (mostly Sunni)	69,521,000
Other (mostly Christians and Jews)	139,000

HISTORICAL BACKGROUND

The land that is now Turkey was originally inhabited by Greeks, Armenians, and other peoples, and great civilizations flourished in the region both in antiquity and in the first millennium of the Common Era. First a part of the Hittite and Persian empires, it was later conquered by Alexander the Great and Hellenized until the first centuries C.E. The land was later incorporated into the Roman and, later, Byzantine empires, by the third century. The ancestors of modern Turks (which name appropriately means "robber" in Turkish) were Ural Altaic people from Central Asia whose marauding armies reached Asia Minor around 1000. In the battle of Manzikert (Malazgirt) in 1071, they defeated the Byzantines and began a slow process of conquest. They also expanded their hold over the land through the forcible conversion of the inhabitants to Islam. Known as Seljuk Turks from 1071 to 1243, they made their capital at Konya, in central Turkey. Their power was temporarily broken in the early 13th century by the Mongols, under Genghis Khan, but after the Mongols withdrew, the Turks' authority was revived under another branch called the Ottoman Turks (so called after their first chief, Osman).

In 1453 the Ottomans, under Mehmet II, conquered Constantinople, the jewel of the Byzantine Empire, after a long and bloody siege. Within the next 100 years they conquered Egypt, Syria, Greece, the Balkans, the Arabian Peninsula, North Africa, the islands of the Mediterranean, the Caucasus, and the Crimea. In 1517 the sultan assumed the title of caliph following the conquest of Egypt. At the zenith of their power, under Süleyman the Magnificent, the Turks were the terror of Europe and the scourge of the Christian world.

By the mid-19th century the process of imperial decline that began in the 17th century was hastened by the modernization of the empire, starting with the Imperial Rescript of 1839, under Sultan Abdul Mejid, and a body

of reforms known as the Tanzimat curbing the powers of the sultan. The Illustrious Rescript of 1856, which followed Turkey's defeat in the Crimean War, forced the sultan to ensure rights for non-Muslims. Sultan Abdul Hamid II introduced a constitution in 1876 but suspended it the following year. Thereafter the sultan continued to rule as the Sublime Porte, with no constitutional checks on his power.

In 1908 the Young Turks Revolution reinstated the constitution of 1876. In 1913 the Committee for Unity and Progress, led by Talat Pasha and Enver Pasha, of the Young Turks, seized effective control of the government from Sultan Mehmet V. During World War I Turkey joined the Central powers and declared war on the Allies. Defeated along with Germany, Turkey signed an armistice at Mudros in 1918. The Ottoman Empire ceased to exist: Turkey was stripped of all non-Turkish areas, and Asia Minor itself was divided among the Allied powers. In 1919 Greece, with Allied assistance, invaded Anatolia through Smyrna but was defeated by a resurgent Turkish army under Mustafa Kemal (known later as Atatürk, "Father of the Turks") in 1922. That year the sultanate was abolished and a secular Turkish state was established at Ankara. In 1923 Turkey negotiated the Treaty of Lausanne with the Allies, which recognized Turkish suzerainty over Asia Minor and a small portion of Thrace, including Istanbul. A republic was proclaimed, with Atatürk as president and Ankara as its capital, and in 1924 the caliphate was abolished.

Kemal Atatürk remained president of Turkey until his death in 1938. During his rule a number of reform policies were established that laid the foundations of the modern state. Among these were the secularization of the state (including the abolition of Islamic jurisdiction), the emancipation of women, the use of the Latin alphabet, the introduction of an industrial economy, and the encouragement of European culture and technology.

Turkey maintained the policies set for it by Kemal Atatürk and remained neutral during World War II. In 1960 a military coup overthrew the government and introduced a new constitution vesting power in the parliament. Throughout the 1960s and early 1970s a series of civilian governments, sometimes under the "guidance" of the military, assumed political control.

When widespread civil unrest erupted in 1978, the military imposed control and took over the running of the government. This continued on and off until the people overwhelmingly voted for a new constitution and decisively rejected further military rule in 1982. Through the 1980s and the end of the 1990s Turkey largely enjoyed the benefits of civilian administration. In 1993 Tansu Çiller became Turkey's first female prime minister, and in 1996 Necmettin Erbakan, leader of the Islamic Welfare Party, became Turkey's first Islamist leader since the country was founded in 1922. However, Erbakan was forced to resign by the military in 1997, and in 1998 the Turkish constitutional court outlawed the Islamic Welfare Party.

In 2001 the Turkish lira lost more than one-third of its value due to the fact that foreign investors pulled

out in fear of a government collapse. In October 2001 thousands of people demonstrated against an austerity plan backed by the International Monetary Fund (IMF). In 2002 Turkish women were granted full legal equality with men. Also in 2002 Islamism made a resurgence: The Islamist-based Justice and Development Party (Adalet ve Kalkınma Partisi, AKP) won a landslide election victory, and in 2003 its leader, Recep Tayyip Erdoğan, became prime minister, nevertheless promising to maintain the secular principles of the constitution.

A conflict between the government and the Kurdistan Workers' Party (Partiya Karkerên Kurdistan, PKK) has gone on for over 20 years. The capture of the PKK leader Abdullah Öcalan in 1999 led to a ceasefire, but in 2004 the PKK, renamed the People's Congress of Kurdistan (Kongra Gelê Kurdistan, KGK), resumed its fight for an independent Kurdish homeland. In the two decades of fighting, over 30,000 people, mostly Kurds, have lost their lives. However, as part of its bid to join the European Union, the Turkish government lifted bans on education and broadcasting in Kurdish. Talks regarding EU membership began in October 2005.

LIST OF MODERN RULERS

President (except as noted)

1923–38	Mustafa Kemal Atatürk
1938	Mustafa Abdülhalik Renda (acting)
1938–50	Mustafa İsmet İnönü
1950–60	Celâl Bayar
1960–61	Cemâl Gürsel (chairman, Committee of National Unity, MBK)
1961–66	Cemâl Gürsel
1966–73	Cevdet Sunay
1973	Tekin Arıburun (acting)
1973–80	Fahri Korutürk
1980	Ihsan Sabri Çaglayangil
1980–82	Kenan Evren (chairman, National Security Council, MGK)
1982–89	Kenan Evren
1989–93	Turgut Özal
1993	Hüsamettin Cindoruk (acting)
1993–2000	Süleyman Demirel
2000–	Ahmet Necdet Sezer

Prime Minister

1923–24	İsmet İnönü
1924–25	Ali Fethi Okyar
1925–37	İsmet İnönü
1937–39	Celâl Bayar
1939–42	Refik Saydam
1942–46	Şükrü Saracoğlu
1946–47	Mehmet Recep Peker
1947–49	Hasan Saka
1949–50	Semsettin Günaltay
1950–60	Adnan Menderes
1960–61	Cemâl Gürsel (chairman, Committee of National Unity, MBK)

1961–65	İsmet İnönü
1965	Suat Hayri Ürgüplü
1965–71	Süleyman Demirel
1971–72	Nihat Erim
1972	Suat Hayri Ürgüplü
1972–73	Ferit Melen
1973–74	Naim Talu
1974	Bülent Ecevit
1974–75	Sadi İrmak
1975–77	Süleyman Demirel
1977	Bülent Ecevit
1977–78	Süleyman Demirel
1978–79	Bülent Ecevit
1979–80	Süleyman Demirel
1980–83	Bülent Ulusu
1983–89	Turgut Özal
1989–91	Yıldırım Akbulut
1991	Mesut Yılmaz
1991–93	Süleyman Demirel
1993–96	Tansu Çiller
1996	Mesut Yılmaz
1996–97	Necmettin Erbakan
1997–99	Mesut Yılmaz
1999–2002	Bülent Ecevit
2002–03	Abdullah Gül
2003–	Recep Tayyip Erdoğan

CONSTITUTION

Under the provisions of the 1982 constitution, legislative power is vested in the Grand National Assembly. The 550-member body is elected through direct proportional representation for a five-year term. Executive power is exercised by the president, elected for a seven-year term, who appoints the prime minister and the Council of Ministers.

Philosophically, the constitution is the outgrowth of Atatürk's 1931 manifesto, which proclaimed the inviolability of the six fundamental "arrows of Kemalism": republicanism, nationalism, populism, statism, secularism, and reformism.

PARLIAMENT

The constitution of 1982 abolished the earlier bicameral legislature and replaced it with a single-chamber 400-member Grand National Assembly, later increased in stages to 550 members. The Grand National Assembly convenes on the first day of September and can adjourn itself—although the president can recall the Assembly if necessary.

POLITICAL PARTIES

Political parties in the Western sense made their first appearance in Turkey at the end of the 19th century. During

this period the graduates of modern schools, army officers, and civil servants pioneered political movements essentially aiming to prevent the further decline of the Ottoman Empire and introduce the principles of nationalism, freedom, and equality that had emerged in the West.

During the era of the Second Mesrutiyet (Second Constitutional Government) and thereafter, the Committee for Unity and Progress (İttihat ve Terakki) was the sole party. During the War of Independence the Republican People's Party (Cumhuriyet Halk Partisi, CHP) became the dominant sole party, and it remained in power through the advent of the multiparty system in 1946 until the election of the Democrat Party to office in 1950.

The competitive and pluralistic party system has been in operation in Turkey since 1946. The political parties are an indivisible and indispensable part of Turkish political life.

All citizens of Turkey over 18 years of age, with the exception of civil servants and members of the armed forces, may form and become members of political parties provided that they conform with related procedures. Prior permission for the formation of a political party is not required. Parties are allowed to function freely in accordance with the constitution.

According to the constitution, all citizens of age have the right to vote, to be elected, and to engage in political activities independently of or within a political party. Elections are held every five years.

In the 2002 elections the Islamist Justice and Development Party (Adalet ve Kalkınma Partisi, AKP) won 363 seats in the Grand National Assembly, while its nearest competitor, the social-democratic CHP, took 178, and non-partisans won 9. As of 2004 there were 13 main political parties and over two dozen minor Turkish and Kurdish parties in the nation.

LOCAL GOVERNMENT

For purposes of regional administration Turkey is divided into 81 *iller* (singular: *il*), or provinces, each under a provincial governor. The various subdivisions include counties, districts, and the smallest unit of administration, villages.

Each provincial and district capital, regardless of size, and town with more than 2,000 inhabitants is grouped into municipalities, run by mayors. At each level are elected representative assemblies with limited administrative powers.

LEGAL SYSTEM

Before the overthrow of the Ottoman Empire the Turkish legal system was based on Islamic religious authority. In 1923 a new code was introduced based on Western, particularly French, legal models.

The Turkish legal system consists of five higher courts and four types of lower courts. At the top sits the Constitutional Court, with members appointed by the president, which court reviews the constitutionality of laws. The highest administrative court is the Council of State, which considers the merits of draft legislation and government regulations. The Court of Appeals hears appeals from the lower courts. The Court of Jurisdictional Disputes settles disputes arising among civil, administrative, and military courts where jurisdictional issues have been raised. The State Security Court was established to prosecute offenses deemed threats to national interests.

The constitution expressly guarantees the independence of judges. The system of justice includes a bail procedure, and while there is no specific provision for habeas corpus, a right to speedy trial is included in the constitution. However, Turkish judicial procedures are not in fact speedy, defendants have been known to spend years in detention before their cases are finally addressed, and Turkish judges, many appointed by the president, can be influenced by the government. In 2004 the death penalty was banned in all cases.

HUMAN RIGHTS

Turkey's admission to the European Union has been delayed largely because of its poor record on human rights. This is the case despite the fact that the constitution expressly recognizes a number of universal rights, including freedom from forced labor, the right to liberty, the right to privacy, freedom of expression, freedom of conscience, and freedom from torture. This last right has been the focus of a great deal of international attention, especially in terms of Turkey's treatment of captured Kurds fighting for independence.

Indeed, Turkey's human rights record has earned the nation widespread negative publicity, such as when the Human Rights Commission of the Council of Europe accepted a case in 1985 brought by several European countries alleging that Turkey had violated the European Convention for the Protection of Human Rights. The case was settled out of court when Turkey agreed to lift all martial law decrees within 18 months, introduce amnesty for political prisoners, and allow independent observers from the Council of Europe to monitor progress.

To a substantial extent, continuing government efforts to suppress the Kurds have been the primary source of Turkey's bleak human rights record. In 1989 Amnesty International issued a report claiming that more than 500 political prisoners had been tortured and that 250,000 people had been detained for political reasons since 1980. Although the organization reported some improvements in the late 1990s, torture remained widespread as of 2000. The armed conflict between government forces and the Kurdistan Workers' Party (PKK) effectively came to an

end in 1999. Nevertheless, the repression of political parties and organizations in Kurdish southeastern Turkey continued unabated.

Since 2001 the Turkish government, under various leaders, has passed laws dealing with certain human rights issues, including the use of torture, violence against women, restrictions on free speech, and restrictions on the use of the Kurdish language. However, independent human rights organizations have noted that the implementation of such laws has not been consistent.

FOREIGN POLICY

Turkey's foreign policy followed both traditional and radical paths in the late 1990s. The nation's membership in the North Atlantic Treaty Organisation (NATO) and full support of the bombing campaign against Serbia, its tacit support of Islamic regimes in the Caucasus, and its aggressive support of the Turkish enclave on Cyprus could all be considered aspects of traditional foreign policy. On the other hand, Turkey's recent economic, cultural, and military alliance with Israel, in the face of vehement criticism from Arabic neighbors, represents a fundamental shift in policy. Many see this as representative of Turkey's willingness to adopt an independent foreign policy when its interests are being served.

To some extent this foreign policy duality can also be seen in Turkey's approach to gaining admission to the European Union. While criticized for its less-than-stellar human rights record (which had to be improved to meet EU accession qualifications), Turkey in turn fiercely rejected such criticism, accusing Europeans of cynically adopting an anti-Islamic standard of behavior in order to isolate Turkey from the rest of Europe. Turkey refused to become a staging ground for U.S. troops during the 2003 Iraq invasion. Toward gaining EU membership, Turkey passed laws in 2003 and 2004 rectifying human rights violations and agreed to recognize Cyprus as an EU member.

Turkey's foreign economic relations also tend to be split along traditional and nontraditional lines. Turkey has bid to become the final outlet for a new oil pipeline from the Central Asian republics and has developed trade with a variety of regimes, some friendly, some hostile, around the globe.

Turkey joined NATO in 1952. The nation was an original signatory of the Baghdad Pact, an agreement on collective regional defense forged in 1955; the resulting alliance, renamed the Central Treaty Organization (CENTO) in 1959, had its headquarters in Turkey. Following the withdrawal of Iran and Pakistan, CENTO was dissolved in 1979.

Turkey and the United States are parties to 48 treaties and agreements, covering agricultural commodities, nuclear energy, aviation, defense, economic and technical cooperation, education, extradition, finance, investment

guarantees, judicial assistance, lend-lease, mutual security, narcotics, patents, the Peace Corps, postal matters, surplus property, taxation, trade and commerce, and visas.

Turkey is a founding member of the United Nations. It is also a member of 16 UN organizations and 39 other international organizations.

DEFENSE

Turkey's defense forces are commanded by the president of the republic, acting in his capacity as chief of staff. The command structure runs through the president to the prime minister and thence to the minister of defense and the chief of the general staff.

Manpower is provided through conscription. The total strength of the armed forces in 2003 was 664,800, making Turkey's one of the largest standing military forces in the world and second only to the United States among NATO members. Along with those of Israel, Turkey's armed forces are considered the best organized, the best led, and the best equipped in the Middle East. In 2003 the budget of the Defense Ministry was over \$12 billion, equaling about 5.3 percent of gross domestic product (GDP). The Turkish armed forces have started producing their own armaments. A 2003 law reduced the military's political role.

ECONOMY

Covering an area only slightly smaller than Germany and France combined, Turkey has a population of over 69 million potential consumers. As situated in the region that has come to be known as the fertile crescent, Turkey is strategically positioned to take advantage of a growing network of economic interests stretching from the Middle East and the Black Sea region to the Turkic-speaking republics of Central Asia.

Since 1980 Turkey has had one of the fastest annual GDP growth rates in the Organization of Economic Cooperation and Development; that rate exceeded 6 percent in most years between 1991 and 2000. The nation's GDP in 2004 was estimated at \$508.7 billion, with a per capita GDP of about \$7,400.

Turkey has been able to rapidly increase both its total exports—about half of which go to the European Union—and the share of manufactured goods it exports. The factors that have increased the competitive strength of

Turkish manufacturing are its abundant natural resources, its geographical proximity to export markets, developments in infrastructure and telecommunication systems, and the existence of a large domestic market. Manufacturing has achieved an annual average growth rate of 6 percent since 1990 and by 1998 was accounting for 20 percent of GDP. Turkey is the 12th-largest steel-producing country in the world, and steel has become Turkey's second-most important export product. Textiles and clothing have also become strong manufacturing sectors. The food industry, chemicals and plastics, glass, iron and steel, motor vehicles and parts, electrical and nonelectrical machinery, electronics, and furniture are also well-established sectors.

The country experienced a financial crisis in late 2000, including sharp drops in the stock market and foreign exchange reserves, but is recovering rapidly thanks to additional IMF support and the government's commitment to a specific timetable of economic reforms. Nevertheless, public-sector fiscal deficit has regularly exceeded 10 percent of GDP, partly as a result of interest payments, which accounted for more than 40 percent of central government spending in 2003. Inflation is beginning to come under control, falling to 9.3 percent in 2004. Foreign investment has not been strong, but proposed EU membership could reverse that trend.

ENVIRONMENT

Turkey is a signatory to the world's principal environmental agencies and has a strong interest in the work of regional environmental institutions. Turkey has received international financial aid for a number of environmental projects deemed crucial to further social development. Among these are projects aimed at improving water supply and quality and also sewage facilities. Another project is concentrated on reverting industrial-use land to a cultivable state. Thus, strip-mining operations, when terminated, would be covered up, resurfaced with top soil, reseeded, and thereby returned to agricultural purposes. Among major environmental concerns are air and water pollution, deforestation, and oil spills in the Bosphorus.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Turkey 88th out of 177 countries in terms of life expectancy, education, and standard of living. The average Turk's life expectancy in 2004 was 72.08 years, literacy stood at 86.5 percent as of a 2003 estimate, and 68 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$7,400 in 2004. While Turkey ranks about in the middle of all countries in terms of quality of life, it is the worst performer in south-eastern Europe.

A traditional village house in the interior of the country is often made of sun-dried brick or rough-hewn stone walls. Roofs are flat and used for storage, while floors are often compacted earth covered in carpets. Furnishing is quite simple and sparse. Along the Black Sea houses are more typically built of wood, while urban residences vary from simple houses to modern, centrally heated apartment buildings. Rapid urbanization since World War II has radically changed the lifestyle of Turks. As of 2000, 65 percent of the population lived in urban areas, up from 44 percent just two decades earlier. As such, there is an acute urban housing shortage; many take up residence in squatters' shantytowns, in temporary shelters called *gecekondu*. In the mid-1990s it was estimated that as many as half the country's urban dwellers lived in such makeshift structures. Major earthquakes in 1999 left close to one million people homeless; many of the residential buildings destroyed were substandard structures constructed without permits.

HEALTH

Medical treatment is free for those with financial need. As of 2004 there were 124 physicians for every 100,000 people. Roughly 81 percent of births are attended by trained health professionals. The infant mortality rate is 41 deaths per 1,000 live births. As of 1999 there were an estimated 2.6 hospital beds per 1,000 people. In 2002, 93 percent of the population had access to safe drinking water, 83 percent to adequate sanitation.

Malaria, once a major health problem, has been largely controlled, as has cholera. Tuberculosis, however, is coming back; in 1999 there were 38 cases of tuberculosis per 100,000 people, and just three years later that number had risen to 50 cases per 100,000. Immunization rates for children up to one year old in 2003 were as follows: tuberculosis, 89 percent; diphtheria, pertussis, and

tetanus, 68 percent; polio, 69 percent; and measles, 75 percent. By a 2001 estimate the HIV/AIDS incidence rate was below 0.1 percent. Smoking is a major health hazard for Turks, as tobacco consumption doubled between 1984 and 1995. Annual consumption per adult was about five pounds in 1995; in 2000, 65 percent of men and 24 percent of women smoked.

Total expenditures on health in 2002 totaled 6.5 percent of GDP.

FOOD AND NUTRITION

Lamb is the favorite meat in Turkey; it is served skewered as a shish kebab or minced and grilled on a vertical spit as *döner kebab*. Other well-known dishes are *cerkes tavugu*, or chicken and walnuts, and *sigara boregi*, or cheese- and spinach-filled deep-fried pastries. Eggplant is a favorite vegetable, as served on its own or stuffed with lamb, onions, and tomatoes (*imam bayildi*). Appetizers, or meze, are also varied and delicious, from stuffed wine leaves to flaky dough rolled and stuffed with cheese (*börek*s).

Drinks include tea, *ayran* (a mixture of water and yogurt with a pinch of salt), Turkish coffee, *boza* (a traditional drink made from fermented bulgur wheat), beer, and raki, a licorice-flavored schnapps. Desserts are also plentiful, from baklava to rice pudding (*muhallabi*).

STATUS OF WOMEN

Women's issues have figured prominently in Turkey in recent years. In line with new women's rights protocols gain-

ing acceptance in the United Nations, Turkey has offered legislation, crafted by women legislators, legally eliminating all forms of discrimination in Turkish society. In 2002 a statute formally established that Turkish men were no longer necessarily regarded by law as the head of the family. The move gave women full equality with men 66 years after women's rights were first legally addressed.

Efforts are proceeding to extend compulsory education for women from five to eight years and to significantly improve the literacy rate among women, which was 78.7 percent in 2003.

In health matters, some remarkable progress has been made. The country's infant mortality rate was reduced from 169 deaths per 1,000 live births in 1965 to 41 in 2005. The Ministry of Justice has been making a determined attempt to eradicate the scourge of "honor killings," wherein a relative, believing a woman to have committed some dishonor on the family, will murder her and, traditionally, escape judicial sanction. In 2004 the government passed new laws regarding violence against women.

 Women's Share of Wage Employment Non-agricultural %: 20.6

WORK

In 2003 the Turkish labor force numbered over 25 million. Of these, 36 percent were employed in agriculture, producing tobacco, cotton, grain, olives, sugar beets, pulse, citrus, and livestock. About 23 percent were employed in industries, such as textiles, food processing, automobiles, mining (of coal, chromite, copper, and boron), steel, petroleum, construction, lumber, and paper. The largest segment of the workforce, over 41 percent, was engaged in the service sector. Tourism is increasingly a major source of income in Turkey. Traditional farming in rural areas involves the entire family, including the wife and children. The unemployment rate was 9.3 percent in 2004, with an additional 4 percent underemployed.

The rights of unionization and collective bargaining are recognized, although unions are required to obtain government permission to meet or hold rallies. Strikes are allowed, except in key industries and public services. As of 2002 about 13 percent of the total labor force was unionized. While the law prohibits children younger than 15 from working, child labor is widespread in Turkey. As many as one million children between the ages of 12 and 17 are employed, mostly in small-scale industry and agriculture. In 2004, the monthly minimum wage was set at \$328, and the workweek was 45 hours. Health and safety conditions

are legislated, but such laws are irregularly enforced; labor laws essentially affect only 12 percent of workers.

EDUCATION

Education is free, universal, and compulsory from ages six to 14 for boys and six to 11 for girls. The academic year runs from September to June. The language of instruction is Turkish, except at the university level, where English is adopted in some colleges and courses. The limited use of Kurdish as a language of instruction in private schools was allowed as of 2002.

Overall schooling lasts for 11 years, as divided into primary and secondary sections. The primary section has two stages: lower and upper; the secondary section, lasting for six years, also has two components: middle school and lycée. Most students heading for university proceed through the lycée system.

Language instruction is compulsory in secondary schools. Technical education is offered through the secondary school system, and, in addition, there is a parallel stream of technical institutes and schools for those with inclinations toward technical careers.

There are 29 universities and more than 100 other institutions of higher learning in Turkey, and all but two are autonomous. There exists a long tradition of conflict between university students and the military.

Turkey's literacy rate in 2003 was 86.5 percent. Net primary enrollment stood at 86 percent in 2002, while secondary and tertiary enrollment sharply declined from that number. Just 68 percent of all eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Government expenditures on education in 2001 equaled 3.7 percent of GDP.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture and Rural Affairs, through its General Directorate for Agricultural Research, administers over a dozen separate research agencies studying everything from filed crops to food technology, plant protection, animal health, and fisheries. The University of Ankara has agricultural research departments, and the University of Istanbul has faculties for forestry research. The Scientific and Technical Research Council of Turkey coordinates scientific research in the nation, mainly through the Marmara Scientific and Industrial Research Institute, which conducts research on basic and applied sciences (including biotechnology) and industry. Turkey also has a nuclear research program. The Ankara Nuclear Research and Training Center, part of the Turkish Atomic Energy Authority, studies health physics, nuclear electronics, and plasma physics. The General Directorate of Mineral Research and Exploration conducts the Geological Survey and evaluates mineral resources.

Turkey has 29 universities offering courses in basic and applied sciences. Between 1994 and 1997, 22 percent of all students in higher education were enrolled in science, math, or engineering courses. In 2002, there were 345 researchers for every million people, and research and development expenditures equaled 0.7 percent of GDP.

MEDIA

Though freedom of expression is guaranteed by the constitution, in practice Turkey's media have long been subjected to varying degrees of official pressure, ranging from censorship and outright banning to surveillance and arbitrary arrest. Freedom of the press is occasionally restricted, particularly for leftist or pro-Kurdish publications. Though the government passed important

freedom-of-expression laws in 2003 and allowed Kurdish-language broadcasts as of 2004, there is still a wide gap between what is stated law and what press control actually happens on the ground. In its 2004 index the international media watchdog group Reporters without Borders ranked Turkey 114th out of 167 countries in terms of press freedom.

Nevertheless, the media in Turkey is thriving. As of 1998 the country boasted 63 radio stations, six TV stations, and hundreds of newspapers and magazines. In 2004 there were about 300 private television stations and 1,000 private radio stations in addition to the state-run TRT. Among the more popular television networks are Star TV, Show TV, and Kanal D. The country's leading newspapers include *Milliyet*, *Sabah*, and *Hürriyet*, all based in Istanbul. Other influential publications include *Cumhuriyet* and the Kurdish-language *Azadi* and *Welat*.

CULTURE

With one foot in Europe and the other firmly in Asia, Turkey presents a country and culture that is a blending of ideas from East and West, a crossroads of beliefs and traditions. The remains of ancient Hittite, Roman, Byzantine, and Seljuk Turk cultures can be found throughout the land, and the imprints of Islam are everywhere to be seen, especially in mosques such as Hagia Sophia and the Blue Mosque in Istanbul. The high art of carpet weaving, with its intricate and subtle designs, has for centuries been a Turkish specialty, as has the carving of meerschaum pipes. With the formation of modern, secular Turkey under Atatürk, another cultural overlay was added. Looking toward Europe rather than the East, Atatürk encouraged painting, sculpture, literature, Western music, dance, and drama.

Traditional Turkish music, with its broad vocal range, complex harmonies, rapid turns from major to minor scales, and irregular rhythms, has a very distinctive sound to Western ears. Traditional instruments include the lute-like *tambur* and *ud* and the dulcimer, or *santour*. *Türkü* music is traditional folk music with a modern urban outlook. Folk dancing has long been a part of the cultural *mélange*, and each region of the country has its own unique traditions as well as its own unique traditional clothing to accompany such dancing. Another uniquely

Turkish cultural artifact is the shadow puppet play called *karagoz*, with puppets made of leather manipulated in front of a white screen, with backlighting used to create shadows on the screen.

Turkish painting found its roots in the miniatures of the Ottoman Empire. Modern practitioners of the idiom include the portrait and landscape painter Rahmi Pehlivanli. Literature has a long and rich tradition in Turkey, from the days of traveling bards to modern narrative fiction and poetry, much with nationalistic and naturalistic slants. Modern Turkish literature includes the work of novelists such as Orhan Pamuk and Latife Tekin. Filmmakers have also made an impact internationally, including the directors Yilmaz Güney, Tunç Basaran, Zülfü Livaneli, and Ömer Kavur.

The Turkish Ministry of Culture oversees the cultural scene in the country. There are music conservatories in Ankara, Istanbul, and Izmir, and the Academy of Fine Arts in Istanbul, the National Folklore Institute in Ankara, and the Turkish Folklore Society in Istanbul also help to preserve traditional culture. There are archaeological museums in Ankara, Istanbul, and Izmir, and the Museum of Turkish and Islamic Art is found in Istanbul.

FOLKLORE AND MYTHOLOGY

Folktales are an integral part of Turkish folklore; some of these tales take more than a day to recite. One popular character in the oral tradition is Nasreddin Hoca (or Hoja), a comic figure thought to have been an actual sage and teacher in the 13th century. Nasreddin Hoca is at the center of many stories, all of them bearing a wry moral twist. Folktale heroes include the nomadic Dede Horkut as well as Koroglu, a sort of Turkish Robin Hood.

Traditional beliefs in the supernatural still inform modern Turkey. For example, charms used to ward off the evil eye can be seen in most cars and taxis.

Proverbs are another rich source of Turkish folklore. Popular sayings include “On a winter’s day, the fireside is a bed of tulips,” “The only head free of worries is that of a scarecrow,” and “If you dig a grave for your neighbor, measure it for yourself.”

Myth abounds in the Turkish land, which has known so many different cultures. Aka is the ancient mother

goddess of Turkey (also known as Cybele), while Ararat is the ancient creator goddess. Shahmeran is the goddess of wisdom, half snake and half female.

ENTERTAINMENT AND RECREATION

Modern urban Turkey has many of the same entertainments found in other urban centers of the West, although nightlife is a bit more staid because of the country’s Muslim orientation. When he was mayor of Istanbul in the 1990s, Recep Tayyip Erdoğan, elected prime minister in 2003, banned alcohol in all official municipal buildings.

Both television and movies provide major entertainment sources for Turks, but one of the most lasting forms of entertainment and relaxation is the tradition of the steam bath, or *hamam*. Both men and women use the *hamam*, though separately. Turkish men still enjoy retiring to the all-male confines of a coffeehouse, *kiraathane*, or *köy odası*, where they play backgammon, drink tea, and smoke hookahs (water pipes).

ETIQUETTE

As with much of the eastern Mediterranean and southeastern Europe, Turkey has a tradition of head and hand gestures that prove confusing for Westerners. A sharp nod of the head upward, sometimes with a clicking of the tongue, means “no,” while an abrupt downward nod means “yes.” A head tilt, which can be mistaken for shaking the head, means “I don’t know” or “I don’t understand.” A hand wave, with the palm down, means “come here.”

Mastering such gestures is only the beginning of becoming literate in Turkish manners. The Turks have three ways of saying thanks: *sagol*, *tesekkür edermin*, and the French-derived *mersi*. The handshake is a usual form of greeting, but it should not be too firm. While men may hug and even exchange kisses with good friends upon greeting, this is not done between the sexes in public. Younger people show elders respect by standing when elders enter a room. Social distance is much closer in Turkey than in other Western countries. Dining is continental style, and the prohibitions of pork and alcohol are observed by strict Muslims. Shoes are generally removed before entering homes; the use of the right hand for giving and receiving is preferred.

FAMILY LIFE

Though the family is still at the center of Turkish social life, it is no longer the traditional male-run, patrilineal family of former times; especially with rapid urbaniza-

tion, customs have changed. The nuclear family is more typical in cities than the extended family of the rural household. While in traditional times sons lived with their wives and children in the family home until the death of their father, nowadays, even in rural areas, children generally set up their own homes after marriage. However, the sense of being responsible for those in one's family is maintained.

Arranged marriages with bride-prices were typical in traditional society. Such is still sometimes the case in rural villages but is no longer so in modern, urbanized Turkey. The size of the family has shrunk from the traditional five or six children. The fertility rate in 2004 was below two children per woman. Women, though given legal equality by Atatürk that was reaffirmed by a 2002 law, still find themselves in traditionally subservient positions in many families, especially rural ones. In the cities, women have moved into the professions alongside men, but many then end up working both in the home and at the workplace. The divorce rate in 2000 was 0.5 per 1,000 population; 6 percent of all marriages end in divorce.

PERSONAL APPEARANCE

Modern Western clothing has been the norm in Turkey since the republic was founded in the 1920s; fezzes and turbans were abolished by law in 1925. In rural areas the traditional baggy pants (*salvar*) can still be seen, though without the cummerbund and brightly patterned vest that once accompanied them. Rural women may still dress traditionally, identifying their marital status with their clothing. Many wear the traditional headscarf (the veil was never used by Turkish Muslim women). This traditional headscarf, the *charshaf*, was banned from the universities in 1988, but that action served only to make it a symbol of Islamic fundamentalism. As of 2004 as many as 65 percent of Turkish women covered their heads with scarves, although the academic headscarf ban was still in effect.

SPORTS

Turkey's national sport is soccer. There are 16 major soccer clubs and dozens of smaller clubs in the country. Teams such as Galatasaray and Fenerbahçe have competed in the European Cup. Between September and May fans gather at the major stadiums on weekends to cheer on their favorite teams and sometimes to engage in soccer hooliganism.

Wrestling, or *kirkpınar*, is another favorite sport. The country has sent traditional wrestling teams to the Olympics, but the domestic variety is distinctly Turkish: The players wear leather pants and cover their bodies with

olive oil to make it more difficult for their opponents to tackle them. Other popular sports include archery, hunting and shooting, car racing, swimming, and the traditional sport called *cirit*, in which the participant throws a javelin while on horseback.

CHRONOLOGY

- 1945** Turkey joins the United Nations.
- 1946** A faction of the Republican People's Party led by Adnan Menderes and Celâl Bayar forms the Democratic Party and wins 46 seats in the Grand National Assembly.
- 1950** The opposition Democratic Party wins an absolute majority in the country's first free elections. Adnan Menderes is elected prime minister and Celâl Bayar president. Turkey sends troops to Korea under UN command.
- 1952** Turkey becomes a member of NATO and provides military bases for NATO and the United States. Political violence increases.
- 1954** The Democratic Party retains a majority in national elections.
- 1955** Anti-Greek riots erupt in Istanbul over the Cyprus issue. Iraq and Turkey sign the Baghdad Pact, a mutual security treaty that later evolves into the Central Treaty Organization.
- 1957** The Democratic Party majority is reduced in parliamentary elections. Student unrest erupts; the government increasingly suppresses opposition.
- 1960** A military coup led by Gen. Cemâl Gürsel topples the Menderes government; Menderes and Bayar are placed under arrest. A provisional military government is formed under a Committee of National Unity. The Turkish lira is devalued.
- 1961** Menderes and two other cabinet members are convicted of misuse of power and hanged; Bayar is jailed. A new constitution is promulgated. Gürsel is elected president. In parliamentary elections the Republican People's Party, led by former president İsmet İnönü, wins the most seats and forms a coalition government with the Justice Party.
- 1962** The army attempts a coup.
- 1963** A second army coup attempt is unsuccessful.
- 1964** Turkey joins the Regional Cooperation for Development.
- 1965** İnönü resigns; Suat Hayri Ürgüplü forms an interim government. The Justice Party wins a clear majority in general elections, and its leader, Süleyman Demirel, heads a new government.
- 1966** Cevdet Sunay succeeds Gürsel as president.
- 1967** Pope Paul visits Istanbul.
- 1968** Television is introduced.

- 1969** The Justice Party retains a large majority in parliamentary elections.
- 1970** The Turkish lira is devalued.
- 1971** As political violence increases, the armed forces threaten to again intervene. Demirel steps down; Nihat Erim forms a nonparty government with military support. Martial law is proclaimed in 11 provinces, including Istanbul. The constitution of 1961 is amended to abridge freedom of association.
- 1972** Erim resigns; Suat Hayri Ürgüplü and Ferit Melen head brief governments.
- 1973** Fahri Korutürk is elected president on the 14th ballot to succeed Sunay. Melen resigns and is succeeded by Naim Talu. The National Assembly passes the Agrarian Reform Bill, setting ceilings on landholdings. A new bridge is opened over the Bosphorus. Opium cultivation is banned under an agreement with the United States. The military curtails its intervention in politics; martial law is lifted. In general elections the Republican People's Party gains a majority in the Assembly. Amnesty is granted to 50,000 political prisoners on the 50th anniversary of the republic.
- 1974** Republican People's Party leader Bülent Ecevit forms a coalition government. The ban on opium cultivation is removed. Turkey invades Cyprus and occupies one-third of the island to prevent a Greek takeover. The United States suspends military and economic aid to Turkey; Turkey closes U.S. military bases. Ecevit resigns as his coalition breaks up. Sadi Irmak forms a caretaker government.
- 1975** Süleyman Demirel returns to power, leading a right-wing coalition. The United States softens its sanctions on Turkey.
- 1977** The Republican People's Party emerges as the leading party in national elections. Bülent Ecevit forms a cabinet that lasts for 10 days. The Turkish lira is devalued for the fourth time. Demirel, of the Justice Party, forms a new cabinet but resigns by the end of the year.
- 1978** Ecevit is sworn in as prime minister for the third time. U.S. arms embargo is completely lifted. Turkey reopens U.S. military bases.
- 1979** In national elections, rightists win a clear lead. Ecevit resigns, and Demirel returns to the prime minister's office. The Turkish lira is devalued in a desperate move to shore up the economy.
- 1980** The Turkish military ousts the civilian government, suspends the Grand National Assembly, and imposes martial law. Chief of Staff Kenan Evren takes over as head of state and chairman of the new National Security Council. Retired admiral Bülent Ulusu is named prime minister. Ecevit and Demirel are arrested but later released, while right-wing extremist leaders are held. Strikes are banned. Turkey signs a new accord with the United States that gives Turkey controlling rights over U.S. bases in the country.
- 1982** A new constitution is approved by popular referendum.
- 1983** The ban on political parties is lifted; of the 15 new political parties that are established, three are permitted to contest legislative elections. The Motherland Party wins 211 of 400 seats in the new unicameral Grand National Assembly, and its leader, Turgut Özal, is named prime minister.
- 1984** The Motherland Party wins decisively in local elections. Northern Cyprus and Turkey exchange ambassadors. The separatist Kurdistan Workers' Party begins a campaign of guerilla violence.
- 1985** The European Economic Community imposes strict quotas on imports of low-priced textiles and clothing from Turkey.
- 1987** The Motherland Party wins 36 percent of the votes cast in the general election, and Turgut Özal forms a new, expanded cabinet.
- 1988** An assassination attempt on Özal is unsuccessful.
- 1989** Turkey's application to join the European Community is rejected. Özal succeeds Gen. Kenan Evren as president and appoints Yildirim Akbulut as prime minister.
- 1990** The Turkish government lifts its restrictions on the use of joint NATO bases in Turkey. Turkey complies with UN sanctions against Iraq and closes the pipeline at Kirkuk.
- 1991** Iraqi Kurd refugees fleeing the Persian Gulf War cross into Turkey. Mesut Yılmaz is named prime minister. The True Path Party, led by Süleyman Demirel, displaces the Motherland Party in parliamentary elections.
- 1992** Kurdish separatist violence escalates.
- 1993** Özal dies. Demirel becomes president. Tansu Çiller, the new leader of the True Path Party, becomes Turkey's first female prime minister.
- 1994** Çiller announces economic austerity plans intended to strengthen Turkey's weak economy.
- 1995** The Welfare Party, an Islamic party led by Necmettin Erbakan, wins the most votes in parliamentary elections, but other parties refuse to form a coalition with it because of its nonsecular platform. Thirty-five thousand Turkish troops cross into Iraq to engage in preemptive strikes on Kurdish guerilla strongholds.
- 1996** The Motherland and True Path parties form a coalition that soon dissolves. True Path joins a coalition with the Welfare Party, and Erbakan becomes the first Islamist leader of Turkey since the nation was founded in 1923.

2416 Turkey

- 1997** The military compels Erbakan to resign. Yilmaz is named prime minister. The European Union denies Turkey's application for membership.
- 1998** The constitutional court outlaws the Welfare Party on the grounds that it threatens the secular nature of the nation. Former Welfare Party members form Virtue, another Islamist party. Yilmaz resigns amid scandal, and Ecevit heads a caretaker government.
- 1999** Abdullah Öcalan, leader of the Kurdistan Workers' Party, is captured. Elections give the most seats to the rightist Nationalist Action Party, but Ecevit forms a centrist coalition government excluding the party. A disastrous earthquake strikes western Turkey, killing at least 15,000 and injuring 30,000.
- 2000** Parliament elects as president Ahmet Necdet Sezer, the former chief justice of the constitutional court. Responding to Öcalan's call for a cease-fire, Kurdish rebels renounce violence and announce plans to empower Kurds through democratic means.
- 2001** Turkey recalls ambassador to France after French National Assembly recognizes the killings of Armenians under the Ottoman Empire as genocide. The Turkish lira loses more than one-third of its value due to foreign investors' fear of a government collapse. The Constitutional Court bans the main opposition party, the pro-Islamic Virtue Party. A new political party is formed in its place by members of the banned Virtue Party, called Saadet. Parliament adopts reforms that include outlawing capital punishment, except in times of war or for acts of terrorism, and allowing broadcasts in Kurdish.
- 2002** Turkish women are granted full legal equality with men. Parliament adopts further legal changes that are intended to improve the country's chances to join the European Union, but critics say that the changes still fall short of EU standards. In November, the Islamism-based Justice and Development Party (AKP) wins a landslide election victory.
- 2003** Recep Tayyip Erdoğan, head of AKP, becomes prime minister. Parliament decides not to allow the United States to use Turkey as a staging ground for the invasion of Iraq.
- 2004** Turkey bans the death penalty, an important step toward EU membership. The PKK, now called the People's Congress of Kurdistan, resumes its separatist insurgency. Turkish state television broadcasts its first Kurdish-language program as part of a reform package to win EU membership.
- 2005** EU membership talks begin in October. A new lira is introduced.

TURKMENISTAN

Basic Fact Sheet

OFFICIAL NAME

Republic of Turkmenistan (Türkmenistan Jumhuriyati)

ABBREVIATION

TM

CAPITAL

Ashgabat

HEAD OF STATE & HEAD OF GOVERNMENT

President Saparmurat Atayevich Niyazov (from 1990)

NATURE OF GOVERNMENT

Modified dictatorship

POPULATION

4,952,081 (2005)

AREA

488,100 sq km (188,455 sq mi)

MAJOR ETHNIC GROUPS

Turkmen, Uzbek, Russian

LANGUAGES

Turkmen (official), Russian, Uzbek

RELIGIONS

Islam, Eastern Orthodoxy

UNIT OF CURRENCY

Turkmen manat

NATIONAL FLAG

Green field, with a claret vertical stripe in the leftmost third containing five white, black, and orange carpet guls (asymmetrical designs used in producing rugs), as associated with five different tribes, and a white crescent and five white stars near the top to the right of the guls

NATIONAL EMBLEM

At the center of the national emblem is a horse that represents the Akhal-Teke horses, a famous breed that comes from a stable outside of Ashgabat. Around the horse are five guls, rose-patterned medallions found in the center section of every Turkmen carpet. The patterns represent the five main tribes of Turkmenistan. On the outside border of the emblem, cotton is depicted. On the upper part of the outside border are a crescent that symbolizes Islam and five stars that symbolize the five provinces of the country.

NATIONAL ANTHEM

“Independent, Neutral, Turkmenistan State Anthem”

NATIONAL HOLIDAYS

October 27 (Independence Day)

DATE OF INDEPENDENCE

October 27, 1991

DATE OF CONSTITUTION

May 18, 1992

GEOGRAPHICAL FEATURES

Turkmenistan, one of the six *stans* (literally, “land of”) of Central Asia, borders the Caspian Sea between Iran and Uzbekistan. The capital city of Ashgabat is located in the southwestern part of the country, which is essentially a rolling desert lowland, 90 percent of which is occupied by the Karakum Desert. The population is concentrated in oases at the foot of the Kopet Dag Mountains in the south and the Murgab, Tejen and Amu Darya rivers. Less than 4 percent of the land is arable. The highest point is Gori Ayribaba (3,139 m; 10,296 ft).

Geography

Population of Principal Cities (1999 est.)

Ashkhabad	604,700
Dashhowuz	165,400
Turkmenabat	203,000

CLIMATE AND WEATHER

The climate is continental and arid. The mean temperature is 27.8°C (82°F) in July and -3.9°C (25°F) in January. Temperatures in the Karakum Desert may reach 50°C (122°F). Annual precipitation averages 100 to 200 mm (4 to 8 in) in the lowland and 400 mm (16 in) in the mountains.

Climate and Weather

Mean Temperature
January: 25°F
July: 82°F
Average Rainfall: 9.7 in

FLORA AND FAUNA

With over 90 percent of the land mass covered in desert, Turkmenistan presents the sparse vegetation characteristic of such arid locations. In mountain valleys are found figs, walnuts, wild grapes, and almonds. On the slopes of the Kopet Dag Mountains in the south, juniper and pistachio trees grow. Along riverbanks are stands of willow and black poplar as well as cane and reed.

Animal life does exist in the desert, including gazelles, wildcats, foxes, and tortoises. Mountain areas and plateaus are home to snow leopards, lynx, goats, and cheetahs. Wild boars, jackals, pink deer, and wild donkeys are also found in some plateau regions. Along the Caspian Sea, avian life is thick. Geese, ducks, and swans all make this area their winter home. The Caspian is also a rich source of roach, sturgeon, herring, and sprat.

ETHNIC COMPOSITION

Turkmenistan has over 100 ethnic groups, of which Turkmen make up 75 percent. The larger minorities include Uzbeks (9 percent), Russians (7 percent), Kazakhs (2 percent), and Ukrainians (0.5 percent). Other groups include Azeris, Uighurs, Moldovans, Georgians, and Jews.

LANGUAGES

Turkmen is spoken by about 95 percent of the population, while Russian, spoken by about 38 percent, is also used in commerce and government. Turkmen is a Turkic language belonging to the Oghuz group. It is written in Cyrillic characters, but upon independence Latin script was introduced.

RELIGIONS

The religion of the majority is Sunni Islam blended with Sufi mysticism and shamanism. Most Russians belong to the Orthodox Church, although a few are Lutherans and Baptists. The many decades of Communist indoctrination affected the force of Muslim traditions in Turkmenian society, but there has been renewed interest in such traditions since independence.

Religious Affiliations

Muslim	4,407,000
Russian Orthodox	446,000
Other	99,000

HISTORICAL BACKGROUND

The region that is now Turkmenistan passed under the rule of a number of conquerors, including Bactrians, Parthians, and the Achaemenids, before the time of Alexander the Great, who conquered the region around 323 B.C.E. The Parthian Empire followed and lasted until 224 C.E., when Persians under the Sassanids seized the

territory. In the fifth century the region fell under new masters, beginning with the Ephthalites and followed by Tiu-chue nomads (sixth century) and Arabs (eighth century). Arabs introduced Islam, which took hold as the religion of the land. Turkmenistan passed under the control of the Samanids in the 10th century, who were in turn displaced by the Seljuks from the 11th century to the 13th century and later by the Mongols. Under the Mongols, from 1219 to 1221 Turkmenistan was split among the Golden Horde, the Chagatai Khanate, and the Hulaguid Khanate, of Persia. From the 13th to the 16th centuries Turkmenistan became a part of Tamerlane's empire. In the 16th century the region was once again divided between Bukhara and Persia. It was during this time that the course of the Amu Darya changed, and much of the land was claimed by desert. In the 17th century, as Russia began its great eastward expansion, Russian merchants traded extensively with Turkmen. Between 1865 and 1885 the czar began the direct annexation of the region, putting down heavy resistance by the tribes. By 1885 the entire region was annexed to Russia under the name of the Trans-Caspian District. Russia put down another revolt in 1916 before the Bolsheviks seized power. Resistance continued under the Bolsheviks until 1924, when the region was made part of the Trans-Caspian Republic. In 1925 it became a constituent republic of the Soviet Union under the present name. Throughout the Soviet period Turkmenistan was the poorest and least assimilated of the republics.

After the Soviet Union collapsed in 1991 Turkmenistan declared its independence under President Saparmurat Niyazov, who assumed the title of *turkmenbashi*, or "head Turkmen," and has remained in power since. The Supreme Soviet approved a new constitution in 1992. In 1999 Niyazov was made a virtual president-for-life. No opposition parties are officially registered, and political expression is effectively outlawed. Niyazov has fostered a Stalinist cult of personality around him. His birthday is an official holiday, and his statues appear in public squares throughout the country. The Human Rights Watch has called his regime "the most repressive and abusive" in the world.

Niyazov continued to consolidate power following a supposed assassination attempt in 2002. He reestablished repressive laws and arrested dozens of his most vocal critics on the pretext of national security. In 2003 he visited Russia and signed an agreement with the Russian company Gazprom through which Russia will buy 60 billion cubic meters of gas from Turkmenistan annually. At the same time Niyazov caused a row when he cancelled the dual citizenship agreement with Russia, which had been in force for a decade. Niyazov continues to hold an iron grip on Turkmenistan, though in 2005 he made the surprise announcement that a new presidential election would be held in 2009.

LIST OF MODERN RULERS

1991– Saparmurat Atayevich Niyazov

CONSTITUTION

The first postindependence constitution, of 1992, established a secular and democratic republic. The constitution provides for a strong executive by combining the offices of head of state and head of government. In practice, under Niyazov the presidency has become an autocratic institution without any restraining legal authority. The president has the power to personally issue laws, except those amending the constitution or revising the criminal code. He also appoints judges. The constitution made Turkmen the sole official language and guaranteed the right of private property. Although the 1992 constitution set a limit of two terms per president, President Niyazov's term was extended indefinitely in 1999.

PARLIAMENT

Turkmenistan has a bicameral parliament with two legislative bodies: the People's Council (Khalik Maslakhaty), with 110 members, and the Assembly (Majlis), with 50 members elected for five-year terms. The People's Council meets infrequently to debate major issues, while the Assembly is responsible for ordinary legislation. Members of the Assembly are generally elected unopposed, such that elections are a sham.

POLITICAL PARTIES

The Democratic Party of Turkmenistan (DPT) occupies a position analogous to that of the Communist Party in Soviet times. It is the successor to the Turkmen Communist Party, which was dissolved in 1991 and is described in official literature as the mother party. There are a number of unregistered parties, none of which have any legal standing. In both the 2003 elections for the People's Council and the 2004 Assembly elections all candidates belonged to the DPT.

LOCAL GOVERNMENT

Turkmenistan is divided into five provinces, or *welayatlar*. Within each province there are four levels of local government: From top to bottom, they are *welayets*, *shekbers*, *etraps*, and *ovs*. The first three have presidentially appointed executives called *vakils*. Each territorial unit has an elected council called a *gengeshchi* headed by an *archbyn*.

LEGAL SYSTEM

Under the Supreme Court are 61 district and city courts of first instance and six provincial courts. The Supreme Economic Court hears cases involving disputes between business enterprises and the government. The judiciary is technically independent but is in actuality subservient to the government. Judges are appointed by the president for five-year terms. There are no juries. The constitution guarantees basic rights to defendants, including those to public trial and to defense counsel, but such rights are normally abrogated in practice.

The constitution prohibits torture and cruel treatment in custody; however, according to the U.S. State Department, in 2004 there were credible reports that security officials tortured, routinely beat, and used excessive force against criminal suspects, prisoners, and individuals critical of the government.

HUMAN RIGHTS

Turkmenistan has made little progress in moving from a Soviet-era authoritarian style of government to a democratic system. The exemption of President Niyazov from term limits has essentially made him president-for-life, although he declared that a presidential election would be held in 2009. The Communist Party (renamed the Democratic Party) has retained its monopoly on power. The government has registered no new political parties and represses all political opposition. The government's human rights record is poor. Security forces under the Committee on National Security (formerly the KGB) commit serious human rights abuses, such as arbitrary arrest and detention, prolonged pretrial detention, unfair trials, and the mistreatment of suspects and prisoners. The government seriously restricts freedom of speech and does not permit freedom of the press. The government completely controls the media, censors all newspapers, and muzzles independent critics. There are restrictions on the practice of religion. Religious organizations are required to have at least 500 Turkmenians as members in a given locality to be legally registered. There are restrictions on travel abroad.

On the strength of a supposed (some say staged) assassination attempt in 2002, the Niyazov government cracked down on critics. Blaming the opposition for the attempt, Niyazov had former foreign minister Boris Shikhmuradov arrested. Shikhmuradov made a televised confession four days later that critics maintain had been coerced. He was sentenced to life in prison following what human rights groups condemned as a Soviet-style show trial. Two of the alleged conspirators received life sentences in absentia, while many other suspects were given lengthy prison sentences.

FOREIGN POLICY

Turkmenistan has close ties to its Muslim neighbors to the south, although the nation by no means subscribes to their Islamic fundamentalism. Foreign policy priorities are instead focused on economic issues, particularly as they relate to the marketing of enormous hydrocarbon reserves. There are frequent disputes with Russia and former Soviet states over pipelines carrying gas to Europe and Asia. There are disputes with Azerbaijan over the ownership of at least two Caspian oilfields. Another dispute with Uzbekistan relates to the Turkmenian diversion of water from the Amu Darya River for irrigation. In an effort to reduce dependence on Russia, Turkmenistan has tried to cultivate good relations with China, Turkey, the United States, and the European Union. The core of Turkmenian foreign policy is neutrality.

DEFENSE

In 2003 the Turkmenistan armed forces comprised about 29,000 active personnel, with about 2,000 heavy weapons in their arsenal. The army has the bulk of these forces, while about 3,000 serve in the air force. In 1999 the defense budget was \$90 million, or 3.4 percent of gross domestic product (GDP).

ECONOMY

Turkmenistan's economy is based on cotton and oil. One-half of the irrigated land is planted with cotton, such that the nation was at one time the world's 10th-largest producer. However, poor harvests since 2001 have led to a 46 percent decline in cotton exports. Turkmenistan also possesses the world's fifth-largest reserves of natural gas and substantial oil resources. The economy did well until 1993 because of higher prices for oil, but after 1994 Russia's refusal to export gas to hard currency markets and mounting debts to former Soviet states contributed to a sharp fall in industrial production and caused the budget to shift from a surplus to a deficit. The economy bottomed out in 1996, while the inflation rate continued to soar.

The authoritarian, tribal nature of the regime has worked against economic reform. Privatization goals

2422 Turkmenistan

have remained limited. In 1996 the government launched a modest stabilization program aimed at cutting budget deficits. Between 1998 and 2003 Turkmenistan suffered from the continued lack of adequate export routes for natural gas and from obligations on extensive short-term external debt.

While total exports have risen sharply because of higher international oil and gas prices, short-term prospects are discouraging because of widespread internal poverty and the burden of foreign debt. International Monetary Fund (IMF) assistance seems necessary, but the government has not yet been ready to accept IMF requirements. A 1999 deal to ship 20 billion cubic meters of natural gas through Russia's Gazprom pipeline helped alleviate the 2000 fiscal shortfall, but inadequate fiscal restraint and the tenuous nature of Turkmenistan's 2001 gas deals, combined with the continued lack of economic reform, will limit progress.

The situation improved somewhat as a result of a 2002 deal with Gazprom for the annual transport of 60 billion cubic meters of natural gas. The international community, including investors, took note of the country's cooperation in allowing for the transshipment of humanitarian aid to Afghanistan following the war there in 2002. All economic statistics are considered state secrets, so economic indicators are estimates only. Despite annual GDP growth rates of between 10 and 20 percent, one-third of the population still lives below the poverty line; estimates put the unemployment rate as high as 60 percent.

ENVIRONMENT

The most significant environmental problems are the salinization of soil and water pollution. The water supply is contaminated by chemical contaminants from agricultural runoff. The problem is exacerbated by the lack of adequate sewage-treatment facilities. A large share of the Amu Darya's flow is diverted to irrigation, affecting the water supply to the Aral Sea. Disrupted water cycles have also affected the Garabogazol Aylagy, a lagoon-like appendage in the northwest that adjoins the Caspian Sea. Endangered species include eight mammals, nine birds, and one plant.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Turkmenistan 86th out of 177 countries in terms of life expectancy, education, and standard of living. The average Turkmen's life expectancy in 2004 was over 61 years, literacy stood at 98 percent as of 2002, and 81 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$5,700 in 2004.

Such figures, however, do not reveal the fact that a full third of the population lives below the poverty line and over half the workforce is unemployed. Profits from the country's natural gas and oil reserves go to the ruling elite. Niyazov has been accused of accumulating a personal fortune of \$2.5 billion, which he keeps in offshore accounts.

Traditionally, Turkmens were nomadic and raised horses, but the years of Soviet domination destroyed such age-old practices. About half of modern Turkmen now live in urban areas in high-rise apartments. In the rural areas where the felt tent called the *gara oy*, or yurt, once held sway, Turkmenians now inhabit stationary houses most of the year and use yurts only for summer dwelling, following the herds, or for holidays. Under Soviet rule the nation was brought into the 20th century industrially and technologically, but, as in many other areas of the former Soviet Union, the infrastructure is badly in need of repair and an infusion of new funds, which the Niyazov dictatorship seems unwilling to provide. However, some improvements have been made regarding water supplies and sewage. As of 2002, 71 percent of the population had a safe water supply, and 62 percent had adequate sanitation; central heating and hot water are still luxury items.

HEALTH

Turkmenistan's health-care system was revamped in 2000 to provide more primary care. However, most of this investment was in infrastructure, with little devoted to the training or recruitment of professional health-care personnel. Both rural and urban health-care centers provide treatment, although in 2005 Niyazov suggested closing all hospitals other than those in capital. In a similar move, in 2004 the government dismissed 15,000 trained nurses and substituted them with untrained conscripts. In 2001 public expenditures on health care equaled 3 percent of GDP. As of 2004 there were 317 physicians for every 100,000 people. Just over 80 percent of routine vaccinations are covered by the government, and Turkmenistan leads Central Asian countries in infant immunization coverage. Immunization rates for one-year-old children in 2003 were 99 percent for tuberculosis and polio, 98 percent for DPT, and 97 percent for measles.

Turkmenistan was declared polio free as of 2002. In 2003 there were an estimated 200 people living with HIV/AIDS, and in 2004 there were fewer than 100 deaths from the disease. Despite the fact that 97 percent of births are attended by trained medical personnel, the infant mortality rate in 2004 was a relatively high 73 deaths per 1,000 live births.

 Access to Improved Sanitation Facilities %: 62
 Access to Improved Water Source %: 71

FOOD AND NUTRITION

Traditional Turkmen cooking was and is often still done over a round clay oven called a *tamdyr*. The traditional flat bread was cooked on this, as were such meals as *dograma*, a soup thick with diced bread, lamb, onions, tomatoes, and spices, and porridge made with any of mung beans; cornmeal and pumpkin; or rice, milk, and yogurt. Meatless *plov* (pilaf) with dried fruit, herb-filled pastries, and cornmeal pancakes are other traditional dishes. Milk products come from cows, goats, sheep, and even camels,

which animals also provide meat. Soups and meat pies are typical fare. Hot green tea is served with most meals.

Nutritionally, the diet of Turkmenians leaves something to be desired. Between 1995 and 2002, 13 percent of children under five were underweight, and 22 percent of the same age group suffered from moderate to severe stunting in growth as a result of nutritional concerns. The government has, however, been committed to achieving universal salt iodization as an effective strategy for preventing iodine deficiency disorders since 1994.

STATUS OF WOMEN

In Turkmenistan, women are routinely abused within the home, but the subject is taboo and is not mentioned in the media. Women have no legal recourse against domestic violence. Women are discouraged from working outside the home and are discriminated against in issues concerning inheritance and property rights. There is one legally registered women's group headed by the deputy chairperson of the Assembly and dedicated in honor of President Niyazov's mother. Women under the age of 35 are reportedly not eligible for exit visas unless they have at least two children.

 Seats Held in Parliament by Women %: 26
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: —

WORK

The Turkmenian labor force numbered over 2.3 million in 2003. Around 48 percent of workers are engaged in agriculture, with cotton the largest single crop. Industrial employment is under 14 percent of the total, with people working in the natural gas, oil, petroleum, textiles, and food-processing industries. The remaining 37 percent are employed in services. The 2004 unemployment rate was estimated at 50 percent in urban areas and 70 percent in rural areas.

The government-controlled Colleagues Union is the only central trade union permitted. There are no legal guarantees for workers to form or join unions or to strike,

although the constitution does not specifically prohibit these rights. Strikes in Turkmenistan are extremely rare. The minimum employment age is 16, though children as young as 10 are often employed for the cotton harvest; they are reportedly conscripted from schools for this purpose and inadequately compensated. The maximum workweek is 40 hours, and in 2004 the minimum wage in the state sector was insufficient to provide a decent standard of living.

Employment and Labor

 Female Participation Rate %: 46.0
 Labor by Sector %:
 Agriculture: 48.2
 Industry: 13.8
 Services: 37.0
 Unemployment %: 60

EDUCATION

Literacy in 1990 was 98 percent, a legacy of Soviet rule. This rate has supposedly stayed about the same since independence, according to census data. Education is state funded and compulsory for 10 years, from ages seven to 17. Teaching is in the Turkmen language except in a minority of schools. There are 15 institutions of higher learning, including Turkmen State University, in Ashgabat.

Since the mid-1990s, class sizes have increased rapidly, facilities have deteriorated, and funds for textbooks and supplies have decreased. Between 84 and 95 percent of children between the ages of seven and 16 attended school on a regular basis in 2004.

The amount of classroom time dedicated to learning Niyazov's personal testament, *Rukbnama*, has increased, and in 2004 *Rukbnama II* was introduced into the school curriculum, displacing standard subjects such as history and literature. A 2000 presidential decree reduced the number of teachers, and in 2004 the government continued to downsize secondary schools and limit courses taught in non-Turkmen languages.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture, through its Turkmenistan Agricultural Research Institute, administers research on crop production, particularly on aspects of cotton growth. As of 1997 there were 540 technicians employed full-time in such research. Additionally, the Turkmen Academy of Sciences has several institutes concerned with natural sciences and technology, and there are half a dozen independent institutes that conduct medical research. Faculties of physics, mathematics, and biology are found at Turkmen A. M. Gorkii State University, at Ashgabat, which is also home to the Turkmen Agriculture Institute, the Turkmen Polytechnic Institute, and the Turkmen State Medical Institute.

MEDIA

All media are strictly controlled by the government. The following newspapers are published in Ashgabat: *Vatan* (Motherland), in Turkmen; *Turkmenistan*, in Turkmen; *Ashgabat ashgamy*, in Turkmen; *Neitralnyi Turkmenistan* (Neutral Turkmenistan), in Russian; *Ashgabat*, in Russian; *Lebapskaya pravda*, in Russian and Turkmen; *Maryiskaya pravda*, in Turkmen and Russian; *Novosti Turkmenistana*, in Russian, English, and Turkmen; and *Syyasy sokkbedesh* (Political symposium). The domestic news agency is the Turkmen Press Agency. Turkmen Radio and Turkmen Television broadcast from Ashgabat in Turkmen and Russian.

Niyazov essentially uses the media as his propaganda tool. Reporters without Borders, an international media watchdog group, ranked Turkmenistan 164th out of 167 nations in terms of press freedom. As of 2002 there were 8,000 Internet users in the country, and in 2004 there were 52,000 cellular telephone users.

CULTURE

Literature, music, equine matters, and carpet making form a rich cultural mix that survived the displacement caused by Russian occupation and is to some extent enduring the mind-control policies of the Niyazov government, which has been in power since the fall of the Soviets.

The oral tradition of traveling bards and poets was very strong in Turkmenistan, giving way to the printed word only in the 1920s. One of the earliest recorded instances of the Turkmen lifestyle is the *Book of Dede Kor-kut*, a collection of epics and stories describing the way of life, religions, traditions, and social norms of the Oghuz Turks in Azerbaijan, Turkey, and Central Asia in the sixth and seventh centuries. Considered by many the father of Turkmen literature, the 18th-century poet Mahtum Quli (also Magtim Guli and Makhtumkuli) wrote of romance, Islam, and tribal unity. He continues to have an influence on the modern Turkmen literary scene. Other famous writers include the 19th-century authors and poets Kemine and Molapenes and the 20th-century writer and philosopher Abdulhekim Qulmuhammed-oghli.

Traditional music, employing instruments such as the two-stringed *dutar* and the fiddle-like *gyjak*, were used in service to the oral tradition. Songs of epic folktales and poetry were an important part of folk music tradition. Other songs celebrate labor, death, romance, and even fortune telling.

Suiting their nomadic lifestyle, the Turkmen devoted much of their culture to carpets, which became their one major form of furnishing. Turkmenian carpets are often called Bukharan carpets, after the location where many are sold; they can have as many as 37,000 knots per square yard and are alive with geometric designs in a distinctive dark red. The carpet ornamentation is distinctive for each Turkmen tribe and is created by the women of the tribe. The Ashgabat Carpet Museum has a wide selection for viewing.

Horse breeding was another main concern of Turkmen, especially of championship strains such as the Akhal-Teke, thought to be among the swiftest and strongest breeds in the world.

FOLKLORE AND MYTHOLOGY

The oral tradition of folktales found rich ground in the Turkmen tribes, each of which had its own distinct legends and heroes. Many of the tales have to do with tribal loyalty and survival in the desert climate. Heroes take up arms for their fellow tribesman or for the sake of romantic love. The most popular work of Turkmen folklore is the epic *Gyor-ogly*, about the brave character of heroes who love the motherland. Gyor-ogly and his 40 stout followers defend their country; they struggle fairly, and therefore, as a rule, they win.

Superstitions also form a part of Turkmen folklore. These entail lucky charms to avoid the evil eye, lucky days of the week, and evil omens. There are numerous proscriptions for pregnant women and for young children. Water also holds an almost spiritual position in this arid country.

Proverbs are another important aspect of the country's folklore. One of the most popular is "Bread is the king of everything," which is indicative of the harsh life led by the nomadic Turkmen.

ENTERTAINMENT AND RECREATION

Increasingly urbanized, Turkmen enjoy many of the same forms of entertainment as do citizens of the West. However, state-run television prescribes what can be seen, and although movies are popular, their content is also closely supervised. Urban dwellers enjoy spending time in the country during the summers or in suburban gardens during vacations.

Both urban and rural Turkmen enjoy entertaining at home. Many appetizer courses will be served, and hospitality is foremost. Horse riding is still a popular pastime for many. Puppet theaters offer a popular traditional form of entertainment; the Turkmen State Puppet-Show Theater in Ashgabat, modeled after a fairy-tale castle, is scheduled to open in late 2005. The theater is just one part of the giant World of Turkmen Tales Entertainment Park, a self-contained theme park/fairy-tale town complete with fake snowcapped mountains and artificial lakes on a 60-hectare oasis south of the capital.

ETIQUETTE

Respect for age, hospitality, and clan loyalty and identity are hallmarks of Turkmenian etiquette. There are three codified sources for this system: the customary law of

Turkmen, Islamic law, and rules for manners and behavior, called *edep*.

As in many Muslim countries, the right hand should be used for giving and receiving, shoes should be removed before entering mosques or homes, pork and alcohol are forbidden, and the thumbs-up sign popular in North America is considered a rude gesture.

FAMILY LIFE

By Turkmenian custom, or *turkmenbilik*, the family is extended, and the youngest son is responsible for the parents. He will usually live with the family in the parents' home. Rural families tend to be large, with six or seven children; those in cities are smaller. The fertility rate in 2004 was 3.4 children per woman. The extended family goes beyond three immediately related generations in times of need; thus, cousins will help out when relatives are building a house or applying for work. Arranged marriages are still common; however, even those forged by the brides and grooms themselves must receive the blessings of parents. A bride-price is still common among some tribes. It is usual for the bride to live with the groom's family after marriage. As of 1996, 18 percent of marriages ended in divorce. In 1998 there were 1.1 divorces per 1,000 people.

PERSONAL APPEARANCE

Unlike other Central Asian ethnic groups, the Turkmen have stuck to their traditional dress. Though Western dress, especially suit jackets and trousers (but not ties), is becoming more common in cities, many men, especially from older generations, still prefer the traditional baggy pants tucked into high riding boots; a white shirt, a colorful vest or silk jacket, and a tall sheepskin hat called a *telpek* complete the attire. Women in this Muslim country tend to avoid Western dress altogether. Traditional female attire includes long silk dresses in either deep red or maroon over striped trousers. A headscarf is typical for women; this headdress often has silver jewelry attached.

SPORTS

Soccer is the most popular Western sport, its popularity having grown since independence. The national team regularly competes in the Asia Cup. Valerii Nepomniachi is probably the most famous name in Turkmen soccer. With large segments of the rural population horse racing and riding remain among the most popular forms of sport; such events provide entertainment for city dwellers as well. In the spring and autumn races are held at the Hippodrome of Ashgabat. The Turkmenbashi Stud Farm,

just south of the capital, is where the famous Akhal-Teke horses are bred.

CHRONOLOGY

- 1925** Turkmenistan becomes a constituent republic of the Soviet Union.
- 1960** Through 1967, the Lenin "Karakum" Canal is built.
- 1985** Saparmurat Niyazov becomes Communist Party leader.
- 1991** Turkmenistan declares independence under Niyazov, later joining the Commonwealth of Independent States.
- 1992** New constitution is promulgated.
- 1993** New currency, the manat, is introduced.
- 1997** Private land ownership is legalized.
- 1998** Natural gas pipeline to Iran opens.
- 1999** Parliament votes Niyazov president-for-life.
- 2000** Niyazov announces that he will step down by 2010, after reaching the age of 70.
- 2001** Niyazov replaces ministers for foreign affairs and defense.
Niyazov completes his book of moral teachings, *Rukhnama*, intended as a sort of moral code for the Turkmen people. It becomes compulsory reading in the nation's schools.
- 2002** Niyazov renames the months of the year after himself, his mother, and his spiritual guide, Rukhnama. An assassination attempt on Niyazov of dubious nature fails, leading to a crack-down on the opposition, whose leader, Boris Shikhmuradov, is arrested and sentenced to life imprisonment.
- 2003** Niyazov cancels dual citizenship agreement with Russia.
- 2004** In parliamentary elections, no candidates oppose those of the country's single legal party, the Democratic Party of Turkmenistan.
- 2005** Turkmenistan is named among the 18 most repressive regimes in the world by the U.S.-based nongovernmental organization Freedom House. Niyazov makes a call for a new presidential election in 2009.

OFFICIAL NAME

Tuvalu

ABBREVIATION

TV

CAPITALS

Funafuti (atoll), Vaiaku (village with government), Fongafale (village)

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Filoimea Telito (from 2005)

HEAD OF GOVERNMENT

Prime Minister Maatia Toafa (from 2004)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

11,636 (2005)

AREA

26 sq km (10 sq mi)

ETHNIC MAJORITY

Polynesian

LANGUAGES

Tuvaluan, English

RELIGION

Christianity

UNIT OF CURRENCY

Australian dollar

NATIONAL FLAG

Light blue field with the United Kingdom flag as a canton in the upper hoist and nine gold, five-pointed stars dispersed in the manner of the nine main atolls on the right

NATIONAL EMBLEM

A *maneaba* (Polynesian meetinghouse) is portrayed within a gold border of eight each of banana leaves and seashells, one for each inhabited island. At the bottom, in black lettering on a gold scroll, is the motto *Tuvalu mo te Atua* (With Tuvalu for God).

NATIONAL ANTHEM

“God Save the Queen”

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 8 (Commonwealth Day), Good Friday, Easter Monday, June 14 (Queen's birthday), first Monday in August (National Children's Day), October 1 (Independence Day), November 8 (Prince of Wales's birthday), December 25 (Christmas), December 26 (Boxing Day)

DATE OF INDEPENDENCE

October 1, 1978

DATE OF CONSTITUTION

October 1, 1978

GEOGRAPHICAL FEATURES

Tuvalu is a widely scattered group of nine islands (eight of which are inhabited) in the western Pacific, neighbored by Fiji to the south, Kiribati to the north, and the Solomon Islands to the west. The Tuvaluan islands are Funafuti, Nanumea, Nanumanga, Niulakita, Niutao, Nui, Nukufetau, Nukulaelae, and Vaitupu. The archipelago extends 560 km (350 mi) north to south and covers an area of 26 sq km (10 sq mi). The length of the coastline is about 24 km (15 mi).

Tuvalu

Population of Principal Cities (2004 est.)

Fongafale	4,740
-----------	-------

CLIMATE AND WEATHER

The climate is uniformly hot, seldom varying more than a degree or two from the mean annual temperature of 26.7°C (80°F). Most of the annual rainfall of 3,050 mm (120 in) is derived from cyclonic storms; the terrain is too low to provoke much precipitation from the clouds borne by the southeasterly trade winds.

Climate and Weather

Mean Temperature: 80°F
Average Rainfall: 120 in

FLORA AND FAUNA

There is scarce arable land and minimal agriculture on the islands of Tuvalu. However, coconut palms are numerous; bananas, breadfruit trees, pandanus, and taro also grow there. Of indigenous animals, the only mammal is the Polynesian rat. Butterflies are plentiful and varied, with almost two dozen species represented. Birds include terns and reef herons. Dogs, chickens, and pigs were all imported; there are now thousands of pigs on the islands. Fish life is plentiful in the surrounding oceans. Tuna is a major food source, and turtles are also caught. The coral reefs around the atolls are threatened by the spread of the crown-of-thorns starfish.

ETHNIC COMPOSITION

The Tuvaluans are predominantly Polynesian; I-Kiribati, other Pacific peoples, and Europeans constitute less than 4 percent of the population.

LANGUAGES

English and Tuvaluan are the official and principal languages. On Nui, a Kiribati dialect is also spoken.

RELIGIONS

The population is almost entirely Christian, with about 97 percent belonging to the Church of Tuvalu, derived from the Congregationalist foundation of the London Missionary Society.

Religious Affiliations

Church of Tuvalu	11,290
Seventh-Day Adventist	160
Baha'i	120
Other	70

HISTORICAL BACKGROUND

According to linguistic evidence, the history of the Tuvaluan people may be as lengthy as 2,000 years. However, local stories and genealogies go back only about 300 years. This later time frame postdates first European contact but predates strong European influence. It is generally believed that the earliest Tuvaluan ancestors came mostly from Samoa, Tonga, and Uvea. All of these settlers were Polynesians, with the exception of those on Nui, who are descendants of Micronesians from Kiribati.

In 1567 Alvaro de Mendana y Neyra, a Spanish explorer, became the first European to make contact with Tuvalu. He discovered, explored, and named a substantial part of the eastern half of the Solomon Islands. For more than two centuries the islands were relatively free of European influence. In the late 1700s Tuvalu became a stopping point for whalers, traders, and slave traders (especially from Peru). This continued until the London Missionary Society became active in the conversion of the islands' inhabitants in the 1860s. The islands came under the hegemony of the United Kingdom between 1850 and 1875, as the British tried to curb the activities of slave traders.

The islands were placed under the jurisdiction of the Western Pacific High Commission in 1875, and 17 years later they were linked administratively with the Gilbert Islands, now Kiribati, to the north. In 1916 the two groups were renamed the Gilbert and Ellice Islands Col-

ony, under the responsibility of the high commissioner for the western Pacific, represented locally by a resident commissioner. In 1974 the colony began the move toward self-government with the replacement of the legislative council by a House of Assembly and the election of a chief minister. In 1972 the British government appointed a commission to study the separatist claims of the Polynesian Ellice Islanders, who chafed under the domination of the Gilbert Islanders, whose population was Micronesian. On the basis of the commission's recommendations a referendum was held in the Ellice Islands in 1974, in which over 90 percent of the voters favored separate status. The islands became a separate British dependency in 1974 under the name of Tuvalu (an old local term meaning "eight standing together"), with a separate House of Assembly and a chief minister. An independence constitution was approved in London in 1978, and after a few months of guided internal self-government Tuvalu achieved independence in October 1978.

Upon independence Toalipi Lauti, chief minister at the time, became prime minister. Following the 1981 elections he was replaced by Dr. Tomasi Puapua. The main issue in the election was Puapua's decision to entrust most of the government's financial capital to a California businessman for investment in the United States; the money plus interest was reportedly returned to Tuvalu in 1984. In 1989 Puapua lost his office to Bikenibeu Paeniu, who promised to reduce Tuvalu's dependence on foreign aid and promote national unity. Toward this end, in 1990 Paeniu began efforts to establish a more open economy and to increase investment in the infrastructure, especially in the area of communications.

In 1993 Kamuta Latasi was elected prime minister. In 1998, following a nasty campaign, Bikenibeu Paeniu returned to office. However, he lost a vote of confidence in 1999 and was succeeded by Ionatana Ionatana. When Ionatana died in December 2000, Faimalaga Luka was elected prime minister, but he suffered a vote of no confidence in 2001 and was succeeded by Koloa Talake. After the 2002 elections Saufatu Sopoanga became prime minister, as followed in turn by Maatia Toafa in 2004.

The nation made international news when it leased its Internet domain suffix, ".tv" to a U.S. company, a deal worth \$50 million over 12 years, which provided enough funds for the country to apply for membership in the United Nations. In 2001 the tiny island nation again made international news: With its highest elevation just 4.5 m (15 ft) above sea level, Tuvalu is acutely aware of the dangers of global warming; the country therefore threatened to take legal action against the United States for failing to sign the Kyoto Protocol on global warming. The nation continues to campaign to have its population taken as an entire community by Australia or New Zealand when life becomes untenable because of high ocean levels. Scientists have forecast that the islands will be severely flooded by 2020 or 2030 and will have disappeared

from sight altogether by the end of the century. Nevertheless, construction proceeds in Tuvalu, fueled by the Internet domain name sale.

LIST OF MODERN RULERS

Prime Minister

1978–81	Toalipi Lauti
1981–89	Tomasi Puapua
1989–93	Bikenibeu Paeniu
1993–96	Kamuta Latasi
1996–99	Bikenibeu Paeniu
1999–2000	Ionatana Ionatana
2000–01	Lagitupu Tuilimu (acting)
2001	Faimalaga Luka
2001–02	Koloa Talake
2002–04	Saufatu Sopoanga
2004–	Maatia Toafa

CONSTITUTION

Tuvalu is a constitutional monarchy, with the Queen of England, represented in the nation by the governor-general, as the head of state and with the leader of the majority in the unicameral legislature as the prime minister and head of government. The governor-general is required by the constitution to be a citizen of Tuvalu appointed on the recommendation of the prime minister. The cabinet consists of the prime minister and up to four other ministers appointed by the governor-general in consultation with the prime minister. The judiciary is composed of the High Court and magistrates' and island courts.

PARLIAMENT

The national legislature is the Fale I Fono, the Parliament (formerly the House of Assembly), consisting of 15 elected members, two each from the seven most populous and one from the least populous of the eight inhabited islands. The 15 seats were last contested in elections held on July 25, 2002. Only nonpartisans stood for election. There is universal suffrage for those over 18 years of age.

POLITICAL PARTIES

There are no formal political parties in Tuvalu.

LOCAL GOVERNMENT

Each of the eight inhabited islands has its own island council responsible for local government. Each council has six elected members. The councils are held in *manea-*

bas (Polynesian meetinghouses), which are large enough to sleep as many as 1,000 persons, which is necessary when an island's entire population comes together for the periodic communal feasts lasting several weeks.

LEGAL SYSTEM

The judicial system comprises eight island courts with limited jurisdiction and magistrate courts. Appeals from these courts lie with the High Court, which is presided over by the chief justice. Decisions can be further contested at the Court of Appeal in Fiji. In some cases the Judicial Committee of the Privy Council in the United Kingdom serves as the ultimate court of appeal.

HUMAN RIGHTS

In terms of civil and political rights Tuvalu is classified as a free country. Tuvaluan society is egalitarian, democratic, and respectful of human rights. There are no human rights problems, and there are no local human rights groups.

FOREIGN POLICY

Tuvalu is a member of the Commonwealth, the South Pacific Commission, and the South Pacific Forum. Most of its contacts with other states are through representatives accredited to New Zealand or Fiji. It is one of the signatories of the South Pacific Forum's Treaty of Rarotonga, which declares the South Pacific a nuclear-free zone.

DEFENSE

Tuvalu has no defense force and has no military spending but is covered by British military guarantees in case of external attack. The nation does have a police force that includes a Maritime Surveillance Unit for search-and-rescue missions and surveillance operations.

ECONOMY

Tuvalu has a small free-market economy in which subsistence farming and fishing are the primary activities. There are no known mineral deposits on the islands, and the nation is too remote for the development of a tourist industry. The sale of stamps and coins, British aid, and worker remittances, particularly from those working in Nauru and Kiribati and on foreign ships, are major sources of revenue. As of 2003 many of the workers on Nauru were being repatriated as a result of the decline of the mining industry on that island.

The U.S. government is also a major source of revenue for Tuvalu, with 1999 payments from a 1988 treaty

on fisheries totaling about \$9 million, with the figure rising annually. In an effort to reduce its dependence on foreign aid, the government is pursuing public-sector reforms, including the privatization of some government functions and personnel cuts of up to 7 percent. Tuvalu began deriving revenue in 1998 from the use of its area code for 900 lines and in 2000 from the lease of its ".tv" Internet domain name. Royalties from such technological sources could raise gross domestic product (GDP) three-fold or more over the next decade. In 1999, with merchandise exports falling and financing reaching less than 5 percent of imports, continued reliance was placed on fishing and telecommunications license fees, remittances from overseas workers, official transfers, and investment income from overseas assets to cover the trade deficit. Partly fueled by the sale of the country's Internet domain name, real GDP growth in 2000 was 3 percent.

ENVIRONMENT

The greatest environmental threat facing this small, underdeveloped country is its population growth, with centralization on the isle of Funafuti. The management of solid waste and associated threats to the water supply are directly related to the increasing and increasingly centralized population. Since 1980 the population of Funafuti has more than doubled. Of grave relevance is the rising of ocean levels as a result of global warming. Another major factor contributing to the gradual sinking of the island of Funafuti and the salinization of its freshwater source is airport construction, which has brought a sizable portion of the island's area within inches of sea level and has caused significant damage to the coralline base.

LIVING CONDITIONS

Tuvalu has historically been considered among the least developed countries in the world, with many native traditions long remaining prominent. Although the *aliki*, or chiefs, ceased to lead society and were no longer thought to have direct connections with the all-powerful god or gods, customs such as the *pologa*, regarding the tasks that each family needs to perform to keep society together, remained in place. Families were known for special skills, such as building canoes or houses. Such skills were passed from father to son, and the sharing of such *pologa* was *tapu*, or taboo. The communal good was the most important thing in Tuvaluan society.

In the modern world, this social structure broke down through decades of missionary zeal and the advent of mass communications. With the windfall from the sale of the country's domain name to a California-based communications company, some of the last vestiges of traditional life were lost. The government invested \$10 million to pave the islands' 19 km (12 mi) of roads. Before 1999 there were four cars on the islands, and Tuvaluans walked or cycled everywhere. With the sudden influx of wealth, Tuvalu was flooded with cars and motorcycles, which has led to decreased exercise and an increase in diabetes. Many Tuvaluans eventually discovered that cars were expensive to maintain as well as unnecessary in their small island nation. Thus, a large portion of the central island is now filled with abandoned cars.

Housing on the islands typically consists of the *fale*, a rectangular structure made of timber posts from matured coconut stumps, which support a thatch roof. Flooring is made of loose coral or concrete covered by rough coconut-frond mats under fine pandanus mats. Homes are fitted with woven coconut-frond shutters that are lowered when it rains.

In 2005 life expectancy was 68 years. Adult literacy stood at 98 percent.

HEALTH

The major Tuvaluan hospital is on Funafuti; dispensaries staffed by paramedics are located on other islands. Medical care is free. As of 2004 there were 6 physicians servicing the islands. The population has generally been healthy, owing to a good basic diet and strong traditions regarding medicinal skills and natural remedies.

The sudden wealth gained in 2000 from the sale of the country's Internet domain name led to a motor revolution that was accompanied by a wave of imported foods. Many Tuvaluans, having given up their daily exercise, were suddenly introduced to obesity, high blood pressure, and diabetes.

As of 2002, 93 percent of the population had access to adequate drinking water, 88 percent to adequate sanitation. Immunization rates for one-year-olds are high, with the government supplying free vaccinations. In 2002 the immunization rates were as follows: tuberculosis, 99 percent; measles, 95 percent; and DPT and polio, 93 percent. In 2002 there were five cases of tuberculosis. The infant mortality rate in 2005 was 20 deaths per 1,000 live births. Public expenditures on health in 2001 totaled 2.9 percent of GDP.

FOOD AND NUTRITION

The traditional Tuvaluan diet is simple and healthy, consisting largely of taro, breadfruit, plantains, fish, crayfish, pork, chicken, and local vegetables such as *laulu* (spinach). Many dishes are prepared in coconut milk, *pi*, which is also a popular beverage. Tropical fruits like papaya and bananas are eaten. Foods are normally steamed or boiled in the *umu* (cooking house), a separate structure that contains an open fire, or roasted in ground ovens. Imported items such as flour, sugar, rice, salt beef, corned beef, and tea have made their way into the diet and are popular among those who can afford them.

Tuvaluans eat three meals a day. Breakfast often includes a cup of warm, fresh toddy made from coconut sap called *ssali kaleve*, which is a primary source of vitamin C. Sunday lunch is a time for socializing.

Nutrition is generally good, with only 5 percent of newborns underweight between 1998 and 2003. However, with the sudden windfall of earnings from the sale of the

country's Internet domain name the simple and healthy diet of the islanders was augmented by imported fast foods. Such foods, combined with reductions in exercise resulting from the purchase of cars, have led to increased obesity rates, high blood pressure, and the incidence of diabetes.

WORK

According to a 2001 estimate the Tuvaluan labor force numbered 7,000. Many people work abroad as sailors or in phosphate mines and send remittances home. Others are employed locally in fisheries or in the small tourism industry. Still others are involved in agriculture, primarily coconut production. Between 60 and 70 percent of the population have lived on subsistence agriculture, but with arable land at a premium and increasing salinization a major problem, such a lifestyle is at risk.

As such a large proportion of the population lives on subsistence crops and fishing, unions are largely nonexistent on the islands, though they are provided for by law. The only registered trade union, the Tuvalu Seamen's Union, has approximately 600 members working on foreign merchant vessels. The minimum working age is 14; the workday is set at eight hours. In 2004 the minimum biweekly wage was \$91.65.

MEDIA

The constitution provides for the freedoms of speech and the press, and the government generally respects these rights in practice. The country's only newspaper is *Sikuleo o Tuvalu/Tuvalu Echoes*, published by the government's Broadcasting and Information Division on Funafuti. The paper, which is published in Tuvalu and English every two weeks, has a circulation of only several hundred.

Radio Tuvalu, which was privatized in 2001, broadcasts for 40 hours per week from Funafuti in both English and Tuvaluan. A government-run television station went off the air in 2001 due to a lack of funds but resumed broadcasting on a limited schedule in 2002. Most residents use satellite dishes to access foreign programs.

The country's only library is located on Funafuti.

The first Internet connection was made in 1999. There are no government restrictions on access, but service is largely limited to the capital due to cost and connectivity issues. As of 2002, there were 1,300 Internet users.

CULTURE

The traditional culture of Tuvalu is similar to that of other Polynesian societies, with music and dance, as well as storytelling and crafts, prominent. Two ancient forms of dance are the *fakanau* and *fakaseasea*, which both may commemorate the reign of a chief or praise certain outstanding figures for their skills in canoe building, fishing, or house building or for their wealth or bravery within the community. The *fakanau* has a tune in between speech and singing and a rhythm that is much quicker than that of the *fakaseasea*. The *fakaseasea*, said to be as old as the *fakanau* is sung much more slowly, to a harmonious tune, and has one or two performers dancing. When the missionaries arrived, they stifled the *fakanau*, whose movements they found to be sexually stimulating. These types of dancing are still performed by elders.

More modern forms of dance are the *fatele* and the *siva*. The *fatele* is a line dance performed by either men or women (most commonly young women) wearing pandanus leaf skirts, greenery, and flower garlands. Dancers tell stories with their body movements and are accompanied by onlookers who sing, clap, and beat wooden drums made from boxes or biscuit tins covered with mats. The *siva* is performed by young women who dance and sing as young men play the guitar and also sing.

The status of a composer or musician in traditional times was high; he was the one people turned to when they wanted to commemorate a special occasion or have a *fakanau* or *fakaseasea* performed for an outstanding figure in the community. Following the composition of the song

the composer himself would call his singing and dancing group to practice. Another type of singing was known as the *kupu*, which was mainly used to commemorate the good work of a deceased person. The timing of the *kupu* is like that of the *fakaseasea* but is accompanied by crying sounds. These dances and songs can still be seen in the annual feast of *fatele*.

The tradition of crafts is still alive on Tuvalu, from canoe carving to weaving with coconut fronds and pandanus leaves.

FOLKLORE AND MYTHOLOGY

The myths and legends of Tuvalu revolve around the founding and naming of the islands. Legend has that the founding ancestors of the main island of Funafuti were Telematua and his two wives, Futi (meaning "banana") and Tupu (meaning "holy" or "abundant"). The island is named after the wife Futi (*fina* is a feminine prefix). According to oral tradition, Funafuti was first inhabited by the porcupine fish whose offspring became men and women.

On most of the Tuvaluan islands people believe that the Eel and the Flounder were the creators of the islands. So strong is this belief that nearly all the islands regard the eel as *tapu*, or taboo, among edible fish. Tuvalu literally means "group of eight," and it is believed that a contested stone flattened Flounder and was later broken into eight pieces by Eel, signifying the eight inhabited islands of Tuvalu.

Similarly, the first people to settle on the sand banks now called Nanumea were two women named Pai and Vau. It is said that the neighboring islets were formed from the sand that fell out of the women's baskets after they had been sent away from Nanumea by the Tongan warrior Tefolaha, the ancestor of the people of Nanumea.

Nanumanga folktales concerning creation all state that in the beginning the heavens and earth were united, with various accounts of how they were separated. According to one account, Tepuhi, a spirit with the physical form of a sea serpent, lifted the heavens to their present positions. Finding that the earth was one massive stretch of land, he smashed it up and formed oceans and rivers between the pieces. Tepuhi, as the woman, and the earth, as the man, later spawned the human race.

ENTERTAINMENT AND RECREATION

Feature films are shown in those *maneaba*, or meetinghouses, equipped with generators or electricity. Increasingly, television has become a major source of entertainment, with satellite dishes providing access to foreign programming. Tuvaluans also enjoy dancing. Special occasions almost always include the traditional *fatele* or more modern *siva* dance. Young people enjoy the casual *tuisi* (“twist”) dances. *Te ano*, a local volleyball-like game, is also popular.

ETIQUETTE

The typical greeting is a handshake accompanied with the spoken *Taalofa!* (“Greetings”) for strangers. Relatives use a sniffing gesture, pressing their face to the other’s cheek and sniffing deeply. This is also used for departures and is considered a particularly affectionate manner in which to greet children. In instances where one sees the same person every day, the typical greeting is *E fano koe ki fea?* (“Where are you going?”) or *E aa koe na?* (“What are you doing” or “How are you?”). It is customary to remove shoes before entering houses or meeting places.

FAMILY LIFE

The Tuvaluan family is extended and patriarchal. The elderly are cared for by their children and often help raise their grandchildren. All family decisions must be approved by the elders. Older men are most involved in community discussions; otherwise their typical activity is to make *kolokolo*, or coconut-fiber string, for use around the home. Mothers are mainly responsible for disciplining children, although fathers take action in cases of serious misbehavior. Women cook, feed the livestock, make household items such as mats and thatched roof panels, see to the needs of the family, and work in the gardens. Men fish and are responsible for agriculture. Though many of the traditional family customs and alignments are disappearing in the modern age, many others still exist. For example, each family, or *solonga*, has its own task, or *pologa*, to perform for the community, such as fishing, building houses, or providing defense. The skills of a family are passed on from father to son. Family size is shrinking; the fertility rate in 2005 was three children per woman.

PERSONAL APPEARANCE

The traditional bark cloth that was worn as a loincloth by men or as a waist cloth by women is seen only in tourist shops. Grass skirts are reserved for special dance occa-

sions. In modern times the typical attire is Western, but with vibrant colors. Flowers are often used to decorate women’s hair.

SPORTS

Sports popular in Tuvalu include soccer, basketball, cricket, and volleyball. Young people also play a traditional sort of volleyball called *te ano*, in which two teams line up facing one another. Competition begins with one member throwing the heavy ball toward the other team, who must hit it back with their hands. Points are scored if the opposite team lets the ball fall, and the first team to score 10 points wins.

CHRONOLOGY

- 1978** Tuvalu becomes an independent nation but retains status as a special member of the Commonwealth.
- 1979** Tuvalu and the United States sign a treaty of friendship by which the latter renounces claims to Tuvalu’s four southernmost atolls.
- 1981** Prime Minister Toalipi Lauti is replaced by Tomasi Puapua.
- 1985** Puapua is reelected prime minister.
- 1986** Sir Tupua Leupena succeeds Sir Fiatau Pentala as governor-general.
- 1989** Bikenibeu Paeniu is elected prime minister.
- 1993** Kamuta Latasi is elected prime minister.
- 1994** The Latasi government dismisses Governor-General Tomu Sione and appoints Manuella Tulaga in his stead.
- 1996** Latasi is defeated in a no-confidence vote, and Paeniu replaces him as prime minister.
- 1998** In a general election, Paeniu is chosen prime minister.
- 1999** Paeniu loses political support, and Ionatana Ionatana becomes his successor.
- 2000** The country sells its Internet domain suffix “.tv” to a U.S. company, thus generating enough money to apply to become a UN member. Tuvalu is admitted to the United Nations later in the year.
- 2001** Faimalaga Luka is elected prime minister. Tuvalu threatens to take legal action against the United States for failing to sign the Kyoto Protocol. Koloa Talake becomes prime minister after a vote of no confidence for Luka.
- 2002** Saufatu Sopoanga wins elections to become prime minister.
- 2003** Faimalaga Luka is confirmed as the new governor-general.

- 2004** Maatia Toafa becomes acting prime minister in August, following a vote of no confidence for Sopoanga. In October, Toafa is elected prime minister.
- 2005** Extreme high tides hit the capital, Funafuti. Luka steps down as governor-general, and Reverend Filoimea Telito is appointed the new governor-general.

27,269,482 (2005)

AREA

236,040 sq km (91,135 sq mi)

MAJOR ETHNIC GROUPS

Baganda, Karamojong, Basoga, Iteso, Lango

LANGUAGES

English (official), Kiswahili, Luganda

RELIGIONS

Christianity, animism, Islam

UNIT OF CURRENCY

Ugandan shilling

NATIONAL FLAG

Six equal horizontal stripes of black (top), yellow, red, black,

yellow, and red; a small white disc in the center bears a representation of the Balearic crested crane, the national bird.

NATIONAL EMBLEM

An oval native shield, pointed at both ends, as flanked on one side by a red-crested white crane and on the other by a *kob* (a buck with a black coat and a white underbody), both standing on a grassy mound, with cotton and coffee growing on either side of a river. The black shield backed by black silver-tipped crossed warriors' spears contains three symbols: a bright sun in the center, a white royal drum with red decorations at the bottom, and horizontal blue and white wavy lines at the top, representing Lake Victoria. Beneath the device is a white scroll proclaiming the national motto, "For God and my country."

NATIONAL ANTHEM

"Oh Uganda, Land of Beauty"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 25 (Proclamation of the Second Republic), May 1 (Labor Day), June 3 (Martyrs' Day), October 9 (National Day, Independence Day), December 26 (Boxing Day), various Islamic festivals, various Christian festivals, including Good Friday, Easter Monday, Christmas

DATE OF INDEPENDENCE

October 9, 1962

DATE OF CONSTITUTION

October 8, 1995

GEOGRAPHICAL FEATURES

Landlocked Uganda is located in East Africa, straddling the equator, with a total area of 236,040 sq km (91,135 sq mi), including some 35,000 sq km (13,500 sq mi) of water and swamps. Uganda shares its total international border of 2,698 km (1,677 mi) with five neighbors: Sudan, Kenya, Tanzania, Rwanda, and the Democratic Republic of the Congo (DRC). The borders were demarcated in the late 19th century by the United Kingdom, Germany, and Belgium, but some territory has since been ceded to Kenya.

The capital is Kampala, with a 2002 population of almost 1.2 million. The other major urban centers are Jinja, Lira, Gulu, Njeru, Mbale, and Entebbe; only Gulu has more than 100,000 residents. Topographically, the country is one vast plateau; there are no natural geographic regions. The northeastern highlands are separated from the Ruwenzori Mountains ("the mountains of the moon") by a low valley containing Lake George and the Kazinga Channel. Uganda is within the upper basin of the White Nile. The Victoria Nile runs from Lake Victoria at Jinja over Owen Falls north into Lake Kyoga. After Karuma Falls, the river follows a westward course over Murchison Falls into Lake

Uganda

Albert. From Lake Albert it runs as the Albert Nile, leaving Uganda at Nimule on the Sudan border. There are almost as many lakes as rivers in the country. Uganda shares Lakes Albert, Edward, and Victoria with neighbors, while Lakes Salisbury, Warnala, Kyoga, George, and Kwania are entirely within the country's borders.

CLIMATE AND WEATHER

Uganda has an equatorial climate, with temperatures moderated by altitude. In most of the country the main dry season occurs between November and March. Mean annual temperatures range between 20°C and 22°C (68°F and 72°F). Kampala has a January average of 22°C (72°F) and a July average of 20°C (68°F). Throughout the country July is the coolest month.

Climate and Weather

Slopes of the Ruwenzori: 60 in to 80 in
Acholi-Kyogo: 35 in to 50 in
Ankole-Buganda: 40 in

FLORA AND FAUNA

Though the southern regions of Uganda once held the most varied flora, natural vegetation has largely been replaced with cultivated fields, mainly of plantains. Patches of forest still remain, with the timber-rich *mvuli* tree present. Savannas take over in central and northern Uganda. The driest regions are in the steppes of the northeast, which area is largely treeless. Forestland was once thick near Lake Victoria and in the western highlands, but there, too, the land has given way to human depredation and elephant grass. Medium-elevation forests, on the other hand, still contain rich varieties of species. Uganda has huge areas of swamplands that include both papyrus and seasonal, grassy swamp.

Once widespread, large cats such as lions and leopards can now only be found in game preserves and national parks. Elephants, buffalo, antelopes, rhinoceroses, and giraffes are found in the north and in the west, while gorillas and chimpanzees are found only in the far west of the country. Zebras and antelopes roam the grasslands, while oryx and Grant's gazelles are found mainly in the northeast. Insect life is rich, including the malaria-carrying *Anopheles* mosquito and the tsetse fly. Bird life includes the national symbol, the crowned crane, as well as the weaver, shrike, heron, egret, stork, kite, pigeon, dove, kingfisher, and guinea fowl, among others. Crocodiles are found along the Nile, while fish include a type of tilapia, the Nile perch, lungfish, and tiger fish.

ETHNIC COMPOSITION

The approximately 40 African tribes that make up Uganda's population are grouped according to language into four large categories: Bantu, Eastern Nilotic, Western Nilotic, and Central Sudanic. The numerically dominant Bantus live in the densely populated southern half of the country, the Eastern and Western Nilotics live north of Lake Kyoga, and the Central Sudanics inhabit the West Nile district. The Bantu speakers make up two-thirds of the population. The group is broadly classified into Eastern Lacustrine Bantu (including the Baganda, Gwe, Gisu, Nyuli, Samia, and Kenyi) and Western Lacustrine Bantu (including the Nkole, Toro, Nyoro, Kiga, Amba, and Konjo).

Western Nilotic speakers make up about 15 percent of the population and are often collectively referred to as the Luo. Eastern Nilotics make up 12 percent of the population and comprise four major tribes—the Karamojong, Dodoth, Jie, and Teso—and a number of minor tribes, such as the Kakwa, Sebei, Labwor, Nyakwai, Tepeth, Napore-Nyangea, and Teso. The Central Sudanics are represented by the Lugbara and the Madi, who together make up less than 5 percent of the population. Intertribal relations are conditioned by historic animosities and rivalries and the process of modernization has tended to reinforce these attitudes rather than soften them.

The Baganda are the largest single tribe or ethnic subgroup in the country, accounting for 17 percent of the population, as followed by the Karamojong at 12 percent, the Basoga at 8 percent, the Iteso at 8 percent, and the Lango at 6 percent.

LANGUAGES

The official language of Uganda is English, which is spoken by only about 5 percent of the population. Kiswahili

(also referred to as Swahili) has been selected as the national language and is designated to eventually supersede English. There are as many languages in the country as there are tribes, and the system of classification is the same for languages as for ethnic groups. Each language is generally unintelligible to speakers of other languages, and dialect differences exist within larger tribes. The two languages that have emerged as lingua franca are Luganda in the south and Kiswahili in the Lango, Acholi, and Teso areas. A considerable body of literature exists in Luganda.

RELIGIONS

Uganda has been the scene of intense Catholic and Protestant missionary activity since the 19th century and as such is one of the most Christianized countries in Africa, with 66 percent professing the Christian faith. Some 18 percent retain traditional African beliefs. Islam has experienced tremendous growth in recent years; about 16 percent of the population is Muslim, up from about 5 percent a few decades earlier. There is also a small Baha'i congregation. The Christians are almost evenly divided between the Roman Catholic and Protestant denominations. The largest Protestant denomination is Anglican (Episcopal). Other Protestant churches include the Methodist, Lutheran, Baptist, and Presbyterian churches. The first Christian missionaries, representing the Anglican Church Missionary Society, arrived in the country in 1877.

Roman Catholic	9,000,000
Protestant	9,000,000
Muslim	4,360,000
Indigenous Beliefs	4,910,000

HISTORICAL BACKGROUND

Uganda's earliest inhabitants were Bushmanoid people. From the year 1000 the country was overrun by a series of invaders: first the Cushitic peoples, then Bantu speakers, and later Nilotic-speaking Sudanese people and Luo. In the 18th century, as the first Europeans reached the land, there were two kingdoms, Bunyoro-Kitara and Buganda. The earliest Christian missionaries were welcomed by the *kabaka* (king) of Buganda, Mutesa I (r. 1856–84). Mwanga, his son, persecuted the Christians; when he was driven out by the Muslims, he appealed to the very missionaries he had persecuted and was restored to the throne with their help.

Uganda was under British colonial rule from about 1888 to 1962. In 1888 the Imperial British East Africa Company was granted a charter to administer the British

sphere of East Africa, which was assigned to the United Kingdom through the Anglo-German Agreement of 1890. As the company was unable to mediate religious conflicts in the country or establish a sound administration, Britain's Parliament announced a protectorate over Buganda in 1894. The area of the protectorate was consolidated between 1894 and 1919. The only major challenge to its hegemony came in 1897, when Mwanga rose in revolt; he was quickly defeated, deposed, and replaced by his son Dawdi Chwa.

The British administrative system in the colony was based on the Uganda Agreement of 1900, signed between Britain's Special Commissioner Sir Harry Johnston and the chiefs of Buganda. Under this agreement Buganda was ruled indirectly by the British, who in turn used the Buganda leadership to extend British control. The agreement confirmed the privileged position of the Buganda tribe and the semi-independence of the Buganda kingdom. The agreement also established a system of land tenure under which half the land area was granted to chiefs and subchiefs as private holdings and the other half became British Crown land, with rights vested in the commissioner. In 1907 the commissioner became the governor. The first step toward self-government came in 1921, with the creation of a legislative council without African representation. Later constitutional evolution was marked by Bugandan attempts to ensure supremacy in the emerging Ugandan state. A British commission of inquiry accepted that Buganda should have federal status within an independent Uganda and that the other three kingdoms—Ankole, Bunyoro, and Toro—should enjoy quasi-federal status. Upon independence in 1962, the *kabaka* of Buganda, Sir Edward Frederick Mutesa Mutesa II, was elected president. Apolo Milton Obote, an advocate of centralism and the leader of the Uganda People's Congress (UPC), became prime minister. In 1966 Obote deposed the president, and over the next year he eliminated the ancient kingdom of Buganda's autonomous status. Three years later he banned all opposition parties and established a one-party state.

In 1971 Gen. Idi Amin, the commander in chief of the army and air force, deposed Obote. Amin had himself installed as president, suspended parts of the constitution, and dissolved the National Assembly. Over the next few years he began a reign of terror that destroyed the political and economic fabric of the country. The Asian population, which played an important role in commerce, was ordered to leave the country. Thousands of Amin's enemies met their deaths at the hands of extermination squads. Resistance to his regime grew during 1976 and 1977 as students and churches protested the regime's excesses. The economy collapsed, as many managers and workers were either forced out or left the country. Corruption was rampant. To divert the army, of whose support he was unsure, Amin declared war on Tanzania in 1978. The following year the Tanzanian army, with the

backing of Ugandan opposition groups, captured Kampala, and Amin fled.

Uganda long struggled with the legacies of the dictator Amin. The post-Amin period was marked by economic decline, political instability, a breakdown in the institutions of law and order, and generally inefficient administration. The rate of inflation soared to well over 100 percent; there was no foreign exchange, even to buy food; parts of the nation were severely affected by drought, producing near-famine conditions; acts of political violence and murder were commonplace; and the police and military created as much crime as they prevented. Indeed, many of these problems could be rightly blamed on the eight-year misrule of Amin, who virtually shattered the economy and the political cohesion of the country. The first and second post-Amin governments, headed by Yusuf Lule and Godfrey Binaisa, respectively, had only short lives; the 1980 elections that returned Milton Obote to the presidency brought the country full circle to the leadership that had been at the helm when Amin had come to power.

Elements of the Ugandan National Liberation Army (UNLA), led by senior military officers primarily from the Acholi ethnic group, overthrew the government of President Obote on July 27, 1985. An interim military government, as headed by a Military Council, was installed, with General Tito Okello Lutwa, the former chief of the defense forces, as head of state and Military Council chairman. Immediately after assuming power, the Military Council began appointing a broad-based civilian cabinet, comprising all major ethnic groups as well as representatives of the four political parties that had contested the disputed 1980 election. The council subsequently included members of four insurgent groups, though not Yoweri Museveni's National Resistance Army (NRA), which was dominated by Bantus, in particular the Banyankole. Museveni's NRA forces continued hostilities against the interim government but also agreed to enter into peace talks with the Military Council, to be held in Nairobi under the chairmanship of Kenyan President Daniel arap Moi. The talks culminated in a peace accord between Lutwa and Museveni, who agreed to join the government as vice chairman of the Military Council when the terms of the accord were implemented; however, further fighting took place. By early 1986 Museveni's army (mostly teenagers fanatically devoted to their leader) had taken over Kampala, driven out Lutwa, and installed Museveni as president and head of state.

Under Museveni, Uganda prospered, with peace returning to large swaths of the country for the first time in decades. Museveni eased government controls on the economy and encouraged foreign ownership and investment. A new constitution in 1995 set the country back on the road to a multiparty state. Political debate in the media became and has remained lively. Despite the good economic news, Uganda's support of Congolese rebels in

1998 and 1999 cost the country international support, and continued low-level insurgencies, as carried out by both the Lord's Resistance Army (LRA), a cultlike group led by Joseph Kony based in Sudan, and the Allied Democratic Forces, a rebel Islamic fundamentalist group based in the west, prevented a full return to normalcy under Museveni in the 1990s.

In 2000 a national referendum reaffirmed popular support for Uganda's no-party political system. Museveni was reelected in 2001, despite claims that there was large-scale vote fraud. Discontent with the country's intervention in the Democratic Republic of the Congo's civil war and signs of corruption in the government also led to diminishing support for Museveni. By the end of 2003 Uganda's forces had been largely withdrawn from the DRC, but there was fighting in 2003 between the remaining Ugandan forces and Congolese rebels, and trouble on the home front ensued. Early in 2004 LRA rebels massacred about 200 civilians in northern Uganda, prompting a renewed government offensive that achieved some successes; late in 2004 there was a brief truce with the LRA, and talks were being held to end the insurgency. Amid such renewed activity, the death of the former dictator Idi Amin in a Saudi Arabian hospital in August 2003 was almost overlooked.

LIST OF MODERN RULERS

1963–66	Edward Mutebi Mutesa II (president)
1966–71	Apolo Milton Obote (president)
1971–79	Idi Amin (president)
1979	Yusuf Lule (president)
1979–80	Godfrey Lukongwa Binaisa (president)
1980	Paulo Muwanga (chairman of the Military Commission of the UNLF)
1980	Saulo Musoke, Polycarp Nyamuchoncho, and Yoweri Hunter Wacha-Olwol (Presidential Commission)
1980–85	Apolo Milton Obote (president)
1985	Basilio Olara Okello (chairman of the Military Council)
1985–86	Tito Okello Lutwa (chairman of the Military Council)
1986–	Yoweri Kaguta Museveni (president)

CONSTITUTION

The new constitution of 1995 extended the one-party "movement" form of government until the year 2000, when a national referendum on the establishment of a multiparty state was held; 52 percent of Ugandans voted to retain the country's no-party system of government rather than switch to a multiparty system. The constitution did away with the Military Council, which had gov-

erned the country since 1986, and established a powerful presidency and a popularly elected legislature. National elections took place in 1996 (on a nonparty basis) and were deemed free and fair by international observers. A presidential election was also held that year, with President Museveni winning 74.2 percent of the vote. Paul Ssemogerere, the leader of the Democratic Party, was second, with 23.7 percent. In 2001 Museveni was reelected, gaining 69.3 percent of the vote. Real political power resides in the office of the president and the cabinet rather than the National Parliament. Both the legislature and the president are elected for five-year terms. Suffrage is universal, and the legal voting age is 18.

PARLIAMENT

The National Parliament, the unicameral legislature re-established under the 1995 constitution, consists of 214 directly elected representatives as well as 78 nominated by legally established so-called special-interest groups and approved by the president. Members are elected to five-year terms. Seats allocated to special-interest groups include 53 for women, 10 for the army, five for the disabled, five for youth representatives, and five for labor and trade organizations. Debate within the National Parliament is lively, with criticism of government policy the norm. The last national elections were held in 2001, and the next are scheduled for 2006.

POLITICAL PARTIES

In 1986 the government suspended all political-party activity but stopped short of a formal ban on political parties. The constitution prohibits political parties from holding national conventions, issuing platforms, or endorsing candidates. Museveni's National Resistance Army, the political arm of which changed its name to "The Movement," is not formally considered to be a political party but rather a national movement that claims the loyalty of all Ugandans. It continues to dominate the National Parliament. In a national referendum held in 2000 voters chose to retain the country's no-party system of government. However, because of a boycott called by opposition parties, only a little over half of registered voters participated in the referendum. In the 2001 parliamentary elections, 214 members (out of 292) were directly elected without party labels in single-seat constituencies, while 78 were chosen by special-interest groups shortly before the election. In the 2001 presidential election there was a candidate from the socialist United People's Congress. The conservative Democratic Party of Uganda is another unofficial political party with a small following. A 2002 law sought to limit the activities of political parties.

LOCAL GOVERNMENT

After years of political instability and civil war, there has been a resurgence of local government activity in Uganda. Museveni ordered the formation of resistance councils to fulfill government functions in areas under the NRA's control in the late 1980s; local councils replaced the resistance councils in 1996, and local government elections that returned localities to elected civilian government were held in 1997. The country comprises 56 administrative divisions.

LEGAL SYSTEM

The legal system is based on English common and customary law. The constitution provides for an independent judiciary, but the president exerts enormous legal and extralegal power over the judiciary, inhibiting its independence. The Supreme Court is the highest court in the land, as followed by the Court of Appeal, which also serves as a constitutional court adjudicating constitutional issues. Next in line are the High Court, then the chief magistrate's court, and finally local council, sub-county, parish, and village courts. The lower magistrate's courts have been a source of controversy because of their susceptibility to bribery and corruption. There is also an Industrial Court, which arbitrates labor disputes.

At times, the government liberally applies the charge of treason against nonviolent political dissidents. Local courts are subject to bribery and corruption. Prison conditions are difficult, especially in local jails.

HUMAN RIGHTS

Human rights issues have played a major role in Uganda's turbulent postindependence history. The depredations of the Amin years are well known and well documented. Chaos and widespread human rights violations continued during the 1980s. Under Museveni, Uganda has improved its human rights record considerably and is moving toward a multiparty democracy, though prohibitions remain on political activity and freedom of assembly in the 21st century. A 2002 bill, the Political Organizations Law, made it increasingly difficult for opposition parties to function in the country. Aside from a 2002 antiterrorism bill that imposes stiff penalties for the publishing of news that might incite terrorism, the media is relatively free and independent. There is general tolerance of religious beliefs.

Government forces have used excessive force against civilians and rebels in areas of unrest in the north and west, and police regularly use torture and other coercive methods against criminal suspects to extract confessions. Many suspects are held for indefinite periods without trial.

or communication with family or lawyers. Political opponents are harassed by overzealous government supporters and police. Prison conditions are harsh. More than 500 prisoners die annually as a result of poor diet, sanitation, and medical care. Rebel groups still active in the north and west have shown little respect for human life; the kidnapping of children and women is common, as is rape.

FOREIGN POLICY

The 1990s saw Uganda maintain uneasy relationships with most of its neighbors. Most disputes have centered around alleged support for antigovernment rebels. In 1998 Uganda and Rwanda sent troops into the Democratic Republic of Congo to aid rebels fighting the government of Laurent Kabila, which Uganda accused of aiding Ugandan rebels. After a year of fighting, Uganda and the DRC signed a cease-fire agreement in April 1999, ending Uganda's official support for Congolese rebel forces. However, relations have remained strained. In 2005 the DRC formally accused Uganda before the International Court in The Hague of invading its borders in 1999.

In 1995 Uganda suspended diplomatic relations with Sudan over that nation's support of the Lord's Resistance Army, also charging that Sudanese troops had crossed the border and bombed Ugandan villages and refugee camps in pursuit of Sudanese rebels. Despite a peace accord signed in 1996 and the restoration of diplomatic relations, the border region remained tense. In 1997 Sudan claimed to have killed hundreds of Ugandan soldiers who were allegedly aiding Sudanese rebels inside Sudan. Uganda and Sudan signed an agreement in 2002 attempting to deal with the LRA along both countries' borders.

Relations with Kenya, once badly bruised over allegations of rebel support, improved in the late 1990s to the point that both countries prepared to join Tanzania in a revival of the East African Economic Community. Kenya and Uganda are working together to stem cattle rustling and violence on behalf of the LRA along the border.

On the global stage, Uganda has maintained a relatively low profile, rebuilding its economic relationships with western Europe and the United States. In 1998 U.S. President Bill Clinton made an official two-day visit to Uganda, and U.S. forces have regularly trained with the Ugandan military. Uganda, which has in the past practiced a nonaligned foreign policy, retains close ties with both China and North Korea.

DEFENSE

The Uganda People's Defence Force (UPDF), numbering about 62,000 in 2003, is made of three wings: the army, an inland navy, and a small air wing. The size of the armed forces is down considerably from a decade earlier,

when troop strength stood at 90,000. Members are virtually all former guerrillas of the National Resistance Army. The UPDF proved itself in combat situations along the country's border and in the neighboring Democratic Republic of the Congo in the latter half of the 1990s. The UPDF participates in training activities for the African Crisis Response Initiative and has held joint exercises with U.S. forces. Some units receive training from the British armed forces. In 2004 military expenditures totaled about \$170 million, or 2.2 percent of gross domestic product (GDP).

ECONOMY

In the 1990s the economy prospered, with the government investing in the rehabilitation of infrastructure and improving incentives for production and foreign investment. The successful implementation of macroeconomic and structural reforms led to higher growth and moderate inflation. By the end of the 1990s real GDP growth was at 8.2 percent, and inflation, which was 240 percent in 1987, was down to 4.8 percent in 1998. A large-scale privatization plan launched in the early 1990s met with a fair amount of success. The sale of the state-owned Uganda Commercial Bank was a milestone. The industrial sector, which employs about 5 percent of the workforce, is being rehabilitated, and the production of building and construction materials such as cement and roofing sheets has grown dramatically. One promising sign is the revival of the East African Economic Community—an economic union with Kenya and Tanzania that will allow increased regional trade and more international investment in the region. With substantial natural resources, including fertile soils, regular rainfall, and large mineral deposits of copper and cobalt, the nation's long-term economic potential looks good. Agriculture remains the single largest sector of the economy, employing over 80 percent of the workforce.

In 2000 Uganda qualified for enhanced Highly Indebted Poor Countries (HIPC) debt relief worth \$1.3 billion and Paris Club debt relief worth \$145 million. These amounts combined with original HIPC debt relief add up to about \$2 billion. Growth for 2001–02 was solid, despite a continued decline in the price of coffee, Uganda's principal export. Solid growth of 4.4 percent in 2003 reflected an upturn in Uganda's export markets.

Despite general progress, Uganda remains one of the world's poorest countries, with per capita GDP at \$1,500 in 2004.

ENVIRONMENT

Uganda is biologically rich because it lies at the conjunction of four vegetation regions: Lake Victoria in the south, the dry Sudanese extension in the north, the Somali-Masai region in the northeast, and the montane areas in the east. Formerly, wetlands occupied much of the country, but they are being drained indiscriminately, especially because they offer breeding grounds to malarial mosquitoes and bilharzia-carrying snails. What little forest remains is mostly in reserves and is diminishing as agriculture expands. Military conflicts and political instability have resulted in the cutting of lantana bushes, which help to keep tsetse fly populations down. The poaching of large game animals, many of which are endangered, is widespread.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Uganda 146th out of 177 countries in terms of life expectancy, education, and standard of living. The average Ugandan's life expectancy in 2005 was 51.6 years, literacy stood at 70 percent as of a 2003 estimate, and 71 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$1,500 in 2004. As citizens of one of the poorest countries in the world, the average Ugandan survives on about 75 cents a day. By a 2001 estimate, 35 percent of the population lives below the poverty line.

Thatched huts made of mud and wattle walls provide housing for most of the population, though styles of building vary from group to group. Corrugated iron is also used as a roofing material. In urban centers, where an estimated 15 percent of the population lived as of 2003, the use of sun-baked mud bricks, concrete blocks, and fired bricks was encouraged by the government. Rural life remains intensely tribal.

Often referred to as "the Pearl of Africa," Uganda is the source of the White Nile, the location of the Ruwenzori Mountains—"the mountains of the moon"—and home to the endangered mountain gorilla. As such, the country is attracting tourists once again, especially after 15 years of stable government.

HEALTH

Life in Uganda is short. In 2005 the average life expectancy was 51.6 years, and the infant mortality rate was high, at over 67 deaths per 1,000 live births. Despite government spending of 2.1 percent of GDP on health, the medical infrastructure is vastly understaffed. As of 2004 there were fewer than five physicians per 100,000 people; only 39 percent of births between 1996 and 2002 were attended by trained medical professionals. Access to safe drinking water is a major problem: As of 2002, only 56 percent of the population had access to a sustainable source of clean water.

Major diseases affecting Uganda include malaria, tuberculosis, and HIV/AIDS, which is locally called "slim disease." In 2000 there were 46 cases of malaria per 100,000 people; 2002 saw 550 cases of tuberculosis per 100,000 people. As of 2003 the HIV/AIDS prevalence rate was 4.1 percent; in 2001, 600,000 people were living with the disease, and 84,000 died of it. AIDS orphans are an increasing problem for Ugandan society. The government has maintained an active policy of public education; the daily newspaper, the *New Vision*, carries a regular column intended to educate the public. Smoking is another major health risk; as of 2000, 52 percent of men smoked.

Immunization rates for children under one year of age are rising; in 2003, 96 percent were immunized

for tuberculosis, 82 percent for polio and measles, and 81 percent for DPT. Child and infant mortality rates remain high as a result of malnutrition, diarrhea, and measles.

FOOD AND NUTRITION

Ugandan staples include corn, cassava, plantains, and millet. Beans and maize meal form basic parts of many meals; maize-meal porridge is boiled until it solidifies and then cut into wedges. Meats include beef, goat, and mutton. Fish also provides protein for those living near rivers and lakes. Millet and sorghum are common grains available to communities throughout northern regions, where rainfall is insufficient for root crops such as cassava, manioc, and sweet potatoes. Root crops and plantains are staples in southern and eastern Uganda, where rain is plentiful. Plantains, or *matooke*, are served with a variety of sauces made of tomatoes, peanuts, mushrooms, and some form of protein, which might be meat, fish, or even grasshopper.

Many of the pastoral groups in the country rely on cattle for much of their food. These animals provide meat, butter, and milk. Milk is often eaten curdled or mixed with blood taken from the animal. *Pombe* is a locally made fermented banana beer, and *waragi* is the local millet-based alcohol.

Urban centers such as Kampala have wider varieties of food, including fruits and vegetables imported from neighboring countries.

The most serious obstacles to health arise from nutritional deficiencies, particularly among children. Between 1999 and 2001, 19 percent of the general population was undernourished, while between 1995 and 2002, 23 percent of children under five were considered underweight. The goiter rate was 75 per 100 school-age children in 1996.

 Amount of Fruits and Vegetables Available per person per year kg: 226.3

STATUS OF WOMEN

Women's roles in society remain clearly subordinate to those of men despite gains in both politics and business and a pledge by President Museveni to eliminate discrimination against women in official policy and practice. African customary laws still discriminate against women, especially in rural areas. In many regions women may not own or inherit property, and polygyny is legal. Men may "inherit" the widow of a deceased brother. Violence against women remains common. While women are not officially restricted from education or employment, their access to education has been declining, according to the UN Children's Fund. Families withdraw daughters rather than sons from school in times of economic hardship.

In the latter half of the 1990s women were given a higher profile in both the government and military but overall remained underrepresented in those areas. The government has set aside 53 seats for women in the 292-seat National Parliament.

WORK

The Ugandan labor force in 2003 was over 12 million strong. Of these, 82 percent were involved in agriculture, 13 percent in services, and only 5 percent in industry. Coffee is the country's single largest agricultural product; others include tea, cotton, tobacco, plantains, cassava, potatoes, corn, millet, pulses, beef, goat, milk, poultry, and flowers. Fishing along the shores of Lake Victoria provides a living for many. Industries include sugar, brewing, tobacco, cotton textiles, and cement. Tourism is becoming an increasing source of income for the country. Essentially, Uganda is a land of subsistence agriculture and small-scale businesses; most Ugandans live outside the formal economy. There are no unemployment figures.

The National Organization of Trade Unions, the country's largest labor federation, is independent of the government and political parties. However, many so-called essential workers are barred from forming unions.

Strikes are permitted only after a lengthy reconciliation process. The normal workweek is 40 hours, but there is no established maximum workweek. Though the law provides for a minimum working age of 18, child labor is widespread, especially in agriculture. With half the country's population under 15, large numbers of children tend to be employed. A minimum wage of \$3.50 per month was set in 1984 but has never been widely enforced; subsequent negotiations have not altered the vastly out-of-date figure. The few occupational safety and health regulations established in Uganda are seldom enforced.

 Unemployment %: —

EDUCATION

Education, even at the primary level, is not compulsory. Less than 50 percent of age-eligible children were in primary school prior to 1997, when the government introduced a universal primary education program, giving free tuition to up to four children from any family. The program has had reasonable success attracting students. The seven-year primary-school education program begins at age six. Secondary school education is six years in duration, as consisting of periods of four and two years. About 30 percent of the adult population is considered to be illiterate.

The effects of the 1997 initiative have been encouraging. Whereas primary school enrollment was about 3.1 million in 1996, enrollment rose to 5.2 million in 1997, an increase of about 68 percent. Primary school enrollments have continued to increase, and in 2002 there were 7.3 million primary-school pupils, of whom 49 percent were female, in over 13,000 schools, with almost 140,000 teachers. Secondary-school enrollment that year was over 500,000 in over 2,000 schools, with nearly 30,000 teachers. Accordingly, government spending on education has increased. In 1990 public expenditures on education totaled 1.5 percent of GDP; the figure had risen to 2.5 percent by 2001.

Kampala's University College of East Africa became Makerere University in 1970. The institution has faculties in the arts, sciences, and agriculture and offers advanced diplomas in medicine, education, engineering, law, and veterinary science. Among other public and private universities are Mbale Islamic University and the Mbarara University of Science and Technology. Uganda has a number of religious colleges, five commercial colleges, and numerous technical, vocational, and teacher-training colleges.

SCIENCE AND TECHNOLOGY

Several government agencies conduct essential research. The Ministry of Agriculture, Animal Industries, and Fisheries, through its National Agricultural Research Organization, employs 185 full-time researchers in fields such as crops, livestock, forestry, and fisheries. Similarly, the Ministry of Water, Lands, and Environment, through its National Environmental Management Authority, pursues research in environmental protection. The Ministry of Tourism, Wildlife, and Antiquities has research centers for wildlife protection and forestry. The country's all-important coffee crop spawned the nonprofit research group Uganda Coffee Development Authority.

Research and training is carried out at several of the nation's colleges and universities. Makerere University has faculties of science, agriculture and forestry, technology, medicine, and veterinary science. Mbarara University of Science and Technology has faculties of medicine and science education.

Between 1994 and 1997 science and engineering students accounted for 15 percent of college and university enrollments. As of 2002 expenditures on research and development totaled 0.8 percent of GDP. As of 2001 there were 25 scientists per million people engaged in research and development.

MEDIA

Uganda has a relatively free and outspoken media, with independently run newspapers and broadcast outlets rivaling those controlled by the government. The *New Vision*, a government-funded daily, and the *Monitor*, an independently owned daily, each have fairly widespread circulation. The *Crusader*, another independently owned newspaper, gained considerable credibility in the late 1990s and was rapidly approaching the circulation of the leading two dailies. While the government controls the main television broadcast outlet as well as the largest radio network, Radio Uganda, it by no means holds a monopoly. Radio Uganda competes with 15 independently run stations and four local television stations, and an additional dozen private stations broadcasting by satellite compete with the government network. The government does require journalists to be licensed and to hold university degrees. The constitution provides for free speech and a free press; however, the government is said to at times restrict these rights in practice. The occasional use of sedition laws and the imprisonment of some members of the media have led to the general practice of self-censorship. Similarly chilling have been the provisions of the 2002 Suppression of Terrorism Bill. This law imposes stiff sentences for the publication of news that might promote terrorism, adding to self-censorship on the part of the media. Reporters without Borders, an international media watchdog group, ranked Uganda 86th out of 167 countries in terms of press freedom.

Internet access is widely available through at least three commercial service providers, though its cost remains prohibitive. As of 2003 there were 125,000 Internet users and 776,000 cellular telephone users.

CULTURE

With its plethora of tribes and ethnic groups, Uganda presents a broad spectrum of cultural artifacts. Some commonality can be found, however, as with music. Songs relate people's histories or celebrate everyday tasks and rites of passage; such songs are passed down from one generation to the next. Similar instruments are found

throughout Uganda. The *ndigindi* is similar to the lyre; the *entongoli* resembles a harp; the *amadinda* is a type of xylophone; and the *lukeme* is a kind of thumb piano. An Acholi, Okot p'Bitek, was one of Uganda's most famous writers. His book *Song of Lawino* (1966) describes the stories told in Acholi songs.

Dance is also a traditional means of expression. Again, such dances vary from group to group and from region to region but are generally used for the same purposes: to celebrate rites of passage, family events, and routine rituals as well as for pure enjoyment. Courtship dancing is particularly important among the Karamojong and their neighbors. Among the Baganda, the small cowhide drum used for singing and dancing is a typical household possession. Pots become drums for the Banyankole people; a typical dance imitates the movements of a cow.

Arts and crafts are still vital in Uganda. Women can often be seen outside their huts weaving straw mats or baskets. Wood carving—from pipes to bowls—is also popular.

Theater has become an effective medium of education in the country, as used to treat topics from gender equality to sexually transmitted diseases. Numerous local companies exist in addition to the National Theatre in Kampala. The largest and most important museum in the country is the Uganda Museum, in Kampala. Others include those at the Murchison Falls and Queen Elizabeth national parks.

FOLKLORE AND MYTHOLOGY

Each of the country's tribes and ethnic groups has its own rich oral tradition of myths, legends, and proverbs. For the people of southern Uganda, the Lubaale is the pantheon of traditional gods. Jok is the god of the Alur tribesmen of Uganda and the Democratic Republic of the Congo. For them, the world is full of spirits, or *djok*. When the Alur are in need of rain, they sacrifice a black goat to Jok. Similarly, Adroa is the primary god of the Lugbara, who also live in both the DRC and Uganda. Adroa has two aspects: good and evil. He is looked on as the creator of heaven and earth and is said to appear to a person who is about to die.

Tales and legends also often relate the exploits of actual folk heroes, such as Kintu, who was the first king of the Baganda.

Proverbs provide a means of teaching morals and values to the young. Examples of some typical Ugandan proverbs are “Caution is not cowardice; even the ants march armed,” “The hunter in pursuit of an elephant does not stop to throw stones at birds,” “The husband is always the last to know,” “The person who has not traveled widely thinks his or her mother is the best cook,” and “An only child is like a drop of rain in the dry season.”

Riddles also provide entertainment as well as learning experiences for the young. Examples of some Baganda riddles include, “He built a house with only one pole standing,” (the answer is “a mushroom”); “He has three legs,” (the answer is “an old man with his walking stick”), or “He goes on dancing as he walks,” (the answer is “a caterpillar”).

ENTERTAINMENT AND RECREATION

Urban entertainment in Uganda has many elements of free-time activities in the West. Movies, television, nightclubs, bars, and concerts are all available in cities such as Kampala. In the countryside, where electricity is rarer, the possibilities are more limited. Radios are found everywhere, however, and musical programs provide entertainment for all, as do soccer broadcasts. Battery-powered traveling video booths bring movies and educational programs to the countryside. Community centers in villages will usually have a television around which locals can gather.

Traditional forms of entertainment are also maintained in rural areas. Ritual celebrations and festivals based on harvests or marriages and christening provide opportunities for singing and dancing.

ETIQUETTE

Ugandans have a plethora of greetings that vary depending on social status, age, time of day, and even the length of the coming social interaction. Not greeting someone is considered rude.

Some taboos prevalent in the rest of Africa also pertain to Uganda. Eating is often done with the hands, in which case the right hand is always used. It is considered impolite to offer or take things with the left hand. Public displays of affection are considered inappropriate.

FAMILY LIFE

Though much has changed in the traditional family paradigm in modern Uganda, the extended family as one

household continues to be the ideal. However, such living arrangements are not always feasible in urban areas. Polygamy, or more specifically polygyny, once widespread, has become less common. A marriage fee is typical, and it is usual to marry outside of one's extended family or clan (but not necessarily outside of the tribe). Children take the clan name of the father.

Family size is shrinking but still large by Western standards. The 2005 fertility rate was 6.7 children per woman; however, a correspondingly high infant mortality rate of 68 deaths per 1,000 live births brings the usual family size to about four or five children. Traditionally, women are in charge of maintaining the home and raising the children, while men work the fields.

PERSONAL APPEARANCE

Western-style clothing is becoming the norm in Uganda, though some groups maintain tradition styles as well. Baganda women typically wear a *busuuti*, a long, brightly colored cloth dress with a sash at the hips. Baganda men frequently wear the long white robe called the *kanzu*. The Bahima women of western Uganda wear full, broad cotton dresses, with floor-length shawls. Northern tribes, including the Karamojong, often wear cow skins. They also signify social status through the use of adornments such as feather plumes and large, coiled, copper necklaces and armlets.

SPORTS

Soccer is the country's most popular sport. The national league has avid fans, and Kampala has one of the largest stadiums in Africa. A sign of the country's colonial past is the continuing popularity of such typically British sports as rugby and cricket. Boxing and wrestling are also popular. Uganda develops some impressive talent in track and field. At the 1996 Summer Olympics, Uganda's Davis Kamoga won a bronze medal in the men's 400-meter race. Ugandans have won six Olympic medals overall since 1968.

CHRONOLOGY

- 1962** Uganda gains independence, with Milton Obote of the Uganda People's Congress (UPC) as prime minister and Sir Edward Frederick Mutesa II, of the Kabaka Yekka (KY) Party—formerly the *kabaka*, or king, of Buganda—as president.
- 1966** UPC cabinet members attempt a coup; Obote has them arrested, suspends the constitution, names himself president, and commands the army chief of staff Idi Amin to take control of the Buganda government.

- 1967** Obote adopts a new constitution for the country, abolishing Uganda's four kingdoms and consolidating their power in the central government.
- 1969** Obote survives an assassination attempt; the UPC is declared the only legal party.
- 1971** Idi Amin overthrows the government and conducts bloody purges of Obote supporters among the military, the cabinet, and the civilian population.
- 1972** Libya provides aid to Uganda; Amin departs from Uganda all Israelis as well as Indians, who had by and large controlled the country's commercial sector.
- 1973** The United States and the United Kingdom close formal diplomatic relations with Uganda.
- 1978** After several military units revolt, Amin orders an invasion of Tanzania to distract them.
- 1979** Tanzania retaliates, assisted by one Ugandan contingent loyal to Obote and another loyal to Yoweri Museveni, and defeats Amin in less than six months; Ugandans and Tanzanians loot the defeated territories, further damaging Uganda's already devastated economy.
- 1980** In national elections the UPC declares victory, with Obote installed as president despite charges of election fraud by the Democratic Party (DP).
- 1981** Museveni forms the insurgent National Resistance Army (NRA), based in Buganda; the government wages a bloody campaign to suppress the group.
- 1985** Soldiers of the Acholi ethnic group stage a coup, forcing Obote into exile; Tito Okello, an Acholi army officer, declares himself head of state.
- 1986** The NRA's political wing assumes control of the government, under Museveni, and creates a broad-based government consisting of DP and UPC as well as NRA members.
- 1990** Uganda allows Rwandans in the Ugandan army to overthrow the Rwandan government.
- 1991** The government launches a large-scale privatization campaign aimed at turning over hundreds of state-run enterprises to private investors.
- 1992** Museveni undertakes a program to cut the size of the national army and to return to civilian life the guerrillas of the NRA that brought him to power; the constitutional commission presents the first draft of a new Ugandan constitution.
- 1993** The government revokes the power of traditional tribal rulers in an attempt to centralize power and modernize the government.
- 1994** Two rebel groups, the Ugandan National Democratic Alliance and the Ugandan Federal Army, sign cease-fire accords with the government.
- 1995** A new constitution is adopted, replacing the ruling Military Council with an elected National Parliament and a popularly elected president; Uganda suspends diplomatic relations with Sudan over its support of rebel insurgents.
- 1996** Museveni wins the presidential election in a landslide; peaceful elections are held for the new National Parliament; Sudan and Uganda reestablish diplomatic relations; regional Presidents Moi of Kenya, Museveni of Uganda, and Benjamin Mkapa of Tanzania meet to formally inaugurate the Permanent Tripartite Commission for East African Cooperation.
- 1997** Local government elections take place for the first time in decades in a peaceful atmosphere; the government launches an initiative giving free primary education to four children from every family.
- 1998** Museveni conducts a major purge in the armed forces after allegations of an assassination plot against him come to light; Uganda sends troops into the Democratic Republic of the Congo in support of antigovernment rebels; U.S. president Bill Clinton visits Uganda, signaling acceptance of Museveni as the legitimate head of state.
- 1999** Eight foreign tourists are kidnapped and killed by Rwandan Hutu rebels in southwestern Uganda, crippling the country's tourist industry; Uganda and the DRC sign a cease-fire agreement, ending Uganda's official support of rebel forces there.
- 2000** An Ebola epidemic breaks out in Uganda, killing over 70; Allied Democratic Forces conduct guerrilla warfare in continued attempts to topple Museveni's government; a national referendum reaffirms popular support for the no-party system of government.
- 2001** Museveni is returned to office, purportedly winning 69 percent of the vote. NRA continues to dominate the National Parliament following elections.
- 2002** Sudan and Uganda sign an agreement to try and contain the rebel group Lord's Resistance Army. A strong offensive is mounted against the rebel faction. Uganda begins pulling troops out of the DRC.
- 2003** Last of Ugandan troops leave the DRC. Idi Amin dies in Saudi Arabia.
- 2004** LRA kills 200 at a displaced persons camp, sparking renewed fighting with the government. The government and LRA begin talks in an attempt to end the insurgency.
- 2005** Uganda rejects the DRC's allegations at the International Court in The Hague that it invaded the DRC in 1999. In December the Court rules in favor of the DRC.

GEOGRAPHICAL FEATURES

Situated north of the Black Sea and the Sea of Azov, Ukraine covers 603,700 sq km (233,090 sq mi). Known as the breadbasket of Europe, Ukraine is largely a flat, fertile plain, with over half the land suitable for agriculture. The country consists of six main regions: the Dnieper-Pripet Lowland, the Northern Ukrainian Upland, the Central Plateau, the Eastern Carpathian Mountains, the Coastal Plain, and the Crimean Mountains.

The Dnieper-Pripet Lowland is the northern part of the Ukraine that includes the basin of the Dnieper River, Ukraine’s longest; the Pripet River, which drains the western lowlands; and the city of Kiev. This once densely forested lowland is largely used as pasture for livestock. A low plateau in the northeastern por-

tion of the nation makes up the Northern Ukrainian Upland, which is used to grow wheat and sugar beets and raise livestock. There are large deposits of natural gas south of Kharkiv. The Central Plateau—Ukraine’s most productive farmland—extends from east to west across the country and is part of the Great European Plain. The eastern part of the plateau is the Donets Basin, or Donbass. Ukraine’s leading industrial region includes the cities of Donets’k, Gorlovka (also spelled Horlivka), and Luhans’k. The region also has large deposits of coal. The Eastern Carpathian Mountains rise in western Ukraine. The country’s highest peak, Mount Hoverla (also spelled Goverla), reaches 2,061 m (6,762 ft). The mountains have deposits of oil and natural gas. Along the Black Sea and Sea of Azov lies the Coastal Plain, which includes most of the Crimean

Ukraine

Peninsula. The coastline consists of moderately steep cliffs and shallow lagoons. This region is also the most arid. In the southern part of the Crimean Peninsula are the Crimean Mountains, which gradually rise from the north but slope steeply to the Black Sea in the south. The highest peak in the Crimeans is Roman-Kosh, which rises to 1,545 m (5,069 ft).

CLIMATE AND WEATHER

Most of Ukraine has cold winters and warm summers that favor the growing of crops. Eastern Ukraine is slightly colder in winter and warmer in summer than western Ukraine. Temperatures in eastern Ukraine average about 19°F (−7°C) in January and 68°F (20°C) in July, while temperatures in the west average about 25°F (−4°C) in January and 64°F (18°C) in July. Precipitation ranges from about 30 in (760 mm) per year in the north to about 9 in (230 mm) in the south. Rainfall is highest in June and July. At higher elevations in the Carpathian and Crimean mountains the weather is colder and wetter.

Climate and Weather

Mean Temperature
 January: 21°F
 July: 66°F
 Average Rainfall: 27 in

FLORA AND FAUNA

Ukraine is divided into three clear vegetative zones. In the north, in the region known as Polesye, heavy rainfall supports forests and woodlands of beech, alder, willow, poplar, beech, oak, elm, and pine. Much of this land has been cleared for agricultural purposes, as the black soil of Ukraine has long made the nation an agricultural powerhouse. The northern region also contains marshland, including parts of the vast Pripet Marshes, though the country is busily draining these marshes for more farmland. The middle of the country is a forest-steppe; agricultural land accounts for over two-thirds of this. The terrain gives way to true steppe farther south. There is alpine vegetation in the Carpathian and Crimean mountains.

Animal life includes fox, rabbit, wild boar, European bison, wolf, elk, deer, wild sheep, and marten. There are over 350 bird species found in the country, including the gull, partridge, owl, and numerous migratory birds. Fish include perch, sturgeon, carp, and bream.

ETHNIC COMPOSITION

Ukrainians, a Slavic nationality with their own customs and language, make up 73 percent of Ukraine's popula-

tion. The Russians form the second-largest ethnic group, constituting 22 percent of the population. Other groups include Jews, Belarusians, Moldovans, Bulgarians, and Poles. Ukraine has tried to accommodate the cultural concerns of ethnic minority groups in education and other cultural areas.

LANGUAGES

Since 1990 the official language of the Ukraine has been Ukrainian. However, from the 1930s until the late 1980s the government of the Soviet Union forced Ukrainians to conduct business, educate, print newspapers, and broadcast television in Russian, such that many Ukrainians speak Russian better than they do Ukrainian. The government allows ethnic minorities to use their own languages in schools and other local affairs. Among the more often used minority languages are Romanian, Polish, and Hungarian.

RELIGIONS

Despite the decades of religious restrictions imposed by the Soviet Union, Ukrainians have maintained strong ties to organized religion. About 46 percent of all Ukrainians are Orthodox Christians who belong to either the Ukrainian Orthodox Church or the Ukrainian Autocephalous Orthodox Church. The former was a branch of the Russian Orthodox Church until the early 1990s, while the latter was an independent Orthodox church that supported Ukrainian independence; the Autocephalous Church was banned in 1930 by Stalin but was reinstated in 1990. The second-largest denomination in the country is the Ukrainian Catholic Church, which is strongest in the west. Also known as Uniates or Greek Catholics, the Ukrainian Catholics celebrate the Orthodox Rite but recognize the authority of the Roman Catholic pope. There are small percentages of other Christian denominations, and about 1 percent of the population is Jewish by birth.

Religious Affiliations

Ukrainian Orthodox	20,870,000
Ukrainian Greek Catholic	2,850,000
Ukrainian Autocephalous Orthodox	810,000
Protestant, Jewish, None, Other	22,910,000

HISTORICAL BACKGROUND

Ukraine has historically been closely linked to Russia. A Slavic civilization called Rus developed around Kiev and at other points along river routes between the Baltic and Black seas during the ninth century. In 980 Kiev was con-

quered by Vladimir I (Volodymyr in Ukrainian), the ruler of the Russian city of Novgorod. Under his rule, the state became a significant European power. Around 988, when Vladimir converted to Orthodox Christianity, the country became Christian and fell under the cultural influence of the Byzantine Empire. The state collapsed in the 13th century, when the Tartars, a Mongol tribe, swept across the Ukrainian plains from the east and conquered the region. The state of Galicia-Volhynia, meanwhile, managed to stay independent and grew in importance in what is now western Ukraine.

In the mid-14th century, Lithuania seized Volhynia and Kiev, and the Polish kingdom gained control of Galicia. Under Polish and Lithuanian rule, Ukrainian peasants became serfs. By 1569 Poland ruled the entire region. Many discontented peasants joined bands of independent soldiers that became known as Cossacks, who occupied the territory that lay between the Poles and the Tatars. In 1648 the Cossack leader Bohdan Khmelnytsky led an uprising against Polish control. In an effort to gain foreign support, he formed a short-lived alliance with the czar of Russia in 1654, accepting his overlordship.

In 1667 Ukraine was divided between Poland and Russia. Poland gained control of lands west of the Dnieper River, while Ukrainian lands east of the Dnieper came under Russian protection. However, by 1764 Russia abolished Ukrainian self-rule. Beginning in 1772 the western regions of the Ukraine, including Galicia, were incorporated into the Austrian Empire.

During the following century Russia followed a policy of Russification, imposing the Russian language and culture on the Ukrainians. From 1863 to 1905 Ukrainian-language publications were banned. In Austrian-controlled Galicia, on the other hand, greater freedom was allowed, and Galicia became a major center of Ukrainian culture during the 1800s.

While the Bolsheviks established a Communist government in Russia, in 1918 the Ukrainians formed an independent, non-Communist country called the Ukrainian People's Republic. However, the republic was short-lived, and by 1920 Communist Russia had seized eastern and central Ukraine. The rest of Ukraine came under Polish, Czechoslovak, and Romanian control.

Ukraine became one of the four original republics of the Soviet Union in 1922. Although initially supportive of Ukrainian culture and the use of the Ukrainian language, under dictator Joseph Stalin the Soviet state began a renewed policy of Russification.

In the late 1920s and early 1930s the Communist government began a program of collectivization in which privately owned farms were combined into larger, state-run farms. Several hundred thousand Ukrainian farmers resisted the seizure of their land and were sent to prison labor camps in Siberia or Soviet central Asia. In 1932 and 1933 the Soviet government seized grain and food from

people's homes, causing a major famine. Between five million and 7.5 million Ukrainians died of starvation.

During World War II, from mid-1941 to mid-1944, Nazi Germany occupied Ukraine. German policies to exploit the region's resources and people to the fullest were implemented with exceptional brutality. About five million Ukrainian civilians, including 600,000 Ukrainian Jews, were killed during the war. By the end of World War II the Soviet Union had taken control of many parts of Ukraine that had belonged to Poland, Czechoslovakia, and Romania. In 1945 Soviet Ukraine became one of the original members of the United Nations. In 1954 Soviet leader Nikita Khrushchev transferred control of the Crimea from Russia to Ukraine. For the next three decades many Ukrainians opposed Soviet control and the oppression of Ukrainian culture. The protest movement continued despite arrests and imprisonment.

In 1986 an explosion and fire at the nuclear power plant in Chernobyl, near Kiev, released large amounts of radioactive material into the atmosphere. Initial reports released by Soviet officials put the number of people who had died from the accident at 31 and claimed only 200 were seriously injured. However, by the early 1990s it had become clear that 6,000 to 8,000 people had died as a result of the explosion and its aftermath. The disaster also caused high rates of cancer and other illnesses in Ukraine, Belarus, and Russia, and there was long-term environmental impact on soil and water supplies.

In the late 1980s the Ukrainian nationalist movement gained strength. Citizens demanded more control over their government, economy, and culture. In July 1990 Ukraine's parliament declared Ukrainian sovereignty and the supremacy of Ukrainian law over Soviet law. When an August 1991 attempt by conservative Communists to overthrow a reform-minded Soviet government failed, the demands for self-rule increased. The Supreme Soviet passed a declaration of independence on August 24, 1991, around the same time that several other Soviet republics made similar declarations. In a referendum on December 1, over 90 percent of Ukrainians voted in favor of independence. Leonid M. Kravchuk, a former Communist official who became a Ukrainian nationalist and democrat, was elected president.

On December 25, 1991, the Soviet Union was dissolved. Ukraine and most of the other former Soviet republics created a loose association called the Commonwealth of Independent States (CIS) to deal with economic and military problems caused by the breakup. Many Ukrainians viewed the CIS as a temporary association, as they feared a commonwealth led by Russia would limit Ukrainian independence. There were tensions between the Ukraine and Russia over how much of the Soviet national debt each country would assume, how the Soviet Navy's Black Sea Fleet would be divided, and which country would have control of the Crimea.

In 1992 Ukraine and two other former Soviet republics with nuclear weapons—Belarus and Kazakhstan—agreed to eliminate all nuclear weapons on their territories within seven years. They also agreed to become parties to the Treaty on the Non-Proliferation of Nuclear Weapons, a UN treaty forbidding the spread of nuclear weapons; Ukraine ratified the treaty in 1994. In 1996 Ukraine completed the transfer of its short- and long-range nuclear weapons to Russia for destruction. Ukraine's last Soviet-era nuclear missile silo was destroyed in 2001.

In 1994 Leonid D. Kuchma was elected to succeed Kravchuk as Ukraine's president. In 1997 Ukraine and Russia reached an agreement to settle the dispute over the Black Sea Fleet: According to the terms of the agreement the Ukraine kept about one-fifth of the fleet, and Russia leased from Ukraine docking space for its ships at the port of Sevastopol, in Crimea. Shortly thereafter the two countries signed a treaty of friendship and cooperation, which was ratified by Russia's legislature in 1999. Kuchma was reelected president in November 1999. His reputation, however, was ruined when a critic of the government, the Internet journalist Georgiy Gongadze, was brutally murdered in 2000. This led to street protests and calls for Kuchma's impeachment, as most suspected he was involved in Gongadze's decapitation. The European Union looked into the case, and in 2002 a parliamentary commission seemed to find a connection to the president. More demonstrations followed, but Kuchma created a news blackout and temporarily weathered the storm.

Meanwhile, in 2001 Ukraine's parliament dismissed the government in a vote of no confidence. Prime Minister Viktor Yushchenko, who had come under attack for his economic reform program, was replaced by Anatoli Kinakh. In 2002 Kuchma fired Kinakh and installed Viktor Yanukovych. When Kuchma attempted to amend the constitution to allow for his presidential term to be extended, the opposition, including Yushchenko, decried the move in parliament. More mass demonstrations in 2002 protested Kuchma's presidency.

In 2004 the first round of presidential elections were held, leading to a runoff between Yushchenko and Kuchma's pick to succeed him, Yanukovych. During the campaign, Yushchenko was diagnosed with severe dioxin poisoning, which apparently was the result of a deliberate action on the part of one of his enemies. Fraud on a massive scale was alleged in the November victory of Yanukovych, sparking the largest peaceful protests in Ukrainian history, the so-called Orange Revolution. Ukraine's Supreme Court ruled the results invalid, and in a second runoff election the reformer Yushchenko won. In 2005 the Yushchenko government announced that the suspected killers of Gongadze were in custody and accused the former authorities of staging a cover-up.

LIST OF MODERN RULERS

President

1991–94	Leonid Makarovich Kravchuk
1995–2005	Leonid Danylovych Kuchma
2005–	Viktor Andriyovych Yushchenko

CONSTITUTION

For nearly five years after gaining independence—from December 1991 to June 1996—Ukraine continued to be governed under a 1978 constitution that was not written to be implemented and that was subsequently modified piecemeal through a series of amendments and constitutional laws. The result was a patchwork constitutional order that left unresolved such fundamental issues as the relationships among the Rada (the legislative body), the prime minister, and the president. President Leonid Kravchuk and his successor, Leonid Kuchma, sought strong presidential powers in a new constitution but could not reach agreement with the Rada. At stake was whether the Rada should act as a parliament or a legislature—that is, whether executive power and legislative power would ultimately be in the hands of a prime minister and cabinet that depended upon the Rada, or whether Ukraine would essentially have a presidential-congressional system.

In April 1995 the Rada finally passed several of President Kuchma's proposals to strengthen the presidency pending the adoption of a new constitution. The Rada acceded to most of the proposals only after Kuchma threatened to convert the changes into referenda that the Rada knew the people would support. As a result of the changes the system became presidential-congressional by default. President Kuchma used the same threat of referendum in order to have a new constitution adopted that codified the changes to which the Rada had agreed; the new constitution took effect July 12, 1996.

The Ukrainian government features an executive branch headed by a president with strong powers and a legislative branch consisting of a national parliament. The president is elected directly to a five-year term by citizens 18 years old or older. The president is assisted by a cabinet, which the president appoints; a prime minister, also appointed by the president, heads the cabinet. Ukraine's parliament, officially called the Supreme Rada, is the nation's lawmaking body. It has 450 members directly elected to four-year terms.

PARLIAMENT

The Rada is a unicameral legislature comprising 450 delegates, half of whom are elected from single-member districts and half through proportional representation. Election is by all citizens aged 18 and over. The turn-

out rate in a given election must exceed 50 percent in order for the results to be valid. There are 24 permanent commissions, or standing committees, in which most of the details of legislation are reviewed. Because there is no strong and stable party structure, the well-defined committees are essential for successful legislative practice. As parties have grown in stability and force, the process of selecting chairs and members of key committees has more closely reflected that growth.

POLITICAL PARTIES

There are over 50 political parties registered in Ukraine, but only a dozen or so have significant size and influence. The main differences between parties regard their pro-Communist or anti-Communist stances. The center, once very weak, has gained strength since the 2002 elections. Over 40 parties took part in the 2002 parliamentary elections, most working temporarily in blocs.

On the left are the Communist Party of Ukraine (the successor to the old Communist Party and the nation's largest party), the Socialist-Peasant Party (adhering to a revisionist Marxism that recognizes private property and private business but holds that business activity, especially that of large enterprises, should be controlled by the state), the Social-Democratic Party United (a moderate socialist party), and the Agrarian Party/Rural Party (which focuses on defending collective farms).

On the right are the Rukh (a strong right-center party that is strongest in western Ukraine) and the Ukrainian Republican Party (which is moderately conservative and strongly supportive of Ukrainian independence).

Viktor Yushchenko's bloc, Our Ukraine (Nasha Ukrayina, NU), a coalition of 10 centrist parties, won 112 seats in the 2002 parliamentary elections. The Communist Party took 66 seats, while the more conservative For United Ukraine bloc won 102. Nonpartisan candidates took 95 seats.

LOCAL GOVERNMENT

Ukraine is divided into 24 oblasts of approximately equal size and the Autonomous Republic of Crimea. Crimea has its own parliament and certain rights as an autonomous republic. The cities of Kiev and Sevastopol also have oblast status for historical reasons. The largest city of a given oblast is the oblast center, and the oblasts are named after these cities (as with L'viv Oblast, Donetsk Oblast, and so on). Only Transcarpathia (Zakarpattia), centered in Uzhgorod, and Volyn, centered in Luts'k, do not follow this principle. The capital of Crimea is Simferopol.

Each oblast and Crimea is divided into between 11 and 27 *raions*; the population of *raions* range between 100,000 and 300,000. Larger cities have the same status

as *raions* within oblasts and are called “cities of oblast subordination.” *Raions* are divided into towns (townships) and villages. Towns are usually somewhat larger than villages and have some nonagricultural industries, while villages are completely agricultural. Large cities may be divided into city districts, also called *raions*, with populations between 70,000 and 300,000. Local councils are elected by the populations of villages, towns, and cities to four-year terms. Terms are concurrent, and all local council members come up for election at once. City mayors are elected by the entire electorates in cities. According to 1994 legislation, mayors must receive more than 50 percent of votes cast.

LEGAL SYSTEM

Ukraine’s highest court is the Supreme Court, which consists of 18 members. Six of the members are appointed by the president, six by the Rada, and six by a panel of judges. The Supreme Court decides questions about the constitutionality of laws. In 2001 the judiciary adopted a three-level court system, with *raion* courts and oblast courts in addition to the Supreme Court. According to the 1996 constitution, the judiciary is funded by the Ministry of Justice so as to free the courts from executive influence. However, such influence can and has been exerted, as the executive branch oversees the financing of the Ministry of Justice.

Ukraine’s Supreme Court did demonstrate its independence from the executive branch in 2004 by invalidating the election results because of fraud and calling for a second runoff election.

HUMAN RIGHTS

Ukraine has a mixed human rights record; through the end of the 20th century there was limited progress in some areas, but serious problems persisted. Members of the military beat and killed conscripts during violent hazing incidents, and there were reports of possibly politically motivated killings. Police and prison officials regularly beat detainees and prisoners, and there were numerous instances of torture, sometimes resulting in death. There were instances of arbitrary arrest and detention; lengthy pretrial detention in very poor conditions was common, and detainees often spent months in pretrial detention for violations that involved little or no prison time under conviction. Long delays in trials were a problem. Prison conditions were harsh and life threatening.

The government has rarely punished officials who have committed abuses. The Security Service of Ukraine, police, and Prosecutor’s Office have drawn domestic and international criticism for their failure to take adequate action to curb institutional corruption and abuse in the government. Many high-profile corruption cases have been

dropped, ostensibly because of a lack of incriminating evidence. Anticorruption legislation has been enforced selectively, mostly against government opponents and low-level officials. Political interference and corruption have affected the judicial process. The judiciary is overburdened, inefficient, and lacks sufficient funding and staff. These factors have undermined citizens’ right to a fair trial.

The citizens’ right to change their government peacefully, formerly restricted, demonstrated new strength in the repeated runoffs and final result of the presidential election of 2004. Improvements in Ukraine’s human rights record are expected under the reform-minded President Yushchenko.

FOREIGN POLICY

Ukraine insisted upon independence that it would be a nuclear-free power, although a substantial portion of the former Soviet nuclear arsenal was located within the nation’s borders. In 1994 Ukraine concluded a tripartite agreement with Russia and the United States by which it divested itself of all nuclear warheads, handing them over to Russia in return for \$1 billion from the United States.

Independent Ukraine’s relations with Russia have been complicated by the status of Crimea and the ownership of the former Soviet Union’s Black Sea Fleet, based in Sevastopol. Most of the boundaries with Russia were agreeably demarcated by 2004, except for the boundary through the Sea of Azov and Kerch Strait. Ukraine was formally admitted to the Council of Europe in 1995 and became a full member of the Central European Initiative in 1996. In 1997 Russia and Ukraine signed a 10-year friendship treaty settling the long-standing disagreement over the Black Sea Fleet and recognizing Crimea and the city of Sevastopol as Ukrainian territory. In 1997 Ukraine signed a cooperation charter with the North Atlantic Treaty Organisation (NATO) establishing a special relationship, short of membership, entailing the exchange of military missions and the establishment of a joint commission through which Ukraine may consult with NATO if under external threat. Subsequently, Ukraine condemned NATO aggression against Serbia. In 1997 Ukraine agreed to shut down the Chernobyl plant after being pledged \$900 million by Western nations in compensation; the plant was finally closed in 2000. In 2005 Ukraine and NATO agreed upon reforms that would need to be in place for the country to become a full NATO member by 2008. EU membership will be a possibility for the country by 2015.

DEFENSE

While the 1996 constitution bans the stationing of foreign troops on Ukrainian soil, Ukraine and Russia have signed an agreement that permits Russia to maintain its Black Sea

naval force with installations in the Ukraine. The defense of Ukraine is conducted by a large, multifaceted force. Conscription for a period of 18 months is still practiced, which gives the country an abundant supply of trained men. In 2000 total military strength was over 420,000 personnel. The army consisted of more than 187,000 soldiers organized into a number of brigades and divisions. There are three commands: the Ministry of Defense, Western Operations Command, and Southern Operations Command. All of the military's hardware is Soviet made. Ukrainian navy personnel numbered 7,000, including a naval aviation force. The air force consisted of more than 2,000 Soviet aircraft commandeered by Ukraine. The total manpower of the air force was more than 120,000.

By 2002 Ukrainian military personnel had been reduced to just over 400,000, with a budget of \$617.9 million, or 1.4 percent of gross domestic product (GDP). Ukrainian troops took part in the war in Iraq from 2003 to 2005.

ECONOMY

After Russia, the Ukrainian republic was by far the most important economic component of the former Soviet Union, producing about four times the output of the next-ranking republic. Its fertile black soil generated more than one-quarter of Soviet agricultural output, and its farms provided substantial quantities of meat, milk, grain, and vegetables to the other republics. Likewise, its diversified heavy industry supplied equipment and raw materials to industrial and mining sites in other Soviet regions. On the other hand, Ukraine has depended on imports of energy, especially natural gas.

Shortly after the implosion of the USSR in December 1991 the Ukrainian government liberalized most price controls and erected a legal framework for privatization, but widespread resistance within the government and the legislature soon stalled reform efforts and led to some backtracking. Loose monetary policies led to hyperinflation in late 1993. After his 1994 election, President Kuchma pushed economic reforms, maintained financial discipline, and tried to remove almost all remaining controls over prices and foreign trade. However, widespread corruption marked his presidency, and the onset of the financial crisis in Russia dashed Ukraine's hopes of expe-

riencing its first year of economic growth in 1998 due to a sharp fall in export revenue and reduced domestic demand. By 1999 output had fallen to less than 40 percent of 1991 levels. The government did not prove able to significantly decrease its huge backlog of wage and pension arrears. Despite increasing pressure from the International Monetary Fund (IMF) to accelerate reform, substantial economic restructuring failed to occur, largely because of resistance in the Communist-dominated Rada to further privatization.

While GDP grew by 12 percent in 2004, the economy remained burdened by a lack of transparency and by the presence of the unofficial cash economy, which accounted for a significant proportion of real income. Wage arrears did decrease, partly because of election-year politics. With the election of Yushchenko as president in 2004, international investors may be less reluctant to put funds into the country.

ENVIRONMENT

The greatest environmental issue facing the Ukraine is the lingering contamination by radiation that resulted from the 1986 Chernobyl nuclear power plant accident in the north-east. Otherwise, there are inadequate supplies of potable water throughout the country. Growing deforestation, especially in the north, is cause for concern, as trees are cut for fuel and land-clearing purposes. In urban areas, there is increased air and water pollution from industrial output.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Ukraine 70th out of 177 countries in terms of life expectancy, education, and standard of living. The average Ukrainian's life expectancy in 2005 was 66.9 years, literacy stood at 99.7 percent in 2003, and 84 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$6,300 in 2004. Overall, Ukraine ranked in the upper half of central and eastern European countries.

Collectivization during the Soviet period largely destroyed small farming in Ukraine. About two-thirds of the population now live in urban areas, most of which are wanting in infrastructure, from housing to roads. About one-third still lives in villages and on farms and are mostly involved in agriculture. Wealth is largely concentrated within the political elite and among directors of both the state-dominated and newly privatized economic sectors.

Ukraine has experienced declines in population since independence, partly because of the return of some ethnic Russians to Russia and also because of low birth and fertility rates. In 2005 the birth rate per 1,000 people was 10.5, while the death rate was 16.4. Net migration that same year was -0.39 people per 1,000. As of 2003, 29 percent of the population was living below the poverty line.

HEALTH

A major health problem for Ukraine continues to be the long-term effects of the 1986 Chernobyl disaster. Rates of various forms of cancer are much higher in areas near the site; about 6.7 million people were exposed to radiation fallout, which has led to a 10-fold increase in thyroid cancer among children in affected areas. Every year the Ukrainian government sends groups of young people with radiation sickness to Europe, North America, or the Caribbean for several months to reduce the levels of radiation in their bodies. Cardiovascular and respiratory diseases, cancer, traumas, and accidents are other major causes of illness and death. HIV/AIDS has made significant inroads in the population. In 1999, the number of people living with HIV/AIDS was estimated to be about 240,000, and AIDS deaths were estimated at 4,000; HIV prevalence was 1 percent among adults. By 2001 there were 11,000 AIDS deaths, and by 2003 the prevalence rate had reached 2 percent. Smoking is also a major health risk; an estimated 43 percent of deaths of middle-aged males are due to lung cancer or tuberculosis.

The medical infrastructure has suffered throughout the transition from the Communist to a free-market system. As of 2004 there were 297 physicians per 100,000 people, and virtually 100 percent of births were being at-

tended by trained health providers. Nevertheless, hospital infrastructure and equipment remains outdated. Once free to all, health care now comes at a substantial cost; public spending on health care was drastically reduced from an estimated 10 percent of GDP in 1992 to 3.3 percent in 2002. Immunization rates remain high; rates for one-year-olds in 2002 were 98 percent for tuberculosis and 99 percent for measles. In 2002, 99 percent of the population had access to improved sanitation, while 98 percent had access to improved water sources. The infant mortality rate in 2004 was 20 deaths per 1,000 live births.

FOOD AND NUTRITION

Ukrainian food is generally heavy in carbohydrates and meats. Potatoes, beets, and cabbage are standard vegetables. Popular dishes include cabbage rolls, called *holubtsi*; stuffed peppers and tomatoes; dumplings, called *varenyky* or *pyrohy*, made with flour and stuffed with any of cheese, meat, vegetables, fruit, or jam and served with sour cream; and borscht, a soup made with beets and meat.

Breads and pastries are also Ukrainian specialties. At Ukrainian weddings it is traditional to offer *korovai*, a special bread built up to form a tall cylinder. *Kolac* is a Christmas bread made with sour cream and honey, and at Easter there is a special egg bread called *paska*, which is often shaped into a cross. Ukrainians are famous for another Easter tradition: decorated eggs called *pysanky*.

The major alcoholic drink is vodka (the name of which is derived from *voda*, meaning "water"), distilled from rye, wheat, or potatoes. Kvass is a drink made from fermented mixed cereals.

Nutrition, aside from the large intake of fats and carbohydrates, is generally good. Undernourishment rates are low. However, only one-third of the population uses iodized salt, and there is the continued risk of radiation contamination in food supplies.

Food and Nutrition

Undernourished % of total population: 3.0
 Daily Available Calories per capita kcal: 2,830
 Amount of Cereal Available per person per year kg: 166.1
 Amount of Fruits and Vegetables Available per person per year kg: 133.2

STATUS OF WOMEN

Violence against women in Ukraine is very pervasive. Surveys by women's groups indicate that 10 to 15 percent of women have been raped and 25 percent have been physically abused. Hotlines, shelters, and other means of practical support for victims of abuse are nonexistent, and violence against women does not receive media coverage. Ukraine is an important source of girls and women trafficked to western Europe and the Middle East for sexual exploitation and prostitution. An April 1998 amendment to the criminal code imposes harsh penalties for trafficking in women, as well as for pornography, but the law is rarely enforced. There is widespread sexual harassment in the workplace, including coerced sex. Though men and women have equal legal access to job opportunities, women are much more likely to be laid off than men; they constitute about 60 percent of the unemployed population. About 15 percent of working women are engaged in hazardous jobs. Few women attain top managerial positions in the either the state or private sector.

WORK

In 2003 the Ukrainian labor force numbered over 21 million. As of 1996, 24 percent were employed in agriculture, producing grain, sugar beets, sunflower seeds, vegetables, beef, and milk; 44 percent were involved in the service sector; and 32 percent were employed in industries such as coal, electric power, ferrous and nonferrous metals, machinery and transport equipment, chemicals, and food processing. The aerospace industry is still important to Ukraine: The country launched its first satellite in 1995. The official 2004 unemployment rate was 3.5 percent, but the International Labor Organization estimated the unemployment rate to be 9 or 10 percent. The government rate does not take into account the large numbers of unregistered and underemployed workers.

Ukraine is still in flux, changing over from the command-and-control economy of the Soviet years to a

free-enterprise system. Dislocations have been severe as a result of breakups of state-run and state-owned industries and collective farms. Trade unions function, but strikes and protests are infrequent. Union leaders have been subject to government harassment and sometimes threats. However, changes adopted in 2003 to the Law on Trade Unions granted unions the status of legal entities, requiring only that they supply a notification of registration, as opposed to requiring approval by a government ministry. By the end of 2003 there were 106 registered trade unions, including 42 traditional and 64 new trade unions. The minimum work age is 16, the workweek is 40 hours, and the minimum wage as of 2005 was \$49 per month. As much of employment in Ukraine is unofficial, however, labor laws do not affect the majority of workers.

EDUCATION

Ukrainian law requires children to attend school for 11 years, from seven to 18 years of age. After the ninth grade students may continue with a general academic program or enroll in technical or trade schools to complete their education. Ukraine has about 250 schools of higher education, including nine larger universities, the best known being Kiev State University, Lviv State University, and Kharkiv State University. The country enjoys a literacy rate of almost 100 percent. Great emphasis is put on education; about 15 percent of the population has a college or technical degree. Public expenditures on education in 2002 totaled 5.4 percent of GDP, and 84 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture, through the Ukraine Academy of Agricultural Sciences, administers 51 research institutes, with 7,000 employees pursuing diverse agricultural research projects, from crop production to food processing. Other agricultural research is carried out by institutes of higher education, such as the National Agrarian University, Bilotserkivsky State Agrarian University, Dnipropetrovsk State Agrarian University, and several others.

Additional scientific research in engineering, chemical engineering, and biological science is carried out by the Ukrainian Academy of Sciences and the 66 scientific and technical research institutes attached to it. The Ukrainian Academy of Medical Sciences has six research institutes.

Higher education in the sciences is available at 92 universities, polytechnics, and institutes. Between 1987 and 1997, science and engineering students accounted for 42 percent of university enrollment. As of 2002, 1,749 scientists and engineers per one million people were engaged in research and development, and research-and-development investment equaled 1.2 percent of GDP.

MEDIA

The Ukraine has a very active and relatively free press, with more than 2,600 newspapers and periodicals registered. In addition to the vast amount of printed material, there are more than 400 broadcast radio stations and 33 television stations. Ukraine has a very active Internet service provider network, and there were more than 900,000 Internet users in 2002.

Among the leading daily papers are *Fakty i komentari*, *Silski visti*, *Vecherniye vesti*, *Kievskiy vedomosti*,

Segodnya, and the English-language *Kyiv Post* and *Den*. The online *Ukrayinska pravda* also has some English-language pages. Though often accused of self-censorship, the Ukrainian press came into its own during the 2004 Orange Revolution, and even the government-run television networks allowed opposition voices to be heard. The media are climbing out of many years of government control and muzzling. Reporters without Borders, an international media watchdog group, ranked Ukraine 139th out of 167 nations worldwide in its 2004 index of press freedom.

CULTURE

Ukrainian literature dates back to medieval Slavic chronicles, including *Povist vremennykh lit* (Tale of Bygone Years) and the 12th-century *Slovo o polku Ihrevim* (The Tale of Ihor's Armament). The 18th-century poet and philosopher Hryhorii Skovoroda was one of the first major artists to write in Ukrainian, while the 19th-century writer Taras Shevchenko was a nationalist dedicated to freeing his country from Russian rule. His use of the national language ushered in a golden age of Ukrainian letters. The Ukrainians claim the famous writer Nikolai Gogol as their own, and in the 20th century writers such as Ivan Franko and Vasyl Stus led the way in Ukrainian literature.

Traditional Ukrainian music also has literary roots. The oral traditions of *bylyny*, or epic narrative poems, and *dumas*, which were long lyrical ballads glorifying the exploits of the Cossacks, found their way into song. The *kobzar*, or wandering minstrels of the 16th and 17th centuries, sang of the heroic exploits of the Cossacks. Their name came from the lutelike instrument they used for accompaniment; this instrument was later replaced by the *bandura*, a larger instrument with up to 45 strings. As *bandura* choirs became popular, the instrument became the national symbol. In the realm of classical music, the well-known 19th-century composer Mykola Lysenko based much of his piano works on Ukrainian folk songs. Among his operatic work is *Taras Bulba*.

Architecture and painting often had religious significance, from the wooden, onion-domed churches of the countryside to larger urban cathedrals. Iconic paint-

ing was the primary visual art until secular painting took over in the 17th century. Shevchenko, a nationalist poet, was also a painter and engraver who created a new style with his realistic pictures of Ukrainian life and the Ukrainian landscape. Among the Ukrainian artists known in the West are Alexis Gritchenko, whose work ranged from cubism to expressionism, and the painter and engraver Jacques Hnizdovsky, who developed a simplified style of realism. In sculpture, Alexander Archipenko was a pioneer in cubism; his later work in constructivism and expressionism made him a major 20th-century artist.

Ukrainian theater originated in the 17th century with dramatizations of religious stories and historical dramas. During the Soviet period, theater, like many other art forms, went underground or into hibernation, but following independence a vital theater scene once again came to predominate, with over 60 professional theaters in the country. Ukrainian film has achieved some marked successes. Major directors include Oleksander Dovzhenko.

Ukrainian folk art includes embroidery, wood carving, ceramics, and weaving, all highly developed, with stylized ornamentation representing many regional styles.

FOLKLORE AND MYTHOLOGY

Pre-Christian myths and folk beliefs form a rich vein in Ukrainian folklore. Among early south Slavic gods shared with Russians and Poles is Dazbog, the sun god and the son of the god Svarog. Khors is a sun god who was worshipped in Kievan Rus during the 10th century, while Mokos is the goddess of the earth. Many pre-Christian traditions were later incorporated into Christian ceremonies; thus, *pysanky*, or Ukrainian Easter eggs, actually date back to pre-Christian times, when they were believed to have magical powers. With Christianity the *pysanky* took on a spiritual, religious meaning and began to be decorated with crosses, geometric designs, and miniature churches.

Legends form another part of Ukrainian folklore. As part of the oral tradition, legends are passed on from generation to generation and include tales of the founding of the city of Kiev by the three brothers Kyi, Scheck, and Khoryv and their sister, Lybed. Other tales speak of the deeds of the heroic Cossacks, while still others deal

with the magical weed called *yevshan zillia*, which has the power to bring lost ones back home. The dragon slayer Kyrylo Kozhumiaka, who supposedly saved Kiev, still entertains Ukrainian children, as do tales of the Ukrainian Robin Hood, Oleksa Dovbush, who operated in the Carpathian Mountains.

Ukrainian proverbs teach homely lessons of virtue and the joy of the hearth. One famous proverb relates, “He is guilty who is not at home”; the virtues of common sense are prized in “Your head is not only for putting a hat on”; and the eternal competition between virtue and vice is seen in “The church is near, but the way is icy. The tavern is far, but I will walk carefully.”

ENTERTAINMENT AND RECREATION

Ukrainians partake of the usual recreational pastimes of people in western Europe and North America. Television and movies are important outlets for the largely urban population. Nightclubs and discos attract the young; cafés are important meeting places. Many play chess, a very popular game in Ukraine.

Cultural activities are also a way of life, especially in cities like Kiev, with its National Fine Arts Museum, Taras Shevchenko Museum, National Museum of Decorative Arts, and many other galleries. Drama and music abound. The Shevchenko National Opera Company, Ivan Franko National Theater, State Operetta, and other groups and venues present opera and ballet performances. Such cultural outlets are not confined to the capital: Lviv’s Ivan Franko Opera and Ballet Theater, Ukrainian Drama Theater, Philharmonic Society, National Museum, and Historical Museum all bring high culture to that city. With regard to traditional culture, many Ukrainians join folk dance groups, performing dances such as the *hopak* and *arkan* in traditional costumes. Circuses are also popular, as is camping in the Carpathians during the summer months and vacations at the Black Sea and in the Crimea.

ETIQUETTE

Greetings are typically done with strong handshakes, and sometimes with hugs and three kisses on the cheek. The typical verbal greeting is “*Drobryden*,” or “Good day.” It is also usual to shake hands upon departure. Dining is performed continental fashion, with fork and knife used simultaneously. Generally a formal people, Ukrainians use last names until friendship is established, and first names can then be used. Some typical North American gestures are rude and offensive in Ukraine. Thus, the “OK” sign of thumb and forefinger joined in a circle, as well as a closed-fist gesture of defiance, should be avoided.

FAMILY LIFE

The strong ties of family survived the Soviet period, during which the state attempted to supersede such bonds. Family arrangements tend to be nuclear, especially in the cities, as the size and availability of housing makes other setups impractical. Matriarchy had a long tradition in Ukraine, but years of occupation brought about subservient roles for women; men are the breadwinners, while women run the home and may also hold outside employment when possible or necessary. Family size has shrunk in Ukraine. One or two children is the norm; the fertility rate in 2005 was 1.4 children per woman. With the death rate higher than the birth rate, and with negative immigration, the population of Ukraine has been declining since the early 1990s. The marriage ceremony is still an elaborate affair, but marriages themselves are ending in divorce much more frequently than ever before; as of 1996 almost two-thirds of all marriages ended in divorce.

PERSONAL APPEARANCE

Western dress is typical in Ukraine, where people are every bit as fashion and label conscious as western Europeans. Traditional costumes are worn only on special holidays or by members of folkloric groups while performing. Costumes vary by region, but all have the intricately beautiful and colorful embroidery typical of the nation.

SPORTS

The most popular Ukrainian sport is soccer, in which Kiev Dynamos has ranked as one of Europe's top teams for decades. Basketball, volleyball, table tennis, horse racing, and ice hockey are other popular spectator and participatory sports. Wintertime skiing in the Carpathians is well enjoyed. Ukraine has won hundreds of team and individual gold medals at the Olympics, with the nation providing the strongest competition in gymnastics and track and field. Ice-skaters such as Viktor Petrenko and Oksana Baiul have helped to give figure skating mass appeal worldwide.

CHRONOLOGY

- 1991** The Soviet Union dissolves, and the Ukraine enters into the Commonwealth of Independent States, with Leonid Kravchuk as president.
- 1992** Ukraine agrees to eliminate all of its nuclear weapons within seven years.

- 1994** Leonid Kuchma is elected president. Ukraine signs the UN Nuclear Non-Proliferation Treaty.
- 1996** The new constitution is formally adopted and goes into effect. Ukraine transfers nuclear weapons to Russia for destruction.
- 1997** Ukraine and Russia agree on the division of the Black Sea Fleet, with the Ukraine keeping about one-fifth of the fleet.
- 1998** The Communist Party receives 24.7 percent of the vote in March elections, securing 115 seats in parliament.
- 1999** Viktor Yushchenko becomes prime minister. Kuchma is reelected president.
- 2000** Chernobyl nuclear power plant is shut down, 14 years after the April 1986 disaster. Journalist Georgiy Gongadze, critic of the government, is murdered.
- 2001** Anatoli Kinakh is appointed prime minister.
- 2002** Kuchma fires Kinakh and replaces him with Viktor Yanukovych. Citizens form mass protest when an ad hoc commission finds links between Kuchma and the murder of Gongadze.
- 2003** In more mass protests, citizens demand Kuchma's resignation. Ukraine sends troops to Iraq.
- 2004** The presidential election is initially, and fraudulently, won by Yanukovych, which foments the nonviolent Orange Revolution. A second runoff sees the election of Yushchenko, who promises to bring true democracy to the country.
- 2005** Yushchenko's government announces that Gongadze's killers are in custody.

An outstretched falcon with an Arab dhow displayed in a red disk within a chain of eight links on its chest. The name of the country in Arabic appears below.

NATIONAL ANTHEM

“Arabic Emirati Tahiat Alalam”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), August 6 (Accession Day), December 2 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

December 2, 1971

DATE OF CONSTITUTION

December 2, 1971

GEOGRAPHICAL FEATURES

The United Arab Emirates (UAE) lies on the southeastern end of the Arabian Peninsula, extending from Ash Sham to Khor al-Odeid. Formerly known as the Trucial Sheikdoms, Trucial Coast, Trucial Oman, and Trucial States, the nation consists of seven emirates (with rough area figures): Abu Dhabi (67,340 sq km; 26,000 sq mi), Dubayy (3,885 sq km; 1,500 sq mi), Ras al Khaymah (1,683 sq km; 650 sq mi), Al Fujayrah (1,166 sq km; 450 sq mi), Umm al Qaywayn (777 sq km; 300 sq mi), Ash Shariqah (2,590 sq km; 1,000 sq mi), and Ajman (259 sq km; 100 sq mi). Disputed and undefined boundaries make the geographical extent of the region difficult to define precisely, but the current accepted figure is

82,880 sq km (32,000 sq mi), including a number of sandbars and islands, of which the largest are Dalma, Al Ghubbah, Abu Musa, Az Zarqa, Das, and Mubarak. The greatest distance northeast to southwest is 544 km (338 mi), that southeast to northwest 361 km (224 mi).

The UAE is an arid and inhospitable desert. The coast is characterized by shallow seas, coral reefs, sandbars, and islets. Inland the coastal plain gives way to rolling sand dunes, with occasional tiny oases fed by shallow groundwater. The coastal plain is bounded on the west by an immense *sabkha*, or salt flat, extending southward for nearly 112 km (70 mi) and merging with the vast wastes of the Rub al Khali desert. Toward the east, as the desert reaches the Musandam Peninsula, the foothills of the Western Hajar Mountains begin to rise in places to 2,500 m (8,000

United Arab Emirates

2472 United Arab Emirates

ft), while their spurs run down in steep cliffs to the shore, except for at small embayments, as at Al Fujayrah. A cluster of oases known as the Liwa form an arc along the southern edge of the sandy desert. On the eastern coast a fertile strip known as the Batinah Coast runs between the mountains and the sea and continues into Oman.

Dubayy	1,171,000
Ras al Khaymah	102,000

CLIMATE AND WEATHER

The United Arab Emirates has an arid, subtropical climate. Average maximum temperatures in July and August, the summer months, run over 48°C (118.4°F), while average minimum temperatures in the winter months of January and February are between 10°C (50°F) and 14°C (57°F). Humidity exceeds 85 percent on the coast during summer. Rainfall is slight and erratic, usually falling in January and February. Average annual rainfall varies between 25 mm (1 in) and 125 mm (5 in), with the upper limits received by the eastern mountains. Rain tends to fall in short, torrential outbursts, flooding the wadis. Droughts are frequent. The scarcity of rainwater is compounded by the limited supply of groundwater, which is generally confined to oases.

The main wind is the *sharqi*, a humid southeastern wind that blows along the western coast, making the summer heat oppressive.

Climate and Weather

Mean Temperature
Summer: 118.4°F
Winter: 50°F to 57°F
Average Rainfall: 1 in to 5 in

FLORA AND FAUNA

Vegetation is scarce in the UAE's desert climate, consisting mostly of low shrub growth. However, after the winter rains the desert comes alive for a brief flowering. In Abu Dhabi millions of trees have been planted, mostly dwarf mangrove. Around the oases are found date palms and alfalfa as well as some fruit trees, such as mangoes.

Animal life includes the fox, jackal, wildcat, lynx, and wolf. Domesticated animals include goats, sheep, and camels. Over 250 species of birds have been sighted in the nation. Some of the larger birds are the eagle, buzzard, falcon, kite, and owl, in addition to game birds such as ducks and geese. Gulls and terns are found along the coast, and the coastal waters are home to tuna, grouper, mackerel, and the occasional shark and whale.

ETHNIC COMPOSITION

Ethnically, the Emirati population is a mosaic reflecting the country's need for foreign labor in the rapidly growing economic and social-services sectors. The dominant strain is Adnani, or northern Arabs, who constitute 10 percent of the population in Abu Dhabi and 25 percent nationwide. There are significant numbers of blacks, recalling the region's prominence in the slave trade in the 18th and 19th centuries.

Three major ethnic groups—Iranians, Indians, and Pakistanis—constitute more than half of the population; almost all of them are foreign-born and recent arrivals. There are also groups of non-Emirati Arabs, such as Pal-

estinians, Egyptians, Iraqis, and Lebanese, throughout the country. The immigrant population is concentrated in the towns along the coast, particularly Abu Dhabi and Dubayy.

Historically, the UAE's indigenous population has tolerated, and even welcomed, outsiders and has displayed a freedom from the xenophobia common in many Arab countries. Nevertheless, there has been increasing concern about the numerical strength of immigrants and some resentment of their growing economic power.

LANGUAGES

The official language of the UAE is Arabic. Gulf Arabic is akin to the Arabic of Saudi Arabia and Iraq while different from the Arabic spoken in Egypt and Lebanon.

English is universally understood among the commercial and administrative elite and is taught as a second language in secondary schools.

RELIGIONS

Islam is the state religion, and the majority of both the indigenous people and immigrants are Sunni Muslims. Shiite Muslims are found in Dubayy but not in numbers to challenge Sunni dominance.

Toleration, remarkable by Arab standards, is extended to Christians of all denominations, and some churches, missions, and schools are permitted to function openly. Religious hostility is exercised only against Jews, whose small communities have virtually disappeared.

Shia Muslim	410,000
Sunni Muslim	2,050,000
Christian, Hindu, Other	100,000

HISTORICAL BACKGROUND

As early as the third millennium B.C.E. a small trading culture emerged along the Persian Gulf in the area that is now the United Arab Emirates. By the sixth century B.C.E. trade had expanded as far as China; the prosperity of the region attracted the Persian empires, which took control of the area and the extensive maritime trade around that time. Arab tribes introduced Islam to the region in the early seventh century C.E.

The trading power of the region later attracted the colonial powers of Portugal, Holland, and Britain. Long a center of refuge for piracy, the emirates of the Persian Gulf entered into a series of agreements with Great Britain during the 19th century that established a "perpetual

maritime truce" in the area. Consequently, the area formerly known as the Pirate Coast came to be known as the Trucial Coast, the emirates as the Trucial States.

The Trucial States became a British protectorate in 1892, surrendering control of external affairs to Britain but maintaining paternalistic, autocratic rule by sheikhs in the domestic arena. In 1968 Britain announced its intention to withdraw from the area and encouraged the formation of the Federation of Arab Emirates, which were to include the seven Trucial States plus Qatar and Bahrain. Qatar and Bahrain withdrew in 1971, and Abu Dhabi, Dubayy, Ash Shariqah, Ajman, Umm al Qaywayn, and Al Fujayrah formed the United Arab Emirates. Ras al Khaymah joined in 1972.

Sheikh Zayed bin Sultan Al Nahayan, of Abu Dhabi, became president of the UAE at independence. Sheikh Rashid, of Dubayy, was vice president from independence as well as prime minister from 1979 until his death in 1990; he was replaced by Sheikh Maktoum bin Rashid Al Maktoum, of Dubayy. Zayed was a major force in maintaining the federation, as a result of both his own commitment to an integrated approach toward development and Abu Dhabi's prominence in the federation. Abu Dhabi is the largest of the sheikhdoms in terms of both territory and population. Since the discovery of petroleum, Abu Dhabi and Ash Shariqah, and to a lesser degree Dubayy, have changed dramatically. Oil wealth led to rapid modernization as well as advances in medicine and education. The contrasts between the three wealthy sheikhdoms and the other four remains significant, although Zayed's commitment to integrated growth lessened the gap through the end of the 20th century. Political power is in the hands of the dynastic rulers who govern the UAE through a supreme council. Within the individual emirates the governments maintain their monarchal character.

The UAE played a strong role in the defense of Kuwait in 1990–91. Like Kuwait, the UAE had been threatened by Saddam Hussein because of its levels of oil production. As part of the U.S.-led offensive, the UAE allowed for the stationing of troops within its borders in addition to contributing manpower to the international force. In the late 1990s the country suffered some economic hardship, as world oil prices plummeted. However, the situation improved after hitting a nadir in 1998. Although the UAE did cooperate with the United States in freezing the assets of organizations and individuals suspected of supporting terrorism following the September 11, 2001, attacks on New York and Washington, D.C., the nation opposed U.S.-led military intervention in Iraq in 2003. With oil prices at record highs in 2005, the UAE economy was running at high speed.

Sheikh Zayed was reelected every five years until his death in 2004, when his son Khalifa bin Zayed Al Nahayan became president.

LIST OF MODERN RULERS

President

1971–2004 Sheikh Zayed bin Sultan Al Nahayan
2004– Sheikh Khalifa bin Zayed Al Nahayan

CONSTITUTION

The UAE's provisional constitution of 1971 established the Supreme Council of Rulers as the highest organ of government; the presidency and Council of Ministers as the executive; the Federal National Council as the legislature; and the Federal Supreme Court as the height of the judiciary. Under the constitution considerable powers remain reserved to each emirate, including control over mineral rights, taxation, and police powers. There has been, however, slow but persistent growth in federal powers. A significant portion of the oil revenues of the three oil-producing emirates goes to the UAE's central budget. There has been growing integration of defense forces, communication facilities, and courts. In 1975 a committee was appointed to draft a permanent federal constitution; however, the following year the Federal National Council decided to extend the provisional constitution for five years, and over the past 25 years the constitution has periodically been extended further. In 1976 the constitution was amended to give the federal government the exclusive right to levy armed forces.

The principal federal institution is the Supreme Council of Rulers, which is composed of the rulers of the seven emirates and is charged with the formulation and supervision of all state policies, the ratification of federal laws, and preparation of the federal budget. All important decisions require the votes of at least five members, including the rulers of Abu Dhabi and Dubayy. The president and vice president are elected for a period of five years and may be reelected.

The president, the head of state, is assisted by the Council of Ministers, which is presided over by the prime minister, the head of the government. The member states are represented in the cabinet in proportion to their size and importance.

Because the country is a federation of seven independent-minded emirates, the federal UAE government has always been weak. Disagreements among the individual emirates over such important economic issues as the creation of a central bank and immigration and labor laws, as well as over other political and defense matters, have sapped the effectiveness of the federal government. National economic planning and coordination have also been hampered.

Emirate rulers are accessible to any subject who has a problem or a request. In a given emirate the choice of a new ruler falls to the ruling family, which is supposed to

choose its most capable and respected eligible member. In practice, to avoid the violent succession disputes that were common in the past, primogeniture has become increasingly common. The political dominance of the ruling families is intertwined with their substantial involvement and influence in economic life. The ruling families and their close allies control and profit from petroleum production and, along with important merchant families, have a major stake in the UAE's commercial life.

Overall, the UAE has had a stable government reinforced by economic prosperity. In the absence of representative institutions and political parties, there is no forum for political expression. Pockets of dissidence, however, exist. In 1972–73 a number of army officers and civil servants were arrested as subversives. Supporters of the National Front for the Liberation of the Occupied Arabian Gulf and other leftist organizations are known to be active, particularly in Abu Dhabi.

PARLIAMENT

Under the constitution of 1971 the legislature is the 40-member Federal National Council, a purely consultative assembly of delegates appointed by the rulers of the constituent states for two-year terms. There are eight delegates from each of Abu Dhabi and Dubayy; six from each of Ash Shariqah and Ras al Khaymah; and four from each of Al Fujayrah, Ajman, and Umm al Qaywayn.

The nation has never held elections, for which there are no constitutional provisions. Consequently, there is no suffrage.

POLITICAL PARTIES

No political parties are permitted to function in the UAE. The major illegal opposition is the National Front for the Liberation of the Occupied Arabian Gulf, which until 1975 was actively supported by the People's Democratic Republic of Yemen (South Yemen). This support was withdrawn in 1975 following the normalization of relations between the UAE and South Yemen. Since then the National Front has ceased to be a threat in the UAE.

LOCAL GOVERNMENT

All the principal population centers of the emirates have their own appointed municipal governments. These include Abu Dhabi, Al Ayn, Dubayy, Ras al Khaymah, Al Fujayrah, Ajman, and Umm al Qaywayn. In addition, tribes have their own traditional councils, known as *majlis* and *amiri diwans*.

LEGAL SYSTEM

The constitution of 1971 set up the Federal Supreme Court and federal primary tribunals as the first step toward the unification of the separate legal and judicial systems. The Federal Supreme Court consists of a chief justice and a maximum of five judges, all of whom are appointed by presidential decree. The constitution guarantees the independence of the judiciary.

The traditional emirate courts, which dispensed justice according to Islamic sharia (religious law), were brought under the administrative control of the Federal Ministry of Justice. A modern code of law was drafted for Abu Dhabi, which also has a Ruler's Court presided over by a professional judge. In other emirates the courts are presided over either by a *qadi*, or Islamic jurist, or by the ruler himself. The court systems in Dubayy and Ras al Khaymah function independently of the federal system.

There are no jury trials. Criminal courts based on European models function alongside the Islamic courts. Crimes and penalties are defined by law—civil or religious—and the accused are presumed innocent until found guilty. In sharia courts, counsel is not permitted, and definitions of crimes and penalties are drawn from religious sources.

HUMAN RIGHTS

In terms of political and civil rights the UAE is classified as a partly free country; citizens cannot change the government.

The UAE's egalitarian Islamic and Bedouin traditions shape its outlook on human rights and political organization. In some emirates, particularly Abu Dhabi, criminal cases are tried in sharia courts, which apply traditional and harsh procedures and penalties. Muslims may be flogged for drunkenness or for violating the Ramadan fast, although all capital sentences must be personally approved by the ruler. Prolonged detention without trial is rare. Although no public-defender system exists, defendants may be represented by counsel of their choice in state, civil, and criminal courts. Mild criticism of the government is generally tolerated, but "irresponsible" opposition is discouraged. Newspapers that deviate from official guidelines are suspended. All books, films, and periodicals are subject to censorship if they contain materials considered pornographic, politically subversive, or derogatory of Islam and Arabs. Visits by foreign journalists require official permission. There are no political parties or popularly elected legislatures. Expatriates, who constitute the numerical majority, are expected to refrain from political activity and are, further, not permitted to organize.

FOREIGN POLICY

The United Arab Emirates has had border disputes with many of its neighbors, especially Saudi Arabia and Oman, as well as Iran. The dispute with Iran involved the island of Abu Musa, while the dispute with Saudi Arabia and Oman concerned Abu Dhabi, including the potentially oil-rich Buraimi Oasis, which is located at the junction of the three states; the latter dispute is now dormant.

In 1981 the UAE joined five neighbors—Bahrain, Kuwait, Oman, Qatar, and Saudi Arabia—in establishing the Cooperative Council of the Arab Gulf States (now the Gulf Cooperation Council, GCC). The GCC became a significant military shield for the peninsula in the wake of the Iraqi aggression against Kuwait in 1991. The UAE cooperated with the coalition forces during the Desert Storm operation, which concluded with Iraq's defeat. The UAE contributed more than \$3 billion to the Persian Gulf War but restored diplomatic relations with Iraq in 1998. Relations with Iran worsened following the Iranian occupation of Abu Musa in 1971. In 1994 the UAE became the fourth GCC country to conclude a military cooperation pact with the United States; it also has an agreement with France and the United Kingdom for military consultation in the event of aggression in the region. The UAE did not support the U.S.-led invasion of Iraq in 2003 but did beforehand call for Iraqi President Saddam Hussein to step down to avoid war. In 2003 a boundary agreement was signed with Oman to clear up lingering disputes.

DEFENSE

The defense structure of the federation is headed by the president, who is the chairman of the Defense Council. In 1976 the armed forces of the UAE were unified under a single central command known as the General Command of the Armed Forces, with three military regions—Western, Central, and Northern—and with a General Staff Command. The unified nature of the military high command is largely a fiction, however, for rivalries among sheikhs have continued unabated. For all practical purposes, each of the three major military regions, centered in Abu Dhabi, Dubayy, and Ras al Khaymah, retain full operational independence. The al-Yarmuk Brigade consists of federal forces, and the National Guard is located in Ash Shariqah and Umm al Qaywayn. The line of command runs from the president as the supreme commander through the deputy supreme commander and the defense minister to the chief of staff.

In 2003 the total personnel strength of the armed forces was 50,500. Defense spending in 2000 was about \$1.6 billion, or 3.1 percent of gross domestic product (GDP). Equipment is mostly British, but some hardware is obtained from France, the United States, and Italy. Ini-

2476 United Arab Emirates

tially, personnel were also mostly British, but assistance is now received from South Asia and other Arab countries. About 40 percent of manpower is provided by local recruitment; another 30 percent comes from Muscat and Oman; and the rest comes from India, Pakistan, and Iran. British officers and noncommissioned officers continue to be employed in the higher echelons.

The deterrent capability and combat-worthiness of the UAE's armed forces have not been tested in the field except briefly in 1990–91, during the Persian Gulf War. Both the navy and the air force have been built up at an accelerated pace but remain heavily dependent on overseas personnel and equipment.

ECONOMY

The UAE has an open economy with a high per capita income and a sizable annual trade surplus. The nation's wealth is based on oil and gas output (which contribute about 33 percent of GDP), and the fortunes of the economy fluctuate with the prices of those commodities. Since 1973, the UAE has undergone a profound transformation, from an impoverished region of small desert principalities to a modern state with a high standard of living. At present levels of production, oil and gas reserves should last for over 100 years. The government has increased spending on job creation and infrastructure expansion and is opening up utilities to greater private-sector involvement.

The UAE is one of the few countries in the region to have diversified its economy beyond dependency on the petroleum sector, having built a leading free-trade zone in Dubai and a major manufacturing center in Ash Shariqah, as well as having invested resources to develop its profile as a leading center for tourism in the region.

ENVIRONMENT

The UAE has among the world's highest levels of carbon dioxide emissions. The overpumping of ground water has brought rises in soil salinity levels. The emirates do not have any environmental legislation, although the government has begun to establish national parks to protect threatened fauna, such as the peregrine falcon, gray wolf, Arabian oryx, Arabian tahr, green sea turtle, and desert monitor.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked UAE 49th out of 177 countries in terms of life expectancy, education, and standard of living. The average Emirati's life expectancy in 2005 was over 75 years, and literacy stood at 77.9 percent in 2003, with 68 percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002. Per capita GDP was \$25,200 in 2004. Overall, the UAE ranked near the top of Arab states in terms of quality of life. Education was the weakest single indicator in its rankings.

Modern amenities are recent innovations for most Emiratis. Before the discovery and production of oil, conditions were very basic, with no electricity, running water, or proper sanitation. Infrastructure, including roads, telephones, medical care, and educational facilities, was largely nonexistent. Now, most citizens of the UAE occupy modern homes and drives large cars on multilane highways. The modern world and its conveniences co-

exist with more traditional life, such that, for example, a street market, or souk, might stand next to a modern shopping mall. The crime rate is extremely low. Much of the menial work is done by the legions of foreign workers. Almost 90 percent of the population now lives in towns and cities.

HEALTH

Medical services are free to nationals, and there are modern hospitals and medical facilities in Dubayy, Abu Dhabi, and other cities. As of 2004 there were 202 trained physicians per 100,000 people, and almost the entire population had access to affordable essential drugs. Professionals attended 96 percent of births between 1995 and 2002; the infant mortality rate was a low 14.5 deaths per 1,000 live births in 2005.

Health in the UAE is generally good. Tuberculosis and malaria are relatively minor health problems. Smoking is low among men and women. Immunization rates for one-year-olds are high: In 2003, 98 percent were immunized for tuberculosis, 94 percent for measles, DPT, and polio. As of 2002, 100 percent of the population had access to adequate sanitation facilities. In 2001 public expenditures on health care equaled 2.6 percent of GDP.

FOOD AND NUTRITION

Staples of the Emirati diet include fish, lamb, chicken, rice, and beans of various sorts; fava beans and chickpeas are favorites for making dips or spreadable pastes such as *fuul*, falafel, and hummus. Flat pita bread is often consumed, with pastes generally served on such bread. A favorite dish made from chicken or lamb is *shwarma*. Typical spices include coriander, cardamom, turmeric, and saffron; lemons are often used for seasoning as well.

Macbous is another favorite meal, made of rice and meat seasoned with spices, onions, tomatoes, and dried lemon.

Sweets and desserts are made from dates, sesame seeds, peanuts, honey, and sugar. Confections include *al-halwa*, *al-jibeet*, and *kul wiskut*. Alcoholic beverages are not consumed. Drinks include coffee and tea.

In general, nutrition is adequate in the UAE, although between 1995 and 2003, 14 percent of children under five suffered from moderate to severe undernourishment, 17 percent from moderate to severe stunting.

Food and Nutrition

Undernourished % of total population: 2.0
 Daily Available Calories per capita kcal: 3,180
 Amount of Cereal Available per person per year kg: 139.9
 Amount of Fruits and Vegetables Available per person per year kg: 335.7

STATUS OF WOMEN

Traditional conservatism and strong family pressures, as evidenced in the still-honored tradition of girls marrying in their early teens, have prevented many female citizens from continuing their education beyond the primary level. This lack of education has in turn limited women's roles in the economic and cultural life of the country. The number of Emirati women in the workforce is minimal.

The government is now encouraging women to pursue their education, and they are beginning to find employment in the news media and government offices as well as in the traditionally accepted fields of health and education. Women are permitted to drive automobiles and may appear in public unveiled. Women remain underrepresented in government, although there have been signs of limited openings, with women receiving appointments at various levels of the government in 2003.

 Women's Share of Wage Employment Non-agricultural %: 14.4

WORK

The UAE labor force numbered over 2.3 million in 2004. However, much of this workforce was nonnational, as foreign workers make up about 80 percent of the population. The overwhelming majority of workers, 78 percent

in 2000, are employed in the service sector. Agriculture accounted for only 7 percent of the labor force, with output of dates, vegetables, watermelons, poultry, eggs, and dairy products. Industries, including petroleum, fishing, petrochemicals, aluminum, construction materials, boat building, handicrafts, and pearling, accounted for the remaining 15 percent of the workforce. In 2001 unemployment stood at 2.4 percent. In the smaller emirates that have no oil, goat herding, fishing, and farming are major occupations.

The UAE has no labor unions, although the government has mediated labor disputes. Foreign nationals are generally not offered labor protections, although in 2003 the government issued a ban on the long-standing practice whereby employers forced foreign employees to surrender their passports as a condition of employment. The minimum work age is 15, while the standard workweek is 48 hours. The workday for businesses and some industries is often broken up, with long two- or three-hour lunch breaks; work is then continued into the early evening hours. There is no minimum wage. Though occupational health and safety standards exist, they are seldom observed.

Employment and Labor

EDUCATION

Education is free, universal, and compulsory, in principle, for six years, between ages six and 12. School uniforms, books, equipment, and transportation are also free. Overall, schooling consists of six years of primary school, three years of middle school, and three years of secondary school, for a total of 12 years. The academic year runs from September to June. The medium of instruction is Arabic, but English is taught in secondary grades. As in the rest of the Gulf countries, the majority of schoolteachers are Egyptian, Lebanese, or Palestinian.

Special adult education is provided for adults at 26 centers.

United Arab Emirates University, the country's first university, opened in Abu Dhabi in 1976; as of 2004 it had 15,000 students. Higher Colleges of Technology were established in 1988; located in Abu Dhabi, Dubayy, Ash Shariqah, Al Ayn, Ras al Khaymah and Al Fujayrah, these colleges prepare nationals for professional and technological careers in both the public and private sectors. Since

their foundation, the colleges have grown significantly, with staff and student populations increasing by about 30 percent each year.

Despite these advances, literacy still stood at only 77.9 percent in 2003, and in 2002 just 68 percent of eligible students were enrolled in primary, secondary, and tertiary schools.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture and Fisheries has nine research centers employing over 100 full-time researchers in areas from crop production to livestock management to fishery preservation. The government of Abu Dhabi maintains the Environmental Research and Wildlife Development Agency, which pursues similar research. Much of the nation's petroleum technology has come from abroad, although in the 1980s the UAE began a training program to avoid reliance on foreign technicians.

UAE University has faculties of sciences, engineering, agricultural sciences, medicine, and health sciences. Ajman University College of Science and Technology was founded in 1988; Etisalat College of Engineering, at Ash Shariqah, in 1989; and the Higher College of Technology at Abu Dhabi in 1988. Between 1987 and 1997 science and engineering students accounted for 24 percent of college and university enrollments.

Science and Technology

MEDIA

Around nine daily newspapers are published in the UAE; there are also three major nondailies, of which the most widely read is the *Gulf Weekly Mirror*, which is published in English in Bahrain, and eight major periodicals. Official gazettes are published by the governments of Abu Dhabi and Dubayy. Ash Shariqah and Ras al Khaymah have monthly publications in Arabic. Among private dailies are the Dubayy-based *al-Bayan*, the *Khaliq Times*, and the *Gulf News*.

The official news agency is the Emirates News Agency, founded in 1977. There is a small book-publishing industry, which does not adhere to any copyright convention.

Abu Dhabi Radio and UAE Radio and Television each broadcast one service in Arabic and one in English. Radio Ras al Khaymah has one medium-wave transmitter. Radio Ash Shariqah has two stations, one in English and the other in Arabic. Capital Radio is an English-language FM music and news service based in Abu Dhabi.

The UAE Television Service operates a color television network, with transmitters in Dubayy and Abu Dhabi. Numerous other private broadcasters have entered the market since 2000. Dubayy has plans to become a regional and international center for television and media services; the Electronic Commerce and Media Zone Authority was created in 2000 to attract regional and international media outlets. Emirate Dubayy TV is a pan-Arab broadcaster, as is MBC, with its Al-Arabiya news channel.

The UAE constitution provides for freedom of speech, but there is strong regulatory and political control of media content. A 1988 law requires that publications be licensed and outlines acceptable subjects of reporting. Foreign publications are censored before distribution. Journalists tend to practice self-censorship when reporting on such matters as government policy and ruling families. Reporters without Borders, an international media watchdog group, ranked UAE 137th out of 167 countries in its 2004 press freedom index.

Internet use in the UAE is extensive; in 2003 there were over 1.1 million users. Most of the population use cellular telephones.

CULTURE

The culture of the UAE is Arabic in nature. Emirati folktales, storytelling, music, and dance are similar to those of other Arab nations. Islam has made a resurgence in the UAE, as it has in other Arab nations, and the faith's architecture and devotional precepts color much of modern cultural life. Tribal identities also figure in the cultural mix.

Traditional musical forms feature a steady drumbeat, provided by the *tubool*, accompanied by such ancient string instruments as the oud and *rebaba* and such wind instruments as the flutelike *nai* and the *mizmar*. Among notable traditional dances is the battlelike *ayyala*, reflecting the chivalric traditions of Arabs. Emirati folk art includes baskets made of palm tree fronds, called *al-khoos*. Wool from sheep is woven into colorful fabrics, to be used for pillowcases, covers, blankets, carpets, and bags.

The Zayed Center for Heritage and History is an official cultural research institution that was founded in 1999 to foster the study of tradition and history. The Al-'Ayn Museum houses archaeological artifacts. There are local museums in Dubayy, Al Fujayrah, and Ash Shariqah; Ash Shariqah is also home to archaeological, historical, Islamic, and science museums.

FOLKLORE AND MYTHOLOGY

Many legends and folktales deal with the adventures of the Prophet, Muhammad, while others retell other parts of the Koran. Daily life in the UAE before the advent of oil is celebrated in numerous folk songs. Pearl diving was once the major occupation of residents of Abu Dhabi; thus, one song tells of how women worried while their husbands, sons, and fathers were away for months on end during the pearl-diving season.

Numerous pre-Islamic gods and goddesses were worshipped throughout the Arabian peninsula; Islamic teachings have totally replaced such earlier traditions.

ENTERTAINMENT AND RECREATION

Television and movies are popular forms of entertainment for Emiratis. To the local channels can be added

numerous pan-Arab networks received by satellite. Movies are shown in a plethora of languages, from Arabic to Hindi to English, reflecting the diverse population. Videos and DVDs are available but are often censored. Sporting events such as soccer and camel racing provide diversions. Diving and snorkeling are possible in the Gulf waters, and riding clubs provide an important form of recreation for a large segment of the population. There are a number of theme parks in and around Dubayy.

ETIQUETTE

Much of the etiquette of the UAE is similar to that of other Arab and Muslim countries. The handshake is a typical form of greeting, though not usual between men and women. Shoes should be removed before entering homes and mosques. The use of the left hand for eating or for giving or receiving is taboo, as is showing the soles of one's feet to others. Food taboos include prohibitions against pork (even soccer balls must be made from a material other than pigskin) and alcohol.

FAMILY LIFE

Intensely tribal, Emiratis still maintain the extended family as the core social unit. Marriages are often arranged, and a bride-price, or *mabr*, is paid: The *muqaddam* is paid before the wedding to allow for the purchase of a trousseau, while the *muta'akbir* is a pledge from the groom for support in case of divorce. Polygamy is legal, and a man may have up to four wives. Divorce is a fairly simple procedure: The father takes children over five, while the mother takes younger children and generally returns to her parents' home until she remarries. The divorce rate in 1996 was 0.87 per 1,000 people.

Women are increasingly taking a larger role in UAE society, having become better educated and more represented in the professions than in many other Arab countries. The size of the family has shrunk since traditional times; as of 2005 the fertility rate was just under three children per woman.

PERSONAL APPEARANCE

Traditional Arab dress is usual for Emiratis. For men, this consists of an ankle-length robe called the *dishdasha*, or *kandura*, made of white or off-white cotton. The *ghutra*, a piece of cloth worn on the head and held in place with a piece of woven rope called an *'aqal*, is also usual. The *bisht*, a full-length cloak, is worn for more formal occasions. Some women prefer to wear Western fashions, but the majority, when in public, still wear the full-length black robe or cloak called the *abaya*.

SPORTS

The most popular spectator sport in UAE is camel racing, which continues to attract large crowds. No betting is allowed at camel races, though prize racers can sell for hundreds of thousands of dollars. Horse racing is also a popular sport. Sand skiing is another typical desert sport.

Ironically, in light of its desert location, the UAE has three ice-skating rinks as well as a championship-level 18-hole grass golf course in Dubayy, home of the Dubayy Desert Classic golf tournament. Dubayy also hosts a major international tennis tournament as well as tournaments in cricket, rugby, volleyball, and soccer.

CHRONOLOGY

- 1971 United Kingdom withdraws its forces from the Persian Gulf region and ends treaty obligations with the Trucial States. Six of the Trucial States—Abu Dhabi, Dubayy, Ash Shariqah, Ajman, Umm al Qaywayn, and Al Fujayrah—federate themselves as a sovereign and independent nation. Provisional constitution of UAE is promulgated. Sheikh Zayed bin Sultan Al Nahayan, of Abu Dhabi, is elected president.
- 1972 Ras al Khaymah joins UAE. Sheikh Khalid, of Ash Shariqah, is killed in coup led by his cousin Sheikh Saqr; UAE forces capture the rebels and install Khalid's brother Sheikh Sultan as emir.
- 1973 The dirham is adopted as the national currency; Currency Board is established as UAE's central bank. Hundreds of alleged subversives belonging to the National Front for the Liberation of the Occupied Arabian Gulf are arrested.
- 1974 Accord is reached with Saudi Arabia over border disputes relating to the Buraimi Oasis; diplomatic relations are established with Saudi Arabia.
- 1975 A committee is appointed to draft a permanent constitution.
- 1976 University of Abu Dhabi is established. As a further step toward integration, the separate emirate defense forces are unified into a single central command, with three military regions.
- 1977 Abu Dhabi is chosen as the headquarters of the newly established Arab Monetary Fund.
- 1979 Prime Minister Sheikh Maktoum bin Rashid al-Maktoum is replaced by Sheikh Rashid bin Said al-Maktoum. Egypt severs diplomatic relations with UAE.
- 1980 In Iraq-Iran War, UAE cautiously sides with Iraq.
- 1981 UAE joins the Gulf Cooperation Council.
- 1982 The UAE runs its first budget deficit.

2482 United Arab Emirates

- 1986** The provisional federal constitution is renewed for another five years.
- 1987** Accusing his brother, Sheikh Sultan bin Muhammad, of fiscal mismanagement, Sheikh Abd al-Aziz seizes power in Ash Shariqah. The Supreme Council reinstates Sheikh Sultan bin Muhammad and decrees that Sheikh Abd al-Aziz should be crown prince and deputy ruler, with control over the emirate's financial affairs. The countries of the Gulf Cooperation Council discuss negotiations with Egypt for aid in light of potential Iranian aggression. The UAE restores diplomatic relations with Egypt.
- 1988** Egypt and the UAE sign trade agreements.
- 1990** Sheikh Sultan bin Muhammad removes his brother as crown prince. Following Iraq's invasion of Kuwait, the UAE grants allied forces the right to use its bases.
- 1991** The UAE sends ground troops to join the 28-nation allied coalition in the Persian Gulf War.
- 1995** The UAE signs a defensive pact with France, which supplies most of its arms.
- 1998** World oil prices fall, creating economic concerns for the government, as 70 percent of revenues come from oil proceeds. UAE restores diplomatic relations with Iraq, which had been severed at the outbreak of the Persian Gulf War.
- 2001** The government orders financial institutions to freeze the assets of 62 individuals and organizations suspected by the United States of funding terrorist organizations.
- 2002** The president's son Khalifa makes an official state visit to Tehran to help normalize the situation between the UAE and Iran, after a decade of strained relations over disputed boundaries.
- 2003** The UAE and Oman sign and ratify a comprehensive agreement to delimit their common border.
- 2004** President Sheikh Zayed bin Sultan Al Nahayan dies. He is succeeded by his eldest son, Sheikh Khalifa bin Zayed Al Nahayan.
- 2005** In late April the Abu Dhabi Securities Market hits a record high of 6,112.98 points.
- 2006** Prime Minister Sheikh Maktoum dies. He is succeeded as prime minister and ruler of Dubayy by his brother Sheikh Mohammed bin Rashid Al Maktoum.

UNITED KINGDOM

Basic Fact Sheet

OFFICIAL NAME

United Kingdom of Great Britain and Northern Ireland

ABBREVIATION

UK

CAPITAL

London

HEAD OF STATE

Queen Elizabeth II (from 1952)

HEAD OF GOVERNMENT

Prime Minister Tony Blair (from 1997)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

60,441,457 (2005)

AREA

244,820 sq km (94,525 sq mi)

MAJOR ETHNIC GROUPS

Anglo-Saxon, Celtic, Scot

LANGUAGE

English

RELIGIONS

Protestantism, Catholicism

UNIT OF CURRENCY

British pound

NATIONAL FLAG

The Union Jack, a combination of the banners of England (St. George's flag, a red cross with extended horizontals on a white field), Scotland (St. Andrew's flag, a white saltire cross on a blue field), and Ireland (St. Patrick's flag, a red saltire cross on a white field)

NATIONAL EMBLEM

In the royal arms, the four quarters of the shield contain two repetitions of the arms of England (three golden lions on red); the pacing red lion of Scotland surrounded by a twin-bordered frame inset, with fleurs-de-lis and other decorations (known as a double "tressure"), on a gold background; and a silver-stringed gold harp on a bright blue field, representing Northern Ireland. Wales is not represented on the shield. The shield is encircled by the blue ribbon of the Order of the Garter, bearing in gold the French-language motto *Honi soit qui mal y pense* (Shame on him who thinks evil of it). The royal British lion and the silver Scottish unicorn support the design on either side. When the arms are displayed in "full achievement," the crest is a gold helmet mantled in white and gold on which rests the imperial state crown, which is gold, red, and jeweled and bears an ermine headband. Topping the crown is a small gold lion, also crowned, facing outward. Beneath the arms is the royal motto in gold letters on a white scroll, in French: *Dieu et mon droit* (God and my right).

NATIONAL ANTHEM

"God Save the Queen"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labour Day), Easter Monday, second Saturday in June (Queen's official birthday), December 25 (Christmas), December 26 (Boxing Day), all major Christian festivals; in Scotland, January 12 (Boxing Day); in Northern Ireland, March 17 (St. Patrick's Day), July 12 (Commemoration of the Battle of the Boyne)

DATE OF INDEPENDENCE

None

DATE OF CONSTITUTION

None

GEOGRAPHICAL FEATURES

The United Kingdom is located off the northwestern coast of Europe between the Atlantic Ocean on the north and northwest and the North Sea on the east. It is separated from the continent by the Strait of Dover and the English Channel, 34 km (21 mi) wide at its narrowest point, and

from the Irish Republic by the Irish Sea and St. George's Channel. Its total area of 244,820 sq km (94,525 sq mi) is shared by four constituent units: England (approx. 130,400 sq km; 50,350 sq mi), Wales (20,800 sq km; 8,000 sq mi), and Scotland (78,800 sq km; 30,500 sq mi)—forming Great Britain—and Northern Ireland (14,100 sq km; 5,450 sq mi), on the island of Ireland. There are also sev-

United Kingdom

eral island groups and hundreds of small single islands, of which the best known are the Orkney Islands, the Shetland Islands, the Outer Hebrides, Skye, Mull, Arran, the Isle of Man, the Isles of Scilly, and the Channel Islands. From the southern coast of England to the north of Scotland is some 1,000 km (622 mi), and the maximum width of Great Britain is under 500 km (311 mi). No location in Great Britain is more than 120 km (75 mi) from tidal water. The prime meridian, longitude 0°, passes through Greenwich, near London.

The total boundary includes a coastline of 12,429 km (7,723 mi) and a land boundary with the Irish Republic of 360 km (224 mi). The seas surrounding the British Isles are shallow, usually less than 90 m (295 ft), because the islands lie on the continental shelf. To the northwest, the sea floor plunges abruptly to 900 m (2,953 ft).

The capital is London, in southeastern England, occupying both sides of the Thames River. An ancient city, London was first settled by the Romans in 43 c.e.; in 2001 the population was almost 7.2 million. With 970,000 inhabitants, Birmingham is the United Kingdom's second-largest city and the industrial capital of central England. Liverpool is the chief port for Atlantic trade. Other major industrial centers include Manchester, Bristol, and Leeds. Glasgow is Scotland's largest city, followed in size by Edinburgh, the capital. Cardiff is the capital of and largest city in Wales and is one of the world's largest coal-shipping ports. Belfast is the capital of and largest city in Northern Ireland.

Most of England consists of low plains and rolling downs, particularly in the south and southwest, where the land does not rise higher than 305 m (1,000 ft). The major hill regions are in the north, west, and southeast. These include the Pennine Range, which originates in Scotland and runs southward, and the Midlands, a plains region with low, rolling hills and fertile valleys. The eastern coast is low-lying, with much of it less than 5 m (15 ft) above sea level. The highest point in England is Scafell Pike (978 m; 3,210 ft). The longest rivers are the Severn (338 km; 210 mi) and Thames (322 m; 200 mi). Other rivers include the Humber, Tyne, Tweed, Avon, and Mersey.

Scotland has three distinct topographical regions: the Northern Highlands, occupying almost the entire northern half of the country and containing the highest point in the British Isles, Ben Nevis (1,343 m; 4,406 ft); the Central Lowlands, containing the valleys of the Tay, Forth, and Clyde rivers; and the Southern Uplands, rising to their peak at Merrick (842 m; 2,764 ft), with moorland cut by many valleys and rivers. Scotland also has numerous deep lochs and wide firths.

Wales is a country of hills and mountains, with extensive tracts of high plateau and shorter stretches of mountain ranges deeply dissected by river valleys. The Cambrian Mountains occupy almost the entire area and contain Wales's highest point, Mount Snowdon (1,085 m;

3,560 ft). There are narrow coastal plains in the south and west and small lowland areas in the north.

Northern Ireland consists mainly of low-lying plateaus and hills, generally from 152 to 183 m (500 to 600 ft) high. The Mourne Mountains, in the southeast, include the highest point in the area, Slieve Donard (852 m; 2,796 ft). In a central depression lies Lough Neagh, the largest lake in the kingdom.

CLIMATE AND WEATHER

The United Kingdom has a mild and temperate climate warmed by the North Atlantic Drift (a continuation of the Gulf Stream) and the prevailing southwestern winds. Daily weather is mainly influenced by depressions moving eastward across the Atlantic. The climate is subject to frequent changes but to moderate extremes; temperatures rarely range above 32°C (90°F) or below 10°C (50°F). Near sea level in the west, the mean annual temperature ranges from 8°C (46°F) in the Hebrides to 11°C (52°F) in the extreme southwest of England. The mean monthly temperature in the extreme north ranges from 3°C (37°F) in the winter to 11°C (52°F) in the summer.

2486 United Kingdom

The annual average rainfall is over 1,600 mm (63 in) in the mountainous areas of the west and north but less than half that amount over central and eastern parts. Rain is fairly well distributed throughout the year, but on average March through June are the driest months, while September through January are the wettest. During May, June, and July, the months of longest daylight, the mean daily duration of sunshine varies from five hours in northern Scotland to eight hours on the Isle of Wight; during November, December, and January, the months of shortest daylight, the mean daily duration of sunshine varies from an hour and one-half in northern Scotland to two hours on the southern coast of England. Scanty sunshine combined with prevalent mists and fogs and frequent drizzles ensure the proverbial dreary English weather.

Climate and Weather

FLORA AND FAUNA

Once extensively wooded in oak and pine, the United Kingdom today has just over one-tenth of its land covered in woods, with much of the rest cleared for farmland. The forests that remain, except in the Highlands of Scotland and along the coasts, are mainly oak. On moorlands and heathlands (about one-quarter of the total area of the United Kingdom), heather, peat moss, bilberry, other types of arctic-alpine vegetation grow wild, but in these regions as well grazing and controlled burning have altered the ecosystem.

Most larger forms of wild mammalian life, such as wolves, wild boar, and reindeer, have long become extinct. Red deer and roe deer are still found in the Scottish Highlands and in Exmoor Forest. Foxes, badgers, otters, weasels, and other small carnivores are widespread in rural areas, as are rabbits, squirrels, mice, rats, numerous amphibians, and three species of snake, including the poisonous adder. All of the island of Ireland is free of snakes. As relatively limited as animal life is, avian life is varied and rich. The United Kingdom is a focal point of various migratory routes, and woodland and farmland, as well as suburban gardens, all offer nesting habitats for over 200 species of birds, including the chaffinch, starling, sparrow, and blackbird. Game birds include grouse, pheasant, and wild pigeons. The reclamation of marshland has de-

ETHNIC COMPOSITION

In the United Kingdom, the English constitute some 81.5 percent of the population, the Scottish 9.6 percent, the Irish 2.4 percent, the Welsh 1.9 percent, and the Ulster 1.8 percent. Most of the native-born inhabitants of the British Isles are descended from a succession of early peoples, including Celts, Anglo-Saxons, Teutons, Romans, Danes, Normans, and Pictish. The Welsh and the Irish are mainly Celtic; the English, Anglo-Saxon; and the Scots, Pictish.

Immigrants from Commonwealth nations or former British imperial possessions constitute approximately 2.8 percent of the population and account for the main ethnic minorities. The largest such groups are Indian, West Indian, Pakistani, and Bangladeshi. A sizable minority of this population was born in the United Kingdom (some 40 percent), and among second-generation immigrants, some 74 percent are of mixed ethnicity. The most dramatic difference between the white and minority communities is age: 42 percent of whites are under 30, compared with 60 percent of West Indians and 70 percent of those from the Indian Subcontinent. Ethnic minorities are more heavily concentrated in urban areas, especially London; overall, almost 70 percent of the minority community lives in metropolitan areas. Both Scotland and Northern

Ireland have very small ethnic minority populations (less than 0.8 percent of the total populations).

LANGUAGES

English is the official and national language and is spoken throughout the United Kingdom. It is descended from the German tongue spoken by the Anglo-Saxons in the fifth and sixth centuries, as subsequently influenced and modified by Latin, Norse, and Norman French. Next to Mandarin Chinese, English is the second-most widely spoken language in the world, and it is the most common second language. English is an official language in over 60 nations and has acquired the unofficial status of *lingua franca* of the modern world.

About 26 percent of the people of Wales speak Welsh, chiefly in the rural north and west. Legal measures adopted in the 1960s helped to revive the language, which is of Celtic origin and closely allied to Breton, spoken in Brittany, France. Welsh may be used alongside English in courts and schools. Some 80,000 Scots, mainly in western Scotland, still speak the Scottish dialect of Gaelic, and some Northern Irish speak the Irish form of the language. On the Isle of Man, the Manx variety of Celtic is used, and in the Channel Islands, some people still use a Norman French dialect. French remains the language of Jersey for official ceremonies.

RELIGIONS

Christianity is the dominant religion of the United Kingdom. The Anglican Communion is the established church and consists of four distinct churches: the Episcopal Church of Scotland, the Church of Ireland, the Church of Wales, and the Church of England. Some 25.8 million people are Anglican. The Church of England is the largest Anglican sect, with two main provinces, Canterbury and York, and 14,400 parishes in 43 dioceses. The archbishop of Canterbury is the primate of the Anglican Church, including all of its 40 ecclesiastical provinces and 390 dioceses in 120 nations. There are close ties between the Church of England and the government. For instance, the 26 senior bishops are entitled to sit in the House of Lords, and the monarch is the formal head of both the Church of England and the Church of Scotland (Presbyterian). The absence of a formal constitution has meant that church-state relations remain based on tradition and custom.

Although Catholicism in Great Britain was suppressed until the Catholic Emancipation Act of 1829, the denomination's followers now number 5.8 million. In England, most Catholics are concentrated in two geographic regions: London and Liverpool. In Scotland, Catholics are more dispersed and account for some 25 percent of the church-

going population. The Scottish Presbyterian Church is divided into 12 synods and 59 presbyteries, with some 1,000 parishes. There are approximately 800,000 Presbyterians in the United Kingdom. There is also a strong Methodist Church in the United Kingdom, with some 760,000 members in five denominations, the largest of which is the Methodist Church of Great Britain, which has more than 10,000 churches and chapels. The Baptist Church is divided into five different unions, with some 500 churches. The Baptist Union is the largest denomination. Fundamentalist or Pentecostal movements have had only minor success in the United Kingdom, although their numbers have grown in recent years.

While Christianity is the dominant religion, there are a number of religious minorities. Immigration has created a substantial non-Christian community. The Muslim community numbers 1.6 million, and there are some 360,000 Sikhs and 600,000 Hindus. The Jewish community numbers approximately 300,000.

After a long history of religious strife and repression, the 20th century witnessed the emergence of religious tolerance throughout the United Kingdom, with the notable exception of Northern Ireland. In general, although churches and clergy continue to receive tax concessions, and denominational schools are subsidized, religion has ceased to be a major issue in politics or public life.

HISTORICAL BACKGROUND

The first known settlers in Britain were Celts, who invaded and conquered England during the sixth century B.C.E. The islands' gold, tin, and pearl mines were known throughout Europe and probably prompted the invasion by Julius Caesar in 55 B.C.E. Roman rule lasted until the fifth century C.E.

The withdrawal of the Roman garrisons was followed by four centuries of internecine strife and external invasions. While the Celtic tribes fought among themselves, Scots and Picts raided from the north, while Angles, Jutes, and Saxons raided the eastern coasts. The Anglo-Saxons were able to establish permanent kingdoms, while the Celts retreated into the mountains of Wales, where they were united into a single kingdom in the 10th century by Howel the Good (Hywel Dda).

Meanwhile, under Alfred the Great (d. 901) the West Saxons (Wessex) came to dominate England, but a wave of Danish and other Norse invasions led to the establishment of a Danish kingdom under Canute II in 1017. Canute's line ended in 1042, when Edward the Confessor, of Wessex, ascended the throne. At Edward's death in 1066 there were three claimants to the throne. The victory of William the Conqueror, Duke of Normandy, at the battle of Hastings ended the Anglo-Saxon period and began Norman rule.

The next 400 years, until the rise of the Tudors in 1485, were marked by notable constitutional and legal advances, intermittent struggle with France, and efforts to unify the British Isles. Henry II, who ruled from 1154 to 1189 and was the first of the Angevin line, strengthened the power of the throne vis-à-vis the church and implemented numerous legal reforms. However, strife between the monarchy and the nobility led his son John to issue the Magna Carta in 1215, following his loss at the battle of Runnymede. A half century later the first Parliament was summoned in opposition to Henry III. The Magna Carta and Parliament helped establish checks on royal power and inaugurated the principle of representative government.

Edward I completed the conquest of Wales in 1282, when the last Welsh king, Llewelyn ap Gruffyd, was killed in battle. Scotland was united under Duncan and his sons Malcolm III and David I from 1034 to 1153. English efforts to conquer Scotland ended with Robert Bruce's victory over Edward II at Bannockburn in 1314 and a subsequent treaty in 1328. Anglo-French conflict culminated in the Hundred Years' War, which began in 1337. Therein, despite notable early victories, the English monarchy lost its main possessions in France. During this period England underwent a series of national traumas, including an outbreak of the bubonic plague and the 85-year civil war between the House of York and the House of Lancaster, known as the War of the Roses.

In 1485 the ascension of Henry VII, of the House of Tudor, marked the end of the civil war. By 1603, when the Tudor dynasty ended, England had been transformed. The defeat of the Spanish Armada in 1588 marked the rise of the nation as the world's most powerful maritime force, and colonization efforts were undertaken around the world. Henry VIII (1509–1547) separated the English Church from Rome, and a golden age of literature flourished under Elizabeth I (1558–1603).

Elizabeth was succeeded by James VI, of Scotland, in 1603, who became James I, of the House of Stuart. The Catholicism of the Stuarts led to renewed civil war (1642–49) and the beheading of Charles I. A commonwealth was established under Oliver Cromwell, but the monarchy was restored after Cromwell's death and the ascension of Charles II in 1660. However, efforts to reassert royal authority failed when James II (1685–88) was overthrown and his daughter Mary II and her husband,

William of the House of Orange, were installed as monarchs.

In the 17th and 18th centuries England consolidated its maritime and commercial supremacy over continental powers such as France and the Netherlands. Following the Seven Years' War, England controlled most of North America and India. The Treaty for the Union of Scotland and England created a single monarchy in 1707, although Scottish resistance continued, most notably in Jacobite rebellions in 1715 and 1745. In 1714 George I, of the House of Hanover, grandson to James I, ascended the throne. During the reign of his grandson George III (1760–1820), England lost its 13 North American colonies through the Revolutionary War, which brought about the formation of the United States, but consolidated possessions in Canada and India and added new colonies in Australia, New Zealand, and South Africa. England also led the opposition to the French Revolution and emerged from the Napoleonic Wars as one of the great powers of Europe.

The 19th century marked the culmination of British imperial power. The industrial revolution made the country one of the wealthiest in the world and assured British commercial dominance for most of the century. Reforms ended slavery in the empire in 1832 and enfranchised the growing middle and working classes. Social and political reforms were also enacted. Finally, the century was marked by widespread emigration to the United States and areas of the empire, which contributed to the dispersion of British political, social, and legal customs.

The status of Ireland remained one of the most contentious issues in British politics throughout the 1800s. Although the 1800 Act for the Union of Great Britain and Ireland created the United Kingdom and granted Irish representation in Parliament, efforts for independence continued. The crisis worsened during World War I, and the 26 southern, and mainly Catholic, counties broke away in 1922 to form the Irish Free State, now the Irish Republic. Meanwhile, the six mainly Protestant counties in Ulster, in the north, remained part of the United Kingdom.

World War I was the first major blow to British imperial supremacy, destroying the carefully built balance of power in Europe. The fiscal and emotional costs of the war seriously eroded support among and the capability of the British people to maintain the empire. In 1931 the Statute of Westminster granted equal status to the self-governing dominions and introduced the concept of a commonwealth. In domestic politics, women gained suffrage in 1922, and the Liberal Party was gradually replaced by the Labour Party as the main liberal and anti-Tory party in the 1920s. Although the United Kingdom emerged from the shadow of the Great Depression in relatively better shape than its continental neighbors, neither its diplomacy nor its military might was sufficient to prevent the rise of Adolf Hitler.

During World War II the United Kingdom, under the inspired leadership of Winston Churchill, became one of the three main Allied powers, along with the United States and the Soviet Union. Alone among the major western European countries, the United Kingdom held out against Nazi Germany, even through one of the most devastating air campaigns staged against civilians, the Battle of Britain (an event that Churchill proclaimed Britain's "finest hour"). British troops also fought in the Pacific and were instrumental in the Allied victory in Europe. Still, Churchill and the Conservatives lost power in 1945 and were replaced by the Labour Party.

In the aftermath of World War II decolonization began, with India and Pakistan gaining independence in 1947, as followed a year later by Burma (Myanmar) and Ceylon (Sri Lanka) and in 1956 by Sudan. That year British troops withdrew from the Suez Canal zone following a failed invasion of the region. In 1960 Nigeria became independent, initiating the process of British withdrawal from southern and western Africa. By the 1970s most of the major colonies were independent. Following the death of George VI in 1952, his daughter Elizabeth ascended the throne as Elizabeth II.

In 1973, in a historic move, the United Kingdom ended its relative isolation from the rest of Europe and joined the European Community. The country's economy received a boost in 1975 when offshore oil in the North Sea began to be piped ashore. In 1979 Conservatives were returned to power under Margaret Thatcher, who became Europe's first female prime minister. Three years later Thatcher led the country to victory after Argentine forces invaded the Falkland Islands.

Unrest in Northern Ireland led the government to impose direct rule over the area in 1972; however, in 1985 the United Kingdom and the Irish Republic signed the Anglo-Irish Agreement, which provided for mutual consultations on the territory. Thatcher was reelected to a third term in 1987 and went on to become the kingdom's longest-serving prime minister since Lord Liverpool in the 19th century. Domestic discontent led Thatcher to be replaced by John Major in 1990.

In 1990 the United Kingdom participated in the U.S.-led coalition against Iraq in the Persian Gulf War. The "Chunnel" inaugurated direct ground transportation between the United Kingdom and France via a tunnel under the English Channel in 1994. The process of decolonization essentially ended in 1997 when Hong Kong reverted to Chinese control. Meanwhile, trouble was brewing in the country's royal family. The heir apparent, Charles, and his wife, Princess Diana, underwent a controversial divorce. In 1997 Diana was killed in a car crash in Paris, and her funeral in England attracted millions of mourners.

Major was defeated in 1997, as Tony Blair and the Labour Party were swept into office in a landslide elec-

tion victory. The Labour government initiated a program of devolution that granted Scotland and Wales limited self-government. In addition, in 1998 the Good Friday Peace Accords ushered in a truce in Northern Ireland and established a regional assembly, though with renewed unrest in 2002 this assembly was put on hold. In 1999 the House of Lords was reformed. That year the United Kingdom also participated in military action led by the North Atlantic Treaty Organisation (NATO) against Serbia during the Kosovo crisis.

In 2001, Blair was reelected prime minister, as his Labour Party won another landslide victory, and the United Kingdom became one of the leading supporters of the U.S.-led military campaign in Afghanistan and the fight against international terrorism. The United Kingdom was also the major ally in the U.S.-led invasion of Iraq in 2003. Blair faced severe criticism at home from the general populace and from members of Parliament, who were deeply divided over such action. Scandal followed the invasion when a senior government scientist leaked information to the BBC regarding supposed falsified intelligence regarding Iraq's possession of weapons of mass destruction. When the government subsequently made the scientist's name public, he killed himself. A commission was established under Lord Hutton to investigate, and in 2004 the commission's report cleared the government of wrongdoing but criticized the BBC for faulty coverage. That year the Iraq Survey Group reported that Iraq had not in fact possessed weapons of mass destruction; nevertheless, Blair stood by his decision to take the country to war. Meanwhile, he faced criticism from within and without his party for failing to live up to election pledges to reform ailing social welfare systems, including health and education. In 2005 a controversial antiterrorism act was passed after historically long debate. On July 7, 2005, suicide bombers struck three trains and one bus in London's mass transit network, killing more than 50 people and injuring 700.

LIST OF MODERN RULERS

Prime Minister

1940–45	Winston Churchill
1945–51	Clement Attlee
1951–55	Winston Churchill
1955–57	Anthony Eden
1957–63	Harold Macmillan
1963–64	Alec Douglas-Home
1964–70	Harold Wilson
1970–74	Edward Heath
1974–76	Harold Wilson
1976–79	James Callaghan
1979–90	Margaret Thatcher
1990–97	John Major
1997–	Tony Blair

CONSTITUTION

Among the major countries of the world, the United Kingdom, New Zealand, and Israel are the only ones without written constitutions. However, the U.K.'s constitution is unwritten only in the sense that the documents and practices upon which the country is based have not been brought together in a single inclusive statement. Government is highly unitary in that power radiates from a central sovereign body. The constitution is flexible in that no part of it is inviolate. Laws reflecting the structure and functions of government may be changed through the replacement of conventions or the passing of new laws.

The major elements constituting the unwritten constitution of the United Kingdom are historic documents, statute law, common-law decisions, judicial interpretations, conventions and customs, parliamentary procedures and privileges, and a few classic writings. Even if all of the relevant documents and acts of Parliament were brought together in a single document, they would still not make up a true constitution due to the myriad constitutional issues not dealt with.

The principal constitutional documents in this context are the Magna Carta (1215), the Petition of Right (1628), the Bill of Rights (1689), the Act of Settlement (1701), and the various Representation of the People Acts. These documents have mainly historical significance, while much of the current constitutional framework is derived from statute law, such as the Parliament Acts of 1911 and 1949. Conventions often define the political processes of Parliament. They are defined as established practices that, although without legal sanction, are followed to the extent that they acquire the character of binding precedents. Among the more important conventions are that the prime minister must be a member of the House of Commons and that the government must resign following a no-confidence vote.

The absence of a comprehensive bill of rights has meant that civil liberties are dependent upon statutes and judicial interpretation. Although the courts have no formal power of judicial review, they may shape the law through interpretation and by adding or subtracting from the scope of relevant legal provisions. In the 20th century the courts increasingly ruled that many ministerial acts were beyond the power conferred by law. Classic writings on constitutional practice fill the gaps not covered by common law, judicial interpretations, and conventions. For instance, Sir Thomas Erskine May's *Treatise on the Law, Privileges, Proceedings, and Usage of Parliament* is used by speakers of the House of Commons to resolve disputed points of procedure.

Two key concepts around which unwritten constitutional norms have evolved are the rule of law and parliamentary sovereignty. The rule of law is based on the principle that the constitution is not the origin of individual rights but merely the codification of those rights.

The rule of law implies that the government is not above the law and can only do what it has the legal power to do. Parliamentary sovereignty means that, unlike in countries where the legislature is subordinate to the constitution, the U.K. Parliament can legally pass any law it wishes, and no person or institution can override it. No existing laws are sacrosanct; they may be repealed or amended as Parliament pleases. Constitutionally, this makes the government in general and the prime minister in particular more powerful than their counterparts in western Europe or the United States.

The unwritten constitution of the United Kingdom is facing increasing pressure from several directions. Membership in the European Union requires that British courts accept the supremacy of EU statutes when they conflict with domestic parliamentary acts. In addition, there has been a devolution of parliamentary power to Wales and Scotland, which have established their own regional bodies. Finally, there has been increasing use of referendums, which bypass Parliament and appeal directly to the people for decisions.

The United Kingdom is a constitutional monarchy in that the sovereign "reigns but does not rule." The power of the Crown to act without consulting Parliament is called the "royal prerogative." In theory, the scope of this prerogative is vast. The monarch appoints the prime minister, summons and dissolves Parliament, opens and closes sessions of Parliament, and completes legislative processes with royal assent. Declarations of war, treaties, and the granting of self-government to dependent territories are executed by the Crown. The monarch appoints peers and bishops and is titular commander in chief of the military. As the head of the Commonwealth, the Crown is the symbol of unity and common bond among its members. In practice these powers are ceremonial. Yet, even as the monarch's powers have declined, the Crown has acquired broader significance in political culture. The royal family represents the traditions and heritage of the United Kingdom. In addition to serving as the sovereign of the United Kingdom, the monarch is the head of state of Antigua and Barbuda, Australia, the Bahamas, Barbados, Belize, Canada, Grenada, Jamaica, Mauritius, New Zealand, Papua New Guinea, Saint Christopher and Nevis, Saint Lucia, Saint Vincent and the Grenadines, the Solomon Islands, and Tuvalu.

The Privy Council is the monarch's council of state, and all of its members are appointed by the Crown on the advice of the prime minister. Its constitutional functions are largely ceremonial. However, the Judicial Committee of the Privy Council is the country's highest legal body.

Succession to the Crown is limited to lineal Protestant descendants of Princess Sophia, the electress of Hanover and granddaughter of James I, of England. Sons have precedent over daughters in the line of succession, and the presumptive male heir is granted the title of Prince of Wales.

The government is made up of the prime minister, secretaries of state, ministers, ministers of state, junior ministers, and private parliamentary secretaries. While the size of the cabinet has remained fairly constant in the 20th century, with an average of 21 members, the size of the government has expanded dramatically, from 50 members in 1914 to over 100 in 2000. There is no statutory provision that members of the government must be members of Parliament.

The prime minister is not generally in charge of any department but holds the title of first lord of the treasury. The composition of the cabinet is left to the personal discretion of the prime minister, who also decides the agendas of all cabinet-level meetings. When there is disagreement, no vote is taken, and the cabinet always acts with collective responsibility and presents a united front. The prime minister's ability to dismiss, transfer, or force to resign members of the government lies at the root of his power. In addition, the prime minister's role as leader of his party while in office makes his position unassailable. The prime minister alone decides the timing of elections. The post also provides opportunities for patronage, as the prime minister controls the civil service.

PARLIAMENT

The Parliament of the United Kingdom is among the oldest representative assemblies in the world. It is a bicameral legislature with a lower chamber, the House of Commons, and an upper chamber, the House of Lords. The doctrine of the sovereignty of the Parliament holds that Parliament (consisting in sum of the monarch, the House of Commons, and the House of Lords) is the supreme lawmaking body. Parliament can legislate for the United Kingdom as a whole or for any of its constituent parts, including Crown dependencies. The Parliament of the United Kingdom is able to make or alter any law; the main action it cannot perform is limit the actions of future parliaments. The Parliament is also bound by the conventions and customs of the country's unwritten constitution, and as the United Kingdom is a member of the European Union, the U.K. Parliament must recognize the validity of EU legislation. The main function of Parliament is to pass laws, but it also has an oversight function, so as to ensure that the government implements policies. The legislative bodies further provide arenas for public debate and the pool from which the government is generally formed.

The speaker is the chairman of the House of Commons and acts as its representative in public ceremonies. The position is chosen through interparty agreement among senior representatives. Once chosen, the speaker remains in office throughout the life of the Parliament and is usually reelected without contest. Upon appointment the speaker ceases to be a party member. The

speaker's duties include deciding whether to allow debates on matters of urgency, accepting or rejecting motions for ending debates, certifying fiscal bills, and acting as an intermediary between the Parliament and the sovereign. The speaker may also sanction individual members for misconduct, imposing suspension or even, in theory, imprisonment.

Within the Parliament, party control is exercised by officers known as whips. Whips are responsible for ensuring party conformity on votes and the attendance of members for debates or votes. Whips also act as intermediaries between junior members and party leadership. The whips from each party work together to arrange parliamentary business.

The House of Commons is elected through universal adult suffrage and consists of 659 members, including the speaker. Of the members, 529 represent England, 40 Wales, 72 Scotland, and 18 Northern Ireland. Each member is elected from a single-member district for a five-year period, although early elections can be called at the discretion of the prime minister. In addition, elections may be delayed during periods of national crisis, as was the case during World War II. Each annual session of Parliament lasts approximately 160 to 170 days. During 20 of the days in session, the largest opposition party has the right to choose subjects for debate. Most of the major work in drafting legislation is performed by committees. Customarily, at least three committees are chaired by the opposition: the Public Accounts Committee, the Committee on the Parliamentary Commissioner for Administration, and the Statutory Works Committee.

The government controls as much as 50 percent of the time of the House of Commons, including question time, when members are free to ask questions, either orally or in writing, of the government. The prime minister regularly answers questions for 15 minutes on Tuesdays and Thursdays, and other ministers also present themselves.

The upper chamber of the Parliament is the House of Lords. It comprises hereditary nobles, or peers; life peers; two archbishops and 24 other senior bishops; and senior judges, known as law lords. The 1999 House of Lords Act reduced the number of hereditary peers to 92, such that the majority of peers are now life peers; overall, the size of the House of Lords was reduced from 1,200 seats in 1997 to 670 in 2000. There are no elections for the House of Lords, and, with the exception of bishops who retire, members serve for life. The senior figure is the lord chancellor, whose powers are quite limited compared with his counterpart in the Commons.

The House of Lords performs six main functions in Parliament: It exercises a delaying power, allowing the House of Commons to reconsider hasty or ill-considered legislation; revises bills passed by the Commons; initiates noncontroversial legislation; consolidates existing legislation into single statutes; examines delegated legisla-

tion; and holds general debates. In addition, the House of Lords is the country's highest legal body and hears final appeals for all civil cases in the United Kingdom and for all criminal cases in England, Wales, and Northern Ireland. The most substantial legislative power of the upper chamber is its delaying capability: The Lords may reject a motion from the Commons, which then must wait a year to resubmit it. If a motion is rejected a second time, it may be presented to the monarch for royal assent.

POLITICAL PARTIES

The United Kingdom has basically had a two-party system since the Whigs and Tories emerged in the late 17th century. They were replaced by the Liberals and the Conservatives after the Reform Act of 1832, and the Labour Party supplanted the Liberals in the early 1920s.

The Conservatives are the best-organized political group, with constituency committees in all districts and seven times as many full-time agents as the Labour Party. Under Thatcher the Conservative Party became an avowed defender of monetarist policies. Historically, its distinguishing characteristic has been its pro-free enterprise ideology and associated corollaries: lower taxes, the diminution of trade union power, privatization, harsher measures on immigration and crime, and import controls. As unionists, Conservatives are committed to the maintenance of British rule in Northern Ireland. In foreign affairs, the party is strongly pro-NATO and extends qualified support to the European Union. Predictably, Conservative support is strongest among the upper and middle classes, particularly professionals and office and clerical groups, among which its policies are very popular. The party also enjoys the support of members of established churches.

The Labour Party was formed in 1906 as the successor to the Labour Representation Committee, formed in 1900 by trade unions, the Independent Labour Party, and the Fabian Society, among other groups. Until it moved decisively to the left in the late 1970s, the Labour Party followed a policy of moderate socialism and reform. When Tony Blair took control of the party in 1994, he carried out drastic reorientation, firmly committing it to free-market economics and more than doubling its membership. In general, Labour membership is the mirror image of Conservative membership: Labour's strength lies disproportionately in the lower economic categories, among men, and in the younger age groups. It flourishes most in urban areas and in Catholic neighborhoods.

The Liberal Party was a shell of both the old party of the same name, which dominated 19th-century British politics, and the 17th-century Whigs, who played a large role in curbing royal absolutism. In 1981 the Liberal Party formed an alliance with the newly formed Social Democratic Party, running joint candidates in 1983

and 1987. The combined factions are now known as the Liberal Democrats, the third-strongest party.

The Social Democratic and Labour Party is the former moderate wing of the Labour Party, which formally broke away in 1981 when Michael Foot was elected president of the latter.

Parties in Northern Ireland operate in a different political climate and have managed to thrive despite sectarian strife. The Ulster Unionist Party, also known as the Official Unionist Party, is the largest and most powerful of the pro-British, Protestant, Orange parties. From 1921 until the introduction of direct rule from London, the Ulster Unionist Party provided all the governments of Northern Ireland and held the majority of the 52 seats in the old Stormont (parliament).

There are a number of other minor or regional parties, including the pro-nationalist, Catholic Sinn Féin; the pro-independence Scottish National Party; and the nationalist Welsh party Plaid Cymru.

In the 2005 parliamentary elections, Labour won 356 seats, with 35.2 percent of the vote, while the Conservatives took 198 seats, with 32.3 percent of the vote, and the Liberal Democrats won 62 seats, with 22 percent of the vote. Regional and special-interest parties won single-digit numbers of seats, with none earning more than 2.3 percent of the vote.

LOCAL GOVERNMENT

The United Kingdom has a complex system of local government, the main elements of which are as follows: local and regional offices of central government departments; nondepartmental public bodies, usually dealing with a specialized function, such as health; decentralized units of public corporations, such as gas or electric boards; autonomous or semiautonomous official organizations, such as the Youth Service Advisory Councils; and elected local governments. In England and Wales there are some 100,000 elected councillors serving on 8,000 councils, with staffs comprising over two million people. Together, elected local councils are responsible for 50 different services and account for one-quarter of all government expenditures.

The United Kingdom has a long tradition of local government, dating back to the Anglo-Saxon period. The 1972 Local Government Act reduced the number of counties to 47 in England and Wales and also created seven metropolitan counties, 26 districts, and three island areas. Within counties, which range in population from 100,000 to 1.5 million, there are 330 district councils. Within metropolitan counties, there are 36 metropolitan districts. At the smallest level of local government, some 11,000 parish councils in England and community councils in Wales have been retained. Of these, some 8,000 councils are elected.

Local councils consist of elected, unpaid councillors and are presided over by chairmen. In boroughs and cities, chairmen are normally known as mayors. Councillors are elected for four-year terms, and local areas are divided into divisions or wards for electoral purposes. Local governments serve a variety of functions, including protective (fire, police, consumer protection, and licensing), environmental (highways and planning), personal (education, housing, and social services), recreational (sports facilities, museums, and art galleries), and trading (markets and transportation) functions. Some services are mandatorily provided, such as education, while others are permissively allowed for, with local authorities given latitude regarding levels of expenditure. Funds are procured through a combination of government grants and local property taxes.

A major component of local-government policy under the Labour government of Prime Minister Tony Blair has been devolution, or the transfer of power from London to the component areas of the United Kingdom. By 1999 Scotland, Wales, and Northern Ireland had all been granted varying degrees of self-government through the establishment of national legislative bodies. Under the system of devolution, the U.K. Parliament has retained control over various features of policy, including defense, foreign policy, and social-security systems; national assemblies, meanwhile, have high degrees of autonomy over education, the environment, and culture.

A Scottish referendum in 1997 endorsed the creation of a semiautonomous Scottish Parliament; the 1998 Scotland Act created a 129-member body endowed with the power to control education, housing, transport, sports, certain legal issues, farming, and other concerns. The British Parliament retains power over employment and immigration. The Scottish executive is the government, comprising a first minister, two Scottish law officers, and the departmental ministers. Acts of the Scottish Parliament must still receive royal assent. Scotland is divided into nine regions and three island areas, with 53 local districts and 1,250 community councils.

Devolution in Wales was initiated in 1998, when Parliament passed the Government of Wales Act, which established a National Assembly. Since 1999 the Welsh National Assembly has had power over issues ranging from agriculture and education to culture and the promotion of the Welsh language. There remains a secretary of state for Wales in the U.K. government, whose functions are to coordinate policies between Parliament and the Welsh National Assembly and to shepherd legislation through Parliament that relates to Wales. The secretary has the right, upon approval, to transfer funds from the U.K. treasury to the Welsh National Assembly and may participate in plenary sessions of the Assembly but may not vote. The Welsh continue to elect members to the U.K. Parliament, and measures passed by that body remain law in Wales.

In Northern Ireland there are 26 district councils responsible for local environmental and certain other services. Through the 1998 Good Friday Agreement, a Northern Ireland Assembly was created. In theory, the Assembly has control over six governmental departments that previously controlled the territory: Agriculture, Environment, Education, Economic Development, Health and Social Services, and Finance and Personnel. The Assembly has 108 members, and the government is presided over by a first minister. After a suspension in 2000, the Assembly was reconvened. One of its main accomplishments has been to provide the means for participation in government by both Protestants and Catholics, including the political wing of the IRA, Sinn Féin. In the wake of renewed unrest in Northern Ireland in 2002, the Assembly was again suspended, with its duties taken over by the secretary of state.

LEGAL SYSTEM

Although the United Kingdom is a unitary state, England and Wales, Scotland, and Northern Ireland each have different legal systems and courts.

The basis for English and Welsh law is common law, legislation, and EU law. A peculiarity of the English legal system is the division of lawyers into barristers and solicitors. Barristers have passed the “bar” and usually appear only in superior courts, though they have the right to appear in all courts. They generally do not communicate with the public but are briefed by solicitors. Solicitors qualify as lawyers by completing a period as an articled clerk and passing the Law Society examination. They have the right of audience only in magistrate courts, county courts, and the new Crown courts. Only a minority are engaged in advocacy by representing clients in court; most perform legal work that does not require appearances in court, such as the preparation of wills or mortgages.

The judicial system is characterized by high caseloads and the extensive influence of the courts. The courts have extensive jurisdiction, and judges have a great deal of independence. All judges are appointed for life and may be removed only by the consent of both houses of Parliament. Juries typically consist of 12 persons, although in county courts the number may vary from seven to 11. Juries are rare in civil cases.

Magistrate courts dispose of about 95 percent of criminal cases and conduct preliminary investigations into more serious offenses. There are about 700 magistrates courts and 27,710 magistrates, or justices of the peace. Cases involving people under the age of 17 are tried in juvenile courts. Crown courts deal with more serious trials and take place before juries; there are 90 such courts. Appeals from the Crown courts are heard by the High Court of the Court of Appeal. Appeals from the High

Court and county courts are heard in the Court of Appeal (Civil Division) and may go on to the House of Lords, the final court of appeals. The judges in the House of Lords are the nine lords of appeal in ordinary.

In 2003 the post of lord chancellor was abolished. The second-oldest office in Britain, after the monarchy, this position combined a legislative seat in the House of Lords, a senior executive position in the cabinet, and a powerful judicial position as, effectively, the top judge in the country. As such, it was deemed to constitute a serious breach of the separation of powers.

With certain limitations, the United Kingdom accepts the jurisdiction of the International Court of Justice.

The legal system in Northern Ireland is similar to that in England and Wales but has its own High Court of the Justiciary, which is the high civil court, and the appellate Court of Appeal; together, these two courts constitute the Supreme Court of Judicature of Northern Ireland. The House of Lords remains the final appellate court.

In Scotland, the High Court of the Justiciary tries capital crimes, while sheriff's courts are concerned with less serious offenses. The High Court is both a trial court and an appellate court, and there is no appeal to the House of Lords. Criminal cases are heard before 15-member juries. District court judges are lay justices of the peace, and local authorities may appoint up to one-quarter of their otherwise elected membership. Civil cases in Scotland may be heard by the sheriff's courts or the Court of Sessions. Civil appeals may go to the House of Lords.

HUMAN RIGHTS

There are no fundamental rights in the United Kingdom in the legal or constitutional sense comparable to those enumerated in the U.S. Bill of Rights. Although some rights are enshrined in documents such as the Magna Carta and the 1689 Bill of Rights, these documents are concerned with specific grievances and do not issue broad declarations. Overall, the evolution of rights has been piecemeal and pragmatic.

Freedom of speech is one of the oldest rights. The major limitations on this freedom are the laws regarding libel and slander, including the use of insulting language in public. The Race Relations Act of 1965 makes it a criminal offense to stir up racial hatred in a public place by written or spoken words. While laws against blasphemy and obscenity remain in place, they have been liberalized.

The freedom to demonstrate peacefully and to assemble are respected with two major exceptions: Public meetings may not be held within 1.6 km (1 mi) of Parliament when it is in session, and the police have the power to change the route of a march or impose other conditions in order to prevent violence or clashes. Police are also obligated, however, to protect protestors from counter-

demonstrators. Meetings in public areas can be held only with prior permission, but such permission is generally granted. There have been no restrictions on the freedom of association since the repeal of the Combinations Act of 1824. Hence, groups such as the Communist Party and the Fascists were never banned in the United Kingdom. Religious freedom is well established. However, the monarch must be a Protestant, and the clergy may not become members of Parliament.

Quite distinct from civil rights are rights in relation to administrative acts. Such rights are less protected in the United Kingdom than they are in countries such as France and the United States. A UK subject has only limited means of appeal against perceived administrative wrongs, other than writing to his member of Parliament. There are administrative tribunals that hear appeals against ministry and agency decisions, but tribunal members are appointed by the minister concerned. There is also no formal right to privacy in the United Kingdom, although legislation does exist that protects certain aspects of private life, including mail and computer communications.

The British tradition in regard to civil rights holds that such rights inhere in individual citizens as subjects of the Crown. The object of establishing civil rights was to ensure that subjects are sufficiently protected against agents of the state and that the protection afforded is equal. The Race Relations Acts of 1965, 1968, and 1976 cover discrimination in public places and in tenancies, employment, services, unions, associations, and business leases. They also ban racially discriminatory advertising. The Commission for Racial Equality, established in 1976, has both an educational and legal role as the main civil rights oversight and enforcement agency.

The main focus of human rights concerns in the United Kingdom continues to be Northern Ireland, where, despite limited efforts at establishing genuine home rule, the Emergency Acts of 1978 and 1987 granted security forces broad powers, including the right to stop, search, and arrest on suspicion of involvement with terrorism. Trial by jury has been abolished for certain offenses, and human rights groups have criticized the use of rubber bullets, which can be lethal, by the military. Tensions have been exacerbated by the simmering conflict between the Catholic, pro-independence Irish Republican Army (IRA) and the mainly Protestant, pro-British Ulster Unionists.

The main oversight body for human rights in the United Kingdom is the parliamentary commissioner for administration (PCA), who serves as a national ombudsman. There also exist regional administrative and health commissioners. The PCA is a statutory officer, independent of the government, who investigates human rights violations. However, the office is prevented by law from investigating the armed forces, public corporations, and civil-service procedural complaints.

Human rights groups inside and outside of the United Kingdom decried a controversial antiterrorism act passed in 2005, providing for control orders for suspects, including placing them under effective house arrest.

FOREIGN POLICY

With the loss of its former imperial role, the United Kingdom had to make readjustments in its overseas relations after World War II. The transition was made more difficult by the concomitant downsizing of the country's traditional supremacy in the trading and maritime realms. The United Kingdom's fundamental principles of foreign policy are almost entirely of post-1945 vintage, although they reflect efforts both to establish new alliances and to salvage as much as possible from the past.

The dominant trend in British foreign policy through the end of the 20th century has been the Anglo-American alliance, or "special relationship." Forged during the world wars and reinforced by common values and language, this relationship led the United Kingdom to present a united front with the United States on almost all issues during the cold war, including U.S. nuclear strategy and arms control policies. The theme continued in the post-cold war era, albeit to a lesser degree, as the Labour government elected in 1997 forged closer ties with the European Union. Nonetheless, the United Kingdom has firmly supported NATO as the cornerstone of European security as a means of maintaining the U.S. military role in Europe, and it supported the U.S.-led military coalitions in the Persian Gulf War and in the former Yugoslavia. The United Kingdom has also supported NATO expansion. The Anglo-American alliance grew even stronger with Blair's persistent support of Washington's war on terror, which led to the invasion of Iraq in 2003.

Another building block of United Kingdom foreign policy has been the preservation of the Commonwealth. Since 1947 the United Kingdom has granted independence to some 50 nations. In 1997 the United Kingdom transferred control of Hong Kong back to China after negotiations ensured that the area would remain a semi-autonomous special region. As the 1982 war in the Falkland Islands against Argentina demonstrated, the United Kingdom remains willing to defend its dependent territories against conquest.

Although the Commonwealth has become a looser form of association, it remains the main vehicle by which the United Kingdom preserves its influence in former territories. The United Kingdom is the only nation besides the United States to station permanent military forces in the Persian Gulf (in its former colonies). The United Kingdom also provides substantial military assistance to other former colonies. Furthermore, the kingdom offers large amounts of foreign aid not only to many former

colonies but also to the lesser-developed nations of the world. There are several government agencies established for the sole purpose of providing economic, social, and scientific training and aid to lesser-developed nations.

A unique feature of the post-cold war era has been the slow integration of the United Kingdom into the European Union. Because of its pro-American policies, the nation was blocked by France from joining the organization in the 1960s. The United Kingdom eventually joined what was then the European Community in 1973. Since then, the United Kingdom has established itself as the main defender of national sovereignty within the organization. The country did not fully integrate into the European Community until 1992, has opted out of much EU social legislation, and refused participation in the European Monetary Union in 1999. The United Kingdom has, however, vigorously supported trade liberalization and the opening of markets and has championed reform of the Common Agricultural Policy. As prime minister, a major foreign policy goal of Tony Blair has been increased cooperation with the European Union and a greater leadership role for the United Kingdom within the organization. As such, he endorsed increased EU military cooperation and economic policies to bring the United Kingdom into the European Monetary Union. In 2005 the Blair government continued to indicate that certain economic criteria would have to be met before the nation would hold a referendum on the adoption of the euro.

DEFENSE

Constitutionally, the monarch is the head of the armed forces, and the services carry the word "Royal" in their titles. Political responsibility is vested in the prime minister and a chain of subordinate officials and agencies: the secretary of state for defense, the minister of state in the Ministry of Defense, three undersecretaries of state, the chief of the defense staff, and the three chiefs of staff. These officials together constitute the Defense Council. Day-to-day management of the army, navy, and air force is vested in the branches' respective boards in the Defense Council. The Chiefs of Staff Committee serves as the professional command agency.

The role of the U.K. military has declined dramatically since the liquidation of the empire, and a new round of downsizing occurred in the wake of the cold war; defense expenditures, personnel, and equipment have all been decreased. Besides the defense of Europe, to which the United Kingdom is committed through its membership in NATO, the only residual overseas defense obligations are those for Crown possessions, such as Gibraltar and the Falklands, and treaty commitments with former colonies in the Middle East and other areas, such as Belize and Cyprus.

In 2003 the United Kingdom expended 2.4 percent of its gross domestic product (GDP) on defense. The manpower of the military declined from 316,700 in 1988 to about 213,000 in 2003. There are some 113,900 troops in the Royal Army, 44,500 in the Royal Navy, and 52,500 in the Royal Air Force. The majority of cuts have been in the army, which lost 50 percent of its personnel in recent years and is now the smallest it has been since the 1700s. In 1998 the Labour government initiated the Strategic Defence Review (SDR), which outlined a major reorganization of the military, including further reductions in manpower and a greater focus on the acquisition of new equipment.

In spite of reductions, the United Kingdom still maintains one of the most powerful and technologically sophisticated militaries in the world, with advanced combat aircraft, missile systems, and naval units. Besides the United States, the United Kingdom has the world's most effective navy, the aircraft carrier arm of which provides the ability to deploy aircraft and reaction forces quickly. The Royal Navy also has nuclear submarines, which now form the basis for the kingdom's nuclear deterrence. The SDR changed the status of the nuclear forces, such that only one submarine armed with nuclear weapons (in 48 warheads) would be deployed at any given time. Three other submarines would be held in reserve, and the total number of nuclear warheads available would be less than 200. In 1998 the last air-dropped nuclear warheads were retired, ending the role of the Royal Air Force in nuclear deterrence.

From 2003, the United Kingdom has taken part in the invasion and occupation of Iraq, alongside its major ally, the United States.

ECONOMY

The United Kingdom is one of the world's most important economic hubs. It ranks among the top four economies in western Europe and is generally more free market than its counterparts, including France and Germany. Since the 1980s there has been a steady reduction of government involvement in the economy, and London has shed many government-owned industries and properties. While industry spurred economic growth in the 19th century, services have become a major component

of the U.K. economy, accounting for almost four-fifths of the workforce. (Industry now accounts for only about one-fifth of the labor force.) The service industry has met with notable success in banking, insurance, and general business services, and London remains one of the world's most important financial centers.

The major industries are machinery production, electronics, aircraft and ship building, chemicals, coal and petroleum, consumer goods, and agriculture. The North Sea oilfields have made the United Kingdom one of the few exporters of energy in western Europe. The kingdom's major trade partners include the United States, EU partners, and Japan. The main exports are manufactured goods, fuels, chemicals, food, beverages, and tobacco products, while the main imports are manufactured products, machinery, fuels, and foodstuffs. Prime Minister Tony Blair has adopted a wait-and-see attitude toward monetary integration with the European Union; as the economy is one of the strongest in Europe, critics of monetary union contend that the country should not fix what is not broken. Blair's support for the war in Iraq has continued to put pressure on defense spending.

ENVIRONMENT

The United Kingdom is party to almost all of the world's major environmental agreements. Nonetheless, it faces a host of ecological problems. There is significant air pollution as a result of sulfur dioxide emissions from coal-burning power plants. Many rivers in rural areas are heavily polluted by agricultural discharge, while industrial wastes have contaminated many waterways in urban areas, including the Thames River. The widespread disposal of sewage at sea or through pipelines has contaminated many coastal waters. Deforestation as a result of development continues. The number of threatened species has been lowered, but overfishing persists, and the

stocks of many species remain depleted. As of 2005 fox hunting was banned. On the positive side, the United Kingdom has managed to cut carbon dioxide emissions.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked the United Kingdom 12th out of 177 countries in terms of life expectancy, education, and standard of living. The average Briton's life expectancy in 2005 was 78.4 years, and literacy stood at 99 percent in 2000. The percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002 was the third highest in the world. Per capita GDP was \$29,600 in 2004.

The United Kingdom is an urban nation: As of 2000, almost 90 percent of the population lived in cities. Once a nation of small farmers and shopkeepers, the United Kingdom is now the service center of Europe, with only 1.5 percent of the population engaged in the highly centralized agriculture sector. Thus, the popular image of rural England, Wales, Scotland, and Northern Ireland is more fiction than fact. Britons visit the countryside rather than inhabit it. Despite trends toward privatization, basic social services, including health care, are provided through national plans, thus making life more secure for the employed. As of 2001 about one-third of residents in England and Wales lived in semidetached dwellings. Most of the U.K. population lives in houses; the rest occupy apartments, or flats. The availability of public transport, particularly in major cities, often makes car ownership optional.

HEALTH

The comprehensive National Health Service (NHS) provides health care free, or at reduced rates, to all residents of the United Kingdom. This care includes general medical, dental, optical, pharmaceutical, hospital, home, and preventive medical services. Most hospitals are NHS run. Public expenditures on health care are correspondingly high, equaling 6.4 percent of GDP in 2002, while private expenditures on health care equaled only 1.3 percent of GDP that year. As of 2004 there were 164 physicians per 100,000 people. The aging U.K. population has put stress on the NHS; there are often long waits for hospital rooms.

Primary causes of death include cardiovascular disease and cancer. The British diet, traditionally high in fat

and sugar, is partly to blame for health problems. Over half the population is overweight, and more than one-quarter of adults were smokers in 2000. The HIV/AIDS prevalence rate in 2001 was 0.2 percent. That year there were 34,000 people living with HIV/AIDS; fewer than 500 died from the disease in 2003. Access to proper sanitation and safe water supplies is available to 100 percent of the population. Immunization rates for one-year-old children in 2003 were not among the highest in Europe: 91 percent for DPT and polio and 80 percent for measles. The 2005 infant mortality rate was among the lowest in the world, at just over five deaths per 1,000 live births.

FOOD AND NUTRITION

Unlike that in other European countries, food in the United Kingdom does not rely heavily on spices and herbs. Traditional cooking is of the sturdy but bland meat-and-potatoes sort. Mutton, lamb, and roast beef are popular, as is fish, especially cod and halibut. Typical dishes include fish and chips, Cornish pasties, Yorkshire pudding (which is not a dessert), steak and kidney pie, and the traditional breakfast of bacon, eggs, smoked fish, fried bread, stewed tomatoes, and beans. Marmalade and tea accompany such breakfasts. Haggis, or sheep innards boiled in the stomach, is a popular Scottish fare. In Wales, leeks and onions are used creatively in many dishes. Welsh rarebit, a cheese sauce over toast, is a typical appetizer.

The expansion of the empire added numerous dishes to the British diet, primary among them being curries of various sorts and Chinese food. Cheddar cheese is an English specialty. Afternoon teatime includes pastries such as scones and strawberries with clotted cream. Bread pudding, rice pudding, and lemon curd are popular desserts. Beers and ales of many sorts are the most popular alcoholic beverages, along with gin.

The British diet is heavy in fats and sugar and has led to cardiovascular problems as well as obesity. Undernourishment is not a problem.

 Amount of Cereal Available per person per year kg: 106.4
 Amount of Fruits and Vegetables Available per person per year kg: 189.5

STATUS OF WOMEN

Measures introduced in the 1970s were designed to promote gender equality. Under the Sex Discrimination Act of 1975, discrimination on the grounds of sex is illegal in employment, training, education, housing, and services. The Equal Pay Act of 1970 gives women the right to pay equal to that of men doing the same or similar work; since 1984 women also get equal pay for work of equal value. Industrial courts or civil courts may adjudicate sexual discrimination suits and levy damages. The Equal Opportunities Commission, established in 1975, helps to enforce legislation, provides advice and assistance to victims of sexual discrimination, and reviews the working of legislation. In 1999 the Labour government enacted maternity-leave benefits and increased benefits for those with children. Women's interests at the cabinet level are overseen by a minister for women.

While women have made significant progress toward gender equality in the United Kingdom, a number of issues remain. Domestic violence continues to be problematic; a 1999 government report indicated that as many as one in four women were the victims of domestic abuse at some point in their lives. The government now provides shelters and offers free legal aid to battered women. The 1997 Protection from Harassment Act increased prison sentences for perpetrators of gender violence. Economic inequalities also continue. Women still earn only about 80 percent of the pay men receive in similar occupations.

 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 49.9

WORK

In 2004 the U.K. labor force numbered 29.8 million, of which the vast majority, almost 80 percent, were involved in the service sector. Just 1.5 percent work in agriculture

and fisheries, producing cereals, oilseed, potatoes, vegetables, cattle, sheep, poultry, and fish, while about one-fifth of the workforce was employed in industries. The unemployment rate in 2004 was under 5 percent.

Unions are relatively strong, and legal provisions are made for collective bargaining as well as striking. In 2004, 30 percent of the working population was unionized; in that respect, the public sector, with 60 percent union membership, was far stronger than the private sector, with only 19 percent of workers unionized. The minimum work age in industry is 16; 13 is the minimum work age in other occupations, while younger children must apply for work permits. The workweek is capped at 48 hours. In 2004 the minimum wage was between \$7.45 and \$8.82, depending on age. Though the minimum wage is not a livable wage, welfare benefits such as universal access to health care help to provide a reasonable standard of living. Safety and health regulations at work places are strictly regulated.

EDUCATION

The British public educational system is based around comprehensive schools that offer both academic and vocational programs. Compulsory education begins at age five and continues until age 16. Parents have the right of school choice, including home schooling. The first stage of school is known as primary education and includes students from age five (four in Northern Ireland) through 11 (12 in Scotland). About 92 percent of students receive secondary education at comprehensive schools; the remainder attend secondary grammar schools after selective testing. Schools that receive public grants do not charge tuition at the elementary or secondary level, but vocational secondary schools do. English is the language of instruction, but Welsh is permitted as a core subject in Welsh-speaking schools. Local school boards determine the length of the academic year, which typically runs from September to July, as divided into three terms of 13 weeks each. In 1988 the Education Reform Act established a system of regular performance testing and a national curriculum.

There also exists a strong tradition of private, or independent, schools. Referred to as "public schools" in the United Kingdom, many of these institutions, including

2500 United Kingdom

the well-known Eton and Harrow, have long and distinguished histories. The main purpose of most of the private schools is to specifically prepare students for a university education. All students who wish to attend institutions of higher education must pass a series of examinations that includes tests on English, math, foreign language, and science. Secondary education is generally geared toward preparation for these exams.

There are 47 universities in the United Kingdom. Some institutions, such as Oxford and Cambridge, have 700-year histories and are regarded as being among the world's elite academic centers. Approximately 80 percent of funds for higher education come from the central government, while local governments contribute the remaining 20 percent. Students also pay a small fraction of the total. Almost half of students in higher education are engaged in postgraduate study. One educational innovation in the United Kingdom is the Open University, which offers a variety of full- and part-time degrees through new mediums, including televised, radio, and Internet courses. There are 30 polytechnics in England, offering specialized degrees. Scotland has 16 central institutions that fulfill a similar role.

Net primary enrollment of eligible students in 2002 was virtually 100 percent; net secondary enrollment that year was 95 percent. The government's commitment to education is high; literacy stands at 99 percent, and in 2001 government expenditures on education equaled 5.3 percent of GDP.

SCIENCE AND TECHNOLOGY

The United Kingdom has a long history of scientific research and advance; from the steam engine to the discovery of DNA to the first cloning of a larger animal, the

nation has been at the international forefront of science and technology. The Royal Society and the British Association for the Advancement of Science, both in London, foster research in many scientific and technical areas. Research in high technology and biotechnology are carried out through government agencies and via private industry. A 1993 white paper from the government, "Realizing Our Potential," called for the creation of a technology-forecasting program to keep the country on the cutting edge of technological matters.

Numerous universities carry out research in topics from nuclear physics to medicine. Agricultural research is largely funded by the Ministry of Agriculture, Fisheries, and Food, which has research centers for studies in crop development and animal health. The Biotechnology and Biological Sciences Research Council carries out research in related areas as well. The departments of agriculture in Wales, Scotland, and Northern Ireland also deal with research projects specific to their locales. Between 1994 and 1997, 29 percent of students in tertiary schools were enrolled in science, math, or engineering programs. In 2002 public expenditures on research and development equaled a high 1.9 percent of GDP.

MEDIA

The United Kingdom has one of the most vigorous media systems in the world. The per capita newspaper readership is surpassed only by that of Japan among developed nations. Political and cultural expression is unfettered and lively. Unlike those of the nation's European counterparts, the press in the United Kingdom does not receive subsidies or tax or postal concessions.

While ownership of the British press is concentrated in the hands of a relatively small number of large publishing groups, there are some 200 independent regional newspaper publishers. There are over 100 daily newspapers and some 470 nondailies in the United Kingdom. Three British newspapers, the *Times*, *Guardian*, and *Daily Telegraph* are considered to be among the most informative and best in the world. In contrast, a number of sensational dailies focus on tabloid journalism, including the *Star* and the *Sun*. The United Kingdom is one of the foremost book-publishing centers in the world, with an output of over 50,000 titles per year. Two public bodies—the British Broadcasting Corporation (BBC) and the Independent Broadcasting Authority (IBA)—provide television and radio service throughout the kingdom.

The BBC also provides a world service. In addition, there are a number of independent television channels. In 1999 there were 78 broadcast stations and 869 repeaters. There were also 225 AM and 525 FM radio stations.

Reporters without Borders, a media watchdog group, ranked the United Kingdom 30th out of 167 nations in its 2004 index of press freedom. Although the BBC is publicly funded, its journalists typically have a free hand in reporting all news, even that unfavorable to the government. In 2004 the BBC was criticized in an inquiry into the suicide of a scientist involved in leaking information indicating that the government had embellished its case for war in Iraq. The subsequent Hutton inquiry exonerated the government and said that the most serious claims in the BBC report were unfounded. The corporation subsequently introduced new complaints procedures and guidelines for journalists.

Internet usage is high in the United Kingdom; in 2005, 52 percent of households were online.

CULTURE

The United Kingdom is host to a mosaic of cultures. The predominant ones are English, Welsh, Scottish, and Northern Irish, but there is also a plethora of cultural traditions from immigrants from former colonies. Thus Afro-Caribbean, Asian, and Muslim traditions are added to the cultural mix.

The folk music of England, Scotland, and Northern Ireland has had a renaissance, as beginning in the 1960s. Ballads and laments, as well as jigs and reels for dancing, entered the world of popular music, as revived by modern groups for an international audience. Singers such as Sandy Denny and groups like Silly Wizard have recorded and performed the traditional music of the isles. Guitars, mandolins, fiddles, and various handheld percussion instruments accompany voices or create the pulsing rhythms of dance music. The Scots' bagpipes and martial air are also cultural shibboleths. The Welsh are known for their singing. The National Eisteddfod of Wales, a song and poetry contest, can be traced back to Cardigan in 1176. Classical music has found many masters in the various parts of the United Kingdom, including composers such as Henry Purcell in the baroque period and

Edward Elgar, Ralph Vaughan Williams, and Benjamin Britten in the 20th century. Classical dance is also part of the cultural heritage in England. Dancers such as Margot Fonteyn helped to make Sadler's Wells a world-class dance theater. Throughout the second half of the 20th century the United Kingdom was a leader in youth culture, from the days of the Beatles and the Rolling Stones to the punk era of the Sex Pistols.

The nation has made an incomparable contribution to the world of literature, from the national epic, *Beowulf*, to the works of the Englishman William Shakespeare, the Scot Robert Burns, the Welshman Dylan Thomas, and the Northern Irishman Seamus Heaney. The foundations of the novel are credited to the work of Daniel Defoe, Samuel Richardson, and Henry Fielding in the 18th century. Other writers of note include Charlotte and Emily Brontë, Charles Dickens, Jane Austen, William Blake, W. H. Auden, D. H. Lawrence, and a host of others, many of whom were Nobel laureates. British philosophers, from Thomas Hobbes to the transplanted Ludwig Wittgenstein, have also made major international contributions.

In the world of visual arts, painters from William Turner to Francis Bacon have achieved international repute. Their work, and that of other international artists, can be seen in the nation's many museums, including the National Gallery, the National Portrait Gallery, the Tate Gallery, and the Victoria and Albert Museum. Among the many libraries and museums of interest in Scotland, Wales, and Northern Ireland are the Royal Museum, the Museum of Scotland, and the Writers' Museum, in Edinburgh; the Museum of Scottish Country Life, in Glasgow; the National Museum of Wales, in Cardiff; and the Ulster Museum, in Belfast.

The British cinema and stage have contributed a host of famous actors, including Ralph Richardson, Laurence Olivier, Alec Guinness, John Gielgud, and, more recently, Hugh Grant and Kenneth Branagh. Among female leads have been Vivien Leigh, Julie Christie, Judi Dench, Kate Winslet, and Helena Bonham Carter. Well-known directors include Carol Reed, Alfred Hitchcock, David Lean, and, more recently, Ken Loach and Mike Leigh. London's West End is the equal of New York's Broadway as a theater center.

FOLKLORE AND MYTHOLOGY

Legends of heroic warriors and knights, tales of fairies and little people, and magical forests and streams are all part of the folklore and mythology of the United Kingdom. The legend of Robin Hood and his righteous outlaws of Sherwood Forest provide a rich strain for English folktales. Perhaps the strongest element in English folklore is the Arthurian legend, revolving around King Arthur and the knights of the Round Table. Arthur's territory was the southwest of England and parts of Wales, so Arthurian legends also inform Welsh folklore, as do tales of fairies and dragons, the latter of which is the Welsh national symbol. Another character in Welsh legend is Prince Madog ab Owain, who is said to have discovered America in the 12th century.

In addition to their border ballads and tales saluting the victories and defeats of brave countrymen fighting English invaders, the Scots have Gaelic songs that tell legends of warrior heroes battling Norsemen, magic rowan trees, and monstrous old women living in the sea. The Scots also have numerous tales of fairies and other supernatural forces. Perhaps the most famous character in Scottish folklore is the Loch Ness monster, a creature reportedly seen by hundreds but with no verifiable proof of its existence. The Northern Irish share many of the legends and myths of the Republic of Ireland, their folktales going back to the time of the Celtic kings and the druid priests. There are tales of the defender of Ulster, Cuchulain, as well as of Cormac mac Airt, Ireland's first king. Further staples of folklore are the love story of Diarmid and Grania and the adventures of Fionn mac Cumhail (roughly pronounced "Finn mac Cool").

ENTERTAINMENT AND RECREATION

Chatting over a "jar" at the local pub or tavern is a favorite pastime in much of the United Kingdom. Television and movies provide other immensely popular escape outlets. Soap operas from England, such as *Coronation Street* and *EastEnders*, are appreciated throughout the country. Walking and hiking in the countryside are common forms of recreation. There are well-developed long-distance walking paths through each region.

The English, in particular, are avid anglers and enjoy fishing the country's many streams and rivers. Fishing is also a favored pastime in Scotland and Northern Ireland. Games such as darts and snooker are popular, as is gardening. More rural Wales relies upon community activities for recreation and entertainment; choral societies are popular, as are women's circles and young farmers' associations. Youth clubs often provide recreational opportunities. Rock climbing is well enjoyed in Wales, as are hunting and pony trekking.

ETIQUETTE

On the whole, Britons tend to be reserved and formal, while the Welsh have a reputation for being warmer than other groups in the United Kingdom. A handshake is typically used for greeting, along with "How do you do?" The handshake is used less in Scotland than in other regions of the United Kingdom. The use of first names is not as common as in North America, although British mores are changing in this regard, as a matter of business reality. Dining is performed continental style, with both fork and knife used simultaneously. Some physical gestures can be confusing. The "V" peace sign should be made palm out, if at all; otherwise it is an extremely rude gesture. Pointing with the finger is considered impolite; more typically one nods the head in a certain direction. Pub etiquette demands that one purchase a round of drinks for those with whom he or she is conversing.

FAMILY LIFE

The traditional family unit in the United Kingdom is the nuclear family. The size of families has been shrinking. The average household has only 2.4 members; the fertility rate in 2004 was 1.66 children per woman. In 2001 the number of divorces rose to 157,000, which was 2,000 more than in the previous year but 23,000 fewer than the peak, in 1993. In part this reflects the decrease in the annual number of marriages, as more couples choose simply to live together without the benefits of legal marriage. The crude divorce rate declined from 3.1 divorces per 1,000 population in 1993 to 2.6 in 2000. Throughout the United Kingdom the traditional male-dominated household is becoming less common; families are transforming into more cooperative arrangements, as more and more women enter not merely the workforce but also professions.

Some family differences can be seen among various segments of the United Kingdom. The Welsh are very family oriented, identifying themselves by that unit rather than by class, as do so many in England. More agrarian, the Welsh still have many of the traditions that reflect such a life. In farming communities, adult sons tend to stay at the family farm until marriage. A younger son generally inherits the farm.

PERSONAL APPEARANCE

Modern Western clothing is worn in the United Kingdom. For many years London was considered one of the fashion capitals of the West. The traditional garment of Scotland is the kilt. Not long ago men could still be seen on the streets of Edinburgh sporting their clan tartan. However, in the 21st century the kilt and its female coun-

terpart, the tartan skirt and white blouse with black vest or bodice, are generally reserved for special occasions. There are over 300 different tartan designs, each signifying a separate clan. Similarly, the tall black hats worn along with checked aprons over long dresses by Welsh women, as well as the breeches and striped vests worn over white shirts by men, are reserved solely for festivals. Traditional articles of clothing in Northern Ireland, such as tweed and hand-knit sweaters, have been incorporated into contemporary clothing as well.

SPORTS

Soccer is one of the most popular sports throughout the United Kingdom. Major teams compete not only regionally but also internationally. Some of the most famous British football clubs are Manchester United and London's Arsenal. Cricket, golf, rugby, tennis, and track and field are also favorites. The annual tennis tournament at Wimbledon draws international attention.

Regionally, golf is Scotland's second-most popular sport; the country that invented the game has over 400 courses. Rugby is another popular Scottish sport, as are tennis, lawn bowling, skiing, and curling. Rugby and hurling, a mix of field hockey and rugby, are played in parts of Northern Ireland, where horse racing is also popular. In Wales, rugby is the most popular sport, while soccer and pony racing are also favored.

CHRONOLOGY

- 1939** Alone among the major Western European powers, the British hold out against the Axis powers during World War II, through 1945, and are one of the three main powers in the Allied coalition, which defeats the Axis.
- 1945** The Labour Party wins general election, defeating the wartime government of Winston Churchill.
- 1947** Independence is granted to India and Pakistan.
- 1948** Independence is granted to Burma (now Myanmar) and Ceylon (now Sri Lanka).
- 1952** George VI dies and is succeeded by his daughter Elizabeth, as Elizabeth II.
- 1956** Britain and France undertake a successful invasion of the Suez Canal zone but are forced to withdraw as a result of U.S. pressure; Sudan is granted independence.
- 1960** Cyprus and Nigeria are granted independence.
- 1972** As unrest escalates into violence in Northern Ireland, direct rule is imposed by London.
- 1973** In a historic move, the United Kingdom joins the European Community; the Bahamas gain independence.
- 1975** Offshore oil, discovered in the North Sea in 1970, is piped ashore, signaling full-scale production.
- 1979** Conservatives return to power with a substantial majority under Margaret Thatcher, western Europe's first female prime minister.
- 1982** Argentine military forces invade the Falkland Islands; a British expeditionary force retakes the islands.
- 1985** The United Kingdom and the Republic of Ireland sign the Anglo-Irish Agreement, providing for mutual consultations on the Northern Ireland question.
- 1987** Thatcher wins a third term and the following year becomes the longest serving prime minister since Lord Liverpool in the 19th century.
- 1990** Domestic discontent forces a change in the leadership of the Conservative Party; John Major becomes prime minister; United Kingdom participates in U.S.-led coalition against Iraq in the Persian Gulf War.
- 1994** The "Chunnel" inaugurates direct ground transportation between the United Kingdom and France via a tunnel under the English Channel.
- 1997** Labour wins general election, and Tony Blair becomes prime minister; Hong Kong reverts to Chinese control.
- 1998** Scotland and Wales are granted limited self-government; Good Friday Peace Accords initiate truce in Northern Ireland and call for establishment of regional assembly.
- 1999** House of Lords is reformed; United Kingdom participates in NATO-led military strike against Serbia during Kosovo crisis.
- 2001** Labour wins general elections in a landslide victory, and Blair wins a second term as prime minister; the United Kingdom becomes one of the strongest supporters of the U.S.-led fight against international terrorism and that nation's military campaign in Afghanistan.
- 2002** Queen Elizabeth celebrates her golden jubilee amid claims that she withheld vital information at the trial of a former butler of Princess Diana, her daughter-in-law who died in 1997; Prime Minister Blair receives criticism for not improving social services as he had promised when taking office in 1997.
- 2003** Amid huge countrywide protests, Blair champions the U.S.-led invasion of Iraq in March; British troops play an active role in the invasion and subsequent occupation; in August, a scandal emerges concerning the death of a government scientist at the center of a disagreement between the BBC and the government over claims that the government embellished the case for the Iraq war.

2504 United Kingdom

- 2004** Lord Hutton, in charge of a commission examining the death of the government scientist, exonerates the government and criticizes the BBC; the Iraq Survey Group reports that Iraq had no weapons of mass destruction in the months before the U.S.-led invasion; Blair stands by his case for war.
- 2005** A controversial antiterrorism measure is passed; in July suicide bombers strike several trains and buses in London's mass transit system, killing more than 50 people and wounding 700.

OFFICIAL NAME

United States of America

ABBREVIATION

US

CAPITAL

Washington, D.C.

HEAD OF STATE & HEAD OF GOVERNMENT

President George W. Bush (from 2001)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

295,734,134 (2005)

AREA

9,631,418 sq km (3,718,690 sq mi)

MAJOR ETHNIC GROUPS

Anglo-Saxon, Hispanic, African American, Asian, German, Semitic, Italian, Slavic, Greek, Celtic, Amerindian

LANGUAGE

English

RELIGION

Christian

UNIT OF CURRENCY

U.S. dollar

NATIONAL FLAG

Thirteen alternate stripes, seven red and six white, with 50 five-pointed white stars placed in nine horizontal rows, alternately of six and five stars, against a blue field in the upper left canton

NATIONAL EMBLEM

The Great Seal has two sides: the face features an eagle with spread wings, legs, and tail feathers, and the other side bears a

pyramid with an eye at the summit. On the breast of the eagle is a shield made up of seven white and six red vertical stripes with a blue horizontal upper portion. In its claws the eagle grasps a green laurel branch and a sheaf of silver arrows. Its beak holds a golden scroll inscribed in black with the Latin motto *E pluribus unum* (One out of many). Above the eagle is a circular crest with an outer rim of 13 *pieces argent*, or silver buttons, and an inner gold border representing the sun emerging from clouds. On the circular badge that forms the heart of the design are 13 silver stars. On the emblem's reverse is a pyramid of 13 courses, or ascending blocks, shown in stone. On the top of this structure appears in a triangle the all-seeing eye of Providence. The upper motto, *Annuit coeptis*, is translated as "He [God] has favored [our] undertakings," while the lower motto, *Novus ordo seclorum*, is translated as "A new order of ages." At the base the year 1776 is marked in Roman numerals.

NATIONAL ANTHEM

"The Star-Spangled Banner"

NATIONAL HOLIDAYS

January 1 (New Year's Day), third Monday in January (Martin Luther King Jr. Day), third Monday in February (Presidents' Day), last Monday in May (Memorial Day), July 4 (Independence Day), first Monday in September (Labor Day), second Monday in October (Columbus Day), fourth Thursday in November (Thanksgiving Day), December 25 (Christmas)

DATE OF INDEPENDENCE

July 4, 1776

DATE OF CONSTITUTION

March 4, 1789

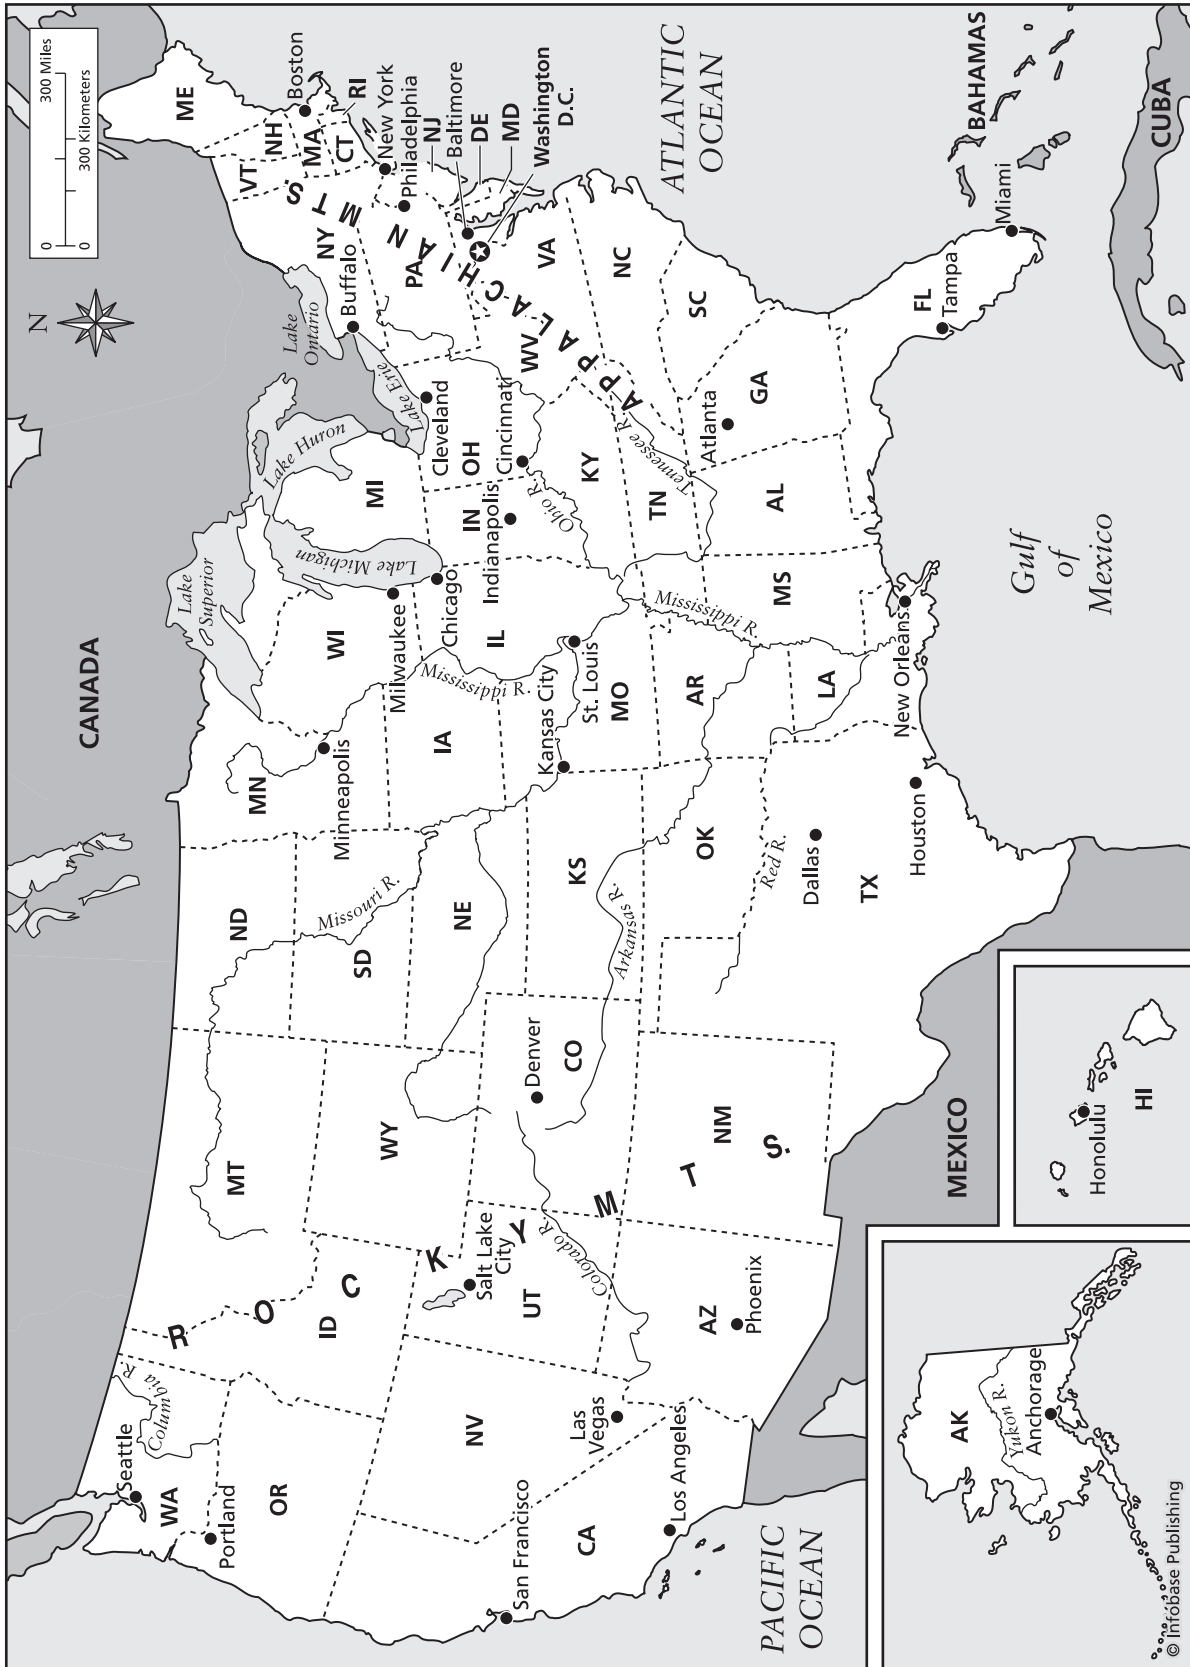

GEOGRAPHICAL FEATURES

Located on the continent of North America, the United States is the third-largest country in the world, with a total area of 3,718,690 sq mi (9,631,418 sq km). The United

States comprises three physically separate territories: the coterminous United States, comprising 48 states; Alaska; and Hawaii.

The capital is Washington, D.C. (District of Columbia), on the eastern bank of the Potomac River. The

United States of America

United States has nine cities with over one million inhabitants: New York, Los Angeles, Chicago, Houston, Philadelphia, Phoenix, San Diego, San Antonio, and Dallas.

The 11 topographical regions of the United States are largely determined by the mountain ranges that traverse the country from north to south. Almost half of the country consists of plains, including the vast central plain, the broad valleys of rivers such as the Sacramento and San Joaquin, and the Wyoming basin. About one-quarter of the country is made up of plateaus, including the Piedmont, Ozark, Appalachian, Columbia, and Colorado plateaus and the interior low plateaus. Mountains make up another quarter of the nation, including the major ranges of the Appalachian Mountains in the east and the Rocky Mountains in the west.

The Coastal Plain region extends along the Atlantic seaboard and the Gulf of Mexico coast, constituting about 10 percent of the nation's land area. The Coastal Plain is noted for its low elevation—more than half the plain is below 500 ft (152 m)—and includes extensive marshy tracts as well as numerous sandy beaches. The Black Belt, named for its characteristic soil, lies south of the eastern Gulf Coastal Plain and is one of most fertile areas of the region.

The Appalachian Mountain region stretches north to south along much of the eastern United States and comprises an area equal to that of the Coastal Plain. The Appalachian Mountains include the Piedmont, Blue Ridge, Valley and Ridge, and Appalachian plateaus; the Adirondack and New England provinces; and the St. Lawrence Lowland. Compared with the Rocky Mountains, in the west, the Appalachians are lower and more rounded. The Piedmont stretches from southernmost New York to Alabama. Blue Ridge province extends from Georgia to Pennsylvania, in places a single ridge but elsewhere a complex of closely spaced ridges. Valley and Ridge province extends the entire length of the Appalachian Mountains.

The Appalachian Plateau forms the western boundary of the Appalachian Mountains, reaching 3,000 ft (914 m) at the Allegheny Front and along the Hudson River Valley. The Adirondack Mountains, in northern New York State, have an overall domelike structure more than 100 mi (161 km) in diameter. New England is considerably more elevated, particularly the Green Mountains, in Vermont; the Hoosac Mountains, in Massachusetts; and the White Mountains, in New Hampshire and Maine. Principal lowlands and basins include Narragansett, Boston, Bangor Bowl, and Aroostook Plain. One characteristic feature of New England is the rocky coast.

The great central plain between the Appalachian Plateau and the Rocky Mountains includes the core Central Lowland, the Interior Low Plateaus, the Ozark Plateau, Ouachita province to the south, and the Great Plains to the west. The Central Lowland covers about 15 percent of the United States in 16 states. In the north are the

Great Lakes, in the south is the Till Plain, and farther to the northwest is the Small Lakes area; the effect of glaciation in this area is seen in the “10,000 lakes” of Minnesota. The Interior Low Plateaus include Lexington Plain and Nashville Basin and parallel the Appalachian Mountains, extending 600 mi (965 km) from Alabama to Ohio.

The Ouachita Mountains, in the central South, and the Ozark Plateau, in the central United States, have average elevations lower than that of the Appalachians. Surrounding these two areas are the Great Plains, which cover 12 percent of the country, including the semiarid part of the Interior Plains. At the northern part of the Great Plains is the Missouri Plateau, with numerous dome mountains rising up to 2,000 ft (610 m), of which the highest are the Black Hills. South of the Missouri Plateau is the High Plains section. To the west, the High Plains are separated from the Rocky Mountains by a basin known as the Colorado Piedmont. To the south is the Raton section, with high mesas, some as high as 7,000 ft (2,133 m). Parts of the High Plains are sandy, with extensive dunes.

The Rocky Mountains in their entirety are the backbone of the Western Hemisphere, stretching from Alaska to Patagonia. Within the United States, they constitute the Continental Divide, separating the Interior Plains from the Intermontane Plateaus and the Pacific Mountain systems. The Rocky Mountains contain three areas: Northern, Middle, and Southern. Together with the Wyoming Basin, they cover about 10 percent of the country.

The Rocky Mountains are characterized by high peaks, many over 14,000 ft (4,267 m); rugged relief; extensive forests; and spectacular scenery. The Middle Rockies include some of the most impressive mountains in the western United States. The Wyoming Basin is an elevated depression separating the Middle and Southern Rockies and consists of a series of basins, such as the Washakie Basin and the basins along the North Platte, Green, and Wind rivers. The valleys of the streams that flow eastward from the Rocky Mountains to the Missouri and Mississippi rivers are broad, steep sided, and shallow.

The Colorado Plateau, between the Rocky Mountains and the Basin and Range province, is one of the most colorful parts of the United States, with spectacular geological features. It is characterized by arid areas of bare rock, sparse vegetation, and brightly colored desert scenery. The general plateau surface is higher than 5,000 ft (1,524 m), and some peaks reach 11,000 ft (3,353 m). The high southwestern part of the plateau is referred to as the Grand Canyon section. The southern rim of the plateau is in New Mexico and western Arizona. At the western edge of the Colorado Plateau is the High Plateaus section.

Basin and Range province covers desert basins and ranges between the Colorado Plateau and the Columbia Plateau. The basins range in elevation from below sea level, as at Death Valley and the Salton Sea, to about

2508 United States

5,000 ft (1,524 m). The area is characterized by colorful vegetation, a warm climate, and large numbers of lakes. The area includes the Great Basin, centered in Nevada; the Sonoran Desert, including the Mojave Desert, in southeastern California, and deserts in southwestern Arizona; and the Salton Trough, a depression occupied by the Gulf of California. Extending northwestward into California from this depression are three major faults: the San Andreas, San Jacinto, and Elsinore. The Sacramento Mountains form the eastern border of the Basin and Range province and adjoin the Great Plains.

The Columbia Plateau, in the northwestern part of the United States, is characterized by a semiarid climate and dry canyons. This plateau region is dominated by the Columbia and Snake rivers and their plains. The lowest part is Pasco Basin, in which the Columbia and Snake rivers join.

The Pacific Mountain system comprises some 200,000 sq mi (518,000 sq km) along the coast, extending east to the deserts in Basin and Range province and the Columbia Plateau. The Pacific Mountains are among the highest in the United States and include the Sierra Nevada, Klamath Mountains, Cascade Range, Oregon Coast Range, and Olympic Mountains.

Alaska is the largest state, with a land area about one-fifth of the other 49 states combined. Alaska is characterized by stark relief contrasts, from Mount McKinley, at 20,316 ft (6,194 m) the highest point in North America, to the Aleutian Trench, at 25,000 ft (7,600 m) below sea level the lowest point in North America.

Hawaii, in the mid-Pacific, consists of five principal islands and four smaller ones. The island of Hawaii, the most easterly and largest, has peaks of more than 13,000 ft (4,000 m). The islands are hilly and the coastlines mostly rocky and rough.

CLIMATE AND WEATHER

The United States has a series of climatic regions because of its vast size, each region with its own climatic determinants. The different regions illustrate the influence of various factors that control climate. Alaska illustrates the influence of latitude. St. Louis and Fort Yukon illustrate the effects of a continental climate, in which the variation in annual temperature is great. Differences between the Atlantic and Pacific coasts illustrate the effects of wind and ocean currents. Other major climatic influences are those of air masses: The continental polar air masses bring cold weather; the North Pacific delivers moist, cold air; and the South Pacific and Gulf of Mexico deliver warm, moist air.

Annual precipitation varies greatly from region to region. The Olympic Mountains, near Seattle, receive 140 in (3,556 mm) annually. At the other extreme, Death Valley, in California, receives 1.6 in (41 mm) annually. Similarly, temperatures vary greatly, ranging from a high of 134°F (57°C) in Death Valley to a low of -78°F (-61°C) in the Yukon Valley, in Alaska.

The eastern seaboard of the United States has a continental climate. With the exception of Florida, winters are cold, and summers are hot. Average mean temperatures vary considerably from north to south, as follows: Boston, 52°F (11°C); New York City, 55°F (13°C); Charlotte, N.C., 60°F (16°C); and Miami, 76°F (24°C). Along most of the Atlantic Coast annual precipitation is between 40 and 50 in (1,020 and 1,270 mm), increasing to 60 in (1,520 mm) in southern Louisiana and Florida and decreasing to 20 in (510 mm) along the Gulf Coastal Plain. Average annual snowfall along the eastern seaboard is highest on Long Island, New York, at 30 in (760 mm).

The climate of the central United States is continental, but temperature variations are extreme. Winters are cold, with frequent blizzards; summers are hot and subject to tornadoes. The climate is semiarid to the west and humid to the east. Average annual precipitation in the Great Plains is about 15 in (380 mm), increasing to 40 in (1,020 mm) in Ohio and 50 in (1,270 mm) in Tennessee. Most of the rainfall occurs during the growing season, which explains the agricultural productivity of the region.

The higher elevations of the Southern Rockies have an alpine climate. Average annual snowfall in the San Juan Mountains exceeds 240 in (6,100 mm). Along the eastern part of the Rockies, winter may suddenly turn mild because of westerly winds called chinooks. The Northern Rockies have a mild climate, with cooler summer temperatures and warmer winter temperatures than the Great Plains.

Much of the Colorado Plateau is arid, and summers are hot, winters cold. The Basin and Range province has a similar climate, with average annual precipitation in three-quarters of the area below 10 in (250 mm). The Columbia Plateau is semiarid and cool, with an average annual temperature of 50°F (10°C). The Pacific Coast experiences most of its rainfall during the fall, winter, and spring months; summers are dry. Westerly winds moderate temperatures in both summer and winter. Los Angeles, to the south, has an average annual temperature of 56°F (13°C) in January and 69°F (21°C) in July, while Seattle, to the north, averages 39°F (4°C) in January and 65°F (18°C) in July.

Alaska's climate near the coast is surprisingly mild, with average winter temperatures of about 32°F (0°C) and average summer temperatures of 50°F (10°C). The average annual precipitation is heavy, generally averaging 80 in (2,030 mm) or more. Inland, the climate becomes increasingly arctic.

Hawaii has a remarkably mild and stable climate. The mean January temperature in Honolulu is 73°F (23°C), and the July mean is 80°F (27°C). Rainfall is generally moderate, averaging 28 in (710 mm) per year.

FLORA AND FAUNA

The vast spaces of the United States allow for numerous vegetative zones. Over 7,000 species of flora have been recorded in the country. Forests predominate along the Pacific Coast, especially in the Northwest, where evergreens such as Douglas fir, redwoods, cedar, and pine, as well as deciduous trees such as alder and birch, grow densely. Eastern forests feature pine, spruce, beech, birch, oak, and maple, while oak, hickory, ash, maple, and walnut are found in the central hardwood forests, whose remnants are found in regions between Texas and Minnesota. Southern forests, along the Gulf coast, feature gum, sycamore, birch, hickory, and pine. Palm trees are found in California and Florida. Forests as such do not exist in the southwest, but large plants there include the giant cactus, or saguaro, and the Joshua tree. Among smaller trees and shrubs throughout the country are dogwood and hawthorn; numerous wildflowers grow across the United States, including the dandelion, forget-me-not, columbine, gentian, and aster. Grasslands cover much of the plains and interior plateaus, where rainfall is not significant enough to support forests. This vegetative zone stretches from the plains states into the eastern parts of Washington, Oregon, and California (though broken by the Rocky Mountains), and includes the cultivated grasslands of the prairies as well as the drier and lower grasslands of the southwest and southeast. True desert regions in the southwest and west have sagebrush, creosote, and saltbrush. Alpine tundra is found in parts of the country, especially in Alaska, while alpine vegetation can be found in the Rocky Mountains. In Hawaii, bamboo and ferns predominate, along with tropical flowers and nonnative sugarcane and pineapple.

Animal life is equally varied, though not as much so as before the arrival of the Europeans. Overhunting has eradicated many species, including the buffalo; settlement

patterns have disrupted what animal habitats remain; and the heavy use of pesticides has put many of the larger animals at the top of the food chain at risk. Still, there are over 400 mammal species present in the United States. Among the large mammals are deer, elk, moose, antelope, bighorn sheep, black bear, grizzly bear, and brown bear. Fur-bearing animals include mink, fox, raccoon, beaver, muskrat, opossum, woodchuck, hare, squirrel, and skunk. Bird life is plentiful, from migratory and game birds such as geese, pheasants, and ducks to seabirds such as gulls, terns, cormorants, and pelicans. Smaller birds include robins, sparrows, crows, meadowlarks, blue jays, Stellar's jays, robins, woodpeckers, hummingbirds, orioles, cardinals, and owls. The bald eagle is the national animal, and other larger birds such as buzzards are also found. Crocodiles inhabit the swamps of Florida. The rattlesnake is the most common poisonous snake, while the garter snake is the most common nonpoisonous reptile. Numerous species of lizards, including the Gila monster, are found. Freshwater fish include trout, perch, pike, catfish, and bass, while ocean fish include sea bass, snapper, cod, and flounder. Common shellfish include clams, mussels, oysters, crabs, and lobsters. Many animals, including the bald eagle, have become endangered species because of the incursion of man into their habitats.

ETHNIC COMPOSITION

When the United States was founded it was a relatively homogeneous nation. Aside from the immigrant English, African Americans, Amerindians, and sprinklings of other, non-English nationalities were part of the original

population. In modern times the population is one of the most ethnically diverse in the world and includes people from nearly every country.

In 2000 the largest group in the United States, whites, composed 69.1 percent of the population. Blacks made up 12.3 percent of the population, Hispanics 13.4 percent, Asians 3.6 percent, Amerindians 0.9 percent, and others the remainder.

Hispanics, who may be of any race, are the fastest-growing minority in the United States. In 1990 there were 22 million Hispanics in the country; by 1997 that number had increased to 29 million, and in 2003 the Hispanic population was estimated at fully 40 million.

LANGUAGES

The United States has no official language, but the national language is English, which is spoken by the great majority of people. English is the language of instruction in public schools, though Spanish is used as a second language in schools with large Hispanic enrollments. Similarly, while English is the language spoken in most homes, Spanish is spoken by 26.7 million U.S. residents.

In the 1980s and 1990s some argued that the English language was an important force in promoting national unity and advocated its adoption as the country's official language. A number of states passed laws according this status to English and limiting bilingual instruction in public schools.

RELIGIONS

According to a 2001 survey, approximately four-fifths of U.S. citizens are professed members of organized religious groups. Christians constituted the largest group, accounting for 76.7 percent of the total. Among Christians, Protestants were the most numerous, at 45.1 percent of the total; Roman Catholics were the second-largest denomination, with 24.5 percent; and other Christian denominations made up 7.1 percent. In order of size, the largest Protestant groups were Baptists, Methodists, Lutherans, and Presbyterians.

People of the Jewish faith constituted 1.4 percent of the population, Muslims 0.5 percent, and other religious faiths 1.8 percent. A total of 14.2 percent indicated they had no religion, while 5.4 percent refused to make any religious identification.

Muslim	1,479,000
Other	5,323,000
None	41,994,000
Unstated	15,970,000

HISTORICAL BACKGROUND

Before 1492 the area that is now the United States was occupied by hundreds of Amerindian tribes. While no documentary evidence of their political or social organization exists, Amerindian society is understood to have been quite complex, perhaps most notably within the Iroquois Confederacy, whose democratic government has been credited as a substantial influence on the U.S. Constitution.

The United States began its existence as a nation in 1783 after gaining independence from Great Britain in the Revolutionary War. The first constitution uniting the original 13 states was the Articles of Confederation, which established a weak central government with no powers to raise taxes or regulate commerce. The Articles proved ineffectual and were replaced in 1787 by the present Constitution, which created a strong central government separated into three branches: executive, legislative, and judicial. To balance the diminution of state powers, a Bill of Rights was added to the Constitution as its first 10 amendments in 1789. That same year George Washington became the first president of the United States.

The early years of the Republic were politically dominated by Washington, Thomas Jefferson, and James Madison. The domestic scene witnessed the establishment of the first national bank on Alexander Hamilton's initiative; the Whiskey Rebellion, which unsuccessfully challenged the new federal structure; and the conflict between Washington's Federalist Party and Jefferson's Democratic-Republican Party. The latter, led by Jefferson, was victorious in the presidential election of 1800. In 1803 President Jefferson negotiated the purchase from France of the Louisiana Territory, a vast tract extending from the Mississippi River to the Rocky Mountains.

The work of mapping and exploring this vast area was undertaken by Meriwether Lewis and William Clark. Madison's second term witnessed the outbreak of the War of 1812, with Great Britain, over the seizure of U.S. ships and the impressment of American sailors. The war ended in a standoff and was concluded by the Treaty of Ghent.

For the next few decades the United States was occupied primarily with domestic problems and westward expansion. The issue of slavery came to the forefront of national life beginning with the Missouri Compromise of 1820, which banned slavery in territories north of latitude 36°30'. In 1823 President James Monroe set forth the Monroe Doctrine, declaring the Western Hemisphere closed to further colonization by European nations.

The period from the end of Monroe's presidency to the Civil War was one of economic growth accelerated

by the onset of the Industrial Revolution and technological advances. The economies of the South and the North began to diverge, the former remaining solidly agrarian, based on cotton, and the latter becoming rapidly industrialized. There was parallel growth in transportation, as led by the completion of railroads and canals linking the Midwest to the East. With the rise of an industrial workforce, the first labor unions were founded. Politically, the franchise was initially expanded to include all free white males. By the time of Andrew Jackson's election as president in 1828, the United States comprised 24 states, with a population of over 13 million.

In the 1840s the relentless westward expansion of the nation was achieved at the expense of Mexico. After American settlers in Texas revolted against Mexican rule and were later admitted to the Union, in 1845, U.S.-Mexican relations steadily worsened. In 1846 President James Polk declared war on Mexico and quickly achieved victory. Through the Treaty of Guadalupe Hidalgo, Mexico was forced to cede California, Nevada, Utah, and parts of present-day Arizona, New Mexico, Colorado, and Wyoming to the United States. In 1853 the United States acquired more territory from Mexico through the Gadsden Purchase, adding the balance of present-day southern Arizona and southern New Mexico. A dispute with Britain over the Oregon region was settled in 1846, establishing the 49th parallel as the boundary with Canada. The United States thus became a Pacific as well as an Atlantic power.

Territorial expansion worsened internal domestic divisions within the United States over the issue of slavery. The admission of California, where slavery was illegal, and the Kansas-Nebraska Act of 1854, which repealed the Missouri Compromise, split the nation on North-South lines. With the election of Abraham Lincoln in 1860 on the Republican ticket, the die was cast for many southerners; seven southern states withdrew from the Union and formed a separate government, the Confederate States of America, led by Jefferson Davis. When the Confederates opened fire on Fort Sumter in Charleston, South Carolina, on April 12, 1861, the Civil War began. Soon thereafter four more states joined the Confederacy.

The Civil War was a costly struggle that lasted four long years and resulted in 780,000 casualties. The immediate consequence of the war was the emancipation of those African Americans still enslaved. Their freedom was initially declared through Lincoln's 1863 Emancipation Proclamation and completed after the war through amendments to the Constitution.

President Lincoln was assassinated six days after the Civil War ended. His successors, Presidents Andrew Johnson and Ulysses S. Grant, presided over the Reconstruction era, from 1865 to 1877, but Congress wielded the real power in these years. Reconstruction failed to consolidate the gains of the Civil War for African Americans, however, and its end saw the gradual restoration of power to white southerners. The postwar decades also witnessed

the long, slow recovery of the southern states from the economic devastation of the Civil War. The South did not share in the extraordinary industrial expansion of the North in the last quarter of the 19th century, when great manufacturing plants were built, transcontinental railroads were laid, and enterprising Americans settled most of the West. Millions of emigrants also arrived from Europe, nearly all settling in the North or Midwest, increasing the nation's population to 76 million by 1900.

The half century following the Civil War marked a new phase of territorial expansion. In 1867 the United States purchased Alaska from Russia for \$7.2 million. In 1898 Hawaii was annexed after U.S. planters had helped establish a republic there. Victory over Spain in the 1898 Spanish-American War concretized the transformation of the United States into an imperialist nation, despite its anticolonial past; at the end of the war the Philippines, Puerto Rico, and Guam became U.S. territorial possessions. During President Theodore Roosevelt's first term the United States leased a canal zone in Central America, and in 1914, during President Woodrow Wilson's first term, the nation completed the Panama Canal, linking the Atlantic and Pacific oceans.

In 1917 the United States entered World War I on the side of the Allies, and more than two million American troops helped turn the war against Germany. President Woodrow Wilson played a central role in drafting the 1919 Treaty of Versailles, ending the war, although opposition in the Senate prevented the United States from ratifying the treaty. During the 1920s the nation followed a policy of isolationism and enjoyed prosperity under several Republican presidents.

The Roaring Twenties ended in the Great Depression, the worst disaster ever experienced by the U.S. economy. By 1933, 12 million Americans were out of work, and the economy was crippled. The election of President Franklin D. Roosevelt brought the New Deal to fruition in 1933. The federal government began assuming an activist role in economic affairs, launching relief measures and work projects and accepting deficit spending as a means of ensuring public welfare. The Social Security system, incorporating pensions and disability payments for workers as well as the right of labor to form unions, was also part of the New Deal legacy.

World War II brought an end to the Depression when Japan attacked the Pearl Harbor naval base in Honolulu, Hawaii, on December 7, 1941. U.S. forces fought World War II on three continents—Asia, Africa, and Europe—for the next four years, until Germany surrendered in May 1945. The war with Japan ended in August 1945 after the United States dropped the world's first atomic bombs on Hiroshima and Nagasaki. President Roosevelt, who had been elected to a fourth term in 1944, died in April 1945 and was succeeded by Harry Truman.

In the postwar years President Truman took strong steps to oppose the Soviet Union's expansion into East-

ern Europe and the Soviet policy of attempting to spread Communism around the globe. The 1947 Marshall Plan marked the start of the Truman Doctrine, which espoused the containment of Communism, such as by providing \$13 billion in economic aid to European nations to help them recover from the ravages of war. To further offset threats from the Soviet Union and its satellite nations in Eastern Europe, the United States and 11 other countries formed the North Atlantic Treaty Organisation (NATO) in 1949. The two superpowers and their allies waged the cold war for several decades, until the collapse of the Soviet Union in 1991.

The United States economy expanded in the 1950s, as prosperity returned and families built new homes in the growing suburbs. Dwight D. Eisenhower, the leader of the Allied forces in Europe in World War II, was elected president in 1952 and reelected in 1956. President John F. Kennedy took office in 1961 and narrowly avoided a nuclear war with the Soviet Union over its missile bases in Cuba.

During the post-World War II decades the lives of many groups in the United States changed in significant ways. African Americans waged a long and ultimately successful struggle to achieve equal rights as citizens; the civil rights movement of the 1950s and 1960s resulted in the enactment of legislation outlawing segregation in public places and guaranteeing blacks suffrage and equal opportunities in employment. Hispanics and other minorities also waged successful campaigns for better housing, greater access to education, and improved working conditions. Women, too, began to question their traditional role as homemakers and to seek opportunities outside the home. They soon gained new job opportunities and helped end discrimination in hiring and promotion practices in the workplace.

In 1963, after Kennedy was assassinated, Lyndon B. Johnson became president. Johnson launched a “war on poverty” to provide education and health care for all Americans. His successful domestic agenda was overshadowed, however, by the Vietnam War. In this conflict the United States backed South Vietnam against the Communist North Vietnam. The number of American troops involved in the fighting escalated year after year, reaching 500,000 by 1967. Opposition to the war within the United States also increased each year; protests and riots caused President Johnson to decide not to run for reelection. In 1968 Richard M. Nixon was elected president, and he was reelected in 1972 in the largest landslide electoral victory. Nixon promised to end the war, yet the conflict continued and expanded into neighboring Asian countries. In 1973 the United States finally pulled its troops out of Vietnam. In 1974 President Nixon was forced to leave office because of the Watergate scandal, an illegal burglary of a Democratic Party office in Washington, D.C., that Nixon tried unsuccessfully to cover up.

President Jimmy Carter took office in 1977 but failed to win reelection after an oil embargo and high inflation

hurt the nation’s economy. In 1980 Ronald Reagan was elected president by a large margin and served two terms in office. President Reagan presided over a decade of prosperity and engineered a buildup of the nation’s defense system that contributed to the breakup of the Soviet Union. However, that buildup had substantial costs; the federal deficit ballooned under Reagan.

In 1988 George H. W. Bush became the first sitting vice president since Martin Van Buren in 1836 to win the presidency, defeating his Democratic opponent, Michael Dukakis. The Bush administration’s greatest achievement was rolling back Iraqi aggression against Kuwait in the Persian Gulf War. However, toward the end of Bush’s presidency the nation faced another economic recession, which led to a precipitous drop in his popularity and the eventual victory of Bill Clinton, governor of Arkansas, in the 1992 presidential election.

Clinton became the first Democrat in the White House in 12 years. Clinton’s initial popularity was clouded by a series of missteps, including disastrous attempts at health-care reform that met with such opposition that they had to be hastily abandoned. By early 1994 Clinton’s agenda had become increasingly hostage to the Whitewater scandal, which was to plague him for the rest of his tenure. The scandal related to the president’s dealings with a bankrupt Arkansas businessman linked to a failed property venture known as Whitewater, in which the Clintons had a substantial interest. At the president’s request, a special prosecutor was appointed to investigate the affair, which also became the subject of congressional hearings. To add to the president’s troubles, a former Arkansas State employee filed a sexual harassment charge against him.

This was the setting in which the Republicans swept into power in both houses of Congress in 1994, on the strength of a platform called Contract with America, which called for, among other things, a balanced-budget amendment to the Constitution, the presidential line-item veto of legislation, the denial of welfare benefits to minor mothers, and the introduction of term limits to legislators. Democrats successfully sabotaged most of these programs by discrediting the speaker, Newt Gingrich, and the others were terminated by presidential veto. Despite his looming troubles, Clinton was elected to a second term in 1996, but the Republicans managed to retain their control in both houses of Congress. Clinton’s second term was a travesty of a dignified presidency. The Whitewater investigation culminated in 1998 in a series of further and unrelated scandals, including sexual misconduct involving Monica Lewinsky, a 21-year-old White House intern. Apparent perjury on Clinton’s behalf with regard to that misconduct led to his impeachment in the House, the first such impeachment since Andrew Johnson. Clinton was later acquitted by the Senate. Despite these difficulties, the Clinton administration helped orchestrate one of the most prosperous decades since the 1960s. By

the end of his term of office, the deficit was under control, and the government was actually running a surplus. The Congressional Budget Office projected budget surpluses of \$5.6 trillion from 2002 to 2011.

For the 2000 presidential election, the Democrats nominated Vice President Al Gore as their standard-bearer, while the Republicans chose George W. Bush, the governor of Texas and son of the former president, as their nominee. In a close and bitter contest, George W. Bush won narrowly, after a 36-day cliff-hanger in which the Florida votes were tallied three or more times and the Supreme Court eventually intervened to determine the winner. The new Bush administration began in 2001 with a clearly defined conservative agenda, including a massive tax cut as the centerpiece and the rejection of international treaties such as the Kyoto Protocol, on greenhouse gas emissions, and the Antiballistic Missile Treaty.

On September 11, 2001, thousands were killed after three aircraft were hijacked and crashed into the World Trade Center, in New York, and the Pentagon, in Washington, D.C.; a fourth was downed in Pennsylvania as a result of a passenger rebellion. Osama bin Laden and his al-Qaeda organization were eventually determined to have masterminded the terrorist attack. Relying on an international coalition for political and military support, the Bush administration launched a campaign against terrorism and began a military offensive in Afghanistan, where Osama bin Laden was being sheltered by the Taliban regime.

Although major fighting in the Afghanistan campaign was brief, the allies proved unable to hunt down bin Laden. On the home front, legislative measures were taken to combat terrorism, including the creation of the cabinet-level Department of Homeland Security and the passage of the Patriot Act, a controversial measure giving the government sweeping new powers to fight terrorism; critics of the act have contended that it undermines due process and gives the government too much access to the private affairs of innocent citizens.

With the economy suffering and military spending increasing, Bush pushed through another tax cut in 2002. Corporate scandals also rocked the nation in 2002, prompting legislation necessitating the change of accounting practices. Internationally, though mop-up operations were still underway in Afghanistan, the White House turned its attention on Iraq and the weapons of mass destruction that its leader, Saddam Hussein, had purportedly built up. Bush took the case for invasion to the U.S. Congress, where he was given the authority to use force in Iraq if necessary. Despite massive protests at home and around the world, in March 2003 U.S. forces, along with a few coalition partners, including the United Kingdom, invaded Iraq. The war appeared to be over within a matter of weeks, but insurgency fighting continued from that time through mid-2006. Early in 2005 elections were held in Iraq, but the situation remained unstable, with attacks by insurgents occurring on a daily

basis. Soon after the invasion it became clear that there had been no weapons of mass destruction. Several agencies, including the Central Intelligence Agency (CIA), took responsibility for faulty intelligence. Critics in turn blamed the White House for overemphasizing the threat as well as framing intelligence to justify the war the president knew he wanted to have. By that time, however, it was too late, as the country was engaged in an ongoing guerrilla conflict that had claimed the lives of over 2,300 American soldiers by mid-2006.

Meanwhile, Bush pressed his domestic agenda forward. Tax cuts in 2003 were scaled back to \$350 billion, still leaving a deficit of \$374 billion that year. The economy remained sluggish, and unemployment rose to over 6 percent, although by late 2003 the economy began to pick up.

John Kerry emerged as the Democratic candidate for president in 2004, and a rancorous campaign followed, with allegations about both men's military pasts. Kerry lost to Bush in November, with the incumbent taking 51 percent of the vote. The Republicans also won a clear majority of seats in both houses of Congress. Entering his second term, Bush made an overhaul of Social Security one of his priorities.

In August 2005 the city of New Orleans was flooded after Hurricane Katrina, the most destructive storm to hit the United States in decades, swept through gulf coast states. More than 1,600 people were killed and more than 1,800 were still missing in early 2006.

LIST OF MODERN RULERS

Presidents

1933–45	Franklin D. Roosevelt
1945–53	Harry S. Truman
1953–61	Dwight D. Eisenhower
1961–63	John F. Kennedy
1963–69	Lyndon B. Johnson
1969–74	Richard M. Nixon
1974–77	Gerald R. Ford
1977–81	James E. Carter
1981–89	Ronald W. Reagan
1989–93	George H. W. Bush
1993–2001	William J. Clinton
2001–	George W. Bush

CONSTITUTION

The Constitution, signed in 1787, provides the foundation of the government of the United States. The principles on which the Constitution is based include the idea that people have certain inalienable rights, that government can exercise authority only with the consent of the people governed, and that the purpose of government is to serve and promote the welfare of the people.

A distinguishing feature is the separation of powers within the federal government, with a system of checks and balances that allows each of the three branches to have some authority with regard to the other two. Thus, for example, the president can veto laws and appoint federal judges, the Senate can confirm or deny judges and officials appointed by the president, and the courts can review laws and the legality of executive acts.

The Constitution is often referred to as a “living” document because it permits growth and change in the system of government. For example, the powers vested in the president and Congress are stated in broad generalities. In the centuries following its drafting, the Constitution has been adapted to changing needs and circumstances. Two means have been employed to accomplish this: amendments to the Constitution and judicial interpretations of the Constitution. The first 10 amendments to the Constitution, collectively called the Bill of Rights, were adopted in 1791, protecting the fundamental freedoms and rights of individual citizens. Since then 17 other amendments have been added. Constitutional interpretation is the second means used to adapt the Constitution to political realities. Much of this task falls to the Supreme Court, which hands down decisions that rule on the meanings of various provisions of the Constitution. The executive branch also plays a part by setting precedents in the discharge of its duties.

The president is both head of state and head of government, and the presidency operates on two levels: On one level the presidency is the symbol of the nation and the president is the country’s leader; on the other level the holder of office is the chief executive, the constitutionally prescribed manager of national affairs. As the former, the president’s authority and influence are virtually unlimited, and the office is as substantial as the incumbent wants it to be. As the latter, the president’s powers are quite circumscribed, both by the Constitution and by the principles of checks and balances. These limits change with circumstances and have expanded or contracted with each president. An activist president may also circumvent such checks for purely political ends.

Presidents are not only chief executives but also legislative leaders. In the 20th century, Theodore Roosevelt’s trust-busting, Franklin D. Roosevelt’s New Deal, and Johnson’s Great Society were all programs initiated by the president and not Congress. Typically, a president submits a package of legislation—usually 100 to 400 bills—to Congress designed to set forth and implement the administration’s major policies. Presidential programs are often based on campaign promises, but some are developed later to meet the nation’s needs. To exercise this legislative leadership, the president must work closely with Congress, which must pass the legislation required to enact the program. The president can also appeal to the public for support, as most postwar presidents have done.

The president uses powers granted by the Constitution in dealing with Congress, including the veto and

executive privilege. The president can use the veto to reject legislation passed by Congress, although Congress may override a veto if both houses then pass the bill again by a two-thirds majority. The veto is a potent weapon, since Congress seldom proves able to override this presidential action, as members of the president’s party typically align themselves with their figurehead. Executive privilege is invoked by presidents to withhold information from Congress. President Taft instituted the modern precedent with regard to that practice by claiming executive privilege when he felt that a congressional request for information was “incompatible with the public interest.” Later, President Kennedy invoked executive privilege to block congressional oversight of foreign policy, and Presidents Nixon, Clinton, and George W. Bush all claimed this privilege to stymie congressional investigations of major scandals or controversies in their administrations.

The president as head of the executive branch of government carries out his duties through departments. These departments of the federal government are headed by officials appointed by the president. The department heads are also members of the president’s cabinet. While the secretary of state, secretary of health and human services, and other department heads have important roles in carrying out administration policies, these cabinet members are seldom part of the inner circle of presidential advisers. Every modern president’s chief advisers have been close friends or political strategists who are members of the White House staff. The White House staff has grown rapidly in numbers and influence in recent decades, using polling and press conferences to gauge and mold public opinion in formulating administration policies and political strategies.

The Constitution vests the president “with general powers to conduct foreign relations.” Over the years, presidential leadership in foreign policy has grown dramatically, with Congress playing a minor, subordinate role in that respect. The president’s autonomy here is in sharp contrast to the power of the chief executive in domestic affairs. Thus, presidents often devote much of their time and attention to foreign affairs, where successes can yield more political capital and prestige. President Reagan, for example, focused much of his energy on defense strategies and strengthening the nation’s military power, which proved successful in hastening the collapse of the “evil empire” of Soviet Communism. Presidents Carter and Clinton showcased their efforts to bring peace to the Middle East by staging meetings at the White House and at Camp David with the leaders of Israel and the Palestine Liberation Organization (PLO).

The president’s role as the commander in chief of the nation’s armed forces reinforces presidential primacy in conducting foreign affairs. As commander in chief, the president may call upon the armed forces to implement actions taken in the interests of national security. These military actions are subject to *ex post facto* approval by Congress, which is almost routinely granted. For example,

in 1994 President Clinton dispatched troops to Haiti to restore the government that had been ousted in a military coup. The president also may send federal troops to any state to enforce the law or put down domestic violence. President Eisenhower ordered federal troops to Arkansas in 1957 to enforce school desegregation laws.

The Constitution provides that the vice president shall take office upon the death of a president. The vice president is elected with the president and serves the same four-year term. The vice president has few formal constitutional duties apart from presiding over the Senate and casting a tie-breaking vote. In all, 13 vice presidents have become president, five after serving their terms and eight upon the death of the president. George H. W. Bush was the first president since Martin Van Buren, in 1837, to win election as president immediately after serving as vice president. The Constitution does not provide guidelines for the exercise of presidential powers in the event of the president's disability. The 25th Amendment, adopted in 1967, remedied this omission by providing that when a president is unable to carry out the duties of office temporarily because of physical disability, the vice president becomes acting president for the duration of the president's disability.

The Constitution provides for the impeachment of the president, who may be removed from office if convicted of treason, bribery, other high crimes, or misdemeanors. The House of Representatives may bring impeachment proceedings against a president by a majority vote. If the House passes a bill of impeachment, the Senate then tries the president, with the chief justice presiding in place of the vice president. A two-thirds vote in the Senate is required for conviction. No president has been impeached, convicted, and then removed from office. Andrew Johnson was impeached but escaped conviction by one vote in 1868. Richard Nixon resigned the presidency in 1974 rather than face a possible impeachment trial after Watergate. Bill Clinton was the first elected president to be impeached; however, the Senate failed to convict him, and he filled out the remainder of his term.

PARLIAMENT

The Constitution invests legislative power in the Congress, which is composed of two bodies: the upper Senate and the lower House of Representatives. The Senate has 100 members, two from each of the 50 states, elected for six-year terms, with one-third elected every two years. The House of Representatives has 435 members divided among the states in proportion to population; each state must have at least one representative.

The powers of Congress are set out in detail in the Constitution. At first the House tended to overshadow the Senate, but as the nation grew, the smaller Senate rapidly gained in influence and prestige. The Senate has

the right to "advise and consent," giving it leverage in government that the House does not have. Conversely, the House has the sole right to originate all revenue bills and bills appropriating money for the government. Both the Senate and the House have a great deal of autonomy, and this freedom from executive control enables Congress to assert its powers. However, since the underlying principle of the Constitution is not so much separation of powers as separation of institutions that are sharing power, Congress and the president are always competing for power.

The "business of Congress," it has been said, is to make laws. The lawmaking powers of Congress include taxation, borrowing, foreign and interstate commerce, naturalization, bankruptcy, coinage, weights and measures, the post office, patents, copyrights, maritime and international law, and regulation of the armed forces. To carry out its legislative duties, Congress deals with over 10,000 bills each year. A bill may originate in either the House or the Senate, as introduced by a member of that body. However, all appropriation bills must be introduced in the House. Upon introduction, in both bodies bills are referred to the appropriate committees, where they are in the hands of the committee chair. The chair has the right to send the bill to subcommittee, pigeonhole or kill the bill, or expedite it. If the chair decides to move the bill along, the committee then holds hearings on the bill.

The step after hearings is called the markup, in which the subcommittee debates the bill, considers amendments to it, and then votes on it. If the bill is passed, it goes to the full committee, where the process is repeated. If the committee passes the bill, it is then sent to the full house for consideration.

If the Senate version differs from the House version of a bill, conference committees with members from both bodies reconcile the differences, usually in secret sessions. The conference committees then report back the agreed-upon bill to their respective houses, and the bill is usually accepted in floor votes. A measure passed by both houses in its final form then goes to the president for signature.

Much of the work of Congress is done through committees. Three of the major House committees are Ways and Means, which deals with taxes; Appropriations; and Rules. An important element in committee work is the concept of seniority. Seniority is the rank accorded members by the length of their continuous service in the House or Senate. Committee chairs and memberships are selected primarily according to seniority.

POLITICAL PARTIES

The United States has a strict biparty political system, which in large measure explains its political stability. Third parties appear primarily in the political lexicon and rarely on ballots, particularly for elections to the highest

offices. Further, the two parties themselves have not suffered permanent splits or breakaways since the mid-19th century, such that the political landscape is less cluttered in the United States than in any other major Western democracy. Nevertheless, the division between the two parties is so fluid that turncoats do not receive the opprobrium they do in most other countries. Party ideologies are not set in concrete and may shift and evolve in response to circumstances, though within historic limits. Party labels do not necessarily concern voters, who may vote for whomever they please even when formally enrolled in a certain party. Cross-party voting is frequent and courted by both parties. The lack of partisan spirit is both a cause and result of a deeper malaise—voter apathy that leads half the electorate to abstain from voting even in the presidential elections because they do not have a real choice of candidates. Another frequent cause for low voter turnout is the fact that with only two candidates, even slight differences in pre-election polling results can lead many to believe that their votes won't change the outcome of the election.

Party organizations to a large extent only on paper. National and state committees come to life primarily at election times, then vanishing from public sight. At higher levels, a party committee's primary task is to negotiate patronage assignments when the party is in power. The national committees—the Democratic National Committee and the Republican National Committee—are relatively powerless entities. Their primary function is to make rules for national conventions and to coordinate fund raising. The committees have no role in policy making and do not issue instructions to party officeholders. The president of a committee is the front man for the dominant faction within the party, but he is expected to show no favoritism to any of the party's numerous luminaries. His task is purely administrative, and more often than not, most Americans do not even know his name.

The Democratic Party was founded in 1828 and as such is the oldest political party in the world. It held its first presidential nominating convention in 1832. Despite its early start, the party, then consisting mostly of proslavery southerners, was almost wiped out by the Civil War and did not become a major force in U.S. politics until the presidency of Franklin D. Roosevelt, who rallied a coalition consisting of southern whites, farmers, blacks, Jews, other ethnics, labor, the poor, and the unemployed. The coalition began to disintegrate in the 1960s in response to civil rights legislation, rising urban crime, welfare and Social Security costs, and budget deficits; it was a coalition of interests and not of ideology and thus unraveled quickly under pressure. Under Clinton, the Democratic coalition gained new life as it expanded to embrace minority voices in American society. Clinton proved adroit at taking the Democratic Party further to the center, co-opting traditional Repub-

lican issues such as economic growth and security. Rapid gains among minority groups, however, have not been large enough to offset the steady erosion of white-male and middle-class support. The decline of labor unions has also cut off a once strong and predictable source of Democratic backing.

The Republican Party was founded in 1854 as a coalition of Whigs and antislavery Democrats. It gained its first electoral success in 1860 when a dark horse named Abraham Lincoln won the White House on the Republican ticket. The Civil War and the subsequent rout of the southern Democrats made the U.S. government a virtual Republican monopoly for 70 years after 1861, with the exceptions of the one term of Andrew Johnson (1865–1869), a Democrat, and the two terms each of Grover Cleveland and Woodrow Wilson. During that same period Republicans controlled the House for 50 years and the Senate for 54. After the ascendancy of the New Deal, Republicans fell into such disarray that few expected the party to survive. It did survive, however, and has managed to capture the White House five times since 1968, even riding out the Watergate debacle.

As of the early 21st century, Republicans have been no more organized than Democrats but have given the appearance of being more united. Although there is a minor liberal Republican wing, the so-called Nelson Rockefeller bloc, it has not diluted the party's official positions on national issues. The party has been consistently probusiness, proreligion, and promilitary, and each of these stances has helped it to win a loyal constituency of supporters. The support of evangelical Christians has been a major factor in recent Republican electoral successes; perhaps evidence of the importance of this line of support is the fact that the two most recent Democratic presidents have been staunch southern Baptists. Republicans have made few attempts to woo blacks or organized labor, and the ill-will has generally been mutual, although George W. Bush has placed African Americans in high-profile cabinet and White House positions. The party's free-market philosophy expresses itself most clearly in opposition to government regulation in particular and large government in general. There is an undercurrent of libertarianism in some of its evolving ideology. Appeals to flag and country have been recurring themes in Republican Party platforms. The party's greatest political success has been destroying the Democratic Party in the South. In the 2000 presidential elections the entire South, excluding Florida but including states like West Virginia and Arkansas, voted solidly for Bush. In the 2004 elections similar support was manifested for the Republicans.

A strong third party has yet to develop in the United States. With winner-take-all elections, such parties have been considered spoilers, eating away at the bases of either the Republicans, as did Ross Perot in 1992, or the Democrats, as did Ralph Nader in 2000, thereby swinging elections to the other major party.

LOCAL GOVERNMENT

The United States comprises 50 states, each headed by an elected governor and a two-house legislature (except Nebraska). The states are autonomous within their own territories and spheres of government. The 10th Amendment reserves to the states those powers not granted to the federal government and not denied to the states.

The political system of the United States is based on federalism, but in practice the states are clearly subordinate to the national government. The Constitution grants Congress the power to make all laws that are “necessary and proper” to carry out its duties and establishes the supremacy of federal laws. The evolution of state-federal relations has been characterized, however, by a growing partnership based on the flow of funds from Washington, D.C., to the states and lower units of government.

The Constitution does not mention local governments, which throughout the states include four major units: counties, townships, municipalities, and special districts. Their powers and status are determined by the state in which they are located.

The county is the most inclusive unit in all but three states. The county is the most important form of rural local government, although there are urban and semiurban counties. A typical county government has at least 10 elected local officials, including treasurer, surveyor or engineer, assessor, superintendent of schools, recorder of deeds, county clerk, sheriff, attorney, clerk of court, and coroner.

Municipalities, called by a variety of names—cities, villages, or boroughs—are the most important general-purpose units of local government. Although not as large as counties, municipalities exercise more powers and provide a greater variety of services.

Townships, sometimes referred to simply as towns, exist in 21 states, largely in the central, north-central, and southeastern sections of the nation. Established primarily to serve rural communities, most still fulfill this function, except in New England, where they increasingly function like municipalities.

Like counties, cities vary widely in size and population. There are three basic forms of city government: mayor-council, commissioner, and council-manager. The principal local government spheres of responsibility are police, fire protection, education, health, welfare, public utilities, public works, and recreation. Although these spheres are broad and varied, local governments do not necessarily enjoy corresponding arrays of powers, nor do they generally have sufficient financial resources. They depend on property taxes, sales taxes, business taxes, and income from fees, fines, and licenses.

LEGAL SYSTEM

The Supreme Court is the nation’s highest judicial body, as headed by the chief justice and eight associate justices.

Justices on the Court are appointed by the president for life but must be confirmed by the Senate. Cases come to the Supreme Court in one of three ways: certification, appeal, or certiorari. In the first category, a court of appeals certifies that the case involves a question of federal law that can be resolved only by the high court. Appeals from the decisions of the highest state courts are the most common route. Many other cases are brought to the Supreme Court by writ of certiorari.

Agreeing to hear a case is a matter of the Court’s discretion. The justices vote on whether to hear each case the Court may consider, with four votes required for the issue of a certiorari. The decisions of the Court are binding legal precedents on all lower courts. However, the Court itself may overturn its own decisions through later rulings.

The most important function of the Supreme Court is to interpret the Constitution, a power known as judicial review. This power enables the Court to nullify state laws and acts of Congress that violate the Constitution. However, it exercises this power of judicial review with great restraint.

Congress has established two levels of federal courts, under the authority granted it by article 3 of the Constitution. At the lower level are district courts, one for each of the 89 judicial districts in the nation. Federal district judges are appointed by the president and may be removed only by impeachment. Above the district courts are federal courts of appeal, organized into 12 circuits, which hear cases appealed from the district courts. The jurisdiction of the federal court system includes cases involving bankruptcy, admiralty, patents, and violations of federal law. The federal court system also includes specialized federal courts, such as the tax court and the court of military appeals.

The court system in each state includes the state supreme court as the highest judicial authority, often consisting of seven judges. In 39 states there are appellate courts to which appeals from trial courts are taken. All states also have general trial courts that hear serious criminal cases, civil cases, divorces and other family-law matters, and complaints for injunctions. State, district, or municipal courts adjudicate traffic violations and minor criminal matters. Most states also have separate probate courts to hear matters relating to the administration of estates and juvenile crime.

As many judges are appointed by the executive branch, there is the risk that these appointments will be political in nature and that ideology might overtake jurisprudence. Throughout the 1990s and into the 2000s, both parties in Congress have refused to approve many of the presidents’ nominees for various judgeships, either by straight vote or by filibuster. In 2005 the ruling Republicans threatened to pass a bill ending the filibuster if Democrats did not approve the president’s candidates.

HUMAN RIGHTS

The Bill of Rights, the first 10 amendments to the Constitution, is the national charter of freedom. The Bill of Rights underscores the basic principle of the Declaration of Independence: that the purpose of government is to protect the rights of individuals. These rights include the freedoms of speech, religion, and assembly and the freedom from unreasonable search and seizure. The Bill of Rights also protects the rights of persons accused of crimes, including the right to a fair and speedy trial, the right to a jury trial in civil cases, and protection against excessive bail and fines or cruel and unusual punishment. The evolution of human rights in the United States has consisted of the application of the Bill of Rights to specific governmental actions or social issues.

The growth of individual rights has been slow and incremental. Thus, the right to vote, which was limited to white males with property in 1787, has been extended through five amendments. The 14th and 15th Amendments removed racially discriminatory practices. The 19th Amendment extended the right to vote to women. The 24th Amendment banned the use of a poll tax as a prerequisite for voting in federal elections, and the 26th Amendment lowered the voting age to 18.

Equal protection under the law is a right guaranteed by the 14th Amendment to the Constitution, with its greatest significance being protection against racially discriminatory treatment. The Supreme Court based its 1954 ruling in *Brown v. Board of Education* on this guarantee, holding racial segregation in public schools unconstitutional. The Civil Rights Act of 1964 banned racial discrimination in all public facilities; this law also created the Office of Equal Opportunity to enforce an end to job discrimination based on race, gender, or place of national origin. Other federal legislation guarantees women equal rights on the job and forbids discriminatory treatment in hiring and promotion. In 1990 Congress passed the Americans with Disabilities Act, banning discrimination against handicapped persons and extending to them many protections and the right to access public facilities.

Following the terrorist attacks of 2001, the Patriot Act was passed, giving the government new powers of surveillance and investigation, which critics argue erode due process protections and give the executive branch too much power. Muslims in the United States, in particular, have complained of racial profiling since 2001. The use of special military tribunals has come under international criticism, as have the abuses of prisoners held by the United States in Afghanistan, Iraq, and Cuba.

FOREIGN POLICY

With the collapse of the Soviet Union in 1991, the United States became the world's sole superpower. After the cold

war ended, the nation decreased its spending on defense, but this "peace dividend" proved illusive. The 1990s saw the United States assume the role of policing world trouble spots. When Iraq invaded Kuwait in 1990 and became a threat to Saudi Arabia and the stability of peace in the Middle East, the United States led UN forces against the Iraqi army, compelling it to withdraw from Kuwait.

The Persian Gulf War of 1991 was part of an ongoing effort by the United States to secure peace in the Middle East. A major goal of President Clinton's foreign policy was to end the enmity between Arab nations and Israel that has existed since Israel's creation in 1948. American diplomatic initiatives in the mid-1990s led to Israel's recognition of the Palestine Liberation Organization (PLO) and negotiations toward an independent Palestinian state. In 1999 Syria and Israel met for the first time in Washington, D.C., to discuss a peace settlement.

In 1999, after Serb forces began a campaign of violence to force ethnic Albanians in Kosovo to leave their land, the United States launched air attacks against Serbia. Although many ethnic Albanians later returned to Kosovo, the centuries-old religious and ethnic divisions in the province remained.

Mediating peace in Northern Ireland was a major goal in U.S. foreign policy. President Clinton worked closely with the British and Irish prime ministers to end violence in Northern Ireland. After several years of negotiations, in 1999 a coalition government including both Protestants and Catholics was formed there.

The North Atlantic Treaty Organisation has remained an important instrument of American foreign policy. To strengthen the stability of the former Communist countries of eastern Europe, in 1997 the United States and its NATO allies invited Poland, Hungary, and the Czech Republic to join. At the same time, western European countries had less need to rely on NATO after the end of the cold war and thus asserted more-independent foreign policy stances. The European Union, composed of many NATO nations, has formed a strong and impressive trade bloc whose goal of strengthening its member nations' economies has included measures restricting trade with the United States to protect European farmers and businesses.

In 2001, after the terrorist attacks in New York City and Washington, D.C., the United States began a military campaign in Afghanistan, where Osama bin Laden, believed to have led the attack, was being sheltered by the Taliban regime. In 2003 the Bush White House pursued a go-it-alone policy regarding Iraq, a country believed to have a large storehouse of weapons of mass destruction. The United States invaded that country with little international support, reversing over 50 years of cooperative foreign policy vis-à-vis European allies. In dealing with North Korea, which actually has nuclear arms, the Bush White House has pursued a policy of multilateral diplomacy with other countries in the region.

DEFENSE

The president is commander in chief of the armed forces and directs defense policy and decisions through the secretary of defense, who heads the Department of Defense, often referred to simply as the Pentagon, which houses its offices. Operational command is vested in the Joint Chiefs of Staff, whose chair is appointed by the president.

The three branches of the armed services are the army, navy, and air force. Service in the armed forces is voluntary, and persons 18 years old or older are eligible. The armed services maintain bases in the United States and overseas.

The army is the largest of the services, with over 485,000 total personnel in 1997. That year the navy numbered 413,000 and the air force 384,000. The marines, a part of the navy, comprised over 173,000 active duty personnel. In all, men and women in the armed forces totaled 1,480,000 in 2003.

The United States spent \$278 billion in 1998 on defense, or 3.8 percent of gross domestic product (GDP), which was significantly less than the percentage spent in the cold war years of the 1980s. By 2004 military expenditures had grown to \$371 billion, or 3.3 percent of GDP. A heavy reliance on high technology in the modern military has not always proven to be the best choice. Fighting a low-tech insurgency conflict, as in Iraq, has shown that having bodies on the ground is more vital than having smart bombs. In that conflict, reserve forces and National Guard troops have had to play major roles in order to keep troop strength at sufficient levels. As a result of the high demands placed on existing troops, recruitment rates have sharply declined for all three services.

ECONOMY

The United States has the strongest and most technologically advanced economy in the world. In 2004 GDP was \$11.75 trillion, with a per capita GDP of \$40,100, among the highest for major industrialized nations. U.S. corporations have been at the leading edge of the worldwide technology revolution. American businesses play dominant roles in the fields of computers, telecommunications, medicine, and aerospace and military equipment and are the leaders in developing the new "global economy," based on multinational corporations, the Internet, and international investment capital. At the same time, the United States remains the world's leading agricultural and food exporter.

In the capitalist U.S. economy the private sector is dominant, with individuals and private enterprise making most decisions affecting the economy and the government taking only a limited, largely regulatory role.

The years from 1994 to 2000 represented one of the longest periods of prosperity in the nation's history. The stock market advanced to all-time highs, and nearly half of the population, directly or indirectly through employer-sponsored retirement plans, shared in these historic market returns. Worker productivity reached all-time highs, the inflation rate remained low, and unemployment stayed below 4 percent during most of this period.

The economy's successful performance was marred only by disparities in income distribution. In the years since 1975, including the booming 1990s, most gains in household income went to the top 20 percent of the population. Even in many middle-class families, both spouses held jobs, largely to earn enough income to participate in the nation's prosperity. Growth weakened in the fourth quarter of 2000 and through the first half of 2001.

Following the terrorist attacks in September 2001, the economy took a sharp downturn. Beforehand the boom economy had already been slowing, as the high-tech bubble burst, and the stock market, severely overvalued by speculative technology stocks, tumbled downward. By the end of 2002 there were signs of recovery, but the stock market continued to stagnate. With the invasion of Iraq, the economy turned around somewhat, and the stock market once again reached healthy levels. Unemployment, however, has stayed over 5 percent. Long-term problems include inadequate investment in economic infrastructure, the rapidly rising medical and pension costs of an aging population, sizable trade and budget deficits, and the stagnation of family income in the lower economic groups.

ENVIRONMENT

The movement to protect the environment in the United States began in the 1960s, after writers and environmentalists like Rachel Carson demonstrated the damage being caused by the pollution of the nation's air and waters. Congress then passed the Clean Air Act, the Clean Water Act, and other major legislation and gave strong enforcement powers to a new federal agency, the Environmental Protection Agency (EPA).

Although the country has adopted strict controls on air pollution, its vast size and industrial might still make it a major contributor to greenhouse emissions. Nearly 22 percent of the carbon dioxide released from burning fossil fuels throughout the world originates in the United States. Despite this troubling fact, the United States has not yet joined with the 150 other nations that signed the Kyoto Protocol, which was introduced in 1997 to reduce such emissions.

The pollution of rivers and streams from solid-waste disposal and from the runoff of pesticides and fertilizers has been notably reduced by federal and state environmental laws. An important step here came in 1980 when Congress created the Superfund to regulate, oversee, and if necessary fund the cleanup of hazardous waste sites.

Protecting the habitat of plants and animals is another environmental issue that has been addressed by the nation. The Endangered Species Act of 1966 established a policy to reduce deforestation, prevent the loss of wetlands, and safeguard against urban encroachment in certain regions. The federal government has set aside numerous locations as wilderness areas and national parks.

Global warming has been a growing concern in recent decades, both within the government and among the public. The EPA has thus created a Climate Change Division to study and monitor the impact of this environmental threat. Recent efforts to combat global warming, especially as through the Kyoto Protocol, have been stymied in part by the Bush White House's refusal to admit the conclusiveness of scientific evidence regarding the humankind-produced causes of global warming.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked the United States eighth out of 177 countries in terms of life expectancy, education, and standard of living. The aver-

age American's life expectancy in 2005 was 77.7 years, and literacy stood at 97 percent in 1999. The percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002 was the 16th-highest in the world, at 92.3 percent. Per capita GDP was \$40,100 in 2004.

As of 2001, four-fifths of Americans lived in urban and suburban areas. Life in the United States tends to be faster than that in other countries of the world. Cities in particular feel the jab of its pace, with cars dominating the cityscape. Except for major urban areas like New York, Chicago, and Boston, most American cities have relatively poorly developed mass-transit systems. Thus, rush hour traffic is a major problem across the country, even in suburban areas. The United States is a nation of cars and as such also of roads and freeways. As of 2001 there were over 230 million registered vehicles and over four million mi (6.4 million km) of roads.

The single-family dwelling remains the dream of most Americans, and the vast majority of homes are single units. Real estate, however, reached speculative highs in 2004 and 2005, with median home prices in some areas of the West and East reaching \$600,000. In contrast, the vast American middle class has dwindled in size since the 1960s, especially with manufacturing jobs lost to lower-wage countries. Though the United States maintains one of the highest standards of living in the world, its population is one of the most hard-pressed in terms of working conditions. Many maintain more than one job to make ends meet. With no national health insurance, medical care is also a major concern for working Americans; if jobs are lost, so are medical benefits. Poverty remains a problem, as an estimated 12 percent of the population live below the poverty line. As of 2001 about 3.5 million people experienced temporary or prolonged periods of homelessness each year.

HEALTH

U.S. medical treatment is among the best in the world. However, the United States is the only industrialized nation not to have a national health plan. Instead, the nation relies on private insurance plans, most of which are tied to jobs. Thus, employers are required to provide health benefits to workers employed over half-time. As a result, many Americans are given 49 percent employment or less by employers who wish to avoid having to offer insurance plans. Health maintenance organizations, offering widely managed medical plans, are the most common form of health coverage.

As of 2004 over 45 million Americans lacked health coverage. Medicare, for the elderly, and Medicaid, for the impoverished, help to bridge the gap. A prescription plan was added to Medicare in 2004. The cost of health care in general is skyrocketing. Public expenditures on health care in 2002 were 6.6 percent of GDP, and private expen-

ditures were even higher, at 8 percent. As of 2004 there were 549 physicians for every 100,000 people, and almost all births were attended by health professionals. However, the United States continues to have one of the highest infant mortality rates among developed countries; in 2005 the rate was 6.5 deaths per 1,000 live births.

Cardiovascular diseases are the most significant cause of illness and death, followed by cancer, in both men and women; diet and lack of exercise are largely to blame for the former. The entire population has access to safe water and proper sanitation. In spite of health warnings, about one-quarter of men and women are smokers. The prevalence rate of HIV/AIDS among adults was 0.6 percent in 2003. That year there were 14,000 deaths from and 950,000 people living with the disease. With the government paying for just over half of routine immunizations, rates of immunization for one-year-olds are not as high as in other developed countries. In 2003, immunization rates were 91 percent for polio, 93 percent for measles, and 96 percent for DPT. Overweight and obesity are major problems in the United States, leading to diabetes and heart problems.

A major overhaul of the health delivery system, especially in light of escalating medical costs, is imperative. Medicare payments have regularly lagged behind rising hospital costs, and Medicaid funding is in jeopardy as a result of both massive tax cuts and increased defense spending.

FOOD AND NUTRITION

The food of the United States represents a smorgasbord of cultural influences, from meat-and-potatoes style Anglo-American cuisine to Asian, Mexican, Italian, and Cajun dishes. Regional specialties include shellfish and chowders in the Northeast, where baked beans and corn are also favorites. Southern cooking emphasizes fish, ham, wild game, and barbecued ribs, often served with hominy

grits. In Louisiana spicy Cajun food is found, while the West Coast is noted for the fresh local foods that make up so-called California cuisine, which is heavy on fish and vegetables and prepared in a straightforward manner. Food in the Midwest is deeply influenced by the northern European roots of many of the region's inhabitants, as heavy on cheese, eggs, and dairy products as well as stews and roasted meats. Throughout the United States the standard restaurant fare of steak and a baked potato is still popular. As the nation is the birthplace of such fast-food chains as McDonalds, in accordance with the accelerated pace and carelessness of American life, fast food is particularly popular. Cookies, cakes, pies, and puddings are typical desserts, as is ice-cream. Favorite beverages include tea, coffee, juice, wine, and beer. California is a major producer of quality wines. Microbreweries exist around the country, producing wide ranges of premium beers and ales. Bourbon is the American contribution to the whiskey family.

Undernourishment is not generally a problem in the United States; instead, reliance on processed, fatty foods and fast foods is a major concern. Over one-third of Americans are overweight, and 30 percent are obese, which state leads to numerous health risks. Among children, 13 percent are overweight.

 Amount of Fruits and Vegetables Available per person per year kg: 238.0

STATUS OF WOMEN

Until recent decades, women in the United States did not enjoy equal rights in voting, in the workplace, or in other areas of society. The women's rights movement, strengthened in the 1960s, successfully demanded legal equality with men. The Civil Rights Act of 1964 barred discrimination on the basis of gender as well as race, color, or national origin. In 1966 the National Organization for Women was founded to increase women's political power and influence. Although the effort to add the Equal Rights Amendment to the Constitution in 1972 failed to win approval, the following decades brought significant gains in the status of women.

Women have made important advances in business, education, and the professions. Women have also served in prominent positions in Congress, the Supreme Court, the cabinet, and other high government posts. Businesses are hiring growing numbers of women at every level, from factory workers to chief executive officers. Yet, despite these gains, women still have not achieved full equality. In 1999 the average wage for women was

only 76.5 percent of the amount paid to men for the same job. Even women who hold major managerial posts have complained of discrimination, noting the perpetuation of a male-defended “glass ceiling” limiting their salaries and possibilities of advancement.

In 1973 the Supreme Court ruled in a 5–4 decision that states could not ban abortions. Many women considered this a step toward equality, and for a variety of reasons abortion has become a divisive social and political issue.

WORK

In 2004 the American labor force numbered 147.4 million, including those unemployed but seeking work. Of these, by far the smallest group, at 0.7 percent of the workforce, were those working in agriculture, forestry, and fishing. Manufacturing, extraction, transportation, and crafts accounted for 22.7 percent of workers, sales and office workers 25.5 percent, other service workers 16.3 percent, and managerial, professional, and technical workers 34.9 percent, constituting the largest segment. The unemployment rate in 2004 was 5.5 percent. The leading industries include petroleum, steel, motor vehicles, aerospace, telecommunications, chemicals, electronics, food processing, consumer goods, lumber, and mining.

Income varies widely, depending on region and type of work. In 2003 the national average wage was \$15.27 per hour for nonagricultural workers, with an average workweek of 33.8 hours. Unions have never been strong in the United States, but in the past decades membership numbers have dropped even further. In 2002 only 13.2 percent of wage and salary workers were union members, whereas in 1983 union membership was 20.1 percent. In 2002 there were 34 national labor unions with over 100,000 members, the largest being the National Educational Association, with 2.7 million members as of 2003. The most important union of organized workers is the American Federation of Labor–Congress of Industrial Organizations (AFL–CIO), whose affiliated unions had 13 million members as of 2003, down from 14.1 million members in 1992. The largest industrial unions are the United Auto Workers and the Teamsters. The right to strike is restricted under the Taft–Hatley legislation, which stipulates that strikes in so-called essential segments of the economy can be delayed by 90 days for the national interest. Almost half the states have right-

to-work laws, which forbid making union membership a condition of employment. The Occupational Safety and Health Administration monitors workplace safety. The minimum wage in 2005 was \$5.15, not enough to support a person working full time. The minimum work age is 14, the maximum workweek 40 hours.

 Unemployment %: 5.5

EDUCATION

Every child in the nation is entitled to a free public education for 12 years. In most public school systems, many children also attend preschool and kindergarten classes. Education is the responsibility of each state and is administered by school boards elected by the voters in each school district.

Primary education may consist of six or eight grades, six grades being more common. Students receive their primary education in elementary school, usually from ages six through 12. The middle school—generally grades seven and eight and possibly also nine—is a transitional school that serves the needs of early adolescents, from ages 12 through 15. Secondary school education begins most commonly at grade nine or 10, depending on whether the school plan is 6–3–3 or 8–4. Most secondary students will have completed their minimum years of compulsory education before graduating from high school. More than three-quarters of students remain in school until they receive their high school diploma at the end of grade 12.

There are three main types of institutions of higher education in the United States. Community colleges offer associate degrees in art or science after two years of study. Public and private colleges and universities offer bachelor of arts or science degrees after four years of study. Graduate education confers master’s and doctorates to students who complete postbachelor study and research. College enrollment increased rapidly between 1980 and 1992, from 12 million to over 14.5 million. In the following years, approximately 15 million students were enrolled in higher education each year.

During the 1990s and into the 2000s there have been attempts at changing the basic educational system. The voucher system is one such plan, whereby parents would receive allowances from public funds if they chose

to place their children in private schools. Critics of this plan contend that only the wealthy would be able to fully afford the accoutrements, including transportation costs, of such private schooling and that the poor would be left behind in underfunded public schools. In 2002, net primary enrollment stood at 92 percent, secondary enrollment 88 percent. In 2001 public expenditures on education equaled 5.7 percent of GDP. The literacy rate among adults was 97 percent in 1999.

SCIENCE AND TECHNOLOGY

The United States has been at the forefront of technology and science since the Second World War. Nuclear research led to the deadly attacks on Japan, with the Manhattan Project and tests in Los Alamos having been carried out during that war. The cold war period led to further scientific military advances, many of which have had everyday applications. The Internet has been one such beneficial by-product. The exploration of space and the work of the National Aeronautics and Space Administration helped to make possible the modern communication age, employing satellites for the rebroadcast of radio signals and allowing for the advent of mobile phones, among other things. The technology revolution of the 1980s was an American export, with firms such as Apple and IBM pioneering the home computer, and others such as Microsoft creating software platforms through which computers could operate.

The Academy of Sciences and the National Institutes of Health (NIH) both sponsor research in a number of fields. Cancer and AIDS research in particular are funded by the NIH. Land-grant colleges across the country carry out research in agriculture. U.S. biotechnology and pharmaceutical research, some done with public funding, also

lead the world. As of 1999 there were 4,526 researchers for every million people. Research and development expenditures equaled 2.7 percent of GDP in 2002.

MEDIA

The United States has the largest press in the world, with almost 1,500 daily newspapers. The aggregate circulation of these papers was approximately 56 million copies in 2000, or 196 copies per 1,000 people. The *Wall Street Journal* had the widest national distribution, followed by *USA Today*, the *New York Times*, and the *Los Angeles Times*, all of which enjoyed circulations of over one million. Suburban newspapers composed more than 50 percent of the daily press, while the number of weeklies declined. Press ownership, once dominated by family enterprises, is now largely held by corporations or parts of chains.

Over 21,000 periodicals were published in 1997, ranging from specialized journals to major news magazines. *Time* had a circulation of 4.1 million copies per week, *Newsweek* 3.2 million. The largest mass-circulation publications were the weekly *TV Guide*, which reached an audience of 13.2 million, and the monthly *Reader's Digest*, with a circulation of 15.1 million.

Two of the world's largest news agencies are American: the Associated Press (AP) and United Press International (UPI). The AP is the largest of all global news-gathering organizations.

In 1997 the nation had 3,701 commercial radio AM broadcasting stations and 4,665 FM stations. The four major television networks are ABC, CBS, NBC, and Fox, which have more than 1,000 affiliated or network-owned stations. The Corporation for Public Broadcasting and its PBS television arm and NPR radio system provide commercial-free broadcasting on a wide variety of topics. Cable television has grown rapidly in recent decades, with more than 100 cable networks now broadcasting programs over cable or satellite services. The most popular of these include the all-news CNN, the entertainment channel HBO, and MTV, the pioneer of music television.

Freedom of speech and the press is guaranteed in the constitution. On the whole, the press is free from political control. However, in the years after the 2001 terrorist attacks there was a distinct lack of questioning regarding the government agenda in its war on terrorism. Specifically, little interrogative skepticism was shown with regard to the White House's claims that Iraq held

weapons of mass destruction. During the invasion of Iraq in 2003, the government allowed only certain journalists to be “embedded” with troops, a situation that critics say hampered not only journalists’ news-gathering ability but also their objectivity. Reporters without Borders, a media watchdog group, ranked the United States 23rd among 167 nations in its 2004 press freedom index.

Technological advances have enlarged the definition of traditional media. In 2003 there were 158.7 million cellular telephone users in the United States, while in 2002 there were 159 million Internet users.

CULTURE

The United States can truly be spoken of as a melting pot, and this is nowhere better seen than in the culture of the land. From African Americans comes the blues, which evolved from southern spirituals and work songs with the accompaniment of instruments that were sometimes homemade. Many blues musicians migrated north to St. Louis and Chicago, and their style changed as they began recording. Similarly, jazz music was born in New Orleans as a blend of African, European, and local creole musical styles. Black jazz musicians also moved north, to Chicago and New York, where their new style was eventually taken up by white musicians as well. Jewish immigrants, including George and Ira Gershwin, were particularly important to the development of the lyrics and melodies of American musical theater and popular songs. The blues went on to have a great influence on the creation of rock and roll, the most popular musical genre of the late 20th century. Elvis Presley, one of the earliest rock-and-roll stars, became an international symbol of that musical form. Rap and hip-hop, the latest of popular music trends, are also mainly driven by black artists. Elsewhere, a distinctly American form of classical music has evolved, from the works of Aaron Copeland to Philip Glass.

In visual arts, the United States was at the forefront for much of the second half of the 20th century. After World War II the focus of the international art world shifted from Paris to New York, where a group of young American painters, including Jackson Pollock, Mark Rothko, and Willem de Kooning, were creating the first distinct American painting style, abstract expressionism.

Later, the world of art reacted to omnipresent mass media with the send-ups of advertising and mass-produced objects by Andy Warhol and other pop artists. Warhol’s various versions of the original *Campbell’s Soup Can* are now American icons.

The United States has fielded a wide assortment of authors and poets writing on distinctly American aspects and perceptions of life. These authors have included Mark Twain, Walt Whitman, Herman Melville, Nathaniel Hawthorne, Emily Dickinson, Henry James, and Edith Wharton and in the modern era such luminaries as William Faulkner, Ernest Hemingway, F. Scott Fitzgerald, John Steinbeck, Jack Kerouac, Arthur Miller, Saul Bellow, John Updike, and Toni Morrison, many of whom are Nobel Prize winners.

Perhaps the most ubiquitous American cultural creation and export is Hollywood. As the movie capital of the world, Hollywood helped to pioneer the studio system, which made blockbusters possible. From *Birth of a Nation* to *Gone with the Wind* to *Star Wars*, the U.S. movie industry has captured the worldwide market. Television is another American specialty; shows from *The Simpsons* to *The Sopranos* can be seen around the globe.

Such mainstream cultural artifacts do not take into account the quieter cultural achievements of Amerindians, whose connection to the earth and the rhythms of the seasons are evident in their artwork and crafts. Hispanic have also established a distinct culture in parts of the United States, with mariachi music and more popular and contemporary forms of balladeering and song.

Major art collections can be found at museums around the country, including New York’s Metropolitan Museum of Art, Solomon R. Guggenheim Museum, and Museum of Modern Art (of which there is also one in San Francisco); the Getty Museum, in Los Angeles; and other regional museums in major cities. The Smithsonian Museum, in Washington, D.C., has a huge collection of industrial and technological artifacts.

FOLKLORE AND MYTHOLOGY

American folklore includes myths, legends and tall tales. Various Amerindian tribes had numerous origin myths. The Thunder Bird myth is one of the most widespread

among Amerindians, with the giant bird most often representing a nature deity. Coyote often serves as the creator in myths, or perhaps as a trickster; Raven plays this role for Pacific Northwest tribes. From Hawaii comes Polynesian myths, including that of Hawai'iiki, the fabled original homeland of the Hawaiians and probably of all Polynesians. The myth of Sasquatch, or the bigfoot, is more modern; it deals with a large apelike animal, serving as a sort of missing link, reported to have been seen throughout the forests of the Northwest. Sasquatch is the American version of the yeti, or abominable snowman, of Himalayan legend.

Legends often feature historical figures, many of whom are figures from the founding of the nation. There are tales of George Washington as a boy confessing to cutting down a cherry tree, of Benjamin Franklin discovering the wonders of electricity with his kite, and of Paul Revere riding his horse to warn of the British invasion. Tales of the West are also numerous. Explorers, pioneers, and gunfighters from Davy Crocket to Daniel Boone, Billy the Kid, and Wyatt Earp all make for stirring legends as well as Hollywood action films.

Among tall tales are the stories of the planting wizard Johnny Appleseed; the giant lumberjack Paul Bunyan and his enormous blue ox, Babe; and Pecos Bill, a cowboy who could lasso a tornado.

ENTERTAINMENT AND RECREATION

Television is perhaps the number one free-time activity for most Americans. As of 2001 there were 2.4 televisions per household, and in a given home the television is on for about eight hours per day. Viewing averages range from three hours daily for teens to five hours daily for women over 18. The average home has access to 75 channels; many people gear their schedules around their favorite shows—or make sure to videotape them. Movies are also extremely popular. In 1999 the average annual movie attendance rate was 5.2 times per individual.

Americans are also active, as athletics and physical exercise occupy many people's free time. Popular activities range from basketball to tennis, jogging, cycling, swimming, golf, hiking, surfing, and sailing. A visit to the neighborhood gym or fitness center is often as much a social outing as a physical one. It has been estimated that 40 percent of Americans play a sport at some level.

With more and more states instituting lotteries to help finance education, and with Native Americans allowed to have casinos on reservation land, Americans are increasingly turning to gambling as a free-time activity. Visits to theme parks, including Disneyland, Disney World, and the many Six Flags amusement parks, are also popular, as are vacations to the natural wonders of the United States, including Yellowstone National Park, the

Grand Canyon, and the beaches of the Atlantic and Pacific oceans.

Many Americans follow professional sports, watching games either on television or in person and tracking the progress of their favorite teams in newspapers or online.

ETIQUETTE

In general, Americans have a relaxed system of etiquette. Not as formal as Europeans, they employ outgoing physical gestures, such as the slap on the back, to show conviviality. A firm handshake is the typical greeting, and questions such as "What do you do?" are considered polite icebreakers, whereas in other countries inquiries about one's job might seem impolite. Also, Americans tend to use first names immediately upon meeting others. Social distance, on the other hand, is greater than in other countries. Dining is essentially done with one hand only: the knife is used to cut and then placed back on the dish or table, with the fork then shifted to the dominant hand. The female title "Ms." (used when a woman's marital status is either unknown or irrelevant) is typically used in formal or public situations, instead of either "Miss" (for the unmarried) or "Mrs." (for the married), unless the woman makes a preference clear.

FAMILY LIFE

Most first marriages are contracted when couples are in their 20s. The divorce rate for first marriages is high: Over 50 percent end in divorce. In 2003, the divorce rate was 3.8 per 1,000 population, while the marriage rate was 7.5 per 1,000. Marriage itself is going through a transformation in the United States. Many heterosexual couples simply live together without the legal benefits of marriage, while there is a substantial movement among not just gays and lesbians but the population at large to make homosexual marriage legal. As of 2005, only Massachusetts allowed same-sex marriage; some states have legalized "civil unions" for same-sex couples, while others have passed laws specifically prohibiting such unions, and the issue has sparked contentious social debate. Another social issue that remains divisive is abortion, which was legal as of 2005 but had the potential to be proscribed, pending future appointments to the Supreme Court. It is estimated that for every 100 live births there are 37 abortions.

Family size has steadily shrunk in the United States, though not as drastically as in some western European countries. The usual family size is three to four persons per household; the fertility rate in 2004 was 2.1 children per woman. Birth rates are higher among Hispanics than whites. Also, as in much of the rest of the developed world, women have left behind the stereotyped role of mother

and homemaker to take their place alongside men in the workplace and the professions. This has drastically altered the mechanics of family, with many children forced to engage in after-school activities, attend day care, or come home to an empty house (and remain unsupervised) until a parent arrives home from work.

PERSONAL APPEARANCE

Dress is generally more casual in the United States than in other developed countries, and, further, dress is more casual on the West Coast than on the East Coast. Business dress remains typically conservative: suits for both men and women. Casual dress includes jeans and T-shirts, which have become ubiquitous all over the world. There are some regional differences in attire: What might be termed the traditional western costume—boots, blue jeans, work shirt, and cowboy hat—is still worn by working men in many parts of the West. Tattoos and body piercings have become commonplace, and not just among youth. Many youths and men and some women wear baseball caps. Prominent logos are typical on clothing and sports shoes, and designer names serve as status symbols for many.

SPORTS

The most popular sports in the United States are American football (as opposed to soccer, which is referred to as football everywhere else in the world), basketball, and baseball. These three sports each have championships that command large television audiences. Football's Super Bowl attracts even nonfans to see the halftime shows as well as the commercials being aired for the first time during the game. The National Basketball Association's playoffs and Major League Baseball's World Series are also major sporting events.

Other popular spectator sports include ice hockey, golf, and tennis. Recently, the United States initiated a professional soccer league and has become more competitive in World Cup competition. Most sports are participatory as well as spectator sports, though participation drops sharply beyond the well-organized high school and college levels. Many enjoy hunting and fishing or activities such as bowling and billiards.

CHRONOLOGY

1945 President Franklin D. Roosevelt dies and is succeeded in office by Vice President Harry S. Truman; the United States drops the world's first atomic bombs on Hiroshima and Nagasaki; World War II ends; the United States becomes a charter member of the United Nations.

- 1947** Truman Doctrine pledges U.S. aid for nations threatened by Communism; the cold war between Western powers and the Soviet Union begins in earnest.
- 1948** Soviets blockade all ground traffic from West Germany to Berlin, and airlifts begin; Congress passes the Marshall Plan; Truman wins an upset victory over Republican candidate Thomas E. Dewey.
- 1949** The North Atlantic Treaty Organisation is formed; the Soviet Union ends its blockade of Berlin; Truman announces the Point Four aid program for less-developed countries.
- 1950** North Korea attacks South Korea, and the United States intervenes on behalf of South Korea; when U.S. forces advance into North Korea, China comes to the aid of North Korea, repelling U.S. forces; Senator Joseph McCarthy begins his attacks on government members for treason and for "coddling" Communism.
- 1951** Truman dismisses the army's General Douglas MacArthur, still in Korea, for proposing that the United States attack China.
- 1952** Dwight D. Eisenhower, of the Republican Party, is elected president, breaking a 20-year Democratic hold on the presidency.
- 1953** The Korean War ends, as an armistice is negotiated at the 38th parallel.
- 1954** U.S. Supreme Court rules that segregation in public schools is unconstitutional; the United States explodes the first hydrogen bomb; the Southeast Asia Treaty Organization (SEATO) is formed; the Central Intelligence Agency helps to overthrow Guatemala's leftist government.
- 1955** Middle East Treaty Organization is formed.
- 1957** The Soviet Union launches Sputnik into space, beginning the space race; the Eisenhower Doctrine commits the United States to assisting anti-Communist Middle East countries.
- 1959** Communist ideologue Fidel Castro captures power in Cuba.
- 1960** The Soviet Union shoots down U.S. U-2 spy plane; Democrat John F. Kennedy wins the White House in a close race with Richard M. Nixon, a Republican.
- 1961** Kennedy launches the abortive Bay of Pigs invasion of Cuba; Kennedy proposes the Alliance for Progress for Latin America; the Peace Corps begins operations; Soviets build the Berlin Wall.
- 1962** In the Cuban missile crisis, the United States blockades Cuba and compels Soviets to withdraw their missiles.
- 1963** The Atomic Test-Ban Treaty is signed; Kennedy is assassinated, and Vice President Lyndon B. Johnson succeeds to the presidency.

- 1964** Congress passes the Gulf of Tonkin Resolution, committing the United States to the defense of South Vietnam; Congress passes the Civil Rights Act.
- 1965** The United States begins bombing North Vietnam and sends U.S. land forces to South Vietnam; President Johnson is reelected.
- 1968** Civil rights leader Martin Luther King Jr. is assassinated; Senator Robert F. Kennedy is assassinated; Richard M. Nixon is elected president over Democratic candidate Hubert H. Humphrey; the Nuclear Nonproliferation Treaty is signed.
- 1969** U.S. astronaut Neil Armstrong lands on the moon.
- 1970** The Senate repeals the Gulf of Tonkin resolution; the U.S. invasion of Cambodia sparks widespread protests, which intensify after National Guard soldiers kill four students at Kent State University, in Ohio.
- 1972** President Nixon visits Beijing, beginning a normalization of relations with China after more than two decades of hostility; Nixon wins reelection in a landslide over George S. McGovern; police arrest five men who had broken into the Democratic Party's national headquarters at the Watergate complex in Washington, D.C.
- 1973** Belligerents in Vietnam sign a peace agreement; the United States and China informally resume diplomatic relations; Organization of Petroleum Exporting Countries quadruples oil prices; over Nixon's veto, Congress passes the War Powers Resolution, which limits presidential authority to send troops into combat without congressional consent; Vice President Spiro T. Agnew resigns under threat of indictment and is replaced by Gerald R. Ford, the first vice president to be chosen under the 1968 Presidential Succession Act.
- 1974** As the Watergate affair becomes a major national crisis, Nixon resigns office in disgrace; Ford becomes president, with Nelson A. Rockefeller as vice president.
- 1975** South Vietnam collapses and a unified Vietnam is established; Cambodia falls to the Khmer Rouge.
- 1976** Democrat Jimmy Carter is elected president.
- 1977** President Carter signs Panama Canal treaties, promising to relinquish control of the Canal Zone in 2000 and reserving the right to intervene to protect the canal's neutrality.
- 1978** The former enemies Israel and Egypt reach a "framework for peace" at Camp David; the shah is overthrown in Iran; a Soviet-inspired coup occurs in Afghanistan.
- 1979** The United States officially recognizes the People's Republic of China and breaks off diplomatic relations with Taiwan; in retaliation against U.S. actions in support of the shah, Islamic militants seize the U.S. embassy in Tehran, taking 53 Americans hostage.
- 1980** Protesting Soviet occupation of Afghanistan, the United States embargoes shipments of feed grains and high technology to the Soviet Union and boycotts the Moscow Summer Olympics; Ronald Reagan, of the Republican Party, defeats Jimmy Carter in the presidential election.
- 1981** U.S. hostages in Tehran are freed moments after Reagan takes office; Reagan announces a plan to rebuild U.S. military power.
- 1983** Terrorists in Beirut kill 241 U.S. Marines; U.S. forces invade Grenada and depose its Marxist government.
- 1984** Reagan is reelected with the second-largest electoral college margin in U.S. history; U.S. Marines are withdrawn from Lebanon; Congress cuts off military assistance to Nicaraguan contras.
- 1987** Congress holds hearings on the Iran-Contra scandal, exposing White House involvement in illegal shipments of arms to Iran and of arms and money to the Nicaraguan contra guerrillas.
- 1988** Vice President George H. W. Bush is elected president.
- 1991** The Soviet Union collapses.
- 1991** Bush assembles a UN force to expel Iraqi forces from Kuwait in the Persian Gulf War.
- 1992** The United States and Russia sign a treaty formally ending the cold war; Bill Clinton, of the Democratic Party, is elected president.
- 1994** Congress narrowly passes a bill to cut \$500 billion from the deficit over five years; independent counsel investigates whether Clinton committed any wrongdoing by investing in Whitewater, a real-estate development, when he was governor of Arkansas; in legislative elections, the Republican Party wins control of both houses of Congress.
- 1996** Two partial federal government shutdowns take place after Clinton and Congress fail to agree on a budget; welfare-reform and minimum-wage-increase bills are approved; federal spending remains within budgeted projections for the first time since 1969; Clinton is reelected.
- 1998** The Whitewater investigation concludes without producing charges against Clinton; independent counsel charges that Clinton lied under oath about an extramarital affair; voting along party lines, Congress impeaches Clinton, making him the first elected president in U.S. history to be

2530 United States

- impeached; Republicans lose seats in legislative elections.
- 2000** In February, the economy surpasses its previous record for the longest uninterrupted economic expansion in U.S. history; after a close race and confusion over the proper counting of votes in the state of Florida, Republican candidate George W. Bush, son of former president George H. W. Bush, becomes president.
- 2001** In response to the terrorist attacks on New York City and Washington, D.C., the United States leads a military campaign in Afghanistan, as backed by an international coalition; Enron, a giant energy company, is declared bankrupt in December after massive false accounting is revealed.
- 2002** A second major round of tax cuts is pushed through Congress, despite increased military spending requirements for what the Bush administration terms the “war on terror”; Department of Homeland Security is signed into law in November.
- 2003** Space shuttle *Columbia* breaks up upon reentering earth’s atmosphere, killing all seven astronauts aboard; the United States and several allies, including the United Kingdom, invade Iraq, accusing the Iraqi leader, Saddam Hussein, of stockpiling weapons of mass destruction; no such weapons are found after the conflict ends; insurgency efforts, however, continue; in August, the biggest power blackout in North American history hits cities in the north and east.
- 2004** Saddam Hussein is captured in Iraq, while weapons of mass destruction remain undiscovered; a Senate report declares that the United States and its allies went to war in Iraq on “flawed” information; Bush wins the presidential election with 51 percent of the popular vote.
- 2005** President Bush is sworn into his second term of office; he proposes an overhaul of Social Security to avert a predicted shortfall in coming decades.
More than 1,600 people die and the city of New Orleans is flooded when Hurricane Katrina, one of the most destructive storms in U.S. history, sweeps through golf coast states.

URUGUAY

Basic Fact Sheet

OFFICIAL NAME

Eastern Republic of Uruguay (República Oriental del Uruguay)

ABBREVIATION

UY

CAPITAL

Montevideo

HEAD OF STATE & HEAD OF GOVERNMENT

President Tabaré Ramón Vázquez Rosas (from 2005)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

3,415,920 (2005)

AREA

176,220 sq km (68,039 sq mi)

ETHNIC MAJORITY

Europeans of Spanish or Italian descent

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Uruguayan peso

NATIONAL FLAG

Nine horizontal stripes of alternating color, five white and four blue, with the Sun of May, a golden sun with 16 rays, of

which eight are wavy and eight straight, in a white canton on the upper hoist side

NATIONAL EMBLEM

A quartered elliptical badge on which are displayed, clockwise from the upper left, golden scales of justice on a blue field; the green cerro, or mountain island of Montevideo, over a blue-and-white wavy sea, with a white sky; a brown longhorn bull on a blue field; and a golden stallion on a white field. The badge is flanked by olive and laurel branches tied at the base with a light blue ribbon. A golden Sun of May rises over the top.

NATIONAL ANTHEM

“Orientales, la Patria o la Tumba” (Easterners, Our Country or Death)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), January 6 (Epiphany), April 19 (Landing of the 33 Patriots), May 1 (Labor Day), May 18 (Battle of Las Piedras), June 19 (Birthday of General Artigas), July 18 (Constitution Day), August 25 (National Day, Independence Day), October 12 (Discovery of America Day), All Souls’ Day (November 2), December 8 (Blessing of the Waters), December 25 (Christmas), also Carnival Week (February/March) and Tourist Week (Holy Week)

DATE OF INDEPENDENCE

August 25, 1828

DATE OF CONSTITUTION

November 27, 1966; effective February 1967; suspended June 27, 1973; constitutional reforms approved by plebiscite November 26, 1989, and January 7, 1997

GEOGRAPHICAL FEATURES

Uruguay is in the southeastern part of the South American continent, east of the Uruguay River, with a total land area of 176,220 sq km (68,039 sq mi). Its Atlantic coastline stretches 660 km (410 mi). Uruguay shares its international land boundary of 1,564 km (972 mi) with two neighbors: Argentina and Brazil.

Southern Uruguay is an extension of the Argentine pampas and northern Uruguay an extension of the basaltic plateau of Brazil. In between, the country consists of a

rolling plateau whose most prominent features are ranges of low hills known as *cuchillas*, none of which is over 500 m (1,600 ft). The two major *cuchillas* are Cuchilla Grande and Cuchilla de Haedo.

Uruguay can claim only partial title to the river that bears its name, while the Río de la Plata, to the southwest, is actually an estuary of the Atlantic Ocean (and is considered by many nations as an international waterway). The longest of the internal rivers is the Río Negro, which rises in Brazil and bisects the country as it flows southward to join the Río Uruguay. The Río Negro’s main tributary is

Uruguay

the Río Yi, which rises in the Cuchilla Grande. Among the rivers flowing east is the Río Cebollatí, which flows into the country's largest lake, Laguna Merín.

CLIMATE AND WEATHER

Weather conditions in Uruguay are uniformly temperate, but the absence of high relief causes some variations. The average temperature in June, the coolest month, is about 10°C (50°F), while the average in January, the warmest month, is 23°C (74°F). Rainfall, evenly distributed throughout the year, averages 1,090 mm (36 in), varying from 910 mm (30 in) in Punta del Este to 1,270 mm (50 in) in Artigas, the northernmost department.

The prevailing wind systems are the *zonda*, a hot wind blowing from the north in summer, and the *pampero*, a chilly wind blowing from the south in the winter.

January: 74°F

Average Rainfall: 36 in

Punta del Este: 30 in

Artigas: 50 in

FLORA AND FAUNA

Basically an extension of the pampas, or prairies, of Argentina, much of the landmass of Uruguay is covered in tall grass. However, this open grazing land has gradually been lost to enclosed pasturage, with vegetation cultivated rather than wild. The very little forestland that exists is found mainly along rivers and streams; alder and ombú, a rather short and treelike plant, are the major flora of these forests. Other tree species include acacia, pine, poplar, willow, eucalyptus, carob, and quebracho, a hardwood. Palm trees are also indigenous. Smaller plants include myrtle, rosemary, verbena, and myrtle.

Much of the eastern region of the country is void of large animal life. Pumas and jaguars can be found in remote locations. Animals that are more widespread include armadillos, foxes, deer, otters, nutrias, wildcats, and numerous types of rodents. Venomous spiders are relatively common, and some venomous snakes are also present. Bird life is particularly varied, including the ovenbird, partridge, crow, quail, hummingbird, and cardinal on the plains. At lagoons can be found birds such as the swan, royal duck, and *aveztruz*, a small ostrich. Cranes, white herons, and flamingos are also relatively common. Fish species include the pompano and salmon.

ETHNIC COMPOSITION

The Uruguayan population is predominantly European, as fed by successive waves of immigrants from almost all European countries in the 19th century. Criollos, descendants of Spanish settlers generally found in the northern interior, constitute the core ethnic group. There is very little to distinguish criollos from later immigrants, particularly Italians, who form the next most prevalent subgroup in the population. Approximately 54 percent of the European majority is of Spanish origin, while 22 percent is of Italian origin. Other Europeans represented in the population are French, German, British, and Sephardic and Ashkenazic Jews. Small colonies of Slavs, Armenians, Lebanese, and Syrians also contribute to the ethnic variety.

Through intermarriage and deliberate extermination, the pure-blooded Amerindian community has become practically extinct. Some of their ethnic characteristics survive in the mestizo population, which represents about 8 percent of the total population and is concentrated in the northern interior. The mestizos are descendants of the nomadic Charrúa and Chana tribes.

During the late 18th and 19th centuries blacks constituted as much as 20 percent of the population, but their numbers have dwindled. By the end of the 20th century blacks, including mulattoes, constituted some 4 percent of the population.

LANGUAGES

Spanish, the official language, is spoken by virtually all Uruguayans. The Spanish spoken in Uruguay is almost identical to that of Buenos Aires, called *porteño* or Río Platense. The accent is characterized by the linguistic trait known as *yeísmo*, in which vowels are thickened, a marked deviation from classical Spanish. The language also includes words and idioms derived or borrowed

from the many immigrant communities as well as from Quechua and Guaraní. Near the northern Brazilian border, over 70 percent of the inhabitants are bilingual in Spanish and Portuguese, and in some border towns Portuguese is spoken exclusively. This bilingualism has fostered a border dialect called *dialecto fronterizo*, in which Portuguese and Spanish elements are combined.

English is the most popular second language, having displaced French, which was the traditional language of the elite before World War II.

RELIGIONS

Uruguay is perhaps the most secularized nation in Latin America as a result of the unremitting anticlerical efforts of the Colorado Party, which dominated Uruguayan politics for nearly a century. Church and state were separated by the constitution of 1919, culminating the campaign for secularization waged by the Uruguayan social reformer and president José Batlle y Ordóñez. While the church was allowed to retain its ecclesiastical properties, religious instruction is not permitted in public schools, divorce is legal, and civil marriages are compulsory.

Nevertheless, Roman Catholicism remains the national religion, and the imprint of religious beliefs remains strong, especially in the interior. The ratio of priests to laity is high compared to that in other Latin American countries, but over half of all priests live in Montevideo, and many of the interior rural settlements may be visited by priests only once or twice yearly.

About 2 percent of the population is Protestant, as divided among nearly 25 different sects and denominations. Protestant faiths also have high minister-to-laity ratios, and nearly half of adherents attend church on Sundays. Although Protestant missionary efforts suffer from associations with foreign countries, Protestantism has developed significant appeal among the middle and lower classes.

Since the Second Vatican Council, relations between Catholics and Protestants have been harmonious. Jews, estimated to number 34,000, constitute the second-largest religious minority.

HISTORICAL BACKGROUND

The earliest inhabitants of Uruguay were the Charrúa and Chana Indians, estimated to number between 5,000 and 10,000 upon the arrival of the Europeans. The earliest

European settlers were Jesuit and Franciscan missionaries. From 1680, when the Portuguese founded Colonia de Sacramento as a rival to Buenos Aires on the eastern bank of the Río de la Plata, to 1828, when Uruguay achieved independence, the country was a battleground between Argentina and Brazil. Uruguay eventually became part of the new viceroyalty of Buenos Aires, established in 1776. In 1815 José Gervasio Artigas declared Uruguay's independence, but the next year the country was invaded by Brazil. After a four-year struggle Uruguay was annexed to Brazil as Cisplatine Province. In 1825 Juan Antonio Lavalleja secretly returned to Uruguay from Argentina at the head of the so-called 33 Immortals and resumed the struggle for independence. That struggle ended in 1828 with a peace treaty in which Uruguay's independence was acknowledged by both Argentina and Brazil.

Uruguay has a long democratic tradition and one of the oldest political party systems in the world; the Colorado and Blanco parties trace their origins to the early 19th century. For nearly a century the Colorados held power, with the Blancos in opposition. The foundations of modern Uruguay were laid during the presidencies of José Batlle y Ordóñez (1903–07, 1911–15), who initiated an extensive welfare program and the development of a mixed economy. The Colorados lost power in 1958 but regained control in 1966.

Beginning in the 1950s the economy entered a period of decline from which it had yet to recover as of the early 2000s. Prolonged inflation, economic stagnation, and political corruption contributed to the rise in the 1960s of a leftist urban terrorist group known as the Tupamaros. The army was used to combat the Tupamaros, and by 1972 they had been neutralized. Disgusted with the inability of civilian governments to deal with Uruguay's problems, the military began to actively intervene in politics for the first time in the 20th century: In 1973 the legislature was dissolved and all leftist political parties outlawed. In 1975 all remaining parties were proscribed, and in 1976 the president was deposed and virtually all prominent political figures were stripped of their political rights for 15 years. Repression was severe, and the torture of political prisoners was common.

In an attempt to institutionalize and legitimize its rule, the military proposed a new constitution in 1980 that would give it a legal veto over all major public policies. The ban on political activity was partially lifted, and the document was presented for ratification in a national plebiscite in November 1980. Despite government harassment, elements of long-suppressed political parties defeated the measure. Stunned by the defeat, the military retained control of the government but began negotiations with major parties to allow the gradual liberalization of the political process. A transitional president was installed in 1981, and legislative and presidential voting was held in November 1984. The moderate Colorado candidate Julio María Sanguinetti Coirolo took office in 1985. Among his first acts were the

release of all political prisoners and the granting of amnesty to former military and police officials accused of human rights violations, in an effort to restore national unity.

The 1989 presidential and government elections resulted in a victory for the Blanco Party—its first since 1962. The party did not achieve a majority in congress, however, and president-elect Luis Alberto Lacalle de Herrera was forced to forge an agreement with the Colorado Party, receiving support for economic reform in return for the appointment of four Colorado members to the Council of Ministers.

In 1994 the Colorado Party returned to power under Julio María Sanguinetti. Given the narrow legislative majority held by his party, Sanguinetti installed a coalition government. In November 1999 Jorge Batlle Ibañez, also of the Colorado Party, was elected president, though he faced a strong challenge from the Broad Front's Tabaré Vázquez, the former leftist mayor of Montevideo.

The economy was a major concern during the term of Batlle Ibañez. From the late 1990s the country's economy had been particularly set back by crises in the economies of its major trading partners, Brazil and Argentina. Several years of recession turned into a severe crisis in 2002, and a general strike was called to protest government policies. In 2003 Batlle Ibañez announced that the government would compensate the families of victims of the 1976–85 military dictatorship as well as the families of the guerrilla groups that opposed it.

In 2004 Uruguay's economic difficulties played a part in Tabaré Vázquez's emerging victorious in the presidential election, with a runoff proving unnecessary. Vázquez became the first leftist president in Uruguayan history, and his Broad Front coalition won majorities in both legislative houses. Shortly after being sworn in in 2005, Vázquez signed an energy-cooperation deal with his Venezuelan counterpart, Hugo Chavez; renewed diplomatic relations with Cuba, which had been severed in 2002; completed agreements on human rights with Argentine leader Nestor Kirchner; and held talks with Brazilian President Luiz Inácio Lula da Silva. Uruguay became the fifth Latin American nation to move to the left in recent years.

LIST OF MODERN RULERS

President

1967	Óscar Diego Gestido Pose
1967–72	Jorge Pacheco Areco
1972–76	Juan María Bordaberry Aroceno
1976	Pedro Alberto Demicheli Lizaso (acting)
1976–81	Aparicio Méndez Manfredini
1981–85	Gregorio Conrado Álvarez Armellino
1985	Rafael José Addiego Bruno (acting)
1985–90	Julio María Sanguinetti Coirolo
1990–95	Luis Alberto Lacalle de Herrera
1995–2000	Julio María Sanguinetti Coirolo

2000–05 Jorge Luis Batlle Ibañez
2005– Tabaré Ramón Vázquez Rosas

CONSTITUTION

Since independence Uruguay has had five constitutions: those of 1830, 1917, 1934, 1952, and 1967. While the presidency remained in place, the country was governed by decree by the senior officers of the armed forces from 1973 through 1984. In 1985 the country returned to a presidentially directed, unitary state, with a bicameral legislature.

Executive power is vested in the president, who is assisted by a vice president and an appointed cabinet of 12 members. The president is elected by universal suffrage for a term of five years.

Legislative power is vested in a bicameral congress. Suffrage is universal over age 18, and the government maintains the National Civic Register, listing all eligible voters.

In accordance with a 1984 agreement between the government and the military, the commanders of the army, navy, and air force participate in the advisory National Defense Council, which also includes the president, vice president, and defense, foreign, and interior ministers. The council's actions are subject to the approval of the legislature. Other provisions of the 1984 act require the president to appoint military commanders from a list presented by the armed forces, limit the scope of military justice to crimes committed by members of the armed forces, and preclude the declaration of a state of siege without legislative approval.

PARLIAMENT

Under the constitution of 1967 and reforms of 1989 and 1997, the congress, called the General Assembly, consists of a 30-member Chamber of Senators and a 99-member Chamber of Representatives.

Both senators and representatives are directly elected for five-year terms. The senators are elected through a system of proportional representation. Elections are conducted under the supervision of the Electoral Court, which consists of nine members, five of whom are designated by the General Assembly by a two-thirds majority, four by the General Assembly as party representatives.

The functions of the General Assembly include the election of the members of the Supreme Court and the Electoral Court.

POLITICAL PARTIES

Uruguay has a vigorous multiparty political system that has been dominated by two traditional parties: the radical, anticlerical, liberal Colorado Party and the relatively

conservative Blanco, or National, Party. (Both parties derive their names from the colors of their flags in the 1836 civil war.) Neither the Colorados nor Blancos are disciplined political groups in the conventional sense but rather are broad alliances, called *lemas*, of factions called *sublemas*. Each *sublema* has its own leaders and organizational structure but presents a united front with other *sublemas* at election times. The Colorado Party was in power from 1865 to 1958 and is identified with the social-welfare system, secularism, and urban cosmopolitanism that distinguish modern Uruguay.

The Blanco Party represents conservative, rural, and clerical elements and also favors a more isolationist foreign policy. For the greater part of the 20th century the Blanco Party functioned as a loyal opposition. It held power only briefly, from 1958 to 1962 and from 1989 to 1994.

The Broad Front, a coalition of left and center-left parties, was founded in 1971. (It regrouped as the Progressive Encounter Coalition in 1994 but reassumed its original name in the late 1990s.) In the 2004 elections the Broad Front swept the presidency and both houses of the General Assembly, taking 50.7 percent in the initial presidential election (making a runoff unnecessary). The Broad Front won 52 seats in the Chamber of Representatives and 16 in the Chamber of Senators. The Colorado Party won 10 representatives' seats and three senators' seats, while the Blancos took 36 representatives' seats and 11 senators' seats. The Independent Party won one representative's seat. The next elections are scheduled for 2009.

LOCAL GOVERNMENT

For purposes of local government Uruguay is divided into 19 departments.

Under the constitution of 1967 each department is administered by an *intendente*, who serves as the mayor of the capital city of the department and governor of the rest of the territory. *Intendentes* are elected by direct popular vote for five-year terms and can be reelected only once. Each department has a unicameral legislature, the departmental junta, with 31 members elected for four-year terms. Towns outside departmental capitals have local five-member juntas.

LEGAL SYSTEM

The Uruguayan legal system is based on Spanish civil law. The judiciary is headed by the Supreme Court, which has general administrative control over the entire judicial system and the power to declare laws unconstitutional. Under the constitution the Supreme Court has five judges appointed for 10-year terms by a two-thirds vote among

the full membership of the General Assembly. Judges are eligible for reelection only after five-year intervals.

Under the Supreme Court are four appellate courts, three for civil cases and one for criminal cases, all in Montevideo and each with three judges. These courts hear appeals from a series of lawyer-courts, or *juzgados letrados*, presided over by lawyer-judges, or *jueces letrados*. These include 36 courts sitting in Montevideo and departmental courts in the capitals of each of the 19 departments. The Montevideo courts include 18 courts of first instance, three financial courts, five criminal instruction courts, six crime courts, three juvenile courts, and one customs court. Each of the 224 judicial divisions of the country has a justice-of-the-peace court.

Full autonomy within the judiciary returned with the election of the Sanguinetti government, when military officers who had been appointed to the Supreme Court or the higher appellate courts retired from their posts. According to the constitution of 1967, all trials shall be public, and trials by commission or in absentia are prohibited. Each trial must be opened by a public statement of the charge by a public prosecutor or complaining witness. Uruguayan legal tradition calls for judges, without the use of juries, to hand down decisions on the basis of written summaries not available to the public.

The judiciary is relatively independent, but escalating crime, particularly street violence and organized crime, has led to severe backlogs. Suspects under arrest often spend more time in jail awaiting trial than they would were they to be convicted and serve the maximum sentence for their crime.

HUMAN RIGHTS

In terms of civil and political rights, Uruguay is classified as a free country.

Uruguay's political transition in the mid-1980s brought with it dramatic improvements in the area of human rights. Accusations of political killings, torture, and disappearances ceased. Restrictive laws and acts passed under military rule were repealed, and the constitution of 1967, which guarantees habeas corpus and freedom from arbitrary arrest, was reinstated. Congress set up commissions to handle issues of restitution for those who had lost their jobs because of political activities and to investigate violations of human rights that occurred during the military regime. In general, Uruguayans enjoyed a freedom and openness in political life that they had not experienced since the late 1960s, and they responded with high levels of civic consciousness and political involvement. The Transparency Law, which went into effect in 1999, criminalizes a broad range of potential abuses of power by governmental officeholders, including the laundering of funds related to public corruption cases.

FOREIGN POLICY

Uruguay is a founding member of the Organization of American States, the Latin American Free Trade Association, and other hemispheric organizations. In 1991 Uruguay became a full member of Mercosur, the Southern Cone Common Market, along with its neighbors Brazil and Argentina. Disputes with Brazil over regional free trade and with Argentina over specific human rights issues festering since the 1970s dominated Uruguayan political debate in 2003.

DEFENSE

The Uruguayan defense structure is headed by the president as commander in chief.

There is no conscription. Military manpower is obtained through the voluntary enlistment of males between the ages of 18 and 45, who serve for one or two years.

Since the 1870s the Uruguayan armed forces have not participated in any military action. Their present strength is designed only for domestic peacekeeping, as the nation does not face any foreseeable external threats.

Uruguay's defense production is limited to naval supplies. Defense spending in 2004 was \$258 million, or 2 percent of gross domestic product (GDP). Troop strength in 2003 was around 25,000 active personnel.

ECONOMY

Uruguay's economy is characterized by an export-oriented agricultural sector, a well-educated workforce, relatively even income distribution, and high levels of social spending. After averaging growth of 5 percent annually in 1996–98, in 1999–2000 the economy suffered from lower demand in Argentina and Brazil, which together account for over one-quarter of Uruguay's exports. Despite the severity of the trade shocks and ensuing recession, Uruguay's financial indicators remained more stable than those of its neighbors, reflecting its solid reputation among investors and its investment-grade sovereign bond rating—one of only two in Latin America. Challenges for the government of President Jorge Batlle Ibañez included expanding trade ties beyond

Mercosur trade partners and bolstering competitiveness by increasing labor market flexibility and reducing the costs of public services. By 2002, with cumulative GDP having dropped 20 percent in the previous four years, the economic downturn had turned into a severe crisis; banks were closed for a time, and intervention by the World Bank and the International Monetary Fund (IMF) was necessary to halt a major run on the nation's currency.

The economy grew by about 10 percent in 2004 as a result of high commodity prices for Uruguayan exports, the weakness of the dollar against the euro, growth in the region, low international interest rates, and greater export competitiveness. The new leftist president, Tabaré Vázquez, immediately proposed new welfare measures and shored up relations with other left-leaning neighboring countries upon taking office in 2005.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Uruguay 46th out of 177 countries in terms of life expectancy, education, and standard of living. The average Uruguayan's life expectancy in 2005 was 76.1 years, and literacy stood at 98 percent in 2003. The nation's percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002 was the 39th highest in the world, at 85 percent. Per capita GDP was \$14,500 in 2004.

As of 2000, 92 percent of Uruguay's population lived in urban areas. Montevideo is the largest city and the capital; its 2004 population was about 1.27 million. There, high-rise apartments dominate the skyline, though many people live in small houses and squatter settlements around the outskirts.

Agriculture is the main source of employment for those living in the country, mostly on large-scale farms called *estancias*. The gauchos, or cowboys who tend the herds of cattle, tend to live in simple communal housing on the farms where they work. Others have simple lodging in the countryside, mostly made of adobe. Though income distribution and the disparity between rich and poor is not as extreme in Uruguay as it is elsewhere in South America, there are still large disparities between the urban and rural populations.

HEALTH

Uruguay is known as having become the first "welfare state" in Latin America, with well-organized health, social security, and public education. With declining revenues, the largely publicly funded health-care system has added a significant private aspect in the form of *mutuales*, or private health plans. Life expectancy is high, at 76.1 years in 2005, and the infant mortality rate is relatively low for the region, at 12 per 1,000 live births in 2005. The ratio of doctors to the population is good, at 365 per 100,000 in 2004. In 2002, 98 percent of the population had access to safe drinking water and 94 percent had adequate sanitation.

The major causes of death are heart diseases, cancer, and digestive disorders. Degenerative diseases rank higher as a cause of death in Uruguay than in most other Latin American countries. Tuberculosis, once a leading cause of death, has almost been eradicated. On the other hand, about one-third of men smoke, leading to respiratory and heart problems as well as increased rates of cancer. The 2001 HIV/AIDS prevalence rate was 0.3 percent, with fewer than 500 deaths from the disease. In 2002, 99 percent of children under one were immunized for tuberculosis, 91 percent for measles. Total expenditures on health care are high, at 10 percent of GDP in 2003.

FOOD AND NUTRITION

Meat is not only an export staple but also a dietary staple. Beef is the primary meat, with the typical beef platter, *parrillada*, the national dish. Grilled steak is called *churrasco*. The steak sandwich, *chivito* (topped with bacon, eggs, cheese, tomatoes and lettuce), is also popular, as are *olímpicos* (club sandwiches) and *húngaros* (spicy sausages wrapped in hot dog rolls). Barbecuing or grilling is a favorite mode of preparation. Pastas are eaten, a signature of the Italians who form part of the ethnic mix. Stews are also popular.

Drinks include black tea and herb tea, or yerba maté, as well as wine and beer. *Clericó* is a mixture of white wine and fruit juice, and *medio y medio* is part sparkling wine and part white wine.

Undernourishment is not a concern in the country, although the heavy reliance on red meat is problematic, as such a diet has been associated with higher rates of certain health problems, including heart disease.

Food and Nutrition

Undernourished % of total population:	3.6
Daily Available Calories per capita kcal:	2,850

Amount of Fruits and Vegetables Available per person per year kg:	133.3

STATUS OF WOMEN

Women in Uruguay are accorded equality before the law. They attend the University of the Republic and pursue professional careers in large numbers. Women have served in the cabinet, on the Supreme Court, and in the diplomatic corps, including at the ambassadorial level. Some barriers to equality still exist as a result of traditional social patterns and restricted employment opportunities. Pay is not always equal for men and women,

2540 Uruguay

especially for lesser-skilled workers in the private sector. Uruguay is a signatory to the 1948 InterAmerican Convention on Political Rights for Women but has not yet acceded to the 1953 UN Convention on Political Rights of Women. Violence against women, much of it domestic, remains a problem.

Women

Women's Share of Wage Employment Non-agricultural %: 46.3

WORK

In 2004 the Uruguayan labor force numbered 1.56 million, 14 percent of whom were employed in agriculture, raising rice, wheat, corn, barley, and livestock. Another 16 percent were employed in industries such as food processing, electrical machinery, transportation equipment, petroleum products, textiles, chemicals, and beverages. The majority of workers, 70 percent, were employed in the service sector, which contributed 64.8 percent of GDP in 2004. The 2004 unemployment rate was 13 percent.

The constitution allows for the rights of collective bargaining and striking. Unions are well organized and politically powerful. Strikes are sometimes marked by violent clashes and sabotage. The minimum age of employment is 15 and is generally recognized, except in the informal sector—which is not an inconsiderable part of the workforce, as estimated by some to be 40 percent of the total employed. The standard workweek is 48 hours in industry and 44 in commerce. Health and safety conditions in regulated industries and businesses are generally observed. The minimum wage in 2004 was \$49 per month.

EDUCATION

Education is free, universal, and compulsory for nine years, from ages six to 15. The school year runs from March to late November or early December. The medium of instruction is Spanish throughout.

Schooling lasts for 12 years, as divided into a primary cycle of six years, a general secondary cycle of three years, and a university-preparatory cycle of three years. Terminal six-year primary schooling is offered only in a few rural schools, which are in most cases simple one-room facilities where all age groups are taught simultaneously. Dropping out and grade repetition are frequent in the lower grades. Secondary education is administered by the National Council of Secondary Education and is offered in three types of schools: *liceos*, or general secondary schools, offering academic courses leading to the *bachillerato* certificate; pilot secondary schools, with five-year curricula generally patterned on that of the United States, where the fifth year involves specialization in a technical or vocational field; and technical and vocational secondary schools.

Technical and vocational education is centralized under an autonomous agency called the Labor University. Labor University programs are generally two or three years in duration, and completion of these programs does not lead to true university enrollment. There is also a small church-run secondary vocational system.

Public education is financed by the national budget, but in each department educational administration is vested in the *governor* or *intendente*. Each level of education is under the immediate control of one of four autonomous agencies: the National Council of Primary and Normal Instruction, the National Council on Secondary Education, the National Council of Vocational and Technical Training, and the University of the Republic.

Higher education is provided free by the University of the Republic at Montevideo. Catholic University is a private institution of higher education. In 2002 net primary enrollment was 90 percent, net secondary enrollment 73 percent. Public expenditures on education in 2002 totaled 2.6 percent of GDP.

SCIENCE AND TECHNOLOGY

Much of the research and development conducted in Uruguay concerns agriculture. The Ministerio de Ganadería, Agricultura y Pesca administers research in animal health, fisheries, crops, wool, and sheep, while the University of the Republic focuses on crops and livestock; the university also has faculties in science, engineering, medicine, and chemistry. The UN Educational, Scientific, and Cultural Organization Regional Office for Science and Technology in Latin America and the Caribbean is located in Montevideo, as are societies such as the Pediatrics Society, the Association of Uruguayan Engineers, and the Chemical and Pharmaceutical Association. The Institute of Higher Studies and the Higher Institute of Electrical Engineering, Electronics, and Computing offer other technical courses. Between 1994 and 1997 science and engineering students accounted for 29 percent of college and university enrollments. As of 2002 there were 370 scientific researchers per million people.

 Patent Applications by Residents: 44

MEDIA

Five major daily newspapers are published in Uruguay: *El país*, *El observador*, *La república*, *El telegrafico*, and *Ultimas noticias*. There is no national news agency.

Broadcasting is partly private and partly public. The government service, SODRE, is on the air for 15 hours a day. Over 75 percent of programming is locally produced. Radio broadcasts are devoted to information, culture, religion, commercials, and entertainment. The state-run sound broadcasting system is one of the most powerful in South America.

Television, introduced in 1956, now reaches nearly 90 percent of the population. There are three networks—SAETA, Teledoce, and the government-owned SODRE—with four commercial stations in the capital, each broadcasting for 15 hours daily, and 16 stations in the provincial capitals. As of 2005 the country was served by over 100 radio stations and 20 television stations.

Freedom of speech and the press are guaranteed by the constitution but are subject to qualifications with regard to inciting violence or “insulting the nation.” Reporters without Borders, an international media watchdog group, ranked Uruguay 45th out of 167 nations in its 2004 press freedom survey.

In 2002 there were 652,000 cellular telephone users and 400,000 Internet users.

CULTURE

Uruguay has a long tradition of music, literature, and visual arts. Though it originated in Argentina, the musical and dance style known as the tango also has deep roots in Uruguay. One of the most famous tangos, *La Cumparsita*, from 1917, was written by the Uruguayan composer Gerardo Matos Rodríguez. Another popular musical form is *candombe*, a blend of African and South American rhythms that inspires carnival dancing. In the *payada*, a song contest, two singers accompanied by guitars take turns improvising lyrics to the same melody.

José Enrique Rodó, perhaps the nation's best-known writer, was a modernist whose 1900 novel *Ariel* still inspires young writers with its advocacy of upholding spiritual over materialistic values and resisting cultural dominance by Europe and the United States. Florencio Sánchez was a playwright from the turn of the 20th century whose plays dealing with social problems are still performed. More contemporary is the work of Mauricio Rosencof, a former Tupamaros member tortured by the government. One of the best-known contemporary writers is Eduardo H. Galeano, author of the 1980s trilogy *Memory of Fire*.

In the visual arts, the 19th-century painter Juan Manuel Blanes, whose canvasses depicted historical scenes, was the first Uruguayan to find a widespread audience. The work of Pedro Figari, a painter of rural scenes, has received international attention; another well-known contemporary painter is Leandro Silva Delgado. Uruguay has a growing film industry, with films such as 2000's *Days with Ana*, by Marcelo Bertalmio, reaching an international audience. The annual International Film Festival of Uruguay is held in Montevideo.

Montevideo is home to major cultural institutions such as the National Library and museums of art and history. The capital city also hosts a National Theater, two symphony orchestras, and a ballet.

FOLKLORE AND MYTHOLOGY

Legends and proverbs make up most of Uruguay's tradition of folklore. Prominent among legends is that of the naming of the country's capital city. According to the story, a sailor serving Ferdinand Magellan on his first visit to the region in 1520 saw a hill on the horizon and shouted out, "*Monte vide eu,*" or, "I see a hill." The name, transposed to Montevideo, stuck.

Popular Uruguayan proverbs include, "Words fly, writing endures," and, similarly, "The wind carries away words and feathers." Other proverbs are "The cats want shoes and the mice want trousers," (that is, people want what they cannot have), "Weeds never die out," and "Singing drives troubles away."

ENTERTAINMENT AND RECREATION

Uruguay has hundreds of miles of pristine beaches, and many urban Uruguayans travel to the coast on weekends to relax after the week's work. Camping is also popular.

As with other countries around the world, television has become one of the mainstays of entertainment. Movies are well attended, and dining out with friends over a leisurely meal is a typical form of entertainment. Montevideo in particular has a nightlife as varied as any Western capital, with clubs, restaurants, cinemas, concert halls, and theaters.

The most important festival of the year is carnival, held the week before Lent.

ETIQUETTE

As in much of South America, formality in social situations is usual. People should be addressed by their full name and title unless one is invited to do otherwise. A firm handshake is the typical greeting. Friends and relatives often embrace upon meeting. Uruguay's Italian influence can be seen in certain greetings and leave-takings. Some friends kiss on the cheeks, Italian style, when greeting and departing, and a typical goodbye is the Italian *ciao* or *addio* instead of the Spanish *adios*. Dining is performed continental style, with the fork in the left hand and the knife in the right. Social distance is much closer than in North America.

FAMILY LIFE

Some of the reforms passed in the country in the early 20th century dealt with the family. As such, women have long had a more equal position in Uruguay than in the rest of Latin America. In 1907 divorce due to spousal abuse was made legal; divorce is now available to women regardless of reason. In 1998 the divorce rate was two per 1,000 people. Marriages are civil affairs; church weddings may also be held but are not required. Though largely Catholic, Uruguay has distinct legal separation of church and state, which has carried over into other aspects of life. Birth control is common in urban areas, and Uruguayan families tend to be smaller than those in other South American countries. In 2005 the fertility rate was 1.9 children per woman.

PERSONAL APPEARANCE

Dress is typically Western in Uruguay, except for among gauchos, who often wear the traditional outfit of baggy pants (*bombachas*), wide-brimmed hat, woolen poncho, and leather boots.

SPORTS

Soccer, called *fútbol*, is both the national sport and national obsession. The nation has twice won the World Cup, in 1930 and 1950. The national team took the gold medal in the 1924 Paris Olympics. For a small country, Uruguay has turned out a dazzling array of top-notch stars, many of whom are recruited by teams around the world.

Other popular spectator sports include boxing, rugby, basketball, horse racing, rodeos, and polo. Participatory sports such as fishing, cycling, and tennis are also common.

CHRONOLOGY

- 1945** Uruguay declares war on Germany.
- 1947** Tomas Berreta is elected president on the Colorado ticket. Berreta dies and is succeeded in office by Vice President Luis Batlle y Barres.
- 1951** Andrés Martínez Trueba is elected president on the Colorado ticket.
- 1952** The presidency is replaced by a nine-man council known as the Colegiado, with an annually rotating presidency.
- 1955** Luis Batlle y Barres is named chairman of the Colegiado.
- 1956** Albert F. Zubaira is named chairman of the Colegiado.

- 1958** In a historic upset the Blancos win power for the first time in the 20th century; Luis Alberto de Herrera, the 80-year-old Blanco leader, is named chairman of the Colegiado but dies within five weeks of taking office; Martín R. Etchegoyen assumes leadership of the Blanco Party and the state.
- 1960** Benito Nardone is named chairman of the Colegiado.
- 1961** Eduardo Victor Haedo is named chairman of the Colegiado.
- 1962** Faustino Harrison is named chairman of the Colegiado.
- 1963** Daniel Fernández Crespo is named chairman of the Colegiado.
- 1964** Luis Giannattasio is named chairman of the Colegiado.
- 1965** Washington Beltrán is named chairman of the Colegiado.
- 1966** Alberto Heber Usher is named chairman of the Colegiado.
In a national referendum the people vote to abandon the Colegiado and restore the presidency.
- 1967** The Colorados win a decisive victory and return to office under the leadership of Oscar Gestido. Gestido dies and is succeeded in office by Vice President Jorge Pacheco Areco. The Tupamaros launch their insurgency.
- 1972** José María Bordaberry Aroceno, the Colorado candidate, is elected president.
- 1973** Bordaberry suspends the constitution and all political activity; the General Assembly is replaced by the Council of State.
- 1976** The military ousts Bordaberry and promises a return to civilian government within 15 years; Vice President Alberto Demicheli is named provisional president. Newly established Council of the Nation, functioning as an electoral college, elects Aparicio Méndez Manfredini as president for a five-year term.
- 1977** Supreme Court is replaced by the Ministry of Justice.
- 1978** Gen. Gregario Alvarez is named commander in chief and head of the ruling junta, in effect becoming ruler of the country.
- 1980** Military-inspired constitutional proposals are defeated in national referendum; Lt. Gen. Luis V. Queirolo is named head of the ruling junta.
- 1981** Gregorio Conrado Álvarez Armellino is named transitional president by the Council of the Nation.
- 1982** In nationwide balloting to select delegates to a constitutional convention, antimilitary delegates win a 5 to 1 majority.
- 1983** Upon return to civilian rule, the military initiates talks with the Multipartidaria that break down over the extent of military oversight.
- 1984** Blanco leader Wilson Ferreira Aldunate is arrested upon his return from exile. Agreement is reached between the Multipartidaria and the military on the basic law governing the restoration of civilian rule.
- 1985** President Álvarez resigns in February, naming Supreme Court president Rafael Addiego Bruno as interim president. In national elections Colorado candidate Julio María Sanguinetti Coirolo is elected president, and his party wins a slim plurality in the General Assembly; Sanguinetti is inaugurated as president. All political prisoners are released; censorship is lifted; all restrictions imposed by the military on labor unions, the judiciary, and the University of the Republic are removed.
- 1986** President Sanguinetti signs legislation offering amnesty for all military and police personnel accused of human rights violations.
- 1987** The government reaches an accord with commercial bank creditors on external debt. A campaign is launched for a referendum on the amnesty law.
- 1989** A referendum supports the amnesty law. Industrial unrest follows price increases. The Blanco Party wins the legislative and presidential elections.
- 1990** The government initiates an IMF-approved program of austerity to reduce inflation.
- 1994** After a single term by the National Party's candidate Luis Alberto Lacalle, Julio María Sanguinetti is once again elected president.
- 1999** Jorge Batlle Ibañez, of the Colorado Party, is elected president.
- 2000** A special commission launches an investigation to ascertain the fate of the 160 people who disappeared during the military dictatorship of the 1970s and 1980s.
- 2001** An outbreak of hoof-and-mouth disease seriously disrupts Uruguay's exportation of beef, a mainstay of the economy.
- 2002** Uruguay severs diplomatic relations with Cuba. An economic crisis requires emergency measures; banks are closed for a week in August; a general strike is called to protest economic measures taken by the government.
- 2003** World Bank approves \$250 million loan. In a referendum voters reject plans to open up the state oil monopoly to foreign investment.
- 2004** Tabaré Ramón Vázquez Rosas, a leftist politician, wins the presidential election.
- 2005** Vázquez announces a welfare package to help deal with growing poverty.

Basic Fact Sheet

OFFICIAL NAME

Republic of Uzbekistan (O‘zbekiston Zuhurijati)

ABBREVIATION

UZ

CAPITAL

Tashkent

HEAD OF STATE

President Islam A. Karimov (from 1990)

HEAD OF GOVERNMENT

Prime Minister Shavkat Mirziyayev (from 2003)

NATURE OF GOVERNMENT

Authoritarian state

POPULATION

26,851,195 (2005)

AREA

447,400 sq km (172,741 sq mi)

MAJOR ETHNIC GROUPS

Uzbek, Tajik

LANGUAGES

Uzbek (official), Russian, Tajik

RELIGIONS

Sunni Islam, Eastern Orthodoxy

UNIT OF CURRENCY

Uzbekistani som

NATIONAL FLAG

Three equal horizontal bands of light blue (top), white, and light green, as separated by red fimbriations, with a white crescent moon and 12 white stars in the hoist-side third of the blue band

NATIONAL EMBLEM

The national emblem presents the image of the rising sun above a flourishing valley flanked by a garland of wheat sheaves on the right side and branches of cotton with open cotton bolls on the left. A blue eight-pointed star is placed at the top of the emblem, symbolizing the unity of the republic. The crescent and star inside the eight-pointed star are the sacred symbols of Islam. The legendary bird Semurg, with outstretched wings, is placed at the center of the emblem as the symbol of national renaissance. Beneath the composition is the name of the republic written in Uzbek on a ribbon bearing the colors of the national flag.

NATIONAL ANTHEM

“Stand Tall, My Free Country, Good Fortune and Salvation to You”

NATIONAL HOLIDAY

September 1 (Independence Day)

DATE OF INDEPENDENCE

September 1, 1991

DATE OF CONSTITUTION

December 8, 1992

GEOGRAPHICAL FEATURES

Uzbekistan occupies the south-central portion of central Asia; its land area is 447,400 sq km (172,741 sq mi), making it the third largest of the five central Asian republics. It spans 1,425 km (891 mi) from east to west, and the greatest north-south distance is 930 km (581 mi). Part of the nation’s area is taken up by the Aral Sea. Uzbekistan has a long boundary of 2,203 km (1,377 mi) with Kazakhstan, to the north and northwest. Its borders with Kyrgyzstan (1,099 km; 687 mi) and Tajikistan (1,161 km; 726 mi), to the east and southeast, respectively, are extremely

convoluted. Two tiny enclaves of Uzbekistani territory are entirely surrounded by Kyrgyzstan. There is a short boundary (137 km; 86 mi) with Afghanistan, to the south, and a much longer one (1,621 km; 1,013 mi) with Turkmenistan, to the southwest. The Afghan border and parts of the Turkmen border are marked by the Amu Darya River, which flows into the Aral Sea. Uzbekistan’s other major river, the Syr Darya, also flows into the Aral.

The capital of and largest city in Uzbekistan is Tashkent, with a 1999 population of 2.14 million.

About four-fifths of Uzbekistan’s territory consists of plains (primarily the Turanian lowland east of the Aral

Sea), taking in the greater part of the Kyzylkum Desert (one of the largest in the world), the dry deltas of the Zarafshan and Kashka-Dar'ya rivers, and the plain of the Amu Dar'ya. To the far west, in the Karakalpak Autonomous Region, is the undulating Ustiurt Plateau, with elevations of 200 to 250 m (660 to 820 ft). On the eastern frontier and in the south are foothills and some mountainous areas, spurs of the Hissar-Alai and Tien Shan ranges; interspersed among these are a number of valleys and hollows, the most important of which is the Ferghana Valley, along the Syr Dar'ya River. Elevations in the Tien Shan and Hissar-Alai ranges exceed 4,000 m (13,120 ft); Uzbekistan's highest peak, Adelunga Toghi, rises 4,301 m (14,107 ft). The Turkestan Range of the Hissar-Alai imposes a separation between the Ferghana Valley and the Golodnaya steppe/piedmont from the rest of Uzbekistan. The high mountains of eastern Uzbekistan are prone to seismic disturbances.

All of Uzbekistan's rivers are part of either the Syr Dar'ya or Amu Dar'ya river systems. However, most of the Syr Dar'ya's tributaries actually fail to reach it, as their waters are taken for irrigation to the point of drying them up. Glaciers of the Pamir Mountains and Alai and Turkestan ranges are the source of many of the country's rivers. Aside from the Aral Sea, which was the world's fourth largest inland sea prior to its desiccation, there are a few lakes, the largest of which is Aydarkul, and a number of small reservoirs.

Samarqand	362,300
Tashkent	2,142,700

CLIMATE AND WEATHER

Uzbekistan's climate is continental, with a long, dry, hot summer; a cool, damp autumn; and a fairly cold win-

ter without much snowfall. In the southern reaches of the country winter lasts just two months or less; in the most northerly and upland sections it can last for five months. The average January temperature in Termez, along the southern Afghan border, is 3°C (37°F), but on the Ustiurt Plateau, in the northwest, it is below -10°C (14°F). The average July temperature ranges across the country from 25°C to 31°C (77°F to 88°F). Summer temperatures can climb as high as 42°C (108°F) in the plains and foothills, while a low of -37°C (-35°F) was recorded at the Churuk weather station, on the Ustiurt.

The plains receive the smallest amount of rainfall, just 80 to 90 mm (3 to 3.5 in) per year, with the Kyzylkum Desert being the driest area. In the mountains, yearly rainfall can average from 890 mm (35 in) to 1,000 mm (39 in) or more. The soil of the plains is quite fertile but requires intensive irrigation for crops and pasture. Uzbekistan's inefficiency in the use of irrigation, combined with poor choices of (especially thirsty) crops to cultivate under the dictates of socialist production quotas, have caused the country's severe and persistent water shortages.

Climate and Weather

Mean Temperature
 January: 37°F
 July: 90°F
 Average Rainfall: 1.6 in

FLORA AND FAUNA

With 80 percent of the landmass covered in lowland plains, desert sedge and grass are the principal forms of vegetation. Forests cover only 5 percent of the country, primarily in the hills and highlands. In the plains and deserts predominant animals include rodents, wolves, foxes, and less-common antelopes and gazelles. Higher in the mountains, lynx, wolves, bears, boars, Siberian goats, and deer are found, though environmental depredation has greatly reduced wildlife numbers in general.

(continues)

the government claimed were the work of Muslim fundamentalists.

Overall, the Islamic revival in Uzbekistan is too diverse in nature to be viewed through the lens of fundamentalism. While the nation's Muslim community tends to be more pious than those elsewhere in central Asia, interests extend across a range of Islamic practices, from Saudi-style strictness of observance (generally referred to as Wahhabism) to mystic Sufism.

Although Uzbekistan protects freedom of conscience, it does not allow proselytizing, and this has led to friction with some Protestant and Korean churches, with some missionaries put behind bars.

HISTORICAL BACKGROUND

Islam arrived early in central Asia, and as far back as the ninth century cities in modern-day Uzbekistan became centers of religious and scientific learning in Arabic and Persian. The region gained fame for the cities that served as outposts along the Silk Road in medieval times, but it remained politically fragmented throughout, except for an interval following the Mongol conquest. Genghis Khan's second son, Chagatai, ruled over south-central and east-central Asia, and by the end of the 14th century dominion over these lands had passed to Tamerlane, who based himself in Samarqand.

Following Tamerlane's death in 1405, his empire split up. The central Asian portions were absorbed into a number of khanates that strove for local supremacy even as the region's prosperity waned, a function of global trade patterns' shifting from a caravan base to maritime shipping routes. The area that lay along the courses of the Amu Dar'ya and Syr Dar'ya rivers had sunk into obscurity by the 19th century, when the Russians began to take an imperial interest. Having seized control of the Kazakh steppes by midcentury, the Russians moved in on the three principal khanates to the south: Kokand and Bukhara were conquered or became Russian protectorates from 1865 onward, and Khiva followed suit in the early 1870s.

The Russians built a rail line from the northern Caspian through Samarqand and Tashkent to the Ferghana Valley, and they redirected agricultural production to emphasize the growing of cotton to supply Russia's textile industry. They established Tashkent as an important center of commerce, industry, and administration. Yet in many regards Russian rule was mostly an urban overlay that, outside of the Russification of a small, educated elite, had little impact on traditional culture or day-to-day life.

Soon after the Bolshevik Revolution, once the Communists had established full control over the old czarist empire, defeating a guerrilla band known as Basmachi, in 1924 Uzbekistan was created as a Soviet Socialist Republic. The new political entity originally extended to Tajikistan, which split off to form its own republic in 1929, but did not include Karakalpak, a part of the Kazakh autonomous republic that was transferred to Uzbekistani jurisdiction when Kazakhstan became a full-fledged republic in 1936. The borders of the new republic cut across traditional khanate boundaries and incorporated into Uzbekistan a large number of speakers of Tajik, a non-Turkic language related to Persian, who were grouped around their historic centers of Bukhara and Samarqand, giving rise to irredentist feelings that remain in modern times. Otherwise, apart from festering disputes in the fertile Ferghana Valley area, the parameters of the new territory were largely accepted, and the Soviets began to promote a distinct, language-based Uzbek national identity.

In large part, this new identity was forged through education. The schools allowed for the molding of good Soviet citizens and rewrote history and revamped culture to serve the state's socialist ideology. Women were educated equally, ordered to stop wearing the veil, and encouraged to find work outside the home. Muslim schools, courts, and mosques were shut down, and the traditional elite and independent thinkers were co-opted, jailed, killed, or driven into exile.

Official "Soviet" culture (which was primarily Russian in form and practice) was reinforced by the migration of large numbers of Slavs to Uzbekistan to take up administrative and skilled professional posts. The World War II era saw the deportation of ethnic groups considered "enemy peoples" by Stalin to the central Asian republics.

Industrial estates were established with little regard for integration into the republic's economy; rather, they supplied the needs of the larger state. They were also largely staffed with migrants from the European part of the Soviet Union. Agricultural development, like industrial development, served Moscow's rather than local interests. The amount of land under cultivation for cotton doubled between 1960 and 1990, which reduced Uzbekistan's ability to feed itself and depleted the water supply to the extent that the Aral Sea dried up to one-third of its original volume.

After a series of embezzlement scandals within the Communist Party of Uzbekistan in the 1980s, party leadership was assumed by Islam Karimov in 1989. When the Soviet Union suffered a coup attempt in August 1991, Uzbekistan hesitated at first to condemn it, but having done so it was then quick to declare its own independence, confirmed by referendum in December, and Karimov was elected the new country's first president by the Supreme Soviet. The Communist Party, which dominated the legislature in no small part because the primary opposition

front, the Birlik (Unity) Movement, had been banned, took on a new identity as the People's Democratic Party of Uzbekistan (PDPU).

The Supreme Soviet adopted a new constitution in December 1992, setting up a powerful head of state, who is also in charge of the executive branch, and a weak unicameral legislature. In the mid-1990s Uzbekistan became involved in the affairs of its war-torn southern neighbors, briefly supporting the ethnic Uzbek warlord Rashid Dostam in Afghanistan until his faction collapsed and offering to guarantee the peace settlement forged in 1997 in Tajikistan. With opposition heavily restricted, the PDPU dominated the 1994 parliamentary elections and subsequently pushed through a referendum extending Karimov's term to 2000. The International Monetary Fund (IMF) voiced its disapproval of Uzbekistan's lax monetary policies by suspending a \$180 million loan in 1997. That year there was a major crackdown on Wahhabi fundamentalists in the Ferghana Valley; two years later a series of explosions in Tashkent was blamed on both the opposition in general and fundamentalists in particular by the president. Karimov was overwhelmingly reelected in 2000 in a vote widely condemned by observers as unfair.

In 2001 the leaders of Russia, China, Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan launched the Shanghai Cooperation Organization (SCO) to fight militancy and promote trade investments. Following the September 11 attacks on the United States, Uzbekistan joined the international fight against terrorism and allowed the United States to use its air bases for action in Afghanistan. In a 2002 referendum Karimov won support for extending the presidential term from five to seven years, to 2007. Critics saw this as a simple attempt on Karimov's behalf to continue his presidency.

In 2003 the banned Birlik Movement, along with another opposition party, the Erk (Freedom) Democratic Party, were allowed to hold public meetings for the first time in over a decade, but in the 2004 parliamentary elections those parties remained barred from participation; only candidates from parties supporting the president were allowed to participate. A wave of new terrorist violence in 2004 included shootings and bombings in Tashkent and Bukhara in March and suicide bombings against the U.S. and Israeli embassies in Tashkent in the summer. The government pursued a crackdown on Islamic groups such as the Islamic Movement of Uzbekistan, an armed group seeking the overthrow of Uzbekistan's secular government and its replacement with an Islamic state.

Despite the government's close ties to Washington vis-à-vis terrorism, Uzbekistan failed to win U.S. certification for aid in 2004. That same year the European Bank for Reconstruction and Development announced that it would cut aid because of the country's poor record with regard to economic reform and human rights.

LIST OF MODERN RULERS

President

1990– Islam A. Karimov

CONSTITUTION

Uzbekistan is operating under a constitution adopted in December 1992 that set up a strong presidential system. There is a bicameral Supreme Assembly (Oliy Majlis) whose 250 members are elected for five-year terms. The president can be elected to two consecutive terms and serves seven years per term, as increased from five by a 2002 referendum. The highest court is the Supreme Court, whose membership is determined by the Supreme Assembly. There is also a constitutional court, which, beyond its normal duties, has the power to approve the president's decision to dissolve the legislature.

Although the republic makes a claim to being a parliamentary democracy, the Supreme Assembly voted early on to ban the popular Birlik Movement, the president's chief opposition. In the December 1994 parliamentary elections, only two parties supporting the president were permitted to run. The new Assembly called a referendum that resulted in delaying the presidential election until 2000 and allowing Karimov to run again.

The constitution guarantees freedom of worship, which is generally respected, and freedom of the press, which is not. Although the document forbids censorship, the government practices it systematically. Suffrage is universal, and the voting age is 18.

PARLIAMENT

The country has a bicameral legislature, the Supreme Assembly (Oliy Majlis), with 250 members elected for five-year terms. The upper Senate consists of 100 members, 84 of whom are elected by regional governing councils to serve five-year terms and 16 of whom are appointed by the president. The lower Legislative Chamber has 120 members elected through universal suffrage to serve five-year terms. In reality the Assembly has only weak powers; although the constitution enumerates much broader powers, the president and his office control the nature, direction, and timing of legislation. The legislature can be dissolved by the president, as subject to the approval of the constitutional court.

The most recent parliamentary elections, in December 2004 and January 2005, were criticized by international observers for failing to meet standards of fairness, as opposition parties such as the Birlik Movement were barred from participation.

POLITICAL PARTIES

Parties in Uzbekistan are not allowed to operate freely; those that are not banned outright are subject to manipulation by the executive. The party identified closely with the president has been the People's Democratic Party of Uzbekistan (PDP), but President Karimov resigned as party chairman in mid-1996, soon after seeking to create a more robust opposition. Nevertheless, parties with official recognition are essentially all creatures and supporters of the Karimov regime: the Uzbekistan Liberal Democratic Party, the Adolat (Justice) Social Democratic Party, the Fidokorlar National Democratic Party (also known as the Self-Sacrificers Party, which absorbed the conservative opposition Vatan Taraqqiyoti, or Fatherland Progress Party), and the Milly Tiklanish (Democratic National Rebirth) Party.

The Birlik (Unity) Movement, a nationalist party that was instrumental in helping bring about the country's independence, has been banned from participating in elections ever since. The Erk (Freedom) Democratic Party, originally an offshoot from Birlik, is similarly barred from contesting elections, as are the Islamic Renaissance Party and Adolat (a conservative Islamic party not to be confused with the Adolat Social Democratic Party).

In the 2004 parliamentary elections for the 120-seat Legislative Chamber, the Uzbekistan Liberal Democratic Party won 41 seats, the PDP 28, the Self-Sacrificers 18, and other smaller pro-presidential parties the remainder. No one opposing the president was allowed to run for office.

LOCAL GOVERNMENT

The Republic of Uzbekistan comprises the autonomous republic of Karakalpak, the city of Tashkent, and 12 *viloyatlar*, or oblasts, which are further divided into 156 districts with 123 towns and 1,245 villages. Provincial authority is vested in *khokims* (governors), who are "recommended" by the state president. Towns and villages have elected councils that are still called soviets.

LEGAL SYSTEM

The judicial system in Uzbekistan is little changed from the Soviet system of jurisprudence it inherited. The highest court in the land is the Supreme Court, whose members are chosen by the Supreme Assembly on the president's recommendation and who can be removed only with the Assembly's consent. The Supreme Court is nominally independent of the government, as prescribed in the constitution; in reality, for any case with a political aspect, the Court is subservient to the president. A constitutional court interprets legislation's accordance with

the republic's constitution. Additionally, there is a high economic court. Karakalpak has its own Supreme Court. Lower courts, including economic courts, are organized by oblast, district, and town.

Most cases are heard before a judge aided by two "citizen advisers" who have no special competence in the law. Cases involving what are regarded as state or military secrets are shielded from press and public scrutiny.

Police routinely physically abuse and torture suspects to extract confessions, which are accepted by judges as evidence and often serve as the sole bases for convictions. Law-enforcement authorities reportedly often plant narcotics, weapons, and banned religious literature on suspected members of Islamic groups or political opponents to justify their arrest. Executions are regarded as state secrets, and relatives are sometimes not informed until months after executions have occurred.

HUMAN RIGHTS

The regime of President Islam Karimov has been one of the most authoritarian among the Soviet successor states. He has made little attempt to "depersonalize" his own rule and put executive authority on a firm institutional basis supported by genuine popular legitimacy, nor is there any other institution in the state in a position to restrain the president's power.

Although the government has registered more than 200 nongovernmental organizations, including the Soros Foundation and a branch of Human Rights Watch/Helsinki, it refuses to allow the independent Human Rights Society of Uzbekistan to function. The regime has appointed a human rights ombudsman and in 1996 set up a National Human Rights Center; that year the regime allowed an international conference on human rights to take place in Tashkent.

The main opposition political grouping, the Birlik Movement, though nationalist in nature, has been barred from participation as subversive. Islamic parties and organizations have also been banned. Imams (religious sages) who are independent of the official spiritual directorate (*muftiat*) have been tossed into prison, kept there beyond the terms of their sentences, and excluded from any amnesties.

Ethnic strife is a sensitive topic. The government has banned the group Samarqand, which is devoted to the expression of Tajik culture. Tajiks protest having the Uzbek language and literature forced on their children at school and are unhappy about the lack of opportunities for higher education in their own tongue. Russians are also dissatisfied with what they feel is second-class status in independent Uzbekistan and have "voted with their feet," emigrating in large numbers, especially prior to 1994.

In 2004 the European Bank for Reconstruction and Development cut aid to Uzbekistan in response to its

poor human rights record, in particular the refusal of the government to condemn the use of torture.

FOREIGN POLICY

Uzbekistan's primary concern in its first decade as an independent state has been instability among its neighbors and the potential for contagion from their crises. Tajikistan, Kyrgyzstan, and Afghanistan all have substantial Uzbek populations, and all have been involved in domestic strife.

Tajikistan's civil war drew in Uzbekistan's military in 1992–93. Uzbekistan agreed to police Tajikistan's airspace and to supplement Russian troops called in to maintain a cease-fire that extended for four years before a peace treaty was signed, with Tashkent as a guarantor.

Concerns about fundamentalism and the welfare of Uzbek minorities have also driven President Karimov's Afghanistan policy. As long as there was active resistance to the Taliban from an Uzbek militia based in Mazar-i-Sharif, a short drive from the Uzbek border, Karimov responded, even though there was little he could do other than offer moral support and supply arms under the table, ultimately to little effect. After the September 11, 2001, attacks on the United States, Uzbekistan joined the international fight against terrorism and allowed the United States to use its air bases for action in Afghanistan.

Uzbekistan sees itself as a pillar of regime stability with regard to Kyrgyzstan, since it has some influence over what takes place in the parts of that country with large Uzbek populations, namely, the Ferghana Valley. The Kyrgyz themselves feel more comfortable relying on Kazakhstan and Russia for protection, illustrating one aspect of the competition between Karimov and Kazakhstan's Nursultan Nazarbayev for influence in the rest of central Asia. Still, both states realize the value of cooperation: They remain natural trading partners, and each can counterbalance the occasionally overweening influence of Russia by relying on the other. Uzbekistan, Kazakhstan, and Kyrgyzstan set up the Central Asian Union in 1994, so as to link the economies of the signatory states. Since 1996 the Central Asian Union's Interstate Council has worked to increase trade, ease the flow of labor and capital, share water resources, and assemble the heads of state to discuss political and military issues. In 2002 Uzbekistan and Kazakhstan settled a long-standing border dispute. In 2004 the Turkmen and Uzbek presidents signed a friendship declaration and agreement regarding water resources.

Russia is both a rival thwarting Uzbek pretensions to regional dominance and a useful counterweight to Kazakhstan. Uzbekistan was quick to remove itself from the integrated military structure of the Russian-led Commonwealth of Independent States (CIS) but remained an enthusiastic participant in the organization in other respects (namely, mutual security and economic cooperation). Notwithstanding the break with the Russian mon-

etary system that occurred when Uzbekistan set up its own currency in 1993, Tashkent seemed reconciled to the inevitability of its continued dependence on Moscow as a guarantor of regional stability and a source of trade and assistance—at least until its 1999 decision to withdraw from the CIS collective-security arrangement signaled a distancing from Russian foreign policy. Turkish-Uzbekistani relations, following an initial spurt of enthusiasm based on the notion of a pan-Turkic culture, have settled into a more pragmatic mode, based partly on the recognition that centuries of separate histories have given each country a very different set of traditions, values, and cultures. Moreover, it became clear that Turkey did not wield enough influence in the economic sphere to supplant Russia as the regional hegemon. Still, Uzbekistan joined the Economic Cooperation Organization (ECO) conceived by Turkey, Iran, and Pakistan as a way to construct ties to the emerging states of central Asia.

Relations with Iran are friendly, but Uzbekistan is wary of the Tehran regime's theocratic nature, preferring more secular models from the Islamic world, like Egypt and Turkey. Tashkent has approached Saudi Arabia and Pakistan with similar caution. Iran has been a significant investor in energy extraction, roads, and railways, and Tehran took the same dim view of the Taliban in Afghanistan as did Tashkent, but the two countries backed opposite sides in the Tajik civil war.

Karimov's relations with the Western world have never been as full or as warm as he would like. The United States and Europe have supported Turkey's efforts to engage the central Asian region, as a way to offset Russian influence and keep fundamentalism at bay, while Washington has made known its displeasure with Karimov's authoritarianism and his regime's persistent human rights violations. Relations improved after Uzbekistan joined the antiterrorism campaign led by the United States in Afghanistan, and in 2002 the United States earmarked \$100 million in aid for Uzbekistan.

DEFENSE

Gradually, all Russian forces have been transferred from Uzbekistan's territory, and there has been a deliberate policy fostering an indigenous officer corps to take military responsibility as Slavic officers retire or migrate elsewhere.

Uzbekistan has the largest armed forces in central Asia and showed its willingness to wield them in the case of the Tajikistan civil war. Nonetheless, Uzbekistan's military doctrine, as spelled out in its 1992 Law on Defense, is purely defensive in nature. In fact, the role of the Uzbekistani military is tacitly understood to be primarily internal security, while Russia guarantees the inviolability of the country's borders. Uzbekistan belongs to the Commonwealth of Independent States and has signed a

collective defense treaty with five other CIS states but has opted out of that organization's integrated military structure. In 1994 Uzbekistan became a member of the Partnership for Peace, operated through the North Atlantic Treaty Organisation (NATO).

The president of the republic is commander in chief, and Karimov has exercised his authority in delineating military policy and making key appointments. Operational control is assumed by the chief of staff, who is responsible to the minister of defense. The military budget for 1997 was about \$200 million; the standing army in 2003 numbered 72,000. About 70 percent of the army's manpower is provided through conscription; the rest are professionals. The age for conscription is 18, and draftees serve 12 months.

Military Indicators

Total Active Duty Personnel: 72,000
 Military Manpower Availability: 6,340,220
 Military Expenditures \$million: 200
 as % of GDP: 2.0
 as % of central government expenditures: —
 Arms Imports \$million: 5
 Arms Exports \$million: 510

ECONOMY

With less of an industrial infrastructure in place at the time of the breakup of the Soviet Union, Uzbekistan suffered a much smaller economic contraction than did a number of the other former Soviet republics. The country is still heavily dependent on agriculture, which registered 38 percent of gross domestic product (GDP) in 2003, and especially on cotton. Mining, manufacturing, construction, and energy together contributed 26.3 percent of GDP, while services, primarily governmental, accounted for the remaining 35.7 percent.

Uzbekistan's industrial base has traditionally rested on the exploitation and processing of its natural resources. The country is self-sufficient in terms of energy, having enough oil and gas to become a minor exporter of hydrocarbon fuels, and there are small coal deposits. About 15 percent of the country's energy needs are met through hydroelectric power. Uzbekistan has important gold deposits and has made deals with Western mining firms to exploit them. Other minerals present in commercially extractable quantities are copper, iron ore, lead, zinc, silver, fluorite, tungsten, molybdenum, and uranium.

Manufacturing has clustered around Tashkent and in the Fergana Valley, where "prestigious" foreign investments such as auto assembly have been attracted. Tashkent and its environs account for one-third of the country's industrial production, most prominently the Chkalov aircraft factory. The principal industries are

mineral processing and metalworking, oil refining, machine building (particularly of agricultural equipment), fertilizer, textiles, rugs, and food processing. Manufacturing output declined by 6 percent annually (in real-value terms) between 1990 and 1996, but by the end of this period the decline appeared to have been arrested.

In 1993 Uzbekistan abandoned its attempts to stay in the ruble zone and devised its own currency, the som. The introduction of the som was accompanied by a burst of hyperinflation (1,568 percent in 1994) as the new currency slumped in value; the rate of price increases was brought down to double digits by 1997. Privatization gathered little momentum in the early years of independence, with the exception of agricultural smallholdings, housing, and retail establishments, but by the end of 1996 the government had nearly completed its program of small-scale privatization of industrial and commercial enterprises and was ready to contemplate similar treatment for medium- and large-scale businesses. Beyond the inflation crisis of 1994–95, the country suffered two discrete setbacks before the close of the decade: A poor cotton harvest in 1996 left the government short of revenue and forced to print money, driving down the value of the som and causing numerous foreign investors to pull up stakes and leave, and the Russian financial meltdown of the summer of 1998 also adversely affected the health of the Uzbekistan economy. A growing debt burden and persistent inflation led to stagnant growth in 2001, with little improvement in 2002. However, the 2004 rate of real GDP growth was 4.4 percent. In 2003 the government accepted the obligations of article 8 under the IMF, providing for full currency convertibility. However, strict currency controls and the tightening of borders have lessened the effects of convertibility and have led to shortages that have further stifled economic activity.

ENVIRONMENT

Soil and water are severely degraded all across Uzbekistan. The single-minded concentration on meeting Soviet production quotas for cotton, a crop requiring large amounts of water, led to the removal of so much water from the Amu Dar'ya and Syr Dar'ya river systems that the Aral Sea dried up to about one-third of its former size, an unmitigated disaster. Fisheries were depleted, climate variations in the area surrounding the Aral became more extreme and generally harsher, more dust storms occurred, and soil salinity increased. The crisis forced Uzbekistan to search for Western assistance regarding smarter irrigation techniques and cooperative water allocation and management solutions with neighboring central Asian states. One of the Soviet Union's chemical weapons test sites was Vozrozhdeniye Island, in the Uzbekistani portion of the Aral Sea; desiccation has caused this island, replete with dangerous pollutants, to become linked to the mainland by a narrow causeway, allowing infected animals to intermingle with animals on the shores of the Aral Sea.

Other environmental problems derive from the lack of sewage systems; the unchecked use of pesticides, fertilizers, and herbicides; industrial and mining discharges; and the burning of fossil fuels. Underground sources of freshwater are nearly all polluted, as are rivers and canals. Industrial activity, power generation, and similar activities are responsible for putting several million tons of pollutants into the republic's skies each year. Health problems associated with or aggravated by air and water pollution include typhoid, paratyphoid, hepatitis, cholera, intestinal diseases, and various forms of cancer, dysentery, dystrophy, and anemia. There is a general retardation of children's physical development, and life spans are sharply reduced in areas close to metal-processing plants, toxic waste sites, and the Aral Sea.

Environmental depredations have also taken their toll on the country's wildlife and biological diversity. To combat ecological destruction, the Uzbekistani government has protected 5 percent of the nation's territory.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Uzbekistan 107th out of 177 countries in terms of life expectancy, education, and standard of living. The aver-

age Uzbek's life expectancy in 2005 was 64.2 years, and literacy stood at 99.3 percent in 2003. The percent of eligible students enrolled in primary, secondary, and tertiary schools in 2002 was the 61st highest in the world, at 76 percent. Per capita GDP was \$1,800 in 2004. In general, the quality of life in Uzbekistan stood the country near the bottom of the rankings for central Asia and eastern Europe.

Uzbekistan is a largely rural country; in 2003, 37 percent of the population lived in urban areas, while the rest occupied small villages and towns in the vast central plains. The typical Uzbek home has two or three rooms. Outside the home there is often a large eating and resting platform known as the *sura*. Shaded by lattices, the *sura* provides a cool location during the summer. A kitchen area of most homes is a separate unit with a large hearth where all the cooking is done. While eating, the family may sit on a low *stupa*, or bedlike structure, and women are often separated from men, especially in rural areas.

According to a 2004 estimate, 28 percent of the population lived below the poverty line, and since independence a sharp increase in the inequality of income distribution has hurt the lower ranks of society.

HEALTH

Medical services in the cities have suffered since the collapse of the centralized Soviet system. Medical care is still free of charge, and as of 2004 there were 293 doctors for every 100,000 people, but the infrastructure is poor, and services have deteriorated. In 1991, one-quarter of the population was hospitalized annually; this figure was halved by 1998. A series of health-care reform objectives set in 2000 included improved quality of overall services, specifically in the areas of maternal and child health; the promotion of privatization; and cost containment. In rural areas, clinics are mostly staffed by medical assistants. Between 1995 and 2002, 96 percent of births were attended by health-care professionals, but the infant mortality rate in 2005 remained a high 71.1 deaths per 1,000 live births. As of 2002 only 57 percent of the population had access to adequate sanitation, 89 percent to safe drinking water.

As of 2003 the government financed 77 percent of all routine immunizations. That year the immunization rates for one-year-old children were 98 percent for tuberculosis and DPT and 99 percent for polio and measles. Major causes of death are communicable diseases, cardiac problems, and birth or prenatal complications. In 2000 one-half of the male population smoked. The HIV/AIDS incidence rate in 2003 was less than 0.1 percent; that year 11,000 were living with the disease and fewer than 500 died from it. Public health expenditures for 2002 were 2.5 percent. Many people in rural areas still rely on herbal medicine and traditional cures and healers.

FOOD AND NUTRITION

Uzbek food has similarities with that of the Middle East in its use of spices such as coriander, cumin, and hot red pepper. Like Middle Eastern cuisine, that of Uzbekistan relies heavily on rice, yogurt, and grilled meats, especially lamb and mutton. Typical dishes include a dish of homemade noodles and mutton called *lagman*, a broth of meat and pastry called *d'ighbman*, a vegetable and beef stew known as *dymlama*, and *plov*, which is rice with chicken or mutton, vegetables, quinces, and spices. Pilafs, kebabs, noodles, pasta, and various sorts of breads and pastries are typical in the north, while in the south the food is distinguished by fancy desserts and pastries. Tea is the typical beverage, usually as served without milk. Despite Islamic restrictions on alcohol, most Uzbeks drink, and vodka, a holdover of Russian domination, is the drink of choice.

Undernourishment is a problem. From 1999 to 2001, 26 percent of the general population were undernourished, and from 1995 to 2002 about 19 percent of children younger than five were considered underweight.

 Amount of Cereal Available per person per year kg: 169.0
 Amount of Fruits and Vegetables Available per person per year kg: 142.9

STATUS OF WOMEN

From the standpoint of women's rights, Soviet rule was something of a golden age compared to what followed. With traditional attitudes reemerging, women were the first to get laid off when companies needed to rid themselves of excess labor. Female unemployment thus runs far ahead of male unemployment, and various obstacles stand in the way of career advancement. The percentage

of female public officials plunged from 36 percent under the Soviet quota system of the 1980s to 6 percent in the mid-1990s, although there were 13 women at the ministerial level in 1997. In 2004 only 7.2 percent of Legislative Chamber members were women. Women in Uzbekistan run a greater risk of impoverishment, all the more so if they are divorced, widowed, or single mothers. All these conditions are found with greater intensity in rural areas. Women also suffer more from health problems related to pollutants; the mortality rate among women and children in Karakalpak is one of the highest in all the former Soviet states.

Women have responded to the limitations on their professional horizons by founding and participating in nongovernmental organizations, in many of which family issues figure strongly. In response to a challenge from President Karimov to become more involved in economic development, female citizens formed the Business Women's Association of Uzbekistan in 1991, training women to start their own small businesses and developing skills that will make them professionally competitive. The Women's Resource Center tries to combat the passivity that keeps women subdued in traditional society and family life through research and social action.

Family planning is regarded as alien to the sensibilities of Muslim society. A UN Development Program project on family planning was altered for Uzbekistan so as to instead deal with victims of domestic violence. Nonetheless, the government has recognized the need for family planning, and the Ministry of Health is training physicians to provide such services. The proportion of women using contraceptives has risen in recent years from 3 to 14 percent.

Victims of domestic violence are discouraged from pressing charges against their perpetrators, who rarely face criminal prosecution. According to a 2003 Human Rights Watch report, *maballa* committees enforce government policy to prevent divorce by frequently denying battered wives access to the police or courts and holding them responsible for the abuse they experience. The trafficking of women abroad for prostitution remains a serious problem.

WORK

The labor force of Uzbekistan numbered 14.64 million in 2004, 44 percent of whom were employed in agriculture, 20 percent in industry, and 36 percent in services. According to government figures, the unemployment rate

in 2004 was 0.6 percent, but outside estimates place the actual rate at around 10 percent and underemployment as high as 20 percent.

The labor code adopted in 1992 recognizes the right of all workers to voluntarily create and join unions, which may in turn associate with international affiliations. However, the Council of the Federation of Trade Unions is dependent on the state, and no genuinely independent union structures exist. Organized strikes are extremely rare, though in 2003 and 2004 there were reports of worker unrest and shutdowns in certain industries. The minimum working age is 14, and between that age and 18 children are allowed to work only 20 hours weekly, though in rural areas this is often disregarded, as children of all ages help with the cotton harvest; a 2000 report estimated that 22.6 percent of children between five and 14 were working part-time in family-run businesses and farms. The maximum workweek is 41 hours, and the minimum wage in 2004 was \$6.53 a month. Laws regarding worker health and safety are often disregarded.

EDUCATION

Education is universal, state provided, and compulsory through the teenage years. Preschool programs are run by local governments, state enterprises, rural collectives, and certain social service organizations. Primary education covers four years, with children beginning school at age six. Secondary school is divided into two cycles, with the first lasting five years and the second two years. In 2002 there were 6.3 million students in primary and secondary schools; the 200,000 or so in vocational schools were specializing in industry, construction, commerce, agriculture, communications, legal studies, or economics. Separate from the technical schools are secondary-level "colleges" preparing pupils for careers in teaching, the arts, or medicine. The Ministry of Education oversees the specialized secondary schools and institutions of higher education, of which there were 53 in 1993, with nearly 400,000 students enrolled.

The Uzbekistani education system has gradually moved away from its Soviet basis. Already in the years just prior to the Soviet Union's dissolution, 76.8 percent of pupils were educated in the Uzbek language, while only 15 percent had Russian-language instruction. Other languages used are Kazakh, Karakalpak, Tajik, Turk-

men, and Kyrgyz. With assistance from Saudi Arabia, the Wahhabi sect set up a system of madrassas (Muslim religious schools) to provide free private education, and a 5,000-seat university was planned for the city of Margilan before the government issued a blanket ban on private education. Under government auspices, plans for an Islamic university in Tashkent were launched in 1999.

As of 2003 the official literacy rate was a high 99.3 percent of adults. Enrollment is also relatively high; in 2002, 76 percent of eligible primary, secondary, and tertiary school students were enrolled.

SCIENCE AND TECHNOLOGY

The Cabinet of Ministers, through the Scientific Production Center of Agriculture, runs 19 research institutes employing almost 3,000 researchers. These institutes pursue diverse research-and-development programs, from general crop propagation and veterinary science to special projects on cotton and irrigation. Departments of physical-mathematical sciences, mechanics, control processes, information technology, chemical-technological sciences, earth sciences, and biological sciences are found at Tashkent's Uzbek Academy of Sciences. Other institutes also conduct research in technology, natural sciences, and medicine. There are 23 colleges and universities that offer scientific and technical training. As of 2001, 1,754 scientists and engineers per million people were engaged in research and development.

MEDIA

The constitution bans censorship, but in practice President Karimov has tolerated no independent viewpoints in newspapers or broadcasting, and publications in the Uzbek, Russian, and Tajik languages have all been censored. Journalists who go beyond the implicit bounds have been fined, expelled, threatened, and on occasion beaten or killed. Nevertheless, at times Karimov himself has criticized the media for its uniformity and lack of debate or genuine analysis of political and economic issues; in this spirit the regime allowed an independent journal to start up in January 1997—only to close it down five weeks later. In 2002 prepublication censorship was ended, but journalists are still prone to self-censorship. The nongovernmental organization Reporters without Borders has rated Uzbekistan, along with Turkmenistan, as having one of the worst climates for journalism, based on the number of reporters killed, assaulted, or thrown in prison; the depth of censorship; restrictions on the operations of foreign media; state monopolies in broadcasting; and the general absence of independent media. In 2004 the group rated Uzbekistan 142nd out of 167 countries in its press freedom index.

In 1997 there were 495 newspapers printed in Uzbekistan, 385 in the Uzbek language. Other newspapers and periodicals were published in Russian, Kazakh, Tajik, Korean, Arabic, English, and Karakalpak. Major Uzbek-language newspapers are *Khalk suzi*, *Uzbekiston ovozi*, *Toshkent khakikati*, and *Uzbekiston adibivoti va san'ati*. Major Russian-language papers are *Golos Uzbekistana*, *Narodnoye slovo*, *Pravda vostoka*, and *Biznes-vestnik vostoka*. News agencies are the Information Agency of the Ministry of Foreign Affairs (Jokhon) and the Uzbek Information Agency.

Television is dominated by Uzbek Television, the state-run service, which has local programming and relays some programs from Russia and other countries. Kamalak Television is a state-private venture providing alternative programming. The government does not allow for independent broadcasting inside the country, although Radio Free Europe/Radio Liberty functions without interference. The state-owned Uzbek Radio broadcasts in numerous languages. A variety of foreign channels are widely available through cable.

Uzbek literature was severely affected by the Stalinist purge of the 1930s and did not start to recover until the 1980s. Uzbek writers have emphasized purifying the Uzbek language and removing Russian elements.

In 2003 there were 320,800 cellular phone users, and in 2005 there were 715,000 Internet users.

CULTURE

Uzbekistan is at the crossroads of central Asia, and as such its culture has been shaped by many forces, from the days of the Silk Road to the high-water mark of Islamic centers at Samarqand and Bukhara and on to the days of the Mongols and the empire of Tamerlane. Great mosques, minarets, and mausoleums, all with fine interior craftsmanship, can be found in the major cities. Calligraphy was an early art form, along with the traditional lacquer painting of miniatures from scenes of royal life and the Koran. The latter have been revived in the late 20th and early 21st centuries by modern painters using papier-mâché.

The territory now encompassing Uzbekistan was the home of an amazing array of medieval scholars, poets, and scientists, including the scholar al-Biruni, who lived in the 11th century and produced a series of geographic works about India; the astronomer and mathematician Ulugh Beg, who founded a famous observatory in Samarqand; and the 15th-century scholar, poet, and writer Ali Shir Nava'i, who greatly advanced Uzbek literature—he is sometimes called the Shakespeare of Uzbekistan—and was also a talented artist and composer. *Baburname* (The memoirs of Babur) is another benchmark of Uzbek literature; Babur (1483–1530) founded the Mughal Empire and became its first emperor, and he is respected as a soldier and statesman by modern Uzbeks.

Modern poets and prose writers have included 'Abdalrauf Fitrat, Sadriddin Ayni, and Abdullah Qadiri, each of whom was bilingual in Uzbek and Tajik. Socialist realism took over during the Soviet period, but since independence newer voices, including Razzaq Abdurashid, Abduqahhar Ibrahim, Jamal Kamal, and Erkin Wahid, all born in the 1930s, and Rauf Parfi, Halima Khudayberdiy, Muhammad Ali, Sharaf Bashbek, and Mamadali Mahmud, born in the 1940s, have found wider audiences.

Classical Uzbek music employs instruments such as the *doira*, a tambourine-drum, and the stringed *rubob* and *dutor*, which accompany a single singer in a wailing sort of song. More modern music blends traditional styles with rock rhythms.

FOLKLORE AND MYTHOLOGY

Historical legends inform much of Uzbek folklore. These involve the doings of conquerors from Alexander the Great, who in the fourth century B.C.E. married the daughter of a local leader near Samarqand on his way to deal with India, to Tamerlane, the Turkic Mongol who formed an empire of devastation in the 14th century, himself ruling from Samarqand. Stories abound of his cruelty, collecting mountains of heads during his conquests.

Uzbekistan is particularly rich in proverbs. Some of the more popular include “If you have peace in your land, you will have health in your hand,” “He who eats, works, he who starves, shirks,” “Wisdom, so says every sage, does not depend on greater age,” “Good breeding and good grace are not sold in the marketplace,” “Upon our friends our strength depends,” and “Who speaks a little knows a lot, and when he speaks, it’s with great thought.”

ENTERTAINMENT AND RECREATION

Uzbeks still enjoy a traditional form of verbal entertainment in which two competitors take on a topic and respond to one another’s comments with witty remarks. The one who first stumbles in forming a comeback phrase loses. These matches are called *payr* contests, and the audience decides who fails to respond in a timely manner. Other forms of entertainment include tight-rope walking and *gap*, a custom wherein men meet with old friends to eat, play games of cards or bingo, and generally socialize, helping one another with personal problems.

Especially in urban areas and towns, movies and television are popular. The country receives numerous channels via cable. The most popular types of movies are action and martial arts. Many films are imported from India. Much of the television content is censored.

ETIQUETTE

Greetings tend to be long and involved discussions of health and work. A typical initial greeting is the Islamic “*A-salaam a-laykum*” (Peace be with you), to which the response is “*W-laykum o a-salaam*” (And also with you). First names are often used accompanied with “*Uzbark*,” meaning brother or sister. A handshake is also usual upon greeting.

As in other Muslim countries, shoes should be removed before entering a home or mosque, and the soles of the feet should never be exposed to another, which is considered insulting. In more traditional situations, men and women are seated separately. Also, among more traditional Muslims, the left hand, considered unclean, is never used for giving or receiving or for eating.

FAMILY LIFE

Families tend to be extended, with two to four generations living under one roof. Families are still large by Western standards, with an average of three to four children. The 2004 fertility rate was just under three children per woman. Women, once powerful under the Soviet system, have been essentially relegated to the home since independence. Divorce is strongly discouraged, even in instances of spousal abuse.

Weddings, called *kelin toi*, are major events in Uzbekistan. Dowries are paid to brides, while in turn the bride’s family is expected to foot the bill for the elaborate wedding ceremony, a status symbol among Uzbeks; where families in the West save for years to send their children to college, in Uzbekistan they save to make sure the offspring have fine weddings. The brides often moves into the groom’s family home, where the couple remains until they have children of their own. Women and girls eat apart from the male members of the family.

PERSONAL APPEARANCE

Both traditional and Western clothing are worn in Uzbekistan. Men typically wear the *doppilar*, or *dopy*, a square, black skullcap often embroidered with ornate patterns that indicate place of birth and other family ties as well as social status. These can be worn along with Western-style suits, long tunics and broad pants, or the shepherd’s quilted robe, called a *chopan*. Women also wear a mix of Western and traditional clothing. Traditional dress may consist of a white headscarf and colorful print dresses in tie-dye patterns, sometimes with trousers of the same material and pattern underneath. Another holdover from traditional times for women is the wearing of braids. A married woman indicates her status by sporting one or two braids, while unmarried women and girls have more. Contrary to Western styles for women, eyebrows that grow together are considered a plus.

SPORTS

Soccer is the most popular recreational and spectator sport in Uzbekistan. Tennis is a recent addition as a spectator sport; the Yunusabad sport and recreation complex

is the venue for the President's Cup of Uzbekistan, an annual international tennis competition. Numerous satellite and challenger tournaments, just below the major professional tennis tournament level, are also held in the country. Table tennis was made popular during the Soviet era and remains so among a wide assortment of people. Uzbek wrestling is called *kurash*. A local variant of polo, popular in many central Asian countries, involves groups of hundreds or even thousands of riders who try to get the carcass of a goat to the opponent's goal.

CHRONOLOGY

- 1940** Many European workers and ethnic minorities are deported from the country during World War II.
- 1959** Through 1982, under the leadership of Sharif Rashidov, the Communist Party of Uzbekistan secretary, the republic achieves a degree of de facto autonomy; corruption and nepotism flourish.
- 1986** Nearly entire Communist Party leadership is purged over corruption charges.
- 1989** Under pressure from nationalists, Uzbekistan Supreme Soviet declares Uzbek the republic's official language. Riots occur in Ferghana Valley between Uzbeks and Meskhetian Turks.
- 1991** As Soviet Union breaks up, independent Republic of Uzbekistan is proclaimed. Communist Party reorganizes itself as People's Democratic Party of Uzbekistan (PDPU), and its leader, Islam Karimov, is elected president.
- 1992** Uzbekistan, as member of Commonwealth of Independent States, signs CIS collective security agreement. Supreme Soviet adopts new constitution.
- 1993** Regime clamps down on opposition parties and independent press. Government introduces new currency, the som.
- 1994** Uzbekistan, Kazakhstan, and Kyrgyzstan form Central Asian Union. PDPU wins strong majority in parliamentary elections in which opposition participation is strictly limited.
- 1995** Referendum approves extension of Karimov's term to 2000.
- 1996** Legislature bans political parties based on religion or ethnicity.
- 1997** IMF suspends \$180 million loan program to Uzbekistan. Defeat of General Rashid Dostam in Afghanistan prompts Uzbekistan to fortify its southern border. Crackdown on Wahhabi sect in Namangan leads to hundreds of arrests. Tashkent agrees to act as a guarantor of Tajikistan's peace accord.
- 1999** Explosions rip through downtown Tashkent, killing around 15. Uzbekistan decides to withdraw from CIS collective security treaty.
- 2000** Karimov wins reelection in a vote near-universally denounced as undemocratic. Regime executes six men found guilty in Tashkent bombings.
- 2001** Leaders of Russia, China, Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan launch the Shanghai Cooperation Organization to fight militancy and promote trade investments. Uzbekistan joins the international fight against terrorism and allows the United States to use its air bases for action in Afghanistan.
- 2002** The United States earmarks \$100 million in aid for Uzbekistan for its support of the U.S.-led campaign in Afghanistan. In a referendum, Karimov wins support for extending the presidential term from five to seven years.
- 2003** Opposition Birlik and Erk movements hold congresses in May and June, their first in over a decade. In December, President Karimov fires his long-standing prime minister, Otkir Sultonov, citing the country's poorest-ever cotton harvest, and appoints Shavkat Mirziyayev in his place.
- 2004** A wave of terrorist shootings kills 47 in March. Suicide bombers target U.S. and Israeli embassies in Tashkent in July. Parliamentary elections are held, from which opposition parties are banned.
- 2005** In May troops open fire on anti-government protesters in the city of Andijan killing an estimated 400 to 1,000 people.

HEAD OF STATE

President Kalkot Mataskelekele (from 2004)

HEAD OF GOVERNMENT

Prime Minister Ham Lini (from 2004)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

205,754 (2005)

AREA

12,200 sq km (4,710 sq mi)

ETHNIC MAJORITY

Melanesian

LANGUAGES

Bislama, English, French

RELIGION

Christianity

UNIT OF CURRENCY

Vatu

NATIONAL FLAG

A horizontal gold Y with black borders dividing fields of dark red at the top and mint green at the bottom; the black triangle between the arms of the Y based on the hoist contains two crossed *namele* ferns within a circular boar's tusk, all gold.

NATIONAL EMBLEM

A native Vanuatuan in traditional dress stands at the base of a mountain; behind him are two crossed green *namele* ferns and a black circular boar's tusk, and on a scroll below is the national motto, *Long God Yumistanap* (Let us stand firm in God).

NATIONAL ANTHEM

"Yumi, Yumi, Yumi" (We, We, We)

NATIONAL HOLIDAYS

January 1 (New Year's Day), July 30 (Independence Day), November 29 (Unity Day), December 25 (Christmas), all major Christian festivals

DATE OF INDEPENDENCE

July 30, 1980

DATE OF CONSTITUTION

July 30, 1980

GEOGRAPHICAL FEATURES

Vanuatu is a chain of 13 large and about 70 small islands stretching from south of the Solomon Islands to east of New Caledonia. The islands of the Y-shaped archipelago, whose open end is to the north, have a total land area of 12,200 sq km (4,710 sq mi) and a total coastline of 2,528 km (1,570 mi). The 13 large islands are Vanua Lava, Banks, Espiritu Santo, Maewo, Pentecost, Aoba, Malakula, Ambrym, Epi, Efate, Erromango, Tanna, and Aneityum; these islands are all quite mountainous and contain extensive rain forests. The other islands are of the coral atoll type. There are at least three active volcanoes: Tanna, Ambrym, and Lopevi.

Vanuatu

Population of Principal Cities (1999)

Port-Vila	29,356
-----------	--------

CLIMATE AND WEATHER

The climate is quite hot and humid. Port-Vila, the capital, on the island of Efate, has average year-round humidity of 83 percent and average annual rainfall of about 2,300 mm (90 in). The winter months are fairly cool. The archipelago lies within a cyclone zone and suffers cyclone damage at least once or twice a year.

Climate and Weather

Mean Temperature: 50°F to 85°F
Average Rainfall: 90 in

FLORA AND FAUNA

Many of Vanuatu's islands are covered with forests of sandalwood, kauri pine, banyan, coconut, and other trees typical of the region. There are over 1,000 plant species growing on the islands, over 150 of them endemic. Most of the forests are relatively untouched because the terrain makes logging difficult.

Vanuatu's most spectacular fauna lives underwater. There are myriad coral reefs inhabited by tropical fish, rays, sharks, and other marine life. Many birds inhabit the islands, such as the incubator bird, which buries its eggs in warm volcanic mud.

Induced Abortions: —

ETHNIC COMPOSITION

Some 95 percent of Vanuatuans are Melanesian. Melanesians are an amalgam of Negritoid, Ainoid, and Veddoic stock, though Negritoid physical characteristics predominate. The remaining 5 percent of the population are French, Vietnamese, Chinese, or of other Pacific races.

LANGUAGES

Vanuatu is a former British and French condominium; both English and French are official languages and widely spoken in the country, with English having a slight edge in degree of use. Bislama, a pidgin dialect, is also constitutionally recognized as an official language, and efforts are being made to give Bislama equal status with English and French as a medium of instruction. Over 100 other Melanesian languages and dialects are spoken on the various islands, but many of these languages are dying out.

RELIGIONS

Nearly 90 percent of Vanuatuans are Christians of one of more than almost 80 denominations. Presbyterians form the largest denomination, followed by Roman Catholics and Anglicans. Both the Presbyterian Church of Vanuatu and the Roman Catholic diocese are based in Port-Vila. About 7.6 percent of the population still practice indigenous religions. A number of people on Tanna observe the practices of the Jon Frum Cargo cult, which originated in the early 1900s as based on the mythical Jon Frum, who the locals hoped would deliver them from missionaries and Europeans in general.

Religious Affiliations

Presbyterian	75,500

Roman Catholic	30,900
Indigenous Beliefs	15,600
Seventh-Day Adventist	12,800
Church of Christ	7,800
Other	32,300

HISTORICAL BACKGROUND

The oldest known settlement in Vanuatu, on Maewo Island, dates back more than 4,000 years. The islands have seen streams of immigrants and conquerors, all of whom have influenced the development of the culture. The first European to see the islands was the Portuguese navigator Pedro Fernández de Quirós, in 1606. Others eventually followed, including Captain James Cook in 1774. The islands became important ports during the slave trade, and their

supply of sandalwood and whales made them economically significant. Missionaries also flocked to the region.

The New Hebrides islands, as they were first named by the colonial powers, were governed from 1906 as an Anglo-French condominium, under which each power was responsible for its own citizens and conducted administration in its own language. The first representative assembly was not convened until 1974, but thereafter the country made quick strides toward full independence, following a timetable drawn up by the British and the French. In 1979 a government of internal autonomy was formed under Father Walter Lini, who was the leader of the most prominent political party, the Vanua'aku Pati (VP). As the date of independence drew closer, separatist movements became more militant; one, led by Jimmy Stevens on Espiritu Santo, established a provisional government until suppressed by British, French, and Papua New Guinean troops. Unrest did not delay the end of British and French joint rule, and the new nation of Vanuatu, independent within the Commonwealth, came into being on July 30, 1980.

Father Lini became prime minister, and the former deputy chief minister George Kaloa, who assumed the surname Sokomanu (literally, "leader of thousands"), took over the largely ceremonial post of president.

The first postindependence election, held in November 1983, returned the Lini government to office. Shortly thereafter President Sokomanu pled guilty to charges of late payment of road taxes and resigned from office. Nevertheless, he was reelected president in March 1984.

Lini was once again returned to office in the parliamentary elections of November 1987, but the VP's share of votes fell below 50 percent for the first time, while the opposition Union of Moderate Parties (UMP) received 42 percent of the vote, up from 33 percent in 1983. Following the elections, Barak Tame Sope, secretary-general of the VP, challenged Lini unsuccessfully for the presidency of the party. In May 1988, after the government's decision to abolish a local land corporation that had been the source of Sope patronage led to rioting, Sope was charged with fomenting the disturbance; he was dismissed from the cabinet and removed from his VP post. He and four other VP members officially resigned from the party in July. Subsequently, the "Gang of Five" was removed from Parliament for shifting their party alliances, which they were precluded from doing under the 1983 Vacation of Seats Act. In protest, 18 members of the UMP boycotted Parliament, and they, too, were expelled from office for violating the parliamentary ban on three consecutive absences. In October 1988 the Vanuatu Court of Appeal reinstated the Gang of Five, declaring their ouster unconstitutional, but upheld the removal of the 18 UMP members.

President Sokomanu dissolved Parliament in December 1988 and set up an interim government, with Sope as its leader. In response, Lini had Sokomanu and Sope arrested for treason. Later in December the Supreme Court ruled Sokomanu's actions unconstitutional

because they had been taken without the advice of the prime minister and without the support of two-thirds of the Parliament. Sokomanu was dismissed as president in January 1989 and replaced by Fred Timakata. Sokomanu was later convicted of seditious conspiracy and incitement to mutiny and was sentenced to six years' imprisonment. Meanwhile, Sope and UMP leader Maxime Carlot were given five-year prison sentences for conspiracy and treason. All three convictions were overturned in April 1989 by the International Commission on Jurists, from Tonga, Papua New Guinea, and Vanuatu, citing insufficient evidence.

The 1990s saw continued instability. In 1996 a paramilitary group called the Vanuatu Mobile Force attempted to overthrow the government. Scandal followed, with members of the government alleged to have been party to massive banking fraud. In 1997 the country restructured its economy with help from the Asian Development Bank.

In 1997 elections President Jean-Marie Leye was defeated. The new government proved to be unstable, and in late 1999 Father John Bani became president, Barak Sope prime minister. That year Pentecost Island was hit by an earthquake and a tidal wave, which caused extensive damage.

In 2001 Barak Sope lost a vote of no confidence in the parliament, and Edward Natapei became prime minister. He was replaced in July 2004 by the UMP's Serge Vohor, who had twice before served in that capacity. Also at that time, Kalkot Mataskelekele was elected president. Vohor immediately upset the government by attempting to shift Vanuatu's diplomatic recognition of China to Taiwan, supposedly without consulting the cabinet. He lost a vote of no confidence that December and was replaced by Ham Lini.

2001–04	Edward Nipake Natapei
2004	Serge Rialuth Vohor
2004–	Ham Lini

CONSTITUTION

Under the constitution that took effect at independence in 1980, Vanuatu is a parliamentary democracy whose

head of state is a largely ceremonial president. The president is named by an electoral college made up of Parliament and the presidents of the regional councils; he serves a five-year term. The head of government is the prime minister, who is elected by Parliament from among its members by secret legislative ballot; the leader of the majority party or coalition is usually chosen. The prime minister appoints other ministers, all of whom must be members of the legislature. The number of ministers, including the prime minister, is not to exceed one-quarter the number of parliament members.

The voting age is 18. Suffrage is universal.

PARLIAMENT

The national legislature is the Parliament, which consists of 52 members elected by popular vote for a four-year term. It can be dissolved before the end of the term by a three-quarters quorum of parliamentary members or by an order from the president on the prime minister's advice. There is also a Council of Chiefs (Malvatu Mauri), which advises the government on cultural matters.

POLITICAL PARTIES

Political associations are fluid. Traditionally, people have divided along linguistic lines. The parties with the largest blocks of parliamentary representation as of 2004 were the National United Party (NUP), the Union of Moderate Parties (UMP), and the Vanua'aku Pati (VP, Our Land Party). Other parties include the Jon Frum Movement, the Melanesian Progressive Party, the Vanuatu Republican Party, and the Greens. A number of parliamentary members are independent.

LOCAL GOVERNMENT

For purposes of local government the country is divided into six administrative regions known as island councils: Malampa, Penama, Sanma, Shefa, Tafea, and Torba. These councils have considerable autonomy.

LEGAL SYSTEM

A united legal system is being created from the former French and British systems.

The judiciary includes a four-member Supreme Court, with the chief justice appointed by the president, following consultation with the prime minister and the opposition leader, and three other judges taken from other Pacific nations, with the requirement that they be qualified to practice law in Vanuatu; the speaker of Parliament, the president of the Council of Chiefs, and the

presidents of the regional councils are each responsible for naming one of the three other justices. The Supreme Court has unlimited jurisdiction in cases of civil and criminal proceedings. The Court of Appeal is composed of two or more Supreme Court justices sitting together. Parliament has the authority to establish village and island courts where necessary.

HUMAN RIGHTS

The government generally respects human rights. The major problems are poor prison conditions, a slow judicial process, some press restrictions, and traditional social norms that tolerate violence against women.

FOREIGN POLICY

Vanuatu was not admitted to the United Nations until 1981, but at independence it became a member of the Commonwealth as well as the francophone Agence de Coopération Culturelle et Technique (ACCT). As of 2004 the nation had diplomatic relations with over 65 countries. Regionally, it is a member of the South Pacific Commission, South Pacific Forum, Asian Development Bank, and Economic and Social Commission for Asia and the Pacific. It maintains no embassies abroad. Vanuatu is an outspoken member of the left-leaning Melanesian Bloc, which opposes nuclear testing and colonialism. The bloc has a tendency to vote with radical third-world nations, although it generally supports France on many issues.

Australia, the United Kingdom, France, and New Zealand furnish the majority of aid, though other nations and organizations also provide some development assistance. The United States and several other countries send volunteers.

DEFENSE

Vanuatu has no regular military forces, though it does have a police force and a paramilitary force of about 300 that is responsible for the nation's security. During the short-lived revolt on Espiritu Santo, the government called in first British and French troops and later Papua New Guinean troops for military assistance. Australia provides a great deal of military aid, training troops and furnishing patrol boats.

ECONOMY

Vanuatu's economy is based mainly on agriculture, with two-thirds of the population farming or fishing in some way. Many people support themselves through subsis-

tence farming. Cash crops include copra (which accounts for 35 percent of export income), cocoa, kava, timber, and beef. The nation also brings in some income through tax sheltering and offshore financial services, hosting about 2,000 registered financial institutions. In 2002 the nation took steps to stop money laundering. Tourism is the fastest-growing sector of the economy, having brought in 40 percent of gross domestic product (GDP) in 2000, but is vulnerable to the weather and natural disasters.

ENVIRONMENT

Like many other island nations in the South Pacific, the country of Vanuatu faces growing environmental impact from its burgeoning population. Growth is of particular concern in the two most urban areas, Port-Vila and Luganville, where poor waste management threatens groundwater purity. Most of the population does not have reliable access to safe drinking water. Deforestation is a potential problem, though Vanuatu's trees are somewhat protected by the steep terrain.

Environment

 Forest Change (1990-2000) hectares 000: 1
 Nationally Protected Areas % of total land area: 0
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 0.41

LIVING CONDITIONS

About 80 percent of the population lives in isolated villages, farming the land. In rural areas people often trade pigs and other items instead of paying for goods with money; pigs are seen as a form of both currency and prestige. Most con-

sumer goods are imported and therefore expensive. While there is no formal public transportation, taxis, jeeps, and minibuses carry passengers for fees. There are paved roads on Efate and Santo, but these are full of potholes, and the roads on other islands are unpaved and prone to becoming impassible in rainy weather. Transportation between islands is by boat or plane and can be irregular.

HEALTH

Life expectancy is fairly low, at 62.5 years in 2005. The infant mortality rate is high, with over 55 deaths for every 1,000 live births. Each woman had an average of 2.8 children in 2004. The population is growing fairly rapidly, straining the nation's ability to provide services for its people.

FOOD AND NUTRITION

Most people grow their own staple foods, which include yams, manioc, and taro root. To supplement these starches, islanders raise other vegetables and fruits, along with pigs, chickens, and cattle; forage for wild fruits and vegetables; and hunt wild animals such as flying fox and fish. The national dish is *laplap*, a mixture of taro, yam, or manioc paste and grated coconut and wild spinach. *Nalot* is a combination of banana or breadfruit, taro, and coconut. People also eat typically French cuisine, such as croissants, escargots, and frog legs. Kava, made from an herb that reduces anxiety, is the national drink.

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 90.4
 Amount of Fruits and Vegetables Available per person per year kg: 141.4

STATUS OF WOMEN

Women have equal legal rights, but traditional culture has hampered their moving into leadership roles. The only female candidate for Parliament in 1983 was defeated by a small margin. Several women hold senior positions in the government bureaucracy. Marie-Noelle Ferrieux-Patterson, Vanuatu's first ombudsman, was instrumental in issuing reports criticizing the government's financial misdeeds. Myriam Abel, the director of public health, was elected to the executive of the World Health Organization in 2002, becoming the first female Pacific Islander to attain that position. Still, most women are considered inferior to men and have far fewer opportunities, especially in education. The government runs a family-planning service as part of a UN-sponsored family health project. The birth rate has dropped substantially, from 5.5 children per woman in 1990 to 2.8 in 2004.

 Unemployment %: —

EDUCATION

The national literacy rate is 53 percent; more men than women are literate.

Education is neither universal nor compulsory, and although it is government provided, a nominal fee is charged. Schooling lasts for 13 years, as divided into six years of primary school, four years of middle school, and

three years of secondary school. English and French are the main languages of instruction. The school year lasts from February through December.

A regional University of the South Pacific center, financed by the New Zealand government, was opened in Port-Vila in the late 1980s.

SCIENCE AND TECHNOLOGY

Vanuatu lacks technological infrastructure. Many islanders still use conch shells as part of a primitive "telephone" system. In 2003 there were about 6,500 telephone lines and 7,800 cellular telephones operating on the islands. About 7,500 people were using the Internet.

CULTURE

Vanuatu is home to a variety of cultures, due to the fractured nature of the landscape and islands that have separated groups of islanders from one another. The population includes both Melanesian and Polynesian peoples, whose cultures have been mingled with those of the French and British as well.

Music is extremely popular throughout the archipelago, and there are a number of different musical instruments on the different islands. The slit-drum called the *tamtam* is used in most ceremonies. People play panpipes, conch shells, three-holed flutes, and long carved pipes. On Ambrym artists draw pictures in the sand, depicting scenes from legends or leaving messages for one another. Sculptors create shapes out of stone, wood, tree ferns, and coral. Some artists carve magic stones from pumice, but these are kept hidden. Body and rock painting are common art forms, and tattooing still occurs, though it has become less common.

FOLKLORE AND MYTHOLOGY

Most islanders still hold traditional beliefs, despite years of missionary presence. The creator god is called Tahara, and the people believe that the world is full of demons and other spirits that can affect natural events such as volcanic eruptions and storms. People often hold ceremonies and dances depicting mythical events. They use the word *tabu* to describe anything that is sacred. The Jon Frum Cargo cult is an important part of social life on the island of Tanna, and every February the people there celebrate Jon Frum Day. Tanna is also the site of a

traditional clan alliance dance called the *toka*. Land diving is a traditional fertility rite on Pentecost Island; men tie vines to their ankles and dive off high platforms to the ground, brushing the earth with their hair to make it fertile.

ENTERTAINMENT AND RECREATION

Most of Vanuatu's population is rural and isolated, so entertainment is strictly local. People hold ceremonies and musical performances with dancing. They enjoy drinking kava, which is said to relieve stress and anxiety. In the north, islanders engage in ceremonies from the *nimangki* system, in which they publicly give away their goods and slaughter pigs. Tourists come to the islands to scuba dive, snorkel, and engage in various other water sports. Trekking is popular. In Port-Vila there are discos, bars, casinos, and golf courses.

ETIQUETTE

The people of Vanuatu do not bargain and consider it offensive if a buyer proposes a price other than the one asked by the seller. Tipping is also not customary, as it imposes an obligation on the person receiving the tip. Different tribes have different rules of behavior; for example, in some tribes men and women drink kava together, but in others kava drinking has become such a male-only ritual that women dare not even look in the direction of men drinking kava lest they be beaten.

FAMILY LIFE

People on Vanuatu keep careful track of lineage, and most know their family history many generations back. Family practices vary by region and tribe. In some tribes women have very low status, but in others they are equal to men. Relatives such as uncles are important to children, and boys often train with their uncles prior to being circumcised in a manhood ceremony.

PERSONAL APPEARANCE

Most women wear loose dresses of colorfully patterned cotton, called island dresses or Mother Hubbard dresses; they decorate these elaborately with ribbons and lace. Recently, some women have begun wearing pants and board shorts, to the dismay of some religious leaders; rules of modesty dictate that women must cover their legs, especially their thighs, though bare breasts are acceptable. Men wear mostly casual, Western-style cloth-

ing, though they wear traditional costumes and body paint for ceremonies.

SPORTS

Sports have been developed in Vanuatu since about 1980, when Kalman Kiri took over the leadership of the Vanuatu Football Federation. At that time there were almost no resources available for sports; since then Vanuatu has developed soccer teams, joined FIFA, been recognized by the International Olympic Committee, and hosted international soccer championships. A variety of sports are now available, and Vanuatu sent a team of athletes to the 2004 Olympic Games, in Athens.

CHRONOLOGY

- 1980** Vanuatu becomes an independent republic, as the Anglo-French condominium is terminated. Jimmy Stevens, backed by an American right-wing organization known as the Phoenix Foundation, leads a secessionist uprising on Espiritu Santo and proclaims an independent republic; the revolt is suppressed with the help of British, French, and Papua New Guinean troops.
- 1982** The vatu is introduced as national currency, replacing the Australian dollar.
- 1983** The Land Leasing Act provides security for agricultural tenants. Vanuatu establishes diplomatic relations with Cuba. In elections to parliament, the Vanua'aku Pati gains 24 seats and the Union of Moderate Parties 12.
- 1984** George Sokomanu pleads guilty to charges of late payment of road taxes and resigns as president. He is reelected in March.
- 1986** Opposition to government policies results in formation of three new political parties: the National Democratic Party, the New People's Party, and the Vanuatu Labor Party.
- 1987** Lini is reelected prime minister in November. Parliamentary seats are increased to 46.
- 1988** Barak Tame Sope is charged with instigating serious rioting in Port-Vila, resulting in one death and several injuries. Sope is dismissed from the Council of Ministers. He and four others resign from the VP and are dismissed from parliament. A total of 18 UMP members boycott three successive parliamentary sittings and are expelled from Parliament. Sokomanu dissolves Parliament and installs Sope as interim prime minister. Sokomanu and Sope are arrested, charged with treason, convicted, and sentenced to prison.
- 1989** International Commission of Jurists overturns convictions of Sokomanu and Sope. Fred Timakata is named president.
- 1990** Lini proposes a major review of the constitution, in particular, a reexamination of the relationships between central and local government and between the government and the churches.
- 1994** Jean-Marie Leye Manatawa is elected president.
- 1998** Donald Kalpokas becomes prime minister of a coalition government between the VP and National United Party (NUP).
- 1999** Father John Bani becomes president, Barak Sope prime minister.
- 2001** Sope loses a vote of no confidence in Parliament, and Edward Natapei becomes prime minister.
- 2002** Sope is sentenced to three years in prison for forging government guarantees worth 46 million Australian dollars but is released three months later for health reasons. Several police officials are found guilty of mutiny.
- 2003** The Organization of Economic Cooperation and Development removes Vanuatu from its list of uncooperative tax havens.
- 2004** Serge Vohor is elected prime minister. Vohor attempts to form an agreement with Taiwan, shifting Vanuatuan diplomatic recognition from China to Taiwan. Vohor is ousted by a vote of no confidence. Ham Lini becomes prime minister.

DATE OF INDEPENDENCE

February 11, 1929

DATE OF CONSTITUTION

August 15, 1967; various apostolic constitutions have been issued by various popes.

GEOGRAPHICAL FEATURES

Located in Rome, Vatican City is the smallest state in the world. It has a roughly triangular area of 0.44 sq km (0.17 sq mi), or 44 ha (109 acres), lying on the western bank of the Tiber River to the west of the Castel Sant'Angelo. On the west and south it is bounded by the Leonine Wall. Vatican City comprises the following buildings and landmarks: St. Peter's Square; St. Peter's Basilica, the largest Christian church in the world, in a quadrangular area north of the square containing administrative buildings and Belvedere Park; the pontifical palaces to the west of Belvedere Park; and the Vatican

Gardens, which occupy about one-third the total area. Outside the Vatican proper, the pontiff exercises extraterritoriality over a number of churches and palaces in Rome, notably the Lateran Basilica and Palace, in the Piazza San Giovanni; the Palace of San Callisto, at the foot of Janiculum Hill; and the basilicas of Santa Maria Maggiore and San Paola Fuori le Mura. Extraterritoriality outside the city of Rome extends to the papal villa and its environs (almost 40 ha; 99 acres), at Castel Gandolfo, and to the area (about 420 ha; 1,037 acres) at Santa Maria di Galeria, some 19 km (12 mi) from Rome, the site of the Vatican radio station established in 1957. Vatican City State has no rivers or hills.

Vatican City State

CLIMATE AND WEATHER

Winters are mild, with only rare snow, and temperatures average 7°C (45°F). Summer temperatures are high during the day, but the evenings are cool. The average temperature in July is 24.4°C (76°F). Most of the rain falls in winter and in the months of October and November.

Climate and Weather

Mean Temperature
 Winter: 45°F
 Summer: 76°F

FLORA AND FAUNA

Vatican City is entirely urban. It has no wild flora and fauna aside from vermin and birds. The Vatican Gardens make up one-third of the state's territory. They date back to medieval times and are full of trees, bushes, and fountains.

POPULATION

The official population of the Vatican City proper as of 2005 was 921. Most of the state's approximately 3,000 lay workers are Italian citizens who live outside the Vatican.

ETHNIC COMPOSITION

The resident population is predominantly Italian. The official hierarchy includes representatives of most of the world's major ethnic groups. Of note are the members of the Swiss Guard, recruited from among Swiss Catholics.

LANGUAGES

The official language of Vatican City is Latin, but Italian is the working language of the people. French and various other languages are also spoken.

RELIGIONS

The Vatican is the center of the Roman Catholic Church, also called the Universal (the English meaning of the Greek word *katholikos*) and Apostolic Church, which was founded in the first century by the apostle Peter. Vatican City may also be referred to as the Holy See, the official name for the ecclesiastical seat of the Roman Catholic Church, which effectively rules Vatican City State. Most residents are ordained Catholic priests or monastics.

HISTORICAL BACKGROUND

Vatican City State is the remnant of the medieval Papal States, which at various times included large areas in Italy and even parts of southern France.

Between the 1850s and the 1870s, during the course of the unification of Italy, most of the papal domain fell into the hands of the House of Savoy, and Rome itself fell in 1870. In May 1871 the Italian government promulgated the Law of Guarantees, defining the status of the papacy. Among other things, the law declared the person of the pope to be inviolate, guaranteed him full liberty in his religious functions and in the conduct of diplomatic relations, awarded him an annual indemnity in lieu of the income lost when the Papal States were annexed, and affirmed his extraterritorial jurisdiction over the Vatican and papal palaces. Pius IX refused to accept the law or the monetary allowance, and he as well as his successors described themselves as "prisoners of the Vatican." Until 1919 Catholics were prohibited from participating in the Italian government.

The so-called Roman Question was settled on February 11, 1929, through the conclusion of the three Lateran Treaties between the Italian state and the Vatican. The first treaty recognized the full sovereignty of the Vatican and established its territorial extent; the second was a concordat establishing the Roman Catholic Church as the state church of Italy; and the third awarded the Holy See 750 million lire in cash and one billion lire in interest-bearing state bonds in lieu of all financial claims against

Italy. The constitution of the Italian Republic, adopted in 1947, substantially reaffirmed the Lateran Treaties.

Beginning with the reign of Pope John XXIII and the convening of the Second Vatican Council, in 1962, the Vatican underwent a remarkable revolution, transforming the nature and bases of its authority. Through a process of *aggiornamento* (renewal), the Holy See moved in several different directions to adapt its ancient message to the modern world. The Vatican demolished barriers that excluded other Christian denominations as well as non-Christian faiths; it also, without compromising its doctrinal integrity, modernized the ecclesiastical structures, cut doctrinal deadwood, and broadened the church's appeal to include workers, the downtrodden, and the oppressed.

The major events in the reign of Pope John Paul II were the assassination attempt against him in 1981; the fall of Communism in Poland and in the rest of Europe, in which he played a part; and his visit to the Holy Land in 2000, a Holy Year. One of the most traveled popes, he visited over 120 countries, as he tried to restore the church's relations with other Christian denominations as well as with the Jews. He enlarged the College of Cardinals to nearly 200 members, and he canonized hundreds of new saints. He was known throughout the world for his conservative views on church doctrine. Pope John Paul II died on April 2, 2005, and was succeeded by Cardinal Joseph Ratzinger, who became Pope Benedict XVI.

LIST OF MODERN RULERS

Pope	
1939–58	Pius XII
1958–63	John XXII
1963–78	Paul VI
1978	John Paul I
1978–2005	John Paul II
2005–	Benedict XVI

CONSTITUTION

The term "Holy See" most accurately refers to the authority and sovereignty vested in the pope to direct the Roman Catholic Church and function as the church's central government. The Holy See has a legal personality equivalent to that of a state and can enter into and maintain diplomatic relations with other states. Vatican City State was created in 1929 to provide a territorial identity for the Holy See in Rome. Vatican City is recognized as a national territory by international law, while the Holy See functions as an international diplomatic presence.

The apostolic constitution of 1967 (*Regimini Ecclesiae Universae*) serves as the constitution of Vatican City State and retains the form of an absolute monarchy. Supreme executive, legislative, and judicial powers are vested

2576 Vatican City

in the pope, who is elected for life and serves concurrently as bishop of Rome, supreme pontiff of the Universal Church, primate of Italy, archbishop and metropolitan of the province of Rome, sovereign of Vatican City State, and vicar of Christ. In administration the pope is assisted by the Pontifical Commission for Vatican City State.

The College of Cardinals assists the pope in administering church affairs. Until the reign of Pope John XXIII the number of cardinals was limited by tradition to 70, but since then it has risen steadily, reaching a record of 194 in 2003 and settling at 182 by 2005. The cardinals are divided into three orders: cardinal bishops (including cardinals of the patriarchal sees of the Eastern Rite), cardinal priests, and cardinal deacons. Since 1970 only cardinals under 80 years of age have had the right to participate in the election of the pontiff, and since 1973 the number of cardinals with that right has been limited to 120.

The Roman Curia acts as a papal court and as the principal administrative body of the church. The Secretariat of State, led by the cardinal secretary of state, presides over a section for general affairs and a section for relations with other states.

PARLIAMENT

The unicameral Pontifical Commission for Vatican City State handles internal administration.

POLITICAL PARTIES

Does not apply.

LOCAL GOVERNMENT

Does not apply.

LEGAL SYSTEM

There are three tribunals for religious cases. The Apostolic Penitentiary determines questions of penance and absolution from sin. The Roman Rota deals with marital issues and is also competent to handle appeals of any decisions from lower ecclesiastical courts. The Supreme Tribunal of Apostolic Signature hears appeals from the Roman Rota, but only in exceptional cases. A tribunal of first instance handles minor cases within the Vatican territory.

In 1917 the first legal code, the Code of Canon Law (*Codex Juris Canonici*), was devised for the Catholic Church. In 1963 a pontifical commission was appointed to recommend possible reforms, and in 1981 the commission submitted 1,752 proposals. Revisions have included a reduction in the number of cases meriting excommu-

nication and a general relaxation of penalties, with an increased emphasis on lay participation. The new code was ratified by Pope John Paul II and came into force in November 1983.

HUMAN RIGHTS

Human rights are not an issue in Vatican City State; they are fully respected in practice.

FOREIGN POLICY

The Vatican's foreign relations are primarily based on its status as the Holy See rather than on its status as a sovereign entity. As the latter, its activities are governed by the Lateran Treaties, which enable it to enter into international agreements and bilateral diplomatic relations. The Vatican has diplomatic relations with over 100 countries (including Protestant countries, such as the United Kingdom, Denmark, Norway, and Sweden, as well as the United States, which has a majority Protestant population) and permanent observer status within the United Nations. In addition to being a spiritual leader, Pope John Paul II was probably one of the most influential and best-known statesmen in the modern world. John Paul II enhanced the Vatican's international profile by embarking on over 100 foreign trips during his reign and was described as "the most peripatetic pope in history."

In 1984 negotiations were concluded on a new concordat governing relations between Italy and the Vatican. The agreement provided for the abandonment of Roman Catholicism as Italy's state religion as well as of mandated religious instruction in public schools but extended the continued recognition of church weddings and of full freedom in Catholic schools. The Vatican was credited with hastening the widespread collapse of Communism, especially in Poland. In 1988 the pope met with President Mikhail Gorbachev, of the Soviet Union, in a historic prelude to the establishment of official contacts in 1990. By 1992 diplomatic relations had been reestablished with all former Soviet countries. Similarly, relations with Mexico, broken off in 1861, were normalized in 1992 following the deletion of anticlerical clauses in that country's constitution. As a result of the changes, the Catholic Church was authorized to own property and run schools, while priests and nuns were enfranchised and permitted to wear clerical garb in public.

Pope John Paul II made historic gestures of reconciliation toward Jews in general and to Israel in particular. In 1994 formal Vatican-Israeli relations were established. The pope met with the chief rabbi of Rome in 1986 and the chief rabbi of Israel's Ashkenazi Jews in 1993. To counter the appearance of any pro-Israeli bias, relations were also established with the Palestine Liberation Orga-

nization (PLO) and Jordan. The Vatican also insisted on its right to be consulted in any settlement regarding the future of Jerusalem. In 2000 the pope visited the Holy Land, symbolically including the Holocaust Memorial in his itinerary. He also defied left-wing criticism in granting audiences to such controversial figures as Kurt Waldheim and Jörg Haider, both of Austria. The Vatican was staunchly opposed to the U.S.-led war in Iraq in 2003.

In global policy, the Vatican has called for the rescheduling of Third World debts, just access to affordable housing for the poor, and land reform and has condemned the widening gap between rich and poor nations. At the same time, however, John Paul II's pontificate proved divisive to many of the world's Catholics due to his pronouncements on birth control, stem-cell research, divorce, and the marriage of priests.

DEFENSE

The defense of Vatican City is the responsibility of Italy. Swiss Papal Guards are posted at the entrances to the Vatican to provide security for the pope.

ECONOMY

The Holy See has a noncommercial economy. The pontificate owns a vast collection of priceless works of art. The state supports itself through the sale of postage stamps, tourist mementos, and publications as well as fees charged for admission to museums. The church also owns real estate and various other investments that bring in substantial income and receives contributions from Roman Catholic dioceses around the world.

ENVIRONMENT

As a small, independent nation surrounded by a large metropolitan area, the Vatican's environment is largely shaped by Rome, which has poor air quality and suffers from all the problems that afflict large cities, with antiquated systems for dealing with pollution.

LIVING CONDITIONS

The standard of living in the Holy See is comparable to that of surrounding Rome. The city has modern amenities and comfortable living quarters for its residents.

HEALTH

The Vatican has its own medical staff and sophisticated medical equipment. Pope John Paul II was diligently cared for in the time leading up to his death.

FOOD AND NUTRITION

There are cooks and dining facilities within Vatican City for the use of the pope and other members of the church hierarchy. Residents also eat in the many restaurants in surrounding Rome.

STATUS OF WOMEN

A number of nuns live in Vatican City.

The Vatican has tremendous power to affect national and international policies related to the status of women. Since the 1980s the Vatican has taken the position that all forms of artificial contraception are wrong and that abortion should not be performed under any circumstances. The Holy See does not allow divorced Catholics to remarry within the church. These positions have resulted in many nations' governments passing laws limiting contraception and restricting divorce. The Vatican also refuses to consider ordaining female priests. On the positive side, the Vatican has sponsored many efforts to improve the lots of women and children around the world.

WORK

The permanent residents of the Vatican are mostly ecclesiastics who pray, say Mass, and handle church business. Members of the Swiss Guard lead the lives of soldiers. The 3,000 or so lay workers who commute daily to the Vatican perform necessary services such as housekeeping, cooking, and the administration of tourist facilities; their income is comparable to that of equivalent workers in Rome.

EDUCATION

As the major center for higher Catholic education, the Vatican is the site of some of the world's most ancient and best-known seminaries. Some of the more important institutions, all prefixed by the word "Pontifical," are the Gregorian University, the Biblical Institute, the Institute of Oriental Studies, the Lateran Athenaeum, the Institute of Christian Archaeology, and the Institute of Sacred Music.

SCIENCE AND TECHNOLOGY

Vatican City has modern telecommunications facilities and its own Internet system. The telephone system is tied into that of Italy.

MEDIA

The Vatican maintains one of the most advanced media systems in the world. Its official newspaper is *L'osservatore*

romano, founded in 1861, which is published daily in Italian; it contains information about Vatican ceremonies, international events, and the pope's schedule. *Acta apostolicae sedis*, founded in 1909, is the Holy See's official bulletin and is issued monthly and on special occasions. The Central Statistics Office publishes *Annuario pontificio*, an annual record. The apostolic news agency is AIF, founded in 1926. Book publishing is handled by three firms.

Radio Vatican, founded in 1931, is situated within Vatican City at Santa Maria di Galeria. The station operates an all-day service in 40 languages on a variety of channels. Centro Televisivo Vaticano is the agency responsible for the production and distribution of Catholic television programs.

CULTURE

Vatican City houses one of the most extensive and valuable collections of art in the world. Its holdings include the Sistine Chapel, with its elaborately painted ceiling and *The Last Judgment*; numerous works of Egyptian, Assyrian, Greek, Roman, and Etruscan art; paintings by Raphael, Leonardo da Vinci, and other Renaissance artists; and a collection of classical statues in the Pio-Clementine Museum. St. Peter's Basilica and Square are architectural masterpieces.

FOLKLORE AND MYTHOLOGY

The Vatican's museums store a vast quantity of artifacts related to mythologies from different regions of the world, including Assyria, Egypt, Greece, Rome, South America, Africa, and the Pacific Islands. The Holy See itself has long been the subject of mythology and folklore, from the sex lives of popes to alleged papal associations with Nazis and the Mafia.

ENTERTAINMENT AND RECREATION

The church celebrates religious ceremonies throughout the year. Christmas and Easter attract the largest crowds. The pope himself usually says Christmas Mass. The pope usually gives public audiences once a week. Residents of Vatican City have access to Rome's many entertainment possibilities.

ETIQUETTE

Residents of the Vatican generally observe standard European rules of etiquette. Conduct during Mass and Communion is governed by a complex set of rules.

FAMILY LIFE

There are no families in Vatican City.

PERSONAL APPEARANCE

Most of the Holy See's permanent residents are ecclesiastics who wear priestly or monastic garments appropriate to their calling. Members of the Swiss Guard wear colorful uniforms that have not changed in centuries. Visitors to Vatican City are expected to dress appropriately; shorts and bare shoulders are not allowed inside St. Peter's Basilica. People attending Vatican ceremonies dress very formally; men wear white ties and tails, and women wear long-sleeved, high-necked long black dresses with mantillas.

SPORTS

The Vatican itself does not have sporting facilities, and its residents do not play sports for the most part. Pope John Paul II, a former athlete, set up a Vatican Sports Department in 2004, hoping to use sports as a way to evangelize and instruct youth in the ways of the church. He particularly wanted the department to encourage honest sportsmanship and end the doping scandals that have plagued professional sports in recent years.

CHRONOLOGY

- 1958** Pope Pius XII dies; Pope John XXIII is elected.
- 1962** Pope John XXIII convenes historic Vatican II for reform and renewal.
- 1963** John XXIII dies; Paul VI is elected pope.
- 1974** Italian referendum approves divorce despite church opposition.
- 1978** Paul VI dies; his successor, John Paul I, dies within a month of election; John Paul II, the first non-Italian in centuries to be elected pope, is installed in St. Peter's chair.
- 1981** John Paul II survives an assassination attempt.
- 1983** Pope approves revision of the Code of Canon Law.
- 1984** Italy and the Vatican sign new concordat, under which Roman Catholicism ceases to be the state religion in Italy.
- 1987** The failure of Banco Ambrosiano involves the Vatican in the worst financial scandal in Italian history.
- 1993** The Holy See establishes diplomatic relations with Israel.
- 1998** John Paul II celebrates 20 years as head of the Roman Catholic Church.

- 2000 The pope visits the Holy Land.
- 2001 John Paul II appoints 44 new cardinals, bringing the total to 184 and increasing the proportion of cardinals from developing countries to 41 percent.
- 2002 The pope summons U.S. cardinals to the Vatican to discuss mounting charges of sexual abuse by priests.
- 2003 The pope names 31 new cardinals, bringing the total to 194.
- 2005 John Paul II dies on April 2. Benedict XVI is installed as pope.

December 30, 1999

GEOGRAPHICAL FEATURES

Venezuela is located on the northern coast of South America, with an area of 912,050 sq km (352,143 sq mi), extending 1,487 km (924 mi) west-northwest to east-southeast and 1,175 km (730 mi) north-northeast to south-southwest. The national territory includes 72 islands in the Antilles, the largest of which is Margarita, in the Nueva Esparta group. The length of the coastline is

2,800 km (1,738 mi). Venezuela shares its international land border with three neighbors: Guyana, Brazil, and Colombia.

Venezuela is divided topographically into four regions: the Maracaibo Lowlands, Northern Mountains, Orinoco Lowlands, and Guyana Highlands.

The Maracaibo Lowlands comprise some 51,800 sq km (20,000 sq mi) of coastal plains embracing Lake Maracaibo. The region, which also includes the Paraguaná

Venezuela

Peninsula, is delimited on the west by the Sierra de Perija (also known as the Serranía de los Motilones) and on the south and east by the Cordillera de Mérida and the Segovia Highlands. The Northern Mountains, which are sometimes called the Venezuelan Andes, extend from the western Colombian border (south of the Maracaibo Lowlands) in an arc toward the coast and then on to the Paria Peninsula in the east. The mountains are an extension of the Eastern Cordillera of the Andes, which divides near San Cristóbal into the Sierra de Perija and the Cordillera de Mérida. The latter broadens northward to form the Segovia Highlands. Between the Cordillera de Mérida and the Colombian Andes is the Táchira Gap, which links Colombia and Venezuela. At Pico Bolívar

the Cordillera de Mérida reaches the highest elevation in the country (5,007 m; 16,423 ft). This range is interrupted by the Yaracuy Gap, beyond which is the coastal range. The coastal range comprises two parallel series of mountains. The fertile valleys between these two ranges contain some of the country's largest cities, including Caracas, Maracay, and Valencia. One part of the coastal range terminates at Cape Codera; the continuation of the other beyond Barcelona is called the Eastern, or Cumaná, Highlands.

The Orinoco Lowlands are the great plains that extend from the Colombian border south of the Andes to the Atlantic, as bounded by the Northern Mountains and the Orinoco River. This region, covering nearly

259,000 sq km (100,000 sq mi), is also called the *llanos*, or plains, and consists of pastureland, forests, sandy tablelands, and swamps.

The Guyana Highlands, constituting some three-fifths of the national territory, principally consists of plateaus between the Brazilian border and the Orinoco River. The region includes the Gran Sabana in the southeast, a 36,000 sq km (14,000 sq mi) plateau covered with grass and scrub from which emerge massive flat-topped bluffs, some of them 2,750 m (9,000 ft) above sea level. The Río Churun tumbles over an opening in these cliffs to create Angel Falls, with its drop of 978 m (3,212 ft) the highest in the world. The Guyana Highlands form one of the least-explored regions in the world.

There are more than 1,000 rivers in the country. About four-fifths of the country is drained by the Orinoco River, the world's eighth-largest river and South America's second largest, after the Amazon. Rising in the Parima Mountains near the Brazilian frontier, the Orinoco is 2,815 km (1,750 mi) long and 21 km (13.5 mi) across at its widest point. The river, along with its 436 tributaries, is connected to the Amazon by a channel, the Casiquiare, which joins up with the Río Negro. The major tributaries of the Orinoco are the Apure and Caroní. Among the rivers flowing from the Northern Mountains into Lake Maracaibo and the Caribbean Sea are the Tuy and the Unare.

Lake Maracaibo is the largest lake in South America and is accessible to ocean shipping. Of the hundreds of other lakes in the country, only Lake Valencia is geographically significant.

CLIMATE AND WEATHER

Venezuela lies entirely within the tropic zone; climatic variations are determined primarily by elevation. The rainy months are customarily referred to as winter, the remainder of the year as summer.

Based on altitude Venezuela is divided into four climatic regions: The *tierra caliente* comprises the coastal plains, the central prairies, the valleys and deltas of the Orinoco, and the jungles, with elevations of less than 800 m (2,600 ft). Average temperatures in this zone range from 24.4°C to 34.4°C (76°F to 96°F). The *tierra templada* comprises the lower mountain slopes and plateaus between 800 and 2,000 m (2,600 and 6,500 ft), where the average temperatures range between 10°C and 25°C (50°F and 77°F). Caracas is located in this zone. The *tierra fría* is the subalpine zone of the mountains, with elevations from 2,000 to 3,000 m (6,500 to 9,800 ft) and temperatures below 23.9°C (75°F) throughout the year. The *páramos* is above the timber line, where the temperature seldom rises above 14.4°C (58°F).

The rainy season lasts from May through November. The average annual rainfall varies from 1,400 mm (55 in) in the Andes to 760 mm (30 in) in Caracas and 280 mm (11 in) at La Guaira, on the coast. The heaviest rainfall occurs in the south and southeast, the least on the Paraguaná Peninsula.

Venezuela lies to the south of the customary path of hurricanes, and cyclones are therefore infrequent. Prevailing trade winds exert a significant influence on climatic conditions. These winds include the *barines* from the northwest, the *calderetes* from the south, and a Caribbean wind called the Red Wind of Coro.

Climate and Weather

Average Rainfall

Andres: 55 in

Caracas: 30 in

La Guaira: 11 in

FLORA AND FAUNA

Venezuela has a huge variety of flora and fauna to accompany its diverse array of landscapes. The area around the Orinoco River is rain forest, inhabited by anacondas, crocodiles, piranhas, monkeys, and numerous other animal species. The llanos are covered with grasses and are home to capybaras, jaguars, anteaters, howler monkeys, and numerous domestic cattle. The Andes Mountains are covered with cloud forests that grow below the snow line; highland

meadows called *páramos* contain unique plant species. The *tepuys*, or rock formations, in the southeast are home to unique, extremely specialized insects. The coral reefs off the coast harbor tropical fish and other marine life.

ETHNIC COMPOSITION

Since 1926 ethnic background has been excluded from the census questionnaire, so the country's ethnic composition can only be determined in approximate terms. The population is a combination of European, indigenous, and African peoples, with a large percentage of mixed-race individuals; those of mixed European and Amerindian ancestry are called *mestizos*. Amerindians occupy a special niche in the national ethnic structure, although their culture and ancestral lands are under relentless assault from encroaching modernization. In the most egregious cases, indigenous people have been killed by miners and even agents of the national government while trying to preserve the integrity of their lands.

The Amerindian population is divided into around 30 recognized groups. Estimates of their total number have ranged from 210,000 to 315,000. About half of these come from four groups: the Guajiro, Warao, Pemón, and Yanomami, with the first two being by far the most prominent. Other tribes are the Achagua, Arawak, Caberre, Caracas, Chaima, Chake, Cumanagoto, Gandule, Guahibo, Guayupe, Jirajira, Karinya, Makiritare, Marakapan, Mariche, Motilonos, Omegua, Otomac, Palenque, Paria, Piaroa, Quiriquire, Saliva, Teques, Timote, Tumuzu, and Zorca. They are primarily concentrated in Amazonas State, although smaller numbers are to be

found in the states of Zulia, Bolívar, Apure, and Sucre. A few groups have adopted Roman Catholicism, but otherwise the Amerindians have retained their traditional culture. The 1961 constitution defined the government's responsibilities toward indigenous peoples and extended to them special protection. Hugo Chávez's regime greatly extended Amerindian rights through the promulgation of a new constitution.

The number of aliens legally residing in the country is estimated at more than one million. These include Colombians, Spaniards, Italians, and Portuguese.

LANGUAGES

The official language is Spanish, which is spoken by virtually the entire population outside of isolated Amerindian groups, who speak as many as 170 languages and dialects. Most indigenous languages belong to one of three linguistic groups—Chibcha, Cariban, and Arawak—but some are of unknown origin. The Spanish of Venezuela is characterized by certain idiomatic expressions. The country absorbed a fair number of Italian and Portuguese speakers over the post-World War II period. Additionally, Spanish speakers from other countries, notably Colombia and the Dominican Republic, bring their own unique forms of the language.

RELIGIONS

About 96 percent of the population are baptized Catholics, and Roman Catholicism functions as the national religion, although there is no constitutional provision for a state religion. Relations between state and church are harmonious and are reinforced by a number of common activities. Through a special division of the Ministry of Justice, the government contributes to certain church operating expenses, such as the salaries of the hierarchy and the construction and repair of religious buildings. The church also has a dominant position in education and the media. There are several Catholic radio and television stations, and the church's daily newspaper, *La religión*, is a fixture in Caracas. The government also supports and finances the church's mission work among Amerindians. As in other parts of Latin America, the church's growing social consciousness and concern for the problems of injustice and economic disparities have led it to adopt a progressive stand on many political issues.

Religious minorities include Protestants, who as a result of active proselytizing among the urban poor now make up some 2 percent of the population, and several thousand Jews. A few indigenous groups still practice ancestral religions. Religious syncretism is far less common in Venezuela than in the Caribbean islands or in Latin American countries with larger Amerindian populations.

Religious Affiliations

Roman Catholic	24,360,000
Protestant	507,500
Other	507,500

HISTORICAL BACKGROUND

Not a great deal can be said with certainty about the prehistoric indigenous populations of Venezuela. They were hunter-gatherers, agriculturalists, and city dwellers who formed a diverse constellation of small bands of unrelated peoples. Never did Venezuelan territory see the rise of a prominent culture or empire such as that of the Incas. One of the most prevalent Amerindian groups was the Timoto-Cuica, whose agrarian society was based in the Andes. The coastal populations of Amerindians were displaced over the years by Caribs and Arawaks from the Caribbean islands. Tribes centered in the llanos of the east and the Maracaibo basin, in the west, tended to be nomadic.

Venezuela was under Spanish rule from 1498, when it was discovered by Christopher Columbus on his third voyage. The country received its name, meaning “little venice,” because the native huts built on stilts over the water reminded Alonso de Ojeda, who sailed into the Gulf of Venezuela in 1499, of the Italian city. From 1528 until 1546 the territory was under the control of the Welsers, a German banking firm, in settlement of a debt owed by Charles I of Spain (Holy Roman Emperor Charles V). Amerindian resistance to Spanish rule continued until 1580, when the natives were decimated by smallpox. After two unsuccessful revolts against Spain, Francisco de Miranda, “El Precursor,” the leader of the Congress of Cabildos, declared the independence of the country in 1811 only to be overthrown by royalist factions, captured, and sent to die in a dungeon in Cádiz. The cause of independence was taken up by Simón Bolívar, who issued his famous declaration calling for a war to the death against all Spaniards. In 1813 Bolívar entered Caracas as “the Liberator” and established the Second Republic.

The Second Republic was also short-lived, and in 1814 Bolívar was driven out of the country by the royalists. After regrouping his forces in Haiti, Bolívar launched a new attack on eastern Venezuela and, with the help of José Antonio Páez, freed part of the country and proclaimed the Third Republic at Angostura in 1819. The end of the war of independence came with Bolívar’s decisive victory at Carabobo in 1821; the death toll in the 10-year war was over 300,000, representing one-third of the population. The Cúcuta Congress proclaimed the union of Venezuela and Colombia in the Republic of Gran Colombia, but the new republic disintegrated in a power struggle between Páez, the military commander of the Venezuela region, and Francisco de Paula Santander, the Colombian leader. In 1829 Páez declared Venezuela an independent state.

Until the late 1950s Venezuela experienced considerable political instability and long periods of authoritarian rule by members of the armed forces. Democratic governments were incapable of legitimizing their authority and inevitably broke down. The overthrow of General Marcos Pérez Jiménez in 1958 paved the way toward the creation of a viable democratic system that witnessed peaceful transfers of power and effective competition between government and opposition parties.

The return to democracy in 1958 was marked by the election of Rómulo Betancourt, the leader of the Democratic Action (Acción Democrática, AD) party. Under his direction and that of his successor, Raúl Leoni, Venezuela made considerable economic progress while combating Cuban-supported subversive efforts. Differences among the AD leadership led to the election of Christian Democrat Rafael Caldera Rodríguez in 1968. Although Caldera’s program was substantially that of the AD, he faced opposition in the AD-dominated Congress, which facilitated the victory of Carlos Andrés Pérez in 1973. Pérez nationalized the petroleum and iron industries and developed plans for the equalization of petroleum revenues. His administration came to be seen as dishonest, and consequently, the AD candidate was defeated by the Christian Democratic candidate, Luís Herrera Campíns, in 1978.

During Herrera’s tenure Venezuela found itself flush with revenues deriving from the worldwide oil shortage; as a member of the Organization of Petroleum Exporting Countries (OPEC), Venezuela benefited tremendously. However, the temptation for the government to spend wildly on various projects led it to borrow heavily on international markets, notwithstanding its windfall; meanwhile, the influx of oil money lifted the value of the local currency, the bolivar, making economic life harder for nonfuel exporters. Venezuela remained a very oil-dependent economy, and when prices slid away from their all-time high in the early 1980s, the country’s economic problems began. Soaring global interest rates caught Venezuela, along with most Latin American countries, as the state had taken on huge debt obligations, which now threatened to overwhelm its capacity to service the debt. Each round of belt-tightening conducted under Herrera and then his AD successor, Jaime Lusinchi, to get the budget deficit under control provoked protests from students, unions, and other quarters.

In 1988, in an atmosphere of dissatisfaction, Carlos Andrés Pérez won a second term by evoking the high points of his first, when times had been better and economic nationalism had been riding high. The constraints of Venezuela’s debt crisis forced Pérez to turn quickly from populist slogans to an orthodox economic program sponsored by the International Monetary Fund (IMF), which included reducing the subsidies that kept gas prices artificially low. The price hikes sparked riots in Caracas, resulting in more than 300 deaths in clashes with police.

Pérez had to retract certain measures, but the incident increased popular disaffection with the political system, which encouraged a set of junior military officers led by Hugo Chávez Frías to attempt a coup in February 1992. Though the coup was unsuccessful, its leader became a hero to many of those with the least to lose. The abortive putsch redoubled criticism of Pérez's program; when this was compounded with renewed accusations of personal corruption (which eventually sent him to jail), the president was forced to resign early.

After a short caretaker period, new elections, in which many abstained, brought in another returning president, Rafael Caldera, who ran as an independent populist with an honest reputation. Before long his administration had to confront a severe banking crisis, following the collapse of Banco Latino; the state eventually needed to bail out a large portion of the financial system. Though Caldera had run on an anti-IMF platform, he, too, was compelled to negotiate an agreement to win an essential standby loan. The administration's austerity measures initially touched off new violence, to which it reacted by temporarily suspending certain basic constitutional rights. After floundering early, Caldera managed to muddle through by running affairs on the basis of broad consensus, meting out blame and pain. The latter was exacerbated in 1998 by drops in oil prices to lows not seen in many years.

Disgust with traditional politicians allowed another independent populist candidate, Hugo Chávez, the one-time coup plotter, to convincingly win the 1998 presidential election. Chávez promised sweeping reforms and began implementing them as soon as he secured power. A constituent assembly was convened to rethink the entire structure of government, eclipsing the existing Congress and judicial institutions, and draw up a new constitution. The open-ended nature of the assembly's authority (as well as that of the president) alarmed many, but overwhelming popular support rendered opposition futile. The new draft constitution, featuring a unicameral legislature and a presidency with unprecedented powers, was approved by referendum in December 1999, clearing the way for the old Congress and soon afterward the constituent assembly to go out of business. Elections were held for the new National Assembly in May 2000; parties supporting Chávez won by large margins, and the president succeeded in getting reelected.

Chávez proceeded to implement unorthodox policies and alienate the middle and upper classes through bitter speeches. In December 2001 the oil-industry workers' union and many large business organizations staged a massive strike. In April 2002, another massive strike was organized, and Chávez was forced to resign by military high-command rebels, who were backed by the United States, and was taken into military custody. However, Chávez returned to office on April 14, after the collapse of the interim government. At the end of

the year the Venezuelan economy ground to a halt, as opposition leaders instigated another general strike. With the oil industry not functioning, the entire country suffered fuel shortages, and shops, schools, offices, and factories were forced to close until the strike ended in February 2003.

The opposition spent much of 2003 collecting signatures demanding a referendum on Chávez's rule. Meanwhile, progovernment and antigovernment clashes led to many violent deaths and injuries. In June 2004 election officials agreed to hold the referendum in question, which asked voters whether Chávez should be allowed to serve the two and one-half years remaining in his term; in August the people voted in favor of Chávez's staying in office. In January 2005 Chávez took advantage of his mandate to sign a land bill that would divide up the country's large estates and redistribute land to the poor, a move that did not endear him to his ranching opponents.

LIST OF MODERN RULERS

1945–48	Rómulo Betancourt
1948	Rómulo Gallegos
1948–50	Carlos Delgado Chalbaud

1993–94	Ramón José Velásquez
1994–99	Rafael Caldera
1999–	Hugo Chávez Frías

CONSTITUTION

The legal basis of the Venezuelan government is the constitution of 1999, the nation's 27th, which came into effect at the beginning of 2000.

The executive branch is headed by the president, who is elected for a six-year term and may be reelected. The president wields considerable powers in practice, such as conducting foreign relations, convening extraordinary sessions of the National Assembly, and administering national finance. The president has the right to introduce bills and defend them before the parliament. As the commander in chief of the armed forces, the head of state is charged with the defense of the national territory. The

most important power available to the chief executive is that of declaring a state of emergency (or state of siege) and suspending constitutional guarantees in the event of a national crisis. The declaration of a state of emergency must be subsequently authorized by the National Assembly, or by its steering committee, when the parliament is not in session, within 90 days. The only clear constitutional checks on presidential power are parliamentary approval of the budget and control over declarations of states of emergency. The 1999 constitution provides for a weak vice presidency.

As head of government the president presides over the Council of Ministers. Ministers are appointed and removed by the president but are at least in theory accountable to the National Assembly, before which they may be called upon to explain their policies.

In addition to the executive branch, the constitution created four other branches. The legislative branch is filled by the unicameral National Assembly. The judicial branch is headed by the Supreme Tribunal of Justice. The citizens' branch consists of a prosecutor general, an ombudsman (or "defender of the people"), and a comptroller general; these individuals are allowed to challenge government actions that they believe illegal or unconstitutional. The electoral branch consists of the National Electoral Council, the five members of which are elected to seven-year terms by the National Assembly and are responsible for organizing all elections.

Suffrage is universal and compulsory over age 18. The penalty for not voting is the loss of certain civil rights, but these penalties have not been strictly enforced.

PARLIAMENT

Since 2000 Venezuela has had a 165-seat unicameral legislature, the National Assembly, with lawmaking powers and the authority to approve or reject the government's budget. In other ways, its scope of authority is restricted to questioning government ministers on policy matters. Constituents are given the power to "deselect" parliamentary representatives by referendum, and parliamentary authority may be further curtailed by another "citizen's power" provision permitting the popular override of legislation via referendum. Parliamentary representatives are elected on the basis of a system of proportional representation; voters cast their ballots for lists rather than candidates. Voting is conducted using colored ballot slips, enabling illiterate citizens to exercise their franchise. Each party is preassigned a specific color, such that in practice voters choose colors in the act of voting. The electoral process instituted in 2000 has been widely seen as a way to marginalize the parties that have traditionally been dominant—Democratic Action and the Christian Democratic Party—and produce a majority in support of the president, Hugo Chávez.

POLITICAL PARTIES

Until the late 1990s Venezuelan politics revolved around two parties. The senior and larger of the two traditional parties is Acción Democrática (AD, Democratic Action). The AD was founded in 1936 as a militant revolutionary party, but by the 1990s it was associated with the corruption of Presidents Jaime Lusinchi and Carlos Andrés Pérez. The other formerly dominant party is the Comité de Organización Política Electoral Independiente (COPEI), also known as the Christian Democratic Party, a moderately conservative and Catholic-oriented party founded in 1946. These two parties now form the core of the opposition, along with a minor party called Justice First.

In 2000 Hugo Chávez's populist party, Movement for the Fifth Republic (Movimiento V República, MVR), took a majority of parliamentary seats. The other notable progovernment party is the Movement toward Socialism (Movimiento al Socialismo, MAS).

LOCAL GOVERNMENT

For administrative purposes Venezuela is divided into 23 states, the federal district, and a federal dependency consisting of 72 Caribbean islands. The states are subdivided into 156 districts, which are in turn divided into 613 municipalities.

The constitution describes the states as "autonomous and equal political entities," but despite its federal form (until 1953 the Republic of Venezuela was called the United States of Venezuela), the government is unitary in structure and authority. Until 1989 the 20 state governors were appointed by the president and thus functioned as agents of the central government. The first-ever direct elections of state governors were held in December 1989. The states have only restricted financial powers and are dependent on the central government for most of their revenues.

Popular representative institutions at the local level include the unicameral state legislatures and, at what is in effect the county level, district councils. The district councils, whose membership varies according to the size of the district, are headed by elected chairs holding office for one-year terms. Council members are elected at the same time as national officials for five-year terms. Similarly, municipalities have elected mayors and municipal councils. These councils have no decision-making powers but function as instruments for the implementation of the decisions of the central government.

LEGAL SYSTEM

Venezuelan law is derived from Napoleonic and Italian sources. The judiciary is headed by the Supreme Court, the composition of which was expanded to 32 justices by a 2004

constitutional amendment. The Supreme Court has broad powers of judicial review and constitutional interpretation.

Below the Supreme Court, the country is divided into judicial districts that roughly correspond to the states. Each judicial district has a superior court composed of either one or three judges. Other judicial bodies within each judicial district include courts of instruction, district courts, municipal courts, and courts of first instance. The Ministry of Justice names judges to the lower courts. Historically, judges have always had fixed rather than lifetime tenures, which underscores their political subordination to the executive branch. This condition appears likely to continue, notwithstanding the president's stated desire for a court system independent of politics.

There also exist special courts: military tribunals, fiscal (tax and customs) tribunals, and juvenile courts. Although Venezuela is a federal state, there is no parallel state court system.

The conduct, efficiency, and independence of the judiciary are supervised by the Council of the Judiciary. The death penalty was abolished in 1863.

HUMAN RIGHTS

Venezuela's human rights record has been poor in recent years. The police force reportedly has connections with vigilante death squads that have murdered hundreds of people all over the country. Criminal suspects have "disappeared," and investigations of disappearances have been slow. Security officers have tortured and abused detainees. Prison conditions are terrible, with severe overcrowding, violence, and harsh treatment of prisoners. Police officers who have abused civilians have typically done so with impunity.

The government has limited numerous civil liberties. It has wiretapped private citizens. Government criticisms of the opposition, the church, the media, labor unions, and other entities have been taken as tacit permission to take violent acts against those entities. The state has forced news media to broadcast Chávez's speeches and other programming favorable to the government.

Violence and discrimination against women remain a problem. Child abuse, child labor, discrimination against indigenous people, and the abuse of laborers are all common. There have been some reports of human trafficking, but the government has been attempting to end this practice by eliminating corruption among immigration officials.

FOREIGN POLICY

Venezuela has been working to integrate its political and economic policies with those of the rest of the hemisphere. It has worked with other Latin American states on ending corruption, integrating energy policy, and expanding trade throughout the region. It is a member of

the United Nations and the Organization of American States and an associated member of Mercosur. It has assisted Haiti as part of a UN program and has tried to persuade Cuba to end its isolation.

Border disputes with Colombia and Guyana are a chronic problem. Venezuela claims three-quarters of Guyana's territory, which situation the United Nations has been trying to resolve since 1987. Venezuela and Colombia each claim certain parts of the Gulf of Venezuela, and bilateral commissions are working on this dispute as well.

The United States and Venezuela had close ties for years, and the United States has remained the nation's most important trading partner, both in imports and exports. Venezuela is one of the top four U.S. oil suppliers and in the past received substantial U.S. assistance in fighting the narcotics trade and money laundering. However, following revelations with regard to U.S. support for the failed coup of 2002, which support was traced as far as the White House, Venezuela has substantially distanced itself from the United States, as facilitated by rises in oil prices and increased ties with other leftist Latin American nations as well as anti-American nations the world over.

DEFENSE

The Venezuelan defense structure is headed by the president. The chain of command runs through the minister of defense, who is generally the chief of the joint staff, although in 2001 a civilian was appointed minister of defense, becoming the first nonmilitary defense minister in decades. Military policy is formulated by the National Council of Security and Defense, which functions outside the chain of command.

The Venezuelan armed forces are among the most modern and professional in Latin America. Conscription is mandatory by law but is rarely enforced; only 10 percent of those eligible are drafted each year. The selective service period is two years. The total strength of the armed forces, not counting the national guard, was over 105,000 in 2003. The 1999 constitution gave the armed forces a new role in economic development, and several military officers are now serving as senior government officials. Almost all military aid, including equipment and counterinsurgency training, has historically been obtained from the United States, but high oil prices have recently allowed Chávez to refuse U.S. assistance.

ECONOMY

Venezuela's economy recovered in 2004 after two years of deep recession. This recovery was mainly produced by increases in world oil prices. Petroleum remains Venezuela's biggest economic asset, accounting for one-quarter of gross domestic product (GDP) and four-fifths of export income. Almost 60 foreign companies are involved in the oil sector. Chávez passed a new law in 2001 making the oil industry the domain of the Venezuelan state. In 2002–03 the oil industry came to a halt, as oil workers went on strike, which led to nearly half of state oil workers being fired.

Venezuela opposes the proposed Free Trade Agreement of the Americas, preferring to form a South American bloc to negotiate with the United States. Manufacturing recovered in 2004 after a recession. Manufactured goods include steel, aluminum, textiles and clothing, tires, fertilizer, automobiles, and food and beverages. Export crops include rice, fish, tobacco and cigarettes, coffee, cocoa, and tropical fruits. Venezuela must import about two-thirds of its food, mainly from the United States.

ENVIRONMENT

Venezuela has a good reputation, at least by developing-country standards, for environmental stewardship. Consciousness of the importance of ecological issues was prevalent in the nation's political arena long before similar awareness was raised in many other Latin American countries. Venezuela had the first environmental ministry

in the region, created in 1977, and made its chief a cabinet member. Its Organic Law on the Environment unified existing legislation in the field, serving as a foundation upon which later laws could extend habitat protection, resource conservation, and the regulation of sanitation and industrial wastes, effluents, and emissions.

In spite of laws passed to control them, deforestation and water-purity maintenance problems remain paramount, as implementation is weak and the government has not actively sought partnerships with nongovernmental organizations and private business to compensate for its own budgetary shortcomings. Venezuela, along with Costa Rica, is foremost among third-world nations in the proportion of territory marked for natural protection or preservation. Nevertheless, swathes of woodland are disappearing at a rate of up to 2,600 sq km (1,000 sq mi) a year, which causes erosion into rivers. The country suffered the disappearance of more than 1.1 percent of its forest cover annually, more than double the pace in Brazil, between 1980 and 1995. The government has frozen some logging permits and replanted certain areas, but the response has been inadequate in relation to the scale of the situation. The pollution of waterways as a result of oil production and transport is an ever-present concern; mining and industrial chemicals have also fouled streams, lakes, and coastal waters. Sewage and other types of runoff typical of urban areas have contaminated Lago de Valencia and Lake Maracaibo. Smog is a local hazard in cities and around power plants and other industrial facilities.

Certain zones are seismically active or are subject to flooding, mudslides, and rockslides; in 1999 extensive flooding and mudslides killed tens of thousands in Vargas State and neighboring areas. Other parts of the country are afflicted by drought in some years.

Venezuela has 35 national parks and over 200 protected areas in all, for a total of 64.4 million ha (159 million acres), or 70 percent of national territory, in natural reserves; 8.3 million ha (20.5 million acres) are classified as international biosphere reserves. The largest national park is Canaima, in the Guyana Highlands, encompassing Angel Falls and Mount Roraima. Thanks to the country's wide variations in elevation and rainfall patterns, wildlife and plant life are diverse. The inaccessibility of much of the wilderness helps to protect wildlife, but many animal and plant species are endangered or threatened. Irresponsible mining operations are a particular threat to rain-forest ecosystems.

 Nationally Protected Areas % of total land area: 70
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 6.49

LIVING CONDITIONS

Venezuelan living conditions range from very comfortable to very poor. People in cities live in apartment buildings and housing developments. Many poor people cannot afford to pay rent and so live in shantytowns called *ranchos* on the outskirts of cities. The *ranchos* usually have no electricity, running water, or sewers. In the mountains, people live in houses made of adobe bricks. Coastal people often build their houses on stilts. The indigenous Yanomami live in large circular houses called *yano*, which may contain up to 100 families. Most public transportation is by bus, which is comfortable, efficient, and cheap. Caracas is the only city with a subway. Traffic is unpredictable and can be dangerous; many people die in automobile accidents every year. The nation's road system is inadequate and poorly maintained.

HEALTH

Venezuela has a combination of public and private health facilities. Public hospitals often suffer from a lack of funds and supplies, so wealthy people often choose to go to private hospitals, especially if they have private health insurance. The nation has a shortage of nurses and doctors, most of whom prefer to stay in the cities, leaving rural areas underserved. Indigenous people use various plants and herbs to heal illnesses, and their ingenuity has been noted by Western doctors and drug manufacturers, who have traveled to the rain forest to investigate their methods. A successful immunization program has greatly reduced the incidence of diseases such as measles. Common diseases include malaria, dengue fever, yellow fever, hepatitis, and malaria. HIV/AIDS is beginning to be a problem. Life expectancy in 2005 was over 74 years.

FOOD AND NUTRITION

Corn and wheat are the staple grains and are used to make pancakes called *arepas*, pastries called empanadas, and cheese-filled pancakes called *cachapas*. Meat and locally caught fish appear at many meals, as do black beans and plantains. Fruit is a popular snack; common fruits include mangoes, watermelons, papayas, pineapples, strawberries, bananas, oranges, guavas, avocados, and indigenous fruits such as *mammnes*. People drink a great deal of fruit juice, sucking the juice straight from coconuts or blending fruits into milkshakes called *batidos*. Many desserts also feature fruits. Custards made with egg are popular. Beer and *chichi*, made from fermented corn or rice, are typical alcoholic beverages. Coffee is served with most meals.

STATUS OF WOMEN

The liberal climate that prevailed after democracy was instituted in 1958 and the economy prospered from the 1960s through the 1980s was a boon for women's freedom. A school of thought holds that the shallow roots of Roman Catholicism among much of the population—in contrast to the deeper roots in next-door Colombia—have greatly allowed for the quick progress women have made. Today, about as many women as men are enrolled in higher education. According to a UN Human Development Report, around half as many women as men were in the paid labor force in 1995; women accounted for only 22.9 percent of administrators and managers but fully 57.1 percent of professional and technical workers. As of 2003, 36 percent of workers were female. Women have held executive positions in private enterprise, political parties, labor unions, local government, the judiciary, and the cabinet. A former Miss Universe and mayor of Chacao, Irene Sáez, was for a time the leading presidential contender in the 1998 campaign, though she eventually dropped far behind her two chief opponents. Women's groups are active in many policy pursuits, from women's welfare and health to legislative reform; tangible gains include a rise in the number of public day-care facilities.

Women's wages are on average 25 percent lower than men's. Venezuela's oil-fed relative prosperity notwithstanding, the nation is among those in the Western Hemisphere with the highest proportion of women in poverty.

There is a high illiteracy rate among single mothers, only about half of whom are gainfully employed. In 1998 the Congress set new penalties for violence against women, directing that these crimes should be prosecuted as a priority before all others, but the fact that the legislature needed to take this step is telling.

Government-funded maternal health programs reach a mere 14 percent of the population; partly as a consequence, maternal mortality rates are fairly high, at 96 deaths per 100,000 childbirths. Family planning became a national priority under the first administration of Carlos Andrés Pérez in the 1970s, and the church did not stand in the way of an extensive network of subsidized hospitals and clinics offering counseling and services. The average number of children per family had dropped to less than 2.3 by 2004, from close to six just two decades earlier. Abortion is still illegal except in cases in which the mother's life is at risk.

WORK

Almost two-thirds of Venezuelans work in services; another quarter work in industry, while agriculture employs only about 13 percent of the workforce. The country supports many professionals, including doctors, lawyers, and teachers. The government employs 5 percent of the workforce. Although oil refining brings in the largest portion of Venezuela's GDP, the industry employs only about 2 percent of the workforce. Many industrial workers belong to trade unions, which have successfully campaigned for safe working conditions, a 40-hour workweek, and overtime pay. The cities have a number of residents working in the informal economy for long hours and low pay. Unemployment is high, at 17 percent in 2004. Almost half of the population lived below the poverty line in 1997.

 Agriculture: 13
 Industry: 23
 Services: 64
 Unemployment %: 17.1

EDUCATION

Venezuela's constitution guarantees free education for all citizens. In the 1970s and 1980s Venezuela spent more than 15 percent of its revenue on education, resulting in one of the highest literacy rates in South America. Public education declined somewhat in the 1990s, as the economic crisis forced cutbacks, but literacy was still over 93 percent in 2003.

Children are required to attend school between the ages of six and 14. Many attend preschool or kindergarten before beginning primary school. All children wear uniforms. Most students attend school in shifts, either morning or afternoon, which makes the most of educational resources. Some poor children cannot attend school because they must work.

Secondary school is not mandatory, but attendance is still high. There are two kinds of secondary schools: diversified schools that offer studies in the humanities and sciences and specialized schools that provide technical education.

Venezuela has many institutions of higher education. The best known of the universities is Caracas's Central University of Venezuela, which has trained much of the nation's political elite. Others of note are the private Rafael Urdaneta University, in Maracaibo, and Andrés Bello Catholic University, in Caracas, and the public University of the Andes, in Mérida; Zulia University, in Maracaibo; Central-Western University, in Barquisimeto; Carabobo University, in Valencia; and Eastern University, with campuses in five different eastern states. There is a business school in Caracas: the Institute for Higher Studies in Administration. The government will pay for students to study abroad if they promise to return to Venezuela.

SCIENCE AND TECHNOLOGY

Venezuela's Ministry of Science and Technology is responsible for national scientific policy and development. The national government was in the process of adopting open-source software in early 2005 as part of a policy of national scientific independence and refusal to depend on privately owned software. The nation has a modern and expanding telecommunications system. In 2002 there were nearly three million land-based telephone lines and over 6.4 million cellular telephones in use. About 1.3 million people were using the Internet.

MEDIA

Venezuela's press was considered one of the freest in Latin America until the 1990s, when the country's economic and social problems began to affect the climate for reporting. Under Rafael Caldera, defamation laws and codes of journalistic conduct were used to try to control what was printed in papers, and the outright intimidation of journalists occurred with far more frequency. The new constitution enshrines a "right of reply" for government officials and a "right to truthful information," both of which are viewed as intending to cow an independent press. Most of the print media are in private hands, and there is no lack of vigorous journalistic opposition to the regime, but journalists complain that the government is hostile and intimidating. The government passed a law in late 2004 prohibiting the broadcasting of inappropriate sex and violence; critics complain that this law was an attempt to prevent the media from criticizing the government.

The national news agency is the Agencia Bolivariana. Foreign news agencies represented in Caracas include AFP, ANSA, AP, DPA, EFE, IPS, ITAR-TASS, Prensa Latina, Reuters, RIA-Vesti, UPI, and Xinhua. Many newspapers and magazines are published throughout the nation.

Venezuela is one of the centers of the Latin American book industry, with some 21 principal publishing houses in Caracas and one in Valencia. The nation adheres to the Universal Copyright Convention.

The official broadcasting network, Radio Nacional de Venezuela, operates 15 stations, including AM, FM, and shortwave. Union Radio Noticias is a commercial news network. Television, introduced in 1952, is operated by the official Televisora Nacional, with its network Venezolana

de Televisión, and by several private stations. The private networks, particularly Radio Caracas Televisión and Venvisión, have been successful in exporting some of their programming to the rest of Spanish-speaking America and beyond. Globovisión is a 24-hour news channel.

CULTURE

Venezuelan music blends African, European, and indigenous styles and comes in many regional varieties. Traditional instruments include maracas, harps, and a four-stringed guitar called a *cuatro*. Caracas and other cities have symphony orchestras that play classical music.

Venezuela has produced many famous artists and painters, including Armando Reverón, the "Hermit of Macuto." Jess Soto and Alejandro Otero are famous modern sculptors. Carlos Villanueva was an architect who designed many of the nation's buildings. Venezuela's different regions produce a variety of handicrafts, such as hammocks in the Amazon and saddles in the llanos.

FOLKLORE AND MYTHOLOGY

Many of the indigenous people believe in spirits that inhabit natural objects, such as the forest, and work to live harmoniously with nature. Belief in witchcraft, or *brujería*, is common. Some Catholics combine their religion with a belief in Mara Lionza, the legendary daughter of a Spanish conquistador who is often depicted riding a tapir. She supposedly performs miracles and protects animals. Believers make an annual pilgrimage to her shrine in Yaracuy State.

ENTERTAINMENT AND RECREATION

Venezuelans spend much of their free time with family. Families especially like to go out to restaurants to meet other families. Venezuelan cities offer a wide range of entertainment possibilities, including bars, restaurants, cafés, discos, and shopping centers. Venezuelans love water sports such as waterskiing, swimming, fishing, scuba diving, snorkeling, and surfing. Other outdoor activities include hiking, trekking, caving, and rock climbing. Men like to play *bolas criollas*, or lawn bowling.

ETIQUETTE

Venezuelan relationships, business and social alike, are often cemented with dinners at restaurants; even if the dinner is business related, no one discusses business at the table. It is very rare for Venezuelans to invite people to their homes for a meal; when they do, the guest always brings a gift. Lunch is the main meal of the day, served between noon and 2 p.m., and may involve many courses. Dinner is served late in the evening, often lasting until midnight, and is usually lighter. Thank-you notes are essential after invitations to meals. Tipping at restaurants and in taxis is uncommon.

FAMILY LIFE

Venezuelans center their lives around their families. It is common for three or more generations to live together, with the older people looking after the young children. Elders are highly respected. Women commonly work outside the home. A certain amount of machismo is still present in the culture, and women are expected to care for the house, children, and elderly.

PERSONAL APPEARANCE

Venezuelans dress well and fairly conservatively. Men wear dark suits for business. Women consider it important to be elegant and well dressed, with makeup, jewelry, and high heels. Both sexes are very status conscious and favor designer goods such as expensive watches. People save their shorts and athletic shoes for exercise or the beach.

SPORTS

Baseball has been one of the most popular sports in Venezuela since it was introduced in 1895. Cities and towns play one another, and the winner of the national champi-

onship plays teams from the Dominican Republic, Puerto Rico, and Mexico in the Caribbean Series. Soccer is also popular, and increasing numbers of people are playing basketball and tennis. Horse racing and bullfighting are favorite spectator sports.

CHRONOLOGY

- 1941** Appointed parliament chooses Isaías Medina Angarita, the minister of war, to replace Eleazar López; Acción Democrática (AD) receives official recognition as party.
- 1943** An elected chamber of deputies is seated; Venezuela renegotiates terms of its agreements with foreign oil firms.
- 1945** Medina is overthrown in an army-inspired coup, which sets up a seven-man junta led by Rómulo Betancourt, the AD leader.
- 1946** Newly elected constituent assembly draws up nation's 25th constitution, which goes into effect in 1947.
- 1948** In free elections, Rómulo Gallegos is elected president; disgruntled army group deposes Gallegos; military triumvirate consisting of Carlos Delgado Chalbaud, Marcos Pérez Jiménez, and Luis F. Llovera Páez takes over the government.
- 1950** Delgado is assassinated in mysterious circumstances; Pérez Jiménez becomes virtual dictator.
- 1952** Pérez Jiménez holds sham plebiscite on his reelection and declares himself the winner.
- 1957** Pérez Jiménez holds another sham plebiscite on his reelection.
- 1958** Pérez Jiménez is overthrown by military junta led by Admiral Wolfgang Larrazabal.
- 1959** Rómulo Betancourt is elected president and forms a coalition government.
- 1960** Led by Venezuela, oil exporting nations form Organization of Petroleum Exporting Countries (OPEC).
- 1961** New constitution, the nation's 26th, is promulgated.
- 1963** Organization of American States charges Cuba with aggression against Venezuela; Raúl Leoni is elected president in nation's first peaceful transfer of power.
- 1968** Rafael Caldera, founder of Comité de Organización Política Electoral Independiente (COPEI), also known as the Christian Democratic Party, is elected president.
- 1973** Carlos Andrés Pérez, of the AD, is elected president; Venezuela joins Andean Common Market.
- 1976** All foreign mining companies are nationalized.

2594 Venezuela

- 1978** Luis Herrera Campíns, of COPEI, is elected president, vowing to institute an austerity program and reductions in the state's role in commerce and industry.
- 1980** Former president Pérez is censured by Congress for his role in a scandal involving the purchase of a Norwegian ship at an inflated price.
- 1983** Jaime Lusinchi, the AD candidate, is elected president.
- 1986** Lusinchi announces 21-point program of economic measures designed to deal with loss of oil revenues; government signs-debt rescheduling accord with creditor banks.
- 1988** Approximately 200,000 workers demonstrate in the capital to protest austerity programs; Carlos Andrés Pérez is elected president; Venezuela and Colombia agree to cooperate in suppressing drug traffic along their border.
- 1989** Nation's largest trade union organizes 24-hour general strike; rise in gas prices causes rioting, and 300 or more die in Caracas.
- 1990** Pérez promises to create a reserve in the Amazon for the threatened Yanomami Indians; Argelia Laya, a former guerrilla, is named head of left-wing Movement toward Socialism, becoming the first black and first woman to lead a major party.
- 1992** Junior military officers led by Colonel Hugo Chávez Frías mount an unsuccessful coup in February and are jailed; President Pérez forms government of national unity; second coup attempt takes place in November.
- 1993** Pérez resigns a half year ahead of schedule amid new allegations of corruption; presidential election in December is won by Rafael Caldera, who ran as an independent opposed to neoliberal economic policies, but the two traditional parties still dominate Congress.
- 1994** The "Group of Three"—Mexico, Colombia, and Venezuela—sign a 10-year trade liberalization pact; Banco Latino collapses, setting off a chain reaction of bank failures, and a state bailout becomes necessary; Caldera pardons Chávez and his fellow conspirators to placate the military; after certain price rises provoke violence, administration suspends six constitutional liberties until further notice; these are later restored.
- 1996** Caldera produces "Agenda Venezuela," a plan for economic restructuring to comply with IMF criteria for a standby loan.
- 1997** Venezuela and Colombia agree to strengthen military cooperation after a string of cross-border incidents involving Colombian guerrillas and paramilitary forces.
- 1998** Hugo Chávez wins presidency on an antiestablishment platform, promising to overturn institutions of Venezuelan political society.
- 1999** Chávez sponsors referendum that approves the seating of a constituent assembly to draw up a new constitution; Chávez supporters win nearly all constituent assembly seats; assembly approves a decree abolishing the existing governmental institutions; draft constitution is completed and is approved in December referendum; oil prices drop to lowest level in years, and economy contracts 7 percent over the full year; heavy rains in December cause massive mudslides that kill around 30,000 people in coastal regions north of the capital.
- 2000** New constitution comes into effect, providing for a strong presidency and unicameral legislature; old Congress is disbanded, as followed by constituent assembly; Chávez is reelected, with a strong majority in the new National Assembly.
- 2002** Venezuela's national currency, the bolivar, plummets 25 percent against the dollar after the government discontinues exchange-rate controls that had been in place for five years. On April 12 Chávez is forced to resign by military high-command rebels and taken into military custody; Chávez returns to office on April 14 after the collapse of the interim government; oil workers strike in December, demanding Chávez's resignation.
- 2003** Oil workers end their strike in February after nine weeks of fuel shortages and commercial inactivity; the opposition demands a referendum on Chávez's rule.
- 2004** Opposition supporters fight with Chávez supporters, leading to deaths and injuries; Chávez wins a referendum on whether he should stay in office for the rest of his term.
- 2005** Chávez signs a law eliminating large estates in an attempt to redistribute land to the poor; Venezuela and Colombia dispute the capture of a Colombian rebel leader in Venezuela.

GEOGRAPHICAL FEATURES

Vietnam, a long and narrow country located in Southeast Asia on the Indochinese Peninsula, has an area of 329,560 sq km (127,243 sq mi). The country is bordered by China to the north, Cambodia and Laos to the west, and the South China Sea to the east and south. The length of the coastline, excluding islands, is 3,444 km (2,140 mi).

Hanoi is the capital city. Other major cities are Ho Chi Minh City (formerly Saigon), Haiphong, Da Nang, and Long Xuyen.

Vietnam is divided into four geographic regions. The northwest is mountainous; the country’s highest peak, Fan Si Pan (3,144 m; 10,312 ft) is located near the Chinese border. East of the highlands are the Red River delta, along the Gulf of Tonkin, an arm of the South China Sea, and coastal plains that extend northeast and south. The Annamese Highlands and a coastal plain are located south of these areas. In the southern part of the country is the flat Mekong River delta. The country also includes several offshore islands.

The two major rivers are the Red River, 1,167 km (725 mi) long, in the north, and the Mekong River, 4,500 km (2,800 mi) long, in the south.

CLIMATE AND WEATHER

The climate of Vietnam ranges from tropical in the south to subtropical in the north. The northern regions have dry winters and wet summers, whereas the southern and central areas have climates more typical of tropical rain forests: Temperatures are high, and there is much rainfall. Average daily temperatures fluctuate around the country. In Hanoi, in the north, temperatures range from an average of 28°C (82°F) in June to 17°C (63°F) in January. In Ho Chi Minh City, in the south, temperatures range from 33.4°C (92°F) to 18°C (64°F). The typhoon season lasts from July through November.

 Hue: 81 in
 Ho Chi Minh City: 81 in

FLORA AND FAUNA

Vietnam was once almost entirely covered in forest, but only about 30 percent of those forests now remain, and they are yet endangered by the growing population and the timber industry. The government has improved the situation somewhat since 1992 by banning the export of unprocessed timber, replanting trees, and sponsoring environmental education programs. The mountains are still mainly covered with forests, including many rare plants.

Vietnam's once profuse wildlife has also suffered from pollution, habitat destruction resulting from the

growing human population, and illegal hunting. Animal species include tigers, leopards, black bears, rhinoceroses, elephants, monkeys, crocodiles, and turtles. The world's rarest rhinoceros, the Java rhino, was discovered in 1990 in Nam Cat Tien National Park. The government's wild-life-protection programs have not been fully successful.

POPULATION

ETHNIC COMPOSITION

The vast majority of the country's citizens, accounting for 87 percent of the population, are ethnic Vietnamese. Important minority ethnic groups are the Chinese, the Khmer, and a variety of ethnic groups living in the mountainous regions, sometimes collectively referred to as *montagnards*.

LANGUAGES

The official language is Vietnamese, a language derived from Chinese. The Europeans introduced a romanized script, Quoc Ngu, in the 17th century, and after further propagation by the French in the early 20th century the Vietnamese came to use the Quoc Ngu system for writing. Various ethnic languages are also spoken. The use of French, the colonial language, is discouraged; English is increasingly favored as a second language.

RELIGIONS

Vietnam has no official religion, and although official census data have four-fifths of the population adhering to no

religion, most Vietnamese follow a combination of Mahayana Buddhist and Taoist practices. Other significant religions are Theravada Buddhism and the newer faiths of Cao Dai, which is highly syncretic, and Hoa Hao, a Buddhist sect. There is a substantial Roman Catholic minority as well as a number of Protestants and Muslims.

Religious Affiliations

Buddhist	7,769,000
Catholic	5,597,000
Hoa Hao	1,253,000
Cao Dai	919,000
Protestant	418,000
Muslim	84,000
None	67,497,000

HISTORICAL BACKGROUND

The known history of Vietnam extends back to Paleolithic times. By about 1200 B.C.E. the area was already a center of wet-rice cultivation and bronze casting. According to Vietnamese tradition, the nation was founded by Hung Vuong, the first ruler of the semilegendary Hung dynasty (c. 2879–258 B.C.E.), of the kingdom of Van Lang. The Hung dynasty is supposed to have ruled Vietnam for 18 generations, during which period the people became skilled weavers and craftspeople. The Hung dynasty was overthrown in the third century B.C.E. by An Duong Vuong, the leader of the neighboring kingdom of Thuc. His rule was short-lived, as he was in turn overthrown by Chinese invaders; their leader combined his domain in southern China with the land he had conquered and named the combined territory Nam Viet. In 111 B.C.E. Vietnam was incorporated into China.

For the next thousand years, until 939, Vietnam was ruled by the Chinese, who attempted to inculcate in the citizens the Chinese way of life, including Chinese values, religion, political organization, and culture. However, the Vietnamese, especially in rural areas, retained their memories of and loyalty to their own language and customs.

The Vietnamese succeeded in driving out the Chinese in 939 and reestablished an independent nation, defeating Mongol armies led by Kublai Kahn in 1257, 1284, and 1287. The Chinese reasserted their influence early in the 15th century, as invited in by Vietnamese landowners threatened by peasant uprisings.

The division of Vietnam in the 18th century into two states, Tonkin in the north and Cochinchina in the south, permitted French political intervention and expansion in the region. Cochinchina became a French colony in 1867, and Annam, in central Vietnam, and Tonkin became French protectorates in 1883. Later, all three were merged with Laos and Cambodia to form French Indochina. Throughout French colonial rule, Vietnam was beset by strong nationalist and revolutionary move-

ments, some with religious overtones. With the collapse of France in 1940, the Vichy regime yielded Indochina to the Japanese, who set up a puppet administration under Bao Dai, the emperor of Annam. Following Japan's surrender, the League for the Independence of Vietnam (Viet Nam Doc Lap Dong Minh Hoi), commonly known as the Viet Minh, a nationalist coalition led by a Communist named Nguyen Ai Quoc—who had adopted the pseudonym of Ho Chi Minh in 1943—proclaimed the Democratic Republic of Vietnam in Hanoi in 1945. French resistance to the Viet Minh led to a war that lasted eight years and culminated in the siege of Dien Bien Phu. A cease-fire agreement signed at Geneva in July 1954 provisionally partitioned Vietnam along the 17th parallel, pending general elections in July 1956 to bring about the unification of the country.

These elections were never held, and in a referendum the south proclaimed itself the Republic of Vietnam, with Ngo Dinh Diem as president and the capital at Saigon. The anti-Communist regime in the south was opposed by a growing resistance movement composed of former members of the Viet Minh who became known as the Viet Cong. In 1961 the United States joined the war between north and south, eventually committing large ground forces on the side of the Saigon government. Diem was overthrown in 1963, and a series of short-lived military regimes followed. The United States carried out bombing attacks against the north from 1965 to 1968, but the bombings did not deter the Viet Cong from stepping up insurgent activity and gaining control of large areas in the south. Meanwhile, peace negotiations begun in 1969 between the Hanoi government and the United States (spurred by the failure of U.S. military policy and growing internal opposition to the unpopular war) led to the signing of the Paris Peace Agreement on January 27, 1973. The last of U.S. forces left South Vietnam on March 29, 1973; the final U.S. combat death toll in Vietnam was 46,079.

In spite of the peace agreement, the conflict dragged on for another two years, until the Hanoi-led National Liberation Front forces, in a massive offensive, swept through to the gates of Saigon. President Nguyen Van Thieu resigned and fled and was replaced by Gen. Duong Van Minh, who announced the Republic of Vietnam's unconditional surrender. The war that had raged for three decades had ended; in all, two million Vietnamese were killed, four million were maimed or injured, 57 percent of the population was rendered homeless, and most of the nation's cultivated areas were desolated.

Reunification was officially proclaimed in July 1976, and North Vietnam's Premier Phan Van Dong formed a government that included South Vietnamese representatives. In 1977 the regime began a rapid transition to socialism that resulted in the flight of hundreds of thousands. The rapid collectivization of agriculture was accompanied by a massive relocation program that affected millions and had disastrous effects on the economy.

Vietnam invaded Cambodia in late 1978, overthrowing the regime of Pol Pot and establishing a friendly government. China responded in early 1979 by launching a brief attack on northern Vietnam that served little purpose. Relations with China remained tense throughout the 1980s, with a series of border incidents culminating in China's three-day incursion into Vietnam in 1987. Vietnam withdrew the last of its troops from Cambodia in 1989.

Le Duan, the Communist Party leader since the death of Ho Chi Minh in 1969, died in mid-1986 and was replaced by Nguyen Van Linh. A reformist, Van Linh moved to deal with the country's economic problems by shifting the nation toward a more open economy. Among measures instituted were the encouragement of privately owned production, the opening of the country to foreign business, and the gradual abandonment of the relocation program.

Aiding in Vietnam's recovery, the United States agreed to lift its 19-year embargo on trade with its former enemy in February 1994, in recognition of Vietnam's efforts to return the bodies of U.S. soldiers killed during the war. In July 1995 the two nations resumed full diplomatic relations.

Tran Duc Luong, a former engineer, was named president by the National Assembly in September 1997, while Phan Van Khai was elected prime minister. In 2001 the Communist Party chose Nong Duc Mants as its new leader. In 2002 the National Assembly returned Tran Duc Luong and Phan Van Khai to power. Tran Duc Luong announced plans to make Vietnam a modern industrialized nation by 2020 and to fight corruption within the nation.

Vietnam and the United States further normalized relations in the early 2000s; a U.S. warship visited Ho Chi Minh City in 2003, and the following year the first U.S. commercial flight since the war landed in Ho Chi Minh City. In 2005 Prime Minister Phan Van Khai became the first Vietnamese leader to visit the United States since the end of the war. The country opened a stock exchange in 2000 and has been encouraging tourism and other forms of economic liberalization, although Communist leaders fear that such developments may weaken their power. As such, the government continues to monitor the press and crack down on media forms that could "poison" the minds of the Vietnamese.

LIST OF MODERN RULERS

Prime Minister

1976–87	Pham Van Dong
1987–88	Pham Hung
1988–91	Do Muoi
1991–97	Vo Van Kiet
1997–	Phan Van Khai

CONSTITUTION

Vietnam is governed under the terms of the 1992 constitution. Under its provisions, the head of state is the

president, elected for a five-year term by the members of the unicameral National Assembly from among its members. The prime minister, who heads the government, is chosen by the president from among the members of the National Assembly. Deputy prime ministers, in turn, are appointed by the prime minister. The cabinet is appointed by the president according to proposals made by the prime minister and subject to approval by the National Assembly.

PARLIAMENT

The Vietnamese parliament, the National Assembly, is the highest legislative body in the country. Its 498 members are elected by popular vote for five-year terms. The legislature must approve all governmental appointments. Approximately 90 percent of Assembly members are members of the Communist Party of Vietnam; the other 10 percent belong to parties sanctioned by the Communist Party.

POLITICAL PARTIES

The only true political party in Vietnam is the Communist Party, which operates through its political organization, called the Vietnam Fatherland Front. Other parties exist in name only and are both sanctioned and controlled by the Communist Party.

LOCAL GOVERNMENT

Vietnam is divided into seven regions, which are further subdivided into 59 provinces and five municipalities—Hanoi, Ho Chi Minh City, Can Tho, Da Nang, and Haiphong. Localities are administered by people's councils, from which people's committees are chosen to carry out executive functions.

LEGAL SYSTEM

Vietnam's legal system is based on French civil law and Communist legal theory. The country's first civil law code was approved by the National Assembly in 1995 and became effective in July 1996. The highest judicial body, whose members are appointed by the president, as subject to approval by the National Assembly, is the Supreme People's Court. Below this court are people's courts, military tribunals, and special tribunals. Judges for the lower courts are elected. The judiciary is still relatively weak, and the country has few lawyers. Trial procedures are still being developed.

The Supreme People's Office of Supervision and Control is charged with enforcing adherence to the law

and to the principles of the socialist government at all levels, from the various ministries to the ordinary citizen, and has the right to initiate public prosecution of alleged violators.

HUMAN RIGHTS

Human rights remain problematic in Vietnam, where the Communist Party controls the flow of communication and often acts in violation of basic principles of human freedom. Amnesty International reported that at least 56 prisoners of conscience and possible prisoners of conscience were in custody in 1998. These included persons imprisoned for following religious practices other than those sanctioned by the government, advocating social and economic change, and participating in demonstrations against alleged government corruption. The government has been particularly harsh in its treatment of religions other than Buddhism, and it has been criticized by the United Nations for its harsh discrimination against the Christian community, which has been subject to harassment and pressure to abandon its religious practices. As part of a continuing program of intimidation, Christian churches have been destroyed and Christian leaders have been subject to detention and house arrest. A UN investigation was stymied when the Vietnamese denied the investigator access to religious dissidents.

Although there has been some loosening in recent years, including several general amnesties that resulted in the freeing of thousands of political prisoners and other prisoners of conscience, the government still keeps tight control over political dissension and the flow of information. Some political protests are permitted, but their leaders are subject to harassment and sometimes arrest. Because the judicial system is dominated by appointed judges selected for their loyalty to the ruling regime, the legal system is inherently unfair and serves to reinforce government policy and control.

The government has committed numerous other human rights abuses. The police arbitrarily detain individuals, and detainees are often beaten or imprisoned for extended periods. Prisoners are forced to work without pay. Child labor and human trafficking are serious problems. There have been cases of women being sent to Taiwan for forced marriages.

FOREIGN POLICY

Vietnam has been renewing relations with the world's nations since the early 1990s in the hopes of attracting foreign capital and finding markets for its goods. Vietnam is a member of the United Nations and the Association of Southeast Asian Nations. It enjoys good relations with France, its former colonial master, and has taken steps to

improve relations with other Southeast Asian countries, many of whom are major trading partners. Ending decades of bitterness, the United States lifted its trade embargo against Vietnam in February 1994, and in July 1995 the two nations resumed full diplomatic relations, after the Clinton administration certified that the Vietnamese had been helpful in recovering the remains of Americans missing in action since the Vietnam War. As a result, U.S. economic investment in Vietnam has grown, and U.S. tourism to Vietnam has increased.

Vietnam remains embroiled in complex disputes with Cambodia, China, Malaysia, the Philippines, Taiwan, and possibly Brunei over the possession of the Spratly Islands. The nation is also under international pressure because of its role in the international drug trade: Vietnam produces poppies capable of yielding 20 metric tons of opium per year and may be a minor transit point for heroin en route to the United States and Europe. The nation may also be a small-scale producer of heroin.

DEFENSE

The People's Army of Vietnam consists of ground forces, a navy, a coast guard, and an air force. Conscription is for two years at the age of 18. In rural areas, military forces are the government's chief agents, providing public safety and all infrastructure functions.

ECONOMY

After the end of the Vietnam War, the victorious north imposed its highly centralized system of economic planning on the south. However, in eventual efforts to fully restore the country's economy, which was devastated by the years of battle, Vietnam actively sought foreign investment and opened up the country to a more Western-style market economy. Even in agriculture, still the dominant market sector, farmers have been encouraged to abandon collective farming and to farm individually contracted plots of land. The economy has enjoyed boosts from oil-export revenue and the growth of tourism, which in 1997 added \$88 million to the economy. The growth of tourism, in particular the boom in the construction of hotels and other tourist facilities in the cities, has attracted much foreign capital.

2602 Vietnam

Despite the sizable economic growth of the 1990s, Vietnam is still a poor country, with a gross domestic product (GDP) of \$227.2 billion and a per capita GDP of \$2,700 in 2004. These figures mark improvements from the late 1990s, but there is a great deal of income disparity, and people in rural areas are much poorer than those in the cities. Vietnam's major trading partners are the United States, Japan, China, and Singapore. The country suffered following the collapse of the Soviet Union, which was a major benefactor, and from the overall decline in Asian economies in the mid-1990s. Administrative rigidities and a centralized decision-making structure have also impeded progress; the country's shift toward privatization has been slow, restricting opportunities for venture capitalists.

In July 2000 the United States and Vietnam signed a trade agreement in which the United States granted normal trade relations to Vietnam; the agreement entered into force in late 2001. The pact reduced tariffs on goods imported to the United States from Vietnam from 40 percent to 3 percent, allowed U.S. financial organizations to operate in Vietnam, and contained other provisions as well. The United States is assisting Vietnam in implementing reforms required by the agreement.

Agriculture remains the dominant market sector, employing approximately 63 percent of the labor force. The country's principal crops are rice, a staple of the diet; sugarcane; potatoes; and coffee and tea. Approximately 20 percent of the land is arable.

ENVIRONMENT

Vietnam is facing a number of serious environmental issues. Excessive logging and slash-and-burn agricultural practices have contributed to deforestation and the impoverishment of the soil. In addition, water pollution and overfishing pose threats to offshore fishing grounds. Groundwater contamination has limited the availability of safe drinking water, and the growing populations of Hanoi and Ho Chi Minh City, along with growing industrialization, are increasing the air pollution in those cities.

Vietnam is a signatory to the Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Ozone Layer Protection, Ship Pollution, and Wetlands treaties. It has signed but not ratified the Kyoto Protocol on Climate Change and the Comprehensive Nuclear Test Ban Treaty.

LIVING CONDITIONS

Most Vietnamese are poor. Food shortages are common, and most people do not have access to adequate sanitation. There is ample public transportation, but much of it is slow, overcrowded, and unsafe. A common form of transport is by cyclo, or bicycle taxi. Traffic is bad and unpredictable. Most people still live in the countryside. Houses are made of bamboo, straw, and earth and roofed with clay tiles or corrugated metal; they are often built on stilts to avoid floods.

HEALTH

Vietnam does not have a thorough modern medical system. Rural areas lack facilities, supplies, and staff. Most patients must pay for their own care, which is unaffordable to many. People still use traditional remedies such as moxibustion and cupping. Numerous diseases are endemic, including hepatitis, dengue fever, malaria, rabies, typhoid, tuberculosis, and HIV/AIDS. Avian flu is a problem as well; influenza strains often begin in chickens and birds in the region. The government has limited fertility by fining couples who have more than two children, which had lowered the birthrate to 1.9 infants per woman by 2005. Life expectancy in 2005 was over 70 years.

FOOD AND NUTRITION

Rice is the staple of Vietnamese cuisine and may be eaten at every meal. Noodles are also popular; a noodle soup called *pho* is often eaten for breakfast. Other meals usually consist of rice served with many vegetables and small amounts of meat or fish. Soups are very common, and the national dish is a meat soup with rice noodles, coriander, ginger, anise, and pepper. Condiments include hot peppers, lemongrass, coriander, and *nuoc mam*, a salty fish sauce. Fruits are readily available. Peanuts and red watermelon seeds are popular snacks. People drink copious amounts of tea, with every meal as well as between meals. Lotus tea is a delicacy.

 Amount of Fruits and Vegetables Available per person per year kg: 132.1

STATUS OF WOMEN

A sizable majority of Vietnamese women have entered the labor force, but they continue to experience economic and social discrimination. Despite the government's promise of equality for women and constitutional promises of equal pay for equal work, women still occupy a subordinate role in the country's power structure, both governmental and economic. During the war years women held leadership positions in industry and government, but their role shrank in the postwar era. In rural areas women perform menial work for extremely low wages. Domestic violence is common. Prostitution is illegal but widely tolerated and is often an economic necessity for young women. Trafficking in sex slaves is a serious problem.

As called for by the United Nations after the Fourth UN Conference on Women, held in Beijing in 1995, the government of Vietnam submitted a national action plan whose goals were the expansion of economic and educational opportunities for women, the eradication of poverty, the improvement of health care, and the enhancement of women's leadership in all aspects of national life. The action plan pledged that all government agencies would work toward these ends. As such, opportunities for young women have increased recently, with greater numbers of women now participating in the civil service and private sector and attending universities.

WORK

Most Vietnamese still work in agriculture; in 2000 about 63 percent of people worked as farmers, with the remainder employed in industry and services. Unemployment was officially only 1.9 percent in 2004, but underemployment is a problem. Many people must work two jobs to make ends meet, perhaps holding a poorly paid official job alongside freelance work or independent business. Employees are expected to be loyal and obedient. People generally find jobs by networking with family and friends, and employers rarely advertise jobs publicly. Economic pressures have forced many women to begin working outside the home.

EDUCATION

Primary education is free and compulsory for children between the ages of six and 11. The estimated literacy rate in 2002 was 90 percent. The Communist Party still controls all education, and while the curriculum was Westernized under French rule, it now includes Vietnamese history, language, and literature. Children attend school for six half days per week. Schools are overcrowded and lack supplies.

The country has more than 100 institutions of higher learning, with the most important universities in Hanoi and Ho Chi Minh City. Spaces are limited, and admission is extremely competitive. The government has been trying to expand the vocational school system and add more university branches, but as of the early 2000s few students attained higher education because of the lack of space and financial limitations.

The Vietnamese believe that education is the key to a prosperous future and will do whatever it takes to educate their children. Teachers are treated with great respect, though they are still poorly paid, and parents ensure that children do their homework.

SCIENCE AND TECHNOLOGY

Vietnam's government is working hard to modernize its telecommunications system, which is nevertheless substandard for the region. The number and quality of telephone lines have been increased, and most of the country uses digital connections and fiber-optic or microwave radio relay networks. In 2003 there were about 4.4 million telephone lines and nearly 2.75 million cellular telephones in use in the country; cellular telephone use has been growing rapidly. Some 3.5 million people were using the Internet. The Ministry of Science, Technology, and Environment, in Hanoi, is in charge of formulating development strategies and plans for science, technology, and the environment.

MEDIA

The Communist Party controls all media, with the assistance of the Ministry of Culture and Information. The government does not hesitate to shut down newspapers that go beyond what it considers "permissible" areas of reporting. Most people get their news from television, with Vietnam Television broadcasting nationally from Hanoi and numerous regional stations also in operation. Only senior governmental officials are allowed to receive satellite broadcasts from foreign countries, though some people can access CNN and other channels through cable. The state-run Voice of Vietnam broadcasts nationally in several languages, including English, French, and Russian. The government restricts Internet access. Several newspapers are published in the nation, the biggest of which is the Communist Party daily *Nhan dan*.

CULTURE

Vietnam has been inhabited for several thousand years and has long-established cultural traditions. Literature, especially poetry, has been important since Vietnam was called Van Lang, meaning "literate country," 4,000 years ago. Famous modern writers include Bao Ninh and Nguyen Huy Thiep. Singing is very popular; people make up songs as they work in the fields and also enjoy listening to pop music. Traditional instruments include bamboo flutes, a 16-string zither called a *don tranh*, and a one-stringed bowed instrument called a *dan bau*. Traditional music is based on a five-note scale. Visual arts include woodblock printing, lacquer art, and mother-of-pearl inlays.

FOLKLORE AND MYTHOLOGY

The four main mythical animals in Vietnam are the dragon, the unicorn, the turtle, and the snake. These animals appear on many older buildings. Most families have altars in their homes where they burn incense and leave offerings of food for their ancestors.

ENTERTAINMENT AND RECREATION

Vietnamese people generally get together in small groups to socialize; large parties are uncommon. Women visit one another to play cards or do embroidery. Men play cards, chess, or mah-jongg. Both sexes enjoy going to cafés. Few people in rural areas own television sets, but those who do may invite neighbors over to watch favorite shows. In the cities people go out to play video games, watch movies, or sing karaoke. Cities also have museums, shops, restaurants, gardens, and other facilities.

ETIQUETTE

Vietnamese, like most Asian peoples, value emotional control and look down on those who lose their tempers. They strive to always present a pleasant demeanor. It is rude to point the soles of one's feet at another person or at a shrine. It is proper to ask permission before photographing someone. Meals are formal occasions, and people follow strict rules of behavior, passing food dishes with both hands, trying some of every dish on the table, and never turning down second or third helpings. Guests are expected to bring gifts to their hosts.

FAMILY LIFE

Vietnamese people hold ancestors, both living and dead, in high esteem. Children are raised to believe that they owe everything to their parents and must respect all elders. Family roles have not changed much over the years, although warfare and Communism have altered some traditions. Men function as providers, and women are considered heads of the home. Wives are subservient to their husbands; widows are expected to allow their sons to become heads of the family. Wives must often care for their husbands' parents in addition to their own parents, their husbands, and their children. In rural areas women do most of the farmwork as well. Children are expected to help out at home, with older children watching younger ones.

PERSONAL APPEARANCE

Most Vietnamese men now wear Western clothing. Women also wear Western clothing, but many wear the

ao dai, a long top over loose trousers. Many office workers wear their *ao dai* to work, and the outfit is also standard attire for formal occasions. Young girls wear white, young unmarried women wear pastels, and older married women wear bright colors. Women are expected to be beautiful and refined, with elegant speech and delicate manners. Both men and women dress conservatively, especially when visiting temples and pagodas.

SPORTS

Soccer is the most popular sport in Vietnam. People also play volleyball, table tennis, and badminton; ride bicycles; and practice martial arts. The first Vietnamese to win an Olympic medal was Hieu Ngan Tran, who won a silver medal in women's tae kwon do in 2000. Many older people practice tai chi in the morning. For the most part, Vietnamese people do not exercise or engage in sports, and the country has few athletic facilities.

CHRONOLOGY

- 1945** When Japan surrenders to the Allies, Viet Minh forces led by Ho Chi Minh declare the independence of Vietnam, in the August Revolution; France later seizes control of Vietnam's southern provinces, beginning an eight-year conflict.
- 1950** The United States recognizes the government of Bao Dai in the south and provides military and economic aid to the French.
- 1954** Viet Minh forces attack Dien Bien Phu, capturing the French military outpost before peace negotiations in Geneva can begin; negotiations temporarily divide Vietnam along the 17th parallel, pending nationwide elections scheduled for 1956.
- 1955** As supported by the United States, Ngo Dinh Diem wins elections staged in South Vietnam to favor the Catholic and non-Communist vote.
- 1961** North Vietnam creates an armed wing, the National Liberation Front, known as the Viet Cong, whose aim is to topple Diem's government and establish a Communist government.
- 1963** South Vietnamese army dissidents kill Diem and overthrow his government.
- 1965** U.S. president Lyndon Johnson orders bombing of North Vietnam and sends U.S. combat troops to South Vietnam.
- 1968** North Vietnam launches the Tet Offensive, simultaneous attacks on most major South Vietnamese cities, damaging both U.S. confidence in victory and the grip of South Vietnamese President Nguyen Van Thieu.
- 1969** Ho Chi Minh dies, and Le Duan assumes leadership of North Vietnam's Communist Party.

- 1973** In the Paris Agreement, the United States agrees to withdraw combat troops from South Vietnam but provide military assistance to the south, while North Vietnam's Viet Cong is allowed a legal role in politics in the south.
- 1975** Communists seize power in Saigon, South Vietnam, in a military offensive; Cambodian troops seeking return of historic territory attack Vietnamese border villages.
- 1976** South and north are officially joined as the Socialist Republic of Vietnam.
- 1979** Vietnam overthrows the regime of Pol Pot in Cambodia and installs a Vietnamese government; China retaliates by attacking northern Vietnam.
- 1986** Le Duan dies; Vietnam begins withdrawal of its occupying forces in Cambodia, a process completed by 1990.
- 1995** Vietnam and the United States resume full diplomatic relations; Vietnam joins with non-Communist governments to form the Association of Southeast Asian Nations (ASEAN).
- 2000** Vietnam and the United States sign a trade agreement.
- 2002** The Communist Party orders the seizure and destruction of unauthorized books by leading dissidents; Russia hands back the Cam Ranh Bay naval base; the Communist Party wins the parliamentary elections; the National Assembly appoints Tran Duc Luong to a second term as president.
- 2003** Gangster Nam Cam and others are sentenced to death in a showcase trial; a U.S. warship docks in Ho Chi Minh City for the first time since the war.
- 2004** Avian flu kills more than 30 people; Nam Cam is executed; the first American commercial flight since the war lands in Ho Chi Minh City.
- 2005** Prime Minister Phan Van Khai becomes the first Vietnamese leader to visit the United States since the war.

May 22 (Day of National Unity), September 26 (Revolution Day), October 14 (National Day), November 30 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

May 22, 1990

DATE OF CONSTITUTION

May 16, 1991; amended September 29, 1994, and February 2001

GEOGRAPHICAL FEATURES

The Republic of Yemen is situated in the southwestern corner of the Arabian Peninsula, just north of the passage between the Red Sea and the Gulf of Aden. Its total area is 527,970 sq km (203,849 sq mi). The republic includes the 3,626 sq km (1,400 sq mi) island of Socotra and the smaller islands of Perim and Kamaran. Yemen's international land frontiers, with Oman and Saudi Arabia, are mostly undemarcated. The total length of the coastline is 1,906 km (1,183 mi).

Topographically, the country is divided into a littoral region, between 6.5 km (4 mi) and 64 km (40 mi) in width; a maritime range, with elevations between 300 and 600 m (1,000 and 2,000 ft); and a highland plateau, with eleva-

tions ranging from 1,500 to 2,400 m (5,000 to 8,000 ft), which falls steeply into the Rub' al-Khali desert region. An important feature is the Wadi Hadhramaut, a wide and imposing valley running parallel to the coast about 200 km (125 mi) inland. The broad upper and middle parts of the Hadhramaut are relatively fertile, but at its lower end it turns sharply to the south and becomes a narrow, barren gorge as it descends to the sea. The land is totally devoid of natural vegetation except for a light cover of thorn shrub.

The Tihamah, a sandy strip about 65 km (40 mi) in width, separates the Red Sea coast from the mountainous interior.

The abundant rains in the highlands produce flash-flood rivers, or wadis. To the northeast rise the tributaries of Wadi Najran, Wadi Dawasir, Wadi Bana, and Aden,

2610 Yemen

while Wadi Siham, Wadi Zabid, and Wadi Surdud flow into the Red Sea.

Population of Principal Cities (2004 est.)

Aden	580,000
Sanaa	1,748,000

CLIMATE AND WEATHER

Temperatures are high throughout the country, except in the mountainous region, where winter temperatures hover near 0°C (32°F). The coastal region has a hot season lasting from April until October, with temperatures between 30°C (86°F) and 40°C (104°F), followed by a cooler season between October and April, when temperatures range from 20°C (68°F) to 30°C (86°F). Temperatures of up to 54.4°C (130°F) have been recorded in Aden. Humidity is very high, particularly at the beginning and end of the hot season. Rainfall, limited to the monsoon months of July and September, is sparse. The average rainfall is 76 mm (3 in) but there are marked regional variations. The Hadhramaut and the central highlands receive as much as 500 to 760 mm (20 to 30 in) per year, while the northern and eastern sections may receive rain only once every five or 10 years. Rainfall is unpredictable, and both drought and severe floods are common. The Tihamah Plain is characterized by heat, aridity, and high humidity.

Climate and Weather

Temperature Range
Coastal Region: Summer 86°F to 104°F, Winter 68°F to 86°F
Interior: 32°F to 98°F
Average Rainfall: 3 in
Hadhramaut and Central Highlands: 20 in to 30 in

FLORA AND FAUNA

Yemen is a fairly dry place, though not nearly as dry as the rest of the Arabian Peninsula, and the combined effects of

farming and tree cutting have led to increased desertification. There are grasses and shrubs in the lowlands, mangroves along the coast, palms and acacias in the foothills, and tropical fruit trees in the mountains. Farmers grow vegetables, spices, sorghum, coffee, and khat. Almost no wild animals inhabit the country, aside from migratory birds who stop on their way to and from Africa. Camels are a common domestic animal.

ETHNIC COMPOSITION

Yemenis are almost entirely Semitic and, with the departure in 1948 of Yemenite Jews for Israel, almost entirely Arab, though inhabitants of the Tihamah belt show Negroid strains. Within the Arab community the historic divisions are between the Qahtani, or southern, Arabs and the Adnani, or northern, Arabs and between the Zaidi and Shafa'i tribes. The latter distinction is based on religious rather than ethnic factors, with the divisions and rivalries between the two tribes permitting only limited social cohesion. The Zaidis, who are Shiites, claim as their imam descendants of the Prophet Muhammad through his son-in-law Ali and Ali's grandson, Zaid. Zaidi tribes are concentrated in northern and eastern Yemen and in the central plateau. The Shafa'is, who are Sunnis, live along the Tihamah coast and in the southern region, where they form the local majority. The Shafa'is, unlike the Zaidis, are mainly town dwellers and are also much more active in the commercial professions.

The tribal configuration is extremely varied. There are an estimated 1,300 to 1,400 separate tribes organized in large confederations called *zei*.

The inhabitants of the island of Socotra differ from mainland Arabs and are believed to be a mixture of Greek, Portuguese, African, and Arab stock. The Mahara tribes of the eastern region are believed to be of Himyarite descent.

The population of Aden, unlike that of the hinterland, is diverse and contains many small ethnic communities. A large number of Indians, Pakistanis, and Somalis still live in the republic, but their numbers are decreasing every year. The once-flourishing British community has virtually disappeared.

LANGUAGES

The official and national language of Yemen is Arabic, which is spoken by all Yemenis. English is widely understood, particularly in Aden. The only two groups in the country who do not speak modern Arabic are the Socotrans and the Mahara tribes of the east. Both of them speak a variety of the ancient Himyarite language, which was spoken in pre-Islamic Arabia for many centuries.

RELIGIONS

Islam is the state religion and the religion of the vast majority of Yemenis. Members of the Zaidi sect, of the Shia branch, have historically enjoyed greater political influence than those of the Shafai sect, of the Sunni branch, although this distinction has often been as much based on geographical and tribal considerations as on sectarian grounds. For the most part, the two major Islamic communities coexist without friction and seek to minimize the significance of doctrinal differences. Muslim associations with ties to pan-Islamic or foreign organizations enjoy some degree of freedom, including the right to operate schools that are largely independent of the national education system.

Although almost all of the once-substantial Yemenite Jewish population has immigrated to Israel, the small number of Jews remaining live in peace with the Muslim majority. These Jews practice their religion freely and suffer no unusual economic hardships. They maintain only very limited contact with Jews abroad; communications between Yemenite Jews and their coreligionists and relatives in Israel are strictly proscribed.

There is no indigenous Christian population. Foreign Christians are allowed to conduct private services, although the establishment of churches is not permitted. Foreign clergy are not permitted into the country.

There is a small Ismaili community, numbering more than 400,000. The Ismailis follow the religious practices of the Shiites but differ in their devotion to Ismail, the seventh imam.

HISTORICAL BACKGROUND

Yemen, known to ancient geographers as Arabia Felix, was the site of a series of kingdoms, including Saba, which prospered through trade in incense. From the second century B.C.E. to the sixth century C.E. the region was ruled by the Himyarites, racially akin to the Sabaeans, who introduced Judaism to the kingdom. The Himyarites were driven out by the Christian Ethiopians, who ruled until expelled by the Persians in 575. Yemen became entirely Muslim in the seventh century. The coastal areas were ruled by Sunni tribes of the Shafa'i rite, while the highlands were controlled by the Zaidis, a Shia sect. In the ninth century the Zaidi imam Yahya al-Hadi ilal Haqq founded a line of imams that survived until the mid-20th century.

During the Middle Ages Yemen was under the rule of a number of overlords: the Fatimid dynasty of Egypt (11th century), Saladin (from 1173), the Rasulid dynasty (1230–1500), and the Mamaluk dynasty of Egypt (from 1516). The first contact with the West was a Portuguese attack in 1513. In 1517 the Mamaluk governor surrendered to the Ottomans, who ruled all of Yemen until expelled from the interior around 1630 by the Zaidi imam, Qasim the Great. In the 19th century Wahhabis seized control until driven out by Muhammad Ali of Egypt, who restored the Zaidis. When the Egyptians left in 1840, the Zaidi imams acknowledged Ottoman suzerainty and agreed to pay a large tribute to Constantinople. In 1872 the Ottomans occupied Sanaa and remained there until the end of World War I.

North Yemen emerged from World War I as an independent kingdom. Army officers deposed the monarch in 1962 and proclaimed the Yemen Arab Republic, sparking six years of civil war in which Egyptian- and Soviet-backed republicans ultimately defeated Saudi-backed royalists. The 1970s were a period of political instability in which North Yemen saw two leaders assassinated and a civilian government overthrown by a military coup. Stability was restored following the election of Ali Abdullah Saleh as president in 1978. Saleh gradually introduced democratic institutions, culminating in the creation of an elected legislature, the Consultative Council, in 1988.

Meanwhile, South Yemen, formed out of the British colony of Aden and the British protectorate of South Arabia, won independence from Britain in 1967. It became the Arab world's only Marxist state, taking the name People's Democratic Republic of Yemen in 1970 and signing a 20-year friendship treaty with the Soviet Union in 1979 that allowed the stationing of Soviet troops on its soil. More than 300,000 South Yemenis fled to North Yemen

after independence, contributing to two decades of hostility between the two states that flared into warfare in 1972 and again in 1979.

South Yemen's first president, Qahtan ash-Sha'abi, resigned in 1969 and was replaced by Salem Rubayi Ali, who in turn was deposed and executed in 1978 by his radical rival Abdalfattah Isma'il. Isma'il resigned, ostensibly for reasons of ill health, in 1980 and went into exile in Moscow. He was replaced by the more moderate Ali Nasser Muhammad. Isma'il returned in 1985, but the following year Muhammad attempted to purge his rivals, killing Isma'il among others. Muhammad's opponents fought the purge, and after a week of heavy fighting in the capital, Muhammad fled to Ethiopia. Haydar Abu Bakr al-Attas, the former prime minister, became president.

During the 1970s and 1980s North and South Yemen, despite obvious ideological differences, made several attempts at unification. During 1989 progress dramatically increased, in part because of the economic problems of South Yemen, which had moved to end its isolation in the wake of the democratic reforms sweeping the Soviet bloc.

The two countries were formally united on May 22, 1990. Sanaa, the capital of the Yemen Arab Republic, became the political capital of the unified state, while the port of Aden, the former South Yemen capital, was proclaimed the economic capital. Saleh became the president of the new state, and Attas was named premier. Yemen's first constitution was promulgated in 1990. The first general elections were held in 1993, and the General People's Congress (GPC), the former ruling party of North Yemen, won a majority of the seats in parliament. The House of Representatives elected to retain Ali Abdullah Saleh as president. In 1994 Saleh and the former South Yemeni leader Ali Salim al-Biedh signed a peace agreement. Despite this agreement, fighting broke out again, escalating into a full-fledged war. Al-Biedh announced the south's secession from the union and the formation of a new democratic Republic of Yemen. However, in the fighting that ensued the southern forces were routed, and the secession was ended when the northern forces secured control of Aden. The 1990 constitution was amended to reflect the new realities of the state. In parliamentary elections in 1997 the GPC was returned to power. In 1999 the country held its first direct presidential election, in which Saleh was elected president.

In the early 2000s Yemen acquired a reputation as a safe haven for Islamic militants. The navy's USS *Cole* was badly damaged while docked in Aden in an al-Qaeda suicide attack in October 2000; a total of 17 crew members were killed, and 39 were injured. That same month a bomb exploded at the British embassy; it was detonated by four Yemenis who claimed the act to be a sign of solidarity with Palestinians. The Yemeni government responded to these attacks with a strict crackdown on suspected terrorists and terrorism networks. Further, following the attacks on Washington, D.C., and New York on Septem-

ber 11, 2001, Saleh visited the United States and promised Yemeni support for the war on terror; in return, the United States furnished Yemen with equipment and antiterrorism training. The nation expelled more than 100 Islamic scholars and suspected al-Qaeda members as part of a February 2002 crackdown on terrorism. An attack on the supertanker *Limburg* off the Yemeni coast in October 2002 was blamed on al-Qaeda; the men implicated in this attack were sentenced by Yemeni courts in 2004. In 2004 and 2005 the northern part of Yemen was plagued by fighting between government soldiers and rebels under the leadership of the dissident cleric Hussein al-Houthi.

1998–2001 Abd al-Karim Ali al-Iryani

2001 Abdul Qadir Bajamal

CONSTITUTION

The constitution of the united Republic of Yemen was approved by popular referendum in May 1991. The constitution provides for an independent, sovereign, unitary, and indivisible state and defines the Yemeni people as part of the "Arab Nation" and the Islamic world. Under the provisions of the constitution, a transitional period was established during which a presidential council exercised executive power. It consisted of the chairman and members of the Consultative Council and the chairman and members of the Presidium of the Supreme People's Council, the executive bodies of North and South Yemen. At independence, the legislatures of the two nations were combined into a 301-member House of Representatives.

Legislative power was originally vested solely in the House of Representatives, elected through universal suffrage for a term of six years. The number of legislators is not specified in the constitution. The constitution provided for the House to enact laws and decide the general policy of the state, in addition to adopting the general plan for economic and social development, the public budget, and its final statement. The legislature also acts as a check on the executive. Islamic law, or sharia, is the main source of legislation.

Executive power is exercised by a president who was originally elected by the House of Representatives for a five-year term but is now popularly elected for a seven-year term. The president appoints the prime minister. The real power of the government is vested in the prime minister

and his council, which has the power to call for general referenda; overall, the government forms general policy and oversees its implementation, appoints and removes high civilian and military officials, and declares states of emergency and general mobilization in accordance with the law.

The constitution provides for an independent judiciary, the composition of which is to be determined by future legislation.

In 2001 more than 70 percent of voters approved changes to the constitution in a referendum. The changes included an extension of the presidential term from five years to seven years and the creation of a bicameral legislature consisting of a Shura Council (with 111 members appointed by the president) and a House of Representatives (with 301 members elected by popular vote for six-year terms).

PARLIAMENT

Following the unification of Yemen in May 1990 the two countries' legislatures merged, pending the elections that were held at the end of the 30-month transition period that began in May 1991. The House of Representatives, originally the only parliamentary body, consists of 301 members.

In a popular referendum, voters approved a revised constitution in 2001, which included the creation of a bicameral legislature consisting of the 111-member Shura Council and the 301-member House of Representatives. The Shura Council's members are appointed by the president and serve concurrently with the president's seven-year term, while the House's members are popularly elected for six-year terms.

Under the constitution ratified in May 1991, Islamic law is the principal source of legislation. Legislative power is vested in the Shura Council and the House of Representatives. The parliament enacts laws and decides the general policies of the state. It also acts as a check on the executive branch.

POLITICAL PARTIES

Political parties in the traditional sense did not develop in North Yemen, where loyalties and alignments were determined by religious and tribal ties. Until 1989 the Yemen Socialist Party was the only legal party in South Yemen. Its organizational structure was modeled after the Soviet Communist Party; its left-wing ideology was closer to that of Moscow than to that of Peking. In 1989 the formation of opposition parties was legalized, and the Nasserite Unionist Organization was founded.

Since unification, approximately 30 political parties have formed, about 12 of which were still active in 2004. Among the most prominent are the General People's Congress (GPC), a broad coalition of supporters of Presi-

dent Saleh; the Yemeni Congregation for Reform (Islah), an Islamist political party that advocates reform based on Islamic law; and the Yemeni Socialist Party (YSP), the party of the former South Yemeni leader Ali Salim al-Biedh. While still in existence, the YSP has lost its political standing since the south lost the civil war.

LOCAL GOVERNMENT

The Republic of Yemen is divided into 19 governorates (*muhafaza*). The city of Sanaa is treated as another governorate for purposes of elections and administration.

The governorates are divided into districts (*qada*), which are in turn divided into sectors (*nabiyia*). At the lower level traditional structures prevail. There are no popular representative institutions at any of these levels, although under the constitution each administrative unit has to have an elected local council; each governorate has an appointed governor, and the districts into which the governorates are divided are also administered by appointed officials.

LEGAL SYSTEM

The constitution of Yemen provides for an independent judiciary that follows Islamic sharia law. The Supreme Court rules on the constitutionality of law and decides final appeals against sentences in civilian and criminal cases and cases of personal statutes, as well as appeals against sentences in administrative disputes and disciplinary actions. The Supreme Court also has the responsibility of deciding cases of conflict of competencies of judicial entities.

The constitution provides protection for the accused. No one can be arrested, searched, or detained unless caught in the act or unless an order has been issued by a judge or a prosecutor in accordance with the law. Physical and psychological torture are prohibited. No one may be forced to give a confession during an investigation. The accused has the right to remain silent and to speak only in the presence of an attorney. The constitution requires arraignment within 24 hours of arrest. Those arrested have the right to notify a designated person of the arrest or to have their relatives notified.

HUMAN RIGHTS

South Yemen was one of the Arab countries with the worst human rights records, but since unification conditions have improved. The constitution of the united Republic of Yemen provides for freedom of thought and expression "within the limitations of the law," protects the rights of the accused, and prohibits the use of torture. Those arrested are guaranteed the right to counsel and to speedy arraignment. Legislation enacted in 1990 provides for freedom of the press. The state guarantees all citizens equal political, economic, social, and cultural opportunities.

2614 Yemen

Despite these guarantees, the military frequently monitors the activities of citizens, and arbitrary arrests and imprisonment are common. Prison conditions are poor, and pretrial detention is sometimes lengthy. The state intimidates journalists, limits freedom of religion, and occasionally restricts freedom of movement. Discrimination and violence against women and religious minorities are problems, as is child labor.

FOREIGN POLICY

Until the 1960s Yemen was isolated from the rest of the world and had meaningful contact only with Saudi Arabia. Since that time it has emerged from its isolation and joined various international organizations, including the United Nations, the Arab League, and the organization of the Islamic conference.

Yemen supported Iraq during the Gulf War and thereby incurred hostility from Saudi Arabia and the Gulf states. Riyadh withdrew the special privileges extended to Yemeni citizens in Saudi Arabia and expelled 700,000 Yemenis. However, relations with all neighbors had improved by the mid-1990s.

Saudi Arabia had preferred a divided Yemen, and therefore the union of the two Yemens was not relished. Border disputes with Saudi Arabia, dormant for many years, led to sporadic clashes in 1992, 1997, and 1998. In 2000 the two countries signed an International Border Treaty, ending 50 years of disputes. Yemen settled a dispute with Eritrea over the Hanish Islands in 1998.

When Yemen supported Iraq in 1991, the United States abruptly reduced its presence in the country and cut off most aid, although food aid continued through 2003 and medical aid through 2000. The United States supported unification in the 1994 civil war. In the early 2000s U.S.-Yemeni relations improved when Yemen lent support to the American war on terror and the United States resumed aid for literacy, Internet access, military training and equipment, and other purposes.

DEFENSE

Yemen's armed forces include an army with special forces, a navy with marines, an air force, and a republican guard. The nation has plans to establish a coast guard. All men must serve two years of compulsory service at the age of 18. The United States provides Yemen with several million dollars annually for military financing, assists with military training, and sells Yemen spare military parts. Yemen was deeply involved in American counterterrorism efforts in the early 2000s.

ECONOMY

Yemen is one of the poorest nations in the Middle East. Its government has been working to integrate the two separate economic systems of the different Yemens, but it has been impeded by civil war, reductions in foreign aid, the return of nearly one million Yemenis from other Gulf states, and extremely rapid population growth. The International Monetary Fund (IMF) and the World Bank have been assisting Yemen in developing a plan to reform the economy by reducing the deficit, cutting subsidies, and reforming the civil service.

Yemen's most lucrative natural resource is petroleum, and the nation's prosperity has risen and fallen with the global price of oil. Most of the population, however, is employed in herding and agriculture. A high rate of unemployment and lack of an educated populace have hampered the country's ability to grow its economy.

ENVIRONMENT

Largely underdeveloped, Yemen does not suffer from much pollution but has other serious environmental problems. Safe drinking water is not available in most areas, and wells are generally contaminated through sewage. The nation has little rainfall and little surface water. The ground water table has been falling for many years as a result of overuse. Land erosion is a serious problem, especially because the wadi (dry river bed) areas are subject to severe flooding that demolishes irrigation systems and washes away soil. The Tihamah, a hot and sandy semi-

2616 Yemen

desert that separates the Red Sea coast from the generally less arid mountainous areas of the interior, is affected by soil salinization.

LIVING CONDITIONS

The standard of living in Yemen is much lower than that in developed nations. Some 42 percent of the populace lives below the poverty line, and another 13 percent are just slightly above it. Per capita gross domestic product (GDP) was only about \$800 in 2004. Poverty is worse in rural areas than in cities. Potable water is in short supply. Most of the nations roads are unpaved. Buses and taxis serve as public transportation.

Yemeni people have historically been sedentary, unlike the nomads of neighboring states. Yemeni homes can be several stories high, with animals on the ground, reception rooms in the middle, bedrooms and kitchens above, and a room on the top floor for the man of the house to entertain his friends. Most houses are made of mud and brick, with thick walls and few windows; they are cool in the heat, warm in the cold, and easy to defend against attack. Attack and violence have been a part of life in many parts of Yemen, especially the north.

HEALTH

Life expectancy is fairly low, at slightly under 62 years in 2005, and the infant mortality rate is relatively high, at over 61 deaths per 1,000 live births. On average, Yemeni women have nearly seven children each. HIV/AIDS is beginning to appear; in 2001 some 0.1 percent of the population was infected.

FOOD AND NUTRITION

Nearly 8 percent of Yemenis, mostly in rural areas, cannot reliably acquire food for themselves and their families. The Yemeni diet is built around flat bread, rice, beans, and spices. Lamb and chicken are the main meats. Typical daily fare is *shurba*, a stew with lamb, lentils, or fenu-greek. The national dish is a stew of chickpeas, lentils, beans, spices, coriander, and meat, served over rice. Kebabs, grilled meat on skewers, are a popular snack. People drink small glasses of tea with mint with every meal. Coffee is usually heavily sweetened and flavored with ginger and other spices. Alcoholic beverages are illegal.

STATUS OF WOMEN

Living in a conservative Islamic society that remained largely isolated from the modern world prior to 1962, few Yemeni women are employed outside the home or play an active role in other aspects of public life. Education for women in significant numbers began only in the 1970s. The government is trying to expand their educational opportunities, but a lack of personnel continues to inhibit the opening of new schools and the staffing of existing institutions; additionally, traditional Islamic norms, more stringently followed in rural areas, as well as the considerable time expended by women in water and fuel collection, constrain female class attendance. Female literacy was only about 30 percent in 2003. Prevailing social norms frequently dictate that women defer to the guidance of their male colleagues and accept the close supervision of their activities by male relatives. Women seeking exit permits for travel outside the country are frequently asked to provide evidence that male relatives have no objection to their travel.

Despite these problems, Yemen has made some strides toward female equality. The government does not restrict women's access to employment. The nation was the first in the Arabian Peninsula to allow women to vote and to elect women to parliament. Its minister for human rights and its ambassador to the Netherlands have been women. In December 2004 Sanaa was the site of the first

Democratic Forum of Arab Women, which discussed the necessity of empowering women and involving women in decision making in Arab regimes.

 Agriculture: > 75
 Industry, Commerce, Labor, Services, and Construction: < 25
 Unemployment %: 35

EDUCATION

Yemen remains one of the most illiterate countries in the world, with the female literacy rate at 30 percent in 2003; the overall literacy rate was only 50 percent. Most primary education is provided at the *kuttab*, the traditional Islamic school for boys, where little is taught besides the Koran.

The government provides free, compulsory, and universal education for six years at the elementary level. In all, the secular school system provides a six-year primary course, a three-year intermediate course, and a three-year secondary course. The academic year runs from September through June. The medium of instruction is Arabic at all levels. In 2002, about 72 percent of children were attending primary school, 35 percent secondary school. Rapid population growth has made it difficult for the country to educate all of its children.

SCIENCE AND TECHNOLOGY

As a nation that until recently existed in a pocket of medieval isolation, Yemen lacks a good technological infrastructure. As of the early 2000s the nation had yet to create a national telecommunications network. There were over half a million telephone lines and 411,000 cellular telephones functioning in 2002. Only about 100,000 people were using the Internet.

MEDIA

The government's ministry of information controls all broadcasting and print journalism. The press is closely watched, and the government has prosecuted some newspapers that have dared to print political criticism.

Because many Yemenis are illiterate, radio is the most important source of news. Radio comes from the state-run Republic of Yemen Radio and also from stations in neighboring Oman and Saudi Arabia. The state also runs Republic of Yemen Television. The two main daily newspapers are *al-Thawrab* and *al-Ayyam*. English weeklies include the *Yemen Times* and the *Yemen Observer*. The national news agency is the Yemen News Agency, or Saba.

CULTURE

Yemen's culture is heavily Islamic and sex-segregated. Art forms include elaborately decorated silver daggers and intricate embroidery on clothing. Poetry is considered the highest literary form, and Yemenis admire the artful use of words. Lutes, lyres, drums, and other instruments are played, but sung poetry is the mainstay of Yemeni music. Singers perform different types of songs depending on the occasion, singing *balab* and *razfab* at weddings, *zamil* at large tribal gatherings, *dan* at smaller gatherings, and *mawlid* hymns of praise on religious occasions.

FOLKLORE AND MYTHOLOGY

Yemen's different tribes still maintain old folk traditions. Each tribe has its own folk dancing style, many of which function as performances of stories. In some areas people dance with ibex horns, reenacting the ancient ibex-hunt ceremony, a ritual that was performed to bring rain. Styles of dress have long been used to express tribal unity.

ENTERTAINMENT AND RECREATION

For diversion, most Yemenis chew khat, a mildly narcotic leaf; people gather in single-sex groups in the afternoon or evening and spend several hours stuffing khat leaves into their mouths and chewing on them. Khat is appreciated in that it raises blood pressure and encourages conversation. It can also suppress the appetite, which is important in a land without enough food.

ETIQUETTE

Yemenis do not tip in restaurants or hotels. Bargaining is not standard procedure in markets. Men and women do not mix in public, and a man who attempts to speak to or photograph a woman risks severe punishment. Yemenis are extremely hospitable to guests, even to their enemies, but they also consider it acceptable to greet visitors with gunshots.

FAMILY LIFE

Women devote their lives to their husbands and families. Yemenis tend to have many children; seven or eight children is not an unusual number for a married couple. However, large families create a financial burden for parents, who cannot afford to send their children to school. Tribal loyalties are very strong.

PERSONAL APPEARANCE

Yemenis dress according to Islamic law as they interpret it. Women cover themselves from head to foot in black, veiling their faces and refusing to speak to strange men, even hiding themselves when men appear, if possible. Men wear robes and turbans and usually appear in public heavily armed with daggers, swords, or machine guns. Yemeni clothing can be heavily decorated with jewels and embroidery.

SPORTS

Yemen does not have a high level of participation in sports. Soccer and boxing are popular with men and boys. Nas-eem Hamed is an international boxing champion. Yemeni women have traditionally not taken part in sports, largely because men want them to protect their modesty, but the government is beginning to encourage female athletic activity. The government has planned to build a women's sports hall in the capital, and the 2005 Asian Conference on Women and Sports was held in Sanaa in May.

CHRONOLOGY

(North Yemen from 1945)

- 1945** Yemen joins the Arab League.
- 1947** Yemen joins the United Nations.
- 1948** Imam Yahya is killed in coup; his son Saif al-Islam Ahmad succeeds as imam.
- 1955** A coup against the imam is suppressed; Yemen concludes aid agreement with the Soviet Union; imam appoints first royal cabinet.
- 1956** Yemen recognizes the People's Republic of China and obtains Chinese economic and technical assistance.
- 1958** Yemen joins Egypt and Syria in a confederation known as the United Arab States.
- 1959** The United States opens its first mission in Sanaa.
- 1961** The United Arab States is dissolved; Egypt launches propaganda campaign against the imam.
- 1962** Imam Ahmad dies and is succeeded by his son, Muhammad al-Badr; within weeks Brigadier Abdullah al-Salal leads successful coup and

- seizes power; Imam al-Badr escapes to the highlands, where he organizes a royalist army, and a civil war begins.
- 1963** The civil war becomes an international conflict, as Egyptian troops land in Yemen to aid the republican forces and the Saudis lend arms and equipment to the royalists.
- 1964** A new republican government is announced under a new constitution, with Hamud al-Jaifi as premier.
- 1965** Hassan al-Amri replaces al-Jaifi as premier but later yields office to Muhammad Ahmad Noman; Noman falls out of favor with the Egyptians, and al-Amri again becomes premier.
- 1966** Al-Amri is dismissed; al-Salal assumes the office of premier in addition to that of president.
- 1967** President Gamal Nasser and King Faisal, meeting in Khartoum, agree to a cease-fire in Yemen and a pullout of both Egyptian and Saudi Arabian forces; the withdrawal of Egyptian troops is followed by a coup in which al-Salal is overthrown, and Abd al-Aini becomes premier; Yemen breaks off diplomatic relations with the United States; Hassan al-Amri replaces al-Aini as premier.
- 1968** In fierce fighting the royalist forces lay siege to Sanaa but are repelled.
- 1969** Abdullah Kurshoumi is named premier.
- 1970** New constitution is promulgated; Mushin al-Aini is recalled to succeed Kurshoumi as premier.
- 1971** Yemen holds the first elections in its history under the new constitution.
- 1972** Diplomatic relations are resumed with the United States; fighting breaks out with the People's Democratic Republic of Yemen; a peace agreement and an agreement on the eventual unification of the two countries is signed in Cairo, but border incidents continue; al-Aini resigns and is succeeded in office by Abdullah al-Hajari.
- 1974** A new government under Premier Hassan Makki takes office; in a successful coup Ibrahim Muhammad al-Hamadi seizes power; the Revolutionary Command Council is established as the supreme state body under an amended constitution; al-Aini is recalled as premier.
- 1975** Abdul Aziz Abdul Ghani is named premier.
- 1977** President Ibrahim al-Hamadi and his brother are assassinated on the eve of their trip to South Yemen; new president, Lt. Col. Ahmed Hussein al-Ghashmi, escapes assassination attempt.
- 1978** President al-Ghashmi is killed when a bomb concealed in the briefcase of a visiting South Yemeni emissary explodes in his office; People's Council elects Ali Abdullah Saleh as president.
- 1979** South Yemen forces joined by the guerrilla forces of the National Democratic Front cross into Yemen and advance 30 miles; under a cease-fire arranged by the Arab League, South Yemen's troops withdraw; President Saleh and President Ismail of Southern Yemen meet in Kuwait and agree to a peaceful resolution of the conflict and the eventual reunification of the two countries; Saudi Arabia, angered by this conclusion, withholds military aid; Yemen turns to the Soviet Union, which begins delivery of planes and military equipment.
- 1982** Earthquake devastates large areas in Yemen; the General People's Congress is convened.
- 1983** President Saleh is reelected to another term; Abd al-Aziz Abd al-Ghani is reinstated as prime minister.
- 1984** A 20-year treaty is signed with the Soviet Union.
- 1988** General elections are held for the newly created Consultative Council, which replaced the appointed Constituent Assembly; Pres. Saleh is reelected; North and South Yemen establish a joint oil-exploration company.
- 1989** The leaders of Egypt, Iraq, Jordan, and North Yemen sign an agreement creating a regional common market, the Arab Cooperation Council; the governments of North and South Yemen announce joint approval of a draft constitution for a unified state.
- 1990** North Yemen and South Yemen merge into a single nation, the Republic of Yemen.
- (South Yemen from 1967)
- 1967** South Yemen gains independence from Britain, with Qahtan al-Shaab, leader of the National Liberation Front (NLF), as president of the republic.
- 1968** Following the Zingibar conference, conflict between the moderate and radical elements within the National Liberation Front intensifies; short-lived revolts and uprisings occur in the First, Third, Fifth, and Sixth governorates.
- 1969** Qahtan al-Shaab is ousted in a power struggle and replaced by Salem Rubayi Ali, leader of the pro-Moscow extremist faction.
- 1970** New constitution is promulgated; official name of the republic is changed to People's Democratic Republic of Yemen; 36 foreign firms are nationalized.
- 1971** Mohammed Ali Haithem resigns as prime minister and is replaced by Ali Nasser Mohammed Hasani.
- 1972** Border clashes with Yemen Arab Republic lead to intervention by the Arab League, which mediates a cease-fire; the two Yemens agree in principle on the concept of a united Yemen.
- 1973** South Yemen conducts its first official census; a seventh governorate is established at Thamoud.

2620 Yemen

- 1975 The National Liberation Front, the Popular Vanguard Party, and the Democratic People's Union merge to form the National Front Political Organization.
- 1976 South Yemen, in dramatic reversal of policy, resumes diplomatic relations with Saudi Arabia and agrees to accept Saudi aid.
- 1977 South Yemen supports Ethiopia in the latter's war with Somalia over the Ogaden; Soviet arms are airlifted to Ethiopia via Aden.
- 1978 President Rubayi Ali is accused of complicity in the assassination of North Yemeni president Ahmed Hussein al-Ghashmi and is deposed, arrested, and shot by a firing squad; pro-Soviet triumvirate consisting of NLF secretary Abdul Fattah Ismail, Defense Minister Ali Antar, and Ali Nasser Mohammed Hasani seizes power; Hasani is named head of state; Ismail announces formation of a new Communist Party called the Vanguard Party.
- 1979 South Yemeni forces cross into North Yemen and seize three important towns; South Yemen withdraws forces from captured territory under truce arranged by Arab League; President Ismail meets with President Abdullah Saleh, of North Yemen, in Kuwait and agrees to peaceful negotiations leading to the eventual reunification of the two Yemens.
- 1980 President Ismail steps down, and Prime Minister Ali Nasser Mohammed Hasani assumes the presidency; guerrilla forces supported by South Yemen step up activity in North Yemen.
- 1981 South Yemen, Libya, and Ethiopia conclude Treaty of Friendship and Cooperation.
- 1982 The People's Democratic Republic of Yemen and Yemen Arab Republic agree to terms of truce between the two countries.
- 1983 Diplomatic relations with Oman are reestablished.
- 1986 President Hasani is ousted in a bloody power struggle, and the Moscow-backed Haydar Bakr al-Attas is installed as president.
- 1988 North and South Yemen establish a joint oil exploration company.
- 1989 The governorates of South Yemen and North Yemen announce joint approval of a draft constitution for a unified state.
- 1990 South Yemen and North Yemen merge into a single nation, the Republic of Yemen.
- (Republic of Yemen from 1990)
- 1990 North Yemen and South Yemen merge into a single nation, the Republic of Yemen; Gen. Ali Abdullah Saleh, president of North Yemen, becomes the first president. Haydar Abu Bakr al-Attas, president of South Yemen, is named premier; Yemen gives equivocal response to the Iraqi invasion of Kuwait: It condemns the invasion but votes against a measure in the United Nations authorizing a multinational coalition to use force to remove Iraq from Kuwait; Yemen attempts to mediate the Persian Gulf crisis.
- 1991 Yemen condemns the UN coalition's offensive against Iraq; the people of Yemen ratify the new constitution by a large majority.
- 1993 In protest over the economic stagnation of south Yemen, Vice President al-Biedh withdraws from governmental activity and decamps to southern Yemen.
- 1994 Despite a Jordan-brokered peace deal between north and south, civil war breaks out in Yemen; after two months of fighting, government troops capture Aden, ending the conflict; parliament approves constitutional amendments; Abd Rabbuh Mansur Hadi is named vice president.
- 1995 An economic austerity program is implemented; Yemen and Saudi Arabia agree to negotiate their border dispute; Eritrea seizes the Hanish Islands in the Red Sea, claimed by Yemen.
- 1996 Yemen and Eritrea submit their territorial dispute for arbitration.
- 1997 President Saleh's General People's Congress retains power in legislative elections, which are boycotted by members of the opposition.
- 1998 Prime Minister Faraj ibn Ghanem resigns; Abd al-Karim Ali al-Iriyani is named prime minister; arbitration awards the two largest Hanish Islands to Yemen and the remainder to Eritrea; Eritrea and Yemen move to normalize mutual relations.
- 1999 In the first direct presidential elections, Saleh is reelected.
- 2000 Yemen and Saudi Arabia announce their boundary agreement; drought strikes Yemen; terrorists bomb the USS *Cole* in the harbor port of Aden, killing 17 and injuring 39 U.S. military personnel.
- 2001 Abdul Qadir Bajamal is named prime minister; Saleh visits the United States and assures President Bush that Yemen is a partner in the international fight against terrorism.
- 2002 Yemen expels more than 100 Islamic scholars as part of a crackdown on suspected al-Qaeda members; oil tanker *Limburg* is damaged in an attack off the coast of Yemen; al-Qaeda is blamed.
- 2003 The 10 suspects held in connection with the attack on the USS *Cole* escape from custody in Aden.
- 2004 Two militants implicated in the attack on the USS *Cole* are arrested; the court convicts 15 men of

terrorism in connection with the attack on the *Limburg*; dissident troops in the north under cleric Hussein al-Houthi fight government troops; the government troops kill Hussein al-Houthi.

- 2005 Fighting between rebels and government troops resumes in the north.

CAPITAL

Lusaka

HEAD OF STATE & HEAD OF GOVERNMENT

President Levy Patrick Mwanawasa (from 2002)

NATURE OF GOVERNMENT

Republic

POPULATION

11,261,795 (2005)

AREA

752,614 sq km (290,566 sq mi)

MAJOR ETHNIC GROUPS

Bemba, Tonga, Nyanja, Lozi

LANGUAGES

English (official), Bemba, Tonga, Nyanja, Lozi, Lunda, Kaonde, Luvale

RELIGIONS

Christianity, animism

UNIT OF CURRENCY

Zambian kwacha

NATIONAL FLAG

Green field with a tricolor at the lower corner of the fly, under an orange flying eagle. The tricolor consists of red (left), black, and orange vertical stripes.

NATIONAL EMBLEM

A shield made up of wavy, narrow, black and white vertical lines, called *pallets*, symbolizing Victoria Falls. The shield is flanked by an African man in a yellow bush shirt and shorts on the left and an African woman in a red traditional dress on the right. They stand on a green mound on which appear a small zebra (for game), shafthead (for mining), and ear of corn (for agriculture). Above the emblem an orange eagle is perched on a crossed pickax and mattocklike hoe. On a scroll on the base appears the national motto, "One Zambia, One Nation."

NATIONAL ANTHEM

"Stand and Sing for Zambia"

NATIONAL HOLIDAYS

January 1 (New Year's Day), first Monday in May (Labour Day), May 24 (Commonwealth Day), May 25 (African Freedom Day), first Monday in July (Heroes' Day), first Tuesday in July (Unity Day), first Monday in August (Farmers' Day), August 9 (Youth Day), October 24 (National Day, Independence Day), December 26 (Boxing Day), various Christian festivals, including Good Friday, Easter Monday, Whitmonday, and Christmas

DATE OF INDEPENDENCE

October 24, 1964

DATE OF CONSTITUTION

August 24, 1991

GEOGRAPHICAL FEATURES

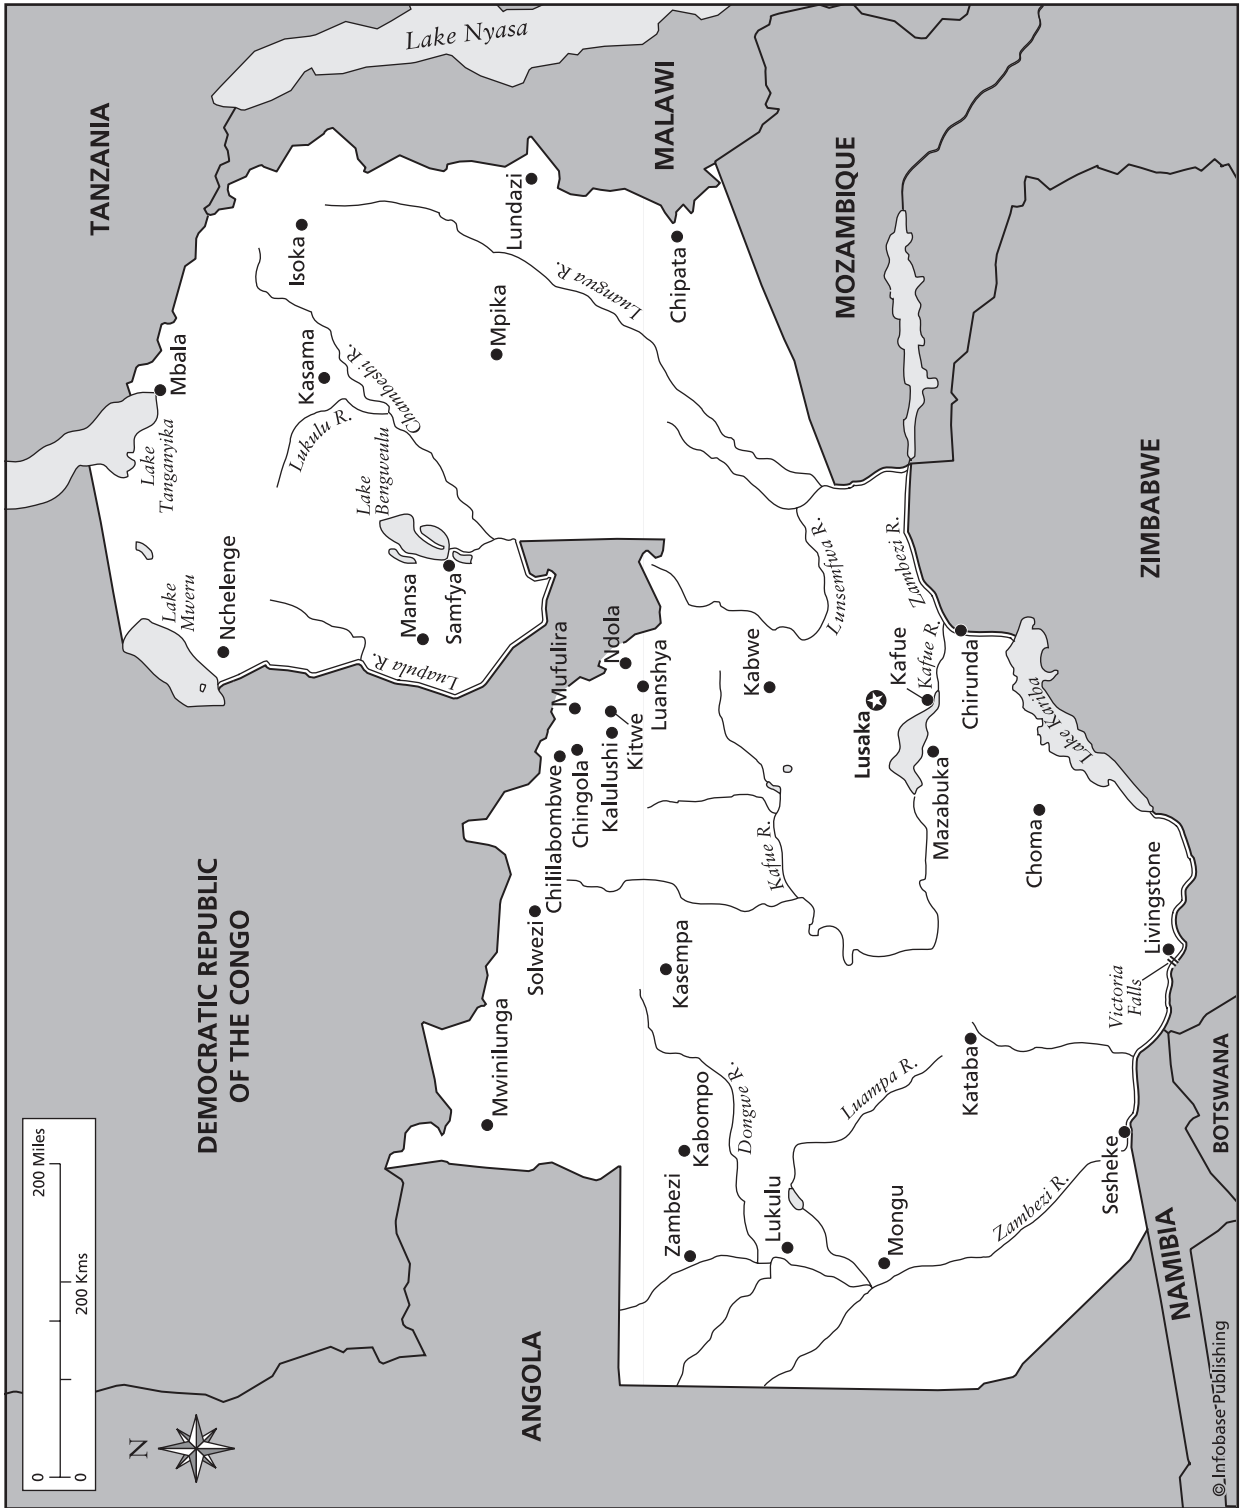

Zambia, a landlocked country in southern Africa, lies between the Zambezi River and the southern rim of the Congo basin, extending 1,206 km (749 mi) east to west and 815 km (506 mi) north to south, with a total land area of 752,614 sq km (290,566 sq mi).

Zambia shares its international boundary with eight countries: Mozambique, Zimbabwe, Botswana, Namibia, Angola, the Democratic Republic of the Congo, Tanza-

nia, and Malawi. The border with Tanzania is based on an agreement made between the United Kingdom and Germany in 1901. Except for the border with Zimbabwe, which follows the Zambezi River and Lake Kariba, most of the other borders are arbitrary lines reflecting territorial adjustments in colonial times. There are no current border disputes.

The capital is Lusaka. The other major urban centers are Kitwe, Ndola, Chingola, Mufulira, Luanshya, Kabwe, and Livingstone. The Zambian plateaus are a mosaic of

Zambia

2624 Zambia

savannas, swamps, and deserts, with five distinct topographical regions: the central highlands, including the copper belt, which slope toward the Kafue River basin to the west and the Zambezi River valley to the east, with an average elevation of 1,230 m (4,000 ft); the western plains, consisting of the swamps of Barotseland, the flat Liuwa and Mulonga plains, and semiarid deserts; the Great Rift Valley, represented by the Luangwa River valley; the northwest, including the Bangweulu Swamp, which is part of the Luapula River basin; and the Mweru-Wantipa fault zone, between Lakes Mweru and Tanganyika.

The country's main drainage system is the Zambezi River, with its three tributaries, the Kabompo, Kafue, and Luangwa rivers. Near the city of Livingstone the Zambezi drops down at Victoria Falls, 107 m (350 ft) high and 1.6 km (1 mi) wide. At flood season the flow rate is 3,785,410 liters (one million gallons) per second. Downstream the river enters Lake Kariba, the world's largest man-made lake. The northern regions are drained by three rivers—the Chambesi, Luapula, and Luvua—all of which eventually flow into the Atlantic Ocean through the Congo River. Zambian rivers are noted for their great seasonal variations in flow and frequent rapids and falls.

There are three large natural lakes: Bangweulu, Mweru, and Tanganyika, all in the north. Of these, only Lake Bangweulu is entirely within the national territory.

CLIMATE AND WEATHER

Zambia is part of a broad belt of temperate highlands, with a mild tropical climate. There are three sharply defined seasons: cool and dry from May to August, hot and dry from September to November, and warm and wet

from December to April. A second period of high temperatures occurs in April and May.

Temperatures are closely related to altitude. Nationwide, the temperatures range from 16°C to 27°C (60°F to 80°F) in the cool season and from 27°C to 38°C (80°F to 100°F) in the hot season. There are occasional frosts in winter.

The pattern of rainfall is fairly uniform. The northern parts of the plateau have annual precipitation of 1,000 to 1,400 mm (40 to 50 in). Precipitation decreases southward, to about 510 mm (20 in). Lusaka, in the middle, receives annual rainfall of about 760 mm (30 in). For one-third of the year, during the cool season, there is no rain in the country.

Heavy tropical storms occur at the start of the rainy season, and there are thunderstorms during October.

Winter: 60°F to 80°F
Average Rainfall
Northern Plateau: 40 in to 50 in
Lusaka: 30 in

FLORA AND FAUNA

Zambia is rich in plant and animal life. Most of the country is covered in savanna woodland, with widely spaced deciduous trees and grasses and other plants growing beneath them. Baobab trees grow in dry areas, such as the Zambezi valley. Other vegetation includes teak, acacia, and thorn bushes. Animal species include elephants, hippopotamuses, buffalos, giraffes, zebras, lions, baboons, warhogs, honey badgers, mongooses, hartebeests, and weasels. The red lechwe, a type of antelope, is unique to Zambia. Birds include ostriches, starlings, woodhoopoes, and hornbills. The nation has 19 national parks and 33 game-management areas.

Discontent with the Kaunda regime grew during the late 1980s as a result of desires and demands for democracy and the stringent economic measures needed to deal with massive foreign debt. The worst violence since independence erupted in 1990 over the doubling of prices for basic commodities. The waning of Kaunda's popularity was demonstrated still further when an inaccurate radio announcement that he had been overthrown brought thousands of cheering Zambians into the streets. Kaunda announced in June 1990 that he would hold a referendum on instituting a multiparty system but warned that such a system would exacerbate tribal divisions. Following increased political pressure, Kaunda said he would recommend the legalization of opposition parties and would schedule elections. In December he signed a constitutional amendment legalizing a multiparty system.

In the 1991 presidential election Frederick Chiluba won handily, with 74 percent of the vote, and his Movement for Multiparty Democracy (MMD) captured 125 out of 150 legislative seats; it was the most dramatic repudiation of a sitting president in any country in southern Africa and marked the definitive end of the Kaunda era in Zambian politics. The Chiluba administration faced a host of problems, not the least of which were defections within the MMD and antigovernment plots by Kaunda and other opposition leaders. In 1994 Kaunda was barred by a constitutional amendment from ever again running for the presidency, and the ban was subsequently upheld by the High Court. In the 1996 presidential and legislative elections Chiluba and the MMD again won in a landslide, capturing 69.5 percent of the vote and 131 out of 150 National Assembly seats, respectively. Tensions remained high, however, as the Chiluba administration, now under the direction of MMD hard-liners, tried to consolidate its hold over the country. In 1997 disgruntled army officers attempted to mutiny but were easily thwarted.

Elections in December 2001 saw Levy Patrick Mwanawasa, of the MMD, succeed to the presidency, despite charges of alleged fraud. His party secured 68 seats in the National Assembly, a figure much reduced from previous elections. Early suggestions that Mwanawasa was Chiluba's puppet soon disappeared, as Mwanawasa removed Chiluba's aides from the government and permitted investigations of corruption during Chiluba's administration. Chiluba was arrested and put on trial for corruption in 2003, and though many of those charges were dropped in September 2004, new charges were immediately brought against him.

1964–91	Kenneth Kaunda
1991–2002	Frederick Chiluba
2002–	Levy Mwanawasa

CONSTITUTION

Zambia enacted a new constitution in 1991. The new constitution enlarged the National Assembly to a maximum of 158 members, established an electoral commission, and allowed more than one candidate to run for president, ending the monopoly of the United National Independence Party. A 1996 amendment imposed a two-term limit on presidents and required that all presidential candidates have two Zambian-born parents. The president functions as both head of state and head of government; he is elected to a five-year term by popular vote. The president chooses cabinet members from among the members of the National Assembly. The voting age is 18, and suffrage is universal.

PARLIAMENT

The Zambian National Assembly is a unicameral body currently consisting of 150 members, all of whom are elected through universal suffrage for five-year terms. A speaker is elected by the members from outside their own ranks. Although the supremacy of the National Assembly is built into the constitution, the legislature shares constitutional power with the judiciary and the executive. Among the Assembly's extensive powers are the rights to impeach the president, amend the constitution, challenge the constitutionality of any ordinance, and extend or revoke a presidentially imposed emergency. All bills receive three readings in the National Assembly; those that pass and receive the assent of the president become law.

The constitution also provides for a subordinate House of Chiefs, comprising three members from each of the nine provinces, for 27 members total. The House submits resolutions to be discussed in the National Assembly and considers matters referred to it by the president. Its constitutional role is purely advisory.

POLITICAL PARTIES

Until 1990 the United National Independence Party (UNIP) was the country's sole political party. It was formed in 1958 as a result of the withdrawal of Kenneth Kaunda, Simon Kapwepwe, and others from the older African National Congress, led by Harry Nkumbula. The UNIP led Zambia to independence in 1964 and ruled Zambia until 1991, when Frederick Chiluba came into power.

The political ideology of the UNIP is Zambian humanism as originally formulated by President Kaunda. Until the 1970s the party was held together by the momentum generated by its successful drive for national independence, but internal divisions, based not only on ethnic and regional rivalries but also on the political am-

bitions of the middle leadership, began to pose serious threats to its dominance.

After the replacement of Kenneth Kaunda by Frederick Chiluba as president of Zambia in 1991, there were a number of constitutional changes. Zambia is no longer a one-party state, and Zambian humanism was virtually abandoned after Kaunda's receding from the political scene.

The present system is a unitary republic, led by the Movement for Multiparty Democracy (MMD), which holds the largest block of parliamentary seats. The other political parties represented in the National Assembly are the United Party for National Development, the UNIP, the Forum for Democracy and Development, the Heritage Party, the Patriotic Front, and the Zambian Republican Party.

LOCAL GOVERNMENT

For purposes of local government, Zambia is divided into nine provinces, each under a minister of state of subcabinet rank. The provinces are Central, Copperbelt, Eastern, Luapula, Lusaka, Northern, North-Western, Southern, and Western.

Within the provinces are 35 districts and 113 local government units above the ward level, including 34 rural local authorities, 39 special areas, 24 township councils, eight mine township management boards, six municipal councils, and two city councils. The minister of state for each province serves as the link between the national and local governments. The administrative head in each province is the resident secretary, who is the senior civil servant in the province. District administrations are conducted by district governors.

The municipal and town councils are modeled on English boroughs and can levy taxes; manage housing projects; and control roads, water, power, town planning, and health facilities. Both urban and rural councils have appointed members, but the majority are elected on the basis of universal adult suffrage.

LEGAL SYSTEM

The basis of Zambia jurisprudence is English common law. Under the constitution of 1972 the highest court in the land is the Supreme Court, consisting of the chief justice and six lower judges appointed by the president. Below the Supreme Court is the High Court, consisting of the chief justice and 16 judges, which has unlimited jurisdiction in any criminal or civil proceedings. Resident magistrate's courts and local courts in various centers administer customary law. The independence and integrity of the judiciary are ensured by the Judicial Service Commission.

HUMAN RIGHTS

The government's human rights record is poor. Press freedom is severely restricted, and criticism of the government is generally not tolerated. Police officers torture and kill detainees and usually suffer no consequences from the government. Prison conditions are harsh, even life threatening, and lengthy detention is common. The police have broken up public demonstrations. Child abuse, violence and discrimination against women, and human trafficking all occur.

FOREIGN POLICY

Zambia has a long tradition of opposing white rule and advocating change in southern Africa. It supported the liberation movements in South Africa, Angola, Zimbabwe, Mozambique, Namibia, and Angola, allowing liberation organizations to maintain headquarters in Zambia during the 1970s and 1980s. During the 1990s Chiluba actively sponsored peace talks in Angola and sent troops to UN peacekeeping initiatives in nearby countries. Zambia was the first African nation to participate in the International Tribunal's investigations of genocide in Rwanda. It also participated in the peace process in the Democratic Republic of the Congo in the late 1990s.

Zambia belongs to the African Union, the Southern African Development Community, the Common Market for Eastern and Southern Africa, and the Non-Aligned Movement. It has close relations with the United States, which is providing aid in combating AIDS and limiting corruption. The U.S. Agency for International Development provided Zambia with \$50 million in assistance in 2003.

DEFENSE

The Zambian Defense Force includes an army, an air force, and the Zambian National Service, which primarily handles public works. The defense establishment is principally composed of ground troops, particularly infantry. The air force is essentially a supporting element without tactical combat capability. Army units are deployed along the rail line stretching from the northern to the southern border. The troops' primary mission is defense.

The defense structure is headed by the president, who is also commander in chief of the armed forces. A defense council consisting of civilian and military members formulates military policy. The armed forces do not have a general staff, but each branch has a commander who reports to the permanent secretary of defense. Military manpower is obtained through voluntary enlistment. The AIDS epidemic has devastated the armed forces.

The United Kingdom and China have been the principal sources of military assistance, with a large portion of arms purchased from or supplied by the Soviet Union.

ECONOMY

Zambia's economy suffers serious problems. As of 2004, over 70 percent of the population lived in poverty, and AIDS was ravaging the populace, killing off many young, educated workers. The population is growing too rapidly for the economy to keep up; AIDS is slowing growth somewhat but presenting economic problems of its own. Unemployment and underemployment are high. Though Zambia was once a middle-income country, it has slid into poverty in the last two decades.

Zambia's economy is closely tied to the production of minerals, principally copper. Until the early 1970s a booming copper industry led rapid domestic development. However, after a subsequent decline in demand and prices the economy suffered from severe recession, with high unemployment, inflation, and foreign debt. Neglect of agriculture, drought, and ineffective economic policies, including food subsidies, have further increased economic difficulties. The government has been attempting to diversify the economy to reduce reliance on copper by promoting tourism, agriculture, gem mining, and hydropower.

During the last two decades Zambia has received \$4.2 billion in aid from international organizations and Western nations other than the United States, as well as \$466 million from the United States. Communist countries contributed \$533 million and the Organization of Petroleum Exporting Countries \$60 million. Chinese aid, the largest from any country, was in the form of a loan for the construction of the Tanzam Railway; the loan was an indirect one, consisting of Chinese goods whose sale proceeds were retained by the Zambian government, and Zambia has been unable to repay the loan. In late 2000 Zambia was determined to prove itself eligible for debt relief under the Heavily Indebted Poor Countries initiative. In 2004 the government implemented an austerity program, increasing taxes and freezing civil service salaries, much to the annoyance of labor and civil servants.

ENVIRONMENT

Zambia has a poor environmental record. Its native fauna are increasingly endangered by poaching and habitat destruction. In 1970 there were 65,000 black rhinos; in 1999 there were fewer than 2,000. In the Luangwa valley, the elephant herd has been reduced from 86,000 to 30,000 in 10 years. There is widespread poaching for both ivory and rhinoceros horn. Other endangered animals include large cats and antelope.

Zambia is losing 0.5 percent of its woodlands each year to firewood and charcoal, forest fires (some of which are set deliberately to drive animals into traps), shifting cultivation, and the clearing of land for agriculture. Rapid destruction of the *miombo* woodland is a growing problem around towns. Herding is usually conducted through a free-range system under which cows are poorly fed and overcrowded, leading to land degradation. Air pollution and acid rain are common in mining regions. Water sources are increasingly polluted with chemicals and other contaminants, resulting in a lack of safe drinking water.

LIVING CONDITIONS

Most Zambians are extremely poor; three-quarters of the population lives on less than one dollar per day. Deaths caused by AIDS leave gaps in society that are difficult to fill; many young professionals are among the victims. Water sources are contaminated with diseases such as schistosomiasis and cholera. Most rural homes have no electricity, and women must cook over wood or charcoal fires. Public transportation is slow and crowded. Roads are typically in poor condition.

HEALTH

AIDS is an extremely serious problem in Zambia. Between 100,000 and 200,000 people died of the disease in 2004, leaving about half a million children orphaned. Malaria, yellow fever, typhoid, sleeping sickness, river blindness, schistosomiasis, tuberculosis, meningitis, measles, and cholera are also common diseases. Life expectancy has dropped to below 40 years, and the infant mortality rate is nearly one death for every 100 live births. Each woman still has more than five children on average, which resulted in a population growth rate of 2.1 percent in 2005. Maternal mortality is very high, at 750 deaths per 100,000 births.

The government had plans to create a national health service at independence, but those plans have come to little fruition, and the nation still lacks health-care facilities, supplies, and personnel. Many people consult traditional healers for their ailments.

FOOD AND NUTRITION

Malnutrition is a major problem for many people. A stiff maize-meal porridge called *nshima* is the staple food for most Zambians, who eat it at every meal. This porridge is supplemented with milk and sugar, beans, peanuts, fish, meat, or chicken. Other starches are millet, cassava, and sorghum. Common vegetables include tomatoes, onions, beans, okra, pumpkins, and cowpeas, as well as the green leafy tops of various plants such as pumpkin and cassava. Bananas and mangoes are typical fruits. People brew their own beer and also make a nonalcoholic drink called *umunkoyo*.

 Amount of Fruits and Vegetables Available per person per year kg: 33.7

STATUS OF WOMEN

Under statutory law, women are guaranteed full equality with men. Women increasingly participate in Zambia's social, economic, and political life. They hold senior positions in the party, the government, and the judiciary, and they are gaining increasing representation in the professions and higher education.

Nevertheless, the majority of Zambian women still occupy traditional roles and are severely disadvantaged in many areas of life. Customary law and practice continue to compete on a de facto basis in most rural areas with Zambia's constitution and codified laws. Some customary statutes place women in subordinate or unequal status with respect to property rights, inheritances, and marriage; women are typically not allowed to own property or use credit, while men are allowed to marry multiple wives. Widows are sometimes forced to engage in sex with their husbands' relatives as a ritual "cleansing." Widows often do not receive the property to which they are entitled because their husbands' relatives seize it, usually with impunity. Many men believe that they can cure AIDS by having sex with virgin girls. Both the government and nongovernmental organizations are working to improve conditions for women, partly from the need to stem the spread of AIDS.

WORK

Most Zambians are subsistence farmers, raising food and animals for their own needs and bringing in little or no income, though they may sell or trade surpluses at local markets. Many people also work on commercial farms; roses are one of Zambia's biggest export crops.

Officially, in 2004 about 85 percent of the workforce was employed in some form of agriculture. The copper industry employs some people and in 2003 and 2004 was increasing output. Cobalt and emerald mining are growing industries, as is tourism. Women are guaranteed full equality in the workplace, and many run their own businesses or work in high positions in the government.

EDUCATION

Fees were first introduced in primary education in the 1990s, and enrollment levels have since declined. Some 96 percent of children of primary school age attended school in the mid-1980s, but recently the figure has been below 70 percent. Fewer than 25 percent of eligible children attend secondary school, while child labor figures for this age group rose by about 150 percent, from 59,000 to 146,000, between 1991 and 1996. The quality of primary school education is falling, as well—a recent national survey found that 75 percent of children leave primary school illiterate. The government spends an estimated 2 percent of GDP on education and, while conceding that this is very low, blames the high cost of servicing the international debt, which has amounted to about 10 percent of GDP per year.

Another serious problem for the education sector is HIV/AIDS. Zambia's teachers are proving particularly susceptible, as many are young and are often moved from school to school—600 teachers died of AIDS in 1999, 1,000 in 1998, according to the government.

Zambia has two universities—the University of Zambia, in Lusaka, and Copperbelt University, in Kitwe—which have around 5,000 students each. There are also several polytechnics and technical schools. Only 2.4 percent of Zambians aged 20 to 24 are enrolled in higher education. The emphasis at this level remains on the scientific, medical, agricultural, and managerial subjects. Higher education is chronically underfunded, which leads

to periodic unrest among both students and teachers. The government is gradually replacing the state funding of tertiary education with private-sector sponsorship and income-generation schemes devised by the universities and colleges themselves.

SCIENCE AND TECHNOLOGY

Zambia has relatively good telecommunications facilities for a nation in sub-Saharan Africa. There are high-capacity microwave radio relay connects in most cities and large towns, and in 2003 there were over 88,000 telephone lines in operation. Over 68,000 people were using the Internet. Cellular telephones are growing in popularity; there are several service providers, and in 2003 there were about 241,000 cellular telephones in use.

MEDIA

It is relatively easy to set up a newspaper or radio station under Zambian law. A number of newspapers and radio stations sprang up with the advent of pluralism. Most radio and television stations are state run. The government prevents free reporting through the use of libel and security laws, such as a law making it illegal to defame the president. As a result, journalists do not report cases of governmental corruption.

Zambia has several newspapers, including the state-owned *Zambia Daily Mail*, *Times of Zambia*, and *Sunday Times of Zambia*. The *Post* is privately owned. There are also some publications owned by churches and religious groups.

There is one government-owned news agency, the Zambia News Agency. There is a state-owned public broadcasting service, Zambia National Broadcasting Corporation, which provides radio programs in English and several local languages, and a single television channel. Numerous private radio stations broadcast in Lusaka and other areas.

CULTURE

Every tribe has its own musical style, which is usually rhythmic and played on various types of drums, thumb harps such as the *kalimba* and *mbira*, and whistles or flutes. People usually dance to the music. Dances are considered ritual communications with the spirit world, and dancers wear costumes, masks, and body paint to emphasize their roles. Modern music is also popular, thanks in part to a 1976 law that requires 90 percent of the music played on the radio to be Zambian.

Visual arts include basketry, pottery, wood carving, and cloth dying. Schools have begun teaching traditional crafts to take advantage of the tourist desire for native souvenirs.

FOLKLORE AND MYTHOLOGY

Zambia's many different ethnic groups each have their own mythologies and traditional rituals. Most groups believe in a supreme being and in spirits of ancestors and

natural objects. Dead ancestors in particular are influential in the affairs of living family members. The Toka-Leya believe that ancestral spirits live near Victoria Falls and hold annual sacrifices for them. The Tonga believe that all people have guardians called *mizimu*. Traditional healers sometimes work by attempting to make evil spirits leave people or by sacrificing animals.

ENTERTAINMENT AND RECREATION

Lusaka is a big city with some entertainment options. In rural areas people enjoy playing music and dancing. Children and adults alike enjoy board games such as chess or *isolo* and sports such as soccer or netball. Tourists come to Zambia to see wildlife and visit Victoria Falls. Outdoor activities includes fishing, canoeing, rafting, hiking, rock climbing, and swimming.

ETIQUETTE

Hospitality is a virtue to Zambians, and they insist on feeding visitors. Before a meal, diners wash their hands; within a family, the father washes his hands first, then the mother, and then the children, from oldest to youngest. Guests are allowed to wash their hands first of all. Diners also wash their hands after the meal in the same fashion. At meals, people sit around a communal bowl of stiff *nshima* porridge, dipping into it with their right hands, rolling the porridge into a ball, and dipping the ball into sauces before eating it.

Tipping is illegal but is sometimes done. Bargaining is proper in markets but not in shops.

FAMILY LIFE

Most Zambian families are headed by mothers, and family structure is matrilineal. Extended family is important, and relatives will take care of one another's children if necessary. Before a couple can marry, the groom must pay a bride-price to the bride's parents. Because children are highly valued as insurance for the future, most parents want to have many children to ensure that some survive to adulthood. In the countryside the sexes eat separately, women eating with their daughters and youngest boys and men eating with their older sons. Women typically farm, raise children, and sell goods in the market, while men hunt, fish, and do the heavier farming jobs.

PERSONAL APPEARANCE

Dress in Zambia is fairly conservative. Women generally wear loose cotton dresses and avoid revealing clothing,

which can be considered provocative. Men wear long pants in cities; shorts are only considered appropriate in the countryside or on safaris. A tidy appearance is important, and untidiness can be taken to indicate low social standing. People avoid wearing clothing that could be taken as military, such as camouflage.

SPORTS

Soccer is the most popular sport. The players on the national team are national heroes, and every town and city has its own team. Tragically, the country lost 17 members of its World Cup team in a 1993 plane crash. Other popular sports include running, squash, rugby, golf, netball, tennis, and badminton. Zambia has produced some world-class boxers.

CHRONOLOGY

- 1964** Zambia, formerly known as Northern Rhodesia, becomes an independent republic, with Kenneth Kaunda, leader of the United National Independence Party (UNIP), as the first president.
- 1972** All parties but the UNIP are outlawed.
- 1975** Kaunda nationalizes all private land in a failed effort to improve agriculture.
- 1976** A railroad connecting Zambia to Dar es Salaam, Tanzania, is completed, increasing the profitability of copper exports.
- 1980** Kaunda provides aid to insurgents attempting to establish a black majority government in Rhodesia.
- 1990** After 27 years in power, Kaunda submits to popular protests, including food riots and a coup attempt, and allows multiparty elections.
- 1991** By a wide margin, elections bring to power the Movement for Multiparty Democracy (MMD), led by Frederick Chiluba.
- 1995** The four-year International Monetary Fund (IMF) Rights Accumulation Program is concluded.
- 1996** The government passes an amendment to the constitution restricting presidents to two terms and requiring candidates to be from families that have lived in Zambia for at least two generations, preventing Kenneth Kaunda from standing in presidential elections on both counts; the MMD and Chiluba are reelected.
- 1997** The IMF releases additional funds and resumes bilateral aid; the army attempts a coup, and Kaunda is arrested on suspicion of being involved.
- 1998** The MMD wins local elections; human rights groups cite the use of torture upon the 80 detainees awaiting trial on charges of attempting a coup; donors withhold \$530 million in government aid until the government lifts the state of emergency.
- 1999** The IMF pledges \$350 million over three years; a high court sentences 59 soldiers to death for treason for the failed coup attempt in 1997.
- 2000** Fighting between Angolan rebels and government forces spills into Zambian territory; in December, more than 60,000 refugees fleeing fighting in the Democratic Republic of the Congo move to Zambia in less than a week.
- 2001** Paul Tembo, a former campaign manager for Chiluba who joined the opposition, is murdered shortly before he is scheduled to testify against three ministers in a high-level corruption case.
- 2002** Levy Mwanawasa is sworn in as president despite protests over alleged fraud in the December 2001 elections; the government refuses to accept donations of genetically modified grains.
- 2003** Former president Chiluba is arrested and put on trial for corruption; the supreme court sentences 44 soldiers to death for their roles in the 1997 failed coup, but Mwanawasa commutes the sentences.
- 2004** The supreme court rejects the opposition's challenge to Mwanawasa's 2001 election.

DATE OF INDEPENDENCE

April 18, 1980

DATE OF CONSTITUTION

December 21, 1979; revised in 1987

GEOGRAPHICAL FEATURES

Zimbabwe is a landlocked country in south-central Africa, between the Zambezi River to the north and the Limpopo River to the south, with an area of 390,580 sq km (150,803 sq mi). The total international border of 3,066 km (1,857 mi) is shared with four neighbors: Mozambique, South Africa, Botswana, and Zambia. Except for the border with Zambia, the boundaries were established during colonial rule. There are no current boundary disputes.

The capital is Harare, formerly Salisbury. Other principal population centers are Bulawayo and Chitungwiza.

A rolling plateau known as the veld covers most of Zimbabwe. The veld slopes gently downward, forming three distinct topographical regions: the High Veld, the Middle Veld, and the Low Veld. The High Veld’s relatively smooth terrain is frequently interrupted by rocky hills known as kopjes. Only one major river, the Sabi, originates in Zimbabwe. Drainage is principally provided by two rivers originating outside Zimbabwe: the Zambezi and Limpopo. In western Zimbabwe the Zambezi drops

Zimbabwe

over Victoria Falls, one of the most spectacular and largest falls in the world.

CLIMATE AND WEATHER

Zimbabwe lies within the southern intertropical zone, with four distinct climatic seasons: a warm rainy season from November to March, a transitional season during April and May, a cool and dry winter season from May to August, and a warm and dry season from August through October. Throughout most of the High Veld, the climate is generally pleasant, with daily maximum temperatures between 26.7°C and 32.2°C (80°F and 90°F) in summer and 12°C and 13°C (53.6°F and 55.4°F) in winter. Rainfall is the highest in the High Veld, which receives as much as 1,020 mm (40 in) annually.

Climate and Weather

Mean Temperature

High Veld: Summer 80°F to 90°F, Winter 53.6°F to 55.4°F

Low Veld: Summer 90°F to 100°F, Winter 64°F to 65°F

Zambezi and Limpopo Valley: High 100°F

Average Rainfall

High Veld: 40 in

Middle Veld: 16 in to 24 in

Low Veld: 12 in

FLORA AND FAUNA

Zimbabwe has a tremendous variety of plant and animal life. Vegetation includes the sausage tree, which grows sausage-shaped fruits that can cure basal-cell carcinoma. Much of the country is savanna grassland, or veld, with some areas of brush. The nation has several national parks, providing homes for animals such as elephants, lions, cheetahs, buffaloes, antelopes, jackals, hyenas, and monkeys. Rare species that live in Zimbabwe include the black and white rhino, the king cheetah, the Samango monkey, and the nyala.

ETHNIC COMPOSITION

Ethnically, Zimbabwe is composed of four distinct groups: black Africans, whites (commonly referred to as Europeans, irrespective of national origin), Asians (mainly East Indians), and people of mixed European-African or Indo-African origin. Blacks constitute 98 percent of the population, Indians and those of mixed race 1 percent, and whites less than 1 percent. The white population has been declining in recent years, as many whites have been leaving the country due to hostile measures taken by the Mugabe regime.

Most Africans belong to one of two major Bantu ethnic groups, Shona or Ndebele. Because of historical assimilation, ethnicity is largely determined by language. On this basis, about 82 percent of the population is Shona, 14 percent Ndebele, and 2 percent of smaller ethnic groups. The Shona occupied most of Zimbabwe until the mid-1800s. The Ndebele, called Matabele by British historians, are a pastoral and later a martial people related to the Zulu who invaded present-day Zimbabwe in the 19th century and subjugated the Shona. Under their king, Mzilikazi, the Ndebele were in the process of carving out a nation when the British arrived.

LANGUAGES

Africans speak the language or dialect of their tribe, particularly Chishona and Sindebele, as well as numerous other dialects. The tribal dialects are not mutually intelligible. English is the official language; it is used in education and in most newspapers and is spoken by an increasing number of Africans.

RELIGIONS

About 25 percent of Zimbabweans are Christian, while the majority follow traditional beliefs in some form, either exclusively (24 percent) or syncretically (about 50 percent), blending Christian and traditional tenets and practices. The trend among African Christians is toward attending independent and separatist churches presenting typically Africanized responses to biblical messages. The Asian population is divided roughly into Hindus and Muslims. There are Jewish congregations in Harare and Bulawayo. The remaining whites and people of mixed race are predominantly Christian.

Religious Affiliations

Syncretic (Christian/Indigenous Beliefs)	6,373,000
Christian	3,187,000
Indigenous Beliefs	3,059,000
Muslim and Other	127,000

HISTORICAL BACKGROUND

Originally inhabited by the Shona people, the area now known as Zimbabwe was ruled by Ndebele conquerors when Cecil Rhodes and his British South Africa Company obtained in 1889 a royal charter for the exploration of mineral rights in what was then called Mashonaland. While the first British colonists, explorers, and missionaries had arrived in the 1850s, a massive influx began when Rhodes sent a group of settlers and founded the town of Salisbury. He later gained the right to distribute the land among settlers.

With the defeat of the Ndebele rulers (1893–97), Mashonaland became British territory under the name Rhodesia. In 1923 Southern Rhodesia was annexed by the Crown, and the colony received its first constitution. A decade later the government acquired the mineral rights to the territory from the British South Africa Company. From the beginning the white settlers made every effort to institutionalize their supremacy. The British government, however, retained certain powers to safeguard the rights of Africans.

In 1953 Southern Rhodesia joined with Northern Rhodesia and Nyasaland in the short-lived Central African Federation. After the federation's demise in 1963, Southern Rhodesia began to seek independence, but the whites and blacks set different conditions, the latter insisting on African majority rule and the former on the continuance of the status quo. Meanwhile, Northern Rhodesia gained independence as Zambia in 1964.

After the breakdown of negotiations the government of Southern Rhodesia, led by Prime Minister Ian Smith, issued its Unilateral Declaration of Independence in 1965. Five years later, the nation now called Rhodesia declared itself a republic. Mounting international political pressure, including economic sanctions, as well as guerrilla activities led to a negotiated agreement on a new constitution. Elections supervised by the British colonial governor led to Robert Mugabe's Zimbabwe African National Union (ZANU) becoming the largest single parliamentary party. On April 18, 1980, the new state of Zimbabwe was born, with Rev. Canaan Banana as president and Robert Mugabe as prime minister.

President Mugabe dominated Zimbabwean politics during the 1980s, 1990s, and early 2000s. He has faced considerable opposition from expatriates as well as the international community for his efforts to promote black violence against white farmers. In 1997 Mugabe announced his intention to expropriate white-owned land, ignoring all constitutional guarantees erected at the time of independence.

His administration has been buffeted by legal setbacks and allegations of widespread corruption and human rights abuses. In February 2000 voters rejected a constitutional referendum that would have expanded Mugabe's powers. In legislative elections that June, ZANU won a narrow victory, but the opposition alleged voter intimidation.

In the presidential election of 2002 Mugabe won another term amid protest by the opposition and foreign observers, who alleged widespread ballot irregularities and violence by the ruling ZANU party. The Commonwealth suspended Zimbabwe for a year as a result of the election. The suspension was made indefinite in 2003, and in response Zimbabwe withdrew from the Commonwealth outright.

Zimbabweans have protested against Mugabe's rule by staging general strikes demanding his retirement, but the president has put them down with violence. Economic conditions deteriorated in the early 2000s, as Mugabe evicted white farmers from their land and gave the farms to blacks who lacked knowledge of farm administration. Inflation increased exponentially, and the nation suffered shortages of food and all basic goods. Mugabe's party once again won a majority in the 2005 elections, taking two-thirds of the parliamentary vote in an election that the opposition claimed was deeply flawed.

LIST OF MODERN RULERS

President

1980–87 Canaan Banana

1987– Robert Mugabe

CONSTITUTION

Under the terms of the independence constitution of 1980, Zimbabwe was a sovereign republic with a president as the ceremonial head of state and a prime minister, elected by the House of Assembly, as head of government. In 1987 the ceremonial presidency was replaced by an executive presidency; the post of prime minister was abolished and its functions assumed by the president.

The president, elected by popular vote, holds office for renewable terms of six years. The cabinet is composed of presidential appointees from the ruling party and is responsible to the House of Assembly.

The constitution can be amended by a two-thirds vote in the House of Assembly. The voting age is 18, and suffrage is universal.

PARLIAMENT

Under the original 1980 constitution, the parliament was bicameral, with a certain number of seats reserved for whites. Those reserved seats were abolished by the

Constitutional Amendment Act of 1987. In November 1989 the House of Assembly abolished the Senate; the single-chamber House of Assembly was then enlarged from 100 to 150 seats, with 120 elected, 10 appointed by traditional chiefs, 12 appointed by the president, and eight held by the provincial governors. All serve for five-year terms, unless parliament is dissolved. The Assembly elects a speaker from outside its membership and a deputy speaker from inside its membership. A proposed new constitution that would have further enlarged presidential powers was soundly defeated in a February 2000 referendum.

POLITICAL PARTIES

Until 2000 Zimbabwe was essentially a one-party state. From 1990 the party of Robert Mugabe, the Zimbabwe African National Union–Patriotic Front (ZANU-PF), held all but two or three seats in parliament. As early as 1984 ZANU dedicated itself to the victory of socialism over capitalism and the achievement of a one-party Marxist-Leninist state. ZANU became ZANU-PF when it absorbed the Zimbabwe African People's Union in 1987.

The situation changed dramatically in June 2000 when the Movement for Democratic Change (MDC) won 57 of the 120 elective Assembly seats. Support from the Zimbabwe Congress of Trade Unions was a key factor, but many different groups—black, white, regional, urban, business, financial, and agricultural—made MDC success possible.

Primary Zimbabwean opposition parties before 1999, many of whose members supported the MDC in 2000, were the Zimbabwe African National Union–Ndonga, Zimbabwe Unity Movement, Democratic Party, Forum Party of Zimbabwe, and United Parties.

ZANU-PF took two-thirds of the parliamentary seats in the 2005 election, which the opposition claimed was rigged.

LOCAL GOVERNMENT

For administrative purposes, Zimbabwe is divided into eight provinces and two cities with provincial status, each administered by a governor appointed by the president. The provinces are Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South, and Midlands. In 2004 Mugabe's government granted the cities Harare and Bulawayo provincial status, a move that was somewhat controversial because there is no provision in the constitution for governors of cities.

Principal agencies of local government are city-municipalities and town-municipalities, each governed by a mayor and council. The councils have wide property-

taxing powers, making the municipalities entirely self-supporting. Smaller urban centers are governed by town management boards with less authority. Townships and rural areas have councils and boards. All chiefs and headmen are included in the councils, but the majority of the members are popularly elected. All township and rural area councils include chiefs and headmen who are appointed government officials.

LEGAL SYSTEM

The legal system is Roman-Dutch, as based on the prevailing system in South Africa in the 19th century. At the system's apex is the High Court, with two divisions. Judges are appointed by the president on the advice of the Judicial Service Commission.

The Appellate Court is the court of final review, hearing appeals from the General Division of the High Court as well as lower courts. The Appellate Court consists of the chief justice, the judge president of the division, and at least one judge of appeal. The General Division, also presided over by the chief justice, includes a number of lower-court judges. Below the High Court are four levels of magistrate courts presided over by the chief magistrate: regional, provincial, senior, and ordinary.

The judiciary has functioned independently of the government and has frequently ruled against the state on sensitive issues. Constitutional amendments restoring corporal and capital punishment were enacted in April 1991, despite fierce criticism from the judiciary and from human rights activists.

HUMAN RIGHTS

Zimbabwe has a very poor human rights record. The government claims to respect the 1980 constitution's provisions preserving multiracial democracy and the rights of property but has maintained the legal state of emergency originally proclaimed in 1960. The citizens do not have the ability to change their government because Mugabe maintains power through intimidation and violence. The government has made full use of its emergency powers in overriding constitutional guarantees of several basic human rights, including freedom from arbitrary arrest and the right to a prompt and fair trial. Emergency powers have also been used to detain without trial opponents of the government. The president manipulates the courts and refuses to abide by judicial decisions.

Government security forces, especially the police, have been responsible for a broad range of mistreatment of suspected dissidents, suspected dissident sympathizers, and minority party members at various government installations. Types of cruel, inhuman, and degrading treatment have been reported, including torture.

Discrimination and violence against women are major problems, as are child abuse, child prostitution, and child labor.

FOREIGN POLICY

Upon gaining independence in 1980, Zimbabwe's government, headed by Robert Mugabe, established diplomatic relations with several Western countries and most African nations. It also formed ties with numerous revolutionary states, including the Soviet Union, China, North Korea, Iran, and Libya, and the Palestine Liberation Organization. Mugabe's policy of commitment to Marxist-Leninist principles and his long-term goal of effectively maintaining a one-party socialist state, despite the presence of nominally democratic institutions, have strained relations with Western countries.

Hostility to South Africa was a key component of Zimbabwe's foreign relations until major changes took place in South Africa's government under Nelson Mandela. While giving increasing attention to Zimbabwe's severe economic problems, the Mugabe government witnessed the breakup of the Soviet Union and its satellite empire and the displacement of Communism by capitalism in much of the world. Closer relations with Western nations, especially with the objective of obtaining foreign economic aid, then became the hallmark of Zimbabwean foreign policy.

President Mugabe's 1999 decision to send several thousand Zimbabwean soldiers to the Democratic Republic of the Congo to aid the government there was not popular, especially due to the additional strain it imposed on Zimbabwe's weak economy. The action was a factor in the February 2000 defeat of the draft constitution backed by the president.

Zimbabwe has historically had close relations with the United Kingdom, but these ties became strained in 2000 and were all but severed in 2003 when Zimbabwe responded to indefinite suspension from the Commonwealth by leaving the association entirely. Zimbabwe has come to blame its former ruler for its modern problems. Relations have historically been relatively close with the United States, but election irregularities and other troublesome aspects of Mugabe's rule eventually led the United States to impose economic sanctions, freezing Mugabe's assets and making business dealings with him illegal.

DEFENSE

The Zimbabwe National Army and Air Force, led by the Defense Ministry, handle external security and also assist the Zimbabwe Republic Police with internal law and order. The defense structure is headed by the president, who is also the titular commander in chief.

Military manpower is provided by voluntary military service. In 2003 Zimbabwe had an active duty force of about 51,000, including 4,000 men in the air force. The officer corps has traditionally been all white, but higher-ranking positions are gradually being taken over by black Africans.

ECONOMY

Zimbabwe has tremendous natural resources and great potential for economic growth with proper management. However, mismanagement, political turmoil, and a lack of infrastructure have prevented the economy from fulfilling its growth potential. The government has faced a wide variety of difficult economic problems as it has struggled to consolidate earlier moves to develop a market-oriented economy. Its involvement in the war in the Democratic Republic of the Congo drained hundreds of millions of dollars from the economy. Badly needed support from the International Monetary Fund (IMF) has suffered delays in part because of the country's failure to meet budgetary goals. The economy contracted by about 35 percent between 2000 and 2004, and in early 2004 inflation climbed to 600 percent before settling at 300 percent.

Zimbabwe has huge mineral deposits, including chromite, coal, platinum, asbestos, copper, nickel, gold, and iron ore. Deposits of coal-bed methane gas could also be exploited. Mining accounts for only about 7 percent of gross domestic product (GDP) but a full 40 percent of exports; asbestos, nickel, and particularly gold are the major export minerals.

Agriculture employs almost two-thirds of the labor force but accounts for only 18 percent of GDP. Crop production has fallen precipitously in the wake of the government's seizure of almost all white-owned farmland. Cotton has become the main export crop, passing tobacco. The other principal cash crops are maize, sugar, wheat, soybeans, and coffee. Agriculture has been periodically affected by drought, which adversely influences both the quality and quantity of crops. In recent years the country has not grown enough food to support itself and has depended on imports and international food aid.

The industrial sector contributes approximately 24 percent of GDP and employs about 10 percent of the la-

bor force. Primary foreign-trade partners include South Africa, Zambia, the Democratic Republic of the Congo, and China.

The economy is being steadily weakened by excessive government deficits and AIDS, for which Zimbabwe has one of the highest rates of infection in the world. Per capita GDP, which is twice the average of the poorer sub-Saharan nations, will increase little if any in the near term, and the nation can expect to suffer continued frustrations in developing its agricultural and mineral resources.

ENVIRONMENT

Zimbabwe is mostly savanna (tropical grassland), with generous tree growth encouraged by the wet summers. The country has rich and diversified animal life. Game preserves are important, especially the Hwange National Park, which has some of the densest wildlife concentrations remaining in Africa.

Major problems are deforestation, air and water pollution, soil erosion, and land degradation. Toxic wastes and heavy metals from poor mining practices have begun to pollute the land and water. The black rhinoceros herd, once the largest in the world, has been drastically reduced by poachers. A total of 15 percent of the country is allocated for conservation, but overgrazing by large numbers of elephants is a problem.

 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 1.17

LIVING CONDITIONS

Living conditions grew suddenly worse in the early 2000s, as exacerbated by extraordinarily high inflation. Imported goods are expensive; Zimbabwe produces most of its own consumer needs, but they are often of low quality. Trains and buses are available, but service is slow and accidents are common. Fuel is in short supply and is expensive. People often pay truck drivers for transport from place to place.

HEALTH

HIV/AIDS is devastating the Zimbabwean population. The HIV infection rate was almost 25 percent in 2001, and 200,000 people died of the disease that year. Infections have increased since then, resulting in the loss of many of the nation's young people and the orphaning of thousands of children. Other common diseases include malaria, cholera, schistosomiasis, yellow fever, and rabies. Life expectancy is low, at less than 37 years, and the infant mortality rate is over 67 deaths per 1,000 live births. Fertility is lower than in neighboring countries; in 2004 each woman had an average of 3.5 children.

 Access to Improved Water Source %: 83

FOOD AND NUTRITION

Zimbabwe has been unable to grow enough food for its people since the government seized all white-owned farms and turned them over to black Africans. Malnutrition is a major problem, and the country depends on food aid.

The staple of Zimbabwean cuisine is a stiff maize-meal porridge called *sadza*. This is often accompanied by some sort of meat, such as chicken, beef, crocodile, or wild game. Vegetables and fruits are not widely available. Coffee is usually instant; the nation grows coffee and tea but exports

most of it. At festive occasions people consume *chibuku*, an alcoholic beverage typically drunk from a shared bucket.

Food and Nutrition

Undernourished % of total population: 43.8
 Daily Available Calories per capita kcal: 2,110
 Amount of Cereal Available per person per year kg: 123.0
 Amount of Fruits and Vegetables Available per person per year kg: 20.8

STATUS OF WOMEN

Despite efforts to clarify and modernize the situation, the legal status of women in Zimbabwean society remains ambiguous. Discrimination in the workplace is illegal, but women are still concentrated in lower-paying jobs, and sexual harassment is common. In 1980 the government passed the Legal Age of Majority Act, which gave all women over age 18 equal legal rights, including the right to manage their own marriages and to own property apart from their husbands. The courts do not reliably uphold this law, however, and it is common for a husband's family to seize property from his widow, a problem worsened by the fact that most women do not know their rights under the law. The system of *lobola*, or bride-price, is still the norm, and the reality of equal rights remains elusive. Domestic violence is a major problem.

Until independence, African leaders opposed birth-control programs as efforts by the then-dominant white minority to restrict African growth while encouraging white immigration. This attitude has changed, and the Mugabe regime has called for the creation of a ministry to deal with the population explosion. Female genital mutilation is illegal and uncommon, though some tribes still practice its most extreme form.

Women

 Women's Share of Wage Employment Non-agricultural %: 21.8

WORK

One of Zimbabwe's biggest economic problems is that there are almost no jobs. As of 2002 the unemployment rate was 70 percent, which corresponded to the 70 percent of the population living in poverty. Income distribution is extremely uneven; the richest 10 percent of the population earns about 40 percent of national income. Two-thirds of the population still support themselves through subsistence agriculture. Mining provides some jobs, as does tourism.

Employment and Labor

 Female Participation Rate %: 44.0
 Labor by Sector %:
 Agriculture: 66
 Industry: 10
 Services: 24
 Unemployment %: 70

EDUCATION

Until independence there were two school systems, one for whites, Asians, and those of mixed race, the other for blacks. Education has been nonracial since 1976.

Free and compulsory primary education begins at age seven and lasts for seven years. Secondary education begins at 14 and lasts for six years. Finding qualified teachers is a major problem, as exacerbated by the exodus of white teachers following independence. The medium of instruction is English throughout. Four-fifths of Zimbabwean children attend primary school, two-fifths secondary school. Higher education is provided at the University of Zimbabwe, in Harare; the National University of Science and Technology, in Bulawayo; the Africa (Methodist) University, in Mutare; three technical institutes; and several teachers colleges.

SCIENCE AND TECHNOLOGY

Zimbabwe is attempting to improve its scientific infrastructure in providing advanced education at the new National University of Science and Technology and other institutions. The nation has a good electrical system, with power supplied by dams on the Zambezi River, though

power can wane in dry years. The telephone system was once one of the best in Africa but is now inadequate, and it is difficult to obtain new lines. In 2003 there were only about 300,000 telephone lines and 380,000 cellular telephones in use. In 2002 about 500,000 people were using the Internet.

MEDIA

Zimbabwe has an extensive press and media system, but it is not known for its freedom. The country's only television station is run by the state-owned Zimbabwe Broadcasting Corporation (ZBC); the ZBC also runs the only four radio stations broadcast from within the country. The only news agency, the Zimbabwe Inter-Africa News Agency, is also state owned. The government publishes two of the three daily newspapers; the only private daily, the *Daily News*, is usually critical of the government and as a result often suffers from governmental interference.

Most people receive their news from radio. In addition to the ZBC broadcasts, there are two stations that broadcast into Zimbabwe from outside the country. SW Radio Africa broadcasts from London, while Voice of the People, set up with funding from the Soros Foundation and a Dutch nongovernmental organization, broadcasts from Madagascar.

CULTURE

Zimbabweans love art and respect artists. The country supports a number of professional artists, such as the colony of artists at Tengenenge Farm. Art forms include carving, basketry, pottery, cloth weaving and decorating, and jewelry. Shona sculpture is particularly good, and some sculptors have sold their work all over the world.

Harare is a regional musical center, attracting musicians from South Africa and other nations. Traditional instruments include stone bells, thumb pianos called *mbiras*, and wooden xylophones called *marimbas*.

FOLKLORE AND MYTHOLOGY

Folk traditions remain strong in Zimbabwe. Musicians at social events such as weddings and funerals perform songs telling African legends, complete with audience participation. Most Zimbabweans still follow traditional spiritual practices, often combining them with Christianity. Many people believe in a supreme being called Mwari and communicate with this deity through the oracle called the Voice of Mwari, a woman who lives in a cave and speaks to people. Ancestor worship is common.

ENTERTAINMENT AND RECREATION

Zimbabweans enjoy going to festive gatherings to listen to or play music, sing, and dance. Men go to beer halls to socialize with friends while passing around a communal bucket of *chibuku* beer. The cities, especially Harare, are modern and semi-European, with restaurants, bars, shopping, and other recreational offerings. The country has ample outdoor recreational possibilities, and tourists come from all over the world to go on safaris and see Victoria Falls.

ETIQUETTE

Zimbabweans observe a fairly formal code of behavior. Young people respect their elders and never address them by first name only. Husbands and wives may address one another by title in public.

FAMILY LIFE

Zimbabwean families have gotten considerably smaller since the introduction of family-planning programs in

the early 1980s; fertility has dropped, from 6.5 children per woman in 1980 to 3.5 in 2005. This has resulted in a certain degree of improvement in quality of life for families, as there are fewer children to raise and educate. Most men approve of these changes. Men and women still occupy traditional gender roles, with men working for income and women caring for the home.

PERSONAL APPEARANCE

Most Zimbabweans dress in Western clothes; they take pride in their appearance, though many lack extensive wardrobes. Women cover their shoulders and thighs, and in general people do not wear shorts in public. People do not wear ragged clothing if they can help it. In 2005 the government unveiled a new national dress fabric, which incorporates all the colors of the Zimbabwean flag and symbolic animals.

SPORTS

Cricket and soccer are popular sports. The Zimbabwe Universities Sports Association was formed in 1999 to encourage the development of organized sports at regional universities. The country has sent teams to the Olympic Games since 1980; it sent several athletes to Athens in 2004, with participation in sports such as tennis, swimming, track and field, and shooting. Zimbabwe's minister of education, sports, and culture was barred from attending the Athens Olympics as part of EU sanctions for human rights violations.

CHRONOLOGY

- 1980** U.S. and U.K. representatives broker the Lancaster House peace agreement between the nation's white-ruled government and majority black population; in national elections, the Zimbabwe African National Union (ZANU), led by Robert Gabriel Mugabe, defeats its erstwhile military ally, the Zimbabwe African People's Union (ZAPU); the name of the country is changed from Rhodesia to Zimbabwe.
- 1985** In legislative elections, ZANU candidates sweep all regions but Matabeleland.
- 1986** Running unopposed in an allegedly unfair election, Mugabe is reelected prime minister.
- 1987** Prime Minister Mugabe has the constitution revised to make him president, expanding his role to both head of state and head of government.
- 1988** The ZAPU party merges into the ZANU party, creating the Zimbabwe African National Union–Patriotic Front (ZANU-PF) in pursuance of the government's ultimate goal of creating a single-party socialist state; the law guaranteeing whites 20 seats in parliament is rescinded.
- 1990** Mugabe appoints the head of the former ZAPU party, Joshua Nkomo, as one of his two joint vice presidents; the government proclaims a program of land reform whereby half the land owned by white farmers will be redistributed among blacks.
- 1992** Zimbabwe suffers a drought.
- 1993** The government initiates a series of trade-liberalization measures meant to encourage foreign investment and meet the requirements of the IMF and the World Bank; Mugabe announces that the government will seize 70 commercial farms, breaking an earlier promise to take only derelict and underutilized farms and threatening foreign investment.
- 1993** The formation of the opposition Forum Party is announced, advocating a program of privatizing state-controlled companies.
- 1994** President Mugabe oversees the seizure of 17 productive farms without compensation, including that of opposition leader Ndabaningi Sithole.
- 1995** Opposition parties boycott the allegedly unfair legislative elections, and Mugabe's party, ZANU-PF, gains all but two seats in the House of Assembly; opposition leader Sithole is arrested; continuing drought produces food shortages, as the national debt nearly matches GDP.
- 1996** President Mugabe wins another six-year term, in an election with only one-third of those eligible voting; government employees wage a successful strike for higher pay.
- 1997** Scandals involving his family members discredit President Mugabe; the World Bank withdraws financial support; Mugabe demands that Britain, not Zimbabwe, compensate farmers whose land has been seized, a demand rejected by the British.
- 1998** Opposition to Mugabe's policies increases; high food and petroleum prices lead to demonstrations and riots, even while lavish pensions for the president and other government officials are announced; Mugabe sends troops to help fight rebels in the Democratic Republic of the Congo, a move with little domestic support.
- 1999** Critics of the Mugabe government are savagely mistreated; the IMF withholds grants; midyear inflation reaches 55 percent; a new opposition political party, the Movement for Democratic Change (MDC), is formed.
- 2000** The MDC wins a startling 57 seats in parliament, though between ZANU-PF victors and appointed positions Mugabe retains control of

93 seats; in a national referendum, voters reject proposals to expand Mugabe's powers and seize productive private farms; the government begins to arrest and otherwise harass opposition Assembly members.

- 2001** The MDC presses lawsuits alleging fraud and voter intimidation in the 2000 elections; the government demands the resignation of judges opposed to the land-reform seizures and expels foreign journalists.
- 2002** Parliament passes a law limiting the freedom of the media; the government takes over the farms owned by whites; in the presidential election, Mugabe wins another term amid protests by the opposition and foreign observers, who allege widespread ballot irregularities and violence by the ruling ZANU-PF; the Commonwealth suspends Zimbabwe for a year in protest of the election.
- 2003** Workers strike, and the government retaliates with arrests and beatings; MDC leader Morgan Tsvangirai is arrested and charged with treason; the Commonwealth extends Zimbabwe's suspension indefinitely, and Zimbabwe pulls out of the Commonwealth.
- 2004** Opposition leader Morgan Tsvangirai is acquitted of treason but faces more charges.
- 2005** The United States calls Zimbabwe an "outpost of tyranny"; the ruling party wins a majority of Assembly seats in the March elections amid opposition complaints of unfairness.
