Acknowledgments

I wish to thank the book's contributors, who are listed on another page. A special acknowledgment is due to Jeffrey D. Schultz, a dear friend and colleague, who has been the principal collaborator in this work. He has contributed 101 chapters to this book, and these chapters reflect his finely honed skills, his expertise in international affairs and editorial judgment. Jeff is the editor of five encyclopedias. *The Encyclopedia of the World's Nations* owes much to the dedicated work of the team at Facts On File. This is my 17th book with Facts On File, and I wish to both applaud their commitment to fine reference books and acknowledge the consistent support I have received over the years from them. Above all, I am grateful to my beloved wife, Annie, for her unfailing devotion and encouragement.

—George Thomas Kurian

I would like to thank the contributors who worked on this new version of the *Encyclopedia of the World's Nations and Cultures*: Amy Hackney Blackwell, Michael Holmes, J. Sydney Jones, and Michael J. O'Neal. At Schlager Group, Marcia Merryman Means oversaw the copyediting of the manuscript, while Jayne Weisblatt, Leah Tieger, and Kristopher Williamson assisted with the statistical updating and fact-checking efforts. I would also like to thank the staff at Facts On File, particularly Claudia Schaab.

—Neil Schlager

Introduction

The *Encyclopedia of the World's Nations and Cultures* comprises an extensive overhaul of the *Encyclopedia of the World's Nations*, edited by George Thomas Kurian and published in 2002. As with the earlier version, this new work provides a compact, balanced, and objective description of the dominant political, economic, social, and cultural systems of the countries of the world. Each entry identifies and describes all major components and sectors of national life and presents them within a clearly defined hierarchical structure and in a consistent sequence. The 190 entries in the previous work, each corresponding to a particular country of the world, are herein joined by three new entries: Marshall Islands, Federated States of Micronesia, and East Timor. In addition, the previous entry for Yugoslavia has been replaced by a new entry on Serbia and Montenegro.

While the *Encyclopedia of the World's Nations and Cultures* retains the essential organizational structure of the previous encyclopedia, it also incorporates several new elements. Chief among these are sections devoted to the culture of each country, an addition that explains the expanded title of the encyclopedia. The new sections are: Flora and Fauna, List of Modern Rulers, Living Conditions, Work, Folklore and Mythology, Entertainment and Recreation, Etiquette, Family Life, Personal Appearance, and Sports. In addition, several categories that in the previous edition contained only statistical tables now also include descriptive prose sections. Readers will also note that the Health, Food, and Nutrition category has been split into two distinct sections, each of which now includes both prose description as well as statistical data.

The backmatter sections from the previous edition have been fully updated for this new work. The Reference Sources section catalogs relevant titles about the world's nations and cultures that readers may wish to consult for further research. The Comparative Statistics table comprises key statistics for all countries in a single chart. Finally, the Index provides a useful method for finding information about a particular topic.

NOTES

Cutoff Date

The cutoff date for this edition is April 1, 2005, although more recent significant events are occasionally included. Every attempt has been made to make the encyclopedia current as of that date. However, statistical data of earlier vintage are often used when such data are the only ones available. See the caveat on statistics below.

Dates

All years are calendar years unless noted as fiscal years, in which case a slash or virgule appears between the years. Inclusive years are noted with a hyphen, signifying the full period of the calendar years noted.

Spelling and Geographical Usage

Proper names and place-names are based on the style of *Webster's Geographical Dictionary* as well as recommendations of the United Nations and U.S. State Department.

Statistics

All statistics in the encyclopedia are derived from publications issued by principal international agencies, particularly the United Nations and its affiliated agencies, including the Food and Agriculture Organization and UNICEF; the Central Intelligence Agency; the World Bank; the U.S. Energy Administration Organization; and the International Monetary Fund. The time lag between collection of data by these agencies and their eventual publication is reflected in the tables. This time lag may be as long as three years. Further, there are a number of countries where internal civil strife or external wars may make the collection of data impossible, and these countries are ignored by the collection agencies. As a result there are discontinuities in the publication of data and other breaks in time series. Further, there is the problem of incomparability between data published by different agencies that use different definitions, techniques of collection, and tools of analysis. Statistical

x Introduction

data are therefore subject to numerous qualifications and are only intended to be used as approximations and estimates. They are, however, valid within limits and may be safely used as indicators of trends.

Readers will note that certain tables and charts from the previous edition have been deleted, while others have been added. In addition, even within charts that appeared in the last edition and appear again here, certain statistical categories have been deleted, added, or changed. For instance, several categories from the United Nations Millennium Development Goal Indicators Database have been added, including the proportion of one-year-old children immunized against measles, the ratio of literate women to men (ages 15-24), and the proportion of the population with access to an improved water source.

INFORMATION CLASSIFICATION

Information on each country has been arranged according to a standard pattern. This classification system is central to this work and has been adhered to throughout. The classification system has been devised not only for ease of consultation but also to provide a framework of comparison essential in international studies.

Each country chapter has 40 sections preceded by a Basic Data Sheet that encapsulates the most important data. Some sections have both text and tables; some have only text; and some have only tables. The sections that are entirely new for this edition are marked as such below. All other sections have been updated and expanded since the previous edition.

1. Geographical Features	Text and Table
2. Population of Principal Cities	Table Only

GEOGRAPHICAL FEATURES

Afghanistan is a landlocked nation in Central Asia that covers an area of 647,500 sq km (250,000 sq mi), about the size of Texas. Afghanistan shares its total international frontier of 5,770 km with six neighbors: China (76 km), Pakistan (2,430 km), Iran (936 km), Tajikistan (1206 km), Turkmenistan (744 km), and Uzbekistan (137 km). The border with Pakistan, named the Durand Line, has been contested by Afghanistan since 1893, when it was drawn by the British Indian government. There are no other border disputes.

The capital is Kabul, with a population of 2,678,000. The other major urban centers are Kandahar (316,000), Herat (249,000), and Mazar-i-Sharif (183,000).

There are three main geographic regions. The central highlands, which are parts of the Himalayan chain

and total approximately 416,398 sq km (160,771 sq mi), fan out from the Pamir Knot. Peaks on the main ridge, the Hindu Kush, rise above 6,400 m (21,000 ft), with passes up to about 4,600 m (15,000 ft). The northern plains, approximately 103,600 sq km (40,000 sq mi) in area with elevations of about 600 m (2,000 ft), are fertile and populous. The southwestern plateau is an arid zone of approximately 155,399 sq km (60,000 sq mi) with an altitude of about 900 m (3,000 ft). Three-fourths of the country’s land area is covered by mountain ranges.

The principal rivers are the Amu Darya (1,250 km; 777 mi), which rises in the Hindu Kush and flows north-westward into the Sea of Aral; the largely unnavigable Kabul River (611 km; 380 mi), which joins the Indus at Attock in Pakistan; and the Helmand River (1,126 km; 700 mi), which flows into Hamun, an inland lake.

CLIMATE AND WEATHER

Afghanistan has a typical continental dry climate with seasonal extremes, marked differences between day and night temperatures, and rapid transition from one season to the next. The mean temperatures are 0.0°C (32°F) in January, 20°C (68°F) in May, 22°C (72°F) in July, and 10.6°C (51°F) in November. In the plains of Jallalabad summer temperatures of -26.1°C (-15°F) have been recorded in the higher plateau areas. The country suffers from the “Wind of 120 Days,” which blows from June to September at velocities exceeding 177 kph (110 mph). Rainfall is scanty, nowhere more than 380 mm (15 in) annually. The rainy season extends from October to April.

 November 51°F
 Average Rainfall: 15 in

FLORA AND FAUNA

Afghanistan is home to over 3,000 plant species, including hundreds of varieties of shrubs, vines, trees, flowers, and fungi. Medicinal plants, such as rue, wormwood, and asafetida are plentiful, and fruit and nut trees are found in many areas. The opium poppy is also heavily cultivated.

Abundant animal life includes the gerbil, flying squirrel, several varieties of bat, fox, lynx, wild dog, bear, mon-

goose, shrew, hedgehog, hyena, jerboa, hare, and wild varieties of cat, ass, mountain goat, and mountain sheep. Trout is the most common fish, and there are more than 100 species of wildfowl and birds.

ETHNIC COMPOSITION

The Pashtuns, who are described as true Afghans, are the dominant ethnic group. The Pashtuns are divided into two major subtribes: the Durranis and the Ghilzais, who together make up 42 percent of the population. Most Pashtuns are Sunni Muslims. The Tajiks compose 27 percent of the population and live in northern Afghanistan. The Hazara Mongols, who constitute the third-largest distinct ethnic group, live in the Bamyan region. They are believed to be descendants of the hordes of Genghis Khan and number 9 percent of the population. Other ethnic groups include Aimaks, belonging to the Firuzkuhi, Taimani, Jamshedi, and Taimuri tribes; Baluchis; Brahuis in the southwest; Turkomans; Uzbeks; Nuristanis, formerly known as Kafirs; and Qisilbashas, or Redheads. Among ethnic aliens are Hindus, Sikhs, and Jews, most of whom are merchants or traders. Westerners are mostly transients.

LANGUAGES

The official national languages are Pashtu, which is spoken by more than 11 million people, and Persian (also Dari or Farsi), spoken by the Tajiks and the Hazaras. It is the principal language of the administrative elite. More

4 Afghanistan

than 28 other languages and dialects are spoken in Afghanistan. Many of these languages are speech islands, reflecting Afghanistan's history and ethnic composition. They include Balochi, Nuristani, Kati, South Turkic, Uzbek, and Kirghiz.

Both English and French are taught in Afghan schools as second languages.

RELIGIONS

The religion of Afghanistan is Islam. About 80 percent of the Pashtuns, Tajiks, Uzbeks, and Turkomans belong to the Hanafite rite of the Sunni sect of Islam, 19 percent belong to the Shia sect, and 1 percent belong to the Ismaili sect.

Religious minorities include small communities of Hindus, Sikhs, Parsis, and Jews.

Non-Muslims are subject to legal and unwritten restrictions, and proselytizing by non-Muslims and even by the heretical Muslim sect of Ahmadiyahs is prohibited. The Taliban regime was very intolerant of all religions other than Islam. This intolerance was expressed in a number of ways, such as the wanton destruction of historic statues of the Buddha in 2000 and the institution of the law requiring Hindus to wear distinguishing dress as a mark of humiliation. With the fall of the Taliban and the creation of a new constitution and government, Islam still found a place as the state religion but within the context of social justice and tolerance. The first article of the constitution declares Afghanistan to be an Islamic republic.

Religious Affiliations

Sunni Muslim	23,943,000
Shia Muslim	5,686,000
Other	299,000

HISTORICAL BACKGROUND

The oldest elements of the present-day Afghan population are the Tajiks, Pashtuns, and Nuristanis, who came to the land during the eastward Aryan migrations in the second and first millennia B.C.E. The people who lived in the area before them were the Dravidians, as were most of the early inhabitants of the Indian subcontinent. Around 600 B.C.E. the Aryan conquerors settled in the area around the city of Balkh in the north-central province of Mazar-i-Sharif. Northern Afghanistan, later known as Aryana or Bactria, first entered recorded history around 550 B.C.E., when it was incorporated into the Achaemenid Empire by its founder, Cyrus the Great. In 331 B.C.E. this empire fell to Alexander the Great. In the north, Hellenic cultural influences left behind by Alexander lasted for centuries, but in the south these remnants had to compete with the Indian culture and Buddhist religion introduced by Mauryan rulers. Most of Afghanistan was ruled during

this period by feuding Greek satraps. From these satrapies arose the Greco-Bactrian kingdom (225–55 B.C.E.) whose greatest ruler, Demetrius, expanded its boundaries eastward into India around 187 B.C.E.

By the middle of the first century B.C.E. Greek power had waned. Five nomadic tribes from Central Asia, called Yueh-chi by the Chinese, invaded Bactria. One of these tribes, the Kushans, gained supremacy and established a dynasty that dominated the Hindu Kush for nearly four centuries. Under their most famous king, Kanishka (c. 110–162), the Kushans adopted the Mahayana form of Buddhism and took over what remained of the Greco-Bactrian culture. The Kushan Empire was destroyed around 425 by the Ephthalites, or White Huns, a Mongol people. They, in turn, were dislodged by the Persian Sassanids in the seventh century.

In the seventh century Islam reached Afghanistan, then known as Iranian Khorasan. After initial forays the Arab general Yakub ibn Layth occupied Kabul, Herat, and Balkh. By the ninth century Arabs had gained control of the region, ensuring the triumph of Islam.

In the mid-10th century Alptagin, a former Turkish slave and commander in chief of the army of the Samanid dynasty (874–999) in eastern Persia, gained control of the principality of Ghazni and founded the Ghaznavid dynasty (962–1140), the first great Islamic kingdom in Afghanistan. The most renowned of his successors was Mahmud of Ghazni (983–1030), nicknamed the “Destroyer of Idols,” who led 17 predatory expeditions to India. A patron of arts and learning, he founded a university in Ghazni with the distinguished historian al-Biruni as its head. The empire lasted for some 125 years after Mahmud's death and was supplanted by the rival principality of Ghorid, southeast of Herat, in the mountains of Ghor. The Ghorids ascended to prominence under Muizzuddin, known also as Mohammad of Ghor, who established a permanent empire in India in 1192.

In the early 13th century Mongols from the eastern plains of Central Asia swept through Afghanistan under Genghis Khan. Under the Il-Khans, as Genghis Khan's descendants were known, a local Tajik dynasty, called Karts, ruled over most of Afghanistan for two centuries, until the rise of Timur (1336–1404), known to the West as Tamarlane. Timur's descendant, Babur, went on to establish the Mughal dynasty in India. Although Babur died in India, he was buried in his beloved city of Kabul.

For the next two centuries Afghanistan was the bone of contention between the Sefavid rulers of Iran and the Mughal rulers of India. The conflict set a pattern of foreign rivalry and intervention that continued well into the 20th century. Northwest and south Afghanistan, with Herat and Kandahar as centers, lay in Iran's sphere of influence; the east, with Kabul, Ghazni, and Jalalabad as centers, lay within the Indian sphere. The Uzbeks held sway in the north outside these two spheres of influence. During this period, the Pashtun tribes, particularly the

Abdali and Ghilzai, steadily increased in numbers and influence and spread from their original mountain habitat in the Sulaiman Range into the more fertile valleys of Kandahar, Zaminawar, and the Tarnak-Arghandab. Although fiercely independent, the Pashtun tribes retained a long tradition of internecine fighting, and both the Mughals and the Iranians played one tribe against the other to advance their own interests. Thus, the Abdali tribes near Kandahar were favored by the Iranian ruler Shah Abbas the Great, who recognized Sado Khan, an Abdali, as chief. Sado's descendants, the Sadozai, rebelled against the Iranians after Shah Abbas II reconquered Kandahar in 1648. As the Sadozai lost Iranian support, the rival Ghilzai tribes became ascendant. Both the Ghilzai and the Abdalis were overpowered by Nadir Shah (1732–47), one of Iran's greatest monarchs, who captured Kabul and severed it from the Mughal Empire in 1738.

Ahmad Shah Sadozai, a chief of the Sadozai *kbeyl* (lineage group) of the Abdali tribe, was one of Nadir Shah's commanders. When the shah was assassinated in 1747, Ahmad Khan marched to Kandahar with a contingent of troops and was elected by the chieftains as the ruler of all Afghans. In 1748 he made Kandahar his capital and took the title of Dur-i-Duran (Pearl of Pearls) and the throne name of Ahmed Shah Durani. Since then the Abdalis have been called the Durani, and their leaders have held the title of emir, Arabic for chief. An able administrator, Ahmed Shah Durani forged a unified Afghan state based on the ascendancy of the Pashtuns. His son, Timur, moved his capital to Kabul, but after his death, the dynasty was weakened by the quarrels of his 23 sons over succession to the throne. The Sadozai power ended in 1818 with the revolt of the Mohammadzai *kbeyl* of the Durani. The Mohammadzai leader Dost Mohammad Khan (1793–1863) declared himself emir in 1835.

It was during Dost Mohammad's reign that the country experienced its earliest contacts with European powers. The British, now well established in India, sought to contain Russian expansion into Afghanistan. For the next century Anglo-Russian rivalry shaped Afghan history. The British invaded Afghanistan in 1838 in what became known as the First Afghan War (1838–42), the first of three wars. British troops took Kandahar and Kabul, drove Dost Mohammad north, and installed a Sadozai rival on the throne. The British occupation ended in 1842 in complete disaster as the Afghans massacred all but a few of the British troops. The British returned the same year to burn Kabul in retaliation and to restore Dost Mohammad to the throne. During the latter years of his rule, Dost Mohammad recovered Herat and Kandahar and succeeded in unifying and pacifying the Afghans.

Sher Ali succeeded Dost Mohammad in 1863, but his relations with the British soon deteriorated. Sher Ali's refusal to allow entry to a British mission led to the Second Afghan War (1878–1879), in which he was deposed in favor of his son, Yakub Khan (1879–80). Yakub Khan was

later ousted and replaced by Abdur Rahman Khan, who was forced to accept the Treaty of Gandamak of 1879, which made the country a virtual British protectorate and mandated cession of the Khyber Pass to the British. The boundaries of Afghanistan were settled at this time. The Anglo-Russian Pact of 1895 established the border with Russia along the River Amu Darya. Two years earlier Sir Mortimer Durand had demarcated the Afghan border with British India along the so-called Durand Line, which cut Pashtun tribal areas in half.

Abdur Rahman Khan was the first modern ruler of Afghanistan; he built the country's first standing army and police force and broke the independent power of the tribal chiefs. His policies were continued by his son Habibullah Khan, who introduced Western medicine and surgery, automobiles, telephones, and opened the first European school. The Anglo-Russian Convention of 1907 recognized Afghanistan as an independent buffer state. It remained neutral in World War I, although popular sympathies were with the Ottomans.

When Habibullah was assassinated in mysterious circumstances in 1919, the mantle of emir fell first on his brother, Nasrullah Khan, and later on his son, Amanullah Khan. Intensely anti-British, Amanullah Khan attacked the British forces, causing the Third Afghan War (May–August 1919). Although the British were victorious, they granted Afghanistan complete independence by the Treaty of Rawalpindi in 1919. Amanullah thereupon used his popularity as a hero who had wrested independence to launch a series of social and economic reforms, including the emancipation of women, prohibition of polygamy, compulsory education of both sexes, stipulation of Western dress as the national dress, and creation of the nation's first parliament. Outraged by the reforms, the mullahs (Muslim religious leaders) staged an open revolt and drove Amanullah out of the country. In 1929 the throne was seized by Sardar Mohammad Nadir Khan, who became emir under the name of Nadir Shah (1929–33). A pious Muslim, he abrogated the reforms of Amanullah and restored the power of the tribal chiefs.

Nadir Shah was assassinated in 1933 and was succeeded by his 19-year-old son, Mohammad Zahir Shah. He inherited a state riven by factional and tribal conflicts, but he lasted for 40 years, until 1973. Under the leadership of his cousin, Sardar Mohammad Daoud Kahn, who became prime minister in 1953, the nation began a series of economic plans for modernization with financial help from the Soviet Union. Daoud resigned in 1963 and was replaced by Mohammad Yusuf, who introduced a democratic constitution in 1964 that combined Western political ideas with traditional Islamic values. Parliamentary elections were held in 1965. Nevertheless, the king never permitted political parties to operate. In 1973 financial problems, recurrent famine, restiveness among the small middle class, and military impatience with civilian rule led to the overthrow of the monarchy. King Zahir was

6 Afghanistan

replaced by Daoud, who took office as president, prime minister, and minister of foreign affairs and defense.

The national assembly, appointed from among notable elders by provincial governors, adopted a new constitution in 1977 that called for a presidential government and one-party rule. Daoud was elected to a six-year term as president, and military rule ended. Disaffection among the military culminated in a left-wing coup in April 1978, led by the deputy air force commander, Colonel Abdul Khadir. Daoud and members of his family were killed during the coup. A Revolutionary Council installed Nur Mohammad Taraki, the imprisoned leader of the formerly banned People's Democratic Party of Afghanistan (PDPA), as president of the party and prime minister. The constitution was abolished, the nation was renamed the Democratic Republic of Afghanistan, and all parties except the Communist PDPA were banned. Under Taraki, Afghanistan's already close ties with the Soviet Union were strengthened. Opposition to the new regime, led by Muslim tribesmen known collectively as the mujahideen, resulted in armed insurrection throughout the country. In March 1979 party hard-liner Hafizullah Amin took over the office of prime minister, with Taraki remaining titular head of state. The Revolutionary Council designated Amin president in September. Amin's attempts to impose hard-line Communist policies were widely unpopular and led to armed rebellion. In December 1979 he was killed in a coup supported by the introduction of 80,000 Soviet troops. Former deputy prime minister Babrak Karmal, who had been in exile in Eastern Europe, was flown into the country by the Soviets and installed as president. Karmal's regime won little acceptance from the Afghan people, and his government depended on the presence of Soviet troops—estimated at 110,000 in 1982—for survival. The mujahideen continued their rebellion from rural bases and supply camps in Pakistan.

In an attempt to broaden its support, the government convened the National Assembly in 1985. It immediately ratified a new constitution and endorsed the Soviet presence. Elections were held on the local level.

Unable to stop rebel fighting or generate domestic support, Karmal stepped down as general secretary of the PDPA in May 1986 and was replaced by Mohammad Najibullah. In November Karmal asked to be relieved of his other posts, including the presidency of the Revolutionary Council. He was succeeded by Haji Mohammad Chamkani. Najibullah was made president of the Republic of Afghanistan in 1987. That year political reforms were effected along with a cease-fire extension. In November a new constitution was ratified that permitted the formation of political parties. Najibullah also announced that he was prepared to share power with the opposition in a coalition government. In April 1988 a multiparty election was held, with about one-fifth of the legislative seats left vacant in the hope of mujahideen occupation. In 1988

Afghanistan, the Soviet Union, Pakistan, and the United States came to an agreement on the withdrawal of Soviet troops, which was completed in 1989. The rebel mujahideen continued hostilities, demanding the installation of an Islamic regime in Kabul and proclaiming a "free Muslim state." Factional infighting among the mujahideen limited its military and political influence, although its military victories in 1990 and 1991 did compel Najibullah to propose a truce in May 1991, which the rebel leaders rejected.

With the fall of the Najibullah government in 1992, the seven-party alliance of Islamic groups based in Pakistan announced plans to set up an interim government, but soon the parties were embroiled in a virtual civil war. By 1992 more than 3,000 Afghans died in the fighting and over 700,000 fled Kabul. By 1994 Burhanuddin Rabbani and his defense minister, Ahmed Shah Masud, were in control of Kabul, although the rest of the country was in a state of anarchy. Disaffected theology students based in Pakistan banded together into a militant armed group, becoming the Taliban, and went on to capture Kandahar, the country's second largest city. Pakistan supported the Taliban with ammunition, fuel, and food. By 1996 the Taliban had captured Kabul after driving out Rabbani, and its members were in control of 21 out of 32 provinces. The Taliban's opponents, mainly from the Tajik, Uzbek, Hazara, and Turkoman ethnic groups, retreated to the northeastern provinces. In 1997 the Taliban entered Mazar-i-Sharif, the largest town north of the Hindu Kush and the stronghold of the Uzbek warlord Rashid Dostum. Dostum was ousted by his lieutenant, Malik Pahlawan, who managed to drive the Taliban out of Mazar. By 2000 the Taliban controlled about 75 percent of the country.

For a number of years the Taliban encouraged and offered asylum to a militant Islamic terrorist group called al-Qaeda (The Cell), led by a Saudi millionaire, Osama bin Laden. Al-Qaeda had cells and branches in more than 60 countries and was dedicated to waging a jihad against Christians and Jews, who were branded as crusaders and infidels. The group was responsible for a number of terrorist attacks against the United States in the 1990s, including the World Trade Center bombing in 1993, the bombing of the U.S. embassies in Tanzania and Kenya, and a sneak attack against the U.S. destroyer *Cole* while it was docked in Aden harbor. Emboldened by apparent U.S. failure to respond adequately to these attacks, al-Qaeda struck again on September 11, 2001. Four groups of suicide bombers, 19 in total, hijacked four U.S. passenger planes; two of them were flown into the World Trade Center in New York City, one into the Pentagon in Washington, D.C., and the fourth crashed in Pennsylvania as a result of an apparent struggle between the hijackers and the passengers. The twin towers of the World Trade Center, New York's tallest buildings, collapsed in the attack, resulting in the

deaths of nearly 3,000 persons of various nationalities; the Pentagon was severely damaged, with more than 100 persons killed. The attack was the worst on the United States since Pearl Harbor in 1941.

The United States responded quickly and decisively. The Bush administration put together an antiterrorism coalition, including Pakistan, Russia, India, Uzbekistan, Tajikistan, and other neighboring nations, and demanded that the Taliban government in Kabul hand over bin Laden and his top lieutenants and also destroy terrorist training camps in Afghanistan. When the Taliban government failed to comply, the coalition forces, led by the United States and Great Britain, launched a massive air assault on Afghan military installations and al-Qaeda training camps in the first week of October. The coalition also supported the Northern Alliance, still in power near the Uzbek and Tajik borders, to regroup and resume their campaign against the Taliban. The Northern Alliance managed to break Taliban resistance and recapture the northern city of Mazar-i-Sharif and also Kabul, the capital, in November. Kandahar, the last remaining Taliban stronghold, fell in December. In the same month non-Taliban Afghan factions convened in Bonn, Germany. The conference set up an interim government to take charge for the next six months, to be led by a respected Pashtun leader, Hamid Karzai. However, warlords remained in power in the various provinces, while the important ministries of defense, foreign affairs, and internal affairs were assigned to non-Pashtun Northern Alliance leaders. Although the war against the Taliban was virtually won by the end of 2001, neither Mullah Muhammad Omar, the former Taliban head of state, nor Osama bin Laden had been captured, and pockets of resistance continued to hamper the pacification of the country.

The American occupation of Afghanistan continued. A *loya jirga*, or grand council, comprising traditional leaders, was held in June 2002, as sponsored by the United States. Karzai was elected the head of state of a transitional government until popular elections could be held. On September 5, 2002, Karzai survived an assassination attempt, and another plot against him was stopped on November 22. In 2003 more than 10,000 coalition troops, led by 8,000 from the United States, were still engaged in fighting remnants of the Taliban, al-Qaeda forces, and the former mujahideen commander Gulbuddin Hekmatyar, in the eastern and southern regions of Afghanistan. There were signs that the Taliban was making a comeback in some districts, and some observers began calling Karzai the mayor of Kabul, implying that his rule did not extend beyond the capital.

Popular elections were held in October 2004, and Karzai was elected president. Despite political, military, and financial support from the United States, a number of problems remain. Warlords, previously supported by

the United States in its hunt for bin Laden, solidified their control of large sections of the country. The warlords in turn have given new life to Afghanistan's opium production: the country supplies 70 percent of the world's opium, used in the production of heroin. Critics point out that after several years the United States has failed in its major objectives of capturing bin Laden and of putting an end to the Taliban. Reconstruction efforts in the country have also been slowed as a result of the redirection of funds to the U.S.-led war in Iraq. Most crucially, many Afghans have grown impatient with the U.S. presence in their country. An estimated 20,000 deaths have occurred in Afghanistan as a result of U.S. bombing.

LIST OF MODERN RULERS

1992	Sibghatullah Mojaddedi (chairman of the Jihad Council)
1992–96	Burhanuddin Rabbani (president of the Islamic State)
1996–2001	Mullah Mohammad Rabbani (head of the Supreme Council)
2001	Burhanuddin Rabbani (president of the Islamic State)
2001–02	Hamid Karzai (chairman of the interim administration)
2002–04	Hamid Karzai (head of state for the transitional administration)
2004–	Hamid Karzai (president of the Islamic State)

CONSTITUTION

The former constitution of Afghanistan was promulgated in 1990 after the withdrawal of Soviet forces. The new multiparty Islamic-oriented constitution had amended the constitution of 1987, reaffirming Afghanistan's non-aligned status, strengthening the post of president, and permitting other parties to participate in government. When the Taliban took control in 1996, the constitution was suspended. Following U.S.-led military operations, a transitional government was set up by a conference held in Bonn, Germany, in December 2001. The Transitional Authority then convened a constitutional *loya jirga* from December 14, 2003, until January 4, 2004, which ended with the approval of a new constitution. That constitution was signed on January 16, 2004, and highlights a strong executive branch, a dominant role for Islam, and basic protections of human rights. The executive branch is led by the president, who is both head of state and head of government. The president has two vice presidents. The president serves a five-year term and is chosen by a majority of over 50 percent, which may not be achieved until after several rounds of voting. Presidents are not al-

8 Afghanistan

lowed to serve more than two terms. The Afghan congress is called the National Assembly and is made up of two houses: the House of the People, whose 250 members are elected for five-year terms, and the House of the Elders, whose members are both appointed and elected. One-third of the House of the Elders is appointed by the president, who is directed by the constitution to include in these appointments at least 50 percent women. The National Assembly makes the laws of the land, which cannot run counter to the tenets of Islam.

The constitution provides for a judiciary, including a nine-member Supreme Court and Courts of Appeal, and also for the institution of the *loya jirga*, made up of members of the National Assembly and heads of provincial governments. This body meets to decide on matters of extreme importance to the state, including matters of national security and impeachment. According to the constitution the state is obligated to create a prosperous and progressive society based on social justice, the protection of human dignity, the protection of human rights, and the realization of democracy and to ensure national unity and equality among all ethnic groups and tribes. The state shall abide by the UN charter, international treaties, international conventions signed by Afghanistan, and the Universal Declaration of Human Rights. There is universal suffrage for those 18 and older.

PARLIAMENT

The National Assembly has two houses: the House of the People and the House of the Elders. Members of the Wolesi Jirga, or House of the People (with no more than 250 seats), are directly elected for five-year terms. The Meshrano Jirga, or House of the Elders, is composed of one representative from each provincial council, one representative from each district council, and a number of presidential appointees. The presidential appointees will include two representatives of nomads and two representatives of the disabled; half of the presidential appointees will be women. On rare occasions the government may convene a *loya jirga* on issues of independence, national sovereignty, and territorial integrity; it can amend the provisions of the constitution and prosecute the president; it is made up of members of the National Assembly and chairpersons of the provincial and district councils. Parliamentary elections, the first in more than 30 years, were held in September 2005.

POLITICAL PARTIES

For much of Afghanistan's history, political parties were illegal and thus operated underground. With the fall of the Taliban, the establishment of a provisional government, and then the presidential election in 2004, numerous

political parties were established. Major political parties include Hezb-e-Congra-e-Mili Afghanistan (National Congress Party of Afghanistan), Hezb-i-Islami Afghanistan (Islamic Party of Afghanistan), Hezb-e-Nuhzhat-e-Mili Afghanistan (National Movement of Afghanistan), and Jumbish-i-Milli Islami Afghanistan (National Islamic Movement of Afghanistan).

There are numerous other smaller parties, pressure groups, and nonofficial parties representing political stances ranging from socialist to nationalist and all vying for a nugget of power in the new Afghanistan. Many of the smaller parties are not recognized by the Ministry of Justice. In the October 2004 run-off election Hamid Karzai, an independent candidate, won 55.4 percent of the vote, while his nearest contender, Yonous Qanooni of the Hezb-e-Nuhzhat-e-Mili Afghanistan, won 16.3 percent.

LOCAL GOVERNMENT

Afghanistan is divided into 34 provinces, each with a governor appointed by the government in Kabul. These provinces are further divided into districts or departments with various administrative heads. The *shura*, or local assemblies, wield real power, collecting taxes and seeing to local security issues. Intensely tribal, Afghanistan in fact operates more effectively in terms of government on the local than on the national level, for the highest loyalties of Afghans remain with family, village, race, ethnicity, language group, and religion—creating what is known as a “Qawm” identity. Thus, in reality much of the country is still run by regional warlords, many of whom are appointed governors. It is the job of the new government in Kabul to try to establish a sense of national identity in Afghans and thus bridge the gap between local autonomy and central authority.

LEGAL SYSTEM

Afghanistan's 2004 constitution establishes a Western-style legal system, including a nine-member Stera Mahkama, or Supreme Court—wherein nine justices are appointed for 10-year terms by the president, with approval of the Wolesi Jirga—and subordinate High Courts and Appeals Courts. There is also a Minister of Justice. A separate Afghan Independent Human Rights Commission was established by the Bonn Agreement and was charged with investigating human rights abuses and war crimes. The country's basic legal framework will consist of its 1964 constitution and existing laws and regulations, so long as these do not contradict the Bonn Agreement of 2001 and international treaties to which Afghanistan is a party. A major difficulty in this regard, however, is the fact that the Taliban burned law books while in power, such that texts of Afghan laws are in short supply. An Islamic country, Afghanistan is also subject to the tenets of Islamic law, known as sharia.

HUMAN RIGHTS

Despite major advances made by the Islamic State of Afghanistan's new government in the area of human rights, there were still widespread reports of abuse in 2003 and 2004. On the positive side the country's constitution makes special consideration for ending discrimination and protecting human rights; nevertheless, lawless warlords have been accused of human rights abuses throughout the country. International organizations have also accused U.S. forces of systematic human rights abuses in its prosecution of the war in Afghanistan and its techniques for questioning prisoners.

FOREIGN POLICY

Under the Taliban regime Afghanistan turned inward, so it may be years before the country is able to reestablish itself as a member of the international community. The government of Hamid Karzai is apparently aligned with the United States, if only because of the coalition military presence in the country and the dire need for Western financial aid. The Northern Alliance, which has strong representation in the cabinet, has strong ties with Russia. Pakistan's influence over Afghanistan is likely to diminish under the arrangements set up by the Bonn Conference. Pakistan has sent troops into remote tribal areas to control the border and stem organized terrorist and other illegal cross-border activities. Regular meetings between Pakistani and Afghans and coalition allies aim to resolve periodic claims of boundary encroachments.

DEFENSE

Military organization disintegrated after 1992 with the fall of Najibullah's government. Much of the advanced equipment, including combat aircraft and helicopters, have fallen into a state of disrepair. The Afghan National Army is being trained by the United States with the assistance of the international community. In 2003, \$61 million was spent on the military, or 1 percent of gross domestic product (GDP).

ECONOMY

Afghanistan is an extremely poor, landlocked country highly dependent on farming and the raising of livestock, specifically sheep and goats. Economic considerations have played second fiddle to political and military upheavals during two decades of war, including the nearly 10-year Soviet military occupation (which ended February 15, 1989). During that conflict one-third of the population fled the country, with Pakistan and Iran sheltering a combined peak of more than six million refugees. In early 2000, two million Afghan refugees remained in Pakistan and about 1.4 million in Iran. Gross domestic product has fallen substantially over the past 20 years because of the loss of labor and capital and the disruption of trade and transport. The majority of the population continues to suffer from insufficient food, clothing, housing, and medical care. Inflation remains a serious problem throughout the country. International aid can deal with only a fraction of the humanitarian problem, let alone promote economic development. The economic situation did not improve in 1998–2000, as internal civil strife hampered both domestic economic policies and international aid efforts. Numerical data are likely to be either unavailable or unreliable. Afghanistan was by far the largest producer of opium poppies in 2000, and narcotics trafficking is a major source of revenue.

With the fall of the Taliban and the infusion of over \$2 billion in international assistance in 2002 and 2003, the economic situation had somewhat improved by 2004. The end of a four-year drought also bolstered economic prospects. Yet the decades of conflict in the country damaged not only infrastructure but also individual initiative. A stable government as well as continued international assistance will be needed for the country to turn its fortunes around over the long term. One stumbling block is the opium trade, which accounts for almost one-third of GDP; the country is under renewed international pressure to curb that trade, which means finding substitute crops.

ENVIRONMENT

The long civil war and continuing political chaos in the country leave Afghanistan in a difficult situation environmentally. Even with less than 3 percent of territory covered with trees in 1993, Afghans have continued to cut forests for fuel and shelter at an alarming rate. By late 2002 between just 1 and 2 percent of Afghanistan's land area was forestland. That represented a 33 percent decrease from 1979. A four-year drought in 2002 also depleted water supplies from rivers and irrigation canals. Much of the land that was productive prior to the extended fighting has been generally devastated by the war and its aftermath, such as through the continuing presence of land mines. Over two dozen species of flora and fauna are on the endangered species lists, including the snow leopard, long-billed curlew, argali sheep, musk deer, tiger, white-headed duck, and Afghan brook salamander.

LIVING CONDITIONS

For much of Afghanistan's population, living conditions are medieval. A full two million Afghans are nomads, living in tents and following pasturage for their herds. These nomads, both Turkmen and Pashtun, are called *kochis*. For settled people living conditions are hardly better. Though one of the poorest agricultural countries in the world, Afghanistan has over 80 percent of its population engaged in farming. The land is dry, and less than 10 percent is arable. Thus, except for a very few wealthy

landowners, farmers eke out very meager livings. Irrigation is largely unheard of; what canals once existed have been destroyed by decades of war and drought.

Village life is also fairly primitive. Houses are flat roofed and built of mud and straw. Bathing and laundering depend on nearby streams and rivers. Furniture is simple, and families often sleep on the flat roofs in warmer weather. Children and women gather dung and shape it into patties for fuel. Transportation in the country is still often by horse and cart. Villagers send their wares—agricultural products or arts and crafts—to larger towns, where they are distributed to the five main cities: Kabul, Kandahar, Herat, Mazar-e-Sharif, and Kunduz.

In the major cities upper-class living conditions approximate those in the West, but the vast majority of the population, both urban and rural, lives near the poverty line. Afghanistan has an infant mortality rate among the highest in the world: 165.96 deaths per 1,000 live births, by a 2004 estimate. Life expectancy was 42.46 years.

HEALTH

Many factors combine to make Afghanistan a medical nightmare. The war and civil strife have destroyed much of the infrastructure of the country, including hospitals and clinics. Access to health facilities, trained doctors, and proper medicines were always lacking, and the situation was only exacerbated during the years of Taliban control. Poor sanitation and limited availability of potable water contribute to alarming rates of infectious diseases in the country. Malaria and typhoid remain major causes for hospital admittance. In 1990 the tuberculosis rate was 278 cases for every 100,000 Afghans. Cholera reached epidemic proportions, with 19,903 cases reported in 1995. As of 2002, 80,000 children were dying of diarrheal disease yearly.

Another factor in the Afghan health crisis is war itself. Untold thousands of land mines are still present throughout the country, causing numerous cases of death and dismemberment every year. Direct casualties of war number in the tens of thousands; close to 4,000 civilians were killed by U.S.-led air strikes between October and December 2001. Since that time, with conflict continuing, some estimates put the total number of civilians killed at upward of 20,000.

By 2004 some of these problems were being addressed by the international community, especially by the Red Cross. Kabul is the center for health care in the country. In 2002 there were four hospital beds and 1.8 doctors for every 10,000 people. The Red Cross had established hospitals in 70 percent of the provinces. Nevertheless, the death rate in 2004 was still 21.12 for every 1,000 persons.

FOOD AND NUTRITION

The major influences on Afghan food are Iranian and Indian. The flatbread known as naan is a staple of the diet; it is cooked on an iron plate in a fire or on the inner wall of a clay oven. Bread is often dipped in a light meat stock and serves as a utensil to scoop other food, as Afghans mostly eat with their hands. Rice is eaten in some districts; cooked in a pilaf of meats and vegetables, it is a major meal. Dairy products constitute a third staple, as yogurt, cream, butter, and dried buttermilk make up a large part of the diet. Eggs are a major source of protein and can be scrambled with tomatoes and onions.

Tea is the primary beverage—black in the south and green in the north—and sugar, though expensive, is always added. As an Islamic country, Afghanistan has the major dietary prohibitions of the religion. Alcohol is not allowed, nor is pork or boar.

Women and girls do the cooking for the family. The major meals are breakfast and dinner, between which dried fruits and nuts are eaten. A cloth is spread on the floor for meals, around which the family sits. A bowl with fresh water is supplied to wash the hands before and after the food is served. This bowl is called an *afterwa-lagan*.

STATUS OF WOMEN

The establishment of a strict fundamentalist Islamic regime during the Taliban regime meant a loss of rights for women. Under prior governments women were, in

theory, equal to men in their rights to vote and to receive an education. However, these advancements ceased to exist under the Taliban. Decrees by the Taliban government in 1996 banned girls and women from attending school, work, and other places outside the home without male relatives. Reports indicated that women were regularly beaten if they attempted to work outside the home. The regime became one of the most repressive in terms of the status of women. Violating Taliban decrees could result in stoning and death. In June 2001 a ban was put in place restricting foreign women from driving in Afghanistan.

Matters changed following the fall of the Taliban. The transitional government, in place from December 2001 to December 2004, included two women. Sima Samar was elected minister of women's affairs; the independent candidate Suhaila Seddiqi, minister of public health. However, despite the fact that 40 percent of eligible women registered to vote in the 2004 election, Afghani women remain second-class citizens. Reports were made of harassment by warlords of those women who dared to run for office.

Afghanistan's new constitution makes provisions for equal rights. Article 22 guarantees men and women equal rights and duties before the law. Article 44 provides that the state must promote education for women. Approximately 25 percent of the seats in the Wolesi Jirga (House of the People) are reserved for women, and the president must appoint additional women to the Meshrano Jirga (House of the Elders).

WORK

According to a 2001 estimate Afghanistan had a labor force of 11.8 million. As of 2004, 80 percent of those were engaged in agricultural work, producing wheat, fruits, nuts, wool, mutton, sheepskins, lambskins, and, most importantly for the economy, opium. By a 2004 estimate 80 to 90 percent of the heroin consumed in Europe came from Afghanistan, and the cultivation of opium was one of the largest contributors to GDP.

In 2004, 10 percent of the workforce was involved in industry, including the small-scale production of textiles, soap, furniture, shoes, fertilizer, cement, hand-woven carpets, natural gas, coal, and copper. Of these trades, the weaving of cloths and carpets are the most important, with whole families engaged in such work, including very

young children. Another 10 percent of the workforce was employed in the service sector.

Working conditions are harsh, with few safety laws and few social welfare safety nets such as workers' compensation, retirement plans, or collective bargaining. Though there was a Central Council of Afghanistan Trade Unions formed in 1978, during the years of Soviet occupation and Taliban rule its powers eroded.

EDUCATION

Afghanistan has one of the lowest literacy rates in the world, with 2004 rates at 51 percent for males and 21 percent for women.

Until civil war broke out in 1989, schooling was free and compulsory for eight years, from ages seven to 15. Elementary education consisted of eight years and secondary school of four years. From 1981 to 1986 the enrollment in primary and secondary school dropped from 29 percent of the school-age population to less than half that number. Outside of Kabul most education was limited to the elementary years. In 1986 only 6 percent of children in the secondary-school age group were in attendance, and that figure has since dropped. In both primary and secondary schools attendance by female students was significantly below that by males.

The 20 years of war had a drastic impact on education. Most rural schools were destroyed by the resistance when the Soviet-backed regime attempted to turn them into political indoctrination centers. Many others were closed because of the danger of regime teachers. Formal education even in major cities such as Kandahar was brought to a virtual standstill as a result of daily firefights. In 1995 there were five universities in operation. The oldest and largest is the University of Kabul (Pohantoon), founded in 1932. It has nine faculties. The University of Nangargarth at Jallalabad has only a faculty of medicine.

The Taliban further eroded educational standards by barring women, who formed a majority of Afghan teachers, from work and education. With the fall of the Taliban and the installment of the transitional government in December 2001, schools reopened for girls, and female teachers returned to work, though they are still vastly outnumbered by their male colleagues. Education

is now free and compulsory for at least six years, though many children and parents in the country ignore that stricture. Attendance rates at schools remain low. In 2004 over one-half of the students of school age did not attend. Approximately 34 percent of the four million Afghan children enrolled in school were girls. In 10 provinces, fewer than one out of every four girls aged seven to 12 attended primary school. In 2002 only 32 percent of males and 11 percent of females graduating from elementary school continued into secondary education; dropout rates are high, particularly among girls. Vocational training is provided in secondary schools and senior high schools, and 6 percent of students were enrolled in the vocational system in 2002. An estimated 1,000 women throughout Afghanistan participated in university entrance examinations in 2002.

SCIENCE AND TECHNOLOGY

During the years of conflict in Afghanistan, many professionals, including scientists and engineers, emigrated to Europe or Pakistan, disrupting scientific and technological progress in the country. With the creation of the Islamic State of Afghanistan and elections in 2004, some professionals began to return. Kabul has several institutions of higher learning, including Kabul University, founded in 1932, which has faculties of Science, Pharmacy, Veterinary Medicine, and Geo-Sciences. Kabul Polytechnic College, founded in 1951, offers postgraduate engineering courses.

Other cities also have educational facilities. The University of Balkh has about 100 faculty members, and Bayazid Roshan University of Nangarhar, founded in 1962, has faculties of Medicine and Engineering. The Af-

14 Afghanistan

Afghanistan Academy of Sciences is the principal scientific institution. As of 2002 it had about 180 members. Additionally, the Ministry of Agriculture and Livestock in Afghanistan is working with international research teams to rebuild Afghan agriculture.

MEDIA

The 2004 constitution provides for free and uncensored media. There were 21 AM stations and 23 FM stations as of 2003, broadcasting news and music. Radio Free Afghanistan, based on the model of Radio Free Europe, also broadcasts throughout the country. Though on paper there is no press censorship, the media itself still demonstrates restraint after experiencing so many years of control. Many laws still in effect, such as the “insult law,” are open to interpretation and serve to keep the press subservient. Also, powerful warlords resent the truth about them being spoken openly, either on radio or in the newspapers. Threats against journalists are still common. In 2003 the Free Press Defense Foundation was established by a number of Afghan journalists in order to safeguard the freedom of the press in Afghanistan and to increase the number of journalists there.

Among the major newspapers are the Kabul weekly *Farda*, the Islamic newspaper *Payam-i-Mujahid*, and the *Kabul Press*. *Malalai* is a monthly magazine aimed primarily at women, while *Seerat*, a weekly newspaper, was the first to be published by women following the departure of the Taliban regime.

The radio is very important in Afghanistan culture. Almost 85 percent of homes have one, and with high illiteracy rates it is a primary mode of information dissemination. Radio Afghanistan is a prominent broadcast station, as is Radio Kabul, noted for its music shows. Kabul TV is the main broadcast television station, though Afghans also receive international broadcasts.

The Internet is a growing form of communication and source of news for Afghans.

CULTURE

Afghanistan culture is dominated by the two main languages of the country, Persian and Pashtu. Dari, a form of Persian, is used extensively for poetry in the Persian style. Contemporary poetry is still written in that language, while Pashtu has a more limited literary heritage. The 17th-century warrior and poet Khushal Khan Khattak almost single-handedly created Pashtu literature. With low literacy rates Afghan culture is highly oral; poetry is recited rather than read. Indeed, since the 17th century few advances have been made in Pashtu literature. The 17th century was the cultural high-water mark for Afghanistan in art and architecture as well. Continual wars and an atomized society have prevented the creation of a modern high culture in the country.

Music, on the other hand, has progressed over the centuries and is a dominant cultural form. The classical music of Afghanistan is called *klasik*, which includes both instrumental forms, such as ragas and *nagmebs*, and vocal forms, or *ghazals*. Indian artists who immigrated to the royal court in Kabul in the 1860s left a long musical tradition in the country. These players, called *ustad*, use Hindustani terminology and structures. The *rubab* is a common lute-like instrument that is sometimes considered the national instrument of Afghanistan.

Afghan folk music is traditionally played at celebrations such as weddings, and popular music arose in the 1950s when radio broadcasting became commonplace. Musicians such as Ahmad Zahir, Biltun, Mahwash, and Parwin were important pioneers in popular music.

The Taliban suppressed this musical heritage while in power, but once the regime was removed, Afghan music returned to the airwaves. The Taliban also tried to erase much of the cultural heritage of the country, destroying, for example, two famous statues of Buddha in Bamiyan province because they were symbols of another religion.

FOLKLORE AND MYTHOLOGY

Spirits, religion, and a warrior tradition all figure into Afghan folklore and mythology. A variant of the “wise fool” is found in the numerous tales of Mullah Nasrudin, while cautionary tales for children, such as “Bachey Ku” (The Bald Boy) both entertain and instruct. Many Afghans believe in spirits, or jinni, and wear protective amulets to ward them off. Jinni tales are similar to ghost stories in Western culture. Heroes of the past, like the warrior Habibullah Ghazi, also inform much of the oral tradition and folklore of the people of Afghanistan. Mythical love stories are also popular. One favorite is that of the doomed love of Leilah and Majnun.

ENTERTAINMENT AND RECREATION

Singing is a popular form of entertainment for adults, as is dancing, either in group circles or individually. At parties, dancing outside is one of the major forms of entertainment. Men also gather in teahouses and talk and listen to music;—as with many activities in the country that are still segregated by gender, these teahouses tend to be all-male enclaves. Men also enjoy so-called blood sports such as cockfighting.

Children’s toys are simple, homemade objects, such as kites or dice made from animal bones and dolls made from sheep’s wool. Television viewing is limited, but most Afghans have access to a radio and enjoy listening to musical programs. There are a few cinemas in urban centers such as Kabul, but in the countryside entertainment and recreation are rudimentary. Storytelling is very popular throughout the country, and Afghanistan’s oral tradition remains strong in the 21st century.

ETIQUETTE

Formal politesse takes many forms in Afghanistan. With the separation of the sexes, there is very little touching between genders in public. Men will shake the hands of other men, and in general men can be effusive in public and often walk arm in arm. Relatives may hug and kiss after long separations, but restrained public decorum is generally the rule. Children tend to call their elders by titles rather than by names, and men typically call their wives “mother of my son” or “mother of my daughter” rather than using given names. The sense of hospitality is strong in the country. Guests are always asked to sit and share a glass or cup of tea.

Relations between Afghans are often determined by the unwritten codes of behavior called Pashtunwali. This Pashtun code is subscribed to by most Afghans and deals mostly with honor and pride. Some examples of this un-

written code are *melmatia*, or being a good and generous host, *ghayrat*, upholding personal and family honor, and *namus*, defending women’s honor.

FAMILY LIFE

A strong sense of family and the kinship tribe is the bedrock of Afghan society. Extended families, connected patrilineally, often share the same household or are gathered in households close to each other. This is true both in the country and in cities, where such extended families and tribes form enclaves and neighborhoods within the larger urban population. Women rule the house and the child-rearing practices, while men represent the family in society.

Marriages are generally arranged, with girls marrying as of about age 16 and boys as of age 18. Men may divorce their wives simply by saying three times in public, “I divorce you.” However, women must go through a judge for relief. Divorce, however, is not common.

Children are held in high esteem but are expected to assume responsibilities at an early age. Thus, milestones such as toilet training begin early. As in many male-dominated societies, the needs of the sons come before those of the daughters. Contrary to Islamic law, daughters do not inherit household goods or property. These are divided among the sons.

PERSONAL APPEARANCE

Afghans are physically a blend of many Central Asian groups, and most have a characteristic Mediterranean cast, with dark hair and eyes. Men often wear beards, as is the Islamic custom, while women mostly wear pleated trousers under long dresses and cover their heads with shawls. Many urban women traditionally wear the *chadri*, an ankle-length cloth covering, like a sack over the whole body, with a mesh insert over the eyes and nose. Men will wear baggy pants, loose, long-sleeve shirts, and vests. Turbans are also worn by men, with styles varying throughout the country. For example, Pashtuns leave part of the turban dangling, while others wrap the head entirely with the material. The *pakol*, a Nuristani hat that was previously adopted as a sign of the mujahideen resistance, has become popular. It has lost its political significance and is now popular with many men.

SPORTS

The people of Afghanistan are well known as great horsemen. This skill is well demonstrated in the sport known as *buzkashi*, which is as popular there as baseball or football in the United States. This sport is also known as “goat grab-

16 Afghanistan

bing,” although in the modern game a calf is usually used. In this contest a headless calf carcass is placed in the center of a circle formed by horsemen (known as *chapandaz*). Only men participate. The object of the game—which has been known to be played by up to 1,000 contestants at a time—is to carry the carcass either clear of the other players or to a scoring circle. Meanwhile, opposing players try to take the carcass away.

Afghan running dogs originate from Afghanistan. A form of wrestling is popular, as are many typically Western sports such as soccer, tennis, and field hockey.

CHRONOLOGY

- 1946** Shah Mahmud succeeds Mohammad Hashim Khan as prime minister.
Afghanistan is admitted to the United Nations.
- 1947** Afghanistan votes against the admission of Pakistan to the United Nations.
- 1948** Border pact is concluded with the Soviet Union.
- 1949** First free elections are held.
- 1950** Border clashes with Pakistan intensify conflict over Pashtunistan issue.
- 1951** United States halts economic aid to Afghanistan.
- 1953** Afghanistan establishes diplomatic relations with the People's Republic of China.
Daoud's policy leads to a crisis in diplomatic relations with Pakistan; the Soviet Union backs Afghanistan; anti-Pakistan riots occur in Kabul.
- 1956** Earthquake kills over 2,000.
Arms pacts with the USSR and Czechoslovakia are concluded.
- 1958** Transit treaty is concluded with Pakistan.
- 1959** Afghanistan signs aid pact with the USSR.
President Eisenhower visits Kabul.
- 1961** Afghanistan cuts diplomatic relations with Pakistan.
- 1962** Afghanistan reopens border with Pakistan to permit transshipment of U.S. aid materials.
- 1963** King dismisses Prime Minister Daoud; Mohammad Yusuf is appointed prime minister.
Diplomatic relations with Pakistan are resumed.
- 1964** New constitution is promulgated.
- 1965** Mohammad Hashim Maiwandwal succeeds Yusuf as prime minister.
All adults over age 21, including women, are enfranchised under new constitution.
- 1967** Supreme Court is established.
Nur Ahmad Etemadi replaces Maiwandwal as prime minister.
- 1969** Demonstrations by university and school students lead to suspension of the educational system.
- 1971** Etemadi resigns in face of growing criticism; Abdul Zahir takes over as prime minister.
- 1972** Widespread grain shortage and famine leads to deaths of tens of thousands.
Mohammad Musa Shafiq replaces Zahir as prime minister.
- 1973** An army coup d'état led by former prime minister Mohammad Daoud deposes Zahir Shah; loyal army general Abdul Ali Shah is executed; Daoud is elected president and prime minister of new Republic of Afghanistan by Central Committee; King Zahir abdicates.
- 1974** Conflict with Pakistan over Pashtunistan issue is renewed.
- 1975** Daoud announces general amnesty to plotters in 1973 conspiracy, including former prime minister Mohammad Musa Shafiq.
- 1977** Planning Minister Ahmad Khoram is assassinated in Kabul; one suspect is arrested.
- 1978** Daoud is overthrown in coup led by Khalq leader Nur Mohammad Taraki. The 1977 constitution is abolished; Afghanistan and the Soviet Union sign 20-year treaty of friendship and cooperation; heavy fighting is reported between Muslim rebels and government troops along the Pakistani border.
- 1979** U.S. ambassador Adolph Dubs is shot and killed in Kabul after being abducted by Muslim extremists. President Taraki is ousted and killed in a coup.
Revolutionary Council names Hafizullah Amin as president; Amin is ousted in a second coup and executed for crimes against the state.
Deputy Prime Minister Babrak Karmal, a pro-Moscow hard-liner, is installed as president.
Citing an invitation by the Afghan government, the Soviet Union pours 30,000 troops across the border into Afghanistan.
Open fighting is reported between Soviet forces and Afghan rebels.
- 1980** An estimated 800,000 Afghans cross into Pakistan. Heavy clashes between Soviets and rebels are reported.
Afghanistan is suspended from the Conference of Islamic States.
- 1982** The first congress of the ruling People's Democratic Party of Afghanistan (PDPA) calls for a purge of the Khalq dissidents and seizure of the estates of rich landowners.
- 1985** A *loya jirga* (grand council) ratifies a new constitution. Elections are held in March–April 1986 for local organs, with 60 percent of those elected not affiliated with the PDPA.
- 1986** Dr. Najibullah replaces Karmal as leader of the PDPA. The PDPA declares a unilateral cease-fire for six months, which is subsequently extended. However, the mujahideen alliances refused to honor the cease-fire or

- negotiate, demanding an unconditional Soviet withdrawal.
- 1987** The National Front (NF) becomes a separate organization from the PDPA. Other political parties are allowed to form under the auspices of the NF. Najibullah proposes sharing power with representatives of the opposition groups if a coalition is formed. A draft of a new constitution is approved by the presidium of the Revolutionary Council. Further local elections are held throughout the country, with many non-PDPA members being elected. Najibullah is unanimously reappointed president by a *loya jirga*.
- 1988** The Soviets begin withdrawal of troops based on accords signed in Geneva in April. Direct talks begin for the first time between the Soviets and mujahideen in Pakistan. The Soviet insistence on a continued role for the PDPA causes a breakdown in negotiations.
- 1989** A state of emergency is declared by Najibullah based on accusations that Pakistan and the United States have violated the Geneva accords. The mujahideen in Pakistan, known as the IUAM, form a government-in-exile but receive no recognition from rebels in Afghanistan. Factional infighting amongst mujahideen groups undermines their mutual goals.
- 1990** A coup attempt by Defense Minister Shahnawaz Tanai fails; leaders of moderate rebel groups form an alliance to counter Gulbuddin Hekmatyar's fundamentalist Muslim faction.
- 1991** Rebels seize the town of Khost; Najibullah proposes a truce that rebel leaders reject.
- 1992** The government falls to rebel troops who enter Kabul; a coalition names religious leader Sibghatullah Mojaddedi interim president. However, Hekmatyar's force continues to fight, and in June Mojaddedi resigns. Burhanuddin Rabbani is elected president by the Leadership Council. Kabul is subjected to continual fighting into 1993.
- 1993** Hekmatyar is named prime minister in the hopes of establishing peace.
- 1994** Fighting between rebel factions resumes.
- 1995** The United Nations brokers a deal to have the nine major factions share power in a council. The deal is of little use as a new force, the Taliban, a fundamentalist Islamic group, enters the fray. By the end of the year the Taliban, which consists largely of students from Islamic schools, has overrun much of the country.
- 1997** Abdul Rashid Dostum, leader of opposition forces, continues to fight and inflicts severe damage on the Taliban, forcing a stalemate for power.
- 1998** Amid rumors of Russian support for the opposition, the Taliban is able to take control of 75 percent of the country and end fighting.
- 2000** Taliban regime issues a religious edict that leads to the destruction of ancient Buddhist statues in central Afghanistan.
- 2001** Following attacks on the World Trade Center in New York City and the Pentagon in Washington, D.C., by suicide bombers linked to al-Qaeda, President Bush demands the Taliban administration in Kabul surrender Osama bin Laden and his associates. Upon the Taliban's failure to comply, the United States and its coalition allies launch massive air bombardment of military and terrorist installations in the country. The Northern Alliance forces resume their campaign against the Taliban with U.S.- and Russian-supplied arms. In November the Northern Alliance retakes Mazar-i-Sharif, Herat, and Kabul; in December, Kandahar, the last Taliban stronghold, falls. An international conference summoned by the coalition in Bonn, Germany, helps set up an interim post-Taliban government headed by Pashtun leader Hamid Karzai. The new interim government is sworn in on December 22, slotted to stay in power for six months.
- 2002** In June, Karzai becomes interim president of Afghanistan.
- 2003** On November 16 a United Nations High Commissioner for Refugees (UNHCR) worker is killed in Ghazni City, in the province of Ghazni, while traveling in a clearly marked UNHCR vehicle. The UNHCR pulls out of Ghazni province due to the worsening security situation.
- 2004** A *loya jirga* ratifies the new constitution in January. In September Karzai attempts to control the power of the warlords by removing one of the most powerful, Ismail Khan, from the governorship of Herat. Violent protests follow Khan's ouster. Karzai is elected president in a run-off election in October, winning over 55 percent of the vote, with 10 million voters registered. Attacks on American-led forces intensify in Afghanistan as the Taliban and al-Qaeda continued to regroup.
- 2005** In September the first parliamentary and provincial elections in more than 30 years take place.

DATE OF INDEPENDENCE

November 28, 1912

DATE OF CONSTITUTION

November 22, 1998

GEOGRAPHICAL FEATURES

Albania, on the western coast of the Balkan Peninsula, is separated from the heel of the Italian boot on the south-west and the west by the Strait of Otranto and the Adriatic Sea, respectively. Albania's total area is 28,748 sq km (11,100 sq mi). It shares a boundary with Macedonia, Serbia and Montenegro, and Greece.

Albania's boundaries were established in 1913 on the principle of nationality rather than geography: to separate Albanians from Serbians and Montenegrins and to separate Albanians from Greeks.

Nearly 70 percent of Albania is mountainous and inaccessible. The North Albanian Alps form an extension of the Dinaric alpine chain and, specifically, the Montenegro limestone plateau. A low coastal belt extends from the northern boundary southward. The foothills of the

central uplands contain fertile land. The mountains east of the serpentine zone are the highest in the country and among the most rugged in the Balkan Peninsula.

Albania

Population of Principal Cities (2001)

Tiranë	343,078
Durrës	99,546
Elbasan	87,797
Shkodër	82,455
Vlorë	77,691
Fier	56,297
Korçë	55,130

CLIMATE AND WEATHER

For a small country, Albania has an unusually large number of climatic regions. The coastal lowlands have a typically Mediterranean climate, whereas the highlands have a Mediterranean continental climate. In both climatic zones weather changes markedly from north to south and from winter to summer. The lowlands have mild winters, averaging about 45°F; summer temperatures average 75°F. Humidity is high, and summer weather is oppressive.

Inland temperatures vary more widely with differences in elevation. Cold northerly and northeasterly winds cause frigid winters. Average precipitation is high. The central uplands receive the heaviest rainfall. There are also frequent thunderstorms accompanied by torrential downpours.

Climate and Weather

Mean Temperature
Lowlands: 45°F to 75°F
Highlands: -13°F to 75°F
Average Rainfall
Lowlands: 40 in to 60 in
Highlands: 70 in to 100 in

FLORA AND FAUNA

Because it consists of lowland and highland regions, each with a very different climate, Albania exhibits a remarkable diversity of flora and fauna for a country of its size. At lower elevations, extensive and unspoiled forests of oak, beech, and conifer provide habitat for wolves, foxes, jackals, and ferrets. At higher elevations, Albanian flora shows more of a Mediterranean influence, with alpine forests that provide habitat for wolves, brown bears, wildcats, lynxes, and weasels. Albania has about 3,220 different kinds of plants, representing 29 percent of the species of European flora and 47 percent of the flora of the Balkan Peninsula. Deer, wild boar, and chamois, as well as 350 species of wild birds, including grouse, woodcock, snipe, and pelicans, are common throughout the country. Aquatic fauna include sardines, mullet, carp, trout, and others.

ETHNIC COMPOSITION

The main cleavage in Albanian society is between two ethnic groups: Gegs and Tosks. Numerically, the Gegs are slightly in the majority.

Approximately 98 percent of the population is Albanian, with the remainder divided among Greeks, Vlachs, Bulgars, Serbs, and Gypsies.

Greeks, who constitute about 1 percent of the population, are most numerous closer to the Greek border. They have adopted Albanian customs and speak fluent Albanian. Vlachs, descendants of the Thracians of the pre-Christian era, are most numerous in the Pindus Mountains. Bulgars tend to live in the border area near Lake Prespa, and those of Serb origin live in the Shkoder area.

An estimated 2 million Albanians are believed to live outside the country. Until the Kosovo War, Yugoslavia alone had 1 million, of whom about 70 percent lived in the Kosovo area.

LANGUAGES

The national and official language is Albanian, a member of the Thracico-Illyrian group. Historically, it has been heavily influenced by Latin and Italian on the one hand and Turkish and Greek on the other. The first written document in Albanian did not appear until the 15th century, but the repressive policies of the rulers of the Turkish Ottoman Empire (1350-1918) restricted its growth until the 19th century. A standardized orthography was adopted in 1908 using a Latin-based alphabet of 36 letters approved by a

linguistic congress at Monastir. The alphabet was made official by a government directive in 1924. The two principal dialects are Geg, spoken by about two-thirds of the population, and Tosk, spoken by most of the elite.

RELIGIONS

Until the 1940s Albania was the only predominantly Islamic nation in Europe, with a legacy of five centuries of Ottoman rule. Christianity was introduced in Albania in the first century, and the country remained Christian until the 14th century, when Turkish invaders introduced Islam. During the next five centuries Islam made steady inroads. By the 17th century Muslims outnumbered Christians in the population.

At the time of independence, in 1912, Albania became a secular state. The constitution guaranteed freedom of worship for all religions. The Communist constitution of 1946 adopted the same liberal tenor. However, even before the adoption of the constitution, the first shots had been fired in the state's war against religion. The Agrarian Reform Law of 1945 confiscated all religious property. In 1967 mosques and churches were closed to worshippers. The ban was lifted in 1990.

Today, under the aegis of democracy, all religions are again tolerated. Their followings are Muslim, 70 percent; Orthodox, 20 percent; and Catholic, 10 percent.

Muslim	2,481,000
Albanian Orthodox	709,000
Roman Catholic	354,000

HISTORICAL BACKGROUND

Until 168 B.C.E. Albania was composed of parts of the kingdom of Illyria, with its capital at Shkoder. During the succeeding nine centuries, invasions of Huns, Bulgarians, and Slavs drove the Illyrians to the mountain fastnesses on the Adriatic coast, where they are concentrated today. During the Crusades in the 12th and 13th centuries, Albania became a thoroughfare for the contending armies.

Albania's dark ages began with the defeat of the Serbs by the Ottoman Turks in 1389 at the Battle of Kosovo, after which the Turks asserted their suzerainty over the country and forced it to submit to Islam.

It was only when the Ottoman Empire was defeated in a Balkan war in 1912 that Albania became an independent nation. Virtually dismembered by the Treaty of San Stefano, Albania struggled to ward off the territorial demands of Serbia, Austria-Hungary, Italy, Russia, and Montenegro. In 1912 Albanians staged a series of revolts and proclaimed Albania's independence.

At the end of World War I, Albania was occupied by the Allied armies. On April 7, 1939, Italy invaded Albania. King Zog fled the country, never to return.

In the chaotic conditions created by the Italian occupation and World War II, the Communists created the National Liberation Movement on September 16, 1942, to coordinate the activities of various guerrilla bands. Having accomplished this goal, the National Liberation Front seized control of the whole country.

On January 11, 1946, the People's Assembly proclaimed the People's Republic of Albania and approved the first Albanian constitution.

During the following 45 years, Albania became the most reclusive (and most repressive) of the European Communist regimes. The first leader of this totalitarian state, Enver Hoxha, earned a reputation for Marxist ideological authoritarianism more rigid than that of either the Soviet Union or China.

With the collapse of the last Communist government in 1992, Albania entered a period of political instability. This was worsened by the sudden national obsession with financial schemes promising instant riches for unwary investors. The pyramid schemes failed, plunging the country into bankruptcy and severe disorder. This situation descended into chaos in 1997 when citizens distributed thousands of military weapons and armed factions divided the country into local fiefdoms. More than 10,000 Albanians fled to Italy. In time, the army reasserted a measure of control, and a central government was elected and installed.

In 1998 Serbian police and the Yugoslav army attacked Albanian separatists and civilians in Kosovo. When the Federal Republic of Yugoslavia refused to sign a peace accord, the North Atlantic Treaty Organization (NATO) began air strikes against Yugoslav targets in 1999. By the time a peace agreement was signed in June 1999, an estimated 444,000 refugees had fled from Kosovo into neighboring Albania, placing an enormous burden on the country's economy.

Meanwhile, a UN peacekeeping force restored order in Albania beginning in 1997. A new constitution affirming the rule of law and protecting human rights, including freedom of religion, was enacted by popular referendum in 1998. From 1997 to 2002 Albania was ruled by a series of short-lived governments. During this period, however, democratic freedoms were strengthened, more media outlets and business associations were formed, and the nation's economy began to improve. In 2002 a "truce" was declared between the contending Socialist and Democratic Parties, with Alfred Moisiu, a consensus candidate, elected president. Nationwide municipal elections were held in 2003.

LIST OF MODERN RULERS

Prime Minister

1944–54 Enver Hoxha

1954–82 Mehmet Shehu

1982–91	Adil Çarçani

2005	Sali Berisha

President

1986–92	Ramiz Alia
1992–97	Sali Berisha
1997–2002	Rexhep Meidani
2002–	Alfred Moisiu

CONSTITUTION

The Albanian constitution, approved in a national referendum in 1998, abandoned virtually all the provisions of the Communist constitution of 1976. The new basic law was a Western-style document modeled on German and Italian counterparts. It describes Albania as a democratic republic in which human rights, including religious freedom, are guaranteed. Private property rights are also protected, and emphasis is given to a market-oriented economy.

PARLIAMENT

The 1998 constitution provides for a democratic form of government. The supreme organ of government is the unicameral People's Assembly. The president is elected by the assembly but is precluded from holding party office. The powers of the president, especially those regarding his authority to govern in times of emergency, were substantially diluted. The responsibility for the administration rests with the Council of Ministers, whose head serves as prime minister. The prime minister is appointed by the president, who, upon the proposal of the prime minister, also nominates the Council of Ministers for approval by the assembly. The assembly may pass a no-confidence motion against the Council of Ministers, forcing it to resign.

POLITICAL PARTIES

The parliament that emerged from the 1997 elections was led by the Socialist Party, which took 101 of the 155 seats. The Democratic Party gained 27 seats, while the Social Democrats secured eight seats, and the Unity for Human Rights Party won four. In the elections of June 2001 the Socialist Party won 73 seats in the 140-seat as-

sembly, with the Unity for Human Rights Party winning 46. The Democratic Party declared the election results "farical" and boycotted the opening session of the People's Assembly in September 2001.

LOCAL GOVERNMENT

For purposes of local administration, Albania is divided into 26 districts (*rrethet*), over 200 localities, and 2,500 villages. Local councils, elected by direct suffrage for three-year terms, are the governing bodies in each subdivision.

LEGAL SYSTEM

The court system consists of a Constitutional Court, the Court of Cassation, appeals courts, and district courts. The Constitutional Court is composed of nine judges appointed by the People's Assembly for maximum nine-year terms. The Constitutional Court determines the constitutionality of laws and resolves disagreements between local and federal authorities. The remaining courts are each divided into three jurisdictions: criminal, civil, and military. The Court of Cassation is the highest court of appeal and consists of 11 members appointed by the People's Assembly and serving seven-year terms. The president of the republic chairs the High Council of Justice, which is charged with appointing and dismissing judges.

A college of three judges renders Albanian court verdicts; there is no jury trial, though the college is sometimes referred to in the Albanian media as the "jury."

HUMAN RIGHTS

Under Presidents Meidani and Moisiu, restrictions on Albanians' personal freedoms have been substantially relaxed. To a large extent, the war over Kosovo, with its huge migrations of refugees and the presence of large numbers of international aid workers and NATO military personnel, has had an influence on Albania's external and internal affairs.

Nevertheless, the improvement in the human rights situation is marginal overall, and complaints continue to occur over violations. The principal area of concern centers on conditions in the prisons, which are known to be harsh. Long-term solitary confinement, for example, is common, and cells are cramped, with rudimentary sanitary facilities and often without heat in winter or fresh air in summer.

FOREIGN POLICY

The war over Kosovo probably did more to influence Albania's foreign relations than any other single event since the end of Communist rule.

Albanian foreign policy has concentrated on maintaining good relations with its Balkan neighbors, gaining access to European-Atlantic security institutions, and securing close ties with the United States. The crisis of 1997 spurred an intensive period of international involvement in Albania—led by the Organization for Security and Cooperation in Europe (OSCE). Italy hosted a series of international conferences and led a multinational force of about 7,000 troops to help stabilize the country and facilitate OSCE election monitoring. The United States has worked closely with European partners and various multilateral forces to ensure that international efforts are coordinated.

During the forced mass exodus of Albanian refugees from Kosovo, Albania threw open its borders to accept as many as wanted to come. In addition, the government gave blanket permission to NATO to make whatever military use of Albania it saw fit. These and several other such gestures have resulted in Western governments' adopting a much more positive attitude toward Albania.

In addition, bilateral relations with Greece have improved dramatically, as have Tirana's relations with Macedonia.

In 2002 the OSCE praised Albania for showing leadership toward reform in the Balkan region. The agency also asserted that the nation was on the "threshold" of beginning a Stabilization and Association Agreement with the European Union, a first step toward membership in the union. Negotiations for this agreement began in February 2003. In May of that year U.S. Secretary of State Colin Powell signed a partnership agreement with Albania, as well as Croatia and Macedonia, to help them achieve membership in NATO.

DEFENSE

Albania's armed forces in 2002 comprised some 22,000 active-duty personnel. The army had about 16,000 troops, the navy about 2,500, and the air force about 3,500.

By 2003 it was estimated that Albania had just over 900,000 citizens ages 19 to 49 available for military service, with about 743,000 fit for military service. In fiscal year 2002 about \$56.5 million was expended on the military, representing about 1.49 percent of the country's gross domestic product (GDP).

ECONOMY

The collapse of Communism in Albania produced an atmosphere more chaotic than that in other Eastern European countries and was marked by a mass exodus of refugees in the early 1990s. At this point, with real GDP having fallen by 50 percent, economic reforms began in earnest.

These included an ambitious program of market liberalization. Any progress that developed was halted for several years, however, because of the deleterious effects of financial pyramid schemes, all of which collapsed, leaving millions of people bankrupt.

International aid helped to defray the high cost of receiving and returning refugees from the Bosnia conflict. GDP grew by 8 percent in 1999 and 7.5 percent in 2000. By 2002 growth was estimated at 7.3 percent.

ENVIRONMENT

Although the continuing deleterious effects of decades of environmental neglect should not be discounted, Albania's most serious current environmental problems stem from the military conflict in Yugoslavia.

UN studies have determined that the most serious threat is caused by leakages of highly toxic chemicals into the Drin from damaged industrial plants and by the sudden and uncontrolled influx of refugees.

In the case of river pollution, the leaking of high quantities and concentrations of ammonia, chlorides, and hydroxides probably will cause sustained environmental damage for a long time to come. The unplanned construction of refugee camps has led to the destruction of protected natural habitat and the contamination of water supplies with untreated sewage. The generalized danger to precious water resources in Albania is now of heightened concern.

LIVING CONDITIONS

Living conditions in Albania are generally poor. Forty-six years of Communist rule left behind a legacy of poverty, poor social conditions, weak rule of law, and failed social, economic, and government institutions. Many Albanians have left their country, seeking jobs elsewhere.

After the Communist regime collapsed, up to 21,000 people illegally settled in Bathora, a suburb of the capital city of Tirana. These migrants turned a thousand acres of orchards and rolling hills into a slum with muddy streets and concrete buildings. Desperately poor, they have appealed to the government for help with social services, but the government has failed to respond, causing, in some instances, rioting in the streets.

To help solve these and other problems as Albania makes the transition from Communism to a democratic, free-market state, the European Union has been offering assistance. The union's primary goal is to train a new generation of civil servants and to help the country modernize its infrastructure: roads, electrical grids, and water systems.

HEALTH

The life expectancy at birth for Albanians as of 2002 was 74.3 years for males and 80.1 years for females. The infant mortality rate was 22 per 1,000. Health expenditures per capita were about \$48, and total health expenditures represented about 3.7% of the nation's GDP.

FOOD AND NUTRITION

As of the beginning of the 21st century, the United Nations estimated that about 14.3 percent of Albania's children ages five and under were moderately or severely underweight. The United Nations estimated that about 6 percent of the total population was undernourished. Historically, the population growth in Albania has outstripped the nation's ability to feed itself, largely because of relatively low amounts of arable land—about 21 percent of the country's land area—and poor soil conditions.

STATUS OF WOMEN

Violence against women and spousal abuse are common in Albania's male-dominated society. The rights of women are not protected by any government program. There is a facility for abused women in Tirana, but it can house only a few women at a time. There is also a telephone hotline that women and girls can call for advice and help. The United Nations High Commissioner for Refugees reported cases of rape and sexual assault of Kosovar Albanian women in refugee camps. In the northeast the traditional code known as *kanum* prevails. Under this code women are considered chattel and may be kidnapped to be sold as brides. Trafficking in women for purposes of prostitution is a major problem. More than 30,000 Albanian women are reported to be working abroad as prostitutes.

WORK

As of 2003 Albania's labor force consisted of about 1.6 million workers, including about 352,000 emigrant workers. As of 2003 it was estimated that about 57 percent of the labor force was in agriculture, 20 percent in the non-agricultural private sector, and 23 percent in the public sector. The unemployment rate in Albania as of 2003 was officially estimated at 15.8 percent, but the actual percentage may have been as high as 30 percent.

EDUCATION

Upon taking power in late 1944, the Communist regime gave high priority to reopening the schools and organizing the whole education system to reflect Communist ideology.

The 1946 Education Reform Law provided specifically that Marxist-Leninist principles would permeate all school texts. This law also made the struggle against illiteracy a primary objective of the new school system.

Illiteracy had been virtually eliminated by the late 1980s. From a total enrollment of fewer than 60,000 students at all levels in 1939, the number of people in school had grown to more than 750,000 by 1987.

A reorganization plan was announced in 1990 to extend the compulsory education program from eight to 10 years. The following year, however, a major economic and political crisis in Albania, and the ensuing breakdown of public order, plunged the school system into chaos. Widespread vandalism and extreme shortages of textbooks and supplies had a devastating effect on school operations. Many teachers fled the country. The highly structured and controlled educational environment that the Communist regime had painstakingly cultivated in the course of more than 46 years was abruptly shattered.

Since 1992 the government has focused on improving supplies and equipment and reconstructing buildings in urban centers, as well as training teachers and improving enrollment rates. New schools are being built in areas that currently have no facilities.

SCIENCE AND TECHNOLOGY

Albania is one of the poorest nations in all of Europe. As a consequence, it makes few investments in research and development and lacks an infrastructure to encourage scientific and technological development. As of 1997, for example, the number of scientists, engineers, and technicians per million population was so small as to round off to zero, and the number of science and engineering students totaled a mere 19. In 2002 the country had about \$2.39 million in high-technology exports, and 111,610 patent applications were filed by Albanian residents in that year.

MEDIA

In 1999 the People's Assembly voted to protect freedom of the press and abolished a 1993 law that restricted access to information and made editors liable to heavy fines for publishing antistate material. The principal source of domestic and foreign news is the Albanian Telegraph Agency. The government-owned Radio and Television of Albania controlled all broadcasting until the late 1990s, when private broadcasters began to appear. Radio Tirana transmits in a number of languages, and television is broadcast in the four most populous districts.

In 2002 the Human Rights Watch organization alleged that Albanian media were still subject to government harassment and intimidation after one of the country's leading newspapers published reports critical of the prime minister.

CULTURE

Albania has a rich tradition of folk music dating back to ancient Illyrian times. Much of this music is polyphonic, meaning that it blends independent vocal and instrumental parts. The songs typically have epic, historical, or lyrical themes, and many are slow and somber. Many of these songs in the north focus on heroic individuals and on historical conflicts with the Turks. Those in the south focus more on communal elements. Traditional musical instruments include the flute, the drum, bagpipes, and the *labuta*, a stringed instrument similar to a lute. Albania has little in the way of cinema. One film of note, *Lamerica*, starkly portrays life in post-Communist Albania. Because Albania lacked a standardized written language until the early twentieth century, the nation has little in the way of a literary tradition. The most famous twentieth-century Albanian author is Fan Noli (1882–1965), who wrote works on religious themes and established himself as a literary critic with works on Cervantes, Shakespeare, Henrik Ibsen, and others. Ismail Kadare, who fled the country's Communist dictatorship in 1990, is Albania's best-known contemporary author, with his work published in over forty languages. His 1997 novel *The Pyramid* captured the chaos caused by the financial scandals and frauds that undermined the nation's economy in the 1990s.

FOLKLORE AND MYTHOLOGY

Among the major figures in Albanian mythology are dragons, fairies, and snakes. Folklore elements are alluded to with such words as *kuçedër*, referring to a snake or dragon with many heads; *shtrigë*, or witch; and *stubi*, or a winged creature that throws flames and guards treasures. The word *kukudh*, or goblin, is still an insult in Albanian culture. Also legendary in Albania are *zama*, or mythological female figures who help mountain dwellers in distress; the *perit*, or female mountain goddesses dressed entirely in white who punish those who ruin or waste bread by giving them a hump; and the *ore*, or fairies, who sometimes represent fate, as in the expression *i vdiq ora*, meaning “his luck ran out.” *Bolla* is a snakelike

or dragonlike figure who sleeps throughout the year but wakes up on Saint George's Day to look about and devour any human unlucky enough to encounter it.

ENTERTAINMENT AND RECREATION

As a relatively poor people, Albanians rely heavily on home, family, and friends for recreation and entertainment. Albanians are great storytellers, and men often sit around in coffee shops trading comical stories about the former Communist regime or Albanian folk heroes. The nation is home to several folk dancing and song festivals each year, and classical music is widely popular; Albania has at least seven symphony orchestras. A common feature of Albanian life is the late afternoon nap, after which people stroll about in the evening to meet friends and relatives, then sit down to a late dinner. Younger people enjoy going to discos.

A common form of recreation is crafts, arts, and hobbies. Albanian women are known for their intricate embroideries, and young women who are about to be married often gather with other young women to create doilies, as well as colorful rugs and sweaters, gloves, socks, and the like. Lace making is a traditional folk art form that has been passed down through the generations. Men tend to work in metals to create plates, wall hangings, and utensils. Albanians in general enjoy bird-watching, gardening, collecting butterflies, and collecting stamps.

ETIQUETTE

Albanian children are taught to respect their elders, and in many villages young people kiss the hand of an elder in greeting. Men customarily embrace each other when they first meet, and when they greet each other, they often kiss. When they walk down the street, they often do so with their arms linked. Albania has few funeral parlors, so wakes for the deceased are typically held at home for two or three days prior to burial.

Visitors to an Albanian home maintain an elaborate ritual of greetings. The first step is for the hostess or other female family member to serve visitors a drink, often Turkish coffee, and a sweet, often made with jelly. The next step is for the visitor to inquire about the health of each family member, with the hostess then inquiring about the health of each member of the visitor's family. Only then does normal conversation begin.

Important to all Albanians is the *besa*, or “pledged word.” An agreement sealed by a handshake or an embrace is regarded as more binding than a written contract, and violating such an agreement involves the loss of personal honor.

FAMILY LIFE

Albanians tend to have small families, with the average number of children being just two. The eldest son is trained eventually to become the head of the family when the father dies. Generally, an Albanian husband is not regarded as an equal partner with the wife in the home, which is regarded as the wife's province. Traditionally, Albanian women played a secondary role to men, and from the age of ten they were taught to prepare themselves for marriage. While some Albanians adhere to this practice, it largely disappeared after World War II, when women had served as partisan fighters resisting Italian and German invaders; after the war, women were encouraged to enter professions such as medicine, education, and politics. Because of the lack of nursing homes, elderly parents are likely to live with their adult children.

The Albanian language contains no word for *pet*. Dogs are regarded as working animals, responsible for guard work or herding sheep and other livestock. Domestic cats have become common in homes in the larger cities.

PERSONAL APPEARANCE

Through the early 1990s, under the Communist regime, the personal appearance of Albanians, especially in the cities, tended to be drab. Because media outlets were tightly controlled, Albanians had little access to news and images regarding fashion trends in the West. Most clothing was homemade. This changed after 1991. As Albanians gained more exposure to Western media, they began to adopt Western fashion trends and continued to wear traditional clothing only on ceremonial occasions. Now most professional men in the cities wear business suits and ties. Women tend to avoid slacks in favor of dresses and skirts, often accompanied by colorful tops and shirts. Younger people prefer jeans, athletic shoes, and T-shirts. In the villages, however, people still tend to wear traditional clothing, which varies by region. In the north women favor head scarves and colorful wool skirts. Pants for men are made of wool or cotton and are worn with heavy wool or cotton shirts and caps. Throughout Albania synthetic fibers are avoided in favor of natural ones, such as cotton or wool.

SPORTS

The most popular sport in Albania is unquestionably soccer (or football). The Albanian Football Federation was formed in 1932, and this federation became part of the International Football Federation. Throughout the decades Albanian teams have won Balkan and European championships. Albanians follow not only their own teams but also teams in Italy, Germany, and England. Also popular,

among both men and women, is volleyball. Basketball is growing in popularity, and cities throughout the country sponsor teams that play in national and international competition. Also growing in popularity in recent years is tennis, which the former Communist regime had looked on with disfavor as a "capitalist" sport.

CHRONOLOGY

- 1943–44** Albania is under German rule following Italian surrender.
- 1946** Communists under Enver Hoxha proclaim a Communist republic.
- 1949** Albania joins the Council for Mutual Economic Assistance (COMECON).
- 1961** Albania breaks with the Soviet Union in the wake of Nikita Khrushchev's denunciation of Stalin.
- 1978** Albania becomes a rogue state following suspension of diplomatic relations with China.
- 1982** Ramiz Alia, a protege of Hoxha, becomes head of state.
- 1985** Hoxha dies; Alia becomes head of Party of Labor.
- 1990** One-party system is abandoned as first opposition party is permitted to form.
- 1991** Communists win first multiparty elections; Alia is reelected.
- 1992** Presidential election is won by Sali Berisha of the Democratic Party; Alia and other Communist Party officials are charged with corruption and abuse of power; Totalitarian and Communist parties are banned.
- 1993** Conflict erupts between Albanians and ethnic Greeks following purge of Greeks from senior positions in civil service and army; Alia is sentenced to eight years' imprisonment.
- 1995** Alia is released from prison but is banned, along with fellow Communists, from local and national elections until 2002.
- 1997** Antigovernment riots break out following collapse of bogus investment schemes, southern Albania falls under rebel control; national election is won by former Communist Party; Rexhep Meidani is elected president and Fatos Nano prime minister.
- 1998** Prime Minister Fatos Nano resigns, and former student activist Pandeli Majko becomes new prime minister.
- 1999** NATO conducts air strikes against Yugoslav military targets. Hundreds of thousands flee from Kosovo into Albania. Prime Minister Majko resigns after losing a Socialist Party leadership vote; at age 30, Iler Meta becomes Europe's youngest prime minister.

30 Albania

- 2000** Albania joins the World Trade Organization.
- 2001** Albania and Yugoslavia reestablish diplomatic ties broken off during the Kosovo crisis in 1999.
- 2002** Alfred Moisiu is elected president; Fatos Nano again becomes prime minister. The Albanian royal family, in exile since the 1930s, returns to Albania.
- 2004** Demonstrations are held, demanding the resignation of Fatos Nano and charging the government with corruption and failing to improve living standards.
- 2005** Former president Sali Berisha becomes prime minister.

NATIONAL FLAG

Red star and crescent superimposed on the center of two equal vertical fields, one white and the other green

NATIONAL EMBLEM

The central motif is the “white hand of Fatima,” an Arab sign of blessing and happiness. This insignia is flanked by two national flags with their gold staffs joined. On the outside are branches of palm and olive trees with a larger red crescent and a star in the middle.

NATIONAL ANTHEM

“We Pledge”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), June 19 (Ben Bella’s overthrow), July 5 (Independence Day), November 1 (National Day, anniversary of the revolution), various Islamic festivals

DATE OF INDEPENDENCE

July 3, 1962

DATE OF CONSTITUTION

November 22, 1976; revised November 28, 1996

GEOGRAPHICAL FEATURES

Algeria is the second-largest country in Africa, with an area of 2,381,741 sq km (919,592 sq mi). It lies midway along the Mediterranean littoral in the Maghreb region of North Africa and extends south into the heart of the Sahara. It shares international borders with Libya, Mali, Mauritania, Morocco, Niger, and Tunisia.

The two parallel mountain ranges of the Tell (or Maritime) Atlas and the Saharan Atlas divide Algeria into three lateral zones: a narrow but fertile coastal plain, a high plateau, and the Sahara. The coastal plain is a narrow strip about 128 km (80 mi) wide to the east and 64

km (40 mi) to the west. The Tell Atlas consists of two distinct ranges: the Traras Mountains, the Sahel of Oran, and the Dahra Massif to the west and the Djurdjura Massif, Greater and Lesser Kabylia, and the Biban and Hodna chains to the east. The eastern end of the Hodna Mountains leads into the Aures Massif, which includes the highest peaks in northern Algeria, several exceeding 2,133 m (7,000 ft). Behind the coastal hills lie a series of relatively low plains: Oran, Chelif Valley, Algier (Mitidja), Bejaia, Skikda, and Annaba. South of the plains are the inland ranges of the Tell Atlas: Tlemcen, Djebel Ouarsenis, and Blida Atlas, whose altitude declines from west to east. They surround and isolate a series of inland

Algeria

basins and depressions, such as Sidi Bel Abbas, Tiaret, Setif, Constantine, and Guelma Plains. The second zone is the high plateau, a vast, steppelike plain that forms a depression between the Tell Atlas and the Saharan Atlas. The plateau generally narrows and falls in height eastward and ends in the Hodna Basin. The plateau is covered by salt lakes and salt marshes, of which the largest is the Shott ech Chergui. To the south of the high plateau are the five massifs of the Saharan Atlas: Ksour, Amour, Ouled Nail, Ziban, and Aures, the last of which includes the highest peak in Algeria outside the Sahara—Chelia,

2,328 m (7,537 ft). The Algerian Sahara covers 2,071,990 sq km (800,000 sq mi), over 85 percent of Algeria's land area, and is one of the driest, hottest, and most arid regions on earth. Much of the Sahara is covered by rocky platforms known as *hammadas*, and two great sand deserts, the Great Western Erg and the Great Eastern Erg. To the southeast is the high Ahaggar Massif, surrounded by desolate sandstone plateaus.

With the exception of the Chelif River, there are no permanent rivers but only wadis, rivers that have water only in the rainy season.

CLIMATE AND WEATHER

The climate of northern Algeria, including the coastal plains and the Tell Atlas, is Mediterranean, with hot, dry summers and mild, wet winters. Typical winter temperatures range from 10°C to 12°C (50°F to 54°F) and summer temperatures from 24°C to 26°C (75°F to 79°F), although summer temperatures of over 37.8°C (100°F) are not infrequent. Rainfall increases from west to east, with an average annual rainfall of 380 mm (15 in) in Oran, 660 mm (26 in) in Algiers, and 1,520 mm (60 in) in Kabylia. In the higher elevated areas of Kabylia snow is common in the winter. Winters are colder and summers are hotter in the Tell Atlas. Mean temperatures in the winter average 4°C to 6°C (39°F to 43°F) and rise to 26°C to 28°C (70°F to 82°F) in the summer. In the high plateau region the continental climate is dominant, with greater daily temperature ranges. The mean winter temperature is 4.4°C (40°F), and the mean summer temperature is 26.7°C (80°F). Rain is scanty, less than 400 mm (15 in), with much of it falling within a brief period. The Sahara has a true desert climate, with temperatures going up to 50°C (122°F) on most days in summer. Rainfall is erratic and infrequent.

During the summer Algeria is subject to the scorching southern wind from the Sahara known as the *chebili*. It blows for 40 days a year over the high plateau and for 20

days a year near the coast. In the summer, a wind called the sirocco is accompanied by blinding swirls of dust.

 Summer: 122°F
 Average Rainfall: 15 in (Oran), 26 in (Algiers), 60 in (Kabylia)

FLORA AND FAUNA

Algeria has suffered from extensive deforestation. In the north forests have receded to the upper Tell Atlas and to the Saharan Atlas, and forests constitute only 0.9 percent of Algeria's land area. In what remains of Algeria's forests can be found pine, cedar, and several species of oak, including cork oak. On the lower slopes of the mountain ranges are juniper and other shrubs. The desolate high plateau contains esparto grass and brushwood. In the Sahara, vegetation is sparse, consisting of desert grasses, acacia, and jujube. Wildlife in the north is typical of Mediterranean regions and includes wild boar and red deer. Desert wildlife is limited but diverse and includes panthers, leopards, gazelles, jackals, hyenas, and antelope. Also found in the desert regions are snakes, monitor lizards, and vipers.

ETHNIC COMPOSITION

Arabs and Arabized Berbers constitute the largest ethnic community and about 80 percent of the population. Berbers make up the remainder. Because both the Arabized Berbers and the Berbers belong to the same racial stock, the dividing line between these two groups is neither rigid nor exclusive. However, the Berbers, with their weaker cultural identity, have tended to be easily assimilated into the stronger Arab group. Although Berbers do not constitute a homogeneous group in a cultural sense and do not exhibit a sense of peoplehood, they are proud of their separateness vis-à-vis the Arabs. Many Berber tribes are endogamous and have resisted the imposition of the Arabic language, preferring to learn French. Major Berber groups live in separate mountain regions: the Kabyles in Kabylia, the Chaouias in the Aures Mountains, the M'zabites in the northern Sahara, and the Tuareg in the central Sahara. Of these groups, the Kabyles, numbering over 2 million, are the most important. They also form the majority of the Algerian workers in France. The Chaouias number over 1 million, the M'zabites 80,000, and the Tuareg less than 10,000.

In 1982 the total non-Arab and non-Berber population was less than 100,000, a fraction of the 1 million Europeans and 150,000 Jews who lived in the country up to the time of independence. The once-flourishing Jewish community has been reduced to a few hundred. Most Europeans are of French (including Corsican) descent, with a sprinkling of Italians, Spaniards, and Maltese.

LANGUAGES

Arabic is the official language of Algeria and is spoken by 86 percent of the population.

During the long colonial rule French became entrenched as the language of the administrative and intellectual elite and also as the language of progress and civilization. The Algerian revolutionary movement and the governments since independence have been committed to a total replacement of French by Arabic in all areas of national life. However, as in France's other former colonies, French has proved difficult to dislodge for practical reasons, and it is likely to remain the semi-official language of Algeria for the foreseeable future.

RELIGIONS

Islam in its Sunni form is the official religion of Algeria; 99 percent of Algerians are Muslim. A vigorous program of mosque construction was undertaken in the late 1960s. Within the Muslim community the Kharadjites are the major minority. The M'zabite tribe is almost entirely Kharadjite. Frequently referred to as the "Puritans of the

Desert," they are governed by a stricter moral code than other Muslims. Friday sermons are not formally censored, but government monitoring constrains their freedom of expression. Religious travel, most notably the hajj (the Islamic pilgrimage to Mecca), is government-organized.

Except for a few converted Berbers, mostly Kabyles, the Christian population is almost entirely foreign. There is one Roman Catholic archdiocese for all of Algeria. The ancient Jewish community comprises native converts to Judaism and descendants of refugees from Roman and, later, Spanish, persecution.

HISTORICAL BACKGROUND

At the beginning of recorded history Algeria was inhabited by Berber tribes. After the eighth century B.C.E. the region was controlled by Carthage and, after the fall of Carthage in 146 B.C.E., by Rome. Known as Numidia under Roman rule, the region was Christianized in the early years of the modern era. Roman influence declined, especially after the Vandal invasions of 430–31. The Arabs arrived on the scene in 637 and swept away all traces of the Roman past. The inhabitants were forcibly converted to Islam, and Arabic was introduced as the national language. Another wave of Arabs in the 11th century brought widespread destruction until the Almoravids and Almohads from Morocco unified the country and consolidated it with Morocco and Spain. Spain conquered a part of the coast in the 16th century, but the Spaniards were expelled by Barbarossa, a Turkish pirate, who made himself a sultan. His brother Khayr al-Din placed his territory under the suzerainty of the Ottoman sultan in Istanbul. From the mid-1500s Algeria was ruled by Turkish *beylerbeys*, pashas, agas, and deys. By the 1800s Turkish power had waned, and the French began to expand their control over the coastal areas.

Algeria was conquered by France in the 1830s and officially annexed to that country in 1842. In the following century white French settlers colonized the territory, became permanent residents, and assumed political and economic power, denying equal rights to the indigenous Muslim majority.

The nationalist movement under the auspices of the Front de Libération Nationale (FLN) instigated a war for independence on November 1, 1954. The eight-year conflict resulted in the deaths of 250,000 Algerians and injuries to an additional 500,000. Two million people were uprooted, and 1 million French settlers left the country.

The French government declared a cease-fire in March 1962, and Algeria became independent on July 3, 1962. In August the political bureau of the FLN took control of the government. A single list of FLN candidates was proposed for election to the National Constituent Assembly in September, and the republic was established. Ahmed Ben Bella, founder of the FLN, was made prime minister of the new government.

In September 1963 a popular referendum was held in which a constitution providing for a presidential form of government and the FLN as the sole political party was approved. Ben Bella was elected president. During his presidency economic reconstruction was initiated, and Algeria emerged as a single-party socialist state.

Col. Houari Boumédiène, the minister of defense, led the army in a bloodless coup in June 1965, taking over the government as president of the Revolutionary Council of 26 members. During the next six years Boumédiène overrode the opposition of left-wing interests in the FLN and, by 1971, had nationalized French petroleum enterprises and undertaken agricultural reforms.

In 1976, in two separate referenda, a new National Charter and a new constitution were approved. These set forth the principles of government, whereby a socialist system was to be established and Islam declared the state religion. Boumédiène, as the only candidate nominated, was elected president in December. In February 1977, in the first legislative election since 1964, the unicameral National People's Assembly was convened, and, in February, Chadli Bendjedid was elected president. Bendjedid appointed Col. Muhammad Abd al-Ghani prime minister in anticipation of constitutional changes approved later, in June, requiring the appointment of a prime minister. A legislative election was held in March 1982 for the National People's Assembly, whose membership had increased to 281. Voters were offered a choice of three candidates for each seat. Government officials were elected to 142 seats and FLN party officials to 55, with expectations that executive control of the National People's Assembly would increase.

Bendjedid was elected to a second term as president on January 12, 1984, and he appointed Abd al-Hamid Brahimi prime minister. The National Charter was revised in 1985 to provide for encouragement of the private sector and a balance of socialism and Islam as state ideologies. It was adopted in a referendum in January 1986. The number of seats in the National People's Assembly was increased to 295, its present size, and a legislative election was held in February 1987.

Discontent among students, Islamic fundamentalists, and Berbers of the Kabyle region began to be expressed publicly in 1985 in the form of criticism of the government and violent protests. In separate trials, supporters of Ben Bella and Berber activists were found guilty either of threatening state security or of membership in illegal

groups and were given prison sentences. Riots in Constantine and Setif in November 1986 led to four deaths and 186 arrests. Economic problems, particularly the sharp drop in petroleum prices in 1986, caused the government to introduce austerity measures, leading to further discontent. Administrative reforms were announced in December 1987 to increase efficiency in the government structure, but the combination of rapid population growth, government austerity measures, food shortages, high prices, and high unemployment rates led to a series of strikes beginning in July 1988, and by October riots had broken out in Algiers. Violent protests also were staged in Oran and Annaba. A state of emergency was declared by the government. The official death toll was announced as 176, but unofficial estimates ranged between 200 and 500. The state of emergency was ended after six days, with Bendjedid promising political reforms. A referendum was held on November 3, and a number of constitutional amendments were approved, including provision for the prime minister to be responsible to the National People's Assembly instead of the FLN.

Kasdi Merbah was appointed prime minister in late 1988. The new government proposed an emergency plan for reforms intended to address the problems causing discontent among youths and the unemployed. Bendjedid, as the sole candidate in the presidential election held in December, was elected to his third term in office.

In February 1989 Algerians approved a new constitution that dropped all references to socialism and cleared the way for a multiparty system. Islam remained the state religion. The new political reforms were seen in part as an effort to head off the growing influence of Muslim fundamentalist groups, especially among the young.

Bendjedid dismissed Merbah in September, citing the prime minister's failure to implement the political and economic reforms promised after the 1988 riots and the plans intended to transform Algeria from a one-party socialist state into a multiparty democracy. He was replaced by Mouloud Hamrouche, one of Bendjedid's top advisers.

The democratization process, begun by the nationwide riots in 1988, gathered speed in 1990. Municipal elections were held in June 1990, with the Islamic Salvation Front (FIS) winning 54 percent of the vote. Violent protests by Islamic fundamentalists in June 1991 caused Bendjedid to declare a state of emergency and cancel the national parliamentary elections that had been scheduled for late June. In the same month, Bendjedid dismissed Prime Minister Mouloud Hamrouche and replaced him with Sid Ahmed Ghazali.

In June 1992, Mohamed Boudiaf, the head of the government, was assassinated and was replaced by Ali Kafi, who in turn was replaced by a five-member presidential High Council. In 1994 the council named Algeria's defense minister, Liamine Zérroual, as interim president of Algeria for a three-year term, allowing him to negotiate

36 Algeria

with the FIS. In 1994 the government met with five opposition groups to negotiate a peace settlement. Negotiations continued in Italy and led to elections in 1995.

Open elections were held in November. However, the FIS boycotted them. Liamine Zérroual was elected president. In 1996, President Zérroual signed new constitutional reforms that, among other things, banned political parties based upon religion or language. Rather than curb violence, these reforms led to increased ethnic conflict. Elections were once again held in April 1999 with Abdelaziz Bouteflika, former foreign minister, winning the vote. President Bouteflika, who was reelected by a large majority in 2004, enjoys the widespread support of the military, but he was elected amid allegations of fraud. His primary agenda was to bring stability and security to Algeria. To that end, he proposed an amnesty for those who had fought against the government in the 1990s. This policy was approved by referendum in 2000, and estimates are that 85 percent of those who fought against the regime accepted the offer of amnesty.

Nonetheless, in 2001 Berber activists from the country's Kabyle region mounted a resistance campaign, including strikes and demonstrations, against a government that they saw as repressive. Among their demands was that their language, Tamazight, be recognized as an official language. Additionally, they demanded greater Berber control over affairs in their region. In 2001 Tamazight was recognized as a "national language" but not an official language. In 2003 Algeria suffered a major earthquake that killed 2,200 people. The government met with widespread criticism for what was seen as an ineffective response to the earthquake.

In 2004 Algeria had its first presidential election since independence that was democratically contested throughout. President Bouteflika faced five opponents, who complained of voting irregularities and unfair media coverage. Bouteflika was reelected with nearly 85 percent of the vote. Security in Algeria has increased since Bouteflika's election in 1999, but terrorism has not been entirely eliminated, especially in the provinces of Boumerdes and Tizi-Ouzou and in the country's southern regions. Each month as many as 50 to 60 Algerians are killed in terrorist incidents, but this number is down markedly from the 1,200-plus during the mid-1990s.

LIST OF MODERN RULERS

- 1963–65** Ahmed Ben Bella (president)
- 1965–78** Houari Boumédiène (1965–76 president of the Council of the Revolution; 1976–78 president).
- 1979–92** Chadli Bendjedid (president)
- 1992** Mohamed Boudiaf (president; January 16–June 29)

- 1992–94** Ali Hussain Kafi (president of the High Council of State)
- 1994–99** Liamine Zérroual (head of state; president 1995–99)
- 1999–** Abdelaziz Bouteflika (president)

CONSTITUTION

The basis of the government of Algeria is the constitution of 1976, ratified in 1977, amended in 1979, and further amended in 1988 and 1989. The constitution originally established Algeria as a socialist, democratic, and popular republic and guaranteed the fundamental rights of its citizens. Voting is universal at the age of 18. The FLN was recognized as the nation's sole political party and as "the leading force in society." Executive power is vested in the president of the republic as the chief executive, head of state, and president of the Political Bureau of the FLN. The constitution was suspended by the military government in January 1992, which ended the commitment to socialism embodied in the National Charter and earlier constitutions. Algeria has a political system based on strong presidential rule, which provides in theory for a multiparty system, the separation of church and state, and military subordination to civilian authority. The constitution was again revised in 1996, banning political parties based solely on ethnicity, religion, or another separatist feature and creating a new, bicameral legislature.

PARLIAMENT

The 1976 constitution described the National People's Assembly as a unicameral, elected, representative legislative body. Under the 1989 law deputies are elected for five-year terms, and all Algerians "enjoying full civil and political rights" and over the age of 25 are eligible. Elections occur by secret, direct, and universal ballot. Until the country's first multiparty elections in December 1991, all candidates were drawn from a single party list, approved by the FLN, although multiple candidates could compete for a single constituency. Some legislative functions are exercised by the National Transitional Council, created in May 1994—a 200-member body that provides for political party, trade union, professional, and civil service representation. The bicameral parliament consists of the National People's Assembly, or al-Majlis Ech-Chaabi al-Watani (389 seats; members elected by popular vote to serve four-year terms), and the Council of Nations (144 seats; one-third of the members appointed by the president, two-thirds elected by indirect vote; members serve six-year terms; created as a result of the constitutional revision of November 1996). The last multiparty elections to the parliament were held in 2003.

POLITICAL PARTIES

The number of legal parties in Algeria dropped from 60 in 1991 to about 20 in 1999 and 13 in 2004. The constitutional amendment of 1996 imposed a number of restrictions on the formation of political parties. There are three government parties: National Democratic Rally, FLN, and Movement for a Peaceful Society, formerly Movement for an Islamic Society. The principal opposition parties are Renaissance Movement, Movement for National Reform, Socialist Forces Front, and Rally for Culture and Democracy, the latter two being primarily pro-Berber groups.

LOCAL GOVERNMENT

The major units of local governments are the *wilayat*, or provinces; the *da'iraat*, or districts; and communes. The largest unit is the *wilaya*, headed by a *wali*, or governor, appointed by the central government. The *wilayat* are divided into *da'iraat*, each of which is headed by a deputy governor. The commune is the basic unit of local government and is linked to the central and *wilaya* governments and also to the FLN through party units, thus functioning as a means of both administrative and political control.

The organs of self-government at the local level include the commune assemblies in the communes and people's assemblies in the 48 *wilayat*. The commune's assemblies are elected for four years. Their administrative work is conducted through standing committees and an executive council.

LEGAL SYSTEM

The legal system is in transition. All legislation dating from the colonial era was reviewed and amended by a national commission, and a revised code was issued in 1975. Algerianization of the judiciary was completed in 1963. Despite these efforts, the bulk of Algerian law remains French in origin and substance.

At the apex of the legal structure is the Supreme Court. It serves as the final court of appeal and also as the body that sets standards of procedure. However, it has no right to decide on the legality of government actions. Below the Supreme Court there is one court for each of the 48 provinces; there are more than 180 courts of first instance at the district level and justices of the peace at the commune level. Three special courts have been set up in Oran, Constantine, and Algiers to deal with economic crimes against the state. There is no appeal from decisions of these courts. In 1975 the Cour de Sûreté de l'Etat, composed of magistrates and army

officers, was set up to try cases against state security. The Higher Court of the Magistrature, presided over by the president of the republic, is the constitutional body concerned with the integrity and discipline of the judiciary. Judges are appointed by the executive branch, and their appointment may be challenged only by the High Judicial Council.

HUMAN RIGHTS

Although democratic in principle, Algeria is a military state. The military establishment strongly influences domestic and foreign policy, and security forces are actively involved in counterinsurgency and counterterrorism operations, in the course of which they have committed serious human rights abuses, including extrajudicial killings, torture of detainees, and arbitrary arrest and detention. Although the constitution provides for an independent judiciary, prolonged pretrial detention, lack of due process, and absence of privacy rights are serious problems.

There is no overt censorship, but the electronic media are entirely state owned, and the print media exercise self-censorship out of fear. Freedoms of press and speech are restricted in practice.

Islamic insurgents pose the greatest threat to human rights. In the last decade of the twentieth century more than 100,000 people were killed by armed groups who targeted both security personnel and civilians, especially women. In many cases, terrorists have randomly targeted civilians in an apparent attempt to create social disorder. There are reports of disappearances involving both security forces and armed Islamic groups. Police beatings of detainees are a common practice. Muslim terrorists have committed numerous abuses, such as beheading, mutilation, disemboweling, and dismembering of their victims, including infants, children, and pregnant women. They also rape female victims and then murder them.

Freedom of assembly and association are curtailed in practice. Islam is the official faith, and the law limits sharply the practice of other faiths. Islam is taught compulsorily in schools, and the government appoints preachers in mosques, gives general guidance on sermons, and provides financial support for the promotion of Islam.

Citizens do not have the ability to change the government peacefully. The executive branch is dominated by the military and the bureaucracy. Opposition parties are harassed, and the government sometimes disconnects their phone services. The opposition has only limited access to state-controlled radio and television. Under the present state of emergency, the police operate checkpoints throughout the country and routinely stop vehicles and detain people at will.

FOREIGN POLICY

Algeria's foreign policy has undergone a sea change since the military takeover in 1992. In the immediate post-independence period foreign policy was dominated by Ben Bella's anti-imperialist ideology. It changed into a low-profile moderate policy after the 1965 coup led by Boumediène. But following the 1967 Arab-Israeli war, Boumediène became more pro-Arab, and Algeria joined the Steadfastness Front as a charter member in opposition to any rapprochement with Israel. During the 1970s and 1980s foreign policy was dominated by disputes with Morocco over Western Sahara and disputes with Libya. Relations with France were always uneasy until the military takeover. Algeria's efforts to contain the fundamentalist movement have received the support of not merely France and the United States but also Arab countries such as Morocco, Tunisia, and Egypt.

DEFENSE

The defense structure is headed by the president as supreme commander of the armed forces. He is assisted by the Higher Council of Defense and the General Staff. The Ministry of National Defense includes a Political Commissariat, an arm of the FLN charged with providing ideological indoctrination for the armed forces. Territorially, Algeria is divided into five military regions: Blida (I), Oran (II), Bechar (III), Ouargla (IV), and Constantine (V). Each is headed by a colonel who is directly subordinate to the minister of defense rather than to the General Staff.

Military manpower is provided by voluntary conscription for a period of six months at age 19.

The total strength of the armed forces in 2003 was 119,000, with about 100,000 reservists. Projected defense expenditures for fiscal year 2004 were \$2.5 billion, or 3.9 percent of the nation's gross domestic product (GDP). This constituted 12 percent of the national budget. Total arms imports in 2003 cost Algeria \$365 million.

The Algerian army is the most important and representative national institution, with both a political and a military mission. In its political role the army is designated the guardian of the revolution, and it determines the ideological direction of the nation.

ECONOMY

The hydrocarbons sector is the backbone of the economy, accounting for roughly 60 percent of budget revenues, 30 percent of GDP, and over 95 percent of export earnings. Algeria has the seventh-largest reserves of natural gas in the world and is the second-largest gas exporter; it ranks 14th for oil reserves. Algiers' efforts to reform one of the most centrally planned economies in the Arab world stalled in 1992 as the country became embroiled in political turmoil. Burdened with a heavy foreign debt, Algiers concluded a one-year standby arrangement with the International Monetary Fund in April 1994 and, the following year, signed onto a three-year extended fund facility, which ended on April 30, 1998. Some progress on economic reform, Paris Club debt reschedulings in 1995 and 1996, and oil-and-gas sector expansion have contributed to a recovery in growth since 1995. Still, the economy remains heavily dependent on volatile oil-and-gas revenues. In 2000 Algeria's finances benefited from the spike in oil prices and the government's tight fiscal policy, leading to a large increase in the trade surplus, the near tripling of foreign-exchange reserves, and reduction in foreign debt. The government has continued efforts to diversify the economy by attracting foreign and domestic investment outside the energy sector, but it has had little success in reducing the high rate of unemployment and improving living standards. Nonetheless, Algeria's real growth rate in GDP was estimated at 7.4 percent in 2004.

ENVIRONMENT

Algeria suffers from growing desertification caused by widespread soil erosion because of overgrazing and other poor farming practices. The rivers and coastal waters of the country are being polluted by the dumping of raw sewage, petroleum-refining wastes, and other industrial effluents. The Mediterranean Sea, in particular, is becoming polluted from oil wastes, soil erosion, and fertilizer runoff. Most Algerians do not have an adequate supply of potable water.

LIVING CONDITIONS

After French forces evacuated Algeria, the nation's health care system was virtually nonexistent. A poor educational system left behind only about 300 doctors. Since independence, Algeria has made great strides in improving health care, and since 1975 the government has provided free health care for all citizens. By 1991 the nation had 23,000 doctors. Meanwhile, Algeria has suffered from an acute shortage of housing; as the population grew, housing did not keep pace, forcing many Algerians to live with extended families in the same home. Under French rule, Algeria had but one university; today there are more than thirty institutions of higher learning. Most Algerians are poor. Arabs in the larger cities tend to be better off and look down not only on the Berbers but on other desert tribes as well.

HEALTH

Medical care in Algeria is nationalized and free. The life expectancy at birth for Algerians in 2002 was 70 years. The infant mortality rate for that year was 39 per 1,000 live births. In 2004 Algeria had 85 physicians for each 100,000 people. In 2003, 81 percent of children were immunized against measles and 86 percent against diphtheria, pertussis, and tetanus. Medical care is much more accessible in the more populous north; residents of sparsely populated areas in the south have little access to modern medical care.

FOOD AND NUTRITION

Couscous, or steamed semolina wheat, served with lamb, chicken, or vegetables is the national dish of Algeria. It is so widely consumed that its Arabic name, *ta'am*, also means "food."

From 1998 to 2002 about 7 percent of Algerian infants were of low birth weight. During those same years, about 5 percent of Algerian children age five and under were moderately underweight; an additional 1 percent were severely underweight. About 6 percent of the total population as of 2003 was undernourished.

STATUS OF WOMEN

After 1962 the status of women began improving, primarily because of the increased education of family members, broader economic and social development, and the willingness or necessity for ever-larger numbers of women to seek gainful employment. In the mid-1950s about 7,000 women were registered as wage earners; by 1977 a total of 138,234 women, or 6 percent of the active workforce, were engaged in full-time employment. Corresponding figures for the mid-1980s were about 250,000, or 7 percent of the labor force. Many women were employed in the state sector as teachers, nurses, physicians, and technicians. The number of women in the workforce, however, may be much higher than official statistics have suggested. Women in the rural workforce were not counted; only 140 were listed in official statistics. In 2004 Algeria was pressing ahead with a controversial women's rights bill that was meeting with fierce opposition from fundamentalist Islamic political parties.

WORK

In 2003 the Algerian labor force consisted of about 9.6 million people. About 32 percent of Algerian workers work for the government, 14 percent in agriculture, 10 percent in construction and public works, 13 percent in industry, and 16 percent in other categories. The unemployment rate in 2002 was estimated at about 31 percent, though that number fell to about 26.2 percent for 2004. Unemployment for young men under the age of 30 is much higher, estimated at around 50 percent, contributing to social and political unrest in the country. The Youth Employment Program and other government-run programs attempt to provide training and jobs for younger workers, but these programs have met with mixed success. Another problem for Algeria has been the loss of skilled nonprofessional workers (such as carpenters and plumbers) to Europe, where wages are higher. The result is that these types of workers are in short supply in Algeria.

Since the 1990 Law on Trade Union Activity was passed, Algerian workers have had the right to join autonomous labor unions. Other labor legislation dating from the early 1990s gives Algerian workers the right to strike and to engage in collective bargaining.

EDUCATION

Education is, in principle, free, compulsory, and universal for nine years, from ages six to 15. Primary education lasts for six years and secondary education for four years in the technical stream and seven years in the general stream, leading to the baccalaureate.

The academic year runs from September to July. The medium of instruction is Arabic in the first two grades of

primary school, partly Arabic and partly French in the next four years in primary school, and almost entirely French from the secondary grades up. Promotion is automatic in all primary grades. In the intermediate and secondary schools promotion is determined by monthly, midyearly, and annual examinations. There are three leaving examinations: at the end of primary school, the end of elementary school, and the end of secondary school. At the primary level all the teachers are now Algerian, but about half of the secondary school teachers are recruited abroad.

Several types of vocational training are offered by different institutions. Six-year programs are available at technical schools, agricultural training programs at agricultural schools and nine regional agricultural colleges, and two- and three-year technical programs with 11 months of intensive practical training at technical institutes. Only 1.5 percent of secondary school students are enrolled in the technical and vocational stream.

Traditional religious schools known as *kuttabs* have been incorporated into the school system. Koranic study centers offer programs in Arabic, and Islamic secondary schools have developed a curriculum with a strong religious emphasis. A total of 2 percent of primary school students are enrolled in private schools.

The educational system is administered by three ministries: the Ministry of Primary and Secondary Education, the Ministry of Higher Education and Scientific Research, and the Ministry of Traditional Education and Habus (religious affairs). In addition, the Ministry of Agriculture and the Ministry of Labor and Social Affairs run vocational training and special education centers.

There are more than a dozen universities and campuses, including the University of Algiers, the University of Oran, the University of Annaba, and the University of Constantine.

MEDIA

All news media are government controlled. Among the major newspapers are *al-Moudjahid* (The fighter), the organ of the FLN, published in Arabic and French; the Arabic dailies *Ech-Chaab* (The people, also an FLN organ) and *al-Watan* (The nation); and the French daily *La tribune*.

Censorship of all news is implicit in state ownership. News coverage is limited largely to officially approved material. The official news agency is Algérie Presse Service.

Broadcasting is a state monopoly operated by Radio-diffusion-Télévision Algérienne (RTA), which has three radio networks broadcasting in Arabic and French. International programs consist of daily Arabic broadcasts beamed to Morocco and the Middle East and broadcasts in French beamed to Algerian workers in Europe.

RTA's television service, introduced in 1956, is available to 80 percent of the population in the region north of the Sahara through a network of transmitters. The system is connected with Eurovision and with Maghrebvision. The national programs are in French, Arabic, and Kabyle.

CULTURE

Because Algeria was a French colony, the nation's cultural life was dominated by France's influence. During the 1950s France suppressed Algerian writers, but the nation's war for independence brought about a rebirth of

interest in a national literature written in Arabic—an interest that had been growing even before the war. Since 1962 the Algerian government has officially supported the drive for a literature of Arab-Berber origins. During the twentieth century, noted Algerian writers have include Kateb Yacine, Mohammad Dib, and Malek Haddad. Albert Camus, the famous French writer and existentialist, was born and educated in Algeria.

One of the most distinctive forms of Algerian culture is its music, especially popular music known generally as *rai* (pronounced "rye"). *Rai* is a word with various meanings, including "a way of seeing," "an opinion," "a point of view," "a thought," or "a judgment." Historically Algerians went to poets known as *shikhs* for their advice, or *rai*. As a popular musical form, *rai* originated in western Algeria and was associated with the migration of people into the cities during the worldwide depression of the 1930s. Today *rai* is somewhat analogous to American jazz or rhythm and blues. It has a repetitive structure and often contains lyrics that are regarded as improper. It is a simple form of music that people enjoy dancing to. The lyrics are in local dialects and fuse elements of Spanish, French, Arabic, and rural and city dialects. It also incorporates Western musical instruments. In songs the word *rai* is often used in manner similar to "yeah yeah yeah" and comparable words in rock and roll. The word *cheb* is given to singers of *rai* music; female singers are called *chabas*.

Many *chebs* and *chabas* adopt the title to appeal to Algeria's youth culture. Many Algerians, however, believe that today's *shikhs* are the only true *rai* singers. Historically, a *shikh* was a mature, educated Muslim. Then and today the *shikh* is a poet learned in *malhum*, sung poetry in the local dialect that has existed since the sixteenth century. This poetry is very elaborate and consists of thousands of verses that treat love, heroic events, history, religion, and other topics. Among many scholars of Algerian culture, today's *rai* is a corrupted form of *malhum*. A form of music called *wahrani* adopts the *malhum* to city instruments such as the accordion, banjo, and piano. *Wahrani* tends to be more elaborate and sophisticated than the more popular *rai*.

One other musical figure is important in Algerian culture—the *maddaba*, a word that comes from a root word meaning "to praise, celebrate, sing religious poetry." *Maddabas* are women who sing both religious and secular songs, usually at ceremonies such as weddings and circumcisions. Female *rai* singers often begin their careers as *maddabas*, and many *maddabas* began their careers as poets.

FOLKLORE AND MYTHOLOGY

Legends in Algeria focus on the exploits of Muslim leaders who resisted the Crusaders of the Middle Ages and, later, French colonization. These religious and learned leaders were holy men called *marabouts*. They were blessed with *baraka*, or a divine grace that enabled them to perform miracles. Pilgrimages are often made to their burial sites. A great deal of folklore not only in Algeria but also in other countries is the story of *al-Isra' wa al-Mi'raj*, which recounts the Prophet Muhammad's night trip from Mecca to Jerusalem, where he mounted his horse, al-Burak, for a miraculous night flight to heaven.

ENTERTAINMENT AND RECREATION

One popular form of entertainment for Algerian men is to gather at coffeehouses, where they play dominos, chess, checkers, and other games. Women are more likely to socialize with each other at home. Among the Berber population there is a popular saying: "When you come to our house, it is we who are your guests, for this is your house." Algerian men also enjoy going to public baths, called *hammam*, where they relax and enjoy a steam bath and a massage. One public bath still in use in Algiers, the Hamman Sidna, was built in the sixteenth century.

In the desert regions of Algeria, camel racing and horse racing are popular. Desert festivals often feature competitions in which horseback riders shoot at targets while galloping at full speed. Many desert dwellers take part in camel dancing, directing their camels to dance to the beat of traditional music.

The coast of Algeria, especially near Algiers, has many resorts where people can sail, water-ski, and swim. Algerians often take their summer holidays at these resorts.

ETIQUETTE

Algerians greet one another in a lengthy and involved way, inquiring into the health and well-being of each other's family members. Social interactions tend to be limited to members of the same sex. Displays of affection between men and women in public are rare, but it is not unusual to see members of the same sex kissing or holding hands. Algerians extend warm hospitality to visi-

tors, and they spend much time visiting members of their extended families.

FAMILY LIFE

Strong in Algeria is a sense of family unity and honor. Algerian men make all the major decisions; women are not encouraged to take part in public life but to stay at home—although Berber women tend to face fewer restrictions on their activities and Tuareg women participate in public affairs.

Extended families are common, especially in rural areas, where parents and children live with their grandparents, aunts, and uncles. Married couples often cook their meals separately and even have separate rooms. In urban areas young married couples are more likely to live on their own. Marriages in Algeria tend to be arranged according to Muslim law, whereby a marriage is as much a link between families as it is between the man and woman. Representatives from each family negotiate the marriage before it takes place. While the woman is expected to submit to her husband, she is not required to marry against her will, and she may obtain a divorce if her husband fails to support her or deserts her. A woman who bears a son enjoys a rise in her social status.

PERSONAL APPEARANCE

Traditionally, Algerian men wear a *jellaba*, a long hooded robe. Algerian women, especially older women, still adhere to Islamic tradition by wearing a *hijab*, or veil, in public. In the Souf region of eastern Algeria, women are heavily veiled such that only one eye is visible. These women wear black clothing, but in the central and western areas, women typically wear white clothing. Berber women, rather than wearing a veil, tend to dress in long skirts and floral-patterned blouses. Tuaregs are often referred to as "the blue people" because they wear a garment called the *taquelmust*, which is dyed with indigo. The dye turns their skin blue. Men in Tuareg villages traditionally wear a veil.

SPORTS

Soccer is the most popular sport in Algeria, and even adults can be found playing soccer in the cities' streets and parks. The Algerian soccer team won the African Continental Championship in 1990. Algerians have also excelled in track and field, placing third in the Africa Games in 1999. Women are not encouraged to participate in sports, but in 1992 Hassiba Boulmerka won Algeria's first Olympic gold medal in the 1,500-meter race.

Among men, Noureddine Morceli took gold in the same race in the 1996 Olympics.

CHRONOLOGY

- 1962** The Evian Agreement establishes a provisional government for Algeria; in a referendum 91 percent of the electorate vote for full independence; France proclaims independence for Algeria.
Internal struggles among Algerian leaders intensify as Muhammad Ahmed Ben Bella and Houari Boumédiène of the FLN assert opposition to the provisional government of Ben Yusuf Ben Khedda.
Ben Bella and Boumédiène march at the head of the FLN forces on Algiers and occupy the capital.
The Republic of Algeria is proclaimed, with Ferhat Abbas as president and Ben Bella as prime minister.
Hundreds of thousands of French Algerians flee the country.
- 1963** The Algerian dinar is introduced.
Vacant French estates are handed over to workers' committees.
A new constitution is promulgated, establishing a presidential form of government; Ben Bella is elected the first president.
In war with Morocco, Algerian forces are badly defeated.
- 1964** The Algiers Charter is adopted at the historic FLN Congress.
Two revolts against the regime are crushed.
- 1965** In a swift and bloodless coup, Boumédiène ousts Ben Bella and assumes power at head of Council of the Revolution.
- 1967** An armed uprising led by Colonel Tahar Zbiri, chief of army staff, is put down.
Algeria suspends diplomatic relations with the United States in the aftermath of the Arab-Israeli War.
- 1970** The Tlemcen Accord settles the border dispute with Morocco.
- 1971** Boumédiène signs into law the Charter of the Agrarian Revolution, initiating a comprehensive land reform program.
- 1974** Diplomatic ties with the United States are resumed.
- 1976** A new constitution is promulgated, restoring the National Assembly.
Boumédiène is elected president.
Mauritania and Morocco break ties with Algeria over Algeria's formal recognition of the Saharan Arab Democratic Republic in Western Sahara and support of Polisario, Western Sahara's national independence movement.
- 1977** The first legislative election since 1964 is held to form the unicameral National People's Assembly.
- 1978** President Boumédiène dies of natural causes, and Speaker of the National Assembly Rabah Bitat is named interim president.
Diplomatic relations between Algeria and Egypt are severed.
- 1979** Chadli Bendjedid is elected president; Colonel Muhammad Ben Ahmed Abdelghani is named prime minister; the constitution is amended, reducing the presidential term to five years.
Former president Ben Bella is released from prison.
Diplomatic ties with Mauritania are restored after Mauritania relinquishes claims to Western Sahara (formerly Spanish Sahara).
- 1980** In a cabinet reshuffle, influential foreign minister Abdelaziz Bouteflika is removed.
The government shifts economic priorities away from heavy industry and toward consumer goods.
The Berbers, charging discrimination and repression, break out into violence in the city of Tizi-Ouzou.
- 1983** President Chadli Bendjedid visits France. The Moroccan border is reopened.
- 1984** President Chadli Bendjedid is reelected to a second term in office.
- 1985** Algeria boycotts Arab summit meeting over the Polisario issue.
President Chadli Bendjedid visits the United States.
- 1986** In a national referendum, voters approve by a vote of 98.37 percent the Revised National Charter, which encourages the private sector and balances Islam against socialism as state ideologies. National People's Assembly seats are increased to 295.
- 1988** In a joint meeting, the heads of state of Algeria, Libya, Mauritania, Morocco, and Tunisia form the Great Arab Maghreb and plan to harmonize legislation within the region and share in joint economic projects. Algeria experiences its worst riots and internal unrest since independence in 1962, and at least 500 are killed in army attacks on rioters. Full diplomatic relations with Egypt are restored.
- 1989** A new constitution is approved by a national referendum.
- 1990** The FIS earns sweeping victories in municipal elections throughout the country; the govern-

- ment formally recognizes at least 25 political parties as they prepare for the 1991 multiparty National Assembly elections.
- 1991** Islamic fundamentalists riot in Algiers; Bendjedid declares a state of emergency and postpones national elections; Prime Minister Mouloud Hamrouche and his cabinet are dismissed, and Sid Ahmed Ghazali is named prime minister.
- 1992** The head of the government, Mohamed Boudiaf, is assassinated.
- 1995** Gen. Liamine Zéroual wins the first contested presidential elections in more than 30 years.
- 1997** A multiparty parliament is elected, but the ruling military council maintains control.
- 1998** Islamic fundamentalists continue to slaughter their opponents.
- 1999** Abdelaziz Bouteflika is elected president amid allegations of fraud.
A law on civil concord, the result of negotiations with the armed wing of the FIS, is approved in a referendum.
- 2000** Attacks on civilians and security forces continue and are thought to be the work of small groups still opposed to the civil concord.
- 2001** Many demonstrators are killed in violent clashes between security forces and Berber protestors in the mainly Berber region of Kabylia following the death of a teenager in police custody. The Rally for Culture and Democracy, a pro-Berber group, withdraws from the government in protest against the authorities' handling of the riots.
- 2003** Algeria suffers a major earthquake in which 2,200 people are killed and thousands more injured.
- 2004** Abdelaziz Bouteflika is reelected to the presidency, winning nearly 85 percent of the vote in a field of six candidates.
- 2005** In a referendum Algerians approve the Draft Charter for Peace and National Reconciliation which pardons many involved in the civil war.

ANDORRA

Basic Fact Sheet

OFFICIAL NAME

Principality of Andorra (Principat d'Andorra)

ABBREVIATION

AD

CAPITAL

Andorra la Vella

HEADS OF STATE

French Coprince President Jacques Chirac (from 1995);
Episcopal Coprince Monseigneur Joan Enric Vives i Sicília
(from 2003)

HEAD OF GOVERNMENT

Albert Pintat (from 2005)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

70,549 (2005)

AREA

468 sq km (180 sq mi)

MAJOR ETHNIC GROUPS

Spanish, Andorran, Portuguese, French

LANGUAGES

Catalan, Spanish, French

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Euro

NATIONAL FLAG

Tricolor of blue, yellow, and red vertical stripes, with the coat of arms on the yellow stripe

NATIONAL EMBLEM

A shield divided into four quarters—with a gold bishop's mitre on a red field in the upper left, three red vertical stripes on a gold field in the upper right, four red vertical stripes on a gold field in the lower left, and two red cows rampant on a gold field in the lower right—with ornate gold framing and the motto *Virtus unita fortior* on the bottom

NATIONAL ANTHEM

"Himne Andorra," beginning, "The great Charlemagne, my father, has delivered me from the Arabs"

NATIONAL HOLIDAYS

September 8 (National Festival)

DATE OF INDEPENDENCE

December 6, 1288

DATE OF CONSTITUTION

May 4, 1993 (effective)

GEOGRAPHICAL FEATURES

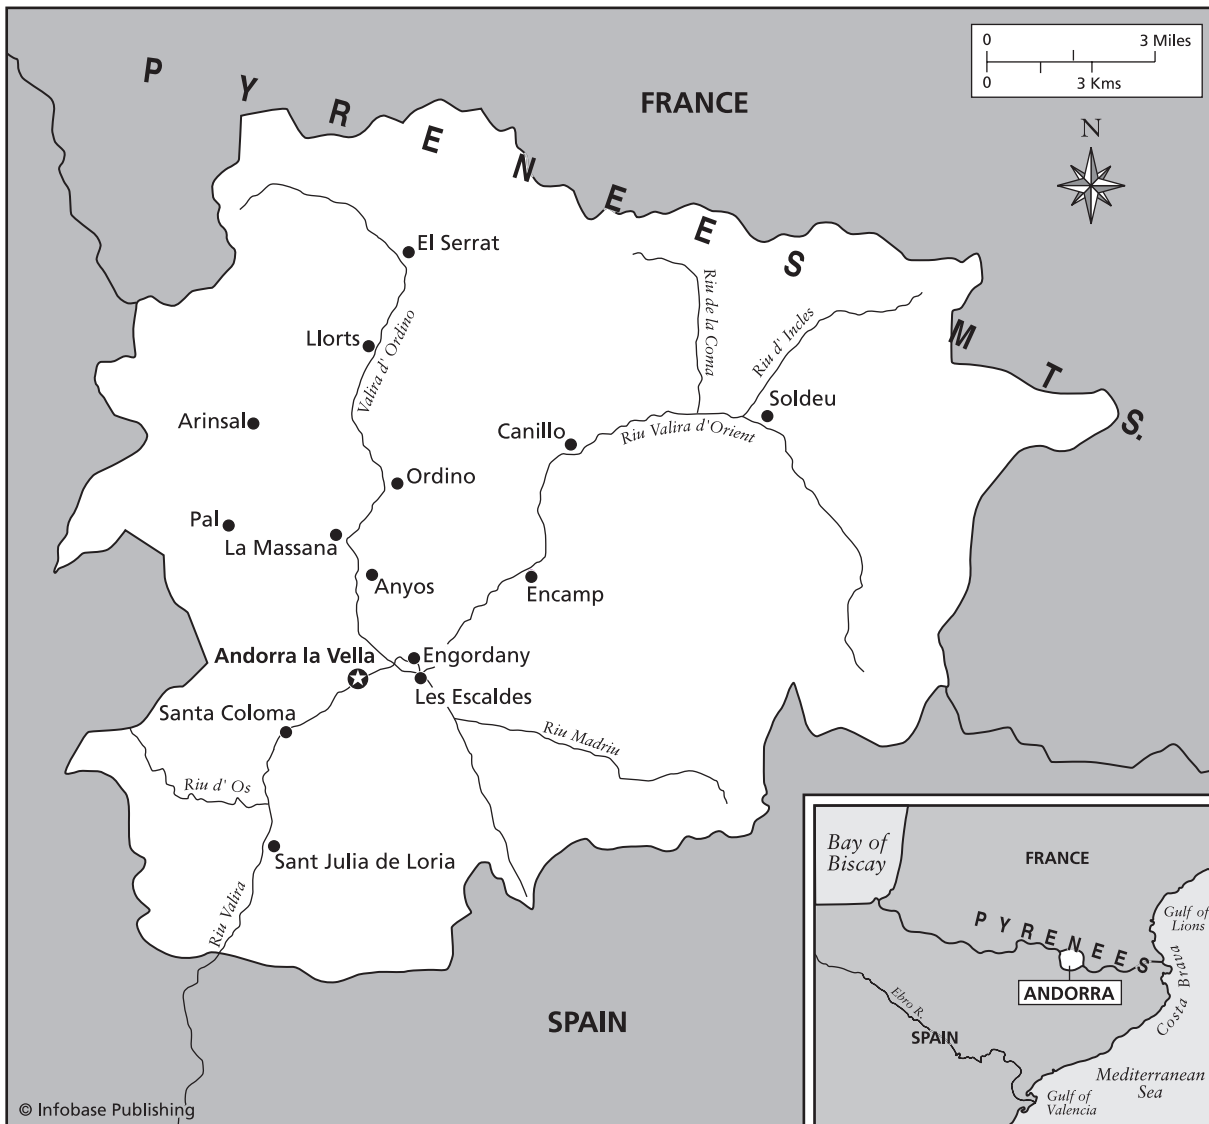

Andorra is a landlocked country on the southern slopes of the Pyrenees Mountains between the French departments of Ariège and Pyrénées-Orientales to the north and the Spanish provinces of Gerona and Lerida to the south. Andorra has a total area of 468 sq km (291 sq mi), extending 30.1 km (18.7 sq mi) east to west and 25.4 km (15.8 mi) north to south. The total boundary length of 121 km (75.1 mi) is shared with France (57 km; 35.4 mi) and Spain (64 km; 39.7 mi).

The capital is Andorra la Vella, with a population of about 23,000.

Most of Andorra's rugged terrain consists of gorges, narrow valleys, and defiles surrounded by mountain peaks rising higher than 2,900 m (9,500 ft) above sea level. All the valleys are at least 914 m (3,000 ft) high, and the mean altitude is over 1,829 m (6,000 ft). Of the several lofty peaks, the highest is Coma Pedrosa (3,100 m; 10,170 ft).

The country is drained by a single basin whose main stream, Riu Valira, has two branches and six smaller open basins; hence, the republic is described as consisting of valleys. The section of the river flowing through La Ser rat by way of Ordino and La Massana is the Valira del

Andorra

Norts; that flowing through Canilo, Encamp, and Les Escaldes is the Valira del Orien.

Andorra la Vella	22,035
Escaldes-Engordany	16,402
Encamp	11,832

CLIMATE AND WEATHER

Because of its high elevation, Andorra has an alpine climate with severe winters and mild or warm summers, depending on the altitude. The rainfall is heavy, most of it falling in April and October, which accounts for the lush mountain pastures. The northern valleys are completely snowed in for at least six months each year, and there is a thriving ski-resort industry.

Climate and Weather

Mean Temperature

Winter: 30°F to 40°F

Summer: 54°F to 79°F

Average Rainfall: 35 in

FLORA AND FAUNA

Andorra's plant and animal life is similar to that found in the nearby regions of both Spain and France. Alpine and subalpine plants dominate, including the nondeciduous oak at lower elevations, firs and pines at higher elevations, and only grass at the highest elevations. Flowers include the gentians, carnations, violets, bellflowers, and daisies. Berries include wild blueberries, strawberries, and blackberries.

Animal life includes a species of chamois indigenous to the Pyrenees, bears, wolves, martens, and rabbits. Avian life includes eagles, ducks, geese, and vultures. The streams of the country have plentiful supplies of trout and crayfish.

ETHNIC COMPOSITION

Native Andorrans, who make up about one-third of the population, are of Catalan stock. The majority are Spanish residents.

LANGUAGES

The official language is Catalan, a Romance language related to Provençal. Both French and especially Spanish are also spoken.

RELIGIONS

The population is almost entirely Roman Catholic. The constitution guarantees religious liberty.

Other	3,684

HISTORICAL BACKGROUND

Andorra is historically associated with Charlemagne; the national anthem declares, "The great Charlemagne, my father, has delivered me from the Arabs." Charlemagne is believed to have christened the principality after the biblical town of Endor and to have granted the Andorrans a charter. Charles the Bald, grandson of Charlemagne, appointed the count of Urgel overlord of Andorra with the right to collect the imperial tribute. The same right was claimed by the bishop of Urgel. When, in 1226, the lords of the county of Foix, in present-day France, became heirs of the counts of Urgel, the contest between the two claimants became intense. In 1278 the dispute was resolved by the adoption of a *pareage*, a federal institution recognizing the equal rights of two lords to a *seigneurage*. In 1505 Germaine of Foix married Ferdinand V of Spain, thus bringing the overlordship under Spain, but it went back to France when Henry II of Navarre, also a count of Foix, ascended the French throne in 1589 as Henry IV. In 1793 the French revolutionary government refused the traditional Andorran tribute as a legacy of feudalism and renounced French suzerainty, overriding the wishes of the Andorrans. French coprincipalityship was restored in 1806 by Napoleon on the express petition of the Andorrans. With the demise of the monarchy, the president of France functions as the coprince along with the Spanish bishop of Urgel.

In 1970 suffrage was extended to women and in 1977 to all first-generation Andorrans of foreign parentage who were aged 28 and over. In 1982 an executive council of six ministers was formed in the first institutional reform in modern Andorran history. In 1993 a new constitution was promulgated, as approved by 74.2 percent of Andorrans. In 1993 Andorra was admitted to the Council of Europe and the United Nations. In the same year both France and Spain explicitly acknowledged the sovereignty of Andorra and established embassies in Andorra la Vella.

Andorra attempted to broaden its economic base in the 1990s by expanding beyond tourism into banking and finance. A law to broaden citizenship was passed in 1995. Snowmaking machines were put into use to extend the skiing season in the late 1990s. In 2000 Radio Valira, the first commercial radio station in Andorra, opened. Marc Forné Molné, of the ruling Liberal Party of Andorra (PLA), won the parliamentary elections held on March 4, 2001, with a clear majority. Also in 2001 the country witnessed a new form of smuggling, as retired people from all over Europe brought their hidden currencies—on which they had paid no taxes—into Andorra to buy goods before the change to the euro currency made their caches worthless. On May 12, 2003, having served since 1971 as bishop of Urgell and coprince of Andorra, Msgr. Joan Martí i Alanis retired and was succeeded by Mgr. Joan Enric Vives i Sicília. In October 2004 negotiations began between Andorra and the European Union on an agreement that would allow Andorra to mint its own euro coins.

Cap de Govern

1994–2005	Marc Forné Molné
2005–	Albert Pintat

CONSTITUTION

Andorra has one of the most unusual systems of government in the world. The two heads of state, or coprinces, who have equal authority in Andorran matters, are both non-Andorrans: One is the president of France and the other the bishop of Urgel. Andorra pays a biennial *questia* (tribute) to the president of France and to the bishop, who receives from each of the six parishes two capons, two hens, and four cheeses, which he then returns.

The constitution adopted in 1993 created a constitutional monarchy. A parliament is elected by universal

suffrage: The General Council of the Valleys has 28 seats, with two members elected from each of the seven parishes and 14 elected at large. The members serve for four years.

PARLIAMENT

Andorra has a unicameral legislature of which half the 28 members are elected to represent the national constituency, with the other half elected to represent each of the country's seven parishes. Each parish has two representatives.

POLITICAL PARTIES

Political parties were sanctioned under the 1993 constitution. The largest parties include the Liberal Party of Andorra, headed by Marc Forné Molné, the National Democratic Initiative, and the National Democratic Organization, which succeeded the Democratic Party of Andorra, founded in 1979. Molné won reelection in 2001, with his Liberal Union Party holding a clear majority of seats in the General Council.

LOCAL GOVERNMENT

For the purpose of local administration Andorra is divided into seven villages, or districts, each of which has a parish council whose members are elected by universal suffrage. Below the districts are *communs* and *corts*. The former are 10-member bodies elected by universal suffrage and headed by an elected senior consul and a junior consul. The latter are submunicipal advisory bodies that function primarily as administrators of communal property.

LEGAL SYSTEM

The legal system is based on customary Catalan law supplemented by Roman law. Traditional laws are codified in the *Namual Digest* of 1748 and the *Politar* of 1763, and legal standards are found in the Instructions to Bailiffs of 1740. Civil cases in the first instance are heard in the Court of the Bailiff (*Tribunal del Batlle*), presided over by two *bayles*, one appointed by the *viguier de franca* of France and the other by the *viguier episcopal* of Spain. Appeals are heard in the Court of Appeal, headed by a single judge appointed alternately by each of the two coprinces. Final appeals in civil cases lie with the Supreme Court of Andorra (*Tribunal Supremo*) in Perpignan, France, or the ecclesiastical court of the bishop of Urgel. Criminal cases are heard in Andorra la Vella by the *Tribunal des Corts*, consisting of the two *viguiers*, the judge of appeal, the two bailiffs, and two members of the General Council. There is a parallel system of labor and administrative courts.

HUMAN RIGHTS

Under the constitution all human and civil rights are respected and protected. All citizens are equal before the law and enjoy full liberties. Discrimination on the grounds of race, sex, religion, and national origin is prohibited. The constitution instituted the legalization of political parties and trade unions, and provision was made for an independent judiciary. Suffrage has been universal since 1970, when women received the right to vote, but the noncitizen majority cannot vote—over two-thirds of the residents of the country are noncitizens. The Association of Immigrants in Andorra (AIA) defends the rights of foreign residents. The Association of Andorran Women (AAW) focuses on women's rights. The Red Cross is present within the country.

FOREIGN POLICY

With the passage of the 1993 constitution, France and Spain recognized Andorra's independence. The country thereafter became a member of the United Nations and was also admitted to the Council of Europe. The United States maintains diplomatic ties to Andorra via the U.S. ambassador to Spain.

DEFENSE

Andorra has no defense forces. All able-bodied men who own firearms must serve without remuneration and without uniforms in the small army that presents the Andorran flag at official ceremonies. The army, which has not seen battle in 700 years, is unique in that all its men are officers.

ECONOMY

Andorra has a capitalist economy superimposed on a feudal political system. The economy is based primarily on trade and tourism and also increasingly on banking and finance. Owing to Andorra's duty-free status, its economy expanded rapidly after World War II. However, Spain's accession to the European Union in 1986 and the consequent removal of Spanish tariff barriers has threatened its lucrative trade. Failing to reach an agreement with the

EU by 1988 on a special status within the union, Andorra has requested that it be allowed to continue as a free-trade area in exchange for modifications in the coprincipality's fiscal and social policies.

With minimal company laws or regulations and little or no enforcement of laws that do exist, Andorra has also been a tax haven for foreign financiers and investors. Land speculation has led to rapid growth of the construction industry. The country's prosperity is based as much on smuggling and laundering of money as on legitimate activities.

There are no accurate estimates of Andorra's gross domestic product, but the best available one is \$1.3 billion, or \$19,000 per capita, as of 2000.

Andorra's economy, based primarily on the country's attractiveness to visitors, continued to thrive into the new millennium. In 2003 tourism made up approximately 80 percent of gross domestic product, and Andorra welcomed about 9 million visitors annually. The banking sector, the second-largest component of the economy, continued to prosper as it worked to expand its financial services.

ENVIRONMENT

Andorra is subject to snow slides and avalanches. The principal environmental concern is deforestation. Also of concern is soil degradation due to the overgrazing of mountain meadows. Other environmental concerns include air pollution, wastewater treatment, and solid-waste disposal. Andorra has not signed any international environmental agreements.

LIVING CONDITIONS

Andorra has one of the longest life expectancies in the world, with a 2004 estimate of 83.5 years. With a total area just twice the size of Washington, D.C., Andorra is a country where building sites are at a premium and land speculation high. With 23,000 people (out of a population of about 70,000) living in the capital, Andorra le Vella, and another 28,000 living in the towns of Les Escaldes and Encamp, there is plenty of open space in Andorra, but much of it is devoted to farming or the all-season tourist trade—skiing, hiking, and other nature sports. Thus, slate-roofed, stone farmhouses stand next to high-rise apartment buildings. Both in rural and urban areas the standard of living is high.

A land cut off from the rest of Europe until the 1930s, Andorra's only transportation for millennia was pack animals. Since that time the country has been modernized, with one car for every four persons by the 1980s. A modern subway is under construction. As a result of modernization and tourism, much of the charm of the old villages has been lost, though certain resorts still maintain their rustic charm.

HEALTH

The World Health Organization (WHO) announced in June 2000 that Andorra ranked 10th in the world in the number of years a person could be expected to live. A 2004 estimate put that figure at 83.5 years. In the WHO's study of the world's health-care systems, Andorra ranked fourth. All citizens have access to safe drinking water and high quality sanitation. In 2004 the infant mortality rate was an estimated 4.05 deaths per 1,000 live births, and the death rate was 5.9 deaths per 1,000 population.

FOOD AND NUTRITION

Though influenced by both France and Spain, Andorra has developed its own food culture after centuries of isolation from the rest of Europe. Simple farm products and game animals make up many of the most popular national dishes. A stew is made from game such as hare or chamois cooked in its own blood, while ham, sausages, and lamb chops are also favorites, as are grilled or poached brook trout and omelets with local wild mushrooms. Boiled cabbage and potatoes, called *trinixat*, serves as a side dish for many meals. Desserts include flat cakes called *coques* and *coca de canel*, made of dried fruit simmered in wine and sugar.

WORK

A 2001 estimate puts the Andorran work force at 33,000, with 1 percent in agriculture, 21 percent in industry, and 78 percent in services. Farmers grow small quantities of rye, wheat, barley, oats, and vegetables and raise cattle and sheep. By far the largest employer in the country is the tourist industry. Other industries include finance and timber. As of 1996 unemployment was estimated at 0 percent.

The 1993 constitution provides for free association in labor unions, and while 600 trade union associations registered with the government by 2002, there were no actual unions in operation. It is not clear whether the right to strike is guaranteed. The minimum work age is 18 and the maximum workweek 40 hours. As of 2002 the

minimum wage was \$3.65. The government maintains various health and safety standards for the workplace.

France and Spain still provide many employment opportunities for young citizens of Andorra.

MEDIA

The oldest Andorran newspaper is *Poble Andorra*, a weekly that was founded in 1974 upon the demise of the daily newspaper of the same name. A private TV company, Antenna 7, transmits one hour of Andorran-interest programs from the Spanish side of the border. Andorra Television, founded in 1995, is an Andorran-owned commercial television service. Radio Andorra, a commercial public broadcasting service, replaced two stations that closed down in 1981 after the expiration of their contracts with French and Spanish companies. In 2000 Radio Valira, another commercial radio station in Andorra, began its broadcasts. As of 2001 there were 23,000 mobile phones in use and 24,500 Internet users. The Andorran constitution guarantees the rights of free speech and a free press.

CULTURE

Culturally, Andorra harkens back to its Catalanian roots. This can be witnessed in old dances known as the *sardana*, which is also the national dance of Catalonia in north-eastern Spain. Old and young alike take part in this circle or line dance, with hands held high in the air. Other folk dances include the *contrapas* and *maratxa*, which survive in Saint Julia de Lona. Such dances are performed to Catalanian music.

Of more contemporary interest is the Escaldes-Engordany International Jazz Festival, held annually. Two well-known Catalan writers, Michèle Gazier and Ramon Villeró, both come from Andorra. The country boasts its Chamber Orchestra, directed by the violinist Gérard Claret.

FOLKLORE AND MYTHOLOGY

Andorran folklore is a blend of Catalan and Catholic influences. The Virgin Mary figures in many myths and legends, as do other miraculous characters such as the Virgin of Meritxell, whose statue is now housed in a church of the same name. Legend has it that this statue was found on a snowy hillside surrounded by flowers. Moved to a covered location, the statue would continually disappear, reappearing again in the snow surrounded by blooming plants. After a long while it was decided to leave the statue where it was but to build a church around it.

Another revered lady—in this case secular—is depicted in the legend of the White Lady, who is often interchanged with the Virgin of Meritxell. Abused by a wicked stepmother, this young princess marries a man who rebels against her parents. The rebellious couple is referred to at all major festivals in song and dance.

ENTERTAINMENT AND RECREATION

Andorrans enjoy much the same sort of entertainment and recreation as the rest of western Europe. They receive both television and radio broadcasts domestically produced and from neighboring countries. With almost 100 percent literacy rates, books and newspapers also provide entertainment, as do the cinemas, museums, and concert halls of the towns and cities. Outdoor activities, including hiking and skiing, are popular in this mountainous country. There is a series of 21 uninhabited cabins in the mountains open to hikers for use as overnight shelters.

ETIQUETTE

Etiquette in Andorra stems from a mixture of French and Spanish influences. Neither as effusive as the Spaniards nor as sometimes distant as the French, the Andorrans, as a result of long isolation and sudden mixing with the world via its tourist trade, have something of a schizoid view toward strangers and outsiders. Overtly and formally polite, they are still clannish.

Men shake hands in public and sometimes hug close friends, as do women. With so much of the population coming from other nations, the country has a large admixture of styles of interaction.

FAMILY LIFE

Traditionally, marriages in Andorra were matters primarily of economic concern rather than of love and common attraction. Of course, this practice, like many other tradi-

tional practices in Andorra, has changed in modern times. Also traditionally, the eldest son would normally inherit all family property. This created wealthy estates but also led to high rates of emigration, as other sons sought opportunities in the outside world.

The family is the basic unit of Andorran society, but this too has gone through changes in the modern world. Rural family units once tended to be extended, while urban ones were usually nuclear. Domestic roles were also strictly divided, with women taking on child-rearing responsibilities, but with the increased role of women in the workforce such strict roles have broken down. No longer is the man always the dominant one in the family and the breadwinner.

PERSONAL APPEARANCE

Western style clothing is typical in Andorra, for both young and old, though style is somewhat more conservative in nature than in the rest of Europe. Traditional apparel is worn for special holidays and folk-dancing festivals. For these the women wear full skirts with floral patterns over white petticoats. They also wear blouses, often covered by flowered shawls, and long, black, fingerless net gloves. This costume is completed with black espadrilles, or cloth sandals with white stockings. For men the traditional costume is a white shirt, dark knee-length pants, white stockings, and black shoes. Many men also wear broad red sashes tied at the waist.

SPORTS

Skiing—both downhill and cross-country—is the national sport and pastime of Andorra. The country not only has the perfect geography but also the perfect climate for mountain sports. Snow covers the mountains for six months of the year, with largely clear skies overhead. The ski season has been lengthened since the 1990s through the use of snowmaking machines on the slopes. In other seasons the mountains provide a home for hikers, mountaineers, and rock climbers from within Andorra and from all over the world. Andorrans also enjoy competitive sports such as rugby, soccer, tennis, and golf. Fishing for trout in mountain streams is also popular.

CHRONOLOGY

- 1970** Women gain the rights to vote and to hold public office.
- 1973** The first personal meeting between the two co-princes since 1278 takes place at Cahors, France.
- 1978** Andorra celebrates the 700th anniversary of its founding.

- 1981** An executive, separate from the legislature, is established, with a head of government and an executive council.
- 1987** A meeting of Europe's six small nations is held in Andorra.
- 1993** A constitutional referendum is held and a written constitution is approved by 74 percent of the electorate.
- 1994** Don Marc Forné Molné is elected prime minister of a coalition government.
- 1997** The Liberal Union Party, headed by Molné, wins a majority of seats in the general election and ends the coalition government.
- 2001** Marc Forné Molné is reelected head of government.
- 2003** Joan Martí i Alanis retires as bishop of Urgel and is succeeded by Msgr. Joan Enric Vives i Sicília as episcopal coprince of Andorra.
- 2004** Plans begin for an "aerial" cable subway system in Andorra. Talks are initiated with the European Union to allow Andorra to mint their own euro coins.

DATE OF INDEPENDENCE

November 11, 1975

DATE OF CONSTITUTION

November 11, 1975; revised 1978, 1980, 1991, and 1992

GEOGRAPHICAL FEATURES

Angola is on the western coast of southern Africa, south of the equator, and occupies an area of 1,246,700 sq km. Angola proper, excluding the exclave of Cabinda, extends 1,758 km southeast to northwest and 1,491 km northeast to southwest. The total Atlantic coastline is 1,600 km long.

Angola proper shares its total international land boundary of 4,747 km with three countries: Democratic Republic of the Congo (Zaire) (2,511 km), Zambia (1,110 km), and Namibia (formerly South-West Africa) (1,376 km). Cabinda shares its international land boundary of 426 km with two

nations: Democratic Republic of the Congo (Zaire) (225 km) and Republic of Congo (201 km).

The sparsely watered coastal plain extends for 50 to 160 km inland. North of the mouth of the Kwanza the coast is hilly; to the south it is, for the most part, flat with occasional cliffs. The coastal plain is separated from the inland plateau by a series of irregular terraces forming a subplateau. Two-thirds of Angola is composed of the central plateau, which has an average height of 1,050 to 1,350 m. The highest point is Mount Moco (2,620 m). The Namib Desert occupies the coastal plain above Mocimedes. The Cassange Depression is a sedimentary hollow toward the Kwango Basin in Zaire. The northwestern

Angola

section of the Angolan Plateau and the Cabinda exclave are covered by equatorial jungles.

CLIMATE AND WEATHER

Angola has a tropical climate with two seasons: a cool season from June to September and a rainy season from October to May. There are, however, considerable regional variations. The northern region from Cabinda to Ambriz has a damp, tropical climate; the region from Luanda to Mocamedes has a moderate tropical climate; the southern strip between the plateau and Namibia has a desert climate. The interior uplands in Bie, Huambo, and Huila have a pleasant climate similar to that of Portugal. The Benguela Current along the coast reduces rainfall in the coastal regions and makes them arid or semiarid. The mean annual temperature is 22.5°C (72.5°F) in the north, 23.5°C (74.3°F) in Luanda, and 19.5°C (67.2°F) in the south. The mean annual rainfall is 203 mm (8 in) in the southwest and 2,030 mm (80 in) in the northeast. The prevailing winds are west, southwest, and south-southwest.

Climate and Weather

Mean Temperature
 North: 72.5°F
 Luanda: 74.3°F
 South: 67.2°F
 Average Rainfall: 8 in (the Southwest)
 80 in (the Northeast)

FLORA AND FAUNA

In the northern part of Angola and in the Cabinda enclave can be found dense tropical rain forests. Farther south these forests turn into savanna, or mixed grasses and trees, and then into grasslands in the southern and eastern regions of the country. Coastal areas feature palm trees, while south of Namibe is sparse desert vegetation. The deserts contain a unique plant called the *tumboa*, which has a deep taproot and a pair of broad, flat, 10-foot-long leaves.

Wildlife is diverse and includes large mammals, such as rhinoceroses, giraffes, elephants, hippopotamuses, antelopes, zebras, gorillas, and lions. Angola is rich in bird species and contains a wide variety of reptiles. The sable antelope, found in the south, is a species threatened with extinction.

ETHNIC COMPOSITION

Angolans are almost entirely of Bantu stock, with numerous tribal groupings. Three-fourths of the African population is accounted for by the four most important tribes.

The largest group is the Ovimbundu, in central and southern Angola, who make up almost 33 percent of the population. The Bakongo, in the northwest, making up 25 percent of the population, also spill over into the Democratic Republic of the Congo (Zaire) and Republic of Congo. The Kimbundu (Mbundu), who occupy the terrain inland from Luanda, are culturally but not ethnically related to the Bakongo. The Kimbundu tribe is among the more detribalized groups in Angola and makes up 25 percent of the population. The Chokwe, of eastern Angola, make up 8 percent of the population; sometimes they are grouped together with the Luanda. Other prominent groups are the Nganguela, Nyaneka, Humbe, Ovambo, Luvale, Ambo, Bunda, Luchazi, Kanguela, Kwangare, Cuanhama, and Herero.

Under the Portuguese the population was officially divided until 1961 into *indígenas*, or native Africans, and *assimilados*, or those who learned Portuguese and assimilated into Portuguese culture, including *mestiços*. Under the colonial regime the European population was almost entirely Portuguese and constituted close to 6 percent of the total population. Nearly 90 percent of Portuguese settlers and *mestiços* were repatriated to Portugal just before independence. The foreign community after independence included 50,000 Cuban soldiers and advisers and an undetermined number of Soviets. These forces were withdrawn in 1991.

LANGUAGES

The official language is Portuguese. No African language extends beyond its tribal area, and few have written scripts of any kind. The principal Bantu languages and their dialects are Kikongo, Kimbundu, Umbundu, Kioko, and Nganguela.

RELIGIONS

Although the constitution guarantees the inviolability of freedom of conscience and belief and provides for separation of church and state, the Movimento Popular de Libertação de Angola (MPLA), the controlling political party, publicly emphasizes the importance of propagating “atheism” and has been critical of religious activities. A large portion (around 55 percent) of the Angolan population is Christian, however, and the MPLA has not moved to close down churches. Church services are regularly held, and there is widespread attendance. Foreign and Angolan missionaries are allowed to carry out activities. Reportedly, the União Nacional para a Independência Total de Angola (UNITA) allows religious liberty in the areas it controls and in which it operates, but obviously the ability of religious personnel to carry out activities in Angola has been circumscribed by the intensification of the civil war.

Over 45 percent of the population adheres to traditional African religions.

HISTORICAL BACKGROUND

Although the precolonial history of many parts of Africa has been carefully researched and preserved, there is relatively little information on the region that forms contemporary Angola as it was before the arrival of the Europeans in the late 1400s. The limited information that is available indicates that the original inhabitants of present-day Angola were hunters and gatherers. Their descendants, called Bushmen by the Europeans, still inhabit portions of southern Africa, and small numbers of them may still be found in southern Angola. These Khoisan speakers lost their predominance in southern Africa as a result of the southward expansion of Bantu-speaking peoples during the first century.

The Bantu settled in Angola between 1300 and 1600, and some may have arrived even earlier. The Bantu formed a number of historically important kingdoms. The earliest and perhaps most important of these was the Kongo Kingdom, which arose between the mid-1300s and the mid-1400s in an area overlapping the present-day border between Angola and the Democratic Republic of the Congo. Other important kingdoms were Ndongo, located to the south of Kongo; Matamba, Kasanje, and Lunda, located east of Ndongo; Bié, Bailundu, and Ciyaka, located on the plateau east of Benguela; and Kwanhama (also spelled Kwanyama), located near what is now the border between Angola and Namibia. Although they

did not develop a strong central government, the Chokwe (also spelled Cokwe) established a significant cultural center in the northeast of present-day Angola.

Parts of Angola were exposed to Portuguese influence as early as the late 15th century. Luanda was founded as a trading settlement in 1575, and the king of Kongo, Nzinga-a-Cuum, was converted to Christianity. Meanwhile, the Portuguese, having failed to find gold and other precious metals, became deeply involved in the slave trade. Portugal's attempts to consolidate its rule over the whole interior of Angola were strongly resisted by the Angolans; the first concerted resistance to Portuguese rule lasted from 1872 to 1902, when the Ovimbundu were beaten in the Bailundo War.

Portugal's colonial policy was to bind its colonies rigidly to the mother country. The doctrine of Luso-African unity argued that what was good for Portugal was good for the colonies. Portugal also emphasized its antiracism compared with the racial practices of Britain, France, and other colonial powers. In 1951 Angola was declared to be an integral part of Portugal, and in 1952 the first of a series of planned settlement projects known as *colônatos* was begun for Portuguese immigrants.

Armed resistance to Portuguese rule began on February 4, 1961, when partisans of the MPLA, headed by a physician, Dr. António Agostinho Neto, attacked the São Paulo fortress and police headquarters in Luanda. Within six weeks the war had spread to the north. Another guerrilla organization, the Frente Nacional de Libertação de Angola (FNLA), headed by Holden Roberto, set up a government-in-exile in the Democratic Republic of the Congo in 1962. Insurgency spread to the south through the partisans of a third organization, UNITA. The drawn-out guerrilla warfare had forced Portugal to the limits of military and psychological exhaustion when the coup of April 25, 1974, brought a new and radical government into power in Lisbon, one committed to ending all Portugal's colonial wars. The transfer of sovereignty to African hands in 1975 was completed with few upsets and in a reasonable spirit of tolerance.

In the wake of the coup in Portugal, the leaders of Angola's three nationalist movements signed an agreement with Portugal calling for independence in late 1975. However, the alliance soon broke down, and the FNLA and UNITA formed an alliance in opposition to the MPLA. The conflict soon involved the cold war superpowers, as the Soviet Union and Cuba sent in troops and advisers, whereas South Africa, with the support of Western nations, backed UNITA. On independence, Dr. Agostinho Neto, whose MPLA controlled the capital, announced the formation of the People's Republic of Angola. The two other nationalist groups announced the formation of a Democratic People's Republic of Angola with the capital in Huambo. In early 1976 the MPLA launched a major offensive into UNITA territory that resulted in the withdrawal of South African troops and the

capture of major UNITA centers. UNITA continued its resistance as a guerrilla movement.

Neto established a socialist regime and in 1977 reconstituted the MPLA as a Marxist-Leninist party with a state subordinate to the party. Neto died in 1979 and was succeeded by MPLA chairman José Eduardo dos Santos. Legislative elections were held in 1980 and again in 1986, but real power continued in the hands of the MPLA hierarchy.

During the 1980s South Africa periodically invaded and occupied Angola, purportedly in pursuit of Namibian rebels. Its troops withdrew in 1988 as part of the peace process designed to bring independence to Namibia. Cuba also agreed to a gradual withdrawal of its troops. In 1988 UNITA rejected a one-year amnesty offered by dos Santos to UNITA supporters, and fighting continued despite attempts at a cease-fire. In late 1989 the UNITA leaders agreed to peace talks with the Angolan government.

During 1990 the Angolan government and UNITA met for five rounds of peace talks under the sponsorship of Portugal, the Soviet Union, and the United States. By the end of the year the parties had reached a tentative agreement on ending the civil war. Under the final accord, which was signed in May 1991, multiparty elections would take place by November 1992. In the meantime, the MPLA would continue to administer the government's daily affairs. In addition, both sides agreed to merge their ground forces into an army of no more than 50,000 members. The air force and navy would remain in MPLA hands until the elections, under close independent supervision of a commission made up of delegates from the MPLA and UNITA as well as the three mediating governments.

While negotiations were under way in 1990, the MPLA formally abandoned its Marxist-Leninist ideology and declared itself a social democratic force. It approved the establishment of a multiparty government, direct presidential elections, and a large degree of free enterprise. It also endorsed proposals for a year-long process of constitutional revision that would start after a cease-fire had been signed. UNITA was to participate in the revision process. In 1991 UNITA decided to transform its movement from a guerrilla force into a political party.

A peace settlement signed in Washington in 1991 provided for free multiparty elections in Angola in 1992 under the supervision of a joint commission with Portuguese, U.S., Russian, the renamed Movimento Popular de Libertação de Angola-Partido do Trabalho (MPLA-PT), and UNITA representatives. In 1992 the MPLA-PT endorsed constitutional revisions formalizing the government's commitment to a democratic system. It also approved a united armed force, Angolan Armed Forces, drawn from both Popular Armed Forces for the Liberation of Angola and UNITA's Armed Forces for the Liberation of Angola. However, the 1992 election was marred

by widespread violence and armed clashes in the capital. In the polling, MPLA-PT gained a 2-to-1 majority and dos Santos won 49.57 percent of the vote compared with Savimbi's 40.07 percent. Savimbi, however, charged that the elections were rigged and stated that he would not accept defeat. By 1993 tens of thousands were reported killed, with Savimbi's forces on the defensive. In a pitched 55-day battle that left 12,000 dead, UNITA recaptured its headquarters in Huambo. The insurgents were now in control of over 70 percent of Angolan territory, and the UNITA guerrilla forces had become as powerful as a conventional army.

The next several years were marked by successive peace talks at Addis Ababa, Abidjan, and Lusaka, all ending in a stalemate. In response to UNITA's intransigence, the United States recognized the dos Santos government and ended its support for UNITA. Subsequently UNITA intensified its military operations, capturing oil-rich Soyo. In the Lusaka-2 agreement, the government made key concessions to UNITA, including the award of 11 government portfolios and three governorships. President dos Santos and Savimbi met in 1995, and further talks were held. Despite reported agreements, the two sides continued to drift apart on issues such as disarming of civilians and integration of UNITA forces into the army. Meanwhile both UNITA and MPLA-PT continued to launch new offensives. In 1997 the United Nations Angola Verification Mission (UNAVEM), charged with monitoring and organizing elections, was replaced by UN Observer Mission at Angola (UNOMA). UNOMA's mandate expired in 1998, and the United Nations' involvement in Angola completely ended. Savimbi refused to relinquish rebel-held territory or completely disarm his troops. However, in 1997, a final resolution appeared near as the National Assembly met for the first time with a full complement of UNITA legislators and with Savimbi as "the leader of the largest opposition party." At the same time, dos Santos named a Government of Unity and National Reconciliation with Fernando Van Dúnem as prime minister and including 11 UNITA members. This government was suspended in 1998 because of reported UNITA noncompliance with the Lusaka accord. Some UNITA cabinet members are reported to have deserted Savimbi and stayed on in the government. By 2000 the government was reported to be planning a final offensive against UNITA. Fighting erupted again in 2002. Insurgent leader Savimbi was killed, and a subsequent cease-fire with UNITA boded well for the nation's near-term future. While the civil war ended, violence remained widespread.

LIST OF MODERN RULERS

- 1976-79 António Agostinho Neto
 1979- José Eduardo dos Santos

CONSTITUTION

Angola is a sovereign, democratic, and independent republic according to the constitution, promulgated in 1975 and amended in 1978 and 1980. The supreme organ of state is the unicameral National People's Assembly, which is chosen by an electoral college whose members are directly elected. In 1992 the MPLA-PT approved a revised constitution that provided for a presidentially appointed prime minister to head a transitional government, the abolition of the death penalty, the removal of "People's" from the republic's formal name, and the deletion of all constitutional references to people and popular as reflecting former Marxist tendencies.

The president is head of state and government, commander in chief of the armed forces, and leader of Angola's sole political party, the MPLA. Real political power is exercised by the MPLA, which is responsible for the nation's political, economic, and social leadership. The chairman of the party is the head of state.

PARLIAMENT

In accordance with the constitution of 1975, the National People's Assembly was established in 1980 as successor to the Council of the Revolution. The unicameral legislature is indirectly elected for a term of five years. Nearly all the 220 full and 29 alternate members are directly or indirectly affiliated with the MPLA.

POLITICAL PARTIES

While Angola has a number of political parties, the two most important are the ones that have shaped much of its history since independence. The ruling party is the leftist MPLA (Popular Movement for the Liberation of Angola), which has ruled the country since 1975. The second-largest party is the formerly United States-backed UNITA party (National Union for the Total Independence of Angola), which spent years of armed resistance before joining the current unity government in April 1997.

LOCAL GOVERNMENT

Under the MPLA regime, Angola is administratively divided into *provincias* (provinces), *concelhos* (councils), *comunas* (communes), *circulos* (circles), *bairros* (neighborhoods), and *povoados* (villages). The government is represented in the provinces by the provincial commissioner, in the district by the local commissioner, and in the commune by the commune commissioner, all of whom are appointed on the recommendation of the MPLA. The administrative bodies of the district, commune, neighborhood, and

villages are the local commission, the commune commission, the neighborhood commission, and the village commission, respectively.

LEGAL SYSTEM

The judiciary is headed by a Supreme Court and Court of Appeals in Luanda. There are also military, civil, and revolutionary people's courts. The rule of law is based upon Portuguese civil law system and customary law. In the last few years of the twentieth century attempts began to be made to accommodate political pluralism and increased use of free markets.

HUMAN RIGHTS

In terms of civil and political rights, Angola is classified as a country that is not free. There is very little reliable information on human rights practices in Angola. The United States does not maintain diplomatic relations with Angola, and of the major human rights organizations only Amnesty International has reported on this country.

The freedoms of expression, religion, assembly, and belief are qualified by the condition that they must conform to and promote "fundamental national interests and objectives." The domestic media are entirely in government hands. Entry of foreign correspondents is restricted, and those who are in the country are subject to immediate expulsion if they write articles critical of MPLA policies. The labor movement also is an MPLA organ; the right to strike is prohibited by law as a crime against the security of the state. The government has instituted a pass system for travel within Angola; foreigners are generally prohibited from traveling outside cities. The visa policy also is extremely restrictive and stringent. Applications for visas are subject to long delays, if they are not rejected outright or ignored. As in other authoritarian states, participation in the political process is limited to members of the MPLA-PT.

FOREIGN POLICY

Although battered by a long-standing civil war, Angola has been an active player in regional affairs. Its support for Kabila was a factor in the overthrow of Mobutu in Congo (Zaire), and the later withdrawal of this support contributed to the disintegration of the Kabila administration. Relations with the United States, which had opposed the Marxist basis of the Neto government, became more positive after the exit of Cuban troops from Angola in 1991. One of the major goals of Angolan foreign policy has been to isolate UNITA, the principal opposition, and to deny it any aid from abroad. In 1998 Luanda alleged

62 Angola

that Burkina Faso, Rwanda, Togo, Uganda, and Zambia were either supplying UNITA rebels or providing them safe haven. Relations with Zambia especially deteriorated in 1999, to the point of armed conflict. Although the issue was later defused, Angola's aggressive involvement in the Congolese civil wars is a matter of serious concern to its neighbors.

DEFENSE

The defense structure is headed by the president. The armed forces, known as FAPLA (Forças Armadas Populares de Libertação de Angola), are integrated within the MPLA. The government has announced a universal draft for two years for all Angolans between the ages of 18 and 35. The total strength of the armed forces was reported at 110,500 in 1999. Total military expenditures for 2003 were \$265 million, about 1.9 percent of the nation's gross domestic product (GDP).

The country is divided into six military divisions: North, East, Central and West, Luanda, South, and Cabinda.

ECONOMY

Angola is an economy in disarray because of a quarter century of nearly continuous warfare. Despite its abundant natural resources, output per capita is among the world's lowest. Subsistence agriculture provides the main livelihood for 85 percent of the population. Oil production and the supporting activities are vital to the economy, contributing about 45 percent to GDP and more than half of exports. Notwithstanding the end of civil war by 2004, violence continues, millions of land mines remain, and many farmers are reluctant to return to their fields. As a result, much of the country's food must still be imported. To take advantage of its rich resources—gold, diamonds, extensive forests, Atlantic fisheries, and large oil deposits—Angola will need to implement the peace agreement and reform government policies. Despite the increase in the pace of civil warfare in late 1998, the economy grew by an estimated 5 percent in 2000. By 2004 real GDP growth was estimated at just 1.5 percent.

The government introduced new currency denominations in 1999, including a 1 and 5 kwanza note. Expanded oil production—estimated at about 742,000 barrels per day in 2004—brightens the nation's economic prospects, but internal strife discourages investment outside the petroleum sector.

ENVIRONMENT

Angola suffers from a number of environmental problems that have resulted from over 40 years of warfare. Deforestation claims around 124,000 hectares a year, and only small patches of natural forest remain. Poaching in woodlands and burning of trees are widespread. Water shortages are common, despite abundant rivers and wetlands. Also, many important endemic species are overhunted or receive no protection. Angola's protected area system has almost completely disintegrated owing to the civil war, although the United Nations still estimates that approximately 12 percent of the country's total land area is officially protected.

LIVING CONDITIONS

Living conditions for the vast majority of Angolans are harsh. Nutrition is poor, medical care is almost nonexis-

tent for most, nearly a quarter million people have AIDS, infectious diseases are commonplace, and the fertility rate is 6.33 children born per woman. Only about 42 percent of the total population—28 percent of women—is literate. Alcoholism is rising. Most efforts to improve the living conditions of Angolans are made by nongovernmental organizations such as the United Nations Development Program, the International Monetary Fund, the World Food Program, the World Health Organization, and others.

Houses in Angola are usually made of local materials, including mud or cinderblock walls and thatched or metal roofs. While electricity in the capital city is fairly dependable, it is not elsewhere in the country, and throughout Angola, clean water is a valuable commodity, forcing many Angolans to install reserve water tanks.

HEALTH

Angola provides little in the way of health care to all but a tiny percentage of its people. Hospitals lack personnel and even the most basic equipment. Life expectancy at birth for both sexes is only about 37 years, one in three Angolan children die before age five, and Angola is one of the few nations in the world in which maternal mortality is on the increase. People suffer from diseases related to poverty, including cholera, measles, malaria, and tuberculosis—both in crowded urban areas and in refugee camps. The incidence of AIDS is increasing. Many health problems are the result of war—particularly, amputees who lost limbs because of the nation's 10 million land mines. The trauma of warfare has led many Angolans to turn to practitioners of traditional medicine, such as herbalists.

FOOD AND NUTRITION

Because of the high unemployment rate, more than half the population—up to 70 percent of Angolans—live be-

low the poverty line. Consequently, hunger is endemic; it is a problem made worse by the amount of time Angolans must spend to gather potable water and firewood. Along the coast, of course, seafood is a major portion of the diet, while inland, herders eat dairy products and meat and farmers rely on maize, sorghum, cassava, bananas, sweet potatoes, and other crops. Few Angolans can afford to serve food on ceremonial occasions, when items as basic as a chicken, soft drinks, and bottled beer are prized—and expensive. Most people drink local beverages, such as maize beer and palm wine.

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 73.7
 Amount of Fruits and Vegetables Available per person per year kg: 54

STATUS OF WOMEN

The general economic status of women is low. Women play a role in all aspects of the political process. It has been reported that they were in the military vanguard during the war for independence. Women participate in the MPLA, not only in the Angolan Women's Organization but also at higher levels of the party. Social, cultural, and traditional factors tend to limit the involvement of women at the highest level of the party, however.

WORK

Angola's economy was devastated by the loss of much of its workforce in 1975, when Portuguese settlers in the country—some 300,000—withdraw, deliberately destroying factories, farms, and transportation infrastructure. Years of civil war drove skilled Angolan workers from the country and discouraged foreign investment. Seventy percent of Angolans make their living through agriculture. Because of civil war, transporting food and other commodities was difficult, so many people turned to subsistence agriculture. Many Angolans rely on small trade to make a living; women often gather and sell firewood, and men often traffic in diamonds, weapons, and spare parts. A considerable portion of Angola's economic activity takes place in the *candonga* system, or the black market.

Employment and Labor

EDUCATION

Education is, in principle, universal, free, and compulsory for five years between ages six and 14.

Schooling lasts for 10 years, divided into four years of primary school, four years of middle school, and two years of secondary school. The MPLA regime has announced plans to reorganize the educational structure and nationalize all educational services. Revolutionary cadres of students are being formed, and the entire educational system is being politicized.

The academic year runs from September to July. The medium of instruction is Portuguese. The shortage of teachers created by the departure of Portuguese teachers has been met by Cuban teachers. Higher education is provided by the Universidade de Luanda, founded in 1963.

CULTURE

Angolan culture is closely linked with that of other Portuguese colonies. Angola is a member of "the Five," a group of former Portuguese colonies (including Mozambique, Guinea Bissau, Sao Tomé, and Cape Verde) that meet to discuss cultural issues. Many buildings in Angola show the influence of Portuguese architecture from the fifteenth century.

Written literature began in Angola in 1850 with a book of poetry written by José de Silva Maia Ferreira. In recent decades, the link between literature and political activism has been strong; even former prime minister Agostinho Neto wrote political poetry. Traditional oral literature, usually in the form of folktales, is popular in many areas of the country.

Angolan music is popular with international audiences, especially in the Caribbean and Latin America. Throughout history Angolan musicians have made their own instruments, including the *cloches* (a double bell) and marimbas. During long journeys in the nation's south, musicians pass the time by playing a bow lute called the *chilumbamba*. In the east, the *likembe*, or lamellophone, is popular. Contemporary popular music is influenced by traditional music. Young people enjoy

kizumba music, or rhythmic music from Cape Verde and the Antilles.

Angola has a rich tradition of graphic arts, and its wood carving and pottery are sold in other African countries.

FOLKLORE AND MYTHOLOGY

The name *Angola* does not designate a culture; the nation is an artificial construct of diverse kingdoms, including the Kongo, the Ndongo, and the Ovimbundu. Thus, it is hard to identify a specifically “Angolan” folklore and mythology. A folk hero to the Kongo is Alfonso I, who founded a Christian kingdom in the area in the sixteenth century. Many Angolans also regard their first president, Agostinho Neto, as something of a folk hero.

Much folk belief in Angola has to do with religion. Because of the trauma of war, many people turn to traditional folk beliefs for emotional support. They exorcise evil spirits in newly created churches; children wear amulets to help them avoid forced conscription in the army; and soldiers make magic potions to protect them from bullets. Folk belief is often expressed through traditional crafts. Various ethnic groups manufacture masks and sculptures that symbolize rites of passage or that play roles in cultural rituals. These are made of wood, bronze, ivory, malachite, and ceramic. The Lunda-Chokwe in the northeast are particularly well known for their skill in folk art and crafts.

ENTERTAINMENT AND RECREATION

A country torn by poverty and a generation of civil war offers few recreational opportunities. Television, however, has become increasingly popular with the advent of satellite dishes. These allow Angolans to receive not only the government-run station but also programming from Brazil and the United States, including movies with Portuguese subtitles. Many residents of apartment buildings

share a satellite dish. Especially in the capital, the number of video-rental stores has grown rapidly.

Chess is popular in Angola; the nation has at least a dozen international chess masters. Popular among children is a traditional game called *ware*, played by moving stones around a board that is either carved out of wood or dug out of the soil.

ETIQUETTE

Standards of dress in Angola are relaxed. Women are supposed to wear long skirts in some areas, but this norm is often ignored. In much of Angola, it is regarded as impolite to look another in the eye during conversation. Men do not eat with women and children in some Angolan communities. Kissing on the cheek is becoming more common as a form of greeting between friends, especially among younger people, though older people prefer shaking hands. Angolans consider pointing to be rude.

FAMILY LIFE

In rural Angola many women work the fields and gather firewood and water. They often raise a large number of children, and polygyny is commonplace—if the man is able to support more than one wife. In the cities, however, women tend to have fewer children. Their rate of literacy is higher, and they often compete with men for traditionally male-dominated jobs. Family life throughout Angola has been severely disrupted because of the combat deaths and dislocation caused by the civil war.

Kin relationships are important to Angolans. Most of Angola’s ethnic groups are both matrilineal and patriarchal. This means that males inherit property from their mother’s brother. Among the Mbundu, a daughter would live with her husband in the husband’s village, but a son would live in his mother’s brother’s village.

PERSONAL APPEARANCE

Western clothing is common in Angola’s towns and cities, especially when dressing up for parties or special occasions. In rural areas and smaller villages, women wear wraparound garments called *panos*. Younger people favor jeans and T-shirts, although they do dress more formally for special occasions. The Makubao people in the southern province of Kuando Kubango do not wear clothing.

SPORTS

As in many nations throughout the world, soccer is a popular sport, both for spectators and participants. One

of Africa's largest soccer stadiums is "the Citadel" in Luanda. Basketball also became popular after the Angolan national team won the Nairobi University Games and three straight All-African championships. Other popular sports include handball, volleyball, and track and field.

CHRONOLOGY

- 1956** Movimento Popular de Libertação de Angola (MPLA) is founded.
- 1960** Dr. Agostinho Neto, chairman of the MPLA Steering Committee, is arrested. Portuguese troops fire on Neto's supporters, killing 30 and wounding 300. Neto is imprisoned in Cape Verde and later is transferred to Portugal.
- 1961** MPLA guerrillas attack São Paulo fortress and police station, killing seven Portuguese and 40 Angolans, and a plantation in Uige Province, killing 21 Portuguese.
- 1962** Neto escapes from Portuguese prison and returns to Angola via Rabat. União das Populações de Angola and Partido Democrático Angolano merge to form the Frente Nacional de Libertação de Angola (FNLA), which sets up a government-in-exile, Governo Revolucionário de Angola no Exilo (GRAE), with Holden Roberto as prime minister.
- 1963** Zaire recognizes GRAE and is followed by the Organization of African Unity (OAU). MPLA is expelled from Zaire and moves its headquarters to Brazzaville, Republic of Congo.
- 1964** Dr. Jonas Savimbi, foreign minister of GRAE, resigns after accusing Roberto of corruption.
- 1966** Savimbi organizes the União Nacional para a Independência Total de Angola (UNITA).
- 1972** MPLA and FNLA form Supreme Council for the Liberation of Angola under OAU auspices, with Roberto as president and Neto as vice president.
- 1975** Portugal grants complete independence to Angola. A coalition government is formed, headed by a three-member presidential council consisting of the three rival political parties: MPLA, FNLA, and UNITA. The coalition breaks up, and FNLA and UNITA proclaim the Popular Democratic Republic of Angola, with the capital at Huambo. Agostinho Neto is inaugurated as president of the republic by MPLA. The United States, Zaire, South Africa, and China support the UNITA-FNLA government, whereas the Soviet Union and Cuba airlift arms and equipment to MPLA forces.
- 1976** MPLA captures Huambo and other key cities as FNLA-UNITA forces disintegrate. MPLA units clear the country of all opposition and foreign forces. OAU recognizes MPLA. President Neto takes over post of prime minister.
- 1977** A short-lived rebellion led by anti-Cuban and pro-Soviet dissidents is put down after severe fighting in Luanda and the provinces; three provincial administrations are suspended. UNITA forces claim minor victories. MPLA-backed forces cross into Zaire on what is described as an invasion. Andrew Young, U.S. representative to the United Nations, claims that Cuban forces are a stabilizing element in Angola. Kwanza is introduced as new national monetary unit. Cuba's Fidel Castro, visiting Angola, promises unlimited aid. MPLA, in national conference, restructures itself as a Leninist party under the name Movimento Popular de Libertação de Angola-Partido do Trabalho (MPLA-PT).
- 1978** Prime Minister Lopo do Nascimento is dismissed as President Neto strengthens hold on MPLA. United States bars recognition of regime, citing Cuban influence over MPLA. Relations with Zaire are normalized, and President Neto visits Kinshasa. Three-year friendship and cooperation agreement is signed with Portugal.
- 1979** President Neto dies of cancer and is succeeded in office by José Eduardo dos Santos, minister of planning.
- 1982** President dos Santos assumes emergency powers in the face of increasing South African attacks.
- 1983** Beijing recognizes the MPLA-PT regime.
- 1985** U.S. Congress lifts ban on aid to UNITA rebels.
- 1986** The United States decides to give UNITA \$15 million in military aid.
- 1988** Angola and South Africa declare a cease-fire. South African troops withdraw from Angola. An agreement is reached for the phased withdrawal of Cuban troops. African nations push peace initiatives.
- 1989** UNITA leaders agree to peace talks with the Angolan government.
- 1990** Following five separate rounds of talks, representatives of the Angolan government and UNITA reach a tentative agreement to end the civil war. The MPLA discards its Marxist-Leninist ideology and adopts democratic socialism as its new ideology.

- 1991** The Angolan government and UNITA sign an agreement ending the civil war; UNITA decides to transform its movement from a guerrilla force into a political party.
- 1992** In Angola's first multiparty elections, neither candidate gains a majority, but the required runoff between dos Santos of the MPLA and Jonas Savimbi of UNITA is never held; dos Santos retains the presidency, and UNITA denounces the elections, resuming the civil war.
- 1993** The UN Security Council adopts an embargo on arms and fuel to UNITA.
- 1994** Successful government offenses early in the year aid in the signing of a UN-brokered peace treaty between UNITA and the government of Angola.
- 1995** The United Nations sends 7,000 peacekeeping troops to Angola.
- 1997** The 70 UNITA members elected to the National Assembly take their seats.
- 1998** UNITA leader Jonas Savimbi refuses to participate in peace talks.
- 1999** The United Nations terminates its peacekeeping mission in Angola, citing the tepid efforts of both Savimbi and dos Santos toward promoting peace.
- 2002** Fighting erupts again. In February rebel leader Jonas Savimbi of UNITA is killed in a clash between rebel forces and the Angolan army. A cease-fire is signed in April, and in August the military wing of UNITA is disbanded.
- 2003** The United States lifts economic sanctions against Angola.

Basic Fact Sheet

OFFICIAL NAME

Antigua and Barbuda

ABBREVIATION

AG

CAPITAL

St. John's

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Sir James B. Carlisle (from 1993)

HEAD OF GOVERNMENT

Prime Minister Baldwin Spencer (from 2004)

NATURE OF GOVERNMENT

Parliamentary democracy in the Commonwealth recognizing Elizabeth II as head of state

POPULATION

68,722 (2005)

AREA

442 sq km (171 sq mi)

ETHNIC MAJORITY

Black

LANGUAGES

English (official), English patois

RELIGION

Christianity

UNIT OF CURRENCY

East Caribbean dollar

NATIONAL FLAG

An inverted triangle centered on a red ground and divided horizontally into three bands of black, blue, and white, the black stripe bearing a symbol of the rising sun in gold

NATIONAL EMBLEM

The main elements are two antelopes flanking a shield. The shield bears a golden sun on a black-field motif with wavy bands of white and blue beneath it; there is a sugar mill in the foreground. The motto on the scroll at the bottom reads, "Each Endeavouring, All Achieving."

NATIONAL ANTHEM

"Fair Antigua and Barbuda, We Thy Sons and Daughters Stand"

NATIONAL HOLIDAYS

Easter; Whitmonday; Queen's Birthday; Carnival; November 1 (Independence Day); Christmas

DATE OF INDEPENDENCE

November 1, 1981

DATE OF CONSTITUTION

November 1, 1981

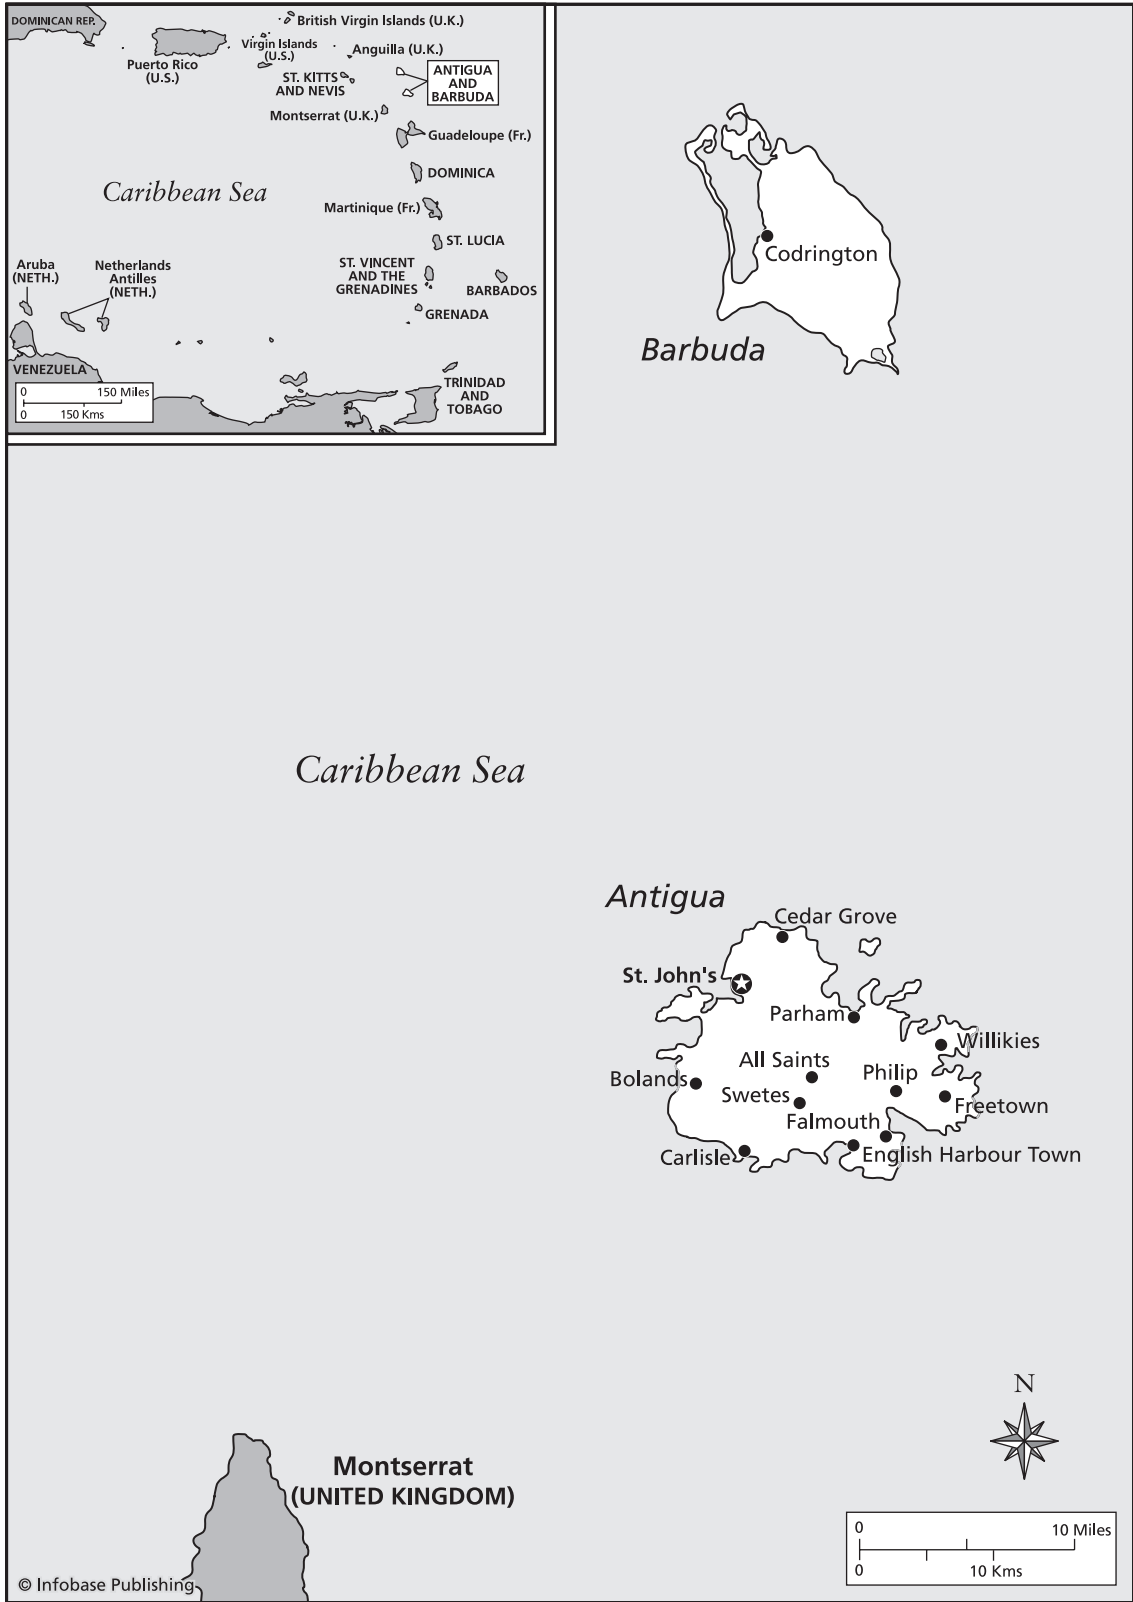

GEOGRAPHICAL FEATURES

Antigua and Barbuda are part of the Leeward Islands chain in the eastern Caribbean and include the islands of Antigua and Barbuda as well as the uninhabited Redonda. The capital city is St. John's, on the northwestern edge of the island of Antigua. Both islands are volcanic and coral. Antigua has deeply indented shores marked by reefs and shoals. Its highest point is Boggy Peak (1,329 ft). The central part of the island is a fertile plain, and there are numerous islets dotting the eastern coastline. Barbuda is a coral island.

------------	--------

CLIMATE AND WEATHER

Cooling winds from the east and the northeast moderate the temperatures, which rise to 84°F in summer and 75°F in winter. The rainfall averages 1,016 mm (40 in), with most falling between September and November.

Climate and Weather

Mean Temperature: 81°F to 93°F
Average Rainfall: 40 in

FLORA AND FAUNA

Volcanic in geology, much of the vegetation of the islands is scrub. However, where freshwater is available many other varieties of flowers and trees are found. Plants native to the islands include the palmetto and mangrove, while over 4,000 acres of woodland have been planted, including red and white cedar, mahogany, and acacia. On Antigua, pineapple plantations are heavily cultivated. In the wooded acres of Barbuda are found deer, boar, wild duck, and guinea fowl.

ETHNIC COMPOSITION

Antiguans and Barbudans are almost entirely of African descent. Minorities include East Indians, Arabs, and Britons.

LANGUAGES

English is the official language and is spoken, in standard or patois form, by virtually all Antiguans.

RELIGIONS

The Anglican Church has historically enjoyed the status of the dominant denomination, claiming the membership of about 32 percent of the population. A variety of other Protestant groups make up another 42 percent. Roman Catholics are a minority at 10 percent. St. John's is the episcopal seat of both the Anglican and Roman Catholic dioceses.

Religious Affiliations

Protestant	29,000
Anglican	22,000
Roman Catholic	7,000
Other	11,000

HISTORICAL BACKGROUND

The early inhabitants of Antigua and Barbuda in pre-Columbian times were the Arawak and Carib Indians, whom Columbus met on his second voyage in 1493. Columbus named the island of Antigua after the Church of Santa Maria de la Antigua, in Seville, Spain. The first Western settlements were erected by the Spanish in 1520, the French in 1629, and the British in 1632. Antigua became a British colony in 1677 under the Treaty of Breda. In 1674 Sir Christopher Codrington established a large sugar estate on Antigua that was worked by slaves from Barbuda. In 1860 Barbuda was formally annexed to Antigua, and 11 years later both were merged into the Federation of Leeward Islands for the next 75 years, until 1956. From 1958 the name of the federation was changed to the Federation of the West Indies and a system of ministerial government was introduced. Vere Cornwall Bird, the leader of the Antigua Labour Party, became chief minister. Antigua became an associated state with full internal self-government in 1967 despite opposition from Barbudans who sought constitutional guarantees for autonomy. In 1981 Antigua and Barbuda became an independent state within the British Commonwealth.

72 Antigua and Barbuda

Since independence Antigua and Barbuda has been governed mainly by the Bird family. The senior Vere Cornwall Bird's most remarkable achievement was in ruling the country for more than four decades and in surviving a series of corruption charges that would likely have brought down the government in any other country. He was succeeded in 1994 by his son Lester Bird, whose cabinet also included other members of the Bird family. The Birds also maintained their hold over the ruling Antigua Labour Party, which won its sixth consecutive electoral victory in 1999.

In 2000 the government of Antigua and Barbuda increased efforts at international cooperation against money laundering and drug trafficking in the Caribbean by enacting new legislation and by signing on to the United Nations Offshore Forum. However, the Organization for Economic Cooperation and Development (OECD) still included the country on its list of countries supposedly running harmful tax regimes. In 2002 the country agreed to make its tax laws more transparent. Prime Minister Lester Bird lost his Antigua Labour Party (ALP) majority in 2003 when three of his party's members of parliament resigned. Forced to call elections, Bird's party lost to the United Progressive Party in March 2004, and a new government was formed under Prime Minister Baldwin Spencer.

2004– Baldwin Spencer

CONSTITUTION

Under the constitution of 1981 the government is headed by the British monarch as head of state, who is represented on the island by a governor-general. The executive is headed by a prime minister, who, in the British parliamentary tradition, is the leader of the largest party in the House of Representatives. He heads a cabinet whose members are appointed by the governor-general on his recommendation.

PARLIAMENT

The bicameral legislature consists of a 17-member House of Representatives, elected from single-member constitu-

encies for five-year terms by universal adult suffrage, and a 17-member Senate, appointed by the governor-general, of whom 11 are named on the recommendation of the prime minister, four on the advice of the leader of the opposition, one on the governor-general's discretion, and one by the Barbuda Council.

POLITICAL PARTIES

As of 2004 the Antigua Labour Party had been in power since independence. The principal opposition was the United Progressive Party, which won four seats (out of 17) in the House of Representatives in 1999. In the 2004 elections the United Progressive Party won 55.3 percent of the vote and placed 12 of its members in the House of Representatives. A new government was formed under Prime Minister Baldwin Spencer.

LOCAL GOVERNMENT

Antigua is divided into six parishes and the two dependencies of Barbuda and Redonda. The six parishes are Saint George, Saint John's, Saint Mary, Saint Paul, Saint Peter, and Saint Philip. Local government is directed by 29 community councils, each with five elected members and four appointed members.

LEGAL SYSTEM

The court system operates on three levels. At the bottom level are three magistrates' courts dealing with summary offenses and civil cases with values of 500XCD or less. At the intermediate level is the court of summary jurisdiction, which sits without a jury and deals with civil cases. At the apex of the system is the Eastern Caribbean Supreme Court, based in St. Lucia, which serves as a high court and a court of appeal. Final appeals may be made to the Queen's Privy Council in the United Kingdom. The Industrial Court arbitrates and settles trade disputes. The Antigua and Barbuda legal system is based on English common law.

The constitution prohibits arrest and detention without sufficient grounds and also provides for speedy processing. A defendant or suspect must be brought before a court within 48 hours of arrest or detention. As of 2003 Antigua and Barbuda, though not a signatory to the Caribbean Court of Justice (CCJ), did indicate that it planned to use the court for appeals.

HUMAN RIGHTS

The Bird family controlled the government from 1976 to 2004. They were notoriously corrupt and managed to

amass an enormous fortune through drug dealing and arms trafficking. They managed to hold on to power by inflating electoral rolls and through intimidation of political opponents. Several of the Birds have been the target of criminal investigations, and Vere Bird was banned from public life for his association and support of Colombian drug bosses. The Bird family also controlled the media, successfully denying the opposition access to the media. The government also engaged in arson against opposing political parties. Prison conditions have been inhumane and there have been allegations of physical abuse of prisoners by guards. In 2004 the Bird family dynasty was finally voted out of office; it was replaced by the United Progressive Party.

In 2004 Freedom House, a nonprofit, nonpartisan organization, rated the country on political rights with a 4 and on civil rights with a 2, both on a scale of 1 to 7 (in which 1 is the most free). Freedom House considers Antigua and Barbuda to be a partly free country.

FOREIGN POLICY

Prime Minister V. C. Bird was a strong believer in regional cooperation and played a leading role in the Caribbean Free Trade Association, its successor, the Caribbean Community and Common Market, and the Organization of Eastern Caribbean States. There is a U.S.-backed regional military training center on the main island. The government of Antigua and Barbuda has since 2000 increasingly agreed to cooperate in international antidrug and money-laundering campaigns.

DEFENSE

Antigua and Barbuda is an active member of the Organization of Eastern Caribbean States. It maintains close ties to the United States, which maintains a military training base on Antigua.

ECONOMY

Tourism is the mainstay of the economy, contributing about half of the gross domestic product (GDP). The number of annual tourist arrivals, mainly from the United

States, determines the health of the economy. Since 2000 weak numbers in the tourist industry have slowed the economy. The older agricultural economy is directed to the domestic market but is hobbled by a lack of water and a labor shortage. Manufacturing is primarily for export, of which the principal products are bedding, handicrafts, and electronic components.

ENVIRONMENT

The principal ecological problem in Antigua and Barbuda is a shortage of fresh water. The islands are subject to periodic drought, and existing facilities and underground sources are contaminated by industrial pollutants. Deforestation contributes not only to soil erosion, as water quickly runs off, but also to the water shortage. Waste disposal is antiquated, and untreated sewage runs in open trenches and empties into the sea. There is an official Environmental Commission that exists mainly on paper and does little to solve these problems. There are several protected areas, including the offshore islands of North Sound and Codrington Lagoon. Endangered species include the Antiguan ground lizard and the West Indian whistling duck.

LIVING CONDITIONS

With a life expectancy in 2004 of 71.6 years and with most of the citizens living in wood and concrete houses with at least two bedrooms, the living conditions of the nation can be said to be adequate. In 2003 the government announced that plans were in place to build at least six affordable housing developments on private lands.

Over 17,000 motor vehicles were registered in the country in 1992, and Antigua has about 150 miles of paved roads as well as a railway line and an airport. Formerly, there was a dearth of road signs or even village markers, making traveling in the country by car somewhat problematic. Since the 1990s, however, the government has increasingly addressed this problem.

With much of the work in the country dependent on the tourist trade and service industry, there is not much demand for skilled workers. Thus, the citizens remain largely stuck in their existing socioeconomic classes.

Sanitation and adequate drinking water remain problems in the country, as does the health-care system.

HEALTH

Due to poor sanitation, dysentery and gastroenteritis were the most common illnesses and causes of death in the late 1980s, especially in children. Other causes of death include heart disease, cancer, and influenza. Hypertension is one of the most common medical conditions on Barbuda. In 1999 AIDS started to rank among the 10 leading causes of death. As of that year the annual incidence of AIDS was 209 per million people. The government took action in 1997, developing a national policy on HIV/AIDS and other sexually transmitted diseases.

There is some malnutrition among the nation's children. As of 1995, 100 percent of the population was immunized against diphtheria, pertussis, and tetanus and 94 percent against measles, mumps, and rubella.

The nation has one general hospital, the Holberton Hospital. The cost of a medical insurance scheme that includes maternity benefits is shared equally between employers and employees. The infant mortality rate as of 2004 was 20.18 deaths per 1,000 live births.

FOOD AND NUTRITION

Like many other nations of the Caribbean and West Indies, Creole cuisine holds sway. Staples such as rice and peas, pumpkin soup, and pepperpot soup are popular national dishes. Surrounded by water, the country also depends on fish and shellfish as an integral part of the national diet. Regional species and specialties include the spiny lobster and conch. Another popular dish is *fungi*, a cornmeal pudding made with boiled okra and served with salt fish. *Pasties*, or meat pies, are a typical street food, sold by vendors in villages and towns.

Fruits on the islands include breadfruit, originally from the Pacific and India, and the Antigua black pineapple.

Undernourished % of total population: —

Daily Available Calories per capita kcal: 2,406

Amount of Cereal Available per person per year kg: 87.6

Amount of Fruits and Vegetables Available per person per year kg: 208.3

STATUS OF WOMEN

Antigua has an official agency, the Directorate of Women's Affairs, to monitor the status of women on the islands. Violence against women is common. In 1999 the parliament approved anti-domestic violence legislation, but in many cases women are unwilling to testify against their husbands. Progress in implementing new programs to assist women in bettering their economic opportunities is slow.

WORK

Of an estimated labor force of 30,000 in 2002, 82 percent of the country's population was engaged in the tourist industry in one way or another. However, because such work tends to be seasonal, many of these workers need to find additional off-season work in agriculture or industry. Much of the tourist industry relies on unskilled service

76 Antigua and Barbuda

workers with subsequent low pay. Agriculture employs 7 percent of the population. Agricultural products include cotton, fruits, vegetables, bananas, coconuts, cucumbers, mangoes, sugarcane, and livestock. The third major employment sector is industry, at 11 percent. Industrial operations include construction and the light manufacturing of clothing, alcohol, and household appliances. Fishing is another important source of income on Barbuda, as is government employment. The estimated unemployment rate in 2001 was 11 percent.

Workers are provided with basic rights. About 75 percent of the workforce is unionized and has the right to strike. The maximum workweek is 48 hours, and the minimum working age is 16. There is also a social security fund covering persons between 16 and 60, which provides old age, disability, and survivor benefits. In 2002 the minimum wage averaged U.S. \$93.63 per week.

EDUCATION

Education is compulsory between the ages of five and 16. The majority of the schools are public. There are three institutions of higher learning: the University of Health Sciences, Antigua; the University of the West Indies School of Continuing Studies, and Antigua State College. Those interested in a university education also travel to schools in the United Kingdom, the United States, Europe, and Canada. The country enjoys one of the highest literacy rates in the Eastern Caribbean.

SCIENCE AND TECHNOLOGY

The fishing industry is one sector where technology has come to play an important role. Sundry hydraulic gear for lifting nets, as well as depth finders and global positioning systems (GPS), have proven invaluable for modern fishing. Such equipment is provided by the government. Educational institutions promoting science and technology include the extramural department of the University of the West Indies and Antigua State College, both of which offer technical courses. A school of medicine was established in 1982 at the University of Health Sciences at St. John's.

MEDIA

Freedom of the press is guaranteed by the constitution. Three of the newspapers are published by political parties: the *Outlet* by the Antigua Caribbean Liberation Movement, the *Workers' Voice* by the former ruling Antigua Labor Party, and *Rappore* by the United Progressive Party. The *Daily Observer* and the *Antigua Sun* are the two major daily papers. There is no domestic news agency. Most media rely on the Caribbean News Agency. Radio ZDK is a private radio facility controlled by the former prime minister Bird's family. The government-run Antigua and Barbuda Broadcasting Service (ABBS) transmits through one radio station and television facility.

In 1997 there were about 36,000 radios and 31,000 television sets in use throughout the country. In 2002 there were 38,200 mobile phone users and 10,000 Internet users.

CULTURE

The cultural life of Antigua and Barbuda is a mixture of Caribbean and Creole. Music is an integral part of that mix, and the island has produced many well-known performers in styles such as reggae, calypso, soca, and zouk. Steel drum and steel band music is also very popular on the islands, especially at Christmastime, and the music of the fife band, consisting of a guitar, drum, and fife or flute, is also an important part of the islands' musical heritage. The nation's typical West Indian cultural background can also be seen in the gingerbread architecture in the capital, a holdover from colonial times.

The job of preserving the archaeological and historical heritage of the island falls to the Museum of Antigua and Barbuda, located in St. John's. The nation's most famous cultural export is the author Jamaica Kincaid, who was born and grew up on the island of Antigua. Now residing in the United States, Kincaid wrote of her native country in the 1988 book-length essay *A Small Place*. Therein she criticizes British colonialism, the excesses of the tourist industry, and government corruption. In his dramas, the well-known Antiguan playwright Dorbrene "Fats" Omarde tackles the social and political problems confronting the country.

Barbuda shares the West Indian culture of Antigua but has remained more isolated than the main island. Even today most of its small population share half a dozen surnames and can trace their lineage to a small group of slaves brought to the island in the late 1600s.

Carnival, which takes place at the end of July, is one of the nation's largest celebrations. The Antiguan Jazz Festival is held annually in October.

FOLKLORE AND MYTHOLOGY

Africa, the original homeland for most of the population, provides a rich heritage of folk beliefs and myths that still inform daily life several centuries later. For example, obeah is a collection of animistic beliefs that hail from Africa. Those who practice obeah feel that it cures the sick, disposes of enemies, and can even fix traffic tickets. Integral to the belief system are the sometimes playful spirits known as *jumbies* and the use of herbal potions.

So popular are these *jumbies* that one of Antigua's main resorts was renamed Jumby Bay Island, from its original Long Island.

Another source of myth and folklore is the culture of the Arawak, the indigenous people who first settled the island. Folk medicine, a body of knowledge that has a long heritage, is also popular in the country. Maiden-blush tea is said to cure many ailments, while a preparation made from the cancanberry bush is used for thrush.

ENTERTAINMENT AND RECREATION

Dominoes is a favorite pastime on the islands, as it is all over the Caribbean. It is played mostly by males. A game called *warri* is also popular among men. This is one of a number of so-called pit-and-pebble strategy games, which originated in the Sudan several millennia ago as a spin-off from a form of calculation used in the ancient Kush civilization.

Music also plays an important part in the recreational life of the Antiguan people. Favorite types of music include calypso, reggae, and hymns. Sports are also popular, and cricket, soccer, and basketball are all played recreationally.

ETIQUETTE

There is a dual form of politesse in the nation: one for the tourists and one for the citizens. "Friendly but distant" best typifies Antiguan contact with tourists. Formal British etiquette is the norm in these situations. Handshakes are also normal both with tourists and for business associates.

With each other, the Antiguan and Barbudan citizenry employ more of a West Indian social interaction. Terms of respect for elders include "Aunty" and "Uncle," while "Mistress" is often used before a woman's last name.

FAMILY LIFE

The heritage of slave culture still determines some aspects of family life in the country. There are three main modes of relationships for couples in Antigua and Barbuda. Legal marriage and unmarried cohabitation are most typical. There is also a local variant called the "visiting union," in which the couple lives apart and the woman is responsible for raising the children. Such fluid unions, along with differing educational opportunities in different locations and the necessity for both parents to work, result in many children being raised by relatives and perhaps even growing up in a succession of different households as they change schools.

78 Antigua and Barbuda

Births out of wedlock are legally recognized, and inheritances are usually divided equally among legitimate and “illegitimate” children. In 2004 the country’s fertility rate was 2.27 children for each woman.

PERSONAL APPEARANCE

The people of Antigua and Barbuda are almost wholly the descendants of African slaves. The residents of Barbuda are closely related and, as a result of slave-breeding experiments, tend to be quite tall.

Modern Western-style clothing is the typical dress. More colorful costumes are worn by many during the Carnival celebration in late July and August. To celebrate the country’s 11th anniversary of independence in 1992, a contest was held to create a national costume, which is now worn on October 31 and November 1, National Day. The costume is a variation on clothing worn by market vendors and cake makers in the country in the early 19th century and was designed by the native Antiguan Heather Doram.

SPORTS

The national sport is cricket, and Antigua and Barbuda has produced some top-tier international stars of the game. Sir Vivian Richards was the first breakout player from the nation, and his success inspired a subsequent generation of players, including Richie Richardson, Andy Roberts, and Curtely Ambrose. Official cricket matches tend to be played on Thursdays, Saturdays, and Sundays. The cricket season in Antigua runs from January to July. Antiguan teams compete against teams from neighboring islands, and Antiguan players play on the West Indies cricket team, which has been one of the world’s best since the 1970s. By the end of 2004 plans had been completed for the Sir Vivian Richards Stadium, which will host matches for the 2007 World Cup of Cricket in the Caribbean.

Soccer is another popular sport in the country.

CHRONOLOGY

- 1946** Antigua Labour Party (ALP) is formed by Vere Bird.
- 1958** The Leeward Islands Federation becomes the West Indies Federation.
- 1967** Antigua and Barbuda become an associated state within the Commonwealth.
- 1971** Progressive Labor Movement wins elections, with George Walter as prime minister.
- 1976** ALP regains power and remains in power for the rest of the century.
- 1981** Antigua and Barbuda becomes a sovereign state.

- 1993** Lester Bird succeeds his father as prime minister.
- 1995** Hurricane Luis damages or destroys at least 75 percent of homes (worth approximately \$300 million) in Antigua and Barbuda.
- 1996** Antigua establishes an office of the control of illicit drugs to improve its tarnished antinarcotics image.
- 1997** Antigua and Barbuda takes steps to eliminate money laundering and organized crime within its borders, closing 11 offshore banks and initiating legislation to close loopholes used by international criminal organizations.
- 1999** Lester Bird is reelected, representing the sixth term for his party, the ALP.
- 2000** The United Nations criticizes the courts’ decision to impose the death penalty in convicting two men of murdering four tourists.
- 2002** Government agrees to make its tax laws more transparent to avoid continued OECD blacklist.
- 2003** Lester Bird is forced to call elections when three of his party’s members of the House of Representatives resign.
- 2004** Elections are held in March, resulting in a 55.3 percent victory for the United Progressive Party. Baldwin Spencer is named prime minister.

Basic Fact Sheet

OFFICIAL NAME

Republic of Argentina (República Argentina)

ABBREVIATION

AR

CAPITAL

Buenos Aires

HEAD OF STATE & HEAD OF GOVERNMENT

President Néstor Kirchner (2003)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

39,537,943 (2005)

AREA

2,766,890 sq km (1,077,924 sq mi)

ETHNIC MAJORITY

Caucasian

LANGUAGE

Spanish

RELIGION

Roman Catholicism (official)

UNIT OF CURRENCY

Argentinean peso

NATIONAL FLAG

Tricolor consisting of middle white horizontal stripe between two light blue horizontal stripes emblazoned with the “Sun of May”

NATIONAL EMBLEM

An oval shield divided horizontally into two halves, light blue in the upper portion and white in the lower. In the center is a liberty pole held by clasped hands. On the top of the staff is a red liberty cap worn by 19th-century patriots in the wars of liberation. Surmounting the oval is a golden “Sun of May,” and enclosing it is a laurel wreath of victory.

NATIONAL ANTHEM

“Hear, O Mortals, the Sacred Cry of Liberty”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day); May 25 (Anniversary of the 1810 Revolution), June 20 (Flag Day), July 9 (Independence Day, National Day), August 17 (Death of Gen. José de San Martín), various Christian festivals and Christmas.

DATE OF INDEPENDENCE

July 9, 1816

DATE OF CONSTITUTION

May 1, 1853; revised August 1994

GEOGRAPHICAL FEATURES

Argentina, located in the southern part of the South American continent, is the eighth-largest country in the world and one-quarter the size of Europe, with an area of 2,766,890 sq km. Argentina also claims a section of Antarctica of about 1,235,430 sq km. Argentina also claims the Falkland Islands as part of its territory. The total length of the Atlantic coastline is 4,989 km.

Argentina is bordered by Chile (5,150 km), Bolivia (832 km), Paraguay (1,880 km), Brazil (1,224 km), and Uruguay (579 km). These international borders generally coincide with natural features, and all have been demarcated except along certain watercourses.

Argentina is generally divided into four topographical regions: the Pampas, Patagonia, the lowland region of the northeast, and the northwest Andes (including the Piedmont).

The Pampas, extending 800 km (497 mi) north to south and east to west, is the heartland of Argentina, containing the richest agricultural land in South America. The region is an unbroken plain, which is exactly what *Pampa* means in the Quechua language. The plain is bounded by the Chaco Plain to the north, the Colorado River to the south, the Atlantic to the east, and the Sierra de Córdoba to the west. However, when Argentineans refer to *la pampa*, they more often than not are referring to the gaucho and cattle country of the Dry Pampa rather

Argentina

than to the Humid Pampa around Buenos Aires. They also distinguish three subregions within the Pampas: the Littoral, immediately to the north of Buenos Aires along the west bank of the Paraná River; the Comahue, comprising the province of La Pampa and the Patagonian provinces of Neuquén and Río Negro; and the Campo, or rural region, of the Pampa.

The second region is Patagonia, a semiarid, wind-swept land, including the barren island of Tierra del Fuego. Patagonia fans out southward from the Colorado River to the Strait of Magellan and from the Atlantic to the Chilean border. Rising from a narrow coastal plain in tiers toward the west, Patagonia reaches elevations of over 1,500 m (5,000 ft). In the north the Granbajo de Gualicho depression between the Colorado and Río Negro rivers drops to 32 m (105 ft) below sea level. In the extreme south the land is dotted with glaciers and ice fields.

The third region is the northeastern lowlands lying north of the Pampas and east of the Andes Mountains between the Paraná and Uruguay Rivers. Because of its location between two rivers, the region is sometimes known as the Argentinean Mesopotamia. It also includes the Argentinean portion of the Gran Chaco Plain, which extends northward across Paraguay into Bolivia.

The fourth region is the northwest Andes and Piedmont, extending along the western half of the country from Bolivia in the north to Patagonia in the south, and from the Chilean border to Gran Chaco and Pampa. Along the Chilean border Jujuy, Catamarca, and Tucumán Provinces have elevations of 6,100 m (20,000 ft); the province of Mendoza contains Cerro Aconcagua (6,960 m), the highest peak in the Western Hemisphere. The mountainsides are cut by broad valleys known as *quebradas*, but otherwise the land is generally inhospitable.

Santa Fe	368,688

CLIMATE AND WEATHER

The climate varies from subarctic in the south to subtropical in the north. January is the warmest month, and June and July are the coolest. Summer lasts from December through February and winter from June through August. Temperatures and rainfall become progressively lower from north to south. The highest temperature recorded in the country is 49°C (120°F). The average daily temperature is about 16.7°C (62°F). The Chaco area has a mean annual temperature of 23°C (73°F), while Puna de Atacama has a temperature average of 14°C (57°F). Rainfall diminishes from east to west; Buenos Aires receives 939.8 mm (37 in); Chaco, 762 mm (30 in); and Puna de Atacama, 50 mm (2 in). Snow falls rarely. Most of the Piedmont and Patagonia are dry, and the Patagonian winters are relatively mild.

Both the Pampas and the northeast are subject to violent windstorms known as the *pamperos*, which are usually accompanied by thunder and rain.

Chaco:	73°F
Puna de Atacama:	57.2°F
Average Rainfall:	
Buenos Aires:	37 in
Chaco:	30 in
Puna de Atacama:	2 in

FLORA AND FAUNA

Argentina encompasses a wide range of climates and habitats, from jungles to ice sheets. Thus, it is difficult to generalize about the country's flora and fauna. Along Argentina's over 4,700 km of ocean shoreline, for example, can be found sand dunes, sandy beaches, pampas grass, rocky cliffs, tundras, and beech forests. Each of the four major regions of Argentina features a different type of flora. The Andes to the west are largely arid, though grapes are grown in the foothills. To the north are subtropical rain forests. The central Pampas is noted for its vast expanses of fertile grassland, while Patagonia is a combination of steppes and glaciers. Argentina has

a system of 22 national parks that protect such animals as caimans, guanacos, pumas, condors, Andean llamas, flamingos, parrots, marine mammals, and rare seabirds. A thousand species of birds—10 percent of the world's total—can be found in Argentina.

ETHNIC COMPOSITION

The Argentineans are overwhelmingly Caucasian by racial origin. Of the many European national groups, Italians and Spaniards predominate, but British, Western and Eastern Europeans, Jews, and Middle Easterners are also represented in the population. Together they make up 85 percent of the population. The remaining 15 percent consists of mestizos, Indians, and others. The pure-blooded Indian population, estimated at 50,000, is concentrated in the provinces of the north, northwest, and south.

LANGUAGES

The official language is Spanish, but spoken Spanish has a distinctively Argentinean flavor and differs in pronunciation and grammar from Castilian Spanish. Among the many peculiarities of Argentinean Spanish is the trait known as *yeísmo*, in which the double *l* and *y* sounds are spoken like *z*, as in “azure.” The *porteños* (“people of the port,” as inhabitants of Buenos Aires are called) also speak Spanish with a peculiar accent, called Río Platense. Many variations are due to Italian and French influences. Italian, particularly, has contributed numerous words to the Argentinean vocabulary, and an Italianized Spanish dialect known as *lunfardo* has evolved in urban slums. English is

spoken by an increasing number of people, particularly within the business and professional communities. English, French, and German immigrants have managed to retain their own mother tongues, and all of the larger communities run their own newspapers.

Three Indian languages still survive in the country: Tehuelche in southern Patagonia, Guaraní in Misiones Province, and Quechua, a modified form of the ancient Inca language, in Jujuy and Salta Provinces. These languages receive no official encouragement and may die out in course of time.

RELIGIONS

Roman Catholicism is the state religion, adhered to by 92 percent of the population. However, less than 20 percent of the population is believed to actively practice Christianity. The government retains “national patronage” over the church, derived from the royal patronage of Spanish times. Bishops are appointed by the president of the republic from a panel of three submitted by the Senate, and papal bulls and decrees are proclaimed by the president and sometimes incorporated in acts of the Congress. The hierarchy consists of two cardinal archbishops, 11 archbishops, and 46 bishops.

Non-Catholic religious groups are small, but all creeds enjoy freedom of worship. Supervision of religious bodies is the responsibility of the Ministry of Foreign Affairs and Worship. Two percent of the population, generally members of ethnic minorities, is listed as Protestant. Interchurch cooperation is very rare despite the existence of the Argentine Federation of Evangelical Churches. Nearly one-half of Protestants belong to the Anglican, Congregationalist, Seventh-day Adventist, Lutheran, and Methodist Churches.

Argentina's constitution states that all have the right to practice their religion, but it also states that the federal government supports Roman Catholicism. The constitution requires the president and vice president to be members of the Roman Catholic Church. Religions other than Catholicism must register with the government to obtain the legal recognition required to operate freely in Argentina. In July 1984 the government granted long-pending legal recognition to the Jehovah's Witnesses.

Argentina's 260,000 Jews constitute the second-largest Jewish community in the Americas and the largest in Latin America. The bulk of the Jews are descendants of Ashkenazim who arrived from Russia in the 19th century. Anti-Semitism has been an ever-present factor in Argentinean politics, but it has been more a nuisance than a threat.

In 1978 the government required all religions other than Roman Catholicism to register with the Ministry of Foreign Affairs. Religious sects “injurious to public order, national security, morality and customs” are banned.

Roman Catholic	36,374,000
Protestant	790,000
Jewish	260,000
Other	2,122,000

HISTORICAL BACKGROUND

Argentina's recorded history began with the visit of the first Spaniards in 1516. Permanent settlement began when colonists from Chile established the town of Santiago del Estero in 1553 and settlers from Peru established Tucumán (1565) and Córdoba (1573). Juan de Garay, governor of Asunción, founded Santa Fe in 1573 and Buenos Aires in 1580 on the site of an older Spanish settlement. These scattered settlements did not coalesce into a province until 1776 when a viceroy was sent to Buenos Aires to thwart Portuguese expansion to the south. In 1886 an English naval force under Gen. William Beresford captured Buenos Aires but was later driven out.

The Spanish colonies in Latin America won independence in 1810–19, and Argentines date their independence from 1816, when they wrested independence from Spain. A long period of disorder during the early and mid-century was followed by strong centralized government at the end of the century. Argentina witnessed large-scale Italian, German, and Spanish immigration after 1810. Modernization followed, and Argentina soon became the most prosperous, educated, and industrialized of the Latin American nations. Military coups prevailed during the 1930s and 1940s until the election of General Juan Perón as president. Perón with his wife, Eva Duarte (known as Evita), worked for social welfare and labor reforms but became increasingly authoritarian. As the economy worsened in the early 1950s, Perón repressed strikes, drove down wages, and harassed opposition leaders. The military overthrew Perón in 1955. After an 18-year exile (1955–73) in Spain, Perón was once again elected the president of Argentina in 1973. He died after 10 months in office, and he was succeeded by his third wife, Isabel Perón, who thus became the world's first woman president.

A military junta ousted Isabel Perón on charges of corruption in 1976. The new military government battled guerrillas and leftists, engaged in the killing of some 5,000 people, and jailed thousands of political opponents. In December 1981, Lieutenant General Leopoldo Galtieri, the commander in chief of the army, became president. During his presidency Argentina witnessed a severe worsening of economic conditions throughout the country. Largely to distract public attention from the unstable domestic situation, President Galtieri ordered the invasion of the Falkland Islands in April 1982. The islands had been a source of contention between Great Britain and Argentina. The defeat in the Falklands War brought

humiliation to the Argentinean armed forces, and President Galtieri was forced to resign on June 17.

Democratic rule returned to Argentina in 1983 when Doctor Raúl Alfonsín took office as president in December of that year. The most pressing problems facing the new administration included a need to refinance the country's \$40 billion debt, bring runaway inflation under control, and resolve thorny foreign conflicts involving the Falkland Islands and the Beagle Channel. Soon after his election, President Alfonsín announced a radical reform of the armed forces and prosecution of military officials engaged in human rights abuses during the "dirty war" between the former military regime and its opponents in the late 1970s and early 1980s. On December 9, 1985, five former junta members were found guilty of murder and human rights abuses. Alfonsín's attempts at prosecuting military personnel were limited by unrest in the army. Three army rebellions linked to discontent over prosecutions were crushed in 1988–89.

Alfonsín was unable to deal with Argentina's economic problems, which worsened during his administration. Inflation reached 100 percent in 1985, and foreign debt topped \$60 billion by the end of 1988. The government issued a new monetary unit, the *australe*, to replace the peso in 1985, but the measure was unable to curb inflation permanently, and the peso was reinstated.

In the campaign for the May 1989 elections, the Perónist presidential candidate Carlos Saúl Menem attracted popular votes with his promise of "productive revolution." The Perónists returned to power on May 14, 1989, by securing 48.5 percent of the votes and 310 of the 600 seats in the electoral college. President Alfonsín resigned from office five months earlier than scheduled, and Carlos Saúl Menem took office as president on July 8, 1989. By September, Menem's drastic economic policies had brought down the rate of inflation to 37 percent compared with the July level of 197 percent. In 1990 Menem pardoned the junta members convicted of human rights abuses, saying it was time to close a black period in Argentinean history. President Fernando de la Rúa Bruno of the Unión Cívica Radical (UCR) center-left Alliance, elected to a four-year term in 1999, promised a crack-down on corruption and tough fiscal measures to balance Argentina's budget. His austerity measures were met with protest, and, in 2001 congressional elections, the opposition Perónists took control of both houses of parliament. In December, after having declared a state of emergency to stop protests against his government's economic policies, de la Rúa Bruno resigned. Adolfo Rodríguez Saá Páez Montero, who was named interim president, stepped down after only 10 days in office and was replaced for a day by caretaker president Eduardo Camaño and, later, by Eduardo Duhalde (January 1, 2002).

Economic problems continued to beset Argentina in the early years of the twenty-first century. Share prices reached record lows in 2001, government restrictions

were placed on withdrawing bank deposits, and the International Monetary Fund (IMF) suspended over a billion dollars' worth of aid. Late that year a general strike was called to protest the government's economic policies. In 2002 banking and foreign exchange activity was suspended, and late in the year the country defaulted on a debt repayment to the World Bank. In 2003 Néstor Kirchner was sworn in as president, and late in the year the country and the IMF agreed on a debt-refinancing deal requiring Argentina to pay only the interest on its loans.

LIST OF MODERN RULERS

(Note: the following list does not include acting presidents, interim presidents, military juntas, or those who served for only days or weeks before resigning or being deposed.)

1946–55	Colonel Juan Domingo Perón
1955–58	General Pedro Eugenio Aramburu
1958–62	Arturo Frondizi
1963–66	Arturo Umberto Illia
1966–70	General Juan Carlos Onganía
1970–71	General Roberto Marcelo Levingston
1971–73	General Alejandro Agustín Lanusse
1973–74	General Juan Domingo Perón
1974–75	Isabel María Estela Martínez de Perón
1976–81	General Jorge Rafael Videla
1981–82	Leopoldo Fortunato Galtieri
1982–83	Reynaldo Benito Antonio Bignone
1983–89	Raúl Ricardo Alfonsín
1989–99	Carlos Saúl Menem
1999–2001	Fernando de la Rúa
2002–03	Eduardo Alberto Duhalde
2003–	Néstor Carlos Kirchner

CONSTITUTION

With the return to civilian rule in 1983 the constitution of 1853, as amended, was reintroduced. In 1994 the constitution was amended. The amendments relate mostly to electoral details. The most important was the removal of the ban on consecutive presidential terms. Executive power was once again placed in the hands of an elected president, serving a four-year term and chosen by direct universal suffrage. The president became eligible to serve two terms. Legislative power is vested in a congress, comprising the Chamber of Deputies with 257 directly elected members and a Senate with 72 members, three members of which are chosen by each provincial legislature and three from the federal district. Each province has its own constitution.

Voting is compulsory for all citizens 18 years of age or older. Some 85 percent to 90 percent of eligible voters

vote in most elections. Elections are generally fair and honest and are administered by an electoral board headed by a federal judge called an electoral judge.

During the 20th century, Argentina has been plagued by violence, civil strife, unstable governments, and economic chaos. Since the 1930 revolution led by General José Félix Uriburu, 10 of the 14 presidents have been military officers.

The country has witnessed systematic violence, kidnappings, and bombings by both left-wing and right-wing terrorists. Left-wing terrorism is exemplified by the activities of two organizations: the Montonero guerrillas and Ejército Revolucionario del Pueblo, (ERP). The government's operations against the guerrillas were marked by mass arrests and suppression of human rights.

During the 1980s terrorism no longer was the number one threat to the country. The principal subversive movements, ERP and the Montoneros, were forced to move their bases of operations abroad. The latter were unable to launch even one significant military action after 1978, except for an occasional grenade or bomb attack, whereas the former began to concentrate on propaganda efforts to isolate the military government, principally through the bulletin *Che Guevara* and the information center Centro Argentino de Información y Solidaridad set up in Paris.

PARLIAMENT

The National Congress consists of a Senate and a Chamber of Deputies. The Senate has 72 members: three from the federal capital and three from each of the 23 provinces. The senators from the provinces are elected by the provincial legislatures and the senators from the Federal District by direct vote. Their term of office is nine years, with one-third retiring every three years. The 257 representatives are elected directly (on the basis of one for every 85,000 inhabitants) for four years, with one-half retiring every two years. The two chambers meet in ordinary sessions annually from April 1 through November 30.

POLITICAL PARTIES

Argentina's political parties are noted for their vigor and ideological variety. The oldest of these parties is the UCR, which has represented the moderate left in Argentinean politics since the 19th century. For most of its existence the party has been in opposition. In the period following the deposition of Juan Perón, the party split into two factions: Unión Cívica Radical de Pueblo (UCRP), led by Arturo Illia, and Unión Cívica Radical Intransigente (UCRI), led by Arturo Frondizi. When partisan political activity was legalized in 1973, Frondizi led his followers

into the Perónist coalition, while UCR backed the candidacy of Richard Balbin.

The country's largest political movement is known by the broad name of Perónism, a label carried by a number of political parties: Partido Unión Popular, Partido Populista, Partido Laborista, Partido Justicialista, and Movimiento Nacional Justicialista. In 1983 these parties joined to form the Frente Justicialista de Liberación (FREJULI) to contest the elections.

Fragments of the traditional parties are scattered across the ideological spectrum. The conservatives are represented by the Union of Argentine People and the National Federation of Parties of the Center. The latter was known as the National Autonomist Party until 1914, the Conservative Party from 1914 until 1930, and the National Democratic Party from 1930 until 1955. The Catholic Church is represented by the Christian Democratic Party and the Federal Union Party, both nationalistic and traditionalistic in outlook. The Socialist Party, which dominated the labor movement from 1922 until the rise of Perón, has steadily lost ground to the Perónists. In 1959 the right wing of the party broke off to form the Democratic Socialist Party, and the main party itself was split into two factions. The moderate and anti-clerical Progressive Democratic Party derives its strength from the interior.

The government has formally outlawed all left-wing parties. These include the Marxist-Leninist Communist Party, the Revolutionary Communist Party, the Trotskyite Workers' Party, the Workers' Political Party, the Workers' Socialist Party, and the Authentic Peronista Party. The number of Communist Party members in the country is estimated at about 70,000, including a small nucleus of activists.

LOCAL GOVERNMENT

For purposes of regional administration Argentina is divided into 23 provinces and the federal capital, Buenos Aires. Under the constitution of 1853 the provinces have their own constitutions and retain all powers not explicitly delegated to the central government. The provincial governors are elected directly for four-year terms and enjoy extensive powers, including the right to issue executive decrees, prepare provincial budgets, and pardon offenders of provincial laws. The governor is also the commander in chief of the local militia. Each province has its own legislature, and those provinces with a population of more than half a million have bicameral legislatures. The powers of provincial legislatures include approval of provincial budgets and supervision of education and health-related activities. However, the federal government retains the right to intervene in provincial administrations "to guarantee the republican form of government."

LEGAL SYSTEM

The judicial system consists of federal and provincial courts. The federal court system is headed by the Supreme Court, whose members are appointed and dismissed by the president. The provincial court structure parallels the federal one, with a supreme court, courts of appeal, and courts of first instance in each province. Although the federal and provincial judiciaries are independent of each other, a degree of centralized control is exercised by the secretary of state for justice in the National Ministry of Interior. Outside both these systems are minor courts that handle petty offenses. These include juvenile courts and courts of justices of peace, or *alcaldes*.

Argentina is reported to run one of the outstanding prison systems in Latin America. The system consists of some 15 federal and 60 provincial institutions. Federal prisons are under the jurisdiction of the General Directorate of Penal Institutions. Although many of the prisons are overcrowded, the emphasis in the prison regimen is on rehabilitation. In addition, a number of prison farms, open-door institutions, and "homes" for women and minors are maintained.

HUMAN RIGHTS

Argentina continued to consolidate the dramatic improvements in its human rights record stemming from the successful 1983 transition from a military government to a freely elected civilian government. Argentina is once again a constitutional democracy with an executive branch, an independent bicameral legislature, and an autonomous judicial system. Political debate is free and open, and all parties have access to the media. There exists a high level of public participation in discussing the issues of the day.

Full respect for civil rights returned to Argentina in 1984. Press restrictions ended, and controls on the largely government-owned electronic media were the least restrictive since the 1976 military coup. Freely elected national and provincial legislatures reopened. An independent judiciary functioned normally by the end of 1984. Trade union freedom was greater than at any time since 1976; strikes occurred, including one national strike on September 3, and most unions completed leadership elections by the end of the year.

There have also been improvements in respect for individual rights. Human rights groups continue to demand a complete accounting for past disappearances and punishment for those responsible.

Alfonsín also created a special, permanent office in the Ministry of the Interior to replace the commission and to continue its work. Other steps to institutionalize human rights have included instituting new laws to strengthen the right of habeas corpus and make torture a

crime, signing and ratifying the Inter-American Human Rights Convention, and supporting the United Nations Convention on Torture. The provincial government in La Rioja began mandatory human rights courses at all schools and for all provincial policemen.

In 1984 Argentina signed and ratified the Inter-American Human Rights Convention. The Chamber of Deputies also approved the UN Convention on Civil and Political Rights and the UN Convention on Economic, Social and Cultural Rights.

FOREIGN POLICY

Argentina has traditionally followed an independent foreign policy and has been frequently out of step with the United States as well as its neighbors. Despite its defeat in the 1982 war with Britain, it continues to assert its long-standing claim to the Falkland Islands (Islas Malvinas). Nevertheless, President Menem indicated that he was prepared to engage in a “civilized dialogue” with Britain if the latter abandoned its economic zone around the islands. In 1990 agreement was reached to restore full diplomatic relations. In 1998 Menem traveled to London for the first such visit by an Argentinean executive in four decades. The dispute with Chile over three islands in the Beagle Channel was resolved by an agreement in 1991 and an additional protocol in 1996. Argentina is linked to Paraguay, Uruguay, and Brazil in the Southern Cone Common Market, an ambitious economic integration effort. Brazil and Argentina also have an agreement to cooperate in the development of nuclear power, although both nations have rejected the use of nuclear weaponry.

DEFENSE

The defense structure is headed by the president, assisted by the chiefs of all three services of the armed forces and a number of advisory bodies, including the National Security Council and the Board of Commanders in Chief of the Armed Forces. Day-to-day operations are the responsibility of the Joint General Staff (Estado Mayor Conjunto).

Argentina is divided into two army areas: the first headquartered at Santa Fe and responsible for the coastal regions and the second headquartered at Mendoza and responsible for the mountains and the north. The two areas are further divided into six military regions: First (Federal Capital), Second (La Plata), Third (Paraná), Fourth (Córdoba), Fifth (Tucumán), and Sixth (Bahía Blanca). The regions are then divided into 68 military districts. The two mountain brigades are located at Mendoza and Neuquén in the foothills of the Andes. The army aviation battalion is based at Campo de Mayo.

Military manpower is provided by conscription. All Argentinean males between the ages of 20 and 45 are required to serve in the military for one or two years’ service. In actual practice, only those between 20 and 22 are inducted.

The total strength of the armed forces in 1998 was 73,000, but that number was reduced to about 31,000 at the end of 2002. The official budget for military expenditures in 2001 was about \$3.3 billion.

ECONOMY

Argentina benefits from rich natural resources, a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. However, by the time President Carlos Menem took office in 1989, the country had piled up huge external debts, inflation had reached 200 percent per month, and output was plummeting. To combat the economic crisis, the government embarked on a path of trade liberalization, deregulation, and privatization. In 1991 it implemented radical monetary reforms, which pegged the peso to the U.S. dollar and limited the growth in the monetary base by law to the growth in reserves. Inflation fell sharply in subsequent years. In 1995 the Mexican peso crisis produced capital flight, the loss of banking system deposits, and a severe, but short-lived recession; a series of reforms to bolster the domestic banking system followed. Real gross domestic product (GDP) growth recovered strongly, reaching 8 percent in 1997. In 1998 international financial turmoil caused by Russia’s problems and increasing investor anxiety over Brazil produced the highest domestic interest rates in more than three years, halving the growth rate of the economy. Conditions worsened in 1999, with GDP falling by 3 percent. President Fernando de la Rúa, who took office in December 1999, sponsored tax increases and spending cuts to reduce the deficit, which had ballooned to 2.5 percent of GDP in 1999. The new government also arranged a new \$7.4 billion standby facility with the IMF for contingency purposes—almost three times the size of the previous arrangement. Growth in 2000 was a disappointing 0.8 percent, as both domestic and foreign investors remained skeptical of the government’s ability to pay debts and maintain its fixed exchange rate with the U.S. dollar. At the end of 2001 Argentina was on

88 Argentina

the brink of default. Efforts to stabilize the nation's banking system and restore economic growth were proving inadequate. Finally, the pegged exchange rate between the peso and the dollar was abandoned in 2002; the exchange rate plummeted and inflation increased. By mid-2002, though, the economy stabilized, and by 2003 the peso was appreciating. That year, falling unemployment, record exports, and slower inflation (under 4 percent) led to 8 percent economic growth. Inflation and corruption produced a growing class of "new poor," or downwardly mobile members of the middle class.

ENVIRONMENT

Argentina's current environmental issues include soil erosion resulting from inadequate flood controls and improper land use practices. The latter is also leading to growing desertification. In the large cities like Buenos Aires, air pollution from emissions and industrial activity is also a problem. The nation's rivers are becoming polluted as the result of increased pesticide and fertilizer use. The nation's system of 22 national parks to preserve habitat and wildlife function reasonably well but are under pressure by deforestation and pollution.

LIVING CONDITIONS

Many visitors to Argentina observe that its cities have a European look to them. In the cities people tend to live in tall apartment buildings. Some have small single-family

bungalows with their own gardens. For decades rural workers have flooded the cities, creating a large number of slums on the cities' outskirts where workers live in shacks. In rural areas, houses are generally made of adobe with dirt floors and straw or mud roofs.

HEALTH

Many Argentines adhere simultaneously to two health care systems—modern, Western medicine and traditional medicine. They often use one system to treat a particular illness or disorder, the other to treat another condition. In some parts of Argentina, traditional beliefs in the medical influences of hot and cold are practiced. Even in the cities, many Argentinean women treat medical ailments, especially upset stomach, by *tirar el cuerito*, or pulling on the skin on the back of a sick person. Some use sulfur and other folk medicine to treat certain conditions. In many regions of Argentina, herbal medicines are used extensively. Life expectancy is relatively high—nearly 72 years for men and nearly 80 years for women. The infant mortality rate is about 16 per 1,000 live births. Fifteen hundred Argentines died of AIDS in 2001.

FOOD AND NUTRITION

Argentines are especially fond of two types of food. Given the prevalence of cattle ranching on the Pampas, it is not surprising that beef is a mainstay of the nation's diet. Especially popular is *parrillada*, a mixed grill of steak and other cuts of beef. Argentines also eat a great deal of Italian food, and it is common to buy fresh pasta for Sunday lunch—often an event that includes the extended family. French cuisine is also served on special occasions. The midday meal used to be the main meal of the day,

but that practice has been changing in modern times because of the pressures of work. Argentines also like to barbecue, serving festive dishes including Spanish paellas. Argentina is a wine-producing country, so wine is served at special events and on holidays.

STATUS OF WOMEN

Women possess the same constitutional rights as do men. Their participation in politics, business, and education is quite extensive, especially when compared with the rights of women in other countries in the region. Argentina has the distinction of having had the first elected woman president in the world.

 Women's Share of Wage Employment (non-Agricultural) %: 47.6

WORK

In the eyes of many observers, Argentina has failed to live up to the potential that its natural resources and cultured, well-educated population—literacy is about 94 percent—would suggest. While its GDP is among the highest in Latin America, its economy has been in an almost constant state of disarray, with huge foreign debts, periods of runaway inflation, an eroding middle class, and a class of desperately poor. While the cities are fairly affluent, rural areas are beset by poverty, largely because much of the best land is in the hands of a few wealthy families while others scramble for a living on marginal land or work for low wages on plantations and estates. Another problem is corruption and inefficiency. Many government workers in the cities hold more than one government job, sometimes several. These workers are often jokingly referred to as *noquis*, which is a potato pasta that is traditionally served on the 29th of each month. The implication is that these people show up for work just in time to receive their paychecks. One measure of the extent of the problem is that after the government tried to lessen such corruption in 1990, the head count of government workers fell by 370,000 over the next five years.

EDUCATION

Education is universal and compulsory for seven years from the ages of six to 14. From preschool to university level, education is available free of charge.

Schooling lasts for 12 years, divided into seven years of primary school and five years of secondary school. More than 70 percent of grade 1 pupils completed primary school during 1975–82. The school curriculum is periodically reformed, but, in general, the emphasis in the primary grades is on nonacademic subjects, such as etiquette, cooperation, civics, and thrift. Secondary schools are divided into general (or academic) and technical (including agriculture) schools. The large majority of students are enrolled in courses leading to the baccalaureate (*bachillerato*) certificate, consisting of a three-year basic cycle of study and a two-year general (*común*) upper cycle of nonspecialized instruction. Other students are enrolled in specialized baccalaureate courses that last from five to seven years.

Although Argentina has the highest literacy rate in Latin America, about 97 percent, the government is actively engaged in systematic adult education. As a result of these efforts, almost all adults claim simple literacy: the ability to read and write simple sentences. Women and men have equal literacy rates. However, because of the high dropout rates in primary schools, functional illiteracy is widespread, and the principal thrust of the present adult education programs is to improve practical skills. These courses, known as *parasistemática*, are attended by over a half million adults, of whom women are in the majority.

Private schools run by ethnic groups and by the Roman Catholic Church are integrated within the school system. They adopt the curriculum prescribed by the government, are monitored by national inspectors, and, in most cases, receive public subsidies. The future of private schools is a sensitive political issue and is closely related to the fortunes of the anticlerical movement.

The national higher educational system consists of 29 state universities and 23 private universities. National universities are autonomous, but since 1966 students are excluded from their governing bodies. The rising tempo of student unrest in the late 1960s and early 1970s led to the dismissal of thousands of professors, the consequent crippling of faculties, and decline in the quality of instruction. Argentinean students are

acutely concerned about social and political issues, and many of them are active in support of leftist and Marxist causes.

SCIENCE AND TECHNOLOGY

Argentina has a large number of institutions of higher learning, including both national and private universities, that support scientific research. The chief government organization that funds research is the Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET). Some governmental institutions conduct research in particular fields. Examples include the Consejo Nacional de Energía Atómica for nuclear energy and the Instituto Nacional de Tecnología Agropecuaria for agriculture. The nation's unstable economy, though, has limited funding for research, and many young Argentinean scientists leave the country for better opportunities elsewhere.

MEDIA

The Argentinean press is one of the largest in the Americas, with more than 200 dailies with combined circulation of approximately 3.5 million. Greater Buenos Aires alone has some 60 daily newspapers with a combined circulation of 1.5 million. The ones that have national reputations include *Clarín*, *La prensa*, and *La nación*. Dailies are

published in all the provincial capitals and 60 other towns. Buenos Aires also has a vigorous ethnic-oriented and foreign language press, including the *Buenos Aires Herald*.

Historically, the Argentinean press had been noted for its independence and its boldness in discussing politically controversial issues. The first break from this tradition took place under Perón, who used a number of methods, such as withholding newsprint and state-inspired strikes and expropriation, to bring the press under government control as an instrument to rally the masses behind his policies. The fall of Perón brought a general relaxation, but censorship was revived under President Onganía and became even more oppressive. In 1968 TELAM, the national news agency, was nationalized and given control over state-enterprise advertising as a means of bringing indirect pressure on errant media.

There are three types of radio stations: state, private, and municipal and provincial. Of the two state-owned networks, Radio Nacional Argentina is the largest. The second state system is operated by the Dirección General de Emisoras Comerciales. External broadcasting is conducted by Radio Nacional. There are more than 52 private stations grouped under Asociación de Radiodifusoras Privadas Argentinas. In addition, there are a number of university stations.

Television, introduced in 1951, is extremely popular in Argentina. Foreign programs are limited by law to 50 percent.

CULTURE

The influence of French culture was strong in Buenos Aires in the nineteenth and early twentieth centuries, when French art, music, and especially architecture were popular. The work of many Argentinean writers, including Jorge Luís Borges, Julio Cortázar, Ernesto Sábato, Manuel Puig, Osvaldo Soriano, and Adolfo Bioy Casares, is well known throughout the world. Argentina's annual book fair regularly attracts over a million people. The Teatro Colón opera house in Buenos Aires is one of the world's leading opera houses and stages not only opera but also classical music and ballet performances. Theater is popular not only in the major cities but even in rural areas of the provinces. Argentina has a strong

tradition of graphic arts; Buenos Aires alone has 60 art galleries that support the work of internationally renowned painters. The Subterráneos de Buenos Aires, or Buenos Aires Subway, sponsors dance and theater performances and art exhibits for people waiting for trains; the organization even sponsors art exhibits on board the subway trains.

FOLKLORE AND MYTHOLOGY

Spiritualism is common in Argentina. Worship of the dead plays an important part in Argentines' lives. People honor national heroes such as San Martín not on the dates of their births but on the dates of their deaths. Many pilgrims regularly visit the Recoleta and Chacarita cemeteries in Buenos Aires, leaving ritual offerings on the tombs of Juan and Isabel Perón and the tango singer Carlos Gardel.

One folk hero for Argentines is the gaucho, the cowboy who represented law and order as well as free-spiritedness and resistance to authority.

ENTERTAINMENT AND RECREATION

So pervasive in Argentina is the tango, both in music and dance, that it could be examined as part of the nation's culture, entertainment, and perhaps even religion. Tango became popular in the late 1800s, when it emerged from working-class neighborhoods and brothels. In form it blends the poetry of the gauchos with French and Italian music. Carlos Gardel (1890–1935) was the nation's foremost tango artist. He created the *tango canción*, or "tango song," making tango a fixture in middle- and upper-class life. The themes of tango music and dance are love, jealousy, and betrayal. For many Argentines, it captures the anxieties of life. It is marked by sadness and nostalgia.

Argentines have traditionally been great moviegoers. While many movie houses remain in Buenos Aires, many others in the smaller towns and villages have had to close because of the advent of the videocassette.

ETIQUETTE

Men and women greet each other with kisses on the cheek, although shaking hands is common in formal situations. In addressing one another, Argentines distinguish between *vos*, the singular form of "you" used with family and friends, and *usted*, the plural form of "you" used in addressing superiors and elders. In contrast to people in countries such as the United States, Argentines are comfortable with close physical proximity and often touch each other when conversing. Men still commonly use *piropos*, or flirtatious comments, when women pass by.

Argentines are gregarious and enjoy having visitors. A common ritual in Argentinean life is drinking *mate*, a tea made from holly leaves. Drinking *mate* is a complex ritual among family, friends, and colleagues. One person fills a gourd with tea leaves while water is heated (but not boiled). Water is then poured into the gourd, and the tea is sipped through a silver tube with a filter to keep the tea leaves from getting into the tube.

FAMILY LIFE

Family life in Argentina is in general similar to that of other Western nations. Social life tends to be centered on the family. Religious holidays and Catholic events such as First Communion provide opportunities for family celebrations. While the Catholic Church opposes it, divorce is becoming more common, especially after it was legalized in the 1980s. The most common family form is the nuclear family, and small families are the norm. Children remain with their family until they are in the twenties or until they marry, when they tend to find homes distant from their relatives. Extended families often gather for Sunday lunch, religious holidays and events, and for family reunions. Affluent people often rely on nannies and baby-sitters to raise their children. It is quite common for parents routinely to seek psychological counseling for their children.

PERSONAL APPEARANCE

People who live in the city wear Western-style clothing. Especially popular are fashions from Italy. It is quite common to own fashionable dresses to wear while dancing the tango. Argentinean businesspeople are conservative and tend to dress formally. In rural areas, many workers on estates and plantations wear clothing that preserves the tradition of the *gaucho* costume, including a wide-brimmed hat and loose pants tucked into boots. Indians in the northwest wear ponchos, colorful skirts and bowler hats.

Many observers believe that Argentines have become obsessed with personal appearance. Diet clinics and

plastic surgery are commonplace; Argentina has become a hub for plastic surgery, including liposuction, throughout Latin America. Obsession with weight loss has caused an epidemic of eating disorders among young women—estimated as afflicting one in ten.

SPORTS

Soccer, tennis, and basketball dominate sports in Argentina. Soccer became particularly popular after Argentina won the World Cup in 1978 and 1986. In 2004 the nation won its first Olympic gold medal in soccer in 52 years. Such legends as Diego Maradona and Daniel Passarella are household names. World-famous tennis players have included Guillermo Vilas and Gabriela Sabatini. In basketball, the Argentinean national team beat the United States for the gold medal in the 1995 Pan-American Games and in 2004 beat Italy to win the Olympic gold—the nation's first-ever Olympic medal in basketball.

CHRONOLOGY

- 1945** The military arrest Vice President Juan Domingo Perón; the General Confederation of Labor calls for a general strike in support of Perón; the army is cowed, and Perón is restored to power.
- 1946** Perón is elected president, defeating a coalition of radical, socialist, and communist parties.
- 1947** Perón launches the First Five-Year Plan.
- 1952** Perón is reelected to the presidency, winning 65 percent of all votes cast.
Eva Perón dies.
- 1953** Perón antagonizes the Catholic Church by proposing to legalize divorce and prostitution and by opposing church influence in labor unions. Perón is ousted in an army coup and replaced by General Eduardo Lonardi.
Lonardi is deposed in a bloodless second coup led by General Pedro Eugenio Aramburu.
The constitution of 1949 is abrogated and the constitution of 1853 is reinstated.
- 1958** Arturo Frondizi is elected president in the first post-Perón national elections.
- 1962** Reinstated Peronist party wins 34 percent of popular vote, 11 governorships, and 42 seats in Congress in elections; the army, alarmed at the revival of Peronism, deposes and arrests Frondizi; José Mario Guido is named president.
In internal struggle the Azul (blue, or Catholic) faction purges the armed forces of the Colorado (red, or anti-constitutionalist) faction.
- 1963** Arturo Umberto Illia is elected president under new electoral laws that bar Peronists from standing as candidates.
- 1965** Illia is forced out in a coup led by Azul leader Gen. Juan Carlos Onganía; Congress is dissolved; all political parties are banned; university autonomy is abolished; provincial governors and legislatures are dismissed.
- 1970** Onganía attempts to dismiss the army's commanding general, Gen. Alejandro Agustín Lanusse, but is himself dismissed by the army. Brig. Gen. Roberto Marcelo Levingston succeeds to the presidency.
- 1971** Levingston is forced to step down, and Lanusse assumes the presidency; Lanusse announces plans for national elections and return to civilian rule.
- 1972** Perón returns to Argentina after an 18-year exile.
- 1973** Hector Campora, a candidate of the Peronist coalition, Frente Justicialista de Liberación (FREJULI), wins presidential election with almost 50 percent of the vote; FREJULI candidates win large majorities in legislative and gubernatorial elections.
Campora resigns to enable Perón to stand as candidate; Perón wins 62 percent of the vote and is inaugurated president.
- 1974** Perón dies and is succeeded in office by his wife Isabel (Maria Estela) Martínez de Perón.
- 1976** Mrs. Perón's turbulent presidency is terminated by an army coup.
Military junta suspends many of the provisions of the 1853 constitution.
Lt. Gen. Jorge Rafael Videla is named president.
- 1977** 432 political prisoners are freed out of an estimated 18,000 held in jail without trial.
Guerrillas step up kidnappings, bombings, and other acts of terrorism.
Montoneros form a political party in exile.
- 1978** The territorial dispute between Chile and Argentina over three islands at the extreme south of the continent intensifies into crisis.
Videla quits army but receives an extension of term as president until 1981.
Mrs. Perón, accused of embezzlement, is placed under house arrest.
- 1979** Unions are banned from political activities.
Diplomatic relations are resumed with the United Kingdom.
Publisher Jacobo Timerman is freed from prison and expelled from the country.
- 1980** Argentina's two largest private banks are declared bankrupt.
Roberto Eduardo Viola, a former commander-in-chief of the army, is named to succeed President Videla in March 1981.
- 1981** Roberto Eduardo Viola assumes presidency but is ousted within a few months and is replaced by Gen. Leopoldo Galtieri.

94 Argentina

- 1982** Argentina invades and occupies the Falkland Islands. In brief but bloody conflict, United Kingdom recovers the islands.
Galtieri resigns and is succeeded by Reynaldo Benito Antonio Bignone.
Bignone lifts ban on political parties and promises return to civilian rule.
Junta rule is reimposed.
Peso is devalued.
Government announces plan to return state companies to the private sector.
Labor protests austerity measures to curb inflation.
General strike paralyzes nation.
- 1983** Police strike in Tucumán province.
Raúl Alfonsín of the Radical Party is elected president, winning 51 percent of the national vote. Radicals also win majority in Chamber of Deputies.
The junta is dissolved as Alfonsín takes office.
The Peso Argentina is introduced to replace the old peso.
- 1984** Argentina and Chile reach accord over the Beagle Channel.
The Peronist CGT and Alfonsín reach agreement over proposed labor reforms.
Alfonsín appoints a National Commission on the Disappearance of Persons.
The Ley de Pacificación Nacional is repealed and members of the three juntas that ruled the country since 1976 are tried before military tribunal.
- 1985** Isabel Perón, former president, steps down as leader of the Peronists.
Argentina obtains bridge loan from IMF.
Radicals fare well in midterm elections.
- 1986** Three members of the military junta are found guilty and receive prison sentences.
- 1987** Divorce is legalized; gubernatorial and legislative elections are held as scheduled.
- 1988** A rebellion at the garrison town of Monte Caberos is crushed in April. The World Bank approves and unprecedented \$1.25 billion loan package in September. Annual inflation rate reaches about 390 percent.
- 1989** In January an attack on the military base at La Tablada is crushed by the army. Inflation reaches crisis level of more than 5,000 percent, sparking a week of looting and rioting in several cities. President Menem takes office on July 8. IMF guarantees a stand-by loan of \$1.5 billion. In October, Galtieri and two other senior military leaders are pardoned of war crimes.
- 1990** Menem authorizes the military to suppress civil unrest for the first time since 1983.
- In December a bloody uprising by several hundred Argentinean army troops is quashed by forces loyal to Menem.
Menem grants pardons to eight military men, including former junta members responsible for the “dirty war.”
- 1991** Argentinean workers stage wildcat strikes to protest economic austerity measures.
- 1993** The country’s 11-year debt crisis comes to an end.
- 1994** Argentina adopts several changes to its constitution including the direct election of the president.
- 1995** Though inflation is down to 4 percent, the government braces for Mexican devaluation with a new austerity plan.
- 1997** Violent protests erupt in several major cities over growing unemployment (20 percent in some areas); the governing Peronist party suffers heavy losses in midterm legislative elections; the economy pulls out of recession, posting 8 percent GDP.
- 1998** Judge Roberto Marquovich orders the arrest of former army chief Jorge Videla over the theft of babies of disappeared persons, crimes not protected by the amnesty laws passed after the end of military rule.
- 1999** Fernando de la Rúa is elected president; President de la Rúa arranges a new \$7.4 billion stand-by facility with the IMF for contingency purposes.
- 2001** President de la Rúa forms a government of national unity incorporating several parties from across Argentina’s political spectrum. He appoints three finance ministers in as many weeks. Protests greet planned austerity measures. The opposition Peronists take control of both houses of parliament in congressional elections. In December, the IMF announces it won’t disburse \$1.3 billion in aid for the month, pushing Argentina closer to the brink of default. On December 20, President de la Rúa resigns after widespread street protests and rioting leave at least 25 people dead. Within two weeks, on January 2, 2002, Eduardo Duhalde becomes the fifth Argentinean president since democratic rule returned to the country in 1983.
- 2002** Banking and foreign exchange activity is suspended in light of Argentina’s economic crisis. Argentina defaults on its debt repayment to the World Bank.
- 2003** Néstor Kirchner is sworn in as president; Argentina and the International Monetary Fund agree on a debt-repayment plan.
- 2004** Argentina wins Olympic gold medals in soccer and basketball.

Christianity

UNIT OF CURRENCY

Dram

NATIONAL FLAG

Three equal horizontal bands of red (top), blue, and gold

NATIONAL EMBLEM

A lion and an eagle hold a shield, the center portion of which represents Noah's Ark and Mount Ararat, joined by the insignias of the four Armenian dynasties. A sword pointing vertically through the center symbolically breaks the chains of foreign oppression. A sheaf of wheat represents the sacredness of the soil, and olive branches stand for goodwill and peace.

NATIONAL ANTHEM

"Mer Heyrenik" (Our fatherland)

NATIONAL HOLIDAY

September 21 (Referendum Day)

DATE OF INDEPENDENCE

September 21, 1991

DATE OF CONSTITUTION

July 5, 1995

GEOGRAPHICAL FEATURES

Armenia is a landlocked nation in the Caucasus region in southeastern Europe. It shares borders with Georgia on the north, Azerbaijan on the east, Iran on the south, and Turkey on the west. Its capital city is Yerevan, located near its southeastern border. The country is a high plateau region of rugged mountains and extinct volcanoes and has an average elevation of 1,800 m (5,900 ft). The perpetually snow-capped Mount Ararat is the highest point in Armenia. The chief rivers are the Aras and its tributary, the Razdan. Lake Sevan, in the northeast, supports an important fishing industry.

Armenia

CLIMATE AND WEATHER

Armenia's climate ranges from subtropical to alpine. The mean temperature is 77°F in August and 27°F in January. Rainfall is infrequent. Yerevan receives 13 inches of rain annually, though the surrounding mountains receive more rainfall.

Climate and Weather

Mean Temperature
 August: 77°F
 January: 27°F
 Average Rainfall: 13 in

FLORA AND FAUNA

Armenia is home to about 3,200 species of plants. About 10 percent of the country, particularly its higher regions, is covered with forests of beech, oak, hornbeam, ash, maple, and lime trees. The valleys of Armenia have steppe vegetation, including feather grass, couch grass, and other woody, herbaceous flowering plants such as Pallas buckthorn, acantholimon, sage, and thyme. Armenia provides habitat for 450 species of vertebrates. Among them are 76 mammals (including a species of wild goat called the tur and a species of wild sheep called the mouflon), 304 birds, 44 reptiles, six amphibians, and 24 fish, as well as 1,000 species of invertebrates.

ETHNIC COMPOSITION

Armenia is ethnically homogeneous, with Armenians making up more than 90 percent of the population. Major minorities are Azerbaijanis, Kurds, and Russians. Minorities include Azeris (1 percent), Kurds (4 percent), and Russians (2 percent).

LANGUAGES

Armenian is an Indo-European language. It has two main dialects: East Armenian, the official language of Armenia, and West or Turkish Armenian. The alphabet is of Greek and Persian origin. It is highly inflective, with a complex system of declensions; agglutinative; and rich in consonants. Armenian has a rich literature dating from the fifth century.

RELIGIONS

Armenia is one of the oldest Christian countries in the world, and it was the first to declare Christianity as its national religion. The Armenian Orthodox Church belongs to the Lesser Eastern Churches and is headed by a Catholicos (the head or patriarch), resident in the ancient city of Etchmiadzin.

Religious Affiliations

Yezidi (Zoroastrian/Animist)	60,000

HISTORICAL BACKGROUND

According to tradition the kingdom of Armenia was founded in the region of Lake Van by Haig or Haik, a descendant of Noah. By the sixth century B.C.E. it was a homogeneous nation. Until the fourth century B.C.E. it was a Persian satrapy. It was conquered in 330 B.C.E. by Alexander the Great and, after his death, became a part of the Syrian kingdom of Seleucus I. After the defeat of the Seleucids the Armenians declared their independence under a native dynasty, the Artashesids. The imperialistic ambitions of King Tigranes led to a war with Rome and his defeat by Pompey in 67 B.C.E. Tiridates, a Parthian prince, was confirmed as king of Armenia by Nero in A.D. 66. Christianity was introduced early in the first century. In the third century Ardashir I, founder of the Sassanid dynasty, overran Armenia, and with that began the long history of persecutions that has lasted until the 20th century. Attempts at independence were short-lived, and the country found itself the constant prey of the Persians, Byzantines, White Huns, Khazars, and Arabs. During the Mongol invasions, the invaders massacred a large part of the population. After the Mongols, the Ottoman Turks invaded Armenia and, by the 16th century, occupied all of it. Possession of the eastern portion of Armenia was disputed by Turkey and Persia until 1828, when Persia ceded to Russia what is now the Republic of Armenia. Between 1894 and 1915 Armenians were subjected to a holocaust when the Turks attempted to exterminate the entire Armenian population. More than 600,000 were killed, and the rest were forcibly deported. With the collapse of the Russian and Ottoman Empires, Armenia declared its independence in 1918, and its independence was recognized by the Treaty of Sèvres in 1920. In the same year, however, Communists gained control of Armenia and proclaimed it a Soviet republic, thus ending the country's independence. With the collapse of the Soviet Union in 1990, Armenia declared its independence in 1991.

In the same year, Levon Ter-Petrosian, the incumbent Supreme Soviet chairman, was elected president of the republic, and Khosrov Haroutiunian was named prime minister. In May 1992 Armenian forces captured Azerbaijan's last major urban stronghold in Nagorno-Karabakh and proceeded to open a corridor to Armenia proper. Concurrently an attack was launched on the Azeri enclave of Nakhichevan near Armenia's border with Turkey. In 1993 Hrand Bagratian replaced Haroutiunian as prime minister. The opposition parties mounted large antigovernment demonstrations in 1993 and 1994. In Armenia's first postindependence legislative elections in 1995 Ter-Petrosian's Pan-Armenian National Movement won a substantial legislative majority while a constitutional amendment gave the president more powers. In the 1996 presidential election, Ter-Petrosian was elected with

51.75 percent vote over Vasken Manukian of the National Democratic Union. Opposition leaders alleged widespread electoral fraud, which was confirmed by outside election observers. In 1996 Prime Minister Bagratian resigned and was replaced first by Aram Sarkissian and later by Robert Kocharian, president of the self-proclaimed Republic of Nagorno-Karabakh. President Ter-Petrosian himself resigned, leaving Kocharian as president. In the presidential balloting in 1998 Kocharian was elected with 60 percent of the vote. He later named Armen Darbinian as prime minister. The May 30, 1999, parliamentary elections resulted in a convincing victory for the Unity Coalition led by Vazgen Sarkissian, who thereupon became prime minister. However, Sarkissian, two cabinet ministers, and five other parliamentary deputies were shot dead on October 27, 1999. President Kocharian named the slain prime minister's brother, Aram Sarkissian, to replace him. There was further political violence when the deputy minister of the interior and national security, Artsun Markkaryan, was found shot dead. Aram Sarkissian was fired in May 2000, and Adranik Markkaryan became prime minister. Armenia became a full member of the Council of Europe in 2001.

Kocharian won reelection in 2003 amid widespread accusations that the vote was rigged. He faced challenges from eight other contenders and criticism for his failure to reach a deal with Azerbaijan over Nagorno-Karabakh. Other issues included 30 unresolved political murders in recent years and the widening gap between rich and poor in the country. When Kocharian failed to win 50 percent of the vote, a runoff election was held, which he won with 67.5 percent of the vote. In 2004 waves of protest over continuing economic problems rocked the capital city of Yerevan.

LIST OF MODERN RULERS

1991–98 Levon Ter-Petrosian (president)
1998– Robert Kocharian (president)

CONSTITUTION

Armenia adopted its first post-Soviet constitution on July 5, 1995. The constitution is based largely on the French model with a strong president and a legislature elected by popular suffrage. The president is directly elected for five-year terms. His veto can be overridden by a simple majority in the house. The prime minister is the head of government. He is nominated by the president, subject to parliamentary approval. The cabinet of ministers and the chairman of the state administration are appointed by the prime minister with presidential and parliamentary approval.

PARLIAMENT

The unicameral National Assembly (Azgayin Zhaghov) is elected for a five-year term and has a membership of 131, of whom 75 are elected from national party lists on a proportional basis and 56 from constituencies on a majoritarian basis.

POLITICAL PARTIES

The major political parties represented in the National Assembly include the Republican Party of Armenia, Armenian Revolutionary Federation, Country of Law (Orinats Yerkir), People's Party of Armenia, National Accord Party, Republic Party, and United Labor Party. Other significant parties include National Democratic Union, Constitutional Rights Union, Social Democratic Hnchakian Party, Armenian National Movement, Liberal Democratic Ramkavar Party, Self-Determination Union, Communist Party, and the Christian Democratic Party. Thirty-six other political parties are registered, but many of these become active only during national campaigns.

LOCAL GOVERNMENT

Armenia is divided into 11 provinces headed by governors and 67 *rayons*, or districts, all centrally controlled. There are legislative bodies at the local level with some fiscal powers.

LEGAL SYSTEM

The court system consists of three levels: district courts of first instance, appellate courts, and a Supreme Court. The Supreme Court consists of three sections: criminal, civil, and appellate. The presidium of the court reviews cases first tried in the other sections of the court. The constitution provides for review courts and a court of appeals to handle cases previously sent to the Supreme Court. The courts are subject to pressure from the executive branch, and polls have shown that the populace remains skeptical about the neutrality of the courts. A new criminal code went into effect in 2000. The civil code and the criminal procedure code went into effect in 1999. The latter permits the right to an attorney, right to a public trial, right to question witnesses, and right to appeal but does not guarantee bail or trial by jury. A constitutional court has been established. It has the right to review the constitutionality of legislation and approve international treaties.

HUMAN RIGHTS

The government's human rights record is poor in several important respects. In some cases, extrajudicial killings

by security forces are reported, and some persons are arbitrarily arrested and detained without warrants. Prison conditions are harsh, and lengthy pretrial detention is common. The judiciary is subject to political pressures and does not enforce constitutional protections consistently. There are some limits on press freedoms, and many journalists practice self-censorship. Registration requirements hinder freedom of association. The law places some restrictions on religious freedom, including a prohibition against proselytizing by groups other than the Armenian Orthodox Church. International observers have found presidential and parliamentary elections to be below international standards, with detentions of opposition supporters and serious irregularities in voting procedures.

FOREIGN POLICY

Armenia is a founding member of the Commonwealth of Independent States. It is also a member of the Conference on Security and Cooperation in Europe and the United Nations. The major foreign policy issue in the 1990s was the dispute with Azerbaijan over the Nagorno-Karabakh enclave. The 1994 cease-fire has left the Armenians in control of much of the territory.

DEFENSE

In fiscal year 2001 Armenia's military expenditures were about \$135 million, representing 6.5 percent of the nation's gross domestic product. The nation has about 650,000 males considered fit for military service.

ECONOMY

Under the old Soviet central planning system, Armenia had developed a modern industrial sector, supplying machine tools, textiles, and other manufactured goods. Since the collapse of the Soviet Union and the independence of Armenia that followed, the economy has switched to small-scale agriculture and away from heavy industry. The privatization of industry has proceeded at a slow pace but ahead of most other former Soviet republics. Armenia is a food importer, and its mineral deposits are small. The

Nagorno-Karabakh dispute and the embargoes imposed by Turkey and Azerbaijan contributed to a severe economic decline in the early 1990s. By 1994, however, the Armenian government had launched an ambitious International Monetary Fund-sponsored economic program that has since produced positive growth rates. Armenia also managed to slash inflation and to privatize small and medium-size enterprises. The persistent energy shortages Armenia had suffered in earlier years have been partially offset by one of its nuclear plants at Metsamor; in fact, Armenia is currently a net energy exporter, although the nation is under international pressure to close the Metsamor power plant. Unemployment is high—about 20 percent in 2003—and women form a disproportionately large number of the unemployed.

In 2003 Armenia joined the World Trade Organization. It has cut inflation to 4.8 percent in 2004, stabilized its currency, and privatized most small and medium-size business as well as the electricity distribution system. Armenia maintains a severe trade imbalance, exporting about \$735 million in goods while importing about \$1.2 billion in 2004.

ENVIRONMENT

Armenia's chief environmental problems have resulted from natural disasters, pollution, and war. The disastrous 1988 earthquake, which left 55,000 dead, set envi-

ronmental cleanup progress back by a decade. Pollution was caused principally by the Chernobyl nuclear reactor meltdown, and the Metsamor nuclear power plant continues to add to the problem. Chemical pollution affects the Hrazdan and Aras rivers.

LIVING CONDITIONS

Living conditions in Armenia have varied widely over the past few decades. Under Soviet rule, Armenians enjoyed one of the highest standards of living in the Eastern bloc. The country was heavily industrialized, and while there were occasional shortages of goods, Armenians in general had ready access to high-quality food and other goods as well as effective public transportation, telecommunications, and utilities.

Conditions changed around the time of the collapse of the Soviet Union. While the conflict with Azerbaijan ended with a cease-fire, the Azerbaijanis imposed an energy blockade that stopped the flow of oil and gas to Armenia. Because of the severe energy shortage, 70 percent of Armenia's industry ceased functioning, the gross domestic product plummeted sharply, and Armenians' standard of living fell precipitously. Compounding the problem were the aftereffects of a massive earthquake in 1988 that killed 25,000 people and caused \$20 billion in damages. Combined with the collapse of the Soviet economy, these events led to an increase in crime, disease, and poverty. In 1997 Armenia's economy began to improve, and while severe problems remain, including a high unemployment rate, living conditions after the turn of the century were markedly better than they had been a decade earlier.

HEALTH

Medical practices in Armenia follow the Western model. Under Communism health care was provided by the state, but in recent years efforts have been made to privatize the health care sector, and a number of private clinics now operate in the country. Some of these clinics are funded by international Armenian organizations, such as the Armenian General Benevolent Union and the Armenian Relief Society. Life expectancy at birth is just over 71 years, and the infant mortality rate is just over 24 per 1,000 live births. The birth rate in 2004 was 11.43 births

per 1,000 population. In 2003 fewer than 200 Armenians died of AIDS.

FOOD AND NUTRITION

As a former part of the Soviet empire, Armenians eat many foods common among Soviet peoples, including borscht (beet soup), roasted meats, potatoes, and stews. Also common are fresh trout from Lake Sevan; grapevine leaves stuffed with ground meat, rice, and herbs; flat breads; and Middle Eastern foods, such as hummus and shish kebab. Bread and salt are such important staples that Armenians are fond of saying, "We have bread and salt among us" to speak of friendship, and foreign dignitaries are welcomed with bread and salt. Unfortunately, a decline in living standards in recent years and widespread poverty—about 50 percent of the population in 2003—have led to malnutrition and stunted growth among Armenian children.

Food and Nutrition

Undernourished % of total population: 34.2
 Daily Available Calories per capita kcal: 2,040
 Amount of Cereal Available per person per year kg: 164.1
 Amount of Fruits and Vegetables Available per person per year kg: 181.6

STATUS OF WOMEN

There is no specific law banning violence against women, and only a few cases of rape, spousal abuse, or other types of violence are reported. Domestic violence cases usually are not reported to the police, and women have no specific legal recourse. At least one nongovernmental organization in the Gyumuri area provides shelter and assistance to battered women. The public prosecutor's of-

Police registers fewer than 20 cases of rape in a normal year. Prostitution is not illegal, and, according to anecdotal evidence, street walkers are simply sent to a hospital or a physician for a checkup. There are reports of trafficking in women by Middle Eastern Arabs. In the workplace women receive equal pay for equal work but are generally not afforded the same professional opportunities given to men and are often relegated to menial or low-skill jobs. Women make up 65 percent of those officially registered as unemployed. Currently there are more women than men receiving university and postgraduate education, but this may stem from the fact that more young men emigrate in search of jobs.

Women

 Seats Held in Parliament by Women %: 5
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 47.0

WORK

Work in Armenia is little different from that in other post-Communist industrialized countries. Many Armenians are employed in shoe and clothing production, computer technology, and chemical industries. Women are a large percentage of the workforce and work as teachers, doctors, scientists, researchers, factory workers, and governmental and nongovernmental administrators—though women also constitute over 60 percent of unemployed workers and earn in general about two-thirds of what men earn. In rural areas, work is divided along traditional gender lines. Men work in the fields or care for livestock, while women take care of domestic matters.

EDUCATION

Education is compulsory between ages six and 17 and is free at both the primary and secondary levels. The education system is based on the old Soviet system, but since independence more emphasis has been placed on Armenian history and culture. There are two universities in

Yerevan: the Yerevan State University, founded in 1919, and the State Engineering University of Armenia.

SCIENCE AND TECHNOLOGY

Throughout most of the twentieth century, dating back to the republic of Armenia and through Soviet Armenia, scientific and technological research was largely sponsored and funded by the state. Research is sponsored still by the National Academy of Sciences, but in recent years financial strain has left the state unable to support much scientific research, and many young scientists leave the country for better opportunities abroad. Appeals are regularly made to international organizations and foundations for funding, and some have been successful. A fiber optics laboratory at the State Engineering University of Armenia was established in the early 1990s with the help of the Armenian Professional Society of America. Despite these difficulties the National Academy of Sciences in October 2004 hosted the Armenian Day of Science to celebrate the accomplishment of Armenian scientists and to address issues affecting Armenian science.

MEDIA

Before independence Armenia had over 90 newspapers, but many of them have folded since then and only 80

have survived. The leading paper is *Hayastani Hanrapetutyun* (Republic of Armenia), founded in 1990. Other important newspapers include *Hayots Ashkhar*, *Hazg* (Nation), and *Hayastani Kommunist* (Armenian Communist). The domestic news agency is the Armenian Press Agency (Armenpress). The electronic media comprise Radio Yerevan and Armenian TV.

CULTURE

Because more Armenians live outside the country than in Armenia, to be “Armenian” is more of a cultural identifier than a national one. Armenians take great pride in the richness and diversity of their historical traditions.

Under Soviet rule, artists and writers were supported by the state. Since the dissolution of the Soviet empire, most artistic and cultural activity in Armenia has been privatized. Armenia has a rich tradition in nearly all the arts. Both oral and written literature dates back to the fourth century with the work of Movses Khorenatsi, a historian who recorded much of the nation’s oral literature. Both church music and folk music have long traditions in Armenia, and Armenians take pride in their opera house, theaters, and concert halls. Armenian graphic arts include architecture, bas-reliefs, stone engravings, tapestry, and illuminated manuscripts.

FOLKLORE AND MYTHOLOGY

Armenians have a large number of historical national heroes. A key figure in Armenian folklore is Mesrop Mashtots, a fourth-century warrior-scholar-teacher who

revived the Armenian alphabet. He is depicted in many Armenian works of art. Also important to Armenians are the fifth-century warrior Vartan Mamikonian, who defended the Armenians against the Persians, as well as modern-day guerrilla fighters. A good deal of Armenian folklore is biblical. Many people believe that Noah landed his ark on Mount Ararat, a mountain on the Turkish side of Armenia’s current-day western boundary. Gregory the Illuminator (Grigor Lusavorich) is believed to have brought Christianity to Armenia by converting King Trdat III in the year 301. Gregory is believed to have had a vision in which Christ showed him where the first Christian church in Armenia should be built, site of the present-day Cathedral of Saint Gregory the Illuminator.

ENTERTAINMENT AND RECREATION

Armenians enjoy movies, music and both traditional and modern dance. The Armenian symphony, as well as opera and ballet companies, performs at the Opera House in the capital and draws enormous crowds. Armenian men often gather at city parks to play backgammon and chess, and all Armenians enjoy walking in the parks and visiting outdoor cafés. In the summer Armenians relax on the beach at Lake Sevan.

ETIQUETTE

Armenians place a great deal of emphasis on showing hospitality and generosity toward guests and visitors. They take great pride in their language and historical traditions, and they manifest that pride in the sophistications of their homes and entertainment. Armenians regard it as impolite not to visit one another spontaneously and unannounced. They greet one another with kisses on the cheek or by shaking hands, and it is not uncommon to see Armenian men, as well as women, walking arm in arm on the street.

FAMILY LIFE

Armenians do not change their places of residence very often, so family life tends to be stable and close. Armenians often live with their parents for a period after marriage, with the bride moving into her husband’s parents’ house. Children tend to care for their parents in old age, so grandparents play a major role in the upbringing of their grandchildren. Cousins play together as children and typically remain close as adults. Traditional Armenian culture has been patriarchal, so the oldest male is regarded as head of the family. Marriages are often arranged in the smaller towns and villages, and throughout Armenia divorce is un-

common. Taking part in the activities of the extended family is a major part of Armenian life.

PERSONAL APPEARANCE

Throughout most of the twentieth century and into the twenty-first, Armenians have dressed much like the people of Europe. Men tend to wear suits, sweaters, slacks, and leather jackets. Women enjoy wearing dresses, jewelry, makeup, and high-heeled shoes. As in much of the world, younger people prefer jeans. Armenians follow fashion trends throughout the world through magazines and television. More traditional costumes are worn for drama, dance, and cultural events. Some distinctive regional items of apparel include sheepskin hats, engraved metal belts, jewelry made of coins, and, for women, braided hair.

SPORTS

Armenians have excelled in boxing, weight lifting, and wrestling, and the nation's athletes have won medals in these sports in the Olympic Games. Armenians take pride in worldwide athletes of Armenian extraction, including the tennis player Andre Agassi, the basketball coach Jerry Tarkanian, the football coach Ara Parseghian, the National Football League placekicker Garo Yepremian, and the Major League Baseball pitcher Steve Bedrosian. Chess grand master Gary Kasparov was of Armenian heritage. Soccer is popular in Armenia, and in 1973 the Armenian national team won the championship of the Soviet Union.

CHRONOLOGY

- 1920** The Allies recognize Armenia as a sovereign nation; the Turks, who refuse to recognize the independence of Armenia, seize the regions of Kars and Alexandropol and continue the forced repatriation of ethnic Armenians, a process begun in 1915 and in which 1.5 million perish; the government of Armenia, a coalition of Communists and Dashnaks, pronounces Armenia a Soviet republic.
- 1921** Communists force out of government the Dashnaks, who stage a revolt but fail to regain power.
- 1922** Armenia, Georgia, and Azerbaijan form the Transcaucasian Soviet Federated Socialist Republic and then join the Soviet Union.
- 1923** The Soviet Union assigns control of Nagorno-Karabakh, a region disputed by Armenia and Azerbaijan, to Azerbaijan.
- 1926** Joseph Stalin comes to power in Moscow and initiates both the industrialization of Armenia and the systematic suppression and murder of the country's political and intellectual elite, a campaign known as the Great Terror.
- 1936** The Soviet Union makes Armenia, Georgia, and Azerbaijan distinct republics within the union.
- 1953** Stalin dies; Nikita Khrushchev becomes the leader of the Soviet Union.
- 1974** Moscow appointee Karen Demirchian assumes control of the Communist Party of Armenia, further entrenching its notorious corruption.
- 1985** Mikhail Gorbachev becomes leader of the Soviet Union.
- 1988** A massive earthquake kills 55,000 in Armenia.
- 1989** Soviet authorities arrest members of the Karabakh Committee, a political group dedicated to regaining the Nagorno-Karabakh region from Azerbaijan; the dispute with Azerbaijan over the Nagorno-Karabakh enclave escalates into war.
- 1991** Armenia declares its independence following the collapse of the Soviet Union; Levon Ter-Petrosian is elected president; Armenia joins 10 other former Soviet countries as a member of the Commonwealth of Independent States.
- 1992** The Armenian army carves a supply route, the "Lachin corridor," through Azerbaijan and occupies Nagorno-Karabakh.
- 1994** Russia brokers a cease-fire between Armenia and Azerbaijan in which Armenia retains control over most of the Nagorno-Karabakh enclave.
- 1998** President Ter-Petrosian resigns unexpectedly; the government legalizes the Dashnak Party, which Ter-Petrosian had outlawed; Prime Minister Robert Kocharian is elected president.
- 1999** Five terrorists enter the National Assembly and open fire, killing the prime minister, speaker, and six other members of parliament.
- 2001** Armenia becomes a full member of the Council of Europe.
- 2002** Armenia and Azerbaijan agree to find a peaceful settlement of the Nagorno-Karabakh issue.
- 2003** President Robert Kocharian is reelected president amid allegations of vote U.S.-based Freedom House downgrades media climate in Armenia from "partly free" to "not free," citing use of libel and security laws to shut down a private television station for criticizing the government.
- 2004** Demonstrators in the capital call for Kocharian's resignation.
- 2006** Explosions in Russia disrupt gas supply to Armenia via Georgia.

Canberra (ACT, Australian Capital Territory)

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Major General (Ret.) Michael Jeffery (from 2003)

HEAD OF GOVERNMENT

Prime Minister John Winston Howard (from 1996)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

20,090,437 (2005)

AREA

7,686,850 sq km (2,967,124 sq mi)

MAJOR ETHNIC GROUPS

Caucasian, Aboriginal, Asian

LANGUAGE

English

RELIGION

Christianity (mainly Protestant and Roman Catholic)

UNIT OF CURRENCY

Australian dollar

NATIONAL FLAG

The red, white, and blue Union Jack in the upper left canton; in the remaining blue field a white, five-star Southern Cross (four stars with seven points and one with five points) appears in the right fly, and the white, seven-pointed federal star appears immediately below the Union Jack.

NATIONAL EMBLEM

Standing on green eucalyptus branches surrounded by the gold and blue wattle blossoms of the national flower are two native creatures: a kangaroo and an emu. Most prints show the two creatures in shades of brown, the pouched animal in lighter color than the swift, flightless bird. The base sometimes is depicted as a green, grassy mound. Between the two facing animals is an ermine-bordered shield surmounted by a seven-pointed gold Union star having one point for each Australian state and one for the Northern Territory. The star rests on a blue-and-white candy-striped wand, or heraldic wreath. Beneath the emblem the country's name appears in black letters on a white scroll. The coats of arms of the six states are displayed in equal segments on the central shield. In the top, from left to right, New South Wales is first, with a Saint George's Cross on a white field with a gold lion in the center. Each arm of the cross contains a gold, five-pointed star. Victoria's gold-and-red royal crown is placed against a blue background, which also contains the white stars of the Southern Cross. Queensland's coat of arms is a Maltese cross against a white background, "defaced," in heraldic usage, by a gold-and-red royal crown. The coat of arms of South Australia is a black-and-white crow shrike or magpie in flight against a yellow background. Also against a yellow background is the black swan of Western Australia. Tasmania is represented by a red lion on a white field.

NATIONAL ANTHEM

"Advance Australia Fair"

NATIONAL HOLIDAYS

January 26 (Australia Day); the queen's birthday is celebrated in June except in Western Australia, where it is observed in November; all Christian festivals and also December 26 (Boxing Day).

DATE OF INDEPENDENCE

January 1, 1901

DATE OF CONSTITUTION

July 9, 1900

GEOGRAPHICAL FEATURES

Australia is the world's smallest continent but its sixth-largest country, lying southeast of Asia between the Pa-

cific and Indian Oceans. Its total area of 2,967,124 sq mi (7,686,850 sq km) is nearly as large as that of the continental United States and half the size of Europe. Including Tasmania, the country extends 2,486 mi (4,000 km) east

to west and 2,385 mi (3,837 km) north to south. On the eastern coast the Great Barrier Reef extends for 1,243 mi (2,000 km), comprising an important ecosystem of islands and coral reefs that contain many rare forms of life.

The country is customarily divided into three principal topographical regions: the large Western Plateau, underlain by ancient rock shield; the Central Lowlands, or Central Plains, underlain by horizontal sedimentary rocks, and the Eastern Highlands, of more complex geological origin. A smaller fourth region sometimes is known as the Southern Faultlands east of the Australian Bight. These regions are popularly designated by different terms. The Outback applies generally to the interior, specifically to the arid center of the Western Plateau and its semiarid northern plains. The name Red Center is applied to an area with characteristic red, brown, and tan soils located in the heart of the continent.

Australia is one of the flattest continents, with just 6 percent of its area lying over 2,000 ft (610 m) above sea level. Only in the southern corner is there any considerable area over 5,000 ft (1,524 m), with Mount Kosciuszko rising to 7,134 ft (2,229 m). This inaptly named Australian Alps area is far from alpine, and the summit of Mount Kosciuszko is easy to reach by car. These mountains form part of an extensive area of high relief known as the Great Dividing Range, consisting of fretted margins of plateaus and cones and plugs of long-extinct volcanoes. The wetter seaward flanks of these highlands are much more desiccated than the western slopes, which fall away to the interior plains in long ridges. The coast, especially in New South Wales, often is backed by massive scarps cut by wild gorges.

The vast desert and semidesert region of the Western Plateau covers almost two-thirds of the continent. Averaging about 1,000 ft (305 m) above sea level, it is relieved by widely separated mountains. These mountains include the Hamersley Range to the west and, in the north-central rim, the irregular ranges of the Kimberley Plateau. Toward the east of the Western Plateau are three notable ranges—Macdonnell, Musgrave, and Petermann. From the western rocky ranges, the Western Plateau stretches eastward as a continuous flatland with occasional stark outcroppings of granite or sandstone. The most impressive outcropping is Ayers Rock, a massive, rounded monolith rising over 1,100 ft (335 m). There are four major deserts—Gibson, Great Sandy, Great Victoria, and Tanamy—on the Western Plateau. The plateau is also rimmed by escarpments, including the singular Nul-larbor Plain and the Darling Scarp.

The Central Eastern Lowlands extend from the Gulf of Carpentaria in the north to Western Victoria in the south. This lowland belt averages only about 500 ft (152 m) above sea level. Beneath the Central Eastern Lowlands are several artesian basins, one of which, the Great Artesian Basin, underlies approximately one-fifth of the entire continent and is the largest in the world.

The Eastern Highlands are inaccurately designated as the Great Dividing Range, though they do not form a true range and have an average altitude of 3,000 ft (914 m). They consist of a complex of tablelands, ridges, and coastal ranges. Nevertheless, they are rugged and spectacular in parts. The Eastern Highlands are low and broad in the north and rise as they progress southward. The island of Tasmania, lying about 150 mi (241 km) southeast of the continent, is geologically part of the Eastern Highlands. The island has a rugged terrain, with a large central plateau and with some mountains rising to over 5,000 ft (1,524 m)

Australia is one of the world's driest continents, with only a few permanent rivers and streams. More than 60 percent of the annual runoff is from the Tasmania, Gulf of Carpentaria, and Timor Sea drainage basins. In nearly three-quarters of the country, stream flow is intermittent or dependent on seasonal rains, and for months or even years streams and rivers dry up. The Murray-Darling river system is the most important drainage system in the country.

CLIMATE AND WEATHER

Australia has a warm climate with little rainfall, clear skies, and much sunshine. The temperature range is moderate, and intense winter cold is absent for the most part. Sum-

mer and winter rainfall systems tend to be weak. Toward the interior of the country rainfall not only decreases but also becomes increasingly variable. Months or years may pass without any rainfall. Droughts are common but generally affect limited areas.

Atmospheric systems influencing the climate include the prevailing southeasterly trade winds. These trade winds lose much of their moisture over the Eastern Highlands, which constitute an effective barrier to the inland spread of moisture. In the winter months the north of the continent is affected by trade winds from the southeast and the south by westerly winds that bring high rainfall over the southwestern area and the western mountain slopes of Tasmania. In the summer months easterly winds prevail over most of the continent, though the north has a wet summer through the influence of the northeastern monsoons. Australia experiences hurricanes and cyclones on both coasts, in the northeast and northwest. They occur mainly between November and March, the southern summer.

The vast interior and much of the west and south have high temperatures and very low amounts of rainfall. Summer temperatures are particularly high in the northern zone above the Tropic of Capricorn, with daytime maximums of 90°F (32°C) and higher. Encircling this arid zone to the north, east, and southwest is a large semi-arid belt with slightly higher rainfall levels and somewhat greater seasonal variations. In the north the maximum rainfall occurs in the summer and is followed by a cooler, drier period extending through August and warm weather with dusty windstorms in September and October. In the south the rainfall is somewhat more evenly distributed, with a drier summer in the west and southwest.

The monsoonal north, comprising Arnhem Land, the Cape York Peninsula, and northern parts of the eastern coast, has a hot, humid, tropical climate with rainfall concentrated in the summer months. The entire region is subject to seasonal floods. In the longer, drier winter season, only slightly cooler in temperature, rain is infrequent. Along the northern parts of the eastern coast the winter season is pleasant and mild. The eastern and southeastern coast has relatively abundant rainfall well distributed throughout the year and usually reliable. Droughts there are infrequent, and winters are mild.

The area to the west of the humid coastal zone has abundant rainfall and considerable temperature variations. Summers there are hot, and maximum temperatures of about 100°F (38°C) are common. Winters are cool, and frosts may occur between April and September. Drought is a continuing hazard, since rainfall in many places is rendered ineffective by evaporation and seepage. The southwestern corner of the country and the Southern Faultlands experience a subtropical Mediterranean climate, with sunny summers and mild winters. Tasmania has a middle latitude climate, with cold winters and warm summers. Rainfall generally is abundant.

FLORA AND FAUNA

Australia offers a wide variety of habitats, including tropical rain forest, temperate rain forest, sclerophyllous forests (sclerophylls are plants with hard leathery or spiny leaves), woodlands, savanna and steppe, alpine grasslands, and deserts. Except in the rain forests, the eucalyptus tree, with over 500 species, can be found nearly everywhere, especially in woodlands, and one species dominates in drier regions to the south. Another major Australian species is the acacia, or wattle tree, with over 600 species. Because Australia is largely a dry country, many plants have evolved that can take advantage of every rainfall, especially in the desert areas. Examples are the kangaroo paw and the Sturt Desert pea.

Australia has 230 species of native mammals, over 300 species of lizards, 140 species of snakes, and two species of crocodile. About 400 of its 800 species of birds are unique to the country, including the kookaburra (a large kingfisher) and the rainbow lorikeets. The emu, a flightless bird, has become a national symbol, along with at least four other animals: the kangaroo (whose population is about 40 million), the wombat, the koala bear, and the dingo.

ETHNIC COMPOSITION

Australia is perhaps the most homogeneous of former British dominions, next to New Zealand. The racial stock is overwhelmingly Caucasian and of British descent, making up 92 percent of the population. Immigrants from Southeast Asia compose a sizable part of the population, numbering 7 percent.

Aboriginals, making up 1 percent of the population, are the only true ethnic minority. In 1788, when Europeans first established a permanent settlement in Australia, there were between 250,000 and 300,000 indigenous Aborigines or Aboriginals living there. These peoples are believed to have lived on the continent for over 30,000 years, coming originally from mainland Asia. They are thought to form a distinct race known as Australoid, and generally are of short stature, with black skin and fine, straight hair that often is blond among children but later becomes black.

In the late 1700s the Aboriginals were divided into over 500 tribes, each ranging from 100 to 1,500 members. Each tribe spoke a different but related language and occupied a defined territory. The Aboriginal material culture was limited to the bare essentials. The people were nomadic and depended entirely on hunting, fishing, and gathering for subsistence. The arid climate, dearth of natural resources, and lack of plants or animals meant a constant struggle for existence in a harsh environment. There was no economic specialization, but sharing and generosity were highly prized virtues. Kinship was of paramount importance and determined all social relationships. Religion was totemistic and animistic, and totems and culture heroes governed the life cycles.

Within the first century of the arrival of the Europeans, the Aboriginals were decimated in numbers. By 1876 all the Tasmanian Aboriginals had died, and disease, loss of hunting grounds, and expulsion from hospitable coastal areas brought the mainland Aboriginals close to extinction. Most Aboriginals were segregated from the rest of Australia by the establishment of Aboriginal reserves in the 19th century. Until the end of World War II they were treated as second-class citizens and openly discriminated against. However, in the 1950s and 1960s public concern over Aboriginal rights forced the government to reverse many of the former discrimination laws. In the 1970s provisions were made to educate their children in white schools. Australia became committed to the full development of the Aboriginals, providing them with medical care and legal aid. Government boards were established to further Aboriginals' economic and social development and to preserve their cultural heritage. This

effort reached a peak during the opening ceremonies of the 2000 Olympic Games in Sydney, which celebrated the traditions of Aboriginal culture.

LANGUAGES

The official language is English. Although there are no dialects, Australian English has established itself during recent decades as a distinct branch of the Queen's English, with its own many picturesque idioms and expressions.

Many first-generation immigrants continue to use their own languages at home, and there are numerous non-English newspapers and periodicals published in the major urban centers. The Aboriginal languages and dialects are dying out despite official efforts to preserve them.

RELIGIONS

Nearly 87 percent of Australians are affiliated with some religious denomination. The major religious groups are Roman Catholics (26 percent), Anglicans (26.1 percent), and other Christians (24.3 percent).

Roman Catholics are predominantly Irish and Southern and Eastern European. This group has increased over the years as a percentage of the population, from 21 percent in 1941 to 27 percent in 1998. This increase has been due to the large number of immigrants from predominantly Catholic countries, such as Italy, Poland, and Malta. Among Aboriginals, about 26 percent are Catholics.

The oldest religious denomination is the Anglican Church. Anglican chaplains arrived with the first convict immigrants in 1781. Most Anglicans are of British origin. The highest proportion of Anglicans is in Tasmania, with 45 percent. As elsewhere, Anglicanism is the professed religion of many Australians who do not practice any religion.

Of the Protestant church groups outside Anglicanism, the largest are the Methodists and Presbyterians. The early Methodists were Welsh settlers, and the first Presbyterian church was built by Scottish settlers in 1809. Other Christian denominations include Lutherans, Congregationalists, Eastern Orthodox, and Pentecostals.

Patterns of religious practice are similar to those in the United Kingdom. The percentage of regular churchgoers is about 30 percent, of whom Catholics form the predominant majority. Attendance is lowest among Anglicans, only 10 percent of whom are active churchgoers.

Australia is a secular state, and there is little friction between church and state. Church properties and funds are exempt from taxes, and the clergy and seminary students, prior to the establishment of an all-volunteer force,

were exempted from military service. Churches receive no financial aid from the government, though they are given assistance for social services and missions to the Aborigines. Since 1974 church schools have received government subsidies under certain conditions.

Religious Affiliations

Roman Catholic	5,224,000
Other Christian	4,882,000
Non-Christian	2,210,000
Other	2,531,000

HISTORICAL BACKGROUND

On January 26, 1988, Australia celebrated its bicentennial, commemorating the settlement of the first British penal colony of 700 convicts at Port Jackson (later Sydney). Captain Arthur Philip, the settlement's commander, was to be the first governor of the colony, later known as New South Wales. The eastern coast of Australia had been explored by Captain James Cook in 1770, only 18 years before this event, and most of the continent was still unexplored. Hobart, Tasmania, was founded in 1803, but it was not until 1813 that a way was found over the Blue Mountains for westward expansion into the continent itself. Then new settlements were established on the Brisbane River in Queensland in 1824 and on the Swan River in Western Australia in 1829. Melbourne was established on Port Phillip Bay in 1835 and Adelaide on Gulf Saint Vincent in 1836. These settlements formed a series of starting points for further exploration of the north and west.

Meanwhile, more shiploads of convicts from England arrived—161,000 in all—until the penal system itself was abolished between 1840 and 1868. Sheep raising and wheat growing became the backbone of a flourishing economy that attracted free settlers from the British Isles. This flow of immigrants increased following the Ripon Land Regulations of 1831, which provided land grants to settlers. By 1850 Australia's population had grown to 500,000 inhabitants (not including Aborigines). Within a few years the population quadrupled under the stimulus of the discovery of gold in Victoria in 1851.

Self-government became an early objective of the colonies as the population grew. The Australian Colonies Government Act, passed by the British Parliament in 1850, empowered the colonies to establish legislatures, determine voting rights, and frame their constitutions as desired. New South Wales was the first to draft a constitution, in 1855. All other colonies except Western Australia became self-governing by 1859; the latter's desire to remain a penal colony delayed its constitution until 1890.

The need for a continental federation was felt even by 1863, when the first intercolonial conference of the premiers of the six colonies began. A draft federal constitution was drawn up in 1891, and it was approved at a convention in 1897–98. On the basis of this constitution, the Commonwealth of Australia came into being on January 1, 1901. The federal parliament sat in Melbourne until 1927. In 1911 a federal capital territory was selected and established as Australian Capital Territory, and the foundation stone for the present federal capital of Canberra was laid in 1913.

Three political parties competed for power in the new commonwealth: the Conservative Free Traders, the Liberal Protectionist Party, and the Australian Labor Party (ALP). The ALP came to power in the first decade and dominated Australian politics for the next several decades, until the end of World War II. Through its extensive social legislation, it set the pattern for Australia's future development.

In the later decades of the 1900s Australia's social welfare state gradually changed as reliance on government controls decreased and private sector economics became more dominant. The need for budgetary constraints and caps on spending forced the government to impose limits on social programs and subsidies. Changes in public opinion toward a centrist view of the proper role of government also influenced the nation's political outlook. After 13 years in power, the ALP was defeated by a coalition of the more conservative Liberal Party and Nationalist Party in 1996. This coalition won a large majority in the House of Representatives under the leadership of John Howard of the Liberal Party, who became prime minister.

The Liberal administration of John Howard faced opposition for its treatment of Aborigines, especially the practice of leasing tribal lands to outsiders. Faced with the probability that the Asian financial crisis would seriously damage his electoral prospects, Howard called an early election in 1998. The Liberal-National Coalition again prevailed at the polls but with a reduced majority. In 1999, 55 percent of Australians voted against the country's becoming a republic, although a constitutional convention had recommended that course in 1998.

In 2000 Sydney hosted the summer Olympic Games, the most popular games ever. In 2001 John Howard won a third term as prime minister in the national elections. In 2002 various aid agencies and the United Nations were critical of Australia's policy of holding asylum seekers in detention camps until their visa applications were processed, leading to riots in the Woomera camp in South Australia. That year, too, 88 Australians were killed in a nightclub bombing in Bali, Indonesia, an event that many call Australia's "September 11." Australia was generally supportive of the United States-led war in Iraq and in 2003 deployed troops, while also deploying a peacekeeping force in the Solomon Islands to

restore order. Then a bomb attack outside the Australian embassy in Jakarta, Indonesia, killed nine people and injured dozens more. In 2004 Howard won a fourth term as prime minister.

LIST OF MODERN RULERS

1945–49	Joseph Benedict Chifley
1949–66	Robert Gordon Menzies
1966–67	Harold Edward Holt
1967–68	John McEwen
1968–71	John Grey Gorton
1971–72	William McMahon
1972–75	Edward Gough Whitlam
1975–83	John Malcolm Fraser
1983–91	Robert James Lee Hawke
1991–96	Paul John Keating
1996–	John Winston Howard

CONSTITUTION

The legal foundation of the Australian government is the Commonwealth of Australia Act of 1900. The constitution is based essentially on the British model, but it borrows heavily from the U.S. Constitution, especially in provisions regarding federal versus state powers. From the British model it adopted the parliamentary system of government, under which the cabinet is responsible to the legislature. From the U.S. model came the idea of a decentralized, federal system of government in which the powers of government are divided between the federation and the states and the states retain their constitutional and political structures.

The powers of the federal government are divided among legislative, executive, and judicial branches, though there is not a strict separation of powers. In the British tradition, the distinction between the legislative and executive branches is nominal, inasmuch as leadership of both branches belongs to the same political party or coalition of parties commanding a majority in the popularly elected lower house of parliament.

Relations between the federal and state authorities are specified in great detail. Federal powers are enumerated, and powers not constitutionally delegated to the federal government remain with the states. The constitution empowers the federal government to legislate and act on all matters relating to foreign affairs, defense, immigration, foreign trade and interstate commerce, taxation, currency, banking, weights and measures, marriage and divorce, and enforcement of the judgments of state courts.

State governments are given wide responsibilities over education, public health, housing, agriculture, transportation, law enforcement, child welfare, welfare of

the Aboriginals, tourism, and exploitation of natural resources. However, since 1900 the trend has been toward a steady enlargement of federal powers at the expense of the states, stemming principally from the unlimited federal taxation power and the relative financial weakness of the states.

Questions relating to the interpretation and application of the constitution are resolved by the High Court of Australia, which has original jurisdiction in any constitutional case as well as appellate jurisdiction in cases brought from the state supreme courts.

The terms associated with cabinet government, including prime minister and cabinet, as well as the principle of collective cabinet responsibility to the parliament, are not mentioned in the constitution, but they are the foundations of Australian government. By convention, the chief executive officer of the federal government is the prime minister, not the governor-general appointed by the British sovereign, as stated in the constitution. The prime minister works with a cabinet of a dozen or so senior ministers that initiates all major government bills in the parliament. The ministers are party loyalists less concerned with day-to-day running of their departments than with legislative and political oversight.

State governments are much older than the federal government, and each has its own constitutional framework. The term *state* refers to Australia's six political divisions: New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania. In addition, there are two mainland territories fully dependent on the federal government: Australian Capital Territory and Jervis Bay Territory and Northern Territory, which became self-governing in 1978.

PARLIAMENT

The legislative power of government is vested in the federal parliament, with a lower house, the House of Representatives, and an upper house, the Senate, consisting of 76 seats. The constitution limits the duration of the House of Representatives to three years, subject to earlier dissolution. It provides that the House, as the national chamber, should have twice the membership of the Senate, which represents states and territories. The House's 150 members are elected directly by the people in single-member constituencies. The leader of the party or party coalition commanding the majority in the House after an election is chosen as prime minister. The second-largest party in the House is the official opposition, and its leader is known as the leader of the opposition. The government party in the House also is the government party in the Senate regardless of whether it has a majority in the upper house.

Both houses use a system of committees to oversee their work and to consider proposed legislation. The fun-

damental stages in legislation, or the enactment of a bill, are presentation and first reading, second reading, committee proceedings, and third reading. The bill is then transmitted to the other house, where it goes through the same stages in committee.

On the British model, the most effective mechanism of legislative, parliamentary control over the executive is question time, during which ministers are questioned as a demonstration of the accountability of the executive.

All state parliaments are bicameral except that of Queensland, which has a unicameral body called the Legislative Assembly. The functions of state parliaments and their procedures are almost the same as those of the federal parliament.

POLITICAL PARTIES

Like most English-speaking countries, Australia has a two-party system in which a right-wing party, the Liberal Party, has alternated in government with a left-wing party, the Australian Labor Party. There is a third group, the National Party, which generally sides with the conservatives and is part of any right-wing coalition. The Liberal Party was founded in 1944 as the successor to the United Australia Party and is actually an amalgam of traditional liberals (in the European sense) and conservatives (in the Anglo-Saxon sense) with strong ties to the business community. The Australian Labor Party is the oldest of Australian political parties, founded in the 1890s as the political arm of the trade union movement. Its traditional constituency comprises immigrants, feminists, and workers. The party has long been divided between a moderate, pragmatic wing and a dogmatic, socialist wing, but the moderates generally carry the day at election times. The National Party was founded in 1920 as the Country Party and assumed its present name in 1982 in an effort to widen its appeal. It is conservative in outlook, and its constituency includes rural residents and farmers.

LOCAL GOVERNMENT

Each state is subdivided into self-governing local units called cities, counties, municipalities, towns, shires, district councils, or road districts. These units are created by the state parliament and are subject to the supervision of the state department of local government. The governing councils of these local areas are popularly elected.

The principal functions of local councils include construction and maintenance of roads, bridges, and water and sewage systems and sanitation and garbage collection services. The more important functions, such as education, public housing, and law enforcement, are performed directly by the state government.

LEGAL SYSTEM

Australia's legal system is based on English common law. The two principal sources of its law are the statutes of the federal parliament and state parliaments and the decisions of the judicial committee of the Privy Council in London, the High Court of Australia, and the supreme courts of the states.

The constitution vests judicial power in the High Court of Australia and other courts created by the federal parliament. At the judicial apex the High Court has both appellate and original jurisdiction. It handles all cases arising under a treaty, those in which the federal government is a party, those involving disputes between states or residents of different states, and those involving the interpretation of the constitution. The High Court's appellate jurisdiction covers appeals from other federal courts, from state courts within federal jurisdiction, and from state supreme courts. The High Court is presided over by the chief justice and six other justices.

The superior courts include the Family Court and the Federal Court. The Federal Court handles cases involving copyright law, trade practices, bankruptcy, industrial law, and administrative review. The Family Court deals with divorce, custody of children, family maintenance, and property disputes. There is no separate system of federal courts paralleling state courts. Instead, existing state courts are vested with jurisdiction over most federal matters.

All states and the Northern Territory have their own court systems headed by the state supreme court. Capital punishment was abolished by the federal government in 1973 but is retained by some states. All Australian prisons are maintained by the states, and there are no federal prisons.

HUMAN RIGHTS

As a multiparty parliamentary democracy, Australia is a country where all basic human rights are guaranteed by law. However, not until the mid-1970s did the federal and state governments enact equal opportunity and antidiscrimination legislation. The reason for this delay lies in the historic belief that Australia was a classless society free of violent racial tensions and serious breaches of human rights. This belief masked the fact that a silent minority, the native Australian peoples, suffered disguised discrimination without any legal remedies.

The indigenous people, the Aborigines, have an average life expectancy 20 years less than that of nonindigenous Australians, higher rates of unemployment, and inferior access to medical and educational institutions. In recent years a wide variety of government initiatives have sought to improve these conditions. In 1997 the government spent over \$1.1 billion on health, welfare,

education, and regional development to assist Aboriginal people. In 1998 Prime Minister Howard declared that reconciliation with Aboriginals was one of his government's highest priorities, but in 2001 he faced criticism for failing to acknowledge the suffering of Aboriginals and to apologize to "Stolen Generations" of Aboriginals who as children were forcibly removed from their parents to live with whites.

FOREIGN POLICY

Since World War II, Australia has played an active role in world affairs. As one of the founders of the United Nations, Australia has strongly supported that body and the work of its agencies. It has taken a key role in the United Nation's peacekeeping activities, drug-control programs, and disarmament initiatives. Australia has devoted special attention to conflicts and disputes involving Asian nations. It contributed soldiers to the UN force during the Korean War, helped suppress a Communist revolt in Malaya in the 1950s, sent combat troops to fight in the Vietnam War, and took the lead in helping restore peace in East Timor after Indonesian forces tried to overturn a vote for independence in 1999.

Australia's foreign policy reflects its national interests and defense needs as well. It has signed security agreements with Britain and New Zealand to protect Singapore and Malaysia. It has given large grants of aid to Papua New Guinea, a former Australian trust territory and another neighbor to the north.

Australia also has maintained close ties with the United States in the decades since World War II. This special relationship was reflected in Australia's strong support of the United States during the Gulf War in 1991 and the war in Iraq in 2003 and the two countries' mutual belief that their national security depended on this power alliance. Foreign commerce also played a key role, with trade between the two countries totaling over \$19.5 billion in 2003.

DEFENSE

Australia's Department of Defense supervises the three services—army, navy, and air force—each a separate branch of the military forces but with joint services for operations, equipment, communications intelligence, and systems analysis. The Defense Logistics Organization operates the government aircraft factories, which produce about one-third of the nation's aircraft, and is also the principal procurer of defense equipment.

The Royal Australian Army consists of the all-volunteer Australian regular army and the citizen military force, the reserve element. Military age is 17 years of age, and military service has been based on volunteers since

1972. The Royal Australian Navy is the senior service, dating from 1910, and is the smallest of the three services. There is no separate coast guard. The Royal Australian Air Force was created in 1921.

The nation's volunteer military service offers the choice of a military career. Initial enlistment is for six years, with reenlistment at the end of another three or six years, up to age 55. Men and women may enlist at any age between 17 and 43.

Australia's military expenditures are relatively high, reaching \$14.1 billion in 2003, or 2.8 percent of the national gross domestic product (GDP). About 54,000 Australians were on active duty as of 2003.

ECONOMY

Australia has a prosperous capitalist economy that ranks it with the highly industrialized countries of Western Europe. Australia's GDP was growing at an annual rate of 2.4 percent in 1990–97, totaling \$382.7 billion, with a per capita GDP of \$20,650. Growth stood at 3 percent in 2004 with a GDP of \$571.4 billion and a per capita GDP of \$29,000.

Australia has abundant mineral and energy resources and is the world's leading exporter of coal as well as a major exporter of aluminum bauxite, copper, industrial diamonds, iron ore, lead, nickel, gold, and silver. It is a major exporter of agricultural products such as wheat, barley, sugarcane, cattle, and sheep. Commodities account for 57 percent of the total value of Australian exports, making its economy subject to major movements in world commodity prices. To offset such downturns in commodity prices, government policies have helped increase the share of manufactured goods in Australian exports.

Australia suffered from low economic growth and a high unemployment rate in the early 1990s, though prosperity returned by the late 1990s despite the economic slump in many Southeast Asian countries. Foreign investments have spurred the development of Australian transport, manufacturing, and ranching. The United States is the leading source of such business investments, accounting for more than \$65 billion in 1996, or 40 percent of the total. In the 1990s the government privatized the national airline, telecommunication system, and national bank, which marked

significant steps toward greater emphasis on the private sector in the nation's economy. Into the new millennium, industrial output has continued to rise, and the nation's emphasis on reforms, low inflation (2.8 percent in 2004), and improving economic ties with China have powered the economy's strength. Problems remain, however. Drought, weak foreign demand, and strong import demand have raised the nation's trade deficit of \$5 billion in 2002 to \$14 billion in 2003.

ENVIRONMENT

Australia's size and physical isolation have given it an assemblage of plants and animals found nowhere else in the world. However, many of its unique mammals, birds, fish, and plants are endangered, primarily from a loss of natural habitat. In South Australia alone nearly 80 percent of the natural vegetation has been lost in areas cleared for agricultural purposes. It is estimated that 68 percent of the 102 species of native mammals there have become extinct or are endangered.

Key environmental issues in Australia are soil erosion and soil salinity. Erosion of the continent's limited arable land continues, caused by industrial development, urbanization, poor farming practices, and overgrazing. Soil salinity often results from the use of poor-quality water. Increasing desertification and the continent's limited freshwater sources pose other environmental concerns.

The Great Barrier Reef off the northeast coast, the largest coral reef in the world, is endangered by increased shipping and its growing popularity as a tourist attraction.

Australia has joined with other nations in agreements to limit ocean pollution and protect the ozone. However, as in most of these nations, Australia's economic development as an industrial, urban nation has taken priority over environmental issues.

LIVING CONDITIONS

Living conditions differ for white Australians and the Aboriginal population. Most white Australians enjoy a high standard of living, with per capita gross domestic product of \$29,000. Australia does not suffer from wide extremes of income, so most white Australians are comfortably middle class—although the gap between rich and poor has widened in recent years such that the top 10 percent of wealth holders have 25 percent of the wealth. The typical Australian lives in a detached brick home with a lawn and garden, although younger Australians, in particular, are likely to live in apartments and town houses in the cities. Aborigines, on the other hand, suffer from a host of problems, including limited access to health care and a significantly lower life expectancy, reliance on government allowances, and exploitation by some white Australians, who sell food staples to Aborigines at inflated prices in the days after government checks are sent. While the government has tried to provide housing for Aborigines, many Aborigines prefer a more nomadic life and use the houses entirely for storage.

HEALTH

Health care in Australia is paid for or subsidized by the government, and public hospitals provide free services, although there has been some movement in recent years to increase the level of private health insurance available. People generally select a general practitioner in their community, who then might refer the patient to a specialist. A great deal of emphasis is placed on disease prevention, and life expectancy at birth in 2004 was over 80 years. In 2004 the infant mortality rate was under 5 deaths per 1,000 live births, and in 2003 fewer than 200 persons died of AIDS.

FOOD AND NUTRITION

As an island continent/nation, Australia has plentiful seafood. Australian ranchers also provide abundant meat, especially beef and lamb. Meals are similar to those in the United States: breakfasts consist of such foods as cereal and bacon and eggs; lunches include sandwiches, salads, and fruit; and dinners include meat or seafood served with vegetables. Meat pies are very common. The influx of European and Asian immigrants in recent years has made Chinese, Thai, Indian, Greek, and Italian foods more popular. As traditional hunter-gatherers, Aborigines devote little time to food preparation and have a diet consisting of game and vegetables.

STATUS OF WOMEN

Women in Australia have equal status under the law, and Australia was a pioneer in women's political rights. South Australia was the first British colony to give women the vote and the right to sit in parliament. Yet in practice, historical patterns of bias against women have contributed to their underrepresentation in government and politics. Still, in 2004, 37 of 150 members of parliament were women, for a total of 25 percent—substantially more than the world average.

Although women's rights organizations, both public and private, exist at the federal, state, and local levels, discrimination is present in the workplace. In 1994 it was estimated that women received approximately 90 percent of wages paid to men for similar work. Women generally work at lower-paying jobs in most professions and also hold jobs most at risk from technological change. Numerous government programs aid women who are home-

less or who are victims of abuse. Working mothers have access to government-operated child-care facilities.

WORK

Australia's labor force by occupation is agriculture, 5 percent; industry (primarily mining, industrial and transportation equipment, food processing, chemicals, and steel), 22 percent; and services, 73 percent. The labor force in 2004 was about 10.19 million. Unemployment in late 2004 was about 6 percent, down from 10 percent in the 1990s. In recent years a growing percentage of the labor force has been in information and high technology, accounting, engineering, and medicine, placing laborers and factory workers at greatest risk for unemployment. About 11.3 percent of Australians are regarded as living in poverty. Despite problems, Australians pride themselves on living in an egalitarian society that provides upward mobility for its citizens economically.

EDUCATION

School attendance is compulsory from the ages of six to 15 in all states except Tasmania, where it is compulsory from ages six to 16. Completion of the final two years of secondary school, while not compulsory, is achieved by at least one-third of students.

At the primary and secondary levels, about 22 percent of Australian children attend private schools, the majority run by the Catholic Church. Approved private schools receive substantial financial assistance from federal and state governments. Most government schools are coeducational; the proportion of single-sex schools is far greater among private schools.

Higher education comprises traditional universities as well as "tertiary" educational institutions, including teachers' colleges, agricultural colleges, fine arts institutions,

and technical institutes. The three “old” universities are Sydney, Melbourne (both founded in the 1850s), and Adelaide (founded in 1874), and the three “middle” universities are Tasmania, Queensland, and Western Australia.

Until 1986 all tertiary institutions were state run and secular. Bond University of Technology was the first private university, established in 1988. It was only in 1945 that the first doctoral program was instituted, at the University of Melbourne. Since then, all universities have offered courses of higher degree and research.

SCIENCE AND TECHNOLOGY

Scientific and technological research is actively pursued in Australia, especially in such fields as astronomy, chemistry, medicine, and engineering. Funding is provided by the government and private industry. The nation has in excess of 2,500 science and technology organizations, including the Australian Academy of Science. The nation has produced six Nobel Prize winners. Perhaps the nation’s most famous scientist was Howard Florey, who discovered penicillin in 1928.

MEDIA

The country’s most influential newspapers are the *Sydney Morning Herald*, the *Age*, and the *Australian*. The national press agency is the Australian Associated Press (AAP), established in 1935.

The Australian Broadcasting Corporation (ABC) provides nationwide noncommercial radio and television service. The Australian Broadcasting Tribunal regulates commercial and public radio and the country’s 139 television stations.

Australia has an extensive book-publishing industry, with over 150 publishers, many of them British publishing houses.

CULTURE

In recent years Australia’s film industry has grown and gained increasing international respect. Hit movies have included *Babe*, *Crocodile Dundee*, *Mad Max*, and *Muriel’s Wedding*. Major film stars from Australia include Mel Gibson (though he was born in the United States), Nicole Kidman, Paul Hogan, Olivia Newton-John, and Russell Crowe. Australian Lucy Lawless won international fame for her depiction of the title character in the television series *Xena, the Princess Warrior*.

One of the most recognizable landmarks in Australia is the Sydney Opera House, designed by the Danish architect Jorn Utzen to look like sails on the ocean. It is home to the Australian Opera Company and attracts hundreds of thousands of visitors each year.

Much of the literature of Australia, especially since the beginning of the twentieth century, has focused on “the bush,” the nation’s wild, sparsely inhabited parts that occupy a central place in Australians’ imagination. Similarly, while earlier Australian painting and other graphic arts formerly took their cue from European traditions, more recent graphic arts have been more inspired by the nation’s wilds. Many Aboriginal artists have had their work prominently displayed, and pointillist painting of Dreamings from the Central Desert region are especially coveted. Additionally, several Aboriginal dance troupes perform in Australian cities and throughout the world.

FOLKLORE AND MYTHOLOGY

The most distinctive folklore of Australia is Aboriginal and arises from a body of oral history known as the Dreaming or the Dreamtime. This body of folklore accounts for the origins of the world, explains the relationship between the person and the natural order, and establishes the rules of social relations as they were instituted by ancestral beings. It is through the Dreaming that the Aboriginal people find connection with their world and their history. One Dreamtime myth, for example, tells how the sun was made—the result of a quarrel between a crane and an emu, when the crane threw one of the emu's eggs into the sky, where it shattered and its yolk burst into flame, illuminating the world. The Dreamtime also allows Aborigines to establish ownership claims to land by showing intimate knowledge of it and its inhabitants. Cultural heroes often stand at the center of myths of the Dreaming.

ENTERTAINMENT AND RECREATION

In the cities Australians enjoy theaters, pubs, discos, and dining out in the many restaurants that feature both Australian cuisine and that from other countries. Also important to Australians is the water. The country's beaches are typically packed with surfers, and boating is a common form of recreation. Vacationers travel within the country by car; favorite foreign destinations are New Zealand, Fiji, and Bali.

Barbecue is an institution in Australia, with friends and family gathering at midafternoon on Sundays for steaks and seafood cooked on the grill. So, too, is gambling, especially on horse races. On the first Tuesday of November, at exactly three in the afternoon, the nation comes to a virtual standstill as the Melbourne Cup is run and people watch or listen, often on loudspeakers set up in offices.

ETIQUETTE

Australians are generally regarded as easygoing, friendly, and casual in their relationships with others. Efforts to appear superior in dress or manners are discouraged.

People typically greet each other with a handshake or, possibly, a kiss on the cheek. The essential Australian greeting is "g'day," that is, "good day." Australians respect one another's privacy, and staring is considered impolite, although eye contact is not avoided. Among the Aborigines, turning the eyes away during conversation is a sign of respect.

The rules of Aboriginal culture are likely to be entirely foreign to a westerner. For instance, interpersonal relationships are defined by kin groups. In some groups a son-in-law must avoid at all costs any contact with his mother-in-law and will often go far out of his way to avoid such contact. In other groups a son-in-law may converse with his mother-in-law, but he must use a special language, called "mother-in-law talk." In general, Aborigines are puzzled by Westerners' use of the phrase "thank you." In Aboriginal culture, society is organized by reciprocal obligations that are well understood and that do not require thanks. It is expected, for example, that food is shared in social or kinship groups, making thanks unnecessary.

FAMILY LIFE

Family life in Australia is similar to that in other Western nations. The norm is the nuclear family, with a husband, wife, and children. As divorce and remarriage have become more common, more and more Australian families consist of a single parent with children and "blended" families consisting of children from the former marriage of each of the partners.

Aboriginal family life follows traditional patterns. In many Aboriginal societies, first marriages are arranged, with husbands often much older than their brides. In some societies female infants are betrothed at birth. This practice appears to stem from the belief that spirits make females pregnant. Because this can happen at any time, it is important for the infant to have at the ready a "social father," the woman's husband.

PERSONAL APPEARANCE

The climate in Australia is mild and often hot, so lightweight, casual clothing is the norm, and shorts are even accepted in the workplace. Clothing is typically a blend of European and American fashions. Dress is more stylish in the cities than in the Outback, where cowboy attire is common. Because of the fierce sun, though, Australians have one of the highest skin cancer rates in the world, so many people wear clothing that provides protection from the sun. Traditionally, Aborigines wore no clothing at all, but that has changed, and most Aborigines wear modern clothing. Aborigines in rural areas, like whites, often wear cowboy attire, while those on the southeastern coast fa-

vor large blankets made from the hides of kangaroos to protect them from winter weather.

SPORTS

Australians are sports lovers. The most popular sports are football, including rugby and Australian rules football. During the summer, cricket is a popular sport with players and spectators, and teams compete to win Sheffield's Shield as national champions. Australians have also enjoyed considerable success as Olympians. In the 2004 summer games in Athens, Australia won 17 gold, 16 silver, and 16 bronze medals, for a total of 49. Many of these medals were in swimming, diving, and cycling, but the men's baseball team and the women's basketball team each won a silver medal.

CHRONOLOGY

- 1939** Australia begins participation in World War II operations against Germany and Japan; the United States provides military aid.
- 1944** Robert Menzies founds the Liberal Party.
- 1945** World War II ends; Prime Minister John Curtin dies; Joseph B. Chifley and the Labor Party come to power and strengthen relations with the United States; Australia takes part in the founding of the United Nations.
- 1946** An influx of postwar immigration begins, bringing 800,000 non-British Europeans to Australia by 1968.
- 1949** Robert Menzies becomes prime minister, a post he will hold for the next 17 years.
- 1950** Australia contributes troops to the United Nation's Korean War effort.
- 1951** Australia joins the United States and New Zealand in a regional security arrangement known as ANZUS; the Colombo Plan, which provides aid for Australia's neighbor countries in Southeast Asia, goes into effect, spurring immigration of Asian students to Australia.
- 1953** The Korean War ends, and Australian troops return home.
- 1954** Australians enthusiastically receive the visit of Queen Elizabeth II; Australia helps to found the Southeast Asia Treaty Organization (SEATO).
- 1956** Television is introduced in Australia, with the Melbourne-hosted Olympics as its first broadcast.
- 1965** Australia sends troops to fight Communism in the Vietnam War.
- 1966** Prime Minister Menzies steps down; his protégé Harold Holt becomes prime minister.
- 1967** Prime Minister Holt drowns; John McEwen acts as caretaker prime minister until John Gorton, also of the Liberal Party, becomes prime minister; a referendum gives Australian Aborigines full citizenship rights; Australia becomes a full member of the Association of South East Asian Nations (ASEAN); Japan replaces Britain as Australia's main trading partner.
- 1971** William McMahon of the Liberal Party becomes prime minister.
- 1972** Edward Gough Whitlam of the Labor Party becomes prime minister; Australia formally recognizes the People's Republic of China; troops are withdrawn from Vietnam.
- 1974** The Immigration Restriction Bill of 1901, known as the "White Australia" policy, is repealed, ending the racially based process for allowing entrance to Australia.
- 1975** A constitutional crisis erupts when the Senate blocks the financial legislation necessary to implement the programs of Prime Minister Gough Whitlam; Governor General John Kerr dismisses Whitlam and appoints Malcolm Fraser, the leader of the opposition, as interim prime minister; elections confirm Fraser, with a Liberal-Country coalition, as prime minister; Papua New Guinea becomes independent.
- 1976** The Aboriginal Land Rights Act awards historic lands in Northern Territory to Aboriginal claimants.
- 1977** SEATO dissolves.
- 1978** Northern Territory achieves self-government.
- 1983** The Labor Party returns to power under Bob Hawke.
- 1984** Japan surpasses the United States as the largest provider of imports to Australia.
- 1986** The British Parliament passes the Australia Act, eliminating the last vestiges of British authority in Australia.
- 1988** Australia signs a free trade agreement with New Zealand.
- 1990** Carmen Lawrence and Joan Kirner become Australia's first female leaders of governments.
- 1992** Parliament passes the Citizenship Act, which removes the oath of allegiance to the British Crown from the requirements for Australian citizenship.
- 1993** The Labor Party wins record fifth election victory.
- 1996** A coalition of the Liberal and National (formerly Country) parties under John Howard ousts Labor.
- 1999** Australians vote against cutting the links with the British monarchy and the establishment of a republic.

122 Australia

- 2000** Australia hosts the Olympic Games in Sydney.
- 2001** National elections are held on 10 November. Howard wins third term as prime minister.
- 2002** Aid agencies, civil rights groups, and the United Nations criticize Australia's policy of holding asylum seekers in detention camps until the visa applications are processed, leading to riots in the Woomera camp in South Australia. Eighty-eight Australians are killed in a nightclub bombing in Bali, Indonesia.
- 2003** Australia deploys troops in Iraq, sparking public protests and a no-confidence vote in the Senate against Prime Minister Howard. Australia deploys a peacekeeping force to restore order in the Solomon Islands.
- 2004** Bomb attack outside Australian embassy in Jakarta, Indonesia, kills nine; John Howard wins fourth term as prime minister.
- 2006** Australia signs treaty with East Timor to share revenue from oil and gas deposits in the Timor Sea.

White horizontal stripe between two red stripes

NATIONAL EMBLEM

A black eagle with a golden beak and long red tongue, a three-merlon mural crown on its head, a hammer in its left hand and a sickle in its right hand, a severed silver chain hanging from each of its wrists, and a shield on its breast with the national colors of red and white on bars

NATIONAL ANTHEM

“Land der Burge, Land am Strome” (Land of the mountains, land on the river)

NATIONAL HOLIDAYS

October 26 (National Day); all major Christian holidays

DATE OF INDEPENDENCE

October 30, 1918

DATE OF CONSTITUTION

October 1, 1920

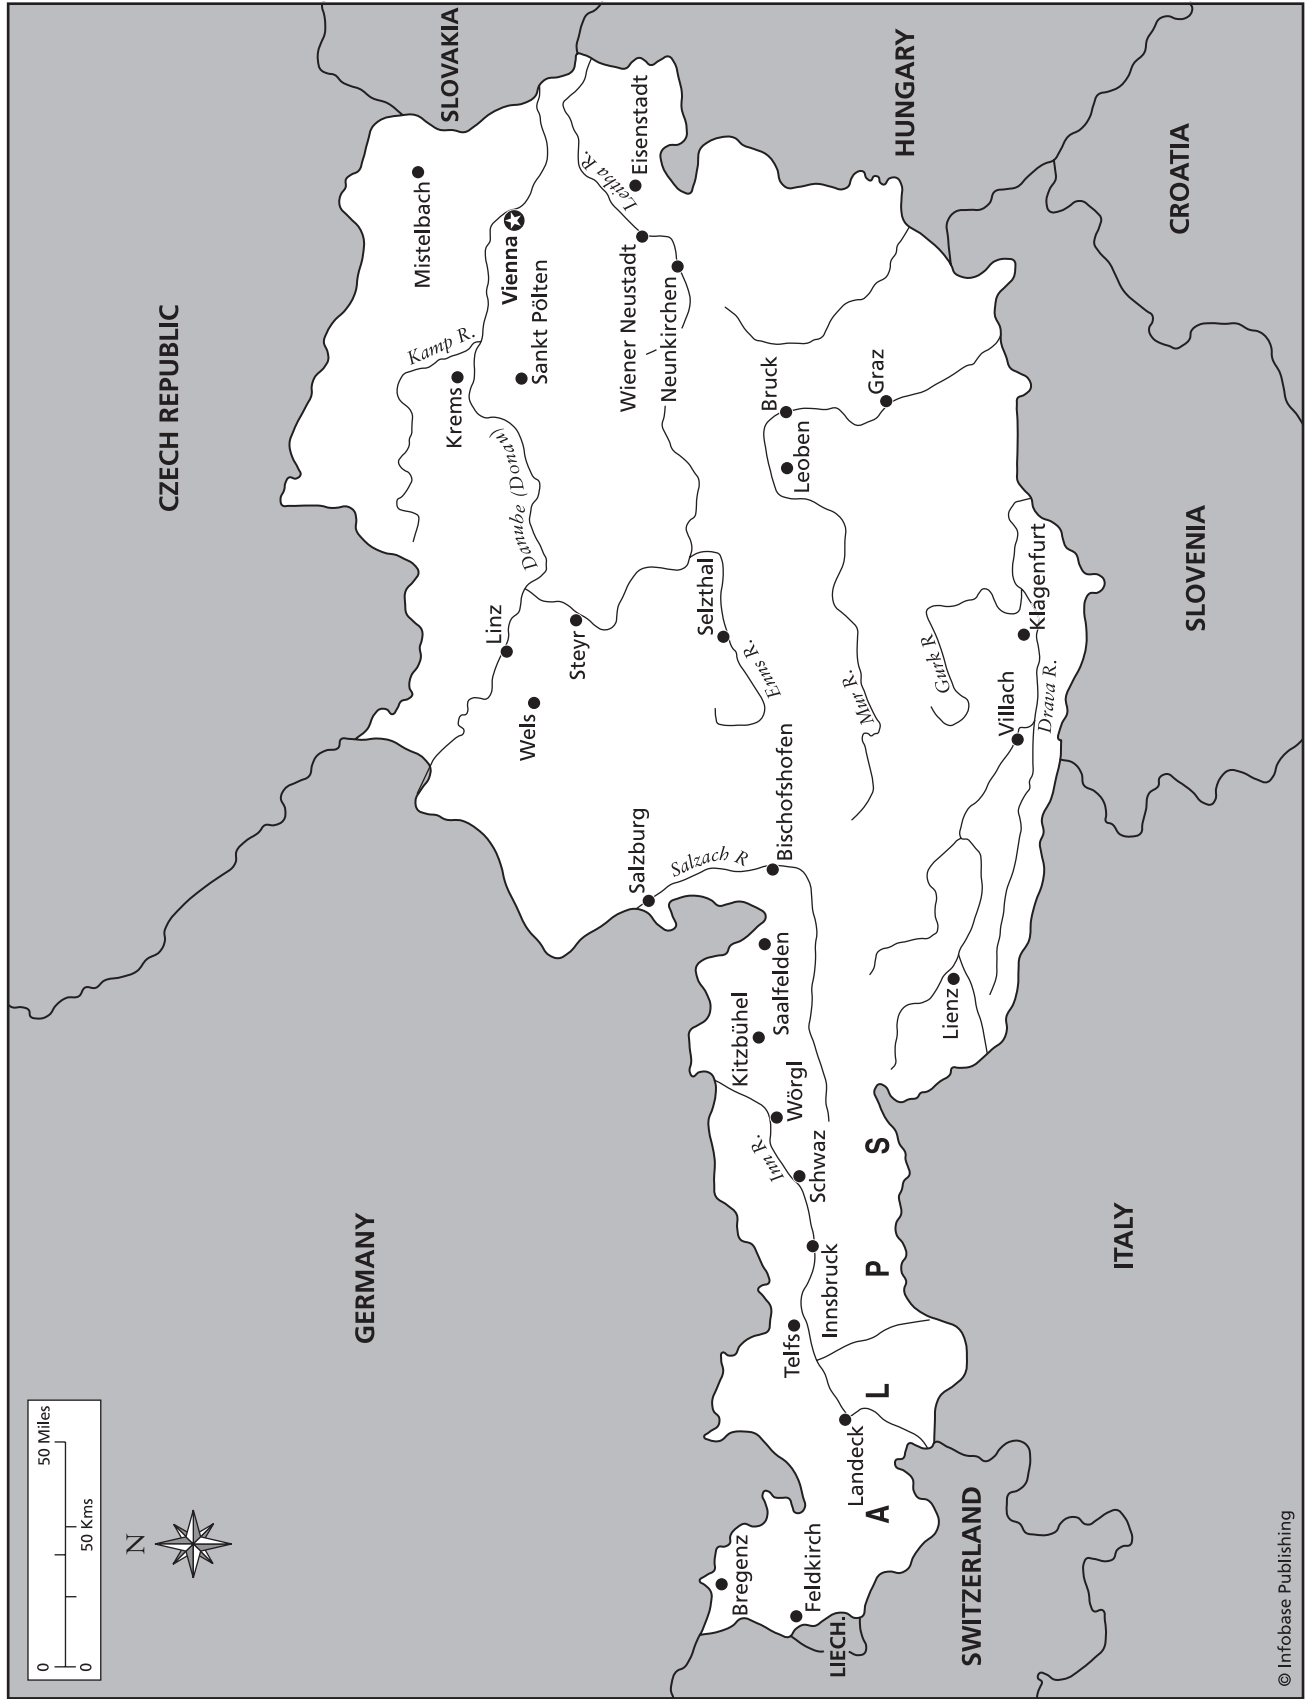

GEOGRAPHICAL FEATURES

Austria is a small, landlocked alpine country in south-central Europe with an area of 83,870 sq km (32,382 sq mi). Austria's geographical importance lies as the crossroads of Europe. Austrians place the country in the exact center rather than in the south-central part of Europe. The Hahneckogel, a peak in the province of Salzburg, not only is claimed to be the highest wooded mountain in Europe but also is said to mark the geographic center of the continent. Austria shares international borders with the Czech Republic, Germany, Hungary, Italy, Liechtenstein, Slovakia, Slovenia, and Switzerland.

Austria generally is divided topographically into the eastern Alps, the northern alpine forelands, the Bohemian Plateau, the Vienna Basin, and the eastern and southeastern lowland. Although nearly three-quarters of the country is mountainous, 17 percent is arable and 47 percent is forest; a little more than 1.6 percent is vineyards, orchards, and small garden plots, and about 14.5 percent consists of built-up areas and wasteland.

The eastern Alps consist of a group of mountains that begin at the Swiss border and become three ranges that fan out as they cross the country. The central range is the largest, containing the highest elevations in Austria, topped by the Grossglockner, at 3,798 m (12,461 ft).

Austria

The northern and central ranges separate near Landeck, where the Inn River takes up its generally eastward course. Much of the northern range consists of either limestone or dolomite, like the southern range.

The northern alpine forelands are foothills of the Alps that extend between the mountains and the Danube River from the country's border north of the city of Salzburg to the Vienna Basin. Nearly all of the highlands northwest of Vienna and north of the Danube River form part of the Bohemian massif rather than the alpine system. They are referred to as the Bohemian Plateau, as they form a ring around the Bohemian portion of the Czech Republic. The northern alpine forelands ultimately terminate in the foothills bordering the Vienna Basin. The basin itself is not completely flat, but the terrain is gentle. The basin extends into the Leitha River valley in a southeasterly direction toward the Semmering Pass and is separated from the Neusiedler See by the Leitha Mountains.

Because Austria contains a greater part of the eastern Alps, precipitation drains in all directions, with all except a minute fraction of it eventually reaching the Danube River.

The Danube is Austria's grand river. The major alpine tributaries of the Danube—including the Inn River, which joins the Danube near the German border—flow eastward, through central Austria. To the east of the Inn are the Salzach and the Enns. The Danube bisects Lower Austria and receives a large number of lesser streams. To the south, the Leitha flows northeast, draining the area from the Semmering Pass to the Hungarian border. From the other side of the Semmering Pass the Murz drains to the south, joining the Danube farther downstream.

CLIMATE AND WEATHER

Austria's weather is determined by three systems—the North Atlantic maritime, the Mediterranean, and the continental—but each dominates in a particular section of the country. The weather of the Danube valley and the northern alpine forelands is mostly from the North Atlantic maritime system. The low-pressure air masses that move with relative rapidity eastward across northern Europe affect climatic activity in a broad way, but weather is determined largely by local factors in the valleys and basins. In deep valleys without air circulation, temperature inversions occur, while sunbathed mountaintops enjoy clean, crisp air and warmer temperatures. The phenomenon known as foehn (warm winds) is common, especially in the valleys on the northern slopes of the mountain ranges. On the southern slopes foehn occur more frequently in winter and spring, while on the northern slopes they occur more frequently in spring and autumn. These strong, hot, dry, and dusty winds cause much discomfort to people and also cause avalanches.

Vienna has an average annual temperature of just under 10°C (50°F). In January, the coldest month, the average is about 22°C (28°F) and in July, the warmest month, 20°C (68°F). Vienna's temperatures are slightly higher than the country's average, but mean annual temperatures vary surprisingly little in low-elevation areas all over the country—less than 4°F in a typical year. At about 2,743 m (9,000 ft), average annual temperatures drop to the freezing point, but clear air and bright sunshine make life tolerable at these elevations.

Precipitation varies considerably more than average temperatures—from about 457 mm (18 in) annually in easternmost Burgenland to 2,032 mm (80 in) or more in mountain spots. Vienna receives about 610 mm (24 in) annually, the southeastern alpine foothills about 1,016 mm (40 in), and Salzburg and the northern alpine forelands about 889 to 1,016 mm (35 to 40 in). Much winter precipitation occurs as snow. Annual snowfalls average from 508 to 1,016 mm (20 to 40 in) in the east, 2,032 mm (80 in) in the low Alps, and 10,160 mm (400 in) or more at high elevations.

Salzburg and the Northern Alpine Foothills: 35 to 40 in

FLORA AND FAUNA

Austria is heavily forested, with nearly 40 percent of the country covered with oak and beech at the lower altitudes and primarily conifers at higher elevations and stone pines in the mountainous regions. The forests give way to alpine meadows at an elevation of about 2,000 m (6,652 ft), where edelweiss, heather, alpine rose, poppies, and blue gentian are common. Ibex (a mountain goat with large curved horns), chamois (horned antelope), and marmots live at higher elevations, while red deer, roe deer, foxes, hares, and badgers can be found throughout the country. Bears inhabit the southern forested regions. The Neusiedler See provides habitat for hundreds of bird species. Austria's national parks make up about 3 percent of the country's land area, and protected areas cover over 28 percent of the nation's land area.

ETHNIC COMPOSITION

Virtually all Austrians consider themselves German. Minority groups, excluding the more than 200,000 guest workers, account for only 2 percent of the total population and are made up of Croatians, Slovenians, Hungarians, Czechs, and Slovaks. The rights of the Slovene and Croatian minorities are guaranteed by the Austrian State Treaty of 1955. They are entitled to complete equality as Austrian citizens, education in their own language, their own cultural and social organizations, and bilingual signs.

LANGUAGES

Austrians are 92 percent German speaking. All are literate and, by law, receive at least nine years of formal education.

Austria's apparent linguistic unity belies its actual diversity. The standard German, sometimes called "school German," is the same as that of Germany, although the Austrian speech is softer. The majority of Austrians use a Bavarian dialect at home. Alemannic German is spoken in Vorarlberg, Frankish German in Lower Austria, and polyglot German in Vienna. In Tirol, German is mixed with Latin words and in eastern areas with Slavic words.

The different dialects also are associated with class distinctions. The Viennese speak a Slavicized dialect that was spoken in the days of the Hapsburg empire. The varieties of Austrian German reflect the country's mixed ethnic heritage, drawn from diverse elements such as the Avars, Illyrians, Romans, Teutons, Huns, Bayuvarians, and Franks. Dialectal differences are the sole vestiges of the various groups that held sway at different times over what is present-day Austria.

RELIGIONS

Austria is a largely Roman Catholic country, with an estimated 74 percent of its citizens professing the Catholic faith. Throughout the country Catholicism is evident in cathedrals and churches; crucifixes at crossroads; and monasteries, convents, and wayside shrines. Throughout the year the many religious holidays are marked by festivals, processions, pageants, and ceremonies.

The real influence of the Catholic Church on the lives of Austrians has been steadily decreasing in this century. More than 20,000 Austrians withdraw annually from church membership, and only one-third of baptized Catholics (15 percent in Vienna) participate in Sunday Mass. Only 10 percent belong to Catholic organizations, such as Katholische Aktion. The number of young people following a calling to the priesthood or a religious order also has been decreasing.

The Protestant percentage of the population has doubled since the end of World War II to just under 5 percent, primarily as a result of immigration. The principal Protestant body is the Evangelical Church, which is a loose union of the Helvetic Reformed and Augsburg Lutheran churches. Protestants are strongest in the alpine regions and in Burgenland. Only two other Protestant groups are officially recognized: the Moravians and the Methodists. The Old Catholic Church, founded in 1871 as a protest movement against the doctrine of papal infallibility, was given legal recognition in 1877. Eastern Orthodoxy is represented by Armenian, Bulgarian, Greek, Romanian, Russian, and Serbian Orthodox churches.

Of the non-Christian religions, Judaism is the oldest. On the other hand, adherents to Islam have grown in

numbers, most of them guest workers from Turkey and parts of the former Yugoslavia.

HISTORICAL BACKGROUND

At the beginning of the Christian era, the Romans organized the region that is present-day Austria into a number of provinces, including Noricum, Pannonia, and Ilyria, and founded its major urban settlements: Vindobona (Vienna), Juvavum (Salzburg), Oenipons (Innsbruck), and Brigantium (Bregenz). After the fall of the Roman Empire, Austria in the ninth century became a province of Charlemagne's empire; two centuries later, under the name *Österreich*, or Kingdom of the East, it was joined to the Holy Roman Empire.

Austria's rise to greatness began in 1282 when Rudolf von Hapsburg (Rudolf I, German emperor) gave Austria (Upper and Lower Austria, Styria, Carinthia, and Carniola) to his sons Albert and Rudolf, launching a dynastic rule that lasted until 1918. The zenith of Hapsburg power came in the 1500s under Charles V (Charles I of Spain, the grandson of Emperor Maximilian I on the agnate side and King Ferdinand and Queen Isabella of Spain on the enate side), whose dominions included Austria, Spain, the Netherlands, and Spanish America. Charles gave Austria to his brother Ferdinand, who had already been elected king of Hungary and Bohemia in 1526. When the last Hapsburg king of Spain died in 1700, France and Austria both claimed the throne. In the ensuing War of the Spanish Succession (1701–14), Austria lost Spain but retained control of the Spanish Netherlands, Naples, Milan, and Sardinia. In the War of the Polish Succession (1733–35) Austria lost Naples and Sicily. The death of Charles VI in 1740 led to the War of the Austrian Succession (1740–48), at the end of which Maria Theresa was recognized as ruler. Both she and her son Joseph II (1780–90) instituted a number of major reforms, including the abolition of serfdom and the extension of religious freedom, and their reigns spanned the golden age of the Austrian cultural renaissance.

The rise of Napoleon signaled the end of Austria's power and the slow dismemberment of its empire. In 1797 France took Belgium and Milan, and in 1805 Austria lost Venice, the Tyrol, and land in Dalmatia to Napoleon. The Congress of Vienna (1814–15) awarded Lombardy, Venetia, Istria, and Dalmatia to Austria but denied the return of former Austrian possessions in Baden and the Netherlands.

From 1815 to 1848 Austria was dominated by Prince Klemens von Metternich, one of the most famous European statesmen of the age. His extremely repressive rule was ended by revolutions that broke out in 1848 in Hungary, Bohemia, and Vienna itself. Metternich resigned and fled to London. Emperor Ferdinand I abdicated the Austrian crown in favor of Francis Joseph I, his 18-year-old nephew, who held the throne for the next 68 years, until his death in 1916. Although Francis Joseph I set up a strong central government, the Hapsburg empire continued to shrink. In 1859 French and Sardinian troops defeated the Austrians in Italy, thus ending their rule in the peninsula. In 1866 Austria lost its influence in Germany after being defeated in the Seven Weeks' War. In 1867 the Magyars revolted and forced the Hapsburgs to concede a separate Kingdom of Hungary under the Austrian crown. Enfeebled by these losses, the empire was ripe for the coup de grace, which came on June 28, 1914, when Archduke Francis Ferdinand, heir to the Austrian throne, was assassinated in Sarajevo by Serbian nationalists. The event set off World War I, in which Austria was joined by Germany, an ally since 1879.

Austria emerged from World War I defeated and impoverished, with neither the empire nor the Hapsburg dynasty. In 1918 Austria was proclaimed a republic, confined to its German-speaking provinces. Like Germany, Austria faced both political and economic chaos for the next 20 years. The two major parties, the Christian Socialist Party and the Social Democratic Party, were almost equal in strength, and both had private armies. A third group, the Austrian Nazi Party, advocated union with Germany; such a union was prohibited by the Treaty of Versailles and the Treaty of Saint-Germain. The democratic constitution of 1920 was suspended in 1933 when Chancellor Engelbert Dollfuss dissolved the Austrian parliament and began to rule by decree. In 1934, following civil strife, Dollfuss established Austria as a corporate state along fascist lines. A few months later Dollfuss was assassinated by the Nazis in a coup, and Kurt von Schuschnigg succeeded to the leadership. Schuschnigg struggled for the next four years to keep Austria independent, but in 1938 German troops entered the country and annexed it to the Third Reich. Eighteen months later Austria entered World War II as part of the Axis powers.

Allied troops entered Vienna in 1945, and the country was divided, like Germany, into U.S., British, French, and Soviet zones. Although the Austrians were permitted to set up a provisional central government, the exercise of Austrian sovereignty was limited to the four occupying powers under a 1946 agreement.

The provisional government was established under the Social Democrat Karl Renner. Following a general election in November 1945, Leopold Figl became chancellor of a coalition government with the Austrian People's Party (*Österreichische Volkspartei*, or *ÖVP*) and the Austrian Social Democratic Party (*Sozialistische Partei Österreichs*, or

SPÖ) as partners. In 1955 the Austrian State Treaty formally ended the occupation and declared Austria's independence. During the same year Austria joined the United Nations.

The postwar coalition government endured until 1966, when the ÖVP won a legislative majority. Thereafter a succession of ÖVP and SPÖ governments held power. The 1970s were dominated by SPÖ chancellor Bruno Kreisky. The 1980s saw the rise of the far-right Freedom Party of Austria (Freiheitliche Partei Österreichs, or FPÖ) under Jörg Haider. To keep the FPÖ out of office, ÖVP and SPÖ agreed to a coalition under Franz Vranitzky. Austria became an EU member in 1995. In the first direct election for the European parliament in 1995, the SPÖ finished second to the ÖVP, while the FPÖ secured a high 27.6 percent of the vote. This led to Vranitzky's resignation in 1997 and the election of Viktor Klima as chancellor. In legislative elections in 1999 the FPÖ won 27 percent of the vote, securing an equal number of parliamentary seats as the ÖVP. This time, however, talks between the ÖVP and the SPÖ were unsuccessful, prompting the ÖVP to form a coalition government with the FPÖ, with Wolfgang Schüssel as chancellor. Following international protest, Haider resigned as leader of the FPÖ in 2000. Schüssel was reelected in 2002. He tried to form a working coalition with the Social Democrats and the Greens, but his efforts failed, so he turned once again to the FPÖ, moving the government to the right. In 2003 the coalition passed a set of asylum and immigration laws regarded as the most restrictive in Europe. In 2004 Heinz Fischer was elected president; just days before he was to take office, his predecessor, Thomas Klestil, died.

LIST OF MODERN RULERS

Chancellor

1945	Karl Renner
1945–53	Leopold Figl
1953–61	Julius Raab
1961–64	Alfons Gorbach
1964–70	Jesef Klaus
1970–83	Bruno Kreisky
1983–86	Fred Sinowatz
1986–97	Franz Vranitzky
1997–2000	Viktor Klima
2000–	Wolfgang Schüssel

President

1945–50	Karl Renner
1951–57	Theodor Körner
1957–65	Adolf Schärf
1965–74	Franz Jonas
1974–86	Rudolf Kirchschläger
1986–92	Kurt Waldheim
1992–2004	Thomas Klestil
2004–	Heinz Fischer

CONSTITUTION

Austrian constitutional development has undergone many changes. After the demise of the Hapsburg monarchy in 1918, a new constitution was proclaimed in 1920, establishing a federal democratic republic. The so-called First Republic collapsed in the face of fascism in 1934. The Second Republic was recreated on an identical basis in 1945.

The constitution of 1920 provides for three separate branches of government: executive, legislative, and judicial. The federal president, as the head of state, is directly elected by the people. He in turn appoints the chancellor, who is the head of government. The president names the cabinet, which usually includes the vice chancellor, on the recommendation of the chancellor. These officials, plus state secretaries, constitute the executive branch.

The constitution of 1920 delegates powers not specifically assigned to the federal government to the nine provinces (*Länder*). Each of the provinces has a constitution and an elected provincial diet (*Landtag*). Below the provinces are local communities (*Gemeinden*).

The constitution of 1920 has been amended several times. In 1929 the federal president's powers were enhanced by granting him the formal power to appoint and dismiss the chancellor and, on the chancellor's recommendation, the cabinet. It also provided for the popular election of the president.

According to the constitution, federal and provincial legislative and administrative authority is apportioned four ways. Such matters as foreign affairs, justice, finance, civil and criminal law, public peace and order, and security are federal concerns. Some laws are enacted at the federal level but are administered by provincial authorities, including those on elections, highway, police, and housing. Other laws are made and administered at the provincial level but under federal guidelines, such as social welfare and land reform. Matters not specifically assigned to federal control are reserved for the provinces, including municipal affairs, buildings, theaters, fire control, and tourism.

The constitution does not include a bill of rights as such, but it does guarantee equality before the law and prohibits discrimination of any kind.

Constitutional amendments may be made through laws designated constitutional laws or through constitutional provisions if the amendment is part of another law. They require a two-thirds majority vote in the Nationalrat, with at least half of the members present. Constitutional laws or provisions are accompanied by a national referendum only if requested by one-third of the deputies of either the Nationalrat or the Bundesrat.

In addition to the constitution, two laws—a constitutional law and a treaty—are particularly important in Austria's constitutional development. The first is the Fed-

eral Constitutional Law on the Neutrality of Austria of 1955; the second is the Austrian State Treaty, signed by the four occupying powers and Austria in 1955.

Since 1951 the president of Austria has been elected by popular vote for a six-year term, limited to two consecutive terms. Members of reigning or formerly reigning dynasties are barred from running for election. Presidential candidates are nominated by parties, and the winner must poll over 50 percent of the vote. If no candidate succeeds on the first ballot, a runoff election is held between the two candidates receiving the highest number of votes.

Presidential duties include convoking, proroguing, and dissolving the Nationalrat; appointing the chancellor and, on his recommendation, the cabinet; signing treaties; and granting reprieves and pardons. Although the president cannot veto legislation, he is empowered to reject a cabinet proposal or delay enactment of a bill. The official acts of the president generally require the countersignature of the chancellor or the concerned minister. During national emergencies when the Nationalrat is not in session, the president may issue ordinances countersigned by the cabinet. The president may be recalled or dismissed from office by popular referendum and by a two-thirds vote of the Bundesversammlung (Federal Assembly). There is no office of vice president; hence new elections are held if the presidency is vacated for any reason.

The chancellor is appointed or dismissed by the federal president but is responsible to the Nationalrat and is the leader of the majority party. Cabinet ministers, also appointed by the president, are generally but not necessarily members of the Nationalrat. Ministers can participate in sessions of either house. Committee meetings also are open to ministers, with the exception of the Main Committee, where they must be specifically invited.

State secretaries are appointed and leave office in the same manner as ministers. They aid ministers in parliamentary business and are nonvoting participants in cabinet sessions.

The basic features of the Austrian constitution are those of Western democracies: separation of powers, federalism, local autonomy, and liberalism. All the institutions of representative parliamentary democracy are present and place basic human rights over those of the state. However, there are countervailing tendencies within the political process, especially from the entrenched bureaucracy, corporatist interest groups, powerful political parties, and the growing power of the interventionist welfare state.

In addition to the parliamentary opposition, there are a number of constitutional checks on federal authority. These include the Constitutional Court and the administrative courts (which are more fully described in the Legal System section); the Central Auditing Authority; and the people's lawyer, the Austrian equivalent of the Ombudsman.

PARLIAMENT

The Austrian Bundesversammlung, or parliament, comprises two chambers: the upper house (Bundesrat) and the lower house (Nationalrat).

The Bundesrat consists of 62 delegates elected by the provincial legislatures for terms varying from four to six years. Representation reflects party strength in the provincial legislatures. At least one seat must be given to the second-largest party in each legislature.

The Bundesrat, like the upper houses in many other countries, is the less powerful of the two chambers. Its authority is only that of a delaying veto, which can be overridden by the Nationalrat.

The Nationalrat consists of 183 members elected by universal suffrage from nine electoral districts for minimum terms of four years. Two sessions are convoked annually by the federal president, in spring and autumn. Special sessions may be called if requested by the cabinet, by one-third of the Nationalrat or by one-third of the Bundesrat. Deputies elect a president and second and third presidents from among their members. The president and the third president usually belong to the majority party, while the second president usually belongs to the opposition party. The three presidents preside over plenary sessions in two-hour shifts and join with the chairmen of the parliamentary groups to form a conference that directs Nationalrat activities and decides the time and agenda of plenary sessions and committees.

Universal male suffrage has been in force in Austria since 1907, but women did not gain full voting rights until after 1917. Voting is compulsory for citizens 21 or older. All elections are supervised by electoral boards on which political parties are represented on the basis of their performance in the previous elections.

Party lists are submitted for the Nationalrat elections. Each voter can list as a preferred choice, thereby increasing his chances for election. Turnout usually is heavy; it has not fallen below 92 percent since 1945.

POLITICAL PARTIES

The Austrian political party system has been described as the "two-and-a-half system," with two major parties, the ÖVP and the SPÖ, and a third party in the FPÖ. The primary characteristics of the system are continuity and concentration: continuity reflecting the historical roots of the major groups in the 19th century and concentration reflecting the limited ideological spectrum covered by these parties.

The ÖVP was founded in 1945 as the successor to the pre-World War II Christian Social Party. Its overall policies support a free-market economy with some government intervention, low taxes, a balanced budget, and low wage increases. Although it advocates free enterprise, it favors some nationalization programs and workers' profit sharing.

The SPÖ was founded in 1945 as the successor to the Social Democratic Party, established in 1888. The SPÖ retains very little of its predecessor's dogmatic Marxism; after the end of World War II it became pragmatic and reformist, as evidenced by its Grand Coalition government alliance with the ÖVP from 1945 to 1966.

Led by moderates such as Karl Renner and Adolf Scharf, each of whom eventually served as federal president, the SPÖ program stressed humane and liberal policies such as full employment, a reduced work week, electoral reform, lower food prices, and increased government spending on social welfare. The party also softened its former anticlerical position to become acceptable to Catholics and even supported state subsidies to Catholic schools. A new party program adopted in 1958 claimed the SPÖ was the party of "all those who work for a living" and stated the party's opposition to both communism and fascism.

The FPÖ was founded in 1955 by a former Nazi, Anton Reinthaller, and represents the nationalist-liberal camp in Austrian politics. It is an offshoot of the League of Independents, a postwar party that broke up in 1955 over internal disagreements. The party is composed of right-wing nationalists and moderate liberals, between whom there are frequent factional disputes. It contested the presidential election for the first time in 1980, when it won 17 percent of the vote. Although a weak opposition party, it was able to parlay its Nationalrat votes as a power broker and participate in the government in 1983.

The FPÖ is a defender of pan-German interests and opposes all forms of non-German, especially Slavic, influences. It is antagonistic to guest workers, who are seen as threats to Austria's Germanness. It is an advocate of free enterprise but has supported social reforms, including granting workers a voice in management. It has endorsed cooperation with Western European countries, particularly the European Union. It is strongly anticlerical, opposing Catholicism as a constraint on individual liberty.

The United Greens of Austria (Vereinte Grüne Österreichs), a conservative ecological party, was founded in 1982 by Professor Alexander Tollman and Alois Engländer. Another ecological party, the more progressive Alternative List of Austria (Alternative Liste Österreichs), was founded in 1983. These two parties won 19 percent and 1.2 percent, respectively, of the Nationalrat vote in 1983. In 1986 these two parties merged to form the Green Alternative (Grüne Alternative) for that year's election. The merged party is now called the Greens/Green Alternative (Die Grünen–Die Grüne Alternative).

The National Democratic Party, founded in 1966, is a radical right-wing group that advocates reintroduction of the death penalty, abolition of abortion, and withdrawal of civil rights from conscientious objectors. It is violently anti-Communist and anti-Slav and opposed to the presence of guest workers.

LOCAL GOVERNMENT

Each of the nine provinces has its own constitution and an elected Landtag (provincial legislature). The number of delegates in the Landtag varies according to the population. A Landtag may be dissolved by the president with the consent of the Bundesrat.

A Landtag elects an executive composed of a governor (*Landeshauptmann*) and councillors (*Landesräte*). If there is no federal agency in the province, the governor also acts as the federal representative. Article 15(1) of the constitution states that all matters not expressly designated as falling under federal authority lie within provincial jurisdiction. These include primary education, housing, health, and conservation. In cases where there is a dispute regarding jurisdiction, the Constitutional Court has ultimate authority. Interprovincial policies are coordinated by compacts and treaties.

Provinces are divided into districts (*Bezirke*) and local communities (*Gemeinden*). Each district is headed by a district commissioner (*Bezirkshauptmann*), usually a career civil servant who is appointed by the provincial governor. Local communities are self-governing, each with a popularly elected community council (*Gemeinderat*) chosen by proportional representation on the basis of political party strength. Members serve a five-year or six-year term. Community council meetings are presided over by a mayor (*Bürgermeister*) elected by the council. Local communities with a population of 20,000 or more have a charter. Each local community has a board whose members are elected on the basis of proportional representation by the community council. The actual authority of these bodies is quite limited because federal and provincial regulations are so pervasive and their supervision and controls so extensive.

LEGAL SYSTEM

Austrian law belongs to the system of European continental law, which has its basis in Roman law. In this system, legal codes play an important role. Austrian civil law is based largely on an 1812 civil code and its amendments, especially those introduced by the Socialist government from 1970 to 1980. The most important of these amendments relate to family law, consumer law, and legal procedure.

The court system is independent of the executive and the legislature. Judges, although administratively subject to the Ministry of Justice, are not bound by instructions from the executive, and they cannot be dismissed or transferred except in accordance with procedures established by law. Judges are chosen by the federal president or the cabinet from lists submitted by the judiciary.

The judicial hierarchy consists of the following courts: Constitutional Court (*Verfassungsgerichtshof*), Administrative Court (*Verwaltungsgerichtshof*), Supreme Court (*Oberster Gerichtshof*), appeals courts (*Oberlandesgerichte*), provincial courts (*Kreisgericht* or *Landesgerichte*).

cht), and district courts (*Bezirksgericht*). Cases outside the jurisdiction of these courts are heard in special courts.

The Constitutional Court decides the constitutionality of laws and decrees that are passed at the federal, provincial, and local levels and hears cases involving jurisdictional conflicts between the federal government and the provinces and between or among provinces. Individuals can present cases to the court if they believe that the decision of an administrative agency violated their constitutional rights. Monetary claims against the state as well as cases regarding disputed elections are also brought before this court. In addition, the court decides impeachment of the federal president and charges of illegality against members of the federal government and provincial governments.

The highest ordinary court (distinct from military or other special courts) is the Supreme Court, which is the court of last resort for all civil and criminal cases. Justices hear cases in five-person panels. Four appellate courts, in Vienna, Graz, Linz, and Innsbruck, are courts of second instance for civil and criminal cases and final appellate courts for district court cases. Usually a three-judge panel hears cases. On the lower level are 18 provincial and district courts. Provincial courts serve as courts of first instance for civil and criminal cases carrying penalties of up to 10 years' imprisonment and as appellate courts for some cases from district courts.

District courts hear minor cases, such as misdemeanors and guardianship, adoption, paternity, probate, registry of lands, and boundary disputes. Juries, usually consisting of eight persons, are employed in criminal cases. Certain criminal cases are subject to a hearing by two lay assessors and a judge.

HUMAN RIGHTS

Austria is a constitutional parliamentary democracy in which most basic human rights are guaranteed and respected in practice.

Although arbitrary detention is constitutionally prohibited, the law provides for investigative, pretrial, or preventive detention for up to 48 hours. The investigative judge may authorize continued detention before trial for up to two years.

The human rights of Austria's minorities are fully respected. However, the Slovenes are concerned about government efforts to end teaching of the Slovenian language in the local elementary schools they attend.

Austria plays a major role in monitoring human rights issues in Eastern Europe. Both Amnesty International and the Bruno Kreisky Foundation are active in this regard.

FOREIGN POLICY

The Austrian State Treaty of 1955 ended the four-power occupation of Austria, reestablished the country as a sov-

ereign republic, and prohibited any union with Germany. During the same year the Federal Assembly approved a constitutional amendment declaring Austria's permanent neutrality, rejecting military alliances, and banning the establishment of foreign military bases on national soil. Austria formally submitted an application to join the European Community in 1989, and accession to the European Union was endorsed by the voters in a referendum by 66.4 percent. In 1995 Austria joined the North Atlantic Treaty Organisation's Partnership for Peace and signed the Schengen Accord providing for free movement between EU states.

DEFENSE

The Austrian military establishment is relatively small—about 35,000 active-duty personnel in 2003—and its forces are lightly armed and organized into small basic units. The Austrian State Treaty of 1955 placed limitations on armaments. For example, it prohibited weapons of mass destruction and guided missiles. Also in 1955 the Nationalrat enacted a constitutional law on Austrian neutrality that prohibits membership in military alliances but permits participation in peacekeeping efforts outside the country, such as in Cyprus. There are no foreign military bases in Austria.

Legislation in 1962 separated national defense into regular military, civil defense, economic, and psychological sectors. The president is the supreme commander of the Bundesheer (Defense Forces), but operational control is vested in the minister of defense. The four sectors are responsible to the National Defense Council, presided over by the minister of defense.

Conscription is compulsory under the Armed Forces Law of 1955. The period of service is six months under a revised law of 1971.

Austria has only a limited armaments industry, and most of the military hardware is imported. The country does not receive military aid.

Observers rate the conditions of military service and the morale as reasonably good, even though military pay is low by Western European standards and a lack of mission and the poor quality of material reduce the sense of purpose among all ranks. The military budget is relatively austere—just under \$1.5 billion in fiscal year 2001–02, 0.85 percent of the nation's gross domestic product (GDP)—allowing little room for sophisticated weaponry. Austrian troops have not engaged in military action since World War II.

ECONOMY

Austria has a well-developed market economy and high standard of living, with just 3.9 percent of its population living below the poverty line. It is closely tied to other EU economies, especially that of Germany. Through its membership in the European Union, Austria has attracted foreign investment because of its access both to the Western European market and nearby countries in Eastern Europe. Economic growth, though, has been slow in recent years—just 0.7 percent in 2001, 1.4 percent in 2002, and less than 1 percent in 2003 and 2004. Planned for 2004 was a tax cut of 500 billion euros, with another 2.5 billion planned for 2005. The stimulating effects of these tax cuts, however, are likely to be offset by higher health insurance contributions and higher energy taxes. Austria faces intense competition from other EU countries; to meet that competition, Austria is trying to emphasize knowledge-based economic sectors, deregulate its service sector, continue to lower taxes, and encourage labor force participation by its aging population. It also is making efforts to reduce its public debt, which stood at 67.6 percent of gross domestic product as of 2004. On the plus side, both inflation (1.4 percent) and unemployment (4.4 percent) were low in 2004.

ENVIRONMENT

Austria is actively engaged in the protection of the national environment. Forests cover about 47 percent of the territory, and there are 129 protected areas or nature reserves covering 28.3 percent of the country; 302 plant species and 108 animal species are protected by law. Along with Hungary and the Czech Republic, Austria is planning a trinational park along the floodplain areas of the Danube, Thaya, and March rivers.

Forest damage is caused by a combination of air and soil pollution. It is estimated that some 25 percent of the country's forests have suffered some damage. Like many postindustrial nations, Austria is taking an active role in reducing pollutants, including those that contribute to the greenhouse effect. Legislation was passed to reduce emission by more than 20 percent over a five-year period, and greater care is being taken of the country's remaining undeveloped lands.

LIVING CONDITIONS

Living conditions in Austria are generally high, with a per capita GDP in 2004 of \$30,000 and less than 4 percent of the population living in poverty. The crime rate is among the lowest in Western Europe, and violent crime is rare—though the rate of white-collar crime is relatively high, and violence and intimidation of ethnic immigrants continue to be problems. Income is distributed relatively evenly, with the richest 10 percent having about 22.5 percent of the nation's income. Health care is almost universally covered by insurance. The transportation system is modern and efficient, with over 6,000 miles of railroads and 1,600 miles of expressways. In the cities, people generally live in one- or two-room apartments; only about one-quarter of Austrian city dwellers live in apartments or homes with four or more rooms. One-third of Austrians live in the five largest cities. Property in the rural areas is relatively inexpensive. There, people tend to live in wood or stone farmhouses, many of which have been in a family for hundreds of years. In the western part of the country, Swiss-type chalets predominate; farmhouses

and other buildings in the east reflect more of a Slavic influence.

HEALTH

Austria has a well-developed health-care system. Fully 99 percent of the population is covered by health insurance, paid for by workers, employers, and government at all levels. This insurance entitles Austrians to free outpatient and inpatient care. Patients are free to go to the doctor of their choice. Life expectancy at birth in 2004 is nearly 79 years, and the infant mortality rate is fewer than 5 deaths per 1,000 live births. Fewer than 100 Austrians died of AIDS in 2003.

FOOD AND NUTRITION

Austria has always been a crossroad between Eastern and Western Europe, so its cuisine reflects the influences of German, Hungarian, Czech, and northern Italian cooking. Austrians begin the day with a light breakfast of rolls and coffee. The midday meal is often the main meal of the day—Austrians call it *Essen warm*, or the “hot meal”—and consists of soup, a main dish (often the essential Austrian dish, *Wiener schnitzel*, or breaded veal), vegetables, as well as noodles. The evening meal is lighter, consisting typically of such items as cheese, sliced tomatoes, and slices of cold meat; the meal is referred to as *Essen kalt*, or a “cold meal.” Coffeehouses are an important part of Austrian culture, and many Austrians, especially in the cities, take a midafternoon break to visit one. The quintessential Austrian dessert is *Sachertorte*, a rich chocolate cake; like many such desserts in Austria, it is not overly sweet. When a fire breaks out, neighbors typically gather to put out beer and a buffet meal for volunteer firefighters.

STATUS OF WOMEN

The position of Austrian women is not markedly different from that of women in other Western European countries. Legal and other barriers to their full participation in public life are disappearing, although vestiges remain. Violence against women is a problem, and it is reported that more than 300,000 women are abused annually and that one-fifth of the country's 1.5 million women have suffered from violence at some time. The 1997 Law on Protection against Violence in the Family provides special protection to women. Although prostitution is legal in Austria, the country is a transit point for women sold into sexual slavery from the former Soviet republics to Western Europe and North America. There is a Women's Affairs Ministry that oversees the condition of women. In addition there is a Federal Equality Commission and a Federal Commissioner for Equal Treatment. About 70 percent of the women between 15 and 60 are in the labor force, but they typically earn 30 percent less than men. About 66 percent of mothers work outside the home. Since 1998 women have been allowed to serve in the military. Sexual harassment is punishable by law, and women may be awarded compensation of up to four months' salary if discriminated against because of their sex.

 Seats Held in Parliament by Women %: 34
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 44.5

WORK

Austria's labor force in 2004 was about 3.4 million, with about 4 percent in agriculture and forestry, 29 percent in industry and crafts, and 67 percent in services. Laborers are represented by trade unions, while management has its own management association, and farmers are represented by a farmers' federation. Eighty-five percent of Austrians work for wages, while 10 percent are professionals who work on a fee-for-service arrangement, and 5 percent are self-sufficient through agriculture. Some 50 percent of wage earners are white-collar workers. Austria's social legislation provides generous benefits for retirees

and mandates five weeks of paid vacation a year, even for young and inexperienced workers. Additionally, workers receive an extra month's salary before Christmas and an extra month's salary before the vacation season. Much of Austria's unskilled labor is provided by immigrants, a continuing source of friction in Austrian society.

EDUCATION

Since 1962 compulsory education has lasted for nine years (ages six to 15 and grades one through nine). The elementary school consists of a four-year lower school and a four-year *Hauptschule* (high school). The latter also functions as the lower level of the eight-year secondary school (grades five through 12), leading to the certificate of maturity (*Matura* or *Reifezeugnis*), which qualifies students for university admission. Children who complete the eight-year elementary school may complete their ninth year of compulsory education in a polytechnical (prevocational) course. There are three types of vocational education: apprenticeships; middle-level technical or vocational full-time schooling, one to four years in length; and upper-level vocational or technical schools, with a five-year program leading to the *Matura*. The educational system is rounded out by an extensive adult education program.

The School Organization Act of 1962 divided the secondary schools into special and regular categories. The upper five-year curricula vary widely. The regular category usually offers six different curricula, three of which are in the classical arts, two in science and mathematics, and one in home economics for female students.

The Private Schools Act of 1962 regulates the establishment and operation of private schools and private student boardinghouses. It also provides for accreditation, subsidies, and inspection. Private schools exist at every level of the educational system except universities. Private-school enrollment in compulsory general education is about 3 percent, but it increases to 12 percent in upper-level academic secondary schools, 20 percent in vocational schools, and 59 percent in middle-level vocational schools. In teacher training 36 percent of the students at the secondary level and about 29 percent of the students at the postsecondary level are in private schools.

The language of instruction is German in 99 percent of the schools, but the rights of the Croats, Slovenes, Hungarians, Czechs, and Slovaks are respected, and elementary schools for minority groups are conducted in their native language. Croatian and Slovenian are offered as electives in academic secondary schools.

Higher education comprises universities (*Universitäten*) and colleges of fine arts (*Kunsthochschulen*), which have equivalent status. The general German term for a higher-education institution is *Hochschule*, which includes universities and all other institutions of university rank. There are 12 universities and six colleges of fine arts.

The federal government has complete financial responsibility for academic secondary schools, medium- and upper-level vocational schools, and higher education. For other schools, the federal government pays the majority of the personnel costs, while the province and district pay the rest. Districts are primarily responsible for preschool and compulsory general education and the provinces for compulsory vocational schools. On average, federal funds provide about two-thirds of total public expenditures on education at all levels. About 60 percent of the costs of private schools are reimbursed by the federal government.

SCIENCE AND TECHNOLOGY

Science and technology are well supported in Austria. Scientific research is carried out mainly at the universities, and Austria participates in the European Space Agency, the European Council for Nuclear Research, the European Molecular Biology Laboratory, the Organization for Economic Cooperation and Development, and the United Nations Educational, Scientific, and Cultural

Organization. It is also the headquarters for the International Atomic Energy Agency. Famous Austrian scientists include the Viennese psychiatrist Sigmund Freud and Nobel Prize winners Julius Wagner-Jauregg (1927), Erwin Schrödinger (1933), Wolfgang Pauli (1945), and Konrad Lorenz and Karl von Frisch (1973).

MEDIA

Austrian newspapers can be divided into three distinct groups: the big, popular, mass-appeal dailies, all in Vienna; the provincial press; and a small group of independent quality papers, of which Vienna's *Die Presse* and Salzburg's *Salzburger Nachrichten* are the best known. Strong political party leanings, if not actual affiliations, characterize most newspapers.

Newspaper readership is highest in Vienna, whereas in rural areas broadcasting is a more important medium.

The press exhibits three types of ownership: private, political party, and government. None is directly tied to any commercial enterprise, although there is some cross interest. Austria has not been spared the trend toward press concentration that most advanced countries have experienced since the 1950s, although it has tended to take the form of increased concentration in the hands of political parties rather than chains. The disappearance of a number of papers, such as *Express*, a mass-appeal daily, and the ÖVP's paper *Volksblatt* in the 1970s reflected the fragile economic base of the Austrian press. The Press Promotion Law of 1975 was designed to give the government power to help ailing newspapers.

Freedom of the press is guaranteed by the constitution, which states, "Every person has the right of free expression of opinion in speech, writing, print and visual media within the limits of legal regulations. The press must not be subjected to censorship or restricted by rule of the licensing system." Because the space devoted to advertising is not high—about 25 percent—advertisers do not exert much influence on editorial policies.

The national news agency is the Austria Presse Agentur, a cooperative jointly owned by all newspapers (except *Neue Kronen Zeitung*) and the Austrian Broadcasting Corporation (Österreichischer Rundfunk), a public corporation whose shares are held by the provincial governments. It does not have foreign bureaus but has a number of part-time correspondents in major cities abroad. It also

has contracts for the supply of news with Reuters, AFP, AP, and dpa.

CULTURE

Austria is virtually synonymous with classical music. Emperor Maximilian I founded the Vienna Boys' Choir in 1498, and Salzburg is the birthplace of Mozart, who first played for Empress Maria Theresa in 1762. Other classical musicians who were born in Austria or otherwise called it home include Franz Joseph Haydn, Beethoven, Franz Schubert, Johannes Brahms, and Gustav Mahler. Viennese waltzes, principally those by Johann Strauss (for example, "Tales from the Vienna Woods") are part of the standard classical repertoire throughout the world. The Salzburg music festival draws thousands of visitors each summer, and Vienna remains home to the Boys' Choir, a philharmonic orchestra, and the state opera. Virtually every town and village in Austria, even the smallest, has its own *Musikverein*, or local musical group with its own community band or orchestra.

Austria also has a rich literary tradition. As a German-speaking country, part of its cultural heritage includes the great German epics of the Middle Ages. In the twentieth century a strong tradition in drama, fiction, and poetry developed with such writers as Arthur Schnitzler, Hugo von Hofmannsthal, and Stefan Zweig.

The Albertina museum in Vienna is world class, housing works by such artists as Michelangelo, Leonardo da Vinci, Peter Paul Rubens, Paul Cézanne, Édouard Manet, and Amedeo Modigliani.

FOLKLORE AND MYTHOLOGY

Because of their isolation, the alpine regions of Austria are particularly rich in pagan folklore and mythology. A good example of such a folklore tradition is the *Krampus*, which derives from the Old High German word for "claw." The *Krampus* is a male incubus who accompanies Saint Nicholas. During the first two weeks of December, young men traditionally dress up as *Krampus* and roam the streets, where they frighten children and adults with bells and chains. Today, *Krampus* costumes include finely

crafted red masks, horns, and a black sheep's skin. Youth in some communities engage in competitive *Krampus* events.

Perhaps the most widely known text in Austrian mythology is the epic poem *Das Niebelungenlied*, written in Austria around the year 1250. The poem blends stories of Teutonic warrior gods and goddesses with tales of court life in the Middle Ages and treats themes such as the tragedy of fate, retribution for wrongdoing, and the struggle between good and evil, light and darkness.

ENTERTAINMENT AND RECREATION

Austrians, particularly the Viennese, display a zest for life and culture. A favorite saying is "In Berlin [Germany], the situation is serious but not hopeless. In Vienna, the situation is hopeless but not serious." For recreation Austrians are fond of such alpine sports as skiing, and they enthusiastically support culture and the arts. Much Austrian social life centers on coffeehouses and *Konditoreien*, or pastry shops, where people gather not only for good food but also for conversation, relaxing, and reading. In rural areas Austrians turn out in traditional costumes to devote considerable attention to folk and religious festivals and holidays, complete with parades and local marching bands.

ETIQUETTE

Austrians tend to formality in their interpersonal relations, a legacy of the Austrian empire, when people were defined by their position in society, either as aristocrats or as members of the complex civil service. Professionals are typically addressed by their titles, and women are often addressed as *gnädige Frau* (literally, "honored woman," the equivalent of "madame"). The most common greeting in Austria is *Griiss Gott*, or "God's greetings." People shake hands when they meet; an Austrian handshake consists not of lingering shaking but of a single firm "pump" of the hands. It is still common for older men to kiss the hands of women and click their heels together when they

are introduced. At mealtimes everyone joins in a toast ("*Prost*" or "*Guten Appetit*") before eating.

FAMILY LIFE

The basic unit of family life in Austria is the *Familie*, or nuclear family, consisting of husband, wife, and children. It is common for a widowed grandparent or unmarried aunt or uncle to live with an Austrian *Familie*. Austrians regularly visit their extended family, or *Grossfamilie*, consisting of grandparents, aunts, uncles, and cousins. Children tend to maintain a close relationship with their godparents.

Although Austria has had one of the highest labor force participation rates among women in Europe and the nation makes strong efforts to ensure that women are treated equally, they continue to take on most of the responsibilities for the household and for child rearing. To many Austrian men, who are brought up with traditional attitudes, the proper sphere for women is still "*Kinder, Kirche, und Küche*" ("Children, church, and kitchen").

PERSONAL APPEARANCE

Austrians tend to dress on the formal side. It is common for men to wear suits, even when they are just strolling the streets or visiting a park, and women frequently wear dresses. Austria is well known, though, for its traditional costumes. For men, these consist of lederhosen, or short leather pants, along with short jackets and brimmed hats decorated with feathers. For women, the traditional costume is the dirndl, a kind of skirt, and an Austrian woman will generally invest heavily in at least one high-quality, custom-made dirndl that will last her for many years (and that can cost the equivalent of many hundreds of dollars). Although these costumes tend to be reserved for holidays and festivals, it is not uncommon to see Austrians wearing them for everyday occasions.

SPORTS

As an alpine country, Austria, not surprisingly, fosters winter sports, especially skiing but also tobogganing and ice skating. Austrian Olympians won a total of 11 medals in the 2002 Winter Games in Salt Lake City, Utah. Popular summer sports include bicycling, canoeing, hiking, and mountain climbing.

CHRONOLOGY

1945 A provisional government is established under Socialist leader Karl Renner; following general elections in November, Chancellor Leop-

- old Figl forms a coalition government with the ÖVP and the SPÖ as partners.
- 1946** Government nationalizes major industrial firms to prevent Soviet confiscation; de-Nazification laws are enacted; Salzburg festival is revived.
- 1947** Austria joins UNESCO, but its application to join the United Nations is vetoed; the United States begins to pay its own occupation costs.
- 1948** Austria qualifies for aid under the Marshall Plan.
- 1949** Former Nazis are allowed to participate in national elections in parties free of Nazi ideology, including the Union of Independents (later renamed the Freedom Party); a new coalition cabinet is formed.
- 1950** President Renner dies, and Theodor Körner of the Socialist Party is elected president; Reds lose Soviet Zone elections; the death penalty is abolished.
- 1951** Theodor Körner takes office as president.
- 1953** Julius Raab is named chancellor, and he pursues a modified free-market economy for Austria; the Soviet Union begins to pay its own occupation costs, and France and Britain follow suit.
- 1955** Four-power occupation of Austria ends as the Austrian State Treaty proclaims an independent Austria; Nationalrat votes for permanent neutrality; Austria joins the United Nations; Austrian defense forces are established.
- 1956** Austria becomes a member of the Council of Europe.
- 1957** Adolf Schärf of the Socialist Party becomes president.
- 1958** Austria joins the European Free Trade Association.
- 1961** Raab resigns and is succeeded as chancellor by Alfons Gorbach.
- 1962** Austria applies to join the European Economic Community (EEC).
- 1964** Josef Klaus is named chancellor.
- 1965** Franz Jonas of the Socialist Party is elected president.
- 1966** People's Party wins elections and forms a minority government under Josef Klaus.
- 1969** Austria and Italy agree on a policy guaranteeing the rights of the German-speaking population of South Tirol.
- 1970** Socialists win a plurality and form the first all-Socialist government under Chancellor Bruno Kreisky; *Volksblatt* ceases publication.
- 1971** New civil code liberalizes divorce and marriage laws; Socialists win a clear majority in snap elections.
- 1972** Austria joins the EEC.
- 1974** President Jonas dies; Rudolf Kirchschläger is elected president on the Socialist ticket.
- 1975** Socialists sustain their Nationalrat majority in elections as the economy continues its upward trend.
- 1978** In a national referendum, voters reject a program for nuclear power.
- 1979** Socialists increase their Nationalrat majority in elections.
- 1983** Socialists lose parliamentary majority in national elections; Bruno Kreisky steps down as chancellor and is succeeded by Fred Sinowatz heading a Socialist Party–Freedom Party coalition government.
- 1986** Jörg Haider becomes the leader of the Freedom Party; despite charges that he was an active Nazi military officer, Austrian People's Party candidate Kurt Waldheim is elected president; Sinowatz resigns as chancellor, and Socialist leader Franz Vranitzky calls for new elections, in which the Green Party participates for the first time; following elections, the Socialist and People's parties form a grand coalition.
- 1990** The government revokes some of the neutrality provisions of the 1955 State Treaty.
- 1991** Austria supports UN forces in the Persian Gulf War by permitting air and land transportation through Austrian territory; President Waldheim announces that he will not run for reelection; the Socialist Party is renamed the Social Democratic Party.
- 1992** Thomas Klestil of the People's Party, a proponent of EU membership for Austria, is elected president.
- 1994** In October legislative elections, the anti-immigrant, anti-EU Freedom Party wins 42 seats at the expense of the Social Democratic and People's parties.
- 1995** Austria enters the European Union.
- 1997** Chancellor Vranitzky resigns and is succeeded by Socialist finance minister Viktor Klima; Austria implements the Schengen Accord, lifting all customs and immigration controls with the eight other member countries.
- 1998** Klestil is elected to a second six-year term as president.
- 1999** The Freedom Party wins 27 percent of the vote in legislative elections for a total of 52 seats, equaling the People's Party's number of seats.
- 2000** After talks with the Social Democrats break down, the People's Party forms a coalition government with the Freedom Party, with Wolfgang Schüssel of the People's Party as chancellor; foreign and domestic groups protest the Freedom Party's participation in the government; the European Union imposes diplomatic sanctions on

- Austria; Haider resigns as leader of the Freedom Party and is replaced by Susanne Reiss-Passer; the European Union lifts sanctions.
- 2002** Schüssel is reelected as chancellor and tries to form a moderate coalition with the Social Democrats and the Green Parties, but his efforts fail.
- 2003** Schüssel forms a coalition with the Freedom Party, moving the government to the right; the coalition passes restrictive asylum and immigration laws.
- 2004** Heinz Fischer is elected president; just days before he is to take office, his predecessor, Thomas Klestil, dies.
- 2005** Parliament ratifies the EU constitution.

NATIONAL FLAG

Three equal horizontal bands of blue (top), red, and green. A crescent and eight-pointed star in white are centered in the red band.

NATIONAL ANTHEM

“Azerbaijani March”

NATIONAL EMBLEM

An eight-pointed white star fimbriated in gold, symbolizing the eight branches of the Turkish people, is superimposed on three circles: the inner one is green, the middle one is red, and the outer one is blue. Between each star point and over the blue circle are smaller eight-pointed white stars, also fimbriated in gold. Inside the main central star is a fire, recalling the name of the country (*Land of fire* or *Land of the fire*) and symbolizing freedom. The shield stands on a golden ear of corn.

NATIONAL HOLIDAY

May 28 (Independence Day)

DATE OF INDEPENDENCE

August 30, 1991

DATE OF CONSTITUTION

November 12, 1995; amended August 24, 2002

GEOGRAPHICAL FEATURES

Azerbaijan is situated in southwestern Asia in Transcaucasia. It has a total area of 86,600 sq km (33,440 sq mi), including the exclave of the Naxcivan Autonomous Republic and the disputed Nagorno-Karabakh region. Naxcivan is separated from the rest of Azerbaijan by Armenia. Azerbaijan shares land borders with five countries: 787 km (489 mi) with Armenia, including 221 km (137 mi) between Armenia and the Naxcivan enclave; 323 km (200 mi) with Georgia; 284 km (176 mi) with Russia; 9 km (5.5 mi) with Turkey; and 611 km (379 mi) with Iran. The

country also has an 800 km (500 mi) coastline on the Caspian Sea.

Nearly half of the country is covered by mountains, and the three main relief features of the Transcaucasian region—the Greater Caucasus Mountains in the northeast, the Lesser Caucasus in the southwest, and the Kura River depression in between—converge within the country. Of the more than 1,000 rivers in Azerbaijan, only 21 are longer than 97 km (60 mi). The capital, Baku, and its surrounding metropolitan region had an estimated population of 1,817,900 in 2001. Only two other cities have populations over 200,000, namely, Ganca (301,400) and Sumqayit (288,400).

CLIMATE AND WEATHER

Azerbaijan has a wide range of climates and weather zones considering its relatively small size. The climate zones range from the arid subtropical to the mountainous tundra. In the lowlands near the Caspian Sea coast, the mean annual temperature is 15°C (59°F), while in the mountains the mean is 0°C (32°F). During July, the hottest month, the mean lowland temperature is 26°C (79°F) and the mean mountain temperature 5°C (41°F). Rainfall distribution is also uneven, with the lowlands receiving between 300 and 900 mm (8 to 12 in) of rain on an annual basis and the southern slopes of the Greater Caucasus Mountains getting 1,200 to 1,400 mm (47 to 55 in). Winter is the rainy season in the lowlands; in the highlands and mountains as well most of the precipitation falls in winter, much of it in the form of snow.

In the beginning of the 16th century Azerbaijan was under the rule of the Safavid dynasty, which by then had also assumed leadership in neighboring Persia. Wars between the Turkish Ottoman Empire and the Safavid in Persia led to Ottoman occupation of Azerbaijan between 1578 and 1603. As Safavid authority began to wane in the region, the Russians and the Ottomans fought for control. With the breakup of the Safavid dynasty in the middle of the 18th century, the remains of the empire in the Caucasus, including Azerbaijan, fell to a number of independent khanates, or fiefdoms.

Catherine the Great sought to extend the Russian empire into the region, and as a result two Russo-Iranian wars were fought from 1804–13 and from 1826–28. The first war ended with the Treaty of Gulistan, which ceded the majority of the northern khanates to Russia. The Treaty of Turkmanchi in 1828, ending the second war, extended Russian influence into present-day Armenia and southwestern Azerbaijan. The net effect of the two treaties saw Azerbaijan divided in half, with the north under Russian colonial rule and the south governed by Iran.

In 1918 the end of World War I saw Azerbaijan change hands from Russian to Ottoman Turkish and finally to British control. With Britain's blessing Azerbaijan declared its independence from Russia. The first independent Republic of Azerbaijan existed for just 23 months, between May 28, 1918, and April 28, 1920. That first Azerbaijan Republic is considered by historians to be the first truly secular state in the Orient with the first European-like parliament and the first cabinet of ministers. In April 1920 units of the Russian Bolshevik 11th army invaded Azerbaijan and overthrew the government. Under Red Army occupation, Azerbaijan was incorporated into the Soviet Union with the signing of the Treaty of Formation of the USSR on December 30, 1922. For the next 70 years the country remained a republic within the Soviet empire.

In 1945, with both Armenia and Azerbaijan members of the Soviet Union, Moscow, by fiat, tried to settle control over Nagorno-Karabakh—a mostly ethnic Armenian enclave within Azerbaijan's borders. The Soviet Bureau of Caucasian Affairs awarded the territory to Armenia, but the Soviet leader Josef Stalin reversed the decision, declaring the region an autonomous oblast, or county, within Azerbaijan.

The Azerbaijani political reawakening began in 1988, sparked by an outbreak of ethnic violence between Azerbaijanis and Armenians over Armenian claims to the Nagorno-Karabakh region and the refusal of Moscow to heed Armenian demands to cede the territory to Soviet Armenia. Moscow sent 5,000 troops to the region to quell the violence that left hundreds dead.

In 1991 Azerbaijan again declared its independence from Russia under the presidency of the former communist Ayaz Mutalibov, who won a hastily called election

that many believed was rigged by the former Communist Party. The country immediately became embroiled in an armed conflict with now-independent Armenia over Nagorno-Karabakh. The failure to hold back Armenian advances in the region led to the replacement of Mutalibov by Abulfaz Elchibey of the Popular Front of Azerbaijan through a multiparty general election in 1992. However, continued military defeats led to more internal dissent.

In June 1993 rebel army units seized Baku, the capital, in a bloodless revolt. A national referendum of no confidence was held in August on Elchibey's rule, with 97.5 percent of the electorate voting against him. The National Assembly endorsed the result and called for another election in June. This time Heydar Aliyev, a former member of the Soviet KGB secret police and the leader of the New Azerbaijan Party, was declared the winner with 98.9 percent of the votes cast.

In December 1993 Azerbaijani forces launched a counteroffensive into Nagorno-Karabakh and recaptured some of the territory that it had lost to the Armenians. In May 1994 the Bishkek Protocol was signed, which led to a cease-fire between Azerbaijan and Armenia. Russian troops arrived as peacekeepers in the disputed territory.

In 1997 and 1998 the Organization for Security and Cooperation in Europe brokered a settlement between Armenia and Azerbaijan, but both sides have refused to sign, claiming reservations about territorial division and home-rule issues. The May 1994 cease-fire has generally remained in effect with only minor violations occurring into the twenty-first century. In 1998 Heydar Aliyev was reinstated as president, but international watchdog groups reported irregularities with the election. In 2000 the New Azerbaijan Party won a majority of seats in the legislature, again amid allegations of improprieties. Despite the nation's questionable human rights record, it was admitted to the Council of Europe in 2001, while the United States brokered failed talks to resolve the Nagorno-Karabakh issue. U.S. aid to Azerbaijan was restored when the nation provided airspace and intelligence after the September 11, 2001, terrorist attacks. In 2002 construction began on a multibillion-dollar pipeline to carry oil from Azerbaijan through Georgia to Turkey. In October 2003 Heydar Aliyev's son, Ilham Aliyev, won a landslide victory to become president, once again amid allegations of improprieties. Heydar Aliyev died in a U.S. hospital in December of that year.

LIST OF MODERN RULERS

1991–92	Ayaz Mutalibov
1992–93	Abulfaz Elchibey
1993–2003	Heydar Aliyev
2003–	Ilham Aliyev

CONSTITUTION

In a national referendum in 1995, 91.9 percent of voters gave approval to a new constitution, which mandated a strong presidency and an independent legislature based on a division of powers. However, in reality both parliament and the judiciary are subservient to the president's office. Under the 1995 constitution, which replaced the Soviet constitution of 1978, the president is head of state and commander in chief of the armed forces. The president, who is elected by popular vote for a five-year term, holds supreme executive authority in conjunction with a Council of Ministers appointed by the president. The council is headed by a prime minister. President Heydar Aliyev of the New Azerbaijan Party won the October 1998 presidential election, gaining 77.61 percent of the vote, compared to Etibar Mamedov of the National Independence Party, who came second with 11.83 percent. In 2003 Aliyev's son, Ilham, succeeded his father as president, leading the New Azerbaijan Party to victory in disputed parliamentary elections and claiming the position of speaker of parliament. Both men and women over the age of 18 have the right to vote.

PARLIAMENT

The unicameral National Assembly, or Milli Mejlis, is comprised of 125 seats, with 25 seats filled by proportional representation according to party lists and 100 elected in single-member constituencies. Members serve five-year terms. As a result of a 2002 change in the constitution, all 125 seats in all future parliamentary elections will be filled from single-member constituencies.

POLITICAL PARTIES

The New Azerbaijan Party is the dominant force in the government and is headed by President Aliyev. Other key political parties include the Popular Front of Azerbaijan, which once controlled the government but was unable to deliver victory over Armenia, currently headed by Ali Karimli and Mirmahmud Mirali-Oglu; the National Independence Party, an anticorruption party headed by Etibar Mammadli; and the Communist Party of Azerbaijan, which is eager to return to the previous form of government and achieve closer ties with Russia, as headed by Ramiz Ahmadov.

LOCAL GOVERNMENT

The country is divided into 59 rayons, which are Soviet-era administrative districts, 11 cities with locally elected officials, and one autonomous republic.

LEGAL SYSTEM

The legal system is based on a code of civil law. The president appoints Supreme and Constitutional Court judges subject to confirmation by the National Assembly. The president directly appoints lower-level judges, and there is no independent confirmation required—a fact that gives the judiciary little independence from the executive branch. Lower-level courts are considered corrupt and open to outside influences. Cases at the district, or rayon, level are tried by a judge and two civilian assessors. The constitution provides for a presumption of innocence and a defendant's right to legal counsel. The death penalty is enforced.

HUMAN RIGHTS

The government's human rights record improved considerably toward the end of the 1990s as a semblance of political stability returned to the country. In 1998, for example, there were no reports of political or extrajudicial killings by security forces or of politically motivated disappearances. Torture is illegal, but international human rights organizations have accused police of routinely using coercion to win confessions from suspects. Prison conditions are harsh. Security forces continue to arbitrarily arrest and detain suspects despite constitutional guarantees against such practices.

The constitution provides for freedom of speech and the press, but in reality these freedoms have often been ignored by the government. As a result of intimidation and threats, many journalists exercise self-censorship. The government, keen to control the flow of international opinion, has also limited internet access, though the number of internet providers has increased in recent years.

The government requires political parties to register and has on occasion forbidden opposition political rallies. The government also requires religious organizations and congregations to register, and there have been credible claims of harassment of non-Islamic religious groups. International human rights organizations are generally granted free access to monitor and investigate abuse claims.

FOREIGN POLICY

Since gaining independence in 1991, Azerbaijan has had a difficult relationship with Russia. Although a charter member of the Commonwealth of Independent States (CIS), the Azerbaijani parliament refused to ratify the treaty in 1992 and instead voted to leave the grouping of former Soviet republics. However, with the accession to power of Aliyev, that course was reversed, and in 1993

Azerbaijan formally rejoined the group. Relations with Russia have since been rather one-sided. In 1996 Russia sealed its border with Azerbaijan to prevent arms shipments from reaching rebels in Chechnya. Russian companies remain closely involved in the country's oil and gas industry, especially in the transportation sector. Russia is eager to see Azeri oil flow through its territory in order to reach world markets. Russian troops continued to monitor the cease-fire in Nagorno-Karabakh at the end of the 1990s.

In the early 1990s the primary criterion governing Azerbaijan's relations with foreign countries was their stance on Azerbaijani sovereignty in Nagorno-Karabakh. The strengthening of relations with Turkey since independence has been a cornerstone of this policy. Turkey helped to enforce Azerbaijan's economic blockade of Armenia during the war.

Iran has also played an increasing role in Azerbaijani foreign policy. With a large number of Azerbaijanis living and working in Iran, that country is now one of Azerbaijan's leading trading partners. After the U.S. Congress placed restrictions on aid to Azerbaijan pending the lifting of its economic blockade against Armenia, relations between the two countries were strained. However, once the blockade was lifted, relations between Azerbaijan and the United States improved significantly. In 1997 Aliyev paid an official visit to Washington and signed a military cooperation agreement. The state oil company also signed agreements with major U.S. oil companies to help in the exploration of the Caspian oil fields.

Azerbaijan was admitted to the United Nations in 1992, and in 1996, along with Georgia and Armenia, the country signed an economic cooperation pact with the European Union. Into the 21st century the conflict with Armenia over Nagorno-Karabakh remained unresolved, while Azerbaijan was involved in various disputes with its neighbors over oilfield rights in the Caspian Sea.

DEFENSE

Prior to independence in 1991, Azerbaijan had no national defense force, relying instead on the Soviet army for border protection. Military service is compulsory for males over the age of 18, and individuals serve 17 months. The army makes up the largest sector of the national defense forces, followed by the navy. Naval units operate under Russian command as part of the Commonwealth of Independent States protocols. In 1994 Azerbaijan joined NATO's Partnership for Peace, a program of military aid and cooperation. Iranian, Turkish, and Russian officers have all assisted with the training of the national defense forces. In fiscal 1999 the nation spent about \$121 million on defense, representing 2.6 percent of its gross domestic product (GDP). The number of active-duty personnel was about 75,000.

ECONOMY

The first years following independence in 1991 were an economic nightmare for Azerbaijan, which was far less developed industrially than the neighboring Caucasian states of Armenia and Georgia. The collapse of trade between the former Soviet republics as well as Azerbaijan's war with Armenia led to a drastic decline in economic activity for the newly independent nation. Gross domestic product (GDP) had declined every year since 1988 and by 1994 stood at just 37 percent of 1988 levels. Agricultural output was off by 43 percent and industrial output had fallen about 60 percent. The oil and gas sectors were particularly hard hit, with production falling to 9.6 million metric tons, from 13.8 million metric tons.

By the latter half of the 1990s there were signs of improvement following a general political stabilization, a cease-fire in the war with Armenia, and the launching of government structural reforms, including a limited privatization program, sanctioned by the World Bank and the International Monetary Fund (IMF). Inflation, which hit 1,664 percent in 1994, fell to less than 1 percent in 1997 and was negative in both 1998 and 1999. GDP growth was 10 percent in 1998, reversing years of double-digit decline. Despite low world oil prices at the end of the decade, there were signs of a revival in Azerbaijan's oil sector after the state-run oil company signed a 30-year production-sharing agreement with an international consortium of oil companies to develop the oil fields of Chirag, Azeri, and Gunashli in the Caspian Sea. The country has also switched its trading focus away from the former Soviet states toward Turkey, Iran, the European Union, and the Middle East. Into the new millennium these strategies appeared to be working, as oil production increased every year, and trade with Turkey and European nations increased, while trade with Russia and the other former Soviet republics declined. Real GDP growth in 2004 was estimated at 11.2 percent, and inflation remained low at 2.1 percent. Public debt was just 6 percent of GDP in 2004.

ENVIRONMENT

The Apsheron Peninsula, which includes the cities of Baku and Sumqayit, is considered to be one of the world's gravest ecological disaster areas. Soviet-era water, air, and soil pollution, caused by unregulated industry and uncontrolled use of toxic fertilizers and DDT in the agricultural sector, especially in the cotton industry, has led to a shortage of potable water and unsafe toxin levels in the soil.

LIVING CONDITIONS

Azerbaijan remains a poor country, with 2004 per capita GDP totaling \$3,400 and 49 percent of the population living below the poverty line. Seven hundred villages in the country still do not have phone service. Lack of modern medical equipment and drugs has led to a low life expectancy, yet Azerbaijan is known for the many people in the Caucasus Mountains who lead extremely long lives—often well over 100 years. These people attribute their longevity to hard work and a diet of yogurt and vegetables as well as to heredity. One person who died in 1973 was believed to have been the oldest person on earth; while reputed to be 168, he was actually some 120 years old, with living descendants to the fifth generation.

Contributing to Azerbaijan's problems is the ongoing dispute with Armenia over Nagorno-Karabakh. As a result of the conflict, there were still some 571,000 displaced Azerbaijanis in 2004.

HEALTH

Medical care in Azerbaijan follows a Western model, although many people use herbal remedies and visit psychics and traditional healers. Azerbaijanis continue to suffer from the legacy of the Soviet system, which ignored health care at the local level in favor of specialized care for those at the top of the hierarchy. In recent years some successful efforts have been made to restore the dilapidated health-care system at the local level and provide primary care, including prenatal care, in villages and rural areas throughout the country. Nonetheless, the rate of infant mortality remains high—just over 76 per 1,000 live births in 2004—and life expectancy overall remains relatively low at just over 63 years (except in the Caucasus Mountain regions, where a disproportionate number of people over age 100 live). Fewer than 100 Azerbaijanis died of AIDS in 2001. Access to clean drinking water and adequate sanitation facilities remains low, particularly in rural areas.

FOOD AND NUTRITION

Staples in Azerbaijan include rice, bread, grains, fruits, and vegetables, supplemented by lamb, chicken, and fish. Cuisine varies by region, depending on the availability of foodstuffs and ethnic preferences. Common dishes include white bread, meat and potatoes, soups, and salads; pork is rarely eaten because of Islamic dietary laws. Some Soviet-era dishes remain, including borscht, or beet soup. Steamed rice with apricots and raisins is served at ritual celebrations, and households are traditionally supposed

148 Azerbaijan

to maintain a tray with seven different kinds of nuts. While the percentage of low-birth-weight infants from 1998 to 2003 was relatively high at 11 percent, only about 6 percent of children five and under suffer from being underweight, with just 1 percent severely underweight.

Undernourished % of total population: 15
Daily Available Calories per capita kcal: 2,330
Amount of Cereal Available per person per year kg: 202.1
Amount of Fruits and Vegetables Available per person per year kg: 179

STATUS OF WOMEN

Perhaps as a result of the country's Soviet legacy, women nominally enjoy the same legal protections as men and participate in all aspects of economic, social, and political life—though women are generally underrepresented in higher political offices as well as executive business positions. Despite traditional Muslim views of the place of women in society, females do have opportunities for work and education. There are several active women's political and social organizations in the country. However, in rural areas women who appear in public unaccompanied, smoke in public, or drive cars are still subject to harassment.

WORK

Azerbaijan's labor force consisted of 4.99 million people as of 2004. Unemployment is extremely low, at just 1.1 percent. As of 2001 about 41 percent worked in agriculture and forestry, 7 percent in industry, and 52 percent in services. A large number of these people are employed in the nation's emerging oil industry. While laws provide for pensions and a guaranteed minimum wage, the level of these benefits is low, and despite the high rate of employment 49 percent of Azerbaijanis lived below the poverty line in 2002.

Employment and Labor

Labor Force Total: 4,990,000
Female Participation Rate %: 44.7
Total Activity Rate %: 36.2

Labor by Sector %:
Agriculture and Forestry: 41

Services: 52
Unemployment %: 1.1

EDUCATION

Education is free and compulsory for children from ages six to 17. Primary education covers a period of four years, while secondary education consists of two phases of five and two years, respectively. The country has 17 institutes of higher learning. In 1994 two-thirds of all people between the ages of six and 23 were enrolled in school. The education level of the general population is relatively high for the region, with a mean education of nine years for both males and females. A total of 97 percent of the adult population is considered to be literate.

Public Expenditure on Education as % of GDP: 3.5

SCIENCE AND TECHNOLOGY

Scientific and technological research is carried out by public universities from the Soviet era, but in recent years these have been joined by private universities. The Academy of Science carries out research in many fields. Research in oil-related subjects is given priority. Limited funding—the nation has spent about 1.3 percent of its budget on science—has required institutions and individuals to seek funding internationally.

MEDIA

Azerbaijan has a lively and healthy mix of government-run and independently owned media in print and broadcast, but the government continues to intimidate independent journalists through unofficial means. In 1998 the government officially ended censorship of the press, creating a boom in independent newspapers and magazines despite attempts at unofficial intimidation. By 2001 there were more than 372 registered newspapers in the country (but only about 100 actually published). There are eight television stations, including the government-run Azerbaijan National Television and seven independently owned stations, including BM-TI TV. However, the government refuses to grant licenses to about a dozen independent television stations wishing to broadcast. Radio Baku, the state-run radio network, broadcasts in Azerbaijani, Arabic, English, and Turkish.

CULTURE

The cultural heritage of Azerbaijan includes the book of *Dede Korkut* (or *Dede Gorgud*), the Zoroastrian *Avesta*, and the Köroglu *dastan* (a recitation of historical events in highly poetic language). Also important is the poetry of such writers as Shirvani, Gancavi, Nasimi, Shah Ismail Savafi, and Fuzuli in the 12th through the 16th centuries. Major 20th-century writers include Elchin, Yusif Samedoglu, and Anar. Some novelists in the 20th century also wrote in Russian.

The architecture of Azerbaijan, especially in Baku, uniquely blends Eastern and Western styles. During an oil boom in the late 19th and early 20th centuries, oil barons commissioned prominent Western and Russian architects to build public buildings, which have a wide range of styles: Classical, German, Italian Renaissance, Venetian Gothic Revival, and others.

Music is central to life for Azerbaijanis. A highly disproportionate number have been trained in music and perform it on either Western or traditional instruments, including stringed instruments such as the *tar* or *kamancha* or wind instruments such as the *zurna* or *balaban*. Most homes have pianos. Azerbaijani music blends Eastern and Western styles, including symphonies, ballet, and opera. Major composers include Gara Garayev, Fikrat Amirov, Uzeyir Hajibeyov, and Muslim Magomayev.

FOLKLORE AND MYTHOLOGY

Azerbaijan has a rich tradition of oral folklore, including songs, stories, and sayings, much of which has been passed down for hundreds of years. Prominent is the *Dede Korkut*, which was written down in the 15th century. Its stories closely resemble those in Homer's *Odyssey*. Legends in the country include that of the Maiden's Tower, which still stands today in Baku. The story, which involves a young girl who locked herself in the tower and threw herself from it when her father wanted to marry her, is a common theme in the work of artists and poets. Azerbaijanis also enjoy the folk wisdom of the region's hundreds of "Molla Nasreddin" stories, many of which are set in the 13th century. These stories could be considered analogous to Aesop's Fables because of their homespun wisdom.

ENTERTAINMENT AND RECREATION

Virtually all homes in Azerbaijan now have a television, and other forms of technology, such as DVDs, computers, and CD players, are beginning to gain prominence. Western television programs, as well as those from Turkey and Russia, are popular. Azerbaijanis have a deep love of music; many homes have pianos, and it is common for family and guests to gather after dinner for music. Also popular is chess; the world champion Garry Kasparov played chess in Baku when he was growing up.

ETIQUETTE

Azerbaijanis are generally very expressive, often holding hands and otherwise touching one another. When they meet someone they exchange kisses on the cheek. Girls often walk down the street holding hands. They also show great kindness and hospitality to foreign visitors, often inviting them to their homes for dinner. Nonetheless, Azerbaijanis can be extremely reticent about some matters. Any matters involving sex or the body are not discussed in public; many men do not use the word *pregnant* without first apologizing, and a person who needs to

use the bathroom typically asks a member of the same sex or a child where it is. While touching by members of the same sex is common, men and women tend to be more reserved in their relations with one another; they maintain space, for example, when standing in line in public. Great respect is accorded to elders; it would be highly inappropriate, for example, to smoke in front of an elder. In the Azerbaijani mind, drinking, smoking, and associating with men in public are more characteristic of “looser” Russian women than of Azerbaijani women.

FAMILY LIFE

Azerbaijani families are either nuclear or include two generations. For economic reasons many newlyweds live with the husband’s family or, if necessary, the wife’s family. For a woman to marry a westerner who is not a Muslim is frowned upon, but men have more freedom to marry Armenian or Russian women. The eldest man is generally regarded as the head of the family, but elderly women are also influential in making decisions. In rural Azerbaijan extended families often live together in family compounds. Older persons are highly esteemed, and close bonds with extended family reduce the stress of aging.

PERSONAL APPEARANCE

Azerbaijanis wear Western-style clothing. Personal appearance is important, especially to women, who tend to try to make themselves look as presentable as possible when they go out in public. Although Azerbaijan is a Muslim country, women have not been required to wear the chador, or veil, since 1928, an event that is actually commemorated by statues in Baku.

SPORTS

Soccer is extremely popular, and Azerbaijanis have always excelled at wrestling. The nation had five medal winners at the 2004 Summer Olympics, including a gold medal by Farid Mansurov in the 66 kg weight class in Greco-Roman wrestling.

CHRONOLOGY

1945 With both Armenia and Azerbaijan members of the Soviet Union, Moscow’s Bureau of Caucasian Affairs awards the territory of Nagorno-Karabakh to Armenia, but Soviet leader Josef Stalin reverses the decision, declaring Nagorno-Karabakh an autonomous region.

- 1988** The Azerbaijani political reawakening begins, sparked by an outbreak of ethnic violence between Azerbaijanis and Armenians over Armenian claims to the Nagorno-Karabakh region in which hundreds die; Moscow sends 5,000 troops to the region to quell the violence.
- 1991** Azerbaijan declares its independence from Russia; Ayaz Mutalibov wins a hastily called election that many believed was rigged by the former Communist Party; the conflict with Armenia over the disputed Nagorno-Karabakh region intensifies.
- 1992** Azerbaijan joins the United Nations and signs a friendship treaty with Russia; Mutalibov’s failure to hold back Armenian advances in Nagorno-Karabakh leads to his replacement by Abulfaz Elchibey of the Popular Front of Azerbaijan in a multiparty general election; Armenian forces seize much of the Nagorno-Karabakh region, equivalent to 20 percent of Azerbaijan’s total territory.
- 1993** Reydar Aliyev ousts Elchibey in a bloodless coup; Azerbaijan forces launch a counteroffensive in Nagorno-Karabakh.
- 1994** In May Azerbaijan signs the Bishkek Protocol, a cease-fire agreement regarding Nagorno-Karabakh, which remains in force through the 1990s.
- 1995** Internal Affairs Ministry militia stage an unsuccessful coup attempt in Baku.
- 1996** Azerbaijan signs an economic cooperation pact with the European Union.
- 1997** Aliyev becomes the first Azerbaijani leader to make an official visit to Washington; Azerbaijan’s state-owned oil company signs agreements on oil exploration with U.S. and international companies; the Organization for Security and Cooperation in Europe brokers a draft peace proposal between Armenia and Azerbaijan.
- 1998** President Heydar Aliyev of the New Azerbaijan Party wins the presidential election with 77.61 percent of the vote.
- 1999** The government’s privatization policy shows signs of success, with the IMF noting in June that consumer prices had fallen by 11 percent in the 12 months ending in April 1999.
- 2000** In November, Aliyev’s son, Ilham, leads the New Azerbaijan Party to victory in disputed parliamentary elections to claim the speaker of parliament position.
- 2001** Azerbaijan becomes a full member of the Council of Europe; United States brokers failed talks to resolve the Nagorno-Karabakh crisis; Azerbaijan, Georgia, and Turkey reach agreement on oil and gas pipelines linking Caspian fields and

- Turkey; United States lifts aid bans after Azerbaijan provides airspace and intelligence after September 11 terrorist attacks.
- 2002** Construction begins on Caspian–Turkey oil and gas pipelines.
- 2003** Aliyev appoints his son, Ilham Aliyev, prime minister; Ilham Aliyev wins the presidency in a landslide in October; Heydar Aliyev dies in December.
- 2005** Construction of Caspian–Turkey oil pipeline is completed.

DATE OF INDEPENDENCE

July 10, 1973

DATE OF CONSTITUTION

July 10, 1973

GEOGRAPHICAL FEATURES

The Bahamas make up an archipelago of 700 islands (of which 29 are inhabited) between southeastern Florida and northern Hispaniola. From the north of the chain, which lies 96 km (60 mi) off the Florida coast, the archipelago extends 950 km (590 mi) southeast to northwest and 298 km (185 mi) northeast to southwest, with a total land area of 13,940 sq km (5,382 sq mi). The most populous island is New Providence (150 sq km; 58 sq mi). Of the other islands or island groups, known as the Family of Islands, the 15 largest are Grand Bahama, the Biminis, the Berry Islands, the Abacos group, Andros, Eleuthera, the Exu-

mas, Cat Island, Rum Cay, San Salvador (also known as Watling Island), Long Island, Acklins Island, Mayaguana, the Ragged Island Range, and the Inaguas. In addition, more than 2,000 small cays and rocks protrude from the shallow seas (the name Bahamas is derived from the Spanish *bajamar*, or "shallow sea"). The total length of the coastline is 3,542 km (2,201 mi).

The capital, Nassau, on New Providence Island, had an estimated population of 226,100 in 2004. The only other major urban center is Freeport (50,400), on the island of Grand Bahama. The islands are for the most part low and flat, with the terrain only occasionally broken by small lakes and mangrove swamps. The shoreline is

The Bahamas

marked by coral reefs. There are no navigable rivers, and the islands lack sufficient freshwater.

CLIMATE AND WEATHER

The Bahamas enjoy a semitropical climate and have only two seasons: Winter extends from December through April, and summer extends from May through November. The warm waters of the Gulf Stream keep temperatures comfortably high during the winter months, and the sea breezes temper even the warmest summer day. Temperatures range from 21.1°C (70°F) to 34.4°C (94°F) in summer and from 15.6°C (60°F) to 23.9°C (75°F) in winter. Relative humidity in summer varies from 60 percent to 100 percent. Annual rainfall averages 1,320 mm (52 in), concentrated from May to June and from September to October. Gales are uncommon except during the hurricane season, which lasts from June to November.

Climate and Weather

Mean Temperature
Summer: 70°F to 94°F
Winter: 60°F to 75°F
Average Rainfall: 52 in

FLORA AND FAUNA

The warm tropical islands of the Bahamas yield a rich variety of plant life, including orchids, hibiscus, aloe vera, palm trees, Bahamian pine, mahogany, lignum vitae, plum trees, rubber vine, yams and cassava, mangroves, and sea grapes. Much of the fauna is indigenous, but many species were introduced to the islands by settlers. There is an abundance of invertebrates and 13 species of indigenous mammals, including bats and the hutia, a rodent-like mammal found only in the Bahamas. There are 44 species of reptiles, 10 species of snakes, and 29 species of lizards. Additionally, 120 species of birds either live in or migrate to the Bahamas, including the frigate bird, the Bahamian parrot, West Indian flamingos, the roseate spoonbill, and egrets, as well as hummingbirds, herons, barn owls, and falcons.

ETHNIC COMPOSITION

The population is predominantly black, constituting close to 85 percent of Bahamians. Many of their ancestors arrived in the islands when it was a major staging area for the slave trade or were brought over by British loyalists during the American Revolution. The remainder of the population is divided evenly between whites and persons of mixed descent.

LANGUAGE

The official language is English—still British English, despite the creeping American influences.

RELIGIONS

The chief Christian denominations represented in the islands are Baptist (32 percent), Anglican (20 percent), and Roman Catholic (19 percent). The remainder is divided among other Protestant groups and Greek Orthodox and Jewish groups. Freedom of religion is guaranteed by the constitution.

Religious Affiliations

Roman Catholic	57,300
Methodist	18,100
Church of God	18,100
Other Protestant	36,200
None or Unknown	9,100
Other	6,000

HISTORICAL BACKGROUND

The earliest inhabitants of the Bahamas were a group of Arawak Indians known as Lucayan. Christopher Colum-

bus discovered the islands for the Europeans in 1492. The Spanish made no permanent settlement but conducted slave raids on the peaceful Arawak that depopulated the islands. By the time the British arrived in the 17th century, the islands of the Bahamas were uninhabited. In 1717 the Bahamas became a crown colony. Its parliamentary system dates from 1729. Internal self-government was implemented in 1964.

In 1973 the Bahamas became an independent nation within the Commonwealth. Lynden Oscar Pindling, leader of the Progressive Liberal Party (PLP), which had won pre-independence elections, became prime minister. Pindling remained head of government throughout the 1980s.

During the 1980s illegal drug trading and government corruption became the dominant issues in Bahamian politics. Responding to allegations of drug-related corruption among government officials, Pindling appointed a commission in 1983 to investigate the problem. Within two years 51 suspects, including the assistant police commissioner, had been indicted. Following revelations that Pindling had accepted several million dollars' worth of gifts and loans from businessmen, Deputy Prime Minister Arthur Hanna called for Pindling's resignation. Hanna resigned his post when the prime minister refused to step down.

An early general election was held in June 1987. Despite the continuing prominence of the drug issue, the PLP won a fifth consecutive term. In 1988, in the wake of violent drug-related crimes, allegations of bribery again were leveled at Pindling. However, the Judicial Committee of the Privy Council rejected the claims.

In 1992 a quarter of a century of PLP rule under Pindling came to end when Hubert Alexander Ingraham of the Free National Movement (FNM) was sworn in as prime minister. The FNM retained control by an even wider margin in the 1997 elections.

In 2002 the PLP, however, won 29 seats in the legislature, and Perry Christie became the nation's third prime minister.

1992–2002	Hubert Alexander Ingraham
2002–	Perry Christie

CONSTITUTION

The constitution of 1973, under which the Bahamas became independent, establishes a parliamentary form of government on the British model. The head of state is the British sovereign, represented in the islands by the governor-general. The governor-general appoints the

prime minister (who also is the leader of the majority party in the House), the cabinet, and the leader of the opposition.

The bicameral parliament, composed of the nominated Senate and the elected House of Assembly, is the national legislative body.

The Bahamas' judicial system is made up of the following main courts: the Judicial Committee of the Privy Council (which sits in London), the Bahamas Court of Appeal, the Supreme Court, and magistrates' courts. All courts have jurisdiction over both civil and criminal cases.

Suffrage is universal over age 18. Elections are held at least every five years.

The Bahamas has enjoyed stable government since independence, and the country has been relatively free of violent racial strife that has afflicted many other West Indian states.

PARLIAMENT

The bicameral parliament consists of the Senate and the House of Assembly. The Senate consists of 16 members appointed by the governor-general, of whom nine are appointed on the advice of the prime minister, four on the advice of the opposition leader, and three on the advice of the prime minister after consultation with the opposition leader. The House of Assembly consists of 40 members elected on the basis of universal suffrage over age 18. Following the 2002 elections the party position in the House of Assembly was as follows: PLP, 29 seats; FNM, seven seats; and independents, four seats.

The normal term of the House is five years, but elections may be called and the House dissolved at any time. The House performs all legislative duties, and the majority leader serves as the prime minister.

POLITICAL PARTIES

There are four major political organizations in the Bahamas. For the most part, the politics of the islands are centrist in nature. The PLP is a centrist party and is headed by the current prime minister, Perry Christie. The FNM, the only other party with seats in Parliament, is headed by Tommy Turnquest and was founded in 1970. The Vanguard Nationalist and Socialist Party was founded in 1971. The most recent political party to be formed is the Bahamian Freedom Alliance.

LOCAL GOVERNMENT

The Family Islands (islands other than New Providence) are administered by district commissioners, who also ex-

ercise limited legal jurisdiction. There are senior commissioners in Grand Bahama, Andros, Abaco, Exuma, and Ragged Island; commissioners in Harbour Island, Grand Bahama, Eleuthera, Berry Islands, Andros, Inagua, Abaco, the Biminis, Cat Island, and Long Island; and assistant commissioners in Abaco, Crooked Island, Exuma, Grand Bahama, Mayaguana, and San Salvatore.

LEGAL SYSTEM

Bahamian jurisprudence is based on British common law. The highest court is the Court of Appeal, composed of three nonresident judges. Appeals from this court go in certain instances to the Judicial Committee of the Privy Council in the United Kingdom. The Supreme Court is composed of a chief justice, one senior justice, and two other justices. Appointments to the Supreme Court and the Court of Appeal are made by the governor-general. Magistrates' courts in New Providence and Grand Bahama are presided over by professionally qualified magistrates. Magisterial powers on other islands are exercised by the district commissioners.

The main prison is at Fox Hill in New Providence, but there are smaller lockups in the larger settlements in each district.

HUMAN RIGHTS

In terms of civil and political rights the Bahamas is classified as a free country. A British-style democracy, the Bahamas is noted for unqualified observance of all human as well as political rights. Notwithstanding the transfer of power from the white elite to the black majority, whites continue to play an active role in the political process, both elective and appointive. Similarly, women hold key judicial, civil service, and elective positions. While being seriously tested by the continued influx of Haitians—in 2001 the government estimated that 30,000 to 60,000 Haitians were in the Bahamas illegally—the government has for the most part maintained a humane approach to the issue.

FOREIGN POLICY

Bahamian foreign relations are determined in part by the islands' proximity to Cuba, Haiti, and the United States. Haitian illegal immigration has been described as the greatest threat to the national security of the islands. Disputes over fishing rights with Cuba have been settled and there are no outstanding issues. Relations with the United States are generally cordial, although there are periodic strains over accusations that high-level Bahamian officials, including the prime minister, are involved in drug

trafficking. In 1997 Bahamas opened its first embassy in Beijing and withdrew its ambassador in Taipei. By 2004 the Bahamas was still unable to negotiate an agreed-on maritime boundary for the nation, and Haitian refugees continued to be a pressing issue.

DEFENSE

The Bahamas has no standing army. The Commonwealth has the 900-man Royal Bahamian Defense Force, which is a paramilitary coast guard. In addition, there is the 2,300-man Royal Bahamas Police Force.

ECONOMY

The Bahamas is a middle-income country with a free-market economy in which the dominant sector is private. Its 2004 per capita gross domestic product (GDP) of \$16,700 was the highest among Caribbean nations. The two main economic sectors are tourism and offshore banking. Moderate growth in tourism receipts and a boom in construction of new hotels, resorts, and residences led to an increase in the country's GDP by an estimated 3 percent in 1998, 6 percent in 1999, and 4.5 percent in 2000, although growth had slowed to 0 percent in 2004, largely as a result of the September 11, 2001, terrorist attacks in the United States. Tourism in 2004 accounted for more than 60 percent of GDP and employed half of the country's labor force.

As one of the first and largest offshore "tax havens," the Bahamas is an important financial center and, in the late 1990s, had about 425 financial institutions and over 100 Eurocurrency branches of foreign banks; that number has declined since 2000, as the government imposed new regulations on the financial sector. With no current corporate, capital gains, or personal income taxes, it is an attractive location for offshore banking activities, which account for about 15 percent of GDP. Operating fees paid to banks are a significant revenue source.

ENVIRONMENT

While the Bahamas has long recognized the need to protect its natural resources—it created a flamingo habitat and marine nursery park in 1959—growing population and increased tourism have caused concern over soil and coastal erosion. The government continues its long tradition of aggressively protecting the environment and finding creative ways to reward good usage of natural resources.

LIVING CONDITIONS

The Bahamian archipelago offers a wide range of living conditions. Cities such as Nassau and Freeport are modern and bustling, while many of the smaller islands, called the Family Islands or “out islands,” are much more primitive. On the out islands, which generally have little in the way of roads, people tend to live in primitive wooden homes, often without electricity or water, in coastal settlements, where boats are the preferred means of transportation. The cities face a housing shortage as more and more people move there in search of economic

opportunity. Housing has not kept pace with demand, and the government estimates that as many as two out of five homes are in poor to average condition. The cost of living is relatively high because so many of the goods Bahamians buy have to be imported so that freight costs constitute a kind of tax. About 96 percent of the population is literate.

HEALTH

The Bahamas has one central hospital, Princess Margaret Hospital in Nassau. Additionally, over a hundred small clinics are scattered throughout the country, where nurses are often primary caregivers; patients who need more extensive treatment are often airlifted to Nassau. The islands have made considerable progress in health care in recent years, with life expectancy reaching 62 years for men and 69 years for women. The infant mortality rate remains relatively high, at nearly 26 for every 1,000 live births. About 3 percent of the adult population lives with AIDS, though fewer than 200 died of the disease in 2003. In the out islands, many people still practice traditional forms of medicine, including herbal remedies.

FOOD AND NUTRITION

In a nation of 700 islands, it is no surprise that seafood is a mainstay of the Bahamian diet. Especially popular is conch shellfish, but also popular are grouper, snapper, crayfish, and shark. Dried pigeon peas with rice, cooked with spices, is also a staple. Another popular food item is the souse, a dish made with pickled meats that is a legacy of the days before refrigeration. Souses are made with various meats, including lamb and mutton, or conch and stewed with lime juice and spices. Bahamians face problems with both obesity and nutritional deficiencies. From

1995 to 2003 figures show that among children four to nine years old, 6.6 percent were underweight, 12.9 percent were stunted (a greater proportion of boys than girls), and 5.7 percent were wasting. In contrast, though, nearly 15 percent were overweight. Among adults 15–64 years old, 21.3 percent were obese, while another 27.3 percent were overweight.

WORK

Among a labor force of 156,000 (1999 estimate), 5 percent make their living in agriculture, 5 percent in industry, 50 percent in tourism, and 40 percent in other services. The unemployment rate in 2001 was 6.9 percent. Much of the population makes its living through subsistence farming, fishing, or production and sale of crafts. Many others are employed seasonally in the tourist trade. Because there are so few salaried jobs in the out islands, many residents move to cities such as Nassau and Freeport seeking employment.

MEDIA

The *Nassau Guardian* is the nation's oldest newspaper; it was founded in 1844 by the Englishman Edwin Charles Mosely. Its major competitor is the *Tribune*, which was

founded in 1903 by the Bahamian Leon Dupuch. A twice-weekly tabloid, *Punch*, was founded in 1990, and the *Bahama Journal* began as a weekly in 1987 but now publishes daily. The *Freeport News* is also in circulation. The press enjoys substantial freedom, including the right to oppose the government on national issues.

CULTURE

Artists in the Bahamas tend to be self-supporting with a great deal of emphasis on folk arts and crafts, which include wood carving, basketry, quilting, and shellwork. Palm fronds are often used to make hats, purses, baskets, and other items. Bahamian folk music derives from Africa's Junkanoo festival. This festival originally featured a goat-skin drum called a *goombay*, a term used today to refer to calypso music with satirical lyrics as well as to music festivals. In the out islands, many local bands featuring the *goombay*, along with guitars, perform at weddings and dances.

The best-known poet of the Bahamas is Susan Wallace, who has also most recently written a play entitled *Single Seven*, and Winston Saunders's play *You Can Lead a Horse to Water* has been performed worldwide. The Dundas Theatre performs plays written by other Bahamian playwrights. Alton Lowe is an artist well known for his realistic paintings of Bahamian life.

FOLKLORE AND MYTHOLOGY

The islands of the Bahamas are the source of many myths and legends. For example, a woman named Pretty Molly

Bay is said to haunt Little Exuma Island. In one legend she is a former slave and roams the beaches at night; in another she is a white woman who was transformed into a mermaid. Bahamians tell stories about chickcharnies, which are three-toed spirits with red eyes. The Fountain of Youth is traditionally associated with Bimini and the lost island of Atlantis with North Bimini. The American playwright Eugene O'Neill based one of his plays, *The Emperor Jones*, on the legend of the nineteenth-century revolutionary leader Henri Christophe (1767–1820), who aided in the liberation of Haiti and later settled in the Bahamas, reputedly as the first black king in the Western Hemisphere in a reign noted for its cruelty and lavishness.

ENTERTAINMENT AND RECREATION

Music is an important source of entertainment for Bahamians. In addition to *goombay*, Bahamians enjoy calypso and reggae as well as gospel music, which is performed not only in churches but also during outdoor concerts. On television Bahamians watch American situation comedies and sports and British Broadcasting Corporation programming. Water sports such as windsurfing are popular, as are boating and sailing.

ETIQUETTE

Except for the bustling cities of Freeport and Nassau, it is customary for people to exchange relatively formal greetings. Bahamians generally prefer to ease into conversations with greetings and friendly remarks before getting down to business. Business relationships are fairly formal, with exchanges of business cards and handshakes. It is recommended that tourists cover up when leaving the beaches. Bahamians also dress rather formally for church services. It is considered extremely rude to photograph a person in the Bahamas without his or her permission.

FAMILY LIFE

The model family in the Bahamas is the two-parent nuclear family. That norm has changed in recent years with the migration of many out islanders to the larger cities, leaving families headed by grandparents and single parents. Children are cared for primarily by mothers or grandmothers, and adult children often provide their mothers with financial help. In white-dominated settlements in the out islands, interracial marriages are stigmatized. While marriage with kin is frowned upon, in fact, many marriages take place between those who are more distantly related than first cousins. Divorce is available,

but many married couples simply drift apart without going through the formality of divorce. Second marriages are frowned upon, and women suffer from a sexual double standard: They are expected to remain chaste until marriage, while it is expected that men will have premarital (and extramarital) affairs.

PERSONAL APPEARANCE

Most Bahamians wear modern Western-style clothing, although traditional costumes can be seen at festivals such as Junkanoo, even in the cities.

SPORTS

Softball is an extremely popular sport in the Bahamas. The nation's teams regularly compete in the World Softball Conference. Bahamians also enjoy basketball, volleyball, and track and field, and many Bahamians attend college in the United States on scholarships given for participating in these sports. One of the most accomplished in recent years has been the sprinter Debbie Ferguson, who won a silver medal in the 400-meter relay in the 1996 Olympics and set numerous track-and-field records while attending the University of Georgia. Also popular are water sports, including fishing, windsurfing, and sailing. Islanders race in the Family Islands regatta every April.

CHRONOLOGY

- 1953** Bahamians of African descent form the PLP.
- 1961** Men who do not own property and all women win the right to vote.
- 1964** The United Kingdom grants the Bahamas self-government.
- 1973** The Bahamas is granted full independence by the United Kingdom and is admitted as the 33rd member of the Commonwealth.
- 1976** Chester Whitfield is elected leader of the opposition FNM.
Gerald C. Cash succeeds Milo B. Butler as governor-general.
- 1977** Lynden O. Pindling's PLP wins 30 of 38 seats in the House of Assembly in national elections.
- 1978** An economic commission is created to promote investment and review economic policies of the government.
- 1979** Legislation restricting land sales to foreigners is approved.
- 1982** In national elections Pindling's PLP wins 32 of 43 seats.
- 1984** Royal Commission of Inquiry is appointed to investigate charges of corruption in government and extensive influence peddling by drug dealers. The commission finds no direct evidence of Pindling's association with drug traffic but releases damaging data of unaccounted wealth in the prime minister's account. Deputy Prime Minister Arthur D. Hanna resigns, and two other cabinet ministers are dismissed following publication of the report.
- 1985** Howard Smith, assistant police commissioner, is indicted along with 50 others for involvement in illegal drug trade and is dismissed from the force.
- 1986** A joint U.S.-Bahamian task force on drug interdiction is created following a two-year inquiry into the cocaine-smuggling problem.
- 1987** Pindling's PLP wins 31 of the 49 House Assembly seats despite the issue of drug-related corruption. Statistics for the year reveal unprecedented levels of violence and drug-related crimes.
- 1988** The Judicial Committee of the Privy Council in the United Kingdom rejects opposition accusations that Pindling's financial affairs had not been adequately investigated.
- 1989** The Bahamas ratifies the 1988 Vienna Convention on Narcotics Trafficking; a Bahamian member of Parliament, his wife, an associate of Prime Minister Pindling, and five others are indicted in two separate U.S. drug-related cases.
- 1990** Sir Cecil Wallace-Whitfield, leader of the opposition FNM, dies and is replaced by Hubert Ingraham; Minister of Agriculture, Trade, and Industry Ervin Knowles resigns after accusations of nepotism and misuse of public funds.
- 1992** After 25 years in power, Pindling's PLP is defeated by the FNM, and Hubert Ingraham becomes prime minister.
- 1995** Sir Orville Turnquist is appointed governor-general.
- 1997** The FNM wins 34 of 40 House Assembly Seats.
- 2000** Pindling dies at age 70.
- 2002** The Progressive Liberal Party wins 29 seats in the legislature, and Perry Christie becomes the nation's third prime minister.

BAHRAIN

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Bahrain (Mamlakah al-Bahrain)

ABBREVIATION

BH

CAPITAL

Manama

HEAD OF STATE

Emir Sheikh Hamad ibn Isa al-Khalifa (from 1999)

HEAD OF GOVERNMENT

Prime Minister Sheikh Khalifa ibn Salman al-Khalifa (from 1971)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

688,345 (2005)

AREA

665 sq km (256 sq mi)

ETHNIC MAJORITY

Arab

LANGUAGES

Arabic (official), English

RELIGION

Islam

UNIT OF CURRENCY

Bahraini dinar

NATIONAL FLAG

Red field covering three-fourths of the flag separated by a vertical serrated line from a white vertical stripe on the hoist

NATIONAL EMBLEM

A red shield with a serrated white upper border surrounded by a red and white mantling

NATIONAL ANTHEM

“Our Bahrain, Country of Security, Nation of Hospitality, Protected by Our Courageous Emir”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), December 16 (National Day), various Islamic festivals

DATE OF INDEPENDENCE

December 16, 1971

DATE OF CONSTITUTION

June 1973; revised February 14, 2002

GEOGRAPHICAL FEATURES

The Bahrain archipelago covers a total area of 622 sq km (240 sq mi) and lies at the entrance of the Gulf of Salwa between Saudi Arabia’s Hausa Province and the Qatar Peninsula. The group includes six principal islands—Bahrain, Muharraq, Sitrah, Umm al-Nassan (the personal property and private game preserve of the emir), Jidda, and Nabi Salih—as well as 27 minor islands, including the Muhammadiyah and the Hwar groups. The total length of the coastline is 161 km (100 mi).

In 1986 the King Fahd Causeway was opened, linking Bahrain and Saudi Arabia. Except for a narrow strip of land along the northern coast, Bahrain is a desert. Toward the interior the land rises gradually toward a central range of hills, which reaches its highest elevation at Jebel Dukhan (122 m, 400 ft). Most of the smaller islands are flat and sandy.

Bahrain is blessed with a number of freshwater springs, or artesian wells, whose sources are still a mystery. These springs are most numerous along the northern coast of Bahrain Island, and they make permanent cultivation possible on a narrow strip of land.

--------	---------

CLIMATE AND WEATHER

Bahrain has an arid, desert climate, with maximum summer temperatures in July reaching 44°C (111°F). Winters are cooler, with temperatures in December ranging between 10°C and 20°C (50°F and 68°F). Average annual rainfall is only 76 mm (3 in). A dry, southwestern wind known locally as the *qaws* periodically raises dust storms.

Climate and Weather

Mean Temperature
 Summer High: 111°F
 Winter: 50° to 68°F
 Average Rainfall: 3 in

FLORA AND FAUNA

Although Bahrain is largely a desert nation, it provides a surprising variety of habitats, including not only the desert but also salt marshes, mudflats, rocky shores, and sea grass beds. Desert plants such as the bean caper adapt to the arid climate by synchronizing their life cycle with the brief rainy season. Animals such as the spiny-tailed lizard hide in burrows, while the Arabian wild hare camouflages itself to hide in the brown landscape. Agricultural drainage ditches have rushes and reeds that provide habitats for species such as the marsh frog and the Caspian terrapin. The rocky shores provide nesting sites for bird such as the sooty falcon and the osprey. The mudflats supply algae for polychaetes, gastropods, bivalves, and crabs, which in turn support migratory birds such as the flamingo and the black-winged stilt. Sea grass beds support sea cows and green turtles as well as commercial marine species such as prawns and pearl oysters.

POPULATION

Population Indicators

Total Population 2005: 688,345
 World Rank: 157th
 Density per sq km: 1,003
 % of annual growth (1999–2003): 2.0
 Male %: 55.9
 Female %: 44.1

 Age Distribution %: 0–14: 27.1
 15–65: 70.1
 65 and over: 2.8
 Population 2025: 865,890
 Birth Rate per 1,000: 18.5
 Death Rate per 1,000: 4.0
 Rate of Natural Increase %: 1.7
 Total Fertility Rate: 2.67
 Expectation of Life (years): Males 71.5
 Females 76.5
 Marriage Rate per 1,000: 7.1
 Divorce Rate per 1,000: 1.2
 Average Size of Households: 6.5
 Induced Abortions: 1,749

ETHNIC COMPOSITION

Indigenous Arabs constitute the majority of the population, though their percentage has decreased. Indigenous Bahrainis include blacks who have intermarried with local Arabs and the Bahanrah, descendants of the original inhabitants of the islands who sought refuge there from Nebuchadnezzar's persecution.

Ethnic diversity among the minority groups is a pronounced feature of Bahrain's population. Among the groups represented are Saudi Arabians, Omanis, Iranians, Asians (including Baluchis, Pakistanis, and Indians) and British or continental Europeans. The ethnic mix continues to change as a steady flow of immigration brings more aliens into the country.

LANGUAGES

The official language is Arabic, which is universally spoken in its Gulf dialect. English is widely understood and taught in secondary schools. English also dominates the media. Other languages are spoken by immigrants to Bahrain, principally from southern and eastern Asia.

RELIGIONS

The national religion is Islam, and a majority of Bahrainis are Shiite Muslims. The Shiites constitute 70 percent of the Muslim population; the Sunnis, 30 percent. Further, a number of Iranian Shiites were naturalized in the early 1970s. Sunni-Shiite conflicts have been common.

The emirs of Bahrain have shown remarkable toleration for the Christian denominations. There are Catholic and Anglican churches as well as a Catholic school and a Dutch Reformed mission in Manama. There are also substantial Hindu and Christian populations, including a fair number of Arab Christians.

HISTORICAL BACKGROUND

The earliest recorded reference to Bahrain dates back to the third millennium B.C.E., when it was known as Dilmun. The era has been chronicled in the Epic of Gilgamesh, who called Dilmun the land of immortality when he visited it in his quest for eternal life. With its lush vegetation and abundant freshwater springs, not to speak of its ideal location between Mesopotamia and the Indian Subcontinent, Dilmun became a popular haven on the sea trade route. As trade between Mesopotamia and the Indus Valley civilizations in the subcontinent continued to flourish, Dilmun also grew in prosperity. A city, Qalat Al Bahrain, began to spring up at the site where the Bahrain Fort now exists.

The good times were not to last; between 1800 and 1600 B.C.E. Aryan forces invaded and destroyed the cities of the Indus Valley, bringing trade to a halt. For a long period thereafter Bahrain remained isolated, forced to depend on its own resources. Not until the early first millennium B.C.E. would Bahrain flourish again, as part of the Assyrian empire. Bahrain became an important pearling and fishing port, but the high quality and abundance of pearls in its waters attracted some unwelcome attention.

By 600 B.C.E. Bahrain was drawn into the expanding Babylonian empire. The Greeks, who called the island Tylos, soon began settling in Bahrain. Trade began to play an important part after the fall of Babylonia to the Persians—who now controlled much of the region between India and the Mediterranean—and by 323 B.C.E. Bahrain regained its independence.

There followed a period of relative calm, up until the 15th century when the Europeans began exploring new sea trade routes. Bahrain was also known as *Awal* during that pre-Islamic era, a name associated with a pagan idol worshipped by the Wael tribe.

The islands first became known as Bahrain in the early Islamic era, when the name was used for the entire region stretching from Basra, Iraq, in the north to Oman in the south. By the early 1500s the Portuguese viewed Bahrain as a key point to protect their trade routes between India, Africa, and Europe. They invaded

the island and set up a military base at the Bahrain Fort. The fort, which ironically had been used by the people of Bahrain to defend themselves against the Portuguese, was strengthened and new stone towers erected. The Bahrain Fort remains widely known as the Portuguese Fort.

The Portuguese were, however, unable to protect the islands, which fell to the Persians in 1603. Then came a long period of turmoil, with Bahrain changing hands between the warring Persians and Arabs until it was finally conquered in 1783 by Shaikh Ahmed bin Mohammed al-Khalifa, better known as Ahmed bin Mohamed al-Fateh, the conqueror.

The British gained a foothold in Bahrain by offering naval protection from the Ottoman Empire in the 1830s. Conflict between Bahrain and Britain was rare. However, there was conflict between the two nations when the British sought to install their choice for emir in 1869. Oil was discovered in Bahrain in 1902, but large-scale drilling did not begin until the 1930s; the production of oil brought wealth to the country as well as the increased presence of the British. Growing anti-British sentiment in the 1950s led to the British announcing their plans to depart the Persian Gulf in 15 years. On August 14, 1971, Bahrain declared itself independent from Britain.

As the price of oil continued to rise in the 1970s and 1980s, the country's wealth and infrastructure improved. The opening of the King Fahd Causeway between Bahrain and Saudi Arabia in 1986 both increased tourism and improved the economy. During the Gulf War Saddam Hussein ordered Scud missile attacks on the country. However, the missiles largely missed targets and landed harmlessly in the sea. Bahrain cooperated with the United Nations' attempt to monitor Iraq after the Gulf War, but U.S. troop buildups in 1998 strained relations between Bahrain and the United States.

In 1999 Emir Isa bin Sulman al-Khalifa was succeeded by his son Hamad ibn Isa al-Khalifa, who commissioned the drafting of a new national charter and pardoned more than 800 political prisoners. In a national referendum in February 2001 voters overwhelmingly endorsed the political reforms stipulated in the national charter, which called for a European-style constitutional monarchy. Emir Hamad abolished the State Security Law and the State Security Court, which had been set up in 1995 after unrest by Shiite Muslims demanding reform. On February 14, 2002, he declared Bahrain a constitutional monarchy and offered a package of reforms, one of which was to allow women to run for office. In May of that year local elections were held for the first time in 32 years, and in October parliamentary elections were held for the first time in nearly the same number of years. In 2003 thousands of torture victims petitioned the king to annul a law that prevented them from suing suspected torturers. In 2004 Nada Haffadh was appointed health minister, be-

coming the first woman to head a government ministry. In May 2004, after protestors demonstrated against the U.S.-led war in Iraq, the king dismissed his interior minister for trying to prevent the protest.

LIST OF MODERN RULERS

1961–99 Isa bin Sulman al-Khalifa
1999– Hamad ibn Isa al-Khalifa

CONSTITUTION

Bahrain has been ruled since the 18th century by the Khalifa family. The only restraint on the absolute power of the emir, until the state became independent in 1971, was the British political agent. Political unrest inspired by the Arab Nationalist Movement and the pro-Iraqi Baath Party in the late 1960s led to the convening of a Constituent Assembly in 1972 and to the ratification of the constitution of 1973, which provides for a National Assembly composed of elected members and cabinet ministers. The constitution created the post of financial comptroller, responsible to the National Assembly and not to the emir, and guarantees freedom of the press, speech, conscience, and religious belief. In theory it also permits national labor unions to be organized “on peaceful lines.” None of these provisions served, in practice, to reduce the power of the emir, who remains as absolute a ruler as ever. The Assembly was dissolved in 1975, and the emir rules through the cabinet alone.

Bahrain’s leadership has been torn between two aims: its desire to foster the open social and commercial environment needed to attract international business and its urges to protect the ruling family’s preeminence, prevent potential sectarian violence, and thwart efforts by Iran and other revolutionary states to destabilize Bahrain.

The government is administered by a cabinet appointed by the emir, the head of state, and presided over by the prime minister, the head of government.

Until recently Bahrain had held only one popular election in its history—in 1973—on the basis of the new constitution. Suffrage was restricted to men over 21. Upon the dissolution of the National Assembly in 1975, the emir promised a revised electoral law providing for a more representative body.

Beginning in the mid-1990s pressure on the government to restore a liberal constitution increased. In 1999 Emir Isa bin Sulman al-Khalifa was succeeded by his son Hamad ibn Isa al-Khalifa, who began to release political prisoners and noticeably declined the use of the state security courts. In 2001 his National Action Charter for a European-style constitutional monarchy was put to a referendum and won overwhelming approval from the populace. The charter called for a partially elected legisla-

ture and an independent judiciary. Both men and women over the age of 20 vote. Local and parliamentary elections were held in 2002. The principal threat to the state comes from the Iran-oriented Shiite community, which forms the numerical majority but has been excluded from power.

PARLIAMENT

The National Assembly formerly consisted of 30 members elected for four-year terms, cabinet ministers, and ministers of state. According to the constitution the financial comptroller is responsible to the National Assembly. The first election to the National Assembly was held in 1973, when 30,000 electors chose 30 members from 114 candidates, all of whom ran as independents because political parties were not allowed. The membership of the 1973 National Assembly was almost equally divided between conservatives and radicals. Its powers were few and insubstantial, and even its rights of debate were subject to government control. Nevertheless, it was dissolved in 1975 “for being dominated by ideas alien to the society and values of Bahrain.” For this act Bahrain was expelled from the International Parliamentary Union in 1976. In 1977 Bahrain was cited by Amnesty International as one of the countries in which legislators had been jailed without trial.

The National Action Charter, approved in a national referendum on February 12 and 15, 2001, stipulated the creation of a bicameral legislature and called for suffrage for men and women over the age of 20. The first parliamentary elections were held in October 2002. Currently, the Shura Council consists of 40 members appointed by the king, and the House of Deputies consists of 40 members elected to four-year terms.

POLITICAL PARTIES

Officially, political parties are prohibited in Bahrain. However, politically oriented societies are allowed. Examples are the Islamic National Al Wafaq Society, National Democratic Action, the Progressive Democratic Forum, the Islamic National Forum, and the Islamic Arab Democratic Wassat Society.

LOCAL GOVERNMENT

The country’s six towns are administered by municipal councils. Half the councilmen are elected, and the other half are appointed by the emir. Council presidents are invariably members of the Khalifa family. Villages are administered by *mukhtars*, or “headmen,” appointed by the emir.

On May 9, 2002, the first elections in 32 years for municipal council members took place. For the first time Bahrain women voted and ran for office.

LEGAL SYSTEM

The legal system is based on the sharia, Islamic law, but has been influenced by British traditions and codes. The emir and the Ministry of Justice constitute the apex of the judicial system. Local sharia courts dispense justice at lower levels. Equality before the law is guaranteed by the constitution. A number of judges and lawyers are non-Bahraini Arabs. The main penal settlement is on the rocky islet of Jidda.

HUMAN RIGHTS

There continue to be serious problems in Bahrain's human rights record. However, the situation has improved measurably in the last few years. The government continues to deny citizens the right to change their government; however, the political situation improved and political and civil unrest decreased following an effort by the new emir to develop relations with the Shia community. In the 1990s there were no extrajudicial killings by security forces, but security forces continued to torture, beat, and otherwise abuse prisoners. Impunity of security-force personnel remains a problem; there are no known instances of any such personnel being punished for human rights abuses. The government continued to use arbitrary arrest and detention, incommunicado and prolonged detention, and involuntary exile. In November and December 1999 the new emir pardoned a total of approximately 800 prisoners and detainees, some of whom had been detained for political reasons. The judiciary remains subject to government pressure, and there are limits on the right to a fair, public trial, especially in the security court. The government continues to infringe on citizens' privacy rights. The government has also imposed some restrictions on the freedoms of speech, the press, religion, movement, assembly, and association. Violence against women and discrimination based on sex, religion, and ethnicity remain problems. The government restricts worker rights, and there have been instances of forced labor. The 2001 National Action Charter offered hope for the government's liberalization program, with its reconstitution of the National Assembly.

FOREIGN POLICY

Since gaining independence, Bahrain has followed Saudi Arabia's lead in foreign policy, but the country has proven more moderate than most Arab states on the Palestin-

ian question. It has a running dispute with Qatar over the small uninhabited island of Fasht al-Dibal, which had been reclaimed from a coral reef. Bahrain and the United States have a defense cooperation agreement that provides for a U.S. airbase in Bahrain.

DEFENSE

The defense command is headed by the emir, and the line of command runs through the defense minister to the chief of staff. Both the defense minister and the chief of staff are members of the ruling Khalifa family. Military manpower is provided by voluntary enlistment. The total strength of the armed forces was 9,000 in 1999, including army and air force personnel, or about 13.0 per 1,000 inhabitants. Military expenditures in 2003 were \$618 million, about 7.5 percent of gross domestic product (GDP).

The Bahrain military is designed for internal peace-keeping only; for defense against possible external attack, Bahrain depends on Saudi forces. Bahrain has permitted Saudi Arabia to establish a major air base south of the Awali-Zalaq road. It is Saudi Arabia's first military establishment outside its own borders.

Most of Bahrain's defense equipment is of British origin. Britain also provides training for defense personnel. The U.S. Navy's base in Bahrain was closed in 1977. The United States is currently assisting in the construction of a major air base.

ECONOMY

Bahrain has a free-market economy in which the private sector is dominant. In Bahrain, petroleum production and processing account for about 60 percent of export receipts, 60 percent of government revenues, and 30 percent of GDP. Economic conditions have fluctuated with the changing fortunes of oil since 1985, such as during and following the Gulf crisis of 1990-91. With its highly developed communication and transport facilities, Bahrain is home to numerous multinational firms with business in the Persian Gulf region. A large share of exports consists of petroleum products made from imported crude. Construction proceeds on several

major industrial projects. Unemployment, especially among the young, and the depletion of both oil and underground water resources are major long-term economic problems.

Gross domestic product in 2002 was \$11.29 billion, with GDP growth at 4.9 percent. Per capita GDP was \$16,900.

ENVIRONMENT

A desert country, Bahrain's limited arable lands have been subject to drought, dust storms, and other forms of degradation that have intensified desertification of the country. Habitat surrounding the nation's natural springs has largely disappeared. The oil industry has also caused some environmental concern, as oil spills and discharge from tankers, refineries, and distribution centers have caused coastal pollution and disturbed mudflat habitats for migratory birds.

LIVING CONDITIONS

The standard of living in Bahrain rose rapidly with the oil boom of the 1970s and 1980s. Although a rapidly increasing population led to housing shortages, as well as shortages of medical care, new construction of homes and

medical facilities has alleviated some of those shortages. In connection with the UN Development Programme, the government's goal is to reduce poverty by half by 2015. The nation has a modern telephone system, five radio stations, four television stations, two space satellites, and over 2,500 km of paved roads. It has a state-of-the-art international airport, and Mina Salman is a modern and efficient port.

Traditional Bahraini homes were made of palm fronds, but modern homes are constructed of cement and lime brick. Bahrainis build their homes vertically to take advantage of breezes higher from the ground, and many homes and public buildings have wind towers to channel breezes down to lower floors.

HEALTH

Medical care improved greatly after independence and is currently free and comprehensive. Bahrain has almost entirely eliminated tropical diseases. When appropriate medical care cannot be provided at the capital's large, modern hospital, the government pays for the patient to be airlifted abroad. Life expectancy is over 71 years for males and over 76 years for females; the infant mortality rate is 13 deaths per 1,000 live births. In 2001 about 0.3 percent of the adult population was living with AIDS. In rural areas some Bahrainis practice traditional medicine, relying on herbal cures made from vegetation such as palm tree flowers.

FOOD AND NUTRITION

Common foods in Bahrain include vegetables and meats such as fish, chicken, lamb, and beef. Muslims in Bahrain (and elsewhere) do not consume pork. Basmati rice is served at nearly every meal. Breads include *khoubz*, a flatbread, and *samouli*, a white bread. One common dish

is *ghouzi*, a Bedouin dish made with lamb cooked on a spit. Bananas, citrus fruits, mangoes, and pomegranates are grown in orchards along the northern coast.

Among the adult population, Bahrain's health ministry found in 2002 a high incidence of overweight (36.7 percent of men, 28.3 percent of women) and obesity (23.3 percent of men, 34.1 percent of women). The ministry also found a high incidence of anemia (21 percent of men, 37 percent of women), suggesting shortages of iron and folic acid as well as generally unhealthful dietary habits.

STATUS OF WOMEN

Bahraini women have traditionally constituted a "separate society," in keeping with the nation's Islamic heritage. Integration of male and female societies began with the development of a modern economy, and women have increasingly taken on roles previously reserved for men. The government has encouraged the trend toward equality, has enacted special labor laws to encourage female entry into the workforce, and is itself a leading employer of women. Most of these positions are clerical, but a small number of senior positions are held by women. Labor law grants women 60 days paid maternity leave and nursing periods during the working day. Women may not be discharged for marriage or pregnancy. However, women generally do not enjoy equal access to many government benefits. In 1984 complaints were aired in the press that women were discriminated against in the awarding of scholarships for study abroad. The responsible government official defended the discrimination and indicated that it would continue. Many legal rights of concern to women are subject to sharia law: women have rights to their own property but daughters receive less inheritance than sons, and widows must share their husbands' estates with their children. Although a wife may divorce, she must specify grounds for the plea, whereas a man may divorce without cause. In the case of a male child, custody remains with the mother until he reaches age 12; a girl stays with her mother until the daughter marries. Women are allowed to drive and appear in public without a male escort. However, permission from a male family member is sometimes required if a woman wishes to leave the country.

Bahrain had no birth-control programs or policies prior to the mid-1970s; however, since then the government has supported the Family Planning Association,

with commercial access to modern contraceptives and health and welfare services.

In September 2000 the emir appointed women (and non-Muslims) to the Consultative Council for the first time; one of these women was a Christian. In 2002 women were allowed to run for office for the first time, and in elections that year women voted and ran for office, although no women candidates won. In April 2004 a woman became the first ever to head a government ministry (health).

 Women's Share of Wage Employment Non-Agricultural %: 13.4

WORK

Bahrain's labor force in 2004 consisted of about 350,000 workers, although 44 percent of these were not Bahraini nationals. Just 1 percent work in agriculture, while 79 percent work in industry, commerce, and services and 20 percent are employed by the government. Oil and natural-gas production provides employment for most Bahrainis, although the government is attempting to diversify into petrochemicals, oil refining, plastics, and aluminum production in anticipation of the depletion of the nation's oil and gas reserves. Other occupations that have a long tradition in Bahrain include fishing and shipbuilding. Shipbuilding skills have been passed down through many generations and are exercised in the construction of everything from huge oil tankers to small wooden dhows.

EDUCATION

Education is free and universal, but not compulsory, for nine years, between ages six and 15. Schooling consists of six years of primary school, three years of intermediate school, and three years of secondary school, for a total of 12 years. The literacy rate for males is almost 92 percent; for females, 85 percent.

The academic year runs from October to June. The medium of instruction is Arabic, but English is taught as a second language from the intermediate grades on.

The state system is supplemented by an independent program sponsored by the Bahrain Petroleum Company, which runs vocational centers for workers, provides education for the children of working families, and finances overseas training for Bahraini students. Private schools account for 100 percent of preprimary enrollment, 19.7 percent of primary enrollment, and 15.8 percent of secondary enrollment. In addition, boys can be enrolled at *kuttabs*, or Muslim schools attached to mosques. Educational administration is centralized in the Ministry of Education.

There are four higher-education institutions: the Arabian Gulf University, the University of Bahrain, the Men's Teacher Training College, and the Gulf Technical College.

MEDIA

The Bahraini press consists of three local daily newspapers in Arabic and two in English, eight nondailies, and 11 other periodicals. The media are subject to the supervision of the Ministry of Information, but there is no active censorship. Bahrain has a small book publishing industry, but it does not adhere to any copyright convention.

Television broadcasting was begun in 1975 by a private station, which was taken over by the government in 1983. The Ministry of Information runs two land-based television stations, one in Arabic, the other in English. The Bahrain Radio and Television Corporation runs a 24-hour television satellite service and has an agreement with the British Broadcasting Corporation to use one of its channels. Additionally, it runs a subscription satellite service that provides a great deal of Western as well as Arabic programming. It provides 27 channels, but satellite-dish owners in Bahrain can receive up to 300 channels.

There are 11 public libraries in the urban centers of Manama and Muharraq.

CULTURE

Much of Bahrain's literature is written in a classical Arabic style, featuring romance and depictions of heroes. Ibrahim al-'Urayyid and Ahmad Muhammad al-Khalifah are modern poets who write in this style. Many younger poets, though, write in Western-influenced free verse about personal and political issues. One prominent contemporary poet who writes in this style is Qasim Haddad. Hamdah Khamis is a journalist and poet; her collection *An Apology for Childhood* was published in 1976.

Islam forbids the depiction of the human form, so Bahraini graphic arts focus on abstract designs. The graphic arts also find expression in calligraphy, architecture, embroidery, and fabric weaving as well as in the construction of wooden boats called dhows. Music follows the traditional repetitive and elaborated Arabic style. Much of it is played on the *oud*, a type of lute, and a one-stringed instrument called the *rebaba*. The *ardha* is a traditional sword dance performed by men, accompanied by a drummer and a poet who recites lyrics.

FOLKLORE AND MYTHOLOGY

Bahrain's freshwater springs have provided a rich source of folklore tales. One story tells that falling stars made holes in the ground. Allah then turned the holes into "cups" from which his people could drink. Another story says that the submarine sea was ruled by a god named Abyss, and since Abyss provided the springs, it was important for people to please him. The word *abyss* in English is used to refer to any bottomless depth.

Historically, pearls were a source of wealth for the people of Bahrain, and they are also a source of folklore. Parents tell children that pearls are made when the tears of a mermaid fall into the shell of an oyster. Magic pearls have the power to help people find lost objects, and if a woman rubs pearls on her eyes, she can turn a man into her slave simply by looking at him.

ENTERTAINMENT AND RECREATION

A favored form of family recreation in Bahrain is camping. People also enjoy relaxing and having conversations in coffeehouses, and the nation is known for the craftsmanship of its elaborate, beautiful coffee servers. Television has become a more popular form of recreation since new satellite stations, especially those carrying Western programming, have become available. As an island nation, Bahrain is home to many boaters and scuba divers. Birdwatchers are drawn to Bahrain's mudflats, where unique species of birds can be found feeding. The Bahrain Bowling Association has 300 members who play at six bowling centers in the capital.

ETIQUETTE

As in most Muslim countries, hospitality rules, and greetings are formal and elaborate, with parties inquiring about each other's health and family, though a man would not ask another about his wife. When someone enters a room, everyone else stands, and the newcomer proceeds around the room shaking hands. Bahrainis touch each other when they converse much more than Westerners do, and it is not uncommon for members of the same sex to hold hands while conversing. In public, however,

members of the opposite sex never touch, even if they are married. Visitors to home and even to shops and offices are offered coffee or tea, and it is considered rude either to fail to make the offer or to decline it.

FAMILY LIFE

Family life in Bahrain has changed in recent years as more and more women have become active in public life and work outside the home. Consequently, arranged marriages are not as common as they once were, and the payment of a dowry is no longer common. These changes, however, have taken place primarily among upper- and middle-class families that have the money to educate daughters and to pay for child care while the woman is working. Lower-class Bahrainis remain much more traditional.

The concept of "tribe," referring to family lineage, is important to Bahrainis, who are extremely loyal to their extended family. Children move away from home only upon marriage, and often not even then. Legally, a man may have up to four wives, but few do. While divorce is available, few Bahrainis are divorced.

PERSONAL APPEARANCE

Western clothing has become more popular in Bahrain, especially in the cities. Many men, however, still wear clothing suitable for a hot, desert climate. The *thobe* is a long robe made of white cotton. The *ghutra* is a piece of material draped over the head and held in place with a thick woven band called an *agal*. These clothes help men keep cool in the heat, and the *ghutra* provides protection for the face in sandstorms. Women do not dress as conservatively as women in some other Arab nations. Many no longer veil their faces, although most wear head coverings and long sleeves.

SPORTS

Expatriate communities support rugby and cricket. Wealthier Bahrainis take part in snorkeling and scuba diving, horse breeding and horse racing (though according to Muslim law, no betting is allowed), camel racing, and falconry. Others play tennis and enjoy racing dune buggies. The national sport of Bahrain is soccer. The national team plays internationally, and a league plays throughout Bahrain. Soccer matches at the National Stadium in Isa Town are well attended.

CHRONOLOGY

1970 A 12-member Council of State is established as Bahrain's supreme executive authority; only

- four of the 12 directors are of royal descent, but all are Bahrainis.
- Iran's claims over Bahrain are referred to the United Nations; UN representatives report popular opinion as overwhelmingly in favor of independence; Iran accepts UN report.
- 1971** The United Kingdom withdraws from the Persian Gulf region and ends its treaty obligations to the Trucial States; Bahrain declares its independence.
- The sheikh of Bahrain assumes the title emir.
- 1972** In response to popular demand, the emir convenes a Constituent Assembly to draft a new constitution for Bahrain.
- 1973** New constitution is ratified; elections are held for the newly created National Assembly; the radical Popular Bloc of the Left gains 10 of the 30 elected seats.
- The Bahrain Monetary Agency is established.
- 1975** The National Assembly is dissolved by the emir, who promises new elections and a new electoral apparatus.
- Television is introduced.
- 1976** International Parliamentary Union expels Bahrain for its autocratic dissolution of the National Assembly.
- 1977** Bahrain terminates a six-year agreement permitting U.S. naval ships to be based in Bahrain.
- 1981** Bahrain joins the Gulf Cooperation Council.
- 1984** The emirate bans the Shiite Islamic Enlightenment Society, charging it with pro-Iranian subversive plots.
- 1988** Bahrain holds its first official talks with the USSR.
- 1989** Bahrain establishes diplomatic relations with the People's Republic of China.
- 1990** Iraq invades Kuwait; Bahrain supports UN economic sanctions against Iraq and permits the stationing of U.S. combat aircraft in Bahrain; Bahrain establishes diplomatic relations with the USSR.
- 1991** Bahrain sends troops and air support to Saudi Arabia; Bahrain fights alongside international troops against Iraq; Bahrain joins seven moderate Arab states in agreeing to a U.S.-backed postwar plan for collective security in the Persian Gulf region.
- 1992** The emir establishes an advisory council as a replacement for the National Assembly, which was dissolved in 1975.
- 1995** Uneven economic and social conditions lead to rioting against the government of Bahrain; the State Security Law is established to suppress unrest.
- 1996** The government cracks down on antigovernment protests, arresting over 600 dissenters.
- 1999** Emir Isa bin Salman al-Khalifa dies and is succeeded by his son Hamad bin Isa al-Khalifa;

Bahrain begins negotiations with Qatar over the disputed Hawar Islands.

- 2000** The emir promises to restore a democratically elected parliament.
- 2001** The emir pardons more than 800 political prisoners and exiles; in a national referendum 98 percent of voters support a proposal for a new national charter providing for free elections and restoration of the National Assembly; the emir abolishes the State Security Law.
- 2002** First elections in 32 years are held on May 9 to decide municipal representatives. Women vote and run for office for the first time. In October the first parliamentary election in 32 years are held.
- 2003** The United States and the United Kingdom warn of terrorist attacks against Western targets.
- 2004** Nada Haffadh becomes the first-ever woman to head a government ministry (health). Protestors demonstrate against the U.S.-led war in Iraq; the emir dismisses the interior minister after police try to prevent the protest.

November 4, 1972 (amended 1973, 1974, 1975, 1977, 1979, 1981, 1988, 1989, 2004)

GEOGRAPHICAL FEATURES

Bangladesh, at the eastern end of the Indo-Gangetic Plain in South Asia, extends 767 km (477 mi) south-southeast to north-northwest and 429 km (267 mi) east-northeast to west-southwest. It has a total land area of 144,000 sq km (55,598 sq mi). The highly irregular deltaic coastline runs 580 km (360 mi).

Bangladesh's total international land boundary of 4,246 km (2,638 mi) is shared with two countries: India (4,053 km; 2,517 mi) and Myanmar (193 km; 120 mi).

Topographically, Bangladesh may be divided into the vast alluvial plain comprising most of the country

and the small Chittagong Hill Tracts in the extreme southeast. The Bengal Plain, also known as the Lower Indo-Gangetic Plain, is the largest delta in the world. The Chittagong Hill Tracts constitute roughly one-sixth of the country. They form a minor hill system, with its greatest elevation at Keokradong (1,230 m; 4,034 ft). Toward the east they form a series of parallel hill chains, while toward the west they slope gradually into a small coastal plain.

Bangladesh has one of the most complex river systems in the world, forming an interlacing grid. The three principal rivers of this network are the Ganges (known as Padma in Bangladesh), the Brahmaputra (known as Jamuna in Bangladesh), and the Meghna.

Bangladesh

From the junction of the three rivers below Dhaka to the Bay of Bengal is the stem of the river system. The triangular estuary contains a number of temporary islands known as *chars* as well as permanent islands. The largest of the permanent islands are Shahbazpur, North Hatia, South Hatia, and Sandwip. The tides from the Bay of Bengal are felt as far inland as Kalipur, 270 km (168 mi) away. These tidal waves, called bores, often cause disastrous floods.

CLIMATE AND WEATHER

Bangladesh has a tropical climate governed by the monsoons. Though it is comparatively temperate and equable, there are marked seasonal variations. The three main seasons are a hot summer from March to June, a cooler but still warm and humid monsoon season from June to September, and a cool, dry winter season from October to February.

The average temperatures range from 7°C (45°F) in January to 31°C (90°F) in May. Temperatures up to 40.6°C (105°F) have occasionally been recorded. Daily temperature changes are moderate.

Nearly 80 percent of the annual rain falls from June through September, when the moisture-laden monsoon blows from the south and the southwest. The average annual rainfall varies between 1,270 and 1,520 mm (50 to 60 in) in the west to over 2,540 mm (100 in) elsewhere. The

Sylhet district, in the northeast, is believed to receive the highest rainfall in the world.

Climate and Weather

Mean Temperature
 January: 45°F
 May: 90°F
 August: 88°F
 Average Rainfall
 50 in to 60 in the west
 100 in the north and east

FLORA AND FAUNA

Bangladesh is divided into four climatic zones, including the low eastern hills with jungles and bamboo, the central zone with swamps and lakes, the plains of the northwest and southwest with cultivated crops and orchards—with the plant named *babyu* being the most common—and the southern region of mangrove forests with harvestable trees such as the *sundri* and the softwood *gengwa*, used for making newsprint. Flowers include the water lily, the country's national flower, the marigold, jasmine, and China rose.

There are about 200 species of mammal in Bangladesh, the same number of freshwater fish and marine life, over seven species of birds, and 150 species of snakes and reptiles. Best known of the larger mammals are the Bengal tiger, the elephant, the sambar deer, the sloth bear, and the clouded leopard. Several of these animals are on the world's endangered species list. Among birds, crows are common, and the eagle is represented by the crested serpent eagle and the ring-tailed fishing eagle.

ETHNIC COMPOSITION

Bangladesh is noted for the remarkable ethnic homogeneity of its population. Over 97 percent of its people are Bengali. Of the remainder, almost 2 percent are Biharis and tribals. The term Bihari designates non-Bengali, Urdu-speaking Muslims who fled to Bangladesh from eastern India in 1947. The tribals, racially distinct from the Bengali, have facial features and language closer to those of the Burmese.

In the coastal areas there are scattered communities of Arab, Dutch, and Portuguese settlers. Apart from these groups there are no numerically significant foreign communities.

LANGUAGES

Bangla, or Bengali, is the official language of Bangladesh. Bangladeshis identify themselves with their national language very closely. Bengali has a rich literature; at least two Bengali writers are well known in the West: the Nobel laureate Rabindranath Tagore and Kazi Nazrul Islam. English remains the language of the modern sector, but its cultural use seems to be declining.

RELIGIONS

Bangladesh is also remarkably homogeneous in religious affiliations. Approximately 83 percent of the people are Muslim, mainly of the Sunni sect, making Bangladesh the second largest Islamic country in the world, after Indonesia. Although loyalty to Islam is deep rooted, the content and social structure of Islam have been influenced by Hinduism. Although Islam does not recognize caste, Bangladeshi Muslim society is divided into three groups: *ashraf* (better class), *ajlaf* (lower class), and *arzal* (lowest class). Each group is subdivided into smaller groups.

The percentage of Hindus, the largest religious minority, has been steadily decreasing since 1947. Hindus are concentrated in areas bordering India, such as Khulna, Jessore, Sylhet, and Dinajpur, where they constitute nearly 25 percent of the population. The bulk of the Hindus belong to one of the lowest castes, the Namashudra, and they occupy low social and economic positions and generally follow the more inferior professions.

Smaller minorities include Zoroastrians (also known as Parsis) and tribal animists. There is a Roman Catholic archbishopric at Dhaka. The secular constitution guarantees the religious rights of all minorities.

Muslim	119,785,000
Hindu	23,091,000
Other	1,443,000

HISTORICAL BACKGROUND

Prior to 1971 Bangladesh was one of five Pakistani provinces formed when the British Indian empire was partitioned in August 1947. Initially called East Bengal, the province was separated from the four western provinces of Pakistan by about 1,600 km (1,000 mi) of Indian territory. By 1952 tensions within the province flared not only because East Bengal was more populous, with the central government nevertheless situated in distant West Pakistan, but also because Urdu was declared the official language of Pakistan, an affront to the Bengali-speaking East Bengalis. Bengali was made a joint official language in 1954, and in 1955 the country was officially divided into two sections, East Bengal becoming East Pakistan, with each equally represented in the central legislative body.

The Awami League, under the leadership of Sheikh Mujibur Rahman (Sheikh Mujib), won an overwhelming victory in the general elections of December 1970, thus giving the east a majority in the nation's legislative assembly. The election results meant that Sheikh Mujib should have become the prime minister, but the president, General Yahya Khan, prevented the succession, and the newly elected assembly was not convened. Violent protests ensued in the east, and when the Awami League decided that the province should secede, Mujib declared the independence of the People's Republic of Bangladesh (literally, Bengal nation) on March 26, 1971.

Civil war followed, with President Yahya Khan blaming the Awami League and the Pakistani army taking over the eastern province and committing genocide in the process, eventually killing perhaps well upward of one million Bangladeshis. India came to Bangladesh's aid, providing both refugee camps and substantial military assistance. By December 16, 1971, Pakistan had surrendered to India, and Bangladesh was independent. In January 1972 Sheikh Mujib, who had been imprisoned in West Pakistan, was freed by Pakistan's president, Zulfikar Ali Bhutto, and assumed the position of prime minister of Bangladesh. The new country was rapidly recognized by the international community, leading Pakistan to withdraw from the Commonwealth and Bangladesh to join the Commonwealth in April. The Bangladesh Constituent Assembly was made up of those members who had been elected in December 1970 to the Pakistan National Assembly, and a new constitution was approved by that body in November, taking effect in December. The first general election to the country's Jatiya Sangsad (Parliament) was held in March 1973. The Awami League won 292 of the 300 directly elected seats. Terrorism by both right- and left-wing opposition groups led to the declaration of a state of emergency and a suspension of constitutional rights in December; President Mujib assumed complete power as president, and the country became a one-party state in February 1975.

In August 1975 a right-wing coup led by a number of Islamic army officers assassinated Sheikh Mujib and his family. The former minister of commerce, Khandakar Mushtaq Ahmed, assumed the presidency, declaring martial law and outlawing all political parties. On November 3 a second coup led to the appointment of Brigadier Khalid Musharaf as army chief of staff. Major General Ziaur Rahman (General Zia) was reinstated as chief of army staff and became the leader of the neutral nonparty government. In July 1976 political parties were legalized.

General Zia gradually assumed increased power, taking on the role of chief martial law administrator and taking over the presidency by April 1, 1977. He made Islam the first basic principle of the constitution and in June 1978 was overwhelmingly elected president in the nation's first direct presidential election. In parliamentary elections held in February 1979, Zia's Bangladesh Nationalist Party (BNP) won 207 of the directly elected seats in the Jatiya Sangsad. A new prime minister was named in April, and martial law was lifted. In November the state of emergency was ended.

The assassination of General Zia on May 30, 1981, during an attempted military coup resulted in the promotion of Justice Abdus Sattar to acting president. He was later overwhelmingly elected to the position of president in November but was unable to maintain civilian control, and on March 24, 1982, Lieutenant General Hossain Mohammad Ershad came to power in a bloodless coup. Martial law was declared once again, and Ershad became chief martial law administrator. In October Ershad took the position of prime minister and named Justice Abul Chowdhury to the presidency.

Two major opposition groups emerged in the aftermath, a 15-party coalition led by Sheikh Hasina Wajed (daughter of the late Sheikh Mujib) and a seven-party alliance under the leadership of Begum Khaleda Zia (widow of General Zia). The two groups joined forces in September 1983 to form the Movement for the Restoration of Democracy (MRD). On December 11, President Chowdhury resigned his position in favor of Ershad, and a new party, Jana Dal, was established in support of the regime. Subsequent struggles between progovernment and opposition parties led to the cancellation of presidential and parliamentary elections scheduled for April 1, 1985, and martial law was once again imposed on March 1. Three weeks later Ershad was again elected president in a referendum.

On March 2, 1986, President Ershad scheduled parliamentary elections for late April. Opposition parties refused to participate unless martial law was completely lifted. However, the Awami League coalition and the fundamentalist Jama'at-i-Islam later agreed to participate in an election scheduled for May 7, although the BNP alliance led by Begum Khaleda Zia refused to take part. The Jatiya Dal, the successor to the Jana Dal, won a narrow majority of the directly elected seats and also filled the 30

seats reserved for women. Extensive fraud, which characterized the parliamentary elections, was also operative in the presidential election of October in which Ershad won an overwhelming victory over his 11 opponents. In November Ershad lifted martial law and restored the 1972 constitution. In order to quiet growing unrest, Ershad reshuffled the Council of Ministers in December, adding four new ministers from the Awami League.

The Jatiya Sangsad was dissolved by Ershad on December 6, 1987, following the resignation of 12 opposition members and 73 Awami League members. Ershad scheduled a general election for February 28, 1988, but continued opposition threats to boycott the election forced a postponement to March 3. Widespread violence disrupted the general election, and participation by voters was estimated at less than 50 percent. The Jatiya Dal took a large majority of the seats.

A further reshuffling of the cabinet in March included the naming of a new prime minister, Moudud Ahmed. Ershad repealed the state of emergency in April because of a lessening of the opposition antigovernment demonstrations. In June a majority of the Jatiya Sangsad approved a constitutional amendment making Islam Bangladesh's state religion, even though the opposition strongly opposed the measure.

Disastrous monsoon floods in August once again overshadowed political troubles, and further severe flooding in December 1988 and January 1989 resulted in at least 2,100 casualties.

In July 1989 the Jatiya Sangsad acted to limit the term of the president to two electoral terms of five years each and also established the position of a directly elected vice president. Moudud Ahmed, who had been prime minister, was appointed vice president by Ershad in August, and Kazi Zafar Ahmed was named prime minister.

Following eight weeks of violent protests against his government, Ershad resigned in December 1990. Shortly thereafter he and his wife were arrested on charges of theft of public funds, nepotism, and gold smuggling. An interim president, Shahabuddin Ahmed, headed a caretaker government until elections in 1991. The general elections were won by the conservative Bangladesh National Party (BNP), whose leader, Khaleda Zia, became prime minister.

While many hoped that the election of Zia would bring democratic stability to Bangladesh, it has not happened. After a few years, the people grew tired of the Zia government. The government did not repeal the 1974 Special Powers Act that allows for the detention of individuals for 120 days without charges. Elections were finally held in February 1996, but they were boycotted by opposition parties and only 5 percent of the population turned out to vote. Zia was reelected but was forced to resign under protests in March. Elections were once again held in June and a coalition government headed by Sheikh Hasina Wajed of the Awami League was elected.

Political stability has still not been achieved and the country has been racked by natural disasters, including widespread flooding in 1998. In 2001 the BNP won a majority of seats in parliamentary elections, and Zia became prime minister a second time.

Elections in 2002 brought Iajuddin Ahmed to power as president and retained Zia as prime minister. The government has since pushed through some reforms, such as making acid attacks on women punishable by death and promising speedy trials for accused prisoners. Extremist Islamic groups have been responsible for a series of bombings that have left both main political parties accusing each other. The Indemnity Law of 2003 was a highly criticized measure that provided immunity from prosecution for military and police who were involved in the anticrime push called Operation Clean Heart; some 40 suspects had died in custody under police interrogation.

In 2004 general strikes were called as relations worsened between opposition parties and the conservative ruling party. More monsoons and flooding affected more than 25 percent of the country's population.

LIST OF MODERN RULERS

President

1971–72	Syed Nazrul Islam (acting)
1972	Sheikh Mujibur Rahman
1972–73	Abu Sayeed Chowdhury
1973–75	Mohammad Ullah (acting 1973–74)
1975	Sheikh Mujibur Rahman
1975	Khandakar Mushtaq Ahmed
1975–77	Abu Sadat Mohammad Sayem (acting)
1977–81	Ziaur Rahman
1981–82	Abdus Sattar
1982–83	A. F. M. Ahsanuddin Chowdhury
1983–90	Hossain Mohammad Ershad
1990–91	Shahabuddin Ahmed (acting)
1991–96	Abdur Rahman Biswas
1996–2001	Shahabuddin Ahmed
2001–02	A. Q. M. Badruddoza Chowdhury
2002	Jamiruddin Sircar (acting)
2002–	Iajuddin Ahmed

Head of Government

1971–72	Tajuddin Ahmed
1972–75	Sheikh Mujibur Rahman
1975	Mohammad Mansoor Ali
1975–76	Abu Sadat Mohammad Sayem
1976–77	Ziaur Rahman
1978–79	Mushiur Rahman
1979–82	Shah Azizur Rahman
1982–84	Hossain Mohammad Ershad
1984–86	Ataur Rahman Khan
1986–88	Mizanur Rahman Chowdhury

1988–89	Moudud Ahmed
1989–90	Kazi Zafar Ahmed
1991–96	Khaleda Zia
1996	Mohammad Habibur Rahman
1996–2001	Sheikh Hasina Wajed
2001	Latifur Rahman
2001–	Khaleda Zia

CONSTITUTION

Bangladesh is governed by the constitution of 1972 (as amended in 1973, 1974, 1975, 1977, 1979, 1981, 1988, 1989, and 2004), which established a parliamentary democracy. The constitution was suspended after the military coup of March 24, 1982, but revived following the repeal of martial law on November 10, 1986. The constitution incorporates four basic principles of state policy: nationalism, Islam, socialism, and democracy.

The president and vice president are elected by universal adult suffrage for five-year terms and may each be elected to a single additional five-year term. In addition to the president and vice president, the executive branch of the government includes a prime minister appointed by the president and council of ministers, all of whom are appointed by the president and may be dismissed by him. The prime minister is the true holder of power in the executive branch.

The Jatiya Sangsad is a unicameral legislature. It is made up of 300 members who are directly elected by universal suffrage for five-year terms, unless the president chooses to dissolve parliament sooner. Additionally, 30 female members of the Jatiya Sangsad are elected by the other members of the Jatiya Sangsad in order to ensure some representation therein by women. The approval of the Jatiya Sangsad is required for any declaration of war.

PARLIAMENT

The national legislature is the unicameral Jatiya Sangsad, with a membership of 300 elected members and—to ensure that their sex has some representation—45 women elected by the other members. Members of the Jatiya Sangsad are elected from single-member constituencies on the basis of universal adult suffrage over age 18. Their legislative term lasts five years unless the Jatiya Sangsad is dissolved sooner by the president. The Jatiya Sangsad was dissolved in 1982 following the seizure of power by the army and the imposition of martial law. Constitutional government was revived in November 1986 when martial law ended.

POLITICAL PARTIES

Bangladesh is a multiparty country in which two parties control most of the elected seats in the parliament. The

Awami League is a nationalistic secular party that arose in opposition to the National Party, which ruled Bangladesh for most of the 1970s and 1980s. The Bangladesh Nationalist Party has an Islamic orientation to its membership. In addition to these two major parties, there are more than a dozen smaller ones. The Bangladesh Islamic Assembly is the nation's ultrareligious right-wing Islamic party, which secured three seats of the 330 available in 1996. The Jatiya Party helped form a recent government by building a coalition with the Awami League. The Jatiya is a centrist party that seeks national consensus for governing.

LOCAL GOVERNMENT

The basic units of regional administration are, in descending order, division, district, and *thana*. The divisions number five, each headed by a commissioner. The districts number 64, each of which is headed by a deputy commissioner. The deputy commissioner is the linchpin of the regional administration and also the most important government representative at the local level.

The districts are divided into 64 *zillas*, or subdistricts, each headed by a subdistrict officer. These subdistricts are further divided into 490 *thanas*, union *parishads*, and villages.

LEGAL SYSTEM

The judicial system inherited from Pakistan and Britain has been retained almost unchanged by independent Bangladesh. The chief court of the land is the Supreme Court, which is composed of the Appellate Division and the High Court Division. The Supreme Court consists of the chief justice and 11 other judges, all appointed by the president. The subordinate courts consist of district and sessions courts in every district and three lower levels of magistrate courts.

HUMAN RIGHTS

Institutional weakness, political instability, and unchecked police brutality appear to be the major factors in continued widespread human rights violations. Despite election promises made by the Zia government, the 1974 Special Powers Act, allowing detention without charge for 120 days, has never been repealed. There have been claims that the government has rigged by-elections, and military and police repression of dissenters appear to be on the rise. According to Amnesty International, hundreds of people were injured and dozens killed, some as a result of police action, in nationwide strikes (*hartals*) called by opposition parties during 1999. Political-party activists and

student groups with links to the ruling and opposition parties continue to perpetrate acts of violence, including beating political opponents to death. Journalists continued to be the focus of attacks in Bangladesh in 2004, with over 200 attacks perpetrated on domestic and foreign journalists covering human rights in the country.

FOREIGN POLICY

Bangladesh's foreign policy reflects the twin realities of geography and religion. Soon after independence the nation signed a 25-year treaty of friendship, cooperation, and peace with India, but within a few years the two nations were embroiled in disputes over water from the Ganges and Teesta rivers and rights of transit from Nepal. Relations with Pakistan, initially characterized by mutual hatred and suspicion born out of the war of independence, slowly improved. The question of the repatriation of pro-Pakistani Biharis from Bangladesh to Pakistan was settled in the early 1990s but has not been fully resolved. There are also repatriation issues with Myanmar over the Rohingya Muslims who were being persecuted and forced to flee from Myanmar.

DEFENSE

The defense structure is headed by the president, who is the minister of defense and chief of the army staff and who thus dominates the defense establishment. Military manpower is provided by voluntary enlistment. In 2003 Bangladesh had armed forces personnel totaling over 188,000.

The combat worthiness of the Bangladesh armed forces is limited by a number of factors, including severe budgetary restrictions and the small number of professionals with field experience. The operational effectiveness of both the army and the air force is inhibited by lack of spare parts. The armed forces are plagued by factionalism and lack of discipline.

ECONOMY

Despite sustained domestic and international efforts to improve economic and demographic prospects, Ban-

182 Bangladesh

gladesh remains one of the world's poorest, most densely populated, and least developed nations. The economy is largely agricultural, with the cultivation of rice the single most important activity in the economy. Major impediments to growth include frequent cyclones and floods, the inefficiency of state-owned enterprises, a rapidly growing labor force that cannot be absorbed by agriculture, delays in exploiting energy resources (natural gas), inadequate power supplies, and slow implementation of economic reforms. Prime Minister Sheikh Hasina Wajed's Awami League government made some headway improving the climate for foreign investors and liberalizing the capital markets; it negotiated with foreign firms for oil-and-gas exploration, better countrywide distribution of cooking gas, and the construction of natural gas pipelines and power plants. Progress on other economic reforms has been halting because of opposition from the bureaucracy, public sector unions, and other vested interest groups. The especially severe floods of 1998 increased the country's reliance on large-scale international aid. Economic reform has not gone forward because of political infighting and corruption at all levels of government. There has been opposition to such reform from the bureaucracy, public sector unions, and others. The BNP government, led by Prime Minister Khaleda Zia, has the voting power in parliament to go forward with reforms, but to date they have not happened.

ENVIRONMENT

High population density is a major factor contributing to extensive overuse of the country's forests, fisheries, and even soil and water resources. These problems are especially serious given that most Bangladeshis are still

directly economically dependent on natural resources. Already a majority of households are without sufficient land to produce their food needs, and wood stocks have been depleted to the point where most domestic energy requirements must be met by crop residues and dung. Floods and storms also inflict severe socioeconomic and environmental damage on the country.

LIVING CONDITIONS

Bangladesh is a poor country, with all the problems attendant on such poverty. Largely rural, Bangladesh has almost 80 percent of its population in the countryside. People live in houses built from simple products, including reeds, brush wood, bamboo, palm leaves, and corrugated iron, and live with large extended families. Per capita income is only \$2,000 per year, and life expectancy was 62 in 2004, with a birthrate of over three children for each woman of childbearing age. Thus, life for most of the population is hard and close to subsistence. However, in urban centers such as the capital, Dhaka, the middle class enjoys a life-style similar to that of the rest of South Asia.

HEALTH

As a result of widespread malnutrition and dislocations caused by natural disasters, basic diseases such as malaria and tuberculosis are a major problem in Bangladesh. High infant mortality rates also indicate a health-care system that has much progress to make, despite its being nationally run and including free hospital service. Many nontraditional healers, such as homeopaths and Aryurvedic practitioners, are consulted in the countryside. While HIV accounted for only 650 deaths in 2001, an estimated 13,000 people carry the disease. Cholera has also been an intermittent problem for the population, as has the popularity of smoking. Life expectancy in 2005 was estimated at 62 years.

FOOD AND NUTRITION

The staples of the Bangladeshi diet are rice, fish, vegetables, milk, and meat. The choices of these foods vary from group to group depending on religious affiliation; though beef is a popular food for Muslims, it is forbidden for the Hindu population. Rice dishes such as *biryani*, with meat and vegetables, kebabs, or barbecued chunks of meat, and kormas, or meat with spicy sauces, are often served for more festive occasions. The clarified butter known as ghee is used in cooking. Hands, instead of utensils, are generally used for eating.

STATUS OF WOMEN

By custom and Muslim-influenced tradition, women occupy a subordinate, dependent place in society and receive unequal treatment before the law on a widespread basis. The ability of a family to seclude its women is a key symbol of social status. The daily press testifies to patterns of domestic violence (murder, rape, and torture), breach of matrimonial contract, denial of inheritance rights, and desertion, with poor women particularly victimized. The rate of suicide among women is reportedly almost three times higher than that among men. In October 1983 the government promulgated a stringent ordinance aimed at deterring cruelty to women. To check murder, kidnapping, abduction, and trafficking (including international trafficking) in women, the ordinance brings together the various statutes applicable to women and stiffens the penalties for abuse. It provides the death penalty for those directly responsible for a "dowry killing" or for the killing of a woman in the course of rape, although it does not address the abuse of a woman that stops short of murder or rape or that takes place within the family or home.

"Dowry killings," as reported in the press, usually share a common theme: the bride's family has not made full payment of a supposedly promised dowry, so the husband or his family attacks and often murders the bride.

WORK

Primarily an agrarian land, Bangladesh has 63 percent of its 65-million-strong workforce involved in farming and cultivation. These workers produce rice for local consumption and jute as an export cash crop. With few industries, the country does not offer a large array of nonagricultural work; the industrial sector employs 11 percent of the workforce. The garment industry became more important in the final decades of the 20th century, producing ready-to-wear goods for the West. Many of the workers in this industry are women, and the garment industry amounts to 60 percent of export revenues earned annually. Exports of shrimp and fish are also important, so fishing and processing are other strong employment sectors. Service accounts for another 26 percent of employment. However, one of the biggest sources of foreign currency is the money sent back to relatives by Bangladeshis employed abroad, especially in the Persian Gulf. The government is another large employer, but cutbacks in 2002 and 2003 led to the losses of 45,000 public-sector jobs in state-owned enterprises. As of 2004 the country had an unemployment/underemployment rate of 40 percent.

Employment and Labor

 Female Participation Rate %: 43.2
 Labor by Sector %:
 Agriculture: 63
 Industry: 11
 Services: 26
 Unemployment %: 40

EDUCATION

Education is free but not compulsory for the five years from ages five to 10. Schooling consists of five years of primary education, five years of lower-secondary education, and two years of higher education, for a total of 12

years. There is a high dropout rate at all levels. Although primary education is free, fees are charged by secondary schools.

The academic year is the calendar year. The medium of instruction is Bangla in the primary grades and Bangla and English in the secondary grades.

Educational standards have been steadily declining since 1947, partly because of the lack of trained teachers. Only 30 percent of the teachers in primary schools are believed to possess minimum professional training.

Private secondary institutions and colleges vastly outnumber government institutions. In 1996 government high schools constituted only 29 percent of the total, and government colleges constituted only 5 percent of the total. In addition, Muslim religious schools are maintained by both private and public funds. Separate schools are also run by Hindus and Buddhists. Vocational education has received little emphasis.

As of 1996, affiliated with Bangladesh's seven universities were 636 colleges, of which seven were medical colleges and nine were law colleges.

Despite this education infrastructure, the literacy rate in 2003 was still only 43 percent.

Education

SCIENCE AND TECHNOLOGY

Unlike other regions of South Asia, Bangladesh does not have a large body of trained scientists and engineers who could catapult the country into intensified technological development. Throughout the 1990s there were just over 50 scientists pursuing research and development projects per every one million people in Bangladesh. Dhaka is the home to several scientific and technical institutes as well as universities that train engineers and scientists. Among the leading universities are Bangladesh Agricultural Uni-

versity in Mymensingh, the University of Chittagong, the University of Dhaka, Jahangirnagar University in Dhaka, Khulna University, and the University of Rajshahi. The Bangladesh Council for Scientific and Industrial Research has seven research institutes, and the Bangladesh Atomic Energy commission runs two others.

MEDIA

Bangladesh has a flourishing newspaper industry. The largest-selling dailies are the *Dainik ittefaq* in Bengali and the *Bangladesh Observer* and *Bangladesh Daily Star* in English.

The national news agency is Bangladesh Sangbad Sangstha (Bangladesh News Agency), with headquarters at Dhaka. The other agency is Eastern News Agency.

The official broadcasting organization is the National Broadcasting Authority, which was formed in 1984 through the merger of Radio Bangladesh and Bangladesh Television. It operates seven medium-wave transmitters, four shortwave transmitters, and five FM transmitters. Bangladesh Television (BTV), founded in 1971, has a transmitter at Dhaka and relay stations.

As of 2003 there were only 740,000 land-based telephones in operation in Bangladesh, but cell-phone usage had grown exponentially to a total of 1.365 million subscribers. The country had an estimated 243,000 internet users in 2003.

CULTURE

Bengali culture is strong in the areas of dance, music, and literature. Though traditional and devotional forms of these exist in both the Muslim and Hindu communities, there are also strong regional forms, such as the songs called *bhatiali*, which deal with life and work on the rivers,

or the *baul* verses, which have a mystical sense. Dances include the snake dance and local forms such as the *dhali*, *manipuri*, and *baul*.

Artists throughout Bangladesh are largely self-supporting, but the Bangla Academy in Dhaka does offer some aid. Poetry is part of the daily life of Bangladeshis; even if illiterate, most people can recite at least one poem. The most famous writer from the country is Rabindranath Tagore, who won the Nobel Prize in 1913. More contemporary is Kazi Nazrul Islam who is a poet and playwright of Bengali nationalism. The treatment of women in Islam is the subject of one of the most celebrated writers in exile, Taslima Nasreen.

Performance art includes theater, which consists of plays developed in villages or brought to them by traveling troops as well as dramas on the stages of Dhaka. Bangladeshi cinema is also a growing industry.

FOLKLORE AND MYTHOLOGY

The folklore and mythology of Bangladesh are strongly influenced by the folk traditions of Bengali culture and the belief in shamanistic powers. Several examples of contemporary shamans are still found in the country. These include the religious wandering musicians known as *bauls*, the healing shamans, or *ojhas*, and the Muslim faith healers called fakirs. Religion plays a significant part in the country's folklore, with Sufi saints such as Shah Jalal and Khan Jahan Ali among the most popular. Imams, or local religious leaders, are also sometimes thought to have supernatural powers. Both Hindus and Muslims have rich folklore inspired by their respective religions.

ENTERTAINMENT AND RECREATION

Much of village entertainment and recreation is centered on religious holy days, when festivals or fairs may be held. Operas written about local myths, or *jatras*, are another form of entertainment, as are dances and many types of song. With an abundance of water, the Bangladeshis also participate in boat races.

Urban forms of entertainment are more in line with those in the West. Attending the cinema is one of the most popular activities. Radio and television also provide entertainment. Newspapers and libraries are a further outlet, but with Bangladesh's high rate of illiteracy, these do not reach the broader masses of people.

ETIQUETTE

Bangladeshis conform to the usual traditions of South Asia in terms of etiquette and especially hospitality. Visitors are always offered some refreshment and are asked to sit. A bamboo mat is provided if chairs are not available. Greetings are the typical "peace be with you," answered by "and with you." Men shake hands if of equal status; men and women do not shake hands. Generally, social distance is less than in the West, and in crowded situations, such as at train stations or post offices, there may be a lot of pushing and shoving because forming a line is not always practical. Also, it is not considered impolite to stare. Age is venerated, as is higher social status, and is recognized by the use of titles rather than names.

FAMILY LIFE

The extended family is the basic social unit in Bangladesh. Called a *paribar* or *gushti*, this unit shares one household and consists of one or more nuclear families related by blood. The extended family is also the basic economic unit for much of the country, especially the rural areas, with patrilineal successions; married sons and their families live in the father's house.

Marriages are arranged by the parents in Bangladesh, with spouses chosen from similar social classes and social standings. Dowries, or bride prices, are paid in many areas, and the female remains subservient in the relationship, with *purdah*, or the seclusion of women, widely practiced.

PERSONAL APPEARANCE

Most of the residents of Bangladesh are of Bengali ethnicity and thus have features in common with South Asians such as Indians and Pakistanis. Only about 1 percent of the population is tribal, with Mongoloid features. In rural areas more traditional clothing is worn. For men this includes the *lungi*, or wrap-around sarong, and a vest and shirt. Others wear the loose cotton trousers called pajamas and the long shirt known as a *punjabi*. Turbans are worn for more formal occasions. Women traditionally wear a blouse and sari or tunic and pants. In cities, dress is more international, with shirts and ties worn by men.

SPORTS

Soccer is the most popular sport in Bangladesh, overtaking all traditional games. Also popular are cricket, field hockey, tennis, table tennis, wrestling, and badminton. One of the best-known traditional games is *ba-do-do*, a game somewhat like tag. For children, kite flying is a popular activity, as are spinning tops and playing hide-and-seek.

CHRONOLOGY

- 1970** In legislative elections, Awami League candidates win 167 of East Pakistan's 169 seats in the 313-seat Pakistan National Assembly; President Yahya Khan postpones opening the assembly; the Awami League launches provincewide agitation.
- 1971** Sheikh Mujibur Rahman is imprisoned in West Pakistan on treason charges; the government outlaws the Awami League, declares martial law in East Pakistan, and begins a reign of terror, attempting to suppress the Bengali nationalist movement; millions of Bengalis seek refuge in India as war breaks out; the combined armies of India and East Pakistan compel West Pakistani forces to surrender; East Pakistan becomes the independent state of Bangladesh.
- 1972** Mujibur Rahman is released from prison in Pakistan and sworn in as interim prime minister of Bangladesh; a treaty of friendship and cooperation is signed with India; Bangladesh joins the British Commonwealth; Bangladesh nationalizes all banks and Pakistani-owned industries and introduces the taka as the national currency; the Jatiya Sangsad ratifies a new constitution.
- 1973** In the first nationwide elections the Awami League wins 308 of 315 seats in the Jatiya Sangsad.
- 1974** As protests become violent, Mujibur Rahman declares a state of emergency; Pakistan recognizes Bangladesh; Bangladesh joins the United Nations.
- 1975** Mujibur Rahman has the constitution amended to make himself a virtual dictator; Mujibur Rahman is killed in a pro-Pakistani coup; Brigadier Khalid Musharraf stages a pro-Indian coup and names Abu Sadat Mohammad Sayem as president; Colonel Abu Taher leads a third coup in which Musharraf is killed.
- 1977** Sayem steps down as president and is replaced by army chief of staff General Zia Rahman; President Zia Rahman's martial law policies win approval in a nationwide referendum; 92 soldiers are executed for their role in an attempted coup against Zia Rahman; opposition parties are banned.
- 1978** Zia Rahman is elected president for a five-year term; a refugee pact is reached with Burma.
- 1979** The Bangladesh Nationalist Party, led by President Zia Rahman, wins in elections to the Jatiya Sangsad; martial law is lifted.
- 1981** President Zia Rahman is assassinated by dissident army officers at Chittagong; Vice President Abdus Sattar is installed as acting president.
- 1982** Lieutenant General Hossain Mohammad Ershad ousts the Sattar government, installs Ahsanuddin Chowdhury as president and himself as martial law administrator, dissolves the Jatiya Sangsad, and suspends the constitution.
- 1983** Ershad dissolves the cabinet and names himself president.
- 1985** Ershad enforces the ban on political parties, jailing opposition leaders; a cyclone described as "the worst in the country's history" strikes Bangladesh, killing 10,000.
- 1986** Ershad lifts the ban on political activity; the five parties of the National Front unite to form the pro-government Jatiya Dal (National Party); in May legislative elections the Jatiya Dal wins 153 of the 300 elected seats and all 30 of the seats reserved for women, and Mizanur Rahman Chowdhury becomes prime minister; Ershad wins the October presidential election by an overwhelming majority; President Ershad repeals martial law and restores the 1972 constitution.
- 1987** Violent opposition to a bill allowing army representation in the 64 district councils forces President Ershad to withdraw it; the worst floods in 40 years bring widespread devastation; in November Ershad declares a 120-day state of emergency, banning antigovernment protests; in December Ershad dissolves the Jatiya Sangsad.
- 1988** Monsoon rains leave 30 million homeless and cause nearly \$2 billion in damage; the Jatiya Dal wins 250 of the 300 seats in the Jatiya Sangsad; President Ershad repeals the state of emergency; a constitutional amendment establishes Islam as the state religion of Bangladesh; Buddhist Chakma rebels seeking autonomy for the Chittagong Hill region kill 200 people.
- 1989** Jatiya Sangsad legislation limits the tenure of presidency to two five-year terms and makes the vice presidency a directly elected position; Moudud Ahmed assumes vice presidency and Kazi Zafar Ahmed becomes prime minister.
- 1990** After violent protests against his government, President Ershad declares a national state of emergency in November; in December Ershad dissolves the legislature and resigns; Chief Justice Shahabuddin Ahmed heads a caretaker

government; Ershad and his wife are convicted of theft of public funds, nepotism, and gold smuggling.

- 1991** The conservative Bangladesh National Party wins the February general elections and BNP leader Khaleda Zia Rahman, widow of former president Zia Rahman, becomes prime minister; the constitution is changed to make the position of president merely ceremonial, with the prime minister holding primary executive power; a cyclone kills over 100,000 and causes billions of dollars in damage.
- 1994** Nearly 150 members of the opposition resign their seats in parliament hoping to force new elections.
- 1996** Under the leadership of Sheik Hasina Wajed, daughter of Sheikh Mujibur Rahman, the Awami League wins control of the government for the first time since 1975.
- 1997** The opposition BNP organizes a series of strikes to protest the government.
- 1998** Monsoons cause severe flooding, killing over 1,000 and leaving millions homeless; 15 military officers involved in the assassination of Sheikh Mujibur Rahman are sentenced to death.
- 2001** In parliamentary elections the BNP wins a majority of seats. Khaleda Zia becomes prime minister for a second time.
- 2002** Iajuddin Ahmed is elected president; Khaleda Zia is retained as prime minister.
- 2003** The controversial Indemnity Law, protecting law enforcement officers and military from prosecution, is passed in parliament. A further deterioration of relationship between the ruling party and opposition parties leads to general strikes.
- 2004** More than 200 journalists are the target of violence from political activists, criminal gangs, or religious extremists. Flooding in late June affects 36 million people nationwide.

BARBADOS

Basic Fact Sheet

OFFICIAL NAME

Barbados

ABBREVIATION

BB

CAPITAL

Bridgetown

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Clifford Husbands (from 1995)

HEAD OF GOVERNMENT

Prime Minister Owen Seymour Arthur (from 1994)

NATURE OF GOVERNMENT

Parliamentary democracy within the Commonwealth, recognizing Elizabeth II as head of state

POPULATION

279,254 (2005)

AREA

431 sq km (166 sq mi)

ETHNIC MAJORITY

Black

LANGUAGE

English

RELIGION

Christianity

UNIT OF CURRENCY

Barbadian dollar

NATIONAL FLAG

Vertical tricolor of ultramarine blue stripes on the hoist and the fly sides and a gold stripe in the middle. A broken trident in black appears on the center stripe.

NATIONAL EMBLEM

A shield in which red orchids flank the fig tree *Ficus barbata*, from which the name of the island is derived. Above the shield, from a silver helmet decorated with a red and ornamental wreath, rises a powerful black forearm grasping two crossed stalks of sugarcane. On either side of the shield are a red-finned dolphin and a pelican with one webbed foot supporting the shield. Beneath the device a golden scroll proclaims the motto "Peace and Industry."

NATIONAL ANTHEM

"In Plenty and in Time of Need, When This Fair Land Was Young"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (May Day), first Monday in July (Caribbean Day), first Monday in October (UN Day), November 30 (National Day, Independence Day), various Christian festivals, including Good Friday, Easter Monday, Whitmonday, Christmas, and Boxing Day.

DATE OF INDEPENDENCE

November 30, 1966

DATE OF CONSTITUTION

November 30, 1966

GEOGRAPHICAL FEATURES

Barbados is the most easterly of the Caribbean islands, lying in the Lesser Antilles east of the Windward Islands about 322 km (200 mi) north-northeast of Trinidad and 161 km (100 mi) east-southeast of Saint Lucia. Barbados is the second-smallest country in the Western Hemisphere, with an area of 431 sq km (166 sq mi), extending 34 km (21 mi) north to south and 23 km (14 mi) east to west. Its total coastline stretches 97 km (60 mi).

From the south and west the island presents a flat appearance, rising in a series of ridges up to about 100 m (325 ft) and then falling steeply toward the sea. The highest point is Mount Hillaby (336 m; 1,105 ft), near the center of the island. The coast is encircled with coral reefs.

There are no rivers in the conventional sense but only gullies, watercourses, and underground channels. The best-known underground channel is Cole's Cave, in the middle of the island. Two rivulets known as Indian River and Joes River are no use for either fishing or navigation.

CLIMATE AND WEATHER

Barbados enjoys tropical temperatures tempered by the northeasterly trade winds. The average annual temperature is 25°C (77°F); daily temperatures rarely rise above 32.2°C (90°F). The dry season is relatively cool, while the wet season is a little warmer. The rains fall from July to November. Annual rainfall varies from 1,016 mm (40 in) in coastal areas to 2,286 mm (90 in) in the central ridge area.

Climate and Weather

Mean Temperature: 77°F
Average Rainfall: 40 in to 90 in

FLORA AND FAUNA

Sugarcane has taken over much of the native vegetation of the island, giving Barbados its characteristic green shading. Tropical trees such as poinciana, mahogany, frangi-pani, and cabbage palm are still found, while flowers and flowering shrubs include wild roses, carnations, cacti, and lilies. The variety of animal life is narrow, and many of these animals, including monkeys, mongooses, and hares, are considered pests by farmers. Finches, hummingbirds, egrets, and sparrows are among the avian life on the island, and marine life includes mackerel, barracuda, kingfish, flying fish, sprat, and the green dolphin.

HISTORICAL BACKGROUND

The original inhabitants of Barbados were the Arawak Indians. They were subsequently replaced by invading Carib Indians in the 13th century. By the time the Portuguese explorer Pedro a Campos stopped in Barbados in 1536 en route to Brazil, the Carib Indians were also gone. Some historians have suggested that earlier contact with the Spanish led the Caribs to flee because some of them were taken as slaves by the Spanish.

Barbados was under the British Crown as of 1624, although it was briefly the personal fief of the dukes of Marlborough and Lord Carlisle and Lord Pembroke. Its House of Assembly, which began meeting in 1639, is the third-oldest legislative body in the New World, following Bermuda's legislature and Virginia's House

of Burgesses. By the time the British left, after 342 years, in 1966, the island had become completely English in culture.

When Barbados became independent, the government was dominated by the Democratic Labour Party (DLP), whose leader, Errol W. Barrow, was premier. Upon the country's independence he became prime minister. The DLP maintained power until 1976, when it was defeated in the general elections by the Barbados Labour Party (BLP), under the leadership of J. M. G. ("Tom") Adams, who became prime minister. Very few issues divided the rival parties; the campaign centered on alleged government corruption. The BLP maintained its majority in close voting during the 1981 elections. Adams died in 1985 and was succeeded by H. Bernard St. John. St. John was unable to maintain party unity, and the BLP lost the elections in 1986. Barrow was returned to office. Following the sudden death of Barrow in 1987, Lloyd Erskine Sandiford succeeded as prime minister. He led the DLP to victory in 1991, although with a reduced margin. However, in the 1994 elections the DLP suffered an overwhelming defeat and Owen Seymour Arthur of the BLP was swept into power. Arthur won reelection in 1999.

In 2003 Arthur won a third term and promised to replace the country's monarchical system with a republican model in which the governor-general would be substituted by a new office of president.

1985–86 Bernard St. John
1986–87 Errol Barrow
1987–94 Erskine Sandford
1994– Owen Arthur

CONSTITUTION

The constitution of 1966 provides for a governmental structure modeled on the British parliamentary system. The queen remains the titular head of state and is represented on the island by a governor-general, who appoints an advisory privy council. Executive authority is vested in the prime minister—the head of government—and his cabinet, who are collectively responsible to a bicameral legislature. The cabinet is required to consist of not fewer than five ministers in addition to

the prime minister. The constitution also provides for a judiciary and legal service and service commissions for judicial, public, and police services. These commissions are exempt from executive interference. The leader of the opposition is a salaried servant of the Crown. Legislative power is vested in the bicameral parliament, composed of the appointed Senate and the elected House of Assembly. Following adoption of a Canters Commission report in 1965, the island was divided into 24 single-member constituencies. House of Assembly elections are held every five years. The judicial system is headed by the Supreme Court of Judicature, which sits as both a high court and a court of appeal.

PARLIAMENT

The bicameral parliament consists of the appointed Senate and the elected House of Assembly. The Senate consists of 21 members, of whom 12 are drawn from the majority party; two are from the opposition; and seven are appointed to represent social, religious, and economic interests. The House of Assembly consists of 27 members elected by direct popular vote for five-year terms from the 11 parishes and the city of Bridgetown.

The electoral system is based on adult suffrage over age 18. In the 1986 elections the DLP won 24 seats and the BLP three seats. The DLP held on to their majority until 1994, when the BLP, led by Owen Arthur, came to power. Arthur won his third election as prime minister in 2003.

POLITICAL PARTIES

There are five active political parties in Barbados. The largest and oldest is the Barbados Labour Party, founded in 1938 as a moderate social democratic party. The second oldest and second largest is the Democratic Labour Party, founded in 1955. A splinter group from the DLP formed the National Democratic Party in 1989. Two small left-wing organizations, the People's Progressive Movement and the Workers' Party of Barbados, were founded in 1979 and 1985, respectively.

LOCAL GOVERNMENT

For the purpose of local government the island is divided into 11 parishes, which, until 1969, physically corresponded to ecclesiastical parishes and were administered by rectors and church wardens.

In 1969 all local government services were taken over by the central government, and statutory bodies were established to administer some of these services.

LEGAL SYSTEM

Barbadian jurisprudence is based on English common law. However, the courts have no power of judicial review.

The highest court of the land is the Supreme Court of Judicature, with a chief justice and three puisne judges appointed by the governor-general on the recommendation of the prime minister and after consultation with the leader of the opposition. The Supreme Court sits as both a high court and a court of appeal. Appeals from the Supreme Court go to the Privy Council in the United Kingdom.

The country is divided into 11 magisterial districts, with 11 magistrate courts. Magistrates are appointed by the governor-general on the recommendation of the Judicial and Legal Service Commission, a constitutional body.

The Prisons Department is administered by a superintendent of prisons and consists of a penitentiary at Glendairy and two reformatories.

HUMAN RIGHTS

In terms of civil and political rights Barbados is ranked as a free country. Barbados is a free and democratic state of the British model. The government respects all the freedoms and rights granted to Barbadians in the constitution. There have been no complaints of human rights violations in recent years.

FOREIGN POLICY

Barbados has pursued an active but nonaligned posture in the Caribbean. Nevertheless, it has maintained close relations with the United States and was designated in early 1985 as the center of the Washington-funded Regional Security System. In 1998 the government announced that henceforth the primary focus of its relations would be with Asia and the Pacific.

DEFENSE

The island has no standing army. A citizens' militia, the Barbados Regiment, is composed of two companies with a combined strength of 600 volunteers. The Barbados Coast Guard began operations in 1974. It has two armed patrol boats. In the event of an emergency the United Kingdom is under contractual obligation to provide for the defense of the island, but such an emergency has not arisen.

ECONOMY

Barbados has a free-market economy in which the dominant sector is private. It has achieved the highest standard of living of all the small island states of the eastern Caribbean. Historically, the Barbadian economy had been dependent on sugarcane cultivation and related activities, but production in recent years has diversified into manufacturing and tourism. The start of the Port Charles Marina project in Speightstown helped the tourism industry continue to expand in 1996–2000. Offshore finance and informatics are important foreign exchange earners, and there is also a light manufacturing sector. The government continues its efforts to reduce the unacceptably high unemployment rate, encourage direct foreign investment, and privatize remaining state-owned enterprises.

An attempt at discovering offshore oil deposits ended in failure in 2002. Also that year Barbados was removed from the list of countries offering "harmful tax competition" when it agreed to tax reforms with the members of the Organization for Economic Cooperation and Development.

ENVIRONMENT

The single greatest environmental concern for Barbados is waste disposal. Its coastal waters are often at risk from the waste of ships and its aquifers are threatened by solid-waste dumping. Barbados is one of the world's most densely populated countries, and coastal erosion is a growing concern at many of the built-up resort areas.

LIVING CONDITIONS

Barbados has one of the highest standards of living in the Caribbean. Per capita income was \$16,400 in 2003, and the United Nations placed the island at the top of its quality-of-life list for developing countries for several years running in the 1990s. That rating takes into account earning power, education, and health. A full 75 percent of Barbadians own their own homes, usually wooden so-called chattel houses that can be taken apart and easily moved. A third of the population own their own cars and refrigerators, while two-thirds have land-based telephones. Life expectancy is accordingly higher in Barbados than most other developing countries, with a 2004 estimate of almost 72 years. The birth rate in 2004 was estimated at 1.65 per woman. Overpopulation is a problem in the countryside and cities alike; overcrowding can be found in the capital, Bridgetown, but without the squatter camps or shantytowns found in other developing countries.

HEALTH

Barbados has a national health-care system that provides free care to its citizens. However, as of 2004 there were still over 850 people per doctor, so Barbadians also rely on native medicine, with home remedies and herbal cures remaining popular. The infant mortality rate in 2005 was 12.5 deaths per 1,000 live births.

The national health system has managed to control high rates of infectious diseases. Currently, health issues are twofold. With an aging population, Barbados faces a problem in dealing with geriatric patients. Also, among the younger population, substance abuse and HIV have become new areas of concern. In 2003 there were an estimated 2,500 people living with HIV/AIDS.

FOOD AND NUTRITION

The Barbadian diet relies on a limited selection of food-stuffs but draws on a rich culinary tradition that is a mixture of West African, English, Spanish, and French cuisine. The island's African roots can be seen in the popular dish known as *cou-cou*, a pudding made of corn-meal and okra that is similar to the *foo-foo* of Africa. Salt cod is another staple food and often accompanies *cou-cou*. Marine life supplies much of the protein in the diet, and flying fish are abundant; this is served in a variety of ways, such as fried, steamed, or baked, and is highly spiced. Pork is another popular food, and the Barbadians have managed to find a use for almost all parts of the animal.

As in many developing countries of the world, rice is one of the cornerstones of the diet. Peas of all sorts are a favorite vegetable. Yams and sweet potatoes are also common, and drinks include fruit juices made from native fruits such as mangoes, guavas, tamarinds, and passion fruit. *Maubry* is a popular drink brewed from tree bark with sugar and spices. Coconuts provide not only juice but also a favorite sweet.

STATUS OF WOMEN

The 1992 Domestic Violence Law affords protection to women suffering violence and abuse. It applies equally to married persons and those in common-law relationships, the latter being in the vast majority. However, criminal law penalties for incest are less than those for rape or sexual

assault on nonfamily members. Women's rights are monitored by the National Organization of Women, which is affiliated with the Caribbean Women's Association.

WORK

With a labor force of 128,500, according to a 2001 estimate, Barbados has a strong middle class that includes workers in both blue-collar jobs and in managerial and professional positions. Women and men are about equally represented in the labor force, which is divided into three main elements: agriculture with 10 percent, industry with 15 percent, and the service sector with 75 percent of the workforce, according to a 1996 estimate. The unemployment rate in 2003 was 10.7 percent.

 Unemployment %: 10.7

EDUCATION

The national literacy rate is 97.4 percent. Education is free, universal, and compulsory for nine years, from ages five to 14. Schooling lasts 12 years, divided into six years of primary school, three years of lower secondary school, and three years of upper secondary school. The curriculum is based on the British model. No tuition fees are charged in secondary schools.

The academic year runs from September to July. The medium of instruction is English at all levels.

Vocational training is provided at the Barbados Technical Institute and the Samuel Jackson Prescod Polytechnic. Private schools account for 14 percent of total primary and secondary enrollment. Higher education is provided at the University of the West Indies.

SCIENCE AND TECHNOLOGY

Technology is not highly developed in Barbados, although the country does have several learned societies and research centers. Bellairs Research Institute, which is associated with McGill University in Montreal, focuses on the study of the tropical environment. The Cave Hill Campus of the University of the West Indies, in Bridgetown, has faculties in medicine and the social sciences. The Barbados Community College also offers training in science and technology. The Barbados Astronomical Society was founded in 1956.

MEDIA

The island's two main daily newspapers are the *Barbados Advocate* and the *Nation*. The press is free and unfettered. A vigorous opposition press flourishes in the absence of government controls.

There is no national news service. Reuters' Caribbean desk is in Bridgetown.

Barbados has a small book-publishing industry.

The Caribbean Broadcasting Corporation (CBC), a statutory body, operates two medium-wave transmitters and one FM transmitter. A privately owned commercial service, the Barbados Rediffusion Service, wires programs for 120 hours weekly to its nearly 26,000 subscribers. CBC's television service was introduced in 1964.

In 2003 there were an estimated 100,000 Internet users and 140,000 mobile-phone subscribers.

CULTURE

With a high literacy rate, Barbadians have a long literary history, both written and oral. In the 1940s and 1950s the Barbadian literary magazine *Bim* introduced the works of Caribbean writers such as Derek Wolcott. Writers from the island include the novelist George Lamming and the poet Kamau Braithwaite.

In the visual arts Barbados has a thriving community of painters and muralists whose African roots are evident in their choices of themes and colors. These artists find support from the heavy tourist trade as well as from the Barbados National Arts Council, which has helped to finance the arts since the 1950s.

Music on the island is influenced by Caribbean trends such as calypso, reggae, and steel band music. The *tuk* band is a local product and provides dance music for celebrations.

FOLKLORE AND MYTHOLOGY

Barbadian folklore is rich in the island's African roots. Folk beliefs include precautions against the return of a *duppy*, or ghost. Such preventive rituals include walking backwards into the house, hanging protective herbs in the windows and doorways, and sprinkling the ground with rum. Other folk beliefs deal with spirits of various sorts. The *bacoo* is a man in a bottle who decides a person's fate, "heartmen" offer up the hearts of children to the devil, and "Conrad" is a vengeful spirit who possesses people.

ENTERTAINMENT AND RECREATION

Television provides a major source of entertainment for Barbadians, with 80 percent of households owning one. For

men, a visit to the rum shop is a daily fixture. There is an estimated one rum shop per every 150 adults in Barbados.

With miles of fine beaches and mild temperatures year round, marine activities provide an ample source of recreation for Barbadians as well as tourists.

ETIQUETTE

Partly as a result of its British heritage, Barbados is noted for its politeness. With its dense population, the island's inhabitants have developed a sense of order but also of *laissez-faire* with respect to a neighbor's rights and activities.

FAMILY LIFE

As with so much else in Barbadian life, the family has been largely determined by history, in this case the legacy of slavery. Thus, family life and households are not necessarily based on the nuclear family of a legally married couple and their children. Another factor in this phenomenon is that many Barbadian men emigrate to find better employment, leaving a majority of women behind on the island.

Common-law marriages are typical and are legally recognized after five years; women tend to be the center of the household. Traditionally, a woman's security against old age was the children she raised; extended families would include a grandmother who helped care for the children when the mother went out to work. This traditional arrangement has changed somewhat along with the advent of better education and employment opportunities for women as well as better legal status for women *vis-à-vis* their relationships with males.

PERSONAL APPEARANCE

Those of African descent make up the vast majority of the population. People of mixed African and European descent as well as whites and East Indians are also present, but in very small numbers. Clothing is mainly Western in style and customarily casual. For business occasions suits and ties are typical. The members of the Apostolic Spiritual Baptist sect have their own dress: turbans and colorful robes.

SPORTS

Cricket is the national sport, and the country's great cricket players, such as Sir Frank Worrell, Sir Everton Weekes, Sir Clyde Walcott, and Sir Garfield Sobers, have become national heroes. A picture of Worrell is found on the country's five-dollar bill.

Other popular sports include rugby, softball, soccer, and an indigenous game called "road tennis," played with homemade equipment and a piece of wood serving for the net.

CHRONOLOGY

- 1966** Barbados gains independence, with Errol W. Barrow as prime minister.
- 1969** National government takes over all local parish administration.
- 1971** Barrow's Democratic Labour Party (DLP) wins in national elections.
- 1973** The Barbadian dollar is introduced, replacing the East Caribbean dollar.
- 1976** The Barbados Labour Party (BLP) wins an upset victory in national elections, gaining 17 seats in the House of Assembly; J. M. G. Adams is named prime minister; Frederick Smith is elected president of the DLP.
- 1978** Mercenary army led by Robert Denard is reported preparing for an invasion of the island.
- 1979** Britain announces formation of a special force to counter Cuban influence in the Barbados region.
- 1983** Barbados supports the U.S. invasion of Grenada.
- 1984** Governor-General Sir Deighton Lisle Ward dies and is succeeded in office by Sir Hugh Springer.
- 1985** Prime Minister Adams dies and is succeeded in office by H. Bernard St. John.
- 1986** The BLP loses the 1986 elections; Barrow returns as prime minister.
- 1987** Barrow dies and is succeeded as prime minister by Lloyd Erskine Sandiford.
- 1989** The National Democratic Party (NDP) is formed by members of the DLP.
- 1990** Dame Nita Barrow is named governor-general.
- 1991** General elections are held; Sandiford is elected to a five-year term as prime minister; the DLP wins 18 of 28 seats in the House of Assembly; the BLP wins the remaining 10.
- 1994** The BLP wins the general election and 19 of the 28 seats in the House of Assembly; Owen Arthur becomes prime minister.
- 1996** Sir Clifford Husbands is appointed governor-general.
- 1998** A constitutional commission undertaken by former foreign minister Sir Henry Fords recommends that Barbados should remain within the British Commonwealth, replace the British monarch with a Barbadian president as head of state, and establish a Caribbean or Barbadian court of appeals.
- 2000** The Organization for Economic Cooperation and Development (OECD) threatens trade sanctions on Barbados and 34 other territories for acting as tax havens.
- 2001** The 12 Caribbean Community (CariCom) countries, including Barbados, sever legal ties be-

tween the region and Britain and establish their own regional supreme court.

- 2002** Explorative drilling for offshore oil reserves is halted after limited deposits are found. OECD removes the country from its "harmful tax competition" list.
- 2003** Owen Arthur wins a third consecutive term as prime minister and promises to convert the country's monarchical system to a republican one.
- 2004** Severe flooding affects much of the island in November after three days of torrential rains.

Belarusian rubel

NATIONAL FLAG

Red horizontal band (top) and green horizontal band one-half of the width of the red band; a vertical stripe of white on the hoist side bears in red the Belarusian national ornament

NATIONAL EMBLEM

Long sun rays extend from a sun rising over the northern hemisphere of a globe; behind the sun rays is the outline of Belarus. Encircling these elements are grain and flowers wrapped together by a banner that resembles the national flag and at the top a red star.

NATIONAL ANTHEM

"We, the Belarusians"

NATIONAL HOLIDAY

July 3 (Independence Day)

DATE OF INDEPENDENCE

August 25, 1991

DATE OF CONSTITUTION

November 17, 1996

GEOGRAPHICAL FEATURES

Situated along the Western Dvina and Dniepr rivers, Belarus is the smallest of the three Slavic successor states of the former Soviet Union. Completely landlocked, the country shares borders with Latvia, 141 km (87 mi); Lithuania, 502 km (312 mi); Poland, 407 km (253 mi); Russia, 959 km (595 mi), and Ukraine, 891 km (553 mi). Its geography consists largely of flat lowlands, with a ridge of higher ground running from the northeast to the southwest bisecting the country. This ridge contains the country's highest point, a hill named Dzerzhinskaya Gora (346 m, or 1,135 ft, above sea level.) While the northern part of the country is covered in forests, the southern portion is a combination of marshes, swamps, and forests including a large forested swamp called the Pripyat

Marshes. Along the southwestern border with Poland, the two countries jointly administer a nature preserve in the Belovezha Forest (Bialowieza in Polish).

Mahilyow	365,102
Vitsyebsk	342,381

CLIMATE AND WEATHER

The relatively monolithic geography gives the entire country a similar climate. Belarus has cold winters and warm summers, with temperatures ranging from about 22°F (-6°C) in January, the coldest month, to about 65°F (18°C) in July, the hottest. Annual precipitation ranges from 20 to 26 in (50 to 66 cm).

Climate and Weather

Mean Temperature
 July: 65°F
 January: 22°F
 Average Rainfall: 20.5 in to 26.6 in

FLORA AND FAUNA

Mixed-growth forests of pine, spruce, oak, birch, alder, and ash trees cover one-third of Belarus. Here can be found some 70 species of mammals, including squirrels, deer, rabbits, wild pigs, wolves, brown bears, and various snakes and vipers. The forests are also home to 280 species of birds, including doves, kestrels, wrens, bullfinches, and woodpeckers.

In the south of the country there is a vast tract of marsh and swamp, the Pripyat Marshes, which is the last virgin marsh landscape in Europe. This is the habitat of an abundant array of animals, including mink, muskrats, turtles, ducks, frogs, and breeding birds, such as the reed warbler. The marshland has steadily been drained, however, over the past three decades, to make way for agricultural land, thus threatening this delicate ecosystem. The country has a sanctuary called the Belovezhskaya Pushcha Reserve for the virtually extinct European bison.

POPULATION

 Marriage Rate per 1,000: 6.7
 Divorce Rate per 1,000: 3.8
 Average Size of Households: 3.2
 Induced Abortions: 89,895

ETHNIC COMPOSITION

The most dominant ethnic group in the country is the Belarusians, a Slavic people who can trace their inhabitation of the area back nearly 1,500 years. Belarusians make up

nearly 78 percent of the population. Slightly more than 13 percent of the population is Russian by nationality. The country also has small numbers of Poles (4 percent) and Ukrainians (3 percent).

LANGUAGES

The native and official language of the country is Belarusian, a Slavic language that closely resembles both Russian and Ukrainian. Like these two languages, Belarusian uses the Cyrillic alphabet. In addition to Belarusian, Russian is also an official language.

RELIGIONS

Most Belarusians are Eastern Orthodox Christians who belong to either the Russian Orthodox Church or the Belarusian Autocephalous Orthodox Church, a self-governing Orthodox church. Because the Belarusian Autocephalous Orthodox Church encouraged independence from the Soviet Union, it was banned from 1920 until 1990, except for a brief time in the 1940s. The second-largest religious group is the Belarusian Catholic Church. These followers are also called Greek Catholics or Uniates because they follow the rituals of the Eastern Orthodox Church but accept the authority of the Roman pontiff. These two groups account for more than 80 percent of the population. In addition to these two groups there are small numbers of Roman Catholics, Protestants, Jews, and Muslims. A 2002 law restricted religious freedom in the country.

Religious Affiliations

Eastern Orthodox	8,240,000
Other	2,060,000

HISTORICAL BACKGROUND

The history of the Belarus people begins when Slavic tribes moved into the area during the 500s. Belarusians, like the Ukrainians and Russians, constituted a portion of the Kievan Rus state that was formed during the 800s. For two centuries Belarus formed the northwestern limits of the state that flourished as a major European political, economic, and military power. By the 13th century the Kievan Rus state was falling apart owing to invasions from the east by Mongol hordes and to threats from the growing Germanic tribes to the west. Belarus sought protection by forming a military alliance with its western neighbor, Lithuania. Eventually, the alliance led to Belarus's becoming part of Lithuania. In 1386, when the grand duke of Lithuania married the queen of Poland, those

two countries began a process of merging into one country; in 1569 Lithuania and its protectorate, Belarus, were subsumed by Poland. For more than 200 years Belarus remained part of the Polish empire, until the empire was divided among Russia, Prussia, and Austria at the end of the 18th century. Russia received eastern Poland, which included Belarus. For nearly two centuries the Russians practiced a policy of Russification that promoted Russian culture and language over the native cultures present in its empire.

When the Bolsheviks overthrew the Russian czar in 1917, the Belarusians used the opportunity to set up an independent state called the Belarusian National Republic in 1918. However, the Communists invaded later that same year and established a state they named Byelorussia (meaning White Russia). In January 1919 the Communists officially declared the state the Belarusian Soviet Socialist Republic. The Communists continued the policy of Russification begun under the czar. In 1939 the Soviets also gained control of western Belarus, which had been under the control of the Polish state since 1919. During World War II much of Belarus was occupied by Nazi Germany and formed part of the famed eastern front. The toll on the country was great, with the city of Minsk meeting with near-complete destruction. With the defeat of Nazi Germany by Russian and Allied forces, Belarus returned to the control of the Soviet Union, where it remained until 1990. Under Soviet rule Belarus was converted from a largely agricultural republic to an industrial one, although Stalin's collectivization activities were resisted by the Belarusians. The Soviets also encouraged the migration of Russians into Belarus. Belarusian was replaced by Russian as the official language of the republic. The relative prosperity of Belarus under the Soviet system made it a somewhat passive player in the disintegration of the USSR.

In 1990 the Belarusian parliament declared that the laws of the republic took precedence over those passed by the Soviet Union. In August 1991, still as a part of the Soviet Union, the country failed to overthrow Mikhail Gorbachev. Nevertheless, along with several other republics Belarus declared its independence from the Soviet Union. In September it officially changed its name from Byelorussia to Belarus. In December it joined the Commonwealth of Independent States.

Independence did not prove to be what many had hoped for. The country's leaders were inexperienced in dealing with economic issues, and their conversion to a market-driven economy was not nearly as fast as anticipated by both Belarusians and Westerners. As international aid began to dry up, Belarus sought to form closer ties with the former Soviet republics, especially Russia. Aleksandr Lukashenko, who became president in 1994, worked for the new constitution that was adopted in 1996 and that increased his powers. In addition to adopting the new constitution, the people approved an extension of

Lukashenko's term to 2001. In 1997 Lukashenko signed a charter with Russia's Boris Yeltsin calling for the merger of the two nations. In protest to the growing authoritarian power of Lukashenko, the United States cut off aid to Belarus. Lukashenko was again reelected president in 2001. However, the elections were called undemocratic by both opposition leaders and international observers.

Lukashenko has continued to hold an iron grip on Belarus, arresting opposition politicians and closing down newspapers that publish stories contrary to the rules of the country's repressive press laws. In 2002 the government passed a new law containing repressive and restrictive elements with respect to the practice of religion. In 2003 the government suppressed trade-union activity, and the International Labor Organization included Belarus's actions on its list of union violations for the second straight year. In 2004 Lukashenko won a referendum allowing him to run for a third term. International observers decried the election as far from fair. Opposition leaders protesting the vote were arrested in October 2004 in Minsk.

LIST OF MODERN RULERS

- 1991–94** Stanislav Stanislavovich Shushkevich (chairman of the Supreme Council)
- 1994** Vyachaslau Mikalayevich Kuznyatsou (deputy, acting chairman of the Supreme Council)
- 1994** Myechyslau Ivanavich Hryb (chairman of the Supreme Council)
- 1994–** Aleksandr Grigoryevich Lukashenko (president)

CONSTITUTION

Under the constitution of Belarus, which became effective in 1996, the president is head of state and has broad powers over the government. The president appoints a prime minister, who heads the Council of Ministers. Since the election of Lukashenko, the country has been largely subservient to his will. He has sought closer ties with Russia and has gone so far as to agree in principle to a merger of the two countries, though as of 2004 negotiations for the proposed union remained stalled. The country's legislature consists of two houses, an upper house called the Council of the Republic and a lower house called the House of Representatives. The Council of the Republic has 64 members, the House of Representatives 110.

PARLIAMENT

The Belarusian parliament—the National Assembly—comprises two houses: the House of Representatives, composed of 110 deputies, and the Supreme House, the

Council of the Republic, composed of 64 representatives. The deputies are elected to the House of Representatives directly by the voters. Any citizen of the Republic of Belarus who has reached the age of 21 may become a deputy of the House of Representatives. The Council of the Republic is the house of territorial representation. Any citizen of the Republic of Belarus who has reached the age of 30 and who has been a resident in a given region (oblast) or the city of Minsk for no less than five years may become a member of the Council of the Republic from that region. Eight members of the council are appointed by the president of the Republic of Belarus, while the rest are elected at the sittings of the deputies of the local Soviets of Deputies: eight from each of the six regions of the Republic and the city of Minsk.

POLITICAL PARTIES

There are nearly a dozen political parties in Belarus. The United Civic Party of Belarus was formed when the Democratic and Civil parties merged. It has strong support among intellectuals and is committed to democracy while downplaying nationalism. The Belarusian Social Democratic Party is modeled after the German Social Democratic Party. The Belarusian Peasant Party is an agrarian party that favors private farming. The Belarusian Popular Front is an umbrella group that contains members who generally support democracy and nationalism.

Despite the plethora of political parties, Belarus continues to be very much a one-party state. The Lukashenko government has consistently dealt with its critics through force and arrests.

LOCAL GOVERNMENT

Belarus is divided into six provinces, each named for its capital: Brest, Gomel, Grodno, Minsk, Mahilyow, and Vitebsk. A council elected by the voters governs each province. The president, however, appoints regional executives, who supervise and appoint local executives. The appointed executives control the regional and local councils.

LEGAL SYSTEM

The government of Belarus has established an independent judicial system that goes to great lengths to protect the appearance of propriety. The courts administer justice on the basis of the constitution, the laws, and other enforceable enactments such as presidential declarations. The trials of cases in all courts are stipulated to be open. The hearing of cases in closed-court sessions are permitted only in the instances specified by the law and in ac-

cordance with all the rules of legal procedure. Justice is administered on the basis of the adversarial proceedings and the equality of the parties involved in the trial. The rulings of courts are legally binding for all citizens and officials. Parties have the right to appeal rulings, sentences, and other judicial decisions. The Constitutional Court of the Republic of Belarus consists of 12 judges from among highly qualified specialists in the field of law, who as a rule have scientific degrees.

HUMAN RIGHTS

Belarus has not had an easy transition to the Western principles of freedom and human rights. Lukashenko's government continues to use Soviet-style repression in violations of a broad spectrum of basic civil and political rights. The government has censored the press and closed the only remaining independent press. There have been threats made against government critics. Restrictions on political freedoms have been codified. Demonstrators have been arrested. Academic freedom is nonexistent, as discussion and research of controversial topics are forbidden. The government has hounded or disbanded opposition political parties and nongovernmental organizations and has stripped independent lawyers of their accreditation. State university authorities issue reprimands and warnings to politically active lecturers, independent historians, and other academics.

FOREIGN POLICY

Belarus is among the most pro-Russian of the former republics of the Soviet Union. In 1995 Belarus and Russia signed a friendship and cooperation treaty providing for bilateral reintegration. Among other stipulations, the pact provided for the eventual creation of an economic and monetary union. The process was continued in 1996 through the far-reaching Treaty on the Formation of the Community of Sovereign Republics (CSR), which called for military and political cooperation as well as economic union and the establishment of a CSR Supreme Council and a CSR parliamentary assembly consisting of an equal number of Belarusian and Russian representatives. The Charter of the Union was ratified in 1997, and citizens of both nations were declared CSR citizens. However, as of 2003 there had been no recent progress in implementing the provisions of the charter, beyond the writing of a draft Constitutional Act for the Russian-Belarus Union. Differences over tax policy, customs codes, foreign trade, terms for a common currency, and constitutional issues make such a union increasingly unlikely and have partially soured relations between the two countries.

DEFENSE

Belarusian military activities are coordinated with Russia under a 1993 treaty. The entire nuclear arsenal of the country was transferred to Russia in 1996. Belarusian males who have reached the age of 18 are subject to conscription, which lasts 18 months. The army has ground forces that number approximately 50,000 members and are organized under the ministry of defense. The air force has about 25,000 members and 200 combat aircraft of Soviet design. Being a landlocked country, Belarus has no navy. In 2004 Belarus began to downsize its military by about 30 percent.

ECONOMY

Belarus has seen little structural reform since 1995, when President Lukashenko launched the country on the path of "market socialism." In keeping with this policy, Lukashenko reimposed administrative controls over prices and currency exchange rates and expanded the state's right to intervene in the management of private enterprise. In addition to the burdens imposed by high inflation, businesses have been subject to pressure on the part of central and local governments, including arbitrary changes in regulations, numerous rigorous inspections, and retroactive application of new business regulations prohibiting practices that had been legal. Additional economic problems include consecutive bad harvests in 1998 and 1999 and persistent trade deficits. Close relations with Russia, possibly leading to reunion, color the pattern of economic developments. For the time being Belarus remains self-isolated from the West and its open-market economies, though the United States and some European countries encourage investment in the country.

Belarus's economy in 2004 posted 6.4 percent growth. The country remains hampered by 17.4 percent inflation, persistent trade deficits, and ongoing rocky relations with Russia.

ENVIRONMENT

The biggest ongoing environmental problem facing Belarus is continuing contamination from the fallout from the 1986 nuclear reactor at Chernobyl in northern Ukraine. About 70 percent of the nuclear fallout from the plant landed on Belarusian territory, and about 20 percent of the land remains contaminated. However, government restrictions on residence and the use of contaminated land are not strictly enforced, and the government itself announced plans in 2004 to increase agricultural production in the contaminated regions. Additionally, as an industrial state Belarus suffers from air- and water-quality issues, as much of the economic industrialization in the country was done when environmental factors were not taken into consideration.

LIVING CONDITIONS

Many of the current problems with respect to living conditions in Belarus are a result of its 20th-century history. During World War II almost three-quarters of the housing in cities and villages was destroyed. After the war, and with Soviet occupation, there were massive and hasty rebuilding projects. Huge housing estates were thrown up, most of which are now in serious disrepair. The housing situation was exacerbated by the Chernobyl disaster of 1986, when tens of thousands were displaced from the contaminated regions. Small apartments are the rule, for those lucky enough not to have to share accommodations. Buildings tend to be several stories high and are built of

prefabricated materials. Another holdover of the Soviet era is the reliance on public sector building. Privatization of the housing industry is still underway. In 1993 about half of such housing was in private hands.

Another indication of the living conditions in the country is the life expectancy. For 2004 it was 68.6 years, low for a developed country. Despite independence from the Soviets, the country functions in many ways along Soviet lines because of the repressive nature of the Lukashenko regime. Scarcity in consumer goods, for example, is still typical.

With its flat terrain, Belarus is well suited for mass transit. The country has an extensive railroad system, with Minsk as an important railroad junction connecting the Baltic states with Ukraine and Moscow with Warsaw. Cars are very much a secondary mode of transportation for Belarusians, and highway infrastructure outside of urban areas tends to be in disrepair. This compounds the problem of shortages, as small farmers have difficulties getting their goods to market.

HEALTH

Like most services in Belarus, the health-care system is in need of repair and an infusion of funds. A four-tier system cares for the people, which includes a combination of hospitals, polyclinics, smaller regional care centers, and walk-in clinics. Two decades after the fact, the incident at Chernobyl still overwhelms the health-care system. An estimated 2.2 million Belarusians were directly contaminated by the radioactive fallout of that disaster, a legacy that has brought about high rates of cancer, birth defects, and other long-term problems. Exposure to the radiation damaged the immune systems of many, causing a condition known as "Chernobyl AIDS," wherein individuals are more susceptible to diseases. Other leading causes of death are cardiovascular disease and respiratory disease. In 2001 there were an estimated 1,000 HIV/AIDS deaths and 15,000 people living with HIV/AIDS.

The infant mortality rate in Belarus is high, at 13.4 deaths per 1,000 live births in 2005, with a birth rate of 10.8 per 1,000 in the same year. Immunization rates for measles, polio, tuberculosis, diphtheria, pertussis, and tetanus are over 99 percent for children. As of 2004 there were an estimated 4.5 doctors and 12.6 hospital beds per 1,000 people. Public health expenditure as a fraction of gross domestic product (GDP) was 4.7 percent in 2002, while private expenditure was 1.7 percent of GDP.

FOOD AND NUTRITION

Like Eskimos with their plethora of names for varieties of snow, Belarusians boast of being able to prepare the common potato in over 100 different ways. They may be baked in the embers of a fire, then sprinkled with salt and eaten with butter. They may be grated and made into dumplings, which are stuffed with mushrooms or vegetables and baked in the oven. They may be formed into pancakes called *dranniki*, which are fried with mushrooms and served with sour cream.

Other staples of the Belarusian diet include beets, cabbage, and pork; fowl and venison are also popular meats. As cooking was traditionally done on hot clay stoves, many dishes are still baked or stewed. A traditional dish is *kotleta po krestyansky*: pork cutlets served in mushroom sauce. *Machanka* is a sauce served with various meat and pancake dishes. Freshwater fish such as perch and crayfish are plentiful and served in many restaurants. A common soup in Belarus is *shtchi*. Made from sauerkraut, potatoes, and fried onions, it is usually served with sour cream. *Kaubasy* (sausages), pork chops, and other meats are often smoked.

Favorite fruits include plums, pears, and apples. *Byarozovy sok*, or birch juice, is a popular drink. Other common drinks are *kvas*, which is made from malt, flour, sugar, mint, and fruit, and *compot*, made from boiling dried fruit with sugar. Though white bread is eaten, rye bread tends to be the favorite.

Breakfast is a light meal, with lunch, at midday, and dinner, at about eight, much larger meals.

STATUS OF WOMEN

Belarus made a considerable step in the 1990s to improve the status of women. The government adopted

the Women of the Republic of Belarus program and the National Plan of Action to Improve the Status of Women for 1996–2000 and established the Gender Information and Policy Center. Parliament passed laws aimed at defending women's rights. Women are almost completely unrepresented in the government and parliament. In Lukashenko's administration there is only one female minister along with 10 deputy ministers. By 2000 women accounted for only about 5 percent of members of the House of Representatives of the Belarusian National Assembly. On the other hand, women made up 31 percent of members of the Council of the Republic, the upper house of the National Assembly. In 2004 women constituted 29 percent of both houses in Belarus, placing it well above average worldwide in terms of equal gender empowerment.

 Women's Share of Wage Employment Non-agricultural %: 55.9

WORK

An estimate of the labor force in 2003 put the number of workers at 4.3 million. Of these, approximately 14 percent were engaged in agriculture, producing grain, potatoes, vegetables, sugar beets, flax, beef, and milk. The service sector accounted for about 51 percent of employment, while industry accounted for the remaining 35 percent. Workers engaged in industry manufactured metal-cutting machine tools, tractors, trucks, earthmovers, motorcycles, television sets, chemical fibers, fertilizer, textiles, radios, and refrigerators.

While the official government unemployment rate in 2004 was 2 percent, underemployment remains a serious problem in the country. Instead of reducing the workforce, business and industry tend to shorten workweeks or reduce wages. The government still provides for social benefits, such as medical insurance, day care, and housing, which makes workers reluctant to leave jobs with benefits even if they are underpaid.

The Belarus constitution provides for the rights of workers to unionize. However, the Lukashenko government has not only discouraged but in some cases has even banned such union activities, including strikes. The minimum working age is 16, and the workweek is 40 hours. A minimum wage is in effect; in 2003, despite depressed business conditions, the government raised the minimum wage to \$100 per month.

EDUCATION

The national educational system of Belarus consists of preschool upbringing and different levels of subsequent education (general, secondary, out-of-school, professional and technical, special secondary, higher education, training of scientists and lecturers, and self-education for grown-ups). Primary and secondary education is compulsory. Children from the ages of seven to 16 are provided with free public education.

The state maintains a number of universities and vocational centers. There were 55 higher educational institutions in Belarus as of 1998, 13 private ones among them. The largest state higher educational institutions are the Belarusian University, the University of Informatics and Radio-Electronics, and economic, technological, agricultural, technological, and pedagogical universities. All of them are located in Minsk.

In the 1990s two-thirds of schools were using Belarusian as the language of instruction. When Belarus was part of the Soviet Union, education was free of charge. Since independence private institutions, as well as paid programs within state institutions, have been established. In 1999 about 83 percent of students were studying at public-financed institutions, whereas 16.7 percent were paying tuition fees. There were 15 nonstate institutions with a total of 36,500 students. The literacy rate was 99.6 percent as of 2003.

SCIENCE AND TECHNOLOGY

In 2002 research and development (R&D) expenditure as a percentage of GDP was 0.62 percent. That year there were 88 patents granted and 1,865 persons involved in R&D per million people; over 70 percent of researchers had a higher education. The greatest proportion of R&D was in the fields of health—responding to the continuing consequences of the Chernobyl nuclear disaster—environmental protection, agricultural research, engineering, and information technology.

Minsk is the home of several scientific institutions. The Academy of Sciences of Belarus has departments of physics, mathematics, informatics, engineering, chemical science, geological science, biological science, and medical-biological science and operates almost 300 research institutes. Minsk is also home to the Belarusian State University, with faculties of applied mathematics, biology, chemistry, geography, mechanics and mathematics, physics, and radiophysics and electronics, and the Belarusian State Technological University, with chemistry technology and engineering, forestry, and organic substances technology studies.

MEDIA

There used to be an active newspaper industry in Belarus, with more than 220 papers in print in 1989. This number declined as the government of Lukashenko cracked down on the independent and opposition presses. Despite this crackdown, there exists a circulation of more than 1.5 million papers daily in both Belarusian and other languages, largely Russian. One of the banned independent newspapers is the popular daily *Belorusskaya delovaya gazeta*.

Both radio and television are controlled by the government. Belarus Radio broadcasts two national programs. It also shares a relay with Radio Moscow. Belarus Television broadcasts a single color channel.

There are fair numbers of public libraries, theaters, clubs, and museums, including the National Arts Museum, the Belarusian State Museum of the Great Patriotic War History, the Museum of the Brest Hero-Fortress, and the museums of famous writers (including Y. Kolas, Y. Kupala, and M. Bogdanovich).

The media remain under the thumb of the government, which passed a new press law in secret in 2003 that aims to further curtail press freedom.

CULTURE

Belarus has a long and rich cultural history. In literature, language, and writing a cultural high-water mark was reached in the 16th century with what is known as the Belarusian Renaissance, when the country was part of the Grand Duchy of Lithuania. Scholars, philosophers, and poets were all responsible for helping to create the modern Belarusian language. The earliest and one of the most important instigators of this renaissance was Francishak Skaryna, who printed the first book in Belarusian in 1517. Skaryna's Bible established the first printing press in the region. Vasil' Cyapinski was another scholar and philosopher whose translation and publication of the New Testament in 1570 was one of the cornerstones of Belarusian language development. The philosopher, teacher, publisher, writer, and social activist Symon Budny was yet another central figure of the Belarusian Renaissance. Much of the intellectual activity of the time was centered on Polacak, Turau, and Smolensk. Belarusian became the official language of the Grand Duchy of Lithuania, whose codes of law were written in that language. Many historical, legal, and literary documents in Belarusian are still extant from the 16th and 17th centuries. Among well-known writers of the 19th and 20th centuries are Maksim Bahdanovich, Janka Kupala, Jakub Kolas, Alojza Pashkevich (Ciotka), Ryhor Baradulin, Janka Bryl, and Vasil Bykau.

Music is another rich cultural Belarusian institution, with roots back to the 15th century for chants, called *znamenny*, which found their way into liturgical use. By the 17th century, part-singing was popular both for religious purposes and for folksongs. Folk instruments include the horn, made from actual cattle or ox horn without holes, drums, pipes, the *duda*, or bagpipe, and the *cymbaly*, or hammer dulcimer. Folk music was often used to celebrate seasonal and life rhythms, such as the coming of spring, the gathering of crops, the coming of winter, religious holidays, lullabies, and laments.

Folk dancing also expresses the rhythm of the seasons and life. Of over 100 identified dances some of the most popular are the *bulba*, *lanok*, and *ruchniki*, which are work-related; the *miacelica* and *charot*, which deal with nature; and the *liavonicha*, *mikita*, and *yurachka*, which tell stories or express emotion.

The cultural life of contemporary Belarus is no less rich. The country is famous for its opera and ballet, with theaters such as the Opera and Ballet Theater in Minsk. Belarus is also well known for musical comedy, which is held at the Theater of Musical Comedy Minsk. Many orchestral groups perform in the cities and towns. Drama is another high art form in Belarus. Minsk is home to the Janka Kupala Belarusian State Academic Theater. Other major theaters include the Gorky Russian Theater in Babruysk and the Jakub Kolas Belarusian State Academic Theater in Minsk. Numerous museums and concert halls are found in the major urban settings.

FOLKLORE AND MYTHOLOGY

Pagan myths and folklore have retained their strength through millennia of Christianization. Strong remnants of this ancient belief system are found in the festivals Kolyady and Kupalie. Kolyady is a winter solstice festival, celebrating the New Year according to the old calendar (prior to 1917) on the night of January 13–14. Traditionally, some people dress as animals or fictional creatures and then visit house-to-house singing Kolyady songs. Kupalie is a midsummer festival, celebrated on the night of July 6. Eternal youth is granted to the lucky one who finds an unfolding fern at midnight.

From Christian times comes the tragic myth of Rahnieda, the daughter of a Belarusian prince whose fate became bound up in dynastic pursuits. Captured and forced to become the wife of Prince Vladimir, she loved instead his brother, Yaropolk. But Vladimir needed her to consolidate his Kievan empire. Vladimir got his wish and his bride, killing his own brother in the process. When Rahnieda attempted to take revenge on him, she was banished, became a nun, and lived until age 100. Numerous tales exist of this heartbroken princess who still roams her native land, helping those in trouble.

Fairy tales are also a feature of Belarusian folklore, many of which have characters similar to other Slavic countries. Some popular characters, common to many Slavic countries, are Koschey Besmyarotny, an immortal, Zmei Garynych, a three-headed dragon, and Baba Yaga, a witch.

ENTERTAINMENT AND RECREATION

Communal singing has long been a favorite recreational activity for the Belarusians. Up until the 19th century youths would congregate during the long nights of summer to sing; during the winter the hearth became the seat of such sing-fests. These traditional ways have, of course, long been displaced by the more modern cinemas and dance clubs. The first Belarusian movie was produced in 1926, and the movie industry still provides a major source of entertainment, as do concert halls and theaters in the main cities. Contemporary Belarusians partake of many of the same forms of entertainment and recreation as their European neighbors.

Belarusians traditionally enjoyed the recreational facilities that their waterways afforded. However irrigation projects and high levels of pollution during the Soviet era destroyed much of the sport fishing in the country. Rowing is still a popular activity, as are amateur sports such as soccer and hockey.

ETIQUETTE

Much of the etiquette system of Belarus is similar to that of Russia and Lithuania, though Belarusians do not use patronymics. A handshake is usual as a greeting; hugs are typical for close friends and relatives. Table manners are relatively loose. It is customary to eat in the continental manner, with both fork and knife. Punctuality is important. Guests are often asked to remove their shoes when entering someone's home. Maintaining eye contact is not considered rude, and in fact an old tradition about helping the less fortunate prevents Belarusians from avoiding eye contact with those who appear destitute.

FAMILY LIFE

Though once agricultural, Belarus is now a distinctly urban country, with 70 percent of the population living in towns and cities and in small apartments. Thus, small families are the norm in Belarus, yet connections between the generations are still strong. Some married couples must live with their parents while they wait for their own apartments. When space permits, grandparents often live with their children and help to take care of their grandchildren.

Weddings are important celebrations. Many take two days—one for the official wedding at the registry office and another for a religious service and party. During the Soviet era it was typical for both parents in the family to work. Since independence, and with the scarcity of jobs in Belarus's troubled economy, some men have been encouraging women to stay at home. This situation worries

women's groups, who feel a new system of inequality is developing. Many in Belarus are also concerned about the country's falling birth rate. According to a 2004 estimate the fertility rate was 1.4 children per woman.

With all the stresses of modern Belarus society, the divorce rate is rising. Because custody of the children is usually awarded to the mother, there has been an increase in the number of households headed by single mothers.

PERSONAL APPEARANCE

Most Belarusians are ethnically Slavic. Dress is modern, though more conservative than in Western Europe. Traditional folk costumes are worn mainly for festivals or special occasions. However, in the south of the country the national dress is still popular for everyday use.

Embroidery plays a dominant role in both male and female folk attire. Men wear embroidered white shirts with matching white linen pants. A wide and colorfully embroidered sash may be worn at the waist. Black boots or sandals are also part of the outfit, with a wide straw hat for summers or a sheepskin coat or vest in winter. Similarly, women wear loose white dresses or embroidered blouses over flounced skirts. Both outfits are accompanied by embroidered aprons and kerchiefs.

SPORTS

Competitive sports include soccer and ice hockey. Belarusians enjoy both watching and participating in these on the amateur level. Participation in the Olympics has become increasingly important over the years, with Belarusians excelling in gymnastics and acrobatics. Rowing is another popular sport in the country, as is basketball.

CHRONOLOGY

- 1944** The Soviet Red Army drives Nazi forces out of Belarus.
- 1945** Belarus is reunited with the Soviet Union and admitted as a founding member of the United Nations.
- 1960s–70s** The Soviet government closes Belarusian language schools and emphasizes the Russian language.
- 1986** An explosion at the nuclear power station at Chernobyl, in the neighboring Soviet state of Ukraine, contaminates 20 percent of Belarus's territory and a large portion of its population with high-radiation fallout; Mikhail Gorbachev initiates his programs of glasnost and perestroika.
- 1988** The Belarusian Popular Front (BPS) is formed with the goals of restoring Belar-

- 1990** The Byelorussia parliament declares that the laws of the republic take precedence over those passed by the Soviet Union.
- 1991** On August 19 the BSSR is renamed the Republic of Belarus; seven days later the Supreme Soviet of the BSSR suspends the Communist Party of Belarus.
- 1994** In March the Supreme Soviet adopts a constitution that declares Belarus a unitary, democratic, social-oriented, legal state. In July Aleksandr Lukashenko is elected as the first president of Belarus.
- 1996** The 1994 constitution is amended to extend Lukashenko's term until 2001.
- 1997** The Treaty on Union of Belarus and Russia, calling for the merger of Belarus with Russia, is signed; the United States cuts off aid to Belarus because of the authoritarian nature of the government.
- 1998** The United States and all 15 European Union countries ban officials from Belarus.
- 2000** Parliamentary elections are criticized by election observers as undemocratic. Turnout in some constituencies is so low that new elections will be necessary.
- 2001** Lukashenko is reelected to a second term. Opposition leaders and international electoral observers allege irregularities.
- 2002** Russian President Vladimir Putin and Lukashenko hold several unsuccessful talks on a proposed Russian-Belarus Union.
- 2003** Over one hundred journalists stage a Day of Closed Newspapers on September 19 to protest government suppression of a free media and to stress their rights. The government further clamps down on human rights groups and opposition groups such as For a Better Life. The business newspaper *Belorusskaya delovaya gazeta* is closed on May 28 for breaking government press laws.
- 2004** In an October 17 referendum Lukashenko wins the right to run for a third term, contrary to the country's constitution. European Union leaders decry the questionable election results as a "deplorable return to the methods of the Soviet Union." Belarus opposition leaders protesting the referendum are arrested on October 21 in Minsk. Their brutal treatment draws further protests from abroad.

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Belgium (Koninkrijk België; Royaume de Belgique; Königreich Belgien)

ABBREVIATION

BE

CAPITAL

Brussels

HEAD OF STATE

King Albert II (from 1993)

HEAD OF GOVERNMENT

Prime Minister Guy Verhofstadt (from 1999)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

10,364,388 (2005)

AREA

30,528 sq km (11,787 sq mi)

MAJOR ETHNIC GROUPS

Flemings, Walloons

LANGUAGES

Dutch, French, German

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Euro

NATIONAL FLAG

Tricolor of black, yellow, and red vertical stripes

NATIONAL EMBLEM

A lion rampant on a shield forms the central design of the coat of arms. The lion is in gold emblazoned on a black field. Encircling the shield is the ornate collar of the Order of Leopold. Behind it, golden scepters form a saltire or diagonal cross. A royal gold and red crown tops the design, and a gold and white ribbon decorates it. The national motto in gold letters on a red ribbon at the base appears in both French and Dutch, the English translation of which is "Union provides strength."

NATIONAL ANTHEM

"La Brabançonne" (The song of Brabant)

NATIONAL HOLIDAYS

January 1 (New Year's Day), July 21 (National Independence Day), November 15 (National Dynasty Day), Labor Day, all major Catholic festivals

DATE OF INDEPENDENCE

July 21, 1831

DATE OF CONSTITUTION

February 7, 1831; last revised June 10, 2004

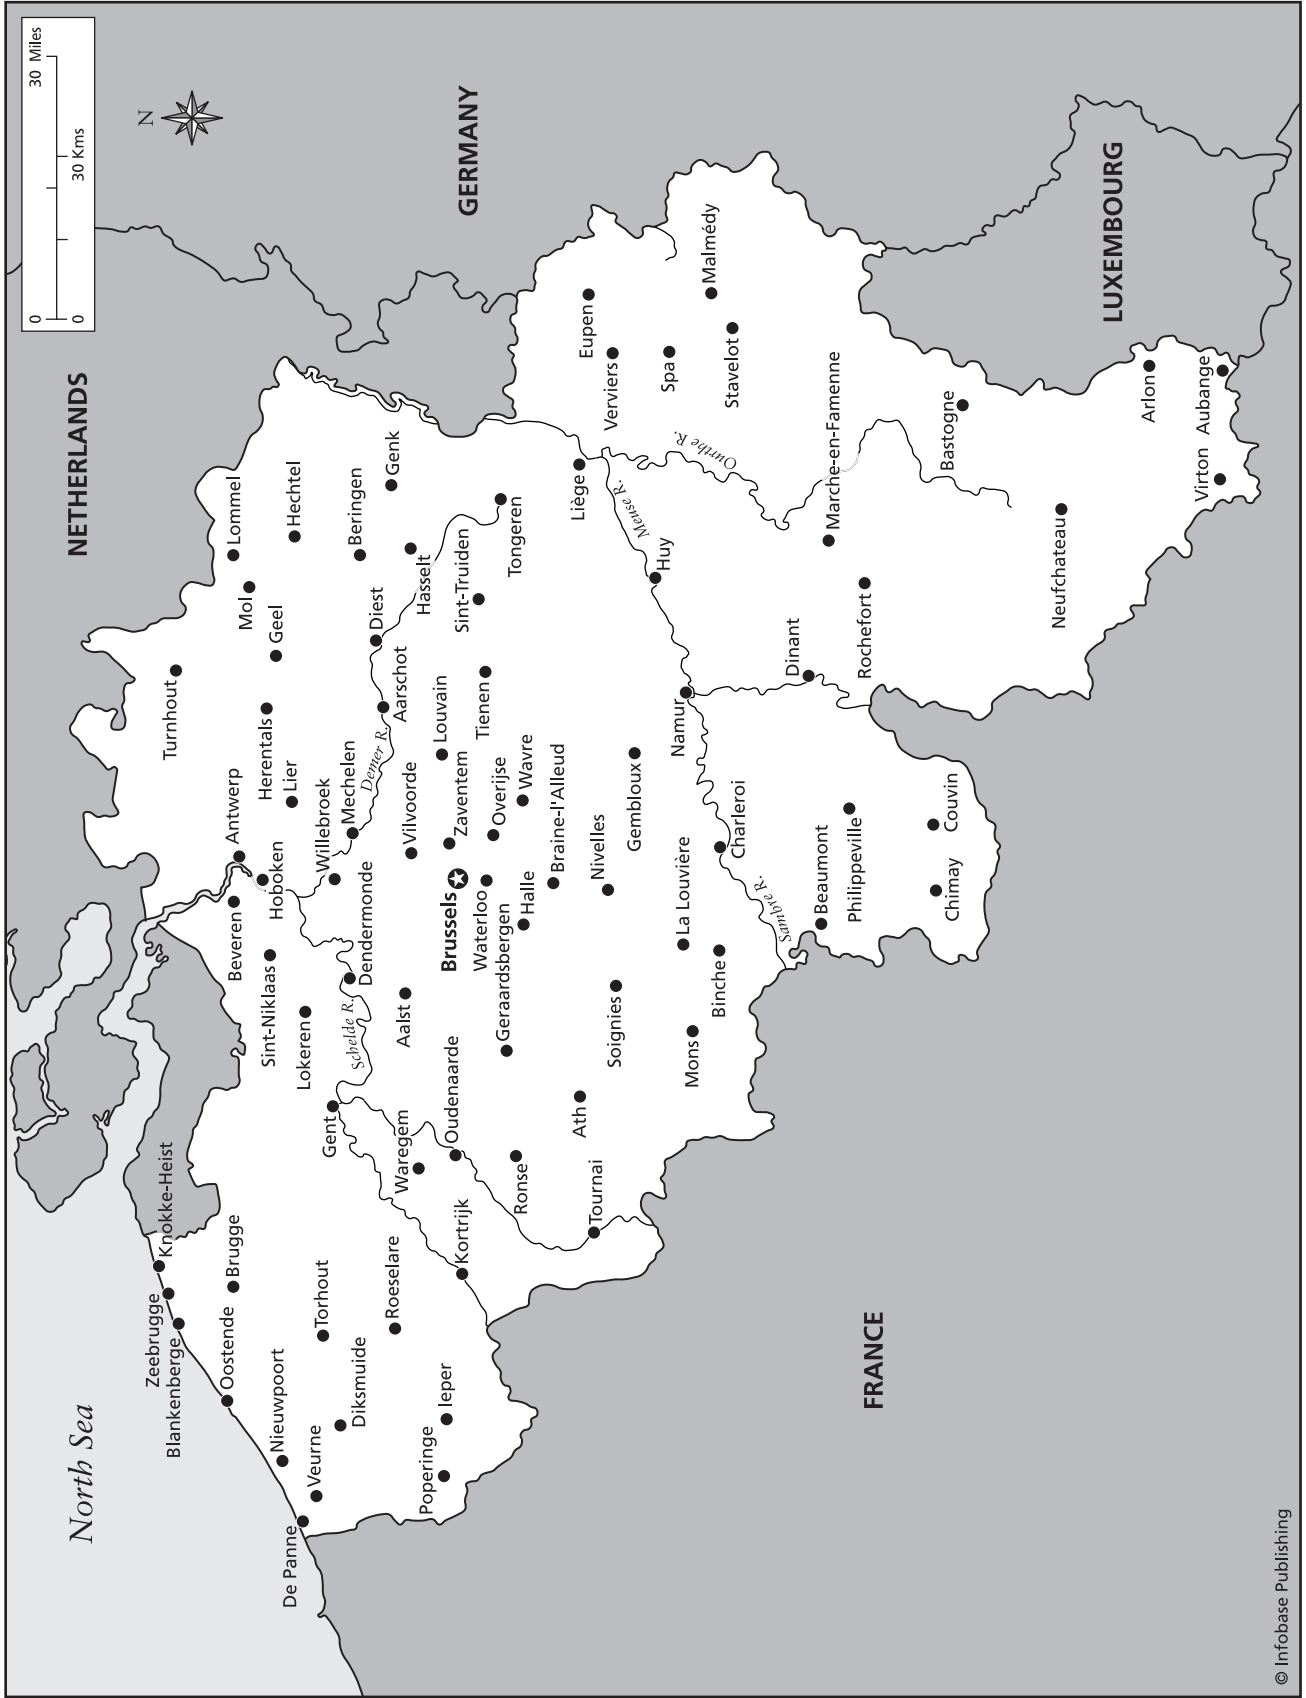

GEOGRAPHICAL FEATURES

Belgium occupies an area of 30,528 sq km (11,787 sq mi). Its borders are formed by the North Sea and the neighboring states of France, Germany, the Netherlands, and Luxembourg. Almost one-fifth of the country was reclaimed from the North Sea between the eighth and 13th centuries. Salt marshes became rich plow land behind a legendary barrier of dikes. A coastal strip 48 km (30 mi) wide was thus added to the country; at the same time rivers like the Schelde, which had spread out in broad, shallow deltas, were made navigable.

Liège	185,488

CLIMATE AND WEATHER

Lowland Belgium has a climate similar to that of Britain because of the passage of air depressions, which result from a combination of tropical and polar air masses. They cause characteristic weather features such as changing winds, summer thunderstorms, winter drizzle, and overcast skies. The Flemish oceanic region has a mild climate because of the warm waters of the North Atlantic Drift, which is responsible for fogs. The interior has more extreme summers and winters, while the uplands have more severe frost and more cold and rain.

Climate and Weather
Temperature Range

Brussels:	30.6°F to 76.5°F
Bruges:	30.0°F to 73.9°F
Kempenland:	26.6°F to 75.9°F
Ardennes:	24.4°F to 74.8°F

Average Rainfall

North of the Sambre and Meuse Rivers:	20 in to 30 in
Southern Foothills:	47 in

FLORA AND FAUNA

With its temperate climate, Belgium is home to a wealth of plant life. Major tree species include the beech and oak, while among other wildflowers and plants are foxglove, goldenrod, hyacinth, and lily of the valley. Interestingly, much of this biodiversity can be witnessed in the country's capital city; about 730 species of wild plants can be found in Brussels, representing half of the wild fauna of Belgium.

Long habitation by man has reduced the animal population, especially mammals. Wild boar are still found in the copses and wooded areas, as are fox, badger, bat, squirrel, European hamster, weasel, marten, and hedgehog. Avian life includes various birds of passage as well as swallows, pigeons, and partridge. Aquatic life is particularly plentiful and varied. Fish and shellfish from both inland waters and along the Atlantic coast include pike, carp, trout, eel, perch, smelt, chub, roach, bream, shad, sole, mussels, crayfish, and shrimp.

A 2004 survey by the Belgian Institute for Natural Sciences indicated that half of the country's flora and fauna was under threat because of encroachment by hu-

mans. A 2001 endangered species list included six species of mammals and three species of birds as well as the Atlantic sturgeon and the black right whale.

ETHNIC COMPOSITION

The original population of Belgium, which was of Celtic stock, was almost entirely wiped out during the Norse invasions of the early Christian era. During the fourth century the area was settled by the Salian Franks, who also constitute the basic racial stock of France. It is generally agreed that there are no ethnic differences between the Dutch and French language groups.

After the end of World War II immigration into Belgium increased significantly, and immigrants now account for approximately 10 percent of the total population.

LANGUAGES

Belgium's three official languages are Dutch, French, and German. German is spoken in the eastern part of the country bordering Germany, Dutch in the northern area bordering the Netherlands, and French in the southern and western areas bordering France. The provinces of West Flanders, East Flanders, Antwerp, Limburg, and northern Brabant constitute Dutch-speaking Flanders, while those of Liège, Luxembourg, Hainaut, Namur, and southern Brabant constitute French-speaking Wallonia. The German speakers, using Low German and Franco-

Mosellan dialects, live in the eastern cantons of Eupen and Malmedy and account for less than 1 percent of the population; in fact, the number of Italian and Arabic speakers has surpassed the number of German speakers. In Brussels linguistic minorities are given special status in bilingual contexts.

Walloon is also spoken by about 600,000 Belgians in Wallonia. It is a variant Romance language very close to French and is sometimes considered a French dialect. However, it is distinct from Belgian French, which differs from the French of France in vocabulary and pronunciation. Similarly, while Belgian Dutch closely resembles the Dutch spoken in the Netherlands, Flemish, a Dutch dialect, is also spoken. While there are over six million Dutch speakers, only a very small minority speak one of the Flemish dialects.

RELIGIONS

Belgium has no state church, and the constitution grants state aid to officially recognized religions. These include primarily Roman Catholicism (75 percent of the population) and also Anglicanism, Protestantism, Judaism, Islam, and Greek and Russian Orthodoxy. These religions receive state subsidies for maintenance of the clergy and upkeep of buildings as well as for the cost of providing teachers for religious instruction in schools. The second-largest group for religious affiliation is actually "Other," which includes those with no religious affiliation. The third-largest religious group is Muslim, many of whom emigrated from Turkey and North Africa. In 1974 Islam was recognized as an official religion. However, not until 1998 did Muslims hold nationwide elections to choose representatives for their dealings with the Belgian government.

In 1997 a parliamentary commission issued a report on the dangers and problems of harmful religious sects or cults, defined as religious groups that would harm individuals or society, especially children. A clearinghouse is being established that will undertake to collect information on many religious groups as well as provide information regarding a Belgian citizen's right to freely choose his or her religion and associate with like-minded people.

HISTORICAL BACKGROUND

The Belgae were a Celtic people whose land was conquered by Julius Caesar in 57 B.C.E. and constituted Gal-

lia Belgica, a province of the Roman Empire. In the fifth century it was overrun by the Franks, and in the eighth century it became a part of the Carolingian Empire. When the empire fell apart upon the death of Charlemagne, several independent principalities emerged, including Flanders, Hainaut, Namur, Brabant, and Liège. During the following three centuries the towns of Flanders became prosperous through trade. In the 15th century all of the present Benelux countries came under the rule of the Dukes of Burgundy and, later, under the Hapsburg crown. When Emperor Charles V divided his empire, the Benelux territories were united with Spain under Philip II, whose energies were devoted to the suppression of Protestantism. This led to a Protestant revolt ended only by the Treaty of Westphalia (1648), which granted independence to the northern Protestant provinces. The southern half remained Catholic and under Spanish rule.

For the next 150 years, the southern Low Countries became pawns in Franco-Austrian rivalries. French armies invaded Belgium in 1792 for the third time in a century and annexed it by the 1797 Treaty of Campo Formio. Belgium was reunited with the Netherlands by the Congress of Vienna, which led to widespread discontent and uprisings. The Dutch were compelled to retreat, and on October 4, 1830, Belgium was declared independent. However, William I, king of the United Netherlands, invaded Belgium and was repulsed by the French army. In 1839 he was forced to accept the Treaty of XXIV Articles, by which Belgian independence was guaranteed under a system of constitutional monarchy, with Leopold of Saxe-Coburg-Gotha as king. His successor, Leopold II, financed the exploration and settlement of the Congo basin, thereby laying the foundations of Belgium's colonial empire, which eventually extended to Rwanda and Burundi.

Belgium was invaded by Germany during World Wars I and II, even though it had maintained neutrality before both invasions. After the capitulation of Germany in 1945 a constitutional crisis rose over the return of King Leopold III amidst questions about his wartime conduct. A rash of strikes, riots, and demonstrations led to his abdication, and in 1951 his son, Baudouin I, was formally proclaimed king.

The country successfully balanced the recognition of its diverse linguistic and cultural communities through four constitutional reforms in the second half of the 20th century (in 1970, 1981, 1988–89, and 1993–94). The reforms led to the creation of three linguistic communities (French, Flemish, and German) as well as three cultural regions (Flanders, Wallonia, and Brussels). Under the 1993–94 reforms the central government retains responsibility for defense, taxation, foreign policy, and social welfare policies. The regional governments oversee transport, environmental, and economic development matters. The community governments are

empowered to deal with cultural concerns, including education.

On July 31, 1993, a reign that had spanned four decades came to an end with the death of King Baudouin, who was childless. His brother, Albert, prince of Liège, ascended the throne as Albert II. In 1994 the government was rocked by the Agusta scandal, in which Socialist parties were alleged to have received huge kickbacks from government contractors. In the 1995 general elections the coalition headed by Jean-Luc Dehaene retained power despite the scandals. However, in the 1999 general elections, the Dehaene coalition was ousted, ending decades of dominance by Christian Democrats. Dehaene was replaced by the first Liberal prime minister in half a century, the Flemish Liberal leader Guy Verhofstadt. He presided over a six-party rainbow coalition representing Socialists, Liberals, and Greens.

Since 1993 and the passage of the Maastricht treaty, Brussels has become a focal point of European politics. Home to the European Commission and to the Council of Ministers of the European Union, as well as the headquarters of the North Atlantic Treaty Organization (NATO), it has become the de facto capital of Europe and as such bases much of its economy around those involved in the governing and bureaucratic apparatus.

Verhofstadt's center-left coalition liberalized social policy, legalizing euthanasia and the private use of cannabis in 2002; in 2003 same-sex unions were legalized. In May 2003 Verhofstadt's coalition returned to power, and he was appointed for a second term as prime minister in a two-party coalition of Liberals and Socialists that pledged to create 200,000 new jobs.

1999– Guy Verhofstadt

CONSTITUTION

Belgium is a constitutional monarchy. The original constitution was written in 1831 and has been amended several times, usually to address voting rights or cultural differences. The king is the head of state and commander in chief of the armed forces. Executive power lies with the crown but is practiced by the cabinet. The king appoints and dismisses ministers, but the prime minister countersigns his successor's appointment. The king's role has grown somewhat since World War II, as coalition governments and cultural differences have called for an honest broker to conduct negotiations. The king does not have veto power and cannot act against the advice of the cabinet. The post of prime minister has a variable amount of power, depending on the actual coalition of the government, and the post was not mentioned in the constitution until 1970.

With the 1993 constitutional revision, a federal state was created with three levels of government: federal, regional, and linguistic community. Each of these has a complex division of responsibilities.

PARLIAMENT

The Belgian parliament is made up of two houses: the Senate (upper house) and the House of Representatives (lower house). Members of both houses are elected to their positions. However, the king's children in the line of succession are senators by right at age 18. They are not allowed to speak in chambers until they are 25.

Members of the upper house serve four-year terms. There are 71 members, of whom 40 are directly elected (25 from Flanders and 15 from Wallonia), 21 are indirectly elected (10 each by the Flemish Council and the French Council and 1 by the German Council), and 10 are appointed (six Flemish and four Walloon) by the elected senators. Members of the lower house also serve four-year terms. There are 150 deputies, directly elected by proportional representation from multimember electoral districts whose complement of deputies is proportional to the population size.

POLITICAL PARTIES

Belgian political parties are historically divided into Dutch- and French-speaking divisions that subscribe to common programs during general elections. Beginning in the 1960s cleavages became more pronounced, leading to formal separation as the country moved toward the creation of a federal structure. At the same time the dominance of the three principal groupings (Christian Democratic, Liberal, and Socialist) has eroded somewhat as numerous smaller ethnic and special interest groups have made gains. Niche parties such as the environmental Greens and far-right Vlaams-Blok have also recently come into play in the country.

LOCAL GOVERNMENT

Local government consists of several layers, in order to deal with the cultural and linguistic variations in the country. There are three linguistic communities (French, Flemish, and German) and three cultural regions (Wallonia, Flanders, and Brussels). The communities have no geographic boundaries but include all people who speak each language as their native tongue. Within the regions are nine provinces (four Flemish, four Walloon, one bilingual). These provinces are further divided into 43 arrondissements. Within the arrondissements are numerous communes, municipalities, and boroughs. Disputes between the communities and regions are handled by a court of arbitration, and they can also be handled by the Council of State and Court of Cassation.

LEGAL SYSTEM

Belgium's legal system is based on the Napoleonic Code and patterned on the French judicial model. The country is divided into nine judicial provinces (with assize courts), 26 districts (each with a tribunal of first instance), and 222 cantons (with justices of the peace and police tribunals). Judges are appointed for life and cannot be removed except through due process. The highest court is the Court of Cassation, which takes appeals from lower courts.

HUMAN RIGHTS

Belgium's constitution guarantees respect for human rights. Belgium's key human rights challenges concern its prison system, police procedures, and handling of immigrants. There is no limit as to how long a defendant may be held prior to trial. Human rights groups claim that this is abusive, as many defendants are held for extended periods of time. Some prisons remain in substandard condition. In the late 1990s Belgian soldiers came to trial for the torture and unlawful killing of Somali citizens while they were

part of a UN peacekeeping mission in 1993. A sergeant was charged with crimes associated with the incident. In 1998 a Nigerian woman was killed while being forcibly repatriated by Belgian authorities. This led to further investigations and reforms (some proposed, some implemented) regarding police conduct and restraint procedures.

The primary goal of human rights organizations has been to eliminate two previously standard procedures, hog-tying and the covering of the mouth, which have led to injury and death in some cases. The new government, which took power in 1999, has adopted most of these recommendations. However, reports of inappropriate handling and police abuse continue. In addition, reports of racially based mistreatment by police have been reported throughout the late 1990s.

In 2003, under pressure from the United States, Belgium repealed its pioneering 1993 antiatrocities law, which made it possible to try a person or persons in Belgium for atrocities committed abroad.

FOREIGN POLICY

The cornerstone of Belgian foreign policy is active participation in the European Union and support for NATO. Belgium was a prime mover of the Schengen Accord, providing for the abolition of border controls, which has been in effect since 1995. Former Belgian colonies in Africa—the Congo, Rwanda, and Burundi—were the scenes of considerable violence in the 1960s and 1990s. Belgian troops were sent to the Congo and Rwanda in an effort to evacuate Belgian nationals.

DEFENSE

Men aged 18 and 19 are subject to the draft and serve part of their time with NATO forces. Military officers and senior officials must be bilingual in French and Flemish. The Belgian navy is larger than would be expected, as Belgium's shallow waters make Belgian ports vulnerable to mine and submarine attacks. Historically, Belgium has been a major exporter of arms, and today those weapons find their way to the Middle East, Africa, and other regions in conflict. As of 2003 defense accounted for 1.3 percent of gross domestic product (GDP); the country's military budget for that same year was \$4 billion.

ECONOMY

Belgium's highly developed private enterprise economy has capitalized on its central geographical location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the populous Flemish area in the north. With few natural resources Belgium must import substantial quantities of raw materials and export a large volume of manufactures, making its economy unusually dependent on world markets. This accounts for Belgium's keen support of free trade and European integration. The major problems of the Belgian economy stem from its antiquated industrial structure and high labor costs. The constitutional process of regionalization has also placed additional strains on the economy.

In one sense Belgium is trying to adjust to the dislocations caused by the demise of its industrial power based on coal mining and heavy industry around Sambre-Meuse and Wallonia, one of the most prosperous regions on the continent in the late 19th century. However, a virtual revolution took place in industrial geography after World War II. With the replacement of coal by petroleum, the Walloon areas lost much of their prominence and the Brussels-Antwerp axis became the country's economic core. The rise of the modern service sector also favored the Flemish region, as Flanders benefited from state support and foreign investment. Thus, the industrial sector now consists of a modern sector in Flanders and a traditional sector in Wallonia. Official economic policy is complicated by linguistic and regional rivalries. As industrial loci shifted to Flanders, coalition governments were forced to balance regional interests and to dole out public funds for nonviable projects in the Walloon region. Although the Belgian economy is based on free enterprise, the state is an active partner in economic development. State intervention, however, remains discreet and is felt primarily only in the weak sectors, with the exception of transportation and communications, which are traditional state domains. The government's role in the economy is overseen by the Economic Planning Bureau within the Ministry of Economic Affairs. The financial arm of the government's industrial policy is the National Investment Company, created in 1962 to provide venture capital. A key element in national economic policy is regionalization, which has led to the establishment of separate ministerial departments, regional economic councils, and regional development corporations.

Economic power was further divided among the three regions of Belgium—Flanders, Wallonia, and Brussels—after the 1993 federal reforms. Now, a large degree of autonomy is enjoyed in each region in the areas of industrial development, promotion of trade, research, and regulation of environmental safeguards. While a 2004 UN study placed the country sixth in

the world in standard of living, many business groups complain of high taxation. In 2003 the government balanced the budget for the first time in half a century. Economic growth in 2002 and 2003 slowed, as in the rest of the world; there was a slight recovery in 2004. Belgium's economy is very much influenced by, and in fact dependent on, those of the European Union and the United States.

ENVIRONMENT

Water protection laws in effect since 1971 have not stopped factories in steelmaking areas from releasing wastes into the Meuse River. The Meuse supplies drinking water to six million people, yet it is highly polluted. Pollution from agricultural sources—especially excess fertilizers and animal manures—has increased algal growth in surface waters. Belgium is home to some smokestack industry, which contributes to Europe's air pollution. However, there has been significant cleanup progress as a result of environmentally minded legislation. In Brussels, for example, average concentrations of sulfur dioxide have declined to about one-fifth of 1975 levels. However, as a result of the shared powers of Flanders, Wallonia, and Brussels, there has been some confusion over federal versus regional authority in environmental issues, making some problems more difficult to tackle.

In December 2002 the Belgian government decided to phase out the country's seven nuclear reactors, which provided almost two-thirds of the country's electrical power. The phaseout would span several decades and would convert energy production to cleaner technologies such as wind and solar power.

Environment

LIVING CONDITIONS

In 2004 the United Nations ranked Belgium sixth in living conditions in the world. Income per capita, safety, and access to services such as education, health care, and public transportation are among the aspects of quality of life that have earned the country its high marks. Life expectancy in 2004 was 78.44 years; the fertility rate was 1.64 children per woman. Cities like Brussels enjoy relatively little crime and a high degree of public safety, despite some high-profile criminal activity.

Though one of the most densely populated countries in Europe, Belgium has no housing shortage and relatively few slums. Over 80 percent of the population resides in urban areas, with buildings generally no more than three to five stories in height. Neighborhoods are often built around or lead into church squares. Many urban apartment houses as well as single-family dwellings are built of red brick. The stepped gable look from the 16th century is still often seen in the centers of cities, and some modern buildings incorporate the look as well. In the southern part of the country a family business is often built on the same site as the family dwelling.

Extensive and comprehensive public transport, linking bus, subway, and rail systems, unites the country.

Among the social problems faced by Belgians are relatively high rates of unemployment and the need to integrate new immigrants—especially Arabs—into the fabric of society.

HEALTH

Belgium has a well-maintained public health-care system, with 95 percent of the people covered by national health insurance. Like some of the Scandinavian countries, Belgium has a cradle-to-grave approach to health care as supported by a mix of public and private hospitals and clinics. Much of the organization of the nation's health-care system originates at the local level; each town has a committee elected by the city council in charge of hospital and medical services. Over 60 percent of the hospitals in Belgium are nonprofit. In 2003 expenditures on health services represented 9.1 percent of GDP. That year there were an estimated 4.2 physicians per 1,000 people.

Immunization rates are high in Belgium, and the 2004 infant mortality rate was below 5 deaths per 1,000

live births. In 2003 there were an estimated 10,000 people in Belgium living with HIV/AIDS. Cigarette smoking is another leading cause of death and serious disease in the country. As of 2004 the government estimated there were 20,000 deaths annually as a direct result of smoking. Several measures have been passed to control smoking, including price hikes, the requirement of nonsmoking areas in bars and restaurants, a ban on the sale of tobacco to those under 16, and the elimination of smoking on trains and in the workplace.

FOOD AND NUTRITION

Belgium is known for seafood, French fries, chocolate, waffles, and beer. Mussels are a typical dish in the country and are often served with *frites*, the fried plank potatoes of Belgian origin that have become known as French fries. Beer, or more particularly fine ale, has also become world famous; the country has 450 different varieties of beer. Trappist ale, made by monks, is produced at six different breweries, including Chimay and Orval abbeys. Belgian chocolate is also considered among the best in the world. The most renowned brand names are Neuhaus, Godiva, Côte d'Or, and Leonidas. Praline was invented in Belgium.

Regional specialties are numerous. A Flemish meat-and-vegetable stew is called *hochepot*. Fish and shellfish are Flemish staples, with favorites including mussels, her-ring, lobster, shrimp, and oysters. Rabbit is a specialty and is often served cooked in brown beer with stewed prunes. *Waterzooi* is soup or chowder made from vegetables and either chicken or fish.

Walloon cuisine largely comes from France but overall is richer and more caloric than its French counterpart. Popular meats are pork and local Ardennes hams. Local specialties in Wallonia range from venison chops to

stuffed goose. A favorite dish in south Belgium is ragout of lamb with chicory.

The main meal of the day is eaten at midday in all regions of the country, with lighter meals at breakfast and supper.

STATUS OF WOMEN

Women received full voting rights in 1948, and as of 1999 Belgian law requires one-third of all political candidates to be women. Domestic violence against women is still underreported. In 1998 the Belgian government passed a law that both defines and provides stiff penalties for domestic violence. The law, which covers both married and unmarried partners, allows organizations to represent women. It also requires the government to keep statistics on domestic violence.

All forms of gender discrimination are illegal, as is sexual harassment. Equal treatment of men and women is provided for by the constitution, federal law, and treaties incorporated into law. The Division of Equal Opportunity, a part of the Ministry of Labor, focuses specifically on issues affecting women, including violence against women, sexual harassment, and the participation of women in the political process.

In spite of such efforts on paper, however, a gulf still exists between the sexes. The female unemployment rate of 10.9 percent at the end of 1998 significantly exceeded the male unemployment rate of 6.7 percent. The net average salary for a woman is only 84 percent of the national average salary.

WORK

Belgium had a workforce of 4.75 million in 2004, with an unemployment rate the same year of 12 percent. A 2003 survey showed that agriculture employed 1.3 percent of the labor force, industry 24.5 percent, and services

the vast majority, 74.2 percent. Agricultural products include sugar beets, fresh vegetables, fruits, grain, tobacco, beef, veal, pork, and milk. Industrial output included engineering and metal products, motor-vehicle assembly, processed food and beverages, chemicals, basic metals, textiles, glass, and petroleum.

Belgians typically have a strong work ethic. The right to unionize is protected by law; 60 percent of the Belgian workforce is unionized. Strikes are only illegal in essential industries such as defense. The country has a five-day, 39-hour workweek, and the minimum age for working is 15. In 2001 the national minimum wage was \$1,050 per month.

The demographics of work in Belgium have changed drastically in the past several decades. Small, family-run businesses were once typical in Flanders, while industry was traditionally located in the south, especially in the Liège area. In recent years, however, with the demise of coal, the north has experienced increased industrialization, and the service and tourist sectors have also grown. Belgium was once a major producer of coal; the Belgian coal mining industry dated back to the 12th century. The last coal mines, however, closed in 1992, and the only active mining left in the country is quarrying for sand and gravel

EDUCATION

Education is required for nine years, from ages six to 15; another three years of part-time education are required from ages 15 through 18. The school year runs from September through June. There are numerous universities and vocational and technical schools for postsecondary education. Institutions of higher education include the state universities of Ghent, Liège, Antwerp, and Mons; the two branches of the Free University of Brussels, one Dutch and one French; the Catholic University of Brussels; and the Catholic University of Louvain, which also has a Dutch and a French branch.

In 2001 there were an estimated 12 students per teacher in primary schools, and public expenditure on education in 1999 totaled 11.6 percent of total government spending. Among those 15 and over, the literacy rate for 2004 was 98 percent.

SCIENCE AND TECHNOLOGY

In 1999 there were 2,953 scientists and technicians engaged in research for every million people, while in the same period spending on research and development (R&D) was 2.24 percent of GDP. The primary jurisdiction for science, research, technological development, and innovation policy is conferred to the regions and communities within their areas of competency, though the federal government does maintain jurisdiction over limited areas such as space and national defense.

The Flanders government started to substantially increase its public investments in R&D activities in the early 1990s, particularly in the areas of microelectronics, biotechnology, and industrial processes, establishing a microelectronics interuniversity R&D center (IMEC), a biotechnology institute (VIB), and an institute for multidisciplinary applied industrial research (IWT). Brussels and Wallonia are following suit. The country has a score of universities and colleges offering degrees in science and technology.

The long tradition of scientific research in Belgium is attested to by the fact that the Royal Academy of Sciences, Letters, and Fine Arts was founded in Brussels in 1772. Since that time it has separated into French and Flemish branches, and it has sections for mathematics, physical sciences, and the natural sciences. Also, numerous specialized societies exist in Belgium for the study of medicine, biology, zoology, anthropology, astronomy, chemistry, mathematics, geology, and engineering. The National Scientific Research Fund promotes scientific research by providing subsidies and grants to scientists and students.

MEDIA

The Belgian press dates back to 1649, when *Courrier véritable des Pays Bas* was published. It was the only Belgian newspaper until 1791. The country went through a “golden period” of newspapers in the 1800s and early 1900s. During the 1970s and 1980s many newspapers folded, and ownership concentration grew. By 2000 there were fewer than 30 regional and national newspapers. Of the 29 newspapers currently in print in Belgium, only 10 or so are autonomous; the remainder are parallel editions of the main papers and differ only slightly from their counterparts. In 2000 the overall circulation of the Belgian press amounted to 1.57 million copies. The Flemish-language press accounted for roughly two-thirds of sales, the French-language press roughly one-third. The constitution provides for freedom of the press.

As of 2002 there were over 8.1 million mobile telephone users and 3.4 million Internet users. Television and radio are also strong in the country. In 1999 there were 5 AM and 77 FM radio stations and 24 television broadcast stations. Belgians can also subscribe to cable and receive broadcasts from all over Europe.

CULTURE

Culture is not monolithic in Belgium; rather it is made up of two cultural-linguistic strains: French-speaking Walloons and Dutch-speaking Flemings. From the Middle Ages, Belgium has been home to a high level of cultural achievement, as can be seen in the country’s major towns and cities, including Brussels, Antwerp, Bruges, and Ghent. Remnants of Gothic and Renaissance art and architecture attest to a long tradition of high art and culture. The renowned Flemish tapestries are priceless reminders of the arts and crafts of earlier times.

Sometimes cultural contributions can be neatly affixed to one linguistic group or the other, and sometimes there is a true fusion of influences. In the visual arts the Flemish take earliest pride of place in painters such as Jan

van Eyck and similar masters of 15th-century painting. These painters pioneered domestic rather than purely religious art, filling their canvasses with details of everyday life of the time. Well-known Flemish painters of the Renaissance include the fabulist Hieronymus Bosch, Pieter Breughel the Elder, Pieter Breughel the Younger, Peter Paul Rubens, and Anthony van Dyck. Flemish contribution to the visual arts did not stop with Renaissance art: Felicien Rops and Fernand Knopff were famous 19th-century artists, known for their odd romanticism and eroticism. Later came the work of James Ensor. Walloons have also become world famous in the visual arts, including the surrealists René Magritte and Paul Delvaux.

Literature has a long and strong tradition in both language groups. Among the French-speaking Belgians of international renown are Maurice Maeterlink and Georges Simenon. Maeterlink, a playwright and sometimes poet, was known for his use of symbolism; he won the Nobel Prize for Literature in 1911. The mystery writer Simenon is the creator of the fictional police commissioner Maigret. Flemish literature began in the Middle Ages with the works of Heinrich von Veldeke, Jacob van Maerlant, and Hadewijch, a Brabant nun. For several centuries, as Belgium was ruled by one great power or another, Flemish national literature went into a period of hibernation, reviving in the mid-19th century with the Flemish movement, which advocated political autonomy and the advancement of the Flemish culture and language. Prominent 19th-century Flemish writers include Hendrik Conscience and the lyrical poet Guido Gezelle. Well-known modern Flemish authors include the novelists Louis Paul Boon and Hugo Claus.

Mixing art and literature are comic artists, of whom Belgian has had several. Best known perhaps is Hergé—a pseudonym derived from Georges Remi's initials in reverse—the creator of the highly popular comic character Tintin. Many consider this famous French-speaking Belgian artist to be the most influential European comic artist ever.

Belgians of both linguistic branches have also excelled in music. In the 16th century the works of Orlando di Lasso blended musical traditions of the Netherlands and Italy. Wallonia's most famous composer was César Franck. More contemporary is the violin virtuoso Eugène Ysaye. A Belgian, Adolphe Sax, was the creator the saxophone.

In architecture the name Victor Horta is synonymous with art nouveau. Brussels has many examples of this innovator's buildings.

FOLKLORE AND MYTHOLOGY

Much of the folklore of Belgium is regional and deals with tall tales involving formative events in various cities. One exception to this is the water spirit that roams the Flemish countryside. This creature, called Kludde, hides just before dawn and sunset and attacks innocent travelers. Travelers are warned to listen for the rattling of the chains in which the Kludde is wrapped. The Kludde can take the form of a black dog, cat, or crow.

Myths and legends dealing with cities include the origin of Antwerp, supposedly named after a Roman hero who defeated a grotesque giant and then cut off its hand. The symbol of Antwerp to this day is a red hand. Ypres is also defined by folklore. During the Middle Ages cats were employed to keep the rat population down, a situation still honored by the annual Cat Festival. Other festivals with origins in folklore include the pageant of the Golden Tree in Bruges and the Ommegang in Brussels. Brussels also lays claim to Mannekin Pis, a boy in Belgian folklore who saved the city of Brussels in the 1600's by peeing on a fire.

Devils populate many Walloon myths, and some rural people still believe in folk healers who employ touch to cure the sick. The First of November, the traditional All Soul's Day of the Catholic Church, is still a time-honored holiday on which Belgians visit the graves of deceased loved ones.

ENTERTAINMENT AND RECREATION

Belgium has all the forms of entertainment and recreation available in other modern developed countries. Television is popular, as it is throughout Europe and the rest of the world. Belgians are avid sports fans, and in Belgium "sports" means soccer. The country supports 60 teams in the national league, and Belgians enjoy watching their favorite teams in action on television or in person at one of the numerous stadiums around the country.

The more culturally minded take advantage of the 200 museums in the country's cities and towns or go to opera or ballet performances. Puppet theaters have also made a comeback, with their wooden marionettes and simple legends and tales.

Favorite hobbies of Belgians, both Flemish and Walloons, include stamp collecting and gardening. Festivals, either religious in nature or more secular and historical, are also popular and plentiful. Examples of these are the

Shrove Tuesday Carnival at Binche, with its March of the Gilles, Brussels's Ommegang, and the Cat Festival of Ypres.

ETIQUETTE

As in most of the rest of northern Europe, Belgian manners tend to be formal and polite. While the younger, more well-traveled generation is generally freer in the instant use of first names or the familiar "you" form of address, most Belgians, both Flemish and Walloons, tend to use the formal form of address until a person has become a good friend. Belgians tend to be private persons; an invitation to a Belgian home is therefore a sign of both respect and friendship.

Handshakes are a typical greeting for men and increasingly for women, though women will also typically exchange a kiss on the cheek with female friends or with male friends.

Eating is done in the European fashion, with both fork and knife held at the same time. In fact, it is considered bad manners to continually shift the fork to the dominant hand in the American style. It is also considered bad manners to hold one's hands in the lap during mealtime.

FAMILY LIFE

Family life in Belgium is essentially nuclear, with larger families in the south than in the north. However, that statistic is changing as two incomes are increasingly needed to support a family. Traditionally, the family in Belgium has been seen as an economic unit; this was true when the country was primarily rural and large families were needed to run farms, and it is still true in parts of the country where families run shops attached to their homes.

It is traditional for a Belgian bride to carry a special handkerchief, embroidered with her name, on her marriage day. After the wedding the handkerchief is framed and hung on the wall until the next wedding by a sister, daughter, granddaughter, et cetera, at which time it is passed on to the next bride. Unmarried children have typically lived with their parents until they married, but this has changed in recent years, with more independence demanded by youth. Cohabitation without marriage has also become more popular. Divorce rates in Belgium are among the highest in Europe, and marriage rates have fallen since the early 1990s. In 2002 Belgium had the highest divorce rate in the European Union at 3 per 1,000 married people. In 2004, 56 percent of marriages ended in divorce. A rise in single-parent families has also occurred. In 2003 a new wrinkle was added to the concept of marriage when same-sex marriages were legalized.

PERSONAL APPEARANCE

Modern clothing is the standard dress for all Belgians. Business attire is of the typical Western style: suit and tie for men, jacket and skirt or sometimes slacks for women. Casual dress is also common, and in Brussels, unlike in other capital European cities, clothing tends to be more informal.

Only for festivals is the old style of clothing worn: wooden clogs, dark-colored baggy pants, long shirts, and peaked caps for men, flounced skirts, aprons, and white fluffed caps for women.

SPORTS

As in most of the rest of Europe, soccer, called football, is one of the most popular sports in Belgium. The national football team, the Red Devils, were ranked 45th in 2003 by the Fédération Internationale de Football Association (FIFA), the international governing body for soccer. Cycling is something of a national obsession. Belgians use the bicycle not only as a mode of transport but also for sport. Eddy Merckx was one of the greatest Belgian cyclists, winning the Tour de France five times.

Tennis has become increasingly popular in Belgium, with two Belgians at the top of the women's professional tour. Justine Henin-Hardenne has won several major titles, including the French Open, the U.S. Open, and the Australian Open, and took an Olympic gold in 2004. Her countrywoman and competitor since youth, Kim Clijsters, has also won significant WTA tour events.

A unique regional sport is Wallonian pigeon racing.

CHRONOLOGY

- 1940** Germany invades Belgium and Holland. While the Belgian government escapes to London, Leopold III remains and surrenders to the Germans.
- 1944** Allied forces liberate Belgium.
- 1949** NATO is founded, with Belgium as a founding member. G. Eyskens is named prime minister.
- 1950** Second School Conflict begins. J. Duvieusart is elected prime minister but resigns after two months in favor of J. Pholien.
- 1951** Leopold III abdicates in favor of his son, Baudouin.
- 1951** The Queen Elizabeth Contest, named after Albert's widow, Elizabeth, is founded, offering support to up-and-coming musicians.
- 1952** Jean van Houtte is sworn in as prime minister.
- 1954** Achille van Acker returns as prime minister.

- 1957** The Benelux Union is formed with Luxembourg and the Netherlands
- 1958** School Pact ends Second School Conflict. European Economic Community is established. Gaston Eyskens returns as prime minister.
- 1960** Austerity budget is announced following general strike in Wallonia.
- 1961** Théodore Lefèvre takes office as prime minister.
- 1962** Belgium's African colonies—Congo, Rwanda, and Burundi—become independent. Linguistic boundaries are delimited.
- 1965** Pierre Harmel is sworn in as prime minister.
- 1966** Paul van den Boeynants is named prime minister.
- 1968** Gaston Eyskens begins new term as prime minister. Violence erupts at the University of Louvain as Flemish students call for the removal of French as medium of instruction. Social Christians split into French and Flemish sections.
- 1971** Third reform of the constitution establishes four linguistic regions and three cultural communities.
- 1972** Liberals split into Flemish, Walloon, and Brussels wings.
- 1974** Léo Tindemans is elected prime minister.
- 1977** The Egmont Pact is signed by Social Christians, Socialists, and Liberals but collapses following persisting party differences. The country is divided into three regions: Wallonia, Flanders, and Brussels.
- 1978** Paul van den Boeynants returns as prime minister. Socialists split into Flemish and Walloon wings.
- 1979** Wilfried Martens forms his first cabinet as prime minister.
- 1980** Regionalization takes effect, as major national powers are devolved to regional and communal councils. The Belgian constitution is changed accordingly.
- 1981** Mark Eyskens is prime minister for nine months, but Wilfried Martens returns to office as head of a coalition government following general elections.
- 1982** Martens coalition government is granted special power to establish an austerity regime.
- 1985** In new elections the Martens center-right coalition retains majority.
- 1986** Former prime minister Boeynants is convicted of tax evasion and fraud.
- 1988–89** Further linguistic and cultural reforms are enacted.
- 1993** King Baudouin dies. His brother, Albert, becomes king.
- 1993–94** Another round of linguistic and cultural reforms are passed.
- 1995** Belgium creates Flemish Brabant and Walloon Brabant from the former Brabant province.
- 1998** Belgium agrees to adopt the euro currency, effective January 1, 1999, for electronic transactions and January 1, 2002, for coin and paper money. The judiciary comes under heavy fire after a notorious pedophile escapes.
- 1999** A contamination scandal prompts Belgium's trading partners to ban Belgian food imports; Prime Minister Jean-Luc Dehaene's center-left coalition resigns; a new center-right coalition comes to power led by Guy Verhofstadt of the Liberal Party.
- 2000** General amnesty is announced for illegal immigrants who have been in Belgium for six years. Over 50,000 take advantage of the amnesty.
- 2001** Belgium assumes rotating presidency of the European Union in the second half of the year. In March eight die in head-on train crash, Belgium's worst rail accident in 25 years.
- 2002** Belgium becomes the second nation in the world, after the Netherlands, to legalize euthanasia; it also decriminalizes the private use of cannabis. In January the euro replaces the Belgian franc as the country's currency.
- 2003** Verhofstadt is reelected to a second term on May 18, in a coalition of Liberals and Socialists that pledges to create 200,000 new jobs. Same-sex unions are legalized. The Belgian government and its foreign minister, Louis Michel, strongly oppose the U.S.-led war in Iraq, leading to strained relations between the two countries.
- 2004** A gas explosion southwest of Brussels in July takes 18 lives and injures over 100. In November, Belgium's high court finds the far-right Vlaams-Blok to be racist; it is stripped of funding and rights to TV access and compelled to disband.

DATE OF CONSTITUTION

September 21, 1981

GEOGRAPHICAL FEATURES

Belize, on the eastern coast of Central America just below the Yucatán Peninsula, is bounded on the north and west by Mexico and on the south and west by Guatemala, with a total boundary length of 516 km (321 mi). Belize extends 288 km (179 mi) north-northeast to south-southwest and 109 km (68 mi) west-northwest to east-southeast. The waters immediately offshore are shallow; they are sheltered by the second longest barrier reef in the world, dotted with a large number of islands known as cays. The

total land area of the mainland and the cays is 22,966 sq km (8,867 sq mi).

The most notable topographical feature is the Maya Mountains, rising to heights of 1,000 to 1,100 m (3,400 to 3,700 ft) and running northeast to southwest across the central and southern parts of the country. The highest point is Victoria Peak (1,160 m; 3,805 ft). The country north of Belize City is mostly level, interrupted only by the Manatee Hills. The coast is flat and swampy and indented by many lagoons. The land is drained by over 17 rivers.

HISTORICAL BACKGROUND

Numerous ruins indicate that for hundreds of years Belize was heavily populated by the Mayas, whose relatively advanced civilization reached its height between 250 and 900 c.e. The civilization eventually declined, leaving behind small groups whose offspring still exist in Belize, contributing positively to the culturally diverse population.

The first recorded European settlements were made by shipwrecked English seamen in 1638. Over the next 150 years more English settlements were established. Although a series of agreements permitted British settlers to engage in the logwood industry, Spain claimed sovereignty and occasionally supported the claim through military action. The decisive victory of the settlers over the Spanish in the Battle of St. George's Caye in 1798 firmly established British control, although not until 1862 was the colony of British Honduras formally declared. Initially, the colony came under the jurisdiction of the governor of Jamaica, but in 1884 a separate post of governor of British Honduras was created. Broad-based suffrage was introduced in 1935 and universal adult suffrage in 1954. As of 1961 the system of government was a ministerial one, supported by an elected majority in the National Assembly. In June 1974 the country's name was changed from British Honduras to Belize. Belize became independent within the British Commonwealth on September 21, 1981. George Cadle Price, head of the People's United Party (PUP), which was first organized in 1951, became prime minister.

Territorial disputes with Guatemala, which had been particularly heated prior to independence, remained Belize's most important issue. The inability of the PUP to secure any treaty agreements with Guatemala, along with internal disputes, culminated in a change of government. In December 1984 the United Democratic Party (UDP) received 53 percent of the general election vote, and the UDP leader, Manuel Esquivel, became prime minister. By 1988, however, the government was weakened because of a controversy over the legislative creation of the Security and Intelligence Service (SIS). Although the SIS was mandated to fight large-scale drug activity and deal with illegal immigrants, the UDP was accused by its opponents of creating a "police state." The PUP won the general elections held in 1989 by a slight margin.

In the snap assembly elections held in 1993 the opposition United Democratic Party was returned to power under Manuel Esquivel. In 1998 the PUP won a decisive victory by gaining 26 of the 29 assembly seats. Shortly thereafter Said Musa was named to succeed Esquivel as prime minister.

The country was hit hard by hurricanes in both 2000 and 2001. Hurricane Keith struck in October 2000, causing more than \$200 million in damage and devastating sections of Belize City. In October 2001 Hurricane Iris landed in the southern part of the country, forcing the evacuation of Belize City and leaving 13,000 homeless.

Despite allegations of abuse of power in 2002 that necessitated some cabinet shifts, Said Musa has maintained power since 1998. He won another election on March 5, 2003, in which the PUP took 53.2 percent of the vote, retaining 22 seats in the House of Representatives. The border dispute between Guatemala and Belize remains unresolved, with occasional shootings and unlawful arrests on both sides that have exacerbated the problem. In 2004 Musa's Finance Minister, Ralph Fonseca, was relieved of his duties as a result of fiscal mismanagement.

LIST OF MODERN RULERS

Prime Minister

1961–84	George Cadle Price
1984–89	Manuel Esquivel
1989–93	George Cadle Price
1993–98	Manuel Esquivel
1998–	Said Wilbert Musa

Governor-General

1981–93	Minita Gordon
1993–	Colville Young

CONSTITUTION

Under the constitution of 1981 Belize is a constitutional monarchy, with the British sovereign represented by the governor-general as the head of state. The sovereign appoints the governor-general, who must be a Belizean national, on the advice of the Belizean prime minister, the head of government. In turn, the governor-general appoints the prime minister and, on the latter's recommendation, other ministers; the governor-general also appoints the leader of the opposition. There are a number of parastatal bodies, such as the Belize Advisory Council, an advisory body of no less than six members who advise the governor-general, the Election and Boundaries Commission, and the Public Services Commission.

PARLIAMENT

The National Assembly is a bicameral body consisting of an appointed Senate and a directly elected House of Representatives, members of both of which serve five-year terms. The Senate has eight members, five of whom are appointed on the advice of the prime minister, two on the advice of the leader of the opposition, and one on the advice of the Belize Advisory Council. The House of Representatives has 29 members. The prime minister comes from the majority party or coalition of parties in the House of Representatives.

POLITICAL PARTIES

There are three active political organizations in Belize. The People's United Party was formed in 1951 by organized labor and merged with the Christian Democratic Party in 1988. The conservative United Democratic Party was formed by the merger of several smaller organizations, including the People's Development Movement, the Liberal Party, and the National Independence Party. The National Alliance for Belizean Rights is a small organization formed in 1992 that opposes any territorial compromise with Guatemala over land disputes.

Since 1998 the PUP has held the majority of seats in the House of Representatives.

LOCAL GOVERNMENT

For purposes of local government Belize is divided into six districts and eight municipal councils. The six districts are Belize, Cayo, Corozal, Orange Walk, Stann Creek, and Toledo.

Local government at the village level is conducted through village councils.

LEGAL SYSTEM

The judicial system includes the Supreme Court, whose chief justice is appointed on the advice of the prime minister after consultation with the leader of the opposition, and the Court of Appeal, from which final appeal may in certain cases be made to the Judicial Committee of the U.K. Privy Council. There are also courts of summary jurisdiction and civil courts in each of the six districts.

The constitution guarantees the right of habeas corpus and prohibits arbitrary imprisonment. Release on bail is allowed for all but the most serious criminal offenses. The constitution also guarantees due process and the rights of accused persons, such as the presumption of innocence, protection against self-incrimination, the right to counsel, and public trial. Trial by jury is mandatory

in criminal cases. The judiciary is independent in theory and in fact. Its major shortcoming is an insufficient number of trained personnel at all levels.

The major flaw of the Belizean penal system is overcrowding. The Penal System Reform Bill (Alternative Sentences) was passed in 2001 and partly addresses this problem, allowing for community service instead of imprisonment for some crimes.

HUMAN RIGHTS

Belize's overall record in human rights is good. Belize has a parliamentary form of government with a competitive political system and regular local and national elections. Elections are open, peaceful, and honest. Constitutional protections for fundamental rights and freedoms of the individual are upheld by an independent judiciary and monitored by a free press. There have been no incidents of political violence since independence.

There have been isolated rather than systematic reports of human rights abuses in the country. In 2002 these included alleged unlawful killings, brutality, and excessive use of force by some members of the police and prison guards; poor prison conditions; allegations of arbitrary arrest and detention; and lengthy pretrial detention, but the overall number of complaints of human rights abuse had decreased from 2001. Violence and discrimination against women, the abuse of children, and employer mistreatment of undocumented foreign workers were also problems. Additionally, there were reports of trafficking in persons.

FOREIGN POLICY

Belize's long-standing dispute with Guatemala over territorial rights has never been settled, and bilateral talks continue to be held. In 1991 Belize was admitted to the Organization of American States (OAS) over Guatemala's objections. In 1993 the Guatemalan president José Serrano Elias committed himself to a resolution of the "sterile dispute" and extended diplomatic recognition to Belmopan. In 1993 the two countries reached agreement on a nonaggression pact, and the United Kingdom withdrew its army garrison from Belize. A rapprochement of sorts appeared to have come after Belize agreed to limit its southern territorial limit to three miles in addition to granting its neighbor access to the sea from the northern department of Petén and the use of the port facilities at Stann Creek. But the accord remains unpopular in both countries, and in February 2000 Guatemala announced that it would pursue its claim to half of Belize through international courts. In 2002 the OAS helped to negotiate a peace proposal between the two sides; however, as of 2004 the proposal was still awaiting ratification by referenda in the two countries.

DEFENSE

The Belize Defense Force was formed in 1978 with the merger of the Police Special Forces and the Belize Volunteer Guard. Military service is voluntary. As of 2000 members of the regular armed services numbered 1,050, with an additional 700 reservists. Military spending as of 2003 was \$18 million, or 2 percent of gross domestic product (GDP).

ECONOMY

Belize has a mixed economy in which the government cooperates with the private sector. Because of its open nature and the fixed relationship between the Belize and U.S. dollars, movements in domestic prices reflect external rather than domestic trends.

The economy is an open one, with agriculture accounting for almost one-quarter of GDP and three-quarters of exports.

There is a comparatively high level of investment in Belize, with gross domestic investment accounting for an average of 20 percent of GDP in recent years. The sectoral contributions to GDP have also remained fairly stable.

In 2002 the government was forced to stop borrowing from external sources and to reduce spending in order to control its budget deficits, trade deficits, and foreign debt and thereby secure the value of its currency. Such measures led to a sharp drop in GDP growth, from 12 percent in 2000 to an estimated 3.7 percent in 2003. A poorly managed tax system also played a part in these difficulties. By 2004 such measures had yet to cure the country's flagging international credit rating. With poor economic growth throughout the developed world from 2001 to 2004, the economy of Belize also suffered; tourism—the country's main industry—was significantly down during this period.

ENVIRONMENT

Compared with other Central American countries Belize is in relatively good shape in terms of the environment. However, the growing population and its environmentally based economy pose certain threats, including increased solid and liquid waste, the overfishing of its waters, and deforestation due to development. Of particular concern is the state of the country's water supply, which in its major city is often mixed with sewage. Also of concern are the endangered species in rain forests, which currently number more than 50. The government of Belize has committed to considering environmental impact in ongoing planning, including through the review of the status of land usage and the protection of certain habitats.

Belize is party to numerous international environmental treaties, including the Kyoto Protocol on Climate Change and the Convention on Biological Diversity.

LIVING CONDITIONS

According to the United Nations' Human Development Report for 2004, Belize ranked 99 out of 177 countries in the human development index, which takes into account factors such as life expectancy and health issues, education, and standard of living. Life expectancy in 2004 was 67.43 years. Fertility rates, meanwhile were high, with 3.77 children born per woman. Per capita income in 2002 was just under \$5,000, putting Belize in the middle of Caribbean countries economically.

Lifestyle varies widely depending on socioeconomic class. Accommodations range from exclusive oceanfront villas in Belize City to two-room, palm-thatched wood shacks for the Garifuna minority. Half the population of Belize live in the countryside, while one-quarter live in Belize City. Poor sanitary conditions, malnutrition, and limited access to health-care professionals are also common. Urban crime, especially violent crime involving firearms, has reached record levels. High unemployment

rates have also become a major social problem. Hurricane damage in 2000 and 2001 exacerbated an ongoing housing shortage in the country.

HEALTH

Cardiovascular disease remains one of the major health problems in Belize, and HIV/AIDS presents another major health risk. As of 2003 there were 3,600 people living with HIV/AIDS, and the incidence of the disease that year was the highest in Central America and sixth in the Caribbean. In 2000, while 92 percent of the population had access to safe drinking water, only 50 percent had access to adequate sanitation facilities. As a result, malaria and cholera remain persistent problems. In 1996 there were 25 reported cases of cholera, and in 1995 there were 9,413 diagnosed cases of malaria. In 2002 there were 55 cases of tuberculosis per 100,000 people.

Progress has been made on some fronts. In 2004 the infant mortality rate was 26.37 per 1,000 live births, down from the 1970 high of 56. The mortality rate in 2004 was 6.04 per 1,000 population. Public expenditure on health care as a percent of GDP has also grown, reaching 5.2 percent in 2001. Eight public hospitals serve the population, with an estimated 1 physician and 1.26 nurses per 1,000 population. An experimental national health-insurance system failed in 2003.

FOOD AND NUTRITION

Belize has a variety of culinary traditions and cultures, largely dependent on ethnic background. Maya and rural mestizos eat large amounts of corn, while Garifuna consume large quantities of fish. The national dish consists of rice and beans. Belizean foods are also influenced by the Spanish and Mexicans, with dishes typical to those coun-

tries present. Seafood is a local favorite, including lobster, conch, squid, mussel, scallop, and shark.

Coconut milk and hot spices are often used in Belizean cooking, and tropical fruits are abundant; these include guava, banana, and mangoes. Local specialties include roast armadillo from the Yucatán region, a fish, coconut milk, and plantain stew called *budut* from the Garifuna culture, and *escabech*, an onion broth and chicken soup originally from Mexico. Fruit drinks, mixed with coconut milk, are also typical, as is locally distilled rum and *nanche*, a liqueur.

 Amount of Fruits and Vegetables Available per person per year kg: 348

STATUS OF WOMEN

There are no legal barriers to equality in Belize. The government actively supports the educational and economic empowerment of women through special programs. Women hold positions of leadership in the government and in industry.

However, by 2004 Belize still failed to meet standards set by the United Nations for gender equality. These include women having a 30 percent share in parliamentary power and having access to the same quality of employment. While women in Belize represent 52 percent of technical and professional workers, they have only 3 percent of parliamentary seats.

Women

Women-headed Households: —
 Seats Held in Parliament by Women %: 3
 Female Administrators and Managers %: 36.6
 Ratio of Literate Women to Men age 15 to 24: 1.01
 Women's Share of Wage Employment Non-Agricultural %: 41.3

WORK

Belize had a workforce of 90,000 in 2001. Although the country experiences high unemployment—it ran in double digits in the 1990s and was 9.1 percent in 2002—there is still a shortage of skilled workers and technical personnel. The service sector was the largest employer in 2001, accounting for 55 percent of the labor force. Agriculture constituted 27 percent of the labor force, industry 18 percent. Agricultural products include bananas, coca, citrus, sugar, fish, cultured shrimp, and lumber, while industrial and manufactured products include garments and pro-

cessed food. By far the largest number of persons involved in the service sector are employed in tourism-related jobs, the country's single largest resource. The Garifuna minority traditionally made livings as fishermen and subsistence farmers. As the oceans have become overfished, however, more and more Garifuna have gone to work in the banana fields. Many have also emigrated.

Legislation deals with workers' issues such as minimum wage and work age. It is illegal to employ children under 12; those between 12 and 14 cannot be employed during school hours. The right to unionize is recognized by the government, and as of 2002 there were eight independent unions that had organized about 11 percent of the labor force. However, unskilled workers, such as those on the banana plantations, are rarely unionized.

Employment and Labor

Labor Force Total: 90,000
 Female Participation Rate %: 24.4
 Labor by Sector: %
 Agriculture: 27

 Unemployment %: 9.1

EDUCATION

Education is compulsory for children aged between six and 14. Primary and secondary education is free. In 2002 there were 47,187 pupils enrolled in 280 primary schools, 26,810 in 30 secondary schools, and 527 in 11 postsecondary institutions. In 2002 the pupil-teacher ratio in primary schools was 21 to 1. The net primary school enrollment was 99 percent, while net secondary enrollment was only 68 percent. Some 81 percent of children reached grade five in 2000–2001 as compared to 67 percent a decade earlier. In 2002 government expenditures on education represented 5.2 percent of GDP. The government runs some of the schools, but most are run by churches. The government maintains one special school for mentally disabled children and another for children with physical disabilities. Adult literacy was estimated at 94.1 percent in 2003.

A Centre for Employment Training (CET) was established in Belize City to reach the student population that has not had the advantage of completing secondary school. The Belize Technical College offers craft and technical courses, and the Belize Teachers College runs a two-year diploma course leading to trained-teacher status.

The Belize Vocational Training Centre in Belize City provides courses for primary-school dropouts, while the Belize Youth Development Centre and the Belize Col-

lege of Agriculture offer training for those interested in entering the field of agro-industry. Advanced training is provided to Belizeans in the professional and technical fields at Belize's first university, the University College of Belize, which opened in 1986. The University of the West Indies maintains a School of Continuing Education (SCE) in Belize City.

Education

SCIENCE AND TECHNOLOGY

Belize is known for its shortage of trained technical workers and also for its brain drain to more developed countries, a situation the government is trying to reverse with education incentives.

Much of the research that goes on in the country revolves around agriculture and fisheries. The Central Farm Agricultural Research Station focuses on studies of vegetables, rice, root crops, cattle, and pigs, while the Research Centre for Sugar Cane deals with sugarcane propagation and processing, and the Fisheries Resource Assessment and Management Program is attempting to revitalize the flagging fishing industry. All are government run.

Educational institutions offering some training in the sciences and technology include the University College of Belize and Wesley College, both in Belize City. For advanced degrees, however, Belizeans need to attend institutions in other countries.

MEDIA

No dailies are published in Belize, but several weekly newspapers are published, including the pro-PUP *Belize Times*, the pro-UDP *Guardian*, and the independent *Amandala*. Aggregate circulation of the nondaily press is 35,000, or 301 per 1,000 inhabitants.

Freedom of speech and the press are guaranteed by the constitution and assured in practice. However, there are certain limits to press freedom, including a law that restricts private individuals from questioning financial statements that public officials submit and an unofficial sanction against impugning the integrity of members of the Supreme Court. The government controls the country's only radio station and thus often makes use of free political ads in the guise of news, but there are 14 privately owned and operated television stations. Following the enactment of a broadcasting law in 1983, the six-member Belize Broadcasting Authority was appointed to license existing stations.

Book publishing is undeveloped in the country, and title output is negligible.

There is no national news agency. Only EFE is represented in the capital.

Television was introduced in 1985, and several commercial stations now operate.

The National Library of Belize contains over 100,000 volumes.

In 2002 there were 30,000 Internet users, and the following year saw 60,400 people using mobile phones.

CULTURE

Belizean culture is a mixture of the country's ethnic roots. The indigenous Maya have left behind remnants of their high civilization in temple complexes, which are aligned to the movement of celestial bodies. In spite of the fact that the Maya were essentially a Stone Age culture, they developed sophisticated mathematics, astronomy, and calendars. Spanish influence in the country is felt in the plain stone churches in towns and cities, but the modern architecture is predominantly British Caribbean in style.

A major component of Belizean culture is music. Marimba music is popular among the majority mestizo population, with ensembles made up of six or so members

hammering on the xylophone-like instrument. Mariachi music from Mexico is also popular.

Creoles tend to listen to a musical form called *bruk-down*, satirical songs accompanied by banjo, accordion, guitar, steel drums, and the jawbone of an ass, which is played by running a stick up and down the teeth. Calypso is also popular among Creoles, as is *cungo*, a spin-off of reggae.

The Garifuna, with their African and indigenous roots, have developed a musical form known as *punta*, an outgrowth of courtship dances—which explains the sometimes overtly erotic moves of the dancers. The old music that accompanies such dances was transformed in the 1970s into *punta* rock, with electrical accompaniment. The Garifuna also have a rich tradition of call-and-response songs, for daily tasks such as bread making, and numerous ballads and lullabies. *Chumba* and *hungubungu* are other dance and musical forms of the Garifuna. *Punta* was declared an “intangible heritage of humanity” by the United Nations Educational, Scientific, and Cultural Organization in 2001.

Belizean painters include Manuel Carrero and Manuel Villamer. Sculptors such as George Gabb and Frank Lizama have also made names for themselves outside of the country, while well-known writers include Zee Edgell, Felicia Hernandez, and Simone Waight.

The Baron Bliss Institute in Belize City promotes the arts and houses a small archaeological museum, and the National Library Service has branches in the districts and operates mobile libraries throughout the country. The national archives are in Belmopan.

FOLKLORE AND MYTHOLOGY

The earliest myth system of the region comes from the Maya; many of their myths and legends remain in contemporary Belize. Prominent among these is that of the Duende, a small, dwarf-like man with a straw hat who can cause disease or wreak havoc in other ways. When meeting a Duende in the jungle, a person must give a four-finger salute to ward off his evil power. Duende myths are not unique to Belize but have been traced as far south as Brazil and as far north as Canada. Duende stories are often paired with those of the Sisemite, a hairy, ape-like

creature that supposedly drags women off to the jungle to mate. In fact, these myths may bear relation to reality; some researchers believe the Duende and Sisemite to be examples of elusive Bigfoot-like primates, and expeditions have been mounted in the Belizean forests for signs of them. Other Mayan myths talk of the beautiful maiden Xtabay and of the creation of the world, and they declare the lucky days of the week to be Mondays and Saturdays, with the unlucky ones being Tuesdays and Fridays.

The ancient shamanistic belief system of obeah, a type of witchcraft, is practiced by some Garifunas and Creoles. Also known as voodoo, this occult system originated in Africa. Obeah incorporates some fetish objects, such as the *puchinga*, a stuffed black doll that, if buried under a person's doorstep, can do that person harm. A type of black butterfly can supposedly bring early death to anyone unlucky enough to see it. Various procedures can ward off the evil eye. The Garifuna, for example, paint crosses on babies' foreheads; others employ dead animals.

ENTERTAINMENT AND RECREATION

Dancing is a major form of recreation and entertainment for several Belizean ethnic groups. Creoles tend to celebrate holidays with an outdoor dancing festival called "jump-up," which is accompanied by Afro-Caribbean music. The Garifuna, too, have a traditional dance used for parties and celebrations. *Punta*, the old courtship dance from Africa, has been updated with rock and Caribbean rhythms and more modern lyrics.

As movie theaters are few in number, television plays an important role in entertainment. Belizeans of all groups watch satellite television, picking up English-language programs from the United States and Spanish-language ones from Mexico. Especially popular are sports programs and soap operas from both countries.

Belizeans also play sports, especially soccer, recreationally.

ETIQUETTE

The use of a handshake is a typical form of greeting in Belize; close friends and relatives often embrace and kiss one another on the cheek. Formal titles are used in society, and first names are reserved for close friends and relatives. As in much of Latin America, extreme punctuality is not considered a virtue. In other matters the Belizeans are less relaxed, although having elbows on the table while eating is considered inappropriate behavior. Dining is performed continental style, with the knife and fork used simultaneously.

FAMILY LIFE

Belizean families tend to be large; by a 2004 estimate, Belizean women give birth to an average of 3.77 children each. This figure has declined in recent years but is still high, especially considering that the average household income is only about \$6,000 per year. Marriage is optional among lower socioeconomic groups and also some ethnic groups, especially the Garifuna, among whom legal marriages constitute a minority of unions. Many urban households are increasingly single-parent households, with women generally being the sole parent.

While legal marriage is not always required, strong kinship ties nevertheless remain. Grandparents, aunts, and uncles are all considered close family, sometimes sharing communal housing. Among the Garifuna three generations typically shared the same dwelling. This is no longer the case, however, as many women emigrate in search of better income to send home to their families. A large degree of independence is fostered in Garifuna children, and violent behavior is frowned upon.

PERSONAL APPEARANCE

Belize has a wide mixture of races and ethnic groups represented in its population. From the indigenous Mayan and European mestizos to the African and Carib Garifuna and the African and Afro-European Creole, the country is a true melting pot.

As the country is tropical, dress is generally informal: in business situations men wear short-sleeved shirts and slacks; women, simple dresses. Ties are worn, but not usually.

The Garifuna once wore ethnic costumes that were trimmed with shells. However, this practice is seen less often in modern times. Women still wear brightly patterned skirts with kerchiefs, but by and large contemporary Western dress is seen throughout the country: jeans and T-shirts. In Belize City more contemporary fashion from New York and London might also be seen.

SPORTS

Like much of Latin America, Belize is a country devoted to soccer. Semiprofessional teams compete with each other throughout the season. Cricket is another British import, though it is not as popular in Belize as in other Caribbean nations. American imports include baseball, basketball, and softball. Boxing, polo, cycling, track and field, volleyball, and tennis are also popular both at the recreational and semiprofessional levels.

CHRONOLOGY

- 1950** In response to the devaluation of the Belize dollar, the People's United Party (PUP) is formed, led by Leigh Richardson, George Price, and Philip Goldson.
- 1952** The General Workers Union (GWU) and the PUP call the first national strike.
- 1954** Universal adult suffrage is established; the PUP wins eight of the nine elected seats and 67 percent of the vote.
- 1964** Belize is granted internal self-government; Guatemala continues to assert its claim to the territory.
- 1971** Belmopan becomes the capital of Belize; the government initiates decade-long redistribution of land from large landowners to tenants.
- 1973** The country's name is legally changed from British Honduras to Belize; the Alien Landholding Ordinance is passed, limiting foreign purchase and development of land.
- 1981** Belize becomes independent, with George Price, the People's United Party (PUP) leader, as prime minister. Guatemala refuses to recognize Belize's independence as legal and presses territorial claims.
- 1984** The PUP is unseated in the National Assembly elections, as the opposition United Democratic Party (UDP) wins a landslide victory. UDP leader Manuel Esquivel is sworn in as prime minister.
- 1988** The UDP is weakened by PUP accusations about the government-created Security and Intelligence Service and about suppression of the PUP newspaper. The Joint Commission is established to examine territorial dispute issues. This is an unofficial recognition by Guatemala of Belize sovereignty.
- 1989** In general elections the PUP wins out over the UDP, and Price regains the prime ministry.
- 1990** Belize holds official talks with Guatemala in an effort to settle their long-standing border dispute.
- 1991** Belize becomes a member of the Organization of American States (OAS).
- 1992** Guatemala formally recognizes Belize.
- 1993** The UDP once again defeats the PUP in general elections and Manuel Esquivel becomes prime minister. Sir Colville Norbert Young is appointed governor-general.
- 1994** The last remaining British forces are withdrawn from the country. Guatemala reasserts its territorial claims.
- 1995** The Violent Crime/Counternarcotics Intelligence Unit (VIU) is formed to reduce drug trafficking across Belize's borders.
- 1998** The PUP wins a landslide victory in the general elections, and Said Musa becomes prime minister.
- 2000** Guatemala announces that it will pursue its claim to half of Belize through international courts. Border disputes continue with the killing of a Guatemalan farmer by Belizean security forces and the arrest of several Belizean soldiers by Guatemalan authorities. In October, Hurricane Keith causes \$200 million in damages.
- 2001** In September Belize celebrates 20 years of independence. Hurricane Iris leaves 13,000 homeless in October.
- 2002** The OAS helps to broker a proposal that could settle the border dispute between Belize and Guatemala.
- 2003** Said Musa and the ruling PUP party remain in power following March elections.
- 2004** Musa relieves Finance Minister Ralph Fonseca of his position following fiscal mismanagement.

BENIN

Basic Fact Sheet

OFFICIAL NAME

Republic of Benin (République du Bénin) (formerly Dahomey)

ABBREVIATION

BJ

CAPITAL

Porto-Novo (official), Cotonou (de facto)

HEAD OF STATE & HEAD OF GOVERNMENT

President Mathieu Kérékou (from 1996)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

7,460,025 (2005)

AREA

112,620 sq km (43,483 sq mi)

MAJOR ETHNIC GROUPS

Fon, Adja, Bariba, Yoruba

LANGUAGE

French (official)

RELIGIONS

Animism, Christianity, Islam

UNIT OF CURRENCY

Communauté financière d'Afrique franc

NATIONAL FLAG

Green vertical stripe on the left third and two horizontal stripes, yellow above red, on the right two-thirds

NATIONAL EMBLEM

Two panthers passant flank a quartered shield depicting, clockwise from the upper left, a Somba fortress, the Star of Benin, a sailing ship, and a palm tree. Above the shield are two horns filled with sand and corn, and below is the national motto, *Fraternité, justice, travail* (Fellowship, justice, work).

NATIONAL ANTHEM

"The New Dawn"

NATIONAL HOLIDAYS

May 1 (Labor Day), August 1 (Independence Day, National Day), December 4 (Proclamation of the Republic Day), various Christian holidays, including Assumption, All Saints' Day, Christmas, Ascension, Easter Monday, and Pentecost Monday, various Islamic festivals

DATE OF INDEPENDENCE

August 1, 1960

DATE OF CONSTITUTION

December 11, 1990

GEOGRAPHICAL FEATURES

Benin, in southern West Africa, has an area of 112,620 sq km (43,483 sq mi), extending 665 km (413 mi) north to south and 333 km (207 mi) east to west. Its coastline, on the Bight of Benin, runs for 121 km (75 mi). Benin shares an international boundary of 1,989 km (1,236 mi) with four countries: Togo (644 km; 400 mi), Burkina Faso (306 km; 190 mi), Niger (266 km; 165 mi), and Nigeria (773 km; 483 mi).

Benin has four natural topographical regions. The first is the coastal belt and, behind, a lagoon region with four lagoons (Cotonou or Nadoue, Ouidah, Grand Popo, and Porto-Novo), all of which join the sea at Grand Popo. Farther north is the *terre de barre*, a fertile clay plateau di-

vided by a wide, marshy depression known as the Lama. The third region, in the northwest, is composed of the Atakora Mountains, with elevations around 654 m (2,146 ft). Mont Sokbaro (658 m) is the highest peak. Last, there are the eastern plains, the Borgu and the Plain of Kandi, which slope toward the Niger Basin.

CLIMATE AND WEATHER

The coastal region of Benin has an equatorial climate with four seasons: the long rainy season between March and July, the short dry season from August through mid-September, the short rainy season from October through mid-November, and the long dry season from November through March. Away from the coast the length of the dry season increases. In the north there are two seasons, with the rains falling between May and September. The maximum midday temperature in January often reaches 43.3°C (110°F) in the north, but the coastal region has a steady temperature of 22°C to 34°C (72°F to 93°F) throughout the year. Rainfall varies between 965 mm (38 in) in the north and 1345 mm (93 in) in the south.

The prevailing wind is the harmattan, the hot and searing wind that drives down from the Sahara between December and March.

Climate and Weather

Mean Temperature
Coastal Region: 72°F to 93°F
Average Rainfall: 38 in to 93 in

FLORA AND FAUNA

Tropical rain forests have almost totally disappeared in Benin. With their loss, depredation to the monkey population, which had found homes there, followed. Three species of monkey in particular—the red-bellied quonon, Geoffrey's pied colobus, and the olive colobus—have become endangered.

Along the coast are found coconut plantations, and farther north are palm groves. Farther north still is savanna woodland, which eventually gives way to arid savanna. Trees include mahogany, palm, ebony, coconut,

and kapok. The natural flora is estimated to comprise around 3,000 species, which is relatively few in comparison with neighboring countries.

The hippopotamus is still found in Benin, though human encroachment has reduced its numbers. Other large mammals include the giraffe, elephant, lion, panther, and several types of antelope; their numbers are largest in the north of the country. The python, puff adder, and mamba are among the most common snakes, while crocodiles populate the rivers. Coastal species include the humpback whale, dolphins, manatees, and four species of endangered turtle.

Game birds include wild duck, partridge, and guinea fowl, while insects include the tsetse fly, responsible for the spread of several diseases.

POPULATION

ETHNIC COMPOSITION

Benin is an ethnic mosaic of 42 groups, of whom the four largest—the Fon, Adja, Bariba, and Yoruba—constitute 54 percent of the population. These groups may be broadly divided into five clusters: Voltaic, Sudanese, Fulani, Ewe, and Yoruba.

The foreign community in Benin is estimated at more than 5,500, of whom the French constitute the largest group.

Interethnic relations are characterized by the carry-over of historic animosities. This has led to shifting and uneasy alliances between groups, often directed against other similar alliances. The northern groups have invariably suffered as the southern tribes have sought to advance their regional interests through national political institutions.

LANGUAGES

The official language of Benin is French. Fon and Yoruba are used as *lingua francas* in the south, and Bariba and Fulani are used in the North.

RELIGIONS

In statistical terms, over 62 percent of Beninese follow traditional African, or animist, religions, about 21 percent are Christian (mostly in the south), and 12 percent are Muslim. Catholic missionary activities began in the middle of the 19th century, when the apostolic vicariate of Benin and Dahomey was set up. Benin was the scene of intense missionary efforts as of 1860, when the *Pères des Missions Africaines de Lyon* began their activities. Since 1975 spiritualist cults have been discouraged.

Muslim influence in the country is disproportionately higher than the number of its adherents. Most Muslims belong to the Fulani, Bariba, and Dendi tribes.

Religious Affiliation	
Traditional beliefs	4,625,000
Christian	1,566,000
Muslim	895,000
Other	375,000

HISTORICAL BACKGROUND

The recorded history of Benin begins in the 17th century, when Onegbajda (c. 1645–85), chief of the Fon people, moved to Abomey after fighting with his brother and then conquered the Kingdom of Dan, which became Dahomey. Successful rulers pledged to continue to expand the territory of Benin, which led to constant war and conflict, especially with the powerful Yoruba of Nigeria. Dahomey became an integral part of the slave trade in that the nation's prisoners of war were sold to Europeans, largely the Portuguese, in exchange for weapons. Southern Benin became known as "The Slave Coast."

The first French trading post in what is now Benin was established in 1851, but a French protectorate was firmly established only after the defeat of King Behanzin of Abomey in 1892. Dahomey, as it was known until 1975, became a component colony of French West Africa in 1902. French rule ended in 1958, when the territory accepted the French-drafted constitution proposed by Charles de Gaulle and opted for the status of autonomous republic within the French Community. It achieved independence in 1960 and did not remain part of the French Community.

Benin is one of the most politically unstable nations in West Africa. Since independence it has seen four suc-

cessful coups (in 1963, 1967, 1969, and 1972) and two unsuccessful coup attempts (in 1974 and 1988) and a total of 11 presidents (one of whom was in power for only one month). The instability and vulnerability of the governments has been due in part to the fragility of political alliances and the constant intervention of ethnic interests in politics. None of the Beninese leaders has attempted to build a broad popular base.

The leader of the *Parti Dahoméen de l'Unité*, Hubert Maga, was elected the country's first president late in 1960. President Maga's term was interrupted by a military coup in 1963 following worker and student riots. The vice president under Maga, Sourou-Migan Apithy, was elected president in January 1964. Unrest in the northern part of Benin over this southern-born president spurred the military leader General Christophe Soglo to set up an interim government, which he eventually headed, in November 1965. This was followed by another coup carried out by young officers led by Maj. (later Lt.-Col.) Maurice Kouandété, who took over as prime minister.

Attempts were made to reestablish civilian rule in 1968, but because former presidents and leading politicians were excluded from taking part in the presidential poll, a boycott of the election was called. With only a quarter of the population voting, the election was voided, and a military appointee, Dr. Émile Derlin Zinsou, formerly the minister of foreign affairs, was sworn in as president in July 1968. In little over a year, Zinsou was deposed by Lt.-Col. Kouandété, and civilian rule was replaced by a military directorate.

Inconclusive results in the presidential election of March 1970 led to a compromise. The Presidential Council was organized, and power was shared by the three main candidates. In 1972, however, civilian rule was once again overturned, this time by a military coup led by Maj. (later Brig.-Gen.) Mathieu Kérékou, who abolished the constitution and established a military regime in which all the country's regions would be equally represented in the newly formed National Council of the Revolution (CNR).

In November 1974 Kérékou moved the country toward Marxism-Leninism, with the state taking over all major economic sectors. An unsuccessful military coup in January 1975 led to the merging of the army and the gendarmerie to form the National Defense Force.

In that same month the *Parti de la Révolution Populaire de Benin* (PRPB) was organized as the "highest expression of the political will of the people of Benin"; there followed a change in the country's name to the People's Republic of Benin, after an ancient African kingdom.

In January 1977 an airborne attack led by the French mercenary Col. Robert Denard was repelled. In May a *Loi Fondamentale* (Fundamental Law) was announced by the PRPB in preparation for the "people's democratic

revolution.” In August the *Loi Fondamentale* was approved by the CNR, which was replaced by the National Revolutionary Assembly (ANR). In February 1980 the ANR unanimously elected Kérékou as president. In that same year Kérékou reportedly converted to Islam, taking the first name of Ahmed. Official documents, however, still refer to him as Mathieu.

In February 1984 the *Loi Fondamentale* was amended to extend the terms of the president and ANR members as well as to reduce the number of members in the ANR. In July, Kérékou, as the sole candidate, was reelected president.

School riots in May led to the closing of all educational establishments. In November, 100 people, including teachers, engineers, and high-ranking officials, were arrested for belonging to the banned *Parti Communiste Dahoméen* (PCD).

In January 1987 Kérékou resigned from the army so that he could become the civilian head of state. Dissatisfaction within the military over government corruption led to one coup attempt in March 1988 and another in June.

A lessening of popular support for the official candidates in the 1989 ANR elections was probably caused by the country’s persistent economic problems. Nonetheless, Kérékou was reelected president by the ANR in August.

In 1989, though suggestions were made within Kérékou’s ministry to create a multiparty system, Kérékou maintained that such a change would lead to a resurgence of tribalism and regionalism.

Economic problems and austerity programs led to strikes in early 1989 by public-sector workers, including teachers and civil servants. Classes were boycotted by students demanding disbursements of promised grants and scholarships. Pressure by the military gave way to a payment of back salaries. Yet, despite agreements with the International Monetary Fund (IMF) and the World Bank, strikes by civil servants continued. Classes resumed in October but were disrupted again in December when the government did not fulfill its promises.

Faced with widespread public disillusionment with his government and mounting street protests, Kérékou announced in December 1989 that Benin would abandon its Marxist-Leninist ideology and that a national conference would be held early in 1990 to draft a new constitution. The conference, convened in February, voted to abolish the *Loi Fondamentale* and appoint a High Council of the Republic to assume the functions of the National Revolutionary Assembly, which was abolished. Nicéphore Soglo, a former official of the World Bank, was designated prime minister. The conference also voted to change the country’s name to the Republic of Benin. A political organization, the *Union des Forces du Progrès* (UFP) was established in May to replace the former PRPB. In December the nation approved a new con-

stitution that provided for the separation of the powers of the executive, legislature, and judiciary in the context of a multiparty state.

In March 1990 Soglo defeated Kérékou in the final round of elections—the country’s first free presidential elections in nearly 30 years and the first time an incumbent president was defeated in a reelection bid in Africa. He assumed office in April. However, Soglo’s term was plagued by legislative infighting, and his opponents captured the majority of the seats in parliamentary elections in 1995. In the 1996 presidential elections Kérékou staged a comeback, winning 52.5 percent of the vote. In 1999 Soglo’s Benin Renaissance Party and its allies captured a one-seat majority in the Assembly. Kérékou was reelected in 2001. Elections in December 2002 and March 2003 gave Kérékou’s party an absolute majority in the National Assembly, the first time such a situation had occurred since the reestablishment of the multiparty democracy in 1990.

Since 2003 the government has had to deal with international crime and the trafficking of humans. Nigeria closed its border with Benin in 2003 as a protest against a rise in cross-border robberies and smuggling. Cracking down on his own administration, Kérékou fired 10 top security officials, including his son. Corruption in the judiciary and among civil servants led to both arrests and trials in 2003 and 2004.

LIST OF MODERN RULERS

- 1960–63 Coutoucou Hubert Maga (president of the Republic)
- 1963–64 Christophe Soglo (head of provisional government)
- 1964–65 Sourou-Migan Apithy (president of the Republic)
- 1965 Justin Ahomadegbé-Tomêtin (president of the Republic)
- 1965 Tahirou Congacou (president of the Republic)
- 1965–64 Christophe Soglo (president of the Republic)
- 1967 Jean-Baptiste Hachème (chairman of the Revolutionary Committee)
- 1967 Iropa Maurice Kouandété (head of state)
- 1967–68 Alphonse Amadou Alley (head of state)
- 1968–69 Émile Derlin Henri Zinsou (president of the Republic)
- 1969 Iropa Maurice Kouandété (army chief of staff)
- 1969–70 Paul-Émile de Souza (chair of directory)
- 1970–72 Coutoucou Hubert Maga (chairman of the Presidential Council)
- 1972 Justin Ahomadegbé-Tomêtin (chairman of the Presidential Council)
- 1972–91 Mathieu Kérékou (president of the Republic)

- 1991–96 Nicéphore Dieudonné Soglo (president of the Republic)
 1996– Mathieu Kérékou (president of the Republic)

CONSTITUTION

Benin has had six constitutions since independence. In 1990 Benin adopted its newest constitution. It provides for an executive directly elected for a five-year term. The president is limited to two terms and must be between 40 and 70 years old. He is advised by a council composed of former heads of state. Legislative power is vested in a unicameral National Assembly, which is directly elected. The constitution established the principle of an independent judiciary.

PARLIAMENT

The 1990 constitution provided for a unicameral National Assembly composed of 83 deputies chosen by direct election. Deputies serve four-year terms and may be reelected indefinitely. There are two ordinary sessions, starting within the first fortnight of April and the second fortnight of October, respectively. Each session cannot exceed three months. Decisions are made by a simple majority.

POLITICAL PARTIES

Benin had throughout its history been a single-party state. That changed in 1990 when the parliament provided for a multiparty system, and there are currently more than 100 active political parties in the country. The largest include the Benin Renaissance Party, the Democratic Renewal Party, the Front for Renewal and Development, and the Alliance of the Social Democratic Party.

LOCAL GOVERNMENT

For purposes of regional administration, Benin is divided into six provinces, within which there are 78 districts.

Each province is headed by a civilian prefect. In addition, the country has five urban constituencies: Abomey, Cotonou, Ouidah, Parakou, and Porto-Novo.

At the lower levels, rural and urban communes and villages are run by elected committees.

LEGAL SYSTEM

The legal system is based on French civil and customary law. The constitution of 1990 established an independent judiciary. It provides for a Supreme Court, which is the

highest court in the nation, and a High Court of Justice, with the power to impeach government officials. The High Court is composed of six members of the legislature and the president of the Supreme Court.

Conditions in the country's penal system are generally harsh, with overcrowding and lack of proper sanitation and health care the norm. New prisons were built in 1999 and 2000 but did not significantly deal with problems. Many prisoners convicted of minor crimes have been released early to ease crowding. Prisoners are allowed regular visits by family and lawyers, and human rights groups have access to penal facilities.

HUMAN RIGHTS

For a country that had a poor record with regard to human rights for most of the 1960s through the 1980s, Benin has made remarkable progress. The country has successfully made the transition from a single-party, authoritarian, Marxist-Leninist state to a democratic one. The constitution provides for a number of protections of citizens from abuse, and these have largely been respected. Benin's constitutional court has direct jurisdiction over human rights abuses and has been diligent in prosecution. In practice the court has taken a more proactive role in addressing human rights abuses than the Benin Human Rights Commission, established especially for that purpose.

Areas in which Benin has been faulted internationally are human trafficking, especially of children, and the protection of women's rights.

FOREIGN POLICY

Throughout the cold war era Benin followed nonaligned policies, although military and economic ties with France remained strong. Relations with neighboring Nigeria are occasionally strained by frequent expulsions of Beninese workers. Border disputes continue between Benin and its neighbors over inaccurately demarcated territorial limits.

Benin is a strong supporter of the Economic Community of West African States (ECOWAS) and has initiated bilateral ventures with Ghana, Mauritania, and Togo.

DEFENSE

The defense structure is headed by the president, who is also the defense minister and commander in chief. Military manpower is provided by voluntary enlistment for a period of 18 months. The army headquarters is at Parakou.

Benin's armed forces have no offensive capability, and their combat worthiness is largely untried in the field.

The major role of the military in the history of modern Benin has been as a political arbiter and as a power base for ambitious colonels.

The bulk of military aid has been received from France. Token assistance has been received from the United States and Israel. Benin has no domestic defense production. In 2003 the government spent \$98.3 million, or 2.7 percent of gross domestic product (GDP), on defense.

ECONOMY

The economy of Benin remains underdeveloped and dependent on subsistence agriculture, cotton production, and regional trade. Growth in real output averaged a sound 4 percent in 1990–95 and 5 percent in 1996–2003. Rapid population growth, however, has offset much of this increase in output. Inflation has subsided over the past several years. Commercial and transport activities, which make up a large part of GDP, are vulnerable to developments in Nigeria, particularly fuel shortages. The Paris Club and bilateral creditors have eased the external debt situation in recent years. While high fuel prices constrained growth in 2000, increased cotton production—enabled by a major restructuring program—and an expansion of the Cotonou port were hoped to lead to increased growth in 2001. Even with the downturn in the world economy that year, about 5 percent growth occurred. However, at least one-third of the population continued to live below the poverty line, and the country's low income per capita made it one of the poorest countries in the world. There was 6 percent growth in GDP in 2002, mostly as a result of a bumper cotton crop.

The GDP per capita had grown to \$1,100 by 2004, taking into account purchasing power parity; overall, GDP grew 5.5 percent that year. Growth in real output has averaged a stable 5 percent in the past several years, but the rapid rise in population has offset much of this growth. Inflation has also subsided. A 2001 privatization policy is planned to extend to the telecommunications, water, electricity, and agriculture industries, leading, it is hoped, to more foreign investment.

ENVIRONMENT

Benin's environmental problems are ones common to Africa. The country suffers from increasing deforestation and desertification. Severe droughts in the north have further marginalized archaic agricultural activities. Overfishing has threatened many species along Benin's coast. Finally, the country lacks adequate supplies of potable water.

The government has set aside tracts of land for reforestation, and two national parks as well as several game preserves give sanctuary to wild game, several species of which—including the chimpanzee—have already become extinct in the nation. A total of 23 percent of Benin's natural areas were protected as of 2000.

LIVING CONDITIONS

In 2004 Benin was ranked 161st in the world on the Human Development Index, which focuses on three aspects of human development: life expectancy, education, and standard of living. Life expectancy in 2004 was 50.81 years, one of the lowest in the world, while the fertility rate was 5.95 children per woman. Benin is thus subject to overpopulation pressures. The country's total school enrollment in 2002 ranked the country 144th out of 176 countries worldwide, and its 2002 per capita GDP of \$1,070 ranked it 155th. With more than one-third of its population living below the poverty line, Benin was 80th among 90 developing nations in terms of poverty in 2002. Growth in urban areas has been significant since 1990, and overcrowding and high unemployment rates have resulted.

Architecture in the cities is a mixture of colonial and hastily built modern buildings, with shantytowns on the outskirts. In the northern rural areas round mud huts with palm thatching are typical, while in the south rectangular huts are the norm. In coastal areas simple homes are often built on stilts. Access to clean drinking water and proper sanitation remain glaringly inadequate throughout the country.

HEALTH

Though health care in Benin has been steadily, if slowly, improving, there are still many problems. Foremost among these is a lack of doctors: as of 2004 there were only 6 doctors per 100,000 people. As of 2002 public expenditures on health amounted to 4.4 percent of GDP. Malnutrition affects large portions of the population, especially infants. As of 1999 one-quarter of children under five were malnourished; malnourishment, malaria, diarrhea, and measles together kill 105 out of every 1,000 children before the age of one. Home birthing is still prevalent. It is estimated that more than half of Beninese women give birth without any professional help; consequently, the infant mortality rate in 2004 was 86 deaths per 1,000 live births.

Some progress has been made. Benin is part of the Bamako Health Initiative, which brings medicine to over 400 rural villages. Immunization rates are increasing: 94 percent of one-year-olds were immunized for tuberculosis in 2001 and 78 percent for measles. By 2002, 68 percent of the population had access to improved water sources; a decade earlier, only 20 percent had such access.

Mobile health units have helped to bring some of the epidemic diseases, such as yaws, sleeping sickness, yellow fever, meningitis, and tuberculosis, under control. HIV/AIDS, however, is a major health risk in Benin, as it is throughout much of sub-Saharan Africa. As of 2003 there were 68,000 Beninese living with HIV/AIDS; that year there were an estimated 5,800 deaths from the disease.

FOOD AND NUTRITION

Benin's staple food is *pâte* ("paste" in French), a concoction of millet, cassava, sorghum flour, and corn all boiled together. This is served with a variety of sauces—a favorite is peanut—and stews, which are generally very spicy. Eaten without utensils, the *pâte* is dipped into sauce using the right hand only. Grains and root crops constitute much of what is eaten for the lighter breakfast. A type of porridge is made from manioc, yams, corn, and millet.

Manioc is also the main ingredient of *gari*, a kind of tapioca or grits, and bananas or beans are beaten and pounded to make deep-fried dumplings. Rice and beans, fried plantains, okra, and fried or boiled cassava are also staples.

Palm wine is a popular drink, as is a gin made from millet, local beer, and fruit drinks made with limes or lemons.

With a large Muslim population, Benin has many of Islam's nutritional taboos. Additionally, there are other various local food restrictions that forbid the consumption of everything from beef to fish.

Malnutrition affected 25 percent of children under age five in 1999.

STATUS OF WOMEN

Although the constitution provides for equality for women in the political, economic, and social spheres, women experience extensive societal discrimination, especially in rural areas, where they occupy subordinate roles and are responsible for much of the hard labor on subsistence farms. In urban areas women dominate the trading sector in open-air markets. By law women have equal inheritance and property rights, but local custom in some areas prevents them from inheriting real property. Women do not enjoy the same educational opportunities as men, and female literacy is only 26 percent, as compared with 55 percent for males. Nevertheless, elementary school pass rates in recent years have highlighted significant progress by girls in literacy and scholastic achievement. Violence and the abuse of women are considered family matters. Female genital mutilation is practiced in the northern provinces of the country.

The Family and Personal Code was passed by the National Assembly in 2004, ensuring more rights for women. While polygamous marriages are allowed, they no longer

enjoy the same legal protections as monogamous ones, particularly with respect to the rights of inheritance for widows. Additionally, the law outlaws traditional practices such as forced marriage and wife inheritance, the practice whereby a widow must marry one of her dead husband's brothers or other relatives.

WORK

Few reliable statistics exist regarding the actual size of Benin's labor force or unemployment rate. In 2003 the labor force was estimated to be made up of about three million people. Of these, about half were employed in agriculture, producing cotton, corn, cassava, yams, beans, palm oil, peanuts, and various livestock. Industry accounted for only about one-tenth of employment. Industrial products include textiles, processed food, chemicals, and construction materials.

The overwhelming problem for most Beninese is simply finding work. With 37 percent of the population living below the poverty line in 2002, unemployment and underemployment are endemic. An estimated three-fourths of urban workers are employed informally as peddlers or pushcart vendors. Unskilled labor remains the major source of employment. Life is particularly difficult for women in this respect: almost 60 percent of women are employed in agriculture.

Workers have the right to unionize and strike. In 2002 about 75 percent of Beninese workers were unionized. The workweek is set at 40 to 46 hours, but many engage in domestic work and agriculture and put in much longer workweeks. Legislation guarantees annual leave and other benefits, but as this legislation covers only salaried employees, and just 2 percent of the population is salaried, such labor laws are essentially meaningless. Child labor also remains a problem despite a law prohibiting the hiring of children under 14. Per capita nominal GDP in 2003 was \$450, making Benin one of the poorest countries in the world.

EDUCATION

Education is free, universal, and compulsory, in principle, from ages five to 11. Schooling consists of 13 years, as divided into six years of primary school, four years of lower secondary school, and three years of upper secondary school. The curricula are modeled on those of France, but changes are gradually being introduced to adapt to local needs and traditions.

The academic year runs from November to July. The medium of instruction is French, but the government has proposed a gradual shift to regional vernaculars as part of its de-westernization policy.

One of the more significant changes made by the Kérékou government has been the introduction of technical education at the secondary level. Benin's sole institution of higher learning, the University of Benin, is 70 percent supported by France. The national literacy rate in 2002 was estimated to be 39.8 percent. In 2000–01 Benin was 155th in the world in terms of total school enrollment numbers; public expenditures on education amounted to 3.3 percent of GDP in 2002.

Improvements have been made in the area of student retention. While in 1990–91 only 55 percent of children remained in school until the fifth grade, by 2000–01 that number had risen to 84 percent—despite the fact that the pupil-teacher ratio for primary education was over 50 to 1.

SCIENCE AND TECHNOLOGY

Benin is in the process of establishing a scientific community. The National University of Benin in Cotonou has faculties of scientific and technical studies, health sciences, and agriculture, while the University of Benin in Benin City also offers technical and science degrees. In 2004 the University of Benin revamped its sciences into

two faculties, of physical sciences and biological sciences, in an attempt to produce more graduates in agriculture and engineering. That same year the Department of Environmental Sciences was established. It is estimated that in 1987–97 science and engineering students accounted for 18 percent of college and university enrollments.

In 2001 there were 174 researchers engaged in research and development activities, primarily agricultural in nature, per million people. Several institutes promote industrial research, including the Benin Office of Mines in Cotonou and the Institute of Applied Research in Porto-Novo.

MEDIA

In 1999 there were a total of 13 dailies published in Benin, with a combined circulation of 33,000.

The national news agency is Agence Béninoise de Presse, which is located in a section of the Ministry of Information. AFP has a regional bureau in Cotonou. Reuters, UPI, DPA, and AP have correspondents.

The official broadcasting organization is the Office de Radiodiffusion et Télévision du Bénin (RTB). In 2003 the government authorized the startup of 35 new radio stations and four television channels, all privately owned and operated. That year there were an estimated 70,000 Internet users and 236,200 cellular phone users.

Freedom of speech and of the press is guaranteed by the constitution, and the government generally respects these rights. Broadcasters are supposed to submit weekly lists of programs to the High Authority for Audio-Visual Media, but the media largely ignore this rule. Criticism of the government is common in the press; however, because of the concentration of media in urban areas and high levels of illiteracy, such criticism does not reach the vast majority of the population.

CULTURE

Beninese culture is a mixture of many influences: the high civilization of the ancient kingdom of Dahomey, the various indigenous peoples, the French, and Muslims.

Abomey is one of the country's main cultural attractions, with painted voodoo fetish temples and the remnants of royal palaces from the Dahomey past. The Royal Palace was constructed in 1645 and expanded by each new king, such that by the 19th century the compound was enormous, with a 30-foot wall encircling nearly 1,000 acres. Only part of the palace remains standing, as the French destroyed much of it in 1892, but this part includes the bas-relief carvings that constitute some of the most impressive art in West Africa. Part of this former palace compound has been converted into a museum displaying artifacts from the kingdom.

Animism plays an important role in Beninese society. It is believed that vodoun, or voodoo as it is popularly called, originated in Benin and was later introduced to Brazil, the islands of the Caribbean, and even parts of North America by slaves taken from the region. As the indigenous religion of Benin, animism or vodoun is practiced by between 60 and 70 percent of the population. The government tried to eradicate the cult but has found trying to coopt it to be a better strategy. Since 1992 vodoun has been recognized as one of Benin's official religions, and National Vodoun Holiday is celebrated on January 10.

This religious tradition gives rise to the long history of ritual, dance, and music for which Benin is widely known. Among the Fon people of southern Benin, for example, ecstatic dances for the *vada* vodoun ritual have found their way into the modern world, as accompanied by drums and even electric guitars. Such dances can be seen on National Vodoun Holiday in Ouidah, which is known as the cradle of vodoun.

Craft traditions are rich in Benin, a holdover from the days of the Dahomey kingdom. Some of these art forms, like the bronze heads sculpted centuries ago by Ife artists, are no longer produced. Other forms, such as appliqué tapestries, are still extant. These were originally made to celebrate momentous events in the kingdom.

Benin is home to many well-known writers, including Colette Senami Agossou Houeto, Florent Couao-Zotti, Adelaide Fassinou, Gisele Hountondji, Jose Pliva, and Richard Dogbeh. In the contemporary musical scene Angelique Kidjo was a major recording artist in the 1960s and 1970s. Musical exports of later decades include Afro-*akpala*-funk from the performer Nel Oliver. Benin has a number of libraries, museums, and archives. Porto-Novo is home to the National Archives, National Library, and the library of the National University of Benin. In addition to the historical museum in Abomey, there is one in Ouidah, ethnological museums in Porto-Novo and

Cotonou, and a museum of natural history and ethnography in Parakou.

FOLKLORE AND MYTHOLOGY

With literally thousands of deities, the animist religions of Benin are rich in folklore and mythology. Yoruba and Fon folklore are particularly wealthy oral literatures. Prominent among the Fon pantheon are Mawu, the supreme deity, Gu, the god of war, and Lisa, the god of the sun, sky, and power and Mawu's twin. The Yoruba, who also live in Nigeria and Togo, use their myth system, called *itan*, not just for rituals but also to settle disputes. Their supreme creative force is Oloddumare, the creator is Obatala, and their pantheon of gods and goddesses numbers—according to various accounts—201, 401, or 601.

The kings of Dahomey also provide material for legends and folktales in Benin. In particular, the 19th-century ruler Behanzin is venerated as a national hero.

Animal trickster tales are popular in Benin, as they are all over Africa. In Benin, the trickster generally takes the form of a spider or a tortoise. One story tells of how wisdom became widespread when a tortoise stole a gourd from the gods containing all the wisdom of the world. On his way home, the tortoise, frustrated that the gourd has gotten in his way at a narrow part of the path, breaks it and releases wisdom.

A variation on the trickster story is the escape tale, in which humans use intelligence and cleverness to get out of difficult situations, as in the Benin tale of the cruel king who commands his subjects to construct a palace from the top down. If they fail, they will die. A wise man saves the population by going to the king and asking him to lay the foundation stone.

ENTERTAINMENT AND RECREATION

Dancing is a popular pastime throughout the country; it is, in fact, something of a national passion. With their rich tradition of folk dances, Beninese are never at a loss for recreation during festivals or religious occasions. Other simple pleasures, such as eating, drinking, and conversing

with friends, are popular throughout the country, as are activities such as playing soccer or games such as cards, checkers, and *adji*, a mathematical, probability-based board game. Such games are typically played outdoors. Wrestling is also common in the north and in Yoruba land. Village and rural populations generally rely on traditional forms of recreation; festivals, holidays, and baptisms are particularly important for villagers.

In urban areas Beninese enjoy going to the movies or watching television. The latter activity, with the addition of new and private channels in 2004, has become increasingly popular. Satellite television also provides programming from abroad.

ETIQUETTE

The Beninese demonstrate a great deal of respect for their elders, sometimes even kneeling in front of them. It is not considered polite to make eye contact with those of greater age.

On the street it is typical for people to greet one another even if they are strangers. For friends and new acquaintances, a handshake is typical, though for a long time, especially in the north of the country, people did not shake hands. It is considered common courtesy that if you greet someone in a group, you must greet all the others.

As water is considered precious, a visitor is generally offered a glass. In many parts of the country time telling is a matter of observing the position of the sun; therefore, punctuality is not necessarily a sign of good manners. Also, property is considered communal in some parts of the country, such that a neighbor might ask to use an implement belonging to another in a manner that might seem rude to a Westerner.

FAMILY LIFE

Monogamous relationships are the rule in Benin, though polygamy exists among Muslims and other groups and is a legally recognized form of marriage. The extended family is the basic unit, and divorce is uncommon, for those who break up their families are considered cursed. Family size has been shrinking in the last few decades, but families are still large by the standards of developed countries, with between four to six children per family.

Patriarchy is the norm, though the traditional roles of men and women are also breaking down. Traditionally, women ran the house and took care of the children while men earned the income. However, with high unemployment and with financial pressures forcing women into the workforce in whatever positions they might find, changes in the family structure have come about. Men may have to travel to distant locations to find work, living outside

the home for long periods of time; women then do double duty as both breadwinner and homemaker.

Many urban children are homeless, living on the street.

PERSONAL APPEARANCE

Beninese wear all types of clothing, from Western-style shirts, blouses, trousers, and skirts to the more colorful traditional apparel of sub-Saharan Africa.

Typical traditional dress for men is a loose-fitting pair of trousers accompanied by a long shirt, down to the knees. More formal wear includes the caftan-like boubou, popular throughout much of West Africa, often decorated with dense embroidery. The more heavily embroidered boubous can be very expensive and are thus reserved for special occasions. Men also wear the colorful, long-sleeve, pullover, V-neck dashiki shirts

Women wear the boubou as well, and along the coast they wear bright, vibrant swaths of fabric wrapped around the waist or sometimes around the whole body. These are called *pagnes* and are often accompanied with matching headscarves. Women also wear the loose-fitting top called the *boumba*.

Muslim dress codes vary somewhat. A head covering is required for women, while Muslim men often wear the abbreviated caftan-style cotton shirt over trousers.

SPORTS

Benin's national sport is soccer; Beninese of all ages both play and follow their favorite semiprofessional teams. The Beninese national team takes part in the African qualifiers for the World Cup. As of 2003 the team was ranked 128th in the world.

CHRONOLOGY

- 1960** Republic of Dahomey is proclaimed, with Hubert Maga as president.
- 1963** Col. Christophe Soglo leads the first of the country's six coups; Maga is placed under house arrest.
- 1964** The constitution of the Second Republic is approved by referendum. Following presidential and legislative elections, a two-headed executive emerges, with Sourou-Migan Apithy as president and Justin Tometin Ahomadegbé as virtual copresident.
- 1965** The completed port of Cotonou is inaugurated. Soglo leads his second coup; Apithy and Ahomadegbé are dismissed, and the government is entrusted to Tahirou Congacou, president of

the National Assembly. Within a month Soglo leads his third coup, assumes full power, and sets up his own administration.

- 1967** Soglo is toppled in a coup led by Maurice Kouandété, and an interim military administration is formed under the dual leadership of Kouandété and Colonel Alphonse Amadou Alley, who is the official president.
- 1968** A new constitution—the country's fourth—is approved by referendum; after 74 percent of eligible voters abstain, the election of President Moumouni Adjou is annulled; the military appoints Émile Derlin Zinsou as president, and his appointment is confirmed in a plebiscite.
- 1969** Kouandété unseats Zinsou in a coup but is himself ousted in an interfactional struggle in the army; an interim three-man military directorate is formed under the chairmanship of Paul-Émile de Souza. A new provisional constitution is adopted. A new presidential election is held but is later suspended; a presidential triumvirate is set up with Maga, Apithy, and Ahomadegbé as members, with rotating terms of office.
- 1970** Maga is inaugurated as first president of the presidential council. A new constitution is promulgated.
- 1972** Maga transfers power to Ahomadegbé. Within five months Major Mathieu Kérékou seizes power in the nation's sixth coup.
- 1973** A new decree decentralizes local administrative structures.
- 1974** Kérékou proclaims a Marxist-Leninist state and nationalizes banks and major industries.
- 1975** Dahomey is renamed the People's Republic of Benin, and the Parti de la Révolution Populaire de Bénin (PRPB) is founded as the country's sole political party and the supreme organ of state. The key junta officer Major Michel Aikpe is killed. The government is rocked by two serious coup attempts.
- 1977** Government troops reportedly foil a coup attempt by "mercenaries in the pay of international imperialism"; a curfew is imposed throughout the country, and borders and airports are closed. The National Council of Revolution approves the Loi Fondamentale, which replaces the council with a National Revolutionary Assembly (ANR).
- 1978** Gabon expels Beninese workers.
- 1979** Single-party balloting is held for electing members of the National Revolutionary Assembly.
- 1982** Pope John Paul II visits Benin.
- 1983** Nigeria expels illegal Beninese immigrants.
- 1984** Kérékou is reelected to a new term in office.

- 1985** Nigeria expels further Beninese immigrants, souring relations between the two countries. In April and May students boycott classes, and riots at the University of Benin follow. The government closes schools. Ministerial reshuffling occurs. In November, 100 people are arrested under suspicion of belonging to the banned Parti Communiste Dahoméen.
- 1986** Benin reschedules external debt in meetings with the IMF and World Bank.
- 1987** Kérékou resigns from the army to become a civilian leader of government.
- 1988** After an abortive military coup, nearly 150 officers are arrested.
- 1989** The ANR reelects Kérékou president. Public-sector workers strike to protest economic problems and austerity programs. Kérékou announces that Benin is abandoning its Marxist-Leninist ideology.
- 1990** The Loi Fondamentale is abolished, and a High Council of the Republic replaces the National Revolutionary Assembly. The PRPB is abolished and replaced with a new political organization, the Union des Forces de Progrès. The nation approves a new constitution.
- 1991** Nicéphore Soglo defeats Kérékou in the first free presidential election in nearly 30 years.
- 1996** Kérékou is reelected president in the country's second free election.
- 1998** Civil servants seeking back pay and wage increases stage a four-day strike.
- 1999** The IMF extends an additional \$14 million to Benin.
- 2001** Kérékou is reelected president.
- 2002** Civil servants paralyze the government with strikes protesting the introduction of merit pay.
- 2003** Kérékou wins an absolute majority in the National Assembly. Nigeria temporarily closes its border with Benin in August in protest of an increase in cross-border crime. The IMF forgives \$460 million of Benin's external debt.
- 2004** A general strike for higher wages shuts the country down for three days in October. The

government sets up an anti-child-trafficking commission in March to combat the growing problem. Kérékou denies that he is considering trying to change the constitution in order to allow him to run for a third term.

- 2005** In January, Benin and Nigeria launch a joint border patrol in order to stem cross-border smuggling and robberies. The International Court of Justice awards most of the river islands along the disputed border with Niger to Niger.

BHUTAN

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Bhutan (Druk-Yul)

ABBREVIATION

BT

CAPITAL

Thimphu (Tashi Chho Dzong)

HEAD OF STATE

King Jigme Singye Wangchuk (from 1972)

HEAD OF GOVERNMENT

Prime Minister Sangay Ngedup (2005)

NATURE OF GOVERNMENT

Absolute monarchy

POPULATION

2,232,291 (2005)

AREA

47,000 sq km (18,147 sq mi)

ETHNIC MAJORITY

Bhotes

LANGUAGE

Dzongkha (official)

RELIGION

Druk Kargue sect of Buddhism

UNIT OF CURRENCY

Ngultrum; the Indian rupee is used in external transaction

NATIONAL FLAG

Two triangles, one orange-yellow and the other maroon, divided diagonally with a white dragon superimposed in the center

NATIONAL EMBLEM

The *khorlo*, or Buddhist Wheel of Law, also symbolic of the monarchy, is flanked in a circular pattern by two dragons at the sides, representing spiritual and secular authority; by the Jewel Umbrella at the top; and by a lotus flower at the bottom. Lattice-like designs appear at each corner of the square outer portion of the emblem.

NATIONAL ANTHEM

"In the Thunder Dragon Kingdom"

NATIONAL HOLIDAYS

November 11 (*Druk Gyalpo's* Birthday), December 17 (National Day), various Buddhist festivals

DATE OF INDEPENDENCE

Never under direct foreign rule in modern times

DATE OF CONSTITUTION

None

GEOGRAPHICAL FEATURES

Bhutan, a landlocked country in the Himalayas, has a total land area of 47,000 sq km (18,147 sq mi) extending 306 km (190 mi) east to west and 145 km (90 mi) north to south.

Bhutan's total international boundary of 1,075 km (668 mi) is shared with two countries: India (605 km; 376 mi) and China (470 km; 292 mi). The border with India was established by the British in the 18th and 19th centuries. The border with China, running along the crest of the main Himalayan range, has never been surveyed and has been the subject of repeated disputes since 1947.

Bhutan is entirely mountainous except for the southern Duars Plain, which extends into the Himalayan foothills in India. The country is almost equally divided in two by the Black Mountain range, a spur of the Himalayas jutting southward. In the north is a series of north-to-south ranges, with four peaks over 6,100 m (20,000 ft). The loftiest of these peaks are Kangri (7,553 m; 24,774 ft) and Chomo Lhari (7,314 m; 23,997 ft).

Bhutan is drained by a series of parallel rivers flowing south through narrow valleys and gorges into the Brahmaputra River. From west to east these are the Amo, Raidak (with its tributaries the Paro, Wong, and Ha), Sankosh, Ai, Tongsa, Bumtang, Kuru, and Dangma. None of these rivers is navigable.

Population of Principal Cities (1997)

Phuntsholing	45,000
Thimphu	45,000

CLIMATE AND WEATHER

Bhutan has three climatic zones. The Duars Plain in the outer foothills has a subtropical climate with high humidity and heavy rainfall, averaging 5,080 to 6,290 mm (200 to 250 in.) a year. The central belt of flat valleys has cool winters and hot summers with moderate rainfall. The uplands and high valleys over 3,650 m (12,000 ft) have cold winters and cool summers with an annual average rainfall of 1,020 to 1,520 mm (40 to 60 in). Over 5,000 m (15,000 ft), the land is permanently covered with snow and glaciers. A major feature of the climate is the frequency of violent thunderstorms, from which Bhutan gets its name. (In the Dzongkha language Bhutan means "Land of the thunder dragon.") Temperatures vary widely because of the enormous range of elevation; no specific temperature information is available.

Climate and Weather

Mean Temperature: 40°F to 50°F
 Average Rainfall
 Duars Plain: 200 in to 250 in
 High Valleys: 40 to 60 in

FLORA AND FAUNA

A Buddhist country with the accordant restrictions on taking life, Bhutan is rich in animal life. In the forests of central and eastern Bhutan are found elephant, rhinoceros, cheetah, sambar, bear, and other wild animals. Game birds include pheasants, quail, and partridges.

Vegetation is dependent on elevation in this mountainous country. Forests of pine and oak are found at elevations between 3,000 and 6,000 ft, while at higher elevations these forests include walnut, poplar, willow, rhododendron, and magnolia. Above 9,000 ft cypress, fir,

and juniper are added to the mix, and these give way to birch and fir, which grow up to the timberline of 14,000 ft. Various alpine shrubs and flowers are also found on the mountain slopes.

POPULATION

Population Indicators

Total Population 2005: 2,232,291

ETHNIC COMPOSITION

The largest homogeneous ethnic group in Bhutan is the Bhotes (known in the Dzongkha language as Sharchops), who constitute 54 percent of the population and who are concentrated in the eastern regions. Direct descendants of Tibetan immigrants live west of the Sankosh River and make up about 32 percent of the population. The largest ethnic minority is the Nepali community, made up largely of the Rai, Gurung, and Limbu castes. They have resisted assimilation and have maintained their own settlements. They are prohibited from moving into the northern regions, where the Bhotes predominate. Smaller ethnic groups include Lepcha immigrants from Sikkim as well as Santals and Paharias from India.

While the CIA's estimate of Bhutan's population is over two million, other estimates range as low as 800,000.

LANGUAGES

The official language is Dzongkha (also spelled Denjongke), whose written form is identical to Tibetan. Three other languages are spoken in the country: Bumthangka in the central region, Sarachapkha in the eastern region, and Nepalese in the southern region.

Indian influence is reflected in the use of Hindi and Bengali near the southern border. English is taught in

schools, and many educated Bhutanese are fluent in Hindi and English as well as in their native dialects.

RELIGIONS

The official religion is a Tibetan form of Buddhism of the Mahayana branch, known as Lamaism, which is followed by the dominant Bhotes. The monks and clerics belong to the Druk Kargue branch of the Kagyutpa, one of the “red hat” orders of Tibetan Buddhism. Monasteries are numerous, and the number of monks is estimated at 4,000 to 5,000. By custom each family devotes at least one offspring to a monastery.

Though the monarch—the *druk gyalpo* (dragon king)—is the secular as well as spiritual head of Bhutan, the head of the monastic order—the *je y khampo*—is a dominant force in national life and is a member of the Royal Advisory Council. Monks in the lower echelons also serve as the social, cultural, and religious leaders in their respective *dzongs* in addition to functioning as physicians and astrologers.

The Nepali minority follows a form of Hinduism with Buddhist overtones.

Religious Affiliations

Lamaistic Buddhist	1,675,000
Hindu	558,000

HISTORICAL BACKGROUND

Little is known of the history of Bhutan before the modern era. The Bhotes probably came from Tibet in the ninth century when the Tibetans overran the area that was inhabited by the native Tephu tribe. Bhutan first appears in history when the British repelled a Bhutanese invasion of the Indian princely state of Cooch Behar and later concluded a peace treaty with Bhutan. But the Bhutanese continued their inroads into the Duars, the low-lying areas of north Assam and Bengal. In 1866 the British finally defeated the Bhutanese and forced them to withdraw in return for an annual payment. In 1907 the Bhutanese leader Ugyen Dorji was installed as king, with British blessings. Under the Punakha Treaty of 1910 the United Kingdom agreed not to interfere in Bhutanese affairs but took over the management of Bhutan’s external relations. When India became independent in 1949 the treaty was replaced by the Indo-Bhutan Treaty of Friendship. King Jigme Dorji Wangchuk, installed in 1952, established the National Assembly in 1953 and a Royal Advisory Council in 1965. He died in 1972 and was succeeded by the Western-educated 16-year-old crown prince Jigme Singye Wangchuk. During the last 40 years Bhutan has had to deal with illegal immigra-

tion from Tibet on the one hand and from Nepal on the other. A Citizenship Act was passed in 1985 that set stringent conditions for citizenship, including linguistic and other tests of commitment to the Bhutanese community. Many formerly legal Nepali Bhutanese then became illegal, and 100,000 were expelled to Nepal, where they still live in refugee camps. This situation has created ongoing tension between the two countries. Other Nepali immigrants have tried to organize themselves into a political party to secure civil rights and legal citizenship. Violence continued in southern Bhutan during the 1990s, leading to further strained relations with Nepal. In 1993 the government was still unable to resolve the uprising by its Nepalese minority, who claimed that 53 percent of Bhutan’s residents were Nepalese, while the government claimed that less than one-third were resident and the remainder were illegal aliens. In April 1993 a meeting between the Nepalese Prime Minister Girija Prasad Koirala and King Wangchuk to discuss the refugee situation ended in failure. In the new millennia this refugee situation continued to be a major problem for the country. More talks were held in 2000 and 2002, without resolution.

Bhutan’s plans for modernization of its institutions are supported and financially underwritten by India. Considered a liberal leader, King Wangchuk in 1999 allowed his country limited access to television and the Internet. In 2001 the king commissioned a constitution, which is scheduled to come into effect in 2005. As another sign of Bhutan attempting to open to the world, negotiations began in 2003 for entrance into the World Trade Organization (WTO). A prime minister is allowed to share some power with the king; he is chosen on a revolving basis from among the council of ministers. In 2005 Sangay Ngedup began his tenure in that office.

LIST OF MODERN RULERS

King	
1907–26	Ugyen Wangchuk
1926–52	Jigme Wangchuk
1952–72	Jugme Dorji Wangchuk
1972–	Jigme Singye Wangchuk

1952–64	Jigme Palden Dorji
1964	Lhendup Dorji
1998–99	Lyonpo Jigme Thinley
1999–2000	Lyonpo Sangay Ngedup
2000–01	Lyonpo Yeshey Zimba
2001–02	Lyonpo Khandu Wangchuk
2002–03	Lyonpo Kinzang Dorji
2003–04	Lyonpo Jigme Yoser Thinley
2004–05	Lyonpo Yeshey Zimba
2005–	Lyonpo Sangay Ngedup

CONSTITUTION

Though Bhutan yet has no constitution and is an absolute monarchy, the nation has taken some hesitant steps toward constitutionalism by introducing certain features of representative government. These include the T̄songdu, or National Assembly, created in 1953; the Royal Advisory Council, created in 1965; and the Council of Ministers, or cabinet, formed in 1968. At the same time the monarch voluntarily surrendered some of his traditional powers to strengthen the T̄songdu. Specifically, the right to veto by the king was removed, full freedom of parliamentary speech was guaranteed, and the king was required to seek a vote of confidence from the T̄songdu every three years. In the event of a vote of no confidence by a two-thirds majority, the king is to abdicate, but the crown is to remain in the Wangchuk dynasty in order of succession. The T̄songdu subsequently abrogated the right to remove the monarch but then reinstated the right in 1998. The impact of these measures has been minimal.

The most powerful organ of government after the *druk gyalpo* is the Royal Advisory Council, whose eight members are appointed by the king. Five of its members represent the people, two the Buddhist hierarchy, and one is the personal representative of the king. The council only submits recommendations to the king, who either accepts or rejects them as he sees fit. Next in authority is the five-member Council of Ministers, selected, in principle, from the T̄songdu. The prime minister is chosen on a rotating basis from this Council.

Popular elections are held at the village level every three years. Each family is granted one vote. In 2001 King Wangchuk established a commission to draft a constitution that would grant more power to the people. Having gone through several drafts, the constitution—calling for separation of powers—was due to come into effect in 2005. However, a referendum on the constitution has been postponed to 2008.

The Wangchuk dynasty seems to be confronted with no serious or visible opposition. Almost all of the changes initiated during the past 30 years have come from the monarch himself. The intention behind these reforms has been to create a semblance of popular participation in the political process without actually diluting royal power. Feudal and theocratic forces remain in control of the country, and a possible internal threat to the monarchy would likely arise only from conservative forces who may feel that the pace of modernization is too fast. The nearest Bhutan came to a political crisis in recent times was in 1964, when Prime Minister Jigme Polden Dorji was assassinated and his successor and younger brother Prime Minister Lhendup Dorji was involved in a power struggle with the king and was forced to flee to Nepal. Although there has been occasional Chinese-inspired guerrilla activity, it is not a serious problem.

PARLIAMENT

The national assembly, known as the T̄songdu and established in 1953, seats members on the basis of a three-year term and meets twice yearly, in spring and autumn, for sessions that last no more than two weeks each. The T̄songdu comprises 150 members, of whom 105 are indirectly elected by village headmen, 10 represent the Buddhist clergy and monks, and the remaining seats are occupied by officials, ministers, deputy ministers, and judicial officers. The T̄songdu claims broad powers, comparable in theory to those of the best representative institutions abroad. It debates freely all important issues and advises the king on political and constitutional matters. Both the Royal Advisory Council and the Council of Ministers are responsible to it. Bills passed by the T̄songdu may not be vetoed by the king. The T̄songdu also has the right to force the abdication of the king through a no-confidence motion. Because most of its members are illiterate, however, the T̄songdu remains largely an otiose and ineffective organ.

POLITICAL PARTIES

Political parties are banned in Bhutan. However, there are a number of antigovernment organizations that are based in Nepal.

LOCAL GOVERNMENT

For purposes of local administration Bhutan is divided into 20 districts known as *dzongs*, each headed by a *dzongda* (in charge of administration and law and order) and a commissioner known as a *trimpong* (in charge of judicial matters). The *trimpongs* are assisted by tax collectors known as *nyer-chens*.

Each village has a council consisting of one member from each family. The council elects a village headman, who also dispenses justice. Elections are held at the village level at three-year intervals.

LEGAL SYSTEM

Bhutan's court systems dates from 1968, when the king established the first High Court (Thimkhang Gongma). At the same time judges were appointed for each of the country's administrative districts. The High Court was empowered to review the decisions of the king.

Below the High Court local headmen and magistrates hear cases in the first instance. At this level justice is dispensed according to customary and religious laws. No information is available on correctional facilities.

HUMAN RIGHTS

Although information is not readily available on political conditions in the nation, Bhutanese society has a reputation for nonviolence and tolerance. However, civil and political liberties have no constitutional basis, and the role of the state is that of a benign patriarch. The basic freedoms have not been guaranteed on paper but are enjoyed in practice. However, the plight of Nepalese refugees has brought a great deal of international attention to Bhutan. Charges of human rights violations were leveled against the Bhutanese security forces for their handling of peace marches sponsored by the Bhutan People's Party in 1996.

FOREIGN POLICY

Although bound by treaty with India, Bhutan has established direct relations with China, India's arch-enemy. It has negotiated with the People's Republic of China over the Bhutan-China border. The ninth round of these border talks was held in 1993. Demarcation of the southern border has been agreed upon with India. Tensions have arisen between Bhutan and India's northeastern state of Assam. Two separatist groups from Assam—the United Liberation Front of Asom (ULFA) and the National Democratic Front of Bodoland (NDFB)—have bases in Bhutan, and a third, the Kamatapur Liberation Organization (KLO), from West Bengal, also maintains bases in the country. In late 2002 Bhutan moved against these bases, a move welcomed by the Assam government. Bhutan became a member of the United Nations in 1971 and has diplomatic relations with 19 nations and with the European Union. It is a founding member of the South Asian Regional Cooperation (SARC) organization.

DEFENSE

The defense structure is headed by the *druk gyalpo*, who is also the commander in chief. Military manpower is provided by conscription.

The strength of the armed forces is estimated at 8,000. Military expenditures totaled \$11.2 million, or 1.9 percent of gross domestic product (GDP), in 2003.

The capability of the army is limited to internal security missions, the manning of border posts, and the suppression of any opposition movements or guerrilla activities inspired by Chinese Communists. Bhutanese soldiers are noted for their stamina and fighting qualities, which partially offset their weakness in equipment and supplies.

Though the defense of Bhutan is the responsibility of the Indian army, there is no agreement to station Indian

troops in Bhutanese territory. India provides military training to Bhutanese officers and men.

ECONOMY

Bhutan is one of the lowest-income and least-developed countries in the world. Because the economy is incompletely monetized, few statistical indicators can be constructed from existing data.

Bhutan has a free-market economy in which the dominant sector is private. The economy is based on agriculture and forestry, which employ 93 percent of the population and account for about 51 percent of GDP.

Balance of payments statistics are limited to imports and exports. Trade deficits are made up through credits from the Indian government.

LIVING CONDITIONS

Bhutan is still very much cut off from the rest of the world, and though overtures have been made toward modernization, the country remains on the lowest rungs of development in South Asia. The 2004 infant mortality rate per 1,000 live births was 103, population growth was 2 percent, and life expectancy was 54 years. Dysentery and malaria are still leading causes of death in the country. Fertility rates are high in the country, with almost 5 children born per woman according to a 2004 estimate.

The economy is also one of the world's smallest and least developed, and 90 percent of the population lives in rural areas and villages. The capital, Thimphu, and Phuntsholing are the only sizable cities, each with an estimated 45,000 inhabitants. In the north of the country architectural styles are influenced by Tibet, while in the south the Indian influence is felt. With no railroads, transportation is problematic across the mountainous terrain. Villages are cut off from one another, just as the entire country is cut off from much of the rest of the world.

HEALTH

As with many other features of Bhutanese life, the health-care system is still in a stage of development. Though the government provides free medical care to workers, the population-to-doctor ratio is still over 10,000 to 1. This acute shortage of medical personnel results in a life expectancy of only 54 years, with a full 38 percent of children less than five underweight in 1994. Immunization rates for children have been growing in recent years, with between 75 and 85 percent rates for measles, pertussis, diphtheria, polio, and tuberculosis vaccinations. Despite these efforts, diphtheria and tuberculosis are still major causes of death, especially among Bhutanese refugees. Cholera outbreaks are still common due to limited supplies of potable water. There were fewer than 100 people living with AIDS or HIV in the country according to a 1999 estimate.

Health

Number of Physicians: 103
 Number of Dentists: —
 Number of Nurses: 467

 Access to Improved Sanitation Facilities %: 70
 Access to Improved Water Source %: 62

FOOD AND NUTRITION

The main food in Bhutan is rice. However, at higher altitudes, where rice cultivation is impossible, it is substituted with other grains such as barley or buckwheat. Fried corn powder is a popular dish, and a type of beer, *chang*, is brewed from grains. Though cow milk is not readily available, yak milk is and provides not only a beverage but also the raw material for a type of cheese. Tea, brewed with salt and butter, is another favorite.

Despite the fact that most Bhutanese are Buddhists, they are not vegetarians. Meats such as beef, pork, chicken, and goat are consumed when available. A stew of meat, rice, and herbs called *thugpa* is a typical dish, as are curries and omelets.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: —
 Amount of Fruits and Vegetables Available per person per year kg: —

STATUS OF WOMEN

Although the government has officially encouraged greater participation on behalf of women in political and administrative life, male members of the traditional aristocracy dominate the social system. By 2001, 9 percent of members of parliament were women. The government founded the National Women's Association of Bhutan in 1981 primarily to improve the socioeconomic status of women, particularly those in rural areas. Starting in 1985 the association became a line item in the government budget.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 9
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men age 15 to 24: —
 Women's Share of Wage Employment Non-Agricultural %: —

WORK

Agriculture and forestry occupy 93 percent of the working population of Bhutan. Another 2 percent of the population is employed in industry and commerce and 5 percent in the service sector. Industrial products include cement, wood products, processed fruits, alcoholic beverages, and calcium carbide, while agricultural production is concentrated on rice, corn, root crops, citrus, grains, dairy products, and eggs. A shortage of skilled laborers is endemic in Bhutan; the government sector is the largest employer of salaried workers. In 2002 the government established a living minimum wage of \$2.50 per day, and although the minimum work age is 18 for citizens, international groups have noted local industries employing preteens. Tourism is restricted in Bhutan, providing only about 2 percent of GDP, but in the future the country's tourist industry could hold promise.

Employment and Labor

Labor Force Total: —
 Female Participation Rate %: 40.0
 Labor by Sector: %
 Agriculture: 93

 Unemployment %: —

EDUCATION

Though education is neither universal nor compulsory, it is free for the first 10 years. Of those 10 years of schooling, primary school lasts for five years, lower secondary school for three years, and upper secondary school for two years. There are no mission or private schools; all schools are subsidized by the government. A few schools are coeducational and are run on the lines of American private schools but using a British syllabus. Two vocational institutes function as teacher-training schools: the Kharbandi Technical School and the Royal Bhutan Polytechnic. Several other colleges also exist.

The academic year is the calendar year. The medium of instruction is Dzongkha, but English is taught in selected schools.

SCIENCE AND TECHNOLOGY

Several colleges in Bhutan offer courses in the sciences and technology. The Bhutan Polytechnic College, in Deothang, trains students in engineering, while the Royal Technical Institute, in Phuntsholing, has courses in electronics, mechanics, and motor mechanics. Sherubtse Degree College, in Tashigang, also provides science courses.

MEDIA

The only newspaper in the country is the weekly *Kuensel*, published by the government in English, Dzongkha, and Nepalese, with a total circulation of about 12,500 copies.

Bhutan has no national news agency. There are no foreign news bureaus in the capital.

Bhutan has 52 radio stations. The Bhutan Broadcasting Service airs programs in English, Sharchopkha, Dzongkha, and Nepali on a daily basis. Television and the Internet were permitted by the king in 1999. The state television station broadcasts a daily news program in two languages. Wealthier Bhutanese use satellite dishes or cable to get international broadcasts. Druknet is the only Internet service provider in the country, offering limited access to customers of the few Internet cafés in the country. There were an estimated 15,000 Internet users in Bhutan in 2003.

There is a public library in the capital, Thimphu, and most monasteries have collections of Buddhist manuscripts.

CULTURE

Tibetan Buddhism provides a backdrop for much of the country's cultural heritage. Protected from outside influences by its geographical location, Bhutan has maintained this cultural heritage into the 21st century. Lamas still maintain a high degree of influence on not only religious but also cultural, political, social, and economic affairs. Their fort-like monasteries, called *dzongs*, are the center of religious and cultural life in the country. Religious objects such as the painted religious scroll, or *thangka*, and the "wheel of life," or *mandala*, are not only sacred objects but are also regarded as art.

The music of Bhutan includes such traditional genres as *rigsar*, *zhungdra*, and *boedra*. Television and radio are largely used for the dissemination of information rather than entertainment, but the country does have a nascent film industry, as witnessed by the 2000 production of the nation's first feature-length film, *The Cup*, which depicts a burgeoning soccer craze among Buddhist monks.

FOKLORE AND MYTHOLOGY

Folklore and mythology in Bhutan harken back to the country's religious roots and to events and people in its history. Many tales relate the wondrous workings of the Tibetan guru Rimpoche, who was invited into the country in the eighth century by an Indian prince. Also known as Padmasambhava, Rimpoche introduced Buddhism into Bhutan. More stories deal with the wisdom and exploits of the reincarnation of Rimpoche, a 15th-century lama named Pemalingma. Religious dances choreographed by him are still popular. A third historical person who figures in Bhutanese folklore is the 17th-century lama Dharma Raja, who helped create the state of Bhutan.

ENTERTAINMENT AND RECREATION

Religious festivals, or *tsechu*, are a major form of entertainment for the villagers in Bhutan. These are held at local monasteries and involve dancing and singing and may last for several days. Since 1999 Bhutanese have been able

to watch television, albeit on a limited basis. There is also the government newspaper, *Kuensel*, but Bhutan's low literacy rate ensures a small circulation for the paper. The largest library in Bhutan is the National Library at Thimphu. In 2002 it contained 105,000 volumes. Internet cafés have also become popular in the country.

ETIQUETTE

Unlike in other parts of South Asia, men and women mix freely with each other in Bhutanese society. When greeting a guest, the Bhutanese will bow with hands extended and palms facing the visitor. Hospitality is important, and guests are always offered some refreshment, such as tea or beer.

FAMILY LIFE

Bhutanese of various ethnic groups tend to marry within their own community. Historically, weddings have been arranged by parents. More and more frequently, however, marriage has become a matter of individual choice. Divorce is permitted but not common; compensation is required from the person wanting the divorce. The legal age for marriage is 21 for men and 16 for women. Lamas usually conduct the simple wedding ceremonies, and offerings are made to spirits with beer. The husband traditionally moves into the family home of the bride, but couples can also set up their own households, depending on their economic circumstances.

PERSONAL APPEARANCE

Mainly of Tibetan stock, Bhutanese share the physical appearance of that people. Dress is controlled by government decree and all citizens are required to abide by this dress code, or *driglam namzha*, during daylight hours. The *gho*, or knee-length robe tied at the waist, is worn by men, while women wear an ankle-length dress called a *kira*, made of a large rectangular piece of cloth folded and clasped. Over this they may also wear a silk jacket known as a *toego*. Shoes are not typical for men or women, but sandals are sometimes worn. Women's hair is cut short and men might wrap scarves around their heads. When visiting a monastery or temple, a special sash is worn by members of both sexes.

SPORTS

Archery is the national sport, but soccer is also very popular. Archery competitions often make up parts of the Bhutanese religious festivals.

CHRONOLOGY

- 1949** India and Bhutan sign Treaty of Perpetual Peace and Friendship.
- 1952** Maharaja Jigme Dorji Wangchuk ascends to the throne.
- 1958** The maharaja abolishes slavery.
- 1961** Bhutan's first five-year plan is launched.
- 1962** Bhutan joins the Colombo Plan.
- 1963** The ruler of Bhutan adopts the title of *druk gyalpo*.
- 1964** Prime Minister Jigme Polden Dorji is assassinated; Brigadier Bahadur Namgyal, deputy commander in chief, is implicated and arrested along with 40 other members of the military. Namgyal is executed. Lhendup Dorji is named prime minister but becomes involved in a power struggle with the *druk gyalpo* and flees to Nepal with the army commander, Brigadier Ugyen Tyangbi. The *druk gyalpo* names himself prime minister.
- 1965** The Royal Advisory Council is established, along with the Council of Ministers, in an effort to broaden the political decision-making process.
- 1968** Bhutan's first High Court is established. In a major governmental reform, the *druk gyalpo* renounces his royal prerogative to veto bills passed by the Tsongdu and also declares that he would step down if two-thirds of its members demanded his abdication through a vote of no confidence. The Bank of Bhutan is established.
- 1969** Bhutan holds its first census.
- 1971** Bhutan is admitted to the United Nations.
- 1972** King Jigme Dorji Wangchuk dies; his son, 17-year-old Jigme Singhye Wangchuk, ascends the throne.
- 1974** The ngultrum is introduced as the national currency. Jigme Singye Wangchuk is crowned king.
- 1979** Following the breakdown of talks with the dalai lama, the Tsongdu passes a directive requiring Tibetan settlers to become citizens or face repatriation to Tibet.
- 1983** Bhutan becomes a founding member of South Asian Regional Cooperation (SARC) along with Bangladesh, India, Maldives, Nepal, Pakistan, and Sri Lanka.
- 1985** Bhutan hosts the first meeting of ministers of foreign affairs from SARC member countries; SARC is renamed the South Asian Association for Regional Cooperation (SAARC).
- 1989** King Wangchuk issues the "Driglam Manzha," an edict that lays down strict rules pertaining to dress and social codes.
- 1990** Alarmed by the restoration of democracy in Nepal, King Wangchuk bans the viewing of foreign television and orders strict enforcement of the Driglam Manzha, subjecting violators to fines and imprisonment; demonstrations are held.
- 1991** Through 1993, thousands of illegal immigrants, mostly Nepali-speaking Hindus, are expelled.
- 1997** Nearly 80,000 Bhutanese refugees in UN camps in Nepal claim they were forced out of their homeland.
- 1998** King Wangchuk agrees to some constitutional governmental reforms, including the election of a cabinet. China also recognizes Bhutan's international status.
- 1999** Bhutan releases 200 prisoners whom human rights groups had identified as political detainees
- 2001** King Wangchuk establishes a commission to draw up a constitution.
- 2004** In December government troops carry out a widespread offensive against the separatist camps of the United Liberation Front of Assam in the south of the country. The United Nations High Commission on Refugees (UNHCR) seeks to solve the Nepalese refugee problem through resettlement in Western countries.
- 2005** King Wangchuk announces he will abdicate in 2008, when parliamentary elections are to be held.

NATIONAL FLAG

Tricolor of horizontal red, gold and green stripes with the national emblem at the center

NATIONAL EMBLEM

A condor of the Andes, with wings outstretched, perches on a blue and gold oval shield flanked by branches of olive and laurel. In the upper rim of the shield is the word *Bolivia* and in the lower rim nine stars appear. The upper half of the inner shield shows Mount Potosí illuminated by a rising sun. In the foreground are a breadfruit tree, a sheaf of corn, a farm house, and an alpaca. In the background of the emblem are an array of crossed cannon, bayonet-armed rifles, Inca war axe, red cap and pike, and six national flags, three on either side.

NATIONAL ANTHEM

“O Bolivia, Now a Kindly Fate Has Crowned Our Long-Felt Hopes”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), August 5 to 7 (National Festival), August 6 (Independence Day, National Day), May 1 (Labor Day), July 21 (Martyrs’ Day), October 12 (Discovery of Americas Day), various Christian festivals, including All Saints’ Day, All Souls’ Day, Christmas, Good Friday, Holy Saturday, and Corpus Christi

DATE OF INDEPENDENCE

August 6, 1825

DATE OF CONSTITUTION

February 2, 1967; last amended April 2004

GEOGRAPHICAL FEATURES

Bolivia is located in the heart of South America. It is the fifth-largest country in the continent, with an area of 1,098,580 sq km (424,162 sq mi), extending 1,529 km (950 mi) north to south and 1,448 km (900 mi) east to west. Because of its landlocked position, it is sometimes described as the “Tibet of South America.”

Bolivia shares its total international land border of 6,743 km (4,190 mi) with five countries: Brazil (3,400 km; 2,113 mi); Paraguay (750 km; 466 mi); Argentina (832 km;

517 mi); Chile (861 km; 535 mi); and Peru (900 km; 559 mi). Bolivia has served throughout its history as a buffer state amid these five neighbors but in the process has lost more than half of the national territory it originally claimed to all of these neighbors except Argentina.

Bolivia is divided into three topographical regions by most geographers, four regions by others. The three commonly cited regions are the high plateau region known as the altiplano; an intermediary region comprising semi-tropical rain forests on the eastern slopes, or *yungas*, of the Andean mountain system; and the drier valleys and

Bolivia

the llanos, or the Amazon-Chaco lowlands. The intermediate region south of Cochabamba is sometimes identified as a separate region under the name of Valles.

The altiplano, which crosses the country in a northwest to southeast direction, parallels and splits the Andes into two mountain chains, or cordilleras, straddling the country on its eastern and western sides. The western

mountain chain, the Cordillera Occidental, forms the border with Chile and has crests and peaks that often rise to 4,900 m (16,000 ft), the highest peak being Sajama (6,542 m; 21,458 ft). On the other flank of the altiplano is the higher Cordillera Real, or Cordillera Oriental, an impressive array of peaks with an average elevation of over 5,500 m (18,000 ft). The most majestic of these mountains

are those around Lake Titicaca, especially Illimani and Illampu, both of which rise to over 6,400 m (21,000 ft), overlooking the city of La Paz. The altiplano itself is 800 km (500 mi) long and 130 km (80 mi) wide, with an average altitude of 3,650 m (11,975 ft) above sea level. This region cradles the famed Lake Titicaca, 222 km (138 mi) long and 113 km (70 mi) wide, with a surface elevation of 3,657 m (12,000 ft), making it the highest navigable lake in the world. It is also South America's largest lake.

The second region, the *yungas* ("warm lands" in Aymara), is made up of sharply tilted mountain valleys with an altitude of between 490 m (1,608 ft) and 2,750 m (9,022 ft). The *yungas* consists of three zones, of which the highest, called *ceja* (eyebrow) is similar to the altiplano, while the intermediate zone consists of fertile river valleys. The valleys and basins of the Valles region, which is often treated as part of the *yungas*, are broader and more densely populated.

The lowland plain, or llano, region consists of tropical rain forests and the Plains of Moxos with alternating savannas and cultivated areas. Because the drainage is poor, much of this region is converted periodically to swamp. Farther south, the llano merges with the La Plata River basin, constituting a northward extension of the pampas of Argentina.

The altiplano is an inland drainage basin drained by the Desaguadero River, which flows into Lake Poopó. The *yungas* and the Valles regions are drained by the Pilcomayo River, which flows south to join the Paraguay, and the Chaparé, Ichilo, and Río Grande, which join to form the Mamoré, a tributary of the Amazon. The Guaporé, Beni, and Madre de Dios rivers also converge in the northeast to form the Madeira in Brazil.

CLIMATE AND WEATHER

Bolivia is entirely within the tropics, but extreme differences in elevation produce a variety of climatic conditions. In general, temperatures and rainfall increase from west to east. During most of the year the altiplano is parched and inhospitable. The valleys of the Cordillera Oriental have a warmer, semiarid Mediterranean climate. The *yungas* have a semitropical and moist climate, and the lowlands become drier to the south near the Argentina border. The mean annual temperature at La Paz is about 8°C (47°F); at Trinidad in the eastern lowlands, it is 26°C (79°F). In the altiplano the nights are cold even in summer, and freezing temperatures are recorded during most winter nights. The thinness of the air in the altiplano and the intense sunlight combine to produce a kind of luminosity in the atmosphere that has a stimulating visual quality.

The rainy season lasts from December to February, but the amount of rainfall varies seasonally as well as annually. Rainfall is heaviest in the Cordillera Oriental and lightest in the altiplano; it also tends to decrease from north to south. Lake Titicaca receives around 1,010 mm (40 in), the *yungas* 1,520 mm (60 in), the Valles 760 mm (30 in), the Santa Cruz Plains 1,020 mm to 1,520 mm (40 in to 60 in), and the Chaco 890 mm to 1,020 mm (35 in to 40 in). Because of seasonal variations, both floods and droughts are common. The Chaco particularly becomes a swamp during the rainy season and a parched desert during the summer.

The rain-bearing winds are easterlies from the Amazon basin. Dust-laden winds called the *surazos* blow from Paraguay across the Santa Cruz plains.

FLORA AND FAUNA

With its immense range of geographical features—from arctic-like conditions in the high mountains to the forests of the Amazon—Bolivia offers a wide range of both plant and animal life. The Lake Titicaca region is said to be the original home of the potato, and it is also home to the *totoro* reed, used for making small fishing boats. In the same region, fuel is provided by a moss-like plant, the *yareta*, and from the *tola* bush. At these high elevations the grass

ichu provides material for everything from woven mats to house thatching.

The tropical forest provides a home to a wide variety of flora, from the quinine-producing *quina* tree to the *Pará* rubber tree. Hardwoods are plentiful in these forests, with over 2,000 species. This is also home to vanilla, sarsaparilla, and saffron plants. Other native plants include palms, sweet potatoes, manioc, peanuts, and a wide variety of fruits. In the Chaco region are found the prickly scrubs called *monte*. The tannin-producing *quebracho* trees are also plentiful there.

Animal life is equally varied, from the llama and alpaca of the altiplano to the puma, armadillo, tapir, sloth, peccary, and ant bear of the Amazon. Lake Titicaca has several varieties of edible fish, and bird life is rich and varied. Reptiles and a wide variety of insects are found below 3,050 m (10,000 ft).

ETHNIC COMPOSITION

Indians constitute the ethnic majority in Bolivia, with an estimated 52 to 70 percent of the population. *Cholos*, or mestizos, make up 32 percent, whites from 5 to 15 percent, blacks 2 percent, and others 1 percent. These disparate ethnic groups have never quite melded together into one people, and cultural, racial, and linguistic differences persist in most areas of national life.

The Indians of Bolivia are broadly divided into Highland and Lowland Indians. The two largest highland groups are the Aymara and the Quechua, the former the oldest and the latter the largest among all

Indian tribes in the country. The Quechua are predominantly rural and are noted for their industriousness and friendliness.

The lowland tribes are characterized by extreme diversity, and many tribes remain unknown to ethnographers. They are generally classified into four linguistic groups: Panoan, Tacanan, Mojoan (or Arawakan), and Guaranian. These, in turn, are divided into 30 extant tribes of from 10 to 20,000 members. The largest of these groups is the Guaranian, with six subgroups.

Mestizos are a transitional group between whites and Indians. Although they make up almost one-third of the population and are widely distributed, they occupy an equivocal position in Bolivian society. The terms “mestizo” and *cholo* were applied formerly only to persons of mixed Indian and Spanish descent, but over the years the terms have been applied indiscriminately to any upwardly mobile Indian who has attained a certain economic and cultural status. Both terms are now defined by criteria such as the ability to speak Spanish, urban orientation, occupation, manners, and dress. Nevertheless, most *cholos* maintain certain Indian traditions and practice certain rituals associated with Indian folk religion, magic, and festivals.

Although they represent less than 15 percent of the population, whites (also known as *gente decente* or *gente buena*, “decent” or “good people”), dominate the political and economic life of the country. The white elite remains socially and culturally homogeneous and jealously protective of their Spanish heritage. The 1952 revolution, which altered the political equation in favor of the Indians, also mitigated some of the rigidity of the Bolivian social system.

Ethnic aliens include Brazilians, Germans (some of whom are members of a 500-family Mennonite agricultural colony), Jews who fled Nazi Germany in the 1930s, Lebanese, Canadians, Italians, and Poles. Relatively prominent among foreign communities are 700 Japanese and Okinawan families who immigrated to Bolivia after World War II and settled in the Santa Cruz area. Almost all aliens live in urban centers.

LANGUAGES

The official languages are Spanish, Aymara, and Quechua. Spanish is spoken as a first language by only a little more than one-third of the population. Bolivian Spanish conforms to standard Castilian and is purer than that spoken in most parts of South America. An estimated 40 percent of Indians cannot speak or read Spanish.

Quechua was the royal language of the Incas and is still the most widespread of the Indian languages. Guaraní is also a principal Indian language. Many isolated Indian groups speak languages so distinctive that they do not fit into conventional classifications and are therefore described by linguists as unrelated.

RELIGIONS

Over 88 percent of the population is estimated to be nominally Roman Catholic, but the church's influence on national life is marginal. The 1961 constitution formally separated church and state. The government relinquished the right to mediate in church affairs, to approve the appointment of major church officials, and to control the issuance of conciliar decrees. However, the church continues to receive financial support through the national budget.

The Roman Catholic Church, though claiming 2.1 million members in 1998, admits that only about 15 percent of the population actually practices the faith.

Protestants constitute only 9 percent of the population, but the Protestant growth rate has tended in recent years to exceed the population growth. During the last 30 or 40 years Protestant churches have seen increased social acceptance. The Aymaras, for example, have shown great receptivity to the Protestant missions, and nearly 3 percent of them are professing Protestants.

Some Indians practice a mixture of Catholic and traditional beliefs based upon the pantheism of pre-Columbian religion.

Religious Affiliations

Roman Catholic	7,795,000
Protestant	797,000
other	265,000

HISTORICAL BACKGROUND

Bolivia's earliest inhabitants were Aymara-speaking Colla Indians who settled around the southern end of Lake Titicaca around 600 c.e. They developed the Tiahuanaco civilization, which flourished until 900. Around 1300 the Quechua-speaking Incas conquered the region. In 1527 the Inca emperor Huayna Capac divided his empire between his two sons, and the southern part with its capital of Cuzco became a distinct region. The civil war between the two sons gave an opportunity for the Spaniards under Pizarro to overrun the land. In 1539 Pedro de Anzures established La Plata, now Sucre. The discovery of a rich silver mine called Cerro Rico de Potosí in 1545 brought the Spaniards to Upper Peru (as Bolivia was known during the colonial period). In 1548 La Paz was founded on the main silver transport route between Potosí and the coast. In 1559 Upper Peru became the Audiencia of Charcas under the Viceroyalty of Lima, but in 1776 it was transferred to the Viceroyalty of Rio de la Plata.

The major event in the colonial period was the insurrection of Tupac Amaru, heir to the Inca throne, which was put down brutally. Bolivia was one of the first Spanish American countries to revolt against Spain in 1809; 15 years later, Antonio José de Sucre, Simón Bolívar's young general, defeated the royalists in Upper Peru and con-

vened a congress, which in 1825 formally proclaimed the Republic of Bolívar, later changed to Bolivia. In 1826 Bolívar gave the new nation its first constitution. Sucre was chosen as the first president and Chuquisaca was renamed Sucre in his honor. Sucre was ousted in 1828 by General Andrés de Santa Cruz, who formed the short-lived Peruvian-Bolivian Confederation, dissolved in 1839. For most of the 19th century Bolivia was racked by civil and foreign wars as a result of which it lost much of its original land to Brazil and Chile. Between 1899 and 1920 Bolivia's rich tin deposits were extensively mined, leading to the construction of its fabled mountain railroads. During this period the Liberals were in power and moved the capital from Sucre to La Paz, a Liberal stronghold. In a war with Paraguay between 1932 and 1935 over the Chaco Boreal region Bolivia lost its outlet on the Paraguay River. The unrest following the war led to the rise of the left-wing governments of David Toro and German Busch, who nationalized the large oil industry and three large tin-mining interests. One of Busch's major accomplishments was the liberal constitution of 1938.

In 1952 the Movimiento Nacionalista Revolucionario (MNR) seized power and, in a coalition with the Labor Party, began a program of extensive social reform. Under the leadership of the presidents Victor Paz Estenssoro and Hernán Siles Zuazo the government nationalized the tin mines, introduced land reform, and established universal suffrage. As a result of opposition from powerful trade unions and growing social disorder, Estenssoro was overthrown by Vice President René Barrientos Ortuño with the support of the army. Barrientos shared the presidency with General Alfredo Ovando Candia until January 1966 when he resigned to run alone for president. Barrientos won election in July 1966 but was killed in a helicopter crash in April 1969. Victor Paz Estenssoro, a runner-up in that race, dropped out of the next contest, thus virtually ensuring Siles the necessary majority in congress. At this point the military again seized control of the government, ordered the disbanding of the congress and declaring the country a military zone. The coup was led by General Luis García Meza, the commander of the army, who then proceeded to establish a military government. The junta immediately moved to consolidate power and to eliminate opposition within the army as well as among the labor force. The new regime was promptly recognized by the other military dictatorships in the so-called Southern Cone of South America—Argentina, Chile, Paraguay, and Uruguay. Argentina was reported to have been actively involved in the coup, masterminding the takeover strategy as well as supplying the coup leaders with 200 military and intelligence personnel.

In May 1981 President García Meza resigned, naming General Humberto Coyoja Riart as his successor. A month later General Coyoja was arrested for his involvement in the plot to remove García Meza from the presidency, and Brigadier General Celso Torrelio Villa was

named president. Torrelío himself resigned on August 4 in favor of General Waldo Bernal Pereira but was restored to office on September 4. On July 19, 1982, General Torrelío was ousted and replaced by General Guido Vildoso Calderón, who announced on September 17 the restoration of civilian rule. The congress elected in 1980 was reconvened and elected Hernán Siles Zuazo as president. During the two ensuing years numerous government changes only worsened economic conditions, and in December 1984 Siles Zuazo announced his early retirement from the presidency following general elections on June 16, 1985. These elections brought Siles's old rival, Victor Paz Estenssoro, back to the presidential office.

Upon taking office Paz Estenssoro attacked the staggering inflation rate, estimated at 11,750 percent. His program was rejected by the trade unions, which called for a countrywide strike that was banned by the government and followed by the arrest and banishment of union leaders. Thousands of strikers were also arrested. The strike was called off in October and was to be followed by talks. In the same month the right-wing Acción Democrática Nacionalista (ADN) aligned with the governing party, the MNR.

A joint campaign by Bolivia and the U.S. military to eradicate illegal coca growing was actively protested by trade unions and opposition groups. Despite \$100 million in U.S. aid, coca operations continued unchecked.

In 1986 the government's economic austerity programs led to further strikes and the imposition of a 90-day state of siege. Unrest continued in 1987, with several ministers being replaced. Strikes were later banned, in November 1989.

Displeasure with the MNR programs was reflected in ADN and Leftist Revolutionary Movement (MIR) victories in the December 1987 municipal elections. Nevertheless, the pact between the ruling MNR and ADN kept the ADN in power. Further economic troubles, fired by rising oil prices early in 1988, led to a national hunger strike in April instigated by the COB trade union. Following this the cabinet resigned, though all but four members were reappointed.

The presidential elections in May 1989 resulted in defeat for each of the three candidates—General Hugo Banzer Suárez (ADN), Gonzalo Sánchez de Lozada (MNR), and Jaime Paz Zamora (MIR). All candidates agreed on MNR policy: economic austerity programs, a campaign against coca production, and the finding of alternative employment and crops for coca growers. Despite the fact that Paz Zamora received the least votes of the three presidential candidates, support from Banzer (who was initially aligned with Sánchez) assured a majority vote for Paz Zamora in the newly elected congress. A coalition government was set up in which ADN members occupied strategic ministries. General Banzer held on to a certain amount of power through his leadership of a newly established joint political council.

Harsher measures had been taken in 1988 to fight Bolivia's drug trafficking. In April an antinarcotic agency and drug-control troops were established and empowered by a coca limitation law restricting the allowable acreage for traditional legal coca growing. At the same time Roberto Suárez, Bolivia's foremost drug trafficker, was arrested. This was followed by the exposure of leading ADN members' involvement in drug trading.

In 1989 an inability to make inroads against the powerful coca growers culminated in a cutoff of U.S. aid and a meeting in October of the presidents of the three major coca-growing countries—Bolivia, Colombia, and Peru—to discuss a common strategy. In 1993 Gonzalo Sánchez de Lozada won the presidential election. During his tenure he implemented a number of reforms in favor of Bolivia's indigenous majority. His government's plan to privatize the oil industry led to heavy protests in 1995 and 1996. In response the government declared a state of siege and suspended civil rights. Presidential elections in 1997 brought the former dictator Hugo Banzer Suárez to office as a candidate of the ADN. In a program largely funded by the United States, the government announced plans to eradicate the coca plant by 2002, leading to angry protests by coca producers. Suffering from cancer, Banzer stepped down as president in 2001 and was replaced by Jorge Quiroga Ramírez, who in turn was replaced by Gonzalo Sánchez de Lozada in 2002.

In February 2003 rioting took place in protest against a proposed income tax as well as the eradication program for coca. In October, Sánchez resigned after two months of rioting and strikes over a gas-exporting project that protesters believed would benefit foreign companies more than Bolivians. He was replaced by his vice president, Carlos Diego Mesa Gisbert, or simply Carlos Mesa, best known as a journalist and historian with little experience in government.

Mesa managed to remain popular despite continued social unrest. In a July 2004 referendum on the future of the country's significant natural gas reserves—the second largest in South America—Bolivians overwhelmingly supported Mesa's plan to exert more control over foreign gas companies. However, rising energy prices led to widespread protests in 2005 and Mesa ultimately resigned. Evo Morales became the first Indian to be elected president.

2005–	Evo Morales

CONSTITUTION

Bolivia is governed by the constitution of 1967 (the nation's 16th constitution since independence), which provides for a democratic centralist republic. Although the constitution calls for elected governments, elected governments have frequently not been allowed by the military to take office. Furthermore, the separation of governmental powers and the equal status of the three branches of government have become legal fictions, as presidents have gained power through coups and maintained it by decree. Suffrage is given at 18 years of age for married individuals and 21 for those unmarried.

The constitution of 1967 provides for a president elected for a four-year term by direct suffrage and by simple majority. A vice president is elected with the president on the same party ticket. Neither the president nor the vice president can be reelected for a succeeding term. The constitution was amended in 1995 to provide for a five-year term of office. Although an effort is made in the constitution to blend the presidential and cabinet forms of government, presidential powers are virtually unrestricted. The president commands the armed forces, controls the local governments, appoints all major public servants, administers the national taxes, disburses state revenues, and negotiates treaties. He may also, under certain conditions and for a limited period of time, declare a state of siege and suspend the constitution. As head of the cabinet he appoints and dismisses cabinet members whose number is fixed by law at 12.

The political system is dominated by persons of largely European origin. Those following a traditional Indian lifestyle and speaking Aymara or Quechua as a primary language, who make up an estimated 60 percent of the population, have little opportunity to advance to top positions because of economic disadvantages and cultural isolation. However, Indians have served in cabinet-level positions, and there are several Indian congressmen.

PARLIAMENT

The National Congress is a bicameral body consisting of a Senate and a Chamber of Deputies. The Senate consists of 27 members, the Chamber of Deputies 130 members. According to the constitution each of the country's nine departments, or states, is represented by three senators. Members of both houses are elected for four-year terms. The regular session of congress lasts for 90 days, beginning every year on August 6. The constitution also provides for a legislative committee composed of nine deputies and five senators to function when the congress is not in session.

Minority representation in the congress is ensured by a proportional system under which the party winning the most seats in each department is awarded two seats and the party with the second-highest vote total is awarded

the third. Candidates who fail to win the elections to the Chamber of Deputies serve as alternates and fill in vacancies as they occur.

Suffrage is universal, with no property or literacy qualifications for married persons over 18 and single persons over 21. All electoral procedures, including the registration of candidates and political parties, are supervised by the National Electoral Court. Below the National Electoral Court are departmental electoral courts, electoral judges, electoral notaries, and juries. Electoral juries consist of five persons chosen by lot from among the literate voters registered in each polling place. Each ballot has a distinctive color and symbol to make voting easier for illiterates. Voters cast their ballots for parties instead of candidates.

POLITICAL PARTIES

Bolivia's five major political parties are the Acción Democrática Nacionalista (ADN), the Movimiento Nacionalista Revolucionario (Histórico) (MNR), the Movimiento de la Izquierda Revolucionaria (MIR), the Conciencia de Patria (Condepa), and Izquierda Unida (IU). The ADN is a right-wing party founded in 1979 by Hugo Banzer Suárez under the slogan "Peace, order, and work." The MNR is a center-right party founded in 1942 and led by Victor Paz Estenssoro. The MIR is a noncommunist Marxist party founded in 1971. It is led by the former vice president Jaime Paz Zamora. Condepa, founded in 1988, is a populist party formed by a popular La Paz broadcast personality. The IU is an eight-party coalition formed for the 1989 campaign. Among the parties included were the left-wing Alianza Patriótica, the left-wing Movimiento Bolivia Libre, the communist Partido Comunista de Bolivia, and the left-wing Partido Socialista-Uno.

LOCAL GOVERNMENT

Bolivia is divided into nine departments, each headed by a prefect who is appointed by the president for a term of four-years. The departments are subdivided into provinces headed by appointed officials called subprefects. The 94 provinces are further divided into about 1,000 cantons, led by officials known as *corregidores*. Three underpopulated and remote areas are designated as *delegations* and administered by officials whose duties include promoting the welfare of Indian tribes in the area and the fostering of colonization.

LEGAL SYSTEM

The legal system is based on Spanish law and the Napoleonic Code. The judiciary comprises the Supreme Court, superior district courts, and local courts.

The Supreme Court, which sits at Sucre, is divided into four sections of three justices each. Its 12 judges, called *ministros*, and the chief justice are chosen for 10-year terms by a two-thirds vote of the Chamber of Deputies from a list of three names submitted for each vacancy by the Senate. They may be reelected indefinitely. District court judges are elected by the Senate for six-year terms from a list of three names submitted for each vacancy by the Supreme Court. The jurisdiction of the nine district courts is chiefly appellate. All major towns and cities have territorial courts whose judges are chosen by the Supreme Court from lists submitted by the district courts. At the bottom of the judicial system are small claims courts and mayor's courts in every parish.

HUMAN RIGHTS

In terms of political and civil rights, Bolivia is classified as a free country. Bolivia's most notable progress since the end of military government in 1982 has been in the area of human rights. Political parties are now free to organize and criticize the government. Both congress and the court system function independently and fulfill an active monitoring function. After several delays municipal elections were held in June 1985. The excesses of the former security police apparatus are a thing of the past. No political prisoners are being held. However, in 2003 the military was responsible for scores of deaths during the rioting that toppled the Sánchez government. In 2004 the Constitutional Court upheld civilian court jurisdiction over military personnel accused of crimes against civilians.

The press operates largely without government restriction. The government has dealt with general strikes, road blockades, and labor protests with some restraint. It has been less effective in protecting property rights and providing guarantees for private-sector activities. There have also been charges of corruption and intimidation in the judicial system.

FOREIGN POLICY

The central issue in Bolivian foreign policy for the last 100 years has been the question of a corridor to the Pacific, which had been lost to Chile in the War of the Pacific (1879–84). In 1975 relations with Chile were resumed after a 12-year lapse, and Santiago announced an agreement in principle to grant Bolivia an outlet to the sea in exchange for territory elsewhere. However, the agreement had yet to take effect by 2004, and a territorial corridor to the sea has eluded Bolivia. Bolivia is a member of both the Andean Pact and the Southern Cone Common Market. Relations with the United States are complicated by Bolivia's involvement in the cocaine trade. Bolivia is a major producer of cocaine and has resisted U.S. attempts

to eliminate its trade, though a coca-eradication policy was initiated in 2002 and 2003, leading to widespread protests.

DEFENSE

The defense structure is headed by the president. He also presides over the Supreme Council of National Defense, the highest policy-making body in military affairs. The line of command runs through the minister of national defense to the commanders of the three services. The Ministry of Defense does not exercise any operational command. The country is divided into nine military regions corresponding to the administrative departments. The army is divided into 10 divisions, with one based in each of these regions and an additional division at Viacha. The main bases are at Miraflores barracks in La Paz and at Cochabamba.

Military manpower is provided by selective conscription at age 18. However, in practice few registered youths are called for service. The conscript service period is 12 months. As of 2002 the country's armed forces comprised 31,500 personnel, with 25,000 in the army, 3,500 in the navy, and 3,000 in the air force. The 2003 military budget reached \$127 million.

ECONOMY

Bolivia, long one of the poorest and least-developed Latin American countries, has made considerable progress toward the development of a market-oriented economy. Successes under President Sánchez de Lozada (1993–97) included the signing of a free trade agreement with Mexico and the Southern Cone Common Market (Mercosur) as well as the privatization of the state airline, telephone company, railroad, electric power company, and oil company. Sánchez's successor, Hugo Banzer Suárez has tried to further improve the country's investment climate with an anticorruption campaign. Growth slowed in 1999, in part due to tight government budget policies, which limited needed appropriations for antipoverty programs, and the fallout from the Asian financial crisis. In 2000 violent protests in April, September, and October held down overall growth to 2.5 percent. Since 2004 the government of Carlos Mesa has attempted to regain control

274 Bolivia

of the country's valuable natural gas supplies from foreign-dominated gas firms.

ENVIRONMENT

Bolivia suffers from a number of environmental problems. Perhaps the most important is the clearing of land for agricultural purposes and the international demand for tropical timber, which contributes to deforestation. The use of slash-and-burn agriculture combined with overgrazing is causing soil erosion and desertification. The cutting of lumber and the clearing of land is also bearing an impact on the biodiversity of the country. Industrial pollution has contaminated water supplies used for drinking and irrigation.

LIVING CONDITIONS

One of the poorest countries in South America, with 70 percent of its population living below the poverty line in 1999, Bolivia has a large sector of its population that thrives on a barter economy. This is particularly true in rural areas populated largely by indigenous people. Their lifestyle is subsistent, and also sustainable, dependent on small agricultural holdings and fishing. At the same time, in major urban areas such as La Paz a more Western style life is the norm. Housing in rural areas is usually quite simple: adobe huts with thatched roofs. Brick and cement

and more modern architectural methods are found in the urban areas and larger towns.

With so much of the population living below the poverty level, health is a major concern. Still, life expectancy in 2004 was 65 years. Chagas' disease, carried by a beetle, is a significant health hazard for much of the population, with estimates of as many as one-fourth of the population affected.

HEALTH

Especially in rural areas of Bolivia, access to doctors, clinics, and hospitals is limited, with a doctor-to-population ratio of 1 to 1,370. However, with the 1997–2002 Strategic Health Plan the government attempted to ensure universal access to primary care. Limitations on potable water, adequate sanitation, and vaccines cause other health problems, including cholera: 2,293 cases were reported in 1995. In addition to Chagas' disease, which is carried by the vinchuca beetle and affects the heart, other major health issues include malaria and tuberculosis. There were 618 cases of malaria per 100,000 people in 1996, and in 1999 there were 238 cases of tuberculosis per 100,000 people.

Malnutrition is also a growing problem in the country, especially among the young. In 2000 an estimated 27 percent of children under five were diagnosed as malnourished. The birthrate in 2004 per 1,000 was 25, with an infant mortality rate of 55 per 1,000 live births. According to a 2003 estimate, there were 4,900 people living with HIV/AIDS.

FOOD AND NUTRITION

First cultivated in the highlands of the Andes, the potato is still a staple of the Bolivian altiplano diet. Rice is also a popular starch in the highlands and throughout the

country and is often served along with potatoes. People close to the poverty line tend to eat a carbohydrate-heavy diet; meat is less common in many rural areas. In the Amazon there are exotic specialties such as alligator and armadillo, while Lake Titicaca supplies abundant trout.

Popular dishes include the empanada, a kind of fried turnover that is widely eaten throughout Latin America, and the *saltena*, a meat or vegetable pie. Barbecued skewered beef, called *anticuchos*, is especially popular in La Paz and is often served with the spicy sauce *llajua*. Deep fried pork and guinea pig are delicacies often consumed on special occasions. Lunch is the major meal, with breakfast usually consisting only of coffee, tea, or a maize drink, *api*, and bread; dinner is also a lighter meal. A popular and ancient drink in the Andean region is *chicha*, made from fermented corn.

STATUS OF WOMEN

Despite traditional Bolivian and Andean beliefs in the crucial, though somewhat opposite, roles of both men and women in social production, women do not enjoy societal status equal to that of men. The main obstacles to advancement are cultural traditions, social conditions, and a lack of political power. In rural families women contribute significantly to economic activities but are considered subordinate and rarely participate in cooperatives, community meetings, or training programs. In Hispanic urban families women are more likely to stay at home and are not economically active. However, women are slowly achieving a greater role in Bolivian business life.

Although Bolivian laws generally do not discriminate against women, under the agrarian reform law land titles cannot pass to women even if they are widowed or divorced. Also, agricultural credit to women is restricted by most banks and lending institutions. Although female workers have the right to three months maternity leave by law, in practice most are unaware of this right or are concerned that they will lose their salaries or jobs if they take such a leave.

Even though there is no overt political discrimination against women, they are rarely named to high-ranking positions in the government. The most notable exception was Lidia Gueiler, who served as interim president from November 1979 to July 1980.

WORK

With a labor force of 4.1 million, according to a 2004 estimate, Bolivia had an unemployment rate of 11.7 percent. Mining and the natural gas industry are two major employments sectors. However, when tin mining suffered setbacks in the 1980s, thousands of the miners entered agriculture, but in the illegal production of coca, the leaves of which are used to make cocaine. In rural areas farming is a typical occupation, with small landholdings the norm. Coca fits this same profile, but the government has made great efforts to encourage the growth of other exportable crops.

A professional middle class exists in the cities, where engineers and technicians have formed a new class of employment. In 2002 the minimum wage was \$59 per month, and it is negotiated annually. The official workday is eight hours, with a maximum workweek of 48 hours. Child labor is forbidden; those under 14 cannot be legally employed. However, as with other labor laws, this is often breached. In 2002 it was estimated that 25 percent of children between seven and 14 were employed in some manner.

EDUCATION

In theory education is universal, free, and compulsory for eight years, from the ages of six to 14. The entire educational system is under the control of the Ministry of Education and Culture.

Schooling lasts for 12 years, as divided into eight years of primary school and four years of secondary school. The rural primary schools are nuclear schools, each consisting of a core, full-program central school surrounded by 15 to 30 outlying units in which all the classes are taught by a single teacher. The primary curriculum is designed to make the student a more useful member of the rural community rather than to train him or her for further studies. Attrition rates are high, and in urban classrooms grade

repeaters exceed the number of regularly paced students. Secondary schools for boys are known as *colegios* and those for girls are known as *liceos*. Almost all secondary-school curriculum is adapted to prepare the students for university studies.

Literacy and adult education programs are directed by the National Office for Literacy and Adult Education, established in 1956. A number of educational broadcasts are being transmitted for new literates, the most successful of which is one conducted by the Maryknolls (a Catholic order), combining broadcasts with short training programs in which both Indian languages and Spanish are used. At the secondary level centers of intermediate adult education offer courses of study leading to a "bachelor by maturity" certificate in three years.

Vocational training is provided in commercial schools, industrial schools, agricultural schools, and labor secondary schools.

Private education plays a significant role in the school system. About 17 percent of primary-school and 25 percent of secondary-school students are in private institutions, most of which are run by Roman Catholic orders as well as large business enterprises, which are required by law to maintain their own schools. The quality of education in private secondary schools is reportedly higher than that in public schools. In order to qualify for state subsidies, private schools are required to provide scholarships to at least 10 percent of their enrollments.

The entire school system is under the centralized control of the Ministry of Education and Culture. Rural schools are administered by a school assistance board headed by a school mayor. All public educational expenditures are met by the central government. Higher education is provided in ten state universities and twenty-three private universities. The University of San Francisco Xavier in Sucre, founded in 1624, is one of the oldest universities in Latin America.

SCIENCE AND TECHNOLOGY

Bolivia has both a National University Council of Science and Engineering and a National Academy of Sciences. Eight of Bolivia's universities offer degrees in basic and applied science. In the decade between 1987 and 1997 science and engineering students made up 30 percent of university enrollment. However, as of 2002 doctoral degrees were not offered in any field.

Various institutes and ministries, including the Bolivian Institute for Agriculture and Livestock Technology, are engaged in horticultural research, an essential field for the country, as only 2 percent of the land is arable, with 49 percent covered in woodland and forests. With the failure of the tin-mining industry in the 1980s such research has become vital for the country to increase its per-acre yield of crops and to redirect agriculture away from cultivation of the coca leaf.

MEDIA

La Paz has three morning and three evening dailies; other towns with daily newspapers are Cochabamba, Santa Cruz, Potosí, and Oruro. The principal dailies are *El diario*, *Los tiempos*, *La razon*, and *El deber*.

In television there are numerous private television stations, including Bolivisión and Unitel.

In 1996 there were 235 radio stations, the majority of which were commercial. Most broadcast in Spanish, but a few offer programs in Quechua, Aymara, German, and English. Of the many networks and stations belonging to religious organizations, the largest is La Cruz del Sur, owned and operated by the Canadian Baptist Foreign Mission Board, which is on the air for 120 hours per week. Many universities conduct their own radio schools.

The government does not exercise formal censorship, and freedom of the press is formally guaranteed by the constitution. There are no government restrictions on free speech or the press. The views of opposition parties, leaders, and organizations—often harshly critical of the government—are given free play in the press and on the radio and most television stations. Some extremist political and labor groups, taking exception to these liberties, have called for the closing or takeover of certain newspapers and radio stations.

In 2000 Bolivia had 676 radios and 119 television sets for every 1,000 people. In 2002 there were an es-

estimated 270,000 Internet users in the country, and in 2003 there were 1,401,500 mobile phone customers.

CULTURE

Bolivian culture is a mixture of the indigenous culture of the region and the Mediterranean culture imported by the Spanish colonists. This mix is seen on religious feast days, when natives still celebrate pagan traditions and the Catholics of Spanish descent participate in church festivities. Many of the native festivities are attempts to depict the European through the eyes of innocents. Thus there is a satiric dance, the *wakatokoris*, which takes a humorous look at the bullfight. Such dances are also accompanied by traditional music, played on the *quena*, a type of flute, and on the panpipe. The *charango* is a stringed instrument developed from the guitar, with five double strings. Its soundbox is made from the shell of an armadillo.

The life of Bolivian Indians was depicted in the writings of Alcides Arguedas, whose novels include *Raza de bronce*, *Vida criolla*, *Pisagua*, and *Wata-wara*. The mining barons were likewise depicted in the work of another writer, Augusto Cespedes, especially in his novel, *El metal del diablo*. Well-known poets include Julio de la Vega, Jaime Saenz, Oscar Cerruto, Pedro Shimose, and Ricardo Jaimes Freire. The Quechua language has also produced a rich tradition of both poetry and song.

With a relatively high literacy rate, Bolivians are avid readers. There is also a small film industry in the country.

FOLKLORE AND MYTHOLOGY

The folklore of Bolivia is heavily influenced by its indigenous past. One Indian myth with disastrous consequences for the natives was that of Viracocha, the Creator God, depicted as a white, bearded teacher. Legend had it that Viracocha would one day return to help the Indians. Thus, when the light-skinned Spanish arrived in the sixteenth century, the local population thought them the embodiment of their myth of Viracocha and put up no defenses against the Spanish conquerors.

Other folklore tends to be wrapped up in the Catholic Church, to which most Bolivians belong. Thus the Virgin Mary cult is strong in the country. Miners are devoted to a deity known as the “uncle,” who guarantees work and protection from accident.

ENTERTAINMENT AND RECREATION

Cinemas are a favorite form of entertainment for Bolivians living in towns and cities, and live theater is also found in larger cities. The Teatro Municipal in La Paz produces both classical and modern plays. Discos are also found in major towns. Like in much of Latin America, festivals and religious holidays provide significant forms of recreation in both urban and rural areas. One of the most popular of these is Carnival, with costumes, music, and dancing all dependent on local taste and custom.

Sporting events are also popular in Bolivia, with soccer matches and other Western sports found in the big cities. Occasionally, there are also bullfights.

ETIQUETTE

Politesse in Bolivia is similar to that in other Latin American countries, with age, gender, and class all coming into play. When talking to an elderly person, it is important to use the formal “you” form of address, *usted*, instead of the informal, *tu*. Titles are also important and used: *don* for men, *doña* for women.

Handshakes are customary between men, while women generally greet each other with a kiss. Social distance is also important; in Bolivia people stand close to the person with whom they are talking. A typical greeting is “*Mucho gusto*,” meaning “Pleased to meet you.” Less formal is “*Que tal?*” or “How are you?”

FAMILY LIFE

While women have a position inferior to that of males in the business and social worlds, they have real power in the home. Many rural communities follow matrilineal in-

heritance. While the male might represent the family in public matters, the female is definitively the controller of household matters such as budget, child rearing, and diet. The family, either nuclear or extended, is the basic unit of domestic society in both urban and rural areas. The Bolivian extended family generally includes members from both the husband's and wife's side.

As with much of the rest of the world, family size is shrinking in Bolivia. From families of six or seven children, now three or fewer is more common. Marriage rituals and customs in urban centers are much like those in the rest of the developed world. In the Andean regions, however, marriage is usually preceded by cohabitation of up to three years, during which time the couple sets up house and begins having children. Thereafter a civil and religious wedding are held, followed by a three-day celebration. Polygamy is not common but does exist; monogamous marriages are the norm. People avoid mates with the same surname or who are closer than third cousins. Divorce is legal but rare, especially in rural communities.

PERSONAL APPEARANCE

A blend of Spanish and indigenous peoples, modern Bolivians have the characteristic darkness and size of such a mixture. Clothing varies depending on location and on ethnic group. The daily dress of highland Indian women in both urban centers and in the country is still very much traditional: full skirts, or *polleras*, with brightly colored shawls. The women use these shawls to carry everything from food to babies. Hats are also a typical part of the traditional female dress, with the shapes of the hats different in different regions.

Men in the countryside wear ponchos and hats. In the cities, however, they tend to wear the more Western-style clothing of trousers and shirts.

SPORTS

Soccer is the national sport, but basketball and volleyball are also popular. All major towns have soccer stadiums, and these are filled with fans when the home team is playing.

CHRONOLOGY

- 1946** President Gualberto Villarroel is murdered by a rioting mob; a civilian junta headed by Nestor Guillén names Tomás Manje Gutiérrez provisional president.
- 1947** A constitutionally elected government under President Enrique Hertzog takes office.
- 1949** The arrest and exile of leftist leader Juan Lechín Oquendo provoke a nationwide strike; in widespread civil war the Movimiento Nacionalista Revolucionario (MNR) gains control of Oruro, Potosí, Cochabamba, Sucre, and Santa Cruz until the army intervenes.
- 1950** Hertzog resigns in the wake of a general strike, and Vice President Mamerto Urriolagoitia assumes power; MNR candidate Victor Paz Estenssoro wins a 43 percent plurality in the presidential election; to forestall a Paz presidency, a military junta led by Hugo Ballivián assumes power.
- 1952** Tin miners and Paz supporters overthrow the government after several days of bloody fighting in which nearly 3,000 are killed; Paz is inaugurated president; in a series of reforms tin mines are nationalized, universal adult suffrage is proclaimed, and a program of land reform is begun.
- 1956** Hernán Siles Zuazo, the MNR candidate, is elected to the presidency, succeeding Paz.
- 1960** Paz is reelected president.
- 1962** Bolivia breaks diplomatic relations with Chile over the Lauca River hydroelectric project.
- 1963** Using the army, Paz breaks a violent strike by the tin miners; the peso replaces the boliviano as the national currency.
- 1964** Paz is reelected to a second consecutive term with the help of the army and police; workers and students rise against Paz, joined by Vice President René Barrientos Ortuño; the army intervenes in favor of the dissidents and Paz flees to Lima; Barrientos is sworn in as president, with General Alfredo Ovando Candía as copresident.
- 1965** Lechín is exiled.
- 1966** Barrientos resigns his copresidency and is elected president.
- 1967** Bolivia adopts a new constitution; Che Guevara dies after a battle between his guerrillas and government units.
- 1969** Barrientos dies in a helicopter crash; Vice President Siles Salinas is named president; four months later Siles is dismissed by Ovando.
- 1970** Ovando is overthrown in a rightist army coup led by General Rogelio Miranda, who is in turn replaced by leftist-backed General Juan José Torres Gonzalez; Torres weathers attempts by rightist General Hugo Banzer Suárez to unseat him; Banzer is exiled.
- 1971** Banzer returns to La Paz and leads successful coup in which over 200 persons are killed; Banzer forms the Nationalist Popular Front, which incorporates Paz's MNR.
- 1972** Andres Selich, head of the Rangers, unleashes a reign of terror; Selich is dismissed and transferred to Paraguay as ambassador.

- 1973** Selich is murdered as he returns to La Paz.
- 1974** Paz leaves the coalition and is exiled.
- 1977** Banzer announces that elections will take place in 1978.
- 1978** Banzer declares a state of siege after discovering "subversive plots" but declares a general amnesty and lifts the ban on trade unions; in general elections General Pereda Asbun wins a clear lead, but elections are invalidated due to claims of fraud; General Pereda ousts General Banzer in a coup and is installed as president; in a second coup General Pereda is overthrown and General Padilla Arancibia is named president; diplomatic relations with Chile are broken over the issue of a Bolivian corridor to the sea.
- 1979** After no candidate wins a clear victory, congress installs the president of the Senate, Walter Guevara Arze, as president of Bolivia for one year; army forces led by Colonel Alberto Natusch Busch depose Guevara, occupy the capital, and dissolve congress; more than 200 people are killed in street fighting in the capital; Natusch steps down in the face of opposition from the military; civilian government is restored with Bolivia's first woman president, Lidia Gueiler; army commander Luis García Meza defies a presidential order to resign.
- 1980** In national elections the leftist Siles wins a plurality, but the military intervenes again and takes over the government; General Luis García Meza establishes a junta and receives prompt support from other military regimes in the Southern Cone region of South America; the United States withdraws all but humanitarian aid.
- 1981** President García Meza resigns under duress and General Humberto Cayoja Riart assumes the presidency; within a month Cayoja is arrested and charged with involvement in the plot that ousted García Meza; Brigadier General Celso Torrelio Villa is designated president.
- 1982** General Torrelio is forced to step down in favor of General Guido Vildoso Calderón, who reconvenes the congress elected in 1980 to name a civilian government; congress elects Hernán Siles Zuazo.
- 1983** Near bankruptcy, intracabinet power struggles, military mutinies, and labor strikes plague Siles's administration; Siles is kidnapped by an army faction but later released unharmed; the peso is devalued and external debt rescheduled.
- 1984** The government sets austerity measures; Bolivia defaults on external debt repayments but obtains a moratorium; fuel and food subsidies are removed; the peso is devalued by 75 percent;
- congress approves a wage increase of 130 percent while food prices rise 450 percent.
- 1985** Siles retires and Victor Paz Estenssoro is elected president; President Paz Estenssoro allows the peso to float; following a general strike by the trade union organization COB, the government calls a state of siege for 90 days and arrests thousands; the strike is called off; the world tin market collapses.
- 1986** Protests throughout the country over the government's austerity plans continue through 1987; opposition groups and trade unions protest a joint military campaign with the United States, ultimately unsuccessful, to fight illegal coca production.
- 1988** COB calls a nationwide hunger strike over plans to decentralize social services; Bolivia establishes an antinarcotics department; Roberto Suárez, Bolivia's foremost drug trafficker, is captured.
- 1989** No clear winner emerges from the presidential elections; congress awards the presidency to Paz Zamora, the third-place candidate.
- 1990** The presidents of Bolivia, Peru, Colombia, and the United States pledge to cooperate in the fight against illegal narcotics trafficking; the Chamber of Deputies impeaches eight of the nation's 12 Supreme Court justices for declaring a law unconstitutional for purely political reasons.
- 1991** Officials from across Latin America combine efforts to fight the region's cholera epidemic.
- 1993** MNR candidate Gonzalo Sánchez de Lozada wins the presidential election and successfully fights the country's hyperinflation.
- 1995** The country's continuing movement toward a free market sparks a general strike by leftists; the government declares a state of siege and suspends civil rights; in December, Bolivia joins the free trade region of South America's Southern Common Market (Mercosur).
- 1997** Presidential elections bring to office former leader Hugo Banzer Suárez, who promises to continue free-market reforms while protecting Bolivia's poor.
- 1998** Torrential rains induce disastrous mudslides near the Peru border in February; in May a series of earthquakes strikes central Bolivia; supported by the United States, the government destroys a record 11,000 hectares of coca leaf; coca-leaf producers march on La Paz in protest.
- 1999** Bolivia and Brazil inaugurate a natural gas pipeline stretching 3,000 miles from Santa Cruz, Bolivia, to Porto Alegre, Brazil.
- 2000** After violent protests break out over the price of water, the government imposes a state of emergency for two weeks; President Banzer meets

- with President Ricardo Lagos Escobar of Chile to discuss the two countries' century-old territorial dispute; storms result in severe flooding and the declaration of half the country as a disaster area.
- 2001** President Banzer, who is suffering from cancer, resigns and is replaced by Vice President Jorge Quiroga Ramírez. Electoral Code Reform Law is passed.
- 2003** Rioting breaks out in protest of tax policies and a coca-eradication program. President Ramírez is forced to resign, and his vice president, Carlos Mesa, assumes power.
- 2004** A July referendum establishes countrywide support for President Mesa's plan to exert more control over the country's natural gas reserves.
- 2005** Mesa resigns amid protests; Socialist Evo Morales is elected president.

UNIT OF CURRENCY

Convertible mark

NATIONAL FLAG

A wide medium blue vertical band on the fly side with the identical sides of a yellow right isosceles triangle abutting the band and the top of the flag; the remainder of the flag is medium blue with seven full five-pointed white stars and two half stars at top and bottom along the hypotenuse of the triangle.

NATIONAL EMBLEM

A blue shield with the triangular upper-right third yellow and five full five-pointed white stars and two half stars at the upper left and lower right crossing the shield diagonally

NATIONAL ANTHEM

“Intermeco”

NATIONAL HOLIDAYS

January 9 (Serb Republic Day), November 25 (National Day), all major Christian festivals, various Islamic festivals

DATE OF INDEPENDENCE

April 5, 1992

DATE OF CONSTITUTION

December 14, 1995

GEOGRAPHICAL FEATURES

The modern country of Bosnia and Herzegovina consists of a landmass of approximately 19,741 sq mi (51,129 sq km). The nearly completely landlocked country is carved out of the former Yugoslavia. It is bordered on the east by the modern state of Yugoslavia, which consists of Serbia and Montenegro, and is otherwise surrounded by Croatia. A narrow corridor gives Herzegovina outlet to the sea at Neum, on the Neretva Channel of the Adriatic Sea; the corridor splits Croatia along the Dalmatian coast about 25 mi (40 km) northwest of Dubrovnik. The country consists of two distinct land areas. The northern

portion, Bosnia, is mountainous and covered with thick forests. The southern part, Herzegovina, is largely rocky hills and farmland.

Sarajevo	380,000

CLIMATE AND WEATHER

Bosnia-Herzegovina's climate is marked by its exceptionally cold and snowy winters. The summers are warm in the mountain valleys but cooler at higher elevations. There is a period of heavy rainfall in early summer. The far northern part of Bosnia has cold winters and dry, hot summers. The average January temperature in Sarajevo is 30°F (-1°C). The average July temperature is 68°F (20°C).

Climate and Weather

Mean Temperature
 July: 72.5 in
 January: 32°F
 Average Rainfall: 24.6 in

FLORA AND FAUNA

The floral ranges known as Euro-Siberian and Mediterranean come together in Bosnia and Herzegovina, creating a diverse ecosystem. Over half the total number of flowering plants on the Balkan Peninsula can be found here; in terms of richness of flora, Bosnia and Herzegovina is comparable to tropical and subtropical regions. There are over 3,700 identified species of flowering plants, as well as ferns, mosses, and common trees such as beech, oak, evergreen, chestnut, spruce, and dozens more.

Among the wide assortment of wild animals are mammals such as deer, brown bears, foxes, hares, lynxes, weasels, otters, wildcats, wolves, gray bears, chamois, wild sheep, and wild boars. Avian life includes eagles, vultures, and hawks.

ETHNIC COMPOSITION

While Bosnia and Herzegovina is home to many people of differing ethnic backgrounds, there are three major groups that make up more than 90 percent of the popula-

tion. The largest single group comprises Bosniaks (formerly called Muslims), who constitute nearly 44 percent of the population. The Bosniaks are descended from Slavic people who converted to Islam at some point during the lengthy period of Ottoman rule. The second-largest group is made up of the Serbs, who form nearly 31 percent of the population. Many of these people relocated to Bosnia and Herzegovina during the period of Josip Broz Tito's rule. The Serbs are largely Orthodox Christians. The third-largest ethnic group, constituting 17 percent of the population, is made up of Croats, who are generally Roman Catholic. These three groups have often intermingled with one another, and it is often difficult to distinguish ethnicity except on the basis of religious affiliation. In addition to these three major groups, there are small numbers of Albanians, Gypsies, and Ukrainians who live in Bosnia.

LANGUAGES

The principal language of the country is Serbo-Croatian (though it is now known as Serbian, Croatian, or Bosnian, depending on the speaker's ethnic and political affiliation). The most distinctive aspect of language is that the Serbs use the Cyrillic alphabet, and the Bosniaks and Croats use the Roman alphabet when writing.

RELIGIONS

Sitting at the crossroads of the East and the West, the religious traditions of Bosnia and Herzegovina are reflective of the nation's geopolitical location. The vast majority of the country's population adhere to one of the three major religious groups in the region. Most Croats are Roman Catholic, while the Serbians are Orthodox Christian. The largest ethnic group, the Bosniaks, also represent the largest religious group, Muslims. Many Bosniaks were converted to Islam during the occupation of Bosnia by the Ottoman Empire. All three religions have a deep heritage in the country. Catholic Croats, for example, observe religious holidays and make pilgrimages to sites like the village of Medjugorje, near Mostar in southern Bosnia, where in 1981 six Croat children reported that the Virgin Mary had appeared to them. The country's religious diversity has often led to violent conflict between the groups.

Religious Affiliations

Sunni Muslim	1,610,000
Serbian Orthodox	1,247,000
Roman Catholic	603,000
Other	563,000

HISTORICAL BACKGROUND

The area of modern-day Bosnia and Herzegovina came under Roman rule in the second century B.C.E., ending the rival territorial ambitions of the Thracians, Illyrians, Celts, and Greeks. The division of the Roman Empire in 395 C.E. brought the region under the control of the Byzantine emperor in Constantinople. In the fifth century Slavic tribes from the Carpathian Mountains began regularly settling in the Balkan Peninsula, establishing a firm Slavic presence in the area.

As Catholicism dominated the western area of Croatia in the ninth century, the eastern region of Serbia adopted Eastern Orthodox Christianity, leaving the Bosnian area as a buffer between the two religious groups. In the 11th century the Bosnian principality of Rama struggled to create its own regional identity. Despite the efforts of Byzantium to control the Bosnian region, Bosnian rulers of the 14th century temporarily established a powerful Bosnian state. In 1389 the Ottoman Empire thwarted the efforts of Tvrtko Kotromanić, the self-proclaimed czar of the Bosnians and Serbs, to unify Bosnian and Serb lands. Bosnia finally succumbed to Ottoman rule in 1463. Some 20 years later, the Ottoman Turks gained control of Herzegovina (an Austrian border duchy since 1448) and confirmed their domination over the region. From the 15th to the 19th centuries the Ottoman Empire ruled Bosnia and Herzegovina through a system that allocated responsibility for religious groups to the leader of each group. Many Bosnians converted to Islam to maintain control over their property and acquire membership in the Muslim ruling class. Persecution of Christians through heavy taxation, a Koran-based legal system, forced conversion to Islam, and, for girls, servitude in harems contributed to hostile uprisings and violent repression.

Also during the 15th through the 19th centuries the Hapsburg Empire encouraged Serb settlement of the bordering Krajina region to prevent the expansion of the Turks. As the Ottoman Empire began to crumble, the 1878 Congress of Berlin gave the Hapsburg Empire administrative rights in the six regions of Bosnia and Herzegovina (Sarajevo, Travnik, Bihać, Dinja Tuzia, Banja Luka, and Mostar).

In 1908 Austria-Hungary officially annexed Bosnia and Herzegovina as a province to counter the threat of Serbian expansion. The empire reversed the Ottoman policy of Muslim privilege. Political organizations were banned and the nationalistic tendencies of Serbs and Croats were suppressed. The Austro-Hungarian Empire attempted to insulate Bosnia and Herzegovina from the influence of its increasingly disgruntled neighbor—Serbia—while trying to prevent the creation of a Muslim state. Tensions in the area erupted when a student member of the Serb nationalist Black Hand organization, Gavrilo Princip, assassinated Archduke Franz Ferdinand, heir to the Hapsburg monarchy, and his wife, Sophie, during a visit to Sarajevo.

Austria-Hungary, supported by Germany, subsequently declared war on Serbia, igniting World War I.

Despite having sided with the losing Austrians during World War I, Bosnia and Herzegovina joined the newly formed Kingdom of Serbs, Croats, and Slovenes in 1918. The kingdom lasted until 1929, when King Alexander established a royal monarchy. The area of Bosnia and Herzegovina, no longer recognized as a political region, was divided into four administrative units. Agrarian reforms freed peasants from the Muslim-led feudal hierarchy, but the centralized, Serb-dominated government dissatisfied many Muslims, Croats, and Slovenes.

A coalition government of Serbs, Muslims, and Slovenes took control in 1939 after the assassination of King Alexander in France. Tensions between the Serbs and the Croats steadily increased until the outbreak of World War II. Croats collaborated with German and Italian fascists and formed the independent state of Croatia, forcing the Serbs to vacate the region in order to create a “Greater Croatia.” The Serbs countered with aggression by both the nationalist Chetnik organization, led by Draža Mihailović, and the Communist Partisan movement, led by Josip Broz Tito. At the end of the war Tito’s partisans brought about the formation of the Federal Republic of Yugoslavia, comprising Serbia, Croatia, Slovenia, Macedonia, Montenegro, and the reunited region of Bosnia and Herzegovina.

Throughout the period of Communist rule Tito and his League of Communists of Yugoslavia suppressed nationalist sentiments and forcibly promoted an ideology of “unity and brotherhood.” The 1974 constitution increased the autonomy of each member republic. The death of Tito in 1980 brought a powerful resurgence of long-suppressed nationalistic sentiments. Unlike the five other more ethnically homogeneous constituent republics, Bosnia and Herzegovina had significant numbers of Muslims, Serbs, Croats, and people of mixed ethnicity. In attempts to increase their ranks, the Serbs and Croats claimed Bosnian Muslims to be converted Serbs or converted Croats, respectively. The Muslims resisted being identified with either group and claimed the right to a Muslim state within Bosnia and Herzegovina.

Because of its relative strength within the federal republic, Serbia sought to reassert the dominance of the federal government over the individual republics through legal, economic, communication, and voting reforms. Serbia also campaigned to reunify the decentralized League of Communists. By 1990 ethnic Serbs in Croatia and Bosnia had begun planning for a “Greater Serbia.” Relations between the member republics rapidly disintegrated, culminating in the secession of Slovenia and Croatia in 1991.

In Bosnia and Herzegovina, dissatisfied Serb delegates in the regional assembly deserted the coalition government and walked out during initial discussions of the region’s independence. Following the example set by

Slovenia and Croatia, the Muslim-dominated assembly of Bosnia and Herzegovina declared independence in December 1991. A referendum held two months later, boycotted by Serbs, confirmed the country's independence. In April and May the United States, the European Union, and the United Nations joined in recognizing the independence of the Republic of Bosnia and Herzegovina.

Following the declaration of sovereignty by the Republic of Bosnia and Herzegovina, Bosnian Serbs declared the formation of the Serbian Republic of Bosnia and Herzegovina, or the Republic of Srpska. Initially, Bosnian Croats remained united with the Bosnian Muslims in the Republic of Bosnia and Herzegovina against the rebel Serbs, despite proposals to Croatia from Serbian leader Radovan Karadžić to partition Bosnia. Bosnian government forces joined with Bosnian Croats to recapture the southern city of Mostar from the Bosnian Serbs. President Franjo Tuđman of Croatia, acting in support of Bosnian Croats, signed a cooperation treaty with the president of Bosnia and Herzegovina, Alija Izetbegović, and formed a joint defense committee against the Bosnian Serbs. However, the cooperation did not last long, and the Bosnian Croats declared independence for the Croatian Union of Herzeg-Bosna (a year later renamed the Croatian Republic of Herzeg-Bosna) in the area west of Mostar.

Relations between Bosnian government and Bosnian Croat forces broke down in October 1992, as Bosnian Croats, backed by Croatian army troops, took over Mostar and other towns in Croatian-held areas of Bosnia. The Bosnian government battled both the rebel Serbs and rebel Croats for almost a year before the Bosnian Muslim government and the Bosnian Croats renewed their military cooperation against the Bosnian Serbs. In March 1994, under international pressure, Prime Minister Haris Silajdžić of Bosnia and Krešimir Žubak, leader of the Bosnian Croats, met in the United States to sign an agreement creating the Federation of Bosnia and Herzegovina. The Bosnian president Izetbegović and the Croatian president Tuđman then signed a second agreement that established a loose confederation. The new federation, approved by the Bosnian Assembly on March 31, 1994, was designed to replace the governance structure of the Republic of Bosnia and Herzegovina. The Bosnian Federation held together, albeit precariously, despite political and military tensions between Bosnian Muslims (Bosniaks) and Bosnian Croats.

In December 1995 the Dayton Accords were signed by the governments of Serbia, Croatia, and Bosnia-Herzegovina, bringing a formal end to the war in Bosnia—which had claimed over 200,000 lives. The agreement called for the continuance of a single Bosnia-Herzegovina state based on a new constitution. The agreement in essence retained Bosnia and Herzegovina's international boundaries and created a joint multiethnic, democratic government. This national government was charged with

conducting foreign, economic, and fiscal policy. Also recognized was a second level of government comprised of two entities roughly equal in size: the Bosniak/Croat Federation of Bosnia and Herzegovina and the Bosnian Serb-led Republika Srpska. The agreement also created the Office of the High Representative to implement the terms of the peace agreement. The High Representative represents the international community and has extensive political powers in Bosnia and Herzegovina.

Approximately 34,000 North Atlantic Treaty Organisation (NATO) troops were stationed in Bosnia and Herzegovina, and a large international civilian presence worked to rebuild the country. More than 80 political parties registered for the September 1997 municipal elections, and more than 25 suspected war criminals have been arrested and are to stand trial before the International Court of Justice at The Hague.

In the early 2000s, however, the situation in Bosnia and Herzegovina had not considerably improved. While NATO forces were reduced and then finally replaced in 2004 by 7,000 troops from the European Union, the enactment of all the provisions of the Dayton Accords had not been accomplished. The power of nationalist parties had thwarted efforts at creating a strong sense of unity in the country; Croats and Serbs continued to seek unification with Croatia and Serbia, respectively. In the presidential elections of 2002 the nationalist parties won, securing all three seats of the three-member presidency and representing a significant defeat for moderates and reformers. In 2003 the High Representative abolished the Supreme Defense Council of the Bosnian Serb Republic and saw to the redrafting of the Bosnian Serb constitution to place the army under full civilian control and remove all references to statehood and sovereignty. With the resignation of President Mirko Šarović, Borislav Paravać, a hard-line nationalist member of the ruling Serbian Democratic Party, was elected in 2003 to represent the Bosnian Serbs in the three-party presidency. In 2004 the High Representative again intervened directly in the country's affairs, dismissing several high-ranking Bosnian Serb officials for shielding wanted war criminals.

LIST OF MODERN RULERS

Chairman of the Presidency	
1990–98	Alija Izetbegović
1998–99	Živko Radišić
1999–2000	Ante Jelavić
2000	Alija Izetbegović
2000–01	Živko Radišić
2001–02	Jozo Križanović
2002	Beriz Belkić
2002–03	Mirko Šarović
2003	Borislav Paravać
2003–04	Dragan Čović

2004	Sulejman Tihić
2004–05	Borislav Paravać
2005–	Ivo Miro Jović

Prime Minister

1990–92	Jure Pelivan
1992–93	Mile Akmadžić
1993–96	Haris Silajdžić
1996–97	Hasan Muratović
1997–99	Boro Bosić
1997–2000	Haris Silajdžić
1999–2000	Svetozar Mihailović

Chairman of the Council of Ministers

2000	Spasoje Tuševljak
2000–01	Martin Raguž
2001	Božidar Matić
2001–02	Zlatko Lagumdžija
2002	Dragan Mikerević
2002–	Adnan Terzić

CONSTITUTION

Bosnia and Herzegovina comprises two autonomous entities: the Federation of Bosnia and Herzegovina and the Republic of Srpska. As such, there are three constitutions in force in Bosnia and Herzegovina. The 1994 constitution of the Federation of Bosnia and Herzegovina established the Federation government and eight cantonal governments. The 1992 constitution of the Republic of Srpska set forth the legal principles, rights, and duties upon which the Republic is based and the powers of the respective bodies within it. The 1995 constitution of Bosnia and Herzegovina governs the two entities within the state.

The 1995 constitution of Bosnia and Herzegovina was written up as part of the Dayton Accords. It replaced the previous constitution of the Republic of Bosnia and Herzegovina and governs the relations between the two constituent entities—the Federation of Bosnia and Herzegovina and the Republic of Srpska. The constitutions of the Federation and of the Republic of Srpska, adopted earlier, were subsequently amended to bring them into compliance with the collective 1995 constitution. The Srpska constitution was amended in 2003 to bring the military totally under civilian control and to excise any mention of statehood or sovereignty for the Republic.

The government of Bosnia and Herzegovina is headed by a three-person presidency, which comprises one representative for each of the Bosnians, the Croats, and the Republic of Srpska. The presidents are elected for four-year terms, with chairmanship rotating every eight months. Bosnia and Herzegovina has a parliamentary assembly comprising two chambers: a House of Representatives and a House of Peoples.

PARLIAMENT

The House of Peoples is made up of 15 delegates. Five of the delegates are selected from the Republic of Srpska and ten—five Croats and five Bosniaks—from the Federation. The delegates from the Federation are selected by the Croat and Bosniak delegates, respectively, to the Federation's House of Peoples. Delegates from the Republic of Srpska are selected by the National Assembly of the Republic of Srpska.

There are 42 members in the House of Representatives. As with the House of Peoples, one-third of the delegates to the House of Representatives come from the Republic of Srpska, and two-thirds are elected from the Federation. Each chamber of the parliamentary assembly of Bosnia and Herzegovina must convene in Sarajevo no more than 30 days after the selection or election of members. Although the first elections were held in September 1996, parliament's first session was not held until January 1997.

The parliamentary assembly has the responsibility to enact the legislation necessary to implement the decisions of the presidency, establish and approve a budget for the operations of the institutions of Bosnia and Herzegovina, and consent to the ratification of all international treaties. Other duties may be assigned to the parliamentary assembly by mutual agreement of the Federation of Bosnia and Herzegovina and the Republic of Srpska.

Each chamber adopts its internal rules by the majority vote of its members. In 1997 each chamber adopted provisional rules of procedure; there are also provisions in the constitution that regulate some important aspects of the legislative process. Each chamber selects from among its members one Serb, one Bosniak, and one Croat to serve as its chair and deputy chairs. The position of chair automatically rotates among the three selected persons every eight months. At no time can the chair of both chambers represent the same constituent people. In each chamber the chair and deputy chairs constitute the Collegium of Chair and Deputy Chairs. The collegia have the responsibility to prepare the proposed legislative agenda, provide the delegates at least seven days' notice of each session sitting, and ensure that draft legislative proposals are presented to the appropriate committees of the respective chambers. In case of undue delays in the legislative process, either chamber may call for a joint meeting. Both collegia are expected to make their best effort to overcome deadlocks.

All legislation requires the approval of both chambers. Unless otherwise proposed by the initiator of the draft legislation, a bill is first introduced in the House of Representatives. However, laws may be initiated in either chamber. Laws may be proposed by any member of parliament, by one or more committees, by any member of the presidency, or by the Council of Ministers. Upon approval by one chamber, the draft law is transferred within

seven days to the other chamber, which may approve the legislation or return it to the originating chamber with suggested amendments.

POLITICAL PARTIES

In 1990 the Communist Party in Yugoslavia had given way to the smaller nationalist parties of the republics, including the Croatian Democratic Union of Bosnia and Herzegovina (HDZBiH), named after Franjo Tuđman's party in Croatia; the Muslim Party of Democratic Action (SDA), led by Alija Izetbegović; and Radovan Karadžić's Serbian Democratic Party of Bosnia and Herzegovina (SDS-BiH), modeled after the SDS in the Croatian region of Krajina. Although there are more than 55 political parties in Bosnia and Herzegovina, the HDZBiH, SDA, and SDS-BiH continue to play the most important roles, dominating the September 1996 elections. In the 2002 presidential elections the three nationalist parties—the Muslim Party of Democratic Action, the Serbian Democratic Party, and the Croatian Democratic Union—regained some lost territory from earlier parliamentary elections, electing each of the three members of the joint presidency.

The SDA, led by Izetbegović, was founded on two main principles. The party chose religion as the vehicle to implement its first goal of strengthening Muslim nationalism. By appealing to the feature certain to distinguish the SDA from other parties, the SDA was able to rally the majority of Muslims behind the banner of Islam. The second goal was to promote the preservation of a multi-national and multireligious state.

The HDZBiH was initially founded on the principle of keeping the borders of Bosnia and Herzegovina inviolate. However, as Bosnian Croats cooperated with Bosnian Serbs, inviolate borders appeared to be merely a step in creating a "Greater Croatia." The HDZBiH has not given up on the idea of an independent Herzeg-Bosna. The president of Croatia, Franjo Tuđman, initially controlled the party. The SDS-BiH was initially created in Croatia by Croatian Serbs to combat rising Croat nationalism.

LOCAL GOVERNMENT

The Federation of Bosnia and Herzegovina is divided into 10 cantons, or autonomous regions. Republika Srpska has only one canton. The basic unit of local government is the commune (*opština*), each of which is governed by a commune assembly. The commune assemblies elect executive bodies with administrative responsibilities.

LEGAL SYSTEM

The Bosnian legal system is based on the civil law system. The highest court in the country is the Constitutional

Court, which consists of nine members: four are selected by the Bosniak/Croat Federation's House of Representatives, two by the Republika Srpska's National Assembly, and three non-Bosnians by the president of the European Court of Human Rights.

HUMAN RIGHTS

There were significant improvements in several areas of concern with regard to human rights in Bosnia and Herzegovina in 1999, the fourth year of implementation of the Dayton Accords. The arrest and prosecution of war criminals increased, as six persons indicted for war crimes were arrested, including several high-ranking officials, and one extradited to The Hague. The return of those who were displaced during the fighting that rocked the area began to accelerate with the support of international efforts. The Federation enacted legislation that abolished the death penalty and also called for its abolishment in the Republic of Srpska. Despite these improvements, there are still lingering hostilities between the ethnic-religious groups. Much of the resentment is not acted upon because of the deployment of international forces and continuing international pressure to keep the peace.

Since 2000 there have been several more high-profile arrests and convictions for war crimes. One of the most important was the 2003 conviction of the former Bosnian Serb general Radislav Krstić for genocide at Srebrenica. He was sentenced to 46 years in prison.

There are still many reported incidents of ethnic discrimination and harassment throughout the country as well as widespread reports of police brutality and corruption.

FOREIGN POLICY

Bosnia's independence is secured by the 1995 Dayton Accords. The Office of the High Representative oversees the implementation of the Dayton Accords. Hostility toward Serbia is the cornerstone of Bosnian foreign policy, although the two countries have diplomatic relations. Bosnia has extensive trade and other agreements with Croatia.

In 2002 the Bosnian presidency met with Serbian and Croatian counterparts and signed a joint declaration agreeing to respect international borders and the implementation of the 1995 Dayton Accords.

DEFENSE

The strength of the Bosnian army in 2001 was approximately 34,000 soldiers, who were organized into five corps headquarters. This number includes the army of the Re-

public of Srpska, about 10,000 strong, and the army of the Federation of Bosnia and Herzegovina, numbering about 24,000. The equipment of the army is largely Soviet-made and includes tanks, aircraft, and missiles.

In 2002 government expenditures on the military amounted to \$234.3 million, or 4.5 percent of gross domestic product (GDP).

ECONOMY

Bosnia and Herzegovina ranked next to the former Yugoslav Republic of Macedonia as the poorest republics in the old Yugoslav federation. With agriculture almost exclusively in private hands, farms have been small and inefficient, and the republic has traditionally been a net importer of food. Industry has been greatly overstaffed, one reflection of the socialist economic structure of Yugoslavia. Tito had pushed the development of military industries in the republic, with the result that Bosnia hosted a large share of Yugoslavia's defense plants. The bitter interethnic warfare in Bosnia caused production to plummet by 80 percent from 1990 to 1995, unemployment to soar, and human misery to multiply. With an uneasy peace in place, output recovered in 1996–98 at high percentage rates on a low base, but output growth slowed appreciably in 1999 and 2000, and GDP remained far below the 1990 level. Economic data are of limited use and official data often do not capture the large share of activity that occurs on the black market. In 1999 the convertible mark—the national currency introduced in 1998—gained wider acceptance, and the Central Bank of Bosnia and Herzegovina dramatically increased its reserve holdings. Implementation of privatization, however, was slower than anticipated. Banking reform accelerated in early 2001 as all Communist-era payments bureaus were shut down. In 2005 the country still received substantial amounts of reconstruction assistance and humanitarian aid from the international community but had to prepare for an era of declining assistance.

As a result of expanding consumer credit with banking privatization, and with postwar spending on reconstruction high, there was improvement in the economy from 2000 to 2002. However, 2003 saw a sharp downturn from 5.5 percent GDP growth in 2002 to 3.5 percent

growth in 2003. This was a result of the winding down of reconstruction spending, the tightening of credit, and a drought that reduced agricultural production by 20 percent. Real growth in GDP for 2004 was again 3.5 percent, with no prospects for an immediate turnaround. A narrow tax base and a great deal of corruption in the tax system continued to undermine reconstruction efforts. Unemployment remained endemic, nearing 40 percent in 2004.

ENVIRONMENT

The environment of Bosnia and Herzegovina has suffered greatly because of the civil strife. The infrastructure for the removal of waste in urban areas, including landfill sites, and drinking-water facilities were largely destroyed, though access to clean water had greatly improved by 2004. Pollution is growing as the result of discharges from metallurgical plants. It is estimated that over one million land mines were still present in the country in the early 2000s, making vast tracts of farmland unusable.

Environment protection is scant. In 2001 only 0.5 percent of the total land area was protected. Some 10 of the country's mammal species were threatened in 2001, as were six species of freshwater fish. The Danube salmon, field adder, and slender-billed curlew are examples of endangered species.

LIVING CONDITIONS

The fabric of everyday life was torn apart during the civil war of 1992–95. Hundreds of thousands were killed or displaced, and homes and infrastructure were destroyed. Over two million people were forced from their homes during that time. Even with the help of international assistance programs, only about half of the nation's refugees and displaced residents were able to return to their homes by 2003.

Another major problem confronting the country is a chronic housing shortage, with an abundance of homes, and a few entire towns, destroyed during the civil war. Of the existing homes, many are in serious need of repair. Among the greatest casualties of the war were the once friendly relations between the three main cultural groups, Bosniaks, Serbs, and Croats, which were poisoned by ethnic cleansing and genocide. In the early 2000s an estimated one million land mines remained scattered over approximately 30,000 minefields throughout the country, including around schools and in areas where children play. They continued to kill and maim both children and adults and posed serious problems for displaced people wanting to return to their communities; they also hindered the country's farming and economic recovery.

As the country struggles to come to terms with its past and forge a new future through its two-state entity, some progress has been made in living conditions. The Human Development Index (HDI), compiled annually since 1990 by the United Nations Development Programme, situated Bosnia and Herzegovina 66th among 175 countries in 2003. The HDI measures countries in three main arenas of human development: longevity, education, and economic standard of living. The average life expectancy in 2004 was 73 years, and the fertility rate was 1.71 children per woman. Access to safe drinking water was a major concern following the civil war. By 2002, 100 percent of urban populations and 96 percent of rural populations had access to improved water sources. The per capita GDP was \$6,100 in 2003.

In 2001, 44 percent of the population lived in cities, and population density in 2003 was 82 people per square kilometer.

HEALTH

As with much of the rest of Bosnia and Herzegovina, the health-care system was hugely affected by the 1992–95 civil war. In 1992 alone there were 120,000 deaths from the war; there were over 200,000 in all. Additionally, thousands were permanently disabled and the health-care infrastructure badly damaged, with hospitals and clinics destroyed in the fighting.

Bosnia and Herzegovina has since made some progress in health care. The infant mortality rate was 22

deaths per 1,000 live births in 2004. The average annual rate of reduction in the mortality rate for children under five between 1990 and 2003 was 2.0 percent. In 2003, 94 percent of one-year-olds were immunized for tuberculosis; 80 percent for diphtheria, tetanus, and pertussis; 86 percent for polio; and 89 percent for measles. As of 2003 an estimated 900 people were living with HIV/AIDS, and 65 cases of tuberculosis per 100,000 people were reported in 2002.

Health-care providers are not paid well and have to function with outmoded equipment. As of 2004 there were 134 physicians for every 100,000 people, providing service in regional health centers and local outpatient clinics. In 2001 public health expenditures were 7.5 percent of GDP.

FOOD AND NUTRITION

Bosnia and Herzegovina displays its mixture of cultures through its food, with influences from the Balkans, the Middle East, and Central Europe.

Grilling is a favorite form of preparation for meats, including lamb, beef, and pork. *Cevapcici* are rolled mincemeat, usually lamb and pork, grilled and served with diced onions. *Pleskavica* is a patty of beef also grilled with onions. Both can be served with various pickled peppers and put on a type of pita bread known locally as *somun*. Other grilled specialties include Turkish-influenced kebabs, served on skewers. Also from Turkey is the meat pie called *burek*. Pastry pies filled with cheese are called *sirnica*, while those filled with spinach are called *zeljanica*. One of the most popular and best-known Bosnian dishes is *bosnaki lonac*, a stew of meat and vegetables layered and slowly cooked in a ceramic pot.

Sweets and desserts include baklava, made of almond and walnut paste and honey in a fluffy pastry, and *tufahije*, an apple cake topped with walnuts and whipped cream. A regional specialty is the plum brandy known locally as

rakija or *slivovitz*. Turkish coffee is also popular, as are yogurt and sour milk drinks.

Despite the severe dislocations caused by the civil war and the ensuing difficult economic times, food is generally plentiful. UNICEF reported only 1 percent of children under five suffering from being severely underweight between 1995 and 2003.

STATUS OF WOMEN

Legally, women have the same rights as do men. The imposition of peace in 1995 by international forces brought to an end one of the most horrific tragedies of the war: mass rape. The country is still dealing with the emotional and cultural scars of the conflict.

Social and economic discrimination against women exists throughout the country; its extent varies from region to region. While women in urban areas have access to professional careers, rural women are often relegated to agricultural labor. Domestic violence continues to be a problem and is not always dealt with properly by the police. By law, women have rights to maternity leave; however, companies often fire women once they become pregnant in order to avoid such payments. Muslim women must deal with restrictions imposed by religion.

Since 2000 a major problem has become trafficking in women and young girls for work in the sex industry. This problem has been exacerbated by corrupt officials who facilitate the trafficking by accepting bribes to falsify documents and provide protection for traffickers.

WORK

The workforce of Bosnia and Herzegovina was estimated at 1.026 million in 2002, with unemployment at 40 percent. No figures exist regarding the distribution of work-

ers across occupation, but before the civil war about 40 percent of Bosnians worked in industry, producing steel, coal, iron ore, lead, zinc, manganese, bauxite, vehicle assemblies, textiles, tobacco products, wooden furniture, tank and aircraft assembly, domestic appliances, and refined oil. Before the Communist era the vast majority of the population worked in agriculture. Though three decades of collectivization and industrialization have altered the nature of the labor force, the majority of the population still live in rural areas. Thus, agriculture accounts for a large portion of the employment sector; wheat, corn, fruits, vegetables, and livestock are raised. A service sector of professionals and merchants exists primarily in urban areas.

The right to form unions and to strike is guaranteed. However, with extremely high unemployment the bargaining power of unions is not great; strikes are the instrument of last resort. Nevertheless, they have become increasingly regular in 2001–04 to protest unpaid wages and salaries. Similarly, basic laws regarding work are often disregarded in the country's current high-unemployment environment. Nominally, the minimum working age is 15 and the legal workweek 40 hours, but both of these regulations are routinely ignored, especially in agriculture. Safety and health standards in the workplace also often go unobserved.

EDUCATION

Prior to the outbreak of civil war in Bosnia, education was universal and free from the ages of seven to 18. More than 700,000 students were enrolled, mostly in elementary schools. There are four universities in the country. Since the Dayton Accords, schools have been reestablished where possible; however, the educational structure that predated the war is largely gone. There are nearly 600,000 school-age children in the country.

Free access to primary education is guaranteed by law to all children in Bosnia and Herzegovina. The adult literacy rate in 2002 was 94.6 percent, and the gross enrollment ratio in 2001–02 for primary, secondary, and tertiary educational systems was 64 percent, placing the nation 121st in the world. The net primary school enrollment for the period of 1996–2003 was 86 percent.

SCIENCE AND TECHNOLOGY

There are no figures for government sponsorship of research and development in Bosnia and Herzegovina. Research into increasing crop yields and into measures to further protect and clean up the environment are performed through the Bosnian Ministry of Agriculture, Water Management, and Forestry. The Bosnian Ministry of Education has worked with European partners to upgrade education at the nation's agricultural colleges.

Various institutions provide scientific and engineering education, including the University of Sarajevo, the University of Banja Luka, and the University of Tuzla. Sarajevo is also home to the Institute for Thermal and Nuclear Technology, founded in 1961. Despite the dislocations of war, several professional groups still operate in Sarajevo, including the Society of Mathematicians, Physicists, and Astronomers, the Union of Engineers and Technicians, and the Medical Society of Bosnia and Herzegovina.

MEDIA

The Federation constitution guarantees the freedom of the media and press, and with the exception of the government press center media agencies operate freely and independently. The award-winning Sarajevo daily *Oslobodjenje* continued operations into the early 2000s, despite

the production difficulties imposed by the war. The Federation constitution also lists freedom of the press as a fundamental national freedom.

The Bosnia and Herzegovina constitution also provides for freedom of expression. While the constitution of the Republic of Srpska sets forth this freedom and guarantees freedom of communication, the latter may be limited by a court order if it is deemed crucial for criminal proceedings or for the Republic of Srpska's security.

The Office of the High Representative in Bosnia (OHR), a body created by the Dayton Accords and approved by the United Nations Security Council and other international bodies, has been active in promoting an independent media. The OHR, the Organization for Security and Cooperation in Europe, and the European Monitoring Commission have been working toward the establishment of an independent and self-sufficient publishing house in the Republic of Srpska.

In 1995 there were 33 television stations in Bosnia and Herzegovina. The nation's first independent television station, the Open Broadcast Network, began broadcasting on September 7, 1996. TV-IN, a joint-venture company that represents independent journalists in Bosnia and Herzegovina and five commercial television stations, was launched in late 1996; MTV began broadcasting to the region in 2004. In 1998 there were eight AM radio stations and 16 FM stations in operation in Bosnia. In 1999 there were 243 radios and 112 television sets per 1,000 people. Most broadcasts are in Serbo-Croatian. In 2002 there were 100,000 Internet users and over one million cellular phone users.

CULTURE

The trio of cultures that make up Bosnia and Herzegovina have assured the country a rich cultural heritage, as did occupation of the country at various times by the Ottoman Turks and the Austrians. From Ottoman times, and as a result of the Muslim influence, come the minarets that ornament the skyline of many of the country's cities and towns. From the Orthodox Serbs come the distinctive onion-dome churches, and from the Catholic Croats come churches and cathedrals. The Habsburg influence is seen in the distinctive Central European urban architecture from the 19th century.

Muslim tradition has left a handcraft tradition of metalworking and calligraphy. Textile arts, such as silk embroidery and the weaving of the famous *kilim* carpets also flourished.

Folk dancing is another cultural heritage. Such dances can be done to music or simply to the clapping of hands or the stamping of feet, and the sexes are often separated, as in line dances. One popular dance accompanied only by the rhythm of stamping feet is the *kolo*. While still extant in rural areas and popular for festivals, such dances are becoming less popular among a younger generation influenced by trends from the West.

The music of Bosnia and Herzegovina is a blend of all its cultures. The most common traditional form of music in all areas was the love song tradition called *sevdalinka*. In the country, traditional song forms include the flat song, or *ravne pesme*, and the more polyphonic *ganga*. Such simple music was often accompanied by a wooden flute, a bagpipe, or *diple*, and a lute-like instrument called the *öargija*. More Turkish influence is shown in the traditional music of urban areas, with its heavy concentration of notes per syllable of song. However, as with traditional dance, this musical tradition is giving way to Western influence, particularly rock. The hip-hop scene in Bosnia and Herzegovina is particularly strong.

Among modern writers are Ivo Andrić, the Nobel Laureate for 1961, Miljenko Jergović, a contemporary best-selling author, and Mak Dizdar, a major poet. The country's emerging film industry received a boost with 2001's *No Man's Land*, directed by Danis Tanović. The film is a darkly comic antiwar parable that won numerous international prizes, including both the Academy Award and Golden Globe for Best Foreign Language Film.

FOLKLORE AND MYTHOLOGY

Mythology and folklore in Bosnia and Herzegovina is strongly influenced by the Bosniak, or Bosnian Muslim, tradition. Many of the tales in this tradition are over 500 years old and are reminiscent of tales in other Slavic and Oriental folk traditions.

As with many folk traditions, favorite characters include the hero and the trickster. The former are represented in Bosnian folktales largely by historical figures

from Bosnia's long history. Thus, such national figures as Gazi Husrev-beg and Gerz Eljaz Đerzelez Alija, have become mythic characters, as has Ban Kulin.

The most famous example of the trickster, and one that is found in many folk traditions, is Nasrudin Hodža. Transplanted to Bosnia, Nasrudin takes part in humorous episodes with Bosnia settings in many folktales. Another trickster, the wise old man, is found in a legend about the old Sarajevo Orthodox Church. Supposedly, a finicky official demanded that a church be built on land no bigger than an animal hide. The wise old man used cunning to trick the official: He cut the hide into thin strips and laid them end to end to create the boundaries of a large church.

Legends and folktales have grown up around many other manmade structures such as bridges and fountains, in towns from Sarajevo to Mostar.

ENTERTAINMENT AND RECREATION

With the addition of new television channels and access to cable and satellite television, Bosnians have, like other Europeans and Westerners in general, turned to the television for much of their entertainment. Movies are also quite popular, and with a high literacy rate and ready access to newspapers and books, reading is another pastime for many.

Recreational sports such as soccer and basketball are popular, as are hiking, swimming, and fishing. The country provides a variety of landscapes for such outdoor activities.

More Mediterranean in influence is the tradition of the evening stroll, or *korzo*. People can be seen milling about after dinner or work on the streets of villages, town, and cities, greeting one another and sharing coffee.

ETIQUETTE

Handshakes are used for greetings, and titles are often used with people's names, especially in formal or business settings. In light of the recent bitter divisions in the country, politics and religion are not the best topics for conversation. With cultures as diverse as those of Muslims and Christians living virtually side by side, there are many local forms of etiquette. For example, removing one's shoes is customary in Muslim households.

FAMILY LIFE

The extended-family traditions of Slavic culture, called *zadruga*, have largely given way to the nuclear family, as such traditions have all over the world. The pressures of

finance and size of homes dictate such changes. However, in rural areas a holdover of such traditions can be seen in grandparents who live with adult children and provide childcare. Families tend to be small, with no more than three children.

In Muslim families polygamy is sometimes practiced, but most marriages are monogamous, and weddings are occasions for lengthy and elaborate celebrations. While previously arranged, most marriages are now matters of personal choice. Divorce is not as common in Bosnia and Herzegovina as in western Europe, but the rate is increasing. However, with the acute housing shortage in the country, divorced couples are often forced to continue to share apartments.

Traditionally, the woman's role is still in the home, despite legal protections for full equality. Men are less likely to become involved in the domestic duties of child rearing and housework, which means that women often work both outside and at the home.

PERSONAL APPEARANCE

Though Bosnia and Herzegovina is divided along ethnic and religious lines, the inhabitants—Muslim Bosniaks, Orthodox Serbs, and Catholic Croats—are all of South Slav extraction and have a similar physical appearance.

Unlike in many other countries, the traditional dress of Bosnia and Herzegovina lasted into the late 20th century. However, this rich assortment of costumes is hardly seen anymore outside of certain mountain villages or during special festivals and folk performances. Colorful and unique to each region, costumes were made of local fabrics and reflected local, ethnic, and religious affiliations. For example, in the Dinaric Mountains, where sheep breeding was a major source of income, folk costumes tended to be made of wool and embroidered with yarn. In other regions, elaborate head wear existed for Muslim women.

Urban Bosnians now dress in the Western style, with blue jeans the new "costume." A Muslim men might still be seen wearing breeches, cummerbund, striped shirt, vest, and fez, but largely all ethnic and religious groups favor Western-style clothing. It is rare for Muslim women to wear the head covering called the *chadri*; they instead use scarves.

SPORTS

Two main sports are popular: basketball and soccer. Both men's and women's basketball leagues exist throughout the country, and Bosnian players are members of teams throughout Europe as well. The country has three leagues: the Bosnian League, the Croatian League, and the Serbian League. Soccer matches also draw spectators

from all over the country, and, like basketball, the sport is played recreationally.

The mountains of Bosnia and Herzegovina provide hiking and mountain climbing opportunities in the summer months and skiing in the winter. The 1984 Winter Olympics were held in Sarajevo.

CHRONOLOGY

- 1941** Axis powers incorporate Bosnia into the independent state of Croatia, a puppet state run by the Ustase, a Croat Fascist group; the Ustase attempts to exterminate the region's two million Serbs; civil war breaks out, with the multiethnic Communist Partisans led by Josip Broz Tito fighting both the Ustase and the Serb royalist Chetniks.
- 1943** The Partisans proclaim a federation of South Slav peoples, known as Yugoslavia, with Tito as marshal and prime minister.
- 1945** World War II ends; Tito organizes the Yugoslavia Socialist Federation as six republics: Bosnia-Herzegovina, Croatia, Serbia, Slovenia, Montenegro, and Macedonia; political representation within Bosnia-Herzegovina is strictly apportioned among the state's three constituent peoples, Croats, Serbs, and Muslims.
- 1948** Tito breaks relations with the Soviet Union's Joseph Stalin and begins a gradual process of decentralization of Yugoslavia.
- 1968** Muslims are officially recognized as one of Yugoslavia's six national groups.
- 1980** Tito dies; Yugoslavia's economy takes a turn for the worse.
- 1985** Yugoslavia's economic crisis hits its nadir, with production and living standards at 1965 levels.
- 1988** Slobodan Milošević, the president of Serbia, embarks on a campaign to recentralize Yugoslavia.
- 1989** Croatia and Slovenia resist centralization and call for multiparty elections.
- 1990** In the first multiparty national elections since World War II, Communist candidates are easily defeated by new parties representing the three national communities of Bosnia-Herzegovina, which gain seats roughly in proportion to their populations; Alija Izetbegović, a Bosniak (Muslim), leads the resulting tripartite government and joint presidency.
- 1991** The Serbian Democratic Party of Bosnia-Herzegovina, led by Radovan Karadžić, boycotts joint presidential meetings and declares a Serb National Assembly in Banja Luka; Slovenia and Croatia declare their independence and are recognized by the European Union.
- 1992** In a referendum boycotted by Serbs, 97 percent of voters endorse independence for Bosnia-

- Herzegovina; in April the United States and the European Union recognize Bosnia-Herzegovina; within a week the combined Serb forces of the Yugoslavian army, Serb paramilitary groups, and Bosnian Serbs begin bombarding Sarajevo; Serbia and Montenegro declare themselves the Federal Republic of Yugoslavia (FRY); Serb forces begin a process of "ethnic cleansing" to clear non-Serbs from Serb-claimed areas; by mid-May Serb forces control two-thirds of Bosnia-Herzegovina.
- 1993** The United Nations imposes economic sanctions on the FRY; war breaks out between Croats and Bosniaks, formerly allied against the Serbs, over control of central Bosnia-Herzegovina; Serb ethnic cleansing is nearly complete by mid-year.
- 1994** Bosniaks and Croats agree to form a Bosniak-Croat federation in Bosnia-Herzegovina; a cease-fire with Serb forces is negotiated in December.
- 1995** Serbian forces massacre some 6,000 Muslim men in the UN-declared "safe haven" at Srebrenica; NATO carries out major air strikes on Serb positions; the United States brokers a peace agreement, the Dayton Accords, retaining Bosnia-Herzegovina's prewar boundaries but distinguishing two separate entities within it: one Serb, the other Croat-Bosniak.
- 1996** Voters choose candidates on essentially ethnic lines in national elections observed by the Organization for Security and Cooperation in Europe.
- 1998** NATO extends indefinitely its peacekeeping operations in Bosnia-Herzegovina, which were scheduled to expire in June.
- 1997** Candidates are selected on essentially ethnic lines in municipal elections.
- 2000** Non-nationalist parties gain a slim majority in national elections; however, many Serbs and Croats remain attached to their nationalist parties. The worst drought in half a century exacerbates economic difficulties.
- 2001** In January the reformist Alliance for Change, a coalition of 10 parties, succeeds in getting its members appointed speaker, deputy speaker, and parliamentary secretary of the legislative assembly in a tight vote over the two dominant Croat and Muslim nationalist parties. The former general Radislav Krstić receives a 46-year prison sentence for crimes against humanity at Srebrenica.
- 2002** Nationalist parties make a comeback in October elections. Reform in the country appears stalled.
- 2003** Polls show that a vast majority of Croats want either their own republic or union with Croatia, while the majority of Bosnian Serbs still desire union with Serbia. In September the Muslim-Croat Federation and the Republika Srpska sign an agreement that establishes a new locally administered Human Rights Commission.
- 2004** In December the Bosnian Serb prime minister Dragan Mikerević, resigns in protest over the firing of Bosnian officials accused of aiding war crimes suspects. That same month the European Union formally takes over peacekeeping from NATO with a force of 7,000. The European Union pledges 65 million euros to aid in the reform and modernization efforts in Bosnia and Herzegovina.
- 2005** In January, Vidoje Blagojević and Dragan Jokić, former Serb officers, are convicted of war crimes for the 1995 Srebrenica massacre.

DATE OF INDEPENDENCE

September 30, 1966

DATE OF CONSTITUTION

Effective 1966

GEOGRAPHICAL FEATURES

Botswana, a landlocked country in southern Africa, occupies an area of 600,370 sq km (231,803 sq mi), extending 1,115 km (693 mi) north-northeast to south-southwest and 951 km (591 mi) east-southeast to west-northwest.

Botswana shares its total international boundary of 4,013 km (2,494 mi) with South Africa (1,840 km; 1,142 mi), Namibia (1,360 km; 844 mi), and Zimbabwe (813 km; 505 mi). Botswana touches Zambia at the confluence of the Zambezi and Chobe rivers in the extreme north. This segment of the border is a source of controversy with South Africa.

The capital is Gaborone, with a 2001 population of 186,007. Gaborone is a comparatively new city and until 1975 had a much smaller population than Serowe (42,444) or Francistown (83,023). Other population centers are Lobatse (29,689), Selebi-Phikwe (49,849), Kanye (40,628, including seasonal migrants), Maun (43,776), Molepolole (54,561), and Mochudi (36,962).

Botswana is a vast tableland at a mean altitude of 1,000 m (3,300 ft). A gently undulating plateau running from the South African border near Lobatse to a point west of Kanye and from there northward to Bulawayo on the Zimbabwean border forms the watershed between the two main natural divisions of Botswana. The fertile

Botswana

land to the south of this plateau is hilly bush country and grassland, or veld. To the west of the country plateau, stretching over the border into Namibia, is the Kalahari (or Kgaladi) Desert. The Kalahari Desert is more accurately a semidesert, or sandy tract covered with thorn bush and grass. In the extreme northwest lies the area known as Ngamiland, dominated by the Okavango Swamps, a

great inland delta of some 16,835 sq km (6,500 sq mi), and the Makgadikgadi Salt Pans. Around the swamps and along the northeastern border from Kasane to Francistown there is forest and dense bush.

Most of Botswana is without surface drainage, and apart from the Limpopo and Chobe rivers the country's waterways never reach the sea. The major interior river

system is the Okavango, which flows into Botswana from the Angolan Highlands in the northwest to form the Okavango Swamps, a delta covering about 3 percent of the total land area of the country. About half of this area is perennially flooded; the rest is seasonally flooded. From this marsh there is a seasonal flow of water into the seasonal Lake Ngami and, along the Botletle River, into Lake Dow and the Makgadikgadi Salt Pans. Much of the water is, however, lost through evaporation. The Chobe River, in the north, flows into the Zambezi after marking the border of the Caprivi Strip for part of its course.

Gaborone	186,007

CLIMATE AND WEATHER

The climate is generally subtropical, although the northern part of the country lies within the tropics. The dry season lasts from September to April, the hottest month being January, with mean maximum temperatures ranging from 30°C (86°F) to 34.4°C (94°F). Winters are cool, with frost common in the desert. In July, the coldest month, mean minimum temperatures range from 0.5°C (33°F) in the Kalahari to 8.3°C (47°F) in the far north. The rains usually begin in late October and continue until the end of April. Average rainfall is about 460 mm (18 in) but most of the Kalahari receives only 230 mm (9 in). The country often suffers long periods of drought, sometimes lasting up to five years.

In the winter the prevailing wind system is a dry wind from the Atlantic, sweeping across the Kalahari and bringing sandstorms.

Climate and Weather

Mean Temperature
 Summer: 86°F to 94°F
 Winter: 33°F to 47°F

Average Rainfall: 18 in
 Kalahari Desert: 9 in

FLORA AND FAUNA

Savanna, or grassland, covers much of the country. While in the southwest this savanna is dotted with shrub acacia, in the north and east of the country there is denser woodland and also forest. In addition to several types of acacia, the shrub savanna is also home to *tsamma* melons and *moselesele*, commonly called the Kalahari Christmas tree. In the woodland, African ironwood, or mopane, can be found, as well as the *mowana*, or baobab, which may live up to 4,000 years, and *morula*, or wild plum. The dry deciduous forest of the extreme northeast consists of *mukwa* (blood wood) and *mu-kusi* (Zimbabwean teak), which are harvested for timber.

Other sorts of trees are found near water, including palm trees in northern aquatic grasslands and African ebony along rivers.

Animal life is equally varied, with more than 150 mammal species, 30 of which are large mammals such as the giraffe, elephant, lion, and buffalo—which are, in modern Botswana, mostly confined to game preserves and parks. About 20 percent of the country's land is set aside for such purposes. Crocodiles and hippos are found in wet areas, and avian life is rich, with 460 species present, including eagles, vultures, ostriches, and bustards. Catfish and tilapia are found in the rivers and streams, and 200 species of reptiles and amphibians have been identified. Richest of all is insect life, with over 80,000 identified species in the region, though this may only represent a fraction of the total.

ETHNIC COMPOSITION

Botswana is one of the most ethnically homogeneous states in Africa. About 90 percent of the population are Tswana, of Setswana-speaking descent; most of the rest are Kalanga-speaking in origin, which links them with their counterparts in neighboring Zimbabwe. The remainder are Basarwa (San); Herero, who are linked to the larger Herero community in Namibia; whites, consisting mainly of Afrikaner farmers in the northeast of the country; and Asians.

LANGUAGES

While Setswana is the mother tongue of the majority of the population, English is the official language and as such is used in business and higher education and is widely spoken. In South Africa's North West Province there are about three million Setswana-speaking people, representing some 66 percent of the province's population (which includes the former Tswana homeland of Bophuthatswana) and 7 percent of South Africa's population.

RELIGIONS

The majority of the Tswana are nominally Christian, although less than 20 to 30 percent are practicing. The rest combine some form of traditional beliefs with Christian elements. Most Christians are affiliated with the United Congregational Church. There is a Roman Catholic diocese at Gaborone with 18,000 members.

Religious Affiliations

Christian	245,000
Other (mostly traditional beliefs)	1,394,000

HISTORICAL BACKGROUND

The earliest inhabitants of what is now Botswana were almost certainly the nomadic San (commonly known as the Basarwa or Bushmen). During the 17th and 18th centuries the area was settled by Tswana-speaking peoples whose communities overlapped into what are now South Africa's northern provinces as well as Zimbabwe. Europeans began to venture into the region in the early 19th century. In 1872 King Khama III emerged as the most prominent indigenous leader and built up a powerful army. As expansionary pressures from Afrikaners in South Africa increased, as intensified by the discovery of gold near Francistown, Khama III sought protection from the British. In 1885 Britain declared a protectorate, Brit-

ish Bechuanaland, over Khama's people, while annexing Tswana-inhabited territory in the northern Cape region to its own Cape Colony. After the Cape Colony became part of the South African Union in 1910, white South African leaders pushed for the incorporation of Bechuanaland into the union.

Khama III retained control of local administration, law, and justice. He also resisted pressure to grant mining concessions to the British South Africa Company and successfully prevented unification with South Africa. Economically, however, the protectorate remained neglected and became little more than a labor reservoir for South African mines and farms. Cattle ownership remained at the core of Botswana society.

A grandson of Khama III, Seretse Khama, founded the Botswana Democratic Party (BDP), which won most of the elected seats in the preindependence poll of 1965. Upon independence in September 1966 Khama became the country's first president. He was a conservative and favored the creation of a multiracial democratic society, in which traditional laws would retain their due place. His policies included the transfer of tribal land rights to elected district committees for white leasehold farmers, the encouragement of foreign investment, and a neutral stance toward racist regimes in South Africa and Rhodesia (now Zimbabwe), reflecting Botswana's strategic vulnerability. He did, however, refuse to open diplomatic relations with apartheid South Africa, despite strong commercial links. His leadership and statesmanship in the British Commonwealth earned him a knighthood from the British government, after which he was referred to as Sir Seretse Khama. He held office until his death in 1980. His deputy, Vice President Quett Ketumile Masire, a cofounder of the BDP, succeeded him. In March 1998 Sir Quett Ketumile Masire retired and his vice president, Festus Mogae, took over as president. Mogae chose Ian Khama, Seretse's son and the previous head of the army, as his vice president. BDP policy has remained fairly constant throughout leadership transitions.

As president, Mogae has had to deal with difficult problems, including environmental degradation, diversification of the economy, and political power struggles within his own ruling party. In the 2004 elections Mogae won another five-year term as president, as his BDP party took 44 seats in parliament, which now has 57 members. Major issues in this election included accessibility to water, education and health systems, corruption, assistance for farmers, the need to improve the country's public service system, unemployment, privatization of state businesses, illegal land acquisition, and the eviction of the San from the Kalahari Game Reserve.

However, these political and economic concerns have been largely overshadowed by the HIV/AIDS pandemic. Botswana has the highest infection rate in the world: 37.3 percent of the adult population was infected in 2003, and

there were 33,000 deaths that year from the disease. AIDS has drastically shortened the average life expectancy, decimated the population, and caused enormous dislocations and pressures on the nation's economy and health-care system. The government has worked hard to meet this challenge, earning commendations as the first nation in Africa to widely distribute antiretroviral drugs.

LIST OF MODERN RULERS

1966–80 Seretse Khama
1980–98 Quett Ketumile Joni Masire
1998– Festus Gontebanye Mogae

CONSTITUTION

Botswana is a presidential democracy. The constitution adopted at independence in 1966 vests legislative power in the National Assembly, with 57 members, including the president, the speaker, the attorney general, and four members nominated by the president. The remainder of the assembly is elected every five years on the basis of universal adult suffrage, with full freedom to organize political parties. A 15-member House of Chiefs has advisory power only. Executive power lies with the president, who is elected by parliament. The constitution may be amended in minor ways on a simple parliamentary majority vote. More substantive amendments require a two-thirds majority, while major alterations have to be put to a national referendum. Under a local government system introduced at independence, there are nine district councils and four town councils. Local elections coincide with national elections and are also conducted on a party basis.

Full protection of the fundamental rights and freedoms of the individual is provided under the constitution, although criticisms about the treatment of minority San have emerged. An independent judiciary interprets and administers the constitution and other laws. Roman-Dutch law is the common law, while criminal law is largely based on English law. Customary law cases in rural areas are heard by tribal courts associated with the village *kgotla*, or assembly of elders, with traditional chiefs acting as court presidents.

The Botswana Democratic Party (BDP) has a secure hold on power. In the 1999 general election it won 33 of the 40 elected seats that existed at the time. Although this was an improvement on the 27 it had won in 1994, it was largely a reflection of opposition weakness rather than strong BDP support. The BDP's urban support is especially weak, as rising unemployment and poverty are major issues, and it is the BDP's rural base that ensures its continued success. Internally, traditional BDP factions appear to have lost ground in recent years, although

the party's conservative policies and constituency remain unchanged. Sir Quett Masire selected Festus Mogae, a former bureaucrat, as his successor in a bid to neutralize internal factions. Mogae's subsequent choice of the former army commander Ian Khama as his vice president was made for similar reasons. BDP faction leaders have thus taken more of a back seat, but they remain powerful. The main opposition, the Botswana National Front, is led by the aging Kenneth Koma, who has promised to step down soon. However, the future of the party in the absence of its long-standing leader, especially as there is no obvious successor, remains in doubt. Other political parties, including those that fought the 1999 elections grouped in a coalition, are in a very weak position, and their prospects for gaining political power will rest heavily on their ability to forge successful alliances, probably with the BNF.

In the 2004 elections Mogae won another five-year term as president, as his BDP took 44 seats in parliament. Meanwhile, the BNF joined forces with the Botswana People's Party (BPP) under Knight Maripe and the Botswana Alliance Movement (BAM) under Ephraim Lepetu Setshwaelo to win 12 seats in the National Assembly, while the Botswana Congress Party under Mokgweetsi Kgosipula took one seat.

PARLIAMENT

The national legislature is a partially bicameral parliament, consisting of an elected National Assembly and a consultative House of Chiefs.

The National Assembly consists of the president of the republic, the speaker, and the attorney general serving *ex officio* and comprises 57 members in all. The term of the National Assembly is five years. The president may withhold his assent to a bill passed by the National Assembly, but if it is again presented to him after six months he is required to assent unless he dissolves parliament within 21 days.

The House of Chiefs is a 15-member advisory body consisting of the chiefs of the eight principal tribes serving *ex officio*, four members elected by the subchiefs from among their own number, and three members elected by the other 12 members of the House. Bills affecting tribal interests and chieftaincy matters must be referred to the House. Under the constitution, suffrage is universal over age 18.

POLITICAL PARTIES

The ruling party is the Botswana Democratic Party (BDP), founded in 1962 by Sir Seretse Khama and currently led by Quett Masire. The BDP favors parliamentary democracy, multiracialism, racial moderation, and

close relations with Great Britain. It had supported a dialogue with white-dominated South Africa prior to the end of apartheid.

The Botswana National Front is a leftist party formed in 1965 by Kenneth Koma. It has been categorized as pro-Communist, but Koma has termed its members social democrats who are not Marxist. Its supporters are primarily the urban working class. The Botswana People's Party (BPP), led by Knight Maripe, was once the dominant opposition party but it retained only one seat in the 1984 election. Its main planks are Africanization of the administration, an end to rule by the chiefs, and nationalization of foreign companies. Its primary strength is among minorities in northeast Botswana. The Botswana Independence Party was formed in 1964 by dissidents from the BPP. The party's main platforms are similar to those of the BPP. The Botswana Progressive Union was formed in 1982. The Botswana Liberal Party, which does not align itself with other opposition parties, was founded in 1984 to combat what the founders declared was economic stagnation since independence. A number of minor parties joined together in 1999 to form the Botswana Alliance Movement (BAM), including the United Action Party, the Independence Freedom Party, and the Botswana Progressive Union. The Botswana Congress Party, or BCP, is one of the major opposition parties and is led by Mokgweetsi Kgosipula.

In the 2004 elections the BDP took 51.73 percent of the vote, gaining 44 seats; the Botswana National Front (in a coalition with other parties) took 26.05 percent, gaining 12 seats; and the Botswana Congress Party took 16.62 percent, gaining one seat.

LOCAL GOVERNMENT

For purposes of regional administration Botswana is divided into nine districts, whose boundaries follow tribal divisions very closely. Five of the district councils are headed by chiefs and four by elected leaders. The district councils vary in size from 12 to 38 members; each council has an elected majority. Chiefs and tribal authorities are ex officio members of the council. The chief official on the district level is the district commissioner, a civil servant appointed by the central government. Each district also has a district development committee.

There are also four townships—Francistown, Gaborone, Lobatse, and Selebi-Pikwe—with town councils. Each town council consists of eight elected members and varying numbers of nominated members.

LEGAL SYSTEM

The legal system is headed by the High Court of Botswana, whose chief justice is also the chairman of the

Judicial Service Commission, which advises the president on matters relating to the appointment, discipline, and removal of judges. The Botswana Court of Appeal has jurisdiction over civil and criminal appeals emanating from the High Court. In certain circumstances further appeals lie with the Judicial Committee of the Privy Council in London. There are subordinate first-, second-, and third-class courts with limited jurisdiction in each district. Under the African Courts Proclamation Act of 1961, tribal law and custom are dispensed in native and customary courts, but their jurisdiction is limited to Africans.

The judiciary is independent, and its separation from the executive has been upheld even in controversial and sensitive cases. There are no special courts to deal with security or political offenses. No information is available on the correctional facilities in the penal system in Botswana.

HUMAN RIGHTS

In terms of civil and political rights, Botswana is ranked as a free nation. The country has conformed to the fundamental principles of rule of law, political democracy, and respect for human rights since independence. The constitution provides for a bill of rights, and the courts have consistently upheld these rights in practice. There are no political prisoners, and preventive detention is illegal. The right to a fair trial is honored in practice. Defendants are entitled to counsel, and consultation may be held in private. All trials are public.

While all of Botswana's information media are owned by the government, editorial staffs enjoy considerable independence. Articles strongly critical of the government are frequently published, and activities of and statements by the political opposition are adequately covered. There is no censorship. Labor unions have a limited right to strike, organize, bargain collectively, and lobby.

While ethnic discrimination is officially banned, critics of the government call its policy of relocation of the San people from the Kalahari Game Reserve a form of implicit discrimination. Poverty and disease is more chronic among the San than among other groups in the country, but the government assumes a color-blind stance where everyone is equal, refusing to see the San minority as the original indigenous people of the region. They are called Basarwa (those who don't raise cattle, in Setswana), a term the San feel is demeaning.

FOREIGN POLICY

In the past Botswana maintained a delicate balance between its natural affinity to black liberation movements in southern Africa and the economic realities of its geographical location as a landlocked nation bordering and

economically heavily dependent on white-dominated South Africa. While rejecting apartheid, Botswana made a special effort to maintain good relations with South Africa, both as a trading partner and as a source of employment for Tswana. Botswana cooperates with South Africa in the South African Customs Union but has pulled out of the rand currency area and established its own monetary unit, the pula. Botswana established diplomatic relations with South Africa following the establishment of the new regime in that country after 1994. Sir Seretse Khama also spoke out vigorously against the Ian Smith regime in Rhodesia (now Zimbabwe), apartheid in Rhodesia, and the sale of arms to South Africa. Botswana continues to give conditional asylum to political refugees from Namibia guerrillas, illustrating its commitment to the peaceful resolution of racial problems.

Relations between South Africa and Botswana were extremely strained through the 1980s because of Botswana's asylum policy. The South African government alleged that Botswana had aided South African guerrilla insurgents, a charge Botswana denied. Border fire was exchanged between the two countries, and during 1985, 1986, and 1987 South Africa sent troops to attack alleged African National Congress (ANC) bases in Botswana. In 1987 Botswana established diplomatic relations with Zimbabwe.

Botswana's main contacts farther afield are with Tanzania and Zambia. Botswana and Zambia established a permanent consultative committee in 1973. A joint commission was also established with Lesotho and Swaziland in 1974. While retaining very close links with the United Kingdom and other Western powers, Botswana, following independence, demonstrated its nonalignment by establishing full diplomatic relations with the Soviet Union, China, North Korea, Romania, Yugoslavia, and Czechoslovakia.

Botswana joined the United Nations in 1966. It is a member of nine UN organizations and also the Commonwealth and the Organization of African Unity (OAU). Botswana and the United States are parties to three agreements and treaties covering economic and technical operation, investment guarantees, and the Peace Corps.

Beginning in 1992 Botswana was involved in a border dispute with Namibia, which was referred to the International Court of Justice in 1995 and decided in Botswana's favor in 1999. In 2003 relations between South Africa and Botswana were normalized with a joint cooperation treaty. Relations with Zimbabwe that same year worsened over the construction by Botswana of new border fencing to keep out cattle that might have foot-and-mouth disease.

DEFENSE

Botswana established its first permanent defense force in 1977, and by 2002 the military consisted of about 9,000

men, with 8,500 in the army and the remaining 500 in the Air Wing. In addition, there were about 1,500 paramilitary police. Military spending in 2003 was \$298.9 million, or 3.6 percent of gross domestic product (GDP).

ECONOMY

Botswana is one of the lowest-income countries of the world and is also considered by the United Nations to be one of the least developed countries in the world. Since independence, however, Botswana has combined an impressive record of economic growth and political stability. Its 15 percent annual growth during the 1973–78 development plan period surpassed the growth rate of many other countries more generously endowed with natural resources.

Botswana has a free-market economy in which the dominant sector is private. Traditionally, Botswana's economy has been based on cattle raising and crops. Agriculture employs over four-fifths of the population but contributes less than 5 percent of GDP and satisfies only about half of domestic food requirements. This sector is limited by overgrazing, poor soil, and limited water resources as well as periodic droughts and plagues of locusts. Botswana achieved dramatic economic growth during the 1970s and 1980s primarily as a result of the growth in mining (principally diamonds). Mining's contribution to GDP grew from 25 percent in 1980 to over 35 percent in 1997. Diamond mining continues to fuel much of the country's expansion and in 2003 accounted for more than one-third of GDP and 90 percent of export earnings. Despite rapid growth, unemployment remains high—about 40 percent—and a very limited resource base hampers diversification into labor-intensive industries.

Almost half of the Botswana government's revenues are from mineral royalties and dividends. Customs and excise taxes account for another 15 percent. Almost 16 percent of expenditures go to recurrent expenditures. Development expenditures account for over 40 percent, of which almost one-quarter go to economic services.

The first National Development Plan (1968–73) called for increased state intervention in economic development, the creation of new job opportunities in the private sector, budgetary self-sufficiency, and equitable distribution of income. The plan exceeded its 15 percent per annum rate of

growth in real terms, achieved budgetary self-sufficiency in 1972–73, and reached the 1975 employment target in 1972. Encouraged by the results, the government launched still more ambitious development plans designed to develop the infrastructure and expand social services. The 1997–2003 development plan aimed at diversifying the economy in order to create jobs, especially for unskilled workers. It also focused on further developing infrastructure and improving the quality of education. More diversification is called for in the 2004–09 National Development Plan, encouraging foreign investment in tourism, pharmaceuticals, and light manufacturing.

The most important sources of foreign aid have been the United Kingdom, Sweden, Denmark, the Netherlands, the International Bank for Reconstruction and Development, the International Development Association, and the United States. Until 1972 budgetary deficits were met by the United Kingdom. In 2002 Botswana received \$37 million in international aid.

HIV/AIDS has had a drastic impact on the economy, taxing its health system and debilitating the working sector. Rates of infection are pushing 40 percent among the sexually active and are expected to force a greater percentage of the population into poverty. It is estimated that the Botswana economy will be one-third smaller over the next decade as a result of the virus. As of 2003, long-term prospects for the country were also threatened by the expected leveling off of diamond mining production.

ENVIRONMENT

Landsat imagery reveals devegetated areas throughout Botswana as a result of overgrazing. Based on recent trends, more than half of Botswana's land area could be degraded and its productivity permanently impaired within 25 years. Rapid expansion of livestock farming has meant the opening up of new areas in the west and north, reducing the habitats available for wildlife. Especially damaging is the expanding network of cor-

don fences established by ranchers that block wildlife migration paths. Up to 50,000 wildebeest died along cordon fences in one recent year alone. The country also faces serious water shortages.

LIVING CONDITIONS

The population of the country is equally distributed between urban and rural areas, and the living conditions in each are very different. Families in rural villages tend to live in traditional compounds, usually with two or three small houses. Traditionally, these simple houses have cylindrical clay walls and conical thatch roofs and are set around an open fireplace. This traditional building style is giving way to square houses with metal roofs. In the northwest many houses are made of reeds. Most cooking in villages is done on open wood fires, though coal fires have become typical in poorer urban households without electricity, and lighting is by candle and kerosene lantern.

Access to water and adequate fuel supplies are definite problems in the villages, and women often have to walk great distances to fetch either or both. Subsistence farming and herding provides a poverty-line income for most rural people. Among many groups, the possession or nonpossession of cattle still distinguishes between relative richness and poverty. Traditional beliefs in the cycle of life in which even the dead are "present" tend to perpetuate such difficult living conditions.

In the cities rapid growth has led to overcrowding. Here, traditional lifestyles have given way to more Western ones. In the cities as well as in much of rural Botswana the social class system of old has broken down, as replaced by one based on commerce and a cash economy.

In 2002 Botswana ranked 126th out of 177 countries in the Human Development Index, which combines measures of life expectancy, school enrollment, literacy, and income. The country had scored higher in previous years, but as a result of the lowering of life expectancy because of the AIDS epidemic, its listing declined. In 2002 life expectancy was 41 years; in 2004 it had plummeted to 31 years. The fertility rate was 3.17 children per woman in 2004. Poverty is endemic: between 1990 and 2002 over half the population lived on less than two dollars per day. Malnutrition is also chronic among about one-quarter of the population.

HEALTH

The government-run health-care system, set up in the 1970s, provides health care to citizens for a nominal fee. Every village with a population over 500 has some sort of health service, though access can be restricted by the availability of trained staff. As of 1999 there were only an estimated 3 physicians and 16 hospital beds per 10,000 people.

The warm, dry climate of Botswana has traditionally been favorable to health; the tropical diseases such as malaria that plague the rest of sub-Saharan Africa are not as prevalent there. In 2000 there were about 49 cases of malaria per 100,000 population. Until the 1990s respiratory and intestinal diseases had been the major fatal diseases, along with tuberculosis. In 2002 there were 338 cases of tuberculosis per 100,000 people. In 2000, 95 percent of the population had access to safe water, and 41 percent of the population had access to sanitation, numbers which have been steadily improving over the years. Malnutrition also poses a health risk; 32 percent of the population was undernourished in 2000–2002. Additionally, with changing diets the people of Botswana have become prone to high blood pressure, heart attack, and stroke. Immunization rates are improving in the country. As of 2003, 97 percent of one-year-olds were immunized for polio and 99 percent for tuberculosis.

The single largest health problem in Botswana as of 2004 is HIV/AIDS. The country has the highest infection rate in the world, with 37.3 percent of adults infected in 2003, another 350,000 living with HIV/AIDS, and 33,000 deaths in 2003 alone. Antiretroviral drugs are distributed through the nation's health-care system, but the pandemic has not slowed. AIDS orphans are a growing problem in the country, and the disease affects men, women, and children, many of whom are born with AIDS. In 2001, 39 percent of children under five were suffering from AIDS-related illnesses. Life expectancy in 2004 was 31 years; the death rate was 34 per 1,000 people, and the infant mortality rate was 70 deaths for every 1,000 live births.

In addition to traditional Western medicine, Botswana also has over 2,000 registered herbalists. Public expenditures on health care in 2001 totaled 6.6 percent of GDP.

FOOD AND NUTRITION

Traditional foods of Botswana include a porridge made of corn and sorghum, beans, okra, melons, and spinach. In most rural areas these are homegrown, while other staples such as tomatoes, potatoes, onions, and various types of cabbage are generally store bought. Milk is also common, either freshly bottled or canned. The latter is more typical where electricity, and therefore refrigeration, is unavailable. Meats include goat and wildlife, and in more recent years beef has also become popular.

Other beverages include palm wine and *kgadi*, made from distilled brown sugar. Legal home brews include *bo-jakwa*, an inexpensive sorghum beer, and there are also canned soft drinks and sour milk drinks. Specialty foods include caterpillars that are found in the woodland and the wild plum known as *morula*.

Malnutrition continues to be a problem. From 2000 to 2002, 32 percent of the population was undernourished; 13 percent of children under five were undernourished between 1995 and 2002.

 Amount of Fruits and Vegetables Available per person per year kg: 64.4

STATUS OF WOMEN

Women hold more than one-third of paid employment positions. An estimated 41 percent of central government employees are women, many of them in high-level positions. While there is little overt discrimination, statistics suggest that social customs still elevate the rights and privileges of men above those of women. Some 40 percent of rural households are headed by women, but in general their economic situations—access to capital, seeds, labor, and draft animals—are significantly worse than those of households headed by men. Women about to marry may choose civil marriage, in which all property is held in common, or customary marriage, which recognizes individual property brought into the marriage. Most women are not aware, however, of the implications of these alternatives. A married woman is often

unable to obtain a bank loan without the signature of her husband or father. The government has participated in the preparation of a handbook outlining women's rights in Botswana and has established preference points for women who seek government-sponsored development loans. The political rights of women and minority groups are generally observed.

Some critics complain that, despite advances on the employment and political representation fronts, there has been little advance for the vast majority of women in areas of domestic violence, marital rape, unfair inheritance practices, and women's equal access to their own resources.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 11
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men age 15 to 24: 1.09
 Women's Share of Wage Employment Non-Agricultural %: 47.0

WORK

The official size of the labor force for formal-sector employment in 2000 was 264,000. An unemployment rate of 40 percent was estimated for 2001, though official government figures put the number at 21 percent. The formal sector includes workers in industry, agriculture, and the services. Industrial products include diamonds, copper, nickel, salt, soda ash, potash, processed livestock, and textiles, while agricultural products are primarily livestock, sorghum, maize, millet, beans, sunflowers, and groundnuts.

Employment figures do not take into account the extremely large number of people engaged in subsistence farming and livestock raising. In 1998 estimates saw almost one million people involved in such occupations, a figure reflected in the high number of people living below the poverty line: 47 percent in 2002.

Some occupations are well organized and represented by unions. These include the railway, mining, banking, and public sectors. However, the right to strike is strongly curtailed by government employment laws, which also control contracts and wages. In 2002 the government established a minimum wage of \$3.15 per day and a 48-hour maximum workweek. Safety regulations on the job are also established by law though not often enforced.

EDUCATION

Compulsory, universal, and free education is the eventual goal of the government, but its introduction has been delayed for economic reasons. Schooling consists of seven years of primary grades, three years of middle grades, and two years of secondary grades, for a total of 12 years. Radical changes have taken place in both primary and secondary school curricula to make them more relevant to Botswana. Greater emphasis is being placed on agricultural subjects.

The academic year runs from January to December. The medium of instruction is English, though Setswana is used in some locales for the first four years. The school system continues to depend heavily on Western expatriate teachers in secondary schools.

Vocational training is provided by the Botswana Training Centre. A unique feature of vocational education is brigade training, a system of job training whereby expenses are met by the sale of products.

Mission schools maintained by the Dutch Reformed and Catholic churches are integrated with the school system.

All schools are controlled by the Department of Education. Botswana is divided into 10 educational circuits. Statutory responsibility for the maintenance and construction of primary schools lies with elected local authorities.

Higher education is provided by the University of Botswana and Swaziland, formerly the University of Botswana, Lesotho, and Swaziland, from which Lesotho withdrew in 1975. In 1997 universities and other institutions of higher education enrolled 8,850 pupils and had 765 teaching staff members.

As of 2003 the literacy rate for those over 15 was 79.8 percent, higher among women than men. Public expenditures on education from 1999 to 2001 were 25.6 percent of total government expenditures, up from 17 percent in 1990. During the 2001–02 school year, 81 percent of primary-school-age children were in school, and 54 percent of eligible secondary students were enrolled. In 2000–01, 89 percent of children reached grade five, whereas a decade earlier the figure had been higher, at 97 percent.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture administers the Department of Agricultural Research, whose research thrusts are in the areas of crop and livestock improvement, sustainable utilization of range resources, soil and water management, optimal utilization of locally available animal feed resources, crop pest and disease management, and pasture and forage crop improvement. The Botswana Technology Centre (BOTEC) in Gaborone carries out research in maximizing the use of the country's resources, specializing in energy efficiency, electronic systems, information technology, water, building materials, and design. One BOTEC project is developing a technology that will enable the use of sand from the Kalahari Desert and other areas for building; in its natural state, this abundant resource lacks bonding agents and is not suitable for molding bricks and building blocks. Other projects include research on passive solar energy, another untapped natural resource.

The University of Botswana, the Botswana Agricultural College, and Botswana Polytechnic, all in Gaborone, have degree programs in science, agriculture, and engineering. The university also houses the Office of Research and Development and the Harry Oppenheimer Okavango Research Centre (HOORC), which focuses its research around the Okavango Delta, which has a combination of hydrological, geological, and biological features making it a wholly unique environment. The HOORC further specializes in natural-resource management research in the Okavango River basin, and its aim is to support the development of sustainable resource use by local communities throughout the basin so as to promote long-term conservation.

MEDIA

The *Botswana Daily News*, is published by the government in English and Setswana. In 2002 it had a circulation of 50,000. Also in 2002, four independent weekly newspapers were publishing, with a total circulation of over 50,000. One of these, *Mmegi*, or the *Reporter*, is published in both Setswana and English and had a 2002 weekly circulation of 24,000. The major political parties also publish monthly journals.

There is no official censorship and there is a vigorous opposition press. The Botswana Press Agency, the nation's first news agency, and Italy's Interpress Service have bureaus in the capital.

Botswana has a small book-publishing industry; the country does not adhere to any copyright conventions.

The official broadcasting organization, Radio Botswana, which has three transmitters, is on the air for 102 hours a week, with programs in English and Setswana. All programs are of national origin. Television service is provided by Botswana TV as well as the private Gaborone Television and the pay service MultiChoice Botswana.

The Botswana National Library Services is the national library. The Gaborone Library is the central library for southern Botswana, and the Francistown Library is the central library for northern Botswana.

In 2002 there were 435,000 cellular phones in use and 60,000 Internet users.

CULTURE

Like much else in the country, Botswana's culture is a reflection of its two main influences: Tswana and English. This is true not only in terms of language but also in the palpable artifacts of culture, including architecture and art.

Botswana has a long musical tradition, based largely on stringed instruments such as the *setinkana* (hand piano), *katara* (guitar), and *segaba* (violin). There is also an older form of music known as *dikoma*. This is still sometimes performed by old men with the backing of various traditional instruments made from the horn of a kudu, called *lepatata*, and various bones. The voice has also been used as an instrument, and drums have not been as prevalent in Botswana as in other African cultures. All of this tra-

ditional music and traditional dance was nearly lost during the years of British occupation. After independence, however, there was an upsurge of interest in traditional Tswana culture, including music and dance. This renaissance was short-lived, as Western soul music and music from black South Africa made inroads via the radio and recordings.

One of modern-day Botswana's largest cultural exports is the traditional craft of basketry, much of it from the northwestern part of the country. Woodcarving is another craft with a long tradition. The local mopane wood is very hard and is used for bowls and other household items as well as for figurines of humans and animals. A soft wood called *mokomoto* is used for toys. The mythical *tokoloshi*, a half-man, half-hare creature that, according to legend, is normally invisible to humans is carved by local artisans in great detail. Ironmongery, beadwork, leatherwork, pottery, and weaving are other local crafts.

Botswana doesn't have a long written literary tradition. What survives of the ancient myths and praise poetry of the native peoples has been handed down orally and only recently transcribed. In more modern times, some writers have gained relative international renown, such as the author Bessie Head (1937–86), who wrote novels in English that reflect the contemporary realities and history of Serowe. The publishing of fiction in Setswana was revived in the 1980s.

The 1980 film *The Gods Must Be Crazy* was supposedly about Botswana, as were its two sequels. It was actually filmed in northern Transvaal, South Africa, and starred a South African actor.

There is a national museum and art gallery in Gaborone and a national learned and scientific society, the Botswana Society, which holds public lecture series and publishes an annual journal and books.

FOLKLORE AND MYTHOLOGY

The oral tradition is strong in Botswana, and myths, folktales, proverbs, and poems have been handed down from generation to generation. The folk poetry, known as *maboko*, deals with topics from love to war to the value of cattle. Proverbs, called *diane*, have also become folkloric in tradition and content and teach moral lessons in Afri-

can settings. One common proverb in Setswana is *O se tshege yo o oleng, mareledi a sale pele*, which translates, "Do not laugh at someone who has fallen; there are slippery slopes ahead."

Folktales and folklore, called *mainane*, deal with mythical animals such as the *kgomodumo*, a mythical bird, or *maruana*, a whale. Ethnologists have found such whale stories interesting in light of the fact that Botswana is landlocked. Researchers speculate that these tales might harken back to a time when Botswana had a sea. The trickster fox and the wise rabbit are also stock figures in folk stories.

ENTERTAINMENT AND RECREATION

With parts of the country lacking electricity, modern forms of entertainment such as television and movie theaters are generally urban pastimes. In 2000 there were only 21 television sets for every 1,000 people. Music and dance are popular forms of entertainment; in large urban centers such as Gaborone, nightclubs and discos attract the young.

Generally speaking, rural forms of entertainment and recreation are more basic in nature. Radios are accessible to a large segment of the population, and listening to music—mostly modern rock and soul—is a favorite pastime. Outdoor recreation is more typical in rural areas, but with much of the rural population making a subsistence living, there is little time left for recreational activities. Celebrations around births and weddings form an integral part of the people's entertainment.

ETIQUETTE

Much of the etiquette system of Botswana is found in other parts of Africa, as well. This includes the use of the right hand only for shaking, offering and receiving, and eating. Handshakes should be gentle rather than the typical firm American type. Modesty in dress and demeanor is appreciated. Women cover their shoulders and knees, while men cover their chest. Respect for elders is shown in social situations by waiting for the older person to initiate introductions. An interesting food restriction demands that one not stand over prepared food or food in the process of preparation to smell it. This could offend the cook.

FAMILY LIFE

Traditional roles still exist in most Botswana families, with patriarchy the norm. Men are allowed by law to physically punish their wives. Polygamy is legal but not widespread.

With the birthrate at 3.17 children per woman in 2004, the size of families is decreasing.

Family structure ranges from the African extended family of the Tswana to the nuclear family of the minority white population. Women often lose access to the resources or wealth they bring with them into a marriage. Though in many cases, especially in the towns, both men and women work outside the home, the woman is generally also the homemaker and responsible for the children.

AIDS has greatly affected family life, as it has so many other aspects of life in Botswana. Over 10 percent of all children in the country are AIDS orphans; that figure is expected to reach 35 or 40 percent by 2010. The traditional family structure, which has over the years proven able to cope with societal challenges such as droughts and other disasters, has become overburdened and unable to support these children. There are also insufficient public institutions and orphanages to care for such high numbers.

PERSONAL APPEARANCE

Traditional dress generally consisted of some form of leather or fur clothing for the cooler winters and sandals or soft shoes made of leather. However, such traditional clothing has for over a century been a thing of the past. Now, Western dress is typical among all strata of the population except for the very poorest.

SPORTS

Soccer is the national sport and is played both recreationally and professionally. The national team is the Zebras, and there are over a dozen teams in the local league.

In urban areas sports such as tennis, golf, and softball are also popular.

CHRONOLOGY

- 1966** Republic of Botswana is proclaimed, with Seretse Khama as first president.
- 1969** New customs agreement is signed with South Africa granting Botswana, Lesotho, and Swaziland more favorable terms as members of the Southern African Customs Union.
Khama's Botswana Democratic Party (BDP) is returned to power in election.
Botswana declines to subscribe to international sanctions against Rhodesia.
- 1971** Botswana holds first national population census.
- 1974** Khama and BDP win another term in office at the polls.
- 1976** The pula is introduced as the new national currency, replacing the South African rand at par.
- 1977** Relations with Rhodesia worsen as the two countries accuse each other of armed attacks across the borders.
- 1979** President Khama is reelected in national elections, with an increased majority for his Botswana Democratic Party.
- 1980** President Khama dies of cancer and is succeeded in office by Vice President Quett K. J. Masire.
- 1983** Martin Chakaliso launches a new political party, the Botswana Liberal Party.
- 1984** In national elections the ruling Botswana Democratic Party retains a commanding legislative majority, but the incumbent foreign affairs and home ministers are defeated.
- 1989** The ruling Botswana Democratic Party wins national elections by a landslide.
- 1990** Following the release of ANC leader Nelson Mandela from prison in South Africa, the government frees 16 members of South African liberation movements who had been held in detention.
- 1991** Leaders of Botswana join hundreds of American and African leaders at the first-ever summit of Africans and African Americans in Abidjan, Côte d'Ivoire.
- 1995** The informal Botswana stock market is converted into a formal stock exchange.
- 1997** The Eighth National Development Plan is presented to the National Assembly. The first referendum on constitutional reform lowers the voting age to 18, limits presidential terms to two, and provides for the automatic succession of the vice president.
- 1998** President Quett Masire retires and is replaced by Festus Mogae, the vice president. Mogae selects Ian Khama as vice president. The main opposition, BNF, officially splits following factional infighting. The majority of its MPs join the Botswana Congress Party (BCP), which becomes the official opposition.
- 1999** The BDP easily wins the legislative election, and Festus is confirmed as president. The BCP loses most of its seats and the BNF regains its position as the official parliamentary opposition. In a cabinet reshuffle Mogae moves a key BDP faction leader, Pontashego Kedikilwe, from the finance ministry to education. Baledzi Gaolathe, who, like Mogae, is a former bureaucrat from outside the BDP inner circle, replaces Kedikilwe. Southern Africa's first female central bank governor, Linah Mohohlo, takes over for Geolathe. The International Court of Justice finds in Botswana's favor in a long-standing border disagreement with Namibia.
- 2000** The vice president, Ian Khama, takes a year's sabbatical leave, leading to rumors, vigorously

denied, of a rift with the president. Botswana's flagship manufacturing enterprise, the Hyundai car assembly plant, closes down owing to the liquidation of its South African parent. The project to double diamond production at Orapa, Botswana's single largest private investment, is completed.

- 2001** In March a commission headed by a former cabinet minister recommends more representation for ethnic minorities in the National Assembly, thus setting off a debate about national integration policies.
- 2002** In an effort to relocate the San minority, the government stops trucking in water supplies for people living in the Central Kalahari Game Reserve in February.
- 2003** Botswana and South Africa sign the joint Permanent Commission for Co-operation, establishing interactions between the governments, businesses, NGOs, and academic institutions.
- 2004** In parliamentary elections held in October the BDP wins 51.73 percent of the vote, or 44 seats. Mogae is thus reelected as president, with the next elections scheduled for 2009.

NATIONAL FLAG

A large yellow diamond, twice as wide as high, in the center of a green field. In the center of the diamond is a blue globe

showing the constellations of the southern sky, with 27 stars representing the 26 states and the capital. Encircling the globe is a white banner bearing the national motto, *Ordem e progresso* (Order and progress).

NATIONAL EMBLEM

A gold five-pointed star in the center of which is a blue orb representing the five white stars of the Southern Cross. The encircling blue rim of the orb carries 27 stars, one for each state and one for the capital. Concealed partly by the gold star is a silver sword and blue cross-hilt bearing in a red panel another white star. Sheaves of coffee and tobacco leaves wreath the design, with the sun shining behind the emblem. A blue ribbon bears the name of the country and the date, "15 de Novembro de 1889," when the republic of Brazil was proclaimed.

NATIONAL ANTHEM

"Listen to the Cry of Iparanga"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), April 21 (Tiradentes or Toothpuller Day), September 7 (Independence Day), November 15 (Proclamation of the Republic), various Catholic festivals, including Christmas

DATE OF INDEPENDENCE

September 7, 1822

DATE OF CONSTITUTION

October 5, 1988

GEOGRAPHICAL FEATURES

Brazil is in eastern-central South America, occupying nearly half of the South American continent. It is the largest country in Latin America and ranks as the fifth largest in the world in continuous area, after Russia, Canada, China, and the United States. The total land area is 8,511,965 sq km (3,286,470 sq mi), extending 4,328 km (2,689 mi) north to south and 4,320 km (2,684 mi)

east to west. The total length of the Atlantic coastline is 7,491 km (4,652 mi). It shares international borders with Argentina, Bolivia, Colombia, French Guiana, Guyana, Paraguay, Peru, Suriname, Uruguay, and Venezuela.

The only offshore territory is the island of Fernando de Noronha in the Atlantic Ocean.

Although 59 percent of the land area is classified as highlands over 200 m (656 ft), only 0.5 percent is above 1,200 m (3,937 ft). The Central Highlands is a vast terri-

Brazil

tory covering all of Brazil south of the Amazon basin, with the exception of a narrow coastal belt and the swamps of Mato Grosso State. The northern and western halves of this zone comprise broad rolling terrain relieved by only low, rounded hills. Southward the terrain becomes more mountainous, and three mountain ranges stand out: the Serra do Mar, with a mean crest of 1,525 m (5,003 ft), the Serra da Mantiqueira, and the Serra do Espinhaço. From the city of Salvador south to Porto Alegre, the highlands meet the Atlantic in a steep, wall-like slope called the Great Escarpment. The only elevated territory in the

north is the Guiana Highlands, which extend into Venezuela and Guyana. It contains Brazil's highest mountain, the Pico da Neblina (3,014 m; 9,888 ft).

Northern Brazil is dominated by the Amazon River basin, which occupies two-fifths of the national territory. Although stretches of swampy land along the course of the river are subject to flooding, swampland is limited and most of the region is known as terra firma, or high ground. The lowlands constitute the world's largest rain forest, supplying 15 percent of the planet's oxygen. There are three smaller lowland areas: between the Xingu and Tapajós riv-

ers, the Pantanal in western Mato Grosso, and the narrow strip of coastal plain extending along the Atlantic seaboard from Guyana to Uruguay. At some places the plain disappears entirely, and there are few large level areas except at the mouths of the Amazon, Doce, and Paraíba rivers.

Brazil's river system is dominated by the Amazon, the world's second-largest river in terms of length (6,275 km; 3,900 mi) and the world's largest in terms of water flow. Together with its tributaries it drains a vast basin equal to three-fifths of the national territory. The Amazon is one of the least polluted rivers in the world, and its water has a chemical purity superior to tap water in many countries. However, with increased mining as well as deforestation in the region, the pollution levels in the Amazon grew significantly in the final years of the 20th century. The river is navigable by oceangoing vessels as far as Iquitos in Peru, and smaller craft can reach Porto Velho near the Bolivian frontier. It has 18 major tributaries, including 10 larger than the Mississippi River. Altogether the 200 rivers of the Amazon system cover a basin of 6,993,000 sq km (2,700,000 sq mi).

The second-largest river and the largest entirely within Brazil is the São Francisco, which is navigable for about 1,600 km (1,000 mi) of its total length of 1,900 km (1,180 mi). The Central Highlands are drained by two smaller rivers, the Paraíba and the Doce. The Paraná and the Uruguay rivers rise in Brazil and flow south to form part of the Rio de la Plata basin.

CLIMATE AND WEATHER

Brazil has a tropical and equatorial climate characterized by high temperatures and moderate to high rainfall. There are three major climatic zones: the tropical north, the subtropical southeast, and the temperate southeast uplands.

The coolest period is from May to September, the hottest period from December to March. The rainy season lasts from October to May. Frost and snowfall occur in the south.

Except in the south, the country is subject to little temperature variation. The highest temperatures are recorded on the northern coast. The mountainous areas of the Central Highlands, the Amazon basin, and the coastal belt have relatively cool nights. The average maximum temperature in Rio de Janeiro in February is 29.4°C (85°F), and the average low in July is 17°C (63°F).

Rainfall is fairly evenly distributed throughout the year, and the average annual precipitation nationwide is between 1,016 and 2,032 mm (40 and 80 in). The upper limit is common in the Amazon basin and the lower in the central-west highlands. The northeast region experiences

periodic droughts caused by erratic rainfall. More than 30 serious droughts have been recorded in this region, known as the *sertão*, including one that caused the death of 500,000 people in 1877–79.

The coastal areas receive the trade winds.

Climate and Weather

Mean Temperature

Summer: 85°F

Winter: 63°F

Average Rainfall: 40 in to 80 in

FLORA AND FAUNA

Home to numerous ecosystems, Brazil has a plethora of plant and animal life; the country contains 25 percent of the known plant species in the world. The Amazon basin in particular holds the greatest variety of plant life on Earth as well as a rich variety of animal life. This region includes rain forest, grasslands, and mangrove swamps. In just one acre there may be 250 different tree species, from brazilwood to Brazil nut trees and rubber trees. It is also home to water lilies and orchids as well as a virtual medicine chest of curative herbs. Several hundred bird species are also found in the Amazon region, as well as alligators, boa constrictors and other tropical snakes, tree sloths, tapirs, monkeys, and capybaras. Freshwater dolphins, manatees and 1,500 species of fish are found in the waters of the Amazon, including numerous types of eels, piranhas, and 450 species of catfish. This is also the home of the large freshwater turtle.

Other regions are less plentiful in flora and fauna. The highlands and coastal regions, for example, were once home to hardwoods, monkeys, and parrots, but human incursion has largely destroyed these habitats. Along the coast mango, guava, coconut, and jack-fruit trees can be found, as well as cultivated sugarcane and cotton. Likewise the Brazilian savannas, once home to jaguars and ocelots, have been hunted so thoroughly by ranchers that these animals are seen only in zoos. Brazil's southern states are home to exotic flowers, such as *papagaias*; flowering trees, such as the *quaresma*; and the *ipê* tree, which can be seen on the streets of São Paulo.

ETHNIC COMPOSITION

Brazilians have a complex racial background yet are considered as a distinct and integrated people with few unassimilated minority groups. The racial elements present in the population are diverse and heterogeneous in origin. The main ingredient in the melting pot is what is generally described as Luso-Brazilian, representing descendants of original Portuguese settlers. Others of Caucasian stock include Italians, Spaniards, Germans, Russians, and Lebanese. Together the Caucasians make up about 60 percent of the population. Arabs, mostly of Lebanese descent, are estimated to constitute about 2 percent of the Caucasian population.

Portuguese settlers have historically been free of racial prejudice and have intermingled freely with the indigenous Amerindians and imported black slaves. Centuries of large-scale intermarriage have created a large mulatto population, and about one-third of the population is believed to have some Amerindian ancestry. Brazil's genetic mix is reflected in the rich ethnic terminology used to describe the various racial blends. Censuses until 1950 (when ethnic origin was deleted from the questionnaire) divided the population into *branco* (white), *pardo* (brown), *preto* (black), *indio* (Amerindian) and *amarelo* (yellow). Those of partial Amerindian ancestry can be further subdivided into *mamelucos* (white father and Amerindian mother), *caboclos* (acculturated Amerindians), and *cafusos*, or *curibacos* (Amerindian and African descent).

The proportion of blacks is estimated at about 7 percent and is concentrated in the state of Bahia. Blacks are also found in great numbers in Rio de Janeiro, São Paulo, Minas Gerais, and Espírito Santo. They are the descendants of between four to 18 million slaves imported into the colony from the 17th through the 19th centuries.

Brazilian society has minimal racial prejudice, and racial violence is unknown. Blacks occupy many positions of importance. Nevertheless, discrimination does exist, especially in the business and social worlds.

The Japanese form the largest unassimilated minority group. Three-quarters of the Japanese live in the state

of São Paulo, where they constitute an impressive economic and political force. Although they number only about 700,000, they at one time had two members in the national cabinet, and they make up 10 percent of university enrollment in São Paulo. The younger generation of Japanese, the Nissei, is succumbing to the pressures of assimilation, and their sense of separate identity has been declining. All of them speak Portuguese, and most have been baptized as Roman Catholics and bear Brazilian names.

Amerindians form the second-largest unassimilated group, and their number is estimated at about 200,000. There are approximately 150 tribes, speaking over 90 languages and 300 dialects. Most of them live in isolated traditional communities in the interior, national reservations or in religious missions. Amerindians who remain in their traditional villages are under the protection of the National Indian Foundation (Fundação Nacional dos Índios), the successor to the Indian Protection Service. Many Amerindian tribes are faced with extinction, as the interior is being gradually opened to road builders, ranchers, and miners.

LANGUAGES

The official and national language is Portuguese, which is spoken by virtually all Brazilians except Amerindians. The principal Amerindian languages are Tupi, Ge, Garib, Arawak, and Nambicuara.

Although literary Portuguese differs only slightly from the language as used in Portugal, spoken Portuguese differs markedly in vocabulary and pronunciation. There are also regional variations, and the speech of *cariocas* (natives of Rio de Janeiro) exhibits the most differences from traditional Portuguese.

Tupi, the main Amerindian language, belongs to the Tupi-Guaraní family. It was the lingua franca of Brazil until the end of the 17th century.

English competes with French as the second language of educated Brazilians.

RELIGIONS

Brazil is the largest Roman Catholic nation in the world. At the time of the 1970 census 85.4 million Brazilians, of a total population of 93.1 million (92 percent) professed themselves to be Roman Catholic; in 2004, 80 percent of the population was listed as Catholic.

The constitution provides for complete religious freedom. However, the church, though not established as official, exerts a strong influence on national affairs. With the military takeover in 1964 there was increasing friction between church and state. A growing number of priests, headed by Dom Helder Camara, the archbishop of Rec-

ife and Olinda, became outspoken critics of the government's social and political policies and have denounced the continuing violations of human rights in the country. The liberal clergy have defined the church's involvement in social problems as a "leavening role for the construction of a better world." The church has actively aligned itself with the poor and the disadvantaged and has tried to act as a vanguard of reform in the creation of labor unions, the elimination of illiteracy, improved treatment of Amerindians and prisoners, and the reduction of economic disparities. The National Conference of Bishops of Brazil has become increasingly concerned with agrarian reform, mass education, and freedom of expression. Priests have been arrested for alleged subversive activities and subjected to torture, and confrontations between the military and the clergy are common. The government's displeasure is particularly directed toward Popular Action, the most radical Catholic group, which has advocated a revolution led by peasants and workers.

Protestants constitute the second-largest religious group, numbering more than 19 million in 1998, or 12 percent of the population. Protestant denominations, particularly the Pentecostal churches, have achieved a rapid rate of growth. The largest denomination, the Assemblies of God, had in excess of 8 million members at the end of the 20th century. Fringe religious groups include nearly half a million Spiritualists, who follow the philosophy of spiritualism developed by the Frenchman Allen Kardec, Afro-Brazilian cults, such as Candomblé-Umbanda and Gege-Nago, and Buddhists. The number of Jews was estimated at close to 130,000 in 1998, concentrated in urban areas. Antisemitism is not a significant factor in national life.

HISTORICAL BACKGROUND

About two million Amerindians inhabited the area that is now Brazil when the Portuguese first discovered the region in 1500. Chief among them were the Tupi, inhabitants of the tropical forest region along the coast. The Portuguese claim to Brazil was established by the papal bull of Alexander VI in 1493 and by the Treaty of Tordesillas (1494), which divided the New World between Spain and Portugal and awarded the latter all territory 370 leagues west of Cape Verde. On Easter Sunday 1500 the Portuguese admiral Pedro Alvares Cabral formally claimed the land for the Portuguese Crown. In 1532 the first Portuguese settlers arrived along with slaves from Africa. In 1549 the city of San Salvador was founded and

the Jesuits began their work among the Amerindians. In 1640 Portugal appointed its first viceroy with his seat first in Bahia and after 1763 in Rio de Janeiro. The first effort to secure independence was the failed conspiracy of Joaquim José de Silva Xavier, better known as Tiradentes or Toothpuller, in Ouro Preto in 1789. In 1807 the invading armies of Napoleon forced the royal family to flee to Brazil. After the fall of Napoleon the king returned to Portugal in 1821, leaving his son Pedro to rule Brazil. In 1822 Pedro proclaimed Brazil's independence, established the Braganza dynasty, and assumed the title of Pedro I, constitutional emperor of Brazil. The constitution of 1824, Brazil's first, was drawn up early in his reign. In 1831 a military revolt forced him to abdicate, and the throne passed to his five-year-old son, who in 1840 was crowned Emperor Pedro II. Under Pedro II, Brazil enjoyed half a century of peace, prosperity, and progress. New frontiers were opened, new cities such as Belem and Manaus were founded, new immigrants arrived from Europe, slavery was abolished in 1888, and railways were built. However, an economic crisis in 1889 led to a bloodless military coup, organized by the republican opposition and former slave owners angered by abolition, in which Pedro II was deposed and the Republic of the United States of Brazil was established. In 1891 a new constitution, based on the U.S. federal model, was promulgated.

The first republic (1889–1930) was organized in a weak federal system dominated by southern coffee interests. It drafted a federal structure of 20 self-governing states, which had complete jurisdiction in internal affairs; the central government was primarily responsible for trade and national security.

Severe economic problems followed World War I, and the growth of a broad movement opposed to the oligarchies that controlled government led to a coup that brought Getúlio Vargas to power in 1930. Vargas initially encouraged democratic participation. However, unable to balance irreconcilable interest groups, he became increasingly authoritarian, and in 1935, in response to an abortive leftist uprising, he established a fascist-modeled new state. Vargas's dictatorship lasted until 1945, when he was forced to resign by the armed forces. During his dictatorship he propagated a policy of modernization and industrialization, with a strong emphasis on development through foreign aid.

In 1946 General Eurico Dutra was elected president, and a new constitution was adopted. Vargas was re-elected in 1950. He committed suicide in 1954 and was succeeded by Juscelino Kubitschek de Oliveira and then Jânio Quadros. Kubitschek continued his policy of modernization through massive foreign—particularly U.S.—loans, which ultimately crippled the country. Quadros attempted to lessen dependence on support by the U.S. government.

The military, first under General Humberto Castelo Branco (1964–67) and then under Marshal Artur da Costa e Silva (1967–69), General Emílio Garrastazú Médici (1969–74), and General Ernesto Geisel (1974–78), banned unapproved political parties and all union activities. Political activities were limited to two authorized parties, the pro-government Aliança Renovadora Nacional (ARENA) and the opposition Movimento Democrático Brasileiro (MDB). During the 1960s increasing political dissent was countered by increasing authoritarianism, and in 1969 the president assumed virtually unlimited powers.

The country's economic growth failed during the 1970s as its burden of foreign debt grew. Discontent, fueled by a deep recession, prompted President João Baptista de Oliveira Figueiredo (1979–85) to dissolve the ARENA and the MDB in 1979 and permit a broad-based political participation and party formation. The January 1985 presidential election was won by a civilian, Tancredo Neves, for the first time in 21 years. The new president died soon after his inauguration, and his vice president, José Sarney, took office in April. The following month a constitutional amendment restored direct elections by universal suffrage. (Previously, the president had been elected by an electoral college.) A new constitution, which prepared the way for a return to full democracy in 1990, was promulgated in 1988.

Sarney inherited an economy crippled by ruinous inflation and staggering foreign debt. His attempts to curb inflation through devaluation, wage and price freezes, dismissal of up to 60,000 civil servants, and privatization of state-run industry met with failure. He was also unable to deal with gross inequities in interior land ownership and environmental concerns over the development of the rain forest.

The nation's first direct-vote presidential elections were held in December 1989. The winner was Fernando Collor de Mello, head of the conservative National Reconstruction Party, who promised to renegotiate the massive foreign debt and privatize state industries. During 1990–91 he instituted a series of economic austerity programs designed to reduce the annual inflation rate of almost 2,000 percent and curb the debt. His plans were unsuccessful, and the economy continued to decline. He was forced to resign in December 1992, as the economy continued to slide into recession.

Vice President Itamar Franco became president in December 1992, upon Collor's resignation. He served only until November 1994, when Fernando Cardoso was elected president. Cardoso reduced the inflation rate significantly. However, nearly two million jobs were lost between 1989 and 1996 and problems persisted with regard to agrarian reform. Cardoso easily won a second four-year term in 1998. In June 1999 the military was placed under direct civilian control for the first time.

Economic conditions in the country continued to deteriorate in the new millennium. By 2002 Brazil's debt exceeded \$260 billion. After twice running unsuccessfully for president, Luiz Inácio Lula da Silva was elected in late 2002 and took over power in 2003. The founder of the left-leaning Workers Party, Lula surprised international investors by pursuing a middle-of-the-road economic policy. Austerity measures, such as an 11 percent reduction in government pensions and devaluation of the currency, cost him some of his popular backing, but polls in 2004 showed that a majority of Brazilians supported his tough reform measures, which were beginning to turn the economy around. In 2004 there were over 50 seizures of property by landless peasants. Meanwhile President Lula, a champion of the landless peasant movement, promised to relocate 100,000 landless workers.

LIST OF MODERN RULERS

1930–45	Getúlio Dornelles Vargas
1945–46	José Linhares
1946–51	Eurico Gaspar Dutra
1951–54	Getúlio Dornelles Vargas
1954–55	João Fernandes Café Filho
1955	Carlos Coimbra da Luz
1955–56	Nereu de Oliveira Ramos
1956–61	Juscelino Kubitschek de Oliveira
1961	Jânio da Silva Quadros
1961	Pascoal Ranieri Mazzilli
1961–64	João Belchior Marques Goulart
1964	Pascoal Ranieri Mazzilli
1964–67	Humberto de Alencar Castelo Branco
1967–69	Artur da Costa e Silva
1969	Augusto Hamann Rademaker Grünewald
	Aurélio de Lyra Tavares
	Márcio de Souza e Mello
1969–74	Emílio Garrastazú Médici
1974–79	Ernesto (Beckmann) Geisel
1979–85	João Baptista de Oliveira Figueiredo
1985–90	José Sarney
1990–92	Fernando Affonso Collor de Mello
1992–95	Itamar Augusto Cautiero Franco
1995–2003	Fernando Henrique Cardoso
2003–	Luiz Inácio Lula da Silva

CONSTITUTION

In October 1988 a new constitution, Brazil's eighth, was promulgated, with several major changes from the previous constitution of 1969. Significant among its 245 articles, the new constitution assured the National Congress certain presidential powers, abolished censorship, freed political dissidents with the ending of the National Security Law, included universal suffrage by direct secret

ballot, lowered the minimum voting age to 16 years, and incorporated the principle of habeas corpus. The presidential term is limited to four years, and the incumbent can be reelected to a second term.

Legislative powers are contained in the National Congress, which is made up of the Chamber of Deputies and the federal Senate. Membership in the first branch is determined by a system of proportional representation, and the second branch consists of three representatives of each state and the Federal District.

The president presides over the cabinet as well as the National Defense Council, whose other members are the vice president, the presidents of the Chamber of Deputies and federal Senate, the ministers of justice, foreign affairs, and planning, and the military ministers. This council advises the president on national sovereignty and defense.

PARLIAMENT

The National Congress consists of the Senate (Senado) and the Chamber of Deputies (Câmara dos Deputados). Members of the National Congress are elected by universal suffrage. A literacy qualification for voters was removed in 1977. Elections for the National Congress occur every four years.

The Senate has 81 members, three from each state and the Federal District, elected for eight-year terms, with one-third retiring after four years and the remaining two-thirds retiring after another four years. Two alternates, or *suplente*, are elected along with each senator as replacements in the event of resignation or death. Each party runs three candidates for each seat and the party with the largest total wins the seat.

The Chamber of Deputies consists of 513 members elected on the basis of one for every 300,000 inhabitants, with a minimum of seven and a maximum of 70 for each state. The term of office is four years. Alternates are elected with each member.

The legislature meets in ordinary session from March 15 to December 15. The National Congress is responsible for fiscal and budgetary concerns and all levels of planning. It also is responsible for resolutions authorizing the president to declare war.

Suffrage is universal, and elections are conducted by direct secret ballot. Those between 18 and 69 are required to vote, and those who are illiterate, over 70 years of age, or age 16 or 17 are given the option to vote.

POLITICAL PARTIES

In November 1979 Congress passed a bill disbanding both ARENA and the opposition MDB as a prelude to the formation of popular democratic parties. To gain legal recognition new parties were required to swear alle-

giance to the democratic system, give six months notice prior to congressional elections, and win 5 percent of the vote in at least nine states or have the support of 10 members of each house of congress. On these bases, however, none of the existing parties achieved legal recognition. In May 1985 the National Congress passed a constitutional amendment that allowed for the open participation of political parties.

Partido do Movimento Democrático Brasileiro (PMDB) was formed by moderate elements in the MDB. The MDB was a token opposition, and its members were nationalistic, statist, or socialistic, depending on the issues. In 1982 the MDB merged with Partido Popular. The PMDB is a left-of-center party. Partido Democrático Social (PDS) was formed in 1980 as a pro-government party, succeeding ARENA. ARENA was designed as a government party, deeply conservative, and pro-United States in outlook. Partido da Frente Liberal was founded in 1984 by moderate members of the PDS and PMDB. It is slightly right of center in its philosophy. Partido Democrático Trabalhista was founded in 1980 under the title Partido Trabalhista Brasileiro (PTB). It was a successor to the pre-1965 Brazilian Labor Party. The PTB was awarded its name by judicial proceedings. Partido dos Trabalhadores was founded in 1980 and was the first independent labor party. It has 350,000 members.

LOCAL GOVERNMENT

Local government in Brazil is divided into 26 states and a federal district. The framework of the state and local governments closely parallels that of the federal government. Governors, directly elected for four-year terms, have broad powers analogous to those of the president. All powers not explicitly or implicitly forbidden them by the constitution are reserved to the states, and each state has its own constitution and court system. The states may also contract foreign loans within a federal system in which only the wealthiest states have a measure of real autonomy. Intervention in the affairs of the states by the central government has been permitted on certain grounds, such as for the suppression of civil war, reorganization of state finances, execution of judicial orders, maintenance of national integrity, and corruption of public state power, and then only after referring to the National Congress. The growing financial weakness of states and municipalities has resulted in the strengthening of the federal government.

The unicameral state assemblies have powers comparable to those of the national congress. Their members are elected for four-year terms on the basis of proportional representation. State legislation may supplement federal legislation but not conflict with it.

The chief administrative subdivision of a state is the *município*, corresponding to a U.S. county. Each of

the 5,507 *municípios* is headed by a *prefeito*, or mayor. The mayors of small *municípios* are elected by popular vote for four-year terms, and the executives of larger municipalities, or *câmara de vereadores*, consist of five to 50 members elected directly for four-year terms. Municipal authorities are responsible for the construction of roads, creation and upkeep of public parks and museums, and provision of primary education. Municipal revenues are derived from local taxes, fines, and federal grants-in-aid and subsidies. The Federal District is under an appointed governor, but there is a legislative council of 20 councilmen elected for four-year terms, which is in session for four months every year.

LEGAL SYSTEM

The legal system is based on Latin codes. The judicial branch is composed of federal, state, and municipal courts. By 1995 small claims courts augmented some municipal courts. Only appointments to the superior courts are political and therefore subject to approval by the legislature. The minimum and maximum ages for appointment to the superior courts are 35 and 65; mandatory retirement is at age 70. These federal courts have no chief justice or judge. The two-year presidency of each court is by rotation and is based on respecting seniority.

The 1988 constitution produced five significant modifications in Brazil's judicial system. First, it converted the old Federal Court of Appeals (Tribunal Federal de Recursos) into the Superior Court of Justice (Superior Tribunal de Justiça). Second, it created an intermediate-level Regional Federal Court (Tribunal Regional Federal) system. Third, the federal general prosecutor was given a two-year renewable term, subject to confirmation by the Senate, without the possibility of removal by the president. Fourth, the Federal Supreme Court can issue a warrant of injunction (*mandado de injunção*) to ensure rights guaranteed by the constitution but not regulated by ordinary legislation. Fifth, the Federal Supreme Court can decide on matters of constitutionality without waiting for appeals to come through the federal courts.

HUMAN RIGHTS

Improvements in Brazil's human rights situation are most visible in the fields of speech, press, and assembly. There is a broad acceptance on the part of the administration of public protest and dissent. Opposition viewpoints are freely ventilated. The constitution of 1988 abolished the National Security Law, used to detain political dissidents. In the so-called alternative, or leftist, press, criticism is often scathing and highly personal. Although no censorship exists, the print media are legally accountable for what they publish. The administration took action several

times during the early 1980s against what it considered unacceptably blatant attacks, confiscating one edition of a leftist weekly and bringing lawsuits in a half dozen other instances. In 2004 a *New York Times* journalist was expelled from the country for writing an article commenting on President Lula's alleged drinking problem. Labor unions have the right to organize, negotiate, and strike. However, strikes are not permitted in essential industries (which are broadly defined), and union rights are generally circumscribed by a ban on partisan political activity.

Perhaps the greatest human rights threat comes from violence and abuse by police. For the past several years cases of police abuse have been well documented in the media. Massive public outcry has led to the approval of a national public security package loaded with crime-fighting measures but lacking in reforms to control police abuse or professionalize the security forces. Street children in Rio de Janeiro and elsewhere became a particular target of abuse in the last decades of the 20th century, with many disappearances occurring. As of 2004 there were still reported cases of beatings and abuse of children in state juvenile detention centers in Rio de Janeiro and northern Brazil.

FOREIGN POLICY

Brazil is generally regarded as the bellwether of Latin America, but its leadership is more symbolic than real. Its general external policies are aligned with those of the United States, except when they conflict with the interests of Brazil or Latin America as a whole. Brazil's arms industry is one of the largest sectors of its economy and is sensitive to U.S. restrictions on sales. Brazil is linked to its neighbors through the Amazon Pact. Relations with Argentina, its main rival on the continent, have improved after the establishment of the Southern Cone Common Market (Mercosur), which also includes Paraguay and Uruguay. In 1994 Brazil signed a nuclear accord with Argentina proscribing the use of nuclear weapons in Latin America and the Caribbean. Diplomatic relations were restored with Cuba after a 22-year lapse. There is still a dispute with Uruguay over certain islands in the Quaraí/Cuareim and Invernada boundary streams. Also, since 2000 Brazil has had to contend with a lawless zone at the convergence of the Argentina-Brazil-Paraguay borders, which has become the center of money laundering, smuggling, and arms and drug trafficking and a safe haven for Islamist militants.

DEFENSE

The defense structure is headed by the president. In June 1999, the military was placed under direct civilian control. The separate army, navy, and air force ministries,

which had been led by military men, were combined into one Defense Ministry headed by a civilian cabinet minister appointed by the president.

The army minister heads the high command of the army, which includes the chief of staff, department heads, and the commanding generals of the other fields of the army. The navy, the senior service, is commanded by the navy minister, who is assisted by the chief of navy staff, the commander of naval operations, the commandant of the marine corps, and the commanders of the seven naval districts. The air force minister is assisted by an air cabinet as well as the air chief of staff and the air general staff.

The territorial organization of the armed forces is based on the strategic needs of the country. The army is divided into four numbered armies, the first with headquarters at Rio de Janeiro, the second at São Paulo, the third at Porto Alegre, and the fourth at Recife. These armies are further divided into military regions, of which there are 11. The underpopulated north and northwest are controlled by the Amazon Military Command, and the capital falls under the Brasilia Military Command. The navy is divided into three operations districts, with Brasilia as a separate naval command. The fleet air arm has its headquarters at São Pedro de Aldeia Naval Air Station. The air force consists of six regional air commands and three specialized commands: Air Defense Command, Tactical Air Command, and Coastal Command.

Military manpower is provided by compulsory military service for men between the ages of 19 and 45; men between the ages of 17 and 18 and women between the ages of 19 and 45 may volunteer. The period of service is one year.

The Brazilian armed forces are the largest and best equipped in Latin America. The military have not been involved in combat operations in the 20th century other than in World War I and World War II and as contingents in various international peacekeeping missions, but they are maintained in a high state of combat readiness. About 85 percent of the army, including the powerful Third Army, is located on the southern border with Argentina and Uruguay. Operational capability around the River Plate basin is one of the two strategic priorities of the Brazilian high command, the other being a defensive shield around the Rio–São Paulo–Brasilia complex.

Defense production capability has expanded since the 1960s and now includes small arms and armaments, ammunition, naval craft and aerospace main systems, and components and engines. At least 40 percent of Brazilian arms and equipment are now manufactured internally. Brazil is the largest and technically the most advanced arms producer to the Third World. The country is capable of producing such advanced and sophisticated military hardware as antitank missiles, armored personnel carriers, combat aircraft, rockets, and jet engines. A substantial portion of the arms industry is controlled by

the military, but the two giants are the private firms Embraer and Engesa. In the new millennium the military continued to be an important part of the country's overall expenditures, with a budget of over \$10 billion, or 2.1 percent of gross domestic product (GDP) in 2003.

ECONOMY

Possessing large and well-developed agricultural, mining, manufacturing, and service sectors, Brazil's economy outweighs that of all other South American countries and is expanding its presence in world markets. In the late 1980s and early 1990s high inflation hindered economic activity and investment. The Real Plan, instituted in the spring of 1994, sought to break inflationary expectations by pegging the real to the U.S. dollar. Inflation was brought down to single-digit annual figures, but not quickly enough to avoid substantial real exchange-rate appreciation during the transition phase of the plan. This appreciation meant that Brazilian goods became more expensive relative to goods from other countries, which contributed to large current-account deficits. However, no shortage of foreign currency ensued because of the financial community's renewed interest in Brazilian markets as inflation rates stabilized and the debt crisis of the 1980s faded from memory. The maintenance of large current-account deficits via capital-account surpluses became problematic as investors became more risk averse to emerging market exposure as a consequence of the Asian financial crisis in 1997 and the Russian bond default in August 1998. After crafting a fiscal adjustment program and pledging progress on structural reform, Brazil received a \$41.5 billion international support program, led by the International Monetary Fund (IMF), in November 1998 and received another \$30 billion loan in August 2002. In January 1999 the Brazilian Central Bank announced that the real would no longer be pegged to the U.S. dollar. This devaluation helped moderate the downturn in economic growth in 1999 about which investors had expressed concerns over the summer of 1998. Brazil's debt-to-GDP ratio of 48 percent for 1999 beat the IMF target and helped reassure investors that Brazil would maintain tight fiscal and monetary policy even with a floating currency. The economy continued to recover in 2000, but inflation had reached double digits by 2004.

Foreign direct investment set a record of more than \$30 billion in 2000. The three parts of the economic programs of both President Cardoso and President Lula have been the floating exchange rate, inflation reduction, and tight fiscal policy. The real depreciated sharply in 2001 and 2002, leading to a record trade surplus. As a result, Brazil recorded its first current-account surplus since 1992. The Lula government continues to run a budget deficit, but by 2004 there were signs of a mild economic recovery.

ENVIRONMENT

Continuing deforestation in the Amazon basin destroys the habitat and endangers the existence of a multitude of plant and animal species indigenous to the area. Hundreds of Brazilian species of animals and plants are now on the endangered lists. From 1990 to 1995 the average annual rate of deforestation was 0.46 percent. Despite international and domestic measures to slow down such deforestation, only 4.4 percent of Brazil's wild areas were protected by 2001. The air and water pollution in Rio de Janeiro, São Paulo, and several other large cities is a serious problem posing public health problems. Sanitation is also an issue in large urban areas where the poor generally do not have access to modern sewage systems. The exploitation of natural resources through activities like mining is also having adverse effects on land and water quality.

 CO2 Emissions per capita ton: 1.7

LIVING CONDITIONS

With its population nearing 200 million and with a mixture of European, African, and Amerindian peoples, Brazil presents a true tapestry of living conditions. Cities such as Rio de Janeiro and São Paulo have modern apartment buildings and skyscrapers in harsh juxtaposition with the slums, called *favelas*, that house 25 million of the poorer members of the country's population, who are largely black. Many of the older shacks in these informal settlements have gained electricity and running water, but far more lack such amenities and the resulting poor sanitation poses enormous health risks. Crime is one way out of such poverty, and *favela* youth often avail themselves of that option. Only minutes away in the suburbs or in the finer quarters of the cities, the middle and upper-middle classes live modern lives with all corresponding conveniences.

In rural areas the living conditions depend largely on class and ethnic background. For those of European or mulatto background, small houses of adobe, wood, or stone are typical, either in villages or on ranches. Brazil's Amerindians, however, numbering only about 200,000, attempt to maintain much of their traditional way of life. For example, the Kayapo of the Amazon region live in thatched-roof huts with open floor plans. Hammocks are used instead of beds. The Xavante of Mato Grosso State favor a so-called beehive house, a round structure made of sticks and cane and covered in palm leaves and shared by up to three families. All the Amerindian tribes have suffered from contact with the outside world and its diseases. As of 2004 the life expectancy was 71.4 years for Brazilians, but for native tribes the average is much lower, at about 63.2.

HEALTH

A government-run health-care system called Prevsauúde was established in 1981, but by 1993 it had been disbanded due to corruption. A combination of public- and private-sector services combined to reach about 75 percent of the population by 2000. Health-care expenditure was 7.6 percent of GDP as of 2001. Additionally, Amerindians have many traditional curative methods involving herbs, shamans, and ritual dances. Many Amazonian plants have attracted international attention for their curative powers.

Malnourishment, poor sanitation, and endemic diseases account for most of Brazil's health problems. Malaria, yellow fever, dengue, amoebic dysentery, tuberculosis, and Chagas' disease are the main endemic diseases of the country. As of 2003 there were an estimated 660,000 Brazilians living with HIV/AIDS. In the *favelas* in and around major cities the government has instituted new systems of sewage and potable water in order to bring

sickness rates down among the poor. By 2002, 89 percent of the population had access to safe drinking water and 75 percent had adequate sanitation. Rio de Janeiro is home to a major tropical disease research center, the Oswaldo Cruz Foundation.

FOOD AND NUTRITION

Basic foods for Brazilians include rice, beans, and manioc, a root crop that is usually consumed in flour form. The national dish of Brazil is *feijoada*, a stew of pork and black beans served with rice and vegetables that was created by African slaves. While a good *feijoada* needs at least five kinds of pork (such as sausage, salt pork, or bacon), the *feijoada completa* mixes up to 20 varieties of salted, dried, or smoked meats with the black beans. African influences are also noted in Bahian foods such as *vatapa*, which is made of rice flour, coconut oil, fish, shrimps, red peppers, and spices.

Brazil's European heritage can be identified in numerous Italian and Portuguese dishes. Steak is a popular dish for the more well to do. Additionally, fish, tropical fruit, and corn make up a large part of the Brazilian diet. The typical Brazilian meal is followed by a dessert of fruit or a sweet and small cups of strong coffee called *cafezinho*.

STATUS OF WOMEN

Under the constitution of 1988 women became entirely equal to men for all legal purposes. Despite persistent gen-

der inequality the status of women in Brazil is improving. Generally, females stay in school longer than their male counterparts, thus achieving educational advances in law and medicine. The attitudes and practices of young people are generally not as sexist as those of their parents, at least among youths of families with higher income and education. Nevertheless, there are still relatively few women in positions of power. They have a limited presence in high levels of federal government, though they have better representation at the state and municipal levels. Since the government of João Baptista do Oliveira Figueiredo of 1979–85, several female ministers have been in the cabinet, and in 1994 two women were candidates for vice president. By 2005 women made up 9 percent of the National Congress.

 Ratio of Literate Women to Men age 15-24: 1.02
 Women's Share of Wage Employment Non-Agricultural %: 46.9

WORK

In 2004 Brazil had a labor force of 82.59 million; 53 percent were employed in services, 24 percent in industry, and 23 percent in agriculture. Those employed in industry manufactured goods such as textiles, shoes, chemicals, cement, lumber, iron ore, tin, steel, aircraft, motor vehicles and parts, and other machinery and equipment, while those engaged in the agricultural sector grew coffee, soybeans, wheat, rice, corn, sugarcane, cocoa, and citrus and raised beef. As of 2003 Brazil had an unemployment rate of 12.3 percent.

Unions are not strong in Brazil; they have been not only discouraged but also supplanted by the government. The right to strike, however, was restored in 1984. Workers' rights include a 44-hour workweek with provisions for overtime pay, a paid annual vacation, equal pay provisions, and severance pay. The government established a minimum wage roughly equivalent to 20 percent of the cost of supporting a family of four. In 2002 this wage was \$75 per month, and nearly two-thirds of the population earns two minimum-wage salaries or less. The poorest workers reside in the northeast, where one-half earn less than minimum wage. The wealthiest region is in the south and southeast, where 80 percent of workers earn more than five minimum-wage salaries. Brazil has a sizable social gap between the very small privileged class at the top of the economic ladder and the large number of people living in or near poverty. There is a relatively large middle class.

Unsafe working conditions are common throughout the country, and despite a minimum work age of 16 there

were an estimated three million children employed in 1999. For indigenous people a subsistence economy of farming or hunting and gathering is still practiced where possible.

 Female Participation Rate %: 35.5
 Labor by Sector: %
 Agriculture: 23
 Industry: 24
 Services: 53
 Unemployment %: 12.3

EDUCATION

Education is free, universal, and compulsory for eight years, from the ages of seven to 14. Schooling lasts for 11 years, as divided into eight years of primary school (technically known as first grade) and three to four years of second grade, or middle school. The term secondary school is applied to university-level institutions. The course of study is divided into hours rather than years, permitting students to proceed at a pace suited to their capabilities after completing the mandatory first grade. There are three types of primary schools: *escolas isoladas*, or one-room rural schools; *escolas reunidas*, or collective schools in small towns; and *grupos escolares* in larger towns and cities. Of the population over the age of 25, more than 40 percent have no schooling. More than 25 percent have attended school but have not completed the first level, with only a very small percent completing university-level education. As of 2001, 97 percent of primary-school-age children were enrolled, and 72 percent of those eligible attended secondary school.

The academic year runs from March to the middle of December. The medium of instruction is Portuguese throughout.

Private schools are operated by Roman Catholic orders, Protestant denominations, and commercial organizations. Private primary schools offer a higher quality of schooling than public ones, but their record at the middle level is mixed.

Under the educational reforms introduced in 1971, the second grade is vocation-oriented, and general studies are supplemented by vocational courses designed to meet the requirements of the labor market in the region. Students are required to enroll in specialized technical programs and to undergo supervised apprenticeship in a specific vocation. Upper grades of primary schools have been converted into work-oriented institutions with shop courses in industrial arts, commercial arts, agriculture, and home economics.

Responsibility for public education is divided between federal, state, and municipal governments. Pri-

mary and middle schools, or the first and second grades, are controlled by the states and municipal governments, whereas higher education is the responsibility of the federal government. The formulation and implementation of educational policies rest with the Federal Council of Education, whose members are appointed by the president. There are also state councils of education with comparable functions.

Education

 Public Expenditure on Education as % of GDP: 4.3

SCIENCE AND TECHNOLOGY

Brazil is not known for high technology; rather, it has pioneered in the study of tropical medicine. The Oswaldo Cruz Foundation for biological research in Rio de Janeiro is a major tropical disease research center, while the Butantan Institute in São Paulo produces snake serum. Brazil leads the world in the latter research. Approximately 100 Brazilian universities and colleges offered courses in basic and applied science in 1996, and between 1987 and 1997 science and engineering students made up 27 percent of college and university enrollments.

Government-sponsored research and development was a 12-billion-real investment in 1994, much of it directed at Brazil's fledgling space program, begun in 1973 with the launch of the Sonda II rocket to study electron density in the ionosphere. After an optimistic and well-funded start, the country's nuclear energy program stalled in the 1980s.

MEDIA

Most Brazilian newspapers have small circulations because of distribution problems. There are five national newspapers: *O estado de São Paulo*, *Folha de São Paulo*, *Gazeta mercantil*, *O globo*, and *Jornal do Brasil*. All dailies except two are published in Portuguese. About 95 towns and cities have their own newspapers, and the larger ones have several morning and evening papers. One of the most striking features of the Brazilian press is the dominance of chains and media dynasties, such as Chateaubriand's Associated Daily Newspapers, the Mesquita Brothers, and the Octavio Frias de Oliveira group.

There are a number of domestic news agencies: Agência Nacional, Agência Meridional, Agência J. B. Servicos de Imprensa, Transpress, Argus Press, Asapress, Brastele, and Agência Noticiosa. Agência Nacional is the official news agency.

Broadcasting is conducted by three types of organizations: government stations, commercial stations, and religious foundations. All broadcasting stations are required to be licensed by the state and come under the control of Departamento Nacional de Telecomunicações. The government station, Radio Nacional, broadcasts an international short-wave program in six languages on the Voice of America model. In 1999 there were 1,365 AM, 296 FM, and 161 short-wave stations.

Television was first introduced in 1950. In 1998 there were 237 stations, of which 118 were in state capitals, six in Brasilia. There are now hundreds of television channels. There are educational stations in Recife, Caceio, and São Paulo.

As of 2003 there were over 46.3 million mobile-phone users and about 14.3 million Internet users in the country.

CULTURE

Brazil's modern culture is a result of its melting-pot origins. The mixture of Portuguese, Africans, and indigenous Amerindians has created a rich tapestry of dance and music. Perhaps best known internationally is the musical tradition of the samba, which was later fused with American jazz to create bossa nova, a musical form made internationally popular by artists such as Sergio Mendes.

Other fusion rhythms from Brazil include the *lambada* and the *carimbo*. Many of these rhythms are strongly influenced by Brazil's African heritage. More classical in training was the composer Heitor Villa-Lobos.

The country is also rich in cultural institutions. The Brazilian Academy of Arts and Letters is housed in Rio de Janeiro, as is the National Library and numerous museums and concert houses. Brazil boasts a long and distinguished literary tradition. Joaquim Machado de Assis was the son of a freed slave who wrote novels in the 19th century; 20th-century writers include Gilberto Freyre, Graciliano Ramos, and Jorge Amado, among others. In the visual arts the landscape architect Roberto Burle Marx has achieved an international reputation, as has the Brazilian architect Oscar Niemeyer. In painting, Brazilian artists have created a distinctly Brazilian style: a blend of European abstract techniques and realism.

FOLKLORE AND MYTHOLOGY

The folklore of Brazil reflects its slave and Amerindian origins. Afro-Brazilians hold the figure of Zumbi, a rebel slave leader who died escaping the militia, high in their pantheon of mythological beings. The day of his death, November 20, is celebrated by many Afro-Brazilians.

Each of the country's indigenous groups has its own set of myths. The Xavante have numerous legends detailing both their history and the workings of the world. For them, the stars are the eyes of people who watch over those on Earth. The bee has a prominent place in Kayapos folklore; they believe that their ancestors learned to live communally from the bees. The Guaranis have several stories dealing with origin myths featuring the creator Nande Ru. For the Tenetehara the creator is embodied in Tupan. When the missionaries came, they told the Tenetehara that Tupan was the Christian God.

ENTERTAINMENT AND RECREATION

Brazilians partake of the usual forms of entertainment found in developed countries. Television—especially the

soap operas, or *telenovelas*—is popular, as are movies. In urban areas live theater and concerts are abundant and libraries and bookshops plentiful. Nightlife in urban areas offers restaurants, music, dance clubs, and discos. Shopping malls are built on the North American model, complete with food courts, movie theaters, and video arcades in addition to retail outlets; these provide a social outlet for Brazilians. Among outdoor activities, a visit to the beach is popular as are outings to nature preserves or scenic areas.

More unique to Brazil is Carnival, the four-day mass party that precedes Lent. Though held in Catholic countries around the world, Brazilian Carnival, with its mix of Roman Catholic tradition and African exuberance, has become world famous. People dance in the street in costumes that they spend all year preparing. Dancing is also a popular form of recreation in Brazil. Samba schools and competitions attract people of all ages.

ETIQUETTE

Brazil is Mediterranean in its attitude toward social space and touching: A sense of personal space is less pronounced than in North America, and touching is a sign of friendship rather than a sexual overture. A greeting of a hug is not uncommon between men, while women traditionally kiss each other on the cheek. This informal and outward nature extends to deportment and to a relaxed attitude toward nudity. This can be seen on the beaches, with the scanty bathing costumes, or at Carnival.

On the other hand, Brazilians also have a stricter sense of decorum when it comes to titles and signs of respect. Titles of teachers, doctors, and professionals in general are used along with the person's first name as a form of address. Likewise, the formal "you" is used for strangers and for elder or higher-class individuals.

FAMILY LIFE

The family is at the heart of Brazilian society, whether nuclear or extended; much of the social life is based around interaction between family members, both closely and distantly related. Families usually live in close proximity to one another and see each other weekly. Family size can include five to seven children, though birthrates are declining.

Both civil and religious marriages exist in the country, as does common-law marriage. Divorce was legalized in Brazil in 1977; extramarital affairs are common, and men may take mistresses on long-term bases. Especially among the poor, cohabitation without marriage, or *amasiado*, is common and socially acceptable.

With the indigenous people of Brazil the sense of kinship and the extended family is even stronger; several

generations will live together in one dwelling and work together. Large families are the norm.

PERSONAL APPEARANCE

Physically, Brazilians have many appearances. There are those of European heritage, those of African heritage, those of mixed or mulatto heritage, and the Amerindians.

In urban areas the dress is modern and is similar to that seen in the cities of North America and Europe. Jeans are popular among the youth, and suits and ties are the norm for business people.

There are various styles of dress outside of urban areas. A cowboy style, or gaucho look, is popular near the border with Argentina, while the Afro-Brazilians of Bahia wear brightly colored clothes. For the women this includes long skirts and embroidered blouses, with colorful turbans wrapped around the hair. Colored beads are also part of the costume for both men and women of this region. Peasant farmers and some of the indigenous groups wear ponchos. Other Amerindians wear body paint and limited clothing.

SPORTS

Soccer is the main sport in Brazil as in the rest of Latin America. The Brazilians are very enthusiastic fans of the sport and have produced a number of world-class players, the best known being Pelé. More contemporary are players such as Rivaldo and Ronaldo, who compete in professional leagues outside of Brazil. The country is usually in contention for World Cup titles.

The second most popular sport in Brazil is volleyball, in part inspired by the gold medal won by the Brazilian women's team in the 1988 Olympics. Beach volleyball has also become very common. Tennis has found a new place in Brazilian life, especially after the success of Gustavo Kuerten, who took the French Open title in 1997, 2000, and 2001. Auto racing and horse racing also draw large crowds. Popular among the younger generation are surfing and other ocean- and beach-related activities.

CHRONOLOGY

- 1945** The armed forces compel President Getúlio Vargas, the virtual dictator of Brazil since 1930, to step down; Chief Justice José Linhares becomes caretaker.
- 1946** General Eurico Dutra is elected president; a new constitution is promulgated.
- 1948** Brazilian Communist Party is proscribed.
- 1951** Vargas is reelected president as the candidate of the Labor Party.

- 1954** The armed forces and the cabinet demand Vargas's resignation; Vargas commits suicide and is succeeded in office by Vice President João Café Filho.
- 1955** In national elections Juscelino Kubitschek de Oliveira is elected president on the plank "Power, Transportation, Food."
- 1960** Brasília, the new capital of Brazil, is inaugurated.
- 1961** Jânio Quadros is elected president with the largest plurality in the country's history.
Quadros resigns seven months later, citing unnamed threats; João Goulart succeeds to the office of the president, with reduced powers and in the face of wide opposition to his leftist policies.
- 1963** Full presidential powers are restored to Goulart through a national plebiscite.
- 1964** The armed forces depose Goulart, who flees to Uruguay; the army chief of staff marshal Humberto de Alencar Castelo Branco is elected by a purged Chamber of Deputies to serve until 1966, a term subsequently extended to 1967.
Through a series of institutional acts, Castelo Branco gains virtually absolute powers.
- 1965** All existing political parties are banned.
- 1967** The military regime promulgates a new constitution. President Castelo Branco steps down and is succeeded in office by Arturo da Costa e Silva.
U.S. Ambassador C. Burke Elbrick is kidnapped by extremists and is released only after the government meets their demands, which include the release of certain political prisoners.
- 1969** President Costa e Silva suffers a stroke and dies; High Command of the Armed Forces selects General Emílio Garrastazú Médici as president. The ARENA and MDB parties are permitted to function as the country's political parties.
- 1970** Work begins on the controversial Trans-Amazon Highway.
- 1974** General Ernesto Geisel is elected president by the electoral college.
- 1977** Brazil rejects U.S. military aid, reacting to U.S. criticisms of the regime's violations of human rights and nuclear development policies; Geisel suspends National Congress and decrees judicial and constitutional reforms.
Divorce is legalized. Amnesty International cites Brazil for torture and illegal detention of political prisoners.
- 1978** U.S. President Jimmy Carter visits Brazil.
General João Baptista de Oliveira Figueiredo, the official nominee, is elected president to succeed Geisel in 1979. Institutional Act 5 is suspended as the regime initiates a process of moderate constitutional reform; press censorship is ended but broadcast curbs remain.
- ARENA, the official party, retains control of Congress in parliamentary elections.
The Amazon Pact is concluded with Bolivia, Colombia, Ecuador, Guyana, Peru, Suriname, and Venezuela.
- 1979** The two existing political parties, ARENA and MDB, are dissolved to make way for new parties. General Figueiredo is inaugurated as president.
As inflation tops annual rate of 70 percent the finance minister, Delfim Netto, outlines new anti-inflation plan, including a maxidevaluation of the cruzeiro by 30 percent.
Tripartite accord is reached with Argentina and Paraguay over the Paraná River dispute.
- 1980** The pope visits Brazil and calls for social justice but warns against the social gospel.
- 1982** In national elections the opposition wins 10 states.
- 1983** Social Democrats regain control of the House of Representatives.
- 1984** The Itaipá Dam is inaugurated.
- 1985** Brazil's electoral college elects Tancredo de Almeida Neves as president.
Neves dies before taking office.
Vice President José Sarney is installed as the first civilian president in 20 years.
Angra I nuclear plant goes on stream. Approval is passed by Congress for a constitutional amendment that restores direct elections by universal suffrage.
- 1986** The Cruzado Plan is announced to fight inflation.
- 1987** A Constitutional Assembly is installed and is dominated by debate over the presidential mandate. A moratorium is announced on debts to commercial banks.
- 1988** Various strikes, some violent, occur throughout the country over recent economic policies. A new constitution is approved by the National Congress. Censorship is abolished, and the voting age is lowered to 16. Francisco (Chico) Mendes, the leader of the rubber-tappers' union, is killed.
- 1989** The Brazilian stock exchange experiences a serious setback, suspending business for four months. In the latter part of the year Brazil is unable to make payments on its foreign debt. A meeting of the Amazon Pact nations denounces outside interference in the Amazon region. The Declaration of Manaus is signed by the Amazon Pact stating their rights over Amazonian environmental issues. The "Our Nation" environmental program is announced. The Summer Plan is abandoned.
The nation's inflation rate climbs to 1,765 percent.

- 1990** Fernando Collor de Mello is sworn in as president, marking the beginning of the first democratically elected regime in Brazil in three decades. Amnesty International reports widespread human rights abuses by Brazilian law enforcement authorities between 1985 and 1990. Collor introduces an economic austerity program aimed at cutting government spending and reducing inflation. The inflation rate rises to 1,795 percent. The Group of Seven pledges to help Brazil preserve its rain forests. The Collor government says it will consider agreeing to preserve parts of its rain forest in return for forgiveness of some of its foreign debt.
- 1991** The government announces a new anti-inflation program as the economic situation worsens. Union leaders in the Amazon area are targeted in death plots.
- 1992** President Collor is impeached, and Vice President Itamar Franco serves the remainder of the term as president.
- 1993** The former finance minister Fernando Henrique Cardoso wins the presidency on an anti-inflation platform.
- 1997** Congress passes a constitutional amendment allowing Cardoso to run for a second consecutive term; prisoners mutiny at the São Paulo jail, taking 600 hostages.
- 1998** A severe drought causes food shortages in northeastern Brazil; the Brazilian economy collapses in the wake of the Asian fiscal crisis of 1997; Brazil receives an IMF-led international support program of \$41.5 billion.
- 1999** Brazilian Central Bank announces that the real, which had tracked the value of the U.S. dollar, will be allowed to float; the government places the military under direct civilian control.
- 2000** Brazil celebrates its 500th anniversary amid protests by the indigenous population, who say that racial genocide, forced labor, and disease have dramatically cut their population from an estimated 5 million before the Europeans arrived in 1500 to the current 350,000.
- 2001** A new civil code guaranteeing legal equality for women is enacted in August.
- 2002** The IMF approves a \$30 billion loan to Brazil in August. At that time Brazil's debt exceeds \$260 billion. Elections are held in October; Luiz Inácio Lula da Silva, founder of the Workers Party, wins the presidency.

2003 President Lula is inaugurated in January. His moderate economic policies reassure international investors.

2004 Brazil launches its first space rocket.

OFFICIAL NAME

Brunei Darussalam (Negara Brunei Darussalam)

ABBREVIATION

BN

CAPITAL

Bandar Seri Begawan

HEAD OF STATE & HEAD OF GOVERNMENT

Sultan Muda Hassanal Bolkiah Mu'izzaddin Waddaulah (sultan from 1967; prime minister from 1984)

NATURE OF GOVERNMENT

Absolute monarchy

POPULATION

372,361 (2005)

AREA

5,770 sq km (2,228 sq mi)

ETHNIC MAJORITY

Malay

LANGUAGES

Malay (official), English (lingua franca)

RELIGION

Islam (official)

UNIT OF CURRENCY

Brunei dollar

NATIONAL FLAG

Yellow with two diagonal stripes of white and black running from the upper hoist to the lower fly; the national emblem, in red with yellow Arabic inscription, is superimposed in the center.

NATIONAL EMBLEM

The crest consists of four elements: the *payong ubor-ubor* (royal umbrella), *sayap* (wings), *tangan* or *kimbap* (hands), and the *bulan* (crescent). On the crescent is inscribed in Arabic the national motto, "Always in service with God's guidance." The scroll beneath the crest reads, "Brunei Darussalam, Brunei, the abode of peace."

NATIONAL ANTHEM

"Allah Peliharakan Sultan" (O God, long live our majesty, the sultan)

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 23 (National Day), Chinese New Year's Day, May 31 (Anniversary of the Royal Brunei Malay Regiment), Sultan's Birthday, Christmas, all major Islamic festivals

DATE OF INDEPENDENCE

January 1, 1984

DATE OF CONSTITUTION

September 29, 1959 (suspended since 1962)

GEOGRAPHICAL FEATURES

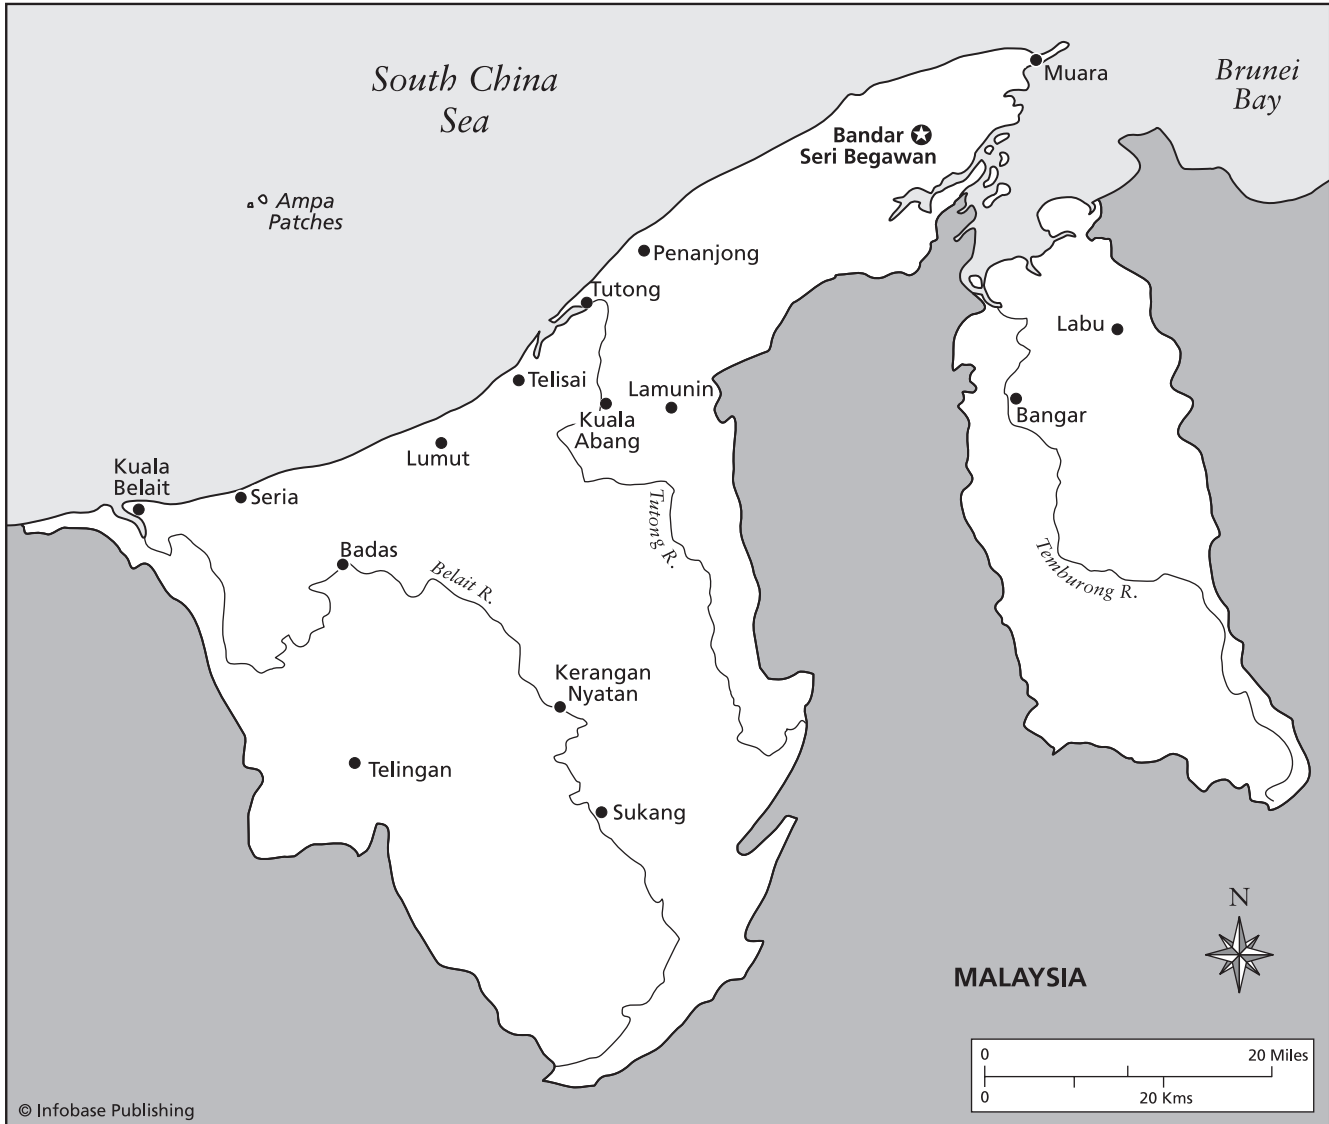

Brunei, on the northwestern coast of the island of Borneo (Kalimantan), has a total land area of 5,770 sq km (2,228 sq mi). It is composed of two enclaves separated by the Limbang River valley, a salient of the Malaysian state of Sarawak. Brunei's total boundary length is 542 km (337 mi).

Apart from the heavily populated narrow coastal strip to the west, the land is primarily tropical rain forest.

Mean Temperature: 81°F to 90°F
 Average Rainfall: 95 in (lowlands) 158 (Interior)

CLIMATE AND WEATHER

Brunei has a tropical climate, with uniform temperatures ranging from 27°C to 32°C (81°F to 90°F). Humidity is constantly high, about 80 percent year-round. Rainfall is heaviest during the northeasterly monsoon season (*landas*), especially in November and December. Average annual rainfall ranges from 2,400 mm (95 in) in lowland areas to 4,000 mm (158 in) in the interior.

FLORA AND FAUNA

Virgin tropical rain forest covers almost 60 percent of the country, while another 20 percent is covered in second-growth forest. There are also mangrove and peat swamps. Hardwoods of the Dipterocarpaceae family, harvested for timber, find a home in the rain forest, as do flora such as lianas, palms, shrubs, herbs, bamboo, epiphytes, creepers, and mosses.

Animal life includes an incredible array of reptiles and birds. Mammals include both wild and domesticated buffalo, honey bear, deer, and monkeys, while insects include the malarial mosquito and biting midge.

ETHNIC COMPOSITION

Brunei is officially described as a Malay nation; Malays form about 67 percent of the population. The greatest minority—at about 15 percent of the population—are the Chinese, who are officially “stateless noncitizens,” although they have been in Brunei for many decades. Formerly they were “British-protected persons,” but they lost that status on independence. Nevertheless, the Chinese community has prospered, and most commercial activity is in their hands.

Other minorities include about 6 percent Ibans, Dayak, and Kelabit and about 12 percent other indigenous groups. There is a substantial Caucasian community, including temporary workers of English, U.S., Dutch, and Australian nationality.

LANGUAGES

Malay is the official language, but English is the effective lingua franca and the language of commerce. The principal Chinese dialect is Hokkien.

RELIGIONS

Islam is the official religion and is extensively promoted with government funds. The proportion of Muslims is the

same as that of Malays, about 67 percent, but the government acts as if the nation were 100 percent Muslim for all practical purposes. The Department of Religious Affairs is heavily funded and is in charge of building mosques and Koranic schools. There are monetary and other incentives for conversion to Islam.

The 31 percent religious minority comprises mostly Buddhists and tribal folk religionists; less than 10 percent are Christian. The constitution guarantees freedom of worship to non-Muslims, and this right is widely exercised.

Other	115,000

HISTORICAL BACKGROUND

From the 14th to the 16th centuries Brunei was the seat of a powerful sultanate extending over Sabah, Sarawak, and the lower Philippines. Thus the current sultan represents one of the oldest continuously ruling dynasties in the world. By the 19th century the Brunei Empire had been whittled away by wars, piracy, and the colonial expansion of European powers.

In 1847 the sultan concluded a treaty with Great Britain, and in 1881 Brunei officially became a British protectorate. A 1959 agreement recognized Brunei as fully self-governing, subject to Great Britain only for the conduct of its foreign affairs and defense. Great Britain exercised this right in helping to put down an Indonesian-backed nationalist coup against the sultan in 1962. At that time the constitution of 1959 was effectively suspended, and ever since the sultan has ruled by decree. In 1967 Sultan Omar abdicated in favor of his son Muda Hassan al-Bolkiah. On January 1, 1984, Brunei attained full independence, and the sultan took office as prime minister, presiding over a cabinet of six (three of whom were close relatives).

Although the sultan's state of emergency remained in effect into 1985 and 1986, Brunei thereafter moved toward a more progressive government. In October 1986 the cabinet was expanded to 11 members and included commoners for the first time. In 1988, on the other hand, the Brunei National Democratic Party (BNDP), which had been formed three years earlier, was dissolved by the state when it called for the sultan to drop his post as prime minister, end the 26-year state of emergency, and hold democratic elections. As of 1988 Brunei adopted the name and style of an Islamic state, and the sultan has emerged as a defender of Islam. In 1991 he undertook the great hajj, or pilgrimage to Mecca. The importation of alcohol and the public celebration of Christmas were banned, the

female members of the royal family adopted Islamic headdress, and the name Islamic was added to the names of major public institutions.

In 1993 Brunei established diplomatic relations with China, Vietnam, and Laos. The country was hit with a financial downturn in 1998 when oil prices declined, a situation exacerbated by a financial scandal in which the sultan's brother, Prince Jefri Bolkiah, was involved. The prince was removed from his post as finance minister, fled to London for a time, and returned in 2000, when he was sued for misuse of public funds.

Talks began in 1999 between Brunei and the nine other members of the Association of Southeast Asian Nations (ASEAN) to create a free-trade zone, which would be the world's largest, with 1.7 billion people. These talks progressed from 2000 to 2004.

The sultan has increasingly relied on two means to solidify his power: consolidation and Islamization. The sultan has become not only prime minister but also minister of defense and minister of finance. Besides this concentration of responsibilities, the sultan has been attempting to secure his own legitimacy by claiming a divine right to rule. The campaign to win allegiance to the national philosophy of Malay Islam Monarchy began in 1990. Since that time there have been further measures passed to resist modernity and the encroachment of Western values.

LIST OF MODERN RULERS

- 1924–50 Ahmad Taju'ddin Akadzul Khairi Waddin
 1950–67 Omar Ali Saifu'ddin Wasa'dul Khairi Waddin
 1967– Muda Hassanal Bolkiah Mu'izzu'ddin Waddaulah

CONSTITUTION

The constitution of 1959 was effectively suspended in 1962, and since then the sultan has ruled by continually invoking two-year states of emergency. The constitution provides for a number of constitutional bodies, including a Privy Council, Council of Ministers, Legislative Council, Religious Council, and Council of Succession. The present sultan, the head of state, is also the prime minister, the head of government. The sultanate is one of the most autocratic regimes outside the Middle East.

PARLIAMENT

The Legislative Council is a unicameral body of 21 members, all of whom are appointed by the sultan. This council is merely ceremonial, however, with no powers either

in theory or in practice. No elections have been held in the sultanate since the 1965 general elections. Disbanded in 1983, the Legislative Council was reinstated in 2004.

POLITICAL PARTIES

Political parties have not fared well in Brunei. The government has dissolved parties when they have appeared to be causing too much trouble. The Brunei National Unity Party was founded in 1986; it was forced out of existence in 1988. The Brunei Solidarity National Party, PPKB in Malay, also became inactive in 1988 but was again registered in 1995 and 1998, though it had fewer than 200 members. As of 2004 the PPKB's president was Mohd Hatta bin Haji Zainal Abidin.

LOCAL GOVERNMENT

For purposes of local government Brunei is divided into four districts. Each district is headed by a district officer reporting directly to the sultan. District councils, in which small numbers of members are elected by the people, advise district officials, as do village headmen. A district consists of several *mukims*, each headed by a *penghulu* (subdistrict officer). A mukim is made up of several kampongs, or villages, and each of these in turn is headed by a *ketua* (village officer), who is elected by the people of the village.

LEGAL SYSTEM

The Bruneian legal system is an amalgam of Anglo-Saxon and Islamic traditions and institutions. Islamic courts deal with religious matters, and appeal goes to the Religious Council. The secular system is headed by the High Court and the Court of Appeals, both headed by justices and commissioners appointed by the sultan. Together these two courts constitute the Supreme Court. Minor civil and criminal cases are tried in magistrates' courts.

Until 1995 there was a right of appeal to the Privy Council in London. However, in 1995 that right was rescinded for criminal cases.

HUMAN RIGHTS

Freedom House rates Brunei as partly free. Since 1962 there have been no political disturbances in the sultanate, as a state of emergency, suspending the constitution, has remained in effect. Economic well-being has made the relative absence of political freedom tolerable for Bruneians. In its 1985 report Amnesty International expressed concern about the continued detention with-

out trial of eight persons allegedly involved in the armed uprising of 1962 and of 20 others arrested for political reasons between 1975 and 1978. In 1990 the government released the detainees from 1962. Press censorship and growing unemployment in the new millennium have created dissatisfaction among larger segments of the populace.

Brunei has drawn international criticism for its treatment of guest workers, who make up about 40 percent of the workforce.

FOREIGN POLICY

Brunei became a member of the Commonwealth upon independence and joined ASEAN in 1984. Soon after it was admitted to the Organization of Islamic States, and Brunei has since moved closer to Muslim nations. Relations with the United Kingdom are cordial, and there is a 1983 agreement providing for a British army battalion to be stationed in the country. Relations with Malaysia and Indonesia were long marred by territorial claims, but talks in 1995 yielded an agreement for a bilateral approach to the resolution of territorial issues. In 1995 Brunei hosted the ASEAN meeting that was attended by all countries in the region.

Brunei, along with the People's Republic of China, Vietnam, Malaysia, Taiwan, and the Philippines, is engaged in a regional dispute over claims to the Spratly Islands, situated in the South China Sea, which are strategically important and may have large oil and gas reserves. In November 2002 ASEAN leaders and China signed a declaration of conduct, agreeing not to attempt to occupy the Spratly Islands.

DEFENSE

With independence, Brunei established its own defense force for the first time since 1881, when Brunei became a British protectorate. The defense portfolio is in royal hands, with the sultan as minister of defense. There is no conscription, and enlistment is voluntary.

The Royal Brunei Malay Regiment consisted of 4,750 men and 250 women in 1998. Its navy had 1,000 personnel in 2002; its air force, 1,100. Britain provides some officer corps, and a Gurkha battalion, which numbers 750 men, is stationed in Brunei. Agreements have been made with the British government for the purchase of military equipment totaling 250 million pounds sterling. In mid-1987 Brunei expressed some interest in joining the Five Power Defense Agreement linking the United Kingdom, Malaysia, Singapore, Australia, and New Zealand.

In 2003 the defense budget totaled \$339.5 million, or 6 percent of gross domestic product (GDP).

ECONOMY

Brunei's small, wealthy economy is a mixture of foreign and domestic entrepreneurship, government regulation and welfare measures, and village tradition. It is almost totally supported by exports of crude oil and natural gas, with revenues from the petroleum sector accounting for over half of GDP. Per capita GDP is far above most other developing countries, and substantial income from overseas investment supplements income from domestic production. The government provides for all medical services and subsidizes food and housing. The government has shown progress in its basic policy of diversifying the economy away from oil and gas. Brunei's leaders are concerned that steadily increased integration in the world economy will undermine internal social cohesion, although it has taken steps to become a more prominent player by serving as chair for the 2000 Asian Pacific Economic Cooperation (APEC) forum.

With flagging GDP growth, the government initiated a stimulus package in 2001 aimed at increasing the natural gas sector and attracting more foreign investment. The stimulus programs were well received and seem to have taken hold. Brunei's GDP grew 3 percent in 2002 and posted similar development in 2003, due largely to higher oil prices. Brunei had low inflation of 1.8 percent in 2002. However, the high unemployment rate of 10 percent was unaffected. More alarming was a 25 percent unemployment rate among those leaving school in 2003.

LIVING CONDITIONS

According to the United Nations Human Development Index—a measure of life expectancy, school enrollment, literacy, and income—Brunei ranked 33rd out of 177 countries in 2002.

The standard of living in Brunei is one of the highest in the developing world, with GDP per capita in 2002 of \$18,600. The absence of an income tax makes economic life easier for citizens easier. The average life expectancy in 2004 was 75 years.

The life of the average Bruneian revolves around the state religion, Islam, with certain things being forbidden (*baram*), certain things tolerated but not encouraged (*makrub*), and certain things embraced by Islam (*balal*). Pork, alcohol, meat not slaughtered under Islamic guidance, casual touching, adultery, and contact with the wet nose or hair of a dog are *baram*. Smoking and eating shellfish are considered *makrub*. With the increased Islamization of society, Bruneians are becoming more and more restricted by such religious codes, nor do they have a voice in the government.

In 2003, 76 percent of the population lived in urban areas. The government has supported a building program for three decades through the National Development Plan to encourage and support homeownership for all citizens. Zero-interest loans are available. The country has an extensive social welfare system and a very low crime rate.

HEALTH

Public spending on health was 3.1 percent of GDP in 2001. These expenditures finance a state-run medical plan that provides free health care to all citizens, even those in remote areas—these citizens are served by flying doctors and mobile clinics. Tropical diseases such as

malaria have largely been eradicated in Brunei, although there were 58 cases of tuberculosis per 100,000 people in 2002. HIV/AIDS, of epidemic dimensions elsewhere in the world, has not made an impact in Brunei due in large part to social restrictions. In 2003 there were fewer than 200 people living with HIV/AIDS. With almost 99 percent of births attended by physicians, the infant mortality rate in 2004 was 13 deaths per 1,000 live births. Immunization rates are also high for infants: 99 percent of one-year-old children were immunized for measles and tuberculosis. As of 2004 there was 1 physician for every 1,000 people.

FOOD AND NUTRITION

Brunei cuisine is influenced by the nation's ethnic makeup; Malaysian and Chinese are the main fare. Food stalls offer Malay favorites, such as *satay* (barbecued meat on a skewer) and local dishes prepared with curry or coconut milk. Whole roasted chicken and grilled fish are also popular. Food on the whole tends to be spicy. Rice or noodles are eaten with most meals. *Ambuyat*, a starchy substitute for rice made from sago flour and served with hot sauce, is a local specialty.

Various Islamic food restrictions, such as the prohibition on pork, influence the diet. Alcohol is not consumed; typical drinks include tea and fruit juices.

In general in Brunei, food is plentiful and malnutrition uncommon.

STATUS OF WOMEN

In accordance with Koranic precepts, women are denied equal status with men in a number of important areas, such as divorce, inheritance, and custody of children. Under the Brunei Nationality Act, citizenship was transmitted through males only. Female citizens who were married to foreigners or bore children by foreign fathers could not transmit citizenship to their children, even when their children were born in Brunei.

Such laws are changing, however. In 1999 the government passed the Emergency (Married Women) Order, which elevates women's rights, putting them on a more equal footing with men. According to the legislation, the husband and wife shall separately have the rights to engage in any trade or profession or in social activities, and the wife shall also have the right to use her own surname. In October 2002 a nationality reform law was passed allowing women to pass on their nationality to their children.

The Council of Women of Brunei Darussalam attempts to enhance the status of women in all fields, especially in education, economy, welfare, and social culture.

WORK

As of 1999 there were an estimated 143,400 workers in the Brunei labor force. This figure included members of the military and foreign workers, who make up an estimated 40 percent of the workforce. Guest workers include skilled technicians from the West employed in the oil and natural gas industry as well as a large number of unskilled laborers who do the work Bruneians do not want to perform, such as domestic service and heavy labor. Many guest workers are illegal aliens from neighboring countries. In 2003 the government began a crackdown on undocumented workers.

The biggest proportion of workers, 48 percent, was employed by the government in 1999. That same year the oil and natural gas industries, construction, and service sector employed 42 percent of workers. Fishing, forestry, and agriculture accounted for the remaining 10 percent.

In 2001 the estimated unemployment rate was 10 percent; rates of 25 percent have been recorded for those leaving school, however.

Unions, though legal, are not a factor in Brunei; they are neither part of the cultural life of the nation nor

encouraged by the government. Only 5 percent of the oil industry, for example, is unionized. Child labor laws prohibit employment for those under 16. The five-day workweek is limited to 48 hours. Guest workers are not covered by such labor laws, however, and are thus often exposed to employer exploitation.

EDUCATION

Schooling is free, universal, and compulsory for 11 years, from ages five to 16, covering six years of primary school and five years of lower secondary school. All children enter the government school system at age five at the kindergarten or preschool level. Government primary schools use Malay up to the fourth year and become bilingual (English and Malay) thereafter for three years. There is a national promotion examination at the end of the last year of primary school. Those who fail this examination are automatically promoted after a repeat year. At the end of the third secondary year, students take a junior certificate of education examination that qualifies them to pursue a further two-year course leading to the Brunei Cambridge General Certificate of Education (GCE, O level). Those who pass this examination proceed to the sixth form center to follow another two-year course leading to the Brunei Cambridge Advanced General Certificate of Education (GCE, A level), which qualifies them for university entrance.

Schools operate over five-day weeks, with Fridays and Sundays off. The school year is divided into three terms, with a total of 202 school days. The longest break is during the month of Ramadan.

Islamic religious education is part of the curriculum in all educational institutions, including private schools, and religious knowledge is a subject in public examinations up to the GCE, A level. In 1966 the first Arabic secondary school was established; it was followed by the Religious Teachers' Training College. In May 1985 the University of Brunei Darussalam was founded, with two faculties, arts and education, and an enrollment of 200. Most of the staff are Western expatriates.

In general, the educational profile of the country is healthy. The literacy rate for 2002 was 93.9 percent. Between 1999 and 2001 public expenditures on education made up 9.1 percent of total government expenditures. In

2000–01, 93 percent of children reached grade five. That same year 95 percent of children made the transition from primary to secondary school. The pupil to teacher ratio in primary school is a very low 13 to 1.

SCIENCE AND TECHNOLOGY

The Brunei Association for Science Education was begun in 1997 to improve science education by holding professional meetings, seminars, symposia, conferences, and scientific visits. Computer courses are organized for science educators. The Ministry of Industry and Primary Resources, through its Department of Agriculture and the Agricultural Research and Development Division, conducts agricultural research. Foreign technicians are generally relied upon for oil industry technology.

The University of Brunei Darussalam has a faculty of science, and the Technological Institute of Brunei, located in Bandar Seri Begawan, and the Jefri Bolkiah College of Engineering in Kuala Belair, offer engineering courses. Between 1994 and 1997, 6 percent of all college and higher education students were enrolled in science, math, and engineering courses.

MEDIA

A main daily newspaper is *Borneo Bulletin*, which is published in English. *Media Permata* is a Malay-language

daily. With the rise of the Internet, several online news sites have developed, including *Brunei Direct*. Additionally, Singapore's *Straits Times* is widely distributed in the country.

The government occasionally suspends the issue of offending foreign newspapers or periodicals and expels nonresident correspondents. More serious regarding press freedom was legislation in 2001 requiring newspapers to register with the government and providing prison terms for editors or journalists who publish what the government deems to be "false news." Magazine articles with Christian themes have been censored. Radio Television Brunei broadcasts radio programs in English, Malay, Gurkha, and Chinese and television programs in Malay and English. Educational television was introduced in 1978 and color television in 1975.

In 2002 there were 35,000 Internet users, though the primary server is state owned. There were also 137,000 cellular telephone users in 2002.

CULTURE

Brunei culture is in part a product of its history, in part an outgrowth of its contemporary politico-religious stance. Its Malaysian roots include influences from animism, Hinduism, and Islam. The country's long association with England is evident in language. Historical artifacts can be seen at the country's Arts and Handicraft Centre, with examples of boat making, silversmithing, bronze tooling, cloth weaving, and mat and basket weaving. The Brunei Museum and the Malay Technology Museum house further examples of craftsmanship, including Malay weaponry, wood carvings, traditional games, traditional musical instruments, artifacts dealing with *silat*, the traditional art of self defense, and decorative items for women.

Malaysian musical and dance traditions were also strong and were used during special religious and social occasions. These traditions are similar to those found among the Malays of Indonesia and Malaysia and include the *gamelan*, with its orchestra of drums, gongs, bamboo flutes, and xylophone, as well as music that demonstrates closer ties to the Middle East and Islamic South Asia. Dance would accompany such classic forms of music; dances included those used during courtship or to en-

tain the sultan, trance dances, and dance dramas. Examples of folk music and dance are the *jipin*, performed by six men and women and accompanied by instruments that include the *dombak*, or hand drum, and the *rebana*, or tambourine; the *adai-adai*, sung by fishermen while they fished; and the *benari*, or *joget baju putih*, danced during various festivals and performed by three men and three women.

Old Malay society is described in literature such as *Sejarah Melayu* (The Malay chronicle), a history of the kingdoms of the Malay Peninsula, *Hikayat Hang Tuah* (Hang Tuah's life story), and *Hikayat Abdullah* (Abdullah's life story). While not specifically Bruneian, this literature is indicative of Malay civilization in general.

These folkloric traditions have largely been lost in modern Brunei, which is dominated by Islam, both as a way of life and as the state's ideology and philosophy. The festivals of that religion determine much of the contemporary culture of the country as well as the architecture.

FOLKLORE AND MYTHOLOGY

Animistic beliefs informed early Malay society before Islam became a dominant influence. Prominent among the folklore was a belief in spirits. Locations had hosts of spirits, from the guardian spirit, or *penunggu*, to the gnome, or *jembalong*. A tigers with one leg shorter than the other might be a *penunggu*. Other animals were the manifestations of river or ocean spirits. A person coming into a new locale would ask permission of that spirit for such entry or even bring a basket of offerings. Amulets are still worn by some villagers to ward off evil spirits; these range from hairpins to wristbands. Such belief systems have largely been lost in modern Brunei.

ENTERTAINMENT AND RECREATION

Television and video are popular in Brunei, and most households have home entertainment centers. Concerts are generally organized by private companies or embassies of foreign countries. The nightlife in Brunei's cities is very low-key in comparison to other countries. Alcohol

consumption is banned, though non-Muslims coming into the country are allowed a limited amount. Cinemas are also popular, though the selection of films, as with the content of the state-run television, is controlled by the government.

For the wealthy, there are numerous private recreational clubs for yachting, golf, horseback riding, and tennis. Bowling is a popular form of recreation in cities, and jogging has also grown in popularity.

ETIQUETTE

Bruneians shake by only lightly touching the other's hand and then bringing the hand back to the chest. It is generally not customary to shake hands with members of the opposite sex. Pointing with a finger is considered impolite; the thumb of the right hand (with the four fingers folded beneath it) is used to indicate something. To attract someone's attention, the whole hand is waved with the palm facing downward. Other hand gestures often have vastly different meanings from those in Western countries. For example, smacking the fist of one's right hand into the left palm is a very rude gesture in Brunei. Gifts and particularly food should only be passed with the right hand, although it is acceptable to use the left hand under the right wrist for support.

When visiting a mosque, it is necessary to remove one's shoes. One should not pass in front of a person at prayer or touch the Koran. Shoes should also be taken off when entering homes. Public displays of affection between people of the opposite sex are discouraged, even between husbands and wives.

FAMILY LIFE

Family is at the heart of life in Brunei, for both the Malay majority and the Chinese minority. While families tend to be nuclear among Malays, the extended family is more common in the Chinese community.

In the Malay community women in public have subservient roles, sitting apart from men at the mosque and not mixing socially with men. However, at home the men often take part in raising the children.

In the Chinese community women also play a key role in domestic life, taking care of the house and of older relatives. In contemporary society, though, more and more Chinese women in Brunei have professions and hire foreign workers to take care of household chores.

Very different traditions are in effect in the two communities regarding household pets. Chinese keep dogs, cats, and birds as pets; dogs in particular serve a useful purpose as watchdogs. Muslim Malays keep cats and birds, but dogs are considered "unclean."

PERSONAL APPEARANCE

Brunei's population is made up mostly of Malaysians of South Asian descent and Chinese. Dress is a mixture of both these cultures and of Western influences.

Traditional Chinese clothing included the tight-fitting, slit-skirted dress, called the *cheongsam*, for women, while for men the *yi fu* was traditional. However, contemporary Chinese wear Western clothing on a daily basis, saving such traditional wear for weddings and other festive occasions. Red is a lucky color; black is reserved for funerals. Older Chinese men often wear baggy shorts and T-shirts or tank tops for the warm weather.

Muslim Malays in Brunei tend to wear more traditional clothing. Men typically wear pants and a long-sleeved shirt called the *baju kurung*. This sometimes has a high collar, and then it is called the *cekak musang* or *teluk belanga*. This shirt is tucked in, left loose down to the knee, or sometimes tied at the waist. Men also typically wear a *peci* cap and sandals. A sarong and a long veil is typical for Muslim women. Some Malays in Brunei wear Western clothing, but not shorts, skirts, or sleeveless tops.

SPORTS

Soccer is the most popular fan sport in the country. The national team took the Malaysia Cup in 1999. The local martial arts variant, *silat*, is also popular. National teams traditionally take medals in this sport. Also popular are *sepak takraw*, a game played with a rattan ball, *gasing*, played with highly polished large metal tops, and competitive kite flying. Badminton is another popular sport; Brunei has hosted several world championship tournaments. The country also hosts a major golfing event each year, the Brunei Open, not to be confused with the annual chess tournament of the same name.

CHRONOLOGY

- 1984** Brunei becomes an independent nation in accordance with its 1979 treaty with the United Kingdom. The Legislative Council is suspended.
- 1985** The Brunei National Democratic Party (BNDP) is formed.
- 1986** The Brunei National Unity Party (BNUP) is formed after splitting with the BNDP.
- 1988** The BNDP is dissolved after asking for political reforms.
- 1990** The outlawed Brunei People's Party writes to Sultan Hassanal Bolkiah from Malaysia demanding democracy for the kingdom; the sultan promptly issues warnings against criticism of the government, religion, or himself.

- 1991** As a result of pressure from the British government, the sultan releases six political prisoners who had been detained since the failed coup attempt in 1962.
- 1996** Brunei has successfully limited its economic dependence on oil revenue, with nearly two-thirds of GNP coming from other diversified sources.
- 1998** Sultan Bolkiah's eldest son, Prince al-Muhtadee Billah, becomes heir apparent. The sultan's brother, Prince Jefri Bolkiah, is involved in a financial scandal involving the collapse of the multibillion dollar conglomerate Amedeo. The prince goes into exile in England.
- 1999** Oil prices climb, helping ease the financial crunch brought on by the overall Asian downturn and the collapse of Amedeo.
- 2000** Prince Jefri Bolkiah returns from exile to face charges stemming from the misuse of \$15 billion of state funds. Oil prices reach their highest levels in 10 years.
- 2001** New press laws go into effect requiring newspapers to obtain publishing licenses each year from the government. Under the new legislation, editors and journalists also face jail terms if they are found guilty of publishing "false news." The sultan is listed by *Forbes* magazine as one of the 15 wealthiest individuals in the world, with \$16 billion.
- 2002** Two new cabinet ministers, one for development and the other for health, are chosen by the sultan.
- 2003** In February Sultan Bolkiah divorces his second wife.
- 2004** In September the sultan reinstates the Legislative Council, two decades after it was disbanded. Its 21 members are all chosen by the sultan. The December 26 tsunami, which takes over 250,000 lives in South Asia, does little damage in Brunei.
- 2005** In January, the government pledges \$6 million for tsunami relief.

DATE OF INDEPENDENCE

October 5, 1908

DATE OF CONSTITUTION

July 12, 1991

GEOGRAPHICAL FEATURES

Located in the Balkan Peninsula, Bulgaria occupies an area of 110,910 sq km (42,823 sq mi). Lying on the Black Sea, the country shares borders with Romania, Turkey, Greece, and Yugoslavia.

First called Serdica by the Thracians when it was founded 2,000 years ago, Sofia, the capital, stands on the direct trading route from Belgrade to Istanbul. Other important cities include Plovdiv, Varna, and Burgas, which are Bulgaria's principal Black Sea links with international maritime commerce.

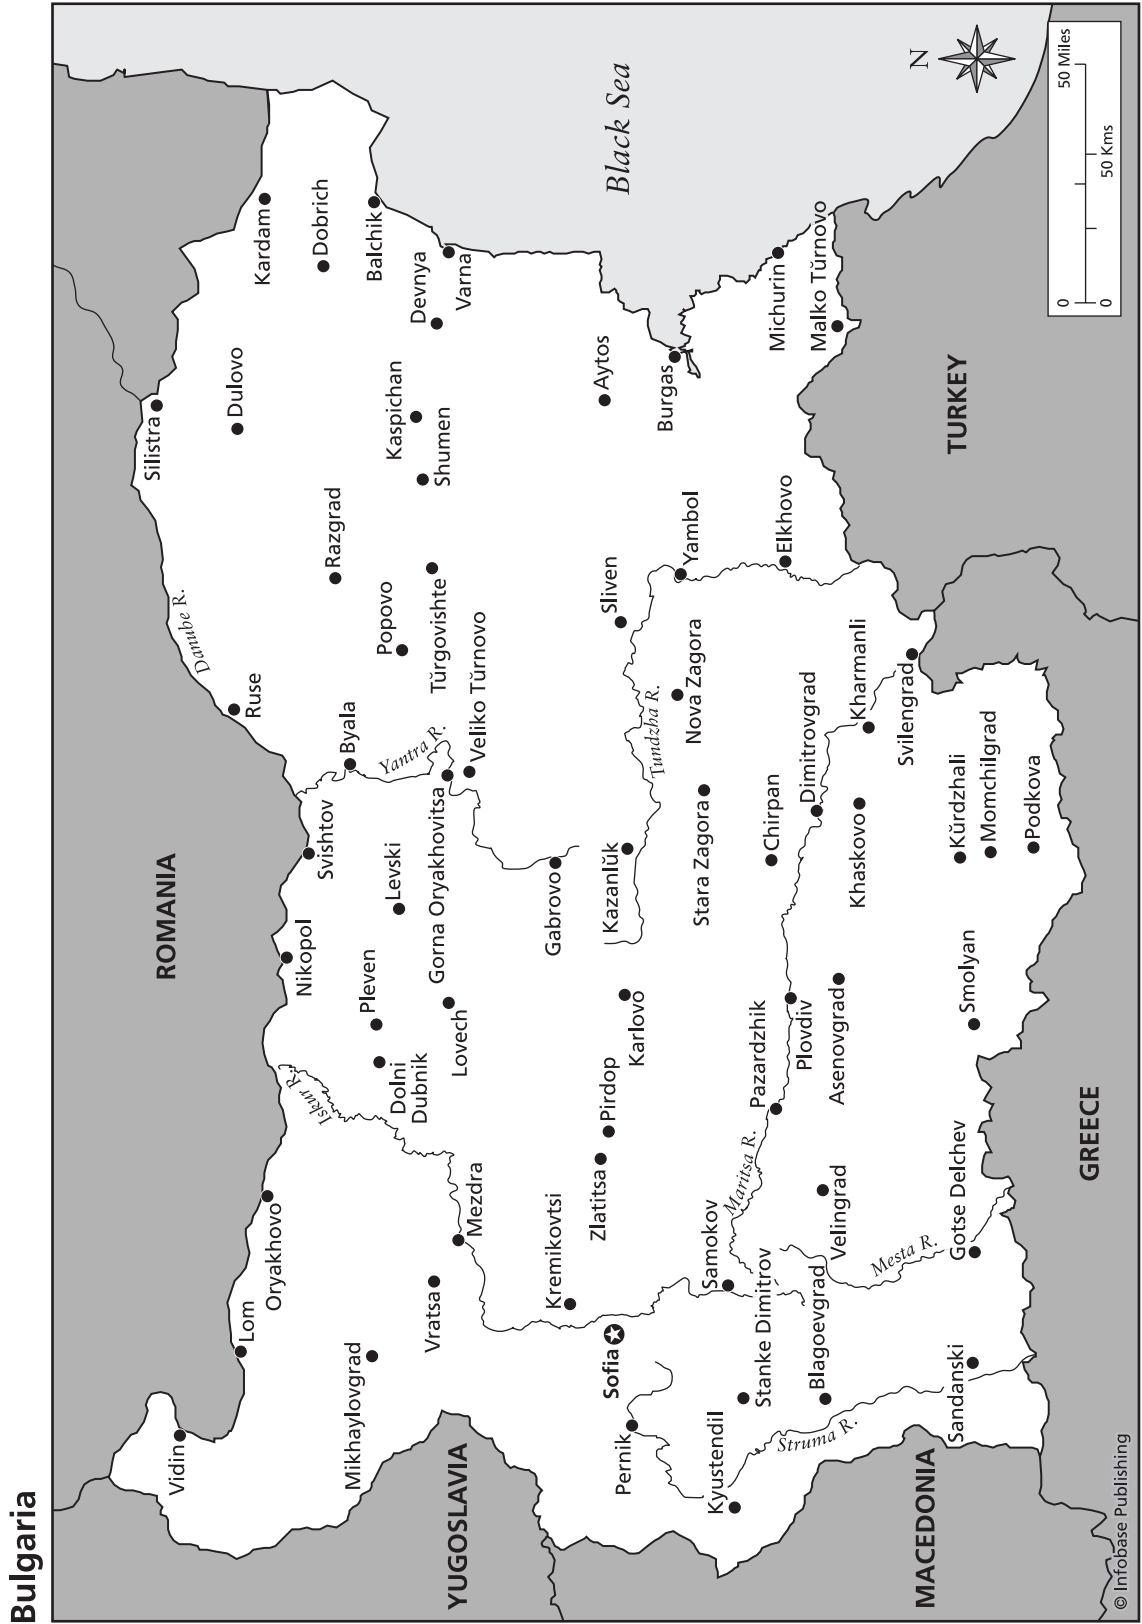

Bulgaria contains four principal land regions: the Rodopi (the Rhodope Mountains), the Balkan Mountains, the Danubian Plateau, and the Central Thracian Plain.

The Rodopi, in southernmost Bulgaria, contain the country's tallest peak, Mount Musala, 2,925 m (9,596 ft), and topographically dominate the entire Balkan Peninsula.

Extending 595 km (370 mi) west to east, the Stara Planina (Balkan Mountains) enclose the Sredna Gora range—including the Shipka Pass (famous as the site of the battle between Russians and Turks that led to Bulgarian emancipation). The Stara Planina are also the location of the Valley of the Roses, which produces the attar used in perfumes.

The Danubian Plateau contains Bulgaria's most fertile farmland and extends from the Yugoslav border to the Black Sea.

The southern slopes of the Stara Planina and the Sredna Gora give way to the Thracian Plain. Roughly triangular in shape, the plain originates at a point east of

the mountains ringing the Sofia basin and broadens as it fans eastward to the Black Sea.

CLIMATE AND WEATHER

For a small country, Bulgaria has an unusually varied and complex climate, with six or more climatic zones. The north is characterized by hot summers and cold winters, with rainfall well distributed throughout the year. The Stara Planina represents the southern limits of this zone. The Rodopi mark the northern limits of Bulgaria's Mediterranean climate, with mild, damp winters and hot, dry summers.

The area lying between these zones, including the Thracian Plain, has a climate characterized by long summers and high humidity. Average temperatures and precipitation are erratic. For Bulgaria as a whole, rainfall averages about 635 mm (25 in), with higher elevations receiving 1,016 mm (40 in) or more.

Throughout the uplands the many valley basins frequently experience temperature inversions, resulting in stagnant air. During winter there are many windy days and violent local storms, particularly along the Danube. The hard-blowing, hot, dry Black Wind wreaks havoc on crops. It gets its name from the quantities of dust it carries, which often darken the skies.

Climate and Weather

Mean Temperature
January: 32°F to 36°F
July: 72°F to 75°F
Average Rainfall: 25 in

FLORA AND FAUNA

The animal and plant life in Bulgaria is a mixture of that of much of central Europe and of the steppe, or plains, especially in the northeast and the southeast of the country.

The forests and broadleaf woods of the flatlands have been mostly cleared for farmland, but wooded areas are found in the Balkan mountains—both deciduous forests at lower elevations and evergreens higher up. Wild fruits, blueberries, raspberries, briars, strawberries and mushrooms are found in the forests. Altogether the flora of Bulgaria includes about 12,360 species, of which about 250 are native to the country and are found nowhere else in the world. These include the Rila primrose, Balkan violet, Bulgarian blackberry, and Rhodopean tulip.

Bulgaria's fauna comprises 13,000 species, which is 14 percent of the total number of listed animal species in Europe. With the clearing of forestland, many of the wild species of larger mammals were greatly reduced in number. However, wildcats, elk, bears, and foxes are still found in remote areas, and squirrels and small rodents are plentiful. Pelicans, deer, wild goats, quails, and pheasants inhabit reserves and hunting grounds. Overfishing and pollution have reduced the number and variety of fish in the Danube and the Black Sea.

ETHNIC COMPOSITION

Bulgaria is characterized by a remarkable ethnic, linguistic, and religious homogeneity. Some 85 percent of the population is Bulgarian. The most significant ethnic mi-

norities are Turks, constituting 8.5 percent; Roma (Gypsies), 2.5 percent; and Macedonians, 2.5 percent. The remainder is made up of Greeks, Romanians, Armenians, and others.

The Turks and the Pomaks (as the Islamized Bulgarians are known) represent the surviving elements of four centuries of Turkish rule, and their numbers have been steadily reduced by emigration to Turkey. In 1950–51 alone 150,000 were expelled from Bulgaria. An effort by the Zhivkov regime in the late 1980s to Bulgarianize the Turks resulted in protests by Turkey and the mass emigration of Turks to Turkey. But many of the migrants later returned, as they found living conditions in Turkey more intolerable than at home. The Turks pose no serious problem to the Bulgarian government, and the Turks' cultural and other rights are guaranteed by the constitution.

Macedonians also are not recognized as a separate entity. They are considered to be ethnic Bulgarians and their language a dialect of Bulgarian. They live predominantly in the southwest. Romanians fall into two groups: the Romanian-speaking Vlachs of the northwest and the Greek-speaking Karakatchans—nomadic mountain shepherds of Romanian descent. Another hybrid community is the Gagauzi of the northeast, who are of Turkish origin but follow the Orthodox faith.

LANGUAGES

Bulgarian, the national language, is classified as a Slavonic language of the southern group, which also includes Macedonian, Serbo-Croatian, and Slovenian. Old Bulgarian, also known as Old Church Slavonic, was the first Slavic language to acquire an alphabet, in the ninth century. The alphabet, created by Sts. Cyril and Methodius, two Greek missionaries, was based partly on Greek and was accordingly named Cyrillic. Both the grammar and the vocabulary of modern Bulgarian show the influence of non-Slavonic languages. The minorities also speak their respective languages.

RELIGIONS

By the second century Christianity had become established in the area that is now Bulgaria. The Bulgars, who conquered the land in about 670, were converted when Boris, their king, was baptized by the Greek clergy. The introduction of the Cyrillic alphabet was a landmark in ecclesiastical history, enabling language, culture, and religion to converge. In 889 Boris abdicated to enter a monastery, while his son Simeon left a monastery to ascend the throne. Slavonic was substituted for Greek in the Bulgar liturgy. The Bulgar church was declared autocephalous, with its own patriarch. In 1018 the Bulgarian kingdom fell to Byzantine rulers, who suppressed the Bulgarian

patriarchate. Bulgaria regained its independence in 1186, and the patriarchate was reestablished in 1235. In 1396 Bulgaria fell before a third wave of Muslim invaders, the Ottoman Turks. For the next 500 years the Bulgarian church was effectively silenced.

Prior to World War II and the Communist takeover the Bulgarian Orthodox Church claimed a membership of 85 percent of the national population, but in the ensuing years this percentage dropped to below 20 percent. However, with the fall of Communism and the establishment of the republic, Orthodoxy made a comeback in the country. According to a 2001 estimate about 83 percent of the population belonged at least nominally to the Bulgarian (Eastern) Orthodox Church, which is now considered the traditional religion of the state.

The Armenian Apostolic Church has 12 congregations in the country. Protestantism was introduced by American Congregationalist missionaries in 1856, American Methodists in 1857, and Russian Baptists in 1865. From the ninth to the 14th centuries the Roman Catholic Church made repeated efforts to bring Bulgaria into its fold, but except for a brief 30-year union these efforts were not fruitful. The majority of Bulgarian Catholics are descendants of the Bogomils, converted to Catholicism by the Franciscans in the 17th century. In 1926 an exarchate of Sofia was created for Catholics of the Byzantine rite, who number a few thousand and who are found in Sofia, Plovdiv, and along the Greek border. Immediately following World War II the church lost all its property, as it became the target of the new Communist regime's hostility. All foreign religious personnel and priests were expelled, and many were arrested, sentenced to life imprisonment, or killed.

Bulgarian Orthodox	6,154,000
Muslim (mostly Sunni)	909,000
Other	387,000

HISTORICAL BACKGROUND

Bulgarian history begins when the Bulgars, a central Asian Turkish tribe, overran what is present-day Bulgaria in the seventh century. They mixed with the Slavs, who had settled in the region earlier, and created a common polity. From this amalgam came the First Bulgarian Kingdom. In the ninth century Bulgaria was powerful enough to challenge Constantinople. Twice in this period Bulgars controlled areas of Greece, Turkey, Yugoslavia, Romania, and even Russia. In 924, after Serbia fell under Bulgarian rule, Simeon (893–927) claimed the title of czar. With territorial expansion came a resurgence of arts and letters, making Simeon's reign the Golden Age of Bulgaria. Toward the end of the 10th century the First Bulgarian

Kingdom vanished. From 1018 to 1185 all of Bulgaria was under Byzantine rule.

By the 13th century Bulgaria had become the largest state in the Balkans. Again, as in the time of Simeon, arts and culture flourished and reached a state of excellence.

Meanwhile the Turks, the nemesis of Christian Europe, had begun to cross the Bosphorus and advance on Thrace, Macedonia, and parts of Bulgaria. In 1371 they captured Sofia and in 1388 beat the Serbs. By 1396 all of Bulgaria was under Turkish rule.

The 482 years of Turkish rule were the darkest in Bulgarian history. Turkish rule was characterized by an enormous capacity for brutality and sustained by a religious and political system that institutionalized such aggression.

It was not until the 19th century that organized resistance to Turkish oppression began to show results. By then Ottoman power was in full retreat, and large parts of eastern Europe had already been liberated. In 1872 the Bulgarian Revolutionary Central Committee was formed in Bucharest. As revolutionary fervor grew, the Bulgarians turned to Russia for help.

The precursor to Bulgaria's liberation in 1878 was an unsuccessful uprising in 1876. Thousands of Bulgarians were killed in April that year. The savagery of these reprisals induced the Russians to invade Bulgaria soon after the Russo-Turkish War of 1877 and liquidate the Turkish army. In these battles for Bulgaria's liberation, the Russians lost over 200,000 soldiers.

Following the Russian intervention, Bulgaria was granted the status of an autonomous principality; complete independence was not established until 1908. However, the Congress of Berlin in 1878 took away from Bulgaria parts of Macedonia and Thrace that it had been granted by the Treaty of San Stefano. This set the tone for an irredentist foreign policy that led to Bulgaria's disastrous alliances with Germany in both world wars.

The postindependence leaders established a democratic government and a constitutional monarchy. Within four years, in 1912, Bulgaria was once again embroiled in war, this time essentially over Macedonia.

Macedonia remained a site of contention for Bulgaria, which was determined to regain the land that had so often escaped its grasp. Of all the Balkan states, Bulgaria was the only one to join the Central Powers in World War I, ironically siding with its former oppressor Turkey against its friend and benefactor Russia. It emerged from the war defeated and in a worse political position.

The interwar period was one of political unrest and Macedonian terrorism.

Bulgaria entered World War II on the Axis side and again suffered defeat. The war ended for Bulgaria when on September 4, 1944, Soviet troops entered Sofia. On October 28, 1944, an armistice was signed between Bulgaria and the Soviet Union by which the former surrendered all territories gained since 1941.

In 1944 the monarchy was rejected by the majority of Bulgarians, and a People's Republic was formally established in 1947 under the premiership of Georgi Dimitrov, the "Father of Bulgarian Communism." Dimitrov died in 1949 and Communist rule was consolidated under the successive regimes of Vŭlko Chervenkov and Anton Yugov until 1954 and thereafter until 1989 by Todor Zhivkov. The collapse of Eastern European Communism did not bear an impact on Bulgaria until November 3, 1989, when demonstrators marched in Sofia in the country's first prodemocracy rally. One week later Zhivkov was replaced as party general secretary by Petŭr Mladenov who later succeeded as head of state. In the first multiparty elections held in 1990, however, Bulgaria bucked the trend by reelecting the Communist Party to power. Nevertheless, Mladenov resigned and was succeeded in office by Zhelyu Zhelev. In 1991 a new democratic constitution was adopted. In 1996 Petŭr Stoyanov, the opposition candidate, won the presidency. In 1997 a deepening economic crisis led to mass protests and the demand for early elections. In general elections held on April 19 the United Democratic Forces (ODC) won 137 out of 240 seats, and its leader, Ivan Kostov, became prime minister. He promised to fight organized crime and corruption and implement rigorous economic reforms. His pro-Western government supported North Atlantic Treaty Organisation (NATO) action against Serbia, marking a departure from earlier pro-Serb policies.

In 2001 the National Movement for Simeon II (NSDV), the party of Bulgaria's former king, Simeon II, won a majority of seats in general elections. Simeon II, also known in Bulgaria as Simeon Borisov Saksokoburg-gotski, or abroad as Simeon of Saxe-Coburg-Gotha, became prime minister in a coalition government with the Movement for Rights and Freedoms, a party primarily representing Bulgaria's ethnic Turkish minority. In so doing Bulgaria became the first country in history to elect its former king to head of government. The former king promised to restore the country's flagging economy in a little over two years with a mixed policy of privatization, easing of the business tax burden, and restriction of government involvement in the economy. He also promised to eradicate organized crime and corruption, stumbling blocks to economic recovery. The Socialist Party candidate Georgi Purvanov won the presidential elections in November and was sworn into office in 2002.

The government pursued reformist policies in 2002. By 2003, however, there were signs that the public had begun to lose faith in Simeon. In local elections held in October and November, Simeon's party won only 7 percent of the votes (down from the 40 percent it had won in 2001). Despite the weak showing of the NSDV, however, no other party was able to win a clear majority, and Simeon's government held on to power until the regularly scheduled general elections in 2005 in which Socialist Party leader Sergey Stanishev was elected prime minister.

In 2003, with a seat on the UN Security Council, Bulgaria proved to be in a pivotal position regarding the U.S.-led war against Iraq. The Bulgarians supported the war and sent a contingent of 500 peacekeepers. Organized crime has continued to be a major domestic problem, despite government promises to eradicate it. In 2004 the nation became a part of NATO. Membership in the European Union is expected in 2007.

LIST OF MODERN RULERS

Head of State

1946–47	Vasil Petrov Kolarov (chairman of the provisional presidency)
1947–50	Mincho Kolev Neychev (chairman of the Presidium of the National Assembly)
1950–58	Georgi Pûrvanov Damyanov (chairman)
1958	Nikolay Georgiev Ivanov (chairman)
1958–64	Dimitûr Ganev Vûrbanov (chairman)
1964	Nikolay Georgiev Ivanov (chairman)
1964–71	Georgi Traykov Girovski (chairman)
1971–89	Todor Khristov Zhivkov (chairman of the State Council)
1989–90	Petûr Toshev Mladenov (chairman)
1990	Petûr Toshev Mladenov (president)
1990	Stanko Todorov Georgiev (president)
1990	Nikolay Todorov Todorov (president)
1990–97	Zhelyu Mitev Zhelev (president)
1997–2002	Petûr Stefanov Stoyanov (president)
2002–	Georgi Sedefchov Purvanov (president)

Prime Minister

1944–46	Kimon Gheorgiev Stoyanov
1946–49	Georgi Mihaylov Dimitrov
1949–50	Vasil Petrov Kolarov
1950–56	Vûlko Velov Chervenkov
1956–62	Anton Tanev Yugov
1962–71	Todor Khristov Zhivkov
1971–81	Stanko Todorov Georgiev
1981–86	Grisha Stanchev Filipov
1986–90	Georgi Ivanov Atanasov
1990	Andrey Karlov Lukanov
1990–91	Dimitûr Popov
1991–92	Filip Dimitrov Dimitrov
1992–94	Lyuben Borisov Berov
1994–95	Reneta Ivanova Indzhova
1995–97	Zhan Vasilev Videnov
1997	Stefan Antonov Sofiyanski
1997–2001	Ivan Yordanov Kostov
2001–2005	Simeon Borisov Sakskoburgotski
2005–	Sergey Stanishev

CONSTITUTION

The theoretical foundation of the state is the 1991 constitution. The constitution established the basic institutions

of government: the National Assembly and the Council of Ministers at the national level and the municipal councils at the local level.

The 1991 constitution is a far cry from Bulgaria's first constitution, the Turnovo Constitution of 1879, which was considered by its contemporaries one of the most liberal in the world. The parliament was supreme, and the king was bound by its laws. Even after the Communist takeover the Turnovo Constitution remained the charter of government until a new constitution was adopted in 1947.

Known as the Dimitrov Constitution, after Georgi Dimitrov, who helped to draft it, the constitution of 1947 remained in force for 24 years. It established the National Assembly as the supreme organ of state power and the Council of Ministers as the supreme executive power. However, in actual practice the Presidium of the National Assembly was empowered with legislative, executive, and judicial authority. Following the Soviet model, the first secretary of the Bulgarska Komunisticheska Partiya (BKP, Bulgarian Communist Party) was also chairman of the Council of Ministers and, as such, the country's prime minister.

With the 1971 constitution the State Council became a more powerful body than the Presidium of the National Assembly, such that it replaced and overshadowed the Council of Ministers as well.

Following the collapse of Communism in Eastern Europe in 1989–90, Bulgaria began to dismantle the constitutional structures of the authoritarian state. First, the Communist Party was stripped of its monopoly of power, called "the dominant role" in the constitution; the Communist Party lost its control over the police and the military, and the State Council was dissolved. Finally, multiple parties were permitted to stand for free national and local elections.

The 1991 constitution defines Bulgaria as a parliamentary republic. The supreme legislative body is the National Assembly (the parliament). The president is the head of state, elected through direct and secret ballot for a five-year term of office. The prime minister was made the most important government official. The Council of Ministers is the supreme executive body for home and foreign affairs.

PARLIAMENT

The National Assembly (Narodno Sobraniye) is a 240-member unicameral legislature, with members elected for terms of four years. Convened at least three times a year, its sessions are brief. The National Assembly has permanent commissions, the functions of some of which overlap those of the ministries.

The basic election law was adopted in 1953 and has been amended many times since then. The constitution

extends the right to vote to every Bulgarian citizen who has reached 18. Members of both national and local representative bodies are elected by direct and secret ballot on the basis of universal, equal, and direct suffrage.

POLITICAL PARTIES

Until 1989 the only authorized political parties were the Bulgarian Communist Party and the Bulgarian Agrarian National Union, which formed the core of the Fatherland Front. The political landscape changed in the 1990s with the formation of numerous political parties on both the left and right. The government at that time consisted of a loose coalition of democratic parties, known as United Democratic Forces, which consisted of three parties: the Union of Democratic Forces, the People's Union (itself an alliance of the Bulgarian Agrarian National Union and the Democratic Party), and the Bulgarian Socialist Party (BSP). The main opposition bloc was the Democratic Left, a coalition of the Bulgarian Socialist Party (formerly the Bulgarian Communist Party), the Ecoglasnost Political Club, the Bulgarian Agrarian National Union, the Alliance for National Salvation (an alliance of several smaller groups, including the Movement for Rights and Freedoms, representing the Turkish minority), the New Choice Liberal Union, and the Green Party. There are hundreds of smaller parties, most of them having the name Democratic in their title, such as the Liberal Democratic Union, Democratic Alternative for the Republic, the Christian Democratic Union, and the Turkish Democratic Party. The National Movement for Simeon II, which elected the former king as prime minister in 2001, officially became a political party in 2002 as the NSDV, with Simeon II as its leader.

As of 2004 the strongest parties were the BSP, the Democrats for a Strong Bulgaria, the NSDV, the Movement for Rights and Freedom, the Union of Democratic Forces, and the Union of Free Democrats. Some of these parties work in coalition.

LOCAL GOVERNMENT

Bulgaria is divided into nine administrative regions and smaller municipalities. The municipality is the primary territorial administrative unit, being a legal entity where local self-government is exercised through a municipal council wherein members are elected for four-year terms.

LEGAL SYSTEM

Bulgarian civil and criminal law is based on Roman law. The highest judicial organ is the Supreme Court. It is a

court of original as well as appellate jurisdiction and is organized into civil, criminal, and military divisions. The chairman is appointed for a seven-year term by the president.

Below the Supreme Court are 28 regional and district courts. Lower court judges are elected by their respective municipal councils for five-year terms and are subject to recall by the voters.

The prosecutor general and senior judges are elected by the Supreme Judicial Council, established in 1992. There is also a Constitutional Court to review the constitutionality of laws, with 12 justices appointed or elected for nine-year terms.

The maximum term of imprisonment is 20 years, but the death penalty may be allowed for exceptionally dangerous crimes. In 1996, 13,097 crimes were reported, of which 227 were murders. In 2003 out of about 33,000 criminal cases, 171 were homicides. In that same year the prison population was about 20,000.

HUMAN RIGHTS

Although Bulgaria is now a parliamentary democracy, some vestiges of former human rights abuses have survived. These include excessive use of force by the police. The judiciary continues to struggle with problems of antiquated procedures, corruption, and a heavy backlog of cases. Organized crime has some influence on the prosecutors' offices. Print journalism is generally free, but the government exerts unduly heavy influence on the electronic media. Eastern Orthodox Christianity is designated as the "traditional religion," and other religions and sects, like Jehovah's Witnesses, face some intolerance. Although the constitution guarantees protection against all forms of discrimination, Roma (Gypsies) are also often discriminated against. The lot of the Gypsies has been a cause for concern internationally. They mostly live in substandard housing on the outskirts of cities and have very high unemployment rates and relatively short life expectancies. Interethnic tensions also exist between Bulgarians and the minority Turks, and there are reports that ethnic Macedonians have been denied the right to hold public gatherings.

Religious freedom is guaranteed, but the government has made it difficult for what are called "nontraditional" religions to get registration permits allowing them to be active. Religions considered "traditional" in Bulgaria are the Orthodox, Roman Catholic, Islamic, and Jewish faiths.

FOREIGN POLICY

Between 1945 and 1990 Bulgaria's foreign policy was completely subordinate to that of the Soviet Union. Todor

Zhivkov once acknowledged that Bulgaria was bound “to the Soviet Union in life and death.”

Since the end of the cold war Bulgaria has sought to maintain a markedly Western foreign policy, joining the European Union as an associate member, making its presence better known in the United Nations, and seeking membership in NATO, which it gained in 2004. Bulgaria is also on track to gain membership in the European Union in 2007.

DEFENSE

The military forces of Bulgaria are composed of the following services: army, navy, air and air defense forces, border troops, and internal security troops. In 2002 the army numbered 31,000, the navy 4,400 and the air force 17,800. There were 34,000 members of the paramilitary, including border guards, security police, and railway and construction troops. Reserves numbered 303,000. Defense expenditures were \$356 million in 2002 or 2.6 percent of GDP.

Manpower availability (conscription was reduced in 1992 from 18 to 12 months) in 2004 was over 1.8 million. Military equipment such as vessels, aircraft, artillery, and missiles are generally ex-Soviet or Soviet built, though much is relatively up-to-date.

ECONOMY

In January 1992 almost the entire economy was still firmly under state control, despite the fact that the government had stated that its ultimate goal was privatization. By the end of that year 5 percent of state firms had been transferred to the private sector, along with another 500 by the end of 1993.

Privatization remains the stated objective of the present government, and if not for the war in Kosovo the privatization process would have been dramatically accelerated in 1999.

In 1996 GDP declined by 4 percent, and in 1998 it stood at \$11.7 billion, or about \$1,200 per capita. After several years of tumult, Bulgaria's economy has stabilized. Its better-than-expected economic performance in 1999—as overcoming the impact of the Kosovo conflict, the 1998 Russian financial crisis, and structural reforms—

and strong growth in 2000 portended solid growth over the next few years.

Following the 2001 elections, which brought Simeon II to office as prime minister, the stock market soared 100 percent, but the government in 2002 was unable to live up to its pledge to improve living standards. Foreign direct investment rose somewhat in 2002, and although economic growth slowed that year from its 5.8 percent high in 2000, it was higher than that of many other European countries. Taxes were lowered, and there is a zero percent capital gains tax on stock market investments. Small businesses are increasingly receiving credit. Corruption remains a stumbling block to Bulgaria's economic success.

In 2003 the country officially posted 4.3 percent growth in GDP but still had double-digit unemployment, of about 14 percent.

ENVIRONMENT

As a signatory to several international environmental initiatives, Bulgaria has shown serious intent to participate in ecological efforts and improve its own environment.

In 1995 reports to the United Nations, Bulgaria drew attention to its worsening air and water quality and to a measurable decrease in arable land. There were also concerns about the disposal of solid industrial and household waste. In addition, there remain health consequences from the Chernobyl nuclear disaster of April 1986.

The World Bank is currently financing a long-term project to enable Bulgaria to phase out ozone-depleting substances (thereby helping to improve air quality), and serious planning is under way to upgrade the safety of the country's Soviet-era nuclear reactors.

Major ecological projects in the country include the prevention of further contamination of the Danube River and the Black Sea and the reduction of emissions and waste. Much progress has been made in waste disposal, with generated solid waste reduced from 236,576 thousand tons in 1997 to 88,855 thousand tons in 2003, mostly as a result of reductions in industrial waste products. Emissions also decreased during the same time-frame.

LIVING CONDITIONS

Bulgaria ranked 57th out of 177 nations in the United Nations' Human Development Index (HDI) for 2002. The HDI is a measure of three factors: life expectancy, education, and standard of living. In 2004 the life expectancy was 72 years, with a fertility rate of only 1.37 children per woman and a mortality rate of 14 deaths per 1,000 people. A national health-care system provides free medical care. The overall population in the country declined by 0.92 percent in 2004. The literacy rate for the country was 98.6 percent in 2003, and the combined gross enrollment in primary, secondary, and tertiary schools in 2001-02 was 76 percent of eligible students. Per capita GDP was \$7,600 in 2003.

Under the Soviets the country became rapidly urbanized. Almost 70 percent of the population live in urban areas, and housing shortages have been endemic in the country for several decades. Large public investments have been made in public housing as well as in individual housing construction with low-interest loans. It is estimated that between 75 and 80 percent of Bulgarians now own their own homes. These are often two-story brick houses with plaster facades in rural areas and towns. Apartment blocks are the norm in cities, though many Bulgarians own small country houses where they spend summers.

HEALTH

Though private health care was reestablished in 1991, Bulgaria still maintains a public health-care system that provides free medical care for its citizens. The Ministry of Health oversees the system, and in 2002 about 4.8 percent of GDP was spent on health issues. However, the country suffers from infrastructure problems; old fa-

cilities, antiquated equipment, and low-paying positions keep likely candidates out of the public health sector. In 2004 there was 1 physician for every 296 people and 1 dentist for every 1,150 people. In 1999 Bulgaria had 98 municipal hospitals with an average of 227 beds apiece, and 32 general district hospitals with an average of 874 beds. In addition there were 12 university hospitals in Sofia. Mortality rates have gone up in recent decades. In 2004 the death rate was 14.25 per 1,000 people; in 1999 the figure was 13, while in 1960 it was 8.1.

With a high intake of fats in the diet and with heavy smoking (almost half the male population smoked as of 2000), Bulgarians suffer from high blood pressure, affecting about 12 percent of the population. Circulatory diseases account for half of all deaths, while the country's stroke mortality is one of the highest in Europe.

The infant mortality rate, on the other hand, has improved, going from 108.2 deaths per 1,000 population in 1950 to 28 in 1970, and to 21 in 2002. In 2002 there were only 60 cases of tuberculosis per 100,000 people, and child immunization rates have also improved. In 2002, 98 percent of children under one were immunized for tuberculosis, 90 percent for measles, and 94 percent for diphtheria, pertussis, and tetanus. In 2001 the adult HIV/AIDS prevalence rate was less than 0.1 percent, and there were only an estimated 350 Bulgarians living with HIV/AIDS and fewer than 100 deaths from the virus.

FOOD AND NUTRITION

Cuisine is influenced by the nation's cultural roots and its geographical location at the crossroads of southern and central Europe. Greek, Turkish, and Slavic food is blended in Bulgaria.

Breakfast is a light meal of either yogurt and bread with strong espresso or Turkish coffee, or cheese pastries called *banitsi*. Dinner is also a light meal, served late at night.

Lunch is the main meal, with pork or lamb as the meat and plenty of potatoes, beans, cheese, and salad. From the Greeks and Turks comes *moussaka*, a casserole of lamb, potatoes, and tomatoes with a béchamel topping. Also popular are *sarmi*, stuffed peppers or cabbage, and *kufteta*, a fried patty made with meat and bread crumbs. Salads include *shopska*, made from cucumbers, tomatoes and a local type of feta or goat cheese. *Tarator* is a soup served cold, made from the omnipresent yogurt, cucumbers, garlic, dill, and walnuts. Deserts include *baklava* and other pastries influenced by southern European traditions.

Drinks include beer, heavy red wine, and the plumb brandy locally known as *rakia*. A nonalcoholic drink is the warm millet concoction called *boza*.

Malnutrition is not a problem in the country, but heavy intake of fats, sugar, and salt leads to high rates of strokes and other circulatory problems.

STATUS OF WOMEN

Bulgarian attitudes toward women's aspirations remain complex, though improvements have been noted. The legal position is irreproachable, as equal rights are enshrined in the constitution. However, legal fact is not completely translated into reality.

Within the bureaucracy, women have made progress in securing jobs—so much so that in certain ministries they now outnumber men. As of 2005 women held 63 of the 240 seats in parliament, having doubled their membership since the last general elections.

Nevertheless, widespread gender discrimination is pernicious, especially when, in the context of deteriorating economic conditions, preference for scarce jobs is given to men or young women rather than to women supporting families. A survey conducted in 2002 showed that 40 percent of women had complained of harassment in the workplace.

A corollary of this is systemic rural poverty, the effects of which are felt particularly strongly among women. Domestic violence is still not recognized as a human rights issue, though parliament is attempting to draft laws criminalizing domestic abuse. One local nongovernmental organization published a survey showing that one in five Bulgarian women is the victim of some form of spousal abuse.

There is also concern that induced abortion is being used as a method of family planning. Another concern is

the unceasing traffic in females and kidnapping for forced prostitution in Western countries and Israel.

 Seats Held in Parliament by Women %: 26
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men age 15-24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 52.2

WORK

In 2003 the estimated labor force for Bulgaria was 3.333 million, with 43 percent in the service sector, 31 percent in industry, and 26 percent in agriculture. Industrial products include electricity, gas and water, food, beverages, tobacco, machinery and equipment, base metals, chemical products, coke, refined petroleum, and nuclear fuel, while agricultural products include vegetables, fruits, tobacco, livestock, wine, wheat, barley, sunflowers, and sugar beets. Unemployment has been high in the country but improving: from 18 percent in 2002 to 14 percent in 2003, to just under 12 percent in the last quarter of 2004.

The right to unionize and strike is guaranteed by the constitution. The two main unions are the Podkrepa and the Confederation of Independent Trade Unions. Labor laws provide for a minimum working age of 16 and a 40-hour workweek. In 2002 the minimum monthly wage was equivalent to \$47. Though workplace health and safety standards are a matter of law, these are often ignored in private industry. The country has a state pension system.

Throughout the 1990s and into the new millennium the country has suffered from the emigration of its educated and professional workers to the West in search of higher-paying jobs; over half a million left for better opportunities in western Europe and North America. As of 2004 the country still had a negative net immigration rate of 4.58 emigrants per 1,000 people.

EDUCATION

Education (including university) is free and compulsory up to the age of 16. As of 2001 there were a total of 6,648 educational institutions in Bulgaria, from kindergarten

through university, of which only 128 were private, with a total enrollment of just over one million. Public expenditures on education in 2001–02 totaled 3.5 percent of GDP. In 2001, 91 percent of eligible children attended primary school; of those, 95 percent finished at least the fifth grade. In 2001–02, 96 percent of primary school students went on to secondary school. As of 2003 the adult literacy rate was 98.6 percent.

For higher education, Bulgaria offers about 50 different institutions, including nine independent colleges. The most important of these are the University of Sofia, founded in 1888, the University of Plovdiv, founded in 1961, the University of Veliko Tarnovo, founded in 1971, and the American University in Bulgaria, founded in 1991. All higher-level institutions had a total of 228,394 students in 2001.

SCIENCE AND TECHNOLOGY

The Bulgarian Academy of Sciences is the country's main research organization, running scores of research and development projects, from biotechnology to communications. It is also involved in numerous joint research ventures with other European countries.

Other research institutes include the Academy of Medicine, with five higher medical institutes. In total there are over 100 research institutes in the country in the fields of agriculture, technology, and medicine.

In 2000 there were 1.42 researchers per 1,000 population; expenditure on research and development that year was 0.5 percent of GDP.

Many colleges and universities offer degree programs in science and applied science. In the period 1987–97 science and engineering students accounted for 27 percent of university enrollment. As of 2003–04 there were almost 5,000 students pursuing advanced science degrees.

MEDIA

From folk dancing to new developments in film, Bulgaria has shaken off its Soviet-era inferiority complex and begun to explore new cultural paths. In literature, music, and political expression Bulgarians are seeking to identify both historic and untried avenues for national media and cultural expression.

In 1996 there were 1,053 newspapers, with a total annual circulation of 454 million. By 2003 the numbers had shrunk to about 400 newspapers with annual circulation of less than 300 million. Some 23 million copies of 5,000 book titles were published during 1996; a total of 403 cinemas were registered. In 1999 there were 4,971 books published, but the number of copies printed had greatly declined, to about 4.5 million. The number of cinemas had also declined, to 191. Television, however, showed an increase in production and audience during the same timeframe. From 30 licensed television stations in 1997, the number grew to 98 in 2003, with combined hours of programming totaling almost 500,000, as compared with a little over 250,000 in 1997. National television and radio broadcasting remain under the supervision of the National Council for Radio and Television (NCRT), a quasi-governmental body that oversees national media and regulates private broadcasters.

Some of the major newspapers in Sofia as of 2002 included *24 chasa*; *Bulgarska armiya*, published by the Ministry of Defense; *Demokratiya*; *Duma*, published by the Socialist Party; *Trud*, published by the Confederation of Independent Trade Unions; *Zemedelsko zname*, from the Agrarian People's Union; and *Zemya*, also published by the Socialist Party.

In 2004 Bulgaria was rated 36th out of 167 countries by Reporters without Borders (RWB) in its annual world press freedom index, based on surveys sent to over a hundred journalists that are members of partner organizations of the RWB as well as to related specialists such as researchers, jurists, and human rights activists. Survey questions deal with direct attacks on journalists and the media as well as other indirect sources of pressure against the free press.

In 2002 there were 630,000 Internet users and 2,597,500 cell phone users.

CULTURE

Greek, Turkish, Bulgar, and Slavic influences all come together to create a unique cultural fusion in Bulgaria. These influences can be seen in music, dance, the visual arts, and literature. Though many of the cultural artifacts of the once-great Bulgar Empire were destroyed during the centuries of Ottoman rule, other less palpable artifacts still exist.

Complex harmonies and irregular rhythms make Bulgarian music unique. Also, the throat style involved in vocal music makes Bulgarian folk song at once recognizable. Vocal music includes both Orthodox religious chants and folk songs with strong Turkish influences. In the late 20th century international interest in Bulgarian vocal music was inspired by the female choir *Le Mystère des Voix Bulgaires*, which introduced Bulgaria's polyphonic singing to a world audience, while Bulgarian folk music influenced contemporary Western musicians such as George Harrison and Kate Bush. The first performances of Bulgarian classical music date from the 1890s, and the earliest Bulgarian opera, by Emanuil Manolov, was performed in 1900. Since that time Bulgarian composers have continued to experiment in tonality with both vocal and orchestral works.

Folk instruments include the *gaida*, or bagpipe, *kaval*, or flute, the guitar-like *tambura*, violin-like *gadulka*, and the two-sided drum called the *tapan*. Traditional dances include the *horó*, a line dance, and *rachenitsa*.

Visual arts and literature were revived after the end of Ottoman rule with the nationalistic resurgence of the late 19th century. The painters Zahari Zograph and Hristo Tsokev were both important in this resurgence. Poets and writers include Hristo Botev, a rebel folk poet of the late 19th century, Dimcho Debelyanov, a lyric poet killed in World War II, and Geo Milev, a poet of the interwar period. Kidnapped and murdered by police, Ivan Vazov was one of the most prominent of Bulgarian writers. His 1893 novel *Under the Yoke* depicts the Ottoman oppression of Bulgaria and is the most famous piece of classic Bulgarian literature. In drama, the works of Georgi Karaslavov depict the Bulgarian countryside and life under Communism.

Bulgaria has a thriving film industry; 86 films were produced in 2003, many of them at the Cinema Center near Sofia.

Libraries and museums are also part of the fabric of Bulgarian life. In 2002 there were 220 museums and

49 major libraries. Museum visits totaled 3,554,515 that year, and library readers numbered 319,403. Two of the major museums in Sofia are the National Archaeological Museum and the National Ethnographic Museum. The major state libraries include the Cyril and Methodius National Library and the Central Library of the Bulgarian Academy of Sciences, both in Sofia.

FOLKLORE AND MYTHOLOGY

Bulgarian folklore is a mixture of Thracian, Bulgar, and Slavic traditions. From Thracian mythology come the mysterious Thracian Horseman (probably a god of nature and vegetation), the wine-loving Dionysus (usually called Zagreus), and Bendis, the great mother goddess, sometimes depicted riding a doe, bow in hand, with a quiver of arrows slung across her back.

After the 6th century the Thracians were absorbed into the Slavic and Bulgarian peoples who settled in the area. The most important historical person from this time to cross over into folktales was Krali Marko, who lived in the 14th century. His legend joined that of the earlier Thracian Horseman god, who was sometimes simply called Hero. There are many heroic songs—which were the traditional way of telling these epic tales—about Krali Marko's adventures with his magical horse Sharkoliya. There are also many tales about the *samodiva*, wild female nymphs of the waters, woodlands, and mountains, renowned for their exquisite singing and dancing. From the Bulgars also comes Baba Marta, the female personification of the month of March. The first of March is still a festival day in Bulgaria.

The Slavs believed in many deities, spirits of nature, and demons. Trees and animals were revered as man's ancestors. Rivers were also worshipped. Their main god was Perun, the god of thunder, who gave his name to the Pirin Mountains in southern Bulgaria. Volos, or Veles, was the god of horned animals. Female deities were less significant and included Lada and Lyulya, the goddesses of love and awakening nature. Vampires and werewolves also form a part of Slave folklore. According to Slav mythology the Morava is a race of giant vampire moths that live in the Carpathian Mountains.

A favorite folk character for hundreds of years has been Sly Peter, with his many ways of outwitting others. Other popular folk figures include the freedom fighters known as *hajduks*, who resemble the English folk hero Robin Hood.

ENTERTAINMENT AND RECREATION

Many forms of entertainment customary in Western Europe are also popular in Bulgaria. Television has become an increasingly popular medium, with 98 licensed stations in 2003 and combined hours of programming numbering almost 500,000. Reading is another popular pastime. The country has a literacy rate of 98.6 percent, 49 libraries with over 300,000 users, and a publishing industry that turned out over 4,900 titles in 1999.

Urban areas have Western-style nightlife with bars, nightclubs and discos, while in the rural areas free-time activities are of a simpler variety. Women often sew or knit while they socialize; the *sedenka* is a tradition whereby village women gather for an evening of socializing while engaged in sewing, embroidery, or other handicrafts. Men in rural areas enjoy winemaking and gardening or chatting with friends in local coffee shops.

Recreational sports such as soccer, skiing, and hiking are also popular.

ETIQUETTE

Male Bulgarians greet each other with firm handshakes, while women often exchange kisses on the cheek. Punctuality is important, especially in business settings, and titles are generally used with people's names until closer relationships have been established. Similarly, shows of affections such as backslapping are not common unless the people know one another well. However, personal space is smaller in Bulgaria, as it is throughout Europe, and people tend to sit and stand more closely together in public than North Americans are accustomed to.

Physical gestures are also unique. In the Greek and Turkish style, a "yes" in Bulgaria is signified by shaking one's head, while "no" is shown with a nod or two and a clicking of the tongue. Pointing with the index finger is considered rude, as is crossing the ankle over the knee for men. When dining, both wrists should be on the table, and it is considered polite to finish everything on one's plate.

FAMILY LIFE

Traditionally the family unit of Bulgaria was the *zadruga*, an extended family composed of 10 to 20 small families, related by blood, who lived and worked together, owned

property jointly, and recognized the authority of a single patriarch. This agrarian tradition broke up with the beginning of the 20th century as the country adopted more Western ways, such as inheritance rights for females. However, the patriarchal family format and the three-generation extended family survived into the 20th century and even beyond the years of Soviet rule. Many households today consist of an extended family comprising parents and one of their married sons—usually the youngest—or daughters. This is very often the case in the countryside. Economic pressures, however, have scaled back the family unit in urban areas to the nuclear family. Children tend to be close to their grandparents in either case, for they are often cared for by these elders while both parents work. Despite the fact that both men and women work outside the family, domestic chores still generally remain the duty of women.

In both urban and rural settings marriage is at the center of family life: more than 90 percent of all Bulgarians are married. Marriage rates, however, have been dropping, with 29,218 marriages registered in 2002 as compared to 59,874 in 1990. In 1985, because of high divorce rates, especially in cities, the government made divorce more difficult by charging a fee to apply for divorce that was equal to three months' wages. This has had little effect, however; as of 1996, 28 percent of all marriages in Bulgaria ended in divorce. In 2002 there were 10,203 divorces, which represent 349 divorces per 1,000 marriages, or 1.3 divorces per 1,000 inhabitants.

Families also tend to be small, with two or fewer children per family in the cities and a slightly higher average in the country. According to the 2001 census the average family size was 2.8 persons. Bulgaria had a low birth-rate of 9.65 per 1,000 people in 2004 and a fertility rate of 1.37 children per woman. Overall population in the country declined by 0.92 percent in 2004.

PERSONAL APPEARANCE

Though Bulgarians wear Western-style clothing now, they have a wealth of traditional dress that was worn in some parts of the country into the middle of the 20th century and can still be seen today for special ceremonies and festivals. Styles vary from region to region and also between genders. Typical to all are the richly embroidered white shirts or blouses worn with elaborately embroidered vests, always with some red or black in the background.

Women may wear colorful aprons over their skirts, and different regions wear different numbers of aprons. The main parts of the two-apron outfit are a blouse, the two aprons, and a belt. The back apron is variously called the *brachnik*, *zaveska*, *valnenik*, *peshtimal*, or *karlyanka* and features different ornamental patterns. It is widespread in northern Bulgaria. The *sukman* female costume con-

sists of a blouse, a pinafore, an apron, and a belt. The ornamentation is concentrated on the skirts and lapels of the bodice of the *sukman*. This costume is widespread in the mountainous regions and in southeastern Thrace. The *saya* attire consists of a multicolored trapeze-shaped *saya*, or blouse, an apron, and a belt. The decorative patterns on the *saya* are on the front of the bodice and on the sleeves. People wore this until the middle of the 20th century in southern Bulgaria and Macedonia. The one-apron female costume consists of a blouse and an apron. It was widespread among the Muslim Bulgarian population.

Male wear is divided into white and black costumes. The white consists of a tunic-like shirt, tight or loose trousers, called *benevretsi* or *dimii*, respectively, a belt or cummerbund, and a white vest or cloak. This clothing is decorated with linear embroidered patterns and colored braiding on the breast, the sleeves, and the trousers. The black male costume consists of a shirt, baggy trousers, a belt, and a sleeveless jacket, padded jacket, or cloak made of black woolen frieze. The trousers have a rich decoration of black braiding. The male wear in western Bulgaria is a combination of the two types: white *benevretsi* with dark blue top garments.

Examples of the variety of costumes can be seen at Bulgaria's National Ethnographic Museum in Sofia.

SPORTS

Soccer and basketball are the most popular team sports in Bulgaria. When the national team defeated the Germans in a 1994 competition for the World Cup, there were nationwide celebrations. Players and coaches such as Georgi Asparuhov, Krasimir Balakov, Hristo Bonev, Trifon Ivanov, Emil Kostadinov, Yordan Letchkov, Dimitar Penev, and Hristo Stoichkov are treated as celebrities in the country, playing for the national team and also filling the lineups of international teams.

Basketball, though not as omnipresent as soccer, is particularly popular in urban areas. The country boasts two professional leagues.

With plentiful mountains, Bulgaria is also home to skiing enthusiasts. Bulgarians also compete internationally in volleyball, track, rowing, wrestling, gymnastics, and weightlifting.

The major sporting event in the country is the National Spartakiad, with mass participation of teams, clubs, and individuals in a variety of sporting events.

CHRONOLOGY

1946 The monarchy is abolished and Bulgaria is declared a people's republic; Georgi Dimitrov is named head of government; agriculture is collectivized.

- 1947** New constitution is promulgated.
- 1948** Banks, industries, and mines are nationalized.
- 1949** Dimitrov dies; Vasil Kolarov takes over as prime minister.
- 1950** Dimitrov's brother-in-law Vûlko Chervenkov is named prime minister.
- 1954** Chervenkov yields post of first secretary of the Bulgarian Communist Party (BKP) to Todor Zhivkov, a Khrushchev protégé.
- 1956** Chervenkov loses post of prime minister to Anton Yugov.
- 1962** Yugov and Chervenkov fall from favor and Zhivkov takes over as prime minister.
- 1965** On Khrushchev's ouster in the Soviet Union, coup against Zhivkov is mounted by dissidents; coup is put down and is followed by a purge.
- 1971** Zhivkov is elevated to president and Stanko Todorov becomes prime minister. New constitution is promulgated.
- 1981** Grisha Filipov replaces Todorov as prime minister.
- 1985** Official Bulgarianization drive is launched and is directed against ethnic Turks.
- 1986** Georgi Ivanov Atanasov replaces Filipov as prime minister.
- 1987** BKP Congress approves extensive administrative reforms, including redrawing of local government jurisdictions.
- 1989** Zhivkov is ousted as regime yields to Soviet and popular pressures for reform; Petûr Mladenov is named president.
- 1990** Grand National Assembly revokes the Communist Party's monopoly of power; the State Council is abolished; an executive presidency is created; the secret police is disbanded; the Bulgarian Communist Party (BKP) renames itself the Bulgarian Socialist Party; in free elections to the National Assembly the Bulgarian Socialist Party gains absolute majority by winning 211 out of 400 seats; President Mladenov steps down in the face of allegations that he ordered the shooting of protesters during anti-Communist demonstrations in 1989; Zhelyu Zhelev, leader of the opposition Union of Democratic Forces, is elected president; Andrey Lukanov replaces Atanasov as prime minister.
- 1991** New constitution is adopted, and the Grand National Assembly is renamed National Assembly. The prime minister is made the most important government official.
- 1992** Zhelyu Zhelev becomes president and Zhan Videnov prime minister.
Some of the Bulgarian Orthodox bishops set up a rival synod.
Former Communist Party leader Todor Zhivkov is convicted of corruption and abuse of power, and imprisoned.

- 1996** An economic austerity program is launched in order to attract Western (primarily International Monetary Fund) investments.
Former prime minister and Communist leader Andrey Lukanov is assassinated.
Petûr Stoyanov is elected president.
- 1997** Despite attempts to stabilize the economy, deteriorating conditions lead to nationwide strikes and demonstrations.
The Union of Democratic Forces (UDF) wins parliamentary elections, and Ivan Kostov becomes prime minister.
Bulgaria shows eagerness to join NATO and, meanwhile, signs an association agreement with the European Union.
- 1998** Todor Zhivkov dies in August.
The Turkish minority is allowed to broadcast in Turkish for the first time in 50 years.
- 1999** During the war in Kosovo, Bulgaria allows NATO jet fighters to fly over the country on their way to bomb Serbia.
The pro-Western government seeks international aid to offset economic disruption caused by the war.
The IMF and other Western donors promise \$750 million to support Bulgaria's economy.
- 2001** The former king Simeon II's political party, National Movement for Simeon II, wins a majority of seats in parliamentary elections, and Simeon becomes prime minister.
- 2002** Stock market goes up 100 percent on strength of Simeon II victory, but his party is unable to carry through on promises for speedy economic recovery and an end to corruption and organized crime.
- 2003** October elections demonstrate growing dissatisfaction among voters with Simeon II and his policies; his party wins only 7 percent of the vote, down from 40 percent in 2001.
- 2004** Bulgaria joins NATO.
- 2005** After general elections, Socialist Party leader Sergey Stanishev becomes prime minister and leads a coalition government.

BURKINA FASO

Basic Fact Sheet

OFFICIAL NAME

Burkina Faso (formerly Upper Volta)

ABBREVIATION

BF

CAPITAL

Ouagadougou

HEAD OF STATE

President Blaise Compaoré (from 1987)

HEAD OF GOVERNMENT

Prime Minister Paramanga Ernest Yonli (from 2000)

NATURE OF GOVERNMENT

Partial democracy

POPULATION

13,925,313 (2005)

AREA

274,200 sq km (105,870 sq mi)

ETHNIC MAJORITY

Mossi

LANGUAGE

French (official)

RELIGIONS

Animism, Islam, Christianity

UNIT OF CURRENCY

Communauté financière d'Afrique franc

NATIONAL FLAG

Two equal horizontal stripes, of red and green, with a five-pointed gold star in the center.

NATIONAL EMBLEM

A shield with black, white, and red horizontal bars representing the three main branches of the Volta River: the Black Volta, White Volta, and Red Volta. Behind the shield, silver-tipped spears are crossed in saltire. On the ground is a stalk of green sorghum flanked by the two native hoes. Black-hooved white stallions rear up to paw the shield. The design is crested by a banner proclaiming the national motto: *Unité, travail, justice* (Unity, work, justice).

NATIONAL ANTHEM

“Proud Volta of My Ancestors”

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 3 (1966 Revolution Day), May 1 (Labor Day), August 8 (Independence Day), December 11 (Proclamation of the Republic), various Christian festivals, including Assumption, All Saints' Day, Easter Monday, Pentecost Monday, Ascension, and Christmas, various Islamic festivals

DATE OF INDEPENDENCE

August 5, 1960

DATE OF CONSTITUTION

June 11, 1991

GEOGRAPHICAL FEATURES

Burkina Faso, a landlocked nation located in West Africa, has an area of 274,200 sq km (105,870 sq mi), extending 873 km (542 mi) east-northeast to west-southwest and 474 km (295 mi) south-southeast to north-northwest.

Burkina Faso shares its international border of 3,193 km (1,986 mi) with six neighbors: Niger (628 km; 390 mi), Benin (306 km; 190 mi), Togo (126 km; 78 mi), Ghana (549 km; 341 mi), Côte d'Ivoire (584 km; 362 mi), and Mali (1,000 km; 621 mi).

The country is one vast plateau tilted toward the south. The average altitude is 400 m (1,312 ft), reaching the highest point at Tena Kourou (749 m; 2,457 ft).

The plateau is carved by the valleys of the three Voltas—the Black Volta, the White Volta, and the Red Volta—and their main tributaries, the Sourou and the Pendjari. The Volta, so named by the Portuguese because of its winding course, is a slow, meandering river, with water so unhealthy that people who live near its banks are highly susceptible to a variety of diseases. The most important river of the Volta system is the Black Volta, which

Burkina Faso

originates not far from Bobo-Dioulasso as two streams called the Plandi and the Dienkoa. Before it reaches the border with Ghana at Ouessa it receives a number of tributaries, such as the Kou, the Sourou, the Tui, and the Bougouriba. The Pendjari, rising in Benin, forms the border between Benin and Burkina Faso for 170 km (110 mi). Burkina Faso has one of the few permanent lakes in West Africa, the Bama, on the White Volta.

CLIMATE AND WEATHER

Burkina Faso is within the tropical savanna zone, with two alternating seasons: a rainy season from June to October and a dry season from November to May. Temperatures are high in the north, especially at the end of the dry season. In March the mean temperature in Ouagadougou is 41°C (106°F); the heat is stoked by the dry east wind from the Sahara, called the harmattan, which blows from March to May. The climate is hot and wet from May to October and pleasant and dry from November to March. The lowest average temperature is recorded between December and January, when the mercury falls to 25°C (77°F).

The rainy season lasts a maximum of five months, from May to October. Annual rainfall progressively decreases from the high of 130 cm (51 in) in the southwest to 50 cm (20 in) in the northeast.

Climate and Weather

Mean Temperature
 Summer: 106°F
 Winter: 77°F
 Average Rainfall: 51 in (southwest); 20 in (northeast)

FLORA AND FAUNA

Most of the land area of Burkina Faso consists of savanna or bush country, with a blend of grass and smaller trees such as the baobab and *kirate*, also known as the shea tree. There are 186 species of aquatic plants and 627 species of herbaceous plants, with about 3,800 recorded species of flora in all. Of the 1,100 recorded species of higher plants, two were threatened as of 2002.

An estimated 4,000 animal species have been observed in the country, including higher mammals such as the antelope, elephant, giraffe, hippopotamus, buffalo, and monkey, and amphibians and reptiles such as the crocodile. Many of these are now found only on game preserves. As of 2002, out of 147 mammal species, seven were threatened, and of 148 breeding bird species, two were threatened. The country is home to over 1,500 species of insects.

ETHNIC COMPOSITION

The principal ethnic group is the Mossi, who are estimated to make up as much as two-thirds of the total population. Other dominant tribes are the Bobo in the southwest and the Gourma in the east. The Mossi (singular: Moaga) are classified by anthropologists as a Voltaic people belonging to the Mole cluster. The Bobo, who called themselves Bwaba, are closely related to the Mande. The Gourounsi (singular: Gourounga) is a general name for those people who live between the Black Volta on the west and the Red Volta on the east, and Koudougou to the north and Ghana to the south.

Some 2,500 Europeans, mostly French, reside in the country. Together all the citizens and diverse ethnic groups of Burkina Faso are called Burkinabe.

LANGUAGES

The official language is French, but its use is restricted to the elite. The dominant Mossi speak Mooré, a language of the Voltaic or Gur subfamily of the Niger-Congo family of languages. These and other native African languages belonging to the Sudanic family are spoken by 90 percent of the population.

RELIGIONS

Burkina Faso is one of the few countries in the world in which animism is widely prevalent, as practiced by nearly 40 percent of the population. Historically, the Burkinabe have resisted the influence of Islam, but the religion now claims some 50 percent of the population as believers. The remaining 10 percent are Christian.

Roman Catholicism was introduced into Burkina Faso in 1896 by the White Fathers, who founded their first mission in 1890. Abbé Yougbare became the first West African Catholic bishop in 1956, and in 1960 Abbé Paul Zoungrana was made an archbishop and later a cardinal, the first West African to be so appointed. There are 90 parishes, with 137 African priests and 256 non-African priests. American fundamentalist missionary groups have worked in the country since 1926, and Protestant denominations claim over 25,000 members. The Sudan Interior Mission and the Christian Missionary Alliance are also active.

Christian	1,392,000

HISTORICAL BACKGROUND

Burkina Faso was founded by the descendants of the Mossi Empire who ruled the area in the 15th century. The empire was successful in resisting the Muslims, who took control of much of West Africa. The country was relatively stable and developed a mature administrative apparatus to manage the empire.

French expansion into Burkina Faso began around 1890 and was completed by Paul Gustave Lucien Voulet, who took Ouagadougou in 1896 and subjugated the entire territory. The Mossi accepted French domination as the best form of protection against their hostile neigh-

bors. The French divided the country into administrative circles but retained chiefs in their traditional roles. At first attached to the French Sudan (or Upper Senegal-Niger, as it was called from 1904 to 1920), the country was organized as a separate colony in 1919. It was partitioned again among French Sudan, Côte d'Ivoire, and Niger between 1932 and 1947, but it was reestablished as an overseas territory in 1947, with a territorial assembly of its own. It became an autonomous republic within the French Community in 1958 and achieved full independence within two years as Upper Volta.

In its years of independence, Burkina Faso has completed two full circles from authoritarian rule to democracy and back to authoritarian rule. Under the new constitution of 1991, the country seems to be moving toward democracy once again. The nation's first government, formed by Maurice Yaméogo, a political disciple of Félix Houphouët-Boigny of Côte d'Ivoire, was incapable of handling economic problems and dealing with powerful trade unions. All parties in opposition to Yaméogo's Voltaic Democratic Union (VDU) were banned shortly after independence. Yaméogo was reelected in a one-party election in 1965, but in the wake of growing student and labor dissatisfaction, he was compelled to resign in 1966. The military, under Sangoulé Lamizana, took over, suspending the constitution and dissolving the National Assembly. In 1969, in preparation for a return to civilian rule, Lamizana removed all political restrictions. The nation adopted a new constitution the following year. Under the constitution Lamizana was to retain his position as head of state, with an elected assembly and a civilian prime minister governing the country. In the first elections following the constitution's adoption, the VDU won a legislative majority, and Gerard Ouédraogo became prime minister.

Ouédraogo's tenure was marked by corruption and conflict between government and opposition parties. Government came to a standstill and was unable to respond to a severe drought in the Sahel region. In 1974 Lamizana and the army again seized control of the government. He suspended the constitution and dissolved the assembly. All political parties were banned, but trade unions were permitted to operate. Lamizana allowed political parties to resume activities in 1977, during which period a new constitution was prepared. He was reelected in elections held in 1978. The following year Lamizana banned all political parties except the Democratic Voltaic Union, the National Union for the Defense of Democracy, and the Voltaic Progressive Union.

In November 1980 the Military Committee of Recovery for National Progress (CMRPN), under Colonel Saye Zerbo, seized power in a bloodless coup. The coup leaders abolished the constitution of 1977, banned all political parties, and dissolved the National Assembly.

In November 1982 Colonel Zerbo was ousted in another military coup led by noncommissioned army officers, in which five people were killed. Maj. Jean-Baptiste Ouédraogo, who had not previously been involved in politics, emerged as the leader of the new military regime, setting up the Conseil de Salut du Peuple (CSP). The CMRPN was dissolved, and a predominantly civilian government was formed. In February 1983 several soldiers and opposition figures were arrested following the discovery of an alleged plot to reinstate the Zerbo regime. A power struggle within the CSP became apparent with the arrest in May 1983 of radical left-wing elements within the government, including the prime minister, Capt. Thomas Sankara. Major Ouédraogo announced the withdrawal of the armed forces from political life and disbanded the CSP, leaving the post of prime minister empty.

In August 1983 Sankara seized power in a coup in which an estimated 15 people were killed. Opposition politicians were placed under house arrest, a strict curfew was imposed, and the Conseil Nationale Révolutionnaire (CNR) was set up. Citizens were called to join local committees, *Comités pour la Défense de la Révolution* (CDRs), in attempts to mobilize popular support for the regime.

Sankara's regime consolidated its power through the local CDRs and brought extensive reforms to the administrative, judicial, education, and military systems. He celebrated the first anniversary of his regime by changing the country's name to Burkina Faso (loosely, "the land of upright people"). Sankara was killed in a bloody coup in 1987 led by Capt. Blaise Compaoré, Sankara's closest friend, who established control through his Popular Front. In 1989 elements of the army staged an unsuccessful coup against Compaoré.

Under political pressure in 1990 Compaoré announced plans for a new constitution as well as multiparty elections to be held at the end of 1991. The new constitution, which called for democratization, was approved by a national referendum and put into effect in June 1991. Compaoré was reelected without opposition in December 1991 for a seven-year term, and his party, the Organization of People's Democracy-Labor Movement, won a legislative majority in multiparty elections in May 1992. Youssouf Ouédraogo was appointed prime minister. However, the transition to a fuller democratic system has been slowed, and the Compaoré administration has become a virtual one-party state. In 1997 the assembly approved constitutional amendments abolishing constitutional provisions limiting the number of presidential terms to two. In 1998 Compaoré, facing opposition candidates for the first time, easily won the presidential election with 87.5 percent of the vote.

The December 1998 killing of the journalist Norbert Zongo, who was investigating a murder in which the

president's brother was possibly involved, led to months of demonstrations and strikes in the spring and summer of 1999. Compaoré finally called for an independent investigation, leading to the arrest of several members of his own Presidential Guard. Fallout from the Zongo affair was still being felt in 2000, leading to strikes by students and demands for election reform. In the municipal elections held in September the ruling Congress for Democracy and Progress won 802 of the 1,100 seats available. In order to help facilitate election reforms, the prime minister, Kadré Désiré Ouédraogo, resigned and was replaced by Ernest Paramanga Yonli. The World Bank announced in 2000 that Burkina Faso, as the third-poorest country in the world, would receive \$700 million in debt relief.

Relations with neighboring Côte d'Ivoire worsened as thousands of Burkinabes returned home from that country in 2001, protesting harassment and persecution by Ivorian officials. AIDS has become a significant health problem in the country, with an estimated 4 percent of the population infected with the virus. Parliamentary elections held in 2002 demonstrated a weakening of Compaoré's hold on power. His Congress for Democracy and Progress won 57 of 111 seats, barely maintaining its majority. In 2003 over 350,000 Burkinabes fled the civil war in Côte d'Ivoire, and in October that year 16 people—including an opposition political leader—were arrested for allegedly plotting a coup against Compaoré. In 2004 locusts hit the north of the country, destroying 90 percent of crops and creating extreme food shortages.

Presidential elections for 2005 were to be held under a new constitutional provision from 2000 decreeing a five-year term and a maximum of two terms. It was unclear whether the law would apply to Compaoré, who had already held office twice.

LIST OF MODERN RULERS

Head of State

1959–66	Maurice Yaméogo (president)
1966–80	Abubakar Sangoulé Lamizana (president)
1980–82	Saye Zerbo (chairman of the Military Committee of Recovery for National Progress)
1982–83	Jean-Baptiste Ouédraogo (chairman of the Committee of Popular Salvation)
1983–87	Thomas Sankara (chairman of the National Revolutionary Council)
1987–91	Blaise Compaoré (chairman of the Popular Front)
1991–	Blaise Compaoré (president)

Prime Minister

1971–74	Gérard Kango Ouédraogo
1974–78	Sangoulé Lamizana

1978–80	Joseph Conombo
1980–82	Saye Zerbo
1983	Thomas Sankara
1992–94	Youssouf Ouédraogo
1994–96	Roch Marc Christian Kaboré
1996–2000	Kadré Désiré Ouédraogo
2000–	Paramanga Ernest Yonli

CONSTITUTION

The constitution that was put into effect on June 11, 1991, provides for separate executive, legislative, and judicial branches of government, aiming to reduce the president's powers. It also calls for presidential elections to be held every seven years. In a separate decree on June 11, Capt. Blaise Compaoré dissolved the country's government, leaving the administration of ministerial affairs in the hands of permanent secretaries until new appointments could be made. The president appoints the prime minister.

In 2000 the constitution was amended to limit the president to a five-year term, renewable once, beginning with the 2005 presidential election.

PARLIAMENT

Burkina Faso has a bicameral legislature. The lower house, the National Assembly, consists of 111 members elected by popular vote in 30 multimember districts. Members serve five years. The upper house, the House of Representatives, was created by the constitutional reforms of 1991 but was not formed until 1995. The House of Representatives consists of 178 members elected or appointed to represent particular societal constituencies.

POLITICAL PARTIES

Political parties were legalized in 1992. While the country has numerous political parties, the Organization for People's Democracy–Labor Movement—an amalgam of former Communist parties—controls the majority of seats in the National Assembly. In the 1997 elections the Organization for People's Democracy ran as the Popular Front. The second largest party is the National Convention of Progressive Patriots–Social Democrats. In the 2002 parliamentary elections, the Congress for Democracy and Progress (CDP), the party of President Compaoré, won a slim majority of seats, with the African Democratic Rally–Alliance for Democracy and Federation (RDA-ADF) in second place, the Party for Democracy and Progress (PDP/PS) in third, and the Democratic Convention for Federation (CDF) and the Party for African Independence (PAI) tied for fourth.

LOCAL GOVERNMENT

Burkina Faso is divided into 45 provinces, which are further divided into 300 departments and over 7,000 villages. Municipal elections are held regularly to choose local officials.

LEGAL SYSTEM

The Burkinabe legal system is an amalgam of French civil law and African customary law.

Before 1984 the apex of the judiciary was the Supreme Court at Ouagadougou, with four chambers: constitutional, judicial, administrative, and fiscal. It was abolished in 1984 and replaced by two high appeals courts for public and private criminal and civil cases, in accordance with French judicial practice. There are four courts of first instance, at Ouagadougou, Bobo-Dioulasso, Ouahigouya, and Fada Ngourma, with competence in criminal, commercial, and civil law. For cases involving common law there are several magistrate courts in the separate departments and a court at Ouagadougou.

The government's oft-stated aim is to ensure that European-imposed judicial procedures do not deny fair access to justice for an overwhelmingly illiterate, impoverished population. The 1991 constitution provides the rights to public trial, access to counsel, and appeal. In 1995 the office of ombudsman, or *médiateur du faso*, was set up to resolve disagreements between the state and private citizens. The judiciary has continued to function for criminal and civil cases. Nominally independent, the judiciary is appointed by the president, who thus has considerable influence over its decisions.

HUMAN RIGHTS

In terms of political and civil rights Burkina Faso is classified as a country that is not free. Under the Third Republic, established with the 1977 constitution, Burkina Faso made considerable progress toward securing basic human rights for its people. Until the 1980 coup there were no political prisoners, the right to a fair trial was guaranteed, the judiciary was independent of the executive, there were no political or security courts, arbitrary arrests and imprisonment were relatively uncommon, and searches of private homes could not take place at night and were permitted only with search warrants during the day. The media, although government owned, could comment freely and critically on government policies and actions, and labor unions often exercised their right to strike without fear of reprisal. Any group or organization could hold public meetings. Participation in the political process was open to all citizens. The 1980 and subsequent coups curtailed most, though not all, of

these significant gains. Compaoré was widely criticized for the summary executions of those implicated in the 1989 coup.

The 1998 murder of the investigative journalist Norbert Zongo, who was investigating a death that may have implicated the entire Compaoré family, highlighted the lack of basic human rights in the country and led to mass demonstrations and strikes, some of which were brutally put down by security forces.

In 2001 human rights campaigners accused the government of carrying out extrajudicial killings in its campaign against a recent upsurge of armed robberies. Despite the government's denial of the allegations, Amnesty International called for an official investigation. Later in the year the government announced that it would allocate \$7.75 million to compensate victims and families of victims of past human rights abuses.

Illegal detention still persists in the country. In 2003 authorities arrested Norbert Tiendrebeogo, the leader of the opposition Social Forces Front party, along with 15 others in connection with an alleged coup plot. The 16 were held without charge for far longer than the constitution allows.

FOREIGN POLICY

Burkina Faso's foreign relations have undergone two transformations in the last 17 years. After the 1983 coup Sankara changed a moderately pro-French and pro-Western foreign policy into a radical, Libyan-influenced one. Sankara tried to rid the country of all vestiges of its colonial past (such as by changing the country's name from Upper Volta to Burkina Faso) and carried out widespread arrests of pro-French officials. Relations with neighbors were also strained, especially with Mali over Agacher Strip and with Togo over Burkinabe complicity in a coup attempt against President Eyadema.

The assassination of Sankara in 1987 led to an about-face in the nation's foreign relations. The new president, Compaoré, was a francophile who was a friend of Côte d'Ivoire's President Houphouët-Boigny. Relations with Ghana and Mali also improved, although the presence of Malian refugees in Burkina proved a continual irritant. Regional cooperation efforts have been the focus of Compaoré's foreign initiatives. He hosted the first summit of the West African Economic and Monetary Union in 1996.

Relations with Côte d'Ivoire grew strained in 2002 and 2003 as a result of unfair treatment of Burkinabe citizens living in the neighboring country and the fallout of the Ivorian civil war. Côte d'Ivoire accused Burkina Faso of providing a staging ground for Ivorian rebels. Also, relations with neighboring Benin became strained over boundary disputes.

DEFENSE

Burkina Faso's defense structure is headed by the president as commander in chief; the chain of command runs through the minister of defense. Military service is compulsory for able-bodied men over the age of 18 and lasts for 18 months. The total strength of the armed forces in 2002 was 5,800. There is no navy.

Burkinabe armed forces have no offensive capability. The bulk of military aid is received from France. In 2003 the country spent \$52.7 million, or 1.6 percent of gross domestic product (GDP), on defense.

ECONOMY

One of the poorest countries in the world, landlocked Burkina Faso has a high population density, few natural resources, and fragile soil. About 90 percent of the population is engaged in (mainly subsistence) agriculture, which is highly vulnerable to variations in rainfall. Industry remains dominated by unprofitable government-controlled corporations. Following the African franc currency devaluation in January 1994 the government updated its development program in conjunction with international agencies, and exports and economic growth have increased. Maintenance of its macroeconomic progress in 2001–02 depended on continued low inflation, reductions in the trade deficit, and reforms designed to encourage private investment.

Part of this plan was also dependent on cotton, the sale of which accounted for 60 percent of the country's exports in 2001. Unfortunately, although the country experienced a 35 percent increase in cotton production in 2002, the world cotton market plummeted that year, destroying any production gains through reductions in sale prices. In the spring and summer of 2002 the country was hit with strikes, as thousands of workers demonstrated against low wages and plans for continued privatization. In 2004 an infestation of locusts destroyed 90 percent of the agricultural production in the north of the country, further worsening the economic situation and creating an acute food shortage.

ENVIRONMENT

The environment of Burkina Faso has suffered in recent years because of drought that has rapidly increased the rate of desertification and soil erosion. The country's growing population and uneven population distribution have also put a strain on natural resources. The capital, Ouagadougou, is surrounded by a dead zone over 40 miles wide in which all trees have been stripped for use as fuel.

National parks and game preserves are the only places that large mammals such as elephants and buffalo can be found.

LIVING CONDITIONS

Burkina Faso ranks among the bottom of countries worldwide in measures of quality of life. With 90 percent of the population living on subsistence farming, large numbers are in poverty and lead precarious lives subject to droughts and other natural disasters.

On the United Nations Human Development Index (HDI), Burkina Faso ranked 175th out of 177 countries in

the world in 2002. The HDI focuses on three measurable dimensions of human development: length and healthiness of life, education, and standard of living. Estimated life expectancy in 2004 was 44.2 years. Combined gross enrollment (not counting grade repeaters) in primary, secondary, and tertiary schools for 2001-02 was just 22 percent of eligible students. In terms of multiple measures of poverty, Burkina Faso was ranked the poorest in the world in 2002.

Almost half the population is under 15, and only 17 percent live in urban areas. For the vast majority of Burkinabes who live in villages, little has changed in their lives for hundreds of years. Round adobe huts with thatched roofs are still the norm, though corrugated aluminum roofs have become modern status symbols. The lack of proper sanitation and access to adequate and safe water is problematic. Village women often have to walk miles each day to search for fuel and water, though the construction of wells has made life easier for some. Modern conveniences such as electricity are scarce. Radios are powered by batteries and kerosene-lit lamps are typical.

In the cities architecture is generally French in inspiration. With rapid urbanization has come a housing shortage; most houses are quickly constructed with mud or brick and plaster. Even in urban areas, access to proper sanitation and drinking water is limited. As a result of all of these conditions, disease and malnutrition are widespread.

HEALTH

Health care in Burkina Faso is in a state of disarray. The country is plagued by a high incidence of malaria, gastrointestinal diseases, and HIV/AIDS, yet the medical delivery system is ill equipped to deal with such crises.

Periodic droughts and even plagues of locusts, as in 2004, have devastated crop production, leading to acute malnutrition and sometimes outright starvation. As of 2000, 19 percent of the population was undernourished. Only 51 percent of the population in 2001 had access to improved water sources. In addition to malaria, onchocerciasis (river blindness), sleeping sickness, leprosy, yellow fever, and bilharzia are endemic. HIV/AIDS has grown to near epidemic proportions, as it has in other sub-Saharan African nations. As of 2001, 4 percent of the population was infected by the virus. In 2003 there were 29,000 HIV/AIDS deaths and 300,000 people living with HIV/AIDS. By 2003 there were already 260,000 AIDS orphans. Antiretroviral drugs were not readily available.

Infants traditionally experienced low immunization rates, but a government-funded immunization program has helped to alleviate this inadequacy. In 2002, only 46 percent of one-year-olds were immunized for measles and 41 percent for diphtheria, pertussis, and tetanus. The infant mortality rate was 98.67 deaths per 1,000 live

births. The death rate in 2004 was 18.79 deaths per 1,000 people.

Hospitals exist only in the leading towns, but the government has improved primary health care by raising the number of village clinics to 7,000. As of 2004 there were only 4 doctors for every 100,000 people. Government expenditures on health care in 2001 totaled 1.8 percent of GDP.

In 2003 international donors agreed to provide \$123 million to fund the first phase of Burkina Faso's National Health Development Plan, modernizing the medical delivery system. Although a meningitis epidemic took more than 900 lives in 2003 and malaria remains a major cause of death in the country, with 5,000 dying annually, the plan particularly focuses on the rising incidence of HIV/AIDS.

In rural areas many still use traditional health-care methods; villages usually have someone who knows how to treat simple bone fractures, for example. Traditional cures are mixed with beliefs about magic, with fetishes and incantations used. Some herbal remedies are also employed.

 Access to Improved Water Source %: 51

FOOD AND NUTRITION

Grains such as millet and sorghum are the dietary staples of Burkinabes. A porridge made from millet is eaten at most meals. Boiled until firm, the porridge can be broken off like bread and then dipped into sauces, which also make up a part of almost every meal. These sauces include sauce with rice, *riz sauce*, vegetable sauce with rice, *riz gras*, a fish-based sauce, *sauce de poisson*, sauce with beef and eggplant *boeuf sauce aubergine*, and sauce with mutton and tomatoes, *mouton sauce tomate*, though meat is usually considered a luxury item. In rural areas, bush rat is considered a delicacy.

Corn and rice are also grown and consumed, though not in the same quantities as millet. Sorghum is used to brew a local beer.

Malnutrition is a chronic problem in the country. As of 2000, 19 percent of the population was undernourished. Children breastfeed longer than elsewhere because of general food supply difficulties. In 2003, 87 percent of children 20 to 23 months were still breastfeeding. In the same year 12 percent of children under five were severely underweight.

Food and Nutrition

Food Supply as % of FAO Requirements: 95
 Undernourished % of total population: 18.8
 Daily Available Calories per capita kcal: 2,320
 Amount of Cereal Available per person per year kg: 217.8
 Amount of Fruits and Vegetables Available per person per year kg: 24.2

STATUS OF WOMEN

The role of women in Burkina Faso is still limited by the cultural orientation of a rural society. The current government has emphasized its commitment to expanding opportunities for women, including educational opportunities. The Ministry of Family Progress, for example, works to promote greater participation by women in the nation's economic, social, and political life.

The few constitutional and legal protections for women's rights are poorly enforced. Discrimination against women is traditional. Female genital mutilation is still widely practiced, even though it is illegal and a government campaign has been mounted against it. Almost 70 percent of all women undergo female genital mutation; in 1994, 3.5 million women and girls were affected. Burkina Faso is used as a transit point for the trafficking of women and children for purposes of forced labor and prostitution; the government has made an effort to stop this criminal activity.

Women-headed Households %: —
 Seats Held in Parliament by Women %: 12
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men age 15-24: 0.55
 Women's Share of Wage Employment Non-agricultural %: 15.2

WORK

In 2003 there were an estimated 5 million in the labor force, with many also gaining seasonal employment in neighboring countries. About 90 percent of workers were engaged in agriculture, most at the subsistence level. There are no statistics on unemployment. Agricultural products, which made up 39.8 percent of GDP in 2003, include cotton, peanuts, shea nuts, sesame, sorghum, millet, corn, rice, and livestock. The remainder

of the workforce was divided between industry and the service sector. Industry, which accounted for 19.6 percent of GDP in 2003, produces cotton lint, beverages, agricultural processing, soap, cigarettes, textiles, and gold. The service sector accounted for 40.6 percent of GDP in 2003.

The right to form unions is recognized for all except police officers. The right to strike is also guaranteed. There were 12 trade unions and four labor confederations operating in the country in 2002. Labor laws include a minimum working age of 14, a maximum workweek of 40 hours, and a minimum monthly wage in 2002 of \$40. However, as agriculture is the primary industry, and as most agriculture is done at the subsistence level and thus not covered by legislation, such employment regulation figures are virtually meaningless—nor are health and safety regulations enforced.

Employment and Labor

Labor Force Total: 5,000,000
 Female Participation Rate %: 46.4
 Labor by Sector: %
 Agriculture: 90
 Other: 10
 Unemployment %: —

EDUCATION

Education is free, compulsory, and universal between the ages of seven and 13.

Schooling lasts for 13 years, as divided into six years of primary school, four years of lower secondary school, and three years of upper secondary school, culminating in the baccalaureate. Nearly 7 percent of primary-school students and 43 percent of secondary-school students are enrolled in private schools. School enrollment figures in the country are among the worst in Africa. In the 2000–01 school year, 36 percent of eligible children attended primary school, 64 percent of whom reached the fifth grade. The school year runs from October to July. The language of instruction is French throughout. Higher education is primarily provided by the University of Ouagadougou, with an enrollment of about 3,086 students.

Improvements have been made in the country's educational system, as witnessed by trends in adult literacy. From an adult literacy rate of about 13 percent in 1995–99, the estimated 2003 adult literacy rate had risen to 26.6 percent. Public expenditures on education amounted to about 3 percent of GDP in 1999, and by 2003 more than 100,000 children who may have never had access to primary school had benefited from 230 new satellite schools being built across the country, largely with the help of international funds.

 Third Level: Institutions: 9
 Teachers: —
 Students: 16,054
 Gross Enrollment Ratio: 1.4
 Public Expenditure on Education as % of GDP: 3.0

SCIENCE AND TECHNOLOGY

Research and development in Burkina Faso is primarily limited to agriculture and medicine. With government funding of research and development at less than 0.2 percent of GDP, the four major research institutes in the nation need to look for funding from abroad—primarily from France. France maintains two additional research institutes in the country, focusing on medicine and geology. Also, the International Development Research Center has been active in the country since 1974, focusing its research on different aspects of the country's major subsistence crops, including resistance to drought and pests, storage, and productivity.

Many Burkinabes go abroad to attain science educations, though the University of Ouagadougou has institutes of mathematics and physics, chemistry, natural science, technology, and health sciences. The University of Ouagadougou is also the center for nuclear research in the country. A 14-nation school of engineering and rural equipment is also located in Ouagadougou. In 1987–97 science and engineering students accounted for 37 percent of college and university enrollments.

 Patent Applications by Residents: —

MEDIA

Three daily newspapers are published in the country, including the government-funded daily *Sidwaya*. Aggregate

daily circulation is 15,000. The press is characterized by active government participation and ownership but no overt censorship.

The national news agency is Agence Burkinabe de Presse (ABP). AFB, Reuters, UPI, and Tass maintain bureaus in the capital.

The state-owned Radiodiffusion-Télévision Burkina, founded in 1963, operates a television and radio service. Additionally Radio Bobo is a regional service. There are about a dozen private radio stations, including Radio Pulsar and Radio Horizon, and a private television channel.

In 2004 the country ranked 64th in the world out of 167 countries by the Reporters without Borders (RWB) in its annual world press freedom index, based on surveys sent to over 100 journalists who are members of RWB partner organizations as well as related specialists such as researchers, jurists, and human rights activists. Survey questions deal with direct attacks on journalists and the media as well as other indirect sources of pressure against the press. The killing of the journalist Norbert Zongo in 1998 had a chilling effect on the media, leading in some cases to increased self-censorship.

In 2003 there were 48,000 Internet users and 227,000 cellular telephone users.

CULTURE

With the more than 60 different ethnic groups that make up the population, Burkina Faso cannot be said to have one culture. The culture of the country is determined by those ethnic groups—most prominent among them the Mossi—and by the French colonial holdovers, as seen in some of the architecture of the capital, Ouagadougou.

Native tribes such as the Mossi and Bobo are known for the artwork of the masks they create for certain rites of passage, such as funerals and weddings. The Mossi antelope masks, some of which are over seven feet in height, are painted red and white and used for funerals. Butterfly masks come from the Bobo; they are painted in red, black, and white and used for fertility ceremonies.

The Mossi professional praise singers, or *djeli*, perform at funerals and social gatherings, reciting the names and histories of past rulers. Mossi song, dance, and drumming are also well known and are used during special rites as well as to celebrate such everyday activities as work.

One clan makes drums that can be played by hand or with sticks and whose pitch can be altered by tightening or loosening the drumhead. The Mossi also play flutes and stringed instruments. Some other typical traditional instruments are the *djembe*, a drum of Malinke origin, the wooden xylophone known as the *balafon*, the *bende*, a halved gourd covered with a goat skin, and the *kora*, a stringed instrument used by the *djeli* singers.

More contemporary culture deals with film and crafts. Ouagadougou draws large numbers of visitors to the biennial Pan-African Film Festival (FESPACO), which over the years has become a showcase for African independent cinema. Burkinabe filmmakers such as Gaston Kaboré and Idrissa Ouédraogo produce feature-length films in the Mooré language; such films are thus accessible to at least half the Burkinabe population and have also been exported to other African countries and Europe. The International Crafts Fair, which is held in alternate years, celebrates the rich and diverse craft production of the nation's artisans. It is the largest such fair on the African continent.

FOLKLORE AND MYTHOLOGY

The folklore and mythology of Burkina Faso is particularly rich, again thanks to the number of ethnic groups in the country. The Mossi, the dominant ethnic group, are descendants of a complex empire with intricate court rituals. The Mossi have a subsequent wealth of oral tradition that not only details the history of the golden age of the Mossi Empire but also lays out a creation myth and has a treasury of proverbs by which wisdom and learning were passed on from generation to generation. One common Mossi proverb is “Words are spoken with their shells, let the wise man come to shuck them.”

Mossi professional praise singers, or *djeli*, perform at funerals and social gatherings, reciting names and histories of past rulers, but the society as a whole also partakes in this oral tradition. The origins of the Mossi people are detailed in the story of Princess Nyennega, who married against her father's wishes, and whose son, Ouédraogo, ultimately united the two tribes that became the Mossi.

Many of the other ethnic groups of the country were converted to Islam from their native animism; hence their

original folklore tends to be overlaid with stories from the Koran as well as from the Old Testament.

ENTERTAINMENT AND RECREATION

While major urban areas have nightclubs and cinemas as in the West, most of the country does not even have access to electricity. Therefore, entertainment and recreational activities are of the traditional sort, revolving around festivals or important rites of passage. Storytelling and singing are important traditions among all ethnic groups. The Mossi's professional class of praise singers, the *djeli*, perform at funerals and social gatherings, reciting the names and histories of past rulers. The West African game of *warri* was once popular, especially among the Mossi, though its popularity has faded in recent years.

Radio is a popular source of entertainment in the countryside and in villages, as radios can run on batteries; television, meanwhile, is all but nonexistent in the villages. In 1999 there were only 11 televisions for every 1,000 people, and the country's television stations broadcast on a limited schedule. While the country boasts a new movie industry and holds the influential Pan-African Film Festival, this form of entertainment is limited to urban areas. As of 1997 there were only 0.45 movie attendances per person per year and 5.04 seats for every 1,000 people. With high illiteracy rates, reading is not popular outside of urban areas. In 1997 there were only five books published in the country.

ETIQUETTE

As throughout Africa, the right hand is used for greetings, offerings, and eating. The left hand is taboo. Failing to greet or show respect to elders is considered a grave infraction of the etiquette code. Respect is demonstrated in numerous ways, including prostration. The Mossi in particular are known for their kindness and generosity toward strangers.

FAMILY LIFE

As most of the population farms on a subsistence level, and as property is not individually owned but rather allocated on a kinship basis, the family is the most important domestic unit for all Burkinabe. Even those in cities generally have some connection to rural areas, as social welfare programs and pensions are not common. Thus, city dwellers ultimately rely on the land they can farm by right of kinship privileges.

Polygamy is common in the patriarchal family structure, even in non-Muslim groups. Each wife has her own

hut for herself and her children in the family compound. Among the Mossi and other ethnic groups, marriages have been traditionally arranged by parents when their children are usually around 10 to 12—or in some cases even before the child has been born. The family of the female child to be married will often receive gifts from the family of the groom, with the gifts increasing in value as the marriage approaches. This is known as the “bride price” and is something like a reverse dowry. Also, to show respect to the family of the bride, the groom will often do some work or other favors for the family. After the marriage, the couple generally moves in with the husband's family. If a husband dies, the children remain with the father's family, and his wife will marry his brother. In most ethnic groups, the bride is brought in from outside the patrilineal family, though among the Dyula, for example, cousins were at one time chosen as wives—a custom that is dying out. Also, though most ethnic groups transfer goods and property rights patrilineally, some do so matrilineally.

Some of these traditions are breaking down in the modern world, and even in traditional settings not all marriages are arranged. Nevertheless, roles are strictly established so that families can survive. Men traditionally work the fields, while women take care of domestic chores. Children help to gather fuel and water and to watch over the family's animals. Family size is decreasing, though in 2004 the fertility rate was still a prolific 6.28 births per woman. However, with the death rate at 18.79 deaths per 1,000 population, the infant mortality rate at 98.67 deaths per 1,000 live births, and a life expectancy of only 44.2 years, the population growth rate was just 2.57 percent in 2004.

PERSONAL APPEARANCE

Western-style clothing is fast becoming the norm in Burkina Faso, as elsewhere in the world. Used cut-off jeans and T-shirts or locally made cotton shirts are typical for men and youths working in the fields, while women buy cotton fabric from stores to wrap around their waists. In both the cities and the countryside most women now also wear tops or blouses.

Cotton was an important precolonial crop, as it has once again become. The men traditionally wove the cotton into cloth, while the women processed it, making loose trousers for the men, with long shirts and robes, and colorful rectangular cotton strips for themselves, which they could wrap around their waists as skirts. For special occasions people had embroidered clothing.

Muslim men have adapted this traditional look to the modern world, wearing the cotton pants and long shirt. Some older men still wear traditional ethnic robes.

Whether Western or traditional, the dress of the Burkinabe tends to be conservative.

SPORTS

Soccer is the national sport of Burkina Faso, as it is throughout most of Africa. Bicycle racing is also immensely popular. Though the country has a national basketball team, its importance is small outside of urban areas.

In track and field, Idrissa Sanou is a Burkinabe runner who took a bronze medal in the 400-meter race at the 2002 Athletics World Cup. In the 2004 Summer Olympics he took fourth place in his heat for the 100-meter race and thus did not make it into the second round.

CHRONOLOGY

- 1960** Burkina Faso (under the name Upper Volta) achieves independence, with Maurice Yaméogo as president. A new constitution is approved.
- 1965** Yaméogo is reelected president, earning 99.98 percent of the votes cast.
- 1966** Following a general strike, mobs attack the National Assembly and other public buildings in the capital; the army chief of staff Sangoulé Lamizana assumes supreme power and compels Yaméogo to resign; the constitution is dissolved; a consultative committee of 41 members replaces the National Assembly.
- 1969** Former president Yaméogo is sentenced to five years at hard labor.
- 1970** Lamizana announces a new constitution and renewal of political activities. In the first elections since 1965, the Union Démocratique Voltaïque (UDV) wins 37 of 57 seats.
- 1971** Gerard Kango Ouédraogo, head of the UDV, is elected premier by the National Assembly. Drought of unprecedented severity hits the Sahel.
- 1974** Military dismisses Premier Ouédraogo, suspends the constitution, and dissolves the National Assembly; Lamizana assumes the post of premier; all political parties are abolished; National Consultative Committee for Renewal is set up with 65 appointed members. Border dispute between Mali and Burkina Faso erupts into border clashes; four West African heads of state, meeting in Lomé, order a truce in the border war; under the auspices of a mediation commission, Mali and Burkina Faso reach agreement.
- 1977** New constitution and a return to civilian rule are approved in popular referendum.
- 1978** In national elections, the UDV gains a clear majority in the restored National Assembly; Joseph Conombo is elected premier by the National Assembly; Lamizana is elected president for five-year term.
- 1980** President Lamizana is overthrown in an army coup led by Saye Zerbo; Zerbo abolishes the constitution of 1977, dissolves the National Assembly, and bans all political parties.
- 1982** Zerbo is ousted in an army coup led by Jean-Baptiste Ouédraogo, who sets up the Conseil de Salut du Peuple (CSP).
- 1983** Premier Thomas Sankara is arrested but later released. The armed forces withdraw from politics and the CSP is disbanded. Sankara ousts Ouédraogo and sets up a left-leaning regime called the Conseil National Révolutionnaire (CNR).
- 1984** Upper Volta is renamed Burkina Faso, meaning “the land of upright men.”
- 1987** Sankara is overthrown in a bloody coup led by Blaise Compaoré.
- 1989** Seven men, including the minister of defense, are executed for attempting to overthrow Compaoré.
- 1990** Under pressure, Compaoré announces plans for a new constitution calling for democratization as well as plans for multiparty elections to be held at the end of 1991.
- 1991** A national referendum approves the new constitution, which immediately goes into effect.
- 1994** The World Bank reports that the country has made significant strides in economic progress.
- 1997** A constitutional amendment permits an unlimited number of presidential terms.
- 1998** Compaoré, facing opposition candidates for the first time, easily wins the presidential elections.
- 2000** Ernest Yonli is appointed prime minister. The World Bank announces in July that Burkina Faso will receive \$700 million in debt relief. The constitution is amended to limit the president to a 5-year term, renewable once, beginning with the 2005 presidential election.
- 2001** Thousands of Burkinabes return home from Côte d’Ivoire, protesting harassment and persecution by officials there. Tensions increase between the two countries. An outbreak of 7,000 cases of meningitis begins in April. HIV/AIDS reaches record levels: 7 percent of the population is reported infected.
- 2002** In parliamentary elections Compaoré’s Congress for Democracy and Progress party barely maintains its majority, winning 57 of 111 seats.
- 2003** Over 350,000 Burkinabes flee violence brought about by the civil war in Côte d’Ivoire. The meningitis outbreak takes 900 lives. In October, 16 people—including an opposition politi-

- cal leader—are arrested for allegedly plotting a coup against Compaoré.
- 2004** Swarms of locusts appear in the north in August, devastating crop production by as much as 90 percent.
- 2005** President Compaoré wins a third term in office.

BURUNDI

Basic Fact Sheet

OFFICIAL NAME

Republic of Burundi (République de Burundi, Republika y'u Burundi)

ABBREVIATION

BD

CAPITAL

Bujumbura

HEAD OF STATE & GOVERNMENT

President Pierre Nkurunziza (from 2005)

NATURE OF GOVERNMENT

Republic

POPULATION

6,370,609 (2005)

AREA

27,830 sq km (10,745 sq mi)

MAJOR ETHNIC GROUPS

Hutu and Tutsi

LANGUAGES

Kirundi and French

RELIGIONS

Christianity and animism

UNIT OF CURRENCY

Burundi franc

NATIONAL FLAG

A white saltire extending from a central circle containing three green-bordered red stars. The upper and lower fields divided by the saltire are red, while the left and right fields are green.

NATIONAL EMBLEM

A yellow-bordered red shield displaying the gold head of an African lion; the shield is set against a backdrop of white native spears in the form of a tripod. Beneath is a white scroll with the national motto in black: "Unity, Work, Progress."

NATIONAL ANTHEM

"Beloved Burundi"

NATIONAL HOLIDAYS

January 1 (New Year's Day); May 1 (Labor Day); July 1 (Independence Day, National Day); September 18 (UPRONA Day); October 13 (Hero of the Nation, Prince Louis Rwagasore Day); November 28 (Republic Day); Christian festivals, including All Saints' Day, Ascension, Pentecost, Assumption, and Christmas

DATE OF INDEPENDENCE

July 1, 1962

DATE OF CONSTITUTION

November 1, 2004

GEOGRAPHICAL FEATURES

Burundi, a landlocked country in the heart of Africa, has an area of 27,830 sq km (10,745 sq mi), extending 263 km (163 mi) north-northeast to south-southwest and 194 km (121 mi) east-southeast to west-northwest.

Burundi's total international border of 974 km (605 mi) is shared with three countries: Rwanda (290 km; 180 mi), Tanzania (451 km; 280 mi), and the Democratic Republic of the Congo (233 km; 145 mi).

Burundi is part of the Great East African Plateau, forming the divide between two watersheds: the Nile and the Zaire River basins. The western slopes of the Zaire-

Nile ridgeline abruptly merge into the Great East African Rift Valley toward the Rusizi Plain and Lake Tanganyika, while the eastern slopes shelve toward the central uplands. There are three natural regions within this configuration: the Rift Valley, known as the Imbo, along the western border; the eastern zone, known as Kumoso; and the central mountain region.

Burundi's rivers are connected to two major river basins: those of the Zaire and the Nile rivers. The most important river flowing into the Democratic Republic of the Congo system is the Rusizi, which has its source in Lake Kivu and forms the border between that country and Burundi.

Population of Principal Cities (1999)

Bujumbura	319,098
Gitega	23,500

CLIMATE AND WEATHER

Despite its location within 5° of the equator, no region of Burundi is uncomfortably hot. The central plateau enjoys pleasant weather, with an average temperature of 20°C (68°F). The Imbo is warmer, averaging 23°C (73°F). The capital, Bujumbura, has an average annual temperature of 25°C (77°F). The upper elevations of the eastern plateau generally are cool, with temperatures below 19°C (66°F), but the easternmost savannas are hotter, with temperatures up to 23°C (73°F).

Although some rain falls every month, two wet seasons alternate with two dry seasons. June, July, August, January, and February are considered dry months, while the first wet season lasts from March to May and the second wet season from September to December. Rainfall is irregular, falling most heavily in the northwest. In the plateaus the average rainfall is 119.4 cm (47 in), but in the lower regions it declines to 76.2 cm (30 in) per year. Violent rainstorms are common at the higher elevations.

Climate and Weather

Central Plateau: 68°F
Imbo and Savanna: 73°F
Bujumbura: 77°F
Eastern Plateau: 66°F
Average Rainfall: 30 in to 47 in

FLORA AND FAUNA

Severe deforestation has denuded most of the country, leaving savannah grassland in most locales. Wooded areas are found only at plateaus of higher elevations and on mountain slopes. Remaining trees include fig, acacia, eucalyptus, and oil palm. There are 2,500 recorded species of higher plants.

With deforestation and also with widespread poaching has come a corresponding loss of wildlife. Large mammals, such as lions, wild boar, warthogs, baboons, antelope, and hippopotamus are endangered and seen mostly in the country's game preserves, while the elephant has become almost extinct. In total, there are 107 known species of mammals, six of which were endangered as of 2002. More than 450 species of breeding birds have been identified, as well as game birds, including quail, duck, geese, and guinea fowl. In the waters of Lake Tanganyika along the country's southwestern border are found over 100 fish species unique to Burundi. The lake also has freshwater sardines, Nile perch, and numerous tropical fish. Burundi is also home to 79 species of reptile (including crocodiles) and 18 amphibian species.

ETHNIC COMPOSITION

The ethnic composition of Burundi is relatively simple, especially in comparison with neighboring countries. The population is made up mainly of Hutu (properly Bahutu) and Tutsi (also known as Watutsi, Watusi, or Batutsi) peoples, who constitute 83 percent and 15 percent of the inhabitants, respectively. The Twa, a pygmoid group, and small numbers of Europeans and Asians account for the remaining 2 percent.

Burundi had, until quite recently, a feudal social system in which the Hutu, though numerically dominant, functioned as serfs and the Tutsi as masters. As a consequence, the Hutu have adopted a number of Tutsi cultural traits and social values. The two tribes differ markedly in physical appearance. The average Hutu is short and stocky, while the Tutsi are tall, slender, angular, and relatively light-skinned.

LANGUAGES

The two official languages of Burundi are Kirundi and French. Swahili is spoken as a lingua franca throughout the country.

Kirundi is closely related to Kinyarwanda, an official language of Rwanda. All Burundians speak Kirundi, but there are dialectical variations.

RELIGIONS

Burundi has no official religion. In terms of numbers, Christianity claims over 63 percent of the population, in-

digenous religions 23 percent, and Islam 10 percent. Of the Christians, nearly 93 percent are Roman Catholics, and 7 percent are adherents of various Protestant denominations. Though Christian missions have been successful in proselytizing and in educational, medical, and social work, adherence to Christian beliefs among converts does not preclude retention of elements of traditional religions. The first Roman Catholic East African diocese was established at Kivu in 1912. The Anglicans form the largest Protestant denomination.

Burundi is a secular state, and religious freedoms are restricted by the government. All religious associations must receive approval from the government, and government authorities must be informed in advance of religious gatherings. Such gatherings are strictly limited to recognized places of worship (churches, mosques, or temples), and religious services are authorized only after midday on Saturday and Sunday. (In spite of this order, the government does not interfere with Muslim worship on Friday.)

The Jehovah's Witnesses sect is banned because its doctrines challenge certain precepts of civil authority. Seventh-Day Adventists' activities in Burundi were banned in 1986. Other churches have suffered various harassments. Though the constitution guarantees freedom of religion, the government has made it clear that churches are to confine their activities to religion and social work and to stay out of political matters, which include Hutu/Tutsi relations.

Religious Affiliations	
Roman Catholic	3,950,000
Protestant	318,500
Indigenous Beliefs	1,465,000
Muslim	637,000

HISTORICAL BACKGROUND

Burundi was settled by three waves of peoples: first the Twa, a pygmy tribe of hunters; then the Hutu, a Bantu group, who probably arrived around the 14th century; and finally the Tutsi, a group of tall pastoral nomads who arrived between the 15th and 16th centuries. The Tutsi introduced a caste system to keep the original Hutu and Twa in subjection. The land was ruled by the Tutsi king, known as the *mwami*, who was always chosen from the elite Tutsi tribe, Ganwa. Prior to its colonial rulers, little is known of the history of Burundi. However, according to legend, Ntare Rushatsi, the founder of the original dynasty, came from Rwanda or Buha in the 17th century.

Burundi was under colonial rule for 77 years—from 1885, when the country, then known as Urundi, was designated a German sphere of interest at the Berlin Conference, to 1962, when Belgium formally granted it

independence. However, it was not until the mid-1890s that German rule was officially extended over the whole country. In 1914 Germans in Burundi numbered only 190, of whom 130 were missionaries, 40 were soldiers, six were officials, and the rest were traders. Burundi was occupied by Belgium during World War I and in 1923 became a mandated territory of the League of Nations under Belgian supervision. Although under the terms of the mandate Burundi and Rwanda were to be maintained as a separate territory, Belgium was permitted to administer it as part of the Belgian Congo under a vice governor-general. The chief administrative officer in Rwanda and Burundi was the resident general. Belgium retained the traditional political organization under which the territory was divided into 36 chiefdoms under a *mwami*.

Belgian rule in Burundi was successful and intensive on all levels. The social structure was unalterably changed by the work of Christian missions, while the legal and administrative structures were rebuilt entirely on Belgian lines. The other major Belgian legacy was the French language, which supplanted existing Bantu languages in administration and education. The departure of the Belgians was peaceful, and there are no widespread anti-European feelings apparent in the country.

At independence Burundi retained its monarchical form of government under the traditional Tutsi rulers. Elections held in 1961, prior to independence, were won by the Union for National Progress party (UPRONA), which had been formed in 1958 by the king's son, Ganwa (Prince Rwagasore). Prince Rwagasore became prime minister but was assassinated after two weeks in office. He was succeeded by his brother-in-law, André Muhirwa.

Burundi politics are shaped by rivalry between the Hutu and the Tutsi. During the early years of independence, political stability was maintained by the monarchy, but in 1966 Mwambutsa IV was deposed by his son Charles, who reigned as Ntare V. Charles, in turn, was deposed a few months later by the prime minister, Michel Micombero, who declared a republic and took over the presidency of UPRONA, which was given monopoly status. Two alleged plots against the government in 1969 and 1972 culminated in an unsuccessful coup in 1972 in which Ntare V was killed. Micombero's Tutsi supporters held the Hutu responsible for the former king's death and initiated reprisals, during which tens of thousands of Hutu, including all of the group's literate members, were killed.

Micombero was overthrown in 1976 in a bloodless coup that brought Jean-Baptiste Bagaza, another southern Tutsi, to power. He suspended the constitution, declared the second republic, and became president of the military Supreme Revolutionary Council. The council was abolished effective January 1980, and its functions given to the Central Committee of UPRONA, which ad-

opted legislation that established a national assembly to be elected by universal adult suffrage. Elections held in 1982 and 1984 were mere formalities. Bagaza and UP-RONA candidates ran unopposed. The president, in an effort to maintain stability, appointed several Hutu to important positions, but tension between the Hutu and Tutsi persisted.

Bagaza's second term was marked by increasingly strained relations with the Roman Catholic Church, which the president saw as a rival power aligned with the Hutu. Priests were detained without trial, missionaries expelled, and parish councils abolished. The government also nationalized some of the seminaries, closed catechism classes, and banned the use of religious texts in education.

In 1987 Bagaza was overthrown in a coup led by Major Pierre Buyoya. He suspended the constitution, dissolved the National Assembly, and set up a Military Committee for National Salvation to exercise power. The following year, a tribal dispute between the Hutu and the Tutsi resulted in the slaughter of tens of thousands of Hutu, including children. In response, Buyoya named a 23-member cabinet that, for the first time, had a Hutu majority. A Hutu was also appointed to the newly restored post of prime minister.

In 1992 Buyoya's government adopted a new constitution, which among its other provisions banned political organizations based upon ethnicity. In June of that same year free elections were held. Melchior Ndadaye, a Hutu, was elected president.

Ndadaye was assassinated in a military coup in October 1993. This coup marked the beginning of another period of ethnic fighting, with as many as 150,000 Tutsi being killed. Cyprien Ntaryamira, a Hutu, was eventually chosen president, and he took office in February of the following year. However, he was killed in a plane crash two months later. Fighting intensified until September, when a new government was formed by Sylvestre Ntibantunganya, a Hutu.

In July 1996 the Tutsi-controlled army staged a coup and reinstated Pierre Buyoya as president. The president was successful in having economic sanctions eased in 1997 and lifted in 1999. However, the civil war continued despite a ceasefire in 2000 and an arrangement for a transitional government brokered by Nelson Mandela in 2001. Under the terms of the agreement, Buyoya remained president until 2003, when his vice president, Domitien Ndayizeye, a Hutu, took over the remaining term of transitional presidency. Fighting continued in 2004 between government forces and rebel factions that refused to take part in a power-sharing deal. Though nominally over, the conflict in Burundi was still alive in 2005, creating a precarious situation for the government and country as a whole. In March voters backed a post-transition power-sharing constitution and in August the

parliament elected Pierre Nkurunziza, a Hutu, as president.

LIST OF MODERN RULERS (PRESIDENTS)

1966–76	Michel Micombero
1976–87	Jean-Baptiste Bagaza
1987–93	Pierre Buyoya
1993	Melchior Ndadaye
1994	Cyprien Ntaryamira
1994–96	Sylvestre Ntibantunganya
1996–2003	Pierre Buyoya
2003–05	Domitien Ndayizeye
2005–	Pierre Nkurunziza

CONSTITUTION

Burundi was a monarchy until 1966, when it was proclaimed a republic. The first republican constitution was promulgated in 1974, but it was suspended within two years, following the military coup led by Jean-Baptiste Bagaza in 1976. A new constitution was approved by the National Assembly.

Following the 1987 coup, executive and legislative powers were assumed by the Military Committee for National Salvation, which elected its chairman president of the republic.

In 1991 the government proposed a new constitution, which was adopted in 1992. The new constitution called for a national assembly with 81 members elected from 16 constituencies by proportional representation. The government is overseen by a 10-member national security council. The president is elected by universal suffrage. In 1998 the size of the legislature was enlarged to 121 seats. In 2001 the National Assembly was expanded from 121 to approximately 140 seats under the transitional government. A new, post-transition constitution was approved by referendum in 2005. One controversial stipulation was that the president not be elected by popular vote, but rather by a vote of parliament.

PARLIAMENT

The National Assembly is a unicameral legislature that is elected by universal suffrage and whose members serve five-year terms. The assembly has not been a very strong body. While it does have the right to propose legislation, it ceded its power to hold a vote of confidence in the government in 1994. The body was suspended by presidential decree in 1996. A new Transitional National Assembly was inaugurated in 1998, consisting of 121 members. This number was again increased in 2001 to 140 seats.

POLITICAL PARTIES

Burundi legalized multiple parties in 1992. Among the most important are Union for National Progress, or UPRONA, the Tutsi party; the Burundi Democratic Front, or FRODEBU, the Hutu party; the Socialist Party of Burundi, or PSB; and the People's Reconciliation Party, or PRP. Opposition parties include Burundi African Alliance for the Salvation, or ABASA; Rally for Democracy and Economic and Social Development, or RADDES; the Party for National Redress, or PARENA; and, more recently, the National Council for Defense of Democracy and the Party for the Liberation of the Hutu People/National Liberation Forces. FRODEBU and UPRONA continue to be the majority parties.

LOCAL GOVERNMENT

For purposes of regional administration Burundi is divided into 16 provinces. Each province is headed by an appointed governor. The provinces are subdivided into 114 communes headed by elected councils.

LEGAL SYSTEM

The judicial structure and the legal codes are based on the Belgian model. The judiciary is not entirely independent. In addition to appointing judges, the president can dismiss them. The judiciary is expected to adhere to the guidance and recommendations of the government. Nevertheless, there is a high degree of autonomy in the day-to-day administration of justice through the courts, and due process is largely observed. Court decisions cannot be overturned by the executive branch. The president can reduce sentences and can issue pardons.

The judicial system is overburdened by a lack of resources and a backlog of cases, many of which are political in nature. Thus, many crimes go unreported in the country.

HUMAN RIGHTS

Burundi is faced with classic problems of an emerging nation: an ethnic imbalance where Tutsi, with 15 percent of the population, monopolize power; a history of genocide; limited natural resources; lack of access to the sea; and weak democratic traditions.

Torture and physical abuse occur occasionally during interrogation of violent prisoners or those who resist arrest. Preventive detention exists but is not commonly used. Legally, a person may be held for only five days before being charged. The separation of the judiciary and the executive is only a fiction, but trials are reasonably fair.

The government controls all domestic media. There is no television station, and in November 1980 the govern-

ment seized all television sets used for watching telecasts from the Democratic Republic of the Congo. Freedom of religion is observed in principle. However, the involvement of many foreign missionaries in social work with the poor Hutu has aroused government suspicions and prompted the government to ask the missionaries to leave the country.

Arbitrary violence, both from the government and from guerilla groups, still affects large segments of the population. Specific figures on the number of dead or injured are difficult to obtain, though widespread violence continued in parts of the country after the 2000 cease-fire and installation of a transitional, power-sharing government. A Truth and Reconciliation Commission was set up in 2005 to investigate cases of genocide during the protracted civil war.

FOREIGN POLICY

Burundi is the epicenter of one of the most violent ethnic conflicts in Central Africa, and this has influenced Burundi's foreign policy both toward its immediate neighbor, Rwanda and toward other African nations. The 1993 presidential assassination set off a chain of events that led to the massacre of millions of Hutu and Tutsi, and it also had reverberations in Congo (then Zaire), where the two communities carried their struggle. International efforts to contain ethnic violence were frustrated by the intransigence of the combatants as well as the Tutsi military leadership's opposition to a foreign military presence. However, when Tutsi power was restored in Rwanda, cooperative security arrangements were restored between Burundi and Rwanda. Burundi is a member, along with Rwanda, Tanzania, and Uganda, of the Organization for the Management and Development of the Kagera River Basin and also the Economic Community of the Central African States. Repatriation of the thousands of Burundian refugees in Tanzania has helped normalize relations with that country as well.

DEFENSE

The defense structure is headed by the president, who is a professional military officer and commander in chief of the armed forces. Operational command is exercised through the commander of the armed forces. Military manpower is provided by voluntary enlistment. The officer corps is almost entirely Tutsi.

The total strength of the armed forces in 2003 was 56,000. There are also 5,500 men in paramilitary units.

The army is organized into two infantry battalions, one parachute company, one commando company, and one armored car company. The navy has three patrol boats, and the air force has three combat aircraft.

The army was trained by Belgian advisers, and most of the equipment is of Belgian origin. The army has no offensive capability and is weakened by traditional rivalry between Hutu enlisted men and Tutsi officers.

The defense budget in 2003 was \$33.3 million, or 6.0 percent of GDP.

ECONOMY

Burundi is a landlocked, resource-poor country with an underdeveloped manufacturing sector. The economy is predominantly agricultural, with roughly 90 percent of the population dependent on subsistence agriculture. Its economic health depends on the coffee crop, which accounts for 80 percent of foreign-exchange earnings. The ability to pay for imports therefore rests largely on the vagaries of the climate and the international coffee market. Since October 1993 the nation has suffered from massive ethnic-based violence, which has resulted in the death of perhaps 250,000 persons and the displacement of about 800,000 others. Foods, medicines, and electricity remain in short supply. Doubts about the prospects for sustainable peace continue to slow development. Only about 50 percent of children go to school, about two-thirds of the population lives in poverty, and approximately 6 percent of adults have HIV/AIDS. All of these factors have a harsh impact on the economy.

In 2003 Burundi's real gross domestic product (GDP) declined by 0.5 percent, owing to the negative impact of poor weather on the agricultural sector. The nonfarm economy, however, performed well. In the third quarter of 2002 the exchange rate depreciated by 20 percent, and food prices increased because of low agricultural output. As a result, inflation increased substantially in 2003, to 12 percent from 1.7 percent in 2002. Figures from 2003 also demonstrated poor performance, with a -1.3 percent real growth rate in GDP and an inflation rate of 10.7 percent.

ENVIRONMENT

Burundi's environmental problems include soil erosion as a result of overgrazing and the expansion of agriculture into marginal lands. The country also suffers from deforestation; little forested land remains because of uncontrolled cutting of trees for fuel. Finally, the loss of forests has also meant a loss of habitat that threatens wildlife populations.

Because of the political and civil strife in the country, Burundi's environmental situation is further complicated, as there are a corresponding lack of institutional will, infrastructure, and resources to tackle these difficult ecological problems.

LIVING CONDITIONS

Life is harsh and short for most Burundians. As of 2002, 68 percent of the population lived below the poverty line; per capita GDP was only \$600 in 2003. Malnutrition is widespread: almost 70 percent of the population was undernourished in 2001. Life expectancy in 2004 was 43 years, and the infant mortality rate was 70 deaths per 1,000 live births. Estimates put the number of Burundians living with HIV/AIDS at around 6 percent. Education is a

luxury; only half the population is able to read and write. In a ranking of 175 countries in 2003, the United Nations' Human Development Index (HDI) placed Burundi in the low human development category, at 171st place. The HDI is a composite of several indicators, which measure a country's achievements in three main arenas of human development: longevity, knowledge and education, as well as economic standard of living.

The ethnic strife, genocide, destruction of homes and infrastructure, and economic destabilization of the decade-long civil war have exacerbated an already desperate situation. Despite a cease-fire and institution of a power-sharing transitional government, there was still fighting in the countryside and sometimes in the capital, Bujumbura, as of 2005. Despite these difficulties, 79 percent of the population had access to improved water sources in 2002.

The country has one of the highest population densities in Africa, yet 90 percent of the people live in the countryside in family or tribal units rather than villages. Family compounds, called *rugos*, are spread throughout the countryside, surrounded by a high hedge or reed wall. Inside, beehive-shaped huts are made of mud or woven bits of wood and covered with thatch or tin. Roads are largely unpaved, so travel and communication are difficult. Bicycles and scooters are used for transport and to ship farm products. Electricity is generally not found outside the urban areas. The hunt for fuel occupies much of the woman's day, for such domestic chores generally fall to females.

The civil war displaced about 800,000 Burundians, sending some as refugees to other countries and others inside Burundi, surviving in camps.

HEALTH

Burundians suffer from a host of health-related issues, including epidemic proportions of HIV/AIDS incidence (estimated at 6 percent in 2003), malaria, typhus, meningitis, sleeping sickness, tuberculosis, cholera, influenza, diarrhea, and measles. These conditions are worsened by widespread malnutrition: as of 2001, almost 70 percent of the population was undernourished. The effects of the civil war, which began in 1993 and was still fitfully going on in 2005, have also been enormous. An estimated 260,000 people lost their lives in the conflict, hundreds of thousands were injured and maimed, and 800,000 were displaced, putting a strain on an already overtaxed health care system. As of 2003 there were an estimated five physicians per 100,000 people. Total health care expenditures as of 1999 were estimated at 3 percent of GDP. The 2004 mortality rate in Burundi was 17.61 deaths per 1,000 population.

Some improvements have been made. The percentage of the population with access to safe drinking water,

for example, has increased from 58 percent in 1995 to 79 percent in 2002. Immunization rates have risen. In 2003, 69 percent of one-year-old children were immunized for polio, 74 percent for measles, 75 percent for DPT, and 84 percent for tuberculosis. However, children are especially prone to the ravages of HIV/AIDS. In 2003, 13 percent of children under age five were affected with AIDS-related illnesses, and only 40 percent of these children received medical attention. AIDS orphans are also an increasing problem in the country. In 2003 there were an estimated 200,000 children orphaned by the disease, which afflicts from 170,000 to 370,000 Burundians. In 2003 there were 24,000 HIV/AIDS deaths.

FOOD AND NUTRITION

Nutrition is a grave problem in Burundi, as is evidenced in numerous statistics: 70 percent of the population were undernourished in 1999–2001, 45 percent of children under age five were moderately to severely underweight between 1995 and 2003, and 85 percent of children were still breast-fed at 20 to 23 months in 2003. Drought, poor land quality as a result of overuse, and competing needs of the coffee industry versus production of locally consumed crops for arable farm land all led to food shortages. Additionally, the civil war, which began in 1993, had a large negative impact on agricultural production.

Staple foods for Burundians are tubers, beans, and plantains. Sweet potatoes and cassava are particular favorites, often served with beans and cabbage. From cassava flour boiled in water, a thick, pastelike food, *ugali*, is made. This is also sometimes made from corn flour. Peas, peanuts, and dairy products, including milk and butter, are also typical, as is porridge made from sorghum or millet. Meat is not an everyday foodstuff. As cattle are kept largely for their milk, beef is eaten only rarely. Dried fish from Lake Tanganyika provides protein in the diet.

From bananas comes a kind of beer called *urwarwa*. Sorghum is also used to make beer, though in the cities lager-type beers are preferred. Lunch is the big meal of the day in the countryside. Breakfast is often skipped altogether or is a simple affair of milk and porridge. The evening meal is also small.

STATUS OF WOMEN

Women in society hold a secondary position, although their status is undergoing considerable change from traditional patterns. The constitution provides for legal equality, and significant improvement in the legal status of women came in 1980 with the issuance of a new legal code on families. This code prohibits polygamy and the use of a dowry and allows women control of family matters in the absence of the husband. However, women still cannot inherit land and cannot work if forbidden to do so by their husbands. Only 5 percent of females are enrolled in secondary schools; although fewer women than men attain an education, once it is attained, women generally can find suitable employment. Even so, women still have far fewer possibilities for advancement than do their male counterparts. On paper, the government does not discriminate against women in hiring or with respect to the jobs open to them. Women are represented at all levels in the political life of the country. Still, their main vehicle of political expression is the women's movement affiliated with the ruling UPRONA, which remains dominated by males.

WORK

One of the world's poorest countries, Burundi had a labor force of 2.99 million in 2002. Though no unemployment statistics exist, most of these workers are in agriculture, which in 2002 accounted for 93.6 percent of employment. The vast majority of such agricultural work was subsistence farming. Agricultural products include cof-

fee, cotton, tea, corn, sorghum, sweet potatoes, bananas, manioc (tapioca); beef, milk, and hides. Ethnic tradition comes into play in such occupational breakdowns, for the majority Hutu were traditionally agricultural laborers and herders, whereas farming, as opposed to owning cattle, was looked down upon by the Tutsi. Only 2.3 percent of the population were employed in industry in 2002, producing light consumer goods such as blankets, shoes, and soap, or involved in the assembly of imported components, public works construction, and food processing. The remaining 4.1 percent were in the service sector. In 2002, 68 percent of Burundians were living below the poverty level; GDP per capita was \$600 in 2003.

Constitutional protections for unionization are in place, and the right to strike is protected by the labor code. The Organization of Free Unions of Burundi is the sole labor confederation and has been independent since the rise of the multiparty system in 1992. Most union members are civil servants and have bargained collectively with the government. Child labor is restricted by legislation, though international agencies report that almost half the children between ages 10 and 14 work. There are also numerous instances of the use of children as soldiers.

Employment and Labor

EDUCATION

Education is free and compulsory for six years, between ages seven and 13. The academic year runs from September through July. Schooling consists of 13 years, with six years of primary education, after which students enter a seventh year called the preparatory year and then six years of secondary education in two three-year cycles. Kirundi is the language of instruction in primary schools, although French is used in secondary schools.

Public schools directly administered by the government account for only 7 percent of the primary-school enrollment. The other 93 percent is provided by approved schools run by Roman Catholic and Protestant organizations. Approved schools must conform to government regulations regarding curriculum and qualifications of the teaching staff.

Vocational and technical training is provided at the Technical School at Kamenge and at craft schools.

Such are the facts on paper. In reality, however, the provision of education in Burundi is among the worst in the world. Only 51.6 percent of the population was literate by a 2003 estimate; other estimates are even lower. Only 53 percent of eligible students attended primary school in 2002; less than two-thirds of these students reached grade 5. Secondary school enrollment was a mere 8 percent of eligible students. Less than 1 percent of the population receives any tertiary education. The University of Burundi, in Bujumbura, is the country's main institution of higher learning.

In 2001–02 there were 50 students for every teacher in Burundian primary schools. Nevertheless, public expenditure on education represents a large part of spending. As of 2002 it was 4.0 percent of GDP, or around 20 percent of all government expenditures.

SCIENCE AND TECHNOLOGY

Lacking a scientific professional class, Burundi must import its technology. This comes largely from Europe, though China and the United States have also contributed toward research in agriculture, hydrology, and mining. Bujumbura is home to several research centers and institutes, including the Ministry of Geology and Mines, the Institute of Agronomical Sciences of Burundi, and the National Center of Hydrometeorology. The Institut des Sciences Agronomiques du Burundi is a crop, livestock, and forestry research facility, while the Institut de Recherche Agronomique et Zootechnique is another government agency involved in research in crops and natural resources. Bujumbura is also home to the University of Burundi, with schools of medicine, science, agriculture, and applied science. Research at the university's agricultural school focuses on crops, livestock, forestry, fisher-

ies, and natural resources. Gitega is home to the Higher Institute of Agriculture.

In 1987–97, total expenditures for research and development totaled 0.3 percent of GNP; 32 technicians and 33 scientists and engineers per million people were engaged in research and development. In 2000 there were about 80 full-time researchers in agriculture alone.

MEDIA

The only daily publication in Burundi is the government bulletin *Le renouveau de Burundi*, issued in French. The national news agency is Agence Burundaise de Presse (ABP). There was also a weekly newspaper, *Ubumwe*, published in Kirundi, with a 1999 circulation of 20,000, and *Burundi chrétien*, another weekly published in French. The government controls all domestic media. Before the mid-1980s, there was no television station, and in November 1980 the government seized all television sets used for watching telecasts from the Democratic Republic of the Congo. The official broadcasting organization, La Voix de la Révolution, broadcasts radio programs in Kirundi, French, and Swahili, with a shortwave transmitter at Bujumbura. Télévision Nationale du Burundi, was established in 1984. In 2001 there was only one television station, which was owned by the government, and four FM stations. As of 2000 there were 220 radios and 15 television sets for every 1,000 people.

Though there is no official press censorship and some different viewpoints are expressed in the media, media outlets operate under significant self-censorship, and the opposition press functions only sporadically. The government-operated radio station allows a measure of diversity. The European Union has funded a radio station. The press group Reporters sans Frontiers placed Burundi 92 out of 116 countries in its 2003 press-freedom rankings.

In 2003 there were 64,000 mobile cellular telephone users and 14,000 Internet users.

CULTURE

The cultural heritage of Burundi is rich in music and dance. Originally such forms were used to celebrate royal power. The king kept musical ensembles and elite corps of dancers, called *intore*, who were trained in movement that included dramatic leaps, hand and arm gesticulations, and stomping. The sacred drum, *karyenda*, was traditionally carved from tree trunks and stood about three feet high. Drummers, or *tambourinaires*, used sticks to beat their drums, grouped in a large circle. Such festive occasions for drumming and dancing included the annual sorghum festival. Vocal music also has a long tradition in Burundi, performed solo or in groups. Such folk songs include lullabies, work, and hunting songs. One group of songs, *ibicuba*, is in praise of the near-holy cattle. Minstrels once traveled from area to area singing the news.

The musical and dance heritage has survived the days of monarchy; the government is encouraging such heritage, hoping that it will help to unite warring Hutu and Tutsi. Burundian craft workers still manufacture many of the instruments used in the traditional music. In addition to the drums, there is the thumb piano, *ikembe*, and the traditional stringed instrument, *indingiti*, which can be strummed or plucked like a banjo or bowed like a violin.

Weaving is another cultural heritage that is undergoing resurgence in the modern world. Tutsi women were noted for intricately woven screens with geometric designs. These were used by the well off as room dividers and household decorations. The Twa are also noted for their pottery. Arts and crafts, including basketry and beadwork, are displayed at the Living Museum in Bujumbura.

Major libraries are at the University of Burundi, the American Cultural Center, and the French Cultural Center in Bujumbura and the Burundi Literature Center in Gitega. Also in Gitega is the National Museum..

FOLKLORE AND MYTHOLOGY

Burundian society has a long and rich oral tradition. In both Hutu and Tutsi society such a tradition includes folktales, creation myths, proverbs, riddles and poetry. So-called “praise poetry,” lauds a person—usually the king—by a recitation of his feats. Praise poetry about cattle was also common. Epic poetry, especially among the Tutsi, deals with dynastic history mixed with mythology. For example, the travels and deeds of the god Imana are favorite Burundian themes. Not only are these tales and poems spoken, they are also sung, especially in the form called “whispered singing,” in which the men half-speak, half-sing, accompanied by traditional instruments.

Favorite tales for the Hutu involve the trickster Samadari. For the Tutsi, greedy Sebbugugu is at the center of other tales. With the 1972 genocide of educated classes of Hutu, the process of committing such tales (many of which are in Kirundi) to paper was set back severely.

Both Hutu and Tutsi believe in a common founder, Gilhanga, descendant of a clan of gods. The Tutsi elaborate on this myth, claiming that it was Gilhanga who led the Tutsi into Rwanda and Burundi and that therefore the gods had chosen the Tutsi to rule.

ENTERTAINMENT AND RECREATION

In urban centers, where electricity is available, entertainment includes television, cinema, and dance clubs. In the rural areas, where the bulk of the population lives, such activities are not available or are available only on a limited basis. Here more traditional forms of entertainment exist, including storytelling and dancing at various festivals and holidays. Such activities were largely curtailed, even in the cities, as the result of the civil war. With a cease-fire and transitional government in place, the fighting is not as widespread, and Burundians are slowly returning to their old ways.

A checkers-like game, called locally *igisoro* and known as *mancala* in other parts of Africa, is popular, especially among Tutsi.

ETIQUETTE

As is the case throughout Africa, using the left hand is taboo in Burundi. It is impolite to give, take, or eat with the left hand. A handshake is a typical greeting, though between women or between men and women touching cheek to cheek three times is also common. Pointing is considered rude. Rather, to gesture toward something, Burundians use the entire arm with hand open and palm up. A similar gesture is used to beckon someone, though in this case the palm is down and the fingers are flexed

inward. Respect is shown toward elders and to those of a higher social class. Kneeling was typical in Hutu society, though such a show of respect or subservience is now dying out.

FAMILY LIFE

As with most pastoralists and farmers, Burundian life centers on the family. It is the family compound, for example, that is the basic social unit rather than the village. In traditional Burundian society marriages were arranged between members of the same caste. Although this is still the case among many, more Western ideas of romantic love and dating are becoming the norm, especially in the cities.

Families of both Hutu and Tutsi are organized patrilineally, and therefore children belong to the father's line or clan. Patriarchy holds in domestic affairs as well. The man goes to work herding or in the fields, while the woman takes care of the home and children. With firewood scarce in the country, and water also often in short supply, such household chores can be very demanding and time-consuming. Girls help out with such domestic chores.

Polygamy, once typical in Burundi, is dying out. As one's wealth was in part reckoned by how many children one had, polygamy made a certain economic sense in traditional society. However, in the modern world, scarcity, bride price and maintenance, as well as discouragement by the Christian church have largely put an end to the tradition. Typically also, Hutu marries Hutu and Tutsi marries Tutsi, though there have been marriages between the ethnic groups. Far less intermarriage occurs between either Hutu or Tutsi and Twa, however.

Although family size has been shrinking, fertility rates are still quite high by Western standards. In 2004 the rate of birth was 5.9 children per woman, with almost 40 births per 1,000 people. The infant mortality rate that same year was 70 deaths per 1,000 live births.

PERSONAL APPEARANCE

Physically, the two ethnic groups that make up most of the population look very different from each other. The average Hutu is short and stocky, while the Tutsi are tall, slender, and lighter-skinned than Hutu.

Clothing for Burundians includes the *pagnes*, or cloth wraparounds. Although *pagnes* are still the main form of dress in some rural areas, women now tend to accompany them with a blouse and a headscarf. Men often wear two cloths, one on each shoulder, tied at the waist and stretching down to the knees. Shoes are not common in rural areas. Dresses for women in the East African or Western style and shirts and pants for men are also increasingly

worn in rural areas. The older forms of traditional clothing—bark-cloth shirts and leather cloaks for Hutu and elaborate gowns and robes for the Tutsi—have virtually disappeared. For women, handmade necklaces and bracelets are still worn.

In Bujumbura, Western fashions, including suits and ties as well as jeans, are the norm. Whether traditional or modern, dress in Burundi is usually conservative and modest.

SPORTS

Soccer is the national sport, played both recreationally on makeshift fields and through a national league. The country has competed in several African Nations Cup championships. Burundians are also strong in international track-and-field competitions. Dieudonne Kwizera and Vénuste Niyongabo both competed in the 1996 Olympic Games. Niyongabo won the gold medal in the 5,000 meters, the first Olympic medal for Burundi. Burundian Joachim Nshimirimana took part in the 2004 Olympics.

Basketball, handball, and volleyball are also becoming popular sports, played mostly at schools. The Ministry of Youth, Culture, and Sports promotes both traditional and modern sports in Burundi.

CHRONOLOGY

- 1961** UPRONA wins 58 of 62 seats in UN-sponsored legislative elections; Prince Rwagasore forms a new government; Rwagasore is assassinated.
- 1962** Burundi achieves independence, and the Belgian resident general leaves; Rwanda and Burundi agree on economic union; André Muhirwa is named the first prime minister of independent Burundi.
- 1963** Pierre Ngendandumwe replaces Muhirwa as prime minister.
- 1964** Rwanda withdraws from the Rwanda-Burundi currency union; fighting breaks out in the interior between Hutu and Tutsi, with the government supporting the Tutsi.
- 1965** In legislative elections Hutu win a majority in both houses, but the king refuses to appoint a Hutu prime minister, dissolving the National Assembly and declaring an absolute monarchy; both Tutsi and Hutu groups attempt coups.
- 1966** Prince Charles deposes his father and is enthroned as Ntare V but is deposed after 89 days; Prime Minister Micombero becomes president of the newly proclaimed Republic of Burundi, with UPRONA as the sole official party.
- 1970** A new UPRONA charter assigns Burundi's presidency to the party secretary-general.

- 1971** A Supreme Military Council of 27 military officers is established.
- 1972** Former *mwami* Ntare V is arrested; Hutu-Tutsi hostilities are revived over the government's alleged discovery of monarchist plots; Ntare V is executed; fighting escalates into civil war between the poorly armed Hutu and government forces; an estimated 100,000 to 250,000 Hutu are killed, and approximately 400,000 refugees flee; Albin Nyamoya, a Tutsi, is named prime minister;.
- 1973** Hutu-Tutsi strife breaks out in neighboring Rwanda; Hutu begin guerrilla warfare against the Burundian army; Burundi receives aid from Libya; relations with Tanzania are strained as Burundian troops cross the border to attack Hutu camps there.
- 1974** Burundi compensates Tanzania for the 1973 attacks; a new constitution is adopted; President Micombero is granted a second seven-year term.
- 1976** Micombero is overthrown in a coup led by Lt. Col. Jean-Baptiste Bagaza, who suspends the constitution of 1974, dissolves the National Assembly, and vests executive and legislative powers in a Supreme Revolutionary Council.
- 1978** The post of prime minister is abolished; a national recovery program is launched.
- 1979** UPRONA holds the first National Congress under Bagaza and replaces the Supreme Revolutionary Council with a Central Committee; Protestant and Catholic missionaries are expelled from the country.
- 1981** A new constitution is approved in a popular referendum.
- 1982** A new National Assembly is elected in which all members belong to UPRONA.
- 1987** President Bagaza is overthrown in a coup led by Pierre Buyoya.
- 1988** Renewed tribal disputes lead to the death of over 1,000 Tutsi and 100,000 Hutu.
- 1990** The government issues a Charter of National Unity, according equal rights to the country's three ethnic groups, the Hutu, Tutsi, and Twa.
- 1992** A new constitution is adopted.
- 1993** Melchior Ndadaye is elected the country's first Hutu president; a failed coup kills several ministers, and violence erupts between Tutsi and Hutu factions.
- 1996** The army seizes power in an attempt to restore peace; Major Pierre Buyoya is installed as president; the civil war between the Tutsi and Hutu continues.
- 2000** The government of Burundi and three Tutsi groups agree to a cease-fire, but the two major Hutu groups refuse to cooperate.
- 2001** Talks brokered by Nelson Mandela lead to the installation of a transitional, power-sharing government backed by a South African peace-keeping force carrying a UN mandate. In November it is decided that under the transition plan President Pierre Buyoya, a Tutsi, will serve as transitional president for 18 months, to be replaced by a Hutu until presidential elections are held.
- 2002** Repatriation of refugees from Tanzania begins in March. More than 60,000 are scheduled to return.
- 2003** Domitien Ndayizeye takes over as interim transition president until presidential elections, scheduled for late 2004. Fighting between government forces and rebel groups continues despite a cease-fire, as the country enters its tenth year of civil war. In December, Burundi's largest rebel group joined the transitional government in return for several key government positions.
- 2004** In October it is decided to postpone presidential elections—scheduled for the end of the month—until April of 2005. In December UN troops take over the peacekeeping mission.
- 2005** President Domitien Ndayizeye establishes a Truth and Reconciliation Commission to investigate atrocities committed during the country's civil war. Voters support a new power-sharing constitution. Pierre Nkurunziza is elected president.

CAMBODIA

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Cambodia

ABBREVIATION

KH

CAPITAL

Phnom Penh

HEAD OF STATE

King Norodom Sihamoni (from 2004)

HEAD OF GOVERNMENT

Chairman of the Council of Ministers Hun Sen (from 1998)

NATURE OF GOVERNMENT

Multiparty democracy under a constitutional monarch

POPULATION

13,607,069 (2005)

AREA

181,040 sq km (69,900 sq mi)

ETHNIC MAJORITY

Khmer

LANGUAGE

Khmer

RELIGION

Theravada Buddhism

UNIT OF CURRENCY

Riel

NATIONAL FLAG

A horizontal red stripe centered between two horizontal blue stripes, with a yellow silhouette of the temple of Angkor Wat in the center of the red stripe

NATIONAL EMBLEM

The main elements of the coat of arms are two golden cups stacked on top of each other with a sacred sword placed horizontally above. Above the sword is shown the symbol representing “om,” the sound of creation. The cups are framed by two laurel branches united at the bottom by the star of the Royal Order of Cambodia.

NATIONAL ANTHEM

“Heaven Protects Our King”

NATIONAL HOLIDAYS

January 7 (National Day), April 17 (Victory over American Imperialism Day), May 1 (Labor Day), May 20 (Day of Hatred), September 22 (Feast of the Ancestors)

DATE OF INDEPENDENCE

November 9, 1953

DATE OF CONSTITUTION

September 21, 1993

GEOGRAPHICAL FEATURES

Cambodia, in the southwestern Indochinese peninsula, is an irregularly shaped country with an area of 181,040 sq km (69,900 sq mi). It is bounded on the northeast by Laos, on the east and southeast by Vietnam, on the southwest by the Gulf of Thailand, and on the west and northwest by Thailand.

The capital city, also the largest, is Phnom Penh (1998 pop. 570,155). Other major cities are Bătdămbâng and Kâmpóng Saôm, the major port on the Gulf of Thailand.

The central three-fourths of the country is a level basin. The Mekong River, at 4,344 km (2,700 m) one of the longest in the world, flows north to south through

the plain. In the center of the plain is the Tonle Sap, an inland lake that acts as a reservoir for the Mekong River. The lake floods during the rainy season; as it recedes, it leaves behind a rich sediment of alluvial soil. The area southwest of the basin is mountainous; peaks in the Cardamom Range exceed 1,500 m (5,741 ft); in the Elephant Range, 900 m (3,000 ft).

CLIMATE AND WEATHER

Cambodia has a tropical climate with two distinct seasons. The rainy southwesterly monsoon season lasts from May through October; the dry northeasterly monsoon season lasts from November through April. Average temperatures range from 20°C to 35°C (68°F to 97°F), but in general the climate is more moderate than in other countries located at the same latitude. Average annual temperature is 26.7°C (80°F). Rainfall from April to September averages 1,270 mm (50 in) to 1,990 mm (75 in) annually and is heaviest over the mountainous areas of the southwest.

Climate and Weather

Mean Temperature
 Summer: 97°F
 Winter: 68°F
 Average Rainfall: 60 in to 75 in
 Southwest Mountains: 200 in

FLORA AND FAUNA

Forests once covered much of Cambodia. In the eastern highlands these were deciduous, while in mountainous areas of the north and the southwestern highlands, evergreen forests predominated. In the north these forests were also home to vines, bamboo, palms, and rattan. Virgin rain forests covered the western slopes of the southwestern highlands. Mangrove and evergreen forest grew along the coast. The forest covering was greatly depleted by indiscriminate logging in the 1970s, which laid waste to about 75 percent of the forest. Further depletion has occurred since then. The rapid deforestation has led to soil erosion. The central lowland region hosts both savanna and vast fields of crops such as rice, corn, and tobacco.

With the loss of the forest covering came a subsequent loss in habitat for the large variety of animal life that once lived in the country. Large populations of elephants, wild oxen, rhinoceroses, and several species of deer at one time inhabited Cambodia, but their numbers have severely decreased as a result of deforestation and the years of conflict experienced by the country. Small numbers of tigers, leopards, and bears are still found, and many small mammals exist. Common birds include herons, cranes, grouse, pheasant, peafowl, pelicans, cormorants, egrets, and wild ducks. Reptilian life is abundant, including poisonous snakes such as the Indian and king cobras, the banded krait, and Russell's viper.

ETHNIC COMPOSITION

Most of the population of Cambodia (approximately 90 percent) is Khmer. Most of the rest of the people are Vietnamese and Chinese, with a smattering of Laotians, Thai, and Cham-Malays, who live in the rural mountainous regions.

LANGUAGES

Khmer, or Cambodian, is the official language. French was the official language until 1975, but its use has been discouraged by the government. Among the Chinese minority, a number of Chinese dialects are spoken.

RELIGIONS

Approximately 90 percent of Cambodians practice Theravada Buddhism. Other religions followed in the country are Roman Catholicism, Islam, and Nahayana Buddhism; some Cambodians living in the mountainous regions practice animism.

HISTORICAL BACKGROUND

There is archaeological evidence that Cambodia was inhabited as far back as the second millennium B.C.E. and that stable societies flourished there 2,000 years ago. Funan was the first Hindu-Buddhist kingdom to dominate in what is now Cambodia and is considered the first Khmer kingdom. The kingdom of Chenla conquered Funan in the sixth and seventh centuries but was itself later split in two, with its southern half, in the area of what is now Cambodia, under Javanese rule.

It was the reign of Jayavarman II in the 800s that began the glorious Angkor era in Khmer history, and it was his successors who built the great temples at Angkor Wat. The kings of Angkor ruled over Cambodia and much of the rest of Southeast Asia until 1432, in what is known as the classical era in Khmer history. That civilization reached its peak in the 12th and early 13th centuries, then began to weaken, threatened by the overextension of

its irrigation system, epidemics, and popular resentment against the well-entrenched bureaucracy as well as by the spread of Buddhism.

Over the next 400 years Siam (now Thailand) and Vietnam vied for control over Cambodia by the use of military occupations and puppet regimes. In 1863 France intervened, and Cambodia became a French colony under the Franco-Cambodian Treaty, which gave France exclusive control of foreign affairs and defense. A French *résident supérieur* was installed in Phnom Penh, and control of the country was exercised through a hierarchy of *résidents*, with the king as a powerless figurehead. The protectorate was not unopposed; minor revolts in the 1860s and 1870s were put down with ease. After 1887 Cambodia became part of the Indochina Union, which included Annam, Tonkin, Cochin China, Laos, and Chan-chiang.

France's primary interest in Cambodia was strategic; occupation there allowed for the protection of French interests in Southeast Asia. Traditional political and social structures were left largely intact, although the French attempted a few economic reforms and introduced some cultural changes, especially with regard to social customs, education, and architecture. Debt slavery was abolished in 1884. From the 1920s secular education was entirely French in character and structure. At the same time, the French exhibited little interest in providing Cambodians with education beyond the primary level and did little to train Cambodians for administrative positions of responsibility. Although modern judicial and police systems were introduced, the French relied on the Vietnamese to staff them. Only after 1936 were Cambodians admitted to senior administrative positions.

France granted total independence to Cambodia in 1953. At that time the nation was led by King Norodom Sihanouk, who had been the reigning monarch since April 1941, when at the age of 18 he succeeded his grandfather. Eight years later he personally negotiated independence. In order to increase his political role, Sihanouk abdicated in 1955 in favor of his father, Norodom Suramarit, and resumed his title of prince. Sihanouk established a mass political movement, Sangkum Reastr Niyum (People's Socialist Community), which won all National Assembly seats in elections held in 1955, 1958, 1962, and 1966. Sihanouk's government established close ties with North Vietnam and the People's Republic of China and opposed U.S. intervention in Asia. In June 1960 the parliament elected Sihanouk head of state following the death of King Suramarit.

Beginning in 1964 the Khmer Rouge, a pro-Communist insurgency movement, threatened the stability of Sihanouk's government. However, it was a conservative group led by prime minister Lon Nol that deposed Sihanouk in March 1970 and abolished the monarchy. In exile, Sihanouk established the Royal Government of National Union of Cambodia (GRUNC), which

was supported by the Khmer Rouge. Together the two groups, with the aid of North Vietnamese troops and South Vietnam's National Liberation Front, posed a serious threat to Lon Nol's government. Nevertheless, Lon Nol proclaimed the Khmer Republic in 1970. He was elected the first president of the republic in 1972, with U.S. and South Vietnamese support.

The GRUNC government of Sihanouk was recognized as the official government of Cambodia by several foreign nations in 1973, and its forces, along with those of the Khmer Rouge, prevented Lon Nol's government from controlling more than a few urban areas. By April 1975 the Khmer Rouge had taken control of Phnom Penh, and a regime headed by Pol Pot took power. The country was renamed Democratic Kampuchea in January 1976. The Khmer Rouge administered a radical and brutal program of social change, evacuating many of the towns and forcibly relocating residents to rural areas. Millions of Cambodians were tortured and murdered by the Khmer regime, and millions of others died from mistreatment, hunger, and disease as the Khmer Rouge tried to eradicate all Western influence from the country and to create a totally rural society.

In December 1978 Vietnam invaded Kampuchea with the assistance of the pro-Communist Kampuchean National United Front for National Salvation (KNUFNS), using the murderous nature of the Khmer regime as its excuse. Within weeks Vietnamese troops had taken control of Phnom Penh, and in January 1979 the People's Republic of Kampuchea (PRK) was proclaimed under a puppet regime headed by Heng Samrin. However, pockets of Khmer resistance remained until the organization finally surrendered in 1998.

The Vietnamese occupied Cambodia for most of the 1980s, pulling out only in 1989. They restored much of Cambodian life, including Buddhism, but the country remained desperately poor and underdeveloped.

In 1991 all the parties involved signed a treaty calling for the United Nations and a Supreme National Council to govern the country temporarily, and Sihanouk temporarily assumed the office of president. In May 1993 the first democratic elections in Cambodia since 1972 were held, and Sihanouk's royalist faction formed a coalition government with Hun Sen's Khmer People's National Liberation Front. A new constitution was approved in September 1993; the country was renamed the Kingdom of Cambodia, and Sihanouk once again took the throne. The new government was opposed by the Khmer Rouge, which continued to use armed violence in its struggle to regain power. A splinter faction within the Khmer Rouge announced its support for the monarch in 1996, however, and the Khmer Rouge rapidly lost public support afterward, although it continued its armed opposition to the government until the last known unit surrendered to the government in December 1998.

In 1997 Hun Sen, co–prime minister in the Sihanouk government, staged a violent coup, ousting his rival, Prince Norodom Ranariddh, the king’s son. Hun Sen’s party, the Cambodian People’s Party (CPP), won the parliamentary elections held in July 1998, and he was sworn in as prime minister in November 1998. Pol Pot was arrested and convicted in a show trial in 1997; he died while under house arrest in 1998. Sihanouk, except for a brief abdication in 1997, remained king, although he had little power.

In the 2003 parliamentary elections, no parties were able to muster the two-thirds majority needed to establish independent leadership. Hun Sen’s CPP won 47.3 percent of the vote and Ranariddh’s royalist party, the FUNCINPEC, took 20.8 percent. A third party also appeared on the scene, with the Pak Sam Rainsy (PSR) winning 21.9 percent. Initially Ranariddh refused to form a coalition with Hun Sen. Negotiations lasted almost a year, until a new coalition was finally formed in June 2004 between the CPP and the FUNCINPEC, with Hun Sen remaining prime minister.

King Norodom Sihanouk abdicated in October 2004, naming his son Prince Norodom Sihamoni as his successor. In early 2005 the opposition party leader Sam Rainsy was forced to flee the country after libel charges were leveled against him for accusing Prince Norodom Ranariddh of taking bribes to enter the coalition government. The National Assembly stripped Rainsy of immunity and banned his opposition party, the PSR. International criticism was quick to call this action a blow to Cambodia’s fledgling democracy.

LIST OF MODERN RULERS

Head of State

1941–55	Norodom Sihanouk (king)
1955–60	Norodom Suramarit (king)
1960	Chuop Hell (head of state)
1960	Prince Sisovath Monireth (head of state)
1960	Chuop Hell (head of state)
1960–70	Prince Norodom Sihanouk (head of state)
1970–72	Cheng Heng (head of state)
1972	Lon Nol (head of state)
1972–75	Lon Nol (president)
1975	Saukham Khoy (president)
1975	Sak Suthsakan (president)
1975–76	Prince Norodom Sihanouk (head of state)
1976–79	Khieu Samphan (president of the State Presidium)
1979–81	Heng Samrin (president of the People’s Revolutionary Council)
1981–92	Heng Samrin (chairman of the Council of State)
1992–93	Chea Sim (chairman of the Council of State)

1991–93	Prince Norodom Sihanouk (chairman of the Supreme National Council)
1993–2004	Norodom Sihanouk (king)
2004	Chea Sim (chairman of the senate)
2004–	Norodom Sihamoni (king)

Head of Government

1945	Norodom Sihanouk (prime minister)
1945	Son Ngoc Thanh (prime minister)
1945–46	Prince Sisovath Monireth (prime minister)
1946–47	Prince Sisovath Youtevong (prime minister)
1947–48	Prince Sisovath Vatchayavong (prime minister)
1948	Chean Vam (prime minister)
1948–49	Penn Nouth (prime minister)
1949	Yem Sambaur (prime minister)
1949	Ieu Koeus (prime minister)
1949–50	Yem Sambaur (prime minister)
1950	Prince Norodom Sihanouk (prime minister)
1950–51	Prince Sisovath Monipong (prime minister)
1951	Oum Cheang Sun (prime minister)
1951–52	Huy Kanthoul (prime minister)
1952–53	Prince Norodom Sihanouk (prime minister)
1953	Penn Nouth (prime minister)
1953–54	Chan Nak (prime minister)
1954	Prince Norodom Sihanouk (prime minister)
1954–55	Penn Nouth (prime minister)
1955	Leng Ngeth (prime minister)
1955–56	Prince Norodom Sihanouk (prime minister)
1956	Oum Cheang Sun (prime minister)
1956	Prince Norodom Sihanouk (prime minister)
1956	Khim Tit (prime minister)
1956	Prince Norodom Sihanouk (prime minister)
1956–57	Sam Yun (prime minister)
1957	Prince Norodom Sihanouk (prime minister)
1957–58	Sim Var (prime minister)
1958	Ek Yi Oun (prime minister)
1958	Penn Nouth (prime minister)
1958	Sim Var (prime minister)
1958–60	Prince Norodom Sihanouk (prime minister)
1960–61	Pho Proeung (prime minister)
1961	Penn Nouth (prime minister)
1961–62	Prince Norodom Sihanouk (prime minister)
1962	Nhiek Tioulong (prime minister)
1962	Chau Sen Cocsal Chum (prime minister)
1962–66	Prince Norodom Kanthoul (prime minister)
1966–67	Lon Nol (prime minister)
1967–68	Son Sann (prime minister)
1968–69	Penn Nouth (prime minister)
1969–71	Lon Nol (prime minister)
1971–72	Prince Sisovath Sirik Matak (prime minister)
1972	Son Ngoc Thanh (prime minister)
1972	Lon Nol (prime minister)
1972–73	Hang Thun Hak (prime minister)
1973	In Tam (prime minister)
1973–75	Long Boreth (prime minister)

1975–76	Penn Nouth (prime minister)
1976	Khieu Samphan (prime minister)
1976–79	Pol Pot (prime minister)
1979–81	Heng Samrin (president of the People's Revolutionary Council)
1981	Pen Sovan (chairman of the Council of Ministers)
1981–84	Chan Sy (chairman of the Council of Ministers)
1985–93	Hun Sen (chairman of the Council of Ministers)
1993	Prince Norodom Ranariddh (co–prime minister of the provisional government) Hun Sen (co–prime minister of the provisional government)
1993–97	Prince Norodom Ranariddh (prime minister)
1997–98	Ung Huot (prime minister)
1998–	Hun Sen (prime minister)

CONSTITUTION

Under the constitution approved in 1993, Cambodia is a multiparty liberal democracy under a constitutional monarchy. The monarch is advised by a Council of Ministers, which he appoints, but in practice he has little power, and the first and second prime ministers are the true heads of state. There is universal suffrage for those age 18 and up.

A 1999 amendment to the constitution provides for a Senate of 61 members, none of whom are chosen by popular vote. Four are appointees, and the remainder are elected by “functional constituencies” and serve five-year terms.

PARLIAMENT

Legislative power is vested in the bicameral parliament (Sepiacheat), consisting of a Senate (Pritsepia) made up of 61 members and a National Assembly (Radspeha Ney Preah Recheanachakr) of 123 members, all elected for five-year terms. The parliament meets in ordinary sessions at least twice a year, each session lasting at least two months. Extraordinary sessions may be convoked by the king at the request of the prime minister or by a majority in the National Assembly. Laws passed by parliament are subject to review by the Constitutional Council, which also has the right to interpret the constitution and settle electoral disputes. The National Assembly may not be dissolved unless the royal government has been dismissed twice within 12 months. The National Assembly may dismiss cabinet ministers or remove the royal government from office through a censure motion passed by a two-thirds majority vote.

POLITICAL PARTIES

The dominant political parties are the National United Front for an Independent, Neutral, Peaceful, and Co-operative Cambodia (FUNCINPEC), the royalist party; the leftist Cambodian People's Party (CPP); and the Pak Sam Rainsy (PSR), previously the Khmer Nation Party, now named for a former finance minister who is the party head and leader of the opposition. In the 2003 parliamentary elections, Rainsy's PSR finished just ahead of the FUNCINPEC in percentage of popular votes, with the CPP taking almost half the seats. In 2005 Rainsy had to flee the country after accusing Prince Norodom Ranariddh of taking bribes, and his party was banned.

LOCAL GOVERNMENT

Cambodia is divided for administrative purposes into five levels of government: 20 provinces (*khet*), each headed by a *chavaykhet*; seven subprovinces (*anoukhet*); 147 districts (*srok*), each headed by a *chavausrok*; 1,621 townships (*sangkat* or *khum*), each headed by a *mekhum*; and villages (*phoumi*). There are also four municipalities (*krong*): Keb, Pailin, Phnom Penh, and Preah Sihanouk (formerly Kompong Som).

The first local elections in 23 years were held in 2002, with the Cambodian People's Party winning in almost all of the country's townships. In the weeks before the election 20 opposition political activists were killed.

LEGAL SYSTEM

Due process and presumption of innocence are provided for by the 1993 constitution. The Supreme Court of the Magistracy, Cambodia's highest court, was created in 1997. Another Supreme Court and lower courts handle cases at lower levels. The constitution also set up the Supreme Council of Magistrates, which appoints and disciplines judges. A lack of trained judges and a high crime rate have led to the court system being seriously overburdened. As a result, many crimes go unreported. Many political murders in particular remain unsolved, and police corruption as well as abuse and overcrowding in the country's prisons remain serious problems.

HUMAN RIGHTS

During the years of Khmer Rouge domination, Cambodians suffered under one of the most brutal, murderous, and totalitarian of governments. When the Vietnamese ousted Pol Pot, despite some liberalization, violations of human rights remained commonplace, with the provisions of the 1981 constitution ignored and police-state policies the rule.

The administration of justice in Cambodia is still problematic. Two human rights activists who were monitoring demonstrations in 1998 that developed in the wake of a revelation about the dumping of toxic waste at a site in Sihanoukville were arrested and accused of inciting a riot. After international protests, the charges were dropped in July 1999. Other concerns about Cambodia's commitment to the balanced administration of justice have been raised in connection with efforts to bring to justice former members of the Khmer Rouge and those responsible for the murders of many associates of Prince Norodom Ranariddh in the months after the 1997 coup by Son Sann.

Over 30 political activists were murdered in the run-up to the 2003 parliamentary elections; only a few of those responsible for the killings have been prosecuted. Torture is often used in the legal system to gain confessions. The political power of the prime minister goes largely unchecked, with parliament acting as a debating society rather than as part of a system of checks and balances. In 2005 the National Assembly stripped the opposition leader, Sam Rainsy, of immunity, and he subsequently fled the country. His party, the third strongest in the country, was banned. In 2004 Amnesty International complained of widespread abuse of power by police and the military. Also, the estimated 200,000 to 500,000 ethnic Vietnamese in Cambodia face widespread discrimination.

FOREIGN POLICY

Cambodia is a member of the United Nations. Its seat at the United Nations was left vacant by the General Assembly after the 1997 coup but is now occupied by a representative of the coalition government that took office in November 1998. In 1999 Cambodia became a member of the Association of Southeast Asian Nations (ASEAN).

Cambodia is embroiled in border disputes with both Vietnam and Thailand. It is also under international pressure for money laundering and its role as a major producer of marijuana for the international market.

Land mine clearing operations have been under way in Cambodia since 1993, but land mines continue to be a major problem; an estimated 3,600 sq km (1,440 sq mi) of the country are believed to be mined, and several hundred people are maimed by mines each month. The United Nations estimates that there are still six million land mines buried in Cambodia.

DEFENSE

As of 2002 the Royal Cambodian Armed Forces consisted of about 100,000 active personnel, with most of those serving in the army. The Cambodian navy and air force have between 1,000 and 2,000 troops, and the provincial

forces make up from one-third to one-half of the military personnel. Military service is compulsory for those between 18 and 30. According to a 2004 conscription law, compulsory service lasts 18 months. In 2001 defense spending amounted to \$112 million, which was 3 percent of gross domestic product (GDP).

ECONOMY

Cambodia's economy is based on agriculture, with rice the major crop. The national budget for 1995 was estimated to be \$496 million. Although both the agricultural and the small manufacturing sectors began to recover from the disastrous years of warfare and social dislocation, the country has remained among the world's poorest; GDP in 1996 was estimated at \$7.7 billion, and per capita GDP was estimated to be approximately \$710. Approximately 80 percent of the labor force was employed in agriculture.

Exports in 1996 were valued at \$466 million; imports were \$1.4 billion. Most foreign trade is with Singapore, Thailand, and Vietnam. The unit of currency is the riel.

In 1999, the first full year of peace in 30 years, progress was made on economic reforms, and growth resumed at 4 percent. GDP growth for 2000 had been projected to reach 5.5 percent, but the worst flooding in 70 years severely damaged agricultural crops, and high oil prices hurt industrial production. Growth for the year was estimated at only 4 percent. Tourism is Cambodia's fastest-growing industry, with arrivals up 34 percent in 2000. The long-term development of the economy after decades of war remains a daunting challenge. The population lacks education and productive skills, particularly in the poverty-ridden countryside, which suffers from an almost total lack of basic infrastructure. Fear of renewed political instability and corruption within the government discourage foreign investment and delay foreign aid. On the brighter side, the government is addressing these issues with assistance from bilateral and multilateral donors. One of the greatest challenges facing the economic sector in the new millennium is providing sufficient employment to meet the needs of the country's imbalanced population. More than 60 percent of the population is under 20 and will be entering the workforce in large numbers.

Cambodia's entry into the World Trade Organization in 2004 proved a double-edged sword. More foreign investment resulted, but also lower tariffs mean Cambodia will import cheaper agricultural goods, thereby hurting domestic agriculture, already in a precarious position. The country's garment industry, which accounted for 23 percent of exports in 2002, could also be seriously damaged with the expiration of U.S. quotas in 2005.

ENVIRONMENT

The deforestation of Cambodia through illegal logging became an issue in the 1990s as the remnants of the Khmer Rouge sought profits from lumbering to support their operations. By the end of the decade, however, the Khmer Rouge no longer existed. Other environmental issues include the practice of strip mining for gems in the western region along the Thai border, soil erosion, and the lack of safe drinking water in rural areas. Fish stocks are also declining as a result of overfishing and soil erosion into rivers, which destroys spawning beds. Additional environmental issues include poor sanitation and waste management and the destabilization of land and soil due to industrial activities. In 2002, 89 animal species were listed as threatened in Cambodia, including 24 species of mammals.

LIVING CONDITIONS

Cambodian population density is among the highest in the world, and the urban growth rate is increasing rapidly, yet the overwhelming majority of Cambodians still live in rural areas. As of 2003, 18.6 percent of Cambodians lived in cities, while the rest were in the countryside, mostly in small villages of a few hundred people. These villages are typically built around Buddhist temples and along transport lines, such as rivers, canals, or roads. Houses are constructed on stilts to keep them dry during the floods of the rainy season. The poorer segment of the population—by a 1997 estimate, 36 percent of people were living below the poverty line—live in simple one-room huts with thatched roofs. For those with a bit more money, houses are built of wood and have windows. Roofs are of tile or corrugated metal. Furniture is simple: beds are thatch mats that are rolled up during the day. Other furnishings, such as chairs, desks, and tables, are scant. As most families are Buddhist, there is generally a small shrine in one corner. The space under the house provides a shaded living area during the hot months. Here people eat, sit, or nap during the heat of the day.

Life in urban areas offers more conveniences. While wealthy Cambodians live in villas or houses with electricity and all amenities, most city dwellers live in small apartments with many family members. Urban poverty is widespread. More than 10,000 children live on the streets of Phnom Penh.

Few people, either in the city or country, can afford a car, let alone a motorbike. Transport is usually confined to the family bicycle.

The United Nations Human Development Index (HDI) placed Cambodia 130th in 2002 out of 177 countries. HDI focuses on three measurable dimensions of human development: living a long and healthy life, being educated, and having a decent standard of living. In 2004 the life expectancy in Cambodia was 58 years, and the mortality rate was 9.1 deaths per 1,000 people. The 2004 literacy rate was 69.4 percent, and more than one-third of the population was living below the poverty line in 1997. The 2003 GDP per capita was \$1,900.

HEALTH

What was already a health-care system that barely served the needs of the population was put into a state of crisis with the civil wars of 1970 to 1975, subsequent deprivations at the hands of the Khmer Rouge regime, and the further fighting that took place after the invasion by Vietnam. Hundreds of thousands were killed and maimed by the fighting and by land mines, still a major problem in the country, and hundreds of thousands more were displaced. Traditionally endemic diseases such as malaria, hepatitis, diarrhea, dysentery, yaws, trachoma, respiratory infections

and dengue fever all became even more severe as the result of malnutrition brought on by the years of conflict.

Since 1995 the government has attempted to rehabilitate the health-care system, but there is still much work to be done. As of 2001, 33 percent of the population was undernourished, a slight improvement from 1992, when 43 percent were undernourished. However, only 34 percent of the population in 2002 had access to improved water sources and only 16 percent to proper sanitation. As of 2004 there were just 16 physicians for every 100,000 people; as of 1999 there were 2.1 hospital beds for every 1,000 people. Infant mortality in 2004 was high, with 74 deaths for every 1,000 live births, though this was down from 2000, when it was 88 deaths per 1,000 live births. Immunization rates among one-year-old children have improved; while the 1999 immunization rates for children up to one year old for measles was 55 percent, in 2003 it was 65 percent. The polio immunization rate in 2003 was 65 percent, diphtheria, pertussis, and tetanus 69 percent, and tuberculosis 75 percent.

HIV/AIDS has also had an impact on the medical delivery system. The HIV/AIDS prevalence rate rose from 0.1 percent in 1991 to 4 percent in 1999, then decreased to 2.6 percent in 2003. As of 2003 the number of people living with HIV/AIDS was estimated at 170,000, and deaths from AIDS that year were estimated at 15,000.

Many Cambodians still use traditional healers and herbs rather than Western medicine.

FOOD AND NUTRITION

Rice and fish form the center of Cambodian or Khmer diet. The food in Cambodia is somewhat similar to that of Thailand, though in general fewer spices are used. Meals usually include a soup as well as a fish dish. Fish are grilled, poached, or fried as well as eaten dried or salted. *Prabok*, fermented fish, is a traditional dish and is also served as a condiment with other dishes.

Herbs and spices used in a typical Khmer salad are mint, lemongrass, and coriander. These three ingredients, along with chili, onions, garlic, and ginger, are used in many Cambodian specialties. The years of French occupation are evidenced by the bread that is baked fresh daily in many regions. Sweet dishes include sticky rice cakes and a pudding made from the jackfruit. Tea and beer are typical drinks, as are Western-style soft drinks.

Cambodians usually eat with spoons but also sometimes with spoons and forks or with chopsticks. When at home, they traditionally sit on the floor around the table.

Malnutrition has been a problem in the country. In 2001, 33 percent of the population was still undernourished. Of infants under five between 1995 and 2003, 45 percent suffered from being moderately to severely underweight.

 Amount of Fruits and Vegetables Available per person per year kg: 53.5

STATUS OF WOMEN

In Khmer society men have traditionally held positions of higher status than women. Although traditional Cambodian culture calls for women to assume the vast bulk of child-rearing and other domestic responsibilities, women are gradually moving into mainstream Cambodian economic life. The Cambodian Women Development Agency, a nongovernment organization, is among those working to educate women about health, economic, and social issues and to help them improve their standing in society. Methods of birth control are generally well known and are available to many women in the population. Divorce is legal and fairly easy to obtain but not common.

In general, Cambodian women have the same access to educational opportunities as men; however, they continue to play relatively limited roles in government and business management. They also hold a majority of the low-paying farming, factory, and service-sector jobs. Human rights groups report that rape and domestic violence are common, and the trafficking of women and girls for prostitution is widespread.

 Women's Share of Wage Employment Non-agricultural %: 52.6

WORK

By a 2003 estimate Cambodia's labor force numbered 7 million, 75 percent of which is involved in agriculture, producing rice, rubber, corn, vegetables, cashews, and tapioca. Of these agricultural workers, it is further estimated that 80 percent are involved in subsistence farming. Major industries and services in the country include tourism, garments, rice milling, fishing, wood and wood products, rubber, cement, gem mining, and textiles. The 2000 unemployment rate was 2.5 percent. The labor force is due to swell in the early 2000s, as 60 percent of the country's population is still under 20. Also, almost half of the labor force is female, a result of the genocide committed by the Khmer Rouge.

Labor laws provide for the right to unionize, and Cambodia's few independent trade unions are active, especially in the garment industry, but small. They also have limited resources and experience and generally have little influence in negotiating with management. Factory workers frequently strike in Phnom Penh to protest low wages, forced overtime, and poor and dangerous working conditions, but there are reprisals by management. Union leaders face dismissal and other harassment at some factories, and union workers are routinely intimidated or even physically attacked, according to the U.S. State Department's human rights report for 2002. With most Cambodians relying on subsistence farming, union membership is estimated at less than 1 percent of the workforce. The minimum work age is 15, and the maximum workweek is 48 hours. These and other labor regulations are regularly ignored. Many children and teenagers work on small farms.

Employment and Labor

 Labor by Sector %:
 Agriculture: 75
 Other: 25
 Unemployment %: 2.5

EDUCATION

Education is free and compulsory for children ages six to 12. Six years of secondary education follow, the first three of which are also compulsory.

With a literacy rate of 69.4 percent in 2002, the country has a long way to go in reestablishing its educational system after the disaster of the Pol Pot regime. During those years education was abolished, except for party indoctrination. Children were sent to work in agriculture, and the educated class was virtually wiped out; only a fraction of instructors and teachers survived those years.

Progress has been made on many fronts, The number of teachers in both primary and secondary schools has dramatically increased, though the student-teacher ratio in primary schools as of 2000–01 was still 56 to 1. In that same time-frame education accounted for 15.3 percent of total government spending, or 1.8 percent of GDP. In 2002, 93 percent of eligible students were enrolled in primary schools, with over 60 percent of those reaching grade 5. The transition rate from primary to secondary was 83 percent.

Higher education still suffers from a shortage of professors and instructors. In 2002 there were about 43,000 students enrolled in postsecondary education in Cambodia and 2,500 instructors. Most students seeking higher education go abroad to foreign universities and colleges.

SCIENCE AND TECHNOLOGY

The educated classes, including scientists, technicians, and researchers, were largely persecuted and killed during the Pol Pot regime. Since 1979 the country has relied primarily on international researchers and technicians. The Cambodian Agricultural Research and Development Institute (CARDI), under the Ministry of Agriculture, Forestry and Fisheries, focuses on plant breeding, soil and water research, agricultural engineering, plant protection, agronomy, and farming systems. There is also a school of medicine and pharmacy. From 1994 to 1997, 23 percent of all students in higher education were enrolled in science, math, and engineering courses.

MEDIA

The Cambodian print media includes the following newspapers: *Cambodia Daily* in Khmer, Japanese, and English; *Cambodia Times*, weekly in English; *Phnom Penh Post*, daily in English; *Kampuchea*, weekly; *Pracheachon*, semi-weekly; and *Rasmei Kampuchea*, daily. The Cambodian News Agency started functioning in 1978. The government-controlled National Radio of Cambodia, formerly the Voice of the Cambodian People, transmits over 11 stations. The *Cambodia Post* and the *Cambodia Journal* are online English-language newspapers. TV-Kampuchea began color transmission in 1986. As of 2003 there were 2 AM and 17 FM radio stations and 7 government-owned television stations. In 2000 there were 119 radios and 8 television sets for every 1,000 people.

Though the constitution provides for freedom of speech and the press, such is not always the case in practice. Radio and television journalists often practice self-censorship, and broadcast news coverage favors the CPP, the ruling party. Opposition parties do not have the same access to the airwaves that the government does; opposition journalists are harassed and in some cases killed. Cambodia's print journalists are freer than their broadcast counterparts. They routinely criticize government policies and senior officials, including Hun Sen. Authorities, however, have recently used the country's press law to suspend several newspapers for 30-day periods for criticizing the government or monarchy. Reporters without Borders ranked the country 109th among 167 countries worldwide in its 2004 press freedom ranking.

In 2002 there were an estimated 30,000 Internet users and 380,000 cellular telephone users.

CULTURE

Ancient Khmer culture was derived from several sources, including indigenous animistic beliefs, Hinduism and Buddhism as imported from India, and the introduction of Sanskrit. The Khmer kingdom of Angkor flourished from the ninth to the 15th centuries, dominating the life of Southeast Asia. Though the literary and court language was Sanskrit, Khmer was the spoken language. Angkor Wat and Angkor Thum, huge palace complexes from the height of Khmer power, remain, giving the modern

world a hint of the heights that that ancient civilization attained.

Music and dance occupy a central position in traditional culture. Classical Khmer dance, as captured on murals and friezes on Angkor temples, was developed from Indian dance and often featured a lone female in ceremonial clothing dancing slowly, with stylized movements, to the music of a *pinpeat* ensemble, which includes drums, gongs, and bamboo xylophones. The Royal Ballet in Phnom Penh adapted this classical dance to modern times. Until recently the ballet performed only for the court, but now it is open to the public. Shadow plays and puppet plays are also typical forms of classical entertainment. These often tell stories from the life of Buddha or are adapted from the *Reamker*, the most important work of Cambodian literature, a Khmer-language adaptation of the Indian myth of the *Ramayana*.

Literature in the country has a long and rich tradition, beginning in the seventh century with temple inscriptions and continuing to the more classical works of the 16th century. Intensely oral, Cambodian literature was often memorized by professional storytellers who would travel about the country reciting their tales. This literary tradition includes stories of the Buddha's life, poem-proverbs called *chhap*, and folktales.

All these classical traditions were banned during the years of Khmer Rouge dictatorship, and there was an attempt to eradicate all cultural signposts from the country. Fortunately, much of the heritage survived those years. Folk arts and crafts have also made a comeback, including weaving, silversmithing, and woodcarving. Popular woven artifacts include the *krama*, a rectangular scarf made in colorful checks and stripes, and the *sampot*, a silk skirt.

The National Museum of Cambodia in Phnom Penh displays examples of Khmer sculpture as well as traditional arts and crafts.

FOLKORE AND MYTHOLOGY

Much of ancient Khmer mythology is related to Indian mythology. Preas Eyn, for example, is the Khmer thunder-god of ancient Cambodia; he rides on a three-headed elephant and casts bolts of lightning and bears similarities to the Indian god Indra. Preas Eyssaur is the god of death

but also brings life. He shows some similarities to the Indian god Shiva. Preas Prohm is the primeval god and infinite being and is similar with the Indian god Brahma. Reahu is the dark demon that pursues the sun and the moon through the heavens, trying to swallow them.

Many myths and legends passed down orally through the generations are based on the great epics of ancient India, the *Mahabharata* and the *Ramayana*, and on the stories about the previous lives of the Buddha. In folklore and legend the primary hero is Kaundinya, the first Cambodian, from whom Khmer trace their lineage. It was he who tamed a dragon princess and inspired the princess's father to drink the water that had been covering all the land of Cambodia. Modern heroes of legendary status include, for many Cambodians, the former king, Norodom Sihanouk.

ENTERTAINMENT AND RECREATION

The tradition of the itinerant storyteller has been replaced in both urban and rural settings by the incursion of radio, television, videos, and movies. Hong Kong martial arts movies are particularly popular among young Cambodians, who form the majority of the population. Using batteries, even villages with no electricity have access to television and radio broadcasts. In villages, some of the bars and cafés will also play popular videos for their customers. Chess is popular with older men, and shadow and puppet plays also provide entertainment to villagers.

Another favorite bar pastime is karaoke, which is found not only in cities but also in the smallest villages. Festivals also fill entertainment needs for villagers. These are times for dancing, eating, and drinking. Village children, who spend much of their time with chores, make up games to play in their free time. Some entertainment activities and sports revolve around schools.

In Phnom Penh there is more Western-style entertainment and recreation, including clubs, discos, spas, cinemas, and theaters.

ETIQUETTE

Cambodian society is formal, and great importance is placed on displays of respect and the recognition of the social hierarchy. Men of status and age are at the top of this social order; women must show respect to men, children demonstrate respect for elders, and people in general show respect for those in superior social and economic classes. Bows are used to for greetings; the deeper the bow, the more respect shown. In addition to the bow, greetings are made with hands together palm to palm and fingers pointed upward. This *sampeah*, as it is called, can also be a sign of respect. The higher the hands, the more respect.

There are many taboos in Cambodian society that would not be considered so in Western societies. For example, the soles of the feet are considered the dirtiest part of the body, and therefore it is considered extremely rude to expose the sole of the shoe to a Cambodian, as in putting one's feet up. Shoes should also be taken off before entering a Cambodian's home or temple. Also, as the head is the most valued part of the body, it is considered very impolite to touch or pat someone's—even a baby's—head. White is considered an unlucky color, as it is associated with death, and is inappropriate as the color of, for example, wrapping paper.

FAMILY LIFE

Courtship rituals in Cambodia follow very prescribed lines. Traditionally, dating is not typical; rather, marriages are arranged between families, with matchmakers setting the terms. Though this practice is changing in urban areas, it is still common among the 84 percent of the people who live in rural areas. Premarital sex is also more common in the cities than in the countryside. Once families agree on a match, gifts are exchanged, and the couple lives with the bride's family before or after the wedding to display the stability of the union. Weddings could be very lengthy and complicated affairs, lasting several days. However, in the modern world and with economic conditions severe in the country, these have been scaled back to daylong ceremonies.

After the probation period of living with the parents, or perhaps after the birth of the first child, the young couple moves into a house of their own. Men typically marry between 19 and 25, women between 16 and 22. The husband is the patriarch and in charge of earning an income, while the wife is in charge of domestic duties. Many women, especially in the cities, also work outside of the home.

Family size is in flux in Cambodia. The fertility rate in 2004 was 3.4 children per woman, which is much smaller than families once were, as the average used to be about five children per woman. Divorce is also becoming easier; once the right only of the wealthy, now middle-class and working-class families also experience divorce. Many of the precepts of marriage are breaking down; for example, it is more common now for men to take a mistress or other partner outside of marriage than it was before. Increasing domestic violence is also a sign of changing times in Cambodian family life.

PERSONAL APPEARANCE

Traditional dress is still popular in Cambodia. The *krama* is typical for both men and women. This long piece of cloth works as a head covering, loincloth, baby sling, blouse, or

purse and is often checkered in design. More elegant ones are made of silk in an array of colors. Men typically wear sarongs, while women wear the *sampot*; both are basically waist wraparounds that go down to the knees. Women will wear a blouse on top, while men often go bare-chested. In rural areas it is typical for children to go barefoot and for the adults to wear rubber sandals or thongs.

Especially in urban areas, Western clothing has become increasingly popular. Men wear trousers and short-sleeved shirts against the heat, while women wear skirts and blouses. Western styles are more popular with men than with women.

SPORTS

Soccer is the nation's most popular spectator sport, with the national team competing regularly in Asia's Tiger Cup. The national soccer league teams play at numerous locations during the season, drawing large crowds. Cambodians living in the capital also go to see basketball games, volleyball tournaments, and exhibitions of tae kwon do at Phnom Penh's Olympic Stadium. Kickboxing is another Cambodian favorite, with large crowds watching local heroes. Kickboxing is thought to be a Khmer invention.

Swimming is a favorite participation sport among the populace, both at beaches and at swimming pools, as are kite flying and canoe racing. *Heoung*, a sort of variant of baseball played with sticks instead of a bat and ball, is a popular sport for young boys.

CHRONOLOGY

- 1953** Cambodia gains independence from the French.
- 1955** King Norodom Sihanouk becomes prime minister.
- 1970** Defense minister and premier Lon Nol leads a coup to oust Sihanouk; the U.S. military, at war with neighboring Vietnam, enters Cambodia in pursuit of Vietnamese Communist guerrillas.
- 1975** The Khmer Rouge take over Cambodia, name Pol Pot the country's leader, and begin a forced evacuation of cities as part of a state experiment in agrarian communism.
- 1979** Vietnamese troops invade Cambodia, under the guise of opposing the Khmer Rouge regime.
- 1989** Vietnamese troops pull out of Cambodia.
- 1993** Elections are held for a new government; Prince Sihanouk resumes the throne at the head of a coalition government.
- 1997** Co-prime minister Hun Sen ousts his rival, Prince Norodom Ranariddh, in a coup.
- 1998** The last of the Khmer Rouge holdouts surrender to the government; Pol Pot dies while under house arrest, Hun Sen wins parliamentary elections and is sworn in as prime minister.

- 2001** The Senate passes a law requiring the creation of a tribunal to bring genocide charges against Khmer Rouge leaders.
- 2002** In February the United Nations temporarily abandons efforts to establish an international tribunal to investigate crimes against humanity by the Khmer Rouge. UN officials blame intransigence on the part of the Hun Sen government.
- 2003** Elections in July result in a stalemate, with none of the parties winning the two-thirds majority required to govern alone. An international tribunal to investigate Khmer Rouge atrocities is finally established.
- 2004** Prince Norodom Ranariddh and Hun Sen agree in June to form a coalition, with Hun Sen remaining prime minister. In August, Cambodia's parliament ratifies the country's entry into the World Trade Organization. King Norodom Sihanouk abdicates in October and names his son, Prince Norodom Sihamoni, his successor.
- 2005** The leader of Cambodia's opposition party, Sam Rainsy, flees to Thailand after parliament strips him of immunity from prosecution for defamation; Rainsy had accused Prince Norodom Ranariddh of taking bribes. He is later convicted of defaming the prime minister.
- 2006** Rainsy returns from exile after receiving a royal pardon.

CAMEROON

Basic Fact Sheet

OFFICIAL NAME

Republic of Cameroon (République du Cameroun)

ABBREVIATION

CM

CAPITAL

Yaoundé

HEAD OF STATE

President Paul Biya (from 1982)

HEAD OF GOVERNMENT

Prime Minister Ephraïm Inoni (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

16,380,005 (2005)

AREA

475,440 sq km (183,568 sq mi)

MAJOR ETHNIC GROUPS

Approximately 200 ethnic groups

LANGUAGES

French, English

RELIGIONS

Christianity, Islam, animism

UNIT OF CURRENCY

Coopération financière en Afrique centrale franc

NATIONAL FLAG

Three vertical stripes, from left to right green, red, and yellow, with a yellow star in the middle of the red stripe

NATIONAL EMBLEM

A shield on which the principal element is a red triangle representing Mount Cameroon flanked by two inverted green triangles, each displaying a gold star. Within the red triangle is a golden map of Cameroon with a black upright sword balancing a pair of scales superimposed on it. Behind the shield are crossed golden fasces. On a scroll beneath appears the national motto *Paix, travail, patrie* (Peace, work, fatherland).

NATIONAL ANTHEM

“O Cameroon, Thou Cradle of Our Fathers”

NATIONAL HOLIDAYS

January 1 (Independence Day), February 1 (Youth Day), May 1 (Labor Day), May 20 (National Day, Anniversary of the United Republic of Cameroon), October 1 (Reunification Day), December 10 (Rights of Man Day), Good Friday, Easter Monday, Whitmonday, Christmas, Boxing Day, various Islamic festivals

DATE OF INDEPENDENCE

January 1, 1960

DATE OF CONSTITUTION

May 20, 1972; revised January 1996

GEOGRAPHICAL FEATURES

Cameroon, known as the hinge of Africa, is in western-central Africa and extends like an irregular wedge north-eastward from the Gulf of Guinea to Lake Chad. The total land area is 475,440 sq km (183,568 sq mi). The total length of international land borders is 4,591 km (2,853 mi), of which the longest is that with Nigeria (1,690 km; 1,050 mi). The other borders are with Chad (1,094 km; 679 mi), Central African Republic (797 km; 495 mi), Republic of the Congo (523 km; 324 mi), Gabon (298 km; 185 mi), and Equatorial Guinea (189 km; 117 mi).

Cameroon is divided into four distinct topographical regions. In the south is a low coastal plain with equatorial rain forests and flat swamplands along its seaward edges. In the center of the country is an extensive savanna-covered plateau, known as the Adamaoua Plateau, extending from the eastern to the western border, with an average elevation of 1,370 m (4,500 ft). The western region is an area of mountainous forests and the site of Mount Cameroon, a volcano that has been active on four occasions in this century and whose height of 4,095 m (13,431 ft) marks it as the highest peak in West Africa. Elsewhere in this region the elevations range from 1,524 m (5,000 ft) to 2,440 m (8,000

Cameroon

ft). The northern part of the country consists of a rolling subarid savanna sloping into a shallow inland basin.

Geography

 Other: 33.36

Population of Principal Cities (2001 est.)

Bafoussam	242,000
Bamenda	316,100
Douala	1,494,700
Garoua	356,900
Maroua	271,700
Yaoundé	1,248,200

CLIMATE AND WEATHER

The country exhibits a complete sequence of tropical climates, from equatorial in the south to Sahelian in the north. In the southern coastal region a wet equatorial climate prevails. There is no dry season and little daily variation in temperature or humidity. Temperatures range from an average daily low of 22°C (72°F) to 29°C (84°F), and the average humidity is 85 percent to 90 percent. Average annual rainfall ranges from 2,540 mm (100 in) to 4,010 mm (158 in). The western slopes of Mount Cameroon are among the wettest places in the world, receiving 6,096 mm (240 in) to 9,144 mm (360 in) of rainfall annually.

East and south of Yaoundé annual rainfall ranges from 1,524 mm (60 in) to 2,540 mm (100 in). Fluctuations in temperature and humidity are within narrower ranges, the average daily maximum temperature being 27.8°C (82°F) and the average daily minimum being 22.2°C (72°F).

In the transition zone of the high central plateau, elevation tends to moderate temperatures. At Ngaoundéré daily maximums range from 27.8°C (82°F) in June during the rainy season to 35°C (95°F) in March at the end of the dry season, while the daily average is about 15.6°C (60°F) in the rainy season. Annual rainfall is about 1,524 mm (60 in), and the rainy season extends from April to October.

The northern plains are tropical, hot, and dry, with the rainfall dropping to 600 mm (24 in) annually toward Lake Chad. The dry season becomes longer and increasingly severe, with the temperature rising to 47°C (116°F) at Maroua in the extreme north. The daily variations in temperature may be as much as 10°C (50°F). Most of the rain falls during the five months from May to September; for the rest of the year the region is under the influence of the dry winds of the Sahara.

Climate and Weather

Mean Temperature

Southern Coastal Region: 72°F to 84°F
 East and South of Yaoundé: 72°F to 82°F
 High Central Plateau: 82°F to 95°F
 Northern Plains: Up to 116°F

Average Rainfall

Southern Coastal Region: 100 in to 158 in
 Western Slope of Mount Cameroon: 240 in to 360 in
 East and South of Yaoundé: 60 in to 100 in
 High Central Plateau: 60 in
 Northern Plains: 24 in

FLORA AND FAUNA

The flora and fauna of Cameroon are similar to those throughout West Africa. The swampy coastal areas support mangrove forests as well as palms, ferns, shrubs, and various species of swamp grasses. In the lowlands, tropical rain forests are dominated by broad-leaved trees that can be up to 200 feet tall. Some of the species are harvested commercially: *obeche*, *utile*, *iroko*, African walnut, *guarea*, and various species of mahogany. At higher elevations are found savanna woodlands. In the more northern regions the savannas are dominated by shorter grasses. The Sahelian landscape is more desert-like and contains low deciduous thorn trees and shrubs, grasses, and succulents.

Many of Cameroon's larger mammal species—including lions, cheetahs, crocodiles, rhinoceroses, leopards, giraffes, elephants, and antelopes—have largely disappeared from the wild and can be found only in nature preserves. Smaller fauna, such as iguanas, lizards, hogs, duikers, wildcats, monkeys, chimpanzees, and baboons, can still be found in the wild, along with numerous species of birds.

ETHNIC COMPOSITION

The ethnic composition of Cameroon is bewilderingly diverse. The country straddles the so-called Bantu Line, the northern limit of the Bantu peoples. In the south the Bantu stock dominates, with semi-Bantus prevailing to the north. Hamitic, Fulani, Arab Choas, and Sudanese Negroes predominate in the northern regions. Classification of the country's approximately 200 ethnic groups is

extremely difficult, and in many cases ethnic affiliations and names have not been established.

Although numerically in the minority, the Fulani, descendants of Muslim conquerors of the 19th century, are the dominant group in the north and have retained their own political structure, composed of 21 *lamidats* (chiefdoms). The non-Muslim *kiridi* (pagan) peoples of the north have generally sided with the Fulani on political issues because of their long tradition of subservience to the latter. The Bamileke, also known as Grasslanders, dominate the cultural and economic life of the country. They hold 70 percent of professional jobs and constitute 60 percent of the merchant class. The Doualas, after whom the country's principal port is named, are the most educated people in Cameroon and form the traditional elite in the coastal regions. The two other major ethnic groups are the Bassa and the Pahouin. Relations among all these groups are characterized by rivalry, suspicion, and hostility accentuated by regional, religious, and linguistic differences and memories of historic conflicts.

Ethnic aliens include more than 50,000 Africans, including Hausa and Ibo from Nigeria; Ewe from Ghana; and citizens of Benin, Central African Republic, Gabon, and Mauritania. There also are about 20,000 Europeans and North Americans in the country, including U.S., British, and French citizens, besides Canadians, Germans, Greeks, Cypriots, Syrians, and Lebanese. The Levantines control trade in the bush, and Europeans and North Americans control the major industries. Anti-Western feelings are not strong in the country.

LANGUAGES

The official languages of Cameroon are French and English. French is the dominant language, reflecting the French background of the ruling elite, drawn from the former East Cameroon. English is more widely spoken in the former West Cameroon.

A number of local languages, such as Ful, or Fulfulde, in the north and Pahouin languages in the south, serve as lingua francas. Intergroup and interregional communication is through Wes Cos, a pidgin English that was developed during the slave trade and was popularized by missionaries.

Most of the peoples of the northern savanna speak Chadic languages, while the Moundang, Baya, and Douri speak Adamawa. Peoples of the south speak Bantu languages, of which Bamileke is the most important.

RELIGIONS

Cameroon has no official religion. Animists constitute 40 percent of the population, Christians 40 percent, and Muslims 20 percent. In general, Christianity dominates

in the south and Islam in the north. The main Christian tribes are the Pahouin, Douala, and Bamileke, while the main Muslim tribes are the Fulani, Koloko, Mousgoum, Mandara, and Bamoun. The Roman Catholic Church has an archbishopric at Yaoundé.

Traditional beliefs	6,552,000
Muslim	2,276,000

HISTORICAL BACKGROUND

Little is known of Cameroon prior to the arrival of the Portuguese in 1472. Bantu-speaking people arrived in the south in the first millennium B.C.E. Fulani pastoralists migrated to the north in the 16th century. Like most of the Atlantic seaboard of Africa, Cameroon served as an important stop on the slave trade. Today it is estimated that 200 distinct ethnic groups live in Cameroon, although most did not settle in the region until the late 18th and early 19th centuries. When the Germans arrived in the late 19th century, the northern portion of the country was under the control of the Islamic Fulani Empire.

Cameroon was under three Western colonial powers after 1884. All of Cameroon, or Kamerun, as it was then known, was a German protectorate until 1916. In 1919 the country was divided between the French and the English, with the larger eastern sector going to France. French Cameroon achieved independence in 1960 as the Republic of Cameroon. The British held a plebiscite in West Cameroon in 1961 under U.S. auspices, as a result of which the northern half opted to join Nigeria and the southern half voted to unite with the Republic of Cameroon as the Federal Republic of Cameroon.

Cameroon then established a federal form of government, with Ahmadou Ahidjo as president; he had served as prime minister before independence. Under his direction, regional political parties were merged into the Cameroon National Union (UNC), formed in 1966. The federal structure, originally developed to meet the problems created by the nation's tribal, religious, and ethnic diversity, was also phased out and abandoned in 1972 when a new constitution created a unitary state. Ahidjo was reelected in 1965, 1970, 1975, and 1980. He stepped down unexpectedly in 1982 and was succeeded by Prime Minister Paul Biya. Biya was reelected without opposition in 1984 and 1988.

In an effort to promote national unity, the UNC was restructured in 1985. At that time it was also renamed the Cameroon People's Democratic Movement (RDPC). Independents were permitted to run in that year's elections, but a return to multiple parties was not envisioned. Biya survived two coup attempts by the military in 1983 and

1984. By 1990 the people of Cameroon seemed to have had enough of Biya. More than 30 new political parties formed and strikes were called when Biya refused to call elections in 1991.

Giving into political pressure, Biya called for elections and several opposition parties were able to garner enough of the vote to form a government with Simon Achidi Achu as prime minister. Nevertheless, later in 1992 Biya won reelection as the country's president. In 1997 and again in 2004 Biya won reelection under the newly expanded seven-year presidential term. The 1997 election was boycotted by main opposition parties. In 2004 Ephraïm Inoni was named prime minister.

Meanwhile, Cameroon continued to face both internal and external problems. In 1998 the business monitoring agency Transparency International ranked Cameroon the most corrupt country in the world. Further, environmental problems plagued the country. In 2000 the World Bank approved funding for an oil and pipeline project over opposition from human rights activists and environmentalists. In 2001 Global Forest Watch noted that 80 percent of the nation's forests had been earmarked for logging. After the International Court of Justice awarded the oil-rich Bakassi Peninsula to Cameroon rather than Nigeria in 2002, tensions between the two countries remained high.

LIST OF MODERN RULERS

1960–82 Ahmadou Ahidjo

1982– Paul Biya

CONSTITUTION

The constitution of 1972, as amended in 1975 and 1996, is the country's third basic document since 1960. It established a democratic and secular republic and radically altered the structure of power and government. It provides for a unitary state headed by a strong executive. The National Assembly replaced the former Federal Assembly and the regional assemblies. It reaffirmed Cameroon's adherence to the Universal Declaration of Human Rights and specifically guaranteed freedom of religion, speech, press, movement, assembly, and association as well as freedom from arbitrary arrest and discrimination and the right to hold private property. Finally, it barred any amendment to the constitution that would impair its democratic character or the unity and territorial integrity of the state.

National executive authority is vested in the president. He is elected by direct popular vote and may seek reelection for any number of terms. He serves as head of the armed forces and can negotiate and ratify treaties without the concurrence of the National Assembly. He

can also declare states of emergency and states of siege, when he may temporarily suspend civil rights and assume absolute powers. The members of the cabinet are appointed, and they are assigned duties by the president and are responsible only to him.

Although the office was not specifically provided for in the constitution, a prime minister was appointed in 1975 as head of a reorganized cabinet. In 1979 a constitutional amendment was passed incorporating the office of the prime minister and defining his status. The office of the prime minister was abolished in 1983 and reinstated in 1996. Cabinet members are not members of the legislature but of the civil service.

Since the creation of a single party in 1966, elections have been held on the basis of a single slate personally selected by the president. They serve only as occasions to demonstrate popular support for the government without offering real political choices to the electorate. Suffrage is universal over age 21.

PARLIAMENT

The National Assembly is a unicameral body consisting of 180 members elected by universal suffrage of those over age 21, for five-year terms. Nearly all of the members of the National Assembly belong to the Cameroon People's Democratic Movement (RDPC). Under the constitution specific areas of legislation are reserved to the National Assembly. These include civil rights; labor laws; civil, commercial, and property laws; civil and criminal codes; judicial organization; local government; national defense; currency; taxation and budgeting; education; and elections. Bills may be introduced either by the president of the republic or by any member of the National Assembly, which may override the president's veto. The National Assembly may appoint commissions of inquiry on specific issues. The president of the republic may, after consultation with the National Assembly, submit certain propositions to national referenda. The National Assembly may empower the president of the republic to legislate by ordinance for a limited period.

The National Assembly meets twice a year; the duration of each session is limited to 30 days. However, the National Assembly may be recalled for an extraordinary session limited to 15 days.

The 1996 constitution calls for an upper chamber for the legislature, to be called a Senate, but it has yet to be established.

POLITICAL PARTIES

In the elections held in 1997, 45 parties were represented by 3,000 candidates. Despite the large number of parties, the dominant Cameroon People's Democratic Move-

ment, which from 1966 until 1990 was the only legal political party, under the leadership of Biya, won an outright majority of the seats. The leading opposition party, the Social Democratic Front, won only 43 of 180 seats. Several other parties, including the Union Nationale pour la Démocratie et le Progrès (UNDP), won 13 seats, and the Union Démocratique du Cameroun (UDC) won five seats. In the most recent elections in 2004, the People's Democratic Movement won 133 seats, the Social Democratic Front 21, and the UDC five, with the 21 remaining seats won by various other smaller parties.

LOCAL GOVERNMENT

For purposes of local government, Cameroon is divided into provinces, departments, departmental subdivisions, and districts. The provinces are supervised by governors, departments by commissioners, subdivisions by subcommissioners, and districts by chiefs. All administrative officials are national civil servants responsible to the Ministry of the Interior.

At each level a chief administrative officer is also responsible for coordinating the work of the technical ministries within his territory. Development programs are coordinated by the Service for Rural Activation through provincial, departmental, and district development councils. The entire structure of regional government is supervised by the General Inspectorate of Administration.

Popular participation in regional government is channeled through elected communal councils, officially referred to as municipal councils, each representing a town, a rural area, or a mixed urban-rural area. A total of 126 municipal councils constitute the broadest local self-government structure in Francophone Africa. The councils levy taxes on produce and personal income and also receive back a portion of the national income taxes collected within their territories by the central government. The central government exercises close supervision over the councils through the mayors and the treasurers, both of whom are appointees of the Ministry of the Interior.

The primary areas of concern of the councils are education, health, and roads.

LEGAL SYSTEM

The law of Cameroon is based primarily on the French Civil Code, with elements derived from British and local customary law. The court system consists of the Supreme Court, appeals courts, regional courts, and magistrates' courts. The duties of the Supreme Court are divided into two major parts, and its composition varies accordingly. The regular Supreme Court gives final judgment on appeals from decisions of appeals courts, while the expanded

Supreme Court decides on the constitutionality of laws at the request of the president of the republic. The constitution also provides for a court of impeachment to try state officials for conspiracy against national security. The independence of the judiciary and its integrity are monitored by the Higher Judicial Council, whose concurrence is mandatory for appointments to the bench, which are made by the president.

HUMAN RIGHTS

In terms of civil and political rights Cameroon is ranked as a nation that is not free. Cameroon is an authoritarian state where political liberties are circumscribed. At the same time, Cameroon has managed to enjoy political stability and economic and social progress despite the ever-present threat of ethnic factionalism. As the only African state to fuse British and French traditions, Cameroon promotes national unity as its primary objective. To this end it has subordinated regional interests to the development of national institutions. As the threat of internal divisions has receded, some measure of civil liberties has been introduced into the political system.

Amnesty International has reported allegations of harsh prison conditions, ill treatment of detainees, and the unnecessary use of force and even torture by the police, especially during the apprehension and interrogation of suspects. Although habeas corpus is in effect, persons may be held in "administrative detention" under legislation relating to subversion. Cameroonian law guarantees criminal defendants a fair public trial, including legal representation at state expense. Courts are independent of executive and military control.

Except for independent weeklies in Douala, Limbe, and Bamenda, the Cameroonian radio and press is government owned and government controlled. Criticism of the government is discouraged, and the media are used as mouthpieces of the government. News reporters are often harassed and intimidated by the constant threat of censorship.

Freedoms of assembly and association are restricted by law and in practice.

Freedom of movement within the country is hampered by frequent police checkpoints, where travelers must produce identity cards and tax receipts.

FOREIGN POLICY

Cameroon, like Senegal, is one of the more Francophile states in Africa, and ties with France are especially strong. On the other hand, Cameroon has disputes with almost all of its neighbors. The civil war in Chad resulted in the influx of some 100,000 refugees into Cameroon's north-

ern provinces. Cameroon was forced to evacuate 10,000 of its nationals from Gabon following a sports-related riot. Border conflicts with Nigeria have been more serious; in 1981 such conflicts led to a seven-month suspension of diplomatic relations. In 1993 armed conflict came about, and enmity flared up again in 1994 as the two nations fought over the oil-rich Bakassi Peninsula. The matter was adjudicated by the International Court of Justice and the Organization of African Unity. In 1995 Cameroon was granted membership in the Commonwealth, reflecting the status of the western region as a former British colony.

DEFENSE

The defense structure is headed by the president; the line of command runs through the minister of defense to the commanders of the four military zones—central, north, west, and coastal—with regional headquarters at Yaoundé, Kutuba, Douala, and Battoussam, respectively.

Manpower is provided by volunteers, but all men are required to be registered for military service at age 18. Enlistment is for seven years, after which veterans are placed in on-call reserve status for 20 years. The armed forces have a high rate of literacy—60 percent—and are indoctrinated in the national ideology. In addition to the regular army, there are 4,000 paramilitary troops.

Cameroon faces no external threat from its neighbors; therefore, its armed forces are designed for internal peacekeeping only. The armed forces have no offensive capability and have limited equipment and firepower. The air force is dependent on French personnel and supplies. The army has not yet seen field combat, but it was employed until 1970 in quelling internal dissident movements. In 2003 the nation spent \$189.2 million, or about 1.4 percent of its gross domestic product (GDP), on defense.

ECONOMY

Because of its oil resources and favorable agricultural conditions, Cameroon has one of the best-endowed primary commodity economies in sub-Saharan Africa. Still, it faces many of the serious problems facing other un-

derdeveloped countries, such as a top-heavy civil service and a generally unfavorable climate for business enterprise. Since 1990 the government has embarked on various International Monetary Fund (IMF) and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. In June 2000 the government completed an IMF-sponsored three-year structural adjustment program; however, the IMF is pressing for more reforms, including increased budget transparency and privatization. Higher oil prices in 2000 helped offset the country's lower cocoa export revenues. By 2003 the nation's real growth rate was 4.2 percent, but the nation remained poor, with per capita GDP at just \$1,800 and nearly half of the population living below the poverty line.

ENVIRONMENT

Cameroon's major environmental problems are divided regionally. In the north of the country, extensive desertification threatens the livelihood of nearly 25 percent of the population. On the coast and in the central areas, deforestation is a growing problem. In urban and industrial areas, there is growing concern over water purity and firewood supplies. In the mountainous zones of the west and northwest, overfarming of the soil in conjunction with soil erosion threatens food supplies. The country is largely unequipped to deal with these matters administratively.

Environment

Forest Area % of land area: 51.3
 Average Annual Forest Change, 1990-2000, 000 ha: —222
 Nationally Protected Areas as % of Total Land Area: 9
 Emissions of Organic Water Pollutants kg 000 per day: 10.7
 CO2 Emissions per capita ton: 0.4

LIVING CONDITIONS

Living conditions in much of Cameroon are poor, with a high infant mortality rate, low life expectancy, and high rate of infectious disease. In many villages, mud and thatch are used in home construction, although the number of homes with concrete blocks and metal roofs is increasing. The larger cities have squatter areas and shantytowns, where refugees subsist without the most basic amenities. Many people bathe and wash their clothes in rivers. While the major roads are paved and train service from the major cities to the ports is available, many people travel by crowded bus and bush taxis. Travel is especially difficult off the main roads, where rains can make dirt roads impassable.

HEALTH

Health care is generally poor. In 2004 the infant mortality rate was high, at over 69 per 1,000 live births. Life expectancy, in turn, was low, at 48 years. AIDS is a major problem, with an estimated 6.9 percent of the adult population living with the disease. With only about 63 percent of the nation's population having access to clean drinking water, the death rate from infectious diseases such as dysentery is high; the death rate from intestinal disease, for example, was nearly 35 percent. Waterborne diseases are also common, and there were 2,900 cases of malaria per 100,000 people. While Western medicine is available from government and private Christian facilities, much of the population continues to rely on herbal practitioners as well as ritual healing.

FOOD AND NUTRITION

Food preferences vary widely among the many ethnic groups in Cameroon. Some generalizations, though, are possible. Staple ingredients include yams, plantains, nuts, cassava, millet, sorghum, and corn. These are sometimes made into a paste called *fufu*, which is then made into balls and included in stews. Fruits are widely consumed, including citrus, bananas, mangoes, papayas, and pineapples. Common vegetables include greens, squashes, and okra. Sometimes dried fish or meat is included in stews, but such meats as chicken, goat, sheep, or beef are more likely to be reserved for honored guests or for special occasions such as weddings.

STATUS OF WOMEN

Women enjoy equal rights with men under the constitution and are politically active in political parties and labor unions. The women's wing of the Cameroon People's Democratic Movement has created social and educational programs aimed at encouraging the economic and social productivity of Cameroonian women. Women are represented in the modern sector, although not proportionately in the upper levels of administration and in the professions.

WORK

In 2003 Cameroon's labor force consisted of about 6.5 million people. The country is heavily dependent on agriculture, with 70 percent of the population earning a living through farming, including herding and plantation work; this 70 percent, however, contributes only about 43 percent of GDP. Industry and commerce employ 13 percent, and other fields employ the remaining 17 percent. Agricultural products include coffee, cocoa, cotton, rubber, bananas, oilseed, grains, root starches, livestock, and timber. Major industries include petroleum produc-

tion and refining, mining and aluminum processing, food processing, textiles, and lumber.

 Unemployment %: 30

EDUCATION

Education is, in theory, universal, free, and compulsory from ages six to 11.

The academic year runs from September to June in the east and from October to June in the west. The medium of instruction is French in the east and English in the west. Pupils in the north and east spend one year longer at school than those in the central, coastal, and western provinces.

Schooling consists of a 13-year cycle, including six years of primary school divided into preparatory (two years), elementary (two years), and intermediate (two years), and seven years of secondary education in a lycée that offers a baccalaureate on the French model. The curriculum at all levels has been reoriented to reflect an African, particularly Cameroonian, point of view.

The Cameroonian school system has a high dropout rate, partly attributable to a shortage of qualified teachers. Of every 1,000 pupils entering the first grade of the primary cycle, only 560 complete the sixth grade; of every 1,000 students entering the secondary cycle, only 312 earn the baccalaureate.

Nearly 27 percent of school enrollment is in the vocational stream. Vocational and technical education is provided in two types of institutions: lower technical secondary schools and technical lycées. The former offer a four-year course, and the latter provide a three-year upper secondary course. The *École des Cadres* at Douala provides training in development work to civil servants, and two colleges organized by the Pan-African Institute of Development (PAID) train middle-level executives in rural development.

Private schools of missionary origin continue to play a dominant role in secondary and primary education. Private-school enrollments constitute 40 percent of the total in eastern Cameroon, while the vast majority of primary and secondary schools and primary-school teacher training institutions are in private hands in western Cameroon. Approved private schools receive grants-in-aid and conform to official curricula and regulations. In the northern provinces Koranic schools provide traditional instruction to Muslims.

Educational administration is centralized in the Ministry of Education.

The country has five universities, all part of the Cameroon University system, located in Buea, Douala, Dschang, Yaoundé (called Yaoundé I), and Soa (called Yaoundé II). Until fairly recently the nation's only university was the University of Yaoundé, founded in 1962 and financed until 1973 by the French government. The national literacy rate is 79 percent.

MEDIA

The Cameroonian press consists of one daily, the *Cameroon Tribune*, published by the government in French daily and in English weekly from Yaoundé, with a circulation of 66,000. In 2000 there were some 1,300 legally existing newspapers, but only about 30 were ever published, and only about 20 were published regularly.

In recent years the circulation of newspapers has been rapidly declining, largely as a result of poverty, which puts even a newspaper outside the reach of many Cameroonians. Over 50 periodicals are also published, almost all in French.

The national news agency is the Société de Presse et d'Édition de Cameroun (SOPECAM), with four permanent bureaus. Foreign news agencies in Yaoundé include Tass, Agence France-Presse, Reuters, and China Nouvelle.

There are nine publishers, all but one in Yaoundé. Cameroon adheres to the Berne, UCC, and Florence copyright conventions.

The state-owned Radiodiffusion-Télévision Camerounaise operates four radio stations, at Yaoundé, Douala, Garoua, and Buea. The main services are in French and English, with some broadcasts in regional languages and Arabic. Television was introduced in 1985. In 2001 TV Max, Cameroon's first private television station, began operation. Another station, Canal 2, was launched in 2002 to broadcast cultural programming. After the country's telecommunications laws were liberalized in 2000, dozens of new radio stations began operation.

CULTURE

Most Cameroonian artists are self-supporting, although in 1974 the government organized a cultural festival to help protect a cultural past that is rich and diverse. Particularly known for their oral literature are the Fulani, who pass along riddles, magic formulas, proverbs, poetry, stories, legends, and history through oral traditions. Writers from the southern Ewondo and Douala ethnic groups have made major contributions to modern African literature. Graphic arts are common as well, including sculpture, textiles, and pottery. The Bamoun, for example, produce bronze sculptures, while the Fulani produce graphic arts that reflect the predominance of cattle herding among them. Many groups in Cameroon use music, dance, statues, and masks to perform ancient rituals, and music is often linked with the cycles of the farming seasons.

 Annual Attendance: —

FOLKLORE AND MYTHOLOGY

The diverse cultural groups of Cameroon have produced a wide array of myths and legends. Among the Bamoun, for example, dirge music is played at night to level accusations of serious crime; the people play on buffalo-skin bags and iron bells as they march along slowly, singing in monotone voices. The Fang narrate heroic events from their history, as well as legends as fables, while playing the *mvvet*, a kind of harp or sitar. A prominent hero to Cameroonians is Douala Manga Bell, who had been chosen to protect the area from Germans. In violation of an 1884 treaty, German colonizers were trying to take over the city of Douala and its surroundings. Douala Manga Bell led the resistance until he was captured and hanged in 1914. Songs and dramatic performances, passed down through the generations, celebrate his bravery and martyrdom.

ENTERTAINMENT AND RECREATION

Perhaps the most dominant form of recreation in Cameroon is *makossa* music, a kind of fast-paced, hard-hitting, rhythmic music. *Makossa* is played virtually everywhere—not just in nightclubs but in taxis, in bars and restaurants, at truck stops, and on nearly everyone's small radio. The *makossa* musicians Sam Fan Thomas and Manu Dibango have become celebrities throughout the nation, and a blind singer named André-Marie Tala has been nicknamed "Ray Charles." Folk arts and crafts, especially graphic arts such as sculpture and also wood carving, basket making, mask carving, and the like, are also forms of entertainment, especially for traditional peoples. Soccer is a national pastime, and many men play checkers and chess.

ETIQUETTE

In many regions of Cameroon, standards of proper etiquette dictate the use of elaborate greetings, a person's proper name, and praise names. In French-speaking regions the common greeting is "*Bonjour, comment ça va?*"

(Hello, how are you?), while the pidgin English greeting is typically “How na?” When people meet, they commonly shake hands, though kissing on the cheek has become more common in the cities. In Cameroon it is considered rude to point. In the presence of a person of higher status or authority, it is rude to cross the legs at the knees. Among traditional cultural groups that are hierarchically organized, including the Grasslanders, the Bamoun, the Fulani, and the Bamiléké, an elaborate protocol has evolved for sitting during an audience with the chief.

FAMILY LIFE

Some cultural groups, especially in rural areas, are polygynous, with the family comprising a male head of household and two or more wives, their children, and often an extended family that includes grandparents. Families tend to be large, often with six or more children, and young children are often given chores, including looking after their younger siblings. In such cultures, where children have economic value, the birth of a child is a major event, and infants are given a great deal of attention. Men make the important decisions for the family, and women often not only care for children but also gather firewood, tend fields, care for the home, and haul water. In the north, most ethnic groups, including the Fulani, are patrilineal. The Bamoun, the Grasslanders, and the Bamiléké are variously patrilineal or dual descent, but one exception among the Grasslanders is the Kom tribe, which is a matrilineal culture.

PERSONAL APPEARANCE

As in many countries where modern cities coexist with traditional cultures, wide variations in dress can be seen. In the cities people generally wear Western-style clothing, and younger people favor T-shirts and jeans, often purchased from used-clothing vendors who ship them in from the United States and Europe. While traditional clothing is sometimes seen in the cities, it is most common in rural areas and villages. Northern Muslim men wear long robes, and women cover their heads in public. Among women, the *pagne*, a type of sarong, is common in the north but especially popular in the southern provinces. The *pagne* serves as a wraparound skirt that can also provide protection from the sun and hold a baby. Much of the clothing in Cameroon is made of high-quality cotton and is imprinted with traditional African designs and patterns.

SPORTS

While Cameroonians play tennis, handball, and basketball, soccer is wildly popular. From an early age boys play

soccer anywhere they can find a ball and open space, and the national soccer team is highly respected, having advanced to the quarterfinals in World Cup play in 1982, 1990, and 1994. Most recently, the 2003 team was the African champion and advanced to the World Cup semifinals. Also that year, Cameroon stunned World Cup champion Brazil at the Confederations Cup tournament.

CHRONOLOGY

- 1960** Cameroon becomes an independent nation, with Ahmad Ahidjo as first president. Ahidjo's group wins an absolute majority in National Assembly elections; new constitution is approved in national referendum.
- 1961** In UN-supervised plebiscite, the southern Cameroonian region of the British Trust Territories votes to join the Republic of Cameroon, while northern Cameroon votes to join Nigeria. The Federal Republic of Cameroon is formed with two states: West Cameroon and East Cameroon. Ahidjo continues as president of the Federal Republic.
- 1964** First elections to the federal National Assembly are held.
- 1965** First federal presidential election is held, and Ahidjo is reelected.
- 1966** Cameroon joins the five-nation UDEAC (Union Douanière et Economique d'Afrique Centrale). Union Nationale Camerounaise (UNC) is formed as the country's sole political party.
- 1968** Tandeng Muna is named premier.
- 1970** Ernest Ouandie, the last of the leaders of the UPC (Union des Populations de Cameroun) rebellion, is arrested along with Albert Ndongmo, the Roman Catholic bishop of Nkongsamba; Ouandie and Ndongmo are sentenced to death, but Ndongmo's sentence is commuted to life imprisonment following an appeal by Pope Paul VI and by Secretary General U Thant of the United Nations.
- 1972** Federal Republic is replaced by the United Republic of Cameroon, with new unitary constitution providing for a strong presidential form of government; new constitution is approved overwhelmingly by the electorate.
- 1973** National Assembly elections are held. Cameroon suspends ties with Israel. Second stage of the Trans-Cameroon Railway, from Belabo to Ngaoundéré, is opened.
- 1975** Ahidjo is elected president for his fourth term. Border treaty is signed with Nigeria. Paul Biya is named prime minister.
- 1976** Border treaty is concluded with Gabon.

416 Cameroon

- 1978** In national elections UNC wins all seats.
- 1979** Constitutional amendment officially creates the post of prime minister.
- 1982** Ahidjo steps down as president and nominates Prime Minister Biya as his successor, but remains UNC leader.
- 1983** Biya rids the cabinet of Ahidjo supporters. In bitter power struggle, Ahidjo is forced to leave the country. Ahidjo and lieutenants are charged with plotting to overthrow Biya. Ahidjo is tried in absentia along with military officers Ibrahim Oumarou and Adamou Salatou by a military tribunal. More than 45 persons are executed in connection with the coup. Members of the presidential security force loyal to Ahidjo stage a coup that is foiled by loyal army and paratroop regiments. As many as 1,000 civilians and soldiers are killed before the government regains control. The government deletes the word "United" from the name of the republic. Three more provinces are added to the territorial administration. The office of prime minister is abolished.
- 1984** Paul Biya is elected president in nationwide balloting, indicating strong popular support for his liberalization programs.
- 1985** Nigeria expels illegal Cameroonian residents. The Cameroon National Union is renamed the Cameroon People's Democratic Movement (RDPC).
- 1986** At least 1,700 people die as they sleep in a natural disaster when toxic gas from volcanic Lake Nyos engulfs lakeside villages.
- 1987** Electoral reforms allow legally constituted parties to contest elections, although the RDPC remains the only authorized party. Biya announces an austerity budget to deal with the country's growing economic crisis.
- 1988** Multiple candidates run for seats in the assembly. Biya is reelected unopposed.
- 1992** Biya is elected president in the first multiparty elections.
- 1994** Nigerian troops claim the petroleum-rich Bakassi Peninsula of Cameroon.
- 1996** Border skirmishes break out with Nigeria over the Bakassi Peninsula territorial dispute; Nigeria and Cameroon agree to adjudication by the International Court of Justice.
- 1997** In elections boycotted by most of the opposition, Biya's party, the Cameroon People's Democratic Movement (formerly the National Cam-

eroonian Union), wins 60 percent of seats and Biya is reelected.

- 1998** Transparency International ranks Cameroon the world's most corrupt country.
- 2000** World Bank approves funding for an oil pipeline project despite environmental and human rights criticism.
- 2001** Global Forest Watch reports that 80 percent of the country's indigenous forests have been allocated for logging. IMF offers debt relief worth \$2 billion on the condition that corruption is checked and social services are improved.
- 2002** The International Court of Justice awards the oil-rich Bakassi Peninsula to Cameroon rather than Nigeria, sparking further tension between the two nations.
- 2004** Biya is elected to a third seven-year term as president.

Canadian dollar

NATIONAL FLAG

A white field flanked by vertical red fields on either end, with a red maple leaf on the white field

NATIONAL EMBLEM

A heraldic shield divided into five parts: three crouching lions on a red field in top left representing Britain; the erect red Scottish royal lion on gold surrounded by a decorated frame called a “double tressure” on the top right; a gold harp on blue for Ireland in the left center; three fleurs-de-lis for France in the right center; and at the bottom, with twice the width as the others, a cluster of three red maple leaves on white, representing Canada. A gold lion holding the red, white, and blue Union Jack and a silver unicorn with the flag of old France bearing three silver fleurs-de-lis support the shield. A gold helmet mantled in red and white rests on the upper part of the shield, with a crowned lion on its top holding a red maple leaf in its forepaw. Above all is displayed St. Edward’s jeweled gold crown. Underneath the emblem a blue scroll rests upon a design of Irish shamrocks and French lilies. In gold letters it carries the national motto, *A mari usque ad mare* (From sea to sea).

NATIONAL ANTHEMS

Canada has no official national anthem. Both “God Save the Queen” and “O Canada” have semiofficial status, with the latter more commonly used.

NATIONAL HOLIDAYS

January 1 (New Year’s Day), Monday preceding May 25 (Victoria Day), July 1 (Canada Day), first Monday in September (Labour Day), second Monday in October (Thanksgiving Day), November 11 (Remembrance Day), Good Friday, Easter, Christmas, Boxing Day

DATE OF INDEPENDENCE

July 1, 1867

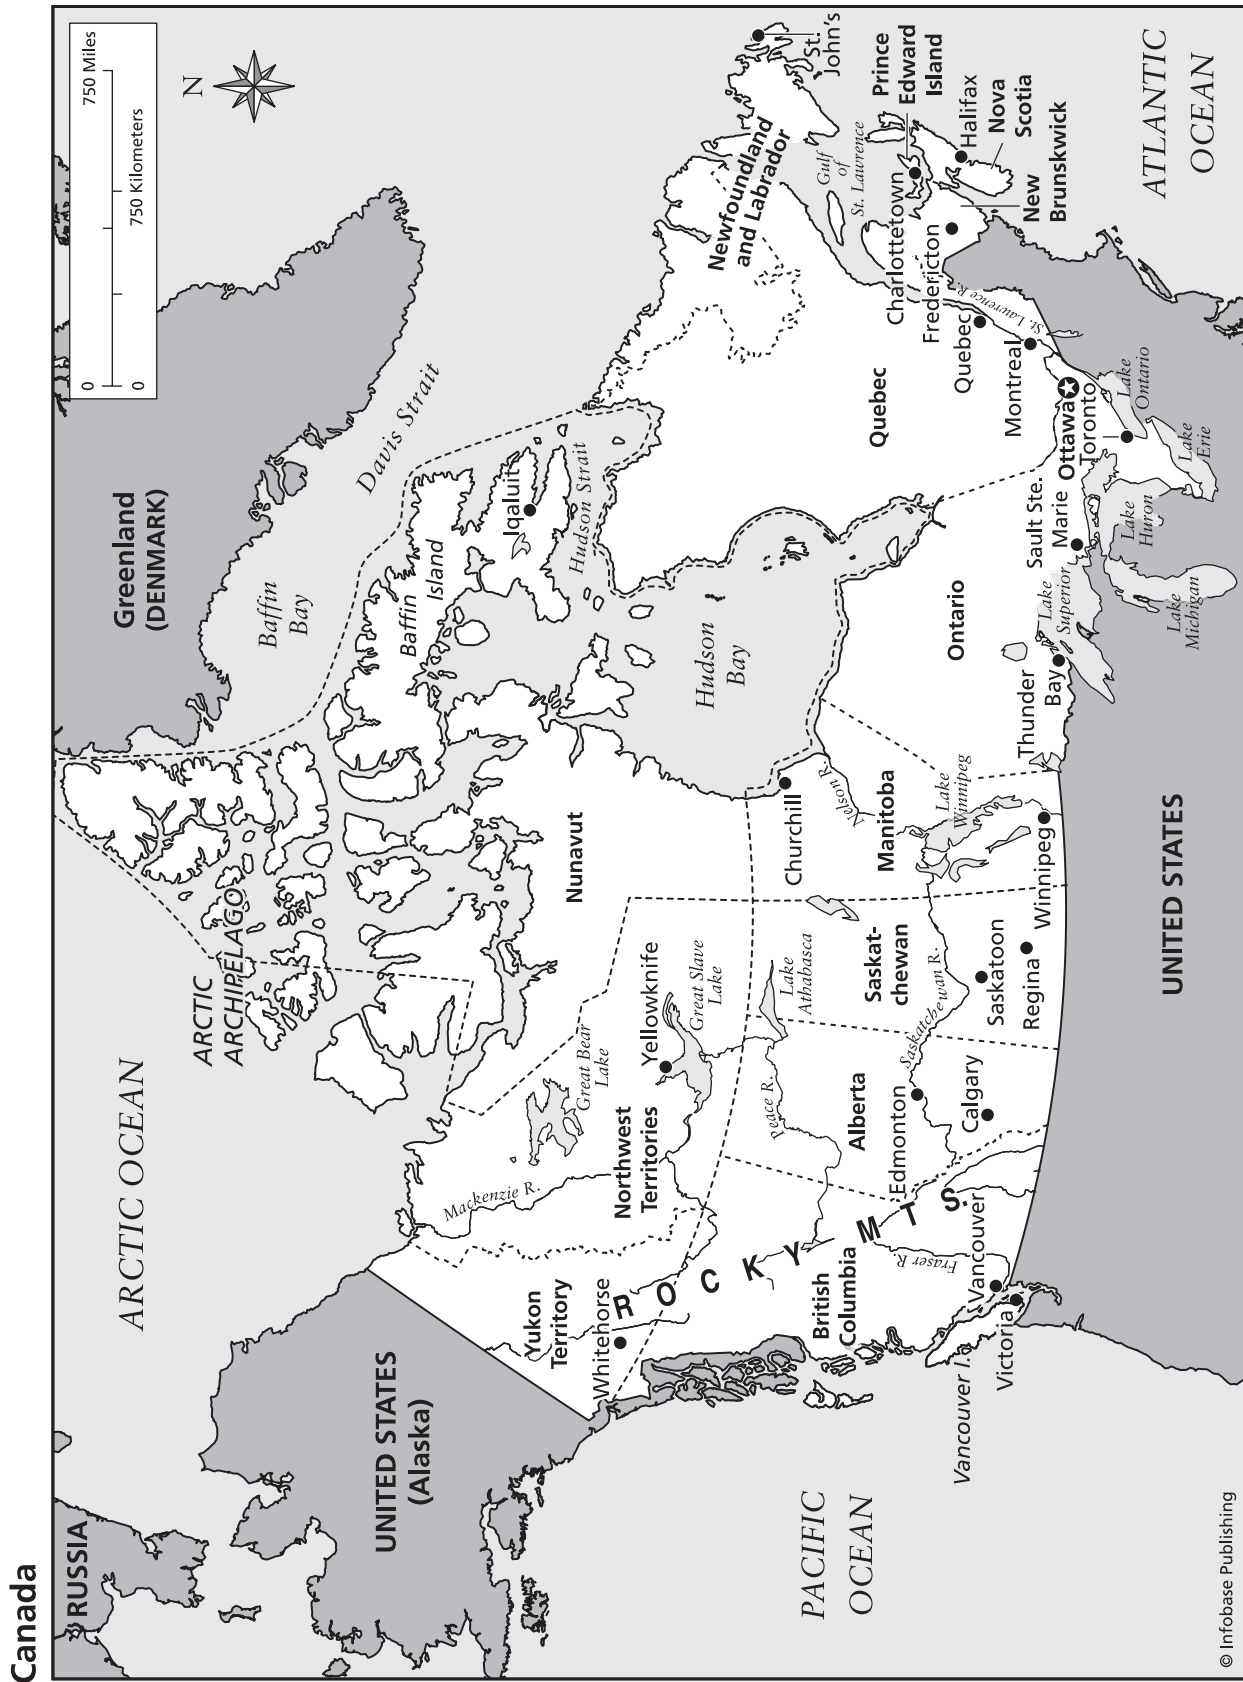

DATE OF CONSTITUTION

April 17, 1982

GEOGRAPHICAL FEATURES

Canada occupies all of the North American continent north of the United States except Alaska and the small French islands of St. Pierre and Miquelon. The most striking geographical characteristic of Canada is its immense size. With a recorded area of 9,984,670 sq km (3,855,081 sq mi) for land and freshwater, it is the largest

country in the Western Hemisphere and the second largest in the world, next to Russia. Canada’s size is about the same as that of the continent of Europe. The border with the United States, the longest undefended border in the world, is 8,893 km (5,526 mi). The total coastline is divided into four segments: Arctic Ocean (9,286 km; 5,770 mi); Atlantic Ocean, including Baffin Bay and Davis Strait (9,833 km; 6,110 mi); Pacific Ocean (2,543 km;

1,580 mi); and Hudson Bay and Hudson Strait (7,081 km; 4,400 mi).

Topographically, Canada is divided into the Atlantic provinces, the Great Lakes–St. Lawrence Lowlands, the Canadian Shield, the Interior Plains, the Western Cordillera, the Northwest Territories, and the Arctic Archipelago.

The foundation of Canadian geology is the Canadian Shield (sometimes called the Precambrian Shield or the Laurentian Plateau), which takes up almost half of Canada's total area. It extends beyond the Canadian boundary into the United States in two limited areas: at the head of Lake Superior and in the Adirondack Mountains. Structurally, the shield may be thought of as a huge saucer, the center of which is occupied by Hudson and James Bays. Most of the shield is relatively level and less than 610 km (2,000 ft) above sea level. Only along the dissected rim of the saucer are there major hills and mountains: the Torngat Mountains in northeastern Labrador, the Laurentian Highlands, and those along the northern shores of Lake Superior. Except for the plains, the rest of the shield is composed of undulating terrain with rocky, knoblike hills and lakes interconnected by rapid streams.

The Canadian Shield is surrounded by a series of lowlands, the Atlantic region and the Great Lakes–St. Lawrence Lowlands to the east, the Interior Plains to the west, and the Arctic Lowlands to the north.

In the Far West is the Western Cordillera, composed of relatively young folded and faulted mountains and plateaus. It is only some 805 km (500 mi) wide in Canada, much narrower than in the United States, with less extensive interior plateaus. Generally, the mountains are much higher in Canada and contain some of the most beautiful alpine scenery in the world. The only other parts of Canada with comparable spectacular mountains are Baffin and Ellesmere islands in the northeastern Arctic.

Between the Western Cordillera and the Canadian Shield is the region broadly known as the West, including the Manitoba and Mackenzie lowlands. The Manitoba Lowland (leading to the Saskatchewan and Alberta plains) is the only part of Canada that is as flat as a tabletop. The boundary between the Manitoba Lowland and the Saskatchewan Plain is marked by the Manitoba Escarpment. The Saskatchewan and Alberta plains are divided in the south by the Missouri Couteau. The landscape of the two plains is similar to that of the U.S. Great Plains, with rolling plains, deeply incised rivers, water-filled depressions called sloughs, dry streambeds called coulees, and, in the drier areas, mesas, buttes, and badlands.

The Northwest Territories is a political rather than a geographical term; it covers the region east of the Western Cordillera and north of the Interior Plains and the Canadian Shield. Within this large area there are two distinct subregions: the subarctic Mackenzie River valley

to the west and the arctic area of the islands and north-central mainland.

The Arctic Archipelago lies on a submerged plateau whose floor varies from flat to gently undulating. From the Alaskan border eastward to the mouth of the Mackenzie River the shelf is shallow and continuous. The deeply submerged continental shelf runs along the entire western coast of the Arctic Archipelago from Banks Island to Greenland.

The largest islands are those in the Arctic Archipelago, extending from St. James Bay to Ellesmere. The largest on the western coast are Vancouver Island and the Queen Charlotte Islands. The largest on the eastern coast are Newfoundland, Prince Edward Island, Cape Breton Island, the Grand Manan and Campello islands of New Brunswick, and Anticosti Island and the Îles de la Madeleine of Quebec.

CLIMATE AND WEATHER

Canada has a great variety of climates. British Columbia has moderate winter and summer temperatures, similar to those of England. The central and southern parts of the Western Plains, on the other hand, have great winter and summer temperature extremes and about as much precipitation as the Gobi Desert in Mongolia. In the north, winter temperatures plunge as low as -51°C (-60°F), but the summers are as hot as in the tropics in southern Ontario.

The conflict of the air masses that pour in from three directions east of the Rockies leads to continual cyclonic storms, producing much rain and snow. The Northwest Territories and the Prairies, having fewer and weaker storms, are the driest areas. The windward mountain slopes are exceptionally wet, and the protected slopes are very dry. Thus the western coast gets 1,524 to 3,048 mm (60 to 120 in) of precipitation annually; the central Prairies area, less than 506 mm (20 in); the flat area east of Winnipeg, 508 to 1,016 mm (20 to 40 in); and the Maritime Provinces, 1,143 to 1,524 mm (45 to 60 in). The average annual number of rainy days ranges from 252 along coastal British Columbia to 70 in the interior of the province. About 30 percent of the annual mean precipitation is snow.

In the province of Newfoundland, on the Atlantic coast, Labrador has a rigorous climate and is covered by snow for more than half the year. On the island of Newfoundland, however, summers are cool and winters are relatively mild.

On Prince Edward Island the climate is quite moderate except for occasional extreme lows in the winter.

In Nova Scotia summer and winter temperatures are more moderate than in the interior. Winters are stormy on the coast, and fog is prevalent throughout the year.

In New Brunswick the seasons are somewhat delayed, and temperatures in the interior are more extreme than on the coast.

In Quebec the frost-free season extends from early May to late September. Northward and eastward, winter temperatures become more extreme and summers cool.

Ontario bears the brunt of severe winter cold waves moving east from the Prairies or south from the Arctic across Hudson Bay. Summers, though warm, are short. Peninsular Ontario has a much milder climate than the northern districts. Since Ontario lies in a major storm track, wide variations occur in weather, especially in winter, but extreme conditions are not prolonged.

Manitoba and Saskatchewan have typically prairie continental climates, with long, cold winters and warm summers. The frost-free period in the fertile lowland areas ranges from 80 to 100 days.

The south of Alberta is subject in the winter to cold, dry air masses of continental polar air, occasionally moderated by chinook winds. Summers are warm with abun-

dant sunshine, but rainfall is meager and highly variable, particularly in the southwest.

British Columbia has the most moderate climate in Canada, with mild, wet winters, warm summers, and the maximum number of frost-free days. Semiarid conditions sometimes occur in the interior.

Yukon is subject to wide temperature variations, but winters are remarkably mild for the latitude, and periods of intense cold are of short duration.

In the southern areas of the Northwest Territories summers last for about three months, with temperatures above 10°C (50°F). North of the tree line, freezing temperatures may occur during any month, and winters are long and bitterly cold. The climate is moderated by the sea in the Arctic Archipelago, so that extremes are not as severe as in a continental region of the same latitude. Temperatures in the Arctic Archipelago are generally below -18°C (0°F) for six months or more. Occasional mild periods occur, particularly in the western Arctic. Summers are short and cool. Winter nights and summer days are long, reaching a maximum of 24 hours above the arctic circle. Precipitation is extremely light and falls mostly in late summer.

Climate and Weather

Mean Temperature

Newfoundland: Jan 6°F to 22°F July 49°F to 61°F
Maritime Provinces: Jan 9°F to 27°F July 47°F to 70°F
Ontario: Jan 11°F to 25°F July 61°F to 72°F
Prairie Provinces: Jan 8°F to 11°F July 63°F to 67°F
British Columbia: Jan 12°F to 40°F July 54°F to 63°F
Yukon: Jan 22°F to 25°F Jul 58°F to 60°F
Northwest Territories: Jan 22°F to 21°F July 38°F to 61°F

Average Rainfall

Western Coast: 60 in to 120 in
Prairies: 20 in
Winnipeg: 20 to 40 in
Maritime Provinces: 45 to 60 in

FLORA AND FAUNA

The wide variety of landform and climate regions in Canada determine the flora and fauna of the country. These regions include tundra, forests, grasslands, and alpine areas. Plant life in the east, in the Great Lakes–St. Lawrence region, includes a wide assortment of trees, including maple, birch, beech, hemlock, white pine, and spruce. Animals in this region include black bears, deer, squirrels, skunks, beavers, and otters. Avian life in the same re-

gion includes the robin, red-winged blackbird, bluebird, woodpecker, oriole, bobolink, hawk, loon, and heron.

In the grasslands, or prairies, stretching north to the tundra are found aspen, cottonwood, balsam, birch, bur oak, and numerous varieties of conifer. In these forested areas corresponding animal life includes moose, caribou, black bear, timber wolf, marten, beaver, porcupine, snowshoe rabbit, and chipmunk, while in the plains are found rabbits, gophers, prairie birds, ducks, and geese.

Along the west coast, a much wetter region, are hemlock, cedar, Sitka spruce, Douglas fir, and white pine. Animal life on the west coast includes deer, mountain goat, mountain beaver, and the striped skunk. Also found are common birds, such as the pygmy owl, band-tailed pigeon, black swift, northern flicker, crow, and black brant.

In the alpine environment of the Rocky Mountains are aspen, lodgepole pine, hemlock, fir, and spruce. Typical mammals of this area are the grizzly bear, mountain goat, moose, cougar, and alpine flying squirrel.

Mosses and low grass and bush cover much of the far northern Arctic region, while animal life includes the musk ox, reindeer, polar bear, caribou, white and blue fox, arctic hare, and lemming. Arctic birds include the snowy owl, ptarmigan, snow bunting, and arctic tern. Canada's coastal waters are home to walrus, seals, and whales.

ETHNIC COMPOSITION

Canada is a country with two founding peoples with distinct cultural and linguistic traditions: Anglo-Canadian and French Canadian. The existence of the two societies belies the belief of the fathers of the confederation

that they were creating a British (including Anglo-Celtic or Irish) nation in North America. In the 1870s more than 60 percent of the population was of British origin, almost double the size of the French. Further, the Anglo-Canadians were the ruling class economically and politically. The French constituted an enclave that simply would not disappear as well as a vulnerable but tenacious minority who resisted all efforts at integration. Anglo-Canadian dominance has suffered erosion during the past century. When the immigration of peoples from the British Isles did not reach the hoped-for proportions, immigration from eastern Europe, including the Ukraine, was encouraged. As a result, the prime farmlands of western Canada were settled by eastern Europeans. Having very little contact with Canadian government representatives or settled communities, immigrants were forced to develop their own resources. They did not assimilate into a Canadian way of life because there were no social or institutional pressures to do so.

Many Amerindians bear a striking resemblance to East Asians. Their physical similarities and differences suggest that while related to Asians, Amerindians separated from Asians before many of the later physical traits developed. Further, no clear relationship exists between Amerindian tongues and Asian languages except for in the Inuit or Eskimo language, which bears a striking resemblance to some northeastern Asian tongues, such as Kamchadal and Chukchi.

Anthropologists distinguish seven distinct cultural groups among Canadian Indians: the Algonquin tribes of the northern woodlands, the agricultural tribes of the eastern woodlands, the Plains tribes, the tribes of the Pacific coast, the tribes of the Western Cordillera, the tribes of the basins of the Mackenzie and Yukon Rivers, and the Inuit along the Arctic coast.

The Amerindians of the eastern woodlands include the Beothuk, Micmac, Nasakapi, Cree, Montagnais, Algonquin, and Ojibwa. The Iroquois are related groups and include the Huron, Neutral, and Tobacco. The Indians of the Plains are the Assiniboine, Plains Cree, Blackfoot, Sarsce, Gros-Ventre, and Sioux, all of whom are migratory hunters. The Indians of the northwestern coast include the Tsimshian, Haida, Kwakiutl (or Kwakwaka'waku), Bella Coola, and Nuu Chah-nulth ("People along the islands," Nootka). The Athabaskans of the Mackenzie and Yukon basins include the Chipewyan, Beaver, Slave, Yellowknife, Hare, Sekani, Dogrib, Nahani, and Kutchin. The Inuit live entirely north of the timberline; the most important Inuit groups are the Mackenzie, Copper, Central, and Labrador.

The one-third of the Canadian population who are neither French nor English in origin are scattered into a number of groups, principally Italians, central and eastern Europeans, Chinese, Japanese, East Indians, blacks, and religious groups such as Hutterites, Men-

nonites, Doukhobors, and Jews. The immigration of these groups has had a profound impact on the nature of Canadian society. Cities such as Toronto became less British with a variety of languages and cultures enlivening its streets. At the same time, there remain pockets of racism and discrimination against non-British groups. Pressures to conform are more subtle than formerly but just as real. The degree of prejudice is in direct proportion to the cultural distance from the Anglo-Saxon center and is more persistent in the case of Asians and blacks and less in the case of more easily assimilable whites, such as Italians.

The most recent population breakdown according to ethnicity puts those of British Isles origin at 28 percent, French origin 23 percent, other Europeans 15 percent, Amerindians 2 percent, others, mostly Asian, African, and Arab, 6 percent, and mixed background 26 percent.

LANGUAGES

Canada has two official languages with coequal status: French and English, representing the dual origins of the nation. In the 1996 midterm census 63 percent of the population reported English as their only mother tongue and 11 percent a language other than English and French as their only mother tongue. Nearly 1 million persons, or 4 percent of the population, reported having more than one mother tongue.

Language is a sensitive issue in Canada, and bilingualism is protected by legislation, particularly the Official Languages Act of 1969. The basic principles of the Official Languages Act are further buttressed in the Charter of Rights and Freedoms in the 1982 Constitution Act. It affirms that all public communications must be in both English and French and encourages bilingualism in nonofficial communications as well. The purpose of the official language policy is not to make all Canadians bilingual but to ensure that wherever there is a Francophone concentration, French speakers, who constitute 45 percent of all officially bilingual Canadians, may deal with the federal government in their own language. There is a commissioner of official languages to ensure the implementation of bilingualism in official practice. The result of this policy has been a modest increase in the overall number of persons who can speak both English and French with reasonable fluency.

RELIGIONS

From the time of the British victory on the Plains of Abraham until the beginning of the 1960s, the Catholic Church was the pillar of French Canadian society and made a profound contribution to the development of its identity. Beginning in about 1960 a rapid deconfessional-

ization of Catholic institutions gained force and contributed to a disintegration of Catholic influence.

The largest Protestant denomination is the United Church of Canada (UCC), formed in 1925 through the merger of Methodist, Congregational, and nearly half the Presbyterian churches. The second-largest Protestant body is the Presbyterian Church, consisting of those Presbyterian congregations that refused union with the UCC in 1925. Lutherans and Baptists have widespread membership. Most of the 15 distinct Pentecostal churches are small offshoots of similar bodies in the United States. Mennonites are dispersed across Canada, with 15 distinct bodies. The Anglican Church is organized into 28 dioceses in four provinces. Immigration has helped to create a wide variety of Orthodox churches, of which the largest is the Greek.

In 1991 Catholics formed 48.2 percent of the population and Protestants 40.1 percent. Two provinces were predominately Catholic: Quebec, with 88.2 percent of its population, and New Brunswick, with 53.9 percent. Of the 296,400 Jews, one-half lived in Ontario and one-third in Quebec. Of Christian denominations, the fastest growing were the Pentecostal, who grew by 54 percent between 1971 and 1981, compared with 13 percent for Catholics and 3 percent for Anglicans. The nearly 1.8 million people with no religious preferences were nearly double the number in this category in 1971. They were found mostly in the west, particularly in British Columbia (where they made up 20.5 percent of the population), Yukon (20.3 percent), and Alberta (11.7 percent). According to the 2001 census, of 29,639,035 Canadians who listed a religion, 12,921,285 were Catholic and 8,654,845 were Protestant.

Religious Affiliations

Roman Catholic	12,921,000
Protestant	8,654,000
Other	11,230,000

HISTORICAL BACKGROUND

The first inhabitants of North America came from Asia during the last Ice Age, around 20,000 to 35,000 years ago. Archaeological evidence and oral traditions indicate that some of the peoples who settled along the west coast and in the eastern woodlands, such as the Huron and Iroquois, created sophisticated political organizations as well as extensive trade systems.

At the end of the 10th century, Norse peoples from Europe, known as Vikings, created permanent settlements on the northern tip of Newfoundland and, after initial conflict, began trade relations with the local peoples. The settlements were abandoned around the mid-14th century.

The first European to set foot in Newfoundland, Canada, was the Venetian John Cabot (Giovanni Caboto), commissioned by England's Henry VIII to look for a short route to Asia. But his voyage was actually financed by Bristol merchants who were more interested in fisheries than in overseas colonies. Cabot reached the shores of Newfoundland in 1497, and his reports of codfish off the coast of Newfoundland brought fishing fleets from England, France, Spain, and Portugal.

In 1534 the French made their first stake in the New World when Jacques Cartier planted a cross on the tip of the Gaspé Peninsula and, the following year, discovered and ascended the St. Lawrence River.

Another 70 years passed before Sieur de Monts and Samuel de Champlain founded the first permanent French settlement, at Port Royal in Nova Scotia. In 1608 Champlain established the town of Quebec. By 1756 the French flag flew over a territory larger than France, and French settlers numbered more than 10,000. However, they suffered great depredations when their allies the Huron Indians were destroyed by the Iroquois.

In the 17th century the English began to press their claims to the French-held lands, and they conquered Quebec in 1629. Restored to France in 1632, Quebec, together with the rest of New France, as the territory was by then known, was placed under the control of a chartered company, the Company of One Hundred Associates, whose mandate was to exploit the fur trade and establish settlements. In 1663 the French Crown took over the territory and established a feudal system of government under which large grants of land were made to seigneurs who, in turn, made grants to settlers in return for specified dues. Meanwhile, explorers and missionaries such as Jacques Marquette, Louis Jolliet, and René-Robert Cavalier, sieur de La Salle expanded the royal domain, so that by the end of the 17th century it stretched north to the shores of the Hudson Bay, west to the Great Lakes, and south to the Gulf of Mexico. French dominance was complete except for the British Hudson's Bay Company, founded in 1670 to compete for the fur trade.

In the middle of the 18th century French-British rivalry culminated in the historic defeat of the French general Montcalm on the Plains of Abraham by British forces led by James Wolfe in 1759. The French army surrendered in Montreal in 1760, and the 1763 Treaty of Paris ceded New France to Britain. The Quebec Act of 1774 established British rule and a system of government very favorable to the ruling seigneurs and the Roman Catholic Church. Concessions to the Quebecois paid off in the loyalty of the French aristocracy and the church during the American Revolution. However, the influx of 40,000 Loyalists from the American colonies changed the political character of the country permanently, as they took over the direction of the new government set up under the Constitutional Act of 1791. The act divided

the British territories into Upper Canada (now southern Ontario) and Lower Canada (southern Quebec), each of which gained elected assemblies with limited powers.

The last decades of the 18th century witnessed another period of geographical expansion, which extended the borders to the Pacific coast. Between 1789 and 1793 Alexander Mackenzie undertook his journey to the northern reaches of the continent and the Pacific Ocean. British mariners, notably George Vancouver, secured for Britain a firm hold on what is now British Columbia. After amalgamating with the rival North West Company in 1821, Hudson's Bay Company held undisputed sway over most of the north and west. Eastern border problems with the United States were settled by the Webster-Ashburton Treaty of 1842, and in the west the border was settled at 49°N in the face of considerable American public opposition.

The road to self-government began with two rebellions, one led by Louis J. Papineau in Lower Canada and the other by William Lyon Mackenzie in Upper Canada in 1838. The earl of Durham was sent to Canada in 1838 to recommend political reform. The Durham Report recommended the grant of some form of self-government and also the immediate union of the two Canadas for the purpose of anglicizing the French Canadians. The union of the two provinces was approved in 1840, and responsible government became effective in 1849.

Movement for a Canadian confederation gained strength in the 1860s. George A. MacDonald and George Brown, rival party leaders, agreed to merge Upper Canada and Lower Canada under a common dominion government. Later the Atlantic provinces were brought in, and a confederation was established in 1867 through the British North America Act. The name Canada was chosen for the entire country, and Lower Canada and Upper Canada became the provinces of Quebec and Ontario, respectively. Prince Edward Island joined in 1873. In 1869 Hudson's Bay Company relinquished its territorial rights to Rupert's Land and the Northwest Territories. In 1870 the province of Manitoba was established and admitted to the confederation, and the Northwest Territories were transferred to the central government. In 1871 British Columbia joined the confederation, thus spanning the continent. The formation of the federation was followed by an equally permanent link, the Canadian Pacific Railway (CPR), which helped to open up the west to new settlers. The two rebellions led by Louis Riel, in 1879–80 and 1885, provided a footnote to the creation of the second-largest nation in the world in the space of just under 25 years.

The long administration of the Liberal prime minister Sir Wilfrid Laurier (1896–1911) witnessed the settlement of the Prairies and large-scale economic growth. Alberta and Saskatchewan were made provinces in 1905. In 1911 Manitoba, Ontario, and Quebec were greatly

enlarged through the allotment of all territory west of Hudson Bay and south of 60°N and all territory east of the bay, formerly known as Ungava. In 1931 Norway formally recognized Canadian title to the Sverdrup group of Arctic islands, giving Canada full sovereignty over the entire Arctic region north of the mainland.

The interwar years were marked by growth in self-government and the rise of radical political parties, such as the Social Credit Party. A major constitutional crisis arose in 1926 with the so-called King-Byng Affair. The governor-general, Lord Byng, tried to interfere in the government operations of Mackenzie King, the prime minister. Mackenzie King called for a new election; Lord Byng refused. The voters later voted for Mackenzie King, and the power of the governor-general to interfere in Canadian politics was reduced. The Statute of Westminster of 1931 gave all dominions equal status, with virtually complete legislative and executive independence.

Canada played an important part in World War II. It declared war three days after Great Britain. For a country of such a small population, Canada played a critical role in supplying Great Britain and in the liberation of Holland. After the war the movement toward more independence from Great Britain continued, as the Supreme Court of Canada replaced the House of Lords as Canada's highest court. Also in 1949 Newfoundlanders decided to join Canada as the 10th province.

Liberal governments successively headed by W. L. Mackenzie King and Louis St. Laurent were in office from 1935 to 1957 when the Conservatives returned to power under John Diefenbaker, prime minister until 1963. Liberals swept back under Lester Pearson (1963–68) and Pierre Trudeau. The Trudeau era lasted for 16 years, until 1984 (except for a year's break in 1979), when the Conservatives won an overwhelming majority in the House of Commons and a new cabinet took office under Brian Mulroney.

In 1989 the United States and Canada signed a free-trade agreement that ultimately led to the formation of the North American Free Trade Agreement (which included Mexico) to create the world's single largest market. Canada has benefited greatly from this agreement. Its high-tech service economy has been a strong international player. Despite widespread opposition to its fiscal and defense policies and the embarrassment of a series of scandals, the Conservative government survived for nine years, until 1993, when the pendulum swung again and the Liberals returned to power under Jean Chrétien. The principal event in the Mulroney administration was the Meech Lake Accord, which granted Quebec special privileges within the Canadian federation and which was opposed by most of the anglophone provinces. In 1994 Quebec voters turned down a referendum on separation from Canada by a narrow margin, 50.6 to 49.4 percent. In 1998 the Supreme Court of Canada held that Quebec could secede but only with

the agreement of the federal government and the other provinces on such questions as the settlement of the national debt and the use of a common currency. In April 1999 the Northwest Territories were officially divided to create a new territory in the east to be governed by the Inuits, who constitute 85 percent of the area's population of 25,000. The new territory, Nunavut, has its capital at Iqaluit. In the 2000 elections Jean Chrétien won a substantial victory with the help of large Liberal electorates in the eastern provinces.

Chrétien, whose tasks as prime minister included the overhaul of the national health-care system and education reform, retired in 2003 and was succeeded by Paul Martin, who is somewhat more conservative than Chrétien. Martin's first task upon becoming prime minister in 2004 was to attempt to repair damaged relationships with the United States. Ties had become strained over trade issues and Canada's refusal to participate in the U.S.-led war in Iraq. However, in November 2005 Martin's government was brought down in a vote of no confidence over a financial scandal. After general elections conservative Stephen Harper became prime minister.

Same-sex marriage became a heated topic in 2003. By the following year the nation's Supreme Court ruled that such marriages were legal, and in February 2005 the Liberal Party put forth a bill in Parliament legalizing such marriages countrywide. Also in 2003 the Liberal Party defeated the separatist Parti Québécois for control of the provincial government of Quebec. The victory ceased for the time being debate over the status of Quebec.

LIST OF MODERN RULERS

Prime Minister

1935–48	William Lyon Mackenzie King
1948–57	Louis Stephen Saint Laurent
1957–63	John George Diefenbaker
1963–68	Lester Bowles Pearson
1968–79	Pierre Elliott Trudeau
1979–80	Charles Joseph Clark
1980–84	Pierre Elliott Trudeau
1984	John Napier Turner
1984–93	Martin Brian Mulroney
1993	Avril Phaedra Campbell
1993–2004	Joseph Jacques Jean Chrétien
2004–2006	Paul Joseph Martin
2006–	Stephen Harper

CONSTITUTION

The foundation of the Canadian government is the British North America Act of 1867, renamed the Constitution Act of 1867, which established the federal form of government as it exists today. It established the powers

of the three branches of government and delimited the division of power between the federal government and the provinces.

The key phrase in the constitution is that Canada was to have a form of government “similar in principle to that of the United Kingdom.” Yet, because Canada is a federal government, unlike the United Kingdom, the Canadian system of government has developed differently from that intended by the authors of the constitution. For instance, the existence of two Canadas, one French and the other British, required an elaborate system of protective clauses that have no parallel in Britain.

Federal constitutions lead to weak central governments, but Canada has been spared this development because the Constitution Act of 1867 clearly gives more powers to the federal Parliament than to the provincial legislatures. The most efficient parts of the constitution are those that deal with the doctrine of “supremacy of Parliament,” the principal British constitutional legacy to Canada. The doctrine holds that Parliament can make or repeal any law it wishes on matters of federal jurisdiction. The courts have no right to declare illegal any statute passed by the federal Parliament. The main restraints on this supremacy are cultural and customary. One is that neither the federal nor any provincial government has the right to delegate its legislative authority to the other. The second is that parliamentary acts must be in harmony with the Canadian Bill of Rights. Third, the courts have built up rules of statutory interpretation that provide guidelines for legislators. However, the effect of judicial interpretation is quite limited because it is only in the event of lack of clarity in the wording of an act that the courts have the right to interpret the intention.

In addition to the Constitution Act of 1867, documents that contribute to the Canadian constitution include some statutes of the British Parliament (including the Statute of Westminster, which radically altered the relationship of the dominions to the mother country); some statutes of the Canadian Parliament, such as the Supreme Court Act and the Official Languages Act; the constitutions of the provinces; and some provincial statutes that establish provincial government institutions.

The Constitution Act of 1867 could be amended only by the British Parliament. Efforts to “patriate” the 1867 Constitution—that is, to make it an authentically Canadian document—bore fruit in 1982, when the British Parliament approved a bill ending Canada’s constitutional dependence on the United Kingdom for amendments. On the basis of this provision, the constitution of 1982 came into being. It included a charter of rights and freedoms and a provision for mechanisms to amend the constitution in the future. The first 15 clauses deal with fundamental freedoms, democratic rights, mobility rights, legal rights, and equality rights; clauses 15 through 24 deal with the status of English and French as co-official languages, clauses 25 through 34 with gen-

eral principles governing application of the charter and the removal of regional disparities. Clauses 38 through 51 deal with procedures for amending the 1867 and 1982 constitutions. Amendments require resolutions of the Senate and House of Commons and at least two-thirds of the provincial legislatures that represent, in aggregate, at least 50 percent of the population of all the provinces.

As in the United Kingdom, there is a fusion of executive and legislative powers. Formal executive power is vested in the sovereign of Britain, who is head of state. The Crown is represented in Canada by a governor-general.

Even more so than in normal constitutional monarchies, the monarch is an entity with only a titular role in government. Such powers as the monarch has in theory—summoning, proroguing, and dissolving Parliament; inviting the leader of the majority in Parliament to form the government; and signing orders-in-council and other state documents—are done in her name by the governor-general, who is bound by constitutional convention to carry out these tasks in accordance with the advice of responsible ministers.

The 1867 constitution created an advisory body called the Queen’s Privy Council for Canada, which includes, but is much larger than, the cabinet. Membership in the council is for life and includes cabinet ministers, former cabinet ministers, the chief justice, former chief justices, former speakers of the Senate and the House of Commons, and occasionally other distinguished persons, including members of the royal family, past and present Commonwealth prime ministers, and premiers of provinces. The Queen’s Privy Council has met in plenary session only a few times, because its constitutional responsibilities to advise the Crown are discharged exclusively by the cabinet.

The linchpin of the governmental system is the prime minister, the head of government. By convention, the position is one of exceptional authority and influence. The prime minister presides over cabinet meetings, sets its agenda, and recommends to the governor-general the dissolution of Parliament. The prime minister recommends the appointment of a new governor-general, privy councilors, cabinet ministers, lieutenant governors, provincial administrators, speakers of the Senate, chief justices of all courts, senators, and certain senior executives in public service.

The most important federal institution is the cabinet, most of whose members are chosen by the prime minister from among the members of the House of Commons, with a few chosen from the Senate. One of the most important considerations in putting together a viable cabinet is balance; although there is no requirement to give proportional representation to every group, every cabinet is expected to include Catholics as well as Protestants, Anglophones as well as Francophones, and, as far as possible, at least one representative from each of the provinces.

A typical cabinet consists of about 30 ministers whose work is carried out through a committee system. The prime minister determines the number, tasks, membership, and terms of reference of these committees. Legislative proposals first surface in the relevant committee, then move to the Justice Department, from where they go to the cabinet committee on legislation before reaching the cabinet, with the approval of which they are introduced as bills on the floor of the House or the Senate. The most important committees are Treasury Board, Priorities and Planning, Federal-Provincial Relations, Legislation and House Planning, External Policy and Defense, Economic Policy, Social Policy, Government Operations, and Science, Culture, and Information.

The cabinet secretariat is the Queen's Privy Council Office, considered a government department under the prime minister. The Parliamentary Secretaries Act of 1959, as amended by the Government Organization Act of 1970, provides for one parliamentary secretary for each departmental minister. Parliamentary secretaries are appointed by the prime minister.

In each of the provinces the Crown is represented by a lieutenant governor appointed by the governor-general in council. The executive council is the provincial counterpart of the federal cabinet. The Legislative Assembly is known by that name in all provinces except Quebec, where it is known as the National Assembly, and Newfoundland and Nova Scotia, where it is the House of Assembly. In the Yukon and Northwest territories, the central government is represented by the commissioner, who shares legislative power with the Legislative Assembly and has to approve all bills. In those two territories there are executive councils or cabinets with limited powers, consisting of four members in the Yukon Territory and eight members in the Northwest Territories and headed by the leaders of the majority parties in the respective assemblies.

Recent amendments to the constitution include one from 1999 creating the territory of Nunavut and one from 2001 changing the name of the Province of Newfoundland to the Province of Newfoundland and Labrador.

PARLIAMENT

The Canadian Parliament is a bicameral legislature consisting of a lower chamber, the elected House of Commons, and an appointed upper chamber, the Senate. The House of Commons consists of 308 members as of 2004 and the Senate of 105. Prior to 1965 the senators were appointed for life, but since then they have been required to retire at 75. The importance of the Commons relative to the Senate is enhanced not only by its elected character but also by its role in the formation of the government and the latter's dependence on the House's confidence for its survival.

Representation in the Commons is roughly proportionate to population, but special provisions in the distribution of seats among the provinces as well as allowed variations in constituency size may create disparities. For example, no province may have fewer seats in the Commons than the fixed number of Senate seats to which it is entitled. Moreover, when the redistribution of seats occurs, normally after each decennial census, no province may be assigned 15 percent fewer seats than it had previously. All constituencies elect a single member to the Commons.

Except in cases of war or other national emergency, the life of a Parliament term may not extend beyond five years. However, Parliament terms have frequently been shorter because prime ministers have generally sought dissolutions of the government, which follow when the cabinet loses the confidence of the House. Parliament must meet at least once each year, but there is no requirement as to the length of each session. As the business of government has increased in recent years, it has become normal for sessions of Parliament to run for the entire year, with breaks in late summer and at Christmas and Easter.

Like its Westminster model and progenitor, the Canadian House of Commons is legally sovereign. However, this sovereignty is tempered by a number of factors, such as party discipline, the right of the prime minister to seek a dissolution, and control by the executive of the legislative agenda.

All bills go through five stages in the Commons and the same five stages in the Senate before they are passed on to the governor-general for royal assent. The first stage is a motion for leave to introduce the bill together with a first reading. Debate at the second reading concerns only the principle of legislation, and no amendments are permitted. When the bill has passed second reading, it is referred to one of the standing committees of the House for clause-by-clause examination. At this third stage the members are free to suggest amendments for the government to accept or reject, but since all committees have a government majority, few bills suffer anything more than minor changes. The bill is then reported back to the House for the fourth stage of clause-by-clause scrutiny and debate, when further amendments may be proposed. The fifth and final stage is the third reading, and debate is generally very brief at this stage. If the government does not feel confident that it can secure the passage of a bill at any stage it will probably withdraw the legislation rather than face defeat.

Of all the second chambers in Western democracies, the Canadian Senate is universally regarded as the most anachronistic and obsolete. Initially, the Senate was a forum for the propertied classes, and senators were required to own real estate in the province they represented. In practice, however, Senate seats are not allocated by the

prime minister as political plums for those who have done special service to the party or, less frequently, the nation; mostly, they are given to people who are near the end of their careers. When one party has been in power for a long period, as the Liberal Party has for most of this century, the Senate becomes lopsided in favor of that party. Further, few third-party members are ever nominated to the Senate, even though vacancies go begging many times.

Theoretically, Senate representation is based on the principle of equal regional representation. Accordingly, its 104 seats are distributed on a regional basis as follows: Ontario, 24; Quebec, 24; Atlantic provinces, 24 (Nova Scotia and New Brunswick, 10 each, and Prince Edward Island, four); Newfoundland, six; western provinces, 24 (six each from Manitoba, Saskatchewan, Alberta, and British Columbia); and one each from the Yukon North-west, and Nunavut territories.

The Senate performs three basic functions. In its legislative role its major work is the revision of major government bills, either those passed by the House of Commons or those introduced in the Senate. In its deliberative role the Senate provides a national forum for the discussion of public issues. On two days' notice, a senator can start any debate, with no time limits, on any subject. In its investigative role, the Senate standing and special committees conduct thorough inquiries into social and economic issues, and their reports are considered authoritative.

The Senate's legislative powers are identical to those of the House, with two exceptions: Money bills must originate in the House and constitutional amendments may be passed by the House without the concurrence of the Senate after 180 days.

The Senate has no right, unlike the House of Lords, to delay legislation, but it has an absolute veto on non-money bills—that is, it may reject or refuse to act on a bill passed by the House. Actually, the Senate does most of its useful work in tidying up legislation, and it seldom defeats a bill or amends it on matters of substance. It is a long-standing practice in the Senate when major government bills are introduced in the House to refer the “subject matter” of such bills to Senate committees in advance of their formal introduction later on. Although Liberals have dominated the chamber for most of this century, it operates with less partisanship and is less in a hurry than the lower chamber. Its lower political temperature no doubt helps it to do its tasks of legislative draftsmanship and investigation quite well.

Elections are governed by the Canada Elections Act of 1920, which also created the office of chief electoral officer. Elections to the House of Commons and provincial legislatures are direct. The age of suffrage is 18. Voter turnout ranges from 60 percent to 85 percent. All constituencies are single-member districts, and one is elected by a simple plurality. The system distorts actual voting

support for the dominant party by giving it more seats than warranted by the votes and depressing the number of seats obtained by minority parties.

POLITICAL PARTIES

Canada has an effective two-party system at the federal level but multiple local parties at the provincial levels, reflecting the mosaic nature of Canadian political culture. Local parties are essentially parochial groups with little ideological content. As a result, the network of affiliated and subsidiary organizations that characterizes parties in other countries is absent in Canada. The organizational strength of federal parties rests on the local or constituent level, where the constituency associations are electoral clubs of volunteers who are active at election times. At the top, each party is dominated by a handful of politicians with high visibility. Generally, constituency groups are responsible for nominating candidates, raising funds, and canvassing the electors. However, these groups exercise little influence at the national level, where the parliamentary party dominates, or at the provincial level, where the provincial legislative party dominates. One of the consequences of personal leadership in Canadian politics is that the more popular leaders are rarely displaced.

The Liberal Party (LP) emerged as the Canadian counterpart of the British Liberal Party soon after Canada gained dominion status in 1867. Its ideological bases were anticlericalism (in Quebec), free trade, and strong self-government.

The Progressive Conservative Party (PCP) governed Canada for the first three decades of dominion status (1867–97) as the Conservative Party. Its constituency comprised the staunchly pro-British and anti-American British Canadians on the one hand and the devoutly religious French Canadians on the other. The Conservatives were pro-tariff, favoring trade restrictions as a means of building up national industrial power. Its rebirth began in 1942 when, following its merger with the Progressive Party of Manitoba, it became the Progressive Conservative Party and was able to build up a strong following in the prairie provinces.

The Conservative Party of Canada (CPP) was created in 2003 by a merger of the Canadian Reform Conservative Alliance/Alliance Réformiste Conservatrice Canadien and the Progressive Conservative Party/Parti Progressiste-Conservateur.

The New Democratic Party (NDP), known until 1961 as the Cooperative Commonwealth Federation, developed in 1933 out of the merger of the United Farmers Party, the Socialist Party, and a number of smaller political groups of European immigrants. It is a committed socialist party and a member of the Socialist International. Its twin political bases are in disparate areas: the prairie farmers and the Ontario and British Columbia working

classes. It has held political power in Saskatchewan and British Columbia under radical premiers.

The Reform Party is a right-wing populist group based in Alberta attracting broad western support. Its leader was Preston Manning, who deplored the commitment to bilingualism and opposed the dominance of Ontario and Quebec in Canadian politics.

Of the provincial parties, the most important is the Parti Québécois (PQ), which achieved power in Quebec in 1976, eight years after its founding. The party's success is closely tied to its dynamic leader, René Lévesque, who helped to create the PQ from three organizations that had nothing in common except a commitment to Quebec's independence: Mouvement Souveraineté, Ralliement National, and Rassemblement pour l'Indépendance Nationale.

The Bloc Québécois (BQ) was created in 1990 and now represents the major political voice for Quebec separatism. In 2005 it was led by Gilles Duceppe.

Other minor parties include the Parti Nationaliste de Québec, the Western Canada Concept Party, the Social Credit Party (which has been in power in Alberta and British Columbia), the Union Nationale, the Confederation of Regions Western Party, the Libertarian Party, and the Communist Party.

In June 2004 parliamentary elections, the LP won 135 seats, the CPP 99 seats, the BQ 54 seats, and the NDP 19 seats, and one seat went nonpartisan.

LOCAL GOVERNMENT

Under the Constitution Act of 1867, local government is the responsibility of the provincial legislatures, a responsibility later extended to territories. The unit of local government, apart from the school boards, is the municipality whose boundaries, powers, and responsibilities are assigned to them by provincial statutes. An increasing number of special agencies, joint boards, or commissions provide certain common services for groups of smaller municipalities. Certain other functions traditionally assigned to municipalities have reverted in whole or in part to the provinces. Some provinces, such as Ontario and British Columbia, have also established new intermediate or second-tier levels of regional government. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario, and Quebec, the first order of municipalities consists of counties, which are further subdivided into cities, towns, villages, and townships. In Newfoundland and the four western provinces there are no counties; municipalities are either rural or urban, the latter being made up of cities, towns, and villages. Municipalities are usually administered by an elected council headed by a mayor, overseer, reeve, or warden.

Canada is made up of 10 provinces and three territories, each with its own premier and unicameral legisla-

ture. In each province the sovereign is represented by a lieutenant governor appointed by the governor-general. The territories have become more autonomous since the 1980s.

LEGAL SYSTEM

Canada has two legal systems representing two great legal traditions: the common law derived from Anglo-Saxon traditions, and the *droit civil* (civil law), which has its roots in the legal code of the Roman emperor Justinian and later that of Napoleon Bonaparte. Criminal law is uniform throughout the country, and most of it is contained in the Criminal Code, which is derived almost exclusively from English sources.

Responsibility for the administration of the courts is divided between the federal and the provincial governments. The Constitution Act of 1867 gives each province exclusive powers over the administration of justice. Under this authority provincial legislatures have established courts of appeal, supreme courts, county courts, and provincial courts. The governments of Quebec and Nova Scotia have delegated some authority to the municipalities, and thus these provinces have, in addition, municipal courts.

The Supreme Court of Canada was created in 1875 by an act of Parliament, and the Supreme Court Act of 1949 firmly established it as the ultimate court of appeal. The act also increased the number of judges from seven to nine, of whom three are to be Quebecois. The Supreme Court is a general court of appeal for both criminal and civil cases, with jurisdiction over both the *droit civil* of Quebec and the common law of the rest of Canada. The court sits in Ottawa. The quorum is five, but a full court of nine sits for most cases.

The Federal Court of Canada was established in 1971 as a court of law, equity, and admiralty and as a superior court of record, having both civil and criminal jurisdiction. It replaced the Exchequer Court of Canada, which had been in operation since 1875. The Federal Court of Canada has two divisions: an appeal division and a trial division. The former consists of the chief justice and nine other judges, and the latter of the associate chief justice and 13 other judges. Every judge is an *ex officio* member of the division of which he is not a regular member. The court may sit anywhere in Canada.

HUMAN RIGHTS

The bulwark of civil rights in Canada is the 1982 constitution, which incorporates a charter of rights and freedoms. A major problem area in human rights is the influx of illegal immigrants from Asia without proper documentation. The government has found it necessary

to move against these immigrants with measures considered harsh by civil rights activists. The government possesses exceptional powers to override constitutional guarantees in the event of war or national emergencies. These include the War Measures Act of 1914, augmented by a 1981 federal cabinet order permitting the federal government to declare a state of national emergency with suspension of certain basic civil liberties, as well as the Official Secrets Act of 1939. In 1987 civil rights groups and opposition parties complained that the Canadian Security and Intelligence Service (CSIS) maintained files on and performed unwarranted investigations into the activities of an unacceptably large group of Canadians who were members of peace organizations and also used false and misleading information to obtain authorization to perform a wiretap on suspected Sikh terrorists.

As a result of the September 11, 2001 terrorist attacks in the United States, Canada passed several antiterrorism measures that have drawn criticism from human rights and political rights groups. The 2002 Public Safety Act allows for, among other things, preventive arrests and retention and the sharing of private data on individuals between government agencies. Civil liberties groups complain that this system is ripe for abuse. Canada has taken important steps to protect the rights of native groups, although some complain that indigenous peoples remain subject to discrimination. During 2003 the federal government reached an agreement ceding control of a large tract of land to the Tlicho First Nation.

The freedoms of speech and of the press are generally respected except for provincial film censorship and legislation that specifically protects ethnic minorities against hate literature and guarantees them cultural and language rights. Although the freedoms of assembly and association are acknowledged, the CSIS is charged with having paid informers within labor unions.

FOREIGN POLICY

Although a member of the Commonwealth, Canada's external relations are dominated by its geographical proximity to the United States. Both geography and economics as well as historical European legacies shape the common interests of the two countries. However, Canada has made strong efforts to carve a separate niche in foreign affairs and to give the impression that it is not tied to U.S. apron strings; thus, on a number of issues it has taken a contrary position. In addition, anti-American sentiments are openly expressed by Canadian policymakers in connection with the extensive U.S. ownership and control of Canadian economic enterprises and pervasive U.S. cultural and intellectual influences. There are also disputes with the United States centered on

fishing rights, the delimitation of maritime boundaries in the Gulf of Maine, and the effects of acid rain from U.S. industries on Canadian forests. The two powers (as well as Mexico) are linked by the North American Free Trade Agreement (NAFTA), which entered into force in 1994. Canada has been one of the most active of the middle powers in the post-World War II period, and it enjoys an international influence far beyond what its population or economic wealth would suggest. It took the initiative in the successful completion of the international landmine treaty signed in 1997. Canadian peacekeepers serve in most UN peacekeeping forces around the world. U.S.-Canadian relations were strained as a result of Canada's refusal to back the U.S.-led war in Iraq in 2003.

DEFENSE

Canada is one of the major members of the North Atlantic Treaty Organisation (NATO) alliance, and its defense forces are fully integrated into the Western system. Defense services are governed by the 1950 National Defense Act and the 1968 Canadian Forces Reorganization Act. The line of command runs from the Crown through the governor-general to the Department of National Defense and the Defense Staff. Within the unified structure there are no chiefs of individual services.

There are five functional commands, of which the first three are called environmental commands and correspond roughly to the traditional branches of navy, army, and air force: (1) Maritime Command, (2) Mobile Command, (3) Air Command, (4) Canadian Forces Europe, and (5) Communications Command. The Mobile Command consists of two brigade groups, each composed of one light artillery regiment, one light armored regiment, one combat engineer regiment, two or three infantry battalions, and supporting units. The command is headquartered at St. Hubert in Quebec, but units are stationed nationwide at Calgary, Alberta; Gagetown, New Brunswick; London, Ontario; Montreal, Quebec; Petawawa, Quebec; Shilo, Manitoba; Suffield, Alberta; and Valcartier, Quebec.

The Maritime Command is headquartered in Halifax, Nova Scotia. The commander of the Pacific maritime forces, with headquarters at Esquimalt, British Columbia, exercises operational control over maritime forces in the Pacific.

The Air Command, with headquarters at Winnipeg, Manitoba, consists of several functional groups, such as the Fighter Group, the Air Transport Group, the Maritime Air Group, the Tactical Air Group, the Training Group, and the Air Reserve Group.

There is no conscription, and services, both regular and reserve, are voluntary. The minimum age for volunteers is 16.

There are two training facilities: one for English-speaking trainees and the other for French-speaking trainees. Officer recruits enter the forces through several programs, the most important of which is the Regular Officer Training Plan. The principal training institutions are the Forces Staff School for junior officers, the Land Forces Command and Staff College, the Forces Staff College, and the National Defense College.

Canadian armed forces numbered 52,300 active and 35,400 reserve personnel in 2002, and Canadian troops took part in peacekeeping missions in Bosnia and Afghanistan. Paramilitary forces, such as the Canadian Coast Guard, consisted of 9,350 members. Military expenditures in 2003 were \$9.8 billion, or 1.1 percent of gross domestic product (GDP).

ECONOMY

As an affluent, high-tech industrial society, Canada today closely resembles the United States in its market-oriented economic system, pattern of production, and high living standards. Since World War II the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. Real rates of growth have averaged nearly 3 percent since 1993. Unemployment is falling, and government budget surpluses are being partially devoted to reducing the large public sector debt. The 1989 U.S.-Canada Free Trade Agreement and 1994's North American Free Trade Agreement (which included Mexico) have touched off a dramatic increase in trade and economic integration with the United States. With its great natural resources, skilled labor force, and modern capital plant Canada enjoys solid economic prospects. Two shadows loom, however, the first being the continuing constitutional impasse between English- and French-speaking areas, which has been raising the possibility of a split in the federation. Another long-term concern is the flow south to the United States of professional persons lured by higher pay, lower taxes, and the immense high-tech infrastructure.

With over 80 percent of the population living within 100 miles of the U.S. border, Canada maintains close ties with its southern neighbor. These close economic ties meant, however, that the country was adversely affected

by the economic downturn in the United States during 2001–02. Real growth in Canada averaged nearly 3 percent during 1993–2000 but declined in 2001. There was a modest recovery in 2002–03, but at the end of 2003 unemployment was still 8 percent. Nevertheless, economic ties to the United States have advantages; a key strength in the Canadian economy is the substantial trade surplus, much of which is created by trade with the United States.

ENVIRONMENT

The country's greatest environmental concern is growing air pollution and the resulting acid rain severely affecting lakes and damaging forests. The origins of the pollutants that cause the acid rain have been a point of contention between Canadian and U.S. officials. In addition to acid rain, metal smelting, coal-burning utilities, and vehicle emissions affect agricultural and forest productivity. Ocean waters are becoming contaminated due to agricultural, industrial, mining, and forestry activities.

Canada is a party to the Kyoto Protocol, among other international environmental treaties.

LIVING CONDITIONS

Canada over the past decades has ranked high in the United Nations Human Development Report's quality-of-life index, based on life expectancy, education, and income. In 1992 and 1994 the country ranked first among 160 nations, and in 2004 it ranked fourth among 177 countries. Life expectancy in 2004 was 80 years. The lit-

eracy rate is almost 100 percent, and the GDP per capita in 2003 was \$29,800. Canada also enjoys a low crime rate; the entire country's annual homicide rate is lower than that of many of the world's cities.

Canadians primarily live in urban settings; as of 2003, 80 percent of the population lived in urban areas. The concentration of population depends on the region. The Northwest Territories have just .045 persons per square mile, while Prince Edward Island, for example, in the east, has 59 people per square mile. Western and prairie provinces have more of their population living in rural areas than do the eastern provinces. Architecture also depends on region: from wooden structures in the west to brick and mortar in the east. Two out of every three Canadians own their own homes. Single homes are the most common type of dwelling although multifamily apartment houses and condominiums are the trend of the future, especially in cities.

Second in geographical size only to Russia, Canada is a country that demands a well-developed transport system. In addition to trains, ships, and planes, the country also relies heavily on the automobile. Canada is second only to the United States in per capita use of cars. Private cars account for 80 percent of urban transport; there is one car for every two Canadians.

HEALTH

Canada's National Health Program, created in 1971, is administered by each province, to which the federal government contributes about 40 percent of costs. Impressively, the system cares for all Canadians from cradle to grave. Virtually the entire population has access to almost free health care and affordable drugs, paid for out of tax dollars. Such a system is not cheap. In 2001 public expenditures on health were 6.8 percent of GDP, and private expenditures were 2.8 percent of GDP, for a total of \$2,792 per capita.

As a result of this system, health care is excellent, and in 2002 Canadians enjoyed the fifth-longest average life expectancy in the world, at over 79 years. Immunization rates for children are high: 88 percent of one-year-olds were immunized for polio in 2003, 97 percent for diphtheria, pertussis, and tetanus, and 96 percent for measles. The infant mortality rate in 2004 was a low 4.8 deaths per 1,000 live births, while the death rate the same year was 7.67 deaths per 1,000 population. The entire population has access to adequate sanitation and safe drinking water. Canada is, however, experiencing a shortage of doctors. As of 2004 there were 209 physicians for every 100,000 Canadians. Yet in 2003 there were 3.6 million people who did not have a regular doctor; with 3,800 physicians scheduled to retire in 2005 and 2006, this situation will only worsen. Also, as a result of the rising cost of medical treatment, there is some rationing in the Canadian system.

Canadians suffer from a variety of illness. Partly as a result of diet, diseases of the heart and arteries account for nearly 40 percent of all deaths, while cancer accounts for about 28 percent. Accidents are the leading cause of death in childhood and among young adult males. HIV/AIDS has also made an impact in Canada. In 2003 there were 1,500 deaths from the virus. That year it was estimated that 56,000 Canadians were living with HIV/AIDS.

Acadians and some indigenous groups still retain some of their traditional beliefs in folk medicine, including herbal cures and consultation with traditional healers.

FOOD AND NUTRITION

With a country as diverse geographically and ethnically as Canada, there is no one predominant food culture. Seafood is a particular favorite in the Maritime Provinces as well as in the west, where the catches from the Pacific provide abundant salmon and crab. In the east, seafood such as lobster, clams, oysters, Atlantic salmon, mackerel, and cod are all eaten.

French-speaking Quebec is influenced by French cuisine. Among a variety of popular dishes from that province are *ragoût de boulettes et de pattes de cochon*, a stew made from meatballs and pigs' feet, and the pork meat pie called *tourtière*. Quebec is also one of the major Canadian homes of maple syrup, and the Canadians have thought up a variety of ways in which to use the sweet liquid, including in cookies and candies as well as over pancakes. *Tourquettes* are a natural candy made by pouring boiling maple syrup onto fresh snow.

The middle of the country also provides its own distinctive flavor. Cheese in many forms comes from Ontario; roast pheasant is another specialty of that province. Out in the prairie provinces, grain-fed beef is prized and meals are large, as befits an agricultural way of life. From Manitoba comes wild rice, while moose meat is a near staple in the Northwest Territories.

Fast food has also made large inroads in the country, with hamburger and pizza franchises found in most towns.

Good food is well appreciated in Canada—perhaps too well, as many Canadians suffer from heart disease as a result of a rich diet, heavy in meat content. Only 6 percent of babies suffered from low birth weight between 1998 and 2003; undernourishment is not an issue in the country, other than by the overconsumption of less nutritious foods.

STATUS OF WOMEN

Over the past decade the government has demonstrated that improving the social and economic status of women is a top priority. The Ministry of Women's Equality was established in 1991 with a mandate to work in partnership with all government ministries, Crown corporations and agencies, community groups, and the private sector to build a society where women experience equality in all aspects of their lives. It is the only freestanding ministry for women in Canada, acting as an advocate for numerous economic, health, and safety matters and social justice issues of importance to women.

Women made up 45 percent of the labor force in 1992, compared to 31 percent in 1966. However, they earned only two-thirds as much as men. In 1990 the average income for full-time employment was \$22,799 for women, compared with \$34,921 for men. Little has changed in over a decade; the estimated earned income for females in 2002 was \$22,964, while that for males was \$36,299. By 2002 women held 20.6 percent of seats in Parliament and constituted 34 percent of legislators, senior officials, and managers and 54 percent of professional and technical workers.

WORK

Canada's labor force numbered over 17 million workers in 2003. Of these, 74 percent were employed in the ser-

vice sector, working for the government or in the tourism industry. Construction and industry accounted for 20 percent of employment, agriculture for 3 percent, and 3 percent were engaged in other occupations. Agricultural workers produced wheat, barley, oilseed, tobacco, fruits, vegetables, and dairy products. Industrial products include forest products, fish transportation equipment, chemicals, processed and unprocessed minerals, food products, wood and paper products, fish products, and petroleum and natural gas. As of 2003 the unemployment rate was 8 percent, down from the 1990s, which saw double-digit unemployment.

Geography and natural resources play their parts in occupational choice. The fisheries are strong on the east and west coasts, while ranching, farming, and mining are traditional occupations in the prairie provinces. Timber is a big part of the local economy in British Columbia.

Unionization is a guaranteed right, as is the right to strike, except for those employed in essential services such as law enforcement. There were 235 national unions and 60 international ones operating in the country in 2002, with approximately 30 percent of the labor force as members. Most of these union members were from public-sector service jobs, one of the biggest employers in the nation. Union issues include wage parity and shorter work hours. With downsizing a dominant corporate theme throughout the industrialized world, Canadian workers have found themselves working harder and longer for less in real wages.

Individual provinces set labor laws, though in most of the country 15 is the minimum work age. The workweek is set at between 40 and 48 hours, and the minimum wage in 2005 was between \$5.90 and \$8.50.

EDUCATION

Schools were introduced into Canada by missionaries, both Catholic and Protestant (Anglican), in the French and British possessions, respectively. Even Hudson's Bay Company encouraged missionary activity in its territory and subsidized denominational schools. It was only in the 19th century that the nondenominational public school system began to make headway, and soon it became well established in all provinces except Quebec and

Newfoundland. The principle of public support for denominational schools was, nevertheless, accorded some recognition.

The constitutional basis of the educational system is found in the Constitution Act of 1867, which states that “in and for each province the legislature may exclusively make laws in relation to education.” At the same time the act guaranteed denominational rights to education. The Charter of Rights and Freedoms of 1982 acknowledges the language rights of both French and English speakers.

The evolution of the educational system has contributed to the gradual blurring of boundaries between elementary and secondary education in Canada. Among the developments that have brought about this integration are the unification of the once-separate elementary and secondary school boards, the consolidation of all teacher training in the universities, the membership of both elementary and secondary teachers in the same professional associations, the shift in emphasis from subject-centered to child-centered curricula, and the insertion of an intermediate stage between the elementary and the secondary levels. The intermediate level retains some of the characteristics of elementary schooling, such as the homeroom, where the whole class studies together as a social unit for much of the day, and some features of the secondary school, such as a rotating schedule of instruction by a succession of subject specialists. Similarly, the traditional gap between secondary and vocational education has been bridged.

The point of transition to secondary school now varies among provinces and even among school districts. In some places there are six grades of elementary school followed by three middle grades known as junior high and three upper grades known as senior high. In other places the pattern is six, three, four. Although elementary education is compulsory throughout Canada, the starting age is six in Alberta, Nova Scotia, Ontario, and Quebec and seven elsewhere.

Secondary grades typically cover grades nine to 11 or nine to 12, while some secondary schools begin at grade seven or eight. At least part of secondary education is compulsory everywhere except in the Northwest Territories, where children may leave school at age 12. Pupils must stay in school up to age 15 in British Columbia, Newfoundland, New Brunswick, Prince Edward Island, Quebec, and the Yukon Territory and up to age 16 in Alberta, Manitoba, Nova Scotia, Ontario, and Saskatchewan. In Quebec five years of secondary education (grades seven to 11) are followed by two or three years at a *collège d'enseignement général et professionnel*.

The higher education sector comprises universities and community colleges. In 1998 there were 69 public universities, of which the five largest were the universities of Toronto, British Columbia, Alberta, Montreal, and

McGill. Most are anglophone. In addition, there are bilingual universities such as the University of Ottawa and Laurentian University, Sudbury. Private or religious universities affiliate with a public university while retaining their religious identity.

Three or four years of full-time study are required for a bachelor's degree in arts or science at general or honors levels. Community colleges offer the first two years of university study, after which students may transfer to a university. Community colleges have flexible admission policies, and their scale of tuition fees is much below that of universities.

Canadian literacy rates approach 100 percent, and nearly 100 percent of eligible students were enrolled in the nation's nearly 13,000 primary schools in 2002, while the student-teacher ratio in these schools was 17 to 1. In the 2001–02 academic year, 98 percent of eligible secondary students were enrolled, and 58 percent of those eligible were enrolled in institutions of higher education. In 2000 public expenditures on education were estimated at 5.3 percent of GDP.

SCIENCE AND TECHNOLOGY

Canada has a thriving scientific community. In 1998 there were 2,945 researchers working in research and development (R&D) per million population. Funding for R&D in 2002 equaled 1.7 percent of GDP, with half coming from businesses involved in industries such as telecommunications and aircraft design. Other research areas cover a wide spectrum of commercial and theoretical topics, from plant propagation to bioengineering to astrophysics and medical research.

The government agency responsibility for federal funding of such projects is the Ministry of State for Sci-

ence and Technology, advised by the National Advisory Board for Science and Technology. Learned societies include the Royal Society of Canada and the National Research Council of Canada. The latter helps to coordinate R&D throughout the country, following the guidelines of the National Science and Technology Policy. In 1987–97 science and engineering students accounted for 16 percent of college and university enrollments.

MEDIA

The first Canadian newspaper, published in Halifax in 1752, predated confederation by over a century. The press played an important role in the evolution of Canada's peculiar geographical and historical characteristics. The large physical size and small population dictated that the Canadian press would remain scattered and few in number and that the circulations of individual newspapers would be much smaller than those in Europe or the United States. Of the 99 communities with dailies, only 14 have more than one, and half the dailies have circulations under 25,000. Nonetheless, in terms of quality, Canada has at least half a dozen newspapers of world class, including the *Toronto Star*, *Le devoir*, *Le journal de Montreal*, Toronto's *Globe and Mail*, and the *Winnipeg Free Press*, the last of which is included among the World's Great Dailies.

Three factors peculiar to Canada have influenced the evolution of the Canadian press. The first is the bilingual imperative, which means that although French speakers constitute less than 30 percent of the population, both French and English receive equal treatment in all public communications, as backed up by constitutional provisions. French- and English-language media in Canada view the world in quite different ways. Francophone dailies and broadcast media have a much more insular outlook because of a preoccupation with Quebec's regional and provincial affairs. Even when the same stories are covered by the two language media, the French journalist is more likely to adopt a guiding rather than an informing function, following the continental European tradition of giving more analysis and comment than factual reportage.

The second major influence is that of the United States, a consequence of physical proximity. Over 80 percent of Canadians live within 161 km (100 mi) of the U.S. border and are constantly exposed to U.S. electronic media. Hollywood films virtually dominate Canadian

cinemas. American magazines outsell Canadian ones, and U.S. book imports make up two-thirds of total book sales. Even in dailies, some one-fifth of all news is about the United States, representing up to half of all foreign news printed, and most of the other foreign news originates from U.S. wire services.

The third factor is regionalism in the context of Canada's strict federalism. The lack of a strong national identity or self-image has helped regionalist tendencies to flourish. The media are among the strongholds of regionalism, and complaints of inequalities and disparities are articulated and magnified by newsmen. Some regional newspapers resent the domination of the Toronto and Montreal elite press in the same way that third-world media resent the hegemony of the Western media.

The Canadian press is as free as that of the United States, even though no First Amendment infuses the Canadian media with the positive spirit of liberty that manifests itself in the no-malice libel defense, shield laws, and the Freedom of Information Act. The Canadian Bill of Rights, however, does include a reference to freedom of the press as "a fundamental freedom." But it is rather in the due process of law that Canadian freedom of the press finds its strongest safeguard. This protection is invoked in regard to laws that apply to the press, such as contempt of court, civil defamation, criminal libel, obscenity, copyright, privacy, and government secrecy. Canada has no shield laws to protect journalists from having to disclose sources of information to courts or parliamentary bodies. Reporters without Borders ranked Canada as 18th in the world out of 167 countries in its 2004 rating of press freedom.

Canada's leading news agency, Canadian Press, has traditionally enjoyed a near monopoly and has been challenged only feebly by competitors, such as United Press Canada. Only a handful of foreign newspapers and magazines are represented in Ottawa.

The broadcast media are regulated by the Canadian Radio-Television and Telecommunications Commission, set up by the federal Broadcasting Act of 1968. The act established the Canadian Broadcasting Corporation (CBC) as the national, publicly owned broadcasting service, as financed mainly by public funds supplemented by advertising revenues. Services are operated in both English and French.

CBC operates 10 AM and two FM networks, one each in English and in French. CBC's Northern Service provides both national network programming in English and French and special local and shortwave programs, some of which are broadcast in the language of the Amerindian and Inuit peoples. CBC radio is virtually free of commercials. Radio Canada International is CBC's overseas shortwave service.

CBC operates two television networks, one in English and one in French. The Northern Service, created

in 1958, reaches northern Quebec, the Northwest Territories, and the Yukon, 60 percent of whose inhabitants are native Canadians, and programming is provided in Inuktitut languages as well as in English and French. Broadcast time is also made available to native groups who produce their own programs. Many privately owned stations have affiliation agreements with CBC. The major private television networks are CTV, TVA (which serves Quebec), and Global (which serves Ontario). Canadian Satellite Communications (CanCom) was licensed in 1981 to operate a multichannel radio and television production via Anik satellite. There are five educational services: TV-Ontario, Radio Quebec, Access (in Alberta), Knowledge Network (in British Columbia), and Saskatchewan (in Saskatchewan).

In 2003 the country had 13,221,800 cellular telephone users and 3,210,081 Internet hosts. Internet users numbered 16.11 million in 2002.

CULTURE

Canadian culture is an amalgam of the country's British and French as well as Native American roots. On top of this there is a further hodgepodge of European and Asian ethnic groups that have impressed their cultures on different parts of the country.

Painting in Canada reveals the country's European ancestry, with the artists Paul Kane and Cornelius Krieghoff of the 19th century painting scenes of Canada in the making with strong European influences. Homer Watson, from the early 20th century, is credited with being the first truly Canadian painter. The Group of Seven, a painting group from the 1920s, further developed the Canadian idiom in painting. The National Gallery of Canada in Ottawa displays the work of Canadian artists.

Early literature comes in the form of journals and histories by missionaries and explorers. Some early works include Marc Lescarbot's *Histoire de la Nouvelle France*, from 1609, and Thomas Haliburton's *The Clockmaker; or, The Sayings and Doings of Samuel Slick of Slickville*, from 1836. Canadians have continued to make inroads in international literature, from Lucy Maud Montgomery, creator of *Ann of Green Gables*, to modern writers such as Alice Munro, Robertson Davies, Mordecai Richler, and Margaret Atwood.

In music Canadians have also made their mark. Traditional music varies from the Breton-inspired folk music of Acadia to English ballads. In the late 20th century opera grew throughout the nation, as did choral music. Canadian film is supported by the National Film Board.

Perhaps Canada's greatest cultural contribution is a silent one. Many native sons and daughters have made international reputations in the performing arts and literature—but often with most people thinking they were from the United States. Prominent actors include Walter Huston, Mary Pickford, Walter Pidgeon, Raymond Burr, William Shatner, Donald Sutherland, and Christopher Plummer. The prominent social and communications theorist Marshall McLuhan, who famously said “the medium is the message,” was Canadian. Popular names in music include Guy Lombardo, Paul Anka, Gordon Lightfoot, Joni Mitchell, Neil Young, and Celine Dion.

Arts and crafts are also alive in Canada; Amerindian artists produce jewelry, beaded moccasins, baskets, and leather goods. The Inuit in particular are known for their soapstone, ivory, and serpentine carvings. Traditional crafts among the Acadians include knitting and weaving. Colorful hooked rugs are another Acadian specialty.

Museums abound in the country; most locales have a local history museum or art gallery. The nation's largest museum, the Royal Ontario Museum, receives more than one million visitors annually.

FOLKLORE AND MYTHOLOGY

Canada has a rich folkloric tradition, emblematic of its equally rich and diverse ethnic makeup. From indigenous peoples come a wealth of creation myths as well as trickster and hero stories. There are the trickster tales of Raven from natives of the Pacific Coast; from Algonquian tribes come the Nanabozo trickster tales. Nanabozo was the trickster-hero in Ojibwa legends, who usually appeared as a strong young brave but could change into an animal or a rock or tree if he wanted to do so. One popular Nanabozo story tells how he brought fire to his people, stealing it from an old magician. Other tricksters include Frog in the Columbian Plateau and Coyote from the Blackfoot. From Pacific Coast natives comes Thun-

derbird, a supernatural creature that produces thunder by flapping its wings and lightning by opening and closing its eyes.

French Canadians have a particularly strong oral tradition, partly as a result of laws in colonial times against establishing printing presses. Perhaps the most important figure in French Canadian folklore is the hero Ti-Jean, a short form of *Petit-Jean* or Little John, a popular hero. Ti-Jean tales include one in which he becomes king by passing three tests using cunning and intellect. Another figure in French Canadian lore is Dalbec the hunter. His exploits include tying ducks to his waist so that he can fly.

Folktales from the British tradition as well as from ethnic groups such as the Yiddish, Ukrainians, eastern Europeans, and Asians all inform Canadian folklore and mythology.

ENTERTAINMENT AND RECREATION

Canadians, like much of the rest of the world, use television as a major source of entertainment. In all, 98 percent of Canadian homes have at least one television. In 1997 Canadians spent on average some 22.7 hours a week, almost 3 hours a day, in front of their sets. With almost 100 percent literacy, Canadians are also avid readers, both in English and in French. In 2000 the average daily newspaper circulation per 1,000 population was 167.9. In 1999 there were 22,941 books published. Cinemas are also popular. In 1998 there were 21.39 cinema seats per 1,000 population and 3.73 annual attendances per inhabitant. In urban centers, theater and concerts also draw large audiences.

Canada has a wealth of natural scenery, and Canadians avail themselves of it on weekend trips and vacations. Many families in the east have weekend cabins or cottages in the woods or on lakes. Hiking, fishing, hunting, swimming, canoeing, skiing, snowboarding, and ice-skating are recreational activities enjoyed by a large segment of Canadian society.

ETIQUETTE

Canada has a reputation for its courtesy and relaxed way of life. In terms of formality, the country lies midway, perhaps, between the reserved British and the very outgoing Americans. Handshakes are a common form of greeting. In francophone Canada it is typical for men and women to exchange kisses on the cheek, French style. Use of the first name is typical, though not done so readily as in the United States. With French-speakers, the informal *tu* is used only with persons one knows.

Table manners are a blend of North American and European. Francophone Canada, for example, tends to eat in the continental manner, using fork and knife simultaneously, while much of English-speaking Canada puts the knife down before eating with the fork alone. For French Canadians it is good manners to have both hands above the table while eating.

Some physical gestures have variant meanings in Canada. For example, the “thumbs down” sign of disapproval in the United States is a rude gesture in Canada.

FAMILY LIFE

Like many Western countries, Canada has become a country of small nuclear families. As women enter more and more into the workforce in myriad occupations, birthrates have gone down and the age at which people marry has been rising. For example, in 1951 the extended family was found in 7 percent of Canadian households, but half a century later it was found in fewer than 1 percent. While in 1971 there were 3.2 children per family, this number had sunk to 1.7 in the 1980s; by 2004 the fertility rate was just 1.6 children per woman, and the birthrate that same year was 10.9 births per 1,000 population. Over half of Canadian children were in some form of child care by 2000–01, and one-quarter of them were in day-care centers.

The modern Canadian family is also shaped by liberal divorce laws. Even within the Catholic community, the divorce rate is high: 45 percent of all marriages in Canada end in divorce.

PERSONAL APPEARANCE

Modern, Western-style clothing is worn by Canadians of all ethnic groups and regions. Canadians tend to dress a bit more formally than their neighbors to the south in the United States, and regionally, dress tends to be more casual in the west of the country as compared with the east.

Ethnic groups from various parts of the world may wear their traditional costumes for festivals and other special occasions. This can be seen with the Acadians of the Maritime Provinces; for festivals, women there wear white bonnets and blouses with black skirts and white aprons. Men wear black trousers to the knees with white stockings, white shirts, and dark vests. Canada’s western traditions can be seen at the annual Calgary rodeo, at which cowboy clothes are the norm.

SPORTS

Ice hockey is Canada’s national sport. Notable stars of the sport include Bobby Orr, Bobby Hull, and Wayne

Gretzky. Canadian athletes play on teams in both Canada and the United States. The original teams of the National Hockey League, established in 1917, were all Canadian. Hockey broadcasts are popular with millions of Canadians. The Canadian national team won the World Hockey Championships in 2003 and 2004.

Another popular national sport is lacrosse, adopted as Canada's national game at the time of confederation. This sport was played by Amerindians in all parts of the country and was later adopted by immigrants. Other team sports show more direct influence from the United States, such as in the Canadian Football League and with the Canadian teams that have belonged to Major League Baseball and the National Basketball Association in the United States. Tennis, golf, and badminton are also gaining in popularity. Winter sports provide opportunities for both participation and spectatorship. These include curling, ice skating, and downhill and cross-country skiing.

CHRONOLOGY

- 1957** Long Liberal rule ends with Progressive Conservatives gaining power under John Diefenbaker as prime minister.
- 1963** Lester B. Pearson leads Liberals back into office.
- 1968** Pearson steps down and is succeeded by Pierre Trudeau as prime minister.
- 1970** The War Measures Act is promulgated to deal with francophone terrorist activity in Quebec.
- 1974** Quebec declares French to be its official language.
- 1976** The Parti Québécois, a separatist party, gains power in Quebec under René Lévesque as premier.
- 1979** A Progressive Conservative minority government under Joseph Clark displaces the Trudeau government.
- 1980** Progressive Conservatives lose elections, and Liberals return to power.
- 1982** The Constitution Act of 1867 is "patriated," and the Constitution Act of 1982 is passed along with the Charter of Rights and Freedoms:
- 1984** Trudeau yields office to John Turner, who is elected Liberal leader. Turner calls a snap election in which the Liberals suffer a decisive defeat; the Progressive Conservatives are elected to office with the largest majority in parliamentary history, under Brian Mulroney as prime minister.
- 1986** Canada proclaims sovereignty over the Arctic region, including interisland channels, despite opposition from the United States.
- 1987** A proposed division of the Northwest Territories into two regions, Nunavut and Denendah, is passed by the territorial assembly.
- 1989** The Canada–United States free-trade agreement comes into force.
- 1993** Liberal party candidate Jean Chrétien wins the prime ministry.
- 1994** Canada, the United States, and Mexico sign the North American Free Trade Agreement (NAFTA) creating the world's largest single market.
- 1999** Adrienne Clarkson is appointed governor-general. A large region of the Northwest Territories officially becomes the separate territory of Nunavut, the only Canadian territory or province with a majority indigenous population. Paul Okalik becomes Nunavut's first territorial premier.
- 2000** Chrétien's Liberal Party wins the parliamentary election.
- 2001** Health-care providers protest the federal government's declining share of health-care costs. A trade dispute over softwood lumber imports from Canada puts a dent in Canadian-U.S. relations. In December the federal government passes a constitutional amendment that officially changes the name of the province of Newfoundland to Newfoundland and Labrador.
- 2002** Stephen Harper of the Western-based Canadian Alliance becomes leader of the parliamentary opposition in May. Chrétien announces he will retire from party leadership in 2004. Canada ratifies the Kyoto Protocol to reduce the emission of greenhouse gases.
- 2003** Toronto is hit by SARS (severe acute respiratory syndrome), imported from Asia, which causes over 40 deaths. An outbreak of "mad cow" disease (bovine spongiform encephalopathy, BSE) in Alberta closes international markets to Canadian beef. Paul Martin, former minister of finance, is chosen to head the Liberal Party. The Progressive Conservative Party and the Canadian Alliance merge to form the Conservative Party of Canada. Relations with the United States are further strained by Canada's refusal to join in the American-led war in Iraq.
- 2004** Parliamentary elections give the Liberal Party a reduced majority—down from 161 seats to 138—and Paul Martin becomes prime minister.
- 2005** Over 3,800 doctors were expected to retire in the year, worsening the critical shortage of family doctors. The Liberal Party introduces a same-sex marriage legalization bill to Parliament in February that is approved by the Senate in July.
- 2006** The government loses a no confidence vote. Martin is replaced by Stephen Harper as prime minister following general elections.

CAPE VERDE

Basic Fact Sheet

OFFICIAL NAME

Republic of Cape Verde (República de Cabo Verde)

ABBREVIATION

CV

CAPITAL

Praia

HEAD OF STATE

President Pedro Verona Rodrigues Pires (from 2001)

HEAD OF GOVERNMENT

Prime Minister José Maria Neves (from 2001)

NATURE OF GOVERNMENT

Republic

POPULATION

418,224 (2005)

AREA

4,033 sq km (1,557 sq mi)

ETHNIC MAJORITY

Mulattos

LANGUAGES

Portuguese (official), Crioulo (national)

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Cape Verde escudo

NATIONAL FLAG

Three horizontal bands of (from top) blue (double width), white (with a horizontal red stripe in its middle), and blue; a circle of 10 yellow five-pointed stars is centered on the hoist end of the middle band, extending into the upper and lower blue bands.

NATIONAL EMBLEM

The main elements of the coat of arms are a blue equilateral triangle with a white torch in its center; the words *República de Cabo Verde* are inscribed in a semicircle from the bottom left angle up to the vertex and down to the bottom right angle of the triangle; three blue-colored line segments are parallel to the base of the triangle; a blue circle encloses these elements, with a yellow plummet aligned with the vertex of the equilateral triangle; outside the circle are three yellow links placed on the composition base, followed by two green palms and 10 yellow five-pointed stars placed symmetrically in two groups of five.

NATIONAL ANTHEM

"This Is Our Beloved Country"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 20 (National Heroes' Day), March 8 (Women's Day) May 1 (Labor Day), June 1 (Children's Day), July 5 (National Day, Independence Day), September 12 (Day of the Nation), , various Christian festivals

DATE OF INDEPENDENCE

July 5, 1975

DATE OF CONSTITUTION

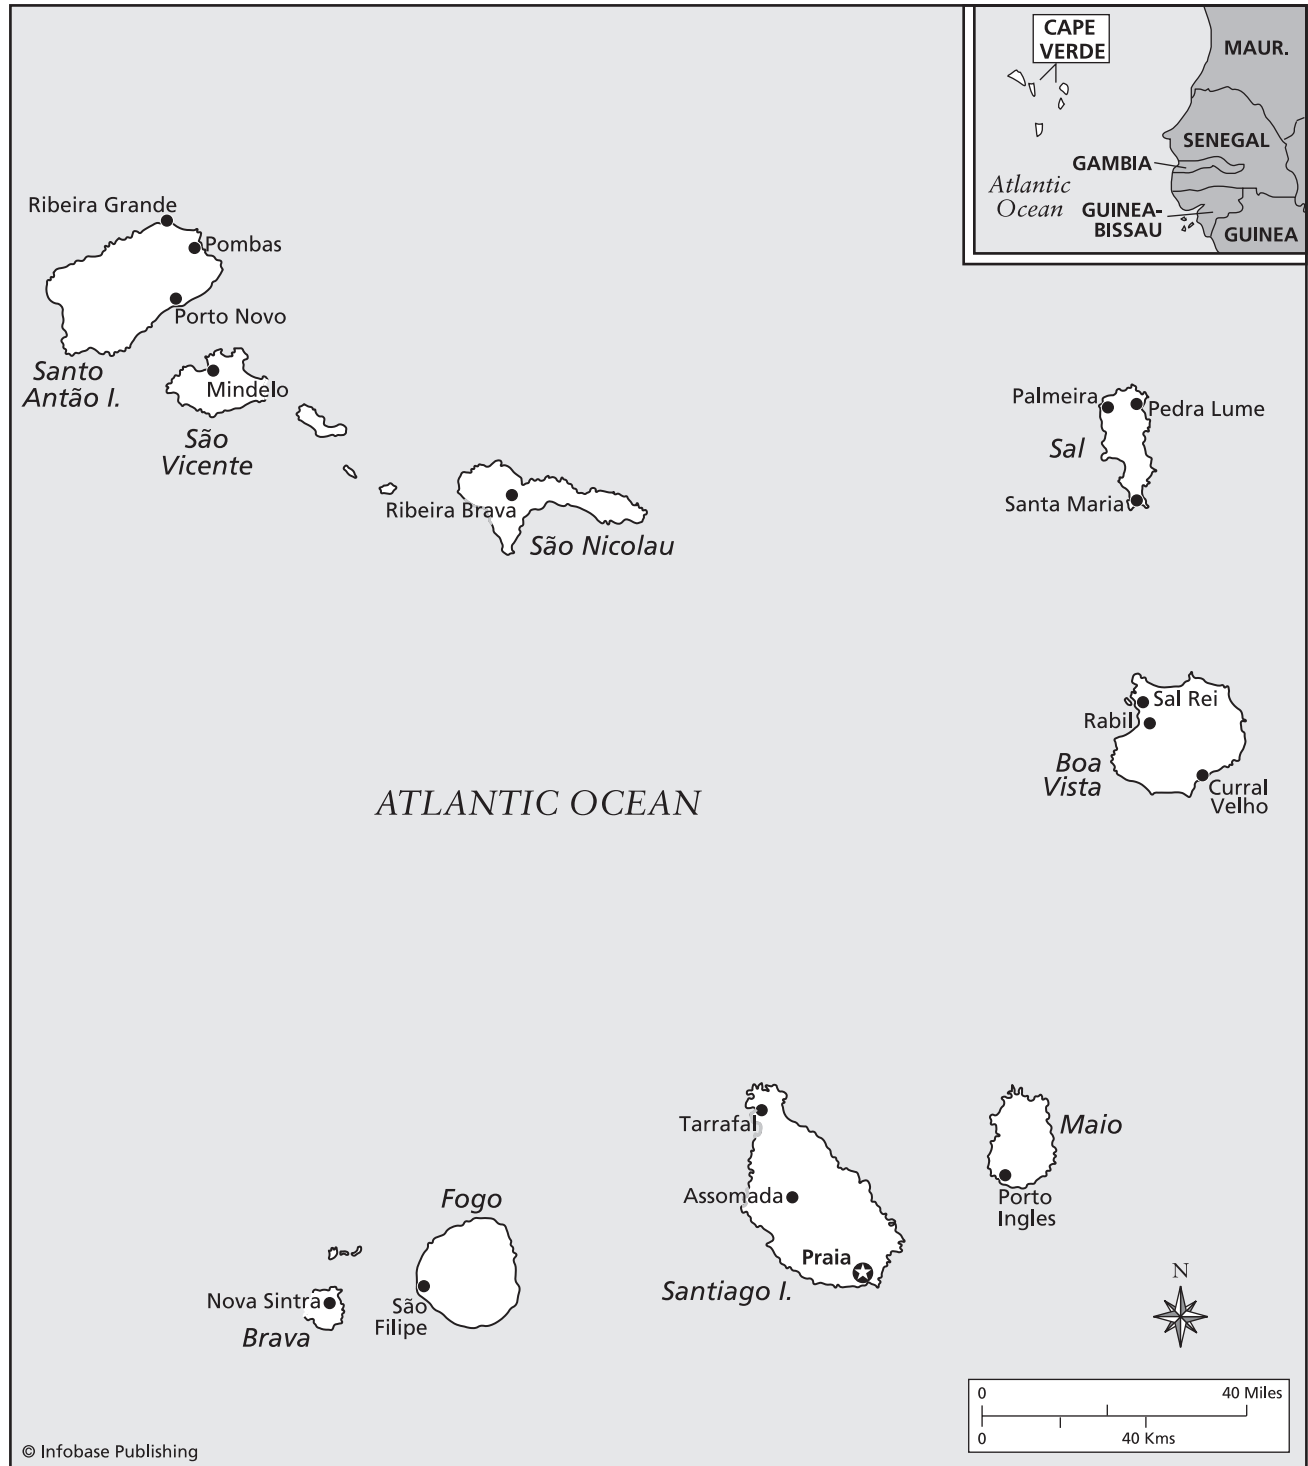

September 25, 1992 (revised in 1995 and 1999)

GEOGRAPHICAL FEATURES

Cape Verde consists of an archipelago of 10 islands and five islets in the Atlantic Ocean about 595 km (370 mi) west of Dakar, Senegal, with a total land area of 4,033 sq km (1,557 sq mi). The greatest distance across the archipelago southeast to northwest is 332 km (206 mi), and that northeast to southwest is 299 km (186 mi). The total length of the coastline is 965 km (600 mi).

The archipelago is divided into two districts: Barlavento, or Windward Islands, and Sotavento, or Leeward Islands, named according to the direction of the prevailing northeasterly wind. Except for the low-lying islands of Sal, Boa Vista, and Maio, Cape Verde is mountainous, with rugged cliffs and deep ravines. The highest peaks are Pico da Cano, an active volcano reaching 2,829 m (9,278 ft), and two peaks reaching 1,935 m (6,348 ft) and 1,320 m (4,298 ft) on Santo Antão and São Tiago, respectively.

CLIMATE AND WEATHER

Cape Verde has an arid climate, with two seasons: a cool, dry season from December to June, with temperatures averaging 21°C (70°F), and a warm season from July to November, with temperatures averaging 26.6°C (80°F). Rainfall is sparse and rarely exceeds 127 mm (5 in) in the northern islands and 305 mm (12 in) in the southern islands. The islands suffer from chronic and severe shortages of water and rainfall, which periodically cause catastrophic droughts. São Vicente depends on a desalination plant for its drinking water.

Climate and Weather

Mean Temperature	
Summer: 80°F	
Winter: 70°F	
Average Rainfall	
Northern Islands: 5 in	
Southern Islands: 12 in	

FLORA AND FAUNA

Since the islands' settlement, native species of flora and fauna have been severely compromised by drought, unwise agricultural practices, and the introduction of nonnative species, especially livestock, such that they can be found only on small patches of the island, particularly those areas inaccessible to farming. The islands are home to four endemic species of land birds, including the Cape Verde sparrow, the Cape Verde swift, the Raso lark, and the Cape Verde warbler. Seabirds include the Cape Verde petrel, the frigate bird, and the red-tailed tropic bird. Of 15 species of lizards, twelve are endemic to the islands, as are 92 species of plants, including the marmulan and the dragon tree.

POPULATION

ETHNIC COMPOSITION

About 71 percent of the Cape Verde population is of mixed descent, except on São Tiago, where the population is of African Wolof stock. Mulattos, or Creoles, as persons of such mixed descent are sometimes called, are a majority on all other islands. They are the descendants of Portuguese settlers and the African slaves who were brought to work on plantations. Whites represented 2 percent of the population until independence; the European population is currently about 1 percent.

LANGUAGES

The official language is Portuguese. The national language is a creole Portuguese known as Crioulo, in which the vocabulary, syntax, and pronunciation have been Africanized. Crioulo is spoken by 70 percent of the population. Portuguese is the language of the officials and educated elite.

RELIGIONS

Almost all mulattos and the majority of Africans adhere to the Roman Catholic faith. The Roman Catholic suffragan see of São Tiago de Cabo Verde is attached to the metropolitan see of Lisbon.

Religious Affiliations

Roman Catholic	397,313
Protestant	14,638

HISTORICAL BACKGROUND

Prior to the arrival of Europeans, there were no inhabitants of Cape Verde. Cape Verde was one of the earliest European colonies in Africa and one of the last to achieve independence. The archipelago was declared part of the Portuguese royal dominion in 1495. From 1591 until independence in 1975 the islands formed an overseas province of Portugal and were administered by a governor.

However, the country lost much of its importance as a strategic gateway to the Atlantic with the abolition of the slave trade in 1876.

Cape Verde achieved independence after a long and costly struggle, in the course of which Amílcar Cabral, the independence forces leader, was assassinated. There was little actual fighting in the islands; most open conflict occurred in Guinea-Bissau. Cape Verde's right to self-determination and independence was acknowledged by the new regime that was set up by the Armed Forces' Movement in Portugal in 1974. When independence was finally granted in 1975, relations between Portugal and its former colony became more cordial than ever before. At independence, the government was controlled by the Cape Verdean wing of the African Party for the Independence of Guinea and Cape Verde (PAIGC). Its leader, Aristides Pereira, became the first president. The PAIGC became the sole legal party and was given supremacy over government structures. This was confirmed by the constitution of 1980. Since its founding, the PAIGC had been a binational party that had the unification of Guinea-Bissau and Cape Verde as one of its principal objectives. However, in 1980 a coup in Guinea-Bissau against a president who was Cape Verdean shattered party unity. The following year the Cape Verdean wing of the party changed its name to the African Party for Independence of Cape Verde (PAICV) and abandoned the goal of unification. Relations between the two countries returned to normal in 1982.

In 1986 Aristides Pereira, who had been president since independence, was reelected to another five-year term by the National People's Assembly. Demonstrations for greater political freedom were held in 1988, and the following year a commission was established to consider proposals for constitutional change. As pressure from church and academic circles increased, the PAICV announced the convening of a special congress to abolish the constitutional provisions that gave it a monopoly of power. In September 1990 Cape Verde officially became a multiparty state, and the *Movimento para a Democracia* (MPD), which had advocated a return to a multiparty system, received official recognition as a political party.

The MPD won 56 out of 79 seats in the 1991 legislative elections, the first since independence. The MPD candidate, Antonio Mascarenhas Monteiro, won the country's first free presidential elections in a contest that pitted him against Pereira. A new constitution endorsing the multiparty system was adopted in 1992. The early 1990s were difficult for the country economically in large part due to devastating droughts. However, the MPD was successful in its 1995 reelection bids. In 1997 the country again suffered a drought that wiped out over 80 percent of the country's grain. In 2001 elections the PAICV retook the majority of seats in the National Assembly, and the PAICV candidate Pedro Pires was elected president

by just 17 votes. Pires appointed José Maria Neves prime minister. Pires's major concerns have been with the nation's economy. In 2002 the nation secured a \$7.91 million loan from the African Development Fund in response to a poor harvest that year. In 2003 the nation's National Institute of Statistics released a report showing that despite strong economic growth, poverty rates were increasing. That year, too, the World Bank loaned Cape Verde \$11.5 million to help develop its private-sector economy.

LIST OF MODERN RULERS

1975–91	Aristides Pereira
1991–2001	Antonio Mascarenhas Monteiro
2001–	Pedro Pires

CONSTITUTION

Cape Verde's newest constitution was adopted on September 25, 1992, and underwent revisions in 1995 and 1999. The president, who is the head of state, and the prime minister, who is the head of government, serve five-year terms. Deputies of the National People's Assembly are elected by universal suffrage from a multiparty ballot.

Legislative power is vested in the National People's Assembly, the 72 members of which are elected by universal suffrage for five-year terms. The president is elected by universal suffrage and must win two-thirds of the vote to secure election. If he does not, a runoff is scheduled within 21 days between the two candidates with the highest number of votes. The prime minister, who is head of government, is elected by the National People's Assembly and appointed by the president.

Suffrage is universal over age 18.

PARLIAMENT

The national legislature is the *Assembleia Nacional Popular* (National People's Assembly), a unicameral body last elected in 2001. In that election the *Partido Africano da Independência de Cabo Verde* (PAICV), which had been the sole legitimate party until 1990, won 40 seats; the *Movimento para a Democracia* (MPD) won 30 seats; and the *Democratic Alliance for Change* (ADM) won two seats.

Deputies of the National People's Assembly are elected by universal suffrage of those over age 18.

POLITICAL PARTIES

The four major political parties are, the *Movimento para a Democracia*, founded in 1991, which advocates

administrative decentralization; the Partido Africano da Independência de Capo Verde, which was the only authorized party from 1975–90; the Partido da Convergencia Democrática, founded in 1994 from splinter members of the Movimento para a Democracia; and the Democratic Alliance for Change (ADM). In addition to these three major parties, there are a number of smaller ones that in the last general election attracted just 6.9 percent of the total vote as a group.

LOCAL GOVERNMENT

For purposes of local administration, Cape Verde is divided into 17 *concelhos* (districts) and 31 *freguesias* (parishes). Representative institutions are being gradually introduced at the regional level.

LEGAL SYSTEM

The highest judicial body in the land is the National Council of Justice, composed of three judges appointed by the government and six assessors designated by the legislature. The council has original jurisdiction and also hears appeals from elected courts of first instance in each of the country's 224 administrative districts.

Trials are conducted by one judge; a public prosecutor presents the case against an accused, who is defended by counsel. There is no jury system. Appeal is possible, and trials appear to be handled expeditiously. There is also a system of popular tribunals to adjudicate minor disputes at the neighborhood or local level in rural areas. The "judges" are usually prominent local citizens without legal training who are appointees of the Ministry of Justice. Their decisions can be appealed within the regular court system.

The judiciary does not have the authority to determine the constitutionality of legislation. Although, according to the constitution, judges are independent, one former judge now living outside the country has claimed that one-party rule in practice has hampered the functioning of a truly independent judiciary. Most evidence suggests, however, that the courts protect individual rights in criminal cases.

HUMAN RIGHTS

Despite the potential for human rights abuses, Cape Verde has a good track record in both civil and political rights. There are no political prisoners, no torture or physical abuse of prisoners has been reported, and no political opponents have "disappeared." Trials, both civil and criminal, are open to the public, and defendants are afforded legal counsel, at state expense if need be. There

have never been any allegations of forced entry into private homes by police officials. The news media are government monopolies and are used to reinforce support for the government programs.

FOREIGN POLICY

As a former Portuguese colony, Cape Verde's closest relations have been with other lusophone countries, especially Guinea-Bissau, Angola, Mozambique, and São Tomé and Príncipe. Relations with Guinea-Bissau, once close, have been frayed over the years. The 1980 constitution provides for the eventual merger of the two countries, but all island influences have been purged from the mainland party. However, diplomatic relations were resumed in 1982.

DEFENSE

The defense structure is headed by the president, who is the commander in chief of the Citizens' Army, a token force that replaced Portuguese troops upon independence. The strength of the armed forces was 1,000 in 1999, including a small coast guard. In 2003 the nation spent \$12.3 million, or 1.5 percent of its gross domestic product (GDP), on the military.

ECONOMY

Cape Verde's low per capita GDP reflects a poor natural resource base, including serious water shortages exacerbated by cycles of long-term drought. The economy is service oriented, with commerce, transport, and public services accounting for 72 percent of GDP. Although nearly 44 percent of the population lives in rural areas, the share of agriculture in GDP in 2003 was only 10 percent, of which fishing accounts for 1.5 percent. About 82 percent of food must be imported. The fishing potential, mostly of lobster and tuna, is not fully exploited. Cape Verde annually runs a high trade deficit, as financed by foreign aid and remittances from emigrants; remittances constitute a supplement to GDP of more than 20 percent. Economic reforms, launched by the new democratic government in 1991, are aimed at

developing the private sector and attracting foreign investment to diversify the economy. Prospects for 2004 and beyond depended heavily on the maintenance of aid flows, remittances, and the momentum of the government's development program.

ENVIRONMENT

Like many other developing nations, Cape Verde suffers from poor agricultural techniques, which have led to overgrazing and soil erosion and have severely compounded the nation's chronic shortage of water. Additionally, the country suffers from growing deforestation as a result of a need for wood as a fuel and building material.

Environment

Forest Area % of total land area: 21.1

LIVING CONDITIONS

Despite being a relatively poor country, with a per capita GDP of just \$1,400 in 2002 and some 30 percent of the population living below the poverty line, living conditions in Cape Verde are good compared to other West African nations. The population is fairly well educated, with over three-quarters considered literate. Because of the influence

of Portuguese culture, the larger towns are similar to those of coastal Brazil. In the major towns, electricity (much of it wind powered) and piped water (much of it from desalination plants) are common, and although the nation's many cobblestone roads are narrow, traffic is able to move. As a group of islands the nation depends on inter-island transportation, including ferryboats and airplane service. Cape Verdeans who live in the United States and Europe and return to their native country, perhaps for the first time, note problems with high prices for some goods, trash and litter in the streets, vagrants digging through trash containers, and rising rates of crime, particularly theft.

HEALTH

Life expectancy at birth is just over 70 years. The infant mortality rate is relatively high, at just over 49 per 1,000 live births. Health care is provided by the government in hospitals on each of the nation's islands. Although facilities are substandard, they are better than many such facilities in other West African nations. Poor sanitation and nutrition lead to high incidences of infectious and parasitic diseases, especially bronchitis, gastrointestinal problems, pneumonia, and tuberculosis.

 Access to Improved Sanitation Facilities %: 42
 Access to Improved Water Source %: 80

FOOD AND NUTRITION

Largely because of drought, Cape Verde is not self-sufficient in food production and has to import much of its food. The main staple is corn, though rice and couscous are also used as starches. Common dishes include *cachupa*, a stew made with beans, hominy, and vegetables or meat; soups, called *conj*; and *djagacida*, or chicken and rice. Meats include chicken and pork, and tuna is also widely consumed. Tropical fruits include bananas and mangoes. The nation is known for its rum, called *grog*, made from distilled sugarcane.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 175.3
 Amount of Fruits and Vegetables Available per person per year kg: 93.2

STATUS OF WOMEN

Sex discrimination exists socially, although banned by the constitution. Many of the traditional male-oriented values of the Portuguese and African ancestors of today's Cape Verdeans are still part of the country's culture. Women have been customarily excluded from certain types of work and are often paid less than men for comparable work. The government has included women in labor-intensive economic development projects financed by foreign grants. Both the government and the current ruling party, PAICV, are making efforts to bring women into the various economic and social activities where they have been traditionally absent. The Organization of Cape Verdean Women was founded in 1980, with PAICV encouragement, to sensitize the government and Cape Verdeans on issues affecting women. The Code of the Family, enacted in October 1981, prescribes full legal equality of men and women, including equal pay for equal work.

WORK

Because 70 percent of the nation's population is involved in farming, much of it subsistence, it is difficult to calculate a meaningful size for the nation's labor force. Further, many Cape Verdeans work overseas as contract laborers, and remittances by these workers are a major source of income for the nation. It is known that agriculture is the source of only 10 percent of the nation's GDP, while industry accounts for 16.5 percent and services 62.8 percent. Major agricultural products include bananas, corn, beans, sweet potatoes, sugarcane, coffee, peanuts, and fish. Major industries include food processing, fishing, garment production, salt mining, and ship repair. The nation offers few opportunities for people with college degrees, who tend to remain abroad to work rather than returning to the country.

EDUCATION

In principle, education is free, universal, and compulsory for six years, from ages seven to 13. However, compulsory education is not enforced.

Schooling consists of six years of primary school (*instrução primaria*), three years of middle school (*escola preparatoria*), and either a three-year general course or a two-year preuniversity course, for a total of 11 or 12 years. The curriculum follows the Portuguese model. The academic year runs from October to July. The medium of instruction is Portuguese.

The building of new schools and improvements in teacher training are the two official priorities in educational planning.

In the absence of a local university, Cape Verdean students who wish to pursue higher studies go to Portugal.

CULTURE

The culture of Cape Verde was and still is heavily influenced by its position as a crossroads in the Atlantic. The influences of the Portuguese, Moors, African people, and Azorean peoples in particular are evident. The nation's Creole culture is a blend of Portuguese and African culture stemming from the nation's role in the slave trade.

Today's cultural institutions include the Cape Verdean Cultural Center in Praia. Most Cape Verdean literature has been written in Portuguese, though in recent years efforts have been made to develop and standardize Crioulo, and some books have been published in that language. Much of the nation's written literature has evolved from oral storytelling traditions. A common theme is *saudade*, defined as a sense of homesickness or longing, brought about by the large number of Cape Verdeans who live overseas. Graphic arts include clay pottery from the island of Boavista and carvings from lava on Fogo. Dance and music are important in Cape Verdean culture. Traditional musical forms include the *morna*, or Portuguese ballads; *batuque*, a rhythmic type of music and dance performed by circles of women; and *funana*, accordion music accompanied by percussion on iron bars.

FOLKLORE AND MYTHOLOGY

Cape Verdean folklore is a blend of Portuguese and African traditions. Tales continue to be told about Nho Lobo, a wolf who provides valuable life lessons through his folksy and clever wisdom.

ENTERTAINMENT AND RECREATION

Cape Verdeans enjoy a variety of sports. Because it is an island nation, water sports such as swimming and scuba diving are popular, and horseback riding and golf have grown in popularity. Music is an important source of entertainment, with European forms such as mazurkas and waltzes as well as more indigenous forms popular. Many forms of music are imported to the country from diasporic communities. One popular board game is *ouri*, a game whose origins can be traced back to ancient Egypt. The home is the center of entertainment, with parties and dances common.

ETIQUETTE

Visitors to Cape Verde are struck by the warmth of the people, who are gracious entertainers and who would not think of eating, for example, without sharing their meal with others. For this reason, eating in public, such as on the street, is generally considered ill mannered. Greetings tend to be long and elaborate, with men shaking hands and women kissing, and people inquire about one another's health and that of the family even if they have already met before during the day. Cape Verdeans value a strong social network of family and friends, and many take part in civic, club, and volunteer activities.

FAMILY LIFE

Most husbands and wives are not married in legal or church ceremonies. More typically, a woman leaves her home and moves in with a man, often when she has become pregnant. Such unions are recognized as common-law marriages after four years. Several generations of family members cohabit, with all taking responsibility for the upbringing of children, who from an early age are given a great deal of responsibility for chores or helping with the family trade. Family relations are very close, and children are treated strictly but with great attention and affection.

PERSONAL APPEARANCE

Cape Verdeans tend to take pride in their appearance and dress. American brand-name clothing is highly valued and often serves as an indicator of class, although even poorer people wear such clothing, which they receive as gifts from friends and family members in the United States. Used clothing from New England, where there is a large diasporic community, and Europe is also widely worn. While men and children generally wear Western clothing, some women wear the *panos*, a woven African cloth that serves both as a sash and as a wrap for carrying babies.

SPORTS

In addition to basketball and water sports, such as swimming, scuba diving, sailing, fishing, surfing, and windsurfing, Cape Verdeans have shown ability in track and field and long-distance running. Soccer is immensely popular, with soccer clubs scattered throughout the islands. Many Cape Verdeans who show athletic promise, however, emigrate to other countries such as Portugal where opportunities are greater.

CHRONOLOGY

- 1975** Cape Verde is granted independence by Portugal and is proclaimed a republic, with Aristides Pereira as president.
In national election 92 percent of the voters favor ultimate union with Guinea-Bissau.
- 1976** Cape Verde signs a judiciary protocol with Guinea-Bissau, merging the judicial systems of the two countries.
- 1980** Cape Verde's first constitution is approved in nationwide balloting.
New National People's Assembly is elected.
- 1981** Constitution is amended to revoke provisions designed to facilitate union with Guinea-Bissau.
- 1982** Cape Verde joins other lusophone African nations in a summit at Praia and in setting up a joint committee to promote cooperation.
- 1984** The first distribution of land to landless peasants under the Land Reform Law of 1982 takes place, on São Tiago.
- 1985** National People's Assembly elections are held.
Over 94 percent of the vote goes to candidates approved by the PAICV.
- 1986** President Pereira is reelected for another five-year term.
- 1988** Pereira is reelected secretary-general of the PAICV.
- 1989** A commission is established to consider constitutional changes.

- 1990** Pereira announces that the next presidential election will be based on universal suffrage. The nation officially becomes multiparty. The Movimento para a Democracia (MPD) is given official recognition.
- 1991** MPD candidate Antonio Mascarenhas Monteiro defeats Pereira in the presidential election.
- 1994** The new constitution is adopted by 82 percent of the votes cast.
- 1995** MPD candidates capture 50 of the 72 seats in the parliament.
- 2001** In January legislative elections PAICV candidates win 37 of the 72 seats; Pedro Pires of the PAICV wins the presidency by a margin of 17 votes.
- 2002** The nation secures a \$7.91 million loan from the African Development Fund in response to a poor harvest.
- 2003** The National Institute of Statistics releases a report showing that despite strong economic growth, poverty rates were increasing.
World Bank loans Cape Verde \$11.5 million to help develop its private-sector economy.
- 2006** The PAICV wins another term in parliamentary elections.

Basic Fact Sheet

OFFICIAL NAME

Central African Republic (République Centrafricaine)
(formerly Ubangi-Shari)

ABBREVIATION

CF

CAPITAL

Bangui

HEAD OF STATE

President François Bozizé (from 2003)

HEAD OF GOVERNMENT

Prime Minister Elie Dote (from 2005)

NATURE OF GOVERNMENT

Republic

POPULATION

3,799,897 (2005)

AREA

622,984 sq km (240,534 sq mi)

ETHNIC MAJORITY

Banda, Baya-Mandjia

LANGUAGES

French (official), Sango (national)

RELIGIONS

Christianity, animism, Islam

UNIT OF CURRENCY

Coopération financière en Afrique centrale franc

NATIONAL FLAG

Four horizontal stripes—top to bottom, blue, white, green, and yellow—divided at the center by a vertical red stripe. In the upper left corner is a yellow five-pointed star.

NATIONAL EMBLEM

A central shield having four equal quarters with a white disk within a square red border at its center. Inside the white disk is a five-pointed gold star on a black map of Africa. The four quarters of the shield contain a white-tusked elephant on green; a green tree on a white background; a raised black hand, the symbol of Bokassa's Movement for the Social Evolution of Black Africa; and three diamonds against a gold field. The shield is flanked by two national flags, and the crest is illuminated by a blazing yellow sun marked with the date December 1, 1958 (the date on which Ubangi-Chari was granted self-governing status). Above the sun appears the legend *Zo kwe kox* (All men are equal) in Sango. Under the shield is a Maltese cross and a scroll containing the national motto, *Unité, dignité, travail* (Unity, dignity, labor).

NATIONAL ANTHEM

"O Central Africa, O Cradle of the Bantus"

NATIONAL HOLIDAYS

March 29 (anniversary of Barthélémy Boganda's death), May 14 (anniversary of the First Republic), August 13 (Independence Day), December 1 (Republic Day, National Day), various Christian festivals, including Christmas

DATE OF INDEPENDENCE

August 13, 1960

DATE OF CONSTITUTION

December 5, 2004

GEOGRAPHICAL FEATURES

The Central African Republic, a landlocked country in the heart of Africa, has an area of 622,984 sq km (240,534 sq mi), extending 1,437 km (893 mi) north to south and 772 km (480 mi) east to west. Its total international boundary of 5,232 km (3,251 mi) is shared with five countries: Cameroon (797 km; 511 mi), Republic of the Congo (467 km; 290 mi), Democratic Republic of

the Congo (1,577 km; 495 mi), Sudan (1,165 km; 724 mi), and Chad (1,197 km; 741 mi).

The country consists of a plateau with an average altitude of 600 to 700 m (1,969 to 2,297 ft). The most prominent topographical features are the Bongo Massif (1,370 m; 4,495 ft) in the northeast, the Yade Massif (1,400 m; 4,593 ft) in the northwest, and the Fertit Hills (1,280 m; 4,200 ft).

The Central African Republic is drained by two river systems, one flowing south, the other flowing

Central African Republic

north. Of those rivers flowing south, the Chinko, Mbari, Kotto, Ouaka, and Lobaye are tributaries of the Ubangi River, and the Mambere and Kadei are tributaries of the Zaire. Two northern rivers, the Ouham and the Bamingui, are tributaries of the Chari River, which drains into Lake Chad.

CLIMATE AND WEATHER

Most of the country has a tropical climate, with alternate rainy seasons from May to June and October to November and dry seasons from November to May and June to October. The climate becomes Sahelian in the north, with a long, dry season lasting eight to nine months and slight and irregular rainfall. In the western highlands the climate is occasionally cool. Average temperatures at Bangui range from 21°C (70°F) to 32°C (90°F). Annual rainfall in the south is about 1,780 mm (70 in). In summer the heat is most oppressive when the country is subject to the harmattan, the hot, dry wind blowing from the Sahara.

Climate and Weather

Mean Temperature: 70°F to 90°F
 Average Rainfall: 70 in

FLORA AND FAUNA

The moist tropical forests in the southwestern part of the country are home to 20 primate species, including chimpanzees, the western lowland gorilla, and both the red and the black and white colobus monkeys. Additionally, the area provides habitat for elephants, bush pigs, forest hogs, buffalo, and six species of duiker. To the north the country

is largely treeless and consists of savanna with low, scrubby bushes, although forests can be found along rivers. These areas are home to numerous species of antelope as well as baboons, buffalo, elephants, and the increasingly rare black rhinoceros. Rivers provide habitat for many species of fish as well as crocodiles and hippopotamuses.

POPULATION

ETHNIC COMPOSITION

Central Africans belong to more than 80 ethnic groups, but three major groups account for 68 percent of the population. The largest group is Baya-Mandjia (46 percent), followed by Banda (27 percent), Sara (10 percent), Mboum (7 percent) and Mbaka (4 percent). There are three ethnic zones in the country, each with its own dominant groups. The Bantu groups Mbaka, Lissongo, and Mbimu and the Babinga live in the forest region; the Sango, Yakoma, Baniri, and Buraka live along the rivers; and the Banda, Zande, Sara, Ndle, and Bizao live in the savanna region.

The Western community in the country is estimated at 6,500, of whom 6,000 are French; the majority of the remainder are Portuguese.

LANGUAGES

French is the official language of the country, while Sango is the national language; Sango is the language of an ethnic group of the same name living in the south, and it is also used as a trade language and lingua franca for intertribal communication. French is spoken by 26 percent of the population.

RELIGIONS

Religious statistics are generally unreliable, but it is estimated that 35 percent of the population follow traditional animist beliefs, 50 percent are Christian (divided evenly between Catholicism and Protestantism), and 15 percent are Muslim.

The Roman Catholic Church, which claims some 18 percent of the population as adherents, is organized under the Archbishopric of Bangui, with eight suffragan dioceses, 25 parishes, 1,452 mission stations, and 70 clergy. There are more than 1,000 Protestant mission centers, with nearly 2,000 missionaries and pastors.

Religious Affiliations

Protestant	950,000
Traditional beliefs	1,330,000
Roman Catholic	950,000
Muslim	570,000

HISTORICAL BACKGROUND

Archaeological evidence suggests that the Central African Republic (CAR) was inhabited by a complex civilization before the rise of Egypt. However, little is known about the region and the first inhabitants, the Babinga. In the ninth and 10th centuries there was widespread immigration from Sudan and Chad. However, by the 17th century the slave trade was depopulating entire towns in the north. Slave markets in Cairo were filled with slaves from the region now known as the CAR until the late 19th century. The result of the voracious slave trade is that the area making up the CAR is one of the most lightly populated regions in Africa.

The Central African Republic was under French rule as a province of French Equatorial Africa (Afrique Equatoriale Française, AEF) from 1908 and previously as a province of the French Congo from 1901. Economic development of the country, then known as Ubangi-Shari, was modeled on the policy adopted by the Belgians in the Congo. The country was parceled out among 40 concessionaires, who were granted rights of tenure and exploitation in return for a fixed annual payment and 15 percent of the profits. This system was abandoned in the 1920s following scandals exposed by René Maran in *Batouala* and André Gide in *Voyage au Congo*. Though AEF made considerable progress in health and education during the interwar years, much of the benefits were limited to Gabon and Middle Congo. Ubangi-Shari became independent about the same time as the other constituent units of AEF in 1960.

Prior to independence, the country experienced two years of self-government under Barthélémy Boganda, founder of the Social Evolution Movement of Black

Africa (MESAN), and his nephew David Dacko, who became the nation's first president in 1960. Dacko established a one-party state in 1962. He was overthrown in 1966 by his cousin, Jean-Bédél Bokassa, commander in chief of the armed forces. Bokassa abrogated the constitution and assumed all executive power. In 1976 he announced that the republic was becoming an empire, and the following year he crowned himself emperor in a ceremony that consumed one-fourth of his poor country's income. The Bokassa regime was supported by substantial financial and military aid, particularly from France. His brutal regime was widely condemned, particularly after the role that he played in the massacre of almost 100 schoolchildren.

With the aid of the French, Dacko deposed Bokassa in 1979. Dacko, however, was unable to deal with the nation's economic problems or the political discontent they generated. He was ousted by the military under the leadership of Gen. André Kolingba in 1981. Kolingba suspended the constitution and proscribed all political parties, although political leaders retained their freedom. He ruled through a Military Committee for National Recovery (CMRN). Kolingba promised to restore civilian rule as soon as conditions were favorable. When no action was forthcoming, opposition to his regime grew. In 1984 his opponents formed a government-in-exile and in 1986 promised a return to democracy. Kolingba responded to these actions by forming a new government in 1985 in which civilians held the majority of cabinet posts.

Kolingba dissolved the CMRN in 1985 and assumed the offices of president and prime minister. He was granted a six-year term under the constitution of 1986. The new constitution established a single-party state in which the Central African Democratic Assembly was the sole legitimate party. Legislative elections were held in 1987, but turnout was low because the opposition boycotted the polls.

In October 1993, Kolingba finally held elections and was defeated by Ange-Félix Patassé. Patassé, a civilian, did not bring calm to the country. Instead he built a government stacked with his own henchmen. Violence broke out in 1996 when some elements of the armed forces challenged the government on at least four occasions.

In July 1997 the mutineers agreed to a truce, receiving amnesty and reintegration into the army in return. Soon thereafter France began withdrawing its military forces from the country, completing the process in 1998. Patassé was reelected president in the 1999 election, which the opposition claimed was rigged. In 2001 Kolingba led an abortive coup attempt, and clashes broke out later that year when the former army chief of staff François Bozizé was accused of taking part in the coup. Despite efforts in 2002 by Libyan-backed forces to subdue General Bozizé, he proceeded to seize Bangui, dissolve parliament, and

declare himself president. In 2004 a new constitution was approved in a national referendum.

LIST OF MODERN RULERS

1960–65	David Dacko
1965–79	Jean-Bédél Bokassa
1979–81	David Dacko
1981–93	André Kolingba
1993–2003	Ange-Félix Patassé
2003–	François Bozizé

CONSTITUTION

The constitution adopted in November 1986 was a revised version of the constitution that was suspended in 1981. A new constitution was promulgated on December 29, 1994, and adopted on January 7, 1995. Yet another constitution was approved by national referendum in 2004. Under the constitution, executive power is vested in a president elected for a six-year term. The prime minister is appointed by the president. Legislative power is in the hands of a unicameral national assembly, whose 109 members are elected by popular vote to serve five-year terms. Although the constitution provides for separation of powers, the legislature is vulnerable to manipulation by the president, who dominates the government. The president can veto legislation, although two-thirds of the unicameral legislature can override his veto, and can rule by decree under special conditions. The constitution provides for an independent judiciary.

PARLIAMENT

Legislative power is vested in a unicameral parliament. The 109-member National Assembly is elected by direct universal suffrage for a five-year term. The National Assembly meets twice a year at the summons of the president. The National Assembly is advised by the Economic and Regional Council, an appointed body serving a five-year term. One-half of its members are elected by the National Assembly, and the other half are appointed by the president. When the two bodies sit together they are called the Congress.

POLITICAL PARTIES

A total of 11 different political parties hold seats in the current National Assembly. The range of political ideology runs the gamut from left to right; parties also have a tendency to take on a political cult of personality. The strongest parties include the Movement for the Libera-

tion of the Central African People (MLPC—the party of the deposed president Patassé), the Central African Democratic Assembly (RDC), and the Movement for Democracy and Development (MDD).

LOCAL GOVERNMENT

For purposes of local administration the republic is divided into 16 prefectures, 69 subprefectures, and 167 rural communes.

There are popular representative institutions at each level: prefectural councils, subprefectural councils, and municipal councils. Eight urban communes have full powers, and there are elected municipal councils at Bangui, Berberati, Bossangoa, Bambari, Bangassou, Bouar, and M'Baiki. Bangui also has a nominated mayor.

LEGAL SYSTEM

The highest judicial organ in the land is the Supreme Court, with three chambers: judicial, administrative, and accounts. It acts as a court of cassation in civil and penal cases and as a court of appeal in administrative cases. Subordinate courts include a criminal court in Bangui, seven civil courts (one in Bangui and six in other population centers), and justices of the peace in smaller population centers. The judiciary, like other branches of the government, is subject to the whims and dictates of the president.

Under local law political detainees can be held without charge for as long as two months, but at that point they must either be formally charged or released. If a suspect is charged, local judicial procedures (which are modeled on French procedures) allow for open-ended preventive detention while the public prosecutor prepares the state's case against the accused.

In most common criminal cases, the government permits the French-modeled legal procedures to be applied fairly and openly and the laws to be executed properly. Within this framework Kolingba granted amnesty to about 100 petty criminals in September 1984. The courts are clearly dependent on the president.

A second tribunal comprising civilian magistrates and military advisers adjudicates political crimes. The special tribunal differs from ordinary courts in that there is no appeal except for the possibility of presidential clemency, and it can try a case only after being authorized by the president.

HUMAN RIGHTS

In terms of civil and political rights, the Central African Republic is classified as a country that is not free. The Central African Republic is still recovering

from the 13 years of Bokassa's dictatorship. General Kolingba's efforts to reconstitute the country's political and judicial institutions were generally cautious and tentative, while General Bozizé has held reconciliation conferences to try to quell dissent and rebellion in the country. Several individuals closely connected with the Bokassa regime were imprisoned for over a year after the coup that overthrew him, but they were later tried and either sentenced or freed. Some of the verdicts were overturned by the Supreme Court because of judicial irregularities or errors in the initial proceedings. Mass media are extremely limited, and broadcast media are controlled by the government. There is no evidence of censorship.

FOREIGN POLICY

As a member of the French Community, CAR has retained close ties with France. A defense pact between the two states permits French intervention in times of crisis, and this clause was invoked against Bokassa and again in 1996 in defense of the government of Patassé. The civil war in neighboring Chad was the principal concern in foreign relations for two decades, and it prompted a rupture of diplomatic relations with Libya, which lasted until 1995. Similarly, the civil war in the Democratic Republic of the Congo spilled over into CAR, and fighting was reported along the border. In 1998 the two countries signed a defense pact, and CAR was reported to be supporting the Kabila regime. In 2004 CAR continued to deal with large numbers of refugees fleeing violence in Sudan, Chad, and the Democratic Republic of the Congo.

DEFENSE

The defense structure is headed by the president, who is also the supreme commander of the armed forces. The line of command runs through the minister of defense to the unit commanders.

Military manpower is provided by voluntary enlistment. The total strength of the armed forces as of 2001 was estimated at 3,000. Additional troops are members of paramilitary units.

The Central African Republic has no military capability other than for internal peacekeeping. Defense of the realm is guaranteed by a 1960 agreement with France, which also provides for military assistance in quelling internal revolts, base rights, and transit and overflight privileges. French officers are temporarily assigned as instructors and advisers, and French garrisons, numbering 1,100 troops, are stationed in Bangui and Bouar. In 2003 the country spent \$14.5 million, or about 1.1 percent of gross domestic product (GDP), on defense.

ECONOMY

Subsistence agriculture, together with forestry, remains the backbone of the economy of the Central African Republic (CAR), with more than 70 percent of the population living in outlying areas. The agricultural sector generates half of GDP. Timber has accounted for about 16 percent of export earnings and the diamond industry for nearly 54 percent. Important constraints to economic development include the CAR's landlocked position, a poor transportation system, a largely unskilled workforce, and a legacy of misdirected macroeconomic policies. The 50 percent devaluation of the currencies of 14 francophone African nations on January 12, 1994, had mixed effects on the CAR's economy. Diamond, timber, coffee, and cotton exports increased, leading to estimated rises in GDP of 7 percent in 1994 and nearly 5 percent in 1995. Military rebellions and social unrest in 1996, on the other hand, were accompanied by widespread destruction of property and a drop in GDP of 2 percent. Ongoing violence between the government and rebel military groups over pay issues, living conditions, and political representation has destroyed many businesses in the capital and reduced tax revenues for the government. The International Monetary Fund (IMF) approved an Extended Structure Adjustment Facility in 1998, and the World Bank extended further credits in 1999 and approved a \$10 million loan in early 2001. As of January 2001 many civil servants were owed as much as 30 months' pay, leading them to go on strike, which further damaged the economy. The government set targets of 3.5 percent GDP growth in 2001 and 2002, but in 2003 the economy actually contracted by 7 percent, and it was predicted to contract even further in 2004.

ENVIRONMENT

The environmental status of the Central African Republic is a case study in problems and potentials. The problems are exacerbated by gaps in legislation, poaching (illegal wildlife traders and armed gangs from the Sudan), agricultural practices that impoverish the soil and cause erosion, a forestry code that does not provide for rational forest management, and a lack of environmental legislation. On the other hand, the country has considerable agricultural potential and mineral resources (especially diamonds and gold), along with an extensive protected areas system and strong potential for sustainable forest production.

LIVING CONDITIONS

Among the poorest countries of Africa, the CAR has a low standard of living. Most people live in huts constructed of mud bricks and thatched roofs, and they do without electricity and clean running water, with latrines frequently placed too close to streams or wells. Many people sleep on mats laid on dirt floors. Houses often have to be rebuilt because of termite damage. In urban centers, which are more like collections of villages, homes made of cement blocks with cement floors and metal roofs are more common. During much of the year people essentially live outdoors, cooking food on a hearth in front of the dwelling. The nation has only about 640 km of paved road; the remaining 23,000 kilometers of road are unpaved, and during the rainy seasons they often become impassable. Few people own cars, so most rely on overcrowded and unreliable bush taxis for transportation—on which they often meet with highway bandits who blockade the road and demand payment for passage.

HEALTH

Health conditions in the CAR, where per capita spending on health care is just \$12 per year, are generally poor.

Life expectancy at birth is only about 41 years, and the infant mortality rate is a high 92 per 1,000 live births. In 2003, 23,000 people died of AIDS, and 13.5 percent of the adult population lives with the disease. Poor sanitation contributes to a high death rate from such diseases as malaria (about 2,200 cases per 100,000 population) and meningitis. Many children go barefoot, contracting parasites from animal waste, especially that of pigs. The only hospital is in Bangui, though small mission-operated clinics can be found throughout the country. Many people rely on traditional medicine and sorcery to deal with health problems.

FOOD AND NUTRITION

The primary staple of the CAR is cassava, which has to be soaked for up to three days to leach out naturally occurring cyanide. After the root has been soaked, it is cut in pieces, dried, ground into a flour, and finally mixed with boiling water to make a paste called *gozo*. The *gozo* is served with a sauce that contains vegetable, fish, or meat and is often thickened with peanut butter. Mushrooms, tomatoes, garlic, and onions are common ingredients. In rural areas, major food items also include bananas, plantains, and various wild plants. Bush meat, including monkey and elephant, is also eaten, as are chicken and goat. Fruits include mangoes, pineapples, guava, bananas, and oranges. Typically, there is only one main meal eaten, at midday, with leftovers eaten in the evening and the next morning.

STATUS OF WOMEN

Women are generally accorded a lower status than men in the Central African Republic. Women's work at home and in the fields prevents many of them from receiving an education. Polygamy is common, but the legal system and traditional practice support the rights of wives and all children of such marriages. A national women's organization is supported by the government. Only 6 of the 96 members of Bozize's National Transitional Council were women. Civil strife has left many women, especially displaced women, vulnerable to abduction and rape.

WORK

No meaningful figures exist for the size of the CAR's labor force, for the vast majority of people scratch out livings as subsistence farmers, often growing only enough for their own needs and to sell a small surplus at markets, providing money to buy such necessities as cloth and soap. A few farmers grow and sell cash crops, including cotton, coffee, tobacco, yams, millet, corn, bananas, and timber. Agriculture contributes about 55 percent of the nation's GDP; about 20 percent comes from industry, including diamond mining, logging, brewing, textiles, footwear, and bicycle and motorcycle assembly. Per capita GDP in 2003 was about \$1,100.

 Unemployment %: 8

EDUCATION

Education is free, universal, and compulsory, in principle, for eight years, from ages six to 14.

Schooling consists of six years of primary school, four years of middle school, and three years of secondary school, for a total of 13 years. Upon completion of the secondary-school program, students are awarded a baccalaureate. The curricula are based on those of France,

and Africanization has received a low priority. A few mission schools run by religious groups continue to operate within the school system.

The academic year runs from October to June. The medium of instruction is French, but the national language, Sango, is taught at all levels. The literacy rate is only 51 percent for adults. Adult education is provided by mobile teams.

The country's sole university is the National University. Specialized institutions include a national administration college, technical and agricultural colleges, and schools of nursing and forestry.

SCIENCE AND TECHNOLOGY

As a poor nation, the CAR supports little scientific research and technological development. There are three government agencies that support limited research in agriculture, including cotton, fruit crops, soil conditions, and forestry. The university in Bangui, too, supports some agricultural research, but the number of people employed, both at the university and in government, is quite small.

MEDIA

The CAR has six privately owned newspapers and a government-run biweekly, the *Centrafrique-Presse*. Circu-

lations are very small, with few people able to afford a newspaper and literacy rates low. None of the periodicals published in the country enjoys a circulation of more than a few hundred. The media are under the control and supervision of the state, though the private newspapers criticize the government.

The national news agency is Agence Centrafricaine de Presse (ACAP), founded in 1974 through the nationalization of the French news agency AFP. Only Tass maintains a bureau in Bangui.

The official broadcasting organizations, Télévision Centrafricaine (TVCA) and Radio Centrafrique, broadcast home services in both French and Sango. Additional radio broadcasting is supported by the United Nations, the Catholic Church, and one private radio station.

Television broadcasts began in 1974.

CULTURE

The most prominent forms of cultural expression in the CAR are music and dance, much of it reflecting traditional cultural beliefs. Through music and dance, people remain in contact with the world of the spirits, and certain songs and dances are performed only in connection with certain events, such as funerals or religious holidays. Much of this music has been incorporated into Christian worship. The most common instrument is the conga drum, which is made of a hollowed-out log with leather stretched across it; some are quite large and can be heard over long distances. In premodern times these drums were used as a form of communication from village to village. Today, modern Western-influenced music can be heard throughout the country, including rap, hip-hop, and reggae.

Other forms of cultural expression are folk arts and crafts, including weaving, pottery, ebony carving, and even hair braiding, which can become quite elaborate and take many hours to complete. In the savanna, where grasses grow to great lengths, basket and mat weaving are common.

FOLKLORE AND MYTHOLOGY

The Central African Republic is a nation consisting of some 40 ethnic groups, and each group has its own tradition of oral folklore. Nevertheless, as the CAR forged a national identity and Sango became the lingua franca, a body of national folklore has emerged. One of the main figures is Tere, a trickster who outwits his adversaries with cunning and supernatural powers. Traditionally, oral folklore was transmitted by the older generation around a fire, but today many of these stories are broadcast on television and radio, and they serve to educate the young in moral and social lessons, often to the accompaniment of songs.

ENTERTAINMENT AND RECREATION

Despite the lack of electricity in some areas, television watching has grown in popularity. Often, a person who is fortunate enough to own a television set will place it outdoors so that friends and neighbors can gather round and watch American and Chinese action movies. In rural areas televisions are powered by generators, and people watch videos. Singing and dancing are also popular forms of entertainment. Even in small villages, people find cement dance floors and dance to music played over the radio or cassette tapes. Sports also provide entertainment, as people attend not only to watch soccer games but also to socialize as their children play nearby. Many of these games take on the air of festivals, as local dignitaries attend and street vendors sell food. Another common form of entertainment is the spontaneous visiting of friends and family, particularly on Sunday afternoons and holidays.

ETIQUETTE

Of central importance in Central African society are rituals associated with greetings and leave takings. In the morning it is customary to shake the hand of each family member and inquire how he or she slept. A person approaching a group is expected to greet and shake hands with the person in the group who enjoys the highest status (for example, the oldest person, or a dignitary), then greet each other member of the group. At leave taking, again a handshake is customary, and among friends the

handshake is followed by a finger snap. In the CAR, hand gestures often have particular meanings. For example, different hand gestures are used to indicate the height of an animal versus that of a person, and to use the animal gesture when referring to a person would be regarded as ill mannered.

FAMILY LIFE

A household unit consists not only of the husband, wife, and their children, but often of one of the parents' siblings, such as a younger sister of the wife and possibly her children. Accordingly, children are raised by an extended family, and cousins who live together are treated as siblings. Many "marriages" in the CAR are never formalized, and even the number of Christian unions has fallen. An arrangement is worked out between the parties' families, usually involving a bride-price ranging from a few head of livestock to larger amounts of money, and the man is often expected to work for the bride's family for a period of years. Divorce involves the man moving the wife's belongings outside and locking the door.

PERSONAL APPEARANCE

Clothing is a blend of Western-style and traditional dress. It can be a symbol of wealth, and many people covet clothing from England and Holland, particularly for more formal occasions. Men avoid wearing shorts, which they associate not only with children but also with European colonists. Poorer people can buy European or American secondhand garments in street markets. Traditional clothing in the CAR was made of bark from rainforest trees, which was pounded until it became soft. More recently, most people wear garments made of cotton, usually dyed or embroidered with colorful African patterns. Many women wear the *pagne*, a piece of fabric tied around the waist, along with a matching blouse made of the same material.

SPORTS

Central Africans are passionate about two sports: basketball and soccer. Many people play basketball on courts that were built in the 1970s by Peace Corps workers, and talented players can attend a training center in Bangui. In 1988 the nation shocked the sports world by winning the African championship. Nearly every town in the CAR supports a soccer team, and back-to-back Sunday afternoon soccer games are common festive events.

CHRONOLOGY

- 1958** Ubangi-Shari votes to become an autonomous republic within the French Community under the name Central African Republic. Barthélémy Boganda is selected as the first prime minister.
- 1959** Boganda dies in an air crash and is succeeded in office by his nephew David Dacko.
- 1960** Central African Republic achieves full independence with Dacko as president. Republic's first constitution is promulgated.
- 1962** The constitution is amended to establish Social Evolution Movement of Black Africa as the sole legal political party in the country.
- 1966** In a swift and bloodless coup Dacko is ousted by the army's commander in chief, Jean-Bédel Bokassa. National Assembly and constitution are suspended. Relations with People's Republic of China are broken.
- 1968** The Central African Republic leaves Union Douanière et Economique de l'Afrique Centrale (UDEAC) and joins with Chad and Zaire in a new grouping called Union des États de l'Afrique Centrale but later returns to the UDEAC fold.
- 1969** Col. Alexandre Banza, a presidential associate, is implicated in an anti-Bokassa plot and is arrested and executed.
- 1972** Bokassa names himself president for life and marshal of the republic.
- 1973** The Central African Republic begins dialogue with South Africa.
- 1974** Bokassa begins a campaign against French influence; sale of French newspapers is forbidden; French consulate general is closed down; French businesses are nationalized.
- 1975** Following the visit of French president Valéry Giscard d'Estaing for a Franco-African summit, good relations are restored with France. Elisabeth Domitien is named as the Bokassa regime's first prime minister.
- 1976** Domitien is replaced by Ange Patassé as prime minister. Bokassa survives attempt on his life at Bangui airport. Bokassa renames the country the Central African Empire and proclaims himself emperor.
- 1977** Jonathan Randal and Michael Goldsmith, correspondents for the Washington Post and the Associated Press, respectively, are arrested and detained on charges of espionage and defamation of the emperor; Goldsmith is beaten un-

- conscious by the emperor and his courtiers and is imprisoned for a month.
- Bokassa holds coronation with pomp and circumstance, demonstrating his absolute hold over the country.
- 1978** Henri Maldou is named prime minister in place of Ange Patassé.
- 1979** Students riot in Bangui; Central African Empire ambassador to France resigns in the wake of mounting allegations of cruelty and brutality against the Bokassa regime; Bokassa is charged with the massacre of students; Bokassa is overthrown in a swift coup in which French troops play a prominent role; David Dacko is installed as president as the republic is reestablished; Bokassa, denied asylum in France, is granted such in Côte d'Ivoire.
- 1980** Central African Republic breaks diplomatic relations with the Soviet Union and Libya. A new constitution for a multiparty system is approved by referendum. Dacko wins presidential election and is sworn in for a six-year term. Following accusations of electoral malpractice, rioting breaks out in Bangui and three people are killed in a bomb attack on a Bangui cinema; state of siege is declared. In a bloodless coup, President Dacko is ousted by an army group under General André Dieudonné Kolingba, who sets up the Military Committee for National Recovery (CMRN) as the supreme organ of government.
- 1982** Ange Patassé, leader of the banned Movement for the Liberation of the Central African People (Mouvement pour la Libération du Peuple Centrafricain), is implicated in an unsuccessful coup attempt. Patassé seeks asylum in the French embassy in Bangui, from where he is exiled.
- 1983** The three main opposition parties form a united opposition movement.
- 1984** President Kolingba announces amnesty for the leaders of banned political parties who had been under house arrest. Opposition leaders form a government-in-exile.
- 1985** President Kolingba gives civilians a majority of the portfolios in a new government formed in September.
- 1986** A new constitution provides for the establishment of the Rassemblement Démocratique Centrafricain as the sole political party and confers strong executive powers on the president. Bokassa returns from exile and is immediately arrested.
- 1987** The nation holds its first legislative elections in 20 years. Bokassa is convicted on charges of murder, illegal detention of prisoners, and embezzlement and is sentenced to death.
- 1988** Diplomatic relations with the USSR, suspended since 1980, are resumed. President Kolingba commutes Bokassa's sentence to one of life imprisonment at hard labor.
- 1989** The Central African Republic recognizes the Palestine Liberation Organization's declaration of an independent state of Palestine and reestablishes diplomatic relations with Israel.
- 1991** Political parties are legalized.
- 1993** Ange Félix Patassé is elected president and begins reforms to lessen the army's control of the country.
- 1996** Mutiny in the army leads to a French-brokered settlement between mutineers and President Patassé. The French twice send troops in an attempt to keep peace.
- 1997** United Nations sends peacekeeping troops to the country to stem further violence by army mutineers.
- 1999** Patassé is reelected.
- 2000** Civil servants strike over back pay; the coordinated protest of 15 opposition groups deteriorates into riots.
- 2001** Kolingba leads an abortive coup attempt; armed clashes break out when former army chief of staff François Bozizé is accused of taking part in the coup.
- 2002** Libyan-backed forces try to subdue Bozizé, who seizes Bangui, dissolves parliament, and declares himself president.
- 2004** A new constitution is approved in a national referendum.
- 2005** Bozizé is declared president after run-off elections.

DATE OF INDEPENDENCE

August 11, 1960

DATE OF CONSTITUTION

March 31, 1995 (adopted 1996)

GEOGRAPHICAL FEATURES

Chad, a landlocked country in north-central Africa, extends 1,765 km (1,097 mi) north to south and 1,030 km (640 mi) east to west. It covers an area of 1,284,000 sq km (495,752 sq mi).

Chad's total international border of 5,968 km (3,708 mi) is shared with six countries: Libya (1,055 km; 655 mi), Sudan (1,360 km; 845 mi), Central African Republic (1,197 km; 745 mi), Cameroon (1,094 km; 679 mi), Nigeria (87 km; 55 mi), and Niger (1,175 km; 730 mi).

The main feature of Chad is the broad, shallow central bowl of Lake Chad in the southern and southwestern half of the country. From the lake area and the central plains the land gradually rises to plateaus to the south, of which the Guera Massif (1,500 m; 4,900 ft) represents the highest point. To the north the basin rises to the clay plateau of the Ennedi and the volcanic Tibesti Range, whose highest point, Emi Koussi, rises to 3,415 m (11,204 ft). To the east the Ouaddai Range divides Chad from the Nile River drainage system. In the basin itself there are a few low mountains, such as Madjer El Hamis and Fianga-Moita.

N'Djamena	530,965

CLIMATE AND WEATHER

Chad has three climatic zones: the Guinean or subtropical zone within the equatorial rain belt, the Sahelian central zone, and the northern Saharan zone. The subtropical zone has a long rainy season, from May to November, with annual rainfall between 900 and 1,200 mm (35 and 47 in), and a dry season lasting the other five to six months. The Sahelian zone has a longer dry season, of seven to eight months, and rainfall of 500 to 900 mm (20 to 35 in). The Saharan zone has a dry season of at least nine months and erratic rainfall, between 200 and 500 mm (8 and 20 in). The northernmost areas have a true desert climate, with rainfall below 200 mm (8 in) and temperatures of up to 40°C (104°F). The minimum temperature drops to 0°C (32°F) in December.

Climate and Weather

Mean Temperature
 Summer: 104°F
 Winter: 32°F
 Average Rainfall
 Subtropical Zone: 35 in to 47 in
 Sahelian Zone: 20 in to 35 in
 Saharan Zone: 8 in to 20 in

FLORA AND FAUNA

Chad has three vegetation zones, each associated with the amount of rainfall received. In the tropical zone to the south can be found tall grasses, shrubs, and some broad-leaved deciduous trees. The middle third of the country is a semiarid tropical zone in which savanna grasses gradually merge into an open steppe area with extensive

thorn bushes. The northern region of the country is hot and arid desert, with little vegetation other than the occasional cluster of palms. The nation's most abundant wildlife is found in the savanna zone, which is home to cheetahs, leopards, lions, warthogs, giraffes, antelopes, rhinoceroses, elephants, and hippopotamuses as well as an abundance of birds and reptiles.

ETHNIC COMPOSITION

The people of Chad are broadly divided into the Arab and Arabized northern groups and the pagan, or *kirdi*, groups of the south. The Arabs and Arabized people form a relatively homogeneous cultural, religious, linguistic, and geographic group. The indigenous inhabitants of the south form a mosaic of extensive variety and number, consisting of some 200 distinct ethnic groups. No single group forms a majority in any region, with the largest group, the Sara, constituting only 24 percent of the population. The ethnic composition has been altered over the years through invasions, migrations, warfare, intermarriage, slave raids, and epidemics.

An estimated 1,000 French live in Chad, constituting the major foreign community. There is no overt hostility toward foreigners in the south, but few Westerners venture into the north.

LANGUAGES

Arabic and French are Chad's official languages, though French is understood and spoken by only 30 percent of

literate Chadians. No one language is spoken or understood by all Chadians. The language of northern and central Chad is Turku, a form of pidgin Arabic sometimes called Chadian Arabic. Sara is widely spoken in the south. The smaller dialects and languages are becoming extinct as the need for intertribal communication increases.

RELIGIONS

About 51 percent of the people are Muslims, mostly the northern and central tribes. Another 7 percent adhere to traditional African religions, generally referred to as animism. Christianity, followed by about 35 percent of Chadians, is strongest among the Sara. There is a Roman Catholic archdiocese at N'Djamena, with three suffragan dioceses. Christian churches came into conflict with former president N'garta Tombalbaye's authenticity campaign in the early 1970s.

Islam, Christianity, and animism are all freely practiced. The country has remained multireligious despite domestic and foreign pressures in favor of Islam.

Religious Affiliations

Muslim	5,011,500
Christian	3,439,200
Animist	687,900
Other	687,900

HISTORICAL BACKGROUND

More than 2,500 years ago the region had abundant water from Lake Chad. That resource has dwindled over the years. However, in the eighth and ninth centuries people were migrating from the Nile River valley, and the state of Kanem was founded. The kingdom lasted more than 1,000 years and was marked by its extensive trade in salt, copper, gold, and slaves. By the 13th century inhabitants of the region had adopted Islam. In 1812 the kingdom collapsed when the capital was attacked by the Fulani people.

Chad came under French rule in 1900 as part of French Equatorial Africa. The pacification of various Chadian areas, however, was not completed until 1915, and it was not until 1920 that an effective administrative system was established. The degree of French control was greatest in the south and nominal in the north. The extension of the French legal and administrative system was slow and halting because of the lack of French administrators willing to serve in Chad. The main legacy of French rule was the transfer of effective political power from the Muslim north to the animist and Christian south. The southerners, who were deeply influenced by French institutions and who readily availed themselves of the new opportunities for advancement that French cul-

ture offered, have retained the French political and economic system almost intact since gaining independence on August 11, 1960.

Chad's political history has been marked by divisions based on ethnic, religious, and geographic lines, with the Arabic Muslims in the north traditionally in conflict with the black animists and Christians of the south. The governing elite have traditionally been drawn from the south, with the northern groups excluded. Unable to gain a role in national political life, in 1958 northerners launched a struggle that resulted in an ongoing civil war. Although nominally a republic, Chad has operated throughout most of its independent nationhood as a dictatorship.

Chad was made an autonomous state within the French community in November 1958. The following year François (later N'garta) Tombalbaye, a Christian from the south and the leader of the majority Parti Progressiste Tchadien (PPT), assumed the position of prime minister. With the exception of the northern province of Bourkou-Ennedi-Tibesti (BET), which remained under French control, the nation became independent in 1960, with Tombalbaye as president. Chad became a one-party state prior to the adoption of the constitution in 1962.

Tombalbaye's government faced civil disturbances in 1963 and outright rebellion in 1965 when the French ended their administration of BET. The Front de Libération Nationale de Tchad (FROLINAT), with covert support from Libya, which had historic ties to the northern region, led the rebellion. French military intervention in 1968 put a temporary end to the revolt, but despite Tombalbaye's attempts at reconciliation, disturbances continued. Resistance culminated in an attempted coup by FROLINAT in 1971, reportedly with Libya's backing. In another effort to consolidate his political power, Tombalbaye, in 1973, formed a new political party, the Mouvement National pour la Révolution Culturelle et Sociale (MNRCS), which replaced the PPT.

Tombalbaye was killed during an army coup in 1975 that brought the former army chief of staff, Félix Malloum, to power. Malloum dissolved the MNRCS and ruled through a newly instituted Supreme Military Council. FROLINAT, with support from Libya, occupied the Aozou Strip in the north and continued to oppose the government.

Temporary infighting in FROLINAT between the People's Armed Forces (FAP), led by Goukouni Oueddei, and the Armed Forces of the North (FAN), loyal to Hissène Habré, temporarily weakened the party. However, by 1977 forces under Oueddei had captured much of the BET. In an effort to curb the rebellion by including factions from FROLINAT in government, Malloum appointed Habré, a Muslim from the BET, as prime minister. Nevertheless, Oueddei continued his advance on the capital, and French intervention was necessary to prevent a takeover.

In 1978 a serious rift between Habré and Malloum led to a breakdown in central authority. A three-way civil war erupted between supporters of Habré, Malloum, and Oueddei, and rebellion also broke out in the south. French troops intervened in 1978 and 1979. External attempts by the French, Libyans, Nigerians, and Algerians to find a solution failed. A series of shaky coalition governments were formed, but the government was dominated by rivalry between Oueddei and Habré. Initially, Oueddei, with Libyan support, controlled the capital, but by 1982 N'Djamena was under Habré's control. Oueddei reestablished his forces in the north and the following year led a major offensive against Habré. In 1983 France intervened in the armed conflict and declared the 15th parallel a line of interdiction between the warring factions. Further fighting forced the French to move the line to the 16th parallel.

The military situation eased in 1984, although there were reports of continued fighting in the south. In an effort to win over the region, Habré formed the Union Nationale pour l'Indépendance et la Révolution (UNIR) and carried out a major government reorganization in which a number of leading southerners were included. At the same time he carried out a major offensive that pushed many of the rebels into the Central African Republic.

In September 1987 a cease-fire was established, bringing the war to an end. The following year Chad and Libya agreed to reestablish diplomatic relations broken off in 1982 and to settle the Aozou question peacefully. Habré was overthrown in a military coup on December 1, 1990. The rebel leader Idriss Déby, a renegade general and former aide of Habré, declared himself president on December 4 and promised a multiparty democracy. Habré fled to Senegal, where he now remains in exile, but in early 1992 he made a foray back into Chad, capturing two towns near Lake Chad before government troops and French paratroopers drove him back. The years 1992–93 saw five attempted coups and numerous government crackdowns. President Déby brought some order to the country but at a high cost in terms of civil rights and government-sanctioned killing.

The Higher Transitional Council approved a new electoral code and draft constitution in 1995. A constitutional referendum was conducted in March 1996. A new constitution was approved by 63.5 percent of voters. Not surprisingly the no vote was heaviest in the south, which had preferred a federal status that gave the region substantial autonomy. As provided in the new constitution, presidential and legislative elections were held the following year. With 15 candidates contesting the first round of presidential voting, Déby obtained 43.9 percent of the vote. In the runoff Déby was reelected to another term with 69.1 percent of the vote. Nassour Ouaidou Guelenouksia was named prime minister, succeeding veteran politician Djimasta Koibla.

In 1998 the Movement for Democracy and Justice in Chad (MDJT), led by the former defense minister Youssouf Togoimi, began an armed rebellion against the government, in 2000 claiming that it had captured the garrison town of Bardai in the north. Déby was reelected in May 2001. In early 2002 Libya brokered a peace agreement between the government and the MDJT, but just months later fighting broke out in the far north. In 2003 the government signed a peace agreement with National Resistance Army rebels in the east, as well as another agreement with MDJT, but hard-liners maintained opposition. The nation's problems worsened in early 2004 as thousands of Sudanese refugees fleeing the fighting in the Darfur region of Sudan arrived in Chad, and border fighting broke out between Chad and pro-Sudanese militias. In 2005 Pascal Yoadimnadjé was appointed prime minister.

LIST OF MODERN RULERS

1960–75	N'garta Tombalbaye
1975–79	Félix Malloum
1979–82	Goukouni Oueddei
1982–90	Hissène Habré
1990–	Idriss Déby

CONSTITUTION

The Constitution of 1962 was suspended in 1975. In March 1991 Idriss Déby declared himself president and ruled the country almost single-handedly. A new constitution was adopted in 1996 that declared Chad a unitary state to be headed by a president. It also provided for a National Assembly consisting of 125—now 155—members elected for four-year terms. In 2004 the constitution was amended to allow Déby to run for a third term in 2006.

PARLIAMENT

The National Assembly was dissolved in 1975 following the coup. Traditionally, it had enjoyed little power. A 30-member Conseil National Consultatif was formed in 1982. It was made up of two representatives from each of Chad's prefectures plus two representatives from the capital, N'Djamena. The president appointed all members of the council. The National Assembly was reinstated in 1997 after the new constitution was formed.

POLITICAL PARTIES

By mid-1996 Chad had about 60 political parties. The following are the most prominent in the new National

Assembly: the Patriotic Salvation Movement (MPS), which was originally in opposition but is now in power, with 110 seats and the presidency; the National Union for Development and Renewal (UNDR), with 3 seats; Rally for Democracy and Progress (RDP), with 12 seats; Union for Renewal and Democracy (URD), with 5 seats; and the Federation Action for the Republic (FAR), with 9 seats.

LOCAL GOVERNMENT

Chad's territorial organization, devised by the French, combines traditional and modern units. The largest regional division is the prefecture, headed by a prefect appointed by the president. There are 14 prefectures.

The prefectures are divided into 54 subprefectures, each under a subprefect. N'Djamena is a separate prefecture known as a *délégation-générale*. Regions where traditional administrations were taken over as a unit are called administrative posts, of which there are 27. Their heads can be either civil servants or traditional chiefs or sultans.

In early 2005 plans were being made to convert to a new administrative structure consisting of 28 departments.

LEGAL SYSTEM

The Chadian legal system is marked by the continued co-existence of customary law, largely uncodified, and French law. In cases of conflict between the two, the French law prevails.

The court structure was extensively reorganized in 1967. The customary courts were replaced by justices of the peace, who were advised by two assessors on customary law. The Supreme Court, which functioned as the top judicial authority since 1963, was abolished in 1975 after the coup. In 1976 the permanent Court of State Security was established, comprising eight civilian and military members.

The judicial structure is controlled by the High Council of the Judiciary, which advises the president on judicial appointments and ensures the independence and integrity of the judges. Almost all the judges on the superior courts are French; there is a continuing shortage of qualified Chadian judges and magistrates.

HUMAN RIGHTS

In terms of civil and political rights, Chad is classified as a country that is not free. In fact, because of unsettled political conditions, it is difficult to speak of civil rights at all. The judicial system no longer functions, and there are no trials in the normal sense of the term. There are reports that all jails have been closed and civilian prisoners

released. There is widespread looting of homes by armed combatants of all factions. Despite movement toward greater democracy, power continues to reside largely in the hands of a northern ethnic oligarchy.

FOREIGN POLICY

Libya was one of the major players in the Chadian civil war, which was provoked by Libya's annexation of the Aozou Strip in northern Chad in 1978. Despite a 1989 agreement calling for mutual withdrawal from the disputed territory, Libya provided haven and support for Chadian rebels operating out of Sudan and Libya. Relations between the two countries improved after the 1990 victory of the Libyan-supported rebels in the civil war. Shortly thereafter the two countries signed a treaty of friendship and cooperation, and in 2002 Libya brokered a peace agreement between the Chadian government and rebels. Relations with France have been complicated by France's involvement in the civil war. French forces aided government troops until 1990, when the pro-Libyan MPS (Mouvement Patriotique du Salut) gained control. In 1991 the Chadian president invited French troops to remain in the country. In 1998 Chad sent more than 2,000 troops to support Kabila in the Democratic Republic of the Congo, but the force was withdrawn in 1999. In the new century, relations with Sudan became strained as the Sudanese civil war spilled over into Chad, and border patrols in the two nations were stepped up.

DEFENSE

The defense structure is headed by the president and chairman of the Supreme Military Council. The line of command runs through the chief of staff and the National Defense Commission to the head of the Tactical Bureau and the army and gendarmerie commanders. Military manpower is provided by voluntary enlistment.

Chad's army, deprived of French crutches, is small and neither staffed nor equipped to repel a concerted offensive by a foreign power. As of 2001 the nation's total military personnel numbered about 30,000. In 2003 the nation spent \$55.4 million, or about 2.1 percent of gross domestic product (GDP), on defense.

ECONOMY

Landlocked Chad's economic development suffers from its geographic remoteness, drought, lack of infrastructure, political turmoil, widespread corruption, and the presence of a large informal black-market economy. Over 80 percent of the population depends on subsistence agriculture, including the herding of livestock. Of Africa's francophone countries, Chad benefited least from the 50 percent devaluation of the CFA franc in January 1994. Financial aid from the World Bank, the African Development Fund, and other sources is directed largely at the improvement of agriculture, especially livestock production. Due to lack of financing, the development of the Doba Basin oil fields, originally due to finish in 2000, was substantially delayed. At length, a consortium of two U.S. oil companies invested \$3.7 billion to develop the nation's oilfields, beginning production in 2003. Exports of oil began in 2004, contributing heavily to a 15 percent real growth rate in Chad's economy.

ENVIRONMENT

The environment of Chad has suffered from both environmental and political factors. For more than 40 years, fighting has prevented any meaningful management of the environment to ensure the long-term sustainability of the agricultural lands. Severe droughts have also taken their toll on the land, particularly between 1972 and 1983. The country suffers from growing desertification and poor agricultural practices.

LIVING CONDITIONS

More than a generation of rebellion and civil war have made living conditions in Chad unsettled at best. Medical care is spotty, water is in short supply, and transportation is difficult. In an area three times the size of California, the nation has only 267 km of paved roads, as well as 33,000 km of unpaved roads, many of which become impassable in rainy seasons. Because so much of the nation is remote and almost inaccessible, it is difficult to transport goods. Life is particularly harsh in Sahelian towns. There, people live in walled compounds constructed of bricks made of straw and camel dung. In the hot, dry seasons people live and sleep largely outdoors. Latrines are found in the corners of compounds. Those who do not live in compounds occupy huts made of sticks and thatched roofs, often with tarps thrown over them. For water, people rely on communal wells, using ropes and buckets to draw water, then transporting water to compounds with donkeys. Because of the recent history of armed rebellion, many people own small weapons and live with great insecurity, and banditry and road robbery are commonplace, as young men from rural areas who took part in rebellions have difficulty adapting to "civilian" life.

HEALTH

Health care in Chad is generally poor, with annual per capita spending on health care just \$5. Life expectancy at birth is only about 48 years, and the infant mortality rate is nearly 95 per 1,000 live births—nearly 105 for males. In 2003 about 4.8 percent of the adult population was living with AIDS, and that year 18,000 Chadians died of the disease. A major problem is untreated drinking water, which contributes to disease and parasites; only 34 percent of the population has access to improved drinking-water sources. Many people suffer from tropical diseases such as malaria, schistosomiasis, and river blindness. Drought and famine also contribute to poor health conditions. While hospitals exist in the major towns, the facilities are substandard, and most people have to rely on remote clinics, which can themselves be barely accessible because of great distances and poor roads.

FOOD AND NUTRITION

Contributing to health problems in Chad is poor nutrition, with an estimated 10 percent of Chadian children underweight. Major staples include rice, potatoes, maize, sorghum, and especially millet, which is ground into a flour and mixed with boiling water to form a paste; this is served with various sauces made with meat or fish, tomatoes, onions, and spices. The diet in the south consists of little fish, with people instead relying on forest products, fruits, root vegetables, and fruits such as guavas, bananas, and mangoes. In the north more fish and dairy products are consumed, and favored fruits include limes and dates. Truck stops often serve grilled goat meat, seasoned with lime and hot peppers and served with French bread.

STATUS OF WOMEN

Women are generally subordinate to men in Chadian society. Females do attend school at all levels of the educational system. A few women participate in the political life of the country; by 2005, 10 members of the legislature were women. Some women serve voluntarily in the armed forces, and some figure prominently in the labor movement. Although figures are not known, many women and their children have been left homeless and without adequate means of support, with their husbands missing or dead as a result of civil strife. Widows and orphans are often taken care of by extended family members.

WORK

Some 80 percent of Chadians live by subsistence farming, but their efforts contribute only 32.4 percent of GDP. The remainder of GDP is provided by industry, at 18.8 percent, and services, at 48.8 percent. In agriculture, the major crops are cotton, sorghum, millet, and rice as well as livestock such as sheep, goats, and camels. Industry includes a growing oil sector, as well as cotton textiles, meatpacking, soap production, and beer brewing. Fully 80 percent of Chadians live below the poverty line, with per capita GDP in 2003 at just \$1,200.

EDUCATION

Education is free, universal, and compulsory, in principle, for six years, from ages eight to 14. However, actual school enrollment rates are abysmally low.

Schooling consists of six years of primary school, four years of middle school at a *collège d'enseignement* or *lycée*, and three years of secondary school at a *lycée*, for a total of 13 years. The curriculum in both primary and secondary schools is based on the French model and is standardized for both private and public schools.

The academic year runs from October to mid-June. The medium of instruction is French throughout, although Arabic is encouraged in areas with Muslim majorities.

About 72 percent of primary-level students attend public schools; the rest are in private schools, primarily Roman Catholic mission schools. At the secondary level, 85 percent attend state schools and 15 percent private schools. Koranic schools offer limited primary education for northern Muslims. There also are a few Islamic secondary-education centers.

Chad's first university, the University of Chad, opened in N'Djamena in 1971 and graduated its first class in 1974.

SCIENCE AND TECHNOLOGY

Civil war, poverty, and a lack of infrastructure have severely inhibited scientific and technological progress in Chad. The University of Chad is small and has little in the way of resources and research materials. A veterinary research center and a cotton research center conduct some research and development activities in those fields, and the Ministry of Rural Development conducts some research in food crops.

MEDIA

A few news bulletins are issued by various government agencies, particularly *Info-Tchad*, a mimeographed daily with a circulation of 1,600 copies. All printing facilities are owned by the government. Additionally, there are a handful of privately owned newspapers, which openly criticize the government but have little impact because of illiteracy, poverty, and the inability to reach people in rural areas. The national news agency is Agence Tchadienne de Presse (ATP). Both AFB and Reuters have offices in N'Djamena.

Radiodiffusion National Tchadienne, until 1973 Radio Chad, operates transmitters in N'Djamena, Sarh, and Abeche. Additionally, FM Liberté is a privately owned station funded by human rights organizations, and the Catholic Church operates a radio station called La Voix du Paysan. Chad's television service broadcasts over 800 hours annually, the majority of which is devoted to entertainment.

CULTURE

The government provides virtually no funding for the arts. Chad has not produced a national literature, largely the result of illiteracy, but various cultures have long oral storytelling traditions. What written literature has been produced by Chadians is in French, especially in the diasporic community in France. Two major forms of cultural expression are the graphic arts, especially folk arts and crafts, and performance. Various ethnic groups have artistic traditions that include artifacts, leatherwork, and the decoration of houses and clothing. Chadian craftsmen are known for their production of musical instruments, including horns, whistles, flutes, pottery drums, and tam-tams as well as five-stringed harps and *balafons*, which are similar to xylophones, with wooden bars and gourds used to amplify the sound. Performance arts include the song and dance that are part of religious rituals.

FOLKLORE AND MYTHOLOGY

Because of its wide range of ethnic groups, Chad has no common folklore or mythological tradition, though each ethnic group has its own traditions. One common tradition, however, focuses on Félix Eboué, the nation's lieutenant-governor who supported the Free French in World War II and whose memory is preserved through a monument in N'Djamena. A national myth concerns the Sao, the first people who lived in the area around N'Djamena. The Sao were reputed to have been giants capable of remarkable physical feats; women, for example, were able to lift a granary holding an entire year's harvest with one hand. Much Chadian folklore is religious, particularly

among those who practice animism. In societies such as the Moundang, for example, rulers are believed to have supernatural powers, and the Mbaye believe spirits occupy such natural forces as the sun, water, and lightning. Communicating between people and the spirit world is the role of sorcerers and diviners.

ENTERTAINMENT AND RECREATION

Poverty and civil unrest have afforded Chadians few opportunities for recreation and entertainment. The nation has few contacts with Western popular culture. Television sets are rare, and only a privileged few have ever seen a movie. Such activities as fishing are practiced out of necessity, and water sports are virtually nonexistent. What little recreation exists is associated with religious events and festivals and consists of music and dancing.

ETIQUETTE

Chad shares with many other African nations an emphasis on proper greetings and leave-taking. Among Muslims, it is customary to exchange greetings by asking about the well-being and health of the other person and his or her family. Visitors to homes in desert communities are offered at least water and often something to eat. Water is also offered for washing the face, hands, and feet. In general Muslims and Christians live in mutual tolerance; very little of Chad's recent internal conflicts have been motivated or driven by religious differences. While Christian missionaries make efforts to win converts, using pressure to do so is frowned upon. Civil war, communal conflict, and violence have led to a breakdown in conventional etiquette, especially among younger people.

FAMILY LIFE

In the towns, nuclear families are relatively common, but throughout much of Chad people live with extended families and clans. Among Saharan nomadic groups such as the Toubou and Daza, for example, people live with clans that tend to break up and re-form seasonally. The clan, which might consist of up to one hundred members, includes males as heads of households, each with one or possibly two wives, and other relatives. Wives take part in decision making and often run household matters in their husband's absence. The domestic unit of the Arabs of the Sahel is the *kashimbet*, a clan of men, wives, descendants, and other relatives that remains fixed throughout the year. In general, children are raised not only by parents but by the extended family and clan.

PERSONAL APPEARANCE

Clothing in Chad tends to differ depending on the region. In the north, the heat, sun, wind, and blowing sand require people to cover their entire bodies except for the face. Men typically wear cotton pants, white robes, and a turban wrapped around the head. Women wear robes. Most people wear sandals or go barefoot. Dress in the south tends to be more colorful, with print shirts and pants for men and wraparound skirts for women. Among women, jewelry is a form of ethnic expression. Arab women favor wrist and ankle bracelets made of copper or bronze; Toubou women are frequently seen with silver nose rings. Tattoos are associated with ethnicity, and amulets to ward off evil spirits are common. In the south, older Massa and Toupouri women wear wooden or metal lip plugs to indicate their marital status.

SPORTS

As with recreation and entertainment, Chadians have had few opportunities to engage in sport. In the Sahel, horse racing is common, particularly among Arab riders. In the towns, soccer clubs compete with one another.

CHRONOLOGY

- 1960** Chad becomes an independent member of the French Community, with François Tombalbaye as president.
- 1961** Tombalbaye's Parti Progressiste Tchadien (PPT) merges with the main opposition party, Parti Nationale Africaine (PNA).
- 1962** New constitution is promulgated. All political parties except the PPT are banned. Northern insurgent organization Front de Libération Nationale de Chad (FROLINAT) is founded.
- 1963** Five prominent northern politicians are arrested. National emergency is declared in the wake of bloody riots in which 500 are killed.
- 1964** National Assembly passes resolution empowering the Political Bureau of the PPT to direct and control the actions of government and to choose all candidates for political office.
- 1965** Open revolt breaks out in the northern prefectures as secessionist movement gathers strength among Muslims.
- 1968** Tombalbaye invokes Franco-Chadian agreement of 1960 for military assistance against the rebels; French troops join in campaign against the insurgents. Zaire, Chad, and Central African Republic join in a new union known as Union des Etats d'Afrique Centrale (UEAC).

- 1969** Tombalbaye is reelected president.
- 1972** Tombalbaye unleashes a new authenticity campaign calling for a return to “Tchaditude,” or authentic Chadian traditions and values; he changes his name to N’garta Tombalbaye, the name of the capital to N’Djamena, and the name of the PPT to Mouvement Nationale pour la Révolution Culturelle et Sociale (MNRCS); Chad declares a drought emergency and appeals for international aid; nearly 20 percent of the national cattle herd is wiped out as a result of the drought that had affected all of the Sahel since 1968.
- 1974** François and Pierre Claustre, French archaeologists, are kidnapped by rebels led by Hissène Habré.
- 1975** Tombalbaye is overthrown in a swift coup; Félix Malloum is named the new president and chairman of the Supreme Military Council; the National Assembly is dissolved.
- 1976** New defense treaty is concluded with France.
- 1977** Attempted coup against the government is reported crushed.
Chad charges Libya with border violations; François Claustre is released.
- 1978** Chad breaks diplomatic relations with Libya after accusing its northern neighbor of occupying a 78,000 sq km (30,000 sq mi) territory in the Tibesti region believed to hold uranium deposits.
FROLINAT launches major attack against government forces at Faya-Largeau; government concludes cease-fire with the Armed Forces of the North (FAN), led by Hissène Habré, and later appoints Habré prime minister; the Malloum regime and Habré engage in a bloody but inconclusive confrontation.
- 1979** French forces are flown into N’Djamena as Malloum flees the country; a cease-fire is agreed on under Sudanese mediation; an agreement among the four main factions (FROLINAT, Malloum, Third Army, and Armed Forces of the North) breaks down when Libya attacks the Aozou Strip; an agreement among the 11 principal factions leads to formation of an interim government of national unity, with Goukouni Oueddei, leader of FROLINAT, as president and Wadal Abdel Kader Kamougue, a former Malloum supporter, as vice president; N’Djamena is demilitarized, and a neutral peacekeeping force from Benin, Congo, and Gabon is created to replace the departing French forces.
- 1980** Fighting resumes, and over 700 die as violence escalates; Congo withdraws its troops; factional fighting breaks out between FAN and other FROLINAT rebel groups.
Libya moves into northern Chad and concludes defense treaty with President Oueddei.
Libyan offensive forces FAN to withdraw to Cameroon and Sudan border areas.
- 1981** Libya invades Chad, and Libyan troops occupy the capital; Libya and Chad announce a decision to “achieve full unity”; after Organization of African Unity (OAU) condemns the merger plan and sends a peacekeeping force, President Oueddei repudiates the merger plan; FAN takes N’Djamena and eventually controls most of the country; Oueddei flees the capital and sets up a rival government in the town of Bardai, near the Libyan border.
- 1982** Habré is sworn in as president; Oueddei forces regroup and advance to the south, taking strategic cities; France intervenes and stations its troops along the “Red Line” of the 16th parallel, which marks the division between the Habré-controlled south and the Oueddei-controlled north.
- 1984** Libya and France reach a mutual accord for withdrawal of troops from Chad; French troops evacuate the country, but Libya maintains a clandestine presence.
- 1985** Seven major antigovernment factions loyal to Goukouni unite to form the Conseil Suprême de la Révolution (CSR).
- 1986** Habré announces release of 122 political prisoners; Libyan forces resume hostilities by attacking government positions; at Habré’s request France again intervenes.
- 1987** OAU mediation culminates in cease-fire between Chad and Libya on September 11; fighting breaks out again in November, and the UN General Assembly declares OAU responsible for resolving the dispute.
- 1988** Diplomatic relations between Chad and Libya, severed in 1982, are restored in October; in December military clashes resume near the Sudanese border.
- 1989** Libya and Chad sign an accord on August 31 agreeing to submit their border dispute over the Aozou Strip to the International Court of Justice.
- 1990** Habré is overthrown in a military coup on December 1; rebel leader Idriss Déby, a former Habré aide, declares himself president and promises a multiparty democracy.
- 1992** The government suppresses two attempted coups; opposition parties are legalized.
- 1996** Déby wins the nation’s first multiparty presidential election.
- 1997** Déby’s party, the Patriotic Salvation Movement, wins 63 of the 125 seats in legislative elections.

- 1998 The Movement for Democracy and Justice in Chad (MDJC), led by Déby's former defense minister, Youssouf Togoimi, begins an armed rebellion against the government.
- 2000 In July, MDJC rebels capture the strategic town of Bardai in the north.
- 2002 Libya brokers a peace agreement between the government and the MDJT; months later, fighting breaks out in the far north.
- 2003 The government signs a peace agreement with National Resistance Army rebels in the east, as well as another agreement with MDJT, but hard-liners maintain opposition.
- 2004 Thousands of Sudanese refugees fleeing the fighting in the Darfur region of Sudan arrive in Chad; border fighting breaks out between Chad and pro-Sudanese militias.

CHILE

Basic Fact Sheet

OFFICIAL NAME

Republic of Chile (República de Chile)

ABBREVIATION

CL

CAPITAL

Santiago

HEAD OF STATE & HEAD OF GOVERNMENT

President Michelle Bachelet (from 2006)

NATURE OF GOVERNMENT

Constitutional republic

POPULATION

15,980,912 (2005)

AREA

756,950 sq km (292,259 sq mi)

ETHNIC MAJORITY

Mestizo

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Peso

NATIONAL FLAG

Divided horizontally, the upper left blue with a white star and the remaining upper half white, the lower half red

NATIONAL EMBLEM

A gold-edged shield with its upper half red and the lower blue displaying a large white five-pointed star in the center. Three plumes in red, white, and blue form the crest of the design. On either side of the shield is a typical Chilean animal: the *buemal*, an Andean deer, to the right of the shield and the condor of the Andes to its left. Beneath the device is a white scroll with the legend in black letters, *Por la razón o la fuerza* (By right and by might).

NATIONAL ANTHEM

“Pure Chile, Thy Skies Spread Above Thee”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), May 21 (Navy Day, Battle of Iquique Day), September 18 (Independence Day), September 19 (Armed Forces Day), October 12 (Columbus Day), various Christian festivals, including Day of Sts. Peter and Paul, Assumption, All Saints’ Day, Immaculate Conception, Good Friday, Holy Saturday, Ascension, Corpus Christi, and Christmas

DATE OF INDEPENDENCE

September 18, 1810

DATE OF CONSTITUTION

September 11, 1980; last amended 2005

GEOGRAPHICAL FEATURES

Chile is situated on the extreme southwestern coast of South America, and the name itself is believed to be a corruption of an Aymará Indian word meaning “where the land ends.” It extends like a long ribbon between the Pacific and the towering Andes for 4,270 km (2,653 mi), with a median width of only 175 km (109 mi). The total land area of 756,950 sq km (292,259 sq mi) includes six dependencies: Easter Island (Isla de Pascua), a volcanic island famed for its massive monolithic stone heads of unknown origin; the Diego Ramírez Islands; the Juan Fernández Islands, famed as the scene of the shipwreck of Alexander

Selkirk, the model for Daniel Defoe’s Robinson Crusoe; Sale y Gomez Island; San Ambrosio Island; and San Félix Island. Chile also claims the section of Antarctica lying between 53°W and 90°W, the Palmer or O’Higgins Peninsula, parts of which are also claimed by Argentina and the United Kingdom. The Pacific coastline extends 6,435 km (3,999 mi).

Chile shares its international border of 6,171 km (3,834 mi) with three neighbors: Bolivia (861 km; 535 mi), Argentina (5,150 km; 3,200 mi), and Peru (160 km; 99 mi).

The capital is Santiago, with a population of over four and one-half million. Other large urban centers in-

Chile

clude Viña del Mar, Valparaíso, and Concepción, all with populations under a half million.

Chile may be divided longitudinally into three regions and latitudinally into six regions. The three longitudinal regions are the Andean cordillera on the east, the low coastal mountains of the west, and the central valley in between. The Andes, occupying from one-third to the entire width of the country, rise to 7,034 m (23,077 ft) at Mt. Aconcagua (in Argentina), the highest peak in the Western Hemisphere. The coastal range, 300 to 2,100 m (1,000 to 7,000 ft) in height, joins the Andean spurs to form a series of plateaus separated by deep valleys. In the south these valleys and ranges plunge into the sea to form a series of archipelagos. The central valley begins below the Atacama Desert in the north and ends at Puerto Montt in the south. The six latitudinal divisions are the Great North, north of the Copiapó River; the Little North, also known as the Andean Fringe, a transitional zone made up of short transverse valleys; Central Chile, also known as the Vale of Chile, north of the Bío-Bío River; South-Central Chile, between the Bío-Bío River and the Gulf of Reloncavi; the Far South, also known as Archipelagic Chile, dominated by fjords; and Patagonian or Atlantic Chile, an undulating plain at the tip of the continent.

Chile lies in an area of geologic instability and frequently suffers from earthquakes, tidal waves, volcanic eruptions, floods, avalanches, landslides, and violent storms. More than 100 major earthquakes have occurred since 1575. Valparaíso and Concepción were leveled or shaken by earthquakes several times in the twentieth century.

Some 30 rivers flow from the Andes, including the Loa in the Great North; the Huasco, Coquimba, and Limari in the Little North; the Mapoche, Maule, and Maipo in Central Chile; and the Bío-Bío in South-Central Chile. Few, if any, of these rivers can be used for commercial navigation. Of the 12 lakes in the Lake District in South-Central Chile, Lake Llanquihue is the largest and Lake Todos los Santos the most beautiful.

CLIMATE AND WEATHER

Because of its great length, Chile has a variety of climatic zones, ranging from subtropical to temperate and near polar. The variety is increased by the proximity of the Andean cordillera and the Humboldt, or Peru, Current, which flows along the coast northward. Generally, Chile is divided into three climatic zones: the north, including the Atacama Desert, one of the driest regions of the world; the middle, with a Mediterranean climate characterized by mild, wet winters and long, dry summers; and the south, with heavy winds and cyclones.

Rainfall increases from virtually nothing in the Atacama Desert to 5,080 mm (200 in) in the south. Santiago, in the middle, has an annual precipitation of only 350 mm (14 in). Southward, the average rainfall rises to 1,270 mm (50 in) at Concepción and 2,540 mm (100 in) at Valdivia but falls to 510 mm (20 in) in Chilean Patagonia. South of the Bío-Bío River, rain falls almost year-round. Chiloé Island is perpetually shrouded in mists, giving rise to the legend that it is inhabited by disembodied spirits. Winds of gale force intensity are common in the south.

FLORA AND FAUNA

Chile's geographical and climatic diversity give rise to a wide range of ecosystems. In the northern coastal des-

ert region flora are virtually nonexistent, with the exception of large cacti. The central part of the country, which is more humid, is covered by shrubbery and deciduous trees, including the *lun*, *litre*, *peumo*, and guayacan, among others. More to the south are forests of oak, evergreens, larch, hazelnut, araucaria, and *camelo*.

Fauna, too, are diverse. Mammals unique to the mountain regions include the puma, a camel-like species called the guanaco, the huemul, the viscacha, and the pudu. The coast is home to sea lions, otters, dolphins, whales, and seals. Chile provides habitat for 439 species of birds, 296 of them endemic.

ETHNIC COMPOSITION

Chile has an uncomplicated ethnic mix, with whites and mestizos, of mixed European and Amerindian heritage, constituting 95 percent of the population, Amerindians 3 percent, and other, mainly unmixed European, 2 percent. Early settlers intermarried with the Amerindians, notably the Araucanian, and European immigration was of less importance than elsewhere in Latin America. Of those Europeans who did come, the earliest non-Spanish settlers were from Britain, followed after 1845 by Germans, Italians, French, Austrians, Swiss, and Yugoslavs. Non-European settlers included the Lebanese and Jews. National enclaves exist in several cities, including the English in Valparaíso and Iquique; the Germans in Puerto Montt, Valdivia, Osorno, and Puerto Varas; and the Lebanese in Recoleta, a section of Santiago.

The largest Native American group in the country is known to ethnographers as Araucanian, but members of this group refer to themselves as Mapuche, which means “people of the land” in their language; they are around one million strong. After the Indian wars of the 19th century the Mapuche were settled in more than 2,000 reservations in Cautin, Maleco, Valdivia, Arauco, Bío-Bío, and Llanquihue, which has isolated them from Western influences. Their customs and cultural heritage are protected by the Indigenous Peoples Law, which has also permitted their lands to be demarcated and preserved. However, the spread of education and transportation has meant that many Mapuche are succumbing to the pressures of assimilation. Other indigenous groups include the Aymara (35,000), Rapa Nui (3,000), Atacameños (about 4,000), Quechua, Colla, Alacalufe, and Yagán. Because of Chile’s ethnic homogeneity, race by itself is not a divisive factor in politics or society, and there is little evidence of a race or color bar in the country. Class divisions do exist, though, and are sharp, with only the gradual eroding of dividing lines.

LANGUAGES

The official language is Spanish, which is spoken by almost everyone except a few Native Americans in the reservations. Chilean Spanish is corrupted by accretions of Native American and foreign words and is also characterized by wide variations in pronunciation and usage. The Mapuche speak the Araucan language, itself a family of languages with seven surviving dialects.

RELIGIONS

Chile is predominantly Roman Catholic, with 89 percent of the population, although the church was disestablished in 1925. Protestants make up most of the remaining 11 percent of the population, along with very small Jewish, traditional Native American, or nonreligious groups.

While the religious influence of the church varies among social classes and between the urban and rural populations, the church has played an important role as a catalyst of social progress and as a defender of human rights when all other forms of opposition have been silenced.

Protestantism has experienced rapid growth since the 1940s, and Chile is considered one of the most successful examples of Protestant missionary activity in Latin America.

HISTORICAL BACKGROUND

Chile’s earliest inhabitants were the Araucanians in the south of the region and subjects of the Inca Empire in the north. In 1536 the first Spanish expedition, led by Diego de Almagro, traveled across the Andes and into the central lowlands but failed to establish a settlement. A subsequent attempt, led by Pedro de Valdivia, overcame Araucanian resistance and founded the cities of Santiago in 1541 and later La Serena, Concepción, and Valdivia. A lack of precious metals meant Chile remained peripheral to Spanish interests, and development was focused on ranching and farming. Until 1778 Chile was a captaincy general ruled by the Viceroyalty of Peru, at which time it became a separate division virtually independent of Peru. Territorially, Chile’s boundaries were ill defined and were the cause of many border disputes with Argentina, Peru, and Bolivia following independence. Chile declared its independence from Spain in 1810, but it was not until 1818 that it achieved true independence. The country’s geographic isolation has helped it to preserve its Spanish heritage virtually intact. This isolation has also helped the nation maintain its independence.

Since independence, Chile has experienced alternating periods of authoritarian and parliamentary rule. From 1891 to 1924 the country was a parliamentary republic. But political corruption, the fragmentation of political parties, and increasing political chaos led to a military takeover in September 1924. The military strongman General Carlos Ibáñez del Campo ruled from 1927 to 1931, when a general strike precipitated by the effects of the Great Depression forced him to flee. From 1931 to 1973 the country was governed by a multiparty democratic system. In 1964 Eduardo Frei became president and implemented a series of social and economic changes that included the partial nationalization of some industries and land reform. Frei was unable to control the inflation that was endemic to the nation, and his reforms alienated the right. Salvador Allende Gossens, a Marxist, won the three-way 1970 presidential election with the largest share of the vote, 30 percent. The Allende government imposed an extensive nationalization program, froze prices, and raised wages. The program initially succeeded in improving economic conditions, but by 1972 the economy had again begun to lag. Middle- and upper-class resentment against the government seizure of property grew, and, amid strikes and civil discontent (covertly promoted by the CIA acting to support U.S. interests), Allende’s government was overthrown by the military in 1973. Depending on sources, Allende either committed suicide or was murdered in an attack by the military on the presidential palace.

Between 1973 and 1990, a military junta headed by General Augusto Pinochet Ugarte ruled Chile, suspending the constitution, dissolving congress, and banning political parties. Left-wing activists were arrested,

tortured, and exiled in the thousands, in a campaign of terror that reached outside the country: the secret police, or DINA, was linked to the 1976 murder in Washington, D.C., of Orlando Letelier, a former Chilean ambassador to the United States.

Under Pinochet the government initiated a program of privatization that drastically reduced government; although Pinochet's measures did not immediately ameliorate the situation, by the end of the 1980s the economy had begun to improve.

The Pinochet regime never faced a sustained revolutionary challenge. The great majority of its opponents were abroad in exile or sent underground. In September 1988 the government announced that all Chileans in political exile, about 430, were permitted to return to Chile. At this time Hortensia Bussi de Allende (President Allende's widow) and her daughter María Isabel Allende also returned to Chile from exile.

Pinochet faced constant criticism of his regime from political parties, trade unions, and the Catholic Church. In 1980 the electorate endorsed a new constitution designed to prepare the nation for a return to democracy in 1989. Pinochet expected this to reconfirm his hold over power, but opposition groups successfully united and campaigned against him. In a plebiscite in 1988 Chileans voted against a new eight-year term for Pinochet. Elections were held in 1989 that resulted in the victory of Patricio Aylwin Azócar, leader of the Christian Democratic Party and candidate of a 17-party Coalition for Democracy. He was inaugurated in March 1990. Pinochet was forced to accept the decision, as the military had committed itself to recognizing the legitimacy of the ballot, and attempts to disrupt the election failed. Pinochet did maintain command of the armed forces until 1997, when he became a senator for life.

Fresh elections in 1993 brought the Christian Democrat Eduardo Frei Ruiz-Tagle to the presidency and continued the country's move toward civilian-controlled democracy. Investigations into the 1976 assassination of the opposition leader Orlando Letelier in Washington, D.C., resulted in the convictions of the former head of the secret police and his deputy in November 1993. After a standoff between Pinochet and the government, the men were arrested in June 1995. The same year, investigations into disappearances during the Pinochet regime were begun.

In October 1998 General Pinochet was arrested in London on a warrant from Spain requesting his extradition on murder charges. For the next 18 months the case moved from appeal to appeal, with British home secretary Jack Straw permitting extradition proceedings to begin following a Law Lords' decision in November. The British courts determined that Pinochet's immunity did not cover the charges against him. In January 2000 Pinochet was declared medically unfit to stand trial, and

despite considerable pressure from domestic and international sources, Jack Straw released the general on March 1, when he returned to Chile. In June the Chilean Appeals Court stripped Pinochet of his immunity, opening the way for criminal proceedings within Chile. He was subsequently indicted on charges of kidnapping and murder and placed under house arrest. In 2001 the Santiago Court of Appeals reduced the charges against Pinochet to accessory in the crimes by having covered them up. Pinochet was released from house arrest on bail while awaiting a possible trial. Later that year charges against him were suspended when he was again found unfit to stand trial, and in 2002 the Supreme Court ruled that the charges were to be dropped because he was mentally unfit. In 2004, however, the Supreme Court stripped Pinochet of his immunity from prosecution, and in January 2005 he was placed under house arrest.

In January 2000 Ricardo Lagos Escobar narrowly defeated his opponent in presidential elections, becoming the first socialist to be elected president since Salvador Allende. One of his most controversial moves was to sign a law in 2004 giving Chileans the right to divorce. In 2006 Socialist Michelle Bachelet was elected the first woman president in run-off elections.

LIST OF MODERN RULERS

1970–73	Salvador Allende
1973–90	Augusto Pinochet
1990–95	Patricio Aylwin Azócar
1995–2000	Eduardo Frei Ruiz-Tagle
2000–06	Ricardo Lagos Escobar
2006–	Michelle Bachelet

CONSTITUTION

Chile has had only two constitutions since 1833, and although the continuity of democratic rule was interrupted from 1924 to 1931, until Pinochet's regime Chile had a notable record of adherence to parliamentary democracy, free elections, and separation of powers. While the balance of power favored the executive, the multiparty system made it virtually impossible for the executive to dominate the legislature.

After seizing power in 1973, Pinochet's military junta suspended the 1925 constitution and ruled by three constitutional acts passed in 1976. A new constitution was adopted in 1980 giving executive and legislative power to the president and the junta. It also provided for what was described as a transition to democracy after a minimum period of eight years. It provided for presidential elections in 1989 and the reestablishment of a bicameral legislature. The constitution, which took effect in 1981, was approved and amended in 1989, when 54 reforms were passed.

Among the provisions was a reduction in the term of office for the president from eight to four years. The president's right to dismiss congress and sentence to internal exile was also eliminated. In 2005 the legislature eliminated the possibility of immediate reelection at the end of a president's term.

Voting is universal and compulsory over age 18. Political parties, banned in 1977, were legalized again in 1987.

PARLIAMENT

The 1980 constitution had provided for a 120-member Chamber of Deputies and a 34-member Senate, 26 elected and eight appointed. Reforms in 1989 increased the number of elected senators to 38 and the total number of senators to 46. Senators serve eight-year terms, while deputies serve four. The Chamber of Deputies carries out its duties by means of 13 permanent commissions, each of which is composed of 13 deputies. The Senate has 18 commissions, each with five members.

Congress approves and rejects international treaties and states of siege or emergency imposed by the president; Congress also selects a president if the office becomes vacant with less than two years until a scheduled election. The Chamber of Deputies can initiate constitutional accusations by majority vote. The Senate, in turn, acts as a jury and finds the accused either innocent or guilty as charged. Further, the Senate can declare the physical or mental incapacity of the president or president-elect, once the Constitutional Tribunal has pronounced itself on the matter.

Congressional power was limited under the 1980 constitution, but many restrictions were removed through the 1989 amendments. The document's role is limited in other areas, however, such as financial and budgetary administration, introduction of spending, public administration, and collective bargaining legislation. The president needs the approval of the majority of Congress to establish states of siege, but the president may declare a state of assembly, emergency, or catastrophe solely with the approval of the National Security Council.

POLITICAL PARTIES

The Communist Party of Chile (Partido Comunista de Chile, PCC), founded in 1922, is the oldest and largest Communist party in Latin America and one of the most important in the West. Initially close to the Soviet Union and outlawed for a decade after 1948, the party helped elect Salvador Allende in 1970 and acted as a moderating influence in the move toward a communist society. By the 1990s, however, it enjoyed less than 5 percent support.

The Socialist Party (Partido Socialista, PS), founded in 1933, has drawn its support from blue-collar workers

as well as intellectuals and members of the middle class. It also helped elect Salvador Allende and suffered under the military repression of the 1970s. Following numerous splits and schisms, the party formed a coalition with the Christian Democrats to oppose Pinochet in the 1988 referendum. As part of the ruling coalition since 1989, the party has moved more toward democratic socialism.

The Party for Democracy (Partido por la Democracia, PPD) was formed in 1988 to unite opposition to Pinochet. Subsequently becoming a party in its own right, it has sought a distinct position as a center-left secular force in Chilean society.

The Christian Democratic Party (Partido Demócrata Cristiano, PDC), founded in 1957, was heavily influenced by the progressive social doctrines of the Roman Catholic Church and the works of the French Catholic philosopher Jacques Maritain. The PDC proclaimed a "third way" between Marxism and capitalism, a form of communitarian socialism of cooperatives and self-managed worker enterprises. After the military regime, the PDC emerged as Chile's largest party, retaining a commitment to social justice issues while embracing the free-market policies instituted by the military government.

The National Party (Partido Nacional, PN) was formed in 1965 from the merging of the Liberal and Conservative Parties. In 1987 it became the National Renewal Party, a combination of three rightist organizations: the National Unity Movement, National Labor Front, and Independent Democratic Union.

Other parties include the Social Democrat Radical Party (Partido Radical Social-Demócrata, PRSD) and the Union of the Centrist Center (Unión de Centro Centro, UCC).

LOCAL GOVERNMENT

Chile is divided for purposes of local government into 12 numbered regions and the Santiago Metropolitan Region. Each numbered region is headed by an *intendente*, while Santiago is headed by a mayor. The regions are subdivided into 51 provinces, each headed by a governor, and further divided into 300 municipalities, headed by a mayor. The lowest subdivision is the *comuna*, or commune.

LEGAL SYSTEM

The Chilean legal system is based on the Code of 1857 derived from Spanish jurisprudence. Subsequent codes have been influenced by French and Austrian laws.

The highest court of the land is the Supreme Court, which consists of 21 members, who select a president from their number for a three-year term. Members and prosecutors are appointed by the president from a list of five persons proposed by the court itself.

Chile has 16 appellate courts, each with jurisdiction over one or more provinces. The president is chosen from a slate of three candidates submitted by the Supreme Court, which also appoints the justices and prosecutors of each appellate court. Below this are major claims courts and various local courts (*juzgados de letras*). There is also a series of special courts, such as the juvenile courts, labor courts, and military courts. The local courts consist of one or more tribunals specifically assigned to each of the country's communes, Chile's smallest administrative units. In larger jurisdictions, the local courts may specialize in criminal cases or civil cases, as defined by law.

The courts faced few difficulties in dealing with the military regime, which left the court system virtually intact. Once the legitimacy of the military junta had been accepted, the courts adjudicated matters in conformity with the new decree laws, even when they violated the constitution. Since the return to democracy, attempts have been made to restore the courts' reputation and to address the deficiencies of the Pinochet years.

The correctional system is composed of around 140 prisons. The system is administered by the judicial police of Chile, or gendarmerie, reporting to the Ministry of Justice.

HUMAN RIGHTS

Many human rights groups consider Pinochet's regime to have been one of the most brutal in South American history. Immediately following the 1973 coup the military government embarked on a campaign of extensive repression, including mass arrests, torture, exile, disappearances, and summary executions of prisoners. During this period the number of people who were detained so exceeded the capacities of the existing penal institutions that for a time, stadiums, military grounds, and naval vessels were used as short-term prisons.

For the first four and a half years of military rule, Chile was officially in a state of siege and functioned under martial law. At the end of this period the state of siege was replaced by a state of emergency, which restored a larger degree of authority to the civilian courts, although military tribunals continued to deal with cases involving public security. A state of siege was once again imposed after an attempt on Pinochet's life in 1984, and the level of repression increased once more.

Following the return to civilian government, judicial competence was returned to civilian courts. This opened the way for these courts to reexamine cases of human rights violations. The Aylwin government also established the National Commission on Truth and Reconciliation, or Rettig Commission, to inquire into human rights abuses during the 1973–90 period of military rule. The commission produced a report holding the security forces responsible for 2,115 deaths.

An amnesty law has protected military officers involved in human rights abuses committed between 1973 and 1978. However, by 1993 as many as 600 officers, mainly from the army, had been cited in 230 cases involving rights abuses.

In 1998 General Pinochet was arrested in England on a Spanish warrant, issued by a judge investigating the disappearance of Spanish citizens in Chile in the 1970s and 1980s. For a period of time it has seemed unlikely that Pinochet would be tried in Chile, due to health as well as legal obstacles, though he was placed under house arrest in early 2005. The case has challenged existing views on international human rights prosecutions. Despite fears of a right-wing backlash, democracy in Chile has remained stable throughout the Pinochet case, a fact that bodes well for the future protection of human rights in the country.

FOREIGN POLICY

Since successfully reintegrating itself into the world political community after 1990, Chile's foreign policy has focused on deepening its international economic involvement and capitalizing on its trade and political ties with Latin and North America, Europe, and the Asia Pacific region. In December 1994 Chile was invited by Canada, Mexico, and the United States to join the North American Free Trade Agreement (NAFTA), although entrance was subsequently delayed. In June 1996 Chile became an associate of the Southern Common Market (Mercosur) and signed a framework agreement on cooperation with the European Union.

Chile is a founding member of the United Nations, belongs to the Organization of American States (OAS), and has provided forces for UN peacekeeping efforts in Cambodia, El Salvador, Israel, and along the Iraq-Kuwait border, among other missions. Chile is also a member of the World Trade Organization (WTO) and the Asia Pacific Economic Cooperation (APEC) Forum, and President Lagos has signed a free-trade agreement with the United States.

The guiding principle of Chilean foreign economic policy is open regionalism. No other Latin American nation is so tightly integrated into the region's system of trade.

A dispute with Bolivia over the Atacama corridor continues. Bolivia ceded the corridor to Chile in 1884 but has reactivated its claim to it, which Chile disputes, to secure maritime access for natural gas shipments.

DEFENSE

Despite 17 years of military rule, Chile's armed forces are still exceptionally professional and generally free of fac-

tionalism or partisan politics. Their reputation, however, has suffered from the widespread human rights abuses that took place under the military junta, and credibility was badly damaged by allegations of financial wrongdoing by Pinochet's son, the discovery of mass graves containing the corpses of individuals who died while in military hands, and the illegal export of arms to Croatia.

Chile was the first country in Latin America to organize a regular army, and the Chilean military takes great pride in its heritage. Within the Chilean state, the armed forces constitute an essentially autonomous power, with status comparable to that of Congress and the courts. Military service of one year in the army or two years in the navy or air force is compulsory in Chile for all able-bodied 18- or 19-year-old men. In 2003 the nation spent \$2.84 billion, or about 4 percent of gross domestic product (GDP), on defense.

ECONOMY

Chile's economy has been dominated by the production of copper since the early 20th century, accounting for up to 50 percent of export revenues. Industry expanded through the 1940s in attempts to diversify the economy, and Chile is currently one of the leading industrial nations in Latin America. Agriculture has played only a limited role in the economy, although efforts to increase production met with some success in the 1970s. After the Marxist experiments of Allende's government were ended by the military coup of 1973, the government began to play a less dominant role in the economy, with privatization a key policy. The financial market has become particularly strong, due largely to the effective reform of the pension system.

Under the Pinochet regime, as influenced by U.S. economists, government expenditure was cut, regulatory functions and price controls ended, free trade promoted, and many state-owned companies privatized. The subsequent democratic governments of Aylwin and Frei strayed little from this free-market economic policy, but they also increased social spending on education, health, housing, and social security. The governments have pursued bilateral and multilateral free-trade agreements throughout the world and have continued to privatize state enterprises and promote foreign investment.

In the 1990s Chile was one of the strongest economies in South America. In 1999 the country experienced negative economic growth, but the economy rebounded in 2000 and has since experienced steady, if modest, 2 to 4 percent growth. One of the major challenges facing the Escobar administration has been reducing poverty and unemployment, the latter of which has remained stubbornly high, at over 8 percent. Economic growth was expected to accelerate in 2004 due to rising copper prices, more foreign investment, and increased export earnings.

ENVIRONMENT

Chile faces several environmental problems, not all of which are man-made. The country is affected by the socioeconomic consequences of climate variability, on a seasonal and annual scale, and particularly by the El Niño southern oscillation. Agricultural production is based on extensive natural ecosystems in the region, and climate variability, both natural and influenced by development, bears an impact on natural resources. The country's most dynamic export sectors are natural resource-based, and the expanded and intensified use of these resources—in forestry and agriculture particularly—has been accompanied by costly environmental degradation (such as the loss of soil and native forests) and environmental contamination (such as the use of chemicals in agriculture and chemical wastes in mining).

Water pollution is also a problem, particularly in the river basins of the Elqui, Aconcagua, Maipo, Mapocho, Rapel, Maule, Bío-Bío, and Valdivia, where the largest demographic changes have occurred. Industrial waste discharges to lakes and rivers import excessive nutrients and heavy metals, although the majority of lakes in the south of Chile are transparent and clean.

The National Environmental Commission coordinates the government's environmental management

efforts. From 1990 through March 1996 a total of 147 investment projects worth almost \$16.6 billion (almost one-third of GDP) submitted to an environmental assessment system.

Air pollution has remained a stubborn problem, especially in cities such as Santiago. Chile's current president, Ricardo Lagos, has shown concern for the environment and has demonstrated support for conservation efforts and fuel diversification. In March 2001 Lagos announced the Atmospheric Decontamination and Prevention Plan, which restricts overall bus travel on Santiago's city streets as well as the ability of vehicles to use leaded gas. Government support for the controversial Ralco hydroelectric project, however, has worried some environmentalists.

LIVING CONDITIONS

With per capita GDP in 2003 at \$9,900, Chile enjoys a relatively high standard of living. The problem is that income is unevenly distributed, with 20.6 percent of the population living below the poverty line. The lowest 10 percent earn only about 3.7 percent of the nation's income, while the highest 10 percent earn 41 percent. This upper 10 percent lives in large, elegant houses in the cities, wields considerable social, political, and economic influence, and owns a disproportionate share of the nation's ranch land. Many have become wealthy in industry. Roughly 30 percent of the population is considered middle class. The remaining people are *campesinos*, or peasants, and *pobladores*, who survive in crowded squatters' villages around the major cities and live in shacks made of whatever material they can find.

HEALTH

The quality of health care in Chile is overall quite good. Life expectancy at birth is over 76 years, and the infant mortality rate is a relatively low 9 per 1,000 live births. Access to sanitation is high, at 96 percent of the population, and the incidence of such diseases as AIDS, tuberculosis, malaria, and intestinal diseases is fairly low. The nation spends roughly 7 percent of GDP on health care, and over 90 percent of the population is covered by public or private health insurance. Access to health care, however, is unevenly distributed. The wealthy and even the middle class have access to private hospitals and

doctors equipped with the latest medical technology, but poor people use publicly funded clinics, many of which are poorly equipped. Many Chileans continue to rely on herbal remedies, and groups such as the Mapuche Indians often turn to female shamans.

FOOD AND NUTRITION

Chileans typically eat four meals: a light breakfast, a main meal early in the afternoon consisting of a salad and a beef or chicken dish with vegetables, a "tea" with bread and cheeses at around five o'clock, and a supper at around nine o'clock in the evening. Cuisine shows the influences of both Europeans and Amerindians. In a nation with such a long coastline, it is no surprise that fish and seafood, especially shrimp—which is often eaten raw—are mainstays of the diet. A national dish is *porotos granados*, a hearty white bean soup that includes squash, corn, peppers, and pumpkin. Also popular are empanadas, wraps made with wheat flour and containing various fillings, such as minced meat, seafood, cheeses, and vegetables. Wine from the nation's central valley is commonly served with the late supper.

 Amount of Fruits and Vegetables Available per person per year kg: 152.2

STATUS OF WOMEN

Traditional definitions of gender roles in Chile have been considerably challenged as women have won access to more education and have entered the labor force in larger numbers. By 1990 about half the students in the nation's primary and secondary schools were female; in

higher education the proportion was lower, at about 44 percent. A 1988 survey of workers found that 70 percent of men and 92 percent of women accepted the notion that "men should participate more actively in housework so that women are able to work." Women can frequently be found in the professions, even outside such traditionally female-dominated areas as primary and secondary education, nursing, and social work. Chilean women today constitute 27 percent of physicians, 48 percent of judges, and over 50 percent of journalists. These percentages are increasing; over 37 percent of physicians under the age of 35 were women. The Lagos administration appointed an unprecedented four women as ministers.

Despite these advancements, considerable pressures on women to have children remain. The proportion of the population favoring legal abortions remains small in Chile, except in cases of rape, danger to the mother, or malformations. Although illegal, abortions are commonly performed. Contraception is broadly accepted, even among practicing Catholics, and the distribution and use of birth control is facilitated by national health programs.

Women

 Seats Held in Parliament by Women %: 13
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 37.3

WORK

In 2003 Chile's labor force numbered about six million, with an unemployment rate of 8.5 percent. About 13.6 percent of workers were employed in agriculture, 23.4 percent in industry, and 63 percent in industry. Major agricultural products include fruit (especially grapes, apples, pears, and peaches), onions, wheat, corn, oats, garlic, asparagus, beans, beef, poultry, wool, fish, and timber. The agricultural sector has done well since the mid-1980s, and Chile exports a considerable amount of its agricultural production, especially fruits and wine. Major industries include copper and minerals, food processing, iron and steel, wood and wood products, transport equipment, cement, and textiles. Chile's major labor problem is acute underemployment. With a per capita GDP of \$9,900 in 2003, many Chileans earn comfortable incomes, while many others, especially the *pobladores* who live in squatter villages, eke out livings performing odd jobs and temporary work.

 Female Participation Rate %: 35.0

Labor by Sector %:
 Agriculture: 13.6
 Industry: 23.4
 Services: 63.0
 Unemployment %: 8.5

EDUCATION

Education is free, universal, and compulsory for children between the ages of six and 14. Primary education lasts for eight years, secondary for four. Attendance is more than 85 percent at the primary level, more than 75 percent at the secondary level. The literacy rate is over 96 percent for both males and females.

Before the education reforms of 1980, Chile had eight universities. In 1980 the military regime split up the two state universities and fostered the development of new private universities, a policy that by 1990 had increased the number of universities to 60, along with 80 professional training institutes and 168 technical training centers. Few of these institutions received state support. These changes led to greater competition but also to greater disparities in standards and a decline in overall quality. The top specialists in many fields moved to research institutes, depriving the university sector of innovative thinkers and writers. In the 1990s the top schools included the University of Chile (founded 1738), the University of Concepción (1919), the Catholic University of Chile (1888), and the Catholic University of Valparaíso (1928). Chilean universities are now widely recognized as being among the best in Latin America.

Preschool programs were introduced into Chile at the beginning of the 20th century by German advisers and were increased greatly during the Pinochet years. The school system is administered by the national government under the Ministry of Education.

SCIENCE AND TECHNOLOGY

The chief source of public funding for scientific research in Chile is the National Fund for Scientific and Technological Development, which was founded in 1992 and since then has funded thousands of research projects at a cost of billions of dollars. The National Commission for Scientific and Technological Research, founded in 1967, not only advises the government on scientific matters but also has funded hundreds of individuals earning master's degrees and doctorates. Otherwise, most of the scientific research carried out in Chile is done at the major universities, especially the University of Chile and Pontificia Universidad Católica.

MEDIA

Before 1973 most major political groups published their own daily or weekly journals, but when political parties were banned during the Pinochet years the journals were also restricted, except for those that did not criticize the government. Although freedom of expression and of the press were guaranteed under the 1980 constitution and the courts constantly challenged government edicts concerning censorship, in practice the regime exercised considerable control over the media and simply blocked legal dissent. During the 1980s control was relaxed slightly, and opposition groups were permitted a voice once more.

Since that return to democracy, modern press and communications have spread. By 1996 there were 52 daily newspapers, up from 33 in 1967, and *El mercurio* (a conservative daily), *La nación* (a government-owned daily), and *La tercera de la hora*, all published in Santiago, have considerable influence. Television was introduced in 1958 and is operated by a national government network (started in 1967) and several independent stations. Many of the television and radio stations are operated by universities on a commercial basis. National Television of Chile is owned by the state but is not under direct government control. The country has more than 375 radio stations and 63 television broadcast stations.

In 2002 the number of people connected to the Internet in Chile was estimated to be 3.575 million, or over 20 percent of the population. Usage has grown rapidly thanks to a good telecommunications infrastructure and the desire of Chileans to keep up with the latest technological developments.

CULTURE

Only since 1992, when the Chilean Ministry of Education established a fund for art and culture, have artists received any public funding for their work. In its first decade the Fondart fund financed over 4,000 projects at a total cost of over \$30 million. Fondart is now the chief source of funding for cultural undertakings in Chile.

The first major literary work in Chile was *La araucana*, a 16th-century epic poem by Alonso de Ercilla. Two 20th-century Chilean poets won the Nobel Prize for Literature: Lucila Godoy Alcayaga (who wrote under the name Gabriela Mistral) in 1945 and Pablo Neruda in 1971. Prominent Chilean novelists in recent years have included Antonio Skarmeta, Francisco Coloane, Ariel Dorfman, and Isabel Allende.

The Museum of Fine Arts and the Museum of Contemporary Art in Santiago house collections of paintings by Chilean artists such as Pedro Lira, Juan Francisco González, Nemesio Antunez, Claudio Bravo, and Roberto Matta. Folk music has also made an important contribution to Chilean culture. The most prominent such musician was Violeta Parra, who collected Chilean folk music in the 1950s and 1960s, and her performances gave rise to a movement called Nueva Canción Chilena, or Chilean New Song. In classical music, the pianist Claudio Arrau was the most famous Chilean performer of the 20th century.

FOLKLORE AND MYTHOLOGY

A Mapuche Indian named Lautaro is an important folk hero in Chile. Lautaro learned Spanish and was a servant of the Spanish conqueror Pedro de Valdivia. Since he knew Spanish ways, he was chosen to lead the resistance

to the Spanish. He developed combat tactics and taught others to ride horses, but he was killed just as his forces were about to enter Santiago. He remains a symbol of resistance to assimilation. In a similar vein, Chile's most famous military hero is Captain Arturo Prat Chacón, who fought in an 1879 war against Bolivia and Peru that expanded Chile's boundaries and left Bolivia landlocked. The date of his death aboard the battleship *Esmeralda* on May 21, 1879, is a national holiday.

Many myths surround the fog-bound island of Chiloé. Legend has it that the island is home to a lost city whose streets are paved with gold and silver, but the fog always hides the city from sight. The lost city, which will be seen only once when the world ends, is a source of immense wealth.

ENTERTAINMENT AND RECREATION

Chileans enjoy taking advantage of the nation's natural wonders, visiting beaches and seaside resorts in the north, the lake district and farmlands further inland, and the glaciers and mountains in the south, including the nation's 2,000 volcanoes. Many of the nation's natural parks have geysers that attract substantial audiences. Water sports are popular, as are skiing, fishing, boating, and visits to thermal baths. In the cities Chile has a lively tradition of film and theater, and in many small theaters singers, poets, and actors gather to perform. Musicians, comedians, and dancers perform outdoors in Santiago's Plaza de Armas to the delight of people out for a stroll or enjoying a late-evening meal or snack. Family and friends often get together for barbecues around open charcoal fires in yards as well as in public parks or gardens.

ETIQUETTE

Chileans are generally a bit on the formal side in their social relations. They tend to use the formal "you" form, *usted*, in addressing others and will address even waiters in a restaurant as "Señor." The informal "you" is used only by younger people and those who know each other well; it is rarely used when a person is talking to an elder. When meeting, people shake hands in a reserved fashion, and talking loudly in public is frowned upon. It is also considered rude to converse about the horrors of the Pinochet regime. While Chileans tend to be punctual for business appointments, it is expected that people arrive from 20 minutes up to an hour late to social functions.

FAMILY LIFE

Because of the influence of the Catholic Church, Chileans place extreme value on marriage and on church

weddings. People tend to marry and begin having children at a young age. Views concerning premarital sex are fairly conventional, and cohabitation before marriage is rare. Only very recently has divorce, rather than church annulment, been available. The principal household unit is the nuclear family, with a father, mother, and a number of children that has been decreasing in recent years to an average of about 2.5. Chile has the lowest fertility rate in Latin America. While the nuclear family dominates, it is not unusual for a widowed grandparent to live with a married son or daughter, and grandparents wield considerable influence in the upbringing of children. Adult children tend to remain close to their parents, visiting frequently and talking on the phone as often as daily.

PERSONAL APPEARANCE

Common dress among Chilean cowboys in the countryside includes ponchos, broad-brimmed hats, boots, and often spurs. In the cities Western-style dress is the norm, including suits for men and dresses for women, although slacks are accepted as well. Much emphasis is placed on good grooming, including hair and, for women, makeup.

SPORTS

In 2003 Chile was ranked 69th by the Fédération Internationale de Football Association (FIFA) in soccer, the nation's most popular sport. Also popular in the countryside, as well as in Santiago, is horse racing, and Chilean cowboys are accomplished rodeo riders. Water sports, boating, and fishing are widely enjoyed along Chile's long coastline.

CHRONOLOGY

- 1946** Gabriel Gonzalez Videla of the Radical Party becomes president.
- 1948** Communist Party is outlawed.
- 1964** Eduardo Frei Montalva, Christian Democratic Party candidate, is elected to presidency.
- 1970** Salvador Allende Gossens, of the left-wing Popular Unity Party, wins presidential election.
- 1971** Copper industry is nationalized.
- 1973** Civil disorder, strikes, and civil war sweep the country. Army overthrows Allende, who dies in the process. Military junta under General Augusto Pinochet Ugarte assumes power. Congress is dissolved and political parties banned.
- 1974** Mass arrests, torture, and suppression of civil rights mark the junta's attempts to consolidate control.

- 1976** Former defense minister Orlando Letelier is killed in bomb explosion in Washington, D.C.
- 1978** Plebiscite supports Pinochet's policies; state of siege is lifted.
- 1980** New constitution is introduced.
- 1984** Increased opposition to Pinochet results in state of emergency being declared.
- 1986** Pinochet survives assassination attempt.
- 1988** Presidential and congressional plebiscites are held.
- 1989** National referendum is held in July. Presidential and congressional elections are held in December.
- 1990** New president Patricio Aylwin Azócar takes office. Pinochet remains as head of army and life senator.
- 1991** President Aylwin accuses Pinochet regime of murdering 1,068 people during its rule.
- 1993** Christian Democrat Eduardo Frei Ruiz-Tagle, son of Eduardo Frei Montalva, is elected president. In November the former head of the secret police and his deputy are sentenced to seven- and six-year sentences for the Letelier assassination in 1976.
- 1994** Canada, Mexico, and the United States invite Chile to join NAFTA.
- 1995** The convictions in the Letelier case are upheld by the Supreme Court, and Pinochet denounces the decision, challenging the court's authority. After a tense standoff, the two men are arrested in June 1995. In August legislation is introduced to reopen investigations into 542 cases of disappearance under the Pinochet regime.
- 1996** Chile becomes an associate member of Mercosur, the Southern Cone free-trade market, and concludes a free-trade agreement with Canada.
- 1998** Pinochet is arrested in London on a Spanish murder warrant. Chile cuts contact with the United Kingdom following a legal decision to allow extradition proceedings to begin.
- 1999** The Law Lords in the United Kingdom rule that Pinochet's immunity does not extend to the charges against him. A U.K. court rules that Pinochet can be extradited to Spain to stand trial for torture and human rights charges. In presidential elections in December, neither of the two main candidates, Ricardo Lagos and Joaquín Lavín, secure an overall majority.
- 2000** On January 16 Ricardo Lagos narrowly wins the second round of the presidential elections. Pinochet undergoes medical tests and is later declared unfit to stand trial and returns to Chile. The Chilean appeals court strips Pinochet of his immunity from prosecution. The Chilean army announces it will help to locate the bodies of some 1,200 people missing since the 1970s.
- 2001** Pinochet is indicted on charges of kidnapping and murder and placed under house arrest. The

Santiago Court of Appeals reduces the charges against Pinochet to acting as an accessory in the crimes. Pinochet is released from house arrest on bail. Later that year he is found unfit to stand trial

- 2002** Supreme Court drops charges against Pinochet, ruling that he is mentally unfit.
- 2004** Supreme Court strips Pinochet of immunity from prosecution. President Lagos signs a controversial law making divorce available for the first time.
- 2005** Pinochet is placed under house arrest.
- 2006** Socialist Michelle Bachelet becomes Chile's first woman president.

ABBREVIATION

CN

CAPITAL

Beijing

HEAD OF STATE

President Hu Jintao (from 2003)

HEAD OF GOVERNMENT

Premier of the State Council Wen Jiabao (from 2003)

NATURE OF GOVERNMENT

Communist dictatorship

POPULATION

1,306,313,812 (2005)

AREA

9,596,960 sq km (3,705,386 sq mi)

ETHNIC MAJORITY

Han Chinese

LANGUAGE

Putonghua (Mandarin)

RELIGIONS

Folk religion, Buddhism, Islam, Christianity, Taoism

UNIT OF CURRENCY

Yuan

NATIONAL FLAG

Red flag with five yellow stars in the upper left quadrant—one large star near the hoist and four smaller ones arranged in an arc to the right.

NATIONAL EMBLEM

A large golden star above a semicircle of four smaller stars, also in gold, against a circular red background, above a golden replica of Tiananmen Square. A gold decorative frame of ears of wheat and rice surrounds the emblem. At the base of the emblem is a gold cogwheel partially covered by red drapery.

NATIONAL ANTHEM

“Yi Yong Ju Jin Xing Qu” (March of the volunteers)

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), May 4 (Youth Day), July 1 (Communist Party of China Founding Day), August 1 (Army Day), October 1 (National Day), various festivals based on the Chinese calendar

DATE OF INDEPENDENCE

1523 B.C.E.

DATE OF CONSTITUTION

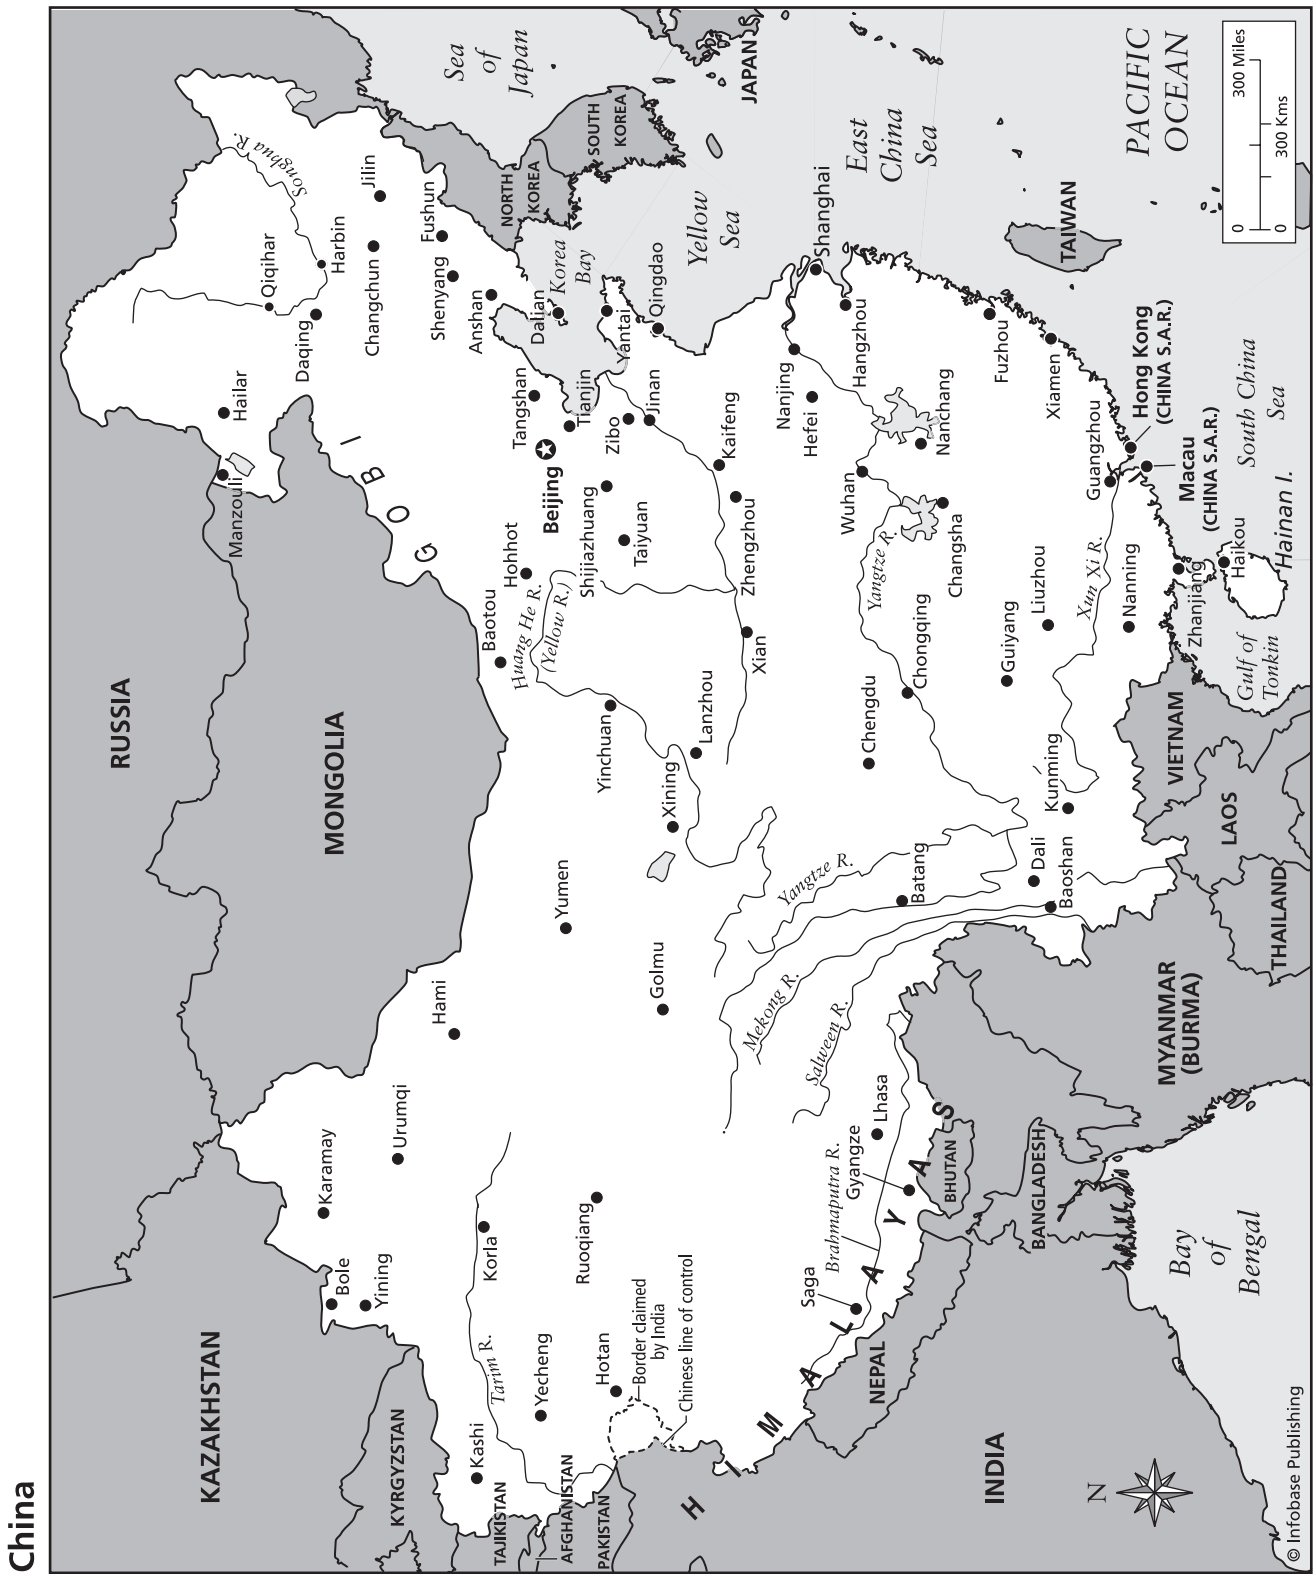

December 4, 1982

GEOGRAPHICAL FEATURES

The People's Republic of China is the fourth-largest country in the world and the largest Asian country. The national territory includes approximately 5,000 islands, of which the largest is Hainan, off the southwestern coast; others are grouped among the Dongsha (Pratas), Xisha (Paracels), Nansha (Spratly), and Zhongsha archipelagoes. Mainland China's coastline extends from the mouth of the Yalu River in the northeast to the Gulf of Tonkin in the south in a sweeping arc, as broken in the south by the Leizhou Peninsula, projecting into the South China Sea, and in the north by the Liadong and Shandong peninsulas, projecting into the Yellow Sea.

The capital is Beijing, formerly known in English as Peking (or also as Peiping or Shuntien-fu), which was founded by Khitan Tartars in the 10th century and has been the capital of China from the 15th century. There are 56 other cities with populations of one million or more, of which Shanghai is the largest, with a population of more than 10 million in 2005. It is by far the largest port serving the vast hinterland of the Yangzi River valley.

China is geographically one of the most diverse regions of the world, encompassing vast areas of rugged, inhospitable terrain, broad plains, deserts, lofty mountain ranges, and steppe. Geographers have identified a number of topographical regions based on terrain and relief,

as divided broadly into plateaus and basins, the Great Plains, and the Southeast.

The four great plains of China are the Huang He, Yangzi, Xi, and Northeast, or Manchurian, plains. Mountains make up more than two-thirds of the land area of China. They fall into three groups according to the direction in which they run: east-west, northeast-southwest, and north-south.

Since the general lie of the land slopes toward the east, all the great national rivers flow toward the Pacific. In the northeast, the Amur (Heilongjiang) drains a great part of the Manchurian basin as it winds along its 4,023 km (2,500 mi) course. The main river in northern China and the second-largest in the country is the Huang He (Yellow River), which acquired its name from the yellowish color of its muddy waters—the result of its passage through the yellow loess plateau of Gansu. From Gansu it winds 4,795 km (2,980 mi) through the northern provinces eastward to Shandong, where it empties into the Bohai Sea. Central China is drained by China's longest river, the Yangzi, more properly called the Chang Jiang (as local people use the name Yangzi to refer to the lower reaches of the river alone). From its source about 80 km (50 mi) from that of the Huang He, it wends 5,208 km (3,237 mi) to the East China Sea. Important rivers that drain the southwestern coastal regions are the Min Jiang and the Zhu Jiang (Pearl River). The Zhu Jiang, the fourth-largest river in China, is a network of three waterways that meet south of the city of Guangzhou to form a large estuary consisting of many channels separated by islets. The main eastern channel, Hu Men (Boca Tigris), enters the sea near Hong Kong, while the main western channel flows close to Macao. Farther south are two independent rivers, the Mekong, or Lancang, and the Yuan Jiang (Red River), of which only the upper courses are in China.

CLIMATE AND WEATHER

The diversity of China's terrain is matched only by the diversity of its climate. In a vast subcontinent such as China with tremendous differences in latitude and longitude as well as altitude—from peaks 8 km (5 mi) in height to basins below sea level—there are sharp variations in climatic features. Leizhou Peninsula, Hainan Island, the South China Sea islands of Guangdong Province, and the southern part of Yunnan Province have tropical climates, where summer reigns year-round. Heilongjiang Province, in the northeast, has a short and cool summer and a severe winter. The area around the Yangzi and Huai river valleys in the east is warm and humid, with four distinct seasons. The Inner Mongolia–Xinjiang area, in the northwest, can experience extremes of weather over the course of a single day, giving rise to the saying “Fur coats in the morning and gossamer at noon.” Some areas of the Yunnan–Guizhou Plateau, in the southwest, have mild winters and cool summers, as does Kunming, justly named the “City of Spring.” The Tibet Plateau has a cold, dry climate and a strong sun; in some of its areas pronounced

differences in climate are found between high and low altitudes.

In spite of these differences, the one constant that characterizes the Chinese climate is the monsoon rhythm arising from the continental nature of the Asian landmass. The monsoon denotes a wind system whose origin, in China, changes from southeast in summer to north and northeast in winter. The cold air mass established in the autumn in Siberia and Mongolia forms an anticyclone, or center of high pressure, and spreads southward until it meets the warm air mass of the North Pacific trades, along a front to the south of the China coast known as the West Pacific Polar Front. From this great anticyclone there is an outflow of dry northerly and northeasterly winds over China, bringing prolonged and bitter winters to the northern part of the country and cold weather as far south as the central and lower Yangzi River basins. In spring the movements are reversed. The cold air mass over the heart of the continent warms up, giving place to a continental low, while a high-pressure center is established over the eastern Pacific. Northerly and northwesterly winds give way to those from the south and southeast, and a great current of warm, humid air moves in from the south. Between May and July the summer monsoon extends over the Yangzi and the North China Plain. The characteristic weather of the summer monsoon over much of China involves hot, calm days of high relative humidity, which are very oppressive. Inland the winds are light, but coastal regions in the south and southeast experience disastrous typhoons. The duration of the summer monsoon season varies between the north and the south, being shorter in the north because of the lateness of the onset.

Temperature patterns are determined by altitude, latitude, and landmass. There is a difference of 9,144 m (30,000 ft) between Mount Everest and the Turfan Basin and a difference of nearly 40° in latitude between Hainan and Moho on the Amur. In winter there is a large and steady fall in temperature from the south to the north. There is a remarkable unity of temperature in summer, the maximum differences being only 15°F, compared to 60°F in winter; every place is hot and humid. In the desert and semidesert regions of Xinjiang, Mongolia, and Dzungaria, annual temperature ranges are very great—up to 76°F, compared to 22°F in Hong Kong.

Except for the small southwestern corner of Xizang, or Tibet, which shares the phenomenal rainfall of Assam across the border, rainfall in China shows a general decrease from southeast to northwest, ranging from 2,159 mm (85 in) in Hong Kong to 102 mm (4 in) in Kashgar.

Climate and Weather

Mean Temperature

Hainan, South Guanxi, South Guangdong: 55°F
 South and Central China: 80°F

 North China and Manchuria: 25 in
 Pearl River: 80 in
 Hong Kong: 85 in

FLORA AND FAUNA

China consists of two major zoogeographic regions. The northern part of the country lies in the Palearctic region and is home to such mammal species as horses, camels, tapirs, river foxes, mouse hares, hamsters, moose, Asiatic black bears, and jerboas. The southern part of the country lies in the Oriental geographic region and is home to such species as gibbons and various species of monkeys and apes, the civet cat, the tree shrew, and the Chinese pangolin. Deer, antelope, pigs, wolves, and rodents can be found throughout the country. The giant panda is found only along the Chang Jiang.

China has an immense diversity of flora: about 146,000 species, one-eighth of the world's total. By comparison, the United States and Canada combined have about 17,000 species. About half of the nation consists of desert and grasslands. There are some 7,500 species of shrubs and trees and some 8,000 species of flora that have economic value, including medicinal uses. Species of plants of Chinese origin that are grown the world over include, among agricultural products, anise, apricots, cucumber, ginger, ginseng, lemons, oranges, peaches, short-grain rice, soybeans, and tea. Flowers include camellias, forsythias, gardenias, jasmines, magnolias, primroses, rhododendrons, and viburnums.

POPULATION

Population Indicators

Total Population 2005: 1,306,313,812
 World Rank: 1st
 Density per sq km: 138.1
 % of annual growth (1999-2003): 0.8

 Divorce Rate per 1,000: 1.0
 Average Size of Households: 4.1
 Induced Abortions: —

ETHNIC COMPOSITION

According to official data, 91.9 percent of the population is Han Chinese; the term *Han* refers to the ancient dynasty that ruled China from 206 B.C.E. to 220 C.E. Although there are sharp regional and cultural differences among the Han, who are a mingling of many races, they share a common language, social organization, and cultural characteristics universally recognized as the core of Chinese civilization.

Han is only one of 56 nationalities that officially make up the Chinese population; the other 55 are called minority nationalities. While accounting for only 8.1 percent of the population, these minority nationalities are distributed over 50 percent of the national territory, mostly along the inland borders. The distinction between Han and some of the minorities is unclear because many have been totally or partially assimilated over time. Some are found only in a single region, while others are spread over many regions. In general, Xinjiang, Inner Mongolia, and Tibet contain heavy concentrations of minorities, whereas minority groups in Yunnan and Guizhou provinces and the Guangxi-Zhuang Autonomous Region are more fragmented and inhabit smaller areas. There are special minority autonomous administrative regions on the Soviet model. They include five provincial-level units: Xizang (Tibet), Xinjiang, Guangxi, Nei Mongol, and Ningxia (named for Tibetan, Uighur, Zhuang, Mongol, and Hui nationalities, respectively). In addition, there are over 29 autonomous prefectures and 73 autonomous counties.

With the exception of the Koreans, few ethnic nationalities have been able to preserve their identity in the face of the preponderance of the Han Chinese culture. Conflicts have been frequent between the majority and minority cultures, and the degree of Sinicization reflects the outcome of these conflicts. The most Sinicized groups are in the southeastern area and among the T'umet of former Suiyuan Province. There are no foreign communities as such in China.

LANGUAGES

The Chinese language is spoken by more people in the world than any other language, including English. Chinese is a much older language that has nevertheless undergone few changes in the course of its history; one of the most important changes—the introduction of the pinyin romanized script—is of recent date. Chinese is one of the most difficult languages in the world to learn. As a result, illiteracy has always been high in the country, with literacy among the privileges of the elite.

During the course of its evolution, the spoken language has undergone more modifications than the written one, particularly in pronunciation and modes of expression. A number of dialects have developed as a result of

these changes. The spoken language is also more receptive to foreign influences. As a result, speech communities intermingle and overlap. Of the numerous dialects, the most important in terms of the number of speakers is Mandarin, locally known as Putonghua, followed by Wu, Xiang, Hui, Gan, Hakka, Min, and Yue. Although derived from a common core language, different pronunciation and linguistic structure make most of them mutually unintelligible. Even within Mandarin, there are three groups of subdialects: Northern Mandarin, spoken in Beijing and the entire Huang He basin; Southwestern Mandarin, spoken in the southwestern hinterland, including the Sichuan Red River basin, the Yunnan-Kweichow Plateau, and the central Yangzi River plains; and Southern Mandarin, spoken in the lower Chang Jiang valley eastward to Nanjing.

The cultural bond of language has led Mandarin to become one of the rallying standards of Chinese nationalism, as embodied in the cry “One State, One People, One Language.” Seeking to foster unity through language, each regime since 1911 has sought to adopt Mandarin as a national language, popularize Chinese among the non-Han minorities, simplify the written words, compile a list of basic Chinese characters and words, and alphabetize the Chinese language.

A more serious need was that for the introduction of a phonetic alphabet to replace the system of Chinese characters. In the absence of an alphabet, scholarly tools such as dictionaries, indexes, bibliographies, and catalogs have traditionally been arranged on the basis of a complex system of fundamental characters (radicals), or the number of strokes in each character. Chinese characters also create special problems in other areas. Telegraphic messages have to be sent in numerical codes. Typesetting machines and typewriters are vastly more complicated than those using an alphabet. In the 20th century many alphabetic systems have been devised to overcome these deficiencies, ranging from romanizations to the kana-like symbols used by the Japanese, shorthand systems, and picture scripts. In 1956 a committee of linguistic experts appointed by the Maoist regime recommended the adoption of a 26-letter Latin alphabet for the Chinese written language. The new system, known as pinyin, was formally approved by the National People's Congress in 1958; another 21 years passed before the government decided to adopt it officially. In 1979 and the following years the government issued a number of word lists and lists of places and persons with standard spellings. The transition to pinyin posed problems not only for Chinese—particularly nationalists for whom language is a highly emotional issue—but also for Western readers accustomed to the Wade-Giles romanization system. Because it is based on the Beijing dialect, much education had to follow its introduction in all parts of China. As part of romanization, Chinese writing switched to left to

right, horizontally, rather than in vertical lines from right to left, as in traditional Chinese. Pens and pencils have also replaced the time-honored writing brushes. Another part of the reform concerned punctuation. There were no punctuations in Chinese writing until a set of marks was introduced in the late 1910s. The new system was copied from the West, with the exception that the period is not a point but a small circle.

The introduction of a romanized script has been a mixed blessing. It has made classical Chinese virtually a foreign language for most Chinese and therefore constitutes a serious diminution of China's literary heritage. As it will be impossible to transcribe all the classic texts into the romanized form, most will be available only to scholars.

RELIGIONS

In China, organized religion is subordinated to a complex of folk beliefs and practices that provide the ritual setting to daily lives. They include ancestor worship, reverence for family altars and institutions, and more distinctly occult elements such as magic, sorcery, and divination. Over this substratum of core beliefs and practices lies a thin veneer of ethical rules of conduct established by some of the greatest of classical masters, Confucius in particular. Some elements of theology and cosmogony were added from Buddhism, which was the first of the organized religions to reach China and which ranks with Confucianism and Taoism as one of the three main indigenous religious traditions. At the fringe of this religious landscape are the two major religions of the non-Chinese world—Islam and Christianity—neither of which was grafted onto the national consciousness and thus never properly took roots in the country. To complicate the picture even further is the hovering and brooding presence of Marxism, which negates religious belief and has waged a relentless campaign to uproot all established religions.

The most pervasive and the oldest of all Chinese religious practices—the distinction between religious practice and religion being quite important in the Chinese setting—is ancestor worship. Although ancestor worship is found in a variety of other cultures, nowhere else has it been so interwoven into the social fabric as to constitute an inseparable part of daily life. The personal and familial nature of ancestor worship precluded the suprafamilial aspect of most religions from taking roots in China; formal religions such as Christianity were rejected because they could not be reconciled with ancestor worship and because their theological aspects overshadowed their social aspects.

Folk religious systems antedate formal religious systems and coexist with them everywhere, even in the 20th century, but in China such folk systems flourish aboveground and have fewer linkages with organized religion. The world of folk religion is a kaleidoscope of dragons,

demons, ghosts, gods, animals, and spirits jumbled together. In addition to folk deities, every family had its own tutelary deity, the kitchen god who kept an account of the good and bad deeds of the family and reported annually to the Tien. The kitchen god's periodical ascent to heaven was made easier by the burning of incense.

Folk religions did not concern themselves with theology, philosophy, or ethics other than in a rudimentary way. The philosophical and ethical bases were provided by Confucianism, Taoism, Buddhism, and other systems, none of which was organized in terms of doctrine, clergy, or believers. Although Confucianism is primarily a politico-intellectual tradition of statecraft (*ju-chia*), it was transformed by its followers into a religion with all the trappings of a cult, including temples, sacrifices, and priests. Yet its inherent religious neutrality made Confucianism too impersonal to fill the emotional needs of the common people. In the 20th century Confucianism, closely identified with the imperial power, collapsed along with the monarchy. Sacrifices in Confucian temples were discontinued in 1928. Reduced to a philosophical system, it was supplanted by Western philosophical and ethical traditions and even more so by dialectical materialism.

Taoism is also both a philosophy and a religion. Its conversion into a religion took place in the early centuries of the common era. Originally based on Persian Mazdaism, Taoism involved the confession of sins, healing, prayers to the spirits, and an elaborate angelology. Later, as a rival to Buddhism, it adopted an order of clergy and monks. Its philosophical character was gradually diluted as it became identified with folk religion. The organization and rituals of Taoism are blatant imitations of Buddhism. Strong Buddhist influences also permeated the architecture of Taoist temples, called *kuan* and *kung*, as well as liturgy and music. The Taoist pantheon was peopled by folk deities such as the Jade Emperor and lower gods and guardian spirits. The cult also embraced the rich reservoir of native superstitions such as geomancy, divination, witchcraft, astrology, communication with the dead, and, most important, alchemy, particularly the transmutation of base metals into gold and the manufacture of elixirs of immortality. From Indian cultures Taoism borrowed Yogic practices such as breathing controls and special diets designed to prolong life. Taoism also quickly disintegrated in the early part of the 20th century. The official end came when the last hereditary *tien-shih*, presiding over Taoist headquarters at Dragon and Tiger Mountain in Jiangxi, was expelled by the Nationalist government in 1927.

Although Buddhism originated in India and only spread into China after many centuries, it is considered a native religion for all practical purposes. Chinese Buddhism is of the Mahayana (Great Vehicle) school, which is more properly a religion than the Hinayana (Lesser Vehicle) school. In the Mahayana version, Buddha is a

god whose image is worshipped and to whom sacrifices are offered. Buddhist temples and ceremonies are replicas of imperial palaces and court ceremonies. Nirvana is replaced by the Western Heaven, ruled over by Amida Buddha (Amitabha). Hells and purgatories have been added as countervailing concepts. The Indian bodhisattva Avalokiteshvara, originally a male deity, became the goddess of mercy, Guanyin. Although persecuted at times by Taoist and Confucianist emperors, Buddhism was a useful political tool for China's rulers in their efforts to control the Mongol and Tibetan peoples who adhered to Lamaism, a form of Mahayana Buddhism corrupted by native shamanism. Suffering serious setbacks in the early 20th century, Buddhism enjoyed a brief revival in the 1930s and 1940s through the efforts of many abbots, such as Yin Guang and Dai Xu.

Islam is considered a foreign religion and is known as *Hui Hui jiao*, which means "religion of the Uighur," the Turkic tribe of Xinjiang. About half of Chinese Muslims speak a Turkic language. Though distributed in most inland provinces, their most important traditional centers are in Yunnan, Gansu, Xinjiang, Ningxia, and Inner Mongolia. The Muslim community has avoided identifying itself with Chinese culture except for the sake of political expediency. Islam flourished under the Nationalist government when Muslims reestablished contacts with Arab countries, resulting in strong movements toward orthodoxy. The same period opened the way to political and military power for many Muslims. Even after the advent of Communism, Islam fared better than other religions. The Chinese Islamic Association operates under government aegis and disseminates Communist propaganda in the Middle East. Muslim schools have been established as instruments of Communist indoctrination. Islam is also taught in the Central Academy of Nationalities and the Chinese Muslim College in Beijing.

There is no accepted term for Christianity in Chinese. Catholicism and Protestantism, which were introduced separately, are called respectively *tien chu jiao* (doctrine of the Heavenly Lord) and *chi tu jiao* (doctrine of Christ). Both groups evolved in isolation and operate as two different religions.

HISTORICAL BACKGROUND

Although earlier civilizations flourished elsewhere, they became extinct, and China is the world's oldest nation, with a continual history that goes back to the second millennium B.C.E. The Chinese have a strong sense of history

and have kept voluminous records since very early times. An inward-looking people, the Chinese have constructed a Sinocentric view of the world reflected in the Chinese name for their own country—Zhonghua, literally the Middle Kingdom or the Central Nation.

The Chinese count time not in centuries, as in the West, but in dynasties. From the first dynasty until 1911, when the first republic was established, there were 17 dynasties, many of them with subdivisions and periods.

The origins of Chinese civilization are shrouded in the mists of time. The first prehistoric dynasty is said to be the Xia, which ruled for about 500 years (2200–1700 B.C.E.). The first historical dynasty about which archaeological evidence exists is the Shang (or Yin), which ruled from 1700 to 1027 B.C.E. Two important Shang developments were the invention of writing and the use of bronze. The last Shang ruler was overthrown by a chieftain of a frontier tribe called Zhou, settled along the banks of the Wei River valley in modern Shanxi Province. The Zhou dynasty had its capital at Hao, near the modern city of Xian. The Zhou dynasty ruled China for a longer period than any other. However, in 771 B.C.E. the Zhou court was sacked and its king killed, forcing the transfer of its capital eastward to Luoyang, in the modern province of Henan. Because of this shift the Zhou period is divided into Western and Eastern eras. The latter is further subdivided into the Spring and Autumn period (722–481 B.C.E.) and the Warring States period (403–221 B.C.E.). The Eastern Zhou period was a time of the flowering of Chinese culture, represented by such philosophers as Kongfuzi, or Master Kung (551–470 B.C.E.), known to the West as Confucius; Mengzi, or Mencius (372–289 B.C.E.); Xunzi (c. 300–237 B.C.E.), the Legalist whose ideas were developed by Hanfeizi (d. 233 B.C.E.) and Li Si (d. 208 B.C.E.); and Lao Zi, Old Master, the founder of Taoism, and his disciple Chuan Chu (369–286 B.C.E.).

The history of China as a united nation begins properly in 221 B.C.E. In that year the western frontier state of Qin (or Ch'in, from which the name China is derived) subjugated the other warring states, and the king of Qin took on the grandiloquent title of *Qin shi huangdi*, or "first emperor of the Chin." He set in motion a process of centralization and imperial expansion. To fend off barbarian invasions from the north, the various fortification walls built previously by the warring states were connected to make the 3,300 km (2,051 mi) Great Wall. The Qin dynasty did not outlast the death of its founder and lasted only 15 years—the shortest dynastic period in Chinese history.

The dynasty that replaced it was the Han—after whom the major nationality of China is named—with its capital at Xian. The Han period is noted for the invention of paper and porcelain, the establishment of the Silk Route to the Roman imperial possessions in Asia Minor, and the introduction of Buddhism.

The collapse of the Han dynasty was followed by nearly four centuries of rule by warlords. This period began with the Three Kingdoms (220 B.C.E.–80 C.E.), followed by the Jin dynasty, which through its western and eastern branches ruled until 420 C.E. From that time until the sixth century power was shared by four southern and five northern dynasties. This period was noted for the spread of Buddhism, the invention of gunpowder and the wheelbarrow, and numerous advances in medicine, astronomy, and cartography.

China was reunified by the short-lived Sui dynasty, which ruled from 581 to 618. Their principal legacy was the Grand Canal, a monumental engineering feat. The Sui was supplanted by the Tang dynasty in 618. Most historians regard the Tang period as the high point in Chinese civilization, distinguished not only by the military exploits of its early rulers but also by the flowering of creativity in many fields. Block printing was invented, making the written word accessible to a larger audience. The Tang period was also the golden age of literature and art. The Tang rulers were the first to establish a cadre of civil servants selected through competitive examinations.

Tang power ebbed by the mid-eighth century, and the dynasty ended in 907. The next half century is known as the Five Dynasties and 10 Kingdoms period. This age of fragmentation gave way to a new power, the Song (960–1279), notable for the development of cities and the mercantile class. At the same time there was a progressive revival of interest in Confucian ideals, coinciding with the decline of Buddhism. The Confucian revival was spearheaded by Zhu Xi (1130–1200), whose teachings became the official imperial ideology until the end of the Manchu dynasty. A rigid and unyielding creed, it stressed the one-sided obligations of obedience and compliance by subject to ruler, child to parents, and wife to husband. Before or during the Song period three other dynasties held power in various other parts of China: the Liao (Kitan) dynasty (907–1125), the Western Xia dynasty (1032–1227), and the Jin (Nurche) dynasty (1032–1227).

At the beginning of the 13th century the Mongols were already ascendant in northern China. Genghis Khan and his successors had established an empire that stretched from the Sea of Japan to the Black Sea and beyond. Kublai Khan, the grandson of Genghis Khan, began a drive against the Song, and even before the latter's extinction established the first alien dynasty to rule all China, the Yuan (1279–1368). As in other parts of their empire, Mongol rule was brief and culturally barren. The period was notable only for the visit of the Venetian Marco Polo, whose account of his trip to Kublai Khan's court was the first Western glimpse into the fabulous land of Cathay. The Mongol rule was resented by the Han Chinese, who were discriminated against socially and politically.

Rivalry among the heirs to the Mongol khanate, natural disasters, and numerous peasant uprisings led to the

collapse of the Yuan dynasty. It was supplanted in 1368 by the Ming dynasty, founded by a Han Chinese peasant and former Buddhist priest. With its capital first at Nanjing and later at Beijing, its power reached its zenith during the first quarter of the 15th century. Chinese armies reconquered Annam in Southeast Asia, and the Chinese fleet ranged the China seas and the Indian Ocean as far as the eastern coast of Africa. Many Chinese historians consider the Ming period as the most stable and prosperous of Chinese eras. However, by the first half of the 17th century Ming power had weakened enough to allow invaders from the north to grasp the throne once again. In 1644 the Manchus took Beijing and became masters of northern China, thus establishing China's second and last alien dynasty. Known as the Qing, it survived until 1911.

Although non-Han, the Manchus were Sinicized to a great degree, and they adopted Chinese customs and retained most of the Ming institutions. They continued the Confucian cult rituals over which they traditionally presided. In a series of bloody and costly campaigns, the Manchus gained control over most border and other outlying areas, including Xinjiang, Yunnan, Tibet, and Taiwan. A combination of military prowess and bureaucratic skills contributed to the early successes of the Manchus.

The Qing were suspicious of the Han, and Qing policy was directed toward preserving Manchu superiority. Han Chinese were prohibited from migrating to Manchuria. The Manchus were forbidden to engage in manual labor and trade, and no agriculture was permitted in northern Manchuria. Intermarriage between the two groups was forbidden. In many government positions a system of dual appointments was used, with Chinese officials being supervised by Manchus.

Even as the Manchu empire grew to include a larger area than ever before or since, it was sapped by new threats from within and without. The process of disintegration occurred throughout the 19th century through a series of incidents that cumulatively drained the empire's resources and eventually toppled it. Beginning in the early 19th century localized revolts erupted in various parts of the empire. Secret societies, such as the White Lotus sect in the north and the Hung Society in the south, gained ground, combining anti-Manchu subversion with banditry. Peace and stability had caused an explosion of population, but with no industry or trade of sufficient scope to absorb the surplus, there was widespread rural discontent and urban pauperism, as aided by the weakening of the Manchu bureaucratic and military systems through corruption. These problems were compounded by natural calamities of unprecedented proportions, including droughts, famines, and floods. These disasters were exacerbated by misgovernment and the neglect of public works. This was especially the case in southern China, the last area to yield to the Qing conquerors and the first region to be exposed to Western influence. It was

the site of the most famous rebellion in Chinese history: the Taiping Rebellion, which was led by a misguided former Protestant convert, Hong Xiuquan, who proclaimed himself the “Heavenly King of the Heavenly Kingdom of Great Peace” in 1851. Over 25 million people were killed before the rebellion was finally crushed in 1864.

As the empire reeled under this revolt, the Western powers trying to get a foothold in the East grew bolder. First the Portuguese gained Macao, where they monopolized the foreign trade at Guangzhou (Canton). Soon the “Celestial Empire” was humiliated by Great Britain in the Opium War (1839–42), provoked by the illegal British trade in opium, which was prohibited by imperial decree. When the Chinese government confiscated and burned 20,000 chests of opium, the British retaliated with a punitive expedition in which the imperial army was disastrously defeated. The resulting Treaty of Nanking (1842) was the first of a series of agreements with Western trading nations that the Chinese call “unequal treaties.” Under its terms the Chinese ceded Hong Kong, abolished the licensed monopoly system of trade, opened five ports to foreign trade, limited the tariff on trade to 5 percent ad valorem, granted British nationals extraterritoriality, and paid a large indemnity.

The treaty triggered a scramble among Western powers to carve up the vast empire. In the 1850s the Russians invaded the Amur watershed of Manchuria in violation of the Treaty of Nerchinsk (1689) and in 1860 forced the emperor to grant them all of Manchuria north of the Amur River and east of the Ussuri River. Foreign encroachments intensified after 1860 through a series of treaties imposed on China under one pretext or another. The catalog of concessions lengthened, and the foreign stranglehold on the economy deepened. The treaty ports became virtual foreign enclaves.

The official response of the tottering Manchu court to these humiliations was a series of half-hearted reforms designed to avert further decline. The first phase of the reforms was championed in the 1860s by such generals as Zeng Huofan, Zuo Zongtang, and Li Hong Zhang. They attempted to reform the bureaucracy, modernize the army, expand public education, create an industrial base, and build railroads, telegraph lines, and new harbors. These efforts petered out, sabotaged by the Confucian bureaucrats, who saw in them only a threat to their own entrenched powers.

As the reforms failed to take hold, the foreign powers continued to dismember the empire. France, victorious in a war with China in 1883, took Annam; the British took Burma; Russia took Turkestan; and Japan, emerging from its centuries-long seclusion, took Taiwan, Korea, and the Liuqiu (Ryukyu) Islands. In 1898 the British acquired a 99-year lease over the New Territories of Kowloon.

In 1898 the second phase of the reform movement proved even briefer than the first; it lasted for just 102

days, from June 11 to September 21. Like the first, it was a self-strengthening movement, aimed at sweeping social and institutional changes. Opposition to the reform was intense among the Manchu ruling elite. Supported by the ultraconservatives, Empress Dowager Cixi engineered a coup forcing the young, reform-minded Emperor Guangxu into seclusion and took over the government as regent. The reform ended with the execution of six of its principal advocates and the flight of two to Japan.

The ultraconservatives then retaliated by backing an antiforeign and anti-Christian organization known to the West as the Boxers. In 1900 this group rampaged around northern China in what became known as the Boxer Rebellion. The uprising was crushed by the expeditionary forces of the foreign powers, and under the Boxer Protocol of 1901 the court was forced to pay the Western powers a large indemnity and consent to the stationing of foreign troops on Chinese soil.

The failure of the reform and the fiasco of the Boxer Rebellion set the stage for the Republican Revolution of 1911. The leader of the revolutionaries was Sun Zhongshan (Sun Yat-sen, 1866–1925), who as an exile in Japan had founded in 1905 the Tong Meng Hui (the United League or Brotherhood Society), a forerunner of the Guomindang (GMD, or the Nationalist Party). His followers included overseas Chinese and also military officers, among them a young cadet named Chiang Kai-shek. Sun’s political philosophy centered on the Three Principles of the People: nationalism, democracy, and socialism.

The Manchu dynasty fell on October 10, 1911, after remaining in power for 267 years. Its anticlimactic exit was the result not of a massive popular uprising but of a minor mutiny by the imperial garrison at Wuchang, where 3,000 soldiers rose in revolt. The city fell without resistance, and the relatively bloodless revolution spread quickly. Sun was inaugurated on January 1, 1912, in Nanjing as the provisional president of the new Chinese Republic. But power in Beijing had already passed to Yuan Shikai, the strongest warlord and commander in chief of the imperial army. To prevent possible bloodshed, Sun agreed to a united national government in Beijing under Yuan Shikai. On February 12, 1912, the last Manchu emperor, Puyi, abdicated, and on March 12 Yuan Shikai was inaugurated as provisional president of the republic.

Within two years Yuan Shikai became a virtual dictator by arranging the assassination of his political opponents and forcing Sun to flee to Japan. Yuan Shikai suspended parliament (in which the Guomindang had a majority of seats) and proceeded to establish a monarchy, and when that attempt failed, he proclaimed himself president for life in 1915. He died a year later.

Yuan Shikai’s death was followed by a scramble among the regional warlords for control of the Beijing government. In addition to internal chaos, the nation was

threatened from without by Japan, who claimed Shandong and also sought to establish its protectorate over all of China through the Twenty-one Demands. In 1917 the Beijing government conceded in a secret deal the Japanese claim to Shandong. When this sellout became public, there were massive student protest demonstrations, culminating in a national movement known as the May Fourth Movement or, in intellectual circles, as the New Culture Movement, which helped rekindle the fading cause of the republican revolution. In October 1919 Sun Zhongshan, who in 1917 had set up a rival government in Guangzhou in collaboration with southern warlords, re-established the Guomindang. In 1922 a new alliance was forged under Soviet auspices between the Guomindang and the Chinese Communist Party (CCP), founded in 1921. Chiang Kai-shek, who became Sun's successor as Guomindang leader upon Sun's death in 1925, staged a coup in 1926, ousting the left-wing CCP elements in the party, but the Soviets nevertheless continued to support him. By 1928 Chiang was in control of most of China, receiving prompt international recognition as the head of the sole legitimate government of China. The decade of 1928 to 1937 was an era of consolidation and accomplishment by the Nationalists.

But even as the nation was beginning to experience a strong, stable central government for the first time in a century, two forces were at work that would eventually undermine Chiang's regime: the rise of the CCP and Japanese aggression.

By mid-1927 CCP fortunes were at their lowest ebb in a decade. The CCP gave up its former policy of passivity and cooperation with Chiang in favor of armed insurrection in both urban and rural areas. Without waiting for the sanction of the CCP Center, then in Shanghai, a former librarian of Beijing University, Mao Zedong began to establish peasant-based soviets, or governmental councils, along the border between the Hunan and Jiangxi provinces. By the winter of 1927–28 Mao's People's Liberation Army (PLA) had some 10,000 men. By 1932 Mao's control of the CCP was complete. Surviving a series of encirclement and extermination attacks mounted by the Guomindang forces, Mao, along with 100,000 to 190,000 supporters, began his epic retreat, celebrated in Communist legend as the Long March, for some 10,000 km (6,215 mi) through southwestern China to the northern province of Shanxi, where some 20,000 survivors arrived in 1935. The Communists then set up their headquarters in Yan'an, in southern Shanxi. The Yan'an era (1936–45) was one of rapid growth for the CCP, owing to a combination of internal and external circumstances, of which World War II was the most significant.

The Japanese had initiated a policy of conquering China piecemeal as early as 1917 and had pursued that policy relentlessly by seizing Manchuria in 1931 and then pushing beyond the Great Wall into northern China and

along the coastal provinces. In the first half of the 1930s the Guomindang was more preoccupied with campaigns to exterminate the Communists than resisting the Japanese invaders. Open hostilities between the two governments began only on July 7, 1937, when a clash, carefully engineered by the Japanese, occurred between Chinese troops and the invaders at the Marco Polo Bridge near Beijing. The Guomindang and the CCP patched up their differences to face the common enemy, but the uneasy alliance crumbled after 1938. By 1940 the Japanese controlled most of coastal and northern China and the rich Yangzi River valley. The Guomindang government moved its capital to Chongqing. The Guomindang reverses greatly benefited Mao. The Communists increased their party membership from 100,000 in 1937 to 1.2 million by 1945. The PLA troops became skilled guerrilla fighters able to wear down the enemy by alternating offensive and defensive actions.

China emerged from the war greatly enfeebled, economically prostrate, and politically divided. Despite massive economic aid from the United States, the economy was shattered by inflation and sabotaged by the Communists. Famines and floods left millions homeless and destitute. The civil war between the Communists and the Guomindang began in earnest within a year of the end of World War II. In 1947 the U.S. mission, headed by George C. Marshall, was withdrawn from Beijing, as the United States decided not to intervene militarily in the conflict. Thereafter the Guomindang collapse was swift. In 1949 the PLA entered Beijing without a fight, and within months all the major cities passed into Communist hands. In December 1949 Chiang, with a few hundred thousand of his troops, fled from the mainland to Taiwan, proclaiming Taipei the capital of his republic.

The People's Republic of China (PRC) was proclaimed on October 1, 1949, with its capital at Beijing. A year later China entered the Korean War and pushed back UN and U.S. troops to the South Korean border. It was the first successful military operation of the new republic. In 1950 China invaded Tibet, which had asserted its independence after the overthrow of the Manchus. Along the coast of Fujian Province hostilities continued between the PRC and the Nationalists. In the early 1960s the Chinese fought intermittently with India over territorial claims along the Himalayan region. Growing discord between China and the Soviet Union continued throughout the 1960s and early 1970s, and the two powers competed for support among the world's Communist parties. Hostilities flared briefly along the Ussuri River.

In domestic affairs, a rapid program of industrialization and socialization was followed in 1958–59 by the Great Leap Forward, a crash program of collectivization. The program ended in three bitter years of economic crisis in 1960–62. Mao tried again to steer the country into a revolutionary path with the Cultural Revolution,

1966–69, the most convulsive period in modern Chinese history. In 1967 the Red Army intervened on the side of Mao and the CCP, and government organs were replaced by revolutionary committees and the Red Guard. Liu Shaoqi was dismissed from his position in the Chinese hierarchy as chairman of the People's Republic, and it was claimed that he died in suspicious circumstances in a plane crash while trying to flee to the Soviet Union.

The first half of the 1970s witnessed dramatic shifts in the course of Chinese diplomacy, particularly after the People's Republic of China ousted Nationalist China (Taiwan) at the United Nations in 1971. Henry Kissinger and President Richard Nixon journeyed to Beijing as the first step toward normalization of relations between the United States and China after a hiatus of 23 years.

The death of Mao and Prime Minister Zhou Enlai in 1976 was followed by a power struggle in which the Maoists were dislodged by the moderates led by Deng Xiaoping. During the next decade Deng consolidated his hold over the party and government by naming his allies to key posts in the CCP. Along with personnel changes, there was sweeping reform in agricultural and economic policies, euphemistically termed rectification and consolidation. The Maoist commune system was nullified, and family farms were restored. Leftist factionalism among party cadres was eliminated, and an unprecedented program to reform the economic structure called for the adoption of many features of a "capitalistic" market system. These liberalization moves were set back in 1989 by a massive student demonstration in Tiananmen Square in Beijing in which several protesters died. This incident was followed by a hardening of the ideological positions within the CCP. At the 14th Party Congress in 1992 Jiang Zemin was named PRC president and the successor to the ailing Deng. Deng himself died in 1997, but no major policy changes ensued, partly because the succession issue had long been settled. In the same year Hong Kong was returned to China by the British government. In 1999 Macau was returned to China by Portugal. China agreed to trade reforms designed to open its economy to international competition and investment. In recognition of these reforms, China was admitted to the World Trade Organization on December 11, 2001.

In 2002 Hu Jintao was named head of the Communist Party, and in 2003 the National People's Congress elected him president. The first crisis he had to deal with was an outbreak of SARS, a pneumonia-like virus, which led to quarantine measures and travel restrictions. That year, too, China and India reached an agreement over the status of Tibet and signed a trade agreement. Further positive news came later in 2003 when China launched its first manned spacecraft. In 2004 China signed a landmark trade agreement with 10 Asian countries, a move that could unite 25 percent of the world's population in a free-trade zone.

LIST OF MODERN RULERS

1949–76	Mao Zedong
1976–93	Deng Xiaoping
1993–2003	Jiang Zemin
2003–	Hu Jintao

CONSTITUTION

The People's Republic of China was established on October 1, 1949. For the first five years of its existence it had no constitution since, according to the regime, the revolution had not been consummated and the economy had not been completely socialized. In the place of a constitution, the state was governed by the Organic Law of the People's Political Consultative Conference. That document and the constitution that would follow both reflected Mao's ideas on "new democracy," or a "people's democratic dictatorship," a contradiction in terms that was justified as appropriate for a transition from a semi-feudal and semicolonial stage to socialism. The first constitution was promulgated in 1954, and it was followed by three others, in 1975, 1978, and 1982.

The constitution of 1982, still in effect in 2005, is essentially a Deng constitution, though it is often compared rather than contrasted with the constitution of 1954. The longest of the four constitutions, with 138 articles, it is more structural than programmatic, marking a radical departure from the heavily political preoccupations of its predecessors. Under that constitution, the presidency was restored. China is defined as a "socialist state under people's democratic dictatorship." No reference is made to the preeminent role of the Communist Party, although it states that the state is "led by the working class." Moreover, article 5 states, "All state organs, the armed forces, all political parties and public organizations . . . must abide by the Constitution and the law." All civil liberties were restored, with the significant exception of the right to strike. The new constitution reflects the post-Mao state in that it diminished the political and governmental role of the people's communes by transferring their power to the townships.

Of the state organs specified in the constitution, the weakest is the presidency, which is largely ceremonial. The president is the head of state. The truly efficient part of the national government is the State Council (Guo Wu Yuan), which, according to the constitution, is the executive body of the National People's Congress and the "highest organ of state administration." It is chaired by the premier, nominated by the Central Committee, and approved by the National People's Congress, and it includes a number of vice premiers, ministers in charge of ministries, and ministers heading commissions. The premier of the State Council is the head of government. The functions of the State Council are defined as exer-

cising “unified leadership” over the entire administration, including local governments. Most if not all of the ministries, commissions, bureaus, and agencies attached to the State Council are represented in provincial-level administrative units and in some cases county- and commune-level units.

Although the functions and powers of the State Council are exceptionally broad, policy is largely determined by the Central Committee and the Political Bureau, to both of which the State Council is closely linked by concurrent memberships. This linkage facilitates the party’s control over the state but at the same time obliterates the distinction between party and government.

The membership of the State Council has varied over the years, but the general trend has been toward a high degree of compartmentalization of jurisdictions, a top-heavy hierarchical structure, and a multiplicity of units. The council is divided into ministries, commissions, bureaus, agencies, and departments. With the growing number of units it has become necessary to create intermediate offices between the State Council and these units. Known as staff offices, they have supervisory responsibility over groups of related units. According to a high-ranking party leader, from 1950 to 1981 the number of ministries and commissions grew from 34 to 100, the number of ministries and deputy ministries to 1,000, and the number of departments to 5,000. Under Deng this number was cut back, but government still remains unwieldy.

The State Council rarely meets as a whole. The long-standing practice is for major decisions to be made by an inner cabinet known as the Standing Conference of the State Council, which generally consists of 15 members, including the premier and four vice premiers.

Directly attached to the State Council is the General Office, which appears to be a housekeeping organ corresponding to the Secretariat of the Central Committee. In addition, a number of specialized offices, directly subordinate to the State Council, deal with diverse matters such as science, environmental protection, and family planning.

PARLIAMENT

The National People’s Congress (NPC) is defined in the 1982 constitution as “the highest organ of state power,” without being identified, as in the constitution of 1975, as “under the leadership of the Communist Party of China.” Among its 15 powers enumerated in article 62 are those to amend the constitution; supervise the enforcement of the constitution and the law; choose the premier, on the recommendation of the CCP Central Committee; elect or remove the president of the Supreme People’s Court and the chief procurator of the Supreme People’s Procuratorate; examine and approve the national economic

plan, the state budget, and the final state accounts; decide on questions of war and peace; and approve administrative boundaries.

The NPC holds one session a year. Its deputies are elected by secret ballot for terms of five years by the people’s congresses at the provincial-level administrative divisions. The provincial-level delegates themselves are indirectly elected. In 2005 the NPC had 2,985 members. Members of the National Committee of the Chinese People’s Political Consultative Conference (CPPCC), a revolutionary united front organization led by the Communist Party, may be invited to attend the NPC as observers.

POLITICAL PARTIES

With a membership of 66 million in 2002—exceeding the population of all but 15 countries in the world—the Chinese Communist Party (CCP) is the largest political party in the world. It is the pivot of the Chinese political system, eclipsing even the government, and despite the debacle of the Cultural Revolution appears to be more firmly entrenched than at any time since 1949.

Despite apparent structural similarities with Communist parties in other countries, the CCP is unique in several respects. First, the distinction between party and state is considerably blurred, to the point where the two systems are identical. The post-Mao leadership has attempted with some success to re-create the distinction between party and state, but so pervasive is the party’s power that the latter appears only as a shadow of the former. Another important distinction is the role of the military in the political system, a role that had been reduced in the Soviet Union to a purely professional one. At the top in China, many leaders hold concurrent civilian and military posts; the military also plays a large part in CCP activities at all subnational levels.

LOCAL GOVERNMENT

On the whole, the Communist regime has adopted without substantial change the previous local government divisions; except for territorial adjustments, most of the provinces, municipalities, and counties remain as they were before 1949. There are, however, two important innovations: the organization of the people’s communes at or below the county level and the establishment of minority nationality areas, consisting of autonomous regions, districts, and counties.

The present system of local government is described in the constitution of 1982 and in local government laws. Article 30 of the constitution provides for the administrative division of the country into provinces, autonomous regions, and municipalities directly under the central

government; provinces and autonomous regions into prefectures, counties, and cities; and counties into townships, nationality townships, and towns.

The 29 administrative units at the provincial level include 23 provinces (*sheng*); the four municipalities, or centrally administered cities (*zhixiashi*), of Shanghai, Beijing, Tianjin, and Chongqing; and the five autonomous regions (*zizhiqu*) of Xinjiang Uygur, Xizang, Ningxia Hui, Guangxi Zhuang, and Nei Mongol, the homes of the Uighurs, Tibetans, Hui, Zhuang, and Mongols, respectively. China considers Taiwan its 23rd province.

Between the provincial and the county (*xian*) levels, administrative entities without congresses have been established. There are 208 of these units: one administrative area (*tebiexingzhengqu*) on Hainan Island, eight leagues (*meng*) in Inner Mongolia, 29 autonomous areas (*zizhizhou*), and 170 areas (*diqu*).

On the local administrative level there are 2,772 units, including three autonomous banners (*zizhiqu*), 53 banners (*qi*), 71 autonomous counties (*zizhixian*), 431 city districts (*qu*), 214 provincially or area-administered cities (*shi*), and 2,000 regular counties (*xian*). On this level as well as on the township (*xiang*) level, the party wields tight control.

The structure of local government is based on that of the national government. As presently constituted, the local people's congresses suffer from the same problems as the National People's Congress. The number of deputies is too large, ranging up to 1,000, and the standing committees also are large, with an average membership of 50 to 60, most far advanced in age. Local government organs are fifth wheels without any real power and are hence burdened with a sense of superfluity. "The party has already made its decisions. Why should we go through the motions of debating them?" is a common complaint at local assemblies.

A noteworthy development, which took place in 1980–81, is the direct election by rural residents of deputies to county people's congresses. Before that only deputies to township (or commune) people's congresses were directly elected, and township deputies, in turn, elected deputies to county people's congresses from their own members. Although hailed as a measure to enhance democratic processes at the county level, these elections, like the others, are orchestrated by local Communist Party branches, with predictable results.

Official efforts to improve governmental performance at the local level have included strengthening standing committees of local people's congresses at and above the county level; the institution of multiple candidacies in elections to local people's congresses; and the reactivation of "basic-level mass autonomous organizations" such as urban neighborhood committees, people's mediation committees, and public security committees.

LEGAL SYSTEM

The State Constitution of 1982 and the Organic Law of the People's Courts provide for a four-tier court system. At the apex is the Supreme People's Court, which is not only the highest appellate forum of the land but also the supervisor of the administration of justice by subordinate courts. Local people's courts—the courts of first instance—handle civil and criminal cases. They consist of three types of units: higher people's courts at the level of provinces, autonomous regions, and municipalities directly under the central government; intermediate people's courts at the level of prefectures, autonomous prefectures, municipalities under the central government, provinces, and autonomous regions; and basic people's courts at the level of autonomous counties, towns, and municipal districts. Special courts adjudicate military, railway transportation, water transportation, forest, and economic cases. The president and judges of the Supreme People's Court are elected by the National People's Congress and serve no more than two consecutive five-year terms. Local people's courts are similarly elected by the local state organs at their level.

China is perhaps the only major society without a written criminal or civil code; although there are selected statutes, there is no comprehensive, universally recognized code. Law plays the dual role of resolving disputes between people and suppressing "enemies of the people." The definition of "enemies" varies with the times but has always included rightists, counterrevolutionaries, "bad elements," and revisionists. Although the constitution guarantees the independence of the judiciary, such independence is only a political fiction, and interference by party organs in judicial organs is common. The conception of equality before the law is seen as violating the Marxist theory of class struggle.

The court system is complemented by a structure of people's procuratorates, from the Supreme People's Procuratorate at the top to lower procuratorates established at the corresponding levels of the courts. The procuratorates represent the state in criminal proceedings and ensure that the judicial process of the courts and the execution of judgments and orders in criminal matters conform to the law.

Prisons were separated from the Ministry of Public Security and placed under the Ministry of Justice in 1983. The majority of prisoners are sentenced to hard labor, of which there are two kinds: criminal and administrative. The former is for a fixed number of years, whereas the latter is for an indeterminate period, usually three or four years. Both categories may be found at state farms, mines, and factory prisons. Prisoners are required to work eight hours a day, six days a week. They are forbidden to read anything not provided by the prison; to speak dialects not understood by the guards; or to keep cash, gold, or jewelry. Mail is censored, and generally

only one visitor is allowed per month. Sentences may be reduced for up to half the original sentence; at least 10 years of a life sentence have to be served. Both probation and parole are granted when certain conditions are met.

No detailed information is available on the criminal justice system.

HUMAN RIGHTS

The major event affecting human rights in China since 1949 was the bloodbath in Tiananmen Square in Beijing in early 1989, which set the country back some 20 years in its evolution toward a less totalitarian government. The power struggle that preceded and followed this event witnessed a leftward and more doctrinaire shift at the very apex of the power structure. The gradual relaxation of the political atmosphere that began with the ascent of Deng in the early 1980s consequently slowed, and some of the gains made in this period were lost.

This setback illustrates the fundamental weakness in China's so-called political modernization program. There is an entrenched intolerance of any criticism of the CCP and its aging leadership. Change can only be initiated at the top, then trickling down to the bottom, rather than vice versa. The rigidity of institutional structures is as old as Chinese society, and it has been reinforced by the harshness of Marxist dogma.

The Code of Criminal Procedure specifically prohibits the use of torture. In 1986 China signed the UN Convention against Torture and Other Cruel, Inhuman or Degrading Treatment, and the National People's Congress ratified the convention in 1988. But news reports of the use of torture by officials persist.

The law notwithstanding, persons accused of political crimes are often held for periods much longer than those sanctioned by the code. The provision requiring immediate notification of families or work units is also frequently ignored, and suspects are held incommunicado for long periods.

Under "labor education" provisions, those who commit minor theft or fraud or who have been expelled from their work units may be deprived of their civil liberties and subjected to one to four years of reform without trial. "Reform through labor" is a more severe sentence, similar to Soviet "internal exile" and imposed on those accused of more serious crimes.

The regime denies that there are any political prisoners, but this is only a semantic subterfuge, since "counterrevolutionaries" are classified as common criminals. Counterrevolutionary activity is defined as "inciting the overthrow of the socialist system." The total prison population is estimated at two to five million, and of this total 1 to 3 percent are political prisoners according to Western standards.

Contacts between Chinese and foreigners had become free of official interference until the Tiananmen Square demonstrations brought about a deterioration in the political climate. "English corners," where Chinese and foreigners can meet to talk in English, attract large numbers of people.

The Code of Criminal Procedure allows officials wide latitude in emergency situations to enter and search living premises without warrants or notifications, use electronic eavesdropping, and seize mail or telegrams, although these powers are used sparingly.

After the excesses of the Cultural Revolution, freedom of religion was one of the major freedoms to be resuscitated. Although atheism is part of the official ideology, its enforcement and propagation have met with much resistance in a culture historically permeated with religious mores. The only major requirement is that religious bodies must not be subject to foreign domination, a proviso often used against Buddhism in Tibet as well as against the Catholic Church. Religious freedom, however, is still not a right but a gift of the state, and it may be withdrawn at any time. The regime does not tolerate unsanctioned religious activity, defined as "counterrevolutionary sabotage perpetrated in the name of religion." In 1983 the death penalty was authorized for secret sects that spread "feudal and superstitious ideas," a broad rubric aimed at curbing any kind of religious zeal. Since the late 1990s the persecution of Fulan Gong, an indigenous religious sect, has intensified, leading to the incarceration of thousands of its followers. In 2005 China still regarded the Fulan Gong as an "evil cult," and its persecution of the sect has been part of a widespread effort to clamp down on ethnic minorities.

Travel within China is restricted through various formal and informal regulations. Chinese citizens may not freely change their locality of residence or workplace. They are registered as residents of a particular jurisdiction, and permission to move to another locality is granted only for a change in employment. Because of the unwillingness of work units to lose employees, such permission is rarely granted.

Controls on foreign travel and emigration have been relaxed since the 1970s and were further liberalized under the Citizens' Exit and Entry Control Law of 1985. The law authorizes exit for personal reasons but denies exit to those in criminal or civil cases or those whose exit may harm China's national security interests. Permission to travel may also be denied to the more vocal critics of the regime and to known dissidents. Restrictions on internal travel by foreigners have also been relaxed.

In 2005 China's rule over Tibet remained controversial. Many human rights groups accuse China of the systematic persecution of Tibetan Buddhist culture.

FOREIGN POLICY

Chinese foreign policy history exhibits a number of dichotomies and contradictions. China is a superpower without formal superpower status, a socialist country that does not belong to the socialist camp, and a developing country that does not belong to the third world proper. Reflecting the factional struggles within the party's inner leadership, Chinese foreign policy also suffers from sudden shifts and breaks, as a result of which it lacks the consistency, coherence, and predictability of the foreign policies of other major powers. Such fluctuations reflect the fact that China has no urgent goals to achieve in foreign affairs, and foreign policy is merely an extension of internal political developments.

Chinese foreign policy is thus a product of three decades of trial and error, more failure than success, perhaps, but nevertheless remarkable for snatching stability from the jaws of chaos. By 1990 Chinese foreign policy had reached a new threshold of maturity, flexibility, balance, and moderation. For the first time China was able to deal on a normal basis with both superpowers and had learned the art and wisdom of isolating troublesome issues and irritations so that they did not impede the major thrust of policy. Given the historical ambivalence of China about the external world, this was a major achievement.

Relations between China and the United States deteriorated sharply in the late 1990s. The major irritants were the alleged Chinese efforts to influence U.S. presidential elections and attempts to obtain U.S. nuclear secrets. The incoming administration of George W. Bush was faced with a crisis when a U.S. spy plane was forced to land on Hainan Island after a midair collision with a Chinese fighter plane. The crew of the spy plane was detained for 11 days before release, and the two nations were embroiled in mutual recriminations following the reluctance of Chinese authorities to permit the return of the plane. Meanwhile, China carries on a number of border disputes with its neighbors, including India, Japan, and North Korea.

DEFENSE

The Chinese Communist Party came to power not through an election or revolution but through the successful military mission of the People's Liberation Army (PLA). The PLA is the world's largest standing army and has the world's third-largest air and naval forces. It provides China with a credible conventional defense-in-depth on land, at sea, and in the air but lacks offensive capability for more than a short distance beyond its borders. The nation is vulnerable to nuclear, biological, and chemical attack, as was the case particularly during the cold war period with respect to its then superior neigh-

bor, the Soviet Union. The small but effective nuclear deterrent is based on the policy of "no first use."

Deterrence is enhanced by a huge and well-organized population that can be mobilized at short notice, including nearly 380 million males ages 15 to 49. Coastal defense consists of successive rings of submarines, missile destroyers, and frigates supported by smaller missiles and torpedo boats. There are no military bases in foreign countries. The air force is strong in numbers but weak in equipment. In 2003 the nation spent \$60 billion, or between 3.5 and 5 percent of gross domestic product (GDP), on defense.

The PLA is organized as the armed forces of the party and remains under CCP control. The Common Program, the precursor to the constitution, placed control of the armed forces in the hands of the 22-member People's Revolutionary Military Council. Later constitutions confirmed this precedent, and the State Constitution of 1978 designated the party chairman as commander in chief of the armed forces. Until his resignation in 1989, Deng, although the virtual leader of the party, had no other official position than as chairman of the Military Affairs Committee. That chairmanship is currently vacant.

Military Indicators

as % of central government expenditures:	—
Arms Imports \$billion:	2.307
Arms Exports \$million:	818

ECONOMY

Beginning in late 1978, the Chinese leadership has been trying to move from a sluggish Soviet-style centrally planned economy to a more market-oriented economy, but still within a rigid political framework of Communist Party control. To this end the authorities switched to a system of household responsibility in agriculture in place of the old collectivization, increased the authority of local officials and plant managers in industry, permitted a wide variety of small-scale enterprise in services and light manufacturing, and opened the economy to increased foreign trade and investment. The result has been a quadrupling of GDP since 1978; by 2003 China had the world's second-largest economy, with a GDP of \$6.5 trillion, and an overall growth rate of 9.1 percent—30.4 percent in the industrial sector. On the darker side, the leadership has often experienced in its hybrid system the worst products of both socialism (bureaucracy, lassitude, and corruption) and capitalism (windfall gains and stepped-up inflation). Beijing has thus periodically backtracked, retightening central controls at intervals.

Popular resistance, changes in central policy, and the loss of authority by rural cadres have weakened China's population control program, which is essential to China's maintaining growth in living standards. Another long-term threat to continued rapid economic growth is the deterioration in the environment, notably air pollution, soil erosion, and the steady fall of the water table, especially in the north. China continues to lose arable land because of erosion and economic development; furthermore, the Communist regime gives insufficient priority to agricultural research. The next few years may witness increasing tensions between a highly centralized political system and an increasingly decentralized economic system. Hong Kong's reversion on July 1, 1997, to Chinese administration strengthened the already close ties between the two economies. China became the 143rd member of the World Trade Organization (WTO) on December 11, 2001, and in 2004 China signed a trade agreement with 10 Asian countries that would potentially create a free-trade zone comprising one-quarter of the world's population.

Principal Economic Indicators

Gross Domestic Product (purchasing power parity) \$trillion: 6.449
 GDP per capita (purchasing power parity) \$: 5,000
