ENVIRONMENT

Between 1957 and 1973 China lost one-fifth of its agricultural land from soil erosion as well as urban development. Since 1973 and the end of the Cultural Revolution, there have been efforts to reverse environmental damage. Reforestation efforts have included the construction of shelter belts and the restoration of ero-

sion-prone loess-covered lands in the middle reaches of the Yellow River. The National People's Congress adopted environmental protection and forestry laws in 1979 and launched a reforestation program called the Great Green Wall 10 years later. Water pollution is also serious. Nearly 436 of the 532 rivers are polluted, and improved drinking-water sources are unavailable to one-quarter of the population. The use of high-sulfur coal as the main energy source causes air pollution and contributes to acid rain. In the 1990s China had the world's second-highest level of industrial carbon dioxide emissions at a per capita level of 2.27 metric tons. However, the nation has begun to impose more stringent environmental controls. Investment in pollution-reducing technology is required of all industrial enterprises, penalties are imposed for noncompliance, and incentives and tax reductions are offered for those enterprises that meet environmental standards. To protect the nation's flora and fauna, nature reserves have grown exponentially, with hundreds of reserves constituting 15 percent of China's landmass.

LIVING CONDITIONS

Although China has 57 cities with more than one million people, in a country with well over one billion people, most live in rural areas, often without electricity or other modern amenities. Cities such as Shanghai are extremely crowded, with less than eight square meters per person; Shanghai is a city of skyscrapers and large business enterprises, where extreme wealth and extreme poverty coexist and housing is in short supply. The capital, Beijing, has a 3,000-year history and is home to many of the nation's most visited historical monuments in the Inner City, which contains the Forbidden City. In all of China's cities, bicycles are the most common form of transportation. Poverty and the search for economic opportunity has lured many people from the countryside to the larger cities on the coast.

An ongoing social problem in China is ethnic relations. Historically, the dominant Han culture has looked down upon the nation's ethnic minorities, who were forced to live on China's harshest lands; relations have been so strained that until recently, the ideograms that represented the names of these minorities contained the symbol for "dog."

HEALTH

In 2004 life expectancy at birth was nearly 72 years. The infant mortality rate was just over 25 per 1,000 live births, though the rate is much higher in the poorer western part of the country than it is in the cities. An indication of the value placed on male children is suggested by the fact that infant mortality rate for males is just under 22, while that for females is just over 29; in most nations of the world, the infant mortality rate for males is higher than it is for females. In the cities, government-run Western medicine is available, but the vast majority of Chinese continue to rely on traditional medical practices. These are based on the belief that health problems are the result of an imbalance between yin and yang, which make up the body's life force, called *qi*. Many people use such substances as rhinoceros horns, herbs, powdered deer antlers, and snake gallbladders to correct an imbalance in the *qi*. Others rely on acupuncture. Although the nation spends only about \$49 per capita per year on health care, as of 2001, health conditions in China are relatively good, with low incidences of such diseases as malaria, cholera, and typhus as well as intestinal diseases caused by parasites.

FOOD AND NUTRITION

In most of China rice is the dietary staple, although in the drier north and west wheat is the primary staple. Supplementing these staples are fish and seafood, eggs, vegetables, and pork, although meat tends to be expensive and is not used extensively. The Chinese food with which people throughout the world are familiar is principally Han food, and its varieties reflect the preferences of four regions. One is the region around Beijing, where duck, sweet-and-sour dishes, and bird's nest soup are popular. Two others are the Hunan and Sichuan provinces, where food tends to be spicy and shrimp is a popular dish. Finally, the people of the southern regions of Canton and Chao-

zhou prefer lighter food, including vegetables, seafood, fried rice, steamed fish, and roast pork and chicken.

Nutritional standards are high in the cities, where there are few underweight children and obesity is actually becoming more of a problem. The poorer rural regions accounted for most of the 10 percent of children under age five who were underweight and the 14 percent who were stunted in 1995–2003. An ongoing problem is vitamin D deficiency; the United Nations Children's Fund estimates that over 25 percent of the nation's children have some degree of rickets.

Food and Nutrition

Undernourished % of total population: 11.0
 Daily Available Calories per capita kcal: 3,030
 Amount of Cereal Available per person per year kg: 166.6
 Amount of Fruits and Vegetables Available per person per year kg: 301.4

STATUS OF WOMEN

Violence against women is a problem in China because there is no national spousal abuse law. Anecdotal evidence suggests that domestic abuse is on the rise, particularly in urban areas. Informal surveys indicate that 20 percent of wives may have been beaten by their husbands. Actual figures may be higher because many cases go unreported.

Trafficking in women and the kidnapping of women for sale into prostitution are other major problems. According to reliable reports there are up to 10 million commercial sex workers in the country. There are 70,000 prostitutes in Beijing alone working in saunas, clubs, and hostess bars, and over 80 percent of them have hepatitis and AIDS. Xinhua News Agency reports that one in five massage parlors is involved in prostitution. In 1998 the Convention on the Elimination of Discrimination against Women highlighted the dangers women faced through forced prostitution. Actions to crack down on this lucrative business, involving organized crime, local officials, police, and the military, have been largely ineffective.

A third problem is a high female suicide rate. Some 56 percent of the world's female suicides occur in China, at the rate of 500 per day. This rate is five times the global average.

The Chinese government has made gender equality a policy objective since 1949. The constitution states that "women enjoy equal rights with men in all walks of life." The 1992 Law on the Protection of Women's Rights and Interests provides for equality in ownership of property, inheritance rights, and access to education. However, since 1990 the pursuit of gender equality has become a low priority with the government, which has concentrated on political stability and economic reform. The law notwithstanding, discrimination, sexual harassment, and wage discrepancies are significant problems. Although

women are aware of their rights, they are encountering serious obstacles in getting the rights enforced. There are no statutes that outlaw sexual harassment in the workplace, and the problem remains unaddressed in the legal system.

Women have borne the brunt of the workforce reduction in state enterprises. About 70 to 80 percent of workers displaced as a result of downsizing have been women, although they made up only 45 percent of the workforce in 1999. Women between the ages of 35 and 50 are the most affected and the least likely to be rehired. Gender-discriminatory hiring practices have been on the rise as unemployment has risen. Many employers prefer to hire men to avoid the expense of maternity leave and child care. On average, Chinese women earn between 80 and 90 percent of the salaries of their male counterparts, but they generally work in lower-skilled and lower-paid jobs. The gap between the educational level of men and women is narrowing. At the end of 1997 women made up 36 percent of all university students and 30 percent of all graduate students. In some departments women are beginning to outnumber men. Women make up 70 percent of the 145 million illiterate Chinese. About 13 percent of all Chinese women are illiterate, as compared to 5 percent of men.

WORK

As of 2003 the labor force in China was 778 million strong. As of 2001, 50 percent were employed in agriculture—although this 50 percent, which continues to use centuries-old farming practices, contributed only about 15 percent to the nation's GDP—22 percent in industry, and 28 percent in services. The official unemployment rate in 2003 was just over 10 percent, but this measures urban unemployment and does not accurately reflect unemployment and underemployment in rural areas. Primary agricultural products include rice, wheat, potatoes, sorghum, peanuts, tea, millet, barley, cotton, oilseed, pork, and fish. Primary industrial products include iron, steel, coal, machines, armaments, textiles, clothing, petroleum, cement, chemical fertilizers, footwear, toys, processed food, automobiles, consumer electronics, and telecommunications equipment. While the real growth rate in China in 2003 was officially estimated at just over 9 percent overall, industrial growth that same year was over 30 percent.

EDUCATION

Three articles in the constitution of 1982 relate to education. Article 19 places on the state the responsibility of “developing socialist educational undertakings in order to raise the scientific cultural level of the whole nation.” Article 46 states that citizens “have the duty as well as the right to receive education.” Article 4 makes Putonghua, or Mandarin, the national language but guarantees minorities the right to employ their own languages under certain conditions.

Compulsory education covers in principle all of primary school, but in rural areas the goal of universal primary education has yet to be attained; as of 2001 about 95 percent of children were enrolled in primary school. Each academic year is divided into two parts: spring and fall semesters. Classes are held six days a week, with half a day on Saturday, nine months per year.

Since the end of the Cultural Revolution, private schools have reappeared, but they still maintain low profiles. Most of them teach foreign languages, but a few prepare students for examinations at various levels. They are funded mostly by private individuals, particularly overseas Chinese.

Kindergartens are available for children aged three to six. They function under the auspices of government authorities, army units, factories, agricultural production units, neighborhood communities, communes, or production brigades. Kindergartens are available from four to eight or 10 hours per day.

Primary education expanded rapidly after 1949. The net enrollment rate is close to those of advanced countries and 30 percent above the average rate for the developing world. Generally, primary schools are easily accessible, even in rural areas. The average commune has 15 primary schools, usually within walking distance. Access is difficult only in the remote areas of the north and west, which are partially inhabited by nomads. A common primary-school curriculum has been developed, but local authorities may adjust the basic curriculum somewhat to meet their specific needs.

Students are expected to meet a portion of the costs for their schooling. Tuition fees are modest, but supplementary fees for books, transportation, food, and heating are collected. In fact, it is suggested that modest fees encourage parents to treat schooling seriously and to be certain that their children attend.

Secondary education has developed even more rapidly than primary education. The secondary enrollment rate has risen from 2 percent in 1949 to the current 37 percent. The rate compares favorably with the 26 percent enrollment ratio for 92 other developing countries but is lower than the 60 percent in China's East Asian neighbors or the 86 percent in countries belonging to the Organization for Economic Cooperation and Development (OECD). Secondary education is biased toward general training. Less than 5 percent of the schools are vocational or technical, and they enroll 12 percent of the secondary-school population. The neglect of technical and vocational education is a fallout of the Cultural Revolution, during which 62,000 vocational and technical schools were dismantled.

China has 633 universities and other institutions of higher learning; the Ministry of Education directly manages 35, municipalities and provinces run 392, and 12 ministries run 206. Responsibility for research is shared between the Ministry of Education and the Chinese Academy of Sciences. Only 24 percent of college enrollees are women, a lower proportion than the 33 percent in the rest of the developing world. In technical fields the more prestigious institutions play critical roles. They enroll 45 percent and 60 percent of students in science and engineering, respectively, and graduate 56 percent and 70 percent of all scientists and engineers, respectively.

Graduate education began only in the 1950s and was one of the casualties of the Cultural Revolution. Graduate institutions reopened in 1978, but the curriculum pattern was not fully defined for many years. Enrollment in graduate courses is low not only in agriculture but also in finance, law, business, trade, economics, and administration. Overall enrollment in higher education is very low by international standards.

The key universities recruit their students nationwide. Many other universities also recruit from outside their provinces. Until recently universities provided boarding for all students. Some day students have been accepted in the past decade, but the percentage is low and restricted by the lack of transportation in many university towns.

SCIENCE AND TECHNOLOGY

The world owes a number of scientific and technological innovations to China, including the development of the seismoscope, the mechanical clock, the compass, gunpowder, paper, woodblock printing, and movable type. In modern times Chinese science has fallen behind, though by the end of the 20th century schools and colleges were placing greater emphasis on science in an effort to catch up. Much stress is placed on practical projects, such as the development of a high-yield hybrid rice. Other recent developments include supercomputers, satellite technology, and nuclear weaponry.

MEDIA

The gap between law and practice is nowhere wider than in relation to the freedom of communication. Prohibition in the constitutional preamble of criticism of the CCP or socialism takes precedence over the clause in the same constitution providing for the freedoms of speech and press. As a result of this contradiction, official policy is punctuated by periodical campaigns against so-called press excesses. In such a climate, press freedom has not been able to take root. The bolder editors and authors who cross the bounds of officially permitted criticism are labeled as bourgeois and expelled from the party or jailed. Foreign periodicals are not available in newsstands, though they are available to subscribers in educational institutions. Coverage of foreign news in the open media is quite extensive and professional. Chinese citizens may freely listen to foreign broadcasts and receive Internet communication—the number of Internet users in 2004 was officially estimated at 94 million—and millions turn to the Voice of America and even Christian shortwave stations to learn or brush up on English. Here, again, official policy appears erratic; foreign correspondents are invited at times and ordered out at other times.

CULTURE

Chinese culture, particularly Han culture, extends back continuously for over 3,000 years. The quantity of Chinese literary output—including novels, plays, poetry, religious works, history, philosophy, and short stories—has been immense, and only a small fraction has been translated into other languages. One of the most famous works of Chinese literature is Confucius's *Analects*, written in the fifth century B.C.E. The earliest anthology of poetry, *The Book of Songs*, dates to 600 B.C.E. Major poets from the Tang dynasty (618–907) included Du Fu and Li Bai. The Ming dynasty (1368–1644) saw the production of major prose epics, including *The Water Margin*, *Golden Lotus*, *Pilgrim to the West*, and *Dream of the Red Chamber*. In the 20th century literature came to be seen as a way to disseminate the state's Communist ideology. One of the best-known contemporary writers is Zhang Xianliang, whose *Blood Red Dusk* examines events during the Cultural Revolution.

The graphic arts include landscape paintings, which are often accompanied by text such as a poem, dedication, or commentary. China also has a long tradition of sculpture and pottery, including work in ceramics and bronze. Calligraphic writing is a highly developed art form. In the performance arts, opera is prevalent, with at least 300 different forms from the nation's different geographical regions. These performances are highly stylized, with conventional characters and archaic language but also with intricate costuming and makeup and acrobatic stage movements.

FOLKLORE AND MYTHOLOGY

Each ethnic group in China has its own tradition of folklore and mythology. These traditions have been handed down orally, although the Han preserved their myths in

writing. The number of stories is legion, but a few are prominent, including the stories of Pangu, a heroic figure who gave birth to the world, and Yu the Great, who harnessed the rivers and made the land productive. A major myth has to do with the creation of the world, especially the principles of yin and yang. According to this tradition, the gods were living in harmony until they quarreled and flooded the earth. The only survivors were a brother and sister in a huge pumpkin floating on the water. They were faced with a quandary: they were the only survivors who could repopulate the world, but if they did so, they would violate the taboo against incest. To learn the will of heaven, the brother devised a test: he and his sister would roll a stone down a hill. If they rolled down separate paths, that meant the gods wanted them to respect the incest taboo; if they stopped rolling one on top of the other, the gods wanted them to marry. The brother, though, hid two stones, one atop the other, and after he and his sister rolled their stones down the hill, the brother took his sister to the stones he had hidden, and the two married. After the sister gave birth to a formless creature, the brother cut it into 12 pieces and scattered them in different directions, giving birth to the 12 peoples of ancient China. This myth originated with the Miao sometime around 1000 B.C.E. In about 200 C.E., the Han recorded the myth, but with changes. The brother and sister were named Fuxi and Nuwa, and each was given a human body but the tail of a reptile. At this point they came to be regarded as symbols of yin, the male principle, and yang, the female principle.

ENTERTAINMENT AND RECREATION

Among Chinese who do not have access to modern technology, storytelling is a popular form of entertainment. In the cities younger people enjoy dancing, rock music, and karaoke. The older generation attends musical and theatrical performances and plays games such as mah-jongg and cards. A five-day workweek was introduced in 1995, giving people more leisure time to travel. Television watching has grown in popularity, and a growing number of people have videocassette recorders, enabling them to watch movies. While movie theaters are a source of entertainment, there are not many and they are small, so only a small percentage of Chinese are able to enjoy them.

ETIQUETTE

The Chinese place great emphasis on *guanxi*, or strong interpersonal relations with family, friends, schoolmates, and business associates. Much deference and respect are accorded those of higher status, including older people.

Privacy is limited, a situation worsened by crowded living conditions, and emphasis is placed on the welfare of the group rather than that of the individual. The Chinese place great stress on saving face and avoiding confrontation. It is regarded as ill mannered to refuse a request, and not performing a duty brings shame not only to the individual but to his or her family and community as well.

FAMILY LIFE

Traditionally, marriages were arranged by families, and even today many people continue to use the services of matchmakers, as well as networks of friends and family, to find mates. In large part because of housing shortages, it is common to find three or more generations living in the same home. When a woman marries, she often leaves her family to become part of her husband's family in a household run by the husband's mother. Many adult children continue to live with their parents, again in part because of housing shortages but also because of a tradition of caring for parents in their old age.

Perhaps the most noteworthy feature of Chinese family life is the "one child per family" policy, instituted to limit population growth. (Some of the nation's ethnic groups are exempt from the policy.) This policy has been largely successful, especially in urban areas, though it often leads to forced abortions and even infanticide. Because male children are more highly valued, many female infants are given up for adoption internationally.

PERSONAL APPEARANCE

For many years, the plain, drab "Mao suit" was worn by nearly everyone throughout the country, and many peasants continue to wear this style of clothing. Today, clothing is more varied and colorful, especially in the warmer southern parts of the country, where people greatly favor modern, stylish Western dress from brand-name clothing makers.

SPORTS

Traditionally, sports were conducted primarily in connection with festivals, but in recent decades the Chinese government has supported athletes who compete internationally, especially in the Olympics. Chinese Olympians have done particularly well in swimming, diving, gymnastics, volleyball, and the nation's traditional sport, table tennis, and in the 2004 Summer Olympics in Athens, Chinese athletes won 63 medals, including 32 gold medals, ranking second in both respects among all nations. The 2008 Summer Olympics will be held in Beijing.

CHRONOLOGY

- 1945** Japan surrenders, bringing World War II to a close.
- 1946** CCP-GMD representatives meet with Marshall mission; CCP-GMD civil war resumes.
- 1947** Marshall mission ends.
- 1948** CCP forces defeat GMD in many areas.
- 1949** CCP forces seize most major cities; People's Republic of China is established in Beijing; Chiang Kai-shek flees to Taiwan along with remaining GMD forces and sets up Republic of China, with seat at Taipei.
- 1950** North Korea invades South Korea; Chinese "people's volunteers" enter the fighting and push UN troops back into South Korea. China invades Xizang (Tibet).
- 1951** China announces completion of the occupation of Xizang.
- 1952** Land reforms conclude. The Three Anti and the Five Anti campaigns begin.
- 1953** Korean armistice is signed.
- 1954** Soviet-style collective farms are established.
- 1957** The Hundred Flowers campaign is launched.
- 1958** Mao launches Great Leap Forward campaign. Communes are established. PRC forces shell Quemoy and Matsu. Tibetan revolt against PRC rule is crushed, and Dalai Lama flees to India.
- 1960** PRC breaks with the Soviet Union; Soviet and Chinese troops clash on the Xinjiang border.
- 1962** Sino-Indian War erupts over Chinese occupation of areas in northern Kashmir.
- 1964** China conducts its first atomic test.
- 1965** Cultural Revolution begins; many Chinese leaders, including Liu Shaoqi, Zhu De, and Deng Xiaoping, are disgraced.
- 1967** China explodes its first hydrogen bomb.
- 1969** Chinese and Soviet troops clash on the Wusuli Jiang border.
- 1971** PRC is seated in the Chinese seat at the United Nations, and the Republic of China is expelled. Vice Chairman Lin Biao dies under mysterious circumstances in a plane crash, following an abortive coup attempt.
- 1972** President Richard Nixon visits Beijing.
- 1975** Chiang Kai-shek dies.
- 1976** Zhou Enlai dies; Mao Zedong dies. The Gang of Four is arrested. Tangshan is devastated by an earthquake. Hua Guofeng is sworn in as premier.
- 1978** China ends aid to Vietnam.
- 1979** United States recognizes PRC and breaks relations with Republic of China (Taiwan); China invades Vietnam in a brief war.

- 1981** The Gang of Four is convicted.
- 1982** Deng Xiaoping emerges as paramount ruler.
- 1983** China adopts new economic policy and strengthens relations with the West.
- 1984** U.S. President Reagan visits China.
Sino-British agreement is signed on reversion of Hong Kong to China in 1997.
- 1986** China launches "anticorruption" campaign.
- 1987** Hu Yaobang resigns as CCP general secretary and is replaced by Zhao Ziyang.
At the 13th National Congress reformists led by Zhao gain the upper hand, as only 90 of the 209 members of the outgoing Central Committee are reelected; Deng retires from the Central Committee but retains influential post of chairman of the Military Affairs Committee; Li Peng is named acting premier in place of Zhao Ziyang.
- 1988** Violent anti-Chinese demonstrations in Xizang are suppressed by force.
- 1989** Soviet president Gorbachev visits Beijing.
Prodemocracy demonstrators, numbering several thousands, gather in Tiananmen Square in Beijing and press for reforms; after initial vacillation, regime sends in the army and crushes the protest; China faces mounting international criticism for using force to quell the prodemocracy movement; antireform faction within the Politburo and the Central Committee gains strength; Zhao Ziyang is ousted and replaced by Jiang Zemin as party general secretary.
Deng resigns as chairman of the Military Affairs Committee.
- 1990** Martial law is lifted.
Dissident scientist Fang Lizhui is allowed into exile in the United Kingdom.
- 1991** China and Russia reach agreement over border dispute.
- 1996** Reunification of Taiwan is declared a priority.
- 1997** Deng Xiaoping dies at age 92.
Collective leadership assumes power headed by Jiang Zemin as president.
Hong Kong is returned to Chinese sovereignty.
President Clinton visits China and Jiang Zemin visits the United States.
- 1998** Macau is returned to China.
- 1999** Chinese attack U.S. embassy in Beijing in retaliation for bombing of Chinese embassy in Belgrade.
- 2001** U.S. Navy reconnaissance plane collides with Chinese fighter jet sent to intercept it, forcing emergency landing on Hainan Island.
China becomes a member of the World Trade Organization.
- 2002** Hu Jintao is named head of the Communist Party.
- 2003** Hu Jintao is elected president by the National People's Congress.
An outbreak of SARS leads to quarantine measures and travel restrictions.
China and India reach an agreement over the status of Tibet and sign a trade agreement.
China launches its first manned spacecraft.
- 2004** China signs a landmark trade agreement with 10 Asian countries, a move that could unite 25 percent of the world's population in a free-trade zone.
- 2005** For the first time since 1949 the leaders of Taiwan's National Party and China's Communist Party meet.

COLOMBIA

Basic Fact Sheet

OFFICIAL NAME

Republic of Colombia (República de Colombia)

ABBREVIATION

CO

CAPITAL

Bogotá

HEAD OF STATE & HEAD OF GOVERNMENT

President Álvaro Uribe Vélez (from 2002)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

42,954,279 (2005)

AREA

1,138,910 sq km (439,736 sq mi)

MAJOR ETHNIC GROUPS

Mestizos, whites, mulattoes

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Peso

NATIONAL FLAG

Three horizontal stripes, with the upper yellow stripe twice as wide as each of the lower blue and red stripes

NATIONAL EMBLEM

A silver-gray condor of the Andes holds in its golden beak a green laurel wreath from which a gold-rimmed shield is surrounded. The shield contains three panels, the first showing an open yellow pomegranate, with two golden cornucopias on either side, the second the red Phrygian cap of liberty, and the third two white-sailed schooners separated by a narrow green strip of land. Beneath the talons of the eagle is a gold ribbon bearing the national motto: *Libertad y orden* (Liberty and order). The shield is flanked by two flags on either side.

NATIONAL ANTHEM

“O Unwithering Glory, Immortal Joy”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), July 20 (Independence Day), August 7 (Battle of Boyaca), October 12 (Columbus Day), November 11 (Independence of Cartagena Day), all major Christian festivals, including Epiphany, St. Joseph’s Day, Day of Sts. Peter and Paul, Ascension, All Saints’ Day, Immaculate Conception, Holy Thursday, Good Friday, Easter, Assumption, Sacred Heart, Corpus Christi, and Christmas

DATE OF INDEPENDENCE

July 20, 1810

DATE OF CONSTITUTION

July 5, 1991

GEOGRAPHICAL FEATURES

Located on the northwest corner of the South American continent, Colombia has a total area of 1,138,910 sq km (439,736 sq mi), extending 1,700 km (1,056 mi) north-northwest to south-southeast and 1,210 km (752 mi) north-northeast to south-southwest. The land area includes the islands of San Andrés and Providencia in the Caribbean Sea and the islands of Malpelo, Gorgona, and Gorgonilla in the Pacific Ocean. The country fronts both

those bodies of water, with a 1,760 km (1,094 mi) Caribbean coastline and a 1,448 km (900 mi) Pacific coastline.

Colombia shares its total international boundary of 6,004 km (3,731 mi) with five countries: Venezuela (2,050 km; 1,271 mi), Brazil (1,643 km; 1,019 mi), Peru (1,496 km; 930 mi), Ecuador (590 km; 366 mi), and Panama (225 km; 140 mi). Colombia is involved in a maritime boundary dispute with Venezuela in the Gulf of Venezuela and a territorial dispute with Nicaragua over the Colombian islands of Providencia and San Andrés. Colombia also

Colombia

has a territorial dispute with Honduras over cays in the San Andrés and Providencia archipelago.

The capital of Colombia is Santa Fe de Bogotá; Bogotá is one of the most spectacular cities in South America, entirely enclosed by lofty mountain ranges. It occupies about 77 sq km (30 sq mi) in the autonomous Special District, established in 1955. There are some two dozen other cities with populations of more than 200,000.

Topographically, Colombia is divided into four regions: the central highlands, the Atlantic lowlands, the Pacific lowlands, and eastern Colombia, to the east of the Andes.

Near the Ecuadorean border the Andes Mountains fan out into three distinct ranges, known as cordilleras, which run through the country from the south on a northeasterly axis. The three principal chains are the Cordillera Occidental, the Cordillera Central, and the Cordillera Oriental. The western and central cordilleras run parallel with the Pacific coast. The highest peak of the central system is Nevado del Huila (5,750 m; 18,865 ft). The third chain runs northeastward, bifurcating into an eastern branch, the Sierra de los Andes, and a northern branch, the Sierra Perija, which terminates south of the Guajira Peninsula. The highest point of this range, Sierra Nevada de Cucuy, rises to 5,580 m (18,307 ft) above sea level. This cordillera also contains the Sabana de Bogotá, the massive plateau on which the capital is built. The Atlantic lowlands consist of the plains north of the highlands and is connected with the highlands through the Cauca and Magdalena river valleys. The region includes the semiarid Guajira Peninsula and the Sierra Nevada de Santa Marta, an isolated mountain system with peaks over 5,700 m (18,700 ft). The Pacific lowlands consist of jungles and swamps and the low Serranía de Baudó, which is geologically separate from the Andean chain. Adjoining the Panama frontier is the Atrato Swamp, a bottomless muck that has defied engineers trying to build the Pan-American Highway across it. The sparsely populated eastern three-fifths of the country comprise vast llanos, or plains, in the north and *selvas*, or jungle forests, in the south.

The river system includes the Magdalena, with a length of 1,549 km (963 mi), of which 1,300 km (808 mi) are navigable; the Cauca, with a length of 1,015 km (631 mi), of which 249 km (155 mi) are navigable; the Caquetá, a tributary of the Amazon with a length of 2,200 km (1,367 mi); the Meta, a tributary of the Orinoco with a length of 1,000 km (621 mi); and the Putumayo, a tributary of the Amazon with a length of 1,800 km (1,119 mi). Shorter rivers include the Guaviare, Baudó, Atrato, San Juan, and Patía. There are a number of lakes in the Atlantic lowlands, including Ciénaga de Zapotosa, Ciénaga Sapayan, Ciénaga de Oro, Ciénaga de Tadia, and Ciénaga Chilloa.

CLIMATE AND WEATHER

Colombia is located within a few degrees of the equator, but temperatures and climatic variations are governed by altitude. There are four main seasons: two wet seasons lasting from March to May and from September to November and two dry seasons lasting from December to February and from June to August, except in the northern plains where there is one long wet season from May through October.

The country is divided climatically into three zones. The hot zone (*tierra caliente*) constituting 90 percent of the land area, is generally below 915 m (3,000 ft). Here the mean annual temperature is 23.8°C (75°F) to 26.6°C (80°F), the mean maximum is 37.7°C (100°F), and the minimum is 18°C (65°F).

The temperate zone (*tierra templada*) has elevations between 915 and 1,980 m (3,000 and 6,500 ft), covering about 8 percent of the country, particularly the intermontane valleys. Here the mean annual temperature varies between 18°C (65°F) and 23.9°C (75°F).

The cool zone (*tierra fría*) comprises regions over 1,980 m (6,500 ft), particularly the plateaus and terraces of the Colombian Andes. Here the temperature varies between 10°C and 19°C (50°F and 66°F). The annual mean temperature at the capital, Bogotá, with an elevation of 2,598 m (8,524 ft), is 13.8°C (57°F).

Climate and Weather

Mean Temperature
 Hot Zone: 75°F to 80°F
 Temperate Zone: 65°F to 75°F
 Cool Zone: 55°F to 1.4°F
 Average Rainfall: 14 in to 35 in

FLORA AND FAUNA

The indigenous flora of Colombia are highly varied, depending on topography. Along the Caribbean coast, mangroves and coconut palms grow in abundance. Forested regions, constituting about half the country, contain such trees as balsam, cedar, pine, walnut, oak, mahogany, and *lignum vitae*, as well as tropical plants such as castor and tonka beans, ipecac, ginger, sarsaparilla, vanilla, sapodilla, and rubber. The savannas are marked by low-lying grasslands and shrublands and are home to spider monkeys, numerous species of birds, and giant anacondas. Common mammals in Colombia include monkeys of various species, red deer, jaguars, pumas, armadillos, sloths, anteaters, peccaries, and tapirs. Colombia is rich in bird species, including hummingbirds, cranes, storks, cockatoos, toucans, parrots, vultures, and condors. It has more species of birds (1,776) and amphibians (620) than any other country on earth.

ETHNIC COMPOSITION

Colombia is one of the most Spanish of all South American nations, although persons of pure Spanish descent constitute only about 20 percent of the population. The proportion of white ancestry is an important measure of the status of mixed groups such as mestizos, who constitute more than half the population, and mulattoes, who constitute 14 percent. Blacks make up 4 percent, Amerindians 1 percent, and *zambos*, or persons of mixed black and Indian ancestry, 3 percent. Perceptions of ethnicity are determined not only by color but also by geography. Persons residing in Popayán and Antioquía are considered to have white backgrounds, while Chocoano usually connotes black ancestry because of the black preponderance in Chocó. The importance of color in Colombian society is reflected in the complex racial nomenclature and the number of words used to classify and describe racial groups.

Spanish values dominate Colombian society, and the ideal for the nonwhite groups is to approximate and adopt all possible Spanish traits. Because of their longer exposure to Spanish culture, blacks have been more successfully Hispanicized than Amerindians. Racial minorities have remained without sustaining any shared identity or cultural cohesion. Economic disparities between the wealthy and upper-class whites and the poorer blacks and Amerindians have also tended to institutionalize the notion of white superiority. Perhaps because of this reason, mestizos, who exhibit more white characteristics than mulattoes, have found it easier to achieve upward mobility. There are an estimated 60 Amerindian tribes scattered throughout the country. Some of these tribes have remained very primitive nomadic groups, although all tribes have had some contact with outsiders. Indian affairs are administered by the National Indian Institute.

Ethnic minorities include Jews, Germans, Lebanese, Italians, and North Americans.

LANGUAGES

The official language is Spanish; Colombian Spanish is generally considered to be the purest in Latin America. The Colombian Language Academy has maintained close ties with its counterpart in Spain. There are, however, a number of words and expressions not found elsewhere that give Colombian Spanish a distinctive character. Co-

Colombia's diversity is reflected in the fact that some regions use *tú* as the familiar form of address while others use *vos*. Most of the innumerable Indian dialects are dying out, although those such as Aymara, Arawak, Chilacha, Carib, Quechua, Tupi-Guaraní, and Yurumangi still survive. Missionary work by the Spanish colonizers guaranteed that, unlike in Peru or Bolivia, all but the most isolated highlands or forest populations of Native Americans came to speak Spanish as their primary tongue.

RELIGIONS

Colombia is considered one of the most strongly Roman Catholic countries in Latin America, not only in the proportion of its population claiming adherence to the faith but also in terms of the depth of conviction of common believers and the influence of the hierarchy in social and political affairs. More than 92 percent of Colombians have been baptized in the church, and most Colombians regularly attend Mass, observe holy days, and receive sacraments. The ratio of priests to believers is also one of the highest in Latin America.

The relations between church and state are governed by the Concordat of 1973, which replaced the Concordat of 1887. Unlike the 1887 concordat, the 1973 concordat did not define Roman Catholicism as the official religion but as "the religion of the great majority of the Colombians." It recognized the pope's right to name bishops but removed tax-exempt status for church properties. The latter concordat also altered the church's role in three major areas. The jurisdiction of the church over so-called mission territories with Indian populations was restricted, and educational and social services provided by the church were to be transferred to the state. Mandatory teaching of the catechism in schools and the ecclesiastical right to censor university texts were taken away, and the church was expected to conform to state regulations even in its own schools. Lastly, the right of Colombians to contract civil marriages was recognized.

The church's ecclesiastical organization reflects its strength and penetration. The primate is the archbishop of Bogotá, who is invariably a cardinal. He presides over eight archdioceses and 27 dioceses. The clergy number over 5,000, almost all of whom are native Colombians, serving 1,600 parishes and growing by 30 a year.

Religious minorities include 300,000 Protestants and 12,000 Jews. Protestant membership has grown since 1968, but evangelical churches have not gained the kind of firm foothold that they have in some other Latin American countries.

HISTORICAL BACKGROUND

There is great uncertainty as to when the first human settlement of South America took place; it was possibly more than 20,000 years ago. Two waves of Mesoamerican migration, crossing the Isthmus of Panama, occurred around 1500 B.C.E. and 500 B.C.E. The fourth century B.C.E. brought a further wave of migration: the Chibcha, or Muisca, from Central America, dispersing the Arawaks living along the Caribbean coast. Another tribe from the islands, the Caribs, mounted periodic raids on the Chibcha from the end of the first millennium C.E. onward, forcing them to resettle at higher elevations. At the time of Spanish exploration and conquest, the tribes with the most advanced and influential culture were the Chibcha and the Tairona.

Colombia, known as New Granada, was under Spanish rule from 1538, as a colony until 1717 and as a vice-royalty until 1819. It was part of the Republic of Gran Colombia until 1830, when Venezuela and Ecuador seceded from the united republic.

Colombia has a long liberal, democratic history centered on competition between the Liberal and Conservative parties. The Liberals have been associated with anticlericalism, federalism, and free trade, while the Conservatives have advocated a strong central government, supported protectionism, and allied themselves with the Roman Catholic Church. Although some governments have been authoritarian, Colombia has experienced dictatorship only five times in its history: in 1830–31, 1854, 1884–94, 1904–09, and 1953–57.

Colombia's recent history has been marked by three key elements: the dominance of the two parties, political violence, and the National Front coalition. Disputes between the two parties have often engendered violence. The greatest bloodshed came in the War of a Thousand Days (1899–1902) and La Violencia (1948–58), in which 100,000 and between 100,000 and 200,000, respectively, died. Colombia is currently plagued by violence from several leftist guerrilla groups and by high levels of criminal violence involving both street criminals and drug lords.

In response to La Violencia and a period of dictatorship under Gustavo Rojas Pinilla from 1953–57, the two parties formed the National Front coalition, in which the Liberals and Conservatives alternated the presidency and evenly split the congressional seats and the bureaucracy for the 16 years from 1958 to 1974. Since the end of the National Front, the Liberal Party has dominated politics, capturing the presidency in 1974, 1978, 1986, 1990, and 1994. Conservatives regained the highest office in 1998.

Since the late 1970s Colombia has been a battleground between the government and left-wing guerrillas. The guerrillas have failed to dislodge the government but have caused major national disruption, as has the growing power of the drug cartels and the death squads formed to protect the cartels. During the late 1980s

Religious Affiliations

Roman Catholic	38,659,000
Other	4,295,000

several prominent politicians were kidnapped or assassinated by drug dealers in efforts to stop the government's tough antidrug campaign. In 1989, following the assassination of Liberal Party leader Carlos Galán, President Virgilio Barco Vargas declared a "war" against the drug cartels. One of his most controversial measures was to extradite drug traffickers wanted in the United States. Drug-related violence increased during the 1989–90 presidential campaign, and three presidential candidates were murdered.

Under the administration of César Gaviria Trujillo (1990–94), the country developed a new constitution to replace the one that had been serving, with many amendments, since 1886. This, it was somewhat vainly hoped, would diversify political participation away from Liberal/Conservative dominance. The government succeeded in getting several guerrilla groups to lay down arms and form parties, but the two largest, the Colombian Revolutionary Armed Forces (FARC) and the National Liberation Army (ELN), remained in the bush. Colombia's political crisis and instability deepened when 1994's victorious presidential candidate, Ernesto Samper Pizano of the Liberals, was accused of taking cash from the Cali drug cartel and other illegitimate sources to finance his campaign. Despite many calls for his resignation at home and abroad, he served out the duration of his term. During this term the national economy took a steep turn for the worse, the United States suspended aid and cooperation because of the accusations against Samper, and guerrilla activity increased to the point where many feared for the survival of the state. Right-wing paramilitaries sprang up to combat the guerrillas on their own terms—which all too frequently involved vigilante justice and other human rights abuses—often tacitly working with units of the army.

When Andrés Pastrana Arango came to power in 1998 as the first Conservative president since 1986, he promised a major peace overture, controversially raising the stakes by effectively ceding a tract of land in southern Colombia about the size of El Salvador to the FARC, declaring it a demilitarized zone. The guerrillas, however, were reluctant to be drawn into formal talks. The ELN and the paramilitaries responded by demanding zones of their own and places at the peace conference, but FARC leaders regarded the idea of the paramilitary chief Carlos Castaño sitting as an equal at the negotiating table as a nonstarter. In 2000 Pastrana succeeded in getting his \$7.5 billion "Plan Colombia" approved; this included a considerable boost in military capacities, as helped by U.S. and European aid, as well as rural development schemes to try to wean peasants away from growing coca. The ultimate aim was to force the guerrillas into negotiations. But the FARC responded by warning of an escalation in violence in the far south and by mounting cross-border raids, to the consternation of Ecuador, Brazil, and Ven-

ezuela. From 2000 through 2002 peace talks were on again, off again, and they finally collapsed when Pastrana accused the rebels of hijacking an airplane and launched attacks against rebels in the south. In May 2002 Alvaro Uribe won a first-round presidential victory, but his inauguration was marked by FARC violence, and a state of emergency was declared. Steps toward peace were taken in 2003, when members of the right-wing guerrilla group United Self-Defense Forces of Colombia (AUC) disarmed, and in 2004 the AUC and the government began peace talks.

LIST OF MODERN RULERS

1958–62	Alberto Lleras Camargo
1962–66	Guillermo León Valencia
1966–70	Carlos Lleras Restrepo
1970–74	Misael Pastrana Borrero
1974–78	Alfonso López Michelsen
1978–82	Julio César Turbay Ayala
1982–86	Belisario Betancur Cuartas
1986–90	Virgilio Barco Vargas
1990–94	César Gaviria Trujillo
1994–98	Ernesto Samper Pizano
1998–2002	Andrés Pastrana Arango
2002–	Álvaro Uribe Vélez

CONSTITUTION

In spite of its internal instability, Colombia has a firm tradition of constitutional democracy and has been ruled by elected governments for all but four years (1953–57) of the present century. The nation had 10 constitutions from 1811 until 1886. The constitution of 1886 was amended many times (in 1910, 1936, 1945, 1957, 1959, and 1968) before giving way to a completely new constitution in 1991.

The new constitution halted the centralizing tendencies produced by the accretion of amendments to the old constitution and attempted to break the dual-party stranglehold on politics. The idea was to open up the political process to new voices and tendencies and perhaps in this way marginalize the leftist guerrilla movements in the countryside and deny them popular legitimacy. This worked better in theory than in practice: the Liberals and Conservatives still dominate politics, and the guerrillas are in a stronger position than ever. Other provisions of the 1991 constitution limited the executive's use of emergency decrees, bolstered the rights of the individual, revamped the judicial system, liberalized criminal procedure, and pruned the legislature. The Chamber of Representatives was shrunk from 199 members to 161, with each department electing at least two representatives. The Senate went from 114 seats to 102, and senators now

have nationwide rather than departmental constituencies. Up to five additional seats in the lower house could be awarded to ethnic minorities, and indigenous peoples soon after seated their first representatives. The changes to the justice system most notably shifted the conduct of trials from a system based on the Napoleonic Code to something more closely resembling U.S. practice and set up a constitutional court for the first time.

Executive power is vested in the president of the republic, who is elected by popular suffrage for a four-year term. He is constitutionally prohibited from seeking reelection for a consecutive term. In addition, the president is the commander in chief of the armed forces and the head of the national police. The country has no vice president, and currently the rules of succession are unclear.

Suffrage is universal, and the voting age was reduced from 21 to 18 in 1977. Women were enfranchised in 1957. There are strict residency requirements for voter registration. Elections are held in the springs of even-numbered years, with municipal and departmental assembly elections alternating with presidential and congressional elections. Voters vote for party lists rather than for individual candidates. Electoral practices are regulated by the Electoral Guarantees Court. Despite the relatively free character of the elections, voter abstention is widespread (up to 70 percent in the early 1990s, as much because of political violence as because of voter apathy).

PARLIAMENT

The Congress (Congreso) is a bicameral legislature consisting of a Senate and a Chamber of Representatives, each elected for four-year terms coinciding with the presidential term. Members of Congress are elected on a proportional basis, with every department guaranteed at least two seats in each house. Each house also makes special provision for members appointed from minority groups; the Senate's elected membership of 100 is joined by two members of the indigenous community, and the Chamber's membership, allowing for up to five such appointees, currently numbers 166, of which two are indigenous and two are from other recognized minorities.

Bills are introduced in either chamber by congressmen or by ministers. Most legislation is referred to one of eight standing committees whose approval is necessary for further consideration. Party discipline is strict in both houses, and members tend to vote in blocs. Among the functions of Congress are the election of the presidential designate, the election of the members of the Supreme Court, and the adoption of amendments to the constitution. Among the powers specifically granted to the Senate are the trial of officials impeached by the Chamber of Representatives and the authorization to declare war. The Chamber elects the comptroller general and originates all legislation dealing with taxation.

In the 2002 legislative election the Liberal Party lost its paper-thin majorities in both the Chamber of Representatives and the Senate.

POLITICAL PARTIES

Colombia has a two-party system dominated by the Liberal and Conservative parties, two of the oldest political parties in Latin America, dating back to 1848. Despite the intensity of party loyalties, few ideological differences exist between the two, particularly since the formation of the National Front power-sharing agreement in 1957. Both parties follow middle-of-the-road, free-market policies at home and pro-U.S. policies abroad, and both are strongly tied to the elite strata of society. If there is a difference, it is in the Liberal Party's orientation toward urban groups, the commercial and industrial sector, and moderate social and agrarian reform, versus the Conservative Party's orientation toward the rural aristocracy, the Roman Catholic Church, and the military. Even in internal organization the two parties are dominated by their leadership, whose policy decisions the rank and file have no choice but to follow. Ideological labels are also misleading in terms of the membership on whom the parties depend for their support. Labor is allied with the Conservative Party because of its ties with the church.

Since 1957, when the two parties agreed to share power, political dynamics have been characterized by the growth of factions within each party. Local organizations of both the Conservative and Liberal parties are headed by local party bosses, whose principal function is to trade votes as power brokers. The system perhaps reached a pinnacle of corruption under the presidency of Ernesto Samper, when not only the president but also a substantial percentage of the legislators were suspected of ties to drug traffickers.

The main challenge to the two-party system in the 1970s came from Alianza Nacional Popular (ANAPO, National Popular Alliance), founded in 1961 by the former dictator Rojas Pinilla. ANAPO's main planks were designed to appeal to the lower classes and constituted a blend of populism, Catholicism, and nationalism. ANAPO splintered and lost influence in the late 1970s, and no viable third party took its place in the 1980s, leading to increasing political expression through terrorism and violence. The 1991 constitution was designed in part to bring these groups into the mainstream and was briefly successful in doing so. The Democratic Alliance—April 19 Movement, formed by leaders of the former terrorist group M-19, headed by Antonio Navarro Wolff, won 10 percent of the votes in the 1991 legislative elections. However, the alliance could not build on that success and is today one of a number of fairly inconsequential minor parties.

The Patriotic Union, formed in May 1985, was purportedly the political arm of the Colombian Revolutionary Armed Forces, but it became increasingly detached from FARC, which continued fighting, and has suffered severe losses to its leadership through assassination. The Christian Democratic Party has been small and fairly weak for years.

A number of guerrilla groups have appeared on the scene since the 1970s, and two are significant enough to be reckoned with: the National Liberation Army (Ejército de Liberación Nacional, ELN) and the Colombian Revolutionary Armed Forces (Fuerzas Armadas Revolucionarias de Colombia, FARC). The paramilitary groups that have garnered increasing influence in reaction against the guerrillas have their own political face: the National Restoration Movement.

LOCAL GOVERNMENT

For purposes of local government Colombia is divided into 32 departments, the federal district of Bogotá, four *intendencias*, and five *comisarias*. The *intendencias* and *comisarias* are together known as national territories.

The departments have directly elected assemblies and, since the new constitution came into effect, elected governors as well. The territories are controlled directly by the central government. Although the territories make up 46 percent of the land area, they support only 1.9 percent of the population.

Departments are further subdivided into municipalities, which are either administrative and commercial centers or municipal seats known as *cabaceras* surrounded by rural localities known as *veredas*. The municipalities are administered by *alcaldes*, or mayors, who served as gubernatorial agents until March 1988, when the country's first mayoral elections were held. Municipalities are divided, though not officially, into zones or wards called *corregimientos*, each headed by an official known as a *corregidor*. The Indian reservations form a separate administrative category. They are administered by their own authorities, known as *cabildos*, which are popularly elected councils.

LEGAL SYSTEM

The legal system was historically based on Spanish law. It has undergone major modifications as a result of the 1991 constitution. Criminal trials have shifted the burden of proof from the accused to the accuser. Two new offices have been mandated: the general prosecutor, to investigate and pursue cases against suspected offenders through the courts, and the public defender, charged with monitoring the general prosecutor's work and safeguarding the human rights of ordinary citizens in the legal

process. The constitution also mandated the creation of a Judicial Council to review judges' professional qualifications and a Constitutional Court.

The Colombian judicature is headed by the Supreme Court. The 24 judges of the Supreme Court are elected by existing members of the court. The term of office is five years, and the magistrates may be reelected indefinitely until they attain the age of 65. The president of the court is elected by the members annually. The court enjoys broad powers, including the right to veto decrees and review legislation. Under a constitutional provision known as popular action, any citizen may file a case before the Supreme Court challenging the constitutionality of a law.

On the next lower level, the country is divided into 61 judicial districts, each of which has a superior court of three or more judges elected by members of the Supreme Court. These judges, in turn, elect judges of the lower courts, such as municipal courts and circuit courts. A parallel system of administrative courts headed by the Council of State also exists. There is one administrative court for each department charged with hearing complaints against the government.

The judiciary is overburdened, and there are backlogs of up to five years resulting from a morass of red tape. The judiciary is also the target of charges of political patronage, extortion, and corruption. Reforms to the civilian penal code in 1993 were thought to be heavily influenced by drug dealers, and a military penal code reform similarly fell short of international expectations that crimes involving human rights violations would be tried in civilian courts. Colombia is trying to do away with courts composed of "faceless" participants—judges, prosecutors, and witnesses whose identities are shielded—in security-related cases, which frequently violate due process. There is no capital punishment.

HUMAN RIGHTS

Colombia is statutorily free and yet everywhere in chains owing to the unrelenting violence of its society. A constitutionally authorized state of siege, which permits the curtailment of some civil and political liberties, was increasingly imposed during the 1970s and 1980s. The Colombian government justified this and other measures infringing on civil liberties as necessary to contain the terrorism of the drug cartels and the politically inspired violence that threatens the security of the state.

The human rights situation worsened during the late 1980s and 1990s as a result of the government's war against the drug cartels and the continuing guerrilla warfare against the central government. Many of the government's units charged with conducting operations against the drug cartels kidnapped, attacked, or murdered civilians whom they suspected of involvement in drugs.

Although torture was illegal under the 1981 penal code, suspects were indeed tortured or disappeared. The drug cartels carried on a systematic campaign of terror against the police, the press, and high government officials. The drug lords were also responsible for terrorist attacks against public facilities and a systematic campaign against judges and public prosecutors. Successive administrations broke the Medellín cartel and jailed the leaders of the Cali cartel; nonetheless, smaller narcotics traffickers continue to function, and the problem remains beyond the control of law enforcement or the military.

The government campaign against leftist guerrillas continued to yield frequent accusations of human rights abuses. Before President Pastrana offered the Colombian Revolutionary Armed Forces (FARC) a “sanctuary” in southern Colombia in an attempt to coax the group into negotiations, the military would raid suspected guerrilla positions without regard for civilian casualties. The guerrillas, in turn, would take hostages in an effort to collect “war taxes” and would murder civilians thought to be spies. Efforts to investigate paramilitary crimes were successful in only a few cases. Human Rights Watch has offered evidence that a number of military units have worked hand in glove with paramilitary forces.

Whereas under the old constitutional regime there was controversy over trying civilians accused of certain crimes in military courts, the present regime is feeling international pressure to try more cases involving human rights abuses by the military in civilian courts. Thus far the army and its intelligence service have largely managed to escape prosecution in the ordinary court system.

The Colombian Constitution specifically proscribes the death penalty. Indemnities have been awarded by the Council of State for wrongful death at the hands of government forces.

The rights of the public to a fair trial and due process are guaranteed by the constitution and generally honored in practice, with some glaring exceptions in the case of special courts in which “faceless” judicial officials have manipulated testimony and violated defendants’ rights. These courts were phased out in 1999.

Freedoms of the press, speech, religion, and assembly are constitutionally guaranteed and have been generally respected to the extent that the government is capable of guaranteeing them. Public meetings, marches, and demonstrations are normally held without police interference. But with guerrillas controlling more than 40 percent of the country’s territory (and paramilitary groups staking their own claims), and with approximately 90 percent of violent crimes going unsolved, to call the state’s capacities for order and justice severely inadequate is to understate the case.

Prisons in Colombia are starkly overcrowded, at 40 percent beyond capacity. Because of violence, Colombia has one of the world’s largest internally displaced popu-

lations—between 2.7 and 3.1 million in 2005—and the government has rarely honored its own promises and obligations to assist this segment of the population in meeting basic needs.

A number of Colombian organizations are involved in monitoring the human rights situation in the country. These include the Permanent Committee for the Defense of Human Rights, the Political Prisoners’ Solidarity Committee, and the Colombian Commission of Jurists. Colombia was also one of the first nations to ratify the American Convention on Human Rights, the Lima Declaration, and the Riobamba Code of Conduct.

FOREIGN POLICY

Colombia has only a limited diplomatic tradition, and often the country has been too consumed by its internal problems to give much interest to foreign affairs. As the largest Spanish-speaking nation in South America, Colombia naturally aspires to being a regional power among the Andean nations and in the Caribbean. This has at times produced friction with its large neighbor Venezuela, which has always had similar aspirations, and the two countries nearly came to blows in 1979 over a marine boundary dispute in the Gulf of Venezuela, or Guajira, as Colombians refer to it. However, foreign policy is still primarily governed by economic determinants such as the need to gain expanded markets.

In global affairs Colombia prefers the low-key approach and has usually opted for multilateral initiatives to solve international disputes. This, along with a continuing commitment to collective security, has led Colombia to follow a generally conservative line on most foreign policy issues. It has shown a readiness to follow the lead of the United States in inter-American affairs. Relations with the United States have always been a central concern. During the 1960s Colombia was the showcase of the Alliance for Progress. The United States for several years “decertified” Colombia as a nation cooperating against the narcotics trade; Colombia responded that the decision to suspend assistance was politically motivated. Colombians have always been critical about Washington’s single-minded focus on drug smuggling. But as Colombia’s security situation deteriorates, the nation has become more dependent than ever on U.S. assistance. Having mended fences, President Andrés Pastrana asked the United States, as well as Europe, for sizable contributions of military aid to finance a several-billion-dollar campaign against the traffickers, although many Americans are wary of being drawn into Colombia’s civil war.

Although Colombia looks to the United States for leadership in hemispheric economic and security relations, its basic commitment is to its South American neighbors to whom it is bound by historic and cultural ties. Colombia was the prime mover in such regional al-

liances as the Andean Common Market, which is now the Andean Community of Nations. In the early 1990s Colombia joined Mexico and Venezuela in a “Group of Three” to discuss energy and infrastructure issues, and in 1994 the trio signed a 10-year trade-liberalization pact. Colombia views this as an intermediate step toward the proposed Free Trade Area of the Americas encompassing the entire Western Hemisphere. Beyond trade issues, Colombia was an active supporter of Panama’s efforts to win a new treaty with the United States over the Panama Canal.

Colombia joined the United Nations in 1945. It is a member of 14 UN organizations and 34 other international organizations.

DEFENSE

The defense structure is headed by the president as commander in chief. The line of command runs through the minister of war, who is always a senior military officer, to the commanding general of the armed forces and the chief of staff of the armed forces. Military policy is formulated on the advice of the Superior Council of National Defense and the Advisory Council of Military Forces.

Military manpower is provided by compulsory military service under which all males between the ages of 18 and 50 are technically subject to the draft. However, this provision of the law is not strictly enforced, and only a small percentage of those eligible are drafted for a period of two years. In 2001 the nation spent \$3.3 billion, or about 3.4 percent of its gross domestic product (GDP), on defense.

ECONOMY

Colombia’s economy was historically primarily agricultural, with coffee and sugar the largest contributors to GDP. Because of wildly fluctuating world market conditions, Colombia has been trying to reduce its dependency on coffee by expanding the manufacturing and mining sectors. The rapid development of oil, coal, and other nontraditional industries has helped the country to greatly reduce its dependence on coffee.

The most significant growth has come in the oil industry, which was insignificant at the start of the 1980s. By the end of the 1990s it had surpassed coffee as the country’s most valuable (legal) export. Oil and gas contributed 35 percent of Colombian export earnings in 1996, even though the minerals sector of the economy represented just 5.3 percent of national output at the time. By 2005, however, Colombia’s reliance on oil was uncertain because of declining reserves and the need for new exploration. Beyond fossil fuels, Colombia’s rivers contain tremendous and largely untapped hydroelectric potential, and the country has large coal deposits, significant gold and nickel reserves, and the vast bulk of the world’s extraction of emeralds.

Colombia’s diversification into manufacturing has happened at a much slower rate than in the energy sector. The industrial sector constituted only 13 percent of GDP in 1970 and 17 percent in 1996, but that figure had risen to 32 percent by 2003. About a quarter of this was in food processing, much of which involved the milling of coffee. Other major manufacturing categories were textiles, leather goods, chemicals and pharmaceuticals, car assembly, and electrical-engineering products. Manufacturing is concentrated in cities, primarily in the four most populous urban centers.

The telecommunications sector was deregulated in the 1990s, with cellular services growing at a rapid pace. This industry represented 2.7 percent of GDP in 1999 and was expected to continue increasing its share. The privatization and deregulation policies pursued by Gaviria and his successors also benefited the financial industry, bringing investment and the modernization of services from abroad, mainly Spanish banking firms, though the recession the country entered in 1998 called attention to flaws in the balance sheets of quite a few. The small stock exchanges of Bogotá, Medellín, and Cali also enjoyed unprecedented growth in the years prior to the recession.

Colombia’s more open trade policies brought substantially improved access to U.S. and European markets, but the country ran a worsening trade deficit as the 1990s proceeded. Continued dependence on primary product exports left Colombia at the mercy of world markets when the terms of trade for commodities turned downward, as was the case for the greater part of that decade. The trade situation was counterbalanced by a surge in foreign investment—until political instability caused many investors to have second thoughts. The pervasive violence and drug-related corruption that helped bring on the downturn of the late 1990s bear considerable relation to the social inequities of the country: a population that is severely stratified, a widening gap in wealth brought on in part precisely by the policies that revolutionized production, and a workforce largely lacking in education beyond grade-school

level. The International Monetary Fund (IMF) pressed for budget cuts and tax reforms from the Pastrana administration, but there was considerable opposition from the Liberal opposition in the legislature and the public-sector workers who would be directly affected by any cutbacks. Colombia was able to tolerate incredibly high levels of domestic strife and chaos without serious consequences in terms of growth or debt accumulation for a long time before its fortunes turned downward. More than anything, the nation needs to settle internal conflicts in order to restore confidence and resume development. International financial institutions credited the Uribe administration for efforts to reduce the deficit below 2.4 percent of GDP in 2004. GDP growth of 3.7 percent in 2003 was the highest in Latin America, but inflation (7.1 percent), poverty (55 percent), and unemployment (14.2 percent) remained problems.

ENVIRONMENT

Colombia's 1992 constitution is considered by those knowledgeable about ecology to be one of the "greenest" ever devised. It elevated environmental affairs to a stand-alone ministry and added five new institutes dealing with conservation-related issues. It also redistributed some decision-making powers downward, giving a greater say over nature and resource management to local communities, in particular Afro-Colombian and indigenous communities. The country has had framework laws on the environment since 1974—earlier than just about any other Latin American state. Enforcement is spotty, however, first of all because the government does not exercise control over its entire territory. It has made a priority of obtaining for-

eign investment in order to exploit the land's energy potential, particularly in the llanos in the eastern portion of the state, but the consequences have been habitat destruction, as exploration areas are denuded of vegetation, and problems regarding waste disposal, as compounded by frequent guerrilla attacks on pipelines, creating oil spills. The new ministry has a deficiency in terms of the expert staff needed to carry out directives. International and local nongovernmental organizations have helped fill in gaps in order to implement conservation plans in partnership with private industry, and they have assisted in education outreach programs to change popular attitudes toward the natural world and raise awareness of how certain activities harm the environment.

The primary environmental issues in Colombia today are deforestation, soil contamination by pesticides, and air pollution from vehicular exhaust in cities, Bogotá most of all. Deforestation is claiming some 200,000 hectares a year. The pace of deforestation slowed slightly in the early 1990s; by the middle of the decade forests still accounted for 48 percent of the country's territory.

The nation has 32 percent of its area protected as national reserves; of these, 3.3 million hectares are classified as international biosphere reserves. Colombia ranks among the top 10 countries in the UN Environmental Program's "megadiversity" ratings, accounting for an incredible 10 percent of the world's biological diversity.

LIVING CONDITIONS

Rebellion and the active drug trade create many uncertainties for Colombians. Domestic terrorists target government buildings, police stations, energy and telecommunications facilities, and military bases in efforts to disrupt the country and its economy. Assassinations, kidnapping, and extortion are commonplace. In many areas the police are unable to protect people. Many judges wear masks to hide their identities because they fear reprisals from the nation's criminal elements. Citizens often take the law into their own hands through paramilitary groups, and wealthier citizens rely heavily on security guards.

Living conditions vary widely depending on people's class. Perhaps 20 percent of the population constitutes the upper class, but even within that class is a small elite that holds a disproportionate share of the nation's social, political, and economic power. The upper class is primarily white, while the middle class consists primarily

of mestizos and some mulattoes; the lower class consists of mulattoes, blacks, and Amerindians. For these people, living conditions are poor, as marked by poverty, malnutrition, lack of opportunity, disease, and illiteracy.

HEALTH

Health care in Colombia has improved markedly over the past several decades. In 2004 life expectancy at birth was over 71 years—over 75 years for females. The infant mortality rate was 21.72 deaths per 1,000 live births. According to the World Bank, per capita spending per year on health care was \$105. Health care, however, is much more widely available in the cities than in rural areas, where women continue to die from forced abortions and where parasites and tropical diseases such as malaria, dengue fever, and yellow fever are more common. While people in the cities, especially those who can afford it, rely on Western medicine, those in rural areas rely more on traditional medicine, practiced by healers called *curanderos*, including herbal and plant remedies.

FOOD AND NUTRITION

Colombians generally eat a light breakfast, a main meal at midday, and a light meal in the evening. The main meal generally consists of fruit, soup, a meat or fish dish with potatoes or rice, and vegetables. There are regional dietary differences. In the nation's interior, breakfasts tend to be heartier and include pork, plantains, steak, eggs, and rice or beans, and dinners tend to be similar. Along the seacoast, fish and shrimp are common dinnertime items. Because of the enormous variety of vegetables grown in Colombia, a vegetable stew called *cocido*, which can include up to 20 different vegetables and three kinds of potatoes, is a common dish.

The state of nutrition in Colombia has generally improved in recent decades. One indicator is the proportion of children under the age of five who are underweight. In 1966, 21 percent of such children were underweight. That percentage improved to 17 percent in 1980, 10 percent in 1989, 8 percent in 1995, and 7 percent in 2000. Meanwhile, obesity, especially among women, has become a problem, with 41 percent of women considered overweight or obese in 2000.

Food and Nutrition

Undernourished % of total population: 13.4
 Daily Available Calories per capita kcal: 2,570
 Amount of Cereal Available per person per year kg: 99.9
 Amount of Fruits and Vegetables Available per person per year kg: 136.3

STATUS OF WOMEN

Colombia's deep Catholic traditions tended to restrict the ambitions of women until fairly recent times. In the 1970s and 1980s the country experienced social modernization on a broad scale, even as bouts of violence threatened to unmoor society. The percentage of women working expanded, such that by 1985 one-third of the labor force was female. Some 43 percent of women are now part of the paid workforce. This has had several effects: the old-time subservience to men was extensively undermined once women experienced a degree of financial independence; for poorer families, which had always been more reliant on female labor, women's earnings proved a vital supplement; and the birthrate dropped sharply. Upper-class women have long had the benefit of higher education, and it became customary for them to contribute their energies to social welfare, education, and the arts; some—a larger number than is typical for Latin America—have even gone far in politics. The Samper administration had a woman foreign minister, María Emma Mejía, and one of Samper's former ambassadors, Noemi Sanín, ran a strong third in the presidential election of 1998. Six ministries in the Álvaro Uribe government are headed by women. It is still the case, however, that women who achieve are regarded as something of a novelty.

Women have equal civil and property rights by law. Their economic situation, though improving, is inferior; especially in rural areas, they are concentrated in low-productivity, low-income sectors. Although Colombian women are legally entitled to pay equal to that of their male counterparts and are normally paid equal salaries when employed by the government, this is not generally the case in private industry. A growing number are receiving higher education; they currently constitute more than 40 percent of the university population and more than 50 percent of graduates, allowing them a much wider range of career options.

Colombia is one of the original signatories to the UN Declaration on Population. It is also one of the few Latin American countries to adopt family planning as an official policy and to integrate it into development plans. In 1968 the Colombian Congress enacted legislation supporting planned parenthood and established the Institute of Family Welfare as an official agency. Private efforts in this field have been coordinated since 1985 by the Colombian Family Welfare Association (Asociación Pro-Bienestar de la Familia Colombiana), a member of the International Planned Parenthood Federation. The hierarchy of the Roman Catholic Church has voiced only moderate opposition to these programs.

About 77 percent of married women of childbearing age use birth control. The fertility rate has dropped steadily since the mid-1960s; overall, the 2004 fertility rate was 2.59 children per woman, though the figure for rural areas is higher.

A divorce law came into force only in the mid-1970s and is valid only for civil marriages, not Catholic ones.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 12
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.01
 Women's Share of Wage Employment Non-agricultural %: 48.8

WORK

In 2003 Colombia's labor force consisted of 20.34 million people, with a per capita GDP of \$6,300. About 30 percent made their living through agriculture, 24 percent through industry, and 46 percent through services. The unemployment rate was a high 14.2 percent, though this figure does not include the many people who are underemployed, scratching out livings as street vendors or servants or through odd jobs in construction and the like. Likewise, the unemployment figure does not take into account wide disparities in income, in a country where the richest 10 percent make 44 percent of gross income and the poorest 10 percent make a scant 1 percent of gross income. Agricultural products include coffee, flowers, bananas, rice, tobacco, corn, sugarcane, cocoa beans, oilseed, vegetables, forest products, and shrimp. In much of Colombia children work with their parents in the fields. Industrial products include textiles, processed food, petroleum, clothing and shoes, beverages, chemicals, cement, gold, coal, and emeralds.

Employment and Labor

Labor Force Total: 20,340,000
 Female Participation Rate %: 39.3

Labor by Sector %:
 Agriculture: 30
 Industry: 24
 Services: 46
 Unemployment %: 14.2

EDUCATION

Schooling is universal, free, and obligatory for five years, from the ages of seven to 12, but in practice, 30 percent or more of rural children do not attend.

Schooling lasts 11 years, as divided into five years of primary school, four years of lower secondary or middle school, and two years of upper secondary school. On the completion of secondary school, students are awarded the *bachillerato* (baccalaureate). There are high failure, dropout, and grade repetition rates because of the rigidity of the examination system and the generally low quality of education. By 1987, 90 percent of children between the ages of seven and 11 attended primary school, more than doubling enrollment in a single generation. But enrollment rates at secondary schools are far lower, even after increasing sixfold since the early 1960s. In 1998 there were 46,707 primary schools and 8,161 secondary schools.

The academic year runs from February to November. The medium of instruction is Spanish throughout.

The public school system comprises national, departmental, and municipal schools. The private sector is made up of schools run by the Roman Catholic Church and a few other religious organizations, schools run by nonreligious private organizations, and cooperative schools run by communities. All private schools are required to be licensed, must conform to state curricula models, and are subject to supervision by public authorities.

Primary teachers are trained in secondary-level normal schools and secondary teachers in university institutes of pedagogy. By 1990 about 55 percent of secondary-school teachers had university degrees. Unqualified teachers are not nearly as prevalent as they were in the 1960s, prior to a burst of public investment in education. Nonetheless, teacher training is sorely inadequate to meet growing needs. Schools faced with shortages of qualified teachers often employ part-time personnel informally known as "taxicab teachers."

Although the national literacy rate is impressive, at 92.5 percent in 2003, well over the Latin American average, it is much lower in the countryside, where even those who have acquired literacy soon lapse into functional illiteracy. In an unusual departure from the norm in Latin America, women have a slightly higher overall rate of literacy than men. Adult education and literacy programs are conducted by a number of organizations, such as the armed forces, business organizations, and religious and welfare institutions.

The primary responsibility for public education is divided between the central government and the departments. About 55 percent of primary-school costs are met by the national Ministry of Education, 22 percent by the departments, and 23 percent by private schools, although the actual proportion varies widely from region to region. The central government has greatly increased financial support for public secondary education. In the past, tuition was charged at the secondary level; even though the government granted scholarships to students in both private and public institutions, the effect was to confine secondary education to the elite, reinforcing social stratification. Since the government assumed primary financial responsibility for secondary schools in 1975, the rate of attendance has greatly increased.

By law the government is required to spend at least 10 percent of its annual budget on education. Total expenditures on education in the early 2000s were equivalent to 5 percent of GDP.

Higher education is provided by 20 general public universities, one open university (recently established to expand educational opportunities for Colombians by offering distance learning), one technical university, and universities of education, education technology, and industry. Additionally, there are two public colleges of administration, one school of police studies, one institute of fine art, one polytechnic, and one conservatory. The private sector has 25 secular universities, four Roman Catholic universities, one college of education, and one school of public administration. The mushrooming of higher education, though it has democratized university studies to a limited degree, has come at the expense of quality instruction. The largest and oldest university is the National University of Bogotá, founded in 1572. Other major universities are the University of Antioquia in Medellín, Universidad Javeriana, Fundación Universidad of Bogotá, Xavier University, Gran Colombia University, and Universidad de los Andes. By 2001 the total number of students enrolled in tertiary institutions was almost one million.

SCIENCE AND TECHNOLOGY

Colombians have produced important work in fields as diverse as anthropology, psychology, genetics, mathematics, physics, medicine, and biology. Geologists have led the way in such fields as seismology and volcanology. Medical researchers, among the best in Latin America, have included noteworthy figures such as Manuel Patarroyo, Rodolfo R. Llinás, and Ignacio Barraquer. Although private organizations contribute to scientific research in Colombia, most is funded by the government.

MEDIA

As of 1999, 24 daily newspapers were being published in Colombia, with a total circulation of 1.1 million. The largest-selling daily is *El espectador*, one of the most influential newspapers in the Spanish-speaking world, followed by the liberal *El tiempo*. Daily newspaper readership is about 63 per 1,000 people, ranking Colombia 59th among the world's nations.

Both these papers tend to support the Liberal Party line. Bogotá has three other dailies. Others are published in Barranquilla (three), Bucaramanga (two), Cali (three), Cartagena, Cúcuta (two), Manizales, Medellín (two), Montería, Neiva, Pasto, Pereira (three), Popayán, Santa Marta, Tunja, and Villavicencio. The periodical press numbers more than one thousand titles, with a combined circulation of 850,000 copies.

Relations between the press and the state have been characterized by frequent government attempts to restrict a free press, most recently during the presidency of Ernesto Samper. Generally, however, freedom of the press has been preserved and abuses have been infrequent. All newspapers are privately owned and function as official or unofficial organs for the various political factions. At least a dozen Colombian presidents have been journalists, and a close alliance exists between the media and the political system. Journalism is of a very high quality, and newspapers are major organs of political debate. Journalists perform their duties under conditions scarcely imaginable: only Algeria saw more reporters and editors killed during the 1990s.

The domestic news agencies are Colprensa and CIEP–El País. Foreign news bureaus in Bogotá include AP, UPI, AFP, ANSA, IPS, DPA, Efe, Reuters, and TASS.

Television, introduced in 1954, is administered by the National Institute of Radio and Television (INRAVISON). There are two services: a national service, with three channels (two commercial, one educational) and a network of 17 powerful transmitters and repeater stations, and Telebogotá, an official commercial service that can be received only in Bogotá, and two other regional channels. The national service is on the air all the time. Two privately run stations began operations in the late 1990s.

CULTURE

The arts flourish in Colombia, largely through a combination of grants from private individuals, foundations, and corporations and from government agencies, especially the Ministries of Education and the Interior. These organizations support such enterprises as the Colombian Institute of Culture and the National Museum of Colombia.

Colombia's literary history began with the arrival of the Spanish, and the nation's literature in earlier decades reflected European traditions. More modern writers, such as Jorge Isaacs and José Eustacio Rivera, have explored themes closer to home. Colombia's most famous writer is Gabriel Garcia Márquez, who won the Nobel Prize for Literature in 1982. Graphic arts include not only folk art from the Andes mountains but also the work of internationally known artists such as the painter Fernando Botero, the sculptor Edgar Negret, and the muralist Pedro Nel Gómez. The performance arts reflect the traditions of different regions, such as the Caribbean coast, which gave rise to *vallenato*, a form of dance and music, and the Pacific coast, which gave rise to *currulao*, music played primarily on wooden instruments.

FOLKLORE AND MYTHOLOGY

Colombian folklore is a blend of Spanish, African, and Amerindian traditions, and much of it is connected with the nation's Catholicism. For example, people in the Chocó region celebrate the Feast of St. Francis, adopted by the largely black population as the patron saint of miners. Along the rivers that flow through this region, many other saint-day festivals are celebrated with music, dance, and singing, and small statues of the saints are floated on river rafts. Other parts of the country celebrate Carnival, often with flutes and African drums, elaborate masks and costumes, all blending African, Amerindian, and European traditions.

ENTERTAINMENT AND RECREATION

In addition to sports, Colombians take part in the nation's many religious holidays and festivals. Examples include the flower fair in Medellín, the Festival of the Devil in Rio Sucio, the International Caribbean Music Festival in Cartagena, and the Carnaval of Barranquilla. Folk music and folk dancing play large parts in these festivals. A major event is the crowning of Miss Colombia in November each year, and many regions crown beauty queens such as the Queen of Sugar or Queen of Coffee. Another popular form of entertainment for city dwellers is driving or taking a bus to a town or village in the countryside, where family and friends can relax, enjoy picnic lunches, play the guitar, and take in the scenery. In the Andes region, people play a form of horseshoes, often wagering crates of beer on the outcome.

ETIQUETTE

Colombians tend to be rather formal, although individual regions and even communities can exhibit more or less familiarity than neighboring regions or communities. The coastal regions tend to more informality than the interior. In the capital, as well as other cities, people pride themselves on their correct Spanish—even among the lower classes—while on the coast a type of Spanish that is less “textbook” correct is common. In the more formal parts of Colombia, people use the formal form of you, *usted*, rather than the informal *tú*, even, oftentimes, with family members. Personal space is valued, and conversation takes

place at arm's length, even in crowded places when possible, and intruding on another's personal space is regarded as rude and even hostile. In general, greetings tend to be formal, with men shaking hands, although women who are acquainted will often greet with kisses on the cheek. In business settings it is considered rude to launch into formalities at once without first inquiring about the welfare of the other person and his or her family.

FAMILY LIFE

Upper-class Colombians are generally encouraged to marry someone from the same class. Courtship is generally long, lasting for a year, and the couple are chaperoned. Middle- and lower-class people often strive to raise their well-being by marrying someone of a higher class. Among the upper classes, weddings are elaborate affairs, designed to cement family relationships and social and economic bonds. The nuclear family is the norm, but extended kin groups, especially among the lower classes, provide important buffers against hunger and poverty in the absence of government social systems. Because large numbers of destitute children are abandoned in the streets, the government has funded programs whereby women are appointed as foster mothers for entire streets and try to provide food and shelter for the children there.

PERSONAL APPEARANCE

In the cities, Western-style clothing is preferred, and dark suits are worn by whites, mestizos, and mulattoes alike. In rural regions, clothing often differs based on climate. Along the warmer coasts, people tend to wear light, colorful clothing made of cotton, in contrast to people in the cooler mountain regions, who wear woolen *ruanas*, a type of Spanish cape. Women in the cooler regions often wear *pañolones*, or large fringed shawls.

SPORTS

Soccer is the most popular sport in Colombia, and in early 2005 the Colombian national team was undefeated in America's Cup soccer play, but other sports, including basketball, golf, tennis, swimming, and volleyball, have also grown in popularity. Colombian cyclists enjoy international success thanks in part to their training in mountainous terrain.

CHRONOLOGY

- 1944** Discontent with government of Alfonso López Pumarejo leads to violence in Bogotá; Conservative rival Laureano Gómez Castro is imprisoned.
- 1946** Presidential elections are held; Conservative Mariano Ospina Pérez wins over two Liberal candidates: Gabriel Turbay and leftist Jorge Eliécer Gaitán.
- 1948** The assassination of Gaitán, Bogotá's mayor, provokes mass riot, known as *bogotazo*, in which 2,000 are killed; undeclared civil war, called La Violencia, breaks out.
- 1949** Repression and violence escalates; Ospina Pérez fires all Liberal governors; Laureano Gómez is elected president on the Conservative ticket in an election boycotted by the opposition.
- 1952** Colombia relinquishes rights over Monjes Archipelago to Venezuela.
- 1953** A civilian-military coalition led by General Gustavo Rojas Pinilla deposes Gómez; Rojas is named president.
- 1954** Violence is renewed as Rojas becomes a virtual dictator.
- 1957** Rojas is reelected by a puppet assembly; arrest of Conservative leader Guillermo León Valencia is followed by the "Days of May" riots and demonstrations; Rojas is forced to hand over power to a five-man junta headed by General Gabriel Paris and go into exile; Liberal and Conservative parties issue Declaration of Sitges, creating the National Front and agreeing to share power and alternate in presidency.
- 1958** Alberto Lleras Camargo is elected president unopposed on the Liberal ticket; Colombian Institute of Agrarian Reform created to undertake country's first serious land reform program; Colombia joins Latin American Free Trade Area.
- 1959** Rojas is tried for illegal use of power and stripped of political rights.
- 1961** Rojas forms the National Popular Alliance Party (ANAPO).
- 1962** State of siege is raised; Valencia is elected president.
- 1965** State of siege is reimposed following continuing political violence.
- 1966** Carlos Lleras Restrepo, a Liberal, is elected president.
- 1969** Colombia joins the Andean Group.
- 1970** Misael Pastrana Borrero is elected president on a Conservative ticket.
- 1971** Supporters of the ANAPO form an armed wing known as the Movimiento 19 de Abril (M-19).
- 1973** A new concordat is signed with the Vatican.
- 1974** National Front pact relating to the rotation of the presidency ends; Liberal Alfonso López Michelsen is elected president.
- 1975** López imposes state of siege as guerrilla groups escalate violence in urban and rural areas.
- 1976** Colombia forgoes further U.S. aid as a demonstration of its own self-sufficiency.

- 1978** Julio César Turbay Ayala, the Liberal candidate, is elected president; Colombia signs eight-nation Amazon Pact.
- 1980** M-19 guerrillas seize Dominican Republic embassy in Bogotá, taking U.S. ambassador and 24 other diplomatic personnel as hostages; seizure ends with the kidnappers being flown to Cuba.
- 1982** Belisario Betancur Cuartas, the Conservative candidate, is elected; state of siege lifted once more; amnesty law passed under which 350 rebels are freed.
- 1984** Justice Minister Rodrigo Lara Bonilla slain; Betancur declares state of siege; two rebel groups sign truce.
- 1985** M-19 rebels take the Palace of Justice but government troops recapture it; Nevado del Ruiz volcano erupts, killing 25,000; state of economic and social emergency declared.
- 1986** Liberal candidate Virgilio Barco Vargas elected president; six guerrilla groups form joint front called the Coordinadora Guerrillera Simón Bolívar (CGSB).
- 1987** Supreme Court declares extradition treaty with the United States unconstitutional.
- 1988** Attorney general is assassinated; first direct elections to the mayoralties are disrupted by violence, and more than 30 candidates are killed.
- 1989** Drug trafficking cartels are blamed for the deaths of several leading politicians; Barco reinstates by decree a treaty that allows Colombian drug traffickers to be summarily extradited to the United States; guerrilla groups under the CGSB agree to government's peace initiative; M-19 formally announces that peace treaty has been reached and is formally constituted as a political party.
- 1990** César Gaviria Trujillo is elected president and in his victory speech vows to bring terrorism to its knees, later issuing decree pledging that drug traffickers who surrender to the central government will not be extradited.
- 1991** More than 50 die in attacks launched by rebels protesting their exclusion from assembly elected to reform Colombia's constitution; Popular Liberation Army (ELP) ends its 23-year war against the government; the new constitution, promising stronger judicial protections for the individual and restricting emergency decree powers of the executive, is ratified.
- 1992** Strikes by telecommunications workers protesting impending privatization and by those in the electric power industry disrupt economy; Medellín drug cartel kingpin Pablo Escobar escapes from prison.
- 1993** Police gun down Escobar after attempting for months to negotiate his surrender; his death brings the demise of the Medellín cartel.
- 1994** "Group of Three" (Mexico, Venezuela, Colombia) sign 10-year trade liberalization pact; Amnesty International calls Colombia one of the world's worst human rights violators; Liberals win elections; new president Ernesto Samper Pizano is shortly afterward accused of taking drug money in his campaign, provoking political crisis.
- 1996** Congress exonerates Samper in drug scandal; United States removes Colombia from its list of countries cooperating in narcotics control, blocking its access to aid from multilateral lending institutions.
- 1998** Liberals hold the majority in parliamentary elections, but barely so in each house; Andrés Pastrana Arango wins presidential election for Conservatives, makes bid for talks with Colombian Revolutionary Armed Forces (FARC) by offering to demilitarize 15,000 square miles in Caquetá and Meta departments, essentially ceding territorial control to the guerrillas.
- 1999** Military opposition to Pastrana's peace strategy leads to resignation of defense minister and more than 200 army officers; United Self-Defense Forces of Colombia (AUC), the leading paramilitary group, demands inclusion in peace negotiations; United States recertifies Colombian cooperation against drug smuggling.
- 2000** United States offers \$1.3 billion, mostly in military aid, to support Pastrana's \$7.5 billion "Plan Colombia" to fight drug trafficking and promote legal forms of development.
- 2002** Right-wing candidate Álvaro Uribe Vélez wins landslide victory in presidential election, marking the first time a winner is chosen in the first round of voting.
- 2003** Members of the right-wing guerrilla group United Self-Defense Forces of Colombia (AUC) disarm.
- 2004** The AUC and the government begin peace talks.
- 2005** Columbia and Venezuela resolve tensions over the arrest of a Colombian rebel in Venezuela.

COMOROS

Basic Fact Sheet

OFFICIAL NAME

Union of the Comoros (Union des Comores)

ABBREVIATION

KM

CAPITAL

Moroni

HEAD OF STATE & HEAD OF GOVERNMENT

President Azali Assoumani (from 1999)

NATURE OF GOVERNMENT

Republic

POPULATION

671,247 (2005)

AREA

2,170 sq km (838 sq mi) (excluding the island of Mayotte)

MAJOR ETHNIC GROUPS

Antalote, Cafre, Makoa, Oimatsaha, Sakalava

LANGUAGES

Arabic, French, Comorian

RELIGION

Islam

UNIT OF CURRENCY

Comorian franc

NATIONAL FLAG

A green triangular field based on the hoist, with a white crescent in the center of the field, the convex side facing the hoist; there are four white five-pointed stars placed in a line between the points of the crescent. Outside the triangle are four equal horizontal bands, from top to bottom, of yellow, white, red, and blue.

NATIONAL EMBLEM

The coat of arms has the crescent and stars from the national flag in the center, with the crescent pointing upward instead of to the right. A sun with rays extended is behind the crescent. Around the focal point, the name of the nation is written in both French and Arabic. The border is composed of two olive branches, with the national motto at the bottom: *Unité, justice, progrès* (Unity, justice, progress).

NATIONAL ANTHEM

“The Flag Is Flying”

NATIONAL HOLIDAYS

July 6 (Independence Day, National Day), various Islamic festivals

DATE OF INDEPENDENCE

July 6, 1975

DATE OF CONSTITUTION

December 23, 2001

GEOGRAPHICAL FEATURES

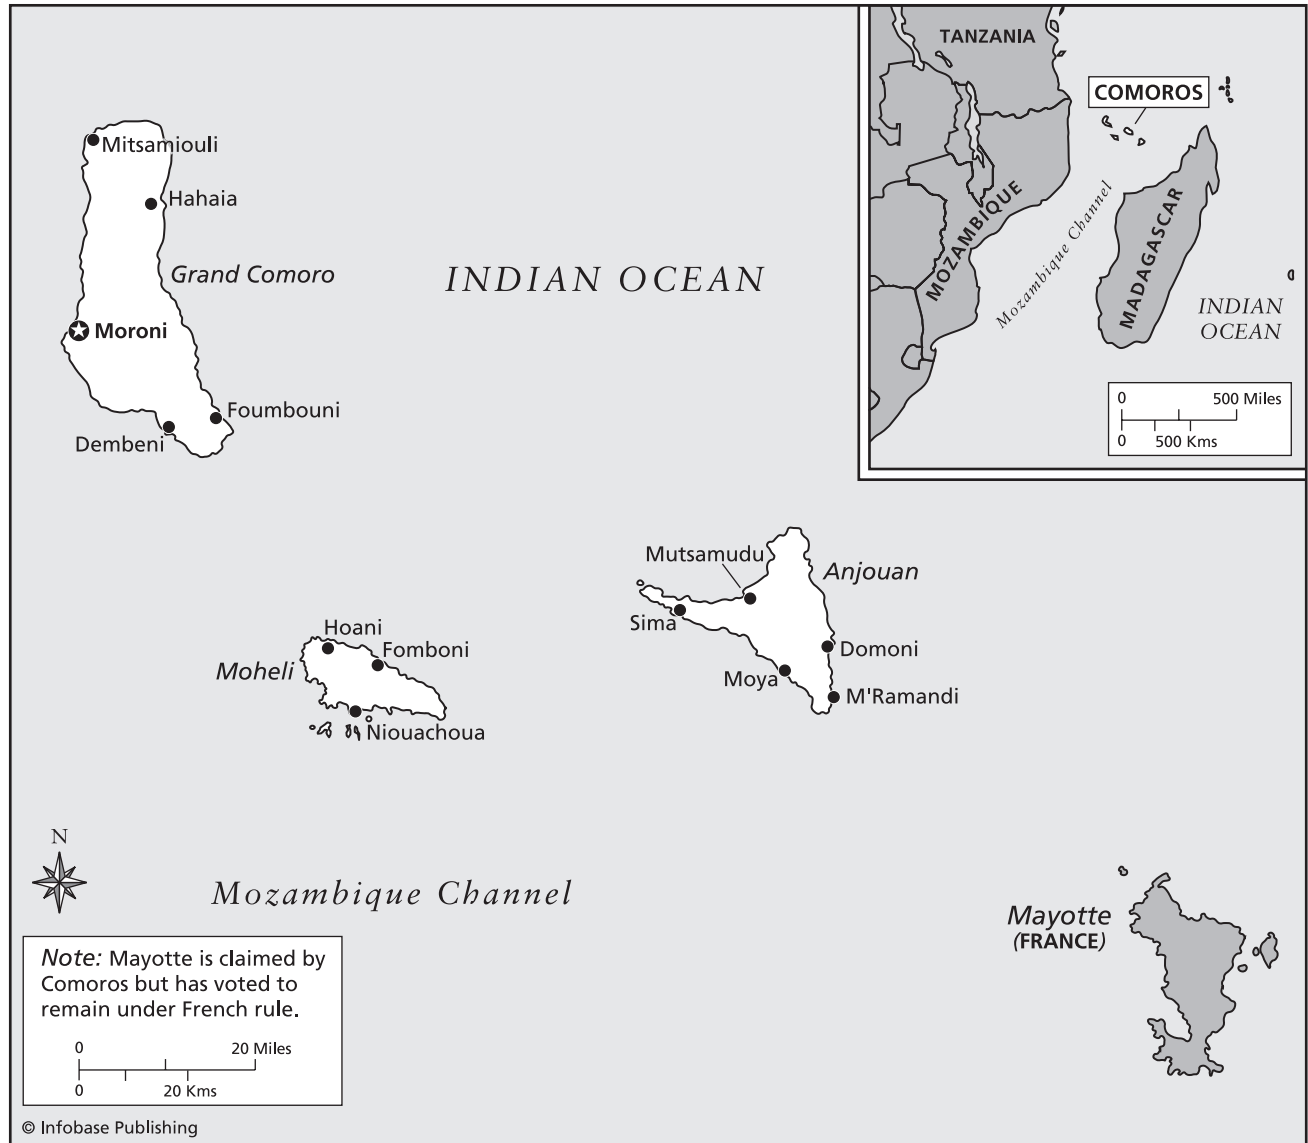

In 1978 the Islamic regime adopted new names for the islands of Comoros as part of the nation's de-Westernization drive: Njazidja for Grande Comore; Nzwani for Anjouan; Mwali for Mohéli; and Mahoré for Mayotte.

Comoros is in the northern entrance of the Mozambique Channel, about halfway between the northern tip of Madagascar and the mainland coast of Mozambique. Comoros includes three main islands—Grande Comore, Anjouan, and Mohéli—and several islets, with a total land area of 2,170 sq km (838 sq mi). Grande Comore, the largest of the islands, comprises 1,148 sq km (443 sq mi); Mohéli, 290 sq km (112 sq mi); and Anjouan, 357 sq km (138 sq

mi). The archipelago extends 177 km (110 mi) east-southeast to west-northwest and 97 km (60 mi) north-northeast to south-southwest. The total length of the coastline is 340 km (211 mi). Comoros also claims de jure sovereignty over the island of Mayotte (374 sq km; 144 sq mi), but the republic's jurisdiction is not accepted by the Mahorais, as inhabitants of Mayotte are known, who have voted for union with France as an overseas department.

The Comoros are volcanic in origin, and Mount Kar-tala on Grande Comore (2,360 m; 7,741 ft) is an active volcano. The center of Grande Comore is a desert lava field. The black basalt relief rises 1,200 to 1,600 m (3,950 to 5,250 ft) on Anjouan and 500 to 800 m (1,650 to 2,600 ft) on Mohéli. Mayotte has a lagoon fringed with coral reefs.

Population of Principal Cities

Moroni	40,275
Mutsamudu	21,558

CLIMATE AND WEATHER

The islands have a tropical climate, with a dry season from May to October and a wet season from November to April. Temperatures average 28°C (82°F) in the wet season and 20°C (68°F) in the dry season. Rainfall varies between 1,100 and 5,500 mm (43 and 217 in). The prevailing winds are the Indian monsoons from the north in the wet season and the continental southeast winds in the dry season.

Climate and Weather

Mean Temperature: 68°F to 82°F
 Average Rainfall: 43 in to 217 in

FLORA AND FAUNA

Grande Comore and Anjouan have lowland and montane rainforests. Sparse vegetation can be found along the coasts, where lava flows have left behind little soil. At higher elevations can be found stands of giant heath. The islands contain approximately 2,000 native plant species, including 175 different ferns and 33 species of orchids; 33 percent of these species are endemic. The islands are home to only eight species of endemic mammals: six species of bats and two species of lemurs. Additionally, the islands support 25 species of reptiles and two species of sea turtles. A total of 21 species of birds are endemic, including the Comoro blue pigeon, the Comoro olive pigeon, the Anjouan brush warbler, and the Anjouan sunbird.

ETHNIC COMPOSITION

The islands have a mixed population, consisting of persons of African, Arab, and Malagasy descent. The racial composition also shows Malay, Indian, Chinese, and Persian influences. The principal ethnic group, known as the Antalote, is of mixed origin. Other ethnic groups include the Cafre, Makoa, Oimatsaha, and Sakalava.

The original inhabitants of the islands were Idumians from the Red Sea region. During the Middle Ages, Arabs invaded the islands, arriving in successive waves, and set up small sultanates. Because these sultanates were constantly engaged in internecine warfare, the archipelago came to be known as the Islands of the Quarreling Sul-

tanates. The islands were also visited by Indian, Malay, and Chinese traders, adding to the racial variety.

At the time of independence there were nearly 1,500 Europeans, mainly French, living in the archipelago. Most of the French departed following the expropriation of French property in 1976.

LANGUAGES

The national language is Comorian, also known as Shikomor, a hybrid language related to Swahili, with borrowed Arabic words. The other official languages are French and Arabic. Swahili is generally understood by the majority of the inhabitants, and Malagasy is also spoken.

RELIGIONS

Islam in its Sunni form is the religion of the vast majority of Comorians. Christianity is the majority religion on the island of Mayotte, and the Christian-Muslim conflict is one of the factors that influenced Mahorais to reject union with Comoros.

According to the constitution, Islam is the “well-spring of the principles and rules that guide the state and its institutions.” However, most aspects of freedom of religion and the right to practice openly non-Islamic faiths are guaranteed and respected in practice. There are established churches for Protestants and Catholics. Although Christian missionaries work in local hospitals and schools, they are not allowed to proselytize openly.

Religious Affiliations

Sunni Muslim	657,800
Roman Catholic	13,400

HISTORICAL BACKGROUND

The archipelago has served in past centuries as a stepping stone between the African continent and Madagascar, as a southern outpost for Arab traders operating along the East African coast, and as a center of Islamic culture. The name Comoros is derived from the Arabic *kamar* or *kumr*, meaning “moon,” although this name was first applied by Arab geographers to Madagascar. According to one local legend, King Husain ibn Ali established a settlement on Comoros at the beginning of the 11th century. He undoubtedly found Bantu peoples, who had apparently migrated to the island earlier. The Bantus were greeted by an earlier group of inhabitants, a Malayo-Indonesian people.

In the 15th and 16th centuries Shirazi Arabs established settlements on the northwest coast of Madagascar

and on Njazidja and Nzwani. The Shirazi, who divided Njazidja into 11 sultanates and Nzwani into two, extended their rule to Mahoré and Mwali, although the latter in the 19th century came under the control of Malagasy rulers. The Shirazi built mosques and established Islam as the religion of the islands. By the end of the 16th century the Comoros had become a center of regional trade, exporting rice, ambergris, spices, and slaves to ports in East Africa and the Middle East in exchange for opium, cotton cloth, and other items.

Comoros was exposed to European contacts following visits by Portuguese and British navigators in the 16th century. French rule dates from 1841, when the king of Mahoré, or Mayotte, was persuaded to cede his island to France. The rulers of the other three main islands followed his example one by one between 1886 and 1909, and in 1912 Les Comores was proclaimed a French colony. In 1914 the islands were joined administratively to Madagascar. As the minor appendage of a larger and culturally different country, Comoros was neglected and remained in a precolonial condition until independence. Whatever economic and political reforms were instituted were designed to benefit the French ruling class and foreign companies. The traditional social structure remained undisturbed, and the old ruling class was absorbed into the bureaucracy as minor officials. The economy was entirely dependent on French subsidies, and the country had neither the local resources nor the infrastructure necessary to stand on its own feet.

In 1973 growing demands for self-government resulted in an agreement with France to obtain independence in five years. The agreement provided for France to retain responsibility for defense, foreign affairs, and currency during the transition period. In July 1975 the Comorian legislature passed a resolution unilaterally declaring independence. The deputies from Mayotte abstained, and that island remained a French protectorate.

After the declaration of independence, Ahmed Abdallah, leader of the preindependence government and head of the Democratic Union of the Comoros, was designated president. He was deposed in August 1975 in a coup engineered by the Front National Unie (FNU), a coalition of opposition parties. Ali Soilih, a leader of the People's Party who took part in the coup, was elected president by the FNU in January 1976.

Soilih envisaged a socialist revolution as the answer to the country's political and economic problems. He implemented a series of reforms that included a drastic reduction in the bureaucracy, a reconstruction of the administrative structure, and a new system of land distribution. He destroyed old government records and gave considerable authority to popular committees of young people. In an effort to curb the power of Islamic religious leaders, he banned the veil and the fivefold daily prayer. Reforms were accompanied by reports of the govern-

ment's brutality toward citizens. Unrest grew, and at least three unsuccessful coups were attempted between April 1976 and January 1978.

Soilih was finally ousted in a coup led by French mercenaries in May 1978. He was placed under house arrest and was killed, allegedly while trying to escape. His predecessor, Abdallah, was restored as president.

Abdallah dominated the Comorian government from his return to power in 1978 until his assassination in November 1989. Daunted by reprisals that accompanied the return, political opposition reemerged only in 1982. Unopposed, Abdallah was overwhelmingly reelected to a second term as president in September 1984. A member of the French-based opposition reportedly attempted to get his name on the ballot but was disqualified on technical grounds. There were also unverified charges of electoral fraud during the presidential election, and non-Comorian observers stated that the announced percentage of eligible voters participating conflicted with their own observations of low turnout in some areas. However, most observers of the Comorian political scene believe that Abdallah would have won the election under any circumstances, though with somewhat less than the 99 percent he purportedly received.

Following the election, Abdallah gained passage of constitutional amendments abolishing the position of prime minister and reducing the powers of the Federal Assembly. In the 1987 legislative elections all of Abdallah's candidates were declared elected in balloting termed "a grotesque masquerade" by opponents.

During the 1980s there were at least three unsuccessful coup attempts against the regime. Abdallah was finally assassinated in November 1989 in an attack on his palace by a group of rebels led by the disgruntled former army commander Ahmed Muhammad. Said Muhammad Djohar, the head of the Supreme Court, became president of the interim government and won election to the office in March 1990.

In 1991 the new president of the Supreme Court led an unsuccessful coup to oust President Said Muhammad Djohar. Thereupon opposition leaders led by Mohamed Taki Abdoukarim met in Paris to plot seizure of the government. In 1992 army officers mounted another coup that was put down, but not before serious clashes with progovernment troops. A period of instability followed, with President Djohar naming and firing nine prime ministers as well as members of the Election Commission. In 1995 Colonel Bob Denard, who had led an earlier coup in 1978, reappeared and seized President Djohar and established a military committee of transition headed by a little-known army captain, Ayouba Combo. Within a day French paratroopers landed and quickly rounded up Denard and his mercenaries. Prime Minister Mohamed Caabi el Yachroutu named himself president, while a former prime minister, Said Ali Mohamed, set up

a rival government. Following French-inspired negotiations, elections were held in 1996 in which Taki won with 64.3 percent of the vote. Antigovernment strikes and riots erupted in 1997 in support of civil servants who had not been paid for years. Faced with open rebellion, the president dismissed the governor of Anjouan, whereupon the latter declared Anjouan's independence; the island of Mohéli also declared independence. Meanwhile, Anjouan itself faced a civil war by rival factions. In 1998 Taki, wearied by these troubles, died of a heart attack and was succeeded as president by Tadjidine Ben Said Massonde, a former prime minister. His authority, however, was limited to Grande Comore. Within a year he was overthrown by a military coup led by Col. Azali Assoumani, who pledged a return to civilian rule in 2002.

Nevertheless, problems continued. In August 2001 a military committee seized power in Anjouan with the goal of rejoining the Comoros. Successive coup attempts were made on Anjouan in September and November. In December that year voters backed a new constitution that would keep the islands as one country but grant each island greater autonomy. In April 2002 Colonel Mohamed Bacar was elected leader of Anjouan, Mohamed Said Fazul was elected leader of Mohéli, and Assoumani was named president of a united Comoros; in May 2002 Abdou Soule Elbak was elected president of Grande Comore. In 2003 the leaders signed a power-sharing agreement, leading to 2004 elections for assemblies on the semi-autonomous islands and for the national assembly, which opened in June of that year.

LIST OF MODERN RULERS

1975	Ahmed Abdallah
1976–78	Ali Soilih
1978–89	Ahmed Abdallah
1989–95	Said Muhammad Djohar
1995–96	Mohamed Caabi el Yachrouti
1996–98	Mohamed Taki Abdoukarim
1998–99	Tadjidine Ben Said Massonde
1999–	Azali Assoumani

CONSTITUTION

Under the constitution approved by popular referendum in 1996, Comoros is a federal Islamic republic. The constitutional head of state is the president, elected by universal suffrage for a five-year term; reelection is permitted only once. The president is assisted by an appointed council of ministers, and he appoints a prime minister as head of government from the majority party in the assembly. Each island elects a governor and island assembly. The governors enjoy considerable administrative autonomy, and the assemblies have some legislative freedom. The

constitution also prescribes the rough division of government revenues between the federation and the individual islands.

Legislative power was vested in a bicameral legislature, consisting at the time of the 42-member Federal Assembly, elected by universal suffrage for four-year terms, and the 15-member Senate, selected by an electoral college for six-year terms.

In 2001 a 77 percent majority approved a new constitution that changed the name of the country from Islamic Federal Republic of the Comoros to Union of the Comoros. The key provision of the constitution was the specification that the nation comprised the autonomous islands of Anjouan, Grande Comore, Mayotte, and Mohéli. Since 1976 Mayotte has been a territory of France, but before then it had been part of the Comoro Islands protectorate. Under the new constitution, Mayotte would be allowed to rejoin the country on the same footing as the other islands.

PARLIAMENT

The former Federal Assembly was dissolved following the coup of April 30, 1999. The unicameral parliament now consists of the 33-member Assembly of the Union, with 15 members selected by the assemblies of the islands and 18 by universal suffrage, all for five-year terms. Matters covered by federal legislation included defense; mail and telecommunications; external and interisland transportation; civil, penal, and industrial law; external trade; federal taxation; long-term economic planning; education; and health.

The council of each island is directly elected for six years. Each electoral ward, of which there may not be fewer than 10 or more than 35 per island, elects one councillor. Each council meets for not more than 15 days at a time, in March and December, and if necessary in extraordinary sessions. The councils are responsible for nonfederal legislation, including local taxation, and must be consulted on federal matters that affect the island, such as economic development.

POLITICAL PARTIES

Until 1989 the only authorized political party was the Comorian Union for Progress (Union Comoriène pour le Progrès, or Udzima). With the new constitution adopted in 1996, parties that showed a certain amount of electoral strength were permitted to continue in existence, while all others were to disband. The largest party in the country was National Assembly for Development (Rassemblement National pour le Développement). The National Front for Justice (Front National pour la Justice) was an Islamic fundamentalist organization that held three seats

in the Federal Assembly. In addition to these two parties there were more than a dozen political organizations active in Comoros.

After the turn of the century the political situation in the Comoros became more unsettled. Currently there is only one national political party, the president's Convention for the Renewal of the Comoros (Convention pour le Renouveau des Comores, CRC). The only opposition to the current president in the 2004 legislative elections was the Camp of the Autonomous Islands (Camp des Îles Autonomes), which is not a formal party. Rather, the camp is a coalition of opposition groups organized by the presidents of the three federated islands. In those elections, a total of 27 seats were won by Assoumani's opponents.

LOCAL GOVERNMENT

For purposes of local administration, Comoros is divided into three prefectures coterminous with the three main islands and their surrounding islets. These islands are further organized into seven regions and 55 to 60 *moudirias*, or regional council centers. *Moudirias* are broken down into *bavous* (districts), the basic units of local government. District government is conducted by district assemblies, or councils, elected by universal suffrage.

LEGAL SYSTEM

The judicial system is headed by the Supreme Court in Moroni. Subordinate courts of first instance are in each *moudiria*. There are 16 religious courts, or *qadi* courts, which apply the sharia, or Muslim personal law. Juries are employed in criminal trials.

No information is available on correctional facilities or the penal system.

HUMAN RIGHTS

In terms of political and civil rights, Comoros is classified as a partly free country. Feudal rule and the dominance of Islam have long been the two main characteristics of Comorian society. This tradition, reinforced during the French period, survived the brief, brutal rule of Ali Soilih, who strove to modernize institutions, collectivize society, and reduce the role of Islam. In the 1978 coup that overthrew him, this experiment came to an end, as Ahmed Abdallah and his band of French mercenaries put the islands back on their traditional course. They ruled with a far lighter hand but did not shrink from suppressing opposition and resorting to censorship.

Under President Assoumani the government has generally respected the human rights of its citizens; however, there have been problems in some areas. Prison

conditions remain poor. Unlike in previous years, security forces and the separatist authorities on Anjouan have not used arbitrary arrest and detention. The government has restricted freedom of religion, and security forces reportedly continue to threaten Christians. Further, societal discrimination against both Christians and women continues to be serious problems. There have been some instances of forced child labor.

FOREIGN POLICY

Comorian relations with France, the only foreign country with any interest in the troubled islands, have been soured by the issue of Mayotte, which seceded from Comoros in 1975. The Organization of African Unity (OAU), now the African Union (AU), has tried to reconcile the warring factions on the islands but has met with little success.

DEFENSE

The national army, the Forces Armées Comoriennes, has 700 to 800 soldiers under about 20 French officers. In 2003 the country spent \$6 million, or about 3 percent of gross domestic product (GDP), on defense.

ECONOMY

Comoros is one of the world's poorest countries. Its islands have inadequate transportation links, a young and rapidly increasing population, and few natural resources. The low educational level of the labor force contributes to a subsistence level of economic activity, high unemployment (20 percent in 1996), and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing, hunting, and forestry, contributes 40 percent to GDP, employs 80 percent of the labor force, and provides most of the exports. However, the country is not self-sufficient in food production; rice, the main staple, accounts for the bulk of imports. The government—which is hampered by internal political disputes—is struggling to upgrade education and technical training, privatize commercial and industrial enterprises, improve

540 Comoros

health services, diversify exports, promote tourism, and reduce the high population growth rate. Increased foreign support is essential if the goal of 4 percent annual GDP growth is to be met, a rate that would double 2002's 2 percent. Remittances from 150,000 Comorians abroad help supplement GDP.

ENVIRONMENT

One of the most densely populated countries in the world, with one of the highest birthrates, Comoros faces many environmental challenges, including soil erosion, poor water quality, deforestation, poor farming techniques, and lack of protected lands. In addition, the major urban areas suffer from poor waste removal and growing air and water pollution. The government of Comoros has identified some of the problems it faces but is challenged by the lack of resources to effectively address them.

LIVING CONDITIONS

The Comoros islands are frequently described as being like picture postcards, with great natural beauty. However, life for the typical Comorian is pure struggle. For

decades the islands have been rocked by political instability and frequent coups and coup attempts. In 2002 an estimated 60 percent of the population lived below the poverty line. Over the last quarter of the 20th century the population doubled, leading to overcrowding, deforestation, and soil erosion. Life expectancy is low, sanitation is poor, diseases such as malaria, tuberculosis, and leprosy are commonplace, literacy is low (about 57 percent in 2003), many roads are impassable during the rainy season, and housing for many people consists of straw huts, although homes in more developed areas are made of basalt stone.

HEALTH

In 2004 life expectancy at birth was just under 62 years. The infant mortality rate that year was a high 77 deaths per 1,000 live births—not surprising in a nation where only 62 percent of births are attended by a health professional. Malaria is a significant problem, with the United Nations in the early 2000s estimating about 1,930 cases per 100,000 population per year. The public health-care system has generally been a failure, so those who can do so turn to private clinics in the cities. Most Comorians rely on traditional practitioners, who typically prescribe herbal remedies, amulets, Koranic verses, and the like.

FOOD AND NUTRITION

Current information about nutrition in Comoros paints a bleak picture. Among children ages three and under, 33.8 percent were stunted, 25.8 percent were moderately underweight, and 7.9 percent were severely underweight. Such figures are not surprising for a country that has to import most of its food.

The Comorian diet reflects Arab, African, Indian, and European influences. The main staple is rice imported from Asia. Other dietary staples include root vegetables, plantains, cassava, breadfruit, bananas, fish (fresh and dried), and coconut milk. Fruit is abundant and includes papayas, oranges, mangoes, and pineapples. On ceremonial occasions, castrated goat is often served.

STATUS OF WOMEN

Women do not have equal rights in Comoros. While the 1992 constitution recognized their right to suffrage, women otherwise play a limited role in politics. Islamic law prevents most women from owning property. Polygamy is often practiced, with a man establishing two or more households. Divorce is relatively easy for men, but the wife retains the family home. While schooling is free and universal, girls are less likely to be enrolled in school than their male counterparts. While some 64 percent of males were literate in 2003, only 49 percent of females were literate. While women have little formal or institutional power, much of Comoros is matrilineal, and women retain considerable informal power through association with other local women.

WORK

The Comorian labor force was 144,000 strong in 1996. Only about 10,000 of those employed earned wages, however, most of them working for the government; approximately 80 percent of the population makes its living through subsistence agriculture and fishing, and per capita GDP in 2002 was only about \$700. Agricultural products primarily include vanilla, cloves, perfume essences, copra, coconuts, bananas, and cassava (tapioca). The small amount of industry, contributing just 4 percent to GDP, consisted primarily of perfume distillation—Comoros is often referred to as the “Perfume Isles”—and tourism.

EDUCATION

In principle, education is free, universal, and compulsory for eight years, from the ages of seven to 15. Enrollments have risen sharply in recent years; still, while enrollments doubled at the secondary level between 1970 and 1980, only 25 percent of children were entering secondary school as of 2000.

All children attend Koranic schools until they are able to read (but not necessarily understand) classical Arabic. Schooling lasts 13 years, as divided into six years of primary school, four years of middle school, and three years of secondary school. Since independence in 1975, all French teachers have left. Consequently, the lycées, or secondary schools, had to be closed in 1975. Primary education, however, continued to function.

The academic year runs from October to July. The medium of instruction is French.

There is a severe shortage of teachers in the school system. Although the student-teacher ratio is high without being unacceptable (about 37 students per teacher at the primary level in 2000), variations are considerable among schools. However, 58 percent of the teachers did not have even a junior secondary school certificate (BEPC), and only two held the baccalaureate. The shortage of classrooms has been a problem for a number of years and is met by a double-shift system. The secondary-school system is almost entirely dependent on expatriate teachers, formerly from France and now from other French-speaking countries in Africa.

Little vocational training took place until 1974, when the International Labor Organization (ILO) helped establish a center for artisan training on Anjouan.

Comoros has no institutions of higher education.

MEDIA

The press consists of two weekly papers, *al-Watwan*, published on Grande-Comore, and *Kwezi*, published on Mayotte, as well as the monthly *L'archipel*. In the absence of a local daily press, newspapers from Madagascar circulate throughout the islands.

Radio service is provided by the government-owned Radio Comoros, which operates one shortwave station and one FM station and broadcasts in French and Comorian. Additionally, Grande Comore, Mayotte, and Anjouan each have their own radio stations.

There are two libraries.

CULTURE

There is little public support for the arts; cultural expression in Comoros takes place primarily in the form of festivals and folk art. Singing, dancing, and violin playing are common at religious festivals. Many artisans produce sculptures (often out of coconuts), wood carvings, dolls, baskets, pottery, embroidery (especially of Muslim hats for

men), and jewelry. Written literature consists primarily of French novels. Another form of cultural expression is national monuments. Many of the towns and villages are fortified, and palaces, mosques, tombs, and public squares are often decorated with domes, sculptures, floral or geometric patterns, and calligraphy, usually texts from the Koran.

FOLKLORE AND MYTHOLOGY

Comorian folklore reflects both African and Muslim traditions. As in other Muslim countries, it is believed that events occur according to the will of Allah and that people have little control over them or their own fates. On Grande Comore the story is told that on the site of Lac Sale used to stand a village that Allah flooded when its people refused to give water to a descendant of Mohammed, the founder of Islam. Other beliefs reflect the influence of African divinities. Many Comorians consult *mrwalim* (diviners) or spirits called jinn before undertaking any important activity, and these consultations may require them to engage in animal sacrifice or other special rituals. It is widely believed that Mount Khartala on Grande Comore was formed when King Solomon dropped a ring as he was being pursued by jinn from Ethiopia.

ENTERTAINMENT AND RECREATION

In a nation that is among the poorest in the world, recreation is not a priority. Nonetheless, a common form of recreation among men is to gather in the village *bangwe* in the afternoons and evenings for conversation with others of their own generation and background. Dominoes, card playing, and a board game called *mraba* are also popular. On Anjouan and Mayotte, a form of boxing/wrestling called *mrenge* is still practiced. Younger people enjoy barbecues and picnics on the beach and attending the nightclubs that can be found in the cities.

ETIQUETTE

Age and maleness give social status. Women wear veils in public and eat separately with children in the kitchen,

while men join friends or family members in the living room or at the dining table for meals. Greetings are formal and elaborate and include inquiries about family members, neighbors, and even pets and livestock. In addressing an older person, it is customary to use the word *kwezi*, a term of respect. All older people are addressed as uncle, father, or mother, along with the name of that person's nephew or niece or child; thus, a man who has a son named Ali would be addressed as *mbada* (father of) Ali.

FAMILY LIFE

Technically, dating is contrary to Islamic law, which forbids relationships between unmarried couples. Men and women tend to marry often, as many as two to four times. Weddings are celebrated only when it is the woman's first, and celebrations have to be conducted in a couple's home community to ensure that the wealth exchanged remains in the community. The residency of a family tends to be matrilineal, with affairs run by the wife's relatives, and often includes children from her earlier marriage as well as other relatives for whom she bears responsibility. Every woman at marriage is given a piece of arable land with a house. On Grande Comore land is owned matrilineally and is inherited by women, and one belongs to one's mother's lineage.

PERSONAL APPEARANCE

Younger people wear Western clothing, and women wear slacks only in the cities. Otherwise, older men tend to wear the *ikoi*, a cloth that covers the lower body, a *kandu*, a long white robe, and a *kofia*, or embroidered hat. Older women dress colorfully, either in long dresses covered with a *lesso* or *shirromani* (or shawls), or in a chador, a traditional Islamic shawl, veil, and head covering. Younger women who wear Western clothing still tend to wear a *lesso*.

SPORTS

In Atlanta in 1996 Comoros took part for the first time in the Summer Olympics.

The most popular sport among men in Comoros, where every village is likely to have at least two teams, is soccer. Women are regulated to the role of spectators. In the cities, volleyball and basketball have grown in popularity, and some women participate.

CHRONOLOGY

- 1946** Comoros is granted administrative autonomy as an overseas territory of France.
- 1961** Comoros achieves internal autonomy under a special statute.
- 1968** Comoros gains greater internal autonomy.
- 1973** An agreement for independence within five years is signed in Paris.
- 1974** In a special referendum, all islands except Mayotte vote for independence; French parliament decides that each island should vote separately on a new constitution.
- 1975** Chamber of Deputies votes for a unilateral declaration of independence and proclaims Republic of the Comoros, with Ahmed Abdallah as president. Chamber of Deputies establishes itself as a constituent assembly to draft a constitution. Abdallah is overthrown in coup led by Ali Soilih, leader of a four-party coalition known as National United Front (NUF). National Assembly is dissolved. Armed supporters of Ali Soilih land on Anjouan, arrest Abdallah and his supporters, and crush an Anjouan secessionist movement. The newly established National Revolutionary Council transfers most of its powers to the 12-member National Executive Council, headed by the president, Prince Said Mohamed Jaffar. Comoros is admitted to the United Nations. Ali Soilih and unarmed followers land on Mayotte in an effort to persuade the Mahorais to join the union.
- 1976** Soilih is elected president, replacing Jaffar. National Revolutionary Council is reconstituted as the National Institutional Council. Island of Mayotte rejects union with Comoros in two referendums. French estates in Comoros are nationalized and French officials are repatriated.
- 1977** Comoros seeks repatriation of its citizens from Madagascar following racial riots.
- 1978** President Soilih is ousted in coup led by the French mercenary Bob Denard and is killed as he tries to flee the country; former president Ahmed Abdallah and former vice president Mohammed Ahmed are installed as coleaders of the new government. The 50 mercenaries, headed by Denard, remain to run vital services, but their presence infuriates other African nations, and Comoros is expelled from the OAU meeting in July. New constitution is drafted and approved by 99.31 percent of the votes. Diplomatic relations with France are resumed, and the two countries sign agreements on economic and military cooperation. Abdallah is elected president.
- 1979** The newly elected Federal Assembly approves the formation of a one-party state.

- OAU readmits Comoros as the mercenaries leave.
- 1982** Prime Minister Salim Ben Ali is dismissed and replaced by Ali M'Roudjae.
- 1983** Anti-Abdallah plot is thwarted in Canberra, Australia, and three plotters are convicted.
- 1984** Abdallah is reelected for a second six-year term. The office of prime minister is abolished through a constitutional amendment.
- 1985** Comoros joins the Indian Ocean Commission.
- 1987** Legislative elections return the entire slate of candidates presented by Abdallah.
- 1989** Abdallah is assassinated. Said Muhammad Djohar is named interim president.
- 1990** Djohar is elected president.
- 1992** Another new constitution is approved restoring the prime ministership, and the country holds its first democratic elections.
- 1995** Mercenaries under the command of Bob Denard attempt to overthrow Djohar's government. Djohar is taken prisoner. French forces suppress the coup attempt and free Djohar but do not reinstate him as president.
- 1996** In elections, Mohamed Taki Abdoukarim is elected president in a contest of 15 candidates.
- 1997** The OAU must come to the aid of the Comoros to put down an armed insurrection on the island of Anjouan; the rebels seek reunification with France.
- 1998** President Mohamed Taki Abdoukarim is reelected head of state and Ahmed Abdou is elected prime minister; in November, Abdoukarim dies and Tadjidine Ben Said Massonde assumes presidency.
- 1999** Anjouan representatives refuse to sign OAU agreement proposing central administration of the three islands; Colonel Azali Assoumani takes control of the government in a bloodless coup.
- 2001** In August a "military committee" seizes power in the breakaway island of Anjouan with aim of rejoining the Comoros.
In Anjouan a takeover by Major Combo Ayouba is put down by Major Mohamad Bacar, the leader of the military government set up in August. In November another failed coup attempt is launched by Colonel Said Abeid, who opposes reunification efforts.
In December voters back a new constitution that will keep the three islands as one country but will grant each one greater autonomy.
- 2002** Bacar is elected leader of Anjouan, and Mohamed Said Fazul is elected leader of Mohéli. Azali Assoumani is named president of reunited Comoros.
Abdou Soule Elbak is elected island president of Grande Comore.
- 2003** Security forces foil a coup plot against President Assoumani.
A power-sharing deal is signed by the leaders of the semiautonomous islands.
- 2004** Local elections are held for assemblies on the three semiautonomous islands in March. Supporters of President Assoumani win only 12 of 55 seats. Elections are held for the national assembly in April, which opens in June.

CONGO, DEMOCRATIC REPUBLIC OF THE

Basic Fact Sheet

OFFICIAL NAME

Democratic Republic of the Congo (République Démocratique du Congo) (formerly Zaïre)

ABBREVIATION

CD

CAPITAL

Kinshasa

HEAD OF STATE & HEAD OF GOVERNMENT

Joseph Kabila (from 2001)

NATURE OF GOVERNMENT

One-party dictatorship

POPULATION

58,317,930 (2005)

AREA

2,345,410 sq km (905,568 sq mi)

MAJOR ETHNIC GROUPS

Mongo, Luba, Kongo, Mangbetu-Azande

LANGUAGES

French (official), Lingala, Kikongo, Tshiluba, Swahili

RELIGIONS

Roman Catholicism, Protestantism, animism

UNIT OF CURRENCY

Congolese franc

NATIONAL FLAG

Light blue with a large yellow five-pointed star in the center and a column of six small yellow five-pointed stars along the hoist side.

NATIONAL EMBLEM

Light blue shield with a large yellow five-pointed star in the center and a row of six small yellow five-pointed stars along the top.

NATIONAL ANTHEM

“Arise, Congolese, United by Fate”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), January 4 (Martyrs of Independence Day), Easter Monday, May 1 (Labor Day), Ascension Day, Whitmonday, May 20 (Mouvement Populaire de la Révolution Day), June 24 (Zaire Day), June 30 (Independence Day), August 1 (Parents’ Day), Assumption Day, All Saints’ Day, October 27 (Three Z Day), November 24 (National Day), December 25 (Christmas)

DATE OF INDEPENDENCE

June 30, 1960

DATE OF CONSTITUTION

May 13, 2005

GEOGRAPHICAL FEATURES

The Democratic Republic of the Congo (DRC) is a rectangular-shaped nearly landlocked nation in the south-central part of the African continent, with a narrow strip of land on the northern bank of the Zaïre estuary as the only outlet to the Atlantic. The nation includes the greater part of the Congo River basin and lies on the equator, with one-third of the country to the north and two-thirds to the south. It is the third-largest nation in Africa, with a land area of 2,345,410 sq km (905,568 sq mi). The length of the coastline is 40 km (25 mi). The greatest distance both north-south and east-west is about 2,250 km (1,400 mi). Congo shares its international bor-

der of about 10,730 km (6,667 mi) with eight neighbors: Central African Republic (1,577 km; 980 mi), Sudan (628 km; 390 mi), Uganda (765 km; 475 mi), Rwanda (217 km; 135 mi), Burundi (233 km; 145 mi), Tanzania (459 km; 285 mi), Zambia (1,930 km; 1,198 mi), Angola (2,511 km; 1,560 mi), and the Republic of the Congo (2,410 km; 1,496 mi).

The Democratic Republic of the Congo is divided into four physical regions. The vast, low-lying central area is a basin-shaped plateau sloping toward the west with an average elevation of 400 m (1,310 ft). This area is surrounded by mountainous terraces in the west, plateaus merging into savannas in the south and southeast, and dense grasslands in the northwest, with elevations in the

Democratic Republic of the Congo (Zaire)

south of 1,000 to 2,000 m (3,280 to 6,560 ft) and in the north of 600 to 800 m (1,970 to 2,625 ft). High mountain ranges enclose the country in the north, including the Ngoma, Virunga, Ruwenzori, Blue, Kundelunga, and Marungu mountains, with altitudes rising to 5,000 m (16,400 ft). The coastline of Congo is bordered by a small plain 100 km (62 mi) wide.

The country is almost entirely drained by the 4,505 km (2,800 mi) Congo River and its many tributaries. The lower Congo is not navigable, but the upper and middle Congo are navigable for 2,575 km (1,600 mi). The Congo

is the world's second-largest river, after the Amazon, in terms of volume of water (339,600 cu m per sec; 12 million cu ft per sec).

CLIMATE AND WEATHER

The seasons in the DRC are opposite north and south of the equator. Both regions have one long wet and one long dry season. North of the equator the rainy season lasts from early April to late October and the dry season from early November to March. The hours of daylight remain practically unchanged throughout the year. On the southern plateau—farthest from the equator—there is a characteristic tropical climate as influenced by the trade winds. Eastern Congo and upper Shaba, in the southeast, have mountainous climates, with lower temperatures sometimes falling to 0°C (32°F) at night. The average rainfall for the entire country is about 1,070 mm (42 in), and rain falls more or less regularly every year. The central region receives at least 1,520 to 2,030 mm (60 to 80 in) per year, and the rainy season extends to 130 days. Storms are violent but seldom last for more than a few hours. At the equator temperatures vary from 15.6°C to 37.8°C (60°F to 100°F), with a mean maximum of about 32.2°C (90°F). The hottest month is February. Humidity is always high, ranging upward from 65 percent. Temperatures drop on the edges of the Congo River basin to about 25°C (77°F), with cooler nights.

Central Region: 60 in to 80 in

FLORA AND FAUNA

The DRC's rain forests have an abundance of diverse flora, including such economically valuable tree species as teak, African cedar, mahogany, and ebony as well as rubber plants and oil palms. Mammals include chimpanzees, hyenas, jackals, leopards, lions, zebras, okapis (short-necked giraffes), giraffes, red buffalo, rhinoceroses, hippopotamuses, and elephants as well as the endangered gorilla. Reptiles include crocodiles, pythons, and mambas. Bird life is abundant, with plovers, herons, cuckoos, flamingos, and parrots.

ETHNIC COMPOSITION

More than 99 percent of the Congolese are of African descent, and the population is divided into more than 200 tribes. No single ethnic group can claim a majority on the national level, but each has its own territory where it is predominant.

Based on cultural and historical criteria, three ethnic zones exist in the Congo: northern and southern savanna, central rain forest, and eastern highlands. Each has its own tribes or tribal clusters.

The most important of the ethnic groups are the Kongo, Luba, Mongo, Azande, and Lunda. None of these groups numbers more than three million. The primary feelings of identity among these groups are ethnic rather than national, but the pressure of the events of the independence period has created a rudimentary consciousness of common interests.

The resident alien population numbers roughly 900,000, including Angolans, Sudanese, Zambians, and West Africans. Since 1970 the non-African alien population has declined, and their number is estimated at 50,000, half the preindependence figure. Belgians still constitute the majority, followed by Portuguese, Italians, Greeks, Arabs, Lebanese, Pakistanis, and Indians; most are civil servants, missionaries, traders, teachers, or planters.

LANGUAGES

French is the official language and the medium of instruction in secondary and higher education, but only a small percentage of the population have a working knowledge of the language, and efforts to introduce French into the primary schools have failed. Nearly all Congolese speak languages of the Bantu subgroup of the central branch of the Niger-Congo family. The eastern branch of the Niger-Congo family and the central Sudanic family are also represented. The principal language is Bantu, with its 14 clusters of languages spoken by over 17 million people. The Kongo, Luba, Mongo, and Lunda belong to this language family. Azande is the most important of the eastern branch of the Niger-Congo family and Moru-Mangbetu that of the central Sudanic family. The total number of languages and dialects is estimated at 700.

RELIGIONS

It is estimated that about 70 percent of the Congolese are, at least nominally, Christians; 50 percent are Roman Catholic, and 20 percent are Protestant. Most of the non-Christian population is composed of adherents of traditional religions or syncretic sects. The traditional religions are not formalized but embody some common concepts, such as animism, belief in spirits, and ancestor worship. The syncretic sects are a mixture of Christianity and traditional beliefs centered around new prophets. One of these sects, Kimbanguism, accounts for about 10 percent of the population and in 1969 became the first independent African church to be admitted to the World Council of Churches. An additional 10 percent of people are Muslims.

The DRC has been the scene of among the most intense Christian missionary efforts, and both Catholic and Protestant organizations have had a profound impact on the development of the nation, particularly in the fields of education and health.

Kimbanguist	5,830,000
Muslim	5,830,000
Other syncretic sects and indigenous beliefs	5,830,000

HISTORICAL BACKGROUND

Little archaeological evidence exists of the people that long ago inhabited the region that is today the Congo. However, it is known that people have been in the area since the Stone Age. The first and most obvious distinction to be made between the various peoples who first populated the area of the Democratic Republic of the Congo is between the small-scale, segmentary societies of the rain forest zone and the state systems of the savanna. Most of the peoples of the rain forest area were organized into village communities, under the leadership of chiefs or of dominant clans or lineages. Some of these communities were able to absorb or conquer neighboring villages and thus develop into sizable chiefdoms. In specific instances, as among the Mangbetu, these expanding societies provided the basis for a common sense of identity among otherwise unrelated peoples. Elsewhere, however, social fragmentation remained one of the most salient characteristics of the rain forest peoples.

From the history of the southern savanna, the traditional habitat of several large-scale societies with centralized political systems, variously described as kingdoms, empires, and chiefdoms, emerged between 1200 and 1500 c.e. These include the Kongo, Lunda, Luba, and Kuba state systems, all of which shared certain common features, such as a centralized structure of authority identified with a single ruler, who more often than not enjoyed the attributes of divine kingship.

Therefore, to a far greater extent than many other African nations, the Democratic Republic of the Congo is a European/colonial creation that has little antecedent history.

By masterful diplomacy King Leopold II of Belgium induced the Berlin Conference of 1884–85 to recognize his personal claim over the Congo, which officially became a Belgian colony in 1908. Belgian rule was harsh, and the development of the colony was driven primarily with a view to economic profit. Belgium failed to prepare the Congo for independence, and consequently bears partial responsibility for the upheavals that followed soon after independence.

Controversy erupted before independence regarding the issue of federalism versus centralism. Most political organizations, which were ethnically based, favored decentralization; only Patrice Lumumba supported a unitary state. The question was not settled by the time the nation became independent. At independence in 1960 Patrice Lumumba became prime minister and Joseph Kasavubu president. Belgian administrators were to stay to train the new executives, and the army was to remain

under Belgian control. Five days after independence the armed forces mutinied. The appointment of Joseph-Désiré Mobutu as chief of staff helped to defuse the rebellion. Nevertheless, a political crisis developed as Belgians fled and Belgian troops took measures to protect Belgian nationals. Katanga and South Kasai provinces seceded, and Lumumba called in UN troops to intervene.

Disagreements between Kasavubu and Lumumba over the handling of the secession resulted in Lumumba's dismissal. He was subsequently murdered by his enemies in Katanga. Mobutu temporarily took control of the government but returned power to Kasavubu in February 1961. Parliament reconvened in August 1961, with most rival groups forming a government of national unity. Only Moïse Tshombe and his secessionist followers refused to join. Their rebellion was finally suppressed in 1963.

In 1964 a new constitution was promulgated that placed greater emphasis on federalism. It created new provinces and established a federalist, presidential system with a bicameral national assembly. Despite the changes, rebellion continued while Tshombe and Kasavubu struggled to assume power. In November 1965 Mobutu intervened and took over the presidency. A new constitution was promulgated in 1967, but the army held power; political activity ended. Mobutu established the *Mouvement Populaire de la Révolution* (MPR), which became the sole party in the country. He consolidated power in the central government and in an increasingly powerful presidency. He ruled with the assistance of a presidential bureau. The legislature, which was not frequently convened, had little influence. All opposition was suppressed.

The official philosophy of Congo became Mobutism, which was more a personal cult than a strict ideology. Mobutu was publicly referred to as "the guide" and "the father of the nation." Mobutism included a campaign for authenticity and national identity under which colonial place names and Christian names were Africanized by mandate. In 1971 he renamed himself Mobutu Sese Seko and the country Zaïre. Much of the thrust of the militant Africanization programs generated by the ideology of Mobutism was blunted by the economic and military failures of the Mobutu regime in the late 1970s. This forced Mobutu to depend more and more on Western powers and generally to retrace his steps toward a more pragmatic stance in political and social matters.

After almost a decade of prosperity, Zaïre relapsed into near civil war following the invasion of Shaba Province in 1977 and 1978 by the National Front for the Liberation of the Congo. The Mobutu regime was rescued solely by the intervention of French forces, although some assistance was received from a number of other states, such as Uganda, Morocco, Central African Republic, and Saudi Arabia, as well as Belgium.

Opposition to Mobutu's regime again manifested itself in 1984. In January and March a number of bombs exploded in Kinshasa, causing loss of life, and a rebel force occupied the town of Moba, in Shaba Province, for two days in November before it was recaptured by Zaïrean troops. Zaïre accused Belgium of harboring the groups responsible for such violent opposition and claimed that the rebels had crossed into Zaïre from neighboring Tanzania. However, the main opposition groups in Belgium did not acknowledge involvement in the occupation of Moba, suggesting instead that rebellious Zaïrean troops had been responsible. It was widely believed that the violent opposition in Zaïre had been orchestrated to disrupt the presidential election, which Mobutu, as the sole candidate, won easily.

Although Mobutu remained entrenched in power as the 1990s began, he was being challenged on a number of fronts. His third seven-year term as president expired in 1991, but he continued to rule without any constitutional sanction, appointing a succession of front men as prime ministers and making vague gestures of ending his one-party rule. The struggle between the president and the opposition forces reached an impasse when the country was invaded in 1996 by some 700,000 to one million Hutus, who were soon opposed by some 400,000 Banyamulenga Tutsis, in what would become known as the First Congo War. The Tutsis, organized into an army called Alliance of Democratic Forces for the Liberation of Congo-Zaïre (AFDL), were led by anti-Mobutu guerrilla leader Laurent-Désiré Kabila, who easily overran most of eastern Zaïre. Within a year AFDL was at the gates of Kinshasa, having driven the Zaïrean army as well as the Hutus out of the rest of the country. Mobutu fled the country, and, after a murderous rampage by Mobutu loyalists, AFDL forces entered the capital. Kabila named himself president of the renamed Democratic Republic of the Congo in 1997. Soon after seizing power, Kabila himself faced a series of civil wars with a number of foreign mercenary armies, including Tutsi, Ugandan, and Angolan forces, carving up the country. Altogether, conflict starting in 1998 became known as the Second Congo War.

On January 16, 2001, Kabila was assassinated by a disaffected bodyguard. His son, Joseph Kabila, was immediately sworn in as the new president. In February he met with the Rwandan president, and Rwanda, Uganda, and the rebels agreed to a UN peace plan calling for the withdrawal of foreign troops. The search for peace continued in 2002, as the DRC and Rwanda signed an agreement calling for the withdrawal of Rwandan troops, while the DRC would disarm and arrest the Rwandan Hutus responsible for the genocide of Tutsis in Rwanda in 1994. Later that year the DRC signed a similar agreement with Uganda and also signed a peace agreement with the rebel groups that would give opposition members seats in an interim government. In 2003 Kabila signed a new con-

stitution that established a two-year interim government, with leaders of the rebel groups sworn in as vice presidents, and in August an interim parliament was launched. Fighting, however, continued. In 2004 rebels attacked military bases around Kinshasa, rebels occupied the town of Bukavu for a week, and fighting erupted between the army and rebel soldiers from a pro-Rwanda group.

LIST OF MODERN RULERS

1960–65	Joseph Kasavubu
1965–97	Mobutu Sese Seko
1997–2001	Laurent-Désiré Kabila
2001–	Joseph Kabila

CONSTITUTION

Numerous constitutional changes took place during the rule of Mobutu Sese Seko; all were undertaken to further consolidate Mobutu's power. In the constitution of February 1978, what was then Zaïre was described as a united, democratic, secular state. The constitution accorded equal rights and the freedom of expression, conscience, and religion to all citizens, who were also all declared members of the Mouvement Populaire de la Révolution (MPR) and from the age of 18 would have the right to vote. The MPR, founded in 1967, was established by the constitution as the nation's only political party in 1970.

The head of state is the president, who is elected for a seven-year term and who earlier served concurrently as the president of the MPR. He appointed and dismissed the National Executive Council, a cabinet of state commissioners. In addition he presided over the MPR political bureau, the MPR congress, and legislative and judicial councils. He held the power to legislate with the consent of the legislative council and was accountable to the people by means of an annual policy statement. The president was also the commander in chief of the armed forces and gendarmerie.

The legislative body was the National Legislative Council and was composed of people's commissioners in a single chamber. As per the constitution members were elected by universal and secret suffrage to five-year terms and were chosen from a slate of candidates approved by the MPR.

Mobutu had been making some movement toward a more democratic form of government, including scheduling elections for the legislature in 1997. However, following the successful rebellion led by General Laurent-Désiré Kabila, in May 1997 the new government announced a program of constitutional reform, and in November 1998 a draft constitution was approved by President Kabila. Under the new constitution the presi-

dent is still the head of government and chief of state. In August 2000 Kabila established the Transitional Constituent Assembly, appointing all 300 members. In 2003 the new constitution was finally signed, creating a two-year interim government that would include former rebel leaders as vice presidents. In 2005 voters approved a new constitution, paving the way for elections in 2006.

PARLIAMENT

The Transitional Constituent Assembly was established in August 2000 by former president Laurent Kabila. It is a unicameral body of 300 members appointed by Kabila. The assembly was reconvened in 2003, and elections were scheduled for 2005.

POLITICAL PARTIES

President Laurent Kabila led the Alliance of Democratic Forces for the Liberation of Congo-Zaïre (AFDL) and banned all other political party activity indefinitely. The sole legal political party until 1991 was the Popular Movement of the Revolution (MPR). While the government allowed the formation of other political parties after 1991, since the coup of 1997 the AFDL has been the only political party to hold office.

President Joseph Kabila lifted the ban on political parties in May 2001. Other parties now include: Union for Democracy and Social Progress (UDPS), Democratic Social Christian Party (PDSC), Union of Federalists and Independent Republicans (UFERI), Popular Movement of the Revolution (MPR), Forces for Renovation for Union and Solidarity (FONUS), and Unified Lumumbast Party (PALU).

LOCAL GOVERNMENT

There are 10 regions, each with its own regional commissioner and six councillors who are appointed by the president. The regions are subdivided into 41 subregions. The capital city of Kinshasa constitutes a separate unit under a governor and urban commissioners appointed by the president of the republic.

LEGAL SYSTEM

The basis of Congolese law is the Belgian penal code, with certain modifications to provide for African traditions.

The court system consists of the Supreme Court of Justice; three courts of appeal, at Kinshasa, Kisangani, and Lubumbashi; first-degree tribunals in each region and the city of Kinshasa; district tribunals in each district and city; and peace tribunals in each city and territory.

The constitution also provides for a Constitutional Court to rule on the constitutionality of laws. Judges and public prosecutors are appointed by the president of the republic on the advice of the Superior Council of the Magistrate. They cannot be removed but may be transferred.

HUMAN RIGHTS

The two Kabila governments' human rights records have been poor, as the nation has been embroiled in conflict, the two Congo wars, almost continuously since 1996. Citizens have not had the right to change their government peacefully. Security forces have been responsible for numerous extrajudicial killings, disappearances, torture, beatings, rape, and other abuses. In general, security forces have committed these abuses with impunity, although a special military tribunal tried and executed some security force members for various human rights abuses. Prison conditions have remained harsh and life threatening. Security forces have increasingly used arbitrary arrest and detention. Prolonged pretrial detention has remained a problem, and citizens have often been denied fair public trials. The special military tribunal has tried civilians for political offenses and executed civilians, frequently with total disregard for process protections. The judiciary has remained subject to executive influence and has continued to suffer from a lack of resources, inefficiency, and corruption. It has been largely ineffective as either a deterrent to human rights abuses or a corrective force. Security forces have violated citizens' rights to privacy. The forcible conscription of adults and children has continued, although children have recently been conscripted to a lesser extent.

Government security forces have continued to use excessive force and have committed violations of international law in the Second Congo War, which started in August 1998. On at least three occasions, government aircraft bombed civilian populated areas in rebel-held territory. Although a large number of private newspapers have often published criticism of the government, authorities continued to restrict freedom of speech and of the press by harassing and arresting newspaper editors and journalists and seizing individual issues of publications, as well as by continuing to increase restrictions on private radio broadcasting. The government has severely restricted freedom of assembly and association. The government has continued to restrict freedom of movement; it has required exit visas and imposed curfews even in cities not immediately threatened by the war. The government has continued to ban political party activity and has used security services to stop political demonstrations, resulting in numerous arrests and detentions. It has harassed and imprisoned members of opposition parties and has also harassed nongovernmental human rights organizations. Violence against women is a problem and has rarely been punished.

Female genital mutilation persists among isolated populations in the north. Discrimination against indigenous pygmies and ethnic minorities has been a problem. Serious governmental and societal violence and discrimination against members of the Tutsi ethnic minority have continued; however, the government has protected many Tutsis who were at risk and has permitted over 1,000 to leave the country. The government has arrested labor leaders during public sector strikes and has allowed private employers to refuse to recognize unions. Child labor, including the use of child soldiers has remained a common problem. There have been credible reports of beatings, rapes, and extrajudicial killings of Tutsis; however, societal abuses of Tutsis in government-controlled areas have been far fewer than in 1998, because by the start of that year surviving Tutsis generally either had left the government-controlled part of the country or were in hiding, places of refuge, or government custody.

There have been numerous credible reports that Mai Mai groups fighting on the side of the government have committed serious abuses, including many extrajudicial killings and the torture of civilians.

FOREIGN POLICY

During his long rule, Mobutu generally enjoyed the support of Western powers who used him as a pawn in the cold war and also exploited his corrupt administration to secure favorable mining leases. But this support evaporated by the early 1990s. In 1993 the United States, Belgium, and France issued a statement describing Mobutu as the "architect of Zaire's ruin" and calling for his resignation. The onset of the civil war and the collapse of the Zairean army before the swift march of Kabila-led Tutsi forces posed a dilemma for Western powers who did not know whether to shore up the tottering and corrupt Mobutu or support an unknown guerrilla leader. When Kabila emerged triumphant, most of the world's nations immediately recognized him, but the continuing civil anarchy in the country and the involvement of Angolan, Ugandan, and Tutsi militias has further complicated the situation. A multinational effort to end the conflict led to the Lusaka Award, which was disregarded by Kabila. The assassination of Laurent Kabila raised the specter that Congo may eventually disintegrate in the face of its internal troubles, which have continued under his son, Joseph Kabila, with Uganda, Rwanda, and Burundi continuing to be drawn into war and rebel insurgencies.

DEFENSE

The defense structure is headed by the president of the republic, who is also the defense minister. Control is exercised through the military high command.

The main source of military manpower is voluntary enlistment, but the government attempts to achieve an ethnic balance through controlled recruitment. The former Zaïrean armed forces disbanded in 1997, and subsequently some 20,000 to 40,000 personnel of the Congo Liberation Army constituted the national armed forces. In 2003 the nation spent about \$116 million, or 1.4 percent of gross domestic product (GDP), on the military. Despite heavy military aid and arms transfers from the West, the Congolese army has a poor track record. The armed forces are heavily concentrated on the southern border and in Shaba.

ECONOMY

The economy of the Democratic Republic of the Congo—a nation endowed with vast potential wealth—has declined drastically since the mid-1980s. The government instituted a tight fiscal policy that initially curbed inflation and currency depreciation, but these small gains were quickly reversed when the foreign-backed rebellion in the eastern part of the country began in August 1998. The Second Congo War has dramatically reduced government revenue and increased external debt. Foreign businesses have curtailed operations due to uncertainty about the outcome of the conflict and because of increased government harassment and restrictions. Poor infrastructure, an uncertain legal framework, corruption, and lack of openness in government economic policy and financial operations remain a brake on investment and growth. A number of International Monetary Fund (IMF) and World Bank missions have met with the government to help develop a coherent economic plan, but associated reforms are on hold. In late 2002 conditions improved with the withdrawal of foreign troops, and President Joseph Kabila has begun instituting reforms. Economic stability, with the help of international donors, improved in 2003. New mining contracts have been approved, and these, combined with high mineral and metal prices, could improve GDP growth, which was estimated to be 6.5 percent for 2003.

ENVIRONMENT

The DRC's most significant environmental problem is widespread poaching, which threatens the viability of a number of species, especially the gorilla and elephant populations. The country also suffers from growing water pollution and deforestation. Refugees who arrived in mid-1994 were responsible for significant deforestation, soil erosion, and wildlife poaching in the eastern part of the country.

LIVING CONDITIONS

Living conditions are harsh in the DRC. Mobutu essentially sacked the nation of its wealth—with his personal fortune at the time of his flight in 1997 estimated at \$5 billion—and ruled through terror and brutality; at one point his guards murdered 50 university students in their beds for speaking out against the regime. Poverty, hunger, and disease are rife, life expectancy is low, and medical care is often unavailable. Ethnic tensions are a fact of life, as rebel fighting continued into 2005, with an estimated 3.8 million people killed thus far in the course of the Second Congo War. In 2004 there were an astounding 2.33 million internally displaced persons surviving under the most primitive conditions. Housing in rural areas consists primarily of mud huts with grass roofs; around the cities, shantytowns have developed, as people in the rural areas try to flee from violence. The corrugated metal homes in the cities are unbearably hot during much of the year.

HEALTH

In 2002 spending on health care amounted to just \$4 per person per year, contributing to the poor living conditions in the DRC. In 2003 life expectancy at birth was just under 49 years. The infant mortality rate was just over 94 deaths per 1,000 live births. AIDS is a major problem, with 4.2 percent of the adult population living with the disease in 2001 and 120,000 people dying of the disease that year. In 2001 only 46 percent of the nation's population had access to clean drinking water, and diseases such as malaria (affecting 5,880 per 100,000 population) and intestinal diseases (accounting for 8.34 percent of deaths in 1997–99) are commonplace. Only just over half of children are immunized against measles by the age of two, and in 1997–99 the death rate from childhood respiratory diseases was 109 per 100,000 people.

FOOD AND NUTRITION

Nutrition is poor in the DRC. The United Nations estimates that 16 million people in the nation are hungry on a daily basis and in 2001 determined that 31 percent of children under age five were underweight. The primary staple is *fufu*, a paste made from manioc roots. This is sometimes supplemented by plantains, bananas, sweet potatoes, and occasionally fish, depending on proximity to streams and rivers; some people are able to construct their own fish ponds, where they harvest fish for consumption. Meat for most people is a luxury served only on ceremonial occasions. Palm trees provide nuts, fruits, oil, and wine. Social customs contribute to child malnutrition in some areas, where the father eats first, getting the best of the food, and mothers and children eat what remains after the father is done.

STATUS OF WOMEN

The role of women in Congolese society was given great emphasis in the doctrine of the once-ruling MPR. Women's rights to own property and participate in the political and economic sectors are protected by law, and a growing number of women work in the professions, government, service, and the universities. Nevertheless, custom, tradition, and existing law continue to constrain women from attaining complete equality in society. Women generally earn less than their male counterparts in the same jobs. In addition, married women must obtain their husband's authorization before opening a bank account, accepting a job, or renting or selling real estate.

WORK

Ongoing civil unrest has made it difficult to estimate the size of the labor force. The most recent estimate of 14.51 million is from 1993. The problem of arriving at an accurate count is compounded by the prevalence of subsistence agriculture and the black market as ways of making a living. As of 2000 agriculture contributed about 55 percent of the nation's GDP. Products include coffee, sugar, palm oil, rubber, tea, quinine, cassava, bananas, root crops, corn, fruits, and wood products. Industry, which contributes just 11 percent of GDP, includes mining (of diamonds, copper, and zinc), mineral processing, textiles, foods and beverages, and cement.

The term *work* is relative, for people in the DRC take whatever steps they need to in order to survive. Some estimates show the black market economy to be three times the size of the "official" economy. Because official prices of goods are high, many people cross the border into neighboring countries, often on bicycles, and bring back goods to sell at lower prices. Many people try to take salaried jobs as, for example, teachers or police officers—not for the salary, which frequently goes unpaid, but for the contacts the job opens on the black

market, where goods are cheaper and more plentiful. Many entrepreneurs have opened businesses in refugee camps, including hair salons, shops that sell basic goods, and even discos.

EDUCATION

The state theoretically provides free, universal, and compulsory education for six years, from ages six to 12. Secondary education, from ages 12 to 17, is not compulsory. Education and literacy among females is greatest among primary age groups, with a sharp decline during secondary and university levels of education. In 1998–99 the estimated “life expectancy” in school for students was just 4.3 years. In 2000 it was estimated that 41.7 percent of the population had no schooling, 42.2 percent had primary schooling, and just 15.4 percent had secondary schooling. Only 0.7 percent of the population had schooling beyond secondary school.

The academic year runs from September to July. The mediums of instruction are Kikongo, Tshiluba, Lingala, or Swahili in the primary grades and French in the secondary and university levels. Primary education is divided into three two-year sections: elementary, middle, and terminal. Students are not divided into formal grades at the first level. There are a few unsubsidized private schools. Over 92 percent of the primary- and secondary-school population attend subsidized schools, over 70 percent of which are run by the Roman Catholic Church.

There is a critical shortage of trained teachers. Less than one-fourth of primary-school teachers have university diplomas. The Compulsory Civic Service was instituted in 1966 to create a pool of trained personnel by making a two-year teaching stint mandatory for all students who received a license after 1966.

All universities in the DRC were reorganized and nationalized in 1971 as the National University, with four campuses, at Kisangani, Kananga, Kinshasa, and Lubumbashi.

 Male %: 76.2
 Female %: 55.1

SCIENCE AND TECHNOLOGY

The state is unable to extend even the most basic social services to its people, so little scientific and technological research is conducted. During the 1990s the World Bank estimated that the DRC had about 34 research scientists per million people, ranking the nation second to last among the 81 countries for which data were compiled. (The leading country, Iceland, had 5,686 per million.) What research is conducted tends to be under the auspices of nongovernmental organizations such as the United Nations and various international agricultural research groups.

MEDIA

Some 15 newspapers appear regularly in the capital, with a combined circulation of 112,000. There are also more than 12 weekly, monthly, and quarterly periodicals.

The official news agency is Agence Congolaise de Presse (ACP), based in Kinshasa, with regional correspondents in the Republic of the Congo and a foreign bureau in Brussels. A second agency—Documentation and Information for and about Africa (DIA)—founded by the Catholic Church in 1956, functions as an independent private company.

The state-owned La Voix du Congo operates in Kinshasa and in provincial stations. An international service, the Voice of the Brotherhood, is broadcast from Lubumbashi. In 2002 the UN mission in the DRC, along with a Swiss-based organization, Foundation Hironnelle, launched Radio Okapi, which attempts to broadcast news to encourage political dialogue.

Television was introduced in 1966. There are two stations, one in Kinshasa and the other in Lubumbashi.

CULTURE

Few Congolese artists can support themselves through their art. Some government funding has been available for artists, but only for those who express views that support the government. Many artists pursue other jobs as a way to generate income. The DRC has produced a number of novelists, playwrights, and poets who write about the nation's colonial past and the conflicts between traditional and modern life. These include Mwilambwe Kibawa, Lisembe Elebe, Paul Lomami-Tshibamba, and Valérin Mutombo-Diba. The nation has a long graphic arts tradition. Especially prominent have been metalworkers who avail themselves of the nation's rich supply of copper. Popular arts also include the production of masks, jewelry, paintings, baskets, wood carvings, and mats. A popular form of dance music is *kwasa-kwasa*, and Congolese jazz can be heard throughout the world. Also renowned for their music are the Mbuti people, who have developed a style in which different people simultaneously sing different melodic lines.

FOLKLORE AND MYTHOLOGY

It is difficult to separate folklore from traditional religious beliefs in the DRC. Animism posits the belief that the divine can be found in any object, such as a rock or a tree. Many people believe in a creator but believe that the best way to make contact with the creator is through ancestor

worship, and many people carry on daily dialogues with their ancestors or appease angry ancestors with gifts and sacrifices. Misfortune, including illness, poor harvests, and the like, are attributed to spirits, angry ancestors, and especially witches, whom many Congolese, especially the Azande in the rain forests, fear. Diviners are often paid to determine the source of a misfortune and the best way to overcome it. Similarly, spiritual healers called *ngangas* use herbal remedies and various rituals, including animal sacrifice, to help people restore their health, become pregnant, or ensure a good harvest.

ENTERTAINMENT AND RECREATION

In a country torn by civil war, entertainment and recreation often take a distant second place to matters of survival. Recreation and entertainment take different forms among the nation's many ethnic groups, but especially in regions that lack electrical power, music, singing, and dancing as well as conversation are primary forms of recreation. Jazz and soukous, which is played on a guitar, are popular forms of dance music. Among the Tutsi, a popular board game is *igisoro*, which is played on a wooden board. The board has rows that hold beads and stones used as counters. The object is for one player to capture as many of his opponent's counters as possible.

ETIQUETTE

Great respect is accorded elders, especially those who might be headmen in villages. Among the Bakongo respect for authority is shown by grasping one's right wrist with the left hand when shaking hands, and children are always to accept gifts with both hands. Among some Tutsis it is customary to kneel in the presence of a superior. Greetings are formal and include inquiries about a person's well-being and that of his or her family. Some Tutsis have extremely elaborate greetings that consist of song, embraces, and formal gestures.

FAMILY LIFE

Family patterns differ with ethnic groups. In rural areas many men have two or more wives, with the goal of producing enough offspring who will survive until they can contribute to the family's well-being. Women tend to carry the burden of family life, performing many chores such as gathering and cutting firewood, hauling water, cooking, washing clothes, harvesting, rearing children, and making handicrafts for sale in markets. Life in many villages revolves around the authority of the elders, respected men who make decisions for the community.

In many respects, there is no “childhood” in the DRC, as children often assume adult responsibilities at a very young age.

PERSONAL APPEARANCE

Women in the DRC almost never wear slacks, instead favoring long skirts. Despite the nation’s poverty, people generally place great emphasis on wearing neat, pressed, colorful clothing; failure to do so is regarded as extremely discourteous. The Bakongo adopted Western dress early on, and throughout the nation they are still regarded as the most stylish and fashionable dressers. The Tutsis, too, wear Western dress, reserving gowns and robes for ceremonial occasions.

SPORTS

As in most of the nations of Africa, soccer is the most popular spectator and participant sport. Many people in the DRC do not play “sports” in the traditional Western sense but engage in activities that reflect their way of life. The Azande, for example, like to spar, enabling men to practice fighting skills. Similarly, the Baganda enjoy wrestling. Among the Efe and Mbuti, children have play areas where they develop skills in group cooperation and hunting, and adults play a game similar to tug-of-war in which men and women compete against one another, and one side ridicules the other in mock male voices (if the men are losing) or female voices (if the women are losing).

CHRONOLOGY

- 1960** Congo gains independence, with Patrice Lumumba of the Mouvement National Congolaise (MNC) as prime minister and Joseph Kasavubu of the Alliance des Bakongo as president; opposed to a centralized rather than federal government, Katanga, the country’s richest province, declares independence under Moïse Tshombe; Congolese soldiers mutiny; Belgian forces withdraw and Belgian civilians flee the country; at the government’s request, the UN Security Council dispatches troops; Lumumba requests Soviet aid; Lumumba and Kasavubu dismiss one another; Albert Kalondji proclaims the independence of South Kasai; Joseph Mobutu, chief of staff of the Congolese National Army (ANC) seizes power; Lumumbists under Antoine Gizenga organize a counter-government at Stanleyville; Lumumba is arrested.
- 1961** Lumumba is executed; Joseph Ileo forms a provisional government; a tentative agreement between the Leopoldville government and the secessionist governments of Katanga and Kasai establishes a centralized government; under UN protection, the National Legislative Council reopens and approves a coalition government headed by Cyrille Adoula as prime minister; diplomatic relations with Belgium are reestablished; UN troops move against Katanga.
- 1962** The Kitona agreement resolves the Katanga secession; the Stanleyville government is dissolved; Gizenga and Kalondji are arrested.
- 1963** President Kasavubu declares a state of emergency and dissolves the National Legislative Council; Tshombe is appointed prime minister.
- 1964** A commission headed by Joseph Ileo drafts a constitution; the country’s name is changed from the Republic of Congo to the Democratic Republic of the Congo (DRC); rebels capture Stanleyville; the Katangan gendarmerie and white mercenaries attack rebel strongholds; rebels under Christophe Gbenye use white hostages to halt government forces; UN forces withdraw.
- 1965** Prime Minister Tshombe and President Kasavubu engage in a power struggle; General Mobutu seizes power for a second time and names a government of national unity, with Leonard Mulamba as prime minister.
- 1966** Mobutu abolishes the National Legislative Council and assumes legislative powers; Prime Minister Mulamba is dismissed and one-time prime minister Évariste Kimba is executed; another mutiny breaks out in Katanga.
- 1967** The new constitution is promulgated, naming the Mouvement Populaire de la Révolution (MPR) the country’s sole political party; after a plane carrying Tshombe is hijacked over Algeria, mercenaries launch a rebellion in the east; the rebellion collapses and rebels flee to Rwanda; the MPR issues the Manifesto of Nsele.
- 1969** Patrice Lumumba is declared a national hero.
- 1970** Running unopposed, Mobutu is elected president in the DRC’s first presidential election.
- 1971** As part of a sweeping program of Africanization, the country is renamed the Republic of Zaïre.
- 1972** A National Executive Council is formed to replace the cabinet.
- 1973** All foreign-owned firms, plantations, and mining companies are nationalized.
- 1974** The constitution is revised to make the MPR synonymous with the state.
- 1976** Congo defaults on foreign loans; currency is devalued.
- 1977** Guerrillas of the Cuban-backed Congolese National Liberation Front, based in Angola, in-

- vade the Zaïrean region of Shaba (formerly called Katanga), straining relations with the Soviet Union; Congo receives aid from Morocco, Sudan, Uganda, and Western nations to fight against the rebels.
- 1978** Guerrillas of the Congolese National Liberation Front (reportedly backed by Angola, Cuba, and the Soviet Union) invade Shaba again through Zambia and occupy Kolwezi and Mutshalaha; French and Belgian troops launch successful rescue operations.
- 1979** President Agostinho Neto of Angola reaches an agreement with Mobutu regarding the creation of a supervisory body to prevent guerrilla operations across the common border.
- 1983** Amnesty International publishes a report harshly critical of the human rights record in Zaïre; Mobutu grants amnesty to all political exiles who return by June 30; some exiles return, but a strong opposition movement remains in Belgium.
- 1984** Despite continued resistance against his regime within Zaïre, Mobutu is reelected president.
- 1985** The MPR is restructured, strengthening Mobutu's position; Nguza Karl-I-Bond returns from exile; restrictions on seven members of outlawed UDPS are ended.
- 1989** Zaïrean students in Belgium are ordered to return to Zaïre by year's end; Mobutu announces termination of two friendship and cooperation treaties between Zaïre and Belgium.
- 1990** In response to growing public discontent, Mobutu vows to end the ban on multiparty politics; nevertheless, the government continues to use violence to suppress political opposition.
- 1993** Western nations, including France and Belgium, send troops in order to protect their citizens living in Zaïre from the growing violence.
- 1994** Mobutu names as prime minister Kengo Wa Dondo, a proponent of austerity and free-market reforms.
- 1997** Rebel forces led by General Laurent Kabila take control of the government after more than a year of fighting; Kabila immediately changes the name of the country from Zaïre to the Democratic Republic of the Congo; Mobutu flees to Morocco, where he dies of cancer in September.
- 1998** Anti-Kabila rebel forces attempt to take the capital but are defeated.
- 2000** Ethnic fighting erupts in the rebel-held east; UN peacekeepers monitor the cease-fire.
- 2001** Kabila is assassinated in January, and his son Joseph Kabila is named president; Ugandan, Rwandan, and Zimbabwean troops begin withdrawing from the country, and UN troops are deployed in the rebel-held town of Kisangani. Kabila lifts the ban on all parties that were in operation under former president Mobutu Sese Seko.
- 2002** Mount Nyiragongo, among Africa's most active volcanoes, erupts, destroying the town of Goma.
- In peace talks in South Africa, DRC signs a power-sharing deal with Ugandan-backed rebels, but Rwandan-backed rebels reject the deal; presidents of DRC and Rwanda sign a peace deal under which Rwanda will withdraw troops and DRC will disarm and arrest Rwandan Hutus responsible for the killing of the Tutsis in Rwanda in 1994; presidents of DRC and Uganda sign peace accord under which Ugandan troops will leave DRC; DRC and rebel groups sign a peace agreement under which opposition members are to be given positions in an interim government.
- 2003** President Kabila signs a new constitution in April, under which an interim government will rule for two years, pending elections. In June Kabila names a transitional government, and in August parliament is inaugurated.
- 2004** Gunmen attack military bases in Kinshasa in an apparent coup attempt. Rebel soldiers occupy town of Bukavu for a week. Fighting erupts between the Congolese army and renegade soldiers from a former pro-Rwanda rebel group.
- 2005** Voters approve a new constitution paving the way for elections in 2006.

NATIONAL FLAG

Divided diagonally from the lower hoist side by a yellow band; the upper triangle (hoist side) is green and the lower triangle is red, using the popular Pan-African colors of Ethiopia.

NATIONAL EMBLEM

A shield with a red lion rampant bearing a torch of freedom on a yellow field split by a green wavy bar representing the Congo River. The shield is flanked by two elephants standing on a red log draped with a gold ribbon carrying the motto *Unité, travail, progrès* (Unity, work, progress). On the crest are seven staves rising from a band inscribed with the name of the country, "République du Congo."

NATIONAL ANTHEM

"On This Day the Sun Rises"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), June 22 (Anniversary of the People's Army), August 13–15 (Anniversary of the Three Glorious Days), August 15 (National Day, Independence Day), December 25 (Christmas), December 31 (Birth of the Parti Congolaise du Travail)

DATE OF INDEPENDENCE

August 15, 1960

DATE OF CONSTITUTION

July 8, 1979; draft constitution adopted by transitional parliament in September 2001, approved in a national referendum on January 20, 2002

GEOGRAPHICAL FEATURES

The Republic of the Congo, in West Africa, has an irregularly shaped area of 342,000 sq km (132,046 sq mi), extending 1,006 km (625 mi) north-northeast to south-southwest and 402 km (250 mi) east-southeast to west-northwest. Its total international land boundaries of 5,504 km (3,420 mi) are artificial ones drawn by former colonial powers. The bordering nations and lengths of borders are as follows: Cameroon (523 km; 325 mi), Central African Republic (467 km; 290 mi), the Democratic Republic of the Congo (2,410

km; 1,497 mi), Angola (201 km; 125 mi), and Gabon (1,903 km; 1,181 mi). The length of the Atlantic coastline is 169 km (105 mi).

The country is divided into four topographical regions. The coastal region is a treeless plain stretching about 161 km (100 mi) along the Atlantic coast and extending about 64 km (40 mi) inland to the Mayombe escarpment and to the foothills of the Crystal Mountains. The area is marked by extensive swamps, lakes, and rivers. Inland the sharp ridges of the Mayombe escarpment run parallel to the coast, reaching elevations of 488 to 610 m (1,600 to 2,000 ft). The Niari Valley, lying be-

Republic of the Congo

tween the Chaillu and Mayombe mountains and extending for about 322 km (200 mi) in the south-central area, contains the most fertile soil in the country. The central highlands, known as the Bateke Plateau, form the watershed between the Niari and the Ogowe river systems. Much of this region, encompassing an area of 130,000 sq km (50,000 sq mi), is covered by dense forests. The northeastern section of the country lies within the

Congo River basin and is composed of largely impassable floodplains in the lower portion and a dry savanna in the upper portion.

CLIMATE AND WEATHER

The Republic of the Congo has a tropical climate characterized by high temperatures, high rainfall, and high humidity, with little seasonal variation. The seasons are reversed north and south of the equator. North of the equator the rainy season lasts from April until late October and the dry season from early November until late March. Temperatures range from 26.6°C to 32°C (80°F to 90°F) on average, although lower temperatures have been recorded nearer the coast under the influence of the Benguela (Antarctic) current. Humidity is consistently high throughout the year, with average daily readings of 80 percent.

Rainfall varies regionally, with higher precipitation in the north. The annual average is about 1,520 mm (60 in), while parts of the Congo basin may receive up to twice that amount. Violent winds and squalls are common in the wet season.

Climate and Weather

Mean Temperature: 80°F to 90°F

Average Rainfall: 60 in

FLORA AND FAUNA

The most noteworthy feature of the Republic of Congo is the rain forest in the Congo basin, which is shared with the neighboring nations of Cameroon, Gabon, and the Central African Republic. Plant species are numerous, with approximately 6,000 in Congo. Particularly noteworthy is the density of species; in many places over 200 distinct species of plants can be found in plots of less than one-20th of an acre. The Congo rain for-

ests are home to some of the world's most spectacular wildlife and at least 198 species of mammals, the highest concentration in Africa. Included among these are the forest elephant and three subspecies of gorilla: the mountain gorilla, the eastern lowland gorilla, and the western lowland gorilla. Also found there are okapi (forest giraffes), forest buffaloes, bongos, chimpanzees, and bonobos (pygmy chimpanzees), regarded as humans' closest relative. One national park in Congo contains at least 428 species of birds.

ETHNIC COMPOSITION

All the Congolese are Bantus except for small, isolated groups of Negrillos and Sudanese immigrants. Of the 15 main ethnic groups, divided into 75 tribes, four stand out. The most important is the Kongo, or Bakongo, whose tribes live in the south, between Brazzaville and the coast, and account for 48 percent of the population. The second ethnic family is the Mbochi, also called Boubangui, who currently inhabit the Cuvette and Likoula regions and constitute about 12 percent of the population. The third important group is the Bateke, or Teke, who live in the plateau country north of Brazzaville and constitute about 17 percent of the population. Finally, the Sangha family of tribes inhabit the northern forest zone, which they share with the Binga, or Babinga, Pygmies, whose ancestors are believed to be the original inhabitants of the land.

There is a great deal of interethnic rivalry, particularly in the political sphere. Intertribal riots are common and, despite misleading labels, political groups are based

largely on ethnic loyalties. In the urban areas each ethnic group tends to isolate itself in its own residential quarter.

LANGUAGES

The official language is French, which is used extensively in government and in the schools. Only a small proportion of the African population use French as a working language.

Each ethnic group has its own traditional language. Kikongo is the most widely used local dialect. Two trade languages are used as lingua francas for intertribal communication: Lingala in the north and Monokutuba in the south. All African languages belong to the Bantu family.

RELIGIONS

About 50 percent of the Congolese are nominally Christian, with Catholics composing the majority of this group. There is a small Muslim community of approximately 2 percent of the population. The remaining 48 percent of the Congolese are either animists or members of unorthodox sects.

In theory, freedom of religion is guaranteed by law. In practice, members of the ruling Parti Congolais du Travail are prohibited from practicing religion. Jehovah's Witnesses had not been allowed to exercise their right to worship, allegedly because they do not recognize the authority of the state. In February 1978 the government banned all religious groups except Roman Catholics, certain Protestant denominations, Muslims, and followers of regional sects.

Religious Affiliations

Christian	1,500,000
Animist	1,440,000
Muslim	60,000

HISTORICAL BACKGROUND

The first settlers to the region that is now the Republic of the Congo came 40,000 to 100,000 years ago. The first large-scale societies were formed only 500 to 1,000 years ago. Three kingdoms emerged from the numerous peoples and villages: Loango on the Atlantic coast, Kongo in the southwest, and Tio on the northern plains. Political power was marked by control over the spirit cults and trade.

The first Europeans arrived in 1483 in Kongo. The Portuguese were welcomed to the region. However, this positive reception came to an end when the Portuguese began to trade slaves in the early 16th century. The 17th through 19th centuries were marked by an increase in the slave trade from the Republic of the Congo and the continued influence of Western cultures on the country. In

order to bring an end to colonial fighting over territory, the Republic of the Congo came under the administration of the French.

From 1910 until 1958 the Republic of the Congo, then known as Moyen-Congo, was an administrative unit of the Federation of French Equatorial Africa, which also included Gabon, Chad (Tchad), and Oubangui-Chari (Central African Republic). Brazzaville was the headquarters of the federation. French colonial rule suffered from a lack of well-defined policy. In the aftermath of World War II a series of administrative and social reforms were initiated, providing for increased Congolese participation in the governing process.

Congo has had five governments since independence, all of them unstable and four of them terminated by violence. The army has dominated the government since 1968. Interethnic rivalries have added to the instability, and each regime has been associated with the ascendancy of a particular tribe and the exclusion of the others.

Congo achieved full independence in August 1958 under a strong, centralized government led by Abbé Fulbert Youlou, a radical former Roman Catholic priest from the south. Youlou's attempts to establish one-party rule resulted in trade union strikes and mass demonstrations, which led to his resignation in 1963.

Alphonse Massamba-Débat took over leadership of a provisional government that was formed by the military with the support of the trade unions. Massamba-Débat adopted Marxist-Leninist policy and attempted unsuccessfully to develop a socialist economic system. The Communist-inspired Mouvement National de la Révolution (MNR) was made the nation's sole political party, and its role became increasingly important during Massamba-Débat's tenure. His radical approach alienated the army, which staged a successful coup in August 1968. The leader of the coup, Captain Marien Ngouabi, became president and drew up a new constitution, approved in 1969, under which his Parti Congolais du Travail (PCT) became the sole party. The constitution proclaimed the nation the People's Republic of the Congo. The regime called itself Marxist but maintained close economic ties with France.

Opposition to one-party rule, particularly in the south, resulted in Ngouabi's assassination in 1977. Former president Massamba-Débat was implicated in the plot and later executed, although his complicity was never proved. The PCT military committee appointed Joachim Yhombi-Opango president. However, his antileft feelings and his failure to deal with a worsening economic crisis led to his resignation in 1979. He was replaced by his chief rival, Col. Denis Sassou-Nguesso. The Military Council was abolished, and amnesty was given to political exiles. A socialist constitution was approved by referendum. Although nominally Marxist, the government became increasingly liberal and pro-Western in order to placate the right and deal with the country's

serious economic problems. Sassou-Nguesso was reelected president in 1984. His position was strengthened at the expense of the prime minister through constitutional amendments approved that year. Ongoing ethnic rivalries and worsening economic problems led to a coup attempt in July 1987, which resulted in the arrest of 20 army officers and the eventual arrest and imprisonment of Yhombi-Opango. Sassou-Nguesso was reelected again for a five-year term in 1989. The Congolese Workers' Party officially dropped its Marxist ideology in 1990.

President Sassou-Nguesso introduced a multiparty system in 1991 and convened an all-party National Conference to chart the future course of the country. The National Conference approved the draft of a new democratic constitution, which dropped "People's" from the country's name, transferred most of the presidential powers to the prime minister, and scheduled a referendum. The referendum, held in 1992, secured 96 percent approval. In the presidential balloting, Pascal Lissouba of the Pan-African Union for Social Democracy emerged as the winner. Lissouba faced a stormy legislature. Waves of civil unrest paralyzed the country. For a time the military occupied Brazzaville and forced the president to appoint a unity government under Claude Antoine Dacosta as prime minister. Dacosta was followed by Gen. Yhombi-Opango, but the state of armed rebellion continued. Regional and ethnic rivalries continued to fan the flames of discontent as the Lissouba administration sought to end the pro-Sassou-Nguesso northerners' dominance of the military as well as to disarm the numerous militias. In 1996 there was a short-lived mutiny, which was ended only on terms imposed by the rebels. Preparations for the 1997 presidential elections soon escalated into a virtual civil war between the two major contenders, Lissouba and Sassou-Nguesso. With the help of mercenaries and regular troops from Angola, Sassou-Nguesso captured Brazzaville, while Lissouba fled the capital. Sassou-Nguesso named a new broadly representative government but abolished the post of prime minister. Militias loyal to Lissouba continued to resist throughout 1998 and early 1999. In 1999 the government and militias signed a peace agreement in the Zambian capital, Lusaka, and in 2001 some 15,000 militia gave up their weapons. In September a new constitution was adopted by the transitional parliament. In December of 2001 Lissouba was convicted in absentia on charges of corruption and treason and given a 30-year sentence.

In January 2002 a constitutional referendum that consolidated the powers of the president was approved by 80 percent of voters. In March that year Sassou-Nguesso won the presidential election unopposed after his rivals were barred from the election. In March 2002 fighting broke out in the Pool region between the government and "Ninja" rebels loyal to the former prime minister Bernard Kolelas. In June the fighting spread to Brazzaville, where 100 people were killed. In March 2003 the

government signed agreements with the rebels, who agreed to end hostilities but as of early 2005 had yet to disarm; many turned to banditry.

LIST OF MODERN RULERS

1960–63	Fulbert Youlou
1963–68	Alphonse Massamba-Débat

1992–97	Pascal Lissouba
1997–	Denis Sassou-Nguesso

CONSTITUTION

The constitution of the People's Republic of the Congo, approved by popular referendum in 1979, the country's fifth since gaining independence, was abolished in 1991 at a national conference. It was replaced with a basic law that established a presidency, a bicameral legislature, and a prime ministership. This basic law was adopted in 1992 by referendum. This constitution was suspended in 1997. In September 2001 a draft constitution was adopted by the transitional parliament and was approved in a national referendum on January 2, 2002.

PARLIAMENT

Until 1997 the parliament of the Republic of the Congo was bicameral. The lower house, the National Assembly, consisted of 125 members elected directly from single-member districts for terms of five years. If a candidate did not win a majority of the votes, then a second round of voting was required between the top two finishers. The upper house, the Senate, consisted of 60 members who were elected indirectly from local and regional councils for periods of six years. One-third of the Senate was elected every two years. The parliament was suspended in 1997, and in 1999 the unicameral 75-member Transitional Council was established in its place. In 2002 elections were held, restoring the parliament, with 137 seats in the National Assembly and 66 seats in the Senate and all lengths of term five years.

POLITICAL PARTIES

The Republic of the Congo is a multiparty state. Among the most important parties is the Congolese Labor Party (PCT), which is the party of the president and the ruling party from when Congo was a one-party state. In addition to the PCT, there is the Pan-African Union for Social Development (UPADS), which lost control in

a no-confidence vote in 1992. Most parties other than the PCT have aligned to form three major groupings. The first is the Presidential Tendency, which includes the UPADS and other minor parties. The second is the Union for Democratic Renewal, which includes the Congolese Movement for Democracy and the Rally for Democracy and Social Progress. The final group, the United Democratic Forces, consists of the Congolese Labor Party and several minor parties. This alliance won a strong majority in both the Senate and the National Assembly in the 2002 elections.

LOCAL GOVERNMENT

In conformity with a 1995 law, the country was divided into 10 regions and one commune, which were then divided into 76 districts. In addition to these 76 districts, there are six urban councils.

LEGAL SYSTEM

The legal system is inherited from the French but has been modified by successive regimes. The court system consists of the Supreme Court, the Court of Appeals, the Criminal Court, *tribunaux de grande instance* (country courts), *tribunaux d'instance* (magistrates' courts), and labor courts. The Revolutionary Court of Justice, created in 1969, deals with cases involving state security. Its nine judges are appointed by the Central Committee of the PCT. Customary courts were abolished under the constitution of 1973.

The Supreme Court is in practice an arm of the government rather than an independent body.

Whereas the constitution guarantees protection against arbitrary indictment, arrest, and detention, in practice a warrant is not required to make arrests. There is a habeas corpus provision, but in cases involving the security of the state, arrested persons can be held without court hearings. Individuals detained for nonpolitical offenses are entitled to attorneys and are judged by generally impartial judiciaries. By law the right to a fair and public trial exists in all cases.

HUMAN RIGHTS

The government's human rights record has been poor, and there have continued to be numerous serious abuses. Citizens do not have the right to change their government peacefully. Security forces, which have included many undisciplined and poorly controlled former members of nongovernmental militias, have been responsible for extrajudicial killings, including summary executions, disappearances, rapes, beatings and the physical abuse of detainees and civilians, arbitrary arrest and detention, and arbitrary searches and the widespread looting of pri-

vate homes. Prison conditions remain life threatening. The judiciary has been overburdened, underfinanced, and subject to corruption and political influence, and as such has been unable to ensure fair and expeditious trials. The government has infringed on citizens' privacy rights. The government has continued to monopolize domestic broadcast media, although private newspapers circulate freely and are sometimes critical of the authorities.

The government has permitted opposition political parties and nongovernmental organizations, including human rights organizations, to function, and there has been relatively open dialog regarding public policy issues. The government has sent mixed signals regarding political participation by opposition figures, however. While many former cabinet ministers and other officials of the Lissouba government returned to Brazzaville and were permitted to resume political activities, the government also repeatedly stated that the most senior figures—including former President Lissouba and Prime Minister Kolelas—would be subject to trial for war crimes. Security forces have restricted freedom of movement within the country. Violence and societal discrimination against women are serious problems, and incidents of rape increased during the renewal of civil unrest. Some minority indigenous San peoples face severe exploitation and are “inherited” by Bantu patrons. Societal discrimination on the basis of ethnicity has remained widespread. Ethnic and regional tensions have continued to contribute to large-scale organized civil violence. Child labor, reportedly including forced labor, persists, and there have been reports of the forced conscription of children for the military. Citizens sometimes resort to vigilante justice, killing those presumed to be criminals.

FOREIGN POLICY

The Republic of the Congo withdrew from the French Community in 1973 but remained economically linked to France. Until the 1980s Brazzaville maintained close ties to Communist countries and adopted a generally leftist stance on foreign policy issues. The overthrow of the Lissouba government in 1997 reportedly involved a number of foreign powers and Hutu militiamen. The Kabila government in the Democratic Republic of the Congo supported Lissouba, while Angola supported the victorious Sassou-Nguesso. In 1998 the European Union declared that Congo had abandoned the rule of law and was in a state of anarchy. In 2004 an international watchdog group removed Congo from its list of legitimate diamond producers.

DEFENSE

The defense structure is headed by the president, who also exercises direct control over the Ministry of Defense. The line of command runs through the chief of staff to

the general staff on the pattern of the French military structure.

Manpower is provided by voluntary enlistment, although a compulsory military service system is provided for by law. Males between the ages of 15 and 49 are eligible for military service. On release from active duty, servicemen are placed in reserve for 15 years.

The total strength of the armed forces was 12,000 in 2003. The nation spent \$68.6 million, or about 2.8 percent of gross domestic product (GDP), on defense.

The combat-worthiness of the Congolese army is limited by the persistence of ethnic conflicts within units, poor logistics, and total dependence on foreign-supplied material, including combat boots and uniforms. Traditionally, the army has largely been recruited from the northern peoples, notably the Mbochi Kouyou, but many of the officers are southerners of the Kongo tribe. There is no defense production in the country.

ECONOMY

The economy is a mixture of village agriculture and handicrafts, an industrial sector based largely on oil, support services, and a government characterized by budget problems and overstaffing. Oil has supplanted forestry as the mainstay of the economy, providing a major share of government revenues and exports. In the early 1980s rapidly rising oil revenues enabled the government to finance large-scale development projects, with GDP growth averaging 5 percent annually, one of the highest rates in Africa. However, the government has mortgaged a substantial portion of its oil earnings, contributing to the government's shortage of revenues. The January 12, 1994, devaluation of the CFA franc by 50 percent resulted in inflation of 61 percent in 1994, but inflation has subsided since and in 2003 was just 2.4 percent. Economic reform efforts have continued with the support of international organizations, notably the World Bank and the International Monetary Fund (IMF).

The reform program came to a halt in June 1997 when civil war erupted. Denis Sassou-Nguesso, who returned to power when the war ended in October 1997, publicly expressed interest in moving forward on economic reforms and privatization and in renewing cooperation with international financial institutions. However, economic

progress was badly hurt by slumping oil prices in 1998 and the resumption of armed conflict in December 1998, both of which worsened Congo's budget deficit. Even with the IMF's renewed confidence and high world oil prices, Congo's real growth rate in 2003 was just 1.2 percent, and growth in the industrial sector was negligible. With the country's return to a fragile peace, the IMF approved a \$14 million credit in November 2000 to aid postconflict reconstruction, but the Sassou-Nguesso regime continues to struggle to improve the economy and reduce poverty.

ENVIRONMENT

Some of the major environmental problems facing the Republic of the Congo today include chaotic urbanization, which has led to the accumulation of solid wastes, lack of sanitation facilities and adequate drinking water, pollution, and environmentally related sickness. In addition to the human health factors, deforestation, disappearance of fauna, and erosion of urban and coastal areas are of growing concern.

LIVING CONDITIONS

In 2003 the United Nations Human Development Index, which encompasses such indicators as income, literacy, and life expectancy, ranked Congo 20th among the nations of Africa and 140th among the 175 of the world's nations ranked. By any standards, Congo is a poor country,

with per capita GDP of just \$700 in 2003. It is one of the most heavily urbanized countries in Africa, with the Brazzaville to Pointe-Noire megalopolis home to two-thirds of the population. In the cities, houses are typically made of cement block, but the Congolese take pride in their living spaces, and most homes have well-tended gardens. Cities are relatively clean, and most people have access to electricity and clean water. In the villages homes are typically constructed of mud brick with metal or thatched roofs, and power is supplied by a communal gas-powered generator. Life is especially difficult for the nation's Teke (Pygmies), who are generally paid lower wages, are not represented in government, and are often turned away from hospitals.

HEALTH

Life expectancy at birth was just 49.5 years in 2004, a figure that was actually down slightly from the year before. The infant mortality rate was almost 94 per 1,000 live births, a slight improvement over the figure of 98 in 2003. AIDS has been a serious problem; in 2003 the adult prevalence rate was 4.9 percent—an improvement over the 2001 rate of 7.2 percent—with 9,700 deaths from the disease. Only about half of the population has access to safe water, and about the same proportion is immunized against diphtheria, pertussis, and tetanus as well as measles. Just 9 percent of the population has access to improved sanitation facilities.

FOOD AND NUTRITION

Although most Congolese engage in some form of subsistence farming, the quality of the soil is poor, and under 1 percent of the land is adequately arable. Over 90 percent of the country's meat is imported, and as such it is quite expensive. Staples in the diet include rice, bread, cassava,

peanuts, taro, pineapples, bananas, and manioc, which in some areas provides as much as 84 percent of the people's energy requirements. There are many food taboos, with the primary taboo against eating an animal that is a family's totem. Malnutrition has been a particular problem for thousands of displaced persons in camps near Brazzaville, with 11 percent of people severely malnourished.

STATUS OF WOMEN

Under the constitution, women have the same rights as men in the private, political, and social domains, and for equal work women are entitled to the same social welfare rights as men. There is a disparity, however, between salaries for men and women, and women are relegated to a secondary role in society. Women have played an important role in the government, and most recently one occupied a high-level position as minister of basic education and literacy. In secondary schools increasing numbers of young women are enrolled in technical courses, and university attendance among women continues to rise. Women suffered heavily during Congo's recent civil war, with widespread incidence of rape; over 1,300 women were treated for rape at Brazzaville's hospital, but the true number of victims was undoubtedly much higher.

WORK

Congolese overwhelmingly engage in subsistence farming; the size of the labor force is officially estimated at around 1.5 million. Agriculture contributed about 6.9 percent of GDP in 2003. Products include cassava (tapioca), sugar, rice, corn, peanuts, vegetables, coffee, cocoa, and forest products. Industry contributed about 53.9 percent of GDP and includes oil production, cement, lumber, brewing, sugar refining, diamond mining, and the production of palm oil, soap, flour, and cigarettes. Many Congolese make a living by selling goods and produce in

570 Congo, Republic of the

informal street markets. The remainder of GDP is supplied by services, including the government bureaucracy.

EDUCATION

Education is free, compulsory, and universal in theory for children between ages six and 16. The academic year runs from October to June. The medium of instruction is French.

Schooling consists of 13 years, as divided into primary, intermediate, and secondary schooling. The primary program is divided into three levels of two years each: preparatory, elementary, and middle. Intermediate and secondary education consist of three types of programs: postprimary training courses in practical skills, a seven-year, or long, academic course, and a four-year, or short, general education course. The long course is divided into two cycles, the first cycle including grades six through three (grades being numbered in descending order) and the second cycle including grades two and one and the final, or *terminale*, class. The curriculum in the secondary grades is almost identical to that used in France, but those in primary grades are adapted to African and Congolese environments.

A national center for adult education was opened in 1965 with assistance from the UN's Educational, Scientific, and Cultural Organization (UNESCO) and Development Programme (UNDP). Under the "Roll Up Your Sleeves" campaign, instructors were required to teach illiterate people for two hours a day without pay in the countryside.

Vocational education is provided by 36 technical schools, including a technical lycée at Brazzaville.

All schools are under the Ministry of Education. Policy is formulated by the Higher Council of Education. There are 10 regional directorates, and at every level there are school commissions. An inspectorate is responsible for supervision and standardization.

Higher education is provided by the Université Nationale de Congo.

SCIENCE AND TECHNOLOGY

Years of civil war have disrupted scientific and technological development in Congo. Nonetheless, the nation is home to a number of research agencies. The Panafrican Union for Science and Technology is headquartered in Brazzaville, as are AgriCongo and the Institut Nationale de la Recherche Agronomique, both agricultural research agencies. Additionally, Congo is home to the Institut de Recherche pour le Développement and the Centre de Recherche Forestiere du Littoral.

MEDIA

The Congolese press consists of six dailies and 21 periodicals, of which the most widely circulated is *La semaine africaine*, a weekly out of Brazzaville that is privately owned by the Catholic Church, with 8,000 readers. Each of the five other dailies is privately owned.

The national news agency is Agence Congolaise d'Information, established in 1962. Foreign press correspondents are required to employ government information services exclusively as the sources of their reports. Foreign news bureaus in Brazzaville include Tass and AFP.

The government-owned Radiodiffusion Télévision Nationale Congolaise operates one medium-wave, four shortwave, and five FM transmitters and broadcasts in French, Lingala, and Kikongo under the call sign Voice of the Congolese Revolution. A second service, Radio Brazzaville, operated by the Office de Radiodiffusion Télévision Française, relays broadcasts from Paris. Radio Liberté is a privately owned radio station.

Television, introduced in 1962, is limited to Brazzaville and its environs. Programs are imported from France. Most are in French, but some are in Lingala and Kikongo.

CULTURE

A tradition of folk arts and crafts, including pottery, weaving, masks, and ironwork, has been disappearing, although the government and a Brazzaville museum are working to preserve the artifacts and traditions. A major form of cultural expression is singing, and there are songs associated with pounding manioc, rowing canoes, fishing, and other forms of labor. The *sanzi* is a wooden box that has metal teeth plucked by the thumbs to produce music. Congo has a rich tradition of oral storytelling, but in modern times the French influence has produced a number of novelists and playwrights, including Guy Menga, Marie Léontine Tsibinda, Soni Labou Tansi, Henri Lopes, and Jean Malonga.

FOLKLORE AND MYTHOLOGY

Congo comprises a number of distinct ethnic groups, so it has no national folklore or mythology per se. One common feature, though, is the totem, taken by a clan or entire village. A totem is typically an animal and represents a group's unity through its spirit and behavior. Heroic stories are told about the totem/animal, which are passed down through the generations; the totem is responsible for the formation of the clan or community and is revered through rituals and taboos, such as the taboo against eating the totem animal. People who retain animist religious beliefs believe in the god Nzambi, who created the world

when he was ill; at the time the earth was covered by water, but Nzambi coughed up the moon, sun, and stars.

ENTERTAINMENT AND RECREATION

The primary forms of entertainment in Congo are storytelling, singing, dancing, listening to music, fishing, and visiting friends and relatives. Movie theaters and nightclubs/discos can be found in some cities, as can the occasional theatrical production. Board games such as chess and checkers, as well as a game called *ngola*, which uses dried peas, are widely played. Spectator sports are popular, and people often gather around a television set powered by a generator, even deep in the jungle, to watch a favorite sporting event.

ETIQUETTE

The Congolese tend to be formal in their interpersonal relations. When people meet, even in business settings, it is customary to inquire about the person's well-being and that of his or her family and to indicate that the other's presence is an honor. Younger people are to avoid frankness or directness toward elders, instead showing respect, agreement, and acknowledgment that the elder stands at a higher position in the social hierarchy. The Congolese take pride in their personal appearance, and etiquette demands that clothing be pressed and clean.

FAMILY LIFE

Especially in rural areas, many marriages are arranged, and the groom must pay a dowry, or bride-price to the bride's family. The marriage can be annulled and the bride-price returned if, on the morning after the wedding night, there is no evidence that the bride was a virgin. The Western concept of the nuclear family is not the norm in much of the country. Many ethnic groups are matrilineal; the mother's oldest brother is considered head of the family, and he is often responsible for the education and welfare of his nephews and nieces. A family is likely to consist not only of parents and as many as six or more children but also of aunts and uncles, cousins, and grandparents, all of whom assume responsibility for one another's welfare in the absence of state safety nets. The elderly are rarely institutionalized but rather are cared for by the entire extended family.

PERSONAL APPEARANCE

The Congolese take pride in their personal appearance, and even poor people take care to wear clothing that is

clean and pressed. In business and office settings, Western dress is common. Otherwise, a common sight are *bous-bous*, or colorful strips of cotton cloth that, on women, are often used as turbans or head wraps.

SPORTS

While volleyball, basketball, handball, and karate are popular, as in most African nations soccer is the most popular sport, both for players and spectators. In 1968, 1974, and 1994 Congo won the African championship, and in 1974 the nation made it to the World Cup playoffs.

CHRONOLOGY

- 1960** The Republic of the Congo becomes an independent republic under President Fulbert Youlou.
- 1961** Independent Congo's first constitution is approved in a popular referendum.
- 1963** Youlou resigns in the wake of mass demonstration and riots; Alphonse Massamba-Débat is named president.
New constitution is promulgated and approved by referendum.
Pascal Lissouba is appointed prime minister.
- 1964** Mouvement National de la Révolution (MNR) is organized as the sole political party in the Congo, with its youth wing, Jeunesse de Mouvement National de la Révolution (JMNR), as a paramilitary force.
- 1966** Attempted military coup is suppressed.
Congo joins UDEAC, a customs union with Chad, Gabon, Cameroon, and Central African Republic.
- 1968** Army seizes power following army-JMNR confrontation; Marien Ngouabi, the army commander in chief, replaces Massamba-Débat as president.
- 1969** Parti Congolais du Travail (PCT) replaces the MNR as the sole political party of the country; Republic of the Congo is renamed People's Republic of the Congo as the nation continues its leftward course.
- 1970** Ngouabi promulgates new constitution based on Soviet and East European models.
- 1971** Student riots erupt in Brazzaville.
In major government reshuffle, Ngouabi dismisses four members of the Political Bureau of the PCT and 50 members of the PCT's Central Committee.
- 1973** New constitution, independent Congo's fourth, is approved in nationwide referendum; elected National Assembly is revived.
Congo withdraws from French Community.
Henri Lopes is named prime minister.
- 1975** Political Bureau of the PCT is replaced by the Special Revolutionary General Staff.
Major Louis Sylvain Ngoma forms a new cabinet.
Congoese government nationalizes the oil industry.
- 1977** President Ngouabi is assassinated by a four-man commando squad.
Joachim Yhombi-Opango assumes the presidency as head of an 11-member military committee.
Constitution is suspended, and the National Assembly is dissolved.
Former president Massamba-Débat is executed for plotting assassination. Diplomatic relations are reestablished with the United States.
- 1979** President Yhombi-Opango steps down and is replaced by Denis Sassou-Nguesso. The constitution of 1973 is readopted and is overwhelmingly approved in a national referendum; the National Assembly is reestablished.
- 1984** President Sassou-Nguesso is reelected with expanded powers.
Former president Yhombi-Opango is released from prison.
- 1987** The government suppresses a coup by military officers. Yhombi-Opango is imprisoned for complicity with the rebels.
- 1988** Discovery of toxic waste dumping into the Congo leads to the dismissal of the minister of environments and scientific research and the minister of information. Amnesty is extended to most political prisoners.
- 1989** Sassou-Nguesso is reelected to a third term.
- 1990** The Congoese Workers' Party officially drops its Marxist ideology.
- 1991** Congo officially becomes a multiparty state.
- 1992** In free presidential elections, Pascal Lissouba defeats Gen. Sassou-Nguesso.
- 1993** CFA franc is devalued by 50 percent, spurring 61 percent inflation in Congo; bloody fighting erupts between Lissouba government forces and supporters of Sassou-Nguesso over disputed parliamentary elections.
- 1994** A cease-fire is established between government and opposition forces.
- 1997** Following outbreak of a civil war, Gen. Sassou-Nguesso proclaims himself president, with the support of the military; Lissouba goes into hiding in Burkina Faso.
- 1998** Warfare resumes in December.
- 1999** Sassou-Nguesso and Lissouba sign a peace treaty providing for integrated military forces and demilitarized political parties.
- 2001** Transitional parliament adopts a draft constitution. Some 15,000 militia are disarmed in a cash-for-arms deal.

Former President Pascal Lissouba is convicted in absentia on treason and corruption charges and sentenced to 30 years hard labor by the high court in Brazzaville.

- 2002** Some 80 percent of voters in constitutional referendum approve amendments to consolidate presidential powers.
Sassou-Nguesso wins presidential elections unopposed.
Intense fighting between government and “Ninja” rebels loyal to former prime minister Bernard Kolelas drives thousands of civilians from their homes in the Pool region; government troops battle Ninja rebels in Brazzaville.
- 2003** Government signs peace agreements with Ninja rebels.
- 2004** World diamond trade monitoring groups removes Congo from list of countries that deal legitimately in diamonds.

Three towering volcanic peaks between two seas, the Caribbean Sea in the foreground and the Pacific Ocean in the background. The other elements of the national emblem are two white-sailed black schooners, a representation in yellow of the Meseta Central, an orange sun, five white stars, a white scroll bearing the legend *República de Costa Rica* decorated with myrtle branches, a deep blue ribbon tied like a corona bearing in white letters the legend *América Central*, red and gold ears of corn at the sides, and a conquistador's cross at the base.

NATIONAL ANTHEM

"Noble Native Land, Your Beautiful Flag"

NATIONAL HOLIDAYS

January 1 (New Year's Day), April 11 (Anniversary of the Battle of Rivas), May 1 (Labor Day), July 25 (Anniversary of the Annexation of Guanacaste Province), September 15 (Independence Day), October 12 (Columbus Day), various Christian festivals, including Christmas and the Day of St. Joseph, Costa Rica's patron saint

DATE OF INDEPENDENCE

September 15, 1821

DATE OF CONSTITUTION

November 7, 1949

GEOGRAPHICAL FEATURES

Costa Rica is in the Central American isthmus. It occupies an area of 51,100 sq km (19,730 sq mi). It has two coastlines; that on the Caribbean stretches 212 km (132 mi), that on the Pacific 1,016 km (631 mi). Costa Rica shares its international land boundary of 639 km (397 mi) with two countries: Panama (363 km; 226 mi) and Nicaragua (309 km; 192 mi).

Costa Rica has three main topographical regions. The largest is the Central Highlands, which reach elevations of more than 3,657 m (12,000 ft). Nestled in the Central Highlands is the Meseta Central, which consists of two upland basins separated by low volcanic hills. The eastern basin is known as Cartago, the western basin San José. The only other upland valley of importance is the General Valley, which lies to the south of the Cordillera de Talamanca, extending to the Panamanian border. The

Costa Rica

© Infobase Publishing

cordillera has 10 peaks over 2,987 m (9,800 ft), the highest of them being Chirripó Grande (3,810 m; 12,500 ft), the highest point in the country. The Pacific coastal region consists of the Palmar lowland complex, the Guanacaste Plain, the Cordillera de Guanacaste, the valley of the Tempisque River, and the three peninsulas of Burica, Osa, and Nicoya. The Atlantic coastal plain is low, swampy, and heavily forested.

The country is drained by 18 small rivers, of which the Tempisque River is navigable for 35 km (22 mi), while the San Juan is navigable from its mouth to Lake Nicara-

gua. The other major rivers are the General, Sixaola, San José, and Grande de Tarcoles.

CLIMATE AND WEATHER

Costa Rica has two seasons: a wet season from May through November and a dry season from December to April. The country has three climatic zones: a torrid zone, which includes the two coastal plains up to about 450 m (1,500 ft), with a temperature range of 29.4°C to 32.2°C (85°F to 95°F); a temperate zone, which includes the Meseta Central and other regions between 450 m and 1,500 m (1,500 ft and 5,000 ft), with a temperature range of 23.9° to 26.7° (75°F to 80°F); and a cold zone, comprising areas over 1,524 m (5,000 ft), with a temperature range of 5°C to 15°C (41°F to 59°F). On the Pacific coast most of the rain falls between May and October, but on the Caribbean coast the rainfall is less seasonal. The average rainfall is 2,540 mm (100 in).

FLORA AND FAUNA

Costa Rica has a huge diversity of plant and animal species, including species from both North and South America; along with Panama, it serves as the intersection between the two continents. There are over 10,000 species of plants in Costa Rica, including 1,000 kinds of orchids. There are mangroves, tropical rain forests, and evergreens on the mountain slopes, cloud forests on the hills, and barren moors at high elevations. In the northwest there are deciduous forests and savannas. There are a number of epiphytes, or plants that obtain nutrients and moisture from the air. Many plant species are endangered; these include some species of insect-eating plants, orchids, ferns, palms, and cacti.

Costa Rica also has over 1,000 species of animals, not including the profusion of insects. South American species include howler monkeys, squirrel monkeys, capuchin monkeys, spider monkeys, anteaters, armadillos, sloths, jaguars, pumas, ocelots, and tapirs. There are over 800 species of birds, including the spectacular quetzals and toucans. Sea turtles visit Costa Rica's beaches to lay their eggs. Snakes, crocodiles, alligators, caimans, various lizards, and many kinds of frogs live on land. Over 200 of these animal species are endangered.

Costa Rica divides the Atlantic Ocean from the Caribbean Sea. It is home to two completely different marine ecosystems: those of the cold Pacific and the warm Caribbean. Marine animals of all types can be found on both sides.

ETHNIC COMPOSITION

Some 94 percent of the population is white or mestizo, 3 percent is black, 1 percent is Amerindian, and 1 percent is Chinese. The European population is descended from the early Spanish settlers. Costa Rica has been called the most homogeneous nation in Central America. The mestizo population is technically the second-largest ethnic group, but the line between mestizo and white is largely undefined.

The primary minority group in Costa Rica thus consists of blacks who are the descendants of slaves. They are concentrated on the Atlantic coast, around Puerto Limón. They retain their attachment to Caribbean culture and seem more British West Indian than Central American.

There are three main Amerindian groups in the country, but none with more than 5,000 members. The government has pursued a policy of integration of the tribes, although efforts have been made to maintain elements of their cultures.

LANGUAGES

Spanish is the national tongue and is spoken by the vast majority of people. English is the second-most-common language and is widely spoken among the black population on the Atlantic Coast, although they speak a version of the Jamaican dialect.

RELIGIONS

Roman Catholicism is the state religion, but the constitution guarantees religious freedom. Some 76 percent of the people are Catholic, and Catholic festivals dominate the calendar. The government provides 1 percent of its budget to support the Catholic Church through the Ministry of Foreign Relations and Worship. There are approximately 40,000 Protestants in the country, mostly blacks on the Caribbean coast. Other religious minorities include Chinese Buddhists, Jehovah's Witnesses, Quakers, Mennonites, and Jews.

Religious Affiliations

Roman Catholic	3,052,000
Evangelical	522,000
Jehovah's Witness	52,000
Other	390,000

HISTORICAL BACKGROUND

Human habitation in Costa Rica can be traced back at least 10,000 years. Between 1000 and 1400 C.E., a civilization emerged near Guayabo that developed pottery techniques that were among the most advanced in Central America. However, when Christopher Columbus landed in 1502, the Spanish found the region sparsely populated.

Following an unsuccessful attempt to colonize the region in 1506, an expedition was dispatched from Panama in 1522. The second effort proved more successful after the discovery of gold, and the leader of this effort, Gil González Dávila, dubbed the land Costa Rica or "rich coast." By the 1560s disease had decimated most of the native population, and in 1562 Juan Vásquez de Coronado was appointed governor; he laid the foundation for the eventual complete settlement of Costa Rica. For most of the colonial period the nation was left in obscurity, al-

though Spain forced the closure of its ports in 1665 in response to piracy.

Costa Rica won its independence from Spain in 1821. Four months later it was absorbed into the short-lived Mexican empire of Agustín Iturbide. After the fall of Iturbide, Costa Rica became a member of the United Provinces of Central America in 1823. It declared itself a sovereign republic in 1848, and its independence was formally recognized by Spain in 1850.

Costa Rica has had a long history of stable democratic government, with only two periods of unrest. The first occurred in 1917 when Federico Tinoco seized the presidency. He was forced to relinquish the office in 1919. In 1948 civil war erupted over the results of the presidential election. The antigovernment forces of the Social Democratic Party (later the National Liberation Party) proved successful, and a provisional government headed by José Figueres Ferrer was formed. Figueres abolished the army in 1948. Under his leadership a new constitution was prepared and democratic elections held.

In 1955 antigovernment forces from Cuba, Nicaragua, Venezuela, Dominican Republic, and Colombia invaded the nation, but with aid from the Organization of American States the invaders were defeated. In 1963 Costa Rica joined the Central American Common Market.

During the Sandinista Revolution in Nicaragua, Costa Rica extended substantial support to the rebels. However, after the overthrow of the Somoza regime, anti-Sandinista contras established bases in Costa Rica. The continued presence of the contras increased tensions between the two nations for the remainder of the decade. Costa Rica turned to international bodies to end the Nicaraguan conflict, and in 1987 President Oscar Arias Sánchez won the Nobel Peace prize for his efforts to bring about peace.

Meanwhile, foreign debt constrained the nation's economy. By 1982 Costa Rica's foreign reserves were exhausted, and debt repayment was halted. This led to debt rescheduling the following year. Efforts at structural readjustment led to a massive strike against the government in 1989. The nation's problems were exacerbated in 1990 when an earthquake left 14,000 homeless. In 1991 Costa Rica, Guatemala, El Salvador, Honduras, and Nicaragua agreed to integrate their economies over a six-year period. Economic reforms continued with the election in 1998 of the conservative candidate Miguel Ángel Rodríguez. In 2000 Rodríguez and the president of Nicaragua resolved an ongoing dispute over their shared border, the San Juan River.

In 2002 a candidate running for president with the Citizen Action Party (PAC) earned a substantial percentage of the vote, necessitating a runoff election in April; before this every election had been a two-way contest between

the conservative Social Christian Unity Party (PUSC) and the liberal National Liberation Party (PLN). The PUSC candidate, Abel Pacheco, won 58 percent of the vote in the runoff and became president. He had promised to privatize the country's utilities and make other economic reforms, but when he attempted to implement his plans in May 2003, workers and teachers went on strike in protest. At the end of 2004 the national government was coming under scrutiny as three former presidents—Rodríguez, Calderón, and Figueres—were accused of corruption and illegal payments to contractors.

LIST OF MODERN RULERS

1948–49	José Figueres Ferrer
1949–53	Luis Rafael Otilio Ulate Blanco
1953–58	José Figueres Ferrer
1958–62	Mario Echandi Jiménez
1962–66	Francisco Orlich Bolmarcich
1966–70	José Joaquín Trejos Fernández
1970–74	José Figueres Ferrer
1974–78	Daniel Oduber Quirós
1978–82	Rodrigo Alberto Carazo Odio
1982–86	Luis Alberto Monge Álvarez
1986–90	Óscar Arias Sánchez
1990–94	Rafael Ángel Calderón Fournier
1994–98	José María Figueres Olsen
1998–2002	Miguel Ángel Rodríguez Echeverría
2002–	Abel Pacheco de la Espriella

CONSTITUTION

The constitution of 1949 made Costa Rica a democratic and unitary republic. The government is divided into three branches: executive, legislative, and judicial. An elaborate system of checks and balances assigned by the constitution somewhat limits the power of the presidency, especially by Latin American standards. The legislature can override presidential vetoes, and the Supreme Court has the right of judicial review over legislative and administrative acts. All members of the executive branch are barred from participating in election campaigns.

The executive consists of the president, two vice presidents, and the Consejo de Gobierno (Council of Government), a cabinet of 15 members. The election process is under the control of the Tribunal Supremo Electoral (TSE, Supreme Electoral Tribunal), an autonomous institution. Elections are held every four years on the first Sunday in February. The president and the two vice presidents must receive at least 40 percent of the vote, or a runoff election is held. Deputies to the National Assembly and municipal councils are elected by a system of proportional representation. In April 2003 the Constitutional Court annulled a 1969 amendment bar-

ring presidents from running for reelection; policy reverted to the original 1949 constitution, which states that presidents may run for reelection after they have been out of office for two terms.

PARLIAMENT

The National Assembly is a unicameral body; members are elected by direct popular vote for four-year terms. Deputies may not be reelected for successive terms. The National Assembly's 57 members are elected according to a system of proportional representation.

The assembly meets in a regular session twice per year, and special sessions may be convened by the president. The legislature wields substantive power, including the right to override a presidential veto by a two-thirds majority. Its functions include the enacting of laws, declaration of war, approval of the national budget, and impeachment of the president.

Suffrage is universal for all citizens over the age of 20 and for all married men and teachers over the age of 18. Voting is compulsory for all qualified citizens under 70.

POLITICAL PARTIES

The ruling political party is the Social Christian Unity Party (PUSC), a loose alliance of conservative parties, including the Calderónist Republican, Christian Democratic, and Popular Union parties as well as the former Democratic Renovation Party. The principal opposition party is the National Liberation Party (PLN), founded by former president José Figueres Ferrer in the aftermath of the 1948 revolution. The PLN is the largest and best organized of Costa Rican parties and represents the best of the Latin American left. It is affiliated with the Socialist International. Costa Rica essentially had a two-party system until the elections of February 2002, when the Citizen Action Party (PAC) won a large percentage of votes, which meant that no candidate won at least 40 percent of the vote, forcing a runoff that April. The PUSC presidential candidate, Abel Pacheco, won the runoff. The PUSC gained a 19-seat plurality in the legislature, which was not enough to give it a decisive majority, and legislation is consequently slow.

LOCAL GOVERNMENT

The principal units of local government are seven provinces. The provinces are divided into 81 counties (*cantones*), which are in turn subdivided into 344 districts (*distritos*). The provinces have no self-government, and governors are appointed by the president. Local authority in each canton is vested in the municipal council. The executive

officer of the council, the jefe politico, is appointed by the president and has veto power over any ordinance passed by the council. In 2002 Costa Rica introduced the office of mayor, and mayors are now directly elected.

LEGAL SYSTEM

The legal system is headed by the Supreme Court of Justice, composed of 22 magistrates elected by the National Assembly for renewable eight-year terms. The high court has five chambers and appoints all lower-court justices. Subordinate courts are organized at three levels: provincial, cantonal, and district. Directly below the Supreme Court are two civil courts of appeal and two criminal courts of appeal. There is an original criminal court in all seven of the provinces, and there are 61 municipal courts. The lowest courts are the police courts, which are presided over by magistrates. In 1989 Costa Rica established a Constitutional Chamber of the Supreme Court, which reviews the constitutionality of executive decrees, legislation, and habeas corpus warrants.

HUMAN RIGHTS

Costa Rica is one of the most democratic nations in Central and South America and has a history of tolerance and individual liberty. Habeas corpus is a constitutional right, and arraignment is required within 24 hours of arrest. Freedom of the press, speech, religion, and assembly have not been curtailed or abridged in recent history. The labor movement is weak, but it is free to strike, organize, and bargain collectively. Not only are domestic and foreign travel and emigration unhindered but Costa Rica also provides asylum for many political refugees.

Costa Rica has had a few instances of human rights abuses. Police and prison guards have abused prisoners, and prisons are overcrowded. The criminal trial system progresses very slowly. Domestic violence against women and child abuse have occurred frequently. Child prostitution is still a problem, though it has been declining. Human trafficking has occurred.

FOREIGN POLICY

Costa Rica has taken an active role in promoting regional peace and stability. The government has worked to increase trade between Central American states and to attract foreign investment. It has also sought to develop a regional trade organization to stabilize coffee products and to expand the North American Free Trade Agreement (NAFTA) to Central America. Costa Rica is a member of 14 UN organizations and 29 other international organizations. Instability in Nicaragua has led to

heavy immigration from that nation through the 1980s and 1990s, and the Costa Rican government has sought to both limit refugee flows and to gain international aid to deal with the resultant social problems.

In 1993 Costa Rica declared itself a neutral nation. It has participated actively in international politics, campaigning for human rights and dispute settlements. The nation has participated in peace negotiations in Nicaragua and El Salvador and has supported regional arms limitation agreements. It has worked to develop the economies in other Central American nations, particularly Panama, and has tried to make economic ties with its neighbors. Costa Rica broke relations with Cuba in 1961, and though it has not renewed formal diplomatic ties, it does maintain a consular office in Havana.

Costa Rica has a close relationship with the United States, its most important trading partner. The United States has worked to preserve Costa Rica's environmental resources and has furnished the nation with over \$1 billion in development assistance funds. Costa Rica and the United States signed the Maritime Counter-Drug Agreement in 1999 in an effort to stop drug trafficking and illegal fishing in Costa Rican waters.

DEFENSE

The constitution outlaws a national army; Costa Rica has no military. National security functions are provided by the police and the Civil Guard. In 1996 the guard was eliminated as a separate entity and now operates on an equal basis with the rural guard and border patrol. The Civil Guard has a strength of 10,000; service in the guard is voluntary. The president is the commander in chief of the guard, but control of the force is directed through the minister of public safety. A civilian director is in charge of the force's day-to-day operations, while the budget is under the control of the minister of government. Most of the Civil Guard's weapons and equipment have been furnished by the United States. Additionally, Costa Rica established a Coast Guard in 2000.

ECONOMY

Costa Rica has a free-market economy dominated by the private sector. The economy is based on agriculture and

manufacturing. The nation's major trade partners include the United States, Germany, and Italy. About one-fourth of the working population is engaged in farming or agriculture. The principal crops are bananas and coffee. Other important crops include sugarcane, rice, and corn. Manufacturing employs some 20 percent of the workforce, mainly in textiles, fertilizers, and construction materials. Fishing is increasingly important along both coasts. The economy grew at a rate of 5.6 percent in 2003.

Foreign investors like Costa Rica because it is politically stable and has a highly educated populace. Costa Rica is contemplating joining the U.S.–Central American Free Trade Agreement, which would make foreign investment easier. The Intel microchip plant that opened in 1998 has brought in sizable income, and other U.S. companies have been welcomed into the country. Trade with the United States totaled over \$6 billion in 2003.

Though tourism and electronics continue to bring in foreign currency, the agricultural sector has been suffering. The country has a large deficit and internal debt, and inflation is rising; it reached 9.4 percent in 2004. Controlling the budget deficit is the country's biggest problem. In 2003, 18.9 percent of the budget came from public borrowing, making it difficult for the government to invest in infrastructure, which badly needs maintenance.

The government has made protecting the environment a top priority. President Pacheco decided not to drill for oil in the Atlantic for environmental reasons. Hydroelectric power generates much of the nation's electricity.

ENVIRONMENT

Partially in response to the economic potential of eco-tourism and partially as a result of the nation's relative

economic prosperity, Costa Rica has undertaken wide-scale efforts to preserve its environment. The country has protected about 23 percent of its land in national parks and refuges, more than any other country. There are 30 national parks and wildlife refuges, which range from small islands off the coast to the huge and essentially pristine La Amistad International Park on the border with Panama. The entire country was once covered with trees, and now forest covers only one-fourth of the land, but the government has taken steps to protect the remaining resources because they are so valuable to the tourism industry. Costa Rica is the only nation in Latin America in which the rate of reforestation exceeds the rate of the loss of rain forests.

Many of Costa Rica's plants and animals are endangered; some are close to extinction. Endangered species include monkeys, anteaters, manatees, tapirs, harpy eagles, macaws, several cats and turtles, golden toads, and the boa constrictor.

Environment

 CO2 Emissions per capita ton: 1.4

LIVING CONDITIONS

Costa Rica has some of the best living conditions in Central America. San José is a major city with over one million inhabitants. There are elegant residential areas, shopping malls, supermarkets, nightclubs, and restaurants. The climate is very pleasant—not too hot and never cold. The National Theater and other venues present live events year-round.

HEALTH

Costa Rica is for the most part a healthy place; life expectancy is over 76 years, and the infant mortality rate is about 10 deaths per 1,000 live births. Hospitals and hygienic standards are some of the best in Central America. There is public health coverage for over 90 percent of the population. Tropical diseases such as typhoid, cholera, hepatitis, dengue fever and malaria do remain a problem.

FOOD AND NUTRITION

Rice and black beans are the mainstays of the Costa Rican diet. The people eat these staples fried, in soup, or with meat, noodles, plantains, and salad and such a combination can appear at any meal of the day. People also eat tamales, *chicharrones* (deep-fried pork rinds), empanadas (turnovers stuffed with meat), chicken, and a Carib stew of meat and vegetables cooked in coconut milk. The local cuisine is not especially spicy. Most savory foods are served with a sauce called *salsa lizano*. Costa Rica has a great variety of fresh fruit, including papayas, bananas, and pineapples as well as a variety of more exotic fruits. People eat these fruits fresh or drink their juice mixed with sugar and water. Coffee and fresh coconut milk are popular drinks. Alcoholic beverages include *guaro*, a local grain alcohol, and Imperial beer.

When people go out to eat, they either go to *sodas*, small inexpensive diners that serve home-style cooking, or more formal *restaurantes*.

STATUS OF WOMEN

Women make up one-half of the population in Costa Rica, outnumbering men in some urban areas. Approximately one-quarter of the workforce is female, and that number has been growing since the 1960s. Although Costa Rica is a conservative, Catholic nation, the government supports birth control, and some 69 percent of women use contraception. There is universal suffrage and women participate in politics; as of 2005, 35 percent of the legislature was female. Women still earn less than men, and domestic violence continues to be a problem. Women are slightly better educated than men.

The Bill for Women's True Equality, passed in 1990, created reforms with respect to social and economic rights, sexist content in educational materials, inheritance laws, protection of women during sexual assault trials, and reforms of existing laws. Women now receive legal protection from domestic violence. Mothers receive free hospitalization for childbirth, and employers are required to give maternity leave.

WORK

Costa Rica has an unemployment rate of 6.7 percent. Per capita gross domestic product (GDP) in 2004 was \$9,100. Poverty has declined in the last 15 years, and a strong social safety net prevents most people from falling into destitution. A total of 58 percent of employees work in services, 20 percent in agriculture, and 22 percent in industry. Tourism is the most important service industry, while electronics is the most important facet of manufacturing.

EDUCATION

In Costa Rica education is free, universal, and compulsory for nine years, from ages six to 15. The language of instruction is Spanish. San José has excellent English, French, and German private schools. Schooling lasts for 11 years, as divided into six years of primary school, three years of lower-secondary education, and two years in the higher-secondary system. Vocational training is provided in three-year industrial schools. The school year runs from March through November. Some 96 percent of the population is literate.

Education

SCIENCE AND TECHNOLOGY

Costa Rica has a great deal of modern technology. Its cellular-telephone network is compatible with many other countries' networks, and Internet use is widespread. The country has a substantial computer hardware and software industry. In 1998 Intel opened a microchip-processing plant in Belén, which was the largest foreign investment in Costa Rica's history. The plant brings in sizable income.

Science and Technology

MEDIA

The press is totally free of official control or manipulation and often criticizes the government openly and vigorously, although libel laws somewhat constrain media freedom. Costa Rica has no official news agency. The largest daily newspapers—*La nación*, *La prensa libre*, and *La república*—are published in Spanish. *La nación* and *La república* espouse the respective viewpoints of the two main political parties. The *Tico Times* is an English-language weekly that reports on current events, cultural activities, and restaurants. There are over 35 radio stations, all of which are privately owned: most are commercial, while a few are owned by religious or cultural organizations. There are also at least 18 television stations. There are several independent book publishers.

CULTURE

The Native Americans who lived in Costa Rica before the arrival of Europeans were skilled artisans who worked in metal and stone. Pre-Colombian artifacts include statues made of stone, jade, and gold. Amerindians also constructed the mysterious perfectly round Diquis stones that were arranged in geometric patterns pointing to magnetic north. After years of ignoring their ancient culture, modern Costa Ricans have taken a renewed interest in their nation's prehistory.

Costa Rica's 19th-century literature was typified by a movement called *costumbrismo*, which took stories from folk traditions and colloquial expressions. The author Joaquín García Monge told stories of working people in his books *El moto* and *Las hijas del campo*. Writers of the 20th century focused their energies on criticizing the government and society.

Modern popular culture embraces all things North American. Teenagers especially like to watch American television shows dubbed in Spanish, and American pop music is played widely on the radio. At nightclubs people like to dance to traditional salsa and merengue music.

FOLKLORE AND MYTHOLOGY

The Amerindians who lived in Costa Rica before the arrival of Europeans all had their own mythologies. Visitors today can see artifacts and learn myths at museums. Costa Rica's folk traditions come from other Central American nations, such as Nicaragua, Panama, Guatemala, and Mexico. Folklore has become popular in recent years, as the tourism industry tries to attract visitors with traditional culture, such as dance performances in traditional costumes done to marimba music.

ENTERTAINMENT AND RECREATION

Costa Rica has encouraged tourism by developing many outdoor activities. There are recreational activities for every taste, including scuba diving, snorkeling, kayaking, mountain biking, white-water rafting, and golf. Many tourists come to Costa Rica specifically for the sportfishing; possible catches include tuna, snapper, wahoo, Atlantic sailfish, marlin, barracuda, and grouper. Surfing is good on both coasts of the country. Costa Rica also offers a full array of less athletic recreational opportunities; it has good restaurants, nightclubs, discos, and shopping facilities.

ETIQUETTE

Courtesy and expressions of gratitude are very important; guests are supposed to thank their hosts profusely. At meals people wait until everyone is served before beginning to eat. Costa Ricans are very careful about using appropriate forms of the second-person pronoun when speaking Spanish; they use *usted* with strangers and older people to show respect and *vos* with friends and in casual settings. Young people always address older people with the titles *don* or *doña*, for men and women, respectively, before the person's name.

Costa Ricans are a friendly and affectionate people. People greet one another with a kiss on the cheek and sometimes a hug. Physical displays of affection are common, whether between family members or among couples out in public. Very close dancing is perfectly acceptable, although premarital sex is not. Homosexuality, on the other hand, is generally taboo, although it is gradually becoming more accepted. Men usually act chivalrously toward women, opening doors and carrying bags for them.

FAMILY LIFE

Costa Ricans value family highly. Children live with their parents until they marry. Extended families are often close to one another. Many middle-class families employ a maid who lives in the house and helps with chores.

PERSONAL APPEARANCE

Looking presentable is very important to Costa Ricans. Women try to dress elegantly, especially in the city, where they wear long pants or dresses. Men usually wear long pants with nice casual shirts. Jeans are popular. People occasionally wear shorts but prefer to save such casual attire for the beach. People dress very stylishly when they go out at night, but fashions are not flashy.

SPORTS

Costa Rica has some professional athletes. There is a national soccer team (ranked 27 by the international soccer organization FIFA in 2005). The nation won two bronze medals at the 2000 Sydney Olympics. One of the country's main attractions to tourists is the wide variety of adventure and water sports.

CHRONOLOGY

- 1948** The bloodiest civil war in Costa Rican history erupts when elections are annulled; the Costa Rican army is disbanded and outlawed; a new National Assembly promulgates new constitution.
- 1955** Antigovernment forces invade Costa Rica with support from Cuba, Nicaragua, Venezuela, Dominican Republic, and Colombia; Figueres appeals for aid from Organization of American States; the invading forces are dispersed.
- 1963** Costa Rica joins the Central American Common Market.
- 1979** Costa Rica extends substantial support to the Sandinista revolution in Nicaragua.
- 1982** Debt repayment is halted as foreign reserves are exhausted.
- 1983** The presence of Nicaragua contras on Costa Rican territory increases tension between the two neighbors; external debt is rescheduled with the IMF.
- 1984** Costa Rica seeks hike in military aid. Costa Rica calls on Contadora nations to supervise the Costa Rican–Nicaraguan border.
- 1985** United Brands sells its banana plantations in the country.
- 1987** Arias wins Nobel Peace Prize for efforts to end Nicaraguan Civil War.
- 1989** Trade unions and civic groups strike in protest against the government's policies on structural adjustment.
- 1990** An earthquake leaves 14,000 homeless.
- 1991** The presidents of Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica agree to integrate their countries' economies over a six-year period.
- 1998** Conservative Miguel Ángel Rodríguez is elected president.
- 2000** Rodríguez and Nicaragua resolve a border dispute.
- 2002** Abel Pacheco wins the presidency. Teachers and utilities workers strike over Pacheco's plans to privatize their industries and salary complaints.
- 2004** Three former presidents are investigated for possible corruption.

August 4, 2000

GEOGRAPHICAL FEATURES

Côte d'Ivoire, on the southern coast of West Africa, is roughly square in shape, with an area of 124,502 sq mi (322,460 sq km). Its coastline along the Gulf of Guinea extends for 320 mi (515 km). It is bounded by Liberia and Guinea to the west, Mali and Burkina Faso to the north, and Ghana to the east. The de facto capital is Abidjan (1998 est. pop., 2,877,948); the official capital is Yamoussoukro (1998 est. pop., 299,243).

The coast of Côte d'Ivoire is fringed by a parallel line of sandbars and deep lagoons. Woodlands cover the continental shore and extend 165 mi (265 km) inland from the Gulf of Guinea in the east and west and 60 mi (100 km)

in the center. The western part of the country is mountainous. In the north lies a savanna covered with grass and trees. Côte d'Ivoire is drained by four major rivers that run roughly parallel from north to south. They are the Comoé, the Bandama, the Sassandra, and the Cavally. Each is navigable for only about 30 mi (48 km), except for the Sassandra, which is navigable for about 50 mi (80 km).

CLIMATE AND WEATHER

Côte d'Ivoire has a tropical climate. The average annual temperature is 79°F (26.1°C). Average annual rainfall ranges from 75 in (1,905 mm) along the coast to 45 in (1,145 mm) in the savanna. The coastal region receives an average annual rainfall of 80 to 230 in (2,030 to 3,040 mm). The prevailing wind systems are the southwestern monsoons and the northeastern Harmattan, a dry, scorching wind from the Sahara.

FLORA AND FAUNA

Côte d'Ivoire has tremendous diversity of animal and plant species, some of the greatest in West Africa. A total of 4,700 plant species grow there, and the country is home to more than 1,000 species of animals, including 232 different mammal species. Most of the animals inhabit the forests in the interior, which contain numerous types of hardwoods, such as mahogany and anigre, a tropical hardwood with a pink tinge that is sought after by guitar makers. In the virgin rain forest, trees grow over 165 feet high, hung with vines, and wild animals abound. The Parc National de la Comoé is the largest game park in West Africa; it is full of animals such as lions, leopards, elephants, hippopotamuses, baboons, colobus monkeys, green monkeys, waterbucks, antelopes, and 21 kinds of pigs.

Deforestation is a substantial problem. Some 80 percent of the country's original forests have been cut down to make room for agriculture and to be sold for timber, usually illegally. The export of tropical hardwoods was once one of the Côte d'Ivoire's main sources of income, but the supply of trees has dwindled to almost nothing, and the export business collapsed in the 1990s. The government has tried to stop deforestation by declaring about 16 percent of the nation to be protected, but there is no money to pay for enforcement and rangers are not well trained. As a result, people are able to continue to cut trees and poach animals within the parks. In 1995 the government banned the export of most hardwoods, and in 1996 it banned the cutting of trees in the savanna zone and tried to enforce prohibitions against illegal logging. In 1998 the government began trying to oust immigrants from Burkina who were putting heavy pressure on the remaining forests.

ETHNIC COMPOSITION

There are more than 60 ethnic groups in Côte d'Ivoire, with some dominant in particular regions. The five principal ethnic divisions are the Akan (in the east and center, including the Lagoon people and the Baoule subgroup), the Krou (in the southwest), the Southern Mande (west), the Northern Mande (in the northwest), and the Senoufo/Lobi (in the northeast and north center). Political affiliations tend to fall along ethnic and religious lines. Approximately 44 percent of the population is urban.

Côte d'Ivoire does not impose significant restrictions on immigration, and about 20 percent of workers come from neighboring countries. Many of these foreign workers eventually return home after working in Côte d'Ivoire for several years. The country also has a significant non-African population, including 100,000 Lebanese, 37,000 French nationals, and many Syrians and Indians. In the 1990s the country became a destination for other Africans fleeing violence in their homelands. Ethnic tensions are a constant problem; immigrants from Burkina Faso, Mali, Liberia, Nigeria, Benin, Senegal, Mauritania, and Guinea are particular targets of ethnic hatred. In 2004 some of the migratory trends had reversed, with thousands of people fleeing civil war in Côte d'Ivoire.

LANGUAGES

The official language is French, which is the language of the media, educational system, and government. Approxi-

mately 60 African languages are also spoken, among them Agni, Baoulé, Senoufo, and Malinke-Bambara-Dioula.

RELIGIONS

Côte d'Ivoire is a secular state, and the constitution provides for religious freedom. The 1998 national census found that Muslims made up the largest religious group, with approximately 38.6 percent of the country's population. Catholics constituted 19.4 percent, practitioners of traditional indigenous religions 11.9 percent, Protestants 6.6 percent, other Christians 3.1 percent, practitioners of other religions 1.7 percent, Harrists 1.3 percent, and persons without religious preference or affiliation 16.7 percent. Of the many migratory workers who enter the country, about 70 percent are Muslim and most of the rest are Christian. Côte d'Ivoire is home to the Basilica of Our Lady of Peace in Yamoussoukro, the largest Christian church in the world, consecrated by Pope John Paul II in 1990. The number of practitioners of traditional religions is declining as missionaries spread their religions and more people move to urban areas.

Traditional beliefs	2,058,000
Nonreligious	2,888,000
Protestant	1,141,000
Other	1,179,000

HISTORICAL BACKGROUND

The first recorded history of Côte d'Ivoire comes from North African traders who traversed the Sahara, and the first important cities in the region were established to serve commercial interests. Islam was introduced to the region by Arab traders and spread rapidly within Côte d'Ivoire after the 11th century. Unification of the country was hindered by the dense rain forests that covered the southern half of the country, and the area that now constitutes Côte d'Ivoire was ruled by various ethnic and religious groups; people lived in small, isolated villages, and their only contact with the larger world was through passing traders. A Muslim state was established in the north in the early 18th century, with four other states ruling independently over other parts of the country; independence movements resisted French subjugation and persisted into the late 20th century.

The first French posts were established in Côte d'Ivoire in 1843. In 1893 the territory was formally named Ivory Coast and placed under a French governor. On December 4, 1958, Ivory Coast accepted a new French

constitution and opted for the status of an autonomous republic within the French Community. On August 7, 1960, the Republic of Ivory Coast proclaimed its complete independence. It changed its name officially to Côte d'Ivoire in 1985.

Côte d'Ivoire gained independence with hardly a murmur, let alone bloodshed. The peaceful departure of the French was, in part, a reflection of the deep pro-French sentiments of the people. Over 40 years after independence, Côte d'Ivoire remains the most Francophone of West African states. French economic conservatism—not African nationalism—dominates the country's economic and foreign policies. Both capital and management of industry are largely in the hands of private French citizens. The French educational, administrative, and judicial systems have been retained with little change. A significant portion of Côte d'Ivoire's foreign trade is with France. Daily newspapers from Paris are more widely read than local newspapers in Abidjan. French is the country's sole official language.

Côte d'Ivoire's French connection, which is perhaps the key to its political stability, is determined by two factors. One is the almost mystical Francophilia of the Ivorian leadership. The second is the pragmatic benefit of French association for the country's economic development. Côte d'Ivoire's phenomenal economic progress through the mid-1980s was in no small part due to France's role.

Félix Houphouët-Boigny was the main political leader beginning in the 1940s, when he organized an international political party to fight colonialism. He became president of the autonomous republic in 1959 and remained president until his death in 1993, having won the right to retain his post in the nation's first multiparty presidential election in October 1990. Houphouët-Boigny's administration was characterized by moderation and a constant search for consensus and dialogue instead of political confrontation. Most potential opposition was defused, with opposition members even being absorbed into the ruling party. The government did not show undue concern for its internal security, nor did it enact extraordinary legislation directed against the opposition. Largely as a result of the president's skillful management, until 1990 the stability of the central government was the most striking feature of Côte d'Ivoire.

Political unrest was sporadic and hampered by weak leadership. In 1963 two coup plots were uncovered. One was conceived by a young group of radicals and the other by northerners resentful of control of the government by southern Ivorians. The president responded by cutting the size of the army to reduce the chance of intervention by the armed forces, introducing a regional development plan, and setting up more management of businesses by indigenes.

The government has at various times faced charges of corruption. In 1977, to deal with those allegations, Houphouët-Boigny removed ministers from three key departments—Finance, Economic Planning, and Foreign Affairs—and passed legislation designed to prevent high-level corruption. Additional anticorruption measures were approved in 1984, and former housing officials were imprisoned for misconduct.

In the 1980s economic austerity led to more unrest as well as political liberalization. Strikes and demonstrations, staged mostly by students and professionals, occurred frequently from late 1980 to mid-1983. The longest was held in the spring of 1983 by teachers protesting the withdrawal of free housing rights. The strike was aided by sympathetic doctors. It was ended through a presidential back-to-work edict. A degree of political openness was introduced in 1980 with the first free elections for seats in the National Assembly, which was expanded from 80 to 147 members. More than 600 people ran for office, and only 27 of the previous 80 incumbents were returned to the chamber. The National Assembly was later expanded to 175 members and today comprises 225 members.

Massive protests by students, teachers, farmers, and professionals flared again in 1990 in response to the government's decision to cut salaries and increase taxes. Growing political pressure forced Houphouët-Boigny to legalize opposition parties and run in the country's first contested election since independence. Amid charges of electoral fraud, Houphouët-Boigny won with 85 percent of the vote. The ruling Democratic Party (PDCI) won 165 seats in the 175-member parliament in the nation's first multi-party parliamentary elections. The Ivorian Popular Front (IPI) won nine seats, and the Ivorian Worker's Party won one seat.

On December 7, 1993, President Houphouët-Boigny died. The National Assembly selected its president, Henri Konan Bédié, to succeed him as the nation's president. On October 22, 1995, Bédié won reelection to the presidency, receiving 96 percent of the vote; however, the election was boycotted by the major opposition parties. In 1998 several constitutional changes were approved that strengthened the president's powers, including a provision to lengthen his term of office from five to seven years.

On December 24, 1999, President Bédié was overthrown in a largely nonviolent military coup, and General Robert Guei, a former armed forces chief of staff, was installed as president. It was the country's first coup since Côte d'Ivoire achieved independence in 1960. The new president promised a democratic government and elections. He suspended the constitution, the parliament, and the courts and in their place created a nine-man National Committee of Public Salvation, which was to rule until elections could be held. Guei gave as the reasons for the coup the preceding government's ethnic intolerance and its practice of holding political prisoners.

During July 23–24, 2000, voters approved a new constitution, with more than 86 percent of the votes cast in favor of the new government. The constitution set the qualifications for candidates for president, lowered the voting age from 21 to 18, reduced the presidential term from seven years to five, and eliminated the death penalty. It also granted amnesty to those who had participated in the December coup.

Presidential elections in October were boycotted by the PDCI and Islamic leaders, who were barred from running in the elections. Guei declared himself the winner of the election even though early voting results showed Laurent Gbagbo, the FPI candidate, leading the vote. A popular uprising then brought Gbagbo to power. Gbagbo assembled a new government that included FPI and PDCI members but excluded the Rally of Republicans (RDR). Fighting erupted between the mostly Muslim followers of Alassane Ouattara, the leader of the RDR, and the Christian followers of President Gbagbo. The two leaders met in 2001 and pledged to work toward reconciliation; however, a National Reconciliation Forum, set up by Gbagbo in October, was boycotted by General Guei. The UN insisted on reconciliation before resuming aid.

Gbagbo spent the first two years of his presidency trying to consolidate his power, but his opponents were not to be placated and finally launched a civil war. Rebels attempted to overthrow his government in September 2002; they were unsuccessful but did manage to take control of the northern portion of the country. In January 2003 the government granted the rebel leaders ministerial positions in a united government, under the Linas-Marcoussis Peace Accord. French and West African troops entered the country to help disarm the troops and implement the agreement. After a three-month stalemate in the autumn of 2003, Gbagbo and the rebels once again tried to implement the peace accord in December 2003. In 2004 Gbagbo's government still had not regained control of the north, and the ethnic and land-use disputes that sparked the civil war were still unresolved.

LIST OF MODERN RULERS

1960–93	Félix Houphouët-Boigny
1993–99	Henri Konan Bédié
1999–2000	Robert Guei
2000–	Laurent Gbagbo

CONSTITUTION

The constitution of 2000 created a secular, democratic, and social republic with a strong president and a National Assembly, whose powers are restricted to specific subjects. All other matters of state are left to the executive and are dealt with by decrees. The executive can also propose leg-

isolation. The president is the head of state, commander in chief, and guarantor of judicial independence. He appoints his own cabinet. He is chosen for a five-year term of office in direct national elections.

Suffrage is universal for all citizens 18 years of age or older. Voters choose a complete slate rather than vote for individuals.

PARLIAMENT

Côte d'Ivoire has a unicameral legislature, the National Assembly, a 225-member legislative body whose members are elected by direct and universal suffrage to serve for five-year terms. The Assembly holds two sessions each year, during which it enacts legislation in the two areas of policy under its jurisdiction. The first category comprises nationality, the criminal and judicial systems, taxation, currency, the electoral system, and public administration. The second category includes areas in which the Assembly sets policy; these include defense, education, labor, transportation, and communications.

POLITICAL PARTIES

From the time Côte d'Ivoire became independent in 1960 until recently, the Parti Démocratique de la Côte d'Ivoire (PDCI) was the only political party in the nation. This situation evolved as a result of the party's control of the electoral process rather than of an official prohibition against opposition parties. In 1990, however, under pressure from political opponents, President Houphouët-Boigny allowed other parties to field slates of candidates in the nation's first multiparty elections. In the balloting the PDCI retained 165 seats in the National Assembly; two opposition parties, the Ivorian Popular Front (FPI) and the Ivorian Workers' Party (PIT), won nine seats and one seat, respectively. Other parties operating in Côte d'Ivoire are Rally of the Republicans (RDR), the Union for Democracy and Peace (UDPCI), and the Ivorian Socialist Party, as well as more than 20 smaller parties. In the 2000 elections the FPI and the coalition between the PDCI and the African Democratic Rally took almost the same number of seats in the legislature.

LOCAL GOVERNMENT

Côte d'Ivoire is divided into 19 regions, 58 departments, and 196 communes. Each department and region is governed by a prefect appointed by the national government. Each commune is headed by an elected mayor. The city of Abidjan has 10 mayors. In 2002 Côte d'Ivoire held elections in order to create departmental councils to handle local administrative matters, such as

infrastructure development and maintenance and social services.

LEGAL SYSTEM

The Ivorian court system is based on French civil law. It has two levels: the higher courts and the lower courts. Lower courts, where individuals initially bring disputes, include the courts of first instance, the courts of assize, the justice of peace courts, and the courts of first degree. Higher courts, or courts of appeal, include the Supreme Court, the High Court of Justice, and the State Security Court. The High Court of Justice, composed of deputies chosen by the National Assembly from among its own members, has the power to impeach the president for high treason.

Although Ivorian law guarantees the right to a fair public trial, this provision is not always honored in rural areas, where justice is administered through traditional institutions. Defendants have the right to legal counsel, and, in theory if not always in practice, attorneys are appointed to represent indigent defendants.

HUMAN RIGHTS

Côte d'Ivoire is classified as a partly free nation. A strongly Francophile country, it has based its human rights structure on that of France. Citizens enjoy a large measure of free speech and complete freedom of religion. Nevertheless, Côte d'Ivoire has a bad record when it comes to human rights, especially since the beginning of the civil war. The government army regularly recruits Liberian children as soldiers. Government troops have been accused of raping women and children, looting civilian property, and committing summary executions. Racial hatred has led to torture, rape, and arbitrary detention.

FOREIGN POLICY

Côte d'Ivoire is a staunch ally of France, on which it depends for its economic and military well-being, and has maintained good relations with the United States and other Western countries. Its national currency is tied to the euro. It favored Western countries throughout the cold war and joined the United Nations in 1960. Côte d'Ivoire has participated in diplomatic negotiations with a number of countries, especially other African nations. It encouraged South Africa to end apartheid. In 1986 it reestablished diplomatic relations with Israel. President Bédié was instrumental in achieving a cease-fire between the Sierra Leone government and rebel forces in 1996; the cease-fire itself was signed in Abidjan. The country

participated in peacekeeping in Liberia in 1996–1997. In 2004 Côte d'Ivoire joined CEN-SAD, the Community of Sahel-Saharan States, and it hopes to resume its status as a peacekeeper as soon as its own civil war is ended.

France remains Côte d'Ivoire's most important foreign partner. The civil war that began in 2002, however, put a strain on relations between the two nations when France refused to help the government recapture the northern areas that had been taken over by rebels. France did send troops to secure the cease-fire in 2003, and though there was some anti-French rioting in Abidjan in January and February of that year, relations with France have remained fairly good.

The United States and Côte d'Ivoire have also had friendly relations. The United States has been providing monetary assistance to end the civil war and to combat AIDS.

DEFENSE

The president is charged with responsibility for the nation's defense. He is assisted by the Ministerial Defense Council and the Military Defense Council. Service commanders report to the Minister of Defense. Military forces are recruited by conscription. Conscripts' obligations last 25 years, of which two entail active duty and the remainder participation as reserves. French soldiers help with military training.

Côte d'Ivoire has reorganized its military since the rebellion of 2002. Before then the nation's military was divided into five military regions, but that system has been abandoned. In 1999 the national armed forces were 15,000 strong, including an army, navy, air force, and gendarmerie, the last of which is a national police force entrusted with security in rural areas. The navy handles coastal security and controls immigration and shipping within the lagoons. The air force defends local airspace and provides transportation to the other services.

Since 1961 France has stationed troops in Côte d'Ivoire. After September 2002 France increased its troops from 500 to 4,000 soldiers. In January 2003 the Economic Community of West African States (ECOWAS) stationed another 1,500 peacekeeping troops from other African nations alongside the French soldiers. These troops became part of the UN operation authorized by the Security Council in April 2004.

ECONOMY

The basis of the Ivorian economy is agriculture; around 68 percent of Ivorians are involved in some form of agriculture. The agricultural sector is largely private, although the government does operate some large farms. Land ownership is restricted to Ivorian nationals. The main cash crops are coffee, cocoa, bananas, timber, sugarcane, plantains, cotton, and pineapples. Other crops are raised primarily for domestic consumption; these include rice, corn, millet, yams, cassava, and peanuts. The country is a leading producer of cocoa and coffee. The small manufacturing sector emphasizes the processing of agricultural goods.

Although the nation was once an economic powerhouse by African standards, the economy of Côte d'Ivoire has been suffering since the 1980s, and the standard of living has fallen. The annual per capita gross domestic product (GDP) was \$1,400 in 2003. The nation depends on direct foreign investment, which accounts for nearly half of total capital. France is by far the biggest investor nation. The country received a number of loans from the International Monetary Fund (IMF) during the 1990s and devalued its currency in 1994, which helped the economy rebound from a long slump.

Agriculture, forestry, and fishing account for two-thirds of exports. A total of 40 percent of the world's cocoa comes from Côte d'Ivoire, as do many of the world's bananas, coffee, cotton, tuna, palm oil, rubber, and tropical wood, though tropical wood exports have fallen precipitously with deforestation. The country must import many products for modern life, such as paper, fuel, and food. Total exports in 2003 were \$5.3 billion, primarily to France and the Netherlands; total imports were \$2.8 billion, primarily from France and Nigeria. Côte d'Ivoire is vulnerable to price swings in its main export products, and the government has been encouraging diversification to protect its markets from these fluctuations.

Côte d'Ivoire has an excellent infrastructure for a developing nation. It has 3,000 miles of paved roads, two large ports, a telecommunications service that includes internet access, air service within Africa and to and from Europe, and a thriving real-estate market. The government has planned numerous investment projects, but these have been delayed by the civil war. The country suffered negative growth in 2004 and has a massive burden of foreign debt estimated at nearly \$12 billion. Hopes are now invested in a possible rebound in economic growth after the 2005 presidential elections.

ENVIRONMENT

Côte d'Ivoire's most serious environmental problem is the loss of nearly all of its forests. During the first half of the 20th century much of the country was covered by forest, but nearly all the trees have been cut down either for sale to foreign markets or to make room for agriculture. The nation's biodiversity is endangered and the situation is unlikely to improve, given the political climate of the early 2000s. The only remaining virgin rain forest is in the Taï National Park, where about 1,400 square miles of trees survive. The nation is trying to protect its remaining trees from its own residents, but the civil war has made it impossible to enforce environmental laws, and loggers have cut down many of the last 300- or 400-year-old trees. On the plus side, because Côte d'Ivoire is so heavily dependent on agriculture, it has not suffered serious problems of industrial pollution. In the 1990s the country instituted measures to reverse the soil depletion caused by overuse of the land and to combat the deforestation that resulted from growth in the nation's timber industry. Modern methods of agriculture are being introduced, along with mechanization, to replace the labor-intensive practices of the past.

Côte d'Ivoire is a signatory to a number of international environmental protection treaties, including treaties on biodiversity, climate change, hazardous waste, marine dumping, ozone layer protection, and ship pollution.

 Nationally Protected Areas % of land area: 16
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 0.66

LIVING CONDITIONS

As developing nations go, Côte d'Ivoire has a reasonably high standard of living. Businessmen looking for an African

base of operations often choose to locate there because of the country's convenient location and reliable connections to neighboring countries. Abidjan is a modern city and is considered quite livable. Transportation and telecommunications are good, and housing is modern. The government had planned various improvement projects before the civil war began in 2002, but these have been delayed. It is expected that the private sector will begin improving facilities such as electricity, telecommunications, and water.

HEALTH

Côte d'Ivoire is plagued with health problems. It has few doctors or dentists to serve its population, and rural areas are especially lacking in medical facilities. Tropical diseases and AIDS are major problems and are affecting population growth and life expectancy. In 2003, 570,000 people were estimated to be infected with HIV, or about 7 percent of adults. The infant mortality rate is high; about 97 babies out of 1,000 die soon after birth. In 2004 the average fertility rate was 5.42 children per woman. Life expectancy is only about 43 years.

 Access to Improved Water Source %: 84

FOOD AND NUTRITION

Ivorian food consumption is centered around vegetables with small amounts of meat. The traditional African style of eating is done with the hands, not utensils. The typical Ivorian dish is *attiéké*, a starch made from grated cassava that is similar to couscous. This starch is topped with vegetables and chicken or fish cooked with onions and tomatoes. A popular dish is *kedjenou*, a chicken stew with vegetables. On the street, people like to snack on *aloco*, banana cooked in palm oil with steamed onions and chili, sometimes served with grilled fish. *Bangu*, or palm wine, is a common drink. When people go out, they sometimes visit open-air restaurants called *maquis*.

 Daily Available Calories per capita kcal: 2,590
 Amount of Cereal Available per person per year kg: 116.1
 Amount of Fruits and Vegetables Available per person per year kg: 112.1

STATUS OF WOMEN

Ivorian women have traditionally been held subordinate to men in all practical ways. As late as the 1960s women were prohibited from establishing bank accounts in their own names and could not control their own property. Access to divorce was severely limited, and property descended patrilineally. (A man's nephews rather than his sons inherited his property.) In 1973 the government established the Ministry of Women's Affairs to combat discrimination against women, and legislation improved women's legal position. Although women continued to receive unfavorable treatment compared with men, the number of women attending university and entering professional fields previously closed to them grew steadily during the 1980s and subsequent years. Women still have not achieved anything approaching equality with men. In the civil war women have been particularly victimized. There have been large numbers of rapes reported, and officials believe the true number is much higher because of the stigma attached to being a rape victim. Ethnicity plays a role in victimization, with Burkinabe women being particular targets of rape by rebels. (Burkinabe men are simply shot.) Ivorian rebels have kidnapped women and girls to be sexual slaves and servants; the soldiers threaten to shoot the women if they try to escape.

WORK

Most Ivorians work in agriculture, many of them growing crops for export. Other jobs include mining for gold or diamonds, drilling for oil, or producing textiles and foodstuffs. The unemployment rate in urban areas was 13 percent in 1998. Per capita income in 2003 was \$732; almost 40 percent of the population lived below the poverty line.

 Unemployment %: 13 (urban)

EDUCATION

Côte d'Ivoire provides free education to its citizens, and elementary education for children between the ages of seven and 13 is compulsory. There were more than 2 million elementary students in 2002, and over 600,000 students were attending secondary and vocational schools. Abidjan has a good school system, including several French-based schools and an international school that teaches an American curriculum. Enrollment dropped sharply when the civil war began in 2002. The National University of Côte d'Ivoire, in Abidjan, enrolls approximately 21,000 students; a number of Ivorians attend university abroad.

Despite the efforts of educators, many children never attend school. Only about half of all Ivorians can read; the numbers are worse for women, of whom about 44 percent are literate.

MEDIA

The Ministry of Information publishes two daily newspapers. In addition, there are many periodicals, all published in French. Newspapers and magazines are also imported from France. The official broadcasting organization is Radiodiffusion Télévision Ivoirienne (RTI), and there are numerous other television and radio stations. Radio is the most popular means of news transmission; there are about 30 low-power radio stations in Côte d'Ivoire. Although there is no official press censorship, those who publish material critical of the government or deleterious to public morality are subject to fine, imprisonment, or expulsion. Most news media are government owned and support government policies; however, foreign publications are widely available.

During the civil war the government used the media, especially RTI, to increase support for the national government against the rebels. Opposition publications were raided and shut down, and broadcasts of foreign radio programs were disrupted. Rebels have been using government-owned television and radio facilities in Bouaké to broadcast their own viewpoints. In 2004 UN peacekeepers created their own radio station in Abidjan.

CULTURE

Artists from Côte d'Ivoire produce some of the best art in West Africa. Each ethnic group produces its own art forms, but most of them specialize in wood carving. Masks and spoons are popular subjects. Ivorian music is characterized by a series of rhythms and melodies that overlap one another without any one dominating the others. Music has traditionally been performed by griots, or bards, who accompany their singing on instruments they make themselves. Côte d'Ivoire is home to several well-known novelists, including Bernard Dadié, Aké Loba, and Ahmadou Kourouma.

Côte d'Ivoire celebrates several traditional festivals every year. The Fêtes des Masques (Festivals of Masks) take place in rural villages in February. Bouaké has a famous carnival every March. In Gomon during the Fête du Dipri, women and children go around the village at night naked, performing rites to get rid of evil spirits. Ramadan is a sacred month of fasting for Muslims.

FOLKLORE AND MYTHOLOGY

Most Ivorians still practice traditional religions. They believe that their dead ancestors come back as spirits who interact with living people, and the living conduct rituals to help them communicate with the dead. Many people believe in magic, visiting medicine men and juju priests to learn their fortunes or buy charms to keep away evil. Some people wear gris-gris, which are necklaces believed to ward off evil spirits and misfortunes. The Senoufo people have been especially diligent in maintaining their traditional beliefs, instructing their children in and initiating them into the rituals.

ENTERTAINMENT AND RECREATION

Abidjan is a prosperous cosmopolitan city with all the entertainment opportunities one would expect to find in such a place, including fine dining, dancing, musical performances, and shopping. In the countryside people entertain themselves in traditional ways, such as by listening to the singing of griots.

ETIQUETTE

French is the official language, but visitors can usually find English speakers in offices and hotels. Ivorians make appointments well ahead of time and arrive on time, though it is acceptable to keep a visitor waiting for a few minutes. When meeting a business contact, Ivorians present business cards and shake hands. People appreciate small gifts and souvenirs. Smoking is perfectly acceptable in most places. Service charges are usually added to restaurant bills, but if not, it is appropriate to tip 15 percent.

FAMILY LIFE

The organization of an Ivorian family is different from that of a Western family. People trace lineage separately through male and female lines. Most Ivorians put greater stake in the paternal line, though some groups in the east

trace ancestry through the maternal line as well. While each line will include people of both sexes, the connecting relatives are of one sex only. In this kind of kinship organization, the children of one's brother or sister can be seen as closer relatives than one's own children. Relatives within a given lineage take care of running the entire family, teaching the young and making sure everyone follows social rules. Elders settle disputes, determine etiquette, arrange marriages, and discipline offenders. Lineage ties also emphasize the connections between the living and the dead and allow people to clearly see their position in society.

PERSONAL APPEARANCE

People in Côte d'Ivoire tend to dress on the conservative side—men in long pants and women in dresses. Men wear ties only on formal occasions. Casual clothing is appropriate in most settings. It is important for women to keep their legs covered because bare legs are considered offensive, although breasts are not.

SPORTS

Ivorians participate in a range of sports, including soccer, track and field, basketball, baseball, tennis, and swimming. The country sends participants to the Olympics and the Special Olympics.

CHRONOLOGY

- 1944 Félix Houphouët-Boigny founds the interterritorial African Democratic Rally, the first major political party in Africa.
- 1948 Protesters demand self-rule in mass demonstrations in Abidjan.
- 1949 Protests turn to violence.
- 1950 Houphouët-Boigny changes his approach, cooperating with the French.
- 1958 Côte d'Ivoire is proclaimed a republic within the French Community.
- 1959 Côte d'Ivoire forms a customs union in 1959 with Dahomey (Benin), Niger, and Burkina Faso.
- 1960 Côte d'Ivoire gains independence from France; Félix Houphouët-Boigny becomes president.
- 1961 The Ivorian military is nationalized.
- 1965 Houphouët-Boigny is reelected for a second five-year term.
- 1969 Some 1,600 unemployed Ivorians are arrested for demonstrating against proforeign hiring policies for government jobs; in response to demands by the prosocialist Movement of Ivorian Primary and Secondary School Students for government

reform of Abidjan University, the government arrests 150 protesters, deports foreign students, and closes the university for two weeks.

- 1973 A military coup is averted.
- 1980 Houphouët-Boigny survives an assassination attempt.
- 1982 Government closes Abidjan University in response to student unrest.
- 1990 Houphouët-Boigny is reelected for a sixth five-year term.
- 1993 President Houphouët-Boigny dies and is replaced by Henri Konan Bédié.
- 1994 Côte d'Ivoire devalues its currency and institutes economic reforms.
- 1995 President Bédié is reelected to office, receiving 96 percent of the vote.
- 1996 United Nations Industrial Development Organization, meeting in Abidjan, announces plan to spur industrial development in Africa.
- 1999 A military coup takes place, and General Robert Guei is installed as president.
- 2000 Voters approve a new constitution in general elections. Laurent Gbagbo, believed to be the real winner in presidential elections, is proclaimed president after a popular uprising against the perceived rigging of the election forces Guei to flee the country. Fighting erupts between Gbagbo's mainly southern Christian supporters and followers of Alassane Ouattara, mostly Muslims from the north.
- 2001 President Gbagbo and opposition leader Ouattara agree to work toward reconciliation. Calls for presidential and legislative elections are renewed after Ouattara's party gains a majority at local polls. Gbagbo sets up a National Reconciliation Forum that General Guei refuses to attend.
- 2002 Rebels attempt to oust Gbagbo on September 19. Soldiers seize power in the north. Fighting begins.
- 2003 Gbagbo agrees to a peace accord. Fighting continues sporadically through much of the year, but in December rebels once again attempt to create a unified government with Gbagbo.
- 2004 UN peacekeeping troops arrive. Fighting continues. The economy suffers negative growth.

NATIONAL FLAG

Red, white, and blue horizontal bands with Croatian coat of arms (red and white checkered)

NATIONAL EMBLEM

A red-and-white checkered field, with a crown that shows the oldest-known Croatian coat of arms (a golden six-pointed star and a silver crescent on a blue shield) and the coats of arms of the Republic of Dubrovnik (two red bars on a dark blue field), Dalmatia (three yellow lion heads on a light blue shield), Istria (a yellow ibex on a dark blue shield), and Slavonia (a golden six-pointed star and a black marten between the rivers Drava and Sava).

NATIONAL ANTHEM

“Our Beautiful Homeland”

NATIONAL HOLIDAYS

January 1 (New Year’s Day); May 1 (May Day); May 30 (Independence Day/Statehood Day); June 25 (Antifascist Struggle Day); August 5 (National Thanksgiving Day); December 25 (Christmas Day); December 26 (Boxing Day); Roman Catholic holidays, including Epiphany, Easter Sunday and Monday, Assumption, and All Saints’ Day

DATE OF INDEPENDENCE

June 25, 1991

DATE OF CONSTITUTION

December 22, 1990; revised 2000, 2001

GEOGRAPHICAL FEATURES

Croatia is part of Central Europe and has a wishbone shape, with one leg following the Adriatic seacoast and the other, roughly parallel leg surrounding Bosnia-Herzegovina. Croatia’s northern neighbor is Slovenia. To the northeast lies Hungary; to the east lies Serbia and Montenegro; to the south lies Bosnia-Herzegovina, with the southernmost tip bordered by Serbia and Montenegro. The Adriatic Sea provides the western boundary. Croatia is situated at 45°10’ N, 15°30’ E. The total

area is 56,542 sq km (21,831 sq mi), with 56,414 sq km (21,781 sq mi) of land and 128 sq km (50 sq mi) of water. The land area is larger than Denmark and slightly smaller than West Virginia.

The three major geographic areas of Croatia are the Pannonian, the Peri-Pannonian, and the coastal regions. The coastal belt is primarily karst with dry summers. The highest mountains in Croatia are Biokova in Dalmatia, rising 1,762 m abruptly from the narrow sea coast, and Dinara, which is 1,830 m high. The hills and mountains separate Pannonian Croatia from the coastal area. While

Croatia

© Infobase Publishing

much of Croatia is above 500 m, there are mainly lowlands in the eastern and northwestern parts of the republic. The lowlands are primarily used to raise livestock and for farming, with forested regions lying in the northwestern hills and valleys.

Much of Croatia's appeal to visitors lies in its 1,185 islands and inlets, providing 5,835 km of coastline, with 1,777 m of the coastline on the mainland, including several large peninsulas.

Hydrotrade routes utilize the Adriatic Sea as well as the Sava and Drava Rivers. The inland countries of Austria and Hungary transverse Croatia for coastal access.

Split	188,694
Zagreb	691,724

CLIMATE AND WEATHER

Croatia has a continental climate in the north and a Mediterranean climate in the central and coastal regions. Croatia's prevailing winds are the *bura*, *jugo*, and *maestrale*. Daily and annual temperature ranges are moderate. The average January temperature is 32°F in Zagreb, 42°F in Dubrovnik, and 37°F in Rijeka. In July the average temperatures in Zagreb, Dubrovnik, and Rijeka are 72°F, 83°F, and 82°F, respectively. The Adriatic keeps the coastal region temperate year-round, while cold and snow cover the central, mountainous, and northern regions in the winter. Annual precipitation is 35 in, 48 in, and 60.4 in in Zagreb, Dubrovnik, and Rijeka, respectively.

Climate and Weather

Mean Temperature
January: 27°F to 37°F
July: 61°F to 84°F
Average Rainfall: 24.6 in

FLORA AND FAUNA

Croatia's native flora and fauna are found mainly in its seven national parks. Paklenica National Park protects dense native forests and many reptiles, birds, and insects; the endangered griffon vulture can be found there. Plitvice Lakes National Park is home to large mammals such as wolves, bears, and deer. Lynx live in the mountains of Risnjak National Park. Mediterranean holm oak forests are found in Brijuni, near the city of Pula.

POPULATION

Population Indicators

Total Population 2005:	4,495,904
World Rank:	116th

Divorce Rate per 1,000:	1.0
Average Size of Households:	3.1
Induced Abortions:	6,574

ETHNIC COMPOSITION

Croatia is one of the most ethnically homogeneous countries in the world, mainly owing to the virtual ethnic cleansing conducted during recent wars. As of 2001, Croats constituted 89.6 percent of the population, with Serbs, the next-largest ethnic group, constituting 4.5 percent. The rest of the population is made up of small groups of Bosnians, Hungarians, Slovenes, Czechs, Roma, Albanians, Montenegrins, and a few others.

LANGUAGES

Croatian, a Slavic language, became the official language in 1847. Some 96 percent of the population speaks Serbo-Croatian; the remaining 4 percent speak their own ethnic languages, including Hungarian, Italian, Czech, Slovak, and German. The Serbian and Croatian languages differ by only about 20,000 words and by the fact that Croatian uses Latin letters while Serbian is written with Cyrillic letters.

RELIGIONS

Religious denomination goes with ethnic identity; virtually all Croats are Roman Catholic, and nearly all Serbs are Eastern Orthodox. There are a few Muslims, Protestants, and Jews. Religion was suppressed during the Communist period when Croatia belonged to Yugoslavia, but it has resurged since independence, and most churches are well attended every week.

Religious Affiliations

Roman Catholic	3,947,000
Orthodox	198,000
Muslim	58,500
Protestant	13,500
Others and Unknown	279,000

HISTORICAL BACKGROUND

The area now known as Croatia has had a long, tumultuous, and rarely independent history. Greek colonists first populated the Adriatic islands around 400 B.C.E. The Romans began their rule of the eastern Adriatic coast around

100 B.C.E. Croats did not start to arrive until around the year 600. The name Croatia is mentioned for the first time in official documents in 852. Croats point to Tomislav, in 925, as the first Croatian king, who unified the areas of Pannonia and Dalmatia. The last Croatian king, Petar Svačić, died in 1102, and Croatia was subsumed into the Hungarian Kingdom for the next 800 years, with Turkish occupation beginning in 1433. Croatia was ruled as part of the Hungarian Kingdom, including the period the Hapsburgs ruled Hungary. The Croatian Assembly voted to accept the Austrian Hapsburgs as its ruling dynasty in 1527, ignoring the Hungarian Kingdom's territorial claims, and by 1699 the Turks had largely been driven out of Croatia. Croatia was divided into three territories at this time, with the islands and main coastal areas falling under Venetian rule, mainland Croatia remaining under Hapsburg rule, and the Dubrovnik Republic constituting the only independent portion.

By 1815 the brief French rule had been terminated, and the former Venetian territory and the Dubrovnik Republic, which had been united with mainland Croatia by Napoleon, were now, like Hungary, under Hapsburg rule. In 1848 Croatia expelled the occupying Hungarians while the Hungarians were busy fighting Hapsburg domination. All the Croatian provinces were united at this point in history, and the Croats aided the Austrians in defeating the Hungarians. As part of Austro-Hungarian punishment for its involvement in World War I, the Treaty of Trianon reallocated the Croatian territory to the artificially created "Kingdom of Serbs, Croats and Slovenes," which was renamed Yugoslavia in 1929.

During World War II Croatian antifascists were led by Josip Broz Tito. Ante Pavelić was the leader of the virtual Nazi puppet state, under the influence of the German and Italian occupation of Yugoslavia. Non-Croats were killed en masse. In 1945 the individual components making up Yugoslavia forced the territory to be renamed the Democratic Federal Yugoslavia (later renamed twice, finally becoming the Socialist Federal Republic of Yugoslavia in 1963), with Croatia recognized as one of the republics. Forty-five years later, in 1990, Croatia held its first post-World War II multiparty elections and proclaimed Franjo Tuđman its president.

The first decade of Croatian independence (1991–2000) was marked by one of the most violent civil conflicts ever in the region, in which Croatia and Serbia were locked in a bitter struggle to control areas populated by both Serbs and Croats. On June 25, 1991, Croatia declared its independence from Yugoslavia, and war with the Serbs of the Yugoslav National Army erupted. Croatia was internationally recognized as an independent nation and joined the United Nations in 1992. In the initial stages of the war a third of Croatian territory had come under Serb control in the 1991–92 fighting. Croatia launched a major military offensive, and its troops quickly overran Serb positions in western Slavonia. Serb forces retaliated by shelling

Zagreb. In a new offensive, Croatian forces overran Serb positions in western Krajina, capturing the capital, Knin, and prompting the mass flight of ethnic Serbs from the region. In the wake of Croatian military successes, Croatia was a key participant in the Dayton talks that yielded a Bosnian peace agreement in 1995. Croatia is estimated to have suffered 13,583 deaths (and nearly 40,000 people injured) as well as material damages estimated at \$27 billion. Buoyed by military successes, the Croatian Democratic Union (HDZ) won the 1995 lower house elections easily. Tuđman died in 1999. The absence of major world figures at his funeral reflected international frustration with Croatia's failure to progress on democratic reforms at home. Vlatko Pavletić served as interim president until elections were held in February 2000, which were won by Stjepan Mesić, leader of the Croatian People's Party. In parliamentary elections held the following January, Tuđman's HDZ was defeated by a center-left coalition of six parties, including the Social Democratic Party and the Social Liberal Party. Ivica Račan of the Social Democratic Party was named prime minister.

Since 2000 the Croatian government has joined the World Trade Organization, worked on joining the European Union, and mostly cooperated with war crimes investigations in the Hague. In 2003 Ivo Sanader, leader of the right-wing HDZ, won 66 of the 152 seats in parliament, and President Mesić invited him to be prime minister. Sanader claims to be committed to democracy and a free market economy and has pledged to get Croatia into both the European Union and the North Atlantic Treaty Organisation (NATO). Sanader's policies, if implemented, could result in Croatia's joining the EU in 2007.

LIST OF MODERN RULERS

1990–99	Franjo Tuđman
1999–2000	Vlatko Pavletić (acting president)
2000	Zlatko Tomčić (acting president)
2000–	Stjepan Mesić

CONSTITUTION

Croatia's constitution is dated December 22, 1990. It promotes many basic civil rights and human rights as well as an organizational structure for the government. Croatia has a presidential/parliamentary form of government. The government of the Republic of Croatia consists of a prime minister, deputy prime ministers, ministers, and other members. According to the Croatian constitution, a vote of no confidence in the prime minister or individual government members or the government as a whole requires the approval of at least one-tenth of the House of Representatives. A vote of no confidence in the government may also be requested by the prime minister.

The executive branch consists of the president, who is the head of state. Presidential elections are held every five years for a five-year term of office. Croatia has universal suffrage guarantees in its constitution. The president selects the prime minister and deputy prime ministers based on the balance of power in the legislature. The prime minister is subject to a vote of confidence.

The legislative branch is composed of a unicameral assembly called the Sabor, which consists of the House of Representatives. The 152 representatives are all elected for four-year terms. Some of the seats in the assembly represent Croats living outside the country, which is controversial. Until 2001 there was another legislative body called the House of Counties, but it has been abolished.

In the judicial branch the Supreme Court and the Constitutional Court both have judges appointed by the Judicial Council of the Republic for eight-year terms. The Judicial Council is elected by the House of Representatives.

PARLIAMENT

The Croatian parliament consists of the House of Representatives. The House of Representatives has 152 deputies directly elected by secret ballot.

The representatives serve four-year terms. The assembly can be dissolved by majority votes of its members. The president can also dissolve the House of Representatives. The assembly has regular sessions twice each year, first between January 15th and June 30th and then between September 15th and December 15th. Emergency sessions may be called either by the president or a majority of the members of both houses. The House of Representatives amends the constitution, passes laws, adopts state budgets, declares war and peace, decides on national boundary alterations, calls referenda, carries out elections, supervises the government's work, and grants clemency.

Prior to taking effect, laws are published in Croatia's official gazette, the *Narodine Novine*. Laws are normally promulgated by the president within eight days of passage by the House of Representatives. There must be a justifiable reason to have a different effective date.

The Sabor commissions an ombudsman to protect the constitutional and legal rights of citizens in proceedings before the government and bodies vested with public powers. The House of Representatives elects the ombudsman for an eight-year term.

POLITICAL PARTIES

From the end of World War II to 1990 there was only one authorized political party in Croatia, the Croatian

Communist Party, which was designated the League of Communists of Yugoslavia. At the time of the collapse of Communism, the HDZ, led by Franjo Tuđman, won a decisive majority in each of the national assembly chambers. After leading the nation to independence, HDZ retained power even after the death of Tuđman in 1999. The principal opposition is the Joint List Bloc, formed by a number of smaller parties, including Croatian Peasant Party, Croatian National Party, Croatian Christian Democratic Union, Istrian Democratic Assembly, Croatian Social Liberal Party, and Social Democratic Party of Croatia.

In the 2003 elections the HDZ won 66 seats in the assembly. The Social Democratic Party took 34 seats. Many of the small parties also won seats, so the assembly is filled with representatives from a variety of parties.

LOCAL GOVERNMENT

Local government exists in the form of municipalities and districts or towns, as determined by law. The local self-governments are subordinate to the state administration.

Local administration and self-government territories are called counties. There are 20 administrative counties as well as two self-governing districts, *kotari*, known as Glina and Knin, with these last two being under local Serb control. National minorities with 8 percent share or more in the total population have had the right to self-government in special districts, but as of May 2000 a new constitutional amendment was passed that abolishes this special privilege. Only after a new census is taken will this provision apply.

Although regional and local governments were granted considerable authority by the Croatian constitution over management of their cities, Franjo Tuđman's HDZ became more and more autocratic during his tenure from 1990 to 1999. Fighting the Serbs caused strengthening of the central government while completely overpowering some local governments with war death tolls, refugees, and other social services problems. This led organizations such as George Soros's Open Society Institute to create facilities like the Croatian Law Center (CLC) in 1994 to promote the rule of law in Croatia through the establishment of legal principles in accord with international standards. The CLC promotes governmental decentralization by helping to revise legislation, leading to the reform of local self-government.

LEGAL SYSTEM

The Croatian legal system is based upon civil law but has some characteristics similar to the American legal system. The Croatian constitution guarantees a presumption of innocence and court trial. Once arrested, persons are en-

titled to be informed of the charges within the shortest time possible, to be informed of their rights, to assistance of counsel and, like the Fifth Amendment of the U.S. Constitution, to not be forced to testify against themselves or to admit guilt. There is also a “double jeopardy” clause preventing someone from being tried twice for the same crime after a sentence has been rendered.

The Supreme Court is the highest court of the land. Under the Supreme Court fall the State Judicial Council, the High Commercial Court, the Administrative Court, the Public Prosecutor’s Office, the Public Attorney’s Office (Ombudsman), the Magistrates Court, the County Courts, the Commercial Courts, the County Prosecutors’ Offices, and the County Public Attorneys’ Offices. Completely separate is the Constitutional Court, which hears cases concerning the legality and constitutionality of elections as well as other constitutional issues. Judges for both the Supreme Court and the Constitutional Court are appointed to office by the Judicial Council of the Republic, which is elected by the assembly. They serve eight-year terms.

HUMAN RIGHTS

Croatia’s human rights violations are not new, despite the fact that Croatia adopted the Constitutional Law of Human Rights and Freedoms and the Rights of Ethnic and National Communities or Minorities in December 1991 and amended it in April 1992. This law gives effect to the UN treaty obligations on human rights. On November 6, 1992, the United Nations reiterated its concern that since Croatia’s declaration of independence, the ongoing territorial disputes had massively violated human rights with significant loss of life, disappearances, summary executions, and torture, resulting in the destruction of entire towns and displacement of entire minority populations. The United Nations also voiced concern over the pervading Croatian military presence, including military members’ wearing fascist emblems, the constant discrimination and harassment of ethnic Serbs and other minorities within Croatia, and other signs of the ultraright nationalism sweeping through Croatia. In 1998 Croats continued to deny Serbs access to their homes in Croatia, persecuted Serbs and other minorities, and held protest rallies against Serbs. The anti-Serbian protest rally held in Borovo Selo by the ultranationalist Croatian Party of Rights (Hrvatska Stranka Prava) resulted in a governmental ban on all public demonstrations in eastern Slavonia. In 1998 freedom of the press in Croatia was effectively denied by the lack of an independent newspaper and electronic media and the governmental prosecution of hundreds of newspaper journalists.

In 2004 the Croatian government had a reasonably good human rights record with some problems. Ethnic

Serbs continued to be the victims of arrests and imprisonment, and many of their trials were clearly political and had intimidated witnesses who gave unreliable testimony. External observers doubt Croatia’s ability to conduct fair and impartial war crimes trials. The government interfered with electronic media. Religious communities had difficulty recovering confiscated property from the government. There was violence against women and trafficking in women, and ethnic and religious minorities were still the victims of violence and harassment.

FOREIGN POLICY

The end of Croatia’s so-called Homeland War with Serbia and the death of Tuđman represent the close of an era in Croatian history. With more or less secure borders guaranteed by United Nations–mandated accords, Croatia’s goal in foreign relations has changed to gaining international recognition, particularly with Western nations. It has gained admission to the Council of Europe and the Organization for Security and Cooperation in Europe, and it is now working to join NATO and the European Union. Croatia presented its formal application for EU membership in 2003, and in 2004 the European Commission began negotiations to admit the nation. In 2002 Croatia joined NATO’s Membership Action Program, a first step on the road to NATO membership. Croatia has belonged to the United Nations since 1992 and has contributed troops to peacekeeping operations in Africa and the Middle East.

Croatia has a friendly relationship with the Muslim-dominated Republic of Bosnia and Herzegovina. The government is working to resolve border disputes with most of the former Yugoslav republics, as well as dealing with the residue of the 1991–95 war.

The United States has had an embassy in Zagreb since 1992 and has contributed aid to Croatia to help it create a free market democracy, especially through the Southeastern European Economic Development Program. In particular, the United States has contributed \$13.4 million to remove land mines from Croatia’s soil, a job that Croatia hopes to complete by 2010.

DEFENSE

Croatia’s military branches include the include Ground Forces, Naval Forces, Air and Air Defense Forces, Frontier Guard, and Home Guard. Males must perform six months of compulsory military service when they reach the age of 18. They can enlist voluntarily at 16. In 2003 there were an estimated 31,000 members of the armed forces. In 2002 Croatia spent about \$520 million on the military, or 2.4 percent of gross domestic product (GDP).

ECONOMY

Croatia had just begun developing a market economy, including a tourism industry, when war broke out in 1991. The economic infrastructure was badly damaged, and GDP fell by 40.5 percent in four years' time. When the war ended in 1995 tourism resumed, and the economy appeared to have recovered. In 1998 Croatia was the second-most-prosperous area of the former Republic of Yugoslavia.

A recession began in 1999, and inflation and unemployment rose. Now Croatia is struggling with economic problems caused by long-term Communist mismanagement; infrastructure damage suffered during recent wars; huge displaced populations of refugees, both entering and exiting Croatia; and the dissolution of some Western funding. While the government under Franjo Tuđman partially stabilized some of the economy on a macroeconomic level and normalized creditor relations, privatization is not progressing as rapidly as it should since independence roughly a decade ago. Tuđman's government placed four commercial banks under its control, and others are threatened by bankruptcy. In 1997 Croatia's account deficit accounted for about 12 percent of the GDP, with that figure being reduced to 8 percent the following year.

The economy emerged from its mild recession in 2000, with tourism the main income generator. Massive unemployment remains a key negative element, although the problem is gradually resolving. State-financed enterprises continue to struggle. Croatia is relying on more Western aid to help restore the economy, and, with the election of the first post-Tuđman government, efforts to secure large-scale Western finance have begun. The country also hopes that privatizing more industries will increase competition and encourage foreign investors.

ENVIRONMENT

Solid waste disposal is currently the country's biggest concern. The volume of waste is increasing, and the country does not have adequate facilities for disposing of it. Mortality rates from respiratory diseases are twice as high in large cities as in small ones and three times higher in larger cities than in rural areas. Air pollution has also damaged the country's forests, and nearly one-quarter of the trees are moderately to severely defoliated. Air pollution is compounded by the country's heavy reliance under Tito on brown coal and lignite. Thermal power plants are among the biggest contributors to air and water pollution. As a result the country's monuments are showing signs of irreversible deterioration. Over one-half of the country's soil is subject to erosion because of improper cultivation on steep lands.

LIVING CONDITIONS

Since 1991 Croats have been able to purchase apartments that were formerly government owned. Serbs are often not allowed to purchase these properties, leading to charges of discrimination that have yet to be resolved. With the resurgence of tourism, many foreigners have decided to purchase property in Croatia, so property in popular areas along the coast has become quite expensive. The country has a good public transportation system, paved roads, and many airports. It is easy to get into and leave the country. Damage still remains from the war in the mid-1990s, which affects housing and other aspects of infrastructure. Some remote areas still have land mines planted in the ground, and it is unsafe to venture off defined paths.

HEALTH

Health in Croatia is good. The health care system is modern, and doctors and nurses are well trained. Life expectancy is about 74 years, and infant mortality is about seven deaths per 1,000 live births. Each woman has, on average, 1.4 children. The HIV infection rate is very low.

FOOD AND NUTRITION

Most people in Croatia have enough to eat. Croatian food tends to be heavy and oily, featuring cheese and pastry. Along the Adriatic coasts people eat seafood, especially shrimp; a typical dish from the Dalmatian region is *brudet*, a stew of fish and rice. Other popular dishes include soup made of beans and corn, baked cheese dumplings, a cheese donut called *piroska*, and a pie filled with cheese or meat called *burek*. Croatia has many good alcoholic beverages, including beer and locally made wines. Zagreb is famous for Tuborg beer. Dalmatia is known for red wines, such as Faros and Dingac. Brandy is popular; *sljivovica* is made from plums, and *travarica* is flavored with herbs.

STATUS OF WOMEN

Although the government collects only limited statistics on the problem, informed observers believe that violence against women, including spousal abuse, remains com-

mon. One nongovernmental organization (NGO) that operates a hotline and support services for women assessed that spousal abuse continues to be a large and unrecognized problem. Alcohol abuse and poor economic circumstances for veterans of the military conflict are cited as contributing factors. A government commission on equality indicated to NGOs that it would recommend that the government track statistics on violence against women; however, this has not been done. One major problem is human trafficking in women who are forced to work as sex slaves.

Amendments to the penal code that went into effect in 1998 removed violence perpetrated within the family (except against children) from the categories of crimes to be prosecuted automatically by the state attorney. The victim now must file a request to prosecute, thereby severely curtailing efforts by health care workers and police to act on suspected cases of violence in the home. The Constitutional Court upheld the constitutionality of this procedure. The nonpartisan Parliamentary Women's Caucus promised to seek amendments of these laws but has not yet done so.

Sexual harassment is a violation of the penal code section on abuse of position but is not specifically included in the employment law. NGOs reported that, in practice, women generally do not resort to the penal code for relief for fear of losing their jobs. In a positive development, the labor union of the Pliva pharmaceutical company signed a collective agreement that specifically forbids sexual harassment.

The law does not discriminate by gender. However, women typically hold lower-paying positions in the workforce. Government statistics from previous years showed that while women constitute roughly 50 percent of the workforce, they occupy few jobs at senior levels, even in areas such as education and administration, where they are a clear majority of the workers. Considerable anecdotal evidence has suggested that women hold by far the preponderance of low-level clerical and shopkeeping positions, as well as primary and secondary schoolteaching jobs. Women reportedly are often among the first to be fired or laid off. NGOs and labor organizations report a practice in which women received short-term work contracts renewable every three to six months, creating a climate of job insecurity for them. While men occasionally suffer from this practice, it is disproportionately used against women to dissuade them from taking maternity leave. Legislation was passed in 1998 limiting the use of short-term work contracts to a maximum of three years.

While there is no national organization devoted solely to the protection of women's rights, many small, independent groups are active in the capital and larger cities. One of the most active was BaBe (Be active, Be emancipated).

WORK

Croatia's per capita GDP has been growing steadily for the past few years, and in 2004 it was about \$10,600. The unemployment rate, on the other hand, was quite high at almost 20 percent. Some 46 percent of Croatians work in services. Tourism is a growing service industry. Some 13 percent of the workforce was employed in agriculture, growing such crops as wheat, corn, sugar beets, olives, grapes, and potatoes and raising livestock for meat and milk. Industry accounted for one-quarter of employment. Croatian products include plastics, electronics, metal products, textiles, ships, and petroleum.

EDUCATION

Croatia is thought to have an excellent educational system. There is universal public education for all children, and the quality is uniform throughout the country, regardless of the urban, suburban, or rural environment. Children are required to attend school between the ages of six and 15. Part of the proof of the success of Croatia's educational system is in the nation's literacy rate of almost 99 percent. Croatians determine their career paths by their high school selection of either trade school or college preparatory school (*gimnazija*). The trade schools prepare students for technical and practical careers, such as nursing, machine construction, and tourism, while those in the *gimnazija* prepare for university; there are also specialized arts schools.

Students must pass an entrance exam in order to pursue higher education. Croatia has universities in Split, Rijeka, Osijek, and Zagreb. Zagreb University was founded in 1669. Croatia also has colleges in Zadar and Pula. Colleges are considered less specialized than universities and offer degrees in subjects like teaching rather than subjects like languages, law, or medicine. Croatian universities tend not to have attendance-based courses, and many

Croatian university students work full time, going to their universities to take final examinations (traditionally oral) at the end of each semester.

SCIENCE AND TECHNOLOGY

Croatia has the technological amenities of a modern nation. Internet facilities and cellular telephones are ubiquitous. The Croatian Ministry of Science and Technology sponsors research in a variety of fields, and Croatian scientists often collaborate with colleagues from other nations. In September 2004 Croatia and the United States signed an agreement on scientific and technological cooperation, which will fund joint research projects and scientific workshops and facilitate the exchange of scientists and scientific information between the two countries. Research priorities include environmental protection, HIV/AIDS and other health problems, marine science, scientific education, and sustainable development.

MEDIA

Compared with the Tuđman era, Croatia's media operates in relative freedom. The constitution guarantees freedom of the press and bans censorship. Most Croatians get their news from public television. The national state-owned station, Croatian Radio-Television, is financed by

license fees and advertising. There are two other national commercial networks and many private local television stations. Several newspapers appear daily. The national news agency is HINA.

CULTURE

Croatia has a great deal of art in museums. One of its most famous artists is the modern sculptor Ivan Meštrović, whose work adorns many Croatian town squares; he also designed the Croatian History Museum in Zagreb and several other public buildings. Croatia has produced many great writers, including Marin Držić, who wrote plays in the 16th century, and Miroslav Krleža, a 20th-century poet, playwright, and novelist. His best-known work is *Banners*, which depicts Croatian life at the beginning of the 1900s. Croatian folk music combines Slavic, Roma, and Italian styles.

FOLKLORE AND MYTHOLOGY

Croatia is dedicated to preserving its folklore and musical traditions. The Institute for Ethnology and Folklore research was founded in 1948, and it has brought together ethnologists, historians, art historians, musicologists, scholars of comparative literature, and other researchers who take an interest in traditional culture. The institute's programs include performances of traditional music and theater, preservation of folktales, and research in themes that have appeared in vernacular culture since the Communist period. Zagreb hosts an international folklore festival every July. Almost every village has its own annual cultural celebrations.

ENTERTAINMENT AND RECREATION

Croatia celebrates numerous festivals every year. Zagreb holds a springtime jazz festival in March and April and an international jazz festival every October, as well as a summer festival that features classical music. Split and Dubrovnik also have music festivals in the summer. Zagreb also holds an international animation festival, an international folklore festival, and a theater festival called EUROKAZ.

Croatia's coastline and landscape offer a variety of options for outdoor recreation, one of the reasons the country is becoming so popular with tourists. The coast is good for yachting and sea kayaking, scuba diving and other water sports. The national parks attract rock climbers and hikers. Many Croatians enjoy hunting in the nation's forests.

ETIQUETTE

For the most part, Croatians follow typical European standards of behavior. Croatians are very proud and do not appreciate being patronized by people who look down on their comparative poverty or lack of development. Croatians do not always reply immediately to letters or faxes, but that is not necessarily a sign of disinterest; speaking on the telephone or meeting face to face will often get better responses. Customers at restaurants or bars should round up their bill when paying, though occasionally a service charge is explicitly added. Tour guides expect tips.

FAMILY LIFE

The number of people getting married has decreased since 1970. In 2000 the rate of marriage was five per 1,000 inhabitants. The average age at first marriage has been increasing; in 2000 the average was 25.3 years for women and 28.6 years for men. The divorce rate has risen slightly since 1996; the average marriage ending in divorce lasted 14 years. The birth rate has been dropping, and currently women have, on average, 1.4 children, below replacement level. Women are waiting longer to have children; the average age at which a woman has her first child was 25.6 in 2000. Some 91 percent of all children are born to married mothers.

PERSONAL APPEARANCE

Croatians dress in typical European style. People engaged in business dress up more than people engaged in casual activities.

SPORTS

Croatians enjoy sports. Zagreb is the country's center of organized sports, and various sports clubs are based there; they include the Mountaineering Society, the Marksman's Club, and the Gymnastics Club, among many others. People play basketball, tennis, handball, and water polo and sail and climb mountains. Croatian athletes have won many international honors, including numerous Olympic medals in sport such as swimming, skiing, and kayaking. Tennis player Goran Ivanisevic won the 2001 Wimbledon title. One of Croatia's basketball players, Krešimir Ćosić, has been elected to the Basketball Hall of Fame. A monument was erected to the basketball player Drazen Petrovic at the Olympic Park in Lausanne, Switzerland, in commemoration of his leading his team to a silver medal in the 1992 Olympics.

Soccer is by far the most popular spectator sport. Croatia has had a national team since 1907. They won third place in the 1998 World Cup.

CHRONOLOGY

- 1941** Germany and Italy set up the so-called Independent State of Croatia, run by the Croatian Ustase regime of Ante Pavelić; the Ustase begin the expulsion and extermination of Serbs, Jews, Gypsies, and antifascist Croats, killing more than 500,000; the Communist Partisans, led by ethnic Croatian Josip Broz Tito, organize resistance against the Ustase and their Axis supporters.
- 1944** Partisan control of Croatian territory, except for the major cities, is nearly complete; Partisans retaliate against anti-Partisan Croats, slaughtering tens of thousands.
- 1945** Both World War II and the Croatian civil war end; the Yugoslavia Socialist Federation is formed, led by Marshall Tito and consisting of six republics: Croatia, Slovenia, Bosnia-Herzegovina, Serbia, Montenegro, and Macedonia.
- 1948** Tito breaks relations with the Soviet Union; Tito replaces Croatian nationalist members of the Croatian Communist Party with centralist officials of his own choosing.
- 1969** Efforts at decentralization by the Yugoslav federal government fuel a cultural flowering in Croatia known as the "Croatian Spring," a movement that gained nationalist momentum under the reformist leadership of Miko Tripalo and Savka Dabčević-Kučar.
- 1971** Tito responds to calls for greater Croatian autonomy by dismissing or imprisoning numerous intellectual and cultural leaders, including Tripalo, Dabčević-Kučar, and members of the cultural organization *Matiča Hrvatska*.
- 1974** Yugoslavia adopts a new republican constitution but undermines the autonomy nominally granted to Croatia by continuing to exercise centralized control of the Croatian Communist Party.
- 1980** Tito dies; Yugoslavia's economy takes a turn for the worse.
- 1985** Yugoslavia's economic crisis hits its nadir, with production and living standards at 1965 levels.
- 1988** Slobodan Milošević, the president of Serbia, embarks on a campaign to recentralize Yugoslavia.
- 1989** Croatia, along with Slovenia, resists centralization and calls for its own multiparty elections.
- 1990** In the first multiparty national elections since World War II, the Communist Party is defeated by the HDZ, a conservative nationalist party led by Franjo Tuđman; President Tuđman's administration begins to purge Serbs from positions of authority, prompting fear among Serbs of a reprise of the ethnic cleansing campaigns of the 1940s.
- 1991** Serb-dominated Krajina in the southwest secedes from Croatia to join with Serbia; Croatia declares independence; civil war breaks out in Krajina between ethnic Serbs and ethnic Croats; the government of Yugoslavia declares war on Croatia, bombs the cities of Vukovar and Dubrovnik, and occupies about one-third of Croatian territory.
- 1992** The United Nations dispatches 14,000 peacekeeping troops to Croatia; the European Community and the United States recognize Croatia's independence; Croatia supports Croats against Serbs and Muslims in the war in Bosnia-Herzegovina; Tuđman is reelected to a five-year term as president of Croatia.
- 1995** Tuđman, Milošević, and President Alija Izetbegović of Bosnia-Herzegovina sign a peace accord in Dayton, Ohio, ending the war in Bosnia-Herzegovina; Croatia reasserts control over Krajina, leading to a mass exodus of Croatian Serbs; the HDZ dominates legislative elections but loses seats.
- 1997** Tuđman is reelected, but independent election monitors criticize his control over the media and curtailed minority suffrage.
- 1998** After two years under UN supervision, Eastern Slavonia and Baranja are returned to Croatian control.
- 1999** Tuđman dies and is succeeded by Vlatko Pavletić as acting president.
- 2000** Stjepan Mesić, leader of the Croatian People's Party, is elected president, ending HDZ rule; war crimes prosecutions continue.
- 2001** The war crimes tribunal at the Hague indicts former Yugoslav President Slobodan Milošević for

- war crimes and crimes against humanity during the war in Croatia; Yugoslavia returns stolen Orthodox icons to the city of Vukovar.
- 2002** Croatia begins negotiations with Belgrade; infighting within HDZ hampers economic reform; Croatia refuses to hand over war criminal Janko Bobetko.
- 2003** Croatia applies for EU membership; Mirko Norac is sentenced to prison for killing Serb civilians in 1991; Ivo Sanader of HDZ becomes prime minister.
- 2004** War crimes prosecutions continue; the European Union agrees to begin considering Croatia's application for accession in March 2005.
- 2005** Mesić wins second five-year term in runoff election.
General Ante Gotovina, sought by the war crimes tribunal in the Hague, is arrested in Spain.

Basic Fact Sheet

OFFICIAL NAME

Republic of Cuba (República de Cuba)

ABBREVIATION

CU

CAPITAL

Havana

HEAD OF STATE & HEAD OF GOVERNMENT

President of the State Council, Chairman of the Council of Ministers, and First Secretary of the Communist Party of Cuba Fidel Castro Ruz (president from 1976; prime minister from 1959)

NATURE OF GOVERNMENT

One-party Communist dictatorship

POPULATION

11,346,670 (2005)

AREA

110,860 sq km (42,803 sq mi)

ETHNIC MAJORITY

Mulatto

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Peso

NATIONAL FLAG

Three blue and two white horizontal stripes on which a red equilateral triangle containing a white five-pointed star is superimposed on the hoist side

NATIONAL EMBLEM

A shield flanked by branches of oak and laurel. The upper portion of the shield is a seascape containing a blue-green channel between two rocky promontories with a sun on the horizon. Suspended between the two headlands is a key memorializing the designation "Key to the Gulf of Mexico," applied to Cuba by the Spanish monarchs. The lower half of the shield is divided between a blue-and-white-striped design and a royal palm between two conical mountains. The shield is crested by a red wool cap on a liberty pole rising from a fasces of bound rods.

NATIONAL ANTHEM

"March to the Battle, People of Bayamo"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 2 (Day of the Revolution), February 24 (Proclamation of Baire), May 1 (Labor Day), May 20 (Independence Day), July 26 (Rebellion Day), October 10 (Proclamation of Yara), December 7 (Day of National Mourning), December 10 (Independence Day), December 24 and 25 (Christmas), Holy Thursday, Good Friday

DATE OF INDEPENDENCE

May 20, 1902

DATE OF CONSTITUTION

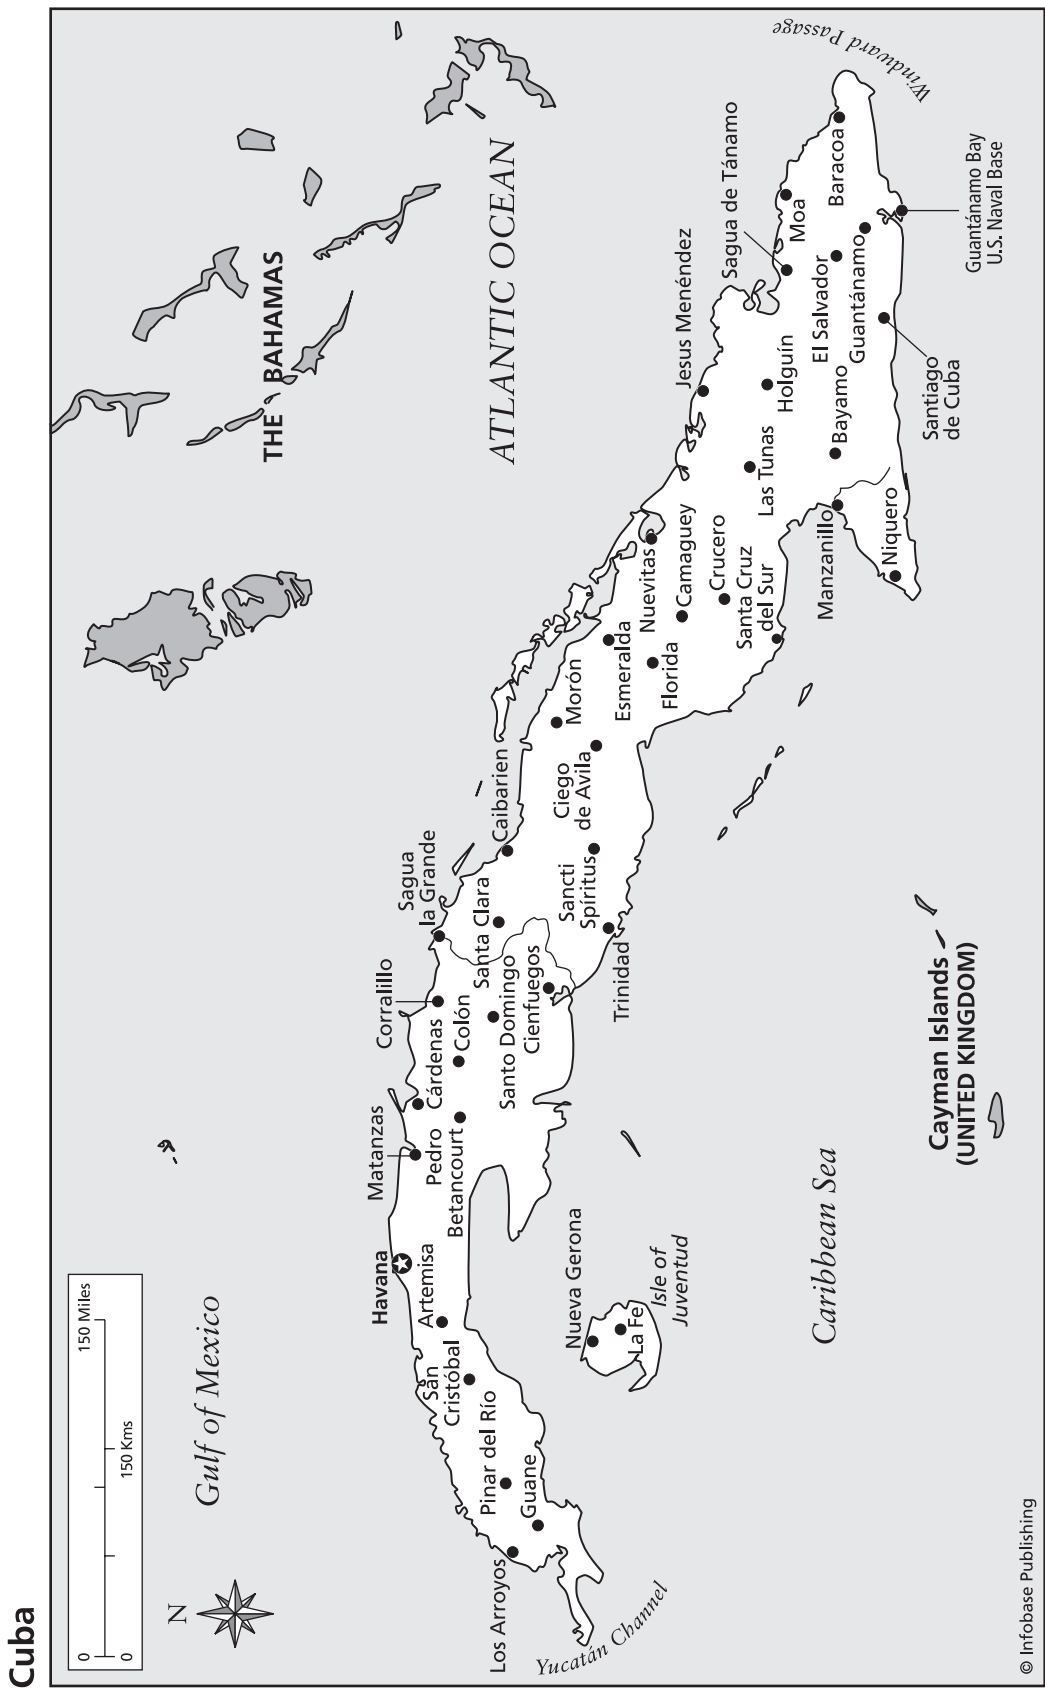

February 14, 1976, amended July 1992, June 2002

GEOGRAPHICAL FEATURES

The island of Cuba is located on the northern rim of the Caribbean Sea about 150 km (90 mi) south of Key West. It is the largest of the West Indian islands, with one-half of the total land area of the West Indies. In addition to the main island, the archipelago includes the Isla de la Juventud (formerly the Isle of Pines), near the south coast in the Gulf of Batabano, and some 1,600 coastal cays and islets. The main island, which occupies 94.7 percent of the national territory, extends 1,223 km (760 mi) east to

west and 89 km (55 mi) north to south. The total coastline stretches 3,735 km (2,320 mi).

Topographically, two-thirds of Cuba consists of flatlands and rolling, with three mountain systems making up the remainder. The largest of the mountain ranges is the Sierra Maestra, including Cuba's highest peak, Pico Turquino (2,005 m, 6,576 ft), and there are also minor ranges, such as Sierra Cristal and Cuchillas de Toa. The central mountain system includes the Escambray Mountains, Sierra de Trinidad, and Sierra de Sancti Spíritus. The third mountain system consists of the western high-

lands, Sierra del Rosario and Sierra de los Organos. The lowlands include valleys, such as the Central Valley, and swamps, such as the Zapata Swamp.

Cuba has more than 200 rivers as well as small streams and arroyos that are dry during the summer. The longest river is the Cauto, which flows into the Gulf of Guacanayabo after flowing about 370 km (230 mi) from the Sierra Maestra.

CLIMATE AND WEATHER

Although situated entirely in the tropics, the moderating influence of trade winds gives Cuba a temperate, semitropical climate. There are two seasons: the dry one, lasting from November to April, and the wet season, from May through October. The country's moderate rainfall is generally well distributed, but about 75 percent of the precipitation occurs in the wet season, when there are heavy downpours of short duration. Pinar del Río receives the most rainfall, with the amount diminishing progressively toward the east. Cuba lies in the southern track of maximum frequency of the tropical hurricane belt, and the island experiences at least one hurricane every other year.

Lowlands: 35 in to 55 in
Easternmost areas: 25 in

FLORA AND FAUNA

Cuba is home to numerous species of animals, particularly reptiles, including iguanas, salamanders, lizards, turtles, crocodiles, and 15 species of snakes. The largest indigenous mammal living on the island is the *jutía*, a large tree rat. Cuba is home to the world's smallest species of bird, the two-gram bee hummingbird. Cuba's national bird is the *tocororo*, which has red, white and blue feathers to match the Cuban flag.

Cuba has over 6,000 plant species. Mangrove swamps thrive on the southern coast. The royal palm grows all over the island, and there are said to be 20 million royal palm trees. The national flower is the butterfly jasmine. Other interesting plants include the silk-cotton tree, the big belly palm, the *jagüey*, a fig that grows in the air, and the cork palm, which dates back to the Cretaceous period.

Average Size of Households: 3.7
Induced Abortions: 76,293

ETHNIC COMPOSITION

In 2004 the ethnic composition of Cuba was estimated to be 51 percent mixed race, 37 percent white, 11 percent black, and 1 percent other (mostly Chinese). Ethnic data is no longer reported in census figures, and these percentages are extrapolated from 1950s data.

The basic racial stock of the mestizos or mulattos (these terms are interchangeable in Cuba, although more

strictly mestizo refers to a person of Spanish and Native American parentage and mulatto to a person of Spanish and black parentage) and the whites (known as criollos) is Spanish. For over 400 years Spanish immigrants from all regions of Spain, especially Andalusia, formed the dominant social, economic, and political class, imposing Spanish standards on all walks of life. Even mestizos were oriented toward criollo society and upward mobility was associated with white physical and cultural traits.

The blacks are descendants of slaves imported into Cuba from 1517 to 1865 (when the slave trade was officially abolished) from all parts of West Africa but particularly from Yoruba (Lucumi) and Calabar (Carabalies), both in what is now Nigeria. The black population, now known as Afro-Cubans, also includes some Haitians and Jamaicans. The African impact on Cuban life is most evident in music, literature, and religious cults.

The two other ethnic minorities are the Chinese (known as *amarillos* or Orientals) and eastern Mediterranean and German Jews, the former referred to as *turcos*, because they came from provinces of the Ottoman Empire. Large expatriate communities existed in Havana and the larger cities before the revolution, including those of Haitians, French, Irish, Japanese, British, Canadians, and Americans. Few of these remained on the island after the revolution. The majority of the inhabitants of Isla de la Juventud once spoke English.

Traditionally, racial origin and ethnicity have been considered important in Cuba, and society was divided along lines of class and color, with the blacks forming the disadvantaged and poorest class. Racial tensions continued to exist as long as the blacks remained in the majority, and there were race riots as late as 1912, when over 3,000 blacks were killed. Interpersonal relations were based on stereotyped perceptions of blacks as lazy, ignorant, and uncouth. There were also fears on the part of whites of absorption by blacks, and these fears were only dispelled in the 1940s through stepped-up immigration of white Europeans. Another positive factor in race relations was the rise in influence of the mestizos, who represented the national integration of races. Nationalist Cubans upheld the virtues of mestizos against the upper-class white supremacists, and Castro has declared that all Cubans are mestizo in spirit. After the revolution Castro tried to deliberately build a fluid and de-ethnicized society by stressing “Cubanness” and racial blends as opposed to rigid categorization. Increased homogenization also resulted from the fact that most of the refugees from Cuba during this period belonged to upper-class white communities. Discrimination on the basis of race has been eliminated by law and, to a large extent, moderated in practice. The government’s economic and agrarian reforms and the campaign against illiteracy have helped to bridge the gap between the races. However, these efforts have drawn fire from both blacks and whites. The blacks

have claimed that the trend is not toward a true integration of races but toward the assimilation of blacks into the white culture, and the whites have resented the loss in jobs and prestige through competition with blacks. Racial inequalities have not been entirely eradicated and still survive not only in interpersonal attitudes and relations but also in more crucial areas of public life. There are few blacks in the higher echelons of government, the Communist Party, or the media.

LANGUAGES

Spanish is the official language and is spoken by virtually the entire population. Cuban Spanish has been described as “disfigured Castillian” and is generally spoken with a slurred accent associated with Andalusian speech. The vocabulary includes many words of Indian, African, and English origins. Under Castro all names of public places and institutions have been Cubanized, particularly those that were associated with U.S. interests.

RELIGIONS

Afro-Cuban religions—blends of native African religions and Roman Catholicism—are widely practiced in Cuba. Officially, Cuba has been an atheist state for most of the Castro era. Prior to the revolution Roman Catholicism was predominant, although it was permeated by Santería (a native African religion) and rather weak in rural areas. In the early 1960s church and state confronted one another with open hostility, the church seeing the revolutionary government as antireligious and the government seeing the church as a potential source of counterrevolution. In 1962 the government seized and shut down more than 400 Catholic schools and expelled many clergy. The 1976 constitution proclaimed scientific materialism as the base of the state and education but recognized and guaranteed religious freedom, though with restrictions. By the 1980s both the church and the government had made some concessions and had entered a period of rapprochement. In 1992 the constitution was amended to characterize the state as secular instead of atheist. The Catholic Church is the largest independent institution in Cuba today but continues to operate under significant pressure. The Cuban government continues to refuse to allow the church to have independent printing press capabilities, to have full access to the media, or to establish institutions, such as local schools.

In November 1996 President Castro invited Pope John Paul II to visit Cuba after an agreement was reached allowing the church to carry out its religious activities in preparation for the visit. In 1997 Christmas was officially recognized as a holiday for the first time since 1969 and the following year was permanently reinstated as a na-

tional holiday. During the pope's visit the Cuban government permitted four open-air masses, provided media coverage, and assisted with transportation of the public to the masses. While on the island, during January 21–25, 1998, Pope John Paul II spoke of broadening the space and freedom of action of the Catholic Church and asked Fidel Castro to grant a prisoner amnesty. The Cuban government responded by freeing at least 300 prisoners, some 70 of which were being held on political charges. Other Cuban religious groups have also benefited from increased openness toward religion. Small Jewish congregations survive in Havana, Santiago, Camagüey, and other parts of the island.

HISTORICAL BACKGROUND

Prior to Christopher Columbus's visit in 1492, Cuba was inhabited by various indigenous groups, who were unable to resist the Spanish invaders. The conquest began in 1511, as led by Diego de Velázquez, and Cuba then served as the staging post for expeditions to the rest of the Americas. British and French buccaneers targeted the Spanish fleets regularly during this period. The native population declined rapidly under Spanish rule, through violence and disease, and was replaced by African slaves. In 1762 Cuba was briefly taken by a British force led by George Pocock but returned to Spanish rule in 1763. While the rest of Latin America sought independence during the early 19th century, Cuba remained in Spanish hands and uprisings were brutally suppressed. By 1868 popular unrest spilled over into the Ten Years' War, ended by truce in 1878 with reforms promised by Spain. Failure to deliver on these promises prompted another revolt in 1895, led by José Martí. The United States sympathized with the rebels, and when the USS *Maine* was sunk in Havana harbor the Spanish-American War broke out.

When the war ended in 1898 the United States established a military government on the island, and although occupation and direct rule ended in 1902, bad feelings developed early between Americans and Cuban patriots and were exacerbated by the reported arrogance and racism of U.S. troops and war correspondents. The United States also imposed humiliating conditions on Cuba as it worked toward independence. These conditions provided that Cuba permit no foreign bases (except those of the United States), lease in perpetuity to the United States the naval base at Guantánamo, accept the acts of the military government as legitimate, omit Isla de la Juventud from national boundaries, and give the United

States the right to intervene in Cuba for any of various reasons, including the protection of life, property, and individual liberty. These conditions, known as the Platt Amendment (after the U.S. senator Orville Platt), were in force until they were revoked in 1934. During this period of semi-independence as an American protectorate, U.S. economic hegemony over the island was firmly established. By 1928 U.S. investments in Cuba constituted 17.7 percent of all U.S. investments in Latin America. The United States controlled 75 percent of the sugar crop, public utilities, ranching, and mining. U.S. economic exploitation became the principal target of Cuban nationalists. Anti-Americanism has been the one consistent theme of Cuban history in the 20th century.

During the mid-20th century Cuban politics was dominated by Fulgencio Batista Zaldívar, who ruled the country directly or indirectly from 1933 to 1944 and from 1952 to 1959. Batista's last years in power were characterized by increasing repression and corruption that generated popular support for his overthrow. Weakened by disaffection from the military and Cuba's large middle class, the regime crumbled and Batista fled the country. A revolutionary movement under the leadership of Fidel Castro Ruz, who had been waging a guerrilla campaign against the central government since 1954, overthrew his regime.

After a brief period of moderation Castro moved to the left, purportedly adapting Marxist ideas to Latin American conditions. He consolidated power through the use of the Communist Party as the governing vehicle and instituted a program of widespread reform that included land reform and the nationalization of all foreign-owned land and businesses. The United States responded by terminating diplomatic relations and sponsoring an invasion of anti-Castro exiles, which was defeated at the Bay of Pigs in April 1961. Castro declared Cuba a Communist state in December 1961. The following year the Organization of American States (OAS) voted to exclude Cuba. Castro's isolation in the Western Hemisphere pushed him into closer relations with the Soviet Union, which offered him massive amounts of military and economic aid. The Soviet Union's placement of missiles in Cuba precipitated a confrontation with the United States in 1962.

In 1965 Castro established the Communist Party of Cuba (PCC) as the sole legal party. A new constitution, establishing Cuba as a socialist state, was adopted in 1976. The first congress of the PCC was held in 1975, establishing a National Assembly, which chose Castro as head of state and government the following year.

During the 1960s and 1970s Castro attempted to export his revolution to other Latin American countries and aid leftist insurgents in several third-world countries. Cuban troops were sent to Angola in 1976 and to Ethiopia in 1977. Military aid was sent to the Sandinista government in Nicaragua in 1979. Diplomatic isolation gradually improved during the late 1970s, with the OAS lifting

its sanctions in 1975 and relations with the United States improving slightly. In 1979 Cuba hosted the meeting of Non-Aligned Nations, and Castro was elected head of the group for three years.

In 1980 exit restrictions were lifted temporarily and some 125,000 refugees fled to the United States, including large numbers of prisoners and the mentally ill. This placed renewed strain on U.S.-Cuban relations, as did Cuban assistance for the left-wing regimes and rebels in Nicaragua, El Salvador, and Grenada. Despite a meeting with the Soviet leader Mikhail Gorbachev in Havana in 1989, Castro rejected the possibility of any Soviet-style political or economic reforms. The collapse of the USSR in the early 1990s hit the Cuban economy hard, as aid and trade subsidies were ended, and an economic crisis in 1993–94 created another wave of refugees to the United States, ending only when the Americans agreed to allow 20,000 Cuban immigrants each year. In 1996 the United States signed the Helms-Burton Act, aimed at tightening the economic embargo by making foreign investors liable to penalties in U.S. courts. At the end of the 20th century Castro outlasted his ninth U.S. president, with threats to the revolution growing but by no means certain to cause changes.

Despite American appeals to open its economy and conduct free elections, in 2003 Cuba once again held elections in which 609 government candidates ran for 609 seats and then cracked down on dissident citizens. In 2004 the United States announced severe limitations on visits to Cuba and transfers of American cash to the island. In response, Cuba announced that U.S. dollars would no longer be legal tender.

LIST OF MODERN RULERS

1959–76 Osvaldo Dorticós Torrado
1976– Fidel Castro

CONSTITUTION

Cuba's constitution, first published in 1975 and approved in the same year by the first congress of the Cuban Communist Party, was ratified by a 97.7 percent vote in a special referendum on February 16, 1976, and made effective eight days later on the anniversary of the 1898 war of independence. The constitution replaced the Fundamental Law of the Republic, instituted on February 7, 1959, which modified and largely replaced the constitution of 1940, Cuba's second since independence. Minor modifications to the constitution in 1992 attempted to make foreign investment easier and also changed the religious nature of the state from atheist to secular.

The constitution established Cuba as a socialist state in which all power belongs to the working people. The

state guarantees work, medical care, education, food, clothing, and housing. The Republic of Cuba is defined as part of the world socialist community, which included the USSR. Cuba also states its hopes to establish one large (socialist) community of nations within Latin America and the Caribbean. The state is charged with the direction of the economic life of the nation in accordance with socialist doctrines. The state guarantees freedom of the press, assembly, religion, speech, demonstration, and association within the confines of the law and in accordance with the goals of socialist society. Freedoms, according to the constitution, are dependent on obligations to the society and state and may not be exercised in opposition to the existence and purposes of the socialist state. The state recognizes the right of small farmers to own, inherit, and sell land and other means of production, but this right, again, is not unequivocal. In general the constitution is a Marxist document that marks another stage in the institutionalization of the Cuban revolution.

The president of the Council of State is the head of state and of government. He presides over the Council of State and the Council of Ministers, signs the decree-laws and other resolutions of the Council of State, and commands the Revolutionary Armed Forces. Executive authority is concentrated in two institutions: a Council of State, elected from among members of the National Assembly, and a Council of Ministers, whose chairman serves as the head of government. The Council of State comprises a president, five vice presidents, a secretary, and 23 other members. It represents the National Assembly between sessions. Among the functions of the council are the calling of special sessions of the National Assembly, setting the date for elections to a new Assembly, issuance of decree-laws between sessions of the National Assembly, mobilization in the event of war, and revocation of acts of the Council of Ministers and executive committees of local organs of people's power that are contrary to the constitution. The Council of Ministers is the highest administrative organ. It is composed of the head of state and government, the first vice president, vice presidents, ministers, and the president of the Central Planning Board. It has an executive committee composed of the president, the first vice president, and vice presidents of the Council of Ministers. The Council of Ministers conducts general administration, prepares the budget, draws up bills, implements laws, issues decrees, prepares development plans, and supervises national security. Policy making is a function of the Council; administration is the function of each ministry.

Outside the Council of Ministers there are powerful state bodies, such as the Central Planning Board (Junta Central de Planificación, JUCEPLAN), the National Institute of Agrarian Reform (Instituto Nacional de Reforma Agraria, INRA), and the National Bank. There are also independent agencies whose chiefs have the rank of

ministers but are not members of the Council of Ministers. These agencies include the Cuban Petroleum Institute, the Cuban Academy of Sciences, the Book Institute, the Tobacco Enterprise, and the Cuban Broadcasting Institute. Members of the Council of Ministers and the Council of State are, with few exceptions, drawn from the ranks of Castro's associates during the Sierra Maestra days.

Together with the state, the Cuban Communist Party dominates all aspects of daily life, controlling the means of production and the distribution of goods as well as internal security, public communication, health, and education. Internal security is under the direction of the Ministry of Interior, which operates border guards and several other police forces, regulates immigration, and maintains a system of neighborhood informers and block wardens known as the Committees for the Defense of the Revolution.

Between 1959 and 1976 the Cuban government was a charismatic revolutionary regime based on the preeminence of Fidel Castro as "the Maximum Leader of the Revolution." Administration was enigmatic, paternalist, and personalistic and was further complicated by the overlapping relationships between the "Fidelistas," or followers of Fidel Castro, the Communist Party, the military, and other loci of power. Despite a growing emphasis on mass participation, power remains concentrated in the hands of a few selected on the basis of their loyalty to Castro. Although some authority has been dispersed and the government has become more structured, Castro retains control of the executive branch, the legislature, the military, and the Communist Party. Bureaucracy suffers from a lack of clear-cut and well-defined lines of authority and an overemphasis on party loyalty. Decisions are still made at the top, and there is little input from either the bureaucrats or the rank-and-file party members.

Castro's regime has achieved a reasonable degree not only of stability but also of respectability. There appears to be no serious threat to the government from within or without. Fidelism has become entrenched as the official ideology of the nation, and the more than 50 percent of the population born after the revolution have been so thoroughly indoctrinated in it that they may sustain it even after the original Fidelistas have disappeared from the scene. The older opponents of the revolution are either in prison or in exile. The government has been eminently successful in its mass mobilization programs, in the total destruction of the old order, in the neutralization of the church, and in the development of social and cultural spheres, such as universal literacy and free health care. At least until the economic crises of the 1990s, other achievements included the liberation of women, the expansion of child care centers, the introduction of one of the most comprehensive social-security systems in Latin America, and the clearing of the urban slums that disfigured prerevolutionary Cuba.

PARLIAMENT

The unicameral National Assembly of People's Power (Asamblea Nacional del Poder Popular), with 609 members, is elected for five-year terms by direct universal voting. According to the constitution the assembly is the supreme state organ. It holds two ordinary sessions per year and special sessions when requested by one-third of the deputies or by the Council of State.

The functions of the National Assembly include amendment of the constitution, approval of laws, supervision of all organs of state, revocation of unconstitutional decree-laws passed by the Council of State, approval of the state budgets and development plans, ratification of treaties and declaration of war, election of the president, the first vice president, vice presidents, and members of the Council of Ministers, and election of the president, vice president, and other judges of the People's Supreme Court. Under the 1976 constitution suffrage is universal over age 16.

POLITICAL PARTIES

According to the 1976 constitution the Communist Party of Cuba is the leading force of society and the state. It is also the only legally recognized party in Cuba. Its structure and policies are those of a traditional Marxist-Leninist party, with adjustments for regional realities. There is no separation between party echelons and public officials, and most national leaders have dual functions in the party and government. The party owes as much loyalty to Fidelism as it does to Marxism-Leninism.

LOCAL GOVERNMENT

The local government structure was entirely remodeled under the 1976 constitution. The country is divided into 14 provinces and 169 municipalities, simplifying the original division into six provinces, 55 regions, and 344 municipal administrations.

The 14 provinces are, from west to east, Pinar del Río, Habana, Ciudad de la Habana, Matanzas, Villa Clara, Cienfuegos, Sancti Spíritus, Ciego de Ávila, Camagüey, Las Tunas, Holguín, Granma, Santiago de Cuba, and Guantánamo. In addition, Isla de la Juventud is defined as a special municipality.

There are popular assemblies at the provincial and municipal levels. Members of the local Assemblies of the People's Power are elected for two-and-one-half-year terms. The members of municipal assemblies are elected directly, and an executive committee elected from among its own members heads each municipal assembly. The members of these executive committees form provincial assemblies, also headed by provincial executive commit-

tees. A commission of Communist Party members and youth and trade-union representatives proposes membership in provincial executive committees.

Municipal assemblies are responsible for schools, hospitals, stores, hotels, cinemas, public utilities, and municipal transport. They also elect magistrates to preside over the municipal people's courts. The provincial assemblies regulate intercity transport and provincial trade and elect judges to the provincial courts.

Supplementing and paralleling the local administration apparatus is a mass organization known as the Committees for the Defense of the Revolution (Comités de Defensa de la Revolución, CDR). These neighborhood committees enroll most of the adult population and act as a surveillance organization, with over 73,000 local committees.

LEGAL SYSTEM

The Cuban legal system is based on Spanish and U.S. law and modified by Marxist jurisprudence. The judiciary, known as the Judicial Power, is headed by the People's Supreme Court. The Supreme Court is charged with transmitting to the rest of the judicial system instructions received from the leadership of the revolution. The judiciary is governed by the Law of the Organization of the Judicial System drafted by the Commission of Judicial Studies of the Central Committee of the Communist Party of Cuba. The law eliminated military tribunals and extended popular participation throughout the judicial system. Lay judges sit along with professional judges in all courts and are selected for three-year terms of two one-month sessions per year.

The Supreme Court is divided into five chambers—criminal, civil and administrative, state security, labor, and military—with each chamber being composed of three professional and two lay judges. The National Assembly of People's Power elects all judges. Professional judges are appointed for five-year terms and the chief justice for a seven-year term. Through its governing council the court proposes laws, issues regulations, and directs the entire court system.

The 14 provincial courts at the next level are divided into three chambers: criminal, civil, and state security. Each chamber has three lay and professional judges, the latter serving five-year terms. Communist Party commissions select judges.

Popular participation in judicial activities is strongest in neighborhood people's courts, known as *Tribunales Populares de Base*. These courts are composed of worker judges selected by the local Communist Party units and serve on the bench in addition to their regular jobs.

There are two types of correctional institutes under the Ministry of Justice: penitentiaries (including maximum-security prisons) and state work farms. Work farms,

or *granjas*, are minimum-security prisons intended for those being rehabilitated through productive labor.

Conditions in Cuban prisons have been cited by the Inter-American Human Rights Commission, Amnesty International, and the International Commission of Jurists as among the most inhumane in the world. Political prisoners suffer torture, deprivation of food, abuse, and severe psychological pressures. Cuba does not accept the compulsory jurisdiction of the International Court of Justice.

HUMAN RIGHTS

In terms of political and civil rights, Cuba is ranked as a country that is not free. Castro's Cuba has had one of the worst human rights records in the Western Hemisphere. The fundamental human rights of expression, association, assembly, movement, and press are severely restricted by Cuban law. The creation of such crimes as "dangerousness," spreading enemy propaganda or unauthorized news, and insulting dead war heroes provides authorities with the power to imprison or keep under surveillance any individuals considered a threat to the regime regardless of actual criminal activities or intent. Harassment and prosecution of dissidents is common, and the state continues to imprison hundreds of political prisoners despite signs of an apparent opening following the papal visit in 1998.

Individuals can be held for "illegal exit" if caught leaving the country, and those who successfully do so are now banned from returning. Free trials are undermined by the restriction of defense rights and by the political oversight exercised by the Council of State. Courts frequently ignore the due process rights that do exist under the constitution. Harsh penalties for supporting the U.S. embargo on Cuba were introduced in 1999. Dissidents are frequently arrested and sentenced to considerable prison sentences for "acts against the security of the state" and other offenses; in 2005 numerous dissidents were still in prison after a crackdown in 2003. Any organized opposition to the regime is dealt with in like fashion.

Independent journalism is similarly restricted and persecuted. Journalists are frequently harassed by police and held in detention as a warning against covering such events as International Human Rights Day. Independent labor unions are banned, and individuals attempting to establish or participate in illegal groups are harassed and detained. To attract foreign investment Cuba has tightened labor controls and employees' rights. Prison labor is still used for agricultural camps, clothing assembly, and other factories, and prisoners work without pay in severe conditions violating international labor and prison standards.

Opposition is silenced through the persistent use of surveillance, phone tapping, and intimidation. Threats of

criminal prosecution and house arrests were used in October and November 1999 while Cuba played host to the Ibero-American Summit in Havana. International human rights and humanitarian monitors are routinely denied access to the country. The International Committee of the Red Cross (ICRC) has not been allowed to conduct prison visits since 1989.

Severe conditions exist in Cuba's prisons. Prisoners suffer from malnourishment and overcrowding and from a lack of appropriate medical attention. Reports of physical and sexual abuse are common and solitary confinement is frequently used for long periods. All detainees are subject to political reeducation sessions—refusal leads to further punishment and mistreatment. Pretrial detainees are often not separated from convicted prisoners, or minors from adults. Complaints or appeals against harsh treatment and poor conditions lead to solitary confinement, restricted visits, or denial of medical treatment. Political prisoners are treated particularly poorly and are routinely not released at the end of their sentences, instead relying on presidential decrees.

Cuba maintains the death penalty for over 100 crimes, which in March 1999 were expanded to include drug trafficking and the corruption of minors. Procedural failings and a lack of judicial independence facilitate miscarriages of justice, and appeals are minimal. Reports of arbitrary disappearance and execution among prisoners were common throughout the 1960s, 1970s, and 1980s and likely continue to this day. At least 12 prisoners sentenced to death were reportedly executed in 1999.

International reaction to Cuba's lack of regard for human rights increased slightly in the late 1990s as relations with Havana generally improved and nations sought signs of political relaxation. The United Nations passed a resolution in April 1999 expressing concern for Cuban human rights practices. The European Union condemned Cuba's continued use of the death penalty. Canada, long voicing its support for ending the trade embargo with Cuba, reassessed its policy in 1999 and suspended programs that did not further the protection of human rights in Cuba. The U.S. government remains committed to the embargo and uses it to express its concern over the human rights situation in Cuba. In 1999 several U.S. lawmakers visited Castro and urged political and economic reforms, including greater respect for human rights. They were denied access to political prisoners during their visit.

Cuba is the closest model of a Soviet-style totalitarian system in the Western Hemisphere.

FOREIGN POLICY

Due to economic hardship and the end of the cold war, Cuban foreign policy, once one of the most ambitious in Latin America, has been redirected and scaled down. Priorities today are finding new sources of trade, aid, and

foreign investment and promoting international opposition to the U.S. trade embargo and the Helms-Burton Act. Cuba maintains relations with over 160 nations and has civilian assistance workers, mainly medical staff, in more than 20 of these. Support for Latin American and African guerrilla movements, including through the deployment of over 75,000 troops, seems largely to have been abandoned. In the past such support, along with Cuba's Marxist-Leninist government and its alignment with the USSR, had contributed to its isolation in the Western Hemisphere, in particular its suspension from the Organization of American States (OAS) in January 1962. Since relaxing its foreign policy, Cuba has reestablished relations with most countries in Latin America and the Caribbean.

In the 1970s and 1980s Cuba spent millions of dollars exporting revolution to Latin America and Africa. Cuban forces played key roles in Angola, Ethiopia, and Nicaragua and served as advisers in the Congo and Mozambique. By the late 1980s such deployments were ending: Cuban forces left Angola by 1991, Nicaragua after 1990, and Ethiopia around the same period. After the 1992 peace accord in El Salvador, Castro stated that support for guerrillas was no longer central to Cuban foreign policy.

Cuba's relationship with Venezuela keeps the country's economy stable. In October 2000 Castro and Hugo Chavez signed an agreement to exchange Venezuelan oil for Cuban goods and services, which has proven very beneficial to Cuba. Cuba exported more than \$150 million in goods and services to Venezuela in 2003.

Relations with the United States, viewed by many Cubans as a colonial power due to its involvement in Cuban politics for much of the 20th century, have always dominated foreign policy. Cuba sought to counteract the effect of U.S. policy by moving closer to the Soviet Union and since 1990 by seeking wider international support for its trade and investment needs. U.S. policy has focused on maintaining the trade embargo while providing humanitarian assistance for ordinary Cubans and is heavily criticized by the Cuban government. The Helms-Burton, or Libertad, Act of 1996 aroused further international support for the Cuban position and condemnation of the U.S. approach. Relations with the United States are also affected by alleged Cuban involvement with the drug trade in the Caribbean and by mass migration from Cuba. A long-running dispute between the two countries has taken place over the status of the U.S. naval base at Guantánamo Bay, in southern Cuba.

In 2002 President Bush called on the Cuban government to reform itself by conducting free elections and opening its economy in exchange for an easing of the trade and travel restrictions imposed by the United States. The Cuban government refused. In 2003 Bush created a Commission for Assistance to a Free Cuba to help Cuba

achieve reforms and promised \$59 million over two years to help build democracy.

Cuba is a founding member of the United Nations and participates in many of its organizations. Other international organizations of which Cuba is a member include the International Atomic Energy Agency, the International Labor Organization, Interpol, the World Health Organization, and the Group of 77.

DEFENSE

The president, as commander in chief, heads the defense structure. The line of command runs through the defense minister (Raúl Castro, brother of Fidel Castro) to the joint general staff. The Revolutionary Armed Forces (FAR) is divided geographically into three field armies: western, central, and eastern. Within these armies there are six independent army corps and independent groups that can function even if the higher echelons are destroyed.

In practice the Central Committee of the Cuban Communist Party wields military power, which is two-thirds military in composition, and Castro and his brother Raúl deal directly with the commanders. As in other Communist armies, the commissar system is an important element in the indoctrination of the armed forces. Communist Party cells work in each formation and unit down to company level.

There are three paramilitary organizations: the Frontier Guards, the Youth Labor Army, and the Defensa Civil, or the territorial militia.

Military manpower is provided by compulsory military service requiring the enlistment of all males between 16 and 49. The term of service is three years. Most of the persons drafted are inducted into the Youth Labor Army rather than the regular forces. All enlisted men and officers undergo indoctrination in Marxism and Cuban socialism.

The FAR is one of the largest armed forces in Latin America, with large numbers of reserves ready for mobilization in 24 to 48 hours. The force is intensely disciplined and loyal to Fidel Castro personally. Until the 1990s Cuba received the latest military hardware from the USSR, and the army was extremely well equipped. The army leadership, particularly the old-line Fidelistas, is proud of its guerrilla traditions, which extend back to the Sierra Maestra days. FAR is maintained in a state of constant preparedness because the regime has always felt threatened by the United States. FAR's credentials were enhanced by its string of successes in Angola and Ethiopia, where Cuban soldiers showed themselves to be capable of striking hard and fast and of solving logistical transport problems successfully. In the late 1980s and 1990s Cuba withdrew its forces from overseas in light of peace agreements in Africa and the termination of Soviet support. The situation throughout the 1990s was one of

stagnation and decline, although the armed forces still have preferential status in Cuban economy and society. The last Soviet troops based in Cuba were withdrawn by 1993, from a maximum strength of 2,000 plus.

Cuba spent \$572.3 million on defense in 2003.

ECONOMY

Cuba's economy remains organized on socialist principles of state control. Most of the means of production are owned and operated by the government, and about three-quarters of the workforce are employed by the state. Already in stagnation and depression since commodity price slumps in the 1980s, the economy in the 1990s suffered extensively from the collapse of the Soviet Union and the withdrawal of trade and aid subsidies. The government sought to alleviate the crisis by opening up small sectors of the economy to private enterprise, legalizing the dollar, and authorizing self-employment. The measures were aimed at the tourist sector, which by the late 1990s surpassed the sugar industry as the primary source of foreign currency. Significant resources are now being diverted to improving Cuba's tourist infrastructure and measures such as dollar shops introduced to keep tourist revenues in the country. Most tourists come from Canada, Italy, Germany, Spain, and Mexico.

Agriculture is still essential to Cuba's economy. Cuba exports a large portion of the world's sugar. The sugar industry has suffered from poor management and bad harvests and is in need of substantial reform despite extensive mechanization in the 1970s. Recent fuel shortages have forced farmers to return to old-fashioned labor-intensive harvesting by hand. Tobacco, used to make Cuba's famous cigars, is the second-most valuable crop.

Foreign investment in joint ventures has been actively sought, although U.S. restrictions on dealings with Cuba have affected investors from most interested nations. There is a widening gap in the economy between those who have access to dollars, or employment which provides such access, and those restricted to dealing in Cuban pesos. Many Cubans are forced to turn to the flourishing black market to secure essentials as well as luxuries, and government crackdowns are limited to organized groups in recognition of the importance of the black market to the survival of the economy. Due to defaults on interna-

622 Cuba

tional debt, Cuba is denied access to funding from international institutions such as the World Bank and must rely on high-interest-rate short-term loans to finance imports such as fuel and food.

ENVIRONMENT

The main problems facing Cuba's environment are the pollution of Havana Bay and other heavily populated areas, deforestation and land pollution, and tourist development. Operating under standard socialist methods of industrialization and economic development, Cuba for many years paid little regard to the environmental damage caused by such a path. Recently, with economic crises and a crumbling infrastructure, the level of pollution into such areas as the Havana Bay has increased, as existing safeguards have fallen. Efforts to increase sugarcane and other agricultural production have also harmed the environment, with large quantities of fertilizers and pesticides entering the ecosystem. The ability of Cuba's limited resources to maintain a program of reforestation means that the area of land cleared each year for fuel, lumber, or farming purposes exceeds the area replanted.

Cuban policy makers have been heavily promoting tourism in an attempt to boost the struggling economy. The development of infrastructure to support and promote tourists and the numbers of tourists themselves pose significant new threats to the environment. New beachfront hotels are being constructed in prime habitats for rare species, and attempts by ecologically minded scientists to stop the developments are countered by the

pressing need for hard currency. Increased numbers of tourists will further damage the coral reefs around the island, which constitute an ecosystem second in complexity and diversity only to rain forests. The experiences of neighboring islands, such as Bermuda and Jamaica, show just how serious the impact of tourism can be, ranging from damage to coral reefs to depletion of water tables.

Cuba is a signatory to several international agreements concerning the environment, including the Antarctic, Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Ozone Layer Protection, and Ship Pollution treaties.

 CO2 Emissions per capita ton: 2.76

LIVING CONDITIONS

Cuba is crowded; little new housing has been built since the 1960s, and several generations must often share a house or apartment. Rural people still live in huts made of palm wood with roofs made of palm leaves. Water is generally unsafe to drink, although many Cubans drink it. Basic toiletries such as shampoo and other consumer goods such as film and batteries are very expensive. Transportation is barely adequate. Very few people own cars, and those who do run the risk of being imprisoned as criminals if they get into traffic accidents. Buses are extremely crowded, trains are more than 100 years old, and some people still use horse-drawn carriages. Air Canada flies between Cuba and Canada; Cuba's airline, Cubana, flies to Canada, sometimes in old Russian airplanes.

HEALTH

Cuba has plenty of doctors, but its hospital facilities lack supplies and equipment. Life expectancy is 77 years. The infant mortality rate is low, at 6.45 deaths per 1,000 live births. Waterborne illnesses are common. Hepatitis of all varieties is a major problem. Hepatitis A and E are transmitted through contaminated food and water, while the other types are transmitted through the exchange of bodily fluids.

FOOD AND NUTRITION

Cuba suffers from frequent food shortages. Even for those who can afford to buy food, a shortage can mean waiting for long periods of time to eat at restaurants. Cuban food is a mix of Spanish and African cuisine adapted to local ingredients. Beans and rice are ubiquitous, as are plantains. Common dishes include *arroz con pollo* (chicken and rice), *Moros y Cristianos* (Moors and Christians, i.e. black beans and rice), and *picadillio* (beef and rice). Cubans love to drink beer and cocktails.

 Amount of Fruits and Vegetables Available per person per year kg: 404.4

STATUS OF WOMEN

The position of women in Cuba has been both positively and negatively affected by the 40 years of revolutionary government. Equality, both racially and sexually, was a major goal of the revolution, and women were encouraged to enter into employment and education to participate in creating the socialist society. The government takes a generally liberal position toward contraception and abortion, and birth-control clinics provide all adults with access to contraceptives and abortion. Universal access to child care and summer youth camps has facilitated the employment of working mothers.

Educationally, women have benefited greatly from expansion at all levels of schooling and technical training, and from this base have come many other benefits. Women now make up 40 percent of the workforce. Many women carry out work in sectors traditionally dominated by men, such as agriculture and livestock raising, and also run cooperatives and local, regional, and national committees. A total of 48 percent of doctors are now women.

There are women on the Central Committee of the Communist Party and in positions as departmental ministers in the government, though men outnumber them by a large margin.

Women are also still expected to run the home, shouldering the burden of most, if not all, domestic tasks. Some men resent their wives going out to work, feeling that the women are abandoning their homes. Economic crisis has worsened the situation, with women the first to be expelled to informal sectors of the labor market, including child care, street vending, and prostitution. A rise in violence in society has also disproportionately affected women, not least through the increase in sexual assault. Shortages of medicines and a decline in health care also affect women, with decreased availability of contraception and access to abortion and reproductive health care.

WORK

The government controls most of Cuba's economy, and many people have state jobs. Self-employment is legal and some people own their own businesses or enter into joint ventures with foreign countries. Most people still work in agriculture. In 2004 per capita gross domestic product (GDP) was \$2,900. An income gap has been growing between those people who have poorly paid state jobs and those who work in tourism, own their own businesses, or have relatives in other countries who send them money. Jobs in tourism are highly desirable because such employees receive tips from foreign visitors.

EDUCATION

Education is free, universal, and compulsory from the ages of six to 12, with subsequent schooling also free. After the revolution the eradication of illiteracy was a high priority

for the government, and all private schools were nationalized in 1961. During the late 1960s around 10,000 new classrooms were provided in rural areas, along with traveling libraries and 270,000 teachers who led the literacy campaign. The organization of a network of adult schools followed the campaign, and a parallel system of education began to develop.

The education system introduced after the revolution comprises general education—12 or 13 grades preceded by a preschool stage—higher or university education, teacher-training education, adult education directed toward the eradication of residual illiteracy and continued study by working people, technical education in parallel with secondary education, language instruction, and specialized education. All levels are free, with supplemental scholarships available to cover living expenses and medical assistance. Education receives a high priority, and the numbers of students enrolled has increased sharply from prerevolution days. The largest university is the University of Havana, opened in 1728. Other universities include the University of the Orient, the Universidad Central de la Villas, and the Universidad Ignacio Agramonte.

SCIENCE AND TECHNOLOGY

Cuba is relatively undeveloped technologically. Less than 1 percent of the population owns automobiles, and most people travel by bicycle, motorcycle, or various kinds of taxis or buses. People who do own automobiles usually own extremely old American vehicles dating from the 1950s or 1960s.

Castro's government has recently decided that they must modernize telecommunication and computer networks so that Cuba can compete in the modern world.

The tourism and biochemistry industries especially need modern telecommunications capabilities, despite what the government sees as political risks.

Since the 1980s Cuba has been developing its pharmaceutical and biochemical industries. The country built the multimillion-dollar Center for Genetic Engineering and Biotechnology in 1986. Cuba manufactures vaccines against hepatitis B and meningitis, insulin, and anti-cholesterol drugs, most of which are sold to third-world countries.

MEDIA

The government is the sole owner of the media and the sole purveyor of the news. The purpose of the media is defined in Leninist terms as political indoctrination and mass mobilization and integration. No criticism of the government is permitted. Journalists who break this law can spend three years in prison. No foreign journalists are permitted; foreign news agencies may only hire journalists through government offices. Cuba's government claims that this repression is necessary to prevent a U.S. invasion.

The three main newspapers are the Communist Party daily, *Granma*; *Juventud rebelde*, the paper of the Communist Youth; and *Los trabajadores*, published by the Cuban Federation of Workers. Provincial newspapers include the *Tribuna de la Habana* and *Sierra Maestra* in Santiago de Cuba, which focus on local issues. Magazines include the weekly *Bohemia*, which covers all aspects of the news and is the oldest periodical in Cuba; the monthly *Opina*, aimed at a younger audience, with information on available consumer goods; and *Mujeres*, published by the Federation of Cuban Women. A number of specialized cultural magazines and newspapers also have wide readerships.

Television was introduced in 1950 and is operated by two national networks, Televisión Cubana and Tele-Rebelde, with 58 broadcast stations in 1998. There are several national radio networks and one international one, all of which are administered by the Cuban Institute of Radio and Television. In 1999 there were 150 AM broadcast stations, five FM, and one shortwave. As of 2000 there were approximately 2.1 million radios and 2.75 million televisions.

In March 1997 Cable News Network (CNN) became the first American news bureau to operate in Cuba since 1969, following a loosening of restrictions by both the Cuban and U.S. governments. Radio-TV Marti provides

U.S. news to Cubans from transmitters in the Florida Keys. News agencies from elsewhere in the world have not faced such restrictions, and those with offices in Cuba include ITAR-TASS, BTA, AFP, and Reuters. Prensa Latina, the Cuban news agency, has offices in Moscow, Prague, Sofia, Paris, and Mexico City.

CULTURE

Cuba has made notable contributions to the world's music. African slaves and Spanish guitar players combined their respective musical traditions to create musical styles that became wildly popular in Cuba and in the United States. Rhumba, salsa, mambo, bolero, and cha-cha all came from Cuba, where they originated in the rural musical style called *son*. Conga-line dancing emerged from slaves dancing while shackled together. Cuban music continues to evolve today.

The Communist government has actively supported the arts. After the revolution the government built art schools, museums, and theaters, created a national film industry, and guaranteed musicians a salary. Famous Cuban painters include Wilfredo Lam, Marianao Rodríguez, and Manuel Mendive. In an effort to counteract the influence of U.S. culture, the government funds Afro-Cuban artistic endeavors. Cubans enjoy going out to cultural events such as concerts and exhibits.

FOLKLORE AND MYTHOLOGY

Cuban culture combines African and European traditions. Many of its folktales have African roots and are similar to tales in other Caribbean countries and the

American South. For example, a popular folk character is the trickster called Tortoise, similar to a character found among the Yoruba, Edo, and Ibo tribes of Nigeria. The government actively encourages artistic groups to rediscover old traditions, such as dance that combines aspects of folklore and popular and religious music. "Folklore" is actually the name of a style of music and dance that incorporates religious elements and traditional drumming and dance moves.

ENTERTAINMENT AND RECREATION

Havana is the center of Cuban entertainment. It has many nightclubs and restaurants, holdovers from the 1950s and 1960s when it was a major destination for American tourists. Cubans enjoy dressing up and going out to events such as concerts, ballets, or art openings. Cuban citizens are not allowed to visit some recreational areas that are open to tourists. Cubans like to watch television, listen to the radio, play games, or go to baseball games and boxing matches.

Several festivals occur annually. The Havana Carnival takes place in late February or early March and features parades and parties. The Havana International Jazz Festival happens every other February. Carnival in Santiago de Cuba happens in late July, coinciding with the end of the sugar harvest; it was originally a time when slaves could relax and celebrate.

ETIQUETTE

Cubans value hospitality and courtesy. Any relationship begins with personal touches, such as small talk and light refreshments; business negotiations begin with coffee drinking and chatting. Cuban businesspeople exchange business cards when they meet; they expect prompt responses to letters and telephone calls. Many Cubans rely on tips for their income, and tips are expected in virtually any situation where they might be appropriate. Cubans are not allowed to beg; beggars who accept money or gifts can be arrested and imprisoned.

FAMILY LIFE

Before Communism Cuban families were very close, as is typical in Latin American countries. The Communist government, however, has removed some of the authority that parents have over children by requiring students to participate in activities that replace familial loyalty with loyalty to the state. After a couple marries, they usually must move into the bride's family's house because it is difficult to find new housing. The government guaran-

tees maternity benefits and child care, which has allowed many women to go to work. The 1974 Family Code requires men and women to take equal responsibility for family obligations. Divorce has grown common, partly because of housing pressure and the changing roles of women.

PERSONAL APPEARANCE

For the most part Cuba is a casual place. People wear shorts, pants, dresses, and shirts made of light materials during the day, especially when they are working outdoors. Cultural events, on the other hand, are very formal. People dress very well for elegant evenings out, such as at concerts, restaurants, and art exhibits.

SPORTS

Cubans take sports very seriously. Cuban athletes won numerous medals at the 2004 Olympics as well as in other international competitions. Every year Cuba holds the School Sports Games to select the best athletes ages 11 to 16 to attend the School for Sports, possibly continuing to one of the Schools of Higher Athletic Performance. Baseball has been Cuba's favorite national sport since it was imported from North America in the late 1800s. Initially Cuban dock workers would play baseball with American sailors; the Spanish government banned the game in 1895 because players were using ticket sales to raise money for José Martí's independence movement. The ban was removed after independence. Many of Cuba's best players have moved to other countries to play for foreign teams. Cockfighting is another popular spectator sport, though it is illegal.

CHRONOLOGY

- 1934** Platt Amendment revoked.
- 1952** Batista retakes power in a military coup.
- 1953** A revolt by Fidel Castro is quickly subdued.
- 1956** Castro and rebels land in Cuba and take to the Sierra Maestra, aided by Ernesto "Che" Guevara. Guerrilla war commences.
- 1959** Batista flees Cuba, and Castro enters Havana; Fulgencio Batista y Zaldívar takes power.
- 1960** Cuba is declared a socialist country.
- 1961** A total of 1,500 Cuban exiles, trained and financed by the CIA, invade Cuba at the Bay of Pigs. Castro's forces defeat the invaders.
- 1962** OAS excludes Cuba. The Soviet Union installs long-range missiles in Cuba. The United States imposes a naval blockade and the two superpowers go "eyeball to eyeball." The Cuban missile

- crisis is resolved, with the Soviet Union removing the missiles and the United States agreeing not to launch further attacks on Cuba.
- 1965** The Communist Party of Cuba is established as the sole legal party.
- 1967** Che Guevara is killed in Bolivia leading a revolutionary group.
- 1974** The OAS votes to normalize relations with Cuba.
- 1976** Cuban troops help the Soviet-backed Angolan government in civil war.
- 1977** Cuban troops are sent to Ethiopia.
- 1980** A sum of 100,000 refugees are allowed to flee to United States.
- 1983** U.S. troops invade Grenada and expel Cuban forces.
- 1988** Cuban forces are removed from Angola.
- 1992** In July the constitution is modified to attract foreign investment and to designate the government as secular and not atheist. In October the U.S. Congress passes the Cuban Democracy Act, prohibiting foreign subsidiaries of U.S. companies from trading with Cuba and tightening travel restrictions.
- 1993** The last Soviet troops leave Cuba. The sugar harvest falls to a 30-year low.
- 1994** Antigovernment demonstrations bring the easing of export restrictions; 30,000 Cubans leave for the United States, many on rafts and small boats.
- 1995** Some 20,000 refugees are admitted to the U.S. base at Guantánamo Bay.
- 1996** Two planes from the Miami-based anti-Castro group Brothers to the Rescue are shot down over Cuban airspace. A human rights organization, Concilio Cubano, formed in 1995, is persecuted by the government, and over 200 members are arrested and harassed. Clinton signs the Helms-Burton, or Libertad, Act, imposing penalties on foreign companies trading with Cuba who also operate in the United States. Castro visits the Vatican and invites the pope to visit Cuba.
- 1997** In July and September a series of bombings targets tourist hotels in Havana and are blamed on exile groups. CNN is permitted to operate in Cuba. On July 12 there is a ceremonial homecoming for the remains of the revolutionary leader Che Guevara and six Cuban guerrillas who were killed in Bolivia on October 9, 1967. The leader of the powerful Miami-based Cuban American National Foundation, Jorge Más Canosa, dies.
- 1998** Pope John Paul II visits Cuba and holds mass in Havana. He calls for greater freedom within Cuba and a lifting of the U.S. embargo.

- 1999** The head of the U.S. Chamber of Commerce, Thomas Donahue, visits Cuba to look at potential business ties, the first such visit in 40 years. George Ryan of Illinois, a Republican, visits Cuba and meets with Castro for seven hours—the first sitting American governor for 40 years to visit the island. Castro hosts the Ibero-American Summit in Havana. Cuba demands the return of Elián González, a refugee who lost his mother and other companions after the boat on which they were traveling to Florida sank. Relatives in Miami were caring for the boy, but his father remains in Cuba.
- 2000** The United States demands the withdrawal of a Cuban diplomat linked to a Miami immigration official accused of spying for the Cuban government. U.S. federal agents snatch Elián González from his relatives' home in Miami and return him to his father. Castro cancels trade talks with the EU after it condemns Cuba's human rights record. U.S. courts uphold the custody rights of Elián's father, and father and son return to Cuba to a rapturous welcome. Cuba wins 11 gold medals at the Sydney Olympics.
- 2001** The United States exports food to Cuba to help the government feed victims of Hurricane Michelle.
- 2002** The United States sends prisoners from Afghanistan suspected of association with al-Qaeda to Guantánamo Bay for interrogation. Russia's last military base in Cuba closes. Jimmy Carter visits Cuba. The constitution is amended to make the socialist form of government permanent.
- 2004** The United Nations criticizes Cuba for its human rights violations. The United States limits visits and cash transfers to Cuba. Castro bans the U.S. dollar.

OFFICIAL NAME

Republic of Cyprus

ABBREVIATION

CY

CAPITAL

Nicosia

HEAD OF STATE & HEAD OF GOVERNMENT

President Tassos Papadopoulos (from 2003)

NATURE OF GOVERNMENT

Parliamentary democracy; republic

POPULATION

780,133 (2005)

AREA

9,250 sq km (3,571 sq mi)

MAJOR ETHNIC GROUPS

Greeks, Turks

LANGUAGES

Greek, Turkish, English

RELIGIONS

Greek Orthodox, Islam

UNITS OF CURRENCY

Cyprus pound, Turkish lira

NATIONAL FLAG

Map of Cyprus in gold set above two olive branches in green on a white field

NATIONAL EMBLEM

A gracefully shaped gold shield displaying a white dove holding in its bill an olive branch. Surrounding the emblem is a decorative garland made up of large olive branches.

NATIONAL ANTHEM

“Ethnikos Hymnos” (Hymn to liberty)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 25 (Greek Independence Day), May 1 (Labor Day), October 1 (Cyprus Independence Day), October 28 (Greek National Day), all major Christian festivals, including Easter, Pentecost, Assumption, and Christmas

DATE OF INDEPENDENCE

October 1, 1960

DATE OF CONSTITUTION

August 16, 1960

GEOGRAPHICAL FEATURES

The third-largest island in the Mediterranean, Cyprus lies off the southern coast of Turkey and the western shore of Syria, north of Egypt. Including the small island outposts of Cape Andreas, Cyprus has an area of 9,250 sq km (3,571 sq mi), extending 227 km (141 mi) northeast to southwest and 97 km (60 mi) southeast to northwest. The length of the coastline is 648 km (403 mi). The northern part of Cyprus, north of the so-called Attila Line, or Green Line, is under Turkish occupation, with control formally recognized only by Turkey.

The capital is Nicosia, partly under Turkish occupation. Other major cities in the Greek sector are Limassol, Larnaca, and Paphos. Famagusta and Kyrenia are the major population centers in the Turkish sector.

The Troodos Mountains cover most of the southern and western portions of the country, while the Kyrenia range extends in a narrow band along the northern coastline. Coastal lowlands surround the island. The highest peak is Mount Olympus (1,951 m; 6,401 ft), in the Troodos range.

The Mesaoria Plain is the agricultural heartland of the country, and in its middle lies Nicosia, the divided capital of the island. A network of rivers rises in the Troodos, most becoming dry courses in summer.

CLIMATE AND WEATHER

The warm Mediterranean climate is rather dry, with winter rainfall mainly between November and March. In general the island experiences mild, wet winters succeeded by hot, dry summers. The higher mountain areas are comparatively cooler and more moist than the rest of the island and receive the highest annual rainfall, up to 1,000 mm (39.4 in). The least rainfall occurs in the Mesaoria. Droughts are frequent and sometimes severe. Summer temperatures are high in the lowlands even near the sea and can reach particularly uncomfortable readings in the Mesaoria. The mean annual temperature of the country is 20°C (68°F), and there is a high degree of sunshine, even during the winter.

Climate and Weather

Mean Temperature:	68°F
Average Rainfall	
Mesaoria and Karpasian Peninsula:	15.7 in to 17.7 in
Higher Mountains:	39.4 in

FLORA AND FAUNA

Cyprus has over 1,800 species of flowering plants. It combines the isolation of an island with proximity to larger land masses to allow for variety with uniqueness. The island has a range of habitats and elevations along with differing microclimates, which has contributed to the large number of endemic species of both plants and animals.

The first animals to arrive on Cyprus were probably swimming elephants and hippopotamuses, who arrived 1.5 million years ago; until humans arrived 9,000 years

ago, they were the only land mammals on Cyprus, with the exception of mice. Cyprus now has 7 species of land mammals, 26 species of amphibians and reptiles, 357 species of birds, and plenty of insects. The waters are home to 197 species of fish and various other sea creatures, including seals and turtles. The largest land mammal currently living on the island is the Cyprus mouflon, a kind of sheep.

Migratory birds use Cyprus as a stopover on their travels between Europe and Africa. Falcons and eagles live on Cyprus year-round. Partridges are the most popular game bird.

ETHNIC COMPOSITION

Cyprus consists not merely of two ethnic groups but of two ethnic nations. Neither group considers themselves as primarily Cypriots; one considers itself Greek and the other Turkish, and the ties that bind them to these larger nationalities have determined the course of Cypriot history in recent years. This ethnic self-identification is of comparatively recent origin; before the 1800s few in Cyprus called themselves either Greeks or Turks, having been united to those countries only as districts of their empires.

There is a small British minority of a few thousand in the country, dating to British rule and the more recent peacekeeping-force involvement in Cyprus. There are a few Latin families in the southern port towns, remnants of the Venetian and Lusignan upper classes of pre-Ottoman times.

LANGUAGES

Three major languages are used in Cyprus: Greek in the Republic of Cyprus, Turkish in the Turkish sector, and English in both. English has become the principal language of the media, commerce, and education.

Cypriot Greek actually comprises three forms of Greek, all common to mainland Greece as well. The liturgical language of the Orthodox church is Koine, the lingua franca of the Mediterranean world at the beginning of the Christian era. The standard Greek is known as demotic. The third significant form is known as Katharvousa, the literary Greek on the Attic model.

Cypriot Turkish is the standard Turkish of modern Turkey, as modified by Kemal Atatürk.

RELIGIONS

Religion is important in Cyprus primarily because it follows and reinforces ethnic and linguistic identity. The Church of Cyprus is in the Greek Orthodox tradition. It dates back to the introduction of Christianity on the island in 45 c.e., and the autonomy of the church was affirmed by the Byzantine emperor Zeno in the fifth century. The constitution of the Church of Cyprus was drawn up in 1909 and states that the church is governed by the Holy Synod.

Monasteries have always played an important role in the life of the Church of Cyprus, and they are the source of bishops, who are required to be celibate following Orthodox practices. Clergy are generally married, however, and traditionally chosen by their fellow villagers and sent for training before ordination. Religious observances vary widely, but Greek Cypriots are generally more religious than Greek mainlanders.

Other Christian denominations are represented on the island in smaller groups. In the Turkish sector Islam is the dominant faith—primarily as practiced by Sunni Muslims—although religion plays a more muted role in the north than in the south and serves more as a political tool.

Religious Affiliations

Greek Orthodox	608,000
Muslim (mostly Sunni)	140,000
Other	32,000

HISTORICAL BACKGROUND

One of the oldest cultures in the Mediterranean, Cyprus has long been a crossroads between East and West. Despite many turnovers it has always been closest to Greece, sharing ethnic origins, language, religion, and social mo-

res. Cyprus was the center of a Neolithic settlement as early as 3700 B.C.E. It was famous in the ancient world for its copper (*kyprios* in Greek), and it is believed that either its name is derived from the name of the mineral or vice versa. A far outpost of the Hellenic world by the second century B.C.E., the Greeks were followed soon after by the Phoenicians, and thereafter Cyprus was conquered successively by Egyptians, Persians, Greeks under Alexander the Great, Romans, and the Byzantines. Its Christian history began with Paul the Apostle, who was accompanied by Barnabas and Mark the Evangelist in the second half of the first century. Although the island experienced a series of Arab invasions in the seventh century, it was spared Arab domination. In 1191 the island was wrested by the English prince Richard I from its Byzantine ruler, Isaac Comnenus, and later sold to the Knights Templar and transferred by that order to Guy de Lusignan. Lusignan lived only two years after assuming control in 1192, but the dynasty that he founded ruled Cyprus as an independent Norman kingdom for more than three centuries. Conquered by Venice in 1489, Cyprus fell to the Turks in 1562.

Ottoman rule ended in 1878, when under a convention with Turkey initiated by Prime Minister Benjamin Disraeli at the Congress of Berlin, Britain took over the administration of the island. Upon the entry of the Ottoman Empire in World War I on the side of the Central Powers, Cyprus was annexed to the British Crown and later placed under a governor.

British rule was marred by the enosis movement—the agitation for self-determination and reunion with Greece—which erupted into violence on a number of occasions between the two world wars. The agitation for union with Greece gained force after World War II and pitted Greece against Turkey and threatened the unity of the North Atlantic Treaty Organisation, of which both were members. As a compromise Greece and Turkey accepted proposals for an independent republic, and the formula was accepted by the British government and the Greek ethnarch, Archbishop Makarios III. The settlement provided for a number of instruments defining the island's political status and also guaranteeing the continuation of British military installations. Independence was officially declared on August 16, 1960, with Britain, Greece, and Turkey as guarantor powers.

In 1974 Makarios III was overthrown by a military coup led by the Cypriot National Guard. Turkey invaded Cyprus by sea and air on July 20, asserting its right to protect the Turkish Cypriot minority. Turks gained control of 40 percent of the island, and many Greek Cypriots were displaced. The separate Turkish state proclaimed on November 15, 1983, was declared invalid by the UN Security Council; Turkey, meanwhile, does not recognize the government of the Republic of Cyprus.

The island remains divided today, and except for some escalated tensions in 1996 there has been little movement

toward resolution of the stalemate. Efforts at reunification continue under the auspices of the United Nations. Indeed, the United Nations offered a reunification plan in 2002, before Cyprus joined the European Union in May 2004; the Turkish Cypriots voted to approve EU membership, although the Greek Cypriots voted against it, such that Cyprus officially joined the European Union but as a divided nation.

LIST OF MODERN RULERS

1988–93	George Vassiliou
1993–2003	Glafkos Clerides
2003–	Tassos Papadopoulos

CONSTITUTION

Since 1974 Cyprus has been divided de facto into the government-controlled southern two-thirds of the island and the Turkish-controlled northern one-third. The government of the Republic of Cyprus continues to be the internationally recognized authority, but in practice its power extends only throughout the Greek Cypriot-controlled areas.

The Greek Cypriot constitution went into effect on August 16, 1960, the day Cyprus became independent. It was not subjected to popular referendum, although many of its provisions were modified in 1964. The constitution was drafted by British, Greek, and Turkish experts, specifically prohibiting union with any other country or the partition of the island and setting forth civil and political rights for both ethnic groups. The president of the republic is both head of state and head of government; there is no prime minister. There is technically an office of vice president, but no elections have been held for it since 1973. The president is elected by universal suffrage for a five-year term and may be reelected. Executive powers are exercised by the president through the Council of Ministers.

This constitution was breached when the Turkish Cypriots declared the independent Turkish Republic of Northern Cyprus in 1983. Only Turkey recognizes this republic. In 1985 the Turkish Republic adopted its own constitution, which provides for a president, prime minister, and cabinet. The president is elected by universal suffrage for seven-year renewable terms. Executive functions are entrusted to a prime minister and a 10-member cabinet.

PARLIAMENT

The legislative power of the Republic of Cyprus is exercised by the House of Representatives. Electoral law provides for proportional representation from each of six constituencies, and parliamentary seats are then distributed according to the electoral strength of each party. Members are elected by universal suffrage of adults over the age of 18. By a 1985 resolution 56 members are to be elected by the Greek Cypriot community and 24 by the Turkish Cypriot community; Turkish Cypriot members have not attended the House since 1963, but the House has kept those seats vacant in accordance with the constitution.

The House is in quorum when at least one-third of the members are present. Legislation is the first order of business, and bills are referred to appropriate committees. Political parties are represented on committees in proportion to the total number of their seats in the House.

The president of the Republic of Cyprus and the vice president have the right of final veto on any law passed by the House that concerns certain issues of foreign affairs, defense, and security. Other types of legislation may be delayed and returned to the House but must be promulgated into law if the House reaffirms its decision.

In the Turkish sector the 1985 constitutional declaration has resulted in elections for parliament and a prime minister, although they are not officially recognized outside of the sector. The Turkish sector has a 50-seat parliament and elects representatives by popular vote.

POLITICAL PARTIES

The political parties in the Republic of Cyprus are the right-wing Democratic Rally, which advocates a pro-Western, free enterprise policy; the center-right Democratic Party, a moderate party following the policies of former president Makarios III; the left-wing Progressive Party of the Working People, with a pro-Marxist bent; the Social Democrats Movement, a small socialist party favoring nonalignment; the Fighting Democratic Movement; the Green Party of Cyprus; the New Horizons; the communist Restorative Party of the Working People; and the center-left United Democrats, a moderate group. In the Turkish Cypriot community the parties include the right-wing National Unity Party (NUP), founded by Rauf Denktaş; the center-right Democratic Party, the other main conservative group, usually aligned with the NUP; the left-wing Republican Turkish Party; the center-left Communal Liberation Party; the center-right National Revival Party, which represents the interests of settlers from mainland Turkey; the left-wing Patriotic Unity Movement; the National Birth Party; Our Party; the Peace and Democratic Movement; and the ultranationalist National Justice Party.

LOCAL GOVERNMENT

Cyprus is divided into six administrative districts: Nicosia, Paphos, Larnaca, Limassol, Famagusta, and Kyrenia, the last two of which are in the Turkish sector. Each district is administered by a district officer appointed by the Ministry of the Interior. Mayors and councils for the municipalities are appointed by the central government. Village commissions have also been appointed by the Ministry of the Interior, although recent legislation provides for their popular election.

LEGAL SYSTEM

In 1964 the Supreme Constitutional Court and the High Court of Justice were merged into the Supreme Court. The president appoints judges. The Supreme Council of Judicature performs the judicatory functions of the former High Court. Below the Supreme Court are the assize courts and the district courts. District courts perform as the courts of first instance for all but the most serious of crimes. Assize courts have unlimited criminal jurisdiction in the first instance. The Supreme Court hears all criminal appeals but has no original jurisdiction in criminal matters.

Trial procedures are based on English common law. There are no juries, and all trials are public. Punishments allowed by law include death by hanging, life imprisonment, and whipping. However, in practice these harsher punishments are rarely meted out, and pardons and parole procedures have been expanded in recent years.

The basic structure of the Turkish Cypriot legal system follows that of the Greek Cypriot sector.

HUMAN RIGHTS

The Republic of Cyprus generally respects human rights norms and practices. However, human rights groups report continued instances of police brutality. In the Turkish sector police abuse of the rights of suspects and detainees is considered a problem. Civilians have been tried in military courts. Suspects are often not permitted to have their lawyers present when questioned, although this right is provided for under basic Turkish Cypriot law. Authorities in the sector also exert some restrictions over general freedom of movement.

Violence against women continues to be of concern in both areas, particularly domestic abuse. Trafficking in prostitutes is also a problem.

FOREIGN POLICY

The government of Cyprus has historically followed a nonaligned foreign policy, although it increasingly iden-

tifies with the West. It maintains close relations with Greece and in recent years has expanded its relations with Russia, Israel, and Syria, from which it purchases most of its oil. Cyprus is a member of the United Nations and has signed the General Agreement on Tariffs and Trade and the Multilateral Investment Guarantee Agency agreement.

The northern part of the island calls itself the Turkish Republic of Northern Cyprus but is not recognized by any country except Turkey. Turkey, meanwhile, does not recognize the government of Cyprus. The Republic of Cyprus's 1990 application for full EU membership sparked protest when Turkey argued that the move required its consent. Negotiations began in 1998 following an EU enlargement summit. In 1999 Turkey was again angered when the Republic of Cyprus announced plans to deploy missiles capable of reaching Turkey's coast.

In 2004 Cypriots from both sides crossed their island's dividing line for the first time in 30 years. Cyprus joined the European Union on May 1, 2004, but as a divided nation, having rejected the UN reunification plan. The government of Cyprus has long identified with Europe, especially Greece. It has sought the withdrawal of Turkish forces since 1974.

DEFENSE

The National Guard is the primary defense force in the Greek Cypriot sector and is responsible to the president of the republic through the minister of the interior and defense. Manpower is supplied through conscription of males when they reach age 18, and recruits serve for 26 months, after which they join the reserve. There is very little formal military tradition in Cyprus, and most training is conducted by Greeks from the mainland.

Besides these indigenous forces there are four other military powers with armed forces on the island: Great Britain, Greece, Turkey, and the United Nations, which has peacekeeping forces. Turkey is the most powerful military presence on the island; its forces report to the Ministry of National Defense in Ankara. The Turkish Cypriot Security Force is officered by members of the Turkish army on temporary assignment, who are responsible to the president of the Turkish sector. Britain retains sovereignty over two bases on the southern coast, Akrotiri and Dhekelia. Greece maintains forces under the direction of the Ministry of National Defense in Athens. The UN troops have been present in Cyprus since 1964 and operate in the buffer zone of the Turkish and Greek Cypriot cease-fire lines.

Both sectors have police forces. The police in government-controlled regions are under civilian control. The Turkish police are controlled by the Turkish military.

ECONOMY

Cyprus is one of the most prosperous nations in the Mediterranean and hopes to improve its prosperity as a full member of the European Union. Its free-market economy offers entrepreneurs many freedoms. Cyprus has positioned itself as a bridge between East and West, working to attract international businesses with its educated population, numerous English speakers, low costs, and good telecommunications and airline connections.

Since 1980 the economy in the Greek sector has shifted rapidly from agriculture to services and light manufacturing. Agriculture and mining now account for only 4.1 percent of gross domestic product (GDP) and employ 5 percent of the labor force. The service sector, particularly the tourism industry, employs 76 percent of the labor force and contributes 76 percent of GDP. The economy grew at a rate of 4.4 percent in the 1990s, with growth in 2003 at 1.9 percent. The economy is susceptible to outside factors, such as fluctuations in tourism.

The Turkish sector is much less prosperous than the Greek sector, with about one-third of the per capita GDP of the south. It still relies on agriculture and government jobs. Turkey is the only foreign nation to recognize the north and is therefore the only nation willing to provide grants and loans for economic development.

Cyprus reformed its tax structure in 2003 to comply with EU requirements, which has resulted in fiscal deficits. The island has few natural resources and must import its food, fuel, raw materials, heavy machinery, and transportation equipment. It purchases most of these items from Europe, especially the United Kingdom. Cyprus's trade deficit in 2003 was \$3 billion, a decrease of 9.2 percent from the previous year.

Economic figures in the tables below are given for the Greek Republic of Cyprus.

ENVIRONMENT

There are two major pressing environmental issues faced by Cyprus: water resource problems (including the lack of reservoirs, seasonal disparity in precipitation, increased salination, water pollution from sewage and industrial wastes, and coastal degradation) and the loss of wildlife and wildlife habitats due to increasing urbanization. The British planted forests on Cyprus in the late 19th century, but since their departure there have been several large forest fires, which have contributed to deforestation. Cyprus is party to various international environmental agreements, including those concerned with biodiversity, endangered species, hazardous wastes, nuclear test bans, ozone-layer protection, and ship pollution.

Environment

Forest Area % of total land area: 12.7

 Nationally Protected Areas % of total land area: 4
 Emissions of Organic Water Pollutants kg per day: 7,166
 CO2 Emissions per capita ton: 8.5

LIVING CONDITIONS

Traditional Cypriot villages had houses built close to one another, with multiple relatives living in the area. Now more Cypriots live in cities, further away from their families. Housing is modern and of high quality; all the modern amenities are available, including telephones, televisions, transportation, and a reliable supply of water and electricity. The road system is good. Water shortages remain a problem, however, and rainfall is irregular. Cyprus now has several desalination plants to purify saltwater.

HEALTH

Cypriot health is good. Life expectancy is over 77 years, and the infant mortality rate is only 7 deaths per 1,000 live

births. Very few people are infected with HIV. Fertility is low, with an average of 1.85 children born per woman.

Health

FOOD AND NUTRITION

Cyprus has ample food. It is famous for its fresh fruit, including melons, prickly pears, oranges, lemons, grapes, strawberries, and stone fruit; the government bans imported fruits in order to protect local growers. Cypriots in the north tend to cook in Turkish fashion, while those in the south prefer Greek food. Baked lamb and mezes (appetizers, dips, and salads) are popular everywhere. Common ingredients are bulgur, yogurt, lentils, chickpeas, eggplants, feta cheese, olives, greens, and pita bread. Lamb and chicken are the most popular meats. Stuffed leaves and vegetables are popular. Cypriots enjoy pastries and puddings made from phyllo dough, cream, and sugar syrup or honey.

Cypriots have been making wine for 4,000 years, and their wines are excellent. Greek Cypriots drink wine with most meals. Muslims, on the other hand, do not drink alcohol.

Food and Nutrition

 Amount of Cereal Available per person per year kg: 102.3
 Amount of Fruits and Vegetables Available per person per year kg: 285.8

STATUS OF WOMEN

Throughout Cyprus women generally have the same legal status as men. During the 1990s laws in both the Greek and Turkish sectors were updated to reflect a broadening of rights for women, particularly concerning marriage,

divorce, child custody, and citizenship. In the workforce legal provisions in both communities require equal pay for men and women performing the same job. This is enforced effectively at the professional level, but women in agricultural and textile positions are still routinely paid less than their male counterparts. In fact, Cyprus is the second-worst country in Europe, after Portugal, in pay discrimination against women. Women also suffer more unemployment than men. Women hold only 10 percent of managerial positions. There is no infrastructure to support working mothers.

Women face no legal obstacles to their participation in the political process. They are clearly underrepresented in government but do hold some cabinet, judicial, and other senior jobs. In the most recently elected parliament, women held nine of the 56 seats.

Domestic abuse continues to be a problem in Cyprus. In the Greek Cypriot community it is an issue receiving increased attention, and in 1994 a law was passed making abuse easier to report and prosecute. To date the law has had little effect, however, largely because of family pressure and the fact that most women are still economically dependent upon their male family members. In the Turkish sector domestic abuse is also estimated to be high but is less openly discussed and more often considered a “family matter” outside of the legal system.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 16
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0

WORK

Cyprus has nearly full employment. The vast majority of Cypriots work in the service sector, particularly in tourism. Nominal per capita income in 2003 was \$17,644 for Greek Cypriots and \$5,949 for Turks. The Turkish sector still has more agricultural jobs and fewer skilled ones, whereas increasing numbers of Greeks are working as professionals. About 20 percent of Cypriots work in industry or construction.

Employment and Labor

 Unemployment %: 3.4

EDUCATION

There are two educational systems in the country, in each of the Greek and Turkish sectors. Attendance is nearly 100 percent in both sectors, and the literacy rate of the entire island is quite high, at 97.6 percent.

The Republic of Cyprus offers education at the preprimary, primary, secondary, and postsecondary levels. Attendance is compulsory at the primary and secondary levels, where most schooling is free, although there are also private schools. The basic language of instruction is Greek, and English is widely taught as well. Overall standards are high, with continual assessment performed, and specialization begins at the secondary level in gymnasiums and lyceums. The University of Cyprus provides instruction in a variety of subjects, and there are several other public institutions of higher education, including the Pedagogical Academy, the Higher Technical Institute, the Forestry College, the School of Nursing and Midwifery, the Hotel and Catering Institute, and the Psychiatric School of Nursing. Some students elect to pursue higher education at universities in Greece.

In the Turkish sector education became compulsory for children up to ages 15 or 16 in 1975. The language of instruction is Turkish, and textbooks are obtained from the mainland. The curriculum is similar to that of the Greek schools, although there are few provisions for preprimary education. There are no universities in the northern sector, but the Teacher Training College in Kyrenia and the Higher Technical Institute in Famagusta serve the needs of higher education.

SCIENCE AND TECHNOLOGY

Cyprus is a modern Western nation with a variety of technological facilities. Telecommunications and Inter-

net facilities are readily available. Cypriots work in web design and other technical fields. Cyprus created the Cyprus Institute of Technology in 1992, as a joint project by the Ministry of Commerce, Industry, and Tourism, the Cyprus Chamber of Commerce and Industry, and the Employers' and Industrialists' Federation. The scientists at the institute participate in research and symposia all over Europe.

MEDIA

Cyprus has several daily newspapers; the *Cyprus Mail* and *Cyprus News* are published in English, *Simerini* is published in Greek, and *Kibris gazete* is published in Turkish. Most papers represent a particular political viewpoint, and the media do not hesitate to criticize the government. Weekly papers and magazines are published on both sides of the divide. Private ownership is the norm in both the Greek and Turkish sectors. There is no censorship, but publication permits are required.

The national news agency is the Cyprus News Agency in the Greek sector and the Turk Ajansi Kibris in the Turkish sector. Foreign news agencies are represented in Nicosia. The Cyprus Broadcasting Corporation, a semi-governmental body modeled on the BBC, operates both radio and television services. Turkish radio and television are operated by Bayrak Radio and Television Corporation. In addition, the British Forces Broadcasting Service is in operation.

CULTURE

Cyprus has a very ancient culture that has been influenced by Europe, especially Greece and Rome, Turkey, the Middle East, and North Africa. Situated at a strategic crossroads in the Mediterranean, it has been invaded

by various cultures for the past 9,000 years. The island is covered with archaeological remains, including Greek temples, Roman mosaics, medieval monasteries, and castles built by crusaders on their way to the Holy Land. This past influences modern art forms. Many villages specialize in particular arts or crafts, such as basketry, tapestry, lace, pottery, and metalwork.

Modern culture is split between the Turkish side and the Greek side. The people in the north consider themselves Turkish and emulate Turkish practices. They are mostly Sunni Muslims; they eat Turkish food and celebrate Muslim holidays. In the south, people are Greek Orthodox; they eat Greek food and celebrate Greek holidays. Easter is the most important festival in the south, Ramadan the most important in the north. A holiday unique to the north is the Proclamation of the Turkish Republic of Northern Cyprus, celebrated on November 15.

FOLKLORE AND MYTHOLOGY

In ancient times residents of Cyprus revered many of the gods of Greece. The goddess Aphrodite was believed to have been born from the sea foam in Cyprus. Medieval Christian saints are also the subject of many stories.

Cypriot folklore has concocted stories around native birds. Villagers believe that if children swallow partridge eggs they will have good singing voices. The partridge is also featured in a story about the Turks—the villains in this case—searching for and killing St. Jacob. In another tale a young woman with a wicked mother-in-law turns into a frankolin, another kind of bird, when her mother-in-law throws her into an oven. Ever since then, tells the story, the frankolin's call has sounded like the young woman wailing.

ENTERTAINMENT AND RECREATION

Cypriots enjoy going out to restaurants or taverns to eat and drink. The island has a developed tourist industry, and a variety of water sports are available to tourists and locals. Windsurfing, sailing, and diving are all popular.

The hills of the interior offer excellent hiking and mountain biking; there is even a ski resort. Golf is popular. There are nightclubs and casinos and plenty of shopping opportunities.

ETIQUETTE

Hospitality is extremely important to Cypriot people. Anyone who is invited to a home in Cyprus can expect to be served Greek coffee and snacks; it is impolite to refuse. A guest should bring chocolates or flowers as a gift. People in urban areas tend to be more culturally liberal than those in the interior, especially Muslims. Certain practices are considered impolite, such as pointing a finger or the soles of the feet at a person, blowing one's nose in public, picking one's teeth at the table, and hugging or kissing publicly. Modesty is especially important when visiting a mosque or church.

FAMILY LIFE

Before the Second World War, the family was the most important social institution in Cyprus; people thought of themselves first and foremost as members of a family and gave little importance to nationality. A household consisted of a man, a woman, and their unmarried children. A matchmaker would arrange marriages, often between partners who hardly knew one another. People became adults upon marriage, not before. Unions were made on the basis of family ties and property, not love. When a daughter married, the parents gave her household items; a son received land and a house. This transfer of property is called the dowry. Divorce was almost unheard of because the social consequences of leaving a marriage were too great.

Modern Greek Cypriots have different attitudes toward marriage. Young people make their own decisions, although economics still enter into the picture. Wealthier parents are usually more flexible about their children's romantic behavior than poorer ones, who still consider a daughter's good reputation valuable for finding a good husband. Parents consider it their duty to provide their children everything they need for success in life, including education and a house. Marriage is still strong in Cyprus; many adults marry, though the divorce rate has been increasing rapidly, and very few children are born out of wedlock.

PERSONAL APPEARANCE

Most Cypriots dress in casual and fashionable Western-style clothes. More formal attire is expected in business settings, but in 2005 women lawyers won the right to

wear trousers to court instead of the dark jackets and skirts they were formerly required to wear. A few elderly rural people still wear the traditional clothing that was common in the early 1900s.

SPORTS

Cyprus has many sports and recreational facilities, many of them for tourists. People ride bikes, hike, enjoy water sports, and play soccer, tennis, and other sports. The Sport Academy of the Cyprus Sport Organization, founded in Nicosia in 1989, promotes sports education for all people, helping coaches, athletes, physicians, and physical education teachers in schools. It also publishes information on sports and helps athletic bodies organize courses and seminars. Many northern European soccer teams travel to Cyprus for winter training.

CHRONOLOGY

- 1959** Under the London-Zurich Agreement, guaranteed by the United Kingdom, Greece, and Turkey, Cyprus is granted independence as a republic; Archbishop Makarios III is elected president and Fazil Kucuk vice president.
- 1960** The constitution of Cyprus takes effect; the first elections to the House of Representatives are held.
- 1963** Archbishop Makarios III issues 13 proposals to amend the constitution in an effort to assure Greek ascendancy in government.
- 1964** The Cypriot National Guard is formed. The UN peacekeeping force reaches Cyprus.
- 1967** Kucuk declares the Turkish Provisional Administration.
- 1968** Makarios III is reelected president by an overwhelming majority.
- 1974** General George Grivas, the Eoka leader, dies. Makarios is overthrown by right-wing National Guard troops, who name Nicos Sampson as head of state; Makarios flees the country. Turkish army invades Cyprus and after heavy fighting occupies the northern third of the country, including the cities of Famagusta and Kyrenia and part of Nicosia. Makarios returns from Greece and is reinstated as president.
- 1975** The Turkish-held northern sector proclaims itself as the Turkish Federated State of Cyprus, with Rauf Denktash as president.
- 1977** Makarios dies and is succeeded in office by Spyros Kyprianou, who is elected president.
- 1983** The northern sector proclaims independence as the Turkish Republic of Northern Cyprus (TRNC). Kyprianou is reelected president.
- 1988** George Vassiliou is elected president.
- 1990** The republic submits a formal application for full EU membership, sparking a storm of debate from the Turkish Cypriot community.
- 1993** Glafkos Clerides is elected president. Turkish Cypriots hold multiparty parliamentary elections.
- 1994** The republic begins a five-year development plan, greatly expanding computerization and telecommunications.
- 1995** TRNC President Rauf Denktash wins reelection.
- 1996** For the first time since 1974, violent clashes between Greek Cypriot and Turkish Cypriot forces result in the death of two demonstrators and escalated tensions.
- 1997** The Republic of Cyprus purchases missiles capable of reaching the Turkish coast, evoking threats of retaliation from Turkey. President Clerides and TRNC President Denktash engage in a series of face-to-face meetings to discuss settlement.
- 1998** Glafkos Clerides is reelected president by a narrow margin. Accession negotiations begin in March.
- 1999** The republic's plan to deploy additional missiles again provokes Turkey's ire.
- 2002** Clerides and Denktash hold their first face-to-face meeting in four years in December. This meeting is followed by a second one, for which Denktash crosses to the south for the first time since the Turkish invasion of 1974.
- 2003** Tassos Papadopoulos defeats Clerides in presidential election. Turkish and Greek Cypriots cross the line dividing the island for the first time in 30 years.
- 2004** Both halves of the island vote on referendum to accept UN reunification plan; Turks vote for it, but Greeks reject it. Cyprus joins the European Union as a divided nation.

NATIONAL EMBLEM

The ornate white lion of the royal house of Bohemia. On the lion's shoulder is displayed a small red and blue shield featuring a flaming grenade against a stylized outline of Mount Krivak. The large red shield is of unusual heraldic shape—square at the bottom and triangular at the top.

NATIONAL ANTHEM

“Kde Domov Muj?” (“Where is My Native Land?”)

NATIONAL HOLIDAYS

January 1 (Establishment Day), May 1 (Labor Day), Easter Monday, May 8 (Anniversary of the Liberation), July 5 (Constantin and Methodius Day), July 6 (Jan Hus Day), September 28 (St. Wenceslas Day), October 28 (Nationalization Day), November 17 (Freedom and Democracy Day), December 25 (Christmas), December 26 (St. Stephen's Day)

DATE OF INDEPENDENCE

January 1, 1993

DATE OF CONSTITUTION

December 16, 1992 (ratified); effective January 1, 1993

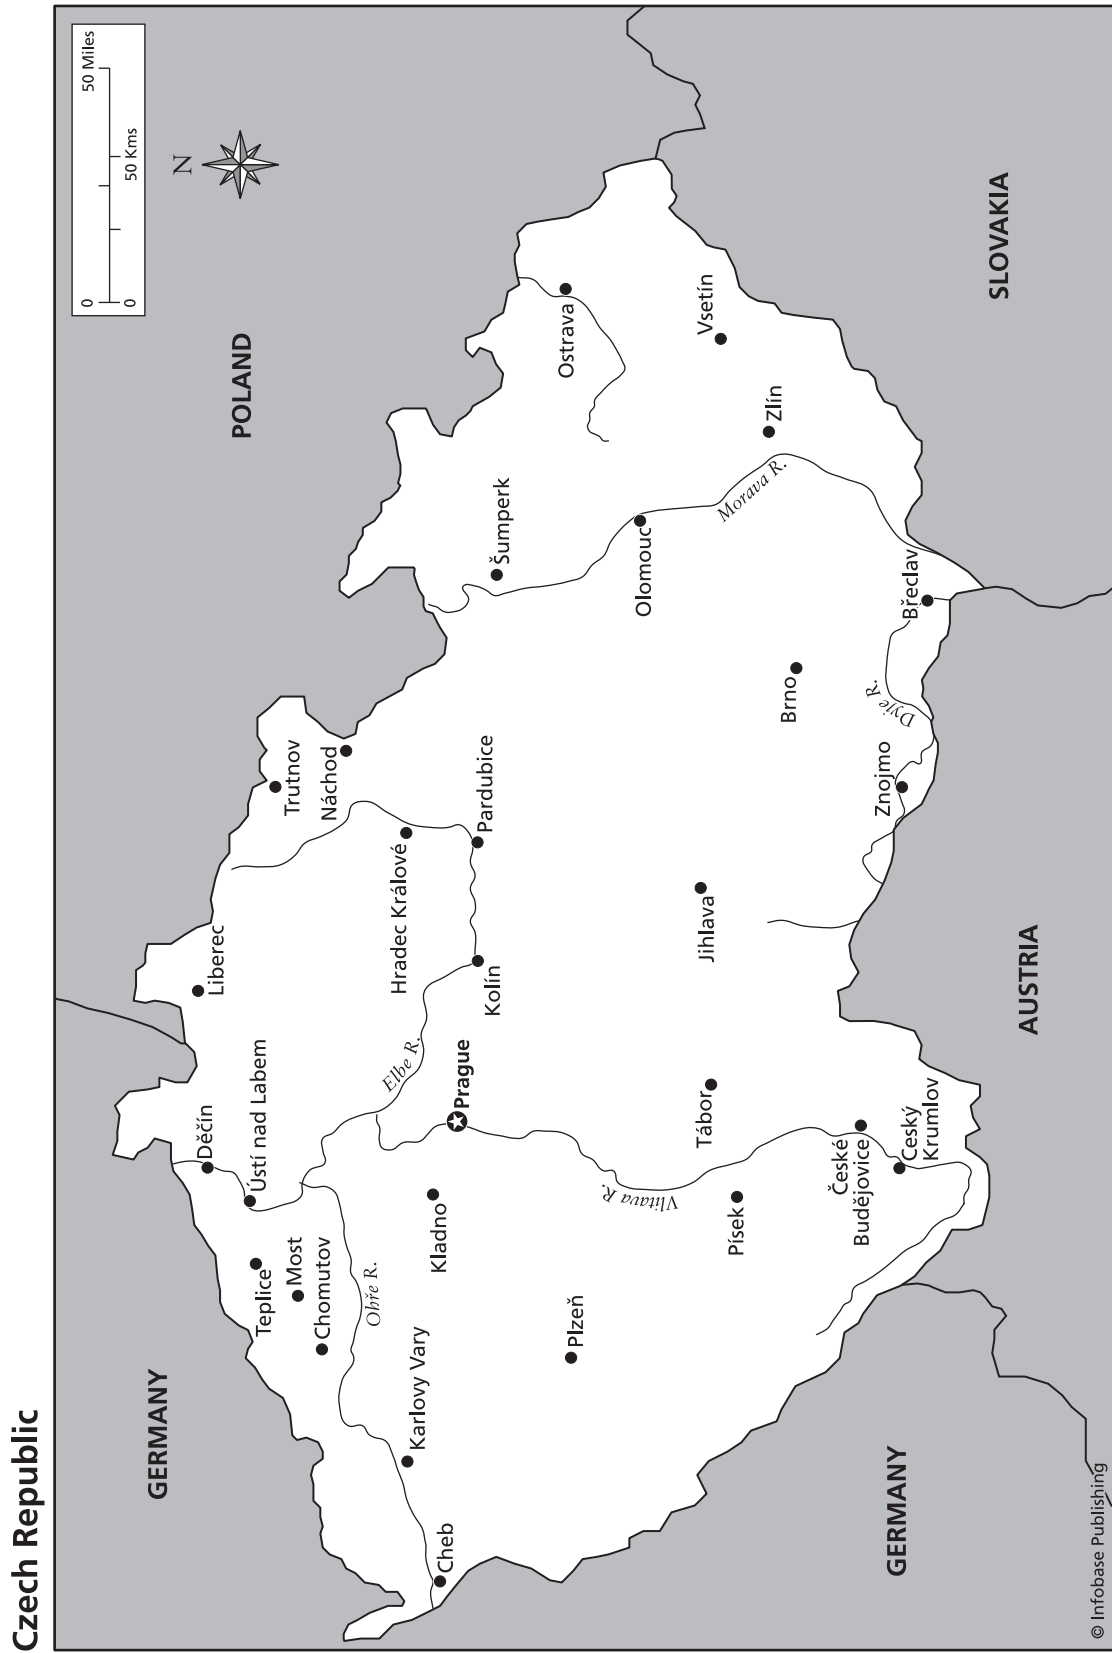

GEOGRAPHICAL FEATURES

The Czech Republic is a landlocked nation in the center of Europe, southeast of Germany. Its total area is 78,866 sq km (30,450 sq mi). The nation borders Austria, Poland, Germany, and Slovakia. There are two broad regions: Bohemia in the west and Moravia in the east. Bohemia consists of rolling plains, hills, and plateaus, surrounded by low mountains. Moravia is much more hilly and mountainous.

Europe's major watershed runs through the Czech Republic and separates the basins of the North, Baltic, and Black seas. The nation's principal rivers include the

Labe (Elbe), Vltava, Morava, Odra (Oder), and Dyje. There are 455 natural lakes in the republic, including a complex of five limestone lakes of glacial origin in the region of Bohemia. In addition, there are some 21,800 artificial lakes which have been created for farm fishing. The nation possesses a number of natural springs renowned for their therapeutic value. The warmest of these is the thermal spring at Karlovy Vary, with a temperature of 72°C (162°F).

The Czech Republic lies on the borderline of two major mountain systems: the Hercynian and the Alpine-Himalayan. The Krkonoše (Giant Mountains) mountain range stretches into Bohemia and creates a

natural border with Poland. The range is the highest in the republic. The Hruby Jeseník (Ash Mountains) are the second tallest mountains in the country and are located in northern Moravia. The third highest range in the Czech Republic is the Šumava (Bohemian Forest). These hilly ranges are known as the Český Les. The fourth major range in the nation is the Morava-Silesian Beskydy Mountains, which lie in the eastern part of the Czech Republic and in northern Moravia. They are a frontier range that runs north to south and borders Poland and the Slovak Republic.

The capital is Prague, situated on both sides of the Vltava River, near the center of Bohemia. Although one of the newest national capitals of Europe, it is one of the continent's oldest and most picturesque cities.

CLIMATE AND WEATHER

The Czech Republic is in Europe's temperate zone, and as such has relatively mild winters and summers, with only moderate precipitation. The mean annual temperature nationwide ranges from 6°C to 10°C (43°F to 50°F), although elevation greatly affects temperature. In the continental eastern regions, temperature variants are greater in the spring than in the fall.

Rainfall is influenced by elevation, the direction of exposure, shelter from winds, and situation on the windward or leeward side of mountains. Generally, rainfall increases toward the east. In the lowlands precipitation occurs mainly in the summer. The more hilly regions and piedmont areas receive up to 1,372 mm (54 in) of rainfall per year, the mountains up to 1,397 mm (55 in).

Climate and Weather

Mean Temperature: 43°F to 50°F
 Summer: 86°F/Winter 5°F
 Average Rainfall: 54 in to 55 in
 Bohemia: 22 in

FLORA AND FAUNA

About one-third of the Czech Republic is covered in forests. Virgin forests remain in mountain areas whose unsuitability for cultivation has enabled them to escape centuries of clear-cutting. There are high-altitude forests in Bohemia and Moravia, but they have been damaged by acid rain. The highest areas (above 1,400 m; 4,592 ft) are covered with grasses, shrubs, and lichens. The Czech Republic is still home to numerous mammals, including wildcats such as lynx, marten, mink, otters, and marmots, as well as the occasional bears or wolves crossing the Carpathians into Moravia. Common birds include ducks, geese, partridges, pheasants, and other game birds that inhabit forests and marshes. Other birds are grouse, osprey, storks, bustards, eagles, and vultures.

 Induced Abortions: 31,142

ETHNIC COMPOSITION

The breakup of Czechoslovakia resulted in the dissolution of a multiethnic state and the emergence of a relatively homogeneous population in the Czech Republic, where ethnic Czechs now make up some 94.4 percent of the total population. Other ethnic groups include Slovaks

(3 percent), Poles (0.6 percent), Germans (0.5 percent), Gypsies (0.3 percent), and Hungarians (0.2 percent). There are also small Jewish and Russian populations. Following the 1994 breakup some 300,000 Slovaks declared themselves Czech citizens; the border between Slovakia and the Czech Republic is open for citizens of the former Czechoslovakia.

LANGUAGES

Both Czech and Slovak are spoken in the Czech Republic. Many Czechs speak German as well as English, which has become the most desired foreign language in the universities. During the Communist era Russian was taught in school, but the language is little used today. The major ethnic groups, including the Poles, Germans, and Hungarians, speak their own languages. In addition, the Jews and Gypsies speak the languages of their communities for general communication but use Yiddish or their own languages in private conversation.

RELIGIONS

Moravia was Christianized in the ninth and 10th centuries by Cyril and Methodius. The Kingdom of Bohemia became Catholic under King Wenceslas. Roman Catholicism is the majority religion, though a deeply persecuted one from 1947 to 1990. In 1989 the Czech Republic passed laws establishing freedom of religion and lifting the regulations used by the Communist regime to repress religion.

Roman Catholics now account for 39.2 percent of the population. The Czechoslovak Hussite Church is a reformed Catholic sect that split with Rome after World War I and is the second largest Christian denomination. Protestants make up only 4.6 percent of the Czech population; Lutheranism is the dominant Protestant denomination. Other Protestant churches include the Evangelical Church of the Czech Brethren and the Reformed Christian Church. A large percentage of Czechs describe themselves as either atheists (39.4 percent) or uncertain about religion (13.4 percent).

Of the 300,000 Jews in Czechoslovakia before World War II, only about 40,000 survived. Due to continued emigration only about 5,000 to 6,000 remain.

HISTORICAL BACKGROUND

The earliest inhabitants of the present-day Czech lands were Celtic tribes who settled in Bohemia as early as 500 B.C.E. The Celts were displaced by seminomadic German tribes. In the fourth century C.E. the Germans began to move westward, and by the fifth century the region was a Slavic domain. The sixth century witnessed the onslaught of the Avars, a pastoral people speaking a Ural-Altai language. They were repelled by Samo, who unified the Slavic tribes and in 625 established the Samo Empire, which lasted until 658 as the first Czech polity. Early in the ninth century the Moravian Empire emerged, and German missionaries began to spread Christianity within the empire. The Moravians allied themselves with the Germans, and Moravia was permanently drawn to the West.

The Moravian Empire disintegrated with the Magyar invasions. The Czech tribes broke away and swore allegiance to the Franks, while the Slovaks remained under Magyar rule for successive centuries. The political center of gravity shifted as a result of the demise of the Moravian Empire, and a new empire emerged in Bohemia in the 10th century. This empire was controlled by chiefs of the Cechove, from which Czech is derived. The third ruler of this dynasty was King Wenceslas, who became the national saint. The Bohemian Kingdom eventually became a fiefdom of the Holy Roman Empire. After the royal line came to an end in 1306, a new royal family was started by John of Luxembourg, who was the son of the Holy Roman Emperor.

The reign of the second Luxembourg king, Charles IV (1347–78), is known as the Golden Age of Czech history. During his reign Prague became an archbishopric, and a supreme court and university were established. Following his election as Holy Roman Emperor in 1355 Prague became the imperial city, and extensive building projects were undertaken, including the Charles Bridge across the Vltava.

In the aftermath of the Golden Age the Hussite movement emerged and dominated Czech history for the next 100 years. Jan Hus, rector of the University of Prague, rejected the corruption, wealth, and hierarchy of the Roman Catholic Church and espoused the teachings of John Wycliffe. Hus was condemned as a heretic and burned at the stake in 1415. His death sparked generations of religious warfare, pitting Catholics against reformers and Czechs against Germans. This conflict was exacerbated by dynastic squabbles, which were finally ended in 1526 when Ferdinand united the crowns of St. Stephen and St. Wenceslas under Austrian control. Austria would rule the Czechs for 392 years, until 1918.

The early years of Austrian rule were marked by efforts to suppress Czech nationalism and the Hussites. On November 8, 1620, the Czechs were decisively defeated

Religious Affiliations

at the Battle of White Mountain. From then on Austrian rule was secure.

Concurrent with this period of Austrian hegemony, the Czech lands were devastated by the Thirty Years War (1618–48) between the Catholic and Protestant powers of Europe. The Treaty of Westphalia (1648) ended the war and incorporated the Bohemian Kingdom into the Hapsburg imperial system. German became the official language.

During the Enlightenment reforms were enacted that limited the power of the Roman Catholic Church, and Josef II (1780–90) abolished serfdom and, through the Edict of Toleration in 1781, extended religious freedom of worship to Lutherans and Calvinists.

The first half of the 19th century witnessed a rebirth of Czech nationalism. However, the Revolution of 1848 was crushed by the imperial Austrian forces and absolutism was restored under the Hapsburg emperor Franz Josef (1848–1916).

The establishment of the Dual Monarchy and the reconfiguration of the empire into the Austro-Hungarian Empire did not bring any concessions to the Czechs. When World War I began, the Czechs intensified their efforts to break away from the empire. Czech and Slovak leaders joined together to establish the Czech National Council and set up centers of resistance in Vienna, Prague, Budapest, and Bratislava. In the fall of 1918 the Allies recognized the council as the government of an independent republic. At the Paris Peace Conference the Allies approved the establishment of the Czechoslovak Republic, which included Bohemia, Moravia, Silesia, Slovakia, and Ruthenia.

Czechoslovakia was officially founded on October 28, 1918. A new constitution was adopted and a national assembly and president were elected. Czech and Slovak were recognized as the national languages and special protections were granted to minorities. In an effort to defuse potential separatist movements, the national government was highly centralized and provincial assemblies had only nominal powers.

Between 1918 and 1938 Czechoslovakia had relatively stable governments, but there soon emerged a struggle between the national government and the Sudeten Germans. A strong sense of German nationalism among this minority fueled the rise of the Sudeten Nazi Party, which supported Adolf Hitler's Pan-Germanism.

After Hitler's annexation of Austria on March 13, 1938, Czechoslovakia became the next target. Hitler wished to use the Sudetenland as a bridgehead for further expansion into eastern Europe. Neither Great Britain nor France desired war and capitulated to Hitler's demands at the Munich Conference for the swift return of Sudetenland to Germany. The Munich Agreement stripped Czechoslovakia of 38 percent of Bohemia and Moravia. It also yielded 11,882 sq km (4,586 sq mi) to Hungary and part of the region of southern Tesin to Poland. Mean-

while, encouraged by Hitler, both Slovakia and Ruthenia asserted their independence. In November 1938 a new republic was established that consisted of three autonomous units: Bohemia-Moravia, Slovakia, and Carpatho-Ukraine, as sub-Carpathian Ruthenia was renamed. Hitler completed his conquest of the republic on March 15, 1938, when he forced the Czech government to capitulate and become a German protectorate.

German rule was moderate at first but, following student demonstrations in November 1939, became brutal under the direction of the notorious Reinhard Heydrich and, after his assassination, General Kurt Daluege. A government-in-exile was established in London and Czech and Slovak resistance was active throughout the war.

The postwar settlement resulted in numerous boundary and population changes. Ruthenia was ceded to the Soviet Union. All Sudeten Germans were expelled under harsh conditions. Territory that had been ceded to Poland was returned, and the nation engaged in a population exchange with Hungary.

In 1946 a Communist-led coalition government assumed power following elections in which the Communists pulled 38 percent of the vote. In 1948 the Communists staged a coup and charged the non-Communist political parties with subversion. All non-Communists were purged from the government, which began nationalizing private industry. A new constitution was enacted, and the provinces of Bohemia, Moravia, and Slovakia were replaced by 19 administrative provinces. Numerous arrests, confiscations, and executions occurred as the Communists sought to enhance their power. There were also restrictions placed on churches, and church property was confiscated.

In 1950 the government banned all books published in Czechoslovakia before 1948. That same year all monastic houses were seized and a new criminal code was adopted. A year later there were mass purges. In 1960 a new constitution was adopted, and the nation's name changed to the Czechoslovak Socialist Republic.

However, in 1968 proreform Communists gained power and Alexander Dubček was named the first secretary. The so-called Prague Spring initiated a series of reforms, but the Soviet Union responded by organizing an invasion of the nation by its Warsaw Pact allies. Thousands were executed or exiled and Dubček was replaced by Gustav Husak.

The reform spirit remained strong, and in 1977 a group of dissidents and reform-minded intellectuals issued Charter 77. These efforts culminated in 1989 when Husak resigned and the "Velvet Revolution" led to the demise of the Communist Party. Playwright Vaclav Havel became president and a non-Communist cabinet took power. The following year the Communists were defeated in national elections. Havel was reelected president.

In 1992 a leftist government came to power in Slovakia; the new government pressed for a dissolution of Czechoslovakia. The result was the breakup of the nation in what became known as the “Velvet Divorce.” New constitutions were established. The next year Hável was elected president of the new Czech Republic.

By 1997 privatization efforts had begun to yield positive results, and the Czech economy reoriented itself to the West more quickly than any of the other former Eastern bloc nations. This aided the republic’s negotiations with the European Union for admittance to the organization. In 1998 Hável was again elected president. The Czech Republic became one of three former Warsaw Pact nations to join the North Atlantic Treaty Organisation (NATO) in 1999. Hável continued to work on getting the nation admitted to the European Union, and in December 2002 he received an invitation to join the organization.

Hável stepped down as president in February 2003. His successor, Vaclav Klaus, who had many disagreements with Hável during his tenure as prime minister from 1992 to 1997, accepted the European Union’s formal invitation to membership following a referendum in which voters approved the plan. The Czech Republic officially joined the European Union on May 1, 2004, along with nine other nations. Klaus is a member of the conservative Civic Democratic Party. He has made full integration into the European Union his top priority. In July 2004 he named Stanislav Gross, leader of the Social Democrats, as prime minister, who resigned in 2005 amid corruption allegations and was replaced by Jiri Paroubek.

CONSTITUTION

The new constitution of the Czech Republic, which became effective following the breakup of Czechoslovakia, detailed the relationship between the executive and legislative branches and established an independent judiciary. It also defined the civil rights of the new nation. Under the constitution the nation is a democratic, unitary republic. There is universal suffrage for those 18 years and older.

The chief executive is the president, who is elected by the parliament for a five-year term. The president may serve a maximum of two consecutive terms. The president is the commander in chief of the armed forces, but power is limited to the right to veto bills passed by the legislature, with the exception of constitutional acts. The president appoints the cabinet, following recommendations by the prime minister.

The legislature consists of two bodies: the Chamber of Deputies and the Senate. The legislature approves all bills and ratifies international treaties.

The government consists of the prime minister, the deputy prime minister, and cabinet ministers. The government manages the administration and has legislative initiative for the state budget. Because of the presence of a number of political parties (16 different parties in the 1996 elections), governments are usually coalitions of different parties. Management of the state budget and control of state property is the domain of the Supreme Audit Office. The office is an independent controlling agency that also audits the government. Many aspects of the economy are overseen by the Czech National Bank. The president and executives of the bank are appointed by the nation’s president. The bank is independent of the cabinet, and its main goal is to maintain the stability of the currency.

The judiciary is divided between the Constitutional Court and the Supreme Court. The Constitutional Court consists of 15 judges who are appointed by the president and approved by the Senate. Judges serve for 10 years. The court oversees constitutional issues. The Supreme Court is the highest judicial body in all legal matters except constitutional ones.

PARLIAMENT

The Czech parliament is a bicameral legislature. The lower house is the Chamber of Deputies and is based on a system of proportional representation. Political parties must gain at least 5 percent of the vote in order to obtain seats in the Chamber. Deputies in the Chamber must be at least 21 years old. The lower house consists of 200 representatives who are elected for a four-year term. The Chamber can be dissolved by the president under certain guidelines provided by the constitution. Such a dissolution occurred in 1997 following the collapse of the center-right coalition because of longstanding disputes among the members.

The upper house of the legislature is the Senate. The Senate is made up of 81 senators elected for six-year terms. The minimum age for election to the Senate is 40 years, and senators are elected by majority vote. Every two years one-third of the Senate is reelected. The Senate cannot be dissolved.

A bill is passed by the Chamber of Deputies and then sent to the senate, which can approve it, veto it, or send it back with amendments. Constitutional amendments and international treaties must be approved by a 60 percent majority.

POLITICAL PARTIES

The Assembly for the Republic—Republican Party of Czechoslovakia (SPR-RSE) is a right-wing, nationalist

party. The Czech Social Democratic Party (CSSD) is a center-left party that was founded in 1878 but banned during Communist rule. The CSSD won 70 seats in the 2002 election and formed a centrist alliance with the Christian Democrats and the Freedom Union. The Christian Democratic Union–Czechoslovak People's Party (KDU-CSL) is a conservative Christian party that is the successor to the Catholic People's Party. The Civic Democratic Party (ODS) is a center-right party that supports privatization and strong ties with the West. The Communist Party is leftist and has splintered into factions, including the Communist Party of Bohemia and Moravia (KSCM). The Communist Party won 41 seats in 2002. The Freedom Union (US) is a conservative party formed by defectors from the ODS, and the Green Party is a left-of-center environmental party.

LOCAL GOVERNMENT

The Czech Republic is divided into two regions (Bohemia and Moravia), 13 self-governing administrative districts, and Prague. There are also about 80 municipalities, or districts, ranging in size from over one million (Prague) to about 50,000 residents. Municipalities receive funding from the state and are not allowed to raise money themselves. Most municipal decisions are made by the national government. There is no regional tier of government.

LEGAL SYSTEM

Civil law is based on Austro-Hungarian codes, and there has been an effort to bring the nation's legal system into line with the obligations of the Organization on Security and Cooperation in Europe (OSCE) by eliminating the vestiges of Marxist-Leninist legal theory. The judiciary is an independent branch of the government that is divided into two broad courts, the Constitutional Court and the Supreme Court. The Constitutional Court consists of 15 judges who are appointed by the president and approved by the Senate. Judges serve for 10 years. The court oversees constitutional issues. The Supreme Court is the highest judicial body in all legal matters except constitutional ones. It has three councils, one each for civil, penal, and military cases.

There is a system of upper courts, which are located in the capitals of the various regions. In addition, each district has a lower court known as a district court made up of three judges, one professional and two chosen by the community.

HUMAN RIGHTS

Human and civil rights are guaranteed by the Bill of Fundamental Rights and Freedoms. Czechs enjoy freedom of speech, religion, and press.

Following the breakup of Czechoslovakia the Czech Republic enacted a restrictive citizenship law that limited the number of residents who could become citizens. Those former Czechoslovakians who did not become Czech citizens were not permitted to vote, serve in the government, or participate in privatization programs. In addition, citizenship had to be established before persons could petition for redress of past official actions or the wrongful confiscation of property. Amendments added in 1996 made it possible for those with criminal records to gain citizenship.

Certain minority groups within the Czech Republic face varying forms of discrimination. The Gypsy or Roma population remains the target of the most significant discrimination. The nation has been criticized for the Romas' disproportionately high rates of poverty, unemployment, and illiteracy.

FOREIGN POLICY

Since 1989 Czech foreign policy has been characterized by a pro-Western orientation. Successive governments have worked to join Western governmental organizations. The main goals were membership in the European Union and NATO. An agreement between the Czech Republic and the European Union was signed in 1992 that covered various aspects of trade liberalization.

In its efforts to join NATO the Czech Republic became a member of the Partnership for Peace (PfP) program, which was perceived as a precursor to full membership in the alliance. As a PfP member the Czech Republic participated in NATO peacekeeping operations in Bosnia. In December 1997 the nation was invited to join the alliance, formally joining in March 1999.

Czech foreign policy has also promoted regional cooperation. In 1992 the Czech Republic, Hungary, and Poland signed a free trade agreement known as the Central European Free Trade Area (CEFTA). This initiative called for the elimination of trade restrictions among member-states and the eventual removal of trade barriers between CEFTA and the European Union. CEFTA was also seen as a means to promote individual entry into the European Union by demonstrating the capability to remove trade restrictions and encourage free trade. The country gained EU membership in 2004.

In 2000 the Czech Republic opened the Temelin nuclear power plant, which sparked a serious disagreement with Austria. In 2001 the two nations resolved the dispute by agreeing to stringent safety measures. The government has also generated conflict with Germany and Hungary by expelling 2.5 million ethnic Germans and Hungarians under the postwar Benes decree; the government was put under pressure to revoke this decree but refused.

DEFENSE

Since the end of the cold war the Czech military has adopted a number of Western-style reforms to strengthen civilian control of the armed forces and has cut personnel by some 25,000. The army includes ground forces, air forces, and special forces. Czech have been obligated to spend 12 months in compulsory military service, but conscription is scheduled to end in 2005. The president is the commander in chief of the military. The government has also initiated a variety of cooperative programs with Western militaries, such as joining the PfP. The goal of these efforts was Czech entry into NATO, which occurred in 1999. In fiscal year 2001 the Czech Republic spent \$1.19 billion on the armed forces, which was about 2.1 percent of gross domestic product (GDP).

ECONOMY

The Czech Republic was initially regarded as the most prosperous and advanced of the post-Communist central European states. A series of problems undercut the country's transformation during the 1990s, but since 2000 the republic has pulled its way out of recession and the economy has been growing steadily. In 2004 the economy grew at a rate of 2.9 percent. The country has been exporting goods to the European Union, especially to Germany, and foreign investment has nearly doubled since 2000. Interest rates have dropped and credit cards and mortgage loans have become readily available, spurring Czechs to consume more. Inflation is under control, at 0.1 percent in 2004. The deficit has averaged around 5 percent of GDP, which could cause problems in the future.

The major exports of the country are machinery and manufactured goods, and one-third of the workers remain in the industrial sector. Mining is also a major industry, and coal provides the nation's major energy source. The service industry employs the majority of workers. The major trading partners of the nation are the European Union states and Slovakia. Increased investment in the banking, telecommunications, and energy industries should attract future foreign investment. Privatization of more businesses is one of the country's keys to future economic growth.

ENVIRONMENT

There are 1,246 protected areas or national parks in the Czech Republic. The largest of these areas is the Krkonoše National Park. The major environmental concerns of the nation involve lasting damage from industrial output during the post–World War II era. The use of coal and other fossil fuels has led to significant levels of acid rain, which have damaged forests; acid rain is especially troublesome in the north and at higher altitudes. In addition, industrial runoff from mining and manufacturing has led to air and water pollution in areas of northwestern Bohemia and northern Moravia, especially around Ostrava. Deforestation is another major problem.

LIVING CONDITIONS

Most cities are built around a central square that usually has a church built on one end. Most people live in apartments or multiplex housing instead of stand-alone houses, as affordable housing is in short supply. Few people own cars, and those who do own them do not always drive them because of the difficulty involved in parking and the terrible reputation of Czech drivers. Instead, people use public transportation, such as subways, buses, and trams. Transportation in and out of the country is fairly easy, especially by train. Driving a car into the country means

entering at a particular checkpoint and buying a permit to drive on the highways. The internal road system is good. People have traditionally done their shopping at small specialty shops such as butcheries and bakeries, but larger supermarkets are starting to appear. Many cities have been refurbishing their buildings and infrastructure as the economy has improved. Crime rates are growing, and air pollution is a continuing problem.

HEALTH

The health-care system is supervised by the Ministry of Health and Parliament and financed by various health-insurance companies. Most hospitals are owned either by the state or by municipalities. The state guarantees the entire health-care system. The health-care system has deteriorated in recent years, and decentralizing the system has caused some adjustment difficulties. Health-care workers are struggling to develop necessary services, such as hospice or palliative care.

Despite these difficulties the Czechs are among the healthiest people in the world, as is typical of relatively wealthy Western nations. Life expectancy is high and infant mortality is low, though both numbers are slightly worse than those in western Europe. Heart disease is the most common serious illness in both men and women. Lyme disease is endemic in some areas.

FOOD AND NUTRITION

Czechs usually have their largest meal in the middle of the day and a light meal in the evening. They may eat big meals on weekends. Czech cuisine is typical of central European cooking, as influenced by practices in Germany, Hungary, and Poland. A typical meal features roasted beef or pork with potatoes, dumplings, and sauerkraut topped

with sauce, often flavored with caraway seed, bacon, and salt. Dessert may be pastries such as crepes, tarts, or fruit-filled dumplings. The Czech Republic is famous worldwide for its beer. Moravian wine is also well known.

STATUS OF WOMEN

The Czech Republic has universal suffrage for all citizens over 18 years of age, and women are given the same civil rights as men. However, there is no government agency to oversee enforcement of equal rights, and discrimination occurs in both the home and society in general. Politics also continues to be dominated by men, although the newer independent parties have placed women in leadership positions. In 1998 the government promulgated a resolution called Priorities and Procedure of the Government in Promoting the Equality of Men and Women, in which the state promised to equalize the position of women in the government and in society. Of particular note was the tendency of employers to discriminate against women with children. The state also pledged to combat violence against women, which is a continuing problem.

Women

WORK

The Czech Republic has become a better place to work in recent years, and the population seems to have successfully made the transition from Communism to a free-market system. Unemployment in 2004 was 9.9 percent. Per capita GDP was \$15,700. About 60 percent of workers are employed in services; tourism is one of the growing service industries. The government continues to be a major employer. A total of 35 percent of employees worked in industry, construction, or commerce, producing machinery and motor vehicles, weapons, glass, metal products, and other things. Only 5 percent of the workforce still works in agriculture; main agricultural products are wheat, potatoes, sugar beets, and hops, as well as pigs and chickens.

Employment and Labor

EDUCATION

The Czechs are a highly educated people; essentially everyone in the country is literate. Many children attend preschool and kindergarten, but formal education begins at age six. Children remain in common schools for nine years, after which they can choose between vocational or apprenticeship schools and secondary schools (high schools). Entrance into universities is determined by students' scores on the *maturita* (school exit) exam. Universities are quite competitive, and students are now expected to help pay for their college education. The largest and most prestigious university is Charles University in Prague, which was founded in 1348. There are also increasing numbers of private schools.

SCIENCE AND TECHNOLOGY

The Academy of Sciences (ACSR) was established by the state in 1992 as a successor to the Czechoslovak Academy of Sciences. ACSR is the leading nonuniversity research institution in the republic. It has three divisions: mathematics, physics, and earth sciences; chemical and life sciences; and humanities and social sciences. It manages 60 research institutes and five supporting units; over half of its employees are university-

trained scientists. The academy advises the government on scientific policy and runs national and international research programs.

The Association of Research Organizations (AVO) is the Czech Republic's scientific-research community within the business sector. Member organizations come from private industry and the construction and architecture fields; the AVO has 8,000 members. The association exists to promote research and development and apply the results to industry and agriculture. The AVO cooperates with the republic's Academy of Sciences and the research universities and also with international partners. The AVO is itself a partner to the state administration and assists the government in making laws to support scientific research and development.

Scientists and Engineers in R&D per 1 million people: 1,353
 Expenditures in R&D as % of GDP: 1.0
 High-Tech Exports \$billion: 4.5
 Patent Applications by Residents: 605

MEDIA

The end of Communist rule in 1989 resulted in the establishment of numerous new journals and media outlets. By 1996 there were approximately 1,168 journals and periodicals published in the republic as well as numerous daily newspapers. The largest is *Mladá fronta dnes*, which was a youth paper under the Communist regime but is now a modern, Western-style daily. The press is guaranteed freedom but most journalists do not believe that they are allowed to voice their true opinions.

The same accusations have been leveled at the government by broadcast journalists. In 2000 journalists and the government had an angry dispute over control of the national public television station, in which the media accused the government of political interference in broadcasts. The Czech Republic has a dual public-private broadcasting system. Czech Radio and Czech Television are state owned. The public television operation, Česká Televize, runs two channels. The public radio station, Český Rozhlas, broadcasts over three national networks and supplies services to many local networks. There are also numerous private television and radio stations competing for audiences with the public stations.

CULTURE

The Czech Republic has long been a bastion of high culture. The architecture has been famous for centuries and features castles, town squares, churches, and other buildings of note. Architectural styles run the gamut from Baroque to Art Nouveau and Cubist; the Czech Renaissance style is especially noteworthy. The visual arts have thrived, albeit with a brief downturn during the Communist era, and there are many excellent examples of religious sculpture and illuminated manuscripts. Czech puppet theatre is among the best in the world.

Literature is a national passion; Czechs love to read. Some famous authors include Franz Kafka, Josef Škvorecký, Ivan Klima, Jaroslav Siefert, Bohumil Hrabal, and Milan Kundera as well as the former Czech president Vaclav Hável. Czechs also love music. Street musicians often play in town squares, and Czechs will listen to nearly any musical genre. Antonín Dvořák is perhaps the most famous classical Czech composer. Czech musicians have been at the forefront of the jazz movement in Europe since the end of World War II. The keyboardist Jan Hammer composed the theme music for the U.S. television program *Miami Vice*.

FOLKLORE AND MYTHOLOGY

Czechs are very proud of their folklore. Many people own colorful, lace-trimmed costumes that they wear to folklore festivals to perform traditional dances and songs; polkas and waltzes are typical dances. Many folklore events occur around Easter. Traditional Czech crafts include hand-painted eggs, lace, straw figurines, pottery, and sculptures made of hardened dough. The Good King Wenceslas of English Christmas carol fame was a Czech; he is the nation's patron saint.

ENTERTAINMENT AND RECREATION

Czechs love to spend weekends and evenings in local bars and pubs drinking their local beer and wine. They also enjoy hobbies such as gardening, hiking, taking day trips, reading, music, and the arts. Many people go to cultural events such as the opera, the symphony, plays, and art exhibits.

Festivals play an important part in Czech recreation. Nearly every day has its patron saint, and festivals and public holidays occur frequently. On April 30 Prague holds a witch-burning festival called Pálení Čarodějnic; nowadays people burn plain bonfires without witches in them, but the festival dates to pre-Christian times. The Prague Spring International Music Festival takes place in May and June, the International Book Fair occurs in May, and the Mozart Festival follows in September. Prague is usually overwhelmed with visitors who come to celebrate the Christmas holiday season.

ETIQUETTE

Czechs are usually even tempered and polite and willing to discuss a wide variety of political viewpoints. Tipping 5 to 10 percent has become standard practice at restaurants; the local custom is for the diner to tell the waiter how much he or she is paying when handing over money, including the tip in that amount. Long lunches are a typical business practice. Many Czechs speak German or English; older people tend to speak German, younger ones English.

FAMILY LIFE

Czech families are typically small, with only one or two children. National fertility rates are quite low, with only 1.18 children born per woman in 2004. Parents continue to help their children after they grow up and move out, babysitting their grandchildren and helping with shopping. The mean age of marriage is fairly young, in the early to mid-20s. Divorces are fairly easy to obtain, but courts will insist that the arrangements not go against the interests of any minor children.

PERSONAL APPEARANCE

Czechs dress in typical Western clothing, similar to that in the rest of Europe or in the United States. Traditional Czech costumes are readily available in stores, but Czechs only wear them for special festivals.

SPORTS

The most popular sports in the Czech Republic include soccer, tennis, ice hockey, skiing, volleyball, cycling, table

tennis, hiking, horseback riding, and swimming. Czechs have won numerous awards at international sports competitions in track, skiing, and cycling. The tennis player Martina Navratilova is a Czech. The most popular spectator sports are soccer and ice hockey. The Czech soccer team won the World Championship in 1934 and 1962 and the European Championship in 1976. The Czech national hockey team has won the World Hockey Championship eight times and won the gold medal in the 1998 Olympics.

CHRONOLOGY

- 1945** The post–World War II peace settlements result in the expulsion of Sudeten Germans, Hungarians, and territorial losses to Russia and the acquisition of land from Poland.
- 1946** After elections in which they received 38 percent of the vote the Communists establish a coalition government.
- 1948** A Communist coup results in the purge of all non-Communists from the government and numerous arrests and executions; the government begins to nationalize private land and industry.
- 1949** Council for Mutual Economic Assistance (CMEA) is formed; government places restrictions on churches and confiscates church property; thousands are arrested in purges.
- 1950** Government bans all books published in Czechoslovakia before 1948; most monastic houses are confiscated; new criminal code is passed.
- 1951** In mass purges members of Central Committee are arrested, tried, and executed.
- 1960** New constitution is promulgated; the official name of the state is changed to Czechoslovak Socialist Republic.
- 1968** Proreform Communists gain power; Alexander Dubček named first secretary; the “Prague Spring” initiates a series of reforms, which end the more ruthless aspects of the Communist regime; in response, the Soviet Union organizes an invasion of Czechoslovakia by its Warsaw Pact allies. Thousands are arrested, executed, or exiled. Dubček is replaced by Gustav Husak.
- 1977** A group of dissidents and intellectuals issues Charter 77.
- 1989** Husak resigns and the Communists give up power in what is known as the Velvet Revolution; human rights activist and playwright Vaclav Hável becomes president, and a new, non-Communist controlled cabinet is sworn in.
- 1990** In general elections the Communists are soundly defeated and Hável’s party, Civic Forum, captures 170 seats in the National Assembly, compared to the 47 of the Communists; Hável is reelected president.
- 1992** Czechoslovakia dissolves into two nations, the Czech Republic and Slovakia, in the so-called Velvet Divorce; a new constitution is established.
- 1993** Hável is elected president of the Czech Republic.
- 1997** Privatization efforts yield significant results, and the Czech economy reorients itself to the West faster than any of the other former Soviet satellites; the nation enters into the Accession Partnership agreement as negotiations with the European Union proceed for admission to the union.
- 1998** Hável is reelected president.
- 1999** The Czech Republic is one of three former Warsaw Pact nations to join the organization’s cold war nemesis, NATO.
- 2002** Prague and towns across the country suffer terrible flooding; EU summit in Copenhagen invites Czech Republic to join.
- 2003** Vaclav Klaus elected president. Czech people vote to join European Union in 2004.
- 2004** Czech Republic joins European Union on May 1. Stanislav Gross becomes prime minister.
- 2005** Gross resigns and is replaced by Jiri Paroubek.

OFFICIAL NAME

Kingdom of Denmark (Kongeriget Danmark)

ABBREVIATION

DK

CAPITAL

Copenhagen

HEAD OF STATE

Queen Margrethe II (from 1972)

HEAD OF GOVERNMENT

Prime Minister Anders Fogh Rasmussen (from 2001)

NATURE OF GOVERNMENT

Parliamentary democracy/constitutional monarchy

POPULATION

5,432,335 (2005)

AREA

43,094 sq km (16,639 sq mi) (excluding Greenland and the Faeroe Islands)

ETHNIC MAJORITY

Scandinavian

LANGUAGE

Danish

RELIGION

Lutheran

UNIT OF CURRENCY

Krone

NATIONAL FLAG

The Dannebrog, or “Danish cloth,” the oldest national symbol in continuous use in the Western world: a white cross, off center toward the hoist, on a field of red

NATIONAL EMBLEM

Denmark has a simple state emblem—three lions on a gold

shield with nine red hearts—and a much older royal arms. In the royal arms three shields are imposed upon one another. The Heart Shield contains the ancestral arms of the ruling family, two red bars on gold (Oldenburg), and a gold cross on blue (Delmenhorst). On the medium shield are devices against red backgrounds representing duchies absorbed by the realm: a silver nettle shield (Holstein), a silver swan (Stormarn), a mounted knight in gold armor (Ditmarsh), and a gold horse head (Lauenburg). The chief escutcheon is quartered by a large Dannebrog cross. One quadrant bears the 12th-century royal state emblem. In another, two blue lions on gold signify Schleswig. Below the arm of the silver cross, four devices in blue appear on one side, displaying three gold crowns, commemorating the union of Denmark, Norway, and Sweden in 1397, and three silver figures representing Danish dependencies: a falcon for Iceland, a ram for the Faeroe Islands, and a polar bear for Greenland. A blue lion on a gold background surrounded by red hearts marks the royal title as the ruler of the ancient tribe of the Wends; underneath is a gold wyvern, a fabled winged creature with a dragon’s head, representing dominion over the Goths. Two Norse giants stand beside the arms. Gold chains of Danish orders circle the shield with pendants dangling. A red ermine-lined gold-fringed cape topped with a bejeweled royal crown frames the ornate emblem.

NATIONAL ANTHEM

“Kong Kristian Stod Ved Hojen Mast” (King Christian stood by the lofty mast) and “Der er et Yndigt Land” (There is a lovely land)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), April 16 (Queen’s Birthday), June 5 (Constitution Day), all major Christian festivals

DATE OF INDEPENDENCE

800

DATE OF CONSTITUTION

June 5, 1849; revised June 5, 1953

GEOGRAPHICAL FEATURES

Located in southern Scandinavia, the Kingdom of Denmark consists of Denmark proper, the Faeroe Islands, and

Greenland. Denmark itself comprises the peninsula of Jutland (Jylland) and some 406 islands with a total land area of 43,094 sq km (16,639 sq mi), extending 402 km (250 mi) north to south and 354 km (220 mi) east to west. The only

Denmark

land boundary, with Germany, is 68 km (42 mi) long. The country is surrounded by water on the other three sides: the Skaggeak on the north; the Kattegat, the Øresund, and the Baltic Sea on the east; and the North Sea on the west. The total length of the coastline is 7,314 km (4,545 mi). There are no border or other territorial disputes.

The precise size of Denmark proper is subject to constant variation owing to marine erosion and deposit and reclamation work. Not included in the land area are inlets or fjords directly connected with the sea. The country's 406 islands (of which only 97 are inhabited) account for more than one-third of the land area. The largest are Zealand (Sjælland, 7,015 sq km; 2,709 sq mi), Fünen (Fyn, 2,984 sq km; 1,152 sq mi), Lolland (1,234 sq km; 480 sq mi), Bornholm (588 sq km; 227 sq mi), and Falster (514 sq km; 198 sq mi).

The capital is Copenhagen (København), on the island of Zealand (Sjælland) and the adjoining island of Amager on the western shore of the Øresund.

Denmark is a low-lying country, with its highest point, Yding Skovhøj in East Jutland, only 173 m (568 ft) above sea level. The surface relief is characterized by glacial moraine deposits, which form undulating plains with gently rolling hills interspersed with lakes. The largest lake is Arreso (40.6 sq km; 15.7 sq mi). Between the hills are extensive level outwash plains of the meltwater formed from stratified sand and gravel outside the ice limit. These heathland plains are the site of the country's densest settlements.

The boundary line between the sandy West Jutland and the loam plains of East and North Denmark is the most important geographical dividing line in the country. West of the line is a region of scattered farms; to the east, villages and towns.

Valleys furrow the moraine landscape. The East Jutland inlets were created by the intruding sea in the lowest part of the valleys, to which glacial erosion also contributed. The inlets form natural harbors, making maritime activities easy means of livelihood. The Gudenå River, the longest river in Denmark (158 km; 98 mi), follows the intersecting valley systems.

Flat sand and gravel tracts make up one-tenth of the total land area, particularly prevalent in the northern part of the country, such as in the Limfjorden area. These low-lying regions are often swampy. Along the coast of South Jutland, where there is a strong tidal variation, there are salt marshes. Dune landscapes form an almost unbroken belt along the entire coast of Jutland.

Denmark is in the north temperate zone, where the natural type of vegetation is the deciduous forest, but as it borders on the coniferous belt, spruce and fir thrive in plantations. About 11 percent of the land area is forest. Beech, oak, elm, and lime thrive in a few locations. Natural plant communities also include dune vegetation and heathland plants, which occur chiefly on the sandy heaths of West Jutland.

Greenland, the largest island in the world, has a total land area of 2,173,600 sq km (840,000 sq mi). Of this area, 1,833,900 sq km (708,100 sq mi) lie under its icecap. The greatest north-to-south distance is 2,670 km (1,660 mi), the greatest east-to-west distance 1,290 km (800 mi). The coastline runs 39,090 km (24,289 mi).

Greenland is mountainous, with lofty fringes, the highest point of which is Gunnbjørn Fjeld, 7,700 m (25,260 ft). The average thickness of the ice field is 1,515 m (4,971 ft).

The Faeroe Islands are in the Atlantic, northwest of Denmark. The Faeroes' 19 islands, of which 18 are inhabited, cover an area of 1,399 sq km (540 sq mi). The islands range 120 km (70 mi) north to south and 79 km (49 mi) northeast to southwest.

The Faeroe landscape is characterized by a stratified series of basalt sheets, with intervening thinner layers of solidified volcanic ash (tufa). The highest peak is Slaetartindur (882 m; 2,894 ft) on Østerø.

CLIMATE AND WEATHER

Denmark lies on the northwestern fringe of continental Europe, where the Gulf Stream brings warmth to the northern regions. The westerly winds temper the winter climate. The mean temperature in the coldest month is 12°C (22°F) higher than the average for Denmark's latitude. The waters of the Baltic isolate Denmark from the continental climate of eastern Europe. However, in exceptional winters, when ice closes the Baltic, cold air streams from the east can spread over the country. The lowest temperature ever recorded in Denmark was -31°C (-23.8°F). Conversely, easterly air streams during periods of high pressure in summer may hold off the westerly sea

winds. With the sun shining for a longer period then, there is a heat wave. The highest temperature ever recorded was 35.8°C (96.4°F).

Generally, however, the climate is in the intermediate range. The mean temperature of the coldest month, February, is 0.4°C (31°F), that of the warmest, July, 16.6°C (61.5°F), but there are great variations from the norm, especially in winter. The number of annual frost days ranges from 70 on the coasts to 120 in the interior.

The weather is significantly variable. As the fronts swing over the Danish region throughout the year, the weather is constantly changing. Westerly winds predominate, especially in gales. Gale damage is most common in West Jutland, particularly in spring.

The mean annual precipitation is 60 cm (23.6 in), ranging from about 80 cm (31.3 in) in southwest Jutland to about 40 cm (15.8 in) in the area of the Storebaelt (Great Belt). The number of days with precipitation fluctuates between 120 and 200. Snow falls from January through March, six to nine days a month. Rain is heaviest during August and October and lightest during the spring and winter months.

Climate and Weather

Mean temperature
February: 31°F
July: 61.5°F
Average Rainfall: 23.6 in
Jutland: 31.3 in
Great Belt: 15.8 in

FLORA AND FAUNA

Denmark has been inhabited for centuries, and the environment has been well used for fuel, building materials, grazing, and hunting. Virgin forest is very rare, though about 12 percent of the land is covered with trees. The largest continuous patch of forest is the 77-square-kilometer Rold Skov, a public forest that also contains Rebild Bakker, Denmark's only national park. Most trees are deciduous; the most common are oak and beech, but there are also chestnut, linden, aspen, birch, pine, maple, hazel, and elm. Denmark has several species of deer, including the large red deer, the roe deer, and the fallow deer. Other mammals include badgers, hedgehogs, hare, foxes, and squirrels. The nearly 400 species of birds include many pigeons, magpies, geese, ducks, and coots.

ETHNIC COMPOSITION

Denmark was traditionally one of the most ethnically homogeneous nations in the world. Recent decades have seen an influx of guest workers and asylum seekers, particularly from Turkey, the Middle East, and South Asia. Racially, there is no special Danish type. The present population is based on a racial mixture of descendants from the New Stone Age and the various groups that have immigrated since. The Nordic group is, nevertheless, most prominent, being characterized by blond, curling hair and blue eyes.

The only non-Scandinavian minority other than recent immigrant arrivals is a German community in South Jutland numbering about 40,000, or less than 0.8 percent of the population.

The population of Greenland is partly Eskimo but consists chiefly of Greenlanders, a Mongoloid-Caucasian mixture of Eskimos and Danes.

LANGUAGES

The official language is Danish, a branch of the East Scandinavian group of the Gothonic (Germanic-Teutonic) family of languages derived from Primitive Norse. In about the 12th century Danish began to evolve separately from Swedish. With Christianity came the Latin script. Another cultural influence was German, which filtered through the Hanseatic merchants and brought in its wake hundreds of new words for products and merchandise and also abstract words.

The period of early modern Danish (1500–1700) saw the written language become fixed in more or less the form it has today. Until 1700 the written and spoken languages varied considerably, and dialects dominated spoken Danish. However, with the growing centralization of the kingdom a standard spoken language began to take shape, called Rigsmalet. From the end of the 17th century Romance loan

words began to be adopted, such as musical and banking terms from Italian, cooking and fashion words from French, and scientific terminology from classical languages. Maritime words were also adopted from Dutch. More recently Danish has borrowed heavily from English.

Danish is spoken by about 5.3 million people, five million of them in metropolitan Denmark itself, with much smaller clusters in Germany, Norway, Greenland, and the New World. Faeroe Island inhabitants speak a distinct language, Faeroese.

RELIGIONS

The national church (*folkekirken*) of Denmark, under paragraph 4 of the constitution, is Evangelical Lutheran.

Christianity was introduced in 826 by the Benedictine monk Ansgar, from northern France. However, it was not nationally adopted until about 960, when, according to the Saxon chronicler Widukind, the monk Poppo converted King Harald Bluetooth after miraculously carrying a red-hot iron in his hands. The story of the Danish church in the Middle Ages reflects the continental struggle between the crown and the church. From about 1520 a reform movement gathered strength and resulted in the smooth adoption of Lutheranism in 1536 under the leadership of Johan Bugenhagen, Peder Palladius, and Hans Tausen. From 1660 the Lutheran State Church was headed by the king, ruling as an absolute monarch.

Religious life in the 19th century was influenced by three outstanding personalities: Bishop J. P. Mynster, Søren Kierkegaard, and N. F. S. Grundtvig, who renewed the hymn tradition.

As absolutism gave way to constitutionalism in 1849, religious freedom was introduced. The state supports the church as a national institution and as part of the Danish heritage. Financially, the church is maintained by a state tax, which is levied on church members along with an ordinary income tax. In addition, the state extends grants for the maintenance of old churches as national monuments. At the same time all other religious groups enjoy full freedom of association and worship.

Spiritually, the Danish church has no single authority. Clergy are trained in the theological faculties of the universities of Copenhagen and Århus. Numbers of new ordinations have been steadily declining in recent years. To make up for the lag, laymen and laywomen are being ordained in greater numbers.

The Danish Church Abroad was founded in 1919 to care for Danish communities outside the kingdom, the largest of which is in South Schleswig. Although weekly church attendance is estimated at less than 5 percent of the population, the national church exercises a strong influence on many aspects of social and cultural life.

The vast majority of Danes (95 percent in 2004) belong, at least nominally, to the established church. Other

Protestant sects (Danish Baptists, Methodists, Seventh-Day Adventists, Pentecostals, Reformed Church, Anglicans, and Mormons), as well as Russian Orthodox, number no more than a few thousand each. The German minority has its own independent Lutheran churches in addition to parishes within the main Danish church.

The Roman Catholic Church has maintained a presence in Denmark since 1849. Most of the 33,000 Catholics live in or around Copenhagen. Some 25 percent of the Catholics are descendants of immigrant Slavs. The majority of the guest workers of the 1970s are Muslims, creating a Muslim community currently estimated at 84,000. There are about 3,400 Jews and small concentrations of Baha'is and Buddhists.

Evangelical Lutheran	5,160,000
Other	271,000

HISTORICAL BACKGROUND

Little is known of Denmark's early history. Harald Bluetooth (d. 985), the first Christian king of Denmark, conquered Norway, and his son Sweyn conquered England. Under Canute (1018–35), Norway, England, and Denmark were united, but shortly after his death the union with England came to an end and Norway seceded. Danish hegemony was reestablished over Norway and Sweden by the Union of Kalmar in 1397. In 1523 Sweden broke free, but the union with Norway remained until 1814. The Reformation was established in Denmark during the reign of Christian III (1534–59). A series of wars with Sweden resulted in the loss of southern Sweden as well as Danish control of the Øresund. Meanwhile, under Frederick III (1648–70) and Christian V (1670–99) absolute monarchy was reestablished and remained in force until 1849. Denmark was on the losing side in the Napoleonic Wars and as a result lost Norway by the Peace of Kiel (1814). Within the next half century Denmark had lost to Prussia the southern provinces of Schleswig, Holstein, and Lauenburg. North Schleswig was returned to Denmark through a plebiscite after World War I. The Virgin Islands were ceded to the United States in 1917. A democratic constitution was introduced in 1849 and a revised one adopted in 1915. Denmark was invaded by the Germans in 1940 and served as a springboard for the invasion of Norway.

Greenland, discovered by Eric the Red, entered a formal union with Denmark in 1397. However, Denmark exercised no actual sovereignty until Hans Egede reached the island in 1721. Iceland came under Danish control along with Norway in 1381 and remained so after Norway was separated from Denmark in 1814.

Iceland became an independent republic in 1944, with Denmark officially recognizing its independence the

following year, when World War II ended. In 1948 the Faeroe Islands were granted home rule, and Greenland won the same status in 1979. When the North Atlantic Treaty Organisation (NATO) was formed in 1949, Denmark became a charter member of the alliance. However, it remained outside of the European Economic Community until 1973, and even after its admission the Danish populace remained vigilant against undue encroachment by Brussels on national sovereignty.

Denmark has had many short-lived and unstable coalition governments since the 1950s. The period from 1975 to 1982 was dominated by the Social Democratic prime minister Anker Jørgensen, who led a succession of governments and grappled with an increasingly unfavorable economic climate that featured swelling unemployment and budget deficits. The tough decisions needed in such circumstances caused the government's support to collapse in September 1982, and fresh elections brought in a coalition headed by a Conservative, Poul Schlüter.

Schlüter managed to navigate the shoals of unsteady support in the Folketing, Denmark's national parliament, for a decade. During that time he shepherded the European Community's Single European Treaty (removing trade barriers between member states) through a referendum (1987), but voters rejected the more sweeping Treaty on European Union (Maastricht Treaty) in 1992. Opposition parties were also able to force through the Folketing a measure obligating the government to inform visiting foreign warships that nuclear weapons were banned in Denmark, creating friction with NATO allies. Each of these crises was resolved, the NATO dispute through the use of diplomatically ambiguous language, the rejection of Maastricht through the creation of several exemptions from the treaty's obligations in order to reassure Danes that national prerogatives would not be overridden. The treaty was ratified in May 1993. By then Schlüter had been compelled to resign (January 1993) owing to a cabinet scandal involving the handling of refugee visas. The Social Democrats reclaimed the prime minister's seat for their leader, Poul Nyrup Rasmussen, who held on through periods of minority government and narrow coalition majorities in parliament. In the late 1990s the sharp rise of the anti-immigrant People's Party reflected popular discomfort that Denmark was becoming a more multicultural society and led to national debate about the need for and treatment of refugees and immigrant labor.

In 2000 the Danes rejected adoption of the euro as their national currency by 53 percent. In parliamentary elections held in November 2001 the center-right Liberal Party became Denmark's majority party. The far-right Danish People's Party took 22 seats, becoming the third-largest party in parliament. The Liberal Party formed a coalition government with the Conservative People's Party, and Anders Fogh Rasmussen was named prime minister. Rasmussen pledged to reduce taxes and tighten immigration laws, in 2002 proposing some anti-immigration laws that sparked controversy.

LIST OF MODERN RULERS

Monarch

1848–63	Frederik VII
1863–1906	Christian IX
1906–12	Frederik VIII
1912–47	Christian X
1947–72	Frederik IX
1972–	Margrethe II

Prime Minister

1945	Vilhelm Buhl
1945–47	Knud Kristensen
1947–50	Hans Christian Hedtoft-Hansen
1950–53	Erik Eriksen
1953–55	Hans Christian Hedtoft-Hansen
1955–60	Hans Christian Svane Hansen
1960–62	Viggo Kampmann
1962–68	Jens Otto Krag
1968–71	Hilmar Baunsgaard
1971–72	Jens Otto Krag
1972–73	Anker Jørgensen
1973–75	Poul Hartling
1975–82	Anker Jørgensen
1982–93	Poul Schlüter
1993–2001	Poul Nyrup Rasmussen
2001–	Anders Fogh Rasmussen

CONSTITUTION

Denmark is one of the oldest monarchies in Europe, completing its first millennium in 1985. Upon the adoption of the nation's first written constitution in 1849 absolute monarchy gave way to representative democracy. The so-called June Constitution (*Junigrundloven*) established three seminal principles: judicial authority should reside in independent courts; legislative authority should rest jointly with king and parliament; and executive authority should be vested in the king, but he would not perform any act of state except on the authority of a minister.

The June Constitution was for its time one of the most liberal in Europe. The two chambers of the Folketing were elected under universal suffrage by all independent men over 30. But not until 1901 did King Christian IX sign "the change of system" (*systemskifte*) and appoint a ministry based on the majority only in the lower chamber. This principle was written into the constitution in 1953.

A constitutional amendment in 1915 gave women and servants the vote.

After World War II a new constitution was spearheaded by the Social Democrats and Radical Liberals and became law on June 5, 1953. It abolished the upper chamber. The voting age was reduced from 25 to 23. Later amendments, confirmed by referendums, further reduced the voting age, ultimately to 18. In order to safeguard

minorities, a provision was included for referendums on parliamentary bills when demanded by one-third of the members. Together with the new constitution, the new Act of Succession was passed, permitting female succession to the throne. It was under this act that Queen Margrethe II succeeded her father, King Frederik IX, as head of state in 1972.

The executive is the cabinet, headed by the prime minister, who is the head of government. Ministers are the administrative heads of their respective ministries. Cabinet decisions are based on consensus, not vote.

All government bills and administrative measures come before the Council of State (Statsradet), which consists of the cabinet under the presidency of the monarch. In addition to Folketing bills, the Council of State also ratifies international treaties and agreements and reprieves certain long-term prison sentences.

Since the turn of the century no Danish government has commanded a majority in the Folketing. Governments as a rule are minority governments made up of a number of parties.

The constitution of 1953, following a Swedish precedent, provided that the Folketing appoint one or two persons as ombudsman, and this office was established in 1955. The ombudsman is directed to see that no one in public service pursues unlawful activities, makes arbitrary or unjust decisions, or is guilty of error or neglect.

Up to 1953 Greenland was governed as a colony. The 1953 constitution accorded Greenland the status of a fully integrated part of the Kingdom of Denmark. Greenland sends two members to the Folketing. Greenland affairs are the responsibility of the minister for Greenland, while local affairs are handled in part by a democratically elected Provincial Council (Landsradet) and in part by a Danish governor (*landshovding*). The two correspond to the Danish County Council and county prefect, respectively. Special legislation applies to Greenland in certain areas.

The Faeroe Islands were a Danish county until 1948, when self-government was introduced. The democratically elected assembly (Lagting) has legislative powers in all local affairs; the local government (Landsstyre) handles all local affairs. The Danish government is represented on the islands by a commissioner (*rigsombudsmand*). Recently there has been a groundswell in the Faeroes for greater local sovereignty.

PARLIAMENT

The Danish electoral system is one of the most complex in the world. It has undergone few changes in the past 60 years. The older parties have sought to raise the 2 percent threshold limit for seats distributed by proportional representation to reduce the proliferation of new parties, while the smaller ones have called for the elimination of the threshold altogether. While the proportional system has added to the instability of Danish governments,

Danes cherish this principle as making their democracy more democratic.

Suffrage is equal and universal for all adults over 18. The 175 seats (excluding those of Greenland and the Faeroe Islands, each of which have 2 seats) in the national legislature, constituting the unicameral Folketing, are distributed in advance among the three election areas (*amrader*) into which the country is divided—metropolitan Copenhagen, the islands, and Jutland—and these are subdivided into 14 county constituencies and three metropolitan constituencies in Copenhagen. A total of 135 representatives are elected in 17 districts, with 40 additional seats divided among those parties that have secured at least 2 percent of the vote but whose district representation does not accord with their overall strength.

The distribution in the Folketing is mostly determined by population totals and density and as such is subject to constant adjustment. Normal voter turnout ranges from 80 to 90 percent, with invalid or blank votes amounting to less than 0.6 percent.

Danish elections are dominated by the presence of political parties. Only a few people run as independents, and only one independent candidate was elected in recent years. Typically, 12 to 13 parties put up candidates in the elections. Parties already represented in the Folketing are automatically entitled to nominate candidates and participate in the election campaign, which is partly financed by public funds. Parties that are new or not represented are accorded these privileges only if they collect signatures totaling 1/175th of the votes cast in the previous election. There are no by-elections, as vacancies are filled by candidates of the same party who have received the next-largest number of votes. Party strength in the Folketing thus remains fixed from one election to the next unless a member breaks away from a party.

Much of the work of parliament is done in 19 standing committees, whose authority corresponds to that of the ministries. There also are committees on standing orders, proof of elections, scientific research, and other issues of concern.

Under the constitution, no taxes may be levied until the finance bill or interim measures have been approved by the Folketing. Similarly, no expenditures may be incurred without such authority. However, because the finance bill is drafted some months before the fiscal year, it is impossible to foresee income or expenditures. Consequently, the practice has developed whereby the government requests the Folketing's Finance Committee (Finansudvalget) to approve unforeseen items. This practice makes this committee one of the most powerful parliamentary organs.

With the abolition of the upper chamber, the Landsting, in 1953, provision was made in the constitution for the holding of referendums. Within three working days of the passage of a bill one-third of the Folketing members may apply to the speaker for a referendum to be held on the proposed measure. The prime minister is responsible

for initiating the referendum, which must take place not earlier than 12 and not later than 18 working days after it has been announced. The bill is annulled if it is opposed by a majority of the Folketing electors and at least 30 percent of those entitled to vote. Certain types of bills, such as money bills, are excluded from this provision. The first referendum took place in 1963.

POLITICAL PARTIES

The four “old” parties in Danish politics are the Social Democrat, the Radical Liberal, the Liberal, and the Conservative People’s parties, covering the ideological spectrum from left to right. They have dominated government coalitions during most of the 20th century. The Justice Party, Center Democrats, and the Christian People’s Party have been coopted into coalitions mainly as supporting parties. The 1973 elections marked an end to this quadrumvirate. The Communist Party, the Left Socialists (who split from the Socialist People’s Party), and the Justice Party (unrepresented in the Folketing since 1960) were returned to the Folketing, and three new parties gained representation for the first time: the Center Democrats, the Christian People’s Party, and the Progress Party, all at the expense of the traditional parties. This fragmentation has meant more power sharing and greater instability, which continued well into the 1990s, even though there were Social Democrat–led governments throughout most of the 1970s and again after 1993, while Conservative People’s–led coalitions dominated from 1982 to 1993.

The Liberal Party (Venstre, Danmarks Liberale Parti, V) is the oldest Danish political party, founded in 1870 in opposition to the ruling conservative elite. It spearheaded the struggle against the monarchy to secure the principle of parliamentary government. It hews to classic liberal positions in its platform, upholding individual freedoms in a pluralistic society. In its economic policy it stands for a free-market economy with a strong private sector, deregulation, and restraints on trade-union power. It advocates trimming social welfare provisions in the interest of budgetary stringency. In foreign policy it is pro-NATO and pro-EU and advocates closer Nordic cooperation.

The Social Democrats (Socialdemokratiet, SD) were founded in 1871 as a Marxist party. In its early years it concentrated on trade-union organization and won its first parliamentary seat in 1884. From 1920 it began to attract voters from outside the ranks of labor and became the largest political party in the Folketing in 1924—a position it has primarily maintained since, although it has never won an outright majority. The Social Democrats laid the foundations of the modern Danish welfare state while in office with the Radical Liberals from 1929 to 1943. Ideologically, the SD long ago shed its Marxist tenets and may best be described as democratic socialism, supporting full-employment policies and an exten-

sive array of welfare-state benefits. In foreign policy it is slightly left of center, supporting NATO and the European Union while opposing the more federalist aspects of European unity.

The Conservative People’s Party (Det Konservative Folkeparti, KF) was formed in 1876 as the United Right, a group of landowners and upper-class supporters of monarchical rule. It regrouped to form the KF in 1915. When in alliance with the Liberals from 1950 to 1953, it carried out a major reform of the constitution. The KF is a pro-free enterprise group that advocates low taxes, low wages, and low inflation. It supports both NATO and the European Union more strongly than do other parties. The KF has adopted some of the classic Liberal stances on domestic freedoms.

The Radical Liberals (Det Radicale Venstre, RV) split from the Liberals in 1905. Wedged between socialists and nonsocialists, the RV has had a moderating influence on both. In foreign policy the RV’s policies are more in line with those of the socialists, opposing excessive military expenditures.

The Center Democrats (Centrum-Demokraterne, CD) are a splinter party that broke away from the Social Democrats in 1973 in protest against the latter’s drift to the left.

The Progress Party (Fremskridtspartiet, FP) was founded in 1972 as a populist movement protesting excessive taxation and “paper-shuffling bureaucracy.” In the 1973 elections the FP gained 16 percent of the vote to become the second largest party in the Folketing, but its support sharply declined afterward, reviving briefly in the late 1980s before it fractured in 1994 and hived off the Danish People’s Party, which has similar positions but is better organized and has captured most of the protest vote.

Other Danish parties include the Socialist People’s Party, the Christian People’s Party, the Danish Communist Party, the Justice Party (also called the Single Tax Party), and the Left Socialists.

In the 2001 elections the votes were cast as follows: Liberal Party, 31 percent; Social Democrats, 29 percent; Danish People’s Party, 12 percent; Conservative Party, 9 percent; Socialist People’s Party, 6 percent; Social Liberal Party, 5 percent; Christian People’s Party (now Christian Democrats), 2 percent; and Unity List, 2 percent.

LOCAL GOVERNMENT

Danish local government was thoroughly reorganized in 1970. Local government boundaries in many cases had been untouched for more than 800 years. Previously, the country was divided into 89 boroughs (*kobstaeder*) and 23 county authorities (*amstkommuner*), the latter being subdivided into more than 1,500 urban and rural districts (*sogne kommuner*). The distinction between urban and rural boroughs was abolished, the number of primary local governments (*primaerkommuner*) was reduced to 277, and the number of county authorities was reduced

to 14. The primary local governments are chosen by the Elected Council (Kommunalbestyrelse) chaired by a mayor, or burgomaster (*borgmester*). The reform did not affect the national capital, which continues to be governed by the elected city council (*borgerrepraesentation*) of 55 members and an executive consisting of a chief burgomaster (*overborgmester*), five burgomasters, and five aldermen (*radmaend*).

Counties are governed by the elected county council (*amtsrad*) chaired by the county mayor (*amtsborgmester*). Central government functions at the county level are discharged by a prefect as chairman of a special council consisting of four members appointed by the County Council.

Greenland is divided administratively into the sub-provinces (*landsdele*) of West Greenland, East Greenland, and North Greenland. There are 16 provincial districts (*tandsradaskredse*), each of which elects one member of the Greenland Provincial Council by direct vote every four years. The 159 habitations are grouped into 19 local districts (*kommuner*), each with a local council (*kommunalbestyrelse*) varying in size.

The Faeroe Islands are divided into seven regions (*sysler*), each under a sheriff (*syssemand*), who constitutes the local authority with some judicial functions. There are 50 local districts with 120 settlements (*bygder*), some with as few as 30 inhabitants.

LEGAL SYSTEM

Denmark has a civil law system that goes back to about 1200. After the introduction of absolute rule in 1660 the king decreed in 1683 a general code applicable to the whole country, the Danish Code of Christian V.

The text of the Danish Code has never been altered, nor did new laws appear as amendments in the initial period after 1683. All legislation since then has been in the form of separate statutes. Few of the provisions of the Danish Code are still in force, but no attempt has been made to codify the mass of legislation in a comprehensive code, so it may be said that Denmark does not possess a general civil code.

Judges are constitutionally independent, although appointed by the Crown on the recommendation of the minister of justice. Judges can be dismissed only by the Special Court of Indictment.

The highest court is the Supreme Court (Højesteret), with 19 judges, which also functions as a court of appeals. The court usually sits in two divisions of at least five judges each. All matters not specifically assigned to a lower court fall within the purview of one of the two high courts (Landsretter) under the Supreme Court, the eastern wing sitting in Copenhagen with jurisdiction over the islands and the western sitting in Viborg with jurisdiction over Jutland. On the next level are the lower courts (Underret), of which there are 84. Each lower court has only one judge, except in Copenhagen and Århus.

There is a special high court for Greenland. There are also special courts, such as the Tax Tribunal, the Maritime and Commercial Court, and the Labor Court.

HUMAN RIGHTS

Human rights are well protected in Denmark and enforced by the office of the ombudsman. Arrested persons must be brought before a judge within 24 hours of detention. In serious crimes the accused is placed in solitary confinement. All trials are public except in divorce and paternity trials or rape and child molestation cases. The rights of aliens are protected by the 1983 Alien Act, and Danish media have engaged in public education campaigns to prevent the rise of racism toward immigrants and refugees from Asia, North Africa, and the Middle East. Natives of Greenland and the Faeroe Islands enjoy all the rights and privileges of Danish citizens.

In 1987 the Human Rights Center, mandated by the Folketing, was established with state funding to conduct research and provide information on a broad range of human rights issues. The Equal Rights Council deals with sex discrimination. Women hold strong representation in both the cabinet and the Folketing. The rights of homosexuals are safeguarded by the state; in 1989 Denmark became the first country to recognize same-sex civil marriage.

If anything, human rights groups occasionally criticize Denmark for being too tolerant, in the sense of allowing neo-Nazi groups space to operate. However, in 1995 the Danish National Socialist Movement was prevented from starting its own radio station.

FOREIGN POLICY

Danish foreign policy is thoroughly pro-Western and is based on close links with four organizations: the United Nations, NATO, the Nordic Council, and the European Union. Denmark also belongs to the World Trade Organization (WTO), the International Monetary Fund (IMF), the World Bank, the Organisation for Economic Cooperation and Development (OECD), the Organization for Security and Cooperation in Europe (OSCE), the Council of Europe, the Baltic Council, and the Barents Council.

Although committed to collective security, Denmark has consistently resisted pressures by NATO to increase defense spending. In 1984 the Social Democrats and their allies secured legislation making Denmark the first NATO nation to withdraw completely from missile deployment. In 1988 there was great controversy over NATO's policy of not declaring which ships carried nuclear weapons; many Danes on the left wanted to ban all such ships from Danish ports, but a compromise was worked out. Danish troops have participated in NATO peacekeeping operations in Kosovo and elsewhere.

Denmark was admitted to the European Community (now the European Union) in 1973, but Greenland withdrew from membership in 1985. Copenhagen has always, with an eye to popular suspicion of Brussels, guarded its sovereignty more tightly against EU supranational encroachment than most members. It demonstrated this in 1992, when a referendum went against the European Union's Maastricht Treaty on closer integration, forcing the government to renegotiate some of its terms regarding common defense, policing, citizenship, and currency. Denmark opted not to participate in Europe's Economic and Monetary Union; the Social Democrat-led government promised to hold off deciding on the matter until after elections in 2002. Strain on the Danish krone, however, caused the country to have second thoughts and to schedule another referendum on joining the Economic and Monetary Union for the fall of 2000. Denmark did join the EU Schengen Agreement on freeing internal border controls.

Denmark places great emphasis on relations with developing countries and is one of the few nations to meet the UN goal of contributing 0.7 percent of gross domestic product (GDP) as developmental assistance. It is especially interested in coordinating assistance to the Baltic states. As a member of the Nordic Council, Denmark maintains close relations with the other members of the council: Norway, Iceland, Sweden, and Finland. In 1982 Denmark joined Norway and Sweden in resuming diplomatic relations with the Vatican, ending a four-century rupture. Denmark is deeply involved in international peacekeeping, particularly in eastern Europe and the Middle East, including in Iraq.

DEFENSE

The sovereign is the constitutional head of the armed services, while operational command is vested in the Ministry of Defense. The chief of defense, the head of the Defense Command, is a serving officer whose deputy is the chief of the defense staff. Both are members of the Defense Council, along with the chiefs of the army, navy, and air force and the commander of the Danish operational forces.

Conscription is authorized by the constitution. Conscripts serve between four and 12 months depending on specialty and are then assigned to reserve units. The right of conscientious objection is recognized, and about 15 percent of eligible Danes invoke the right annually. Defense legislation is extensive and includes acts from 1950, 1960, 1969, and 1973 and the Royal Decree of 1952, amended in 1961.

Defense personnel are trained at specialized schools: artillery personnel at the Army Fire Support School at Varde and infantry personnel at the Army Combat School at Oxboel, both in West Jutland. Regular officers are trained at the Defense College, Copenhagen, a triservice institution that also serves as the staff college.

The army is organized into supply troops, signal corps, engineers, artillery, army aviation, infantry, and armored troops. The latter include old regiments of infantry and cavalry. Operationally, the kingdom is divided into the Western Land Command, the Eastern Land Command, and the Bornholm Region. The Eastern Land Command has two standing force brigades; the Western Land Command, three. For territorial defense Denmark is divided into seven regions: three in Jutland, one in Fünen, two in Zealand, and one in Bornholm.

Although a member of NATO, Denmark does not permit the stationing of foreign troops on its soil (except in Greenland, where it has allowed the United States to shoulder most of the responsibility for the island's defense) or NATO troop exercises in Bornholm. Denmark does not allow the stationing of nuclear weapons on its territory, but it will tacitly allow nuclear-armed NATO ships in port.

The principal naval bases are at Copenhagen, Kørsør, and Frederikshavn. The navy is charged with guard duties off the Faeroe Islands and Greenland. The air force consists of a tactical air command.

ECONOMY

The Danish economy today is characterized by very high rates of taxation, high levels of government spending (equivalent to 56 percent of GDP in 1998, up from 25 percent in 1960), but only a modest degree of public ownership of industry. The service sector, especially public services, is correspondingly high, accounting for 79 percent of the workforce and 76 percent of GDP (not counting financial services) in 2003. Private services have grown vigorously in the 1990s and early 2000s, primarily in retailing, hotels and restaurants, and commerce- and business-related services and communications. The state has liberalized the telecommunication sector bit by bit since consolidating all companies into a single, state-owned firm, Teledanmark—now private—in 1991.

The finance system (commercial banks, mortgage lenders, insurance companies, and pension funds) has been consolidating and increasingly trying to compete on a Europe-wide scale. The Copenhagen Stock Exchange joined with its Stockholm counterpart to create Nordic Exchanges (NOREX), in 1999. The financial sector occupied 2.6 percent of the labor force in 1998 and generated 6.4 percent of gross domestic product.

Manufacturing jobs were 17 percent of the total in 1998, and manufacturing activity accounted for just 18.2 percent of GDP. Since the 1960s Denmark has lost footwear, textile, and clothing-related jobs to lower-wage countries, while the chemical and pharmaceutical industries have increased employment. The food-processing industry remains important, given Denmark's prominence in dairying and meat production. All told, the country has lost about 20 percent of the industrial employment it had in the mid-1960s. Even the declining sectors, however, have demonstrated impressive productivity improvements, and the country has managed to retain many of the high-skill jobs associated with manufacturing, such as design and marketing, even as factory jobs move "offshore." The Danish industrial landscape is still predominantly one of small and midsized concerns, with many firms still controlled by individual families. Construction provided employment for about 6 percent of the workforce in 1998 and was responsible for 5.3 percent of national output; the building industry is cyclical in nature and does not export its services.

Denmark currently extracts enough oil and gas from its North Sea wells to take care of its own energy needs. It has also been active in seeking out nonpolluting sources of power, such as wind farms, and renewable energy sources provided 10 percent of the country's electricity in 1998. The fossil fuel and electricity industries, state owned, were allowed private investment in 1998 for the first time to stimulate competition.

Denmark emerged from World War II with most of its economy intact, though considerably depleted. The devaluation of the krone in 1949 helped to boost exports, while the Marshall Plan helped to stimulate the weaker sectors. At the beginning of the 1950s Danish exports were primarily farm products. As a result, the farmers favored liberalization of trade and the removal of import restrictions. Industry, however, was more protectionist. Faced with growing competition from abroad, Danish industry nonetheless surged in the 1950s, increasing production, employment, and share of exports. By the end of the 1950s Denmark had established itself as a significant industrial exporter, helping to swing the balance of payments in Denmark's favor.

The year 1973 was a watershed in Danish economic history. In that year Denmark joined the Common Market, along with Great Britain, and the first oil crisis hit. During 1973–75 inflation climbed by 20 percent annually; unemployment was at an all-time high; and the balance of payments deficit increased from Kr3 billion in 1975 to Kr12 billion in 1976, equal to 5 percent of GDP. The problem was exacerbated by the second oil crisis, of 1978–80. Government efforts to keep the lid on inflation and improve the balance of payments produced unpleasant side effects: lower wages, higher interest rates, high unemployment, deteriorating public finances, and higher taxes.

The Schlüter government passed a tax reform in 1986, and subsequent changes in the tax code took place under its successor in 1994 and 1998. While lowering top marginal rates was certainly one aim, the net effect has been to draw more earnings into the revenue system through greater transparency, fewer loopholes, and a broader tax base, and this has created a more equitable income distribution. Another emphasis has been a shift toward "green" taxation based on resource consumption, adoption of energy-efficient technologies, and reduced emission of greenhouse gases.

A series of conservative-leaning governments in the 1980s and early 1990s also attempted to put the brakes on the growth of public spending and public-sector employment and prepare the ground for the heightened competition that would come with the signing of the Single European Act, removing many of the European Community's internal trade barriers and protections. The government retains control over postal services, public transportation, and, for the most part, utilities, and of course the welfare state continues to provide generous health, education, pension, and unemployment benefits and other transfer payments. With revenues on the increase, though, the socialist team that took the reins of power from 1993 managed to turn around the nation's string of deficits to record a slight budgetary surplus in 1998, even as unemployment fell sharply, to about 5 percent from 10.1 percent when Rasmussen became prime minister, and government expenditure as a percentage of GDP fell off from 64.2 percent to 55.8 percent over the same time period.

Denmark has always been very trade dependent, with imports and exports each equivalent to about one-third of GDP. Manufactures make up 76 percent of exports, agricultural products 15 percent. Most of the country's exports (leading sectors: machines and instruments, chemicals and pharmaceuticals, textiles, clothing, and furniture) go to other EU countries (68 percent), with Germany the largest single export market. The country ran current account deficits steadily for almost three decades until 1990; since then it has had a surplus. Although Denmark meets the criteria for participating in the European Union's Economic and Monetary Union, phase three, popular sentiment has been running against giving monetary sovereignty to Brussels, and in 2000, 53 percent of the population rejected adoption of the euro as the national currency.

Danish growth and investment have been slightly below average for industrial countries since 1960. Savings rates have been correspondingly lower as well, and this has caused Denmark to slip down the rankings of income by country, but it has taken steps to enhance savings and capital formation through the tax code, and it remains one of the world's most prosperous nations. Growth averaged around 2 percent in the early 2000s, though it was flat in 2004, and there is a surplus in public financing. The gov-

ernment has lowered income tax rates but also increased environmental taxes, reduced deductions, and added user fees to make up for any shortfalls in revenue. Currency policy has been stable since the 1980s, when the krone was linked to the deutschmark; since January 1, 1999, it has been linked to the euro. Denmark has not yet adopted the euro, but public support for doing so has been increasing.

The Danish social safety net has been growing more economically burdensome. Health care and care for the elderly and children have been losing funding.

ENVIRONMENT

The importance Denmark places on the environment is underscored by the decision of the European Environment Agency to situate its headquarters in Copenhagen. The nation's own environment ministry dates to 1971; in 1994 it was consolidated with the Ministry of Energy. The revamped ministry has worked to realign the tax system to put a price on resource consumption. Denmark has had a carbon dioxide emissions tax since 1993, with a part of the proceeds earmarked for energy conservation programs and research and development to increase efficiencies in energy supply. With nuclear energy widely unpopular in Scandinavia these days, the government has worked to develop wind power and biogas facilities drawing on fertilizer and slaughterhouse wastes.

Most of Denmark's forests have been heavily exploited for a long time. Denmark's Forest Act prevents most woodlands from being plowed under for agricultural, commercial, or residential activity, but it fails to protect old-growth forests from being harvested for timber. The Worldwide Fund for Nature has assessed the country's forests as "eroded" from a standpoint of genetic diversity and in poor health.

Flooding threatens certain parts of the coastline (parts of Jutland and the south shore of Lolland Island),

and these have a series of dikes to keep the seas at bay. The lower areas have been made into arable farmland by draining the marshes with pumps, and nearly one-fifth of Denmark's farmland is at or near sea level; much of this area is environmentally sensitive wetlands. Very few of Denmark's natural streams and waterways exist, most of them having been artificially straightened.

The Environmental Protection Agency requires impact statements before permitting new industrial plants or expansions to get under way. Similarly, government-sponsored projects and transportation investments have to be vetted by the agency for possible ecological effects. The National Environmental Research Institute monitors the nation's soil and air quality; purity of streams, lakes, and fjords; and ecology of the countryside, and it also gives policy advice. Denmark's special concerns are smog and particulates from vehicle emissions, nitrogen and phosphorus contamination of the North Sea and surface freshwater from fertilizer runoff, and contamination caused by animal wastes. Marine pollution is one area where the government has cooperated with both nongovernmental groups and other Nordic nations.

LIVING CONDITIONS

Denmark is quite expensive and has all the modern Western amenities. The standard of living is very high. Roads and public transportation are excellent. Houses and apartments are of high quality and spacious; children usually have their own rooms. A wide variety of foods are readily available.

HEALTH

Danes are extremely healthy people. Life expectancy is over 77 years, and infant mortality is fewer than five deaths for every 1,000 births. The national health-care system provides for free hospitalization. Caregivers of ill family members receive government stipends to compensate them for lost earnings. Municipalities handle the distribution of benefits.

FOOD AND NUTRITION

Living so near the North Sea, Danes eat a large amount of fish, especially cured or salted salmon. They also eat a great deal of meat in general, especially pork, and potatoes. The most typical snack is *smørrebrød*, or “buttered bread,” an open-faced sandwich topped with any number of toppings. Bakeries are ubiquitous, nearly all of them selling a pastry called *wienerbrød*, better-known to English speakers as Danish pastry. Danes drink a large amount of alcohol, and most restaurants and groceries sell various alcoholic beverages. Danish beer is excellent; the Carlsberg brewery produces some of the best. The most popular drink is aquavit.

 Amount of Fruits and Vegetables Available per person per year kg: 250.7

STATUS OF WOMEN

In perhaps no other part of the world do women enjoy the degree of equality that Scandinavia affords, and Denmark places itself firmly in the Scandinavian tradition. A 1997 survey of European women found more Danish women (two-thirds) saying they were “very satisfied” with their lives than those of any other country. Even here, however, women earn significantly less than men, in spite of laws mandating equal pay going back to 1973. “Women’s work” remains concentrated in poorly compensated occupations like teaching, clerical work, and other low-skilled or unskilled services. Many married women are in the workforce (more than 80 percent), but quite a few of these work part time. Still, with more women today graduating with advanced degrees, higher-paying fields such as science, engineering, and management are open to women as never before. Women represented about 47 percent of the paid labor force in 2003.

Women were granted the vote in 1915 and won the right to run for office at the same time. They typically hold between 20 and 30 percent of seats in the Folketing, and from the late 1940s onward there has been at least one female minister in every cabinet formed. After a 1921 law passed, women were guaranteed equal opportunity in and access to official positions, excepting only the clergy and the military—and even these exceptions eventually fell by the wayside. Military training became an option for women in 1971. The Nordic countries have since 1974 cooperated to advance the equal rights agenda in tandem.

Family planning is integrated into the national health service, with service delivery delegated to county level. Abortion is available on request for the first trimester and is covered by national insurance. The country’s social policies consciously steer toward equalization of opportunity through family allowances, special aid for single mothers, public provision of day care, and the like. Divorce became no-fault in 1970, and the divorce rate is high. A substantial proportion of couples live together without marrying; only in Sweden is the frequency of unmarried cohabiting couples higher.

WORK

Some 79 percent of Danish workers are employed by service industries. More than one-fourth of the Danish workforce is employed by the government, many of them to administer the complex system of public welfare. About 17 percent of the workforce was involved in industry, producing food, machinery, furniture, textiles, electronics, ships, and other products. Only 4 percent of the workforce still works in agriculture. Danes are on average quite wealthy by world standards; per capita GDP in 2004 was \$31,100. The unemployment rate was 6.1 percent.

EDUCATION

The earliest Danish schools were established from the 10th to the 12th centuries. The University of Copenhagen was established in 1479 through a papal bull of Sixtus IV. In 1536 the state took over the grammar schools from the Catholic Church, and the history of national education may be said to begin from that date. From the 15th to the 19th centuries the most decisive influence on education was the national Lutheran Church. The state, for its part, acknowledged its obligation to provide the physical facilities for such schooling. In 1689 a high commission reorganized the entire school system, requiring townships to pay for primary schools, maintain evening classes for adults, and make school attendance compulsory for children between ages seven and 14. It also created the first normal schools.

The Enlightenment and the rise of the merchant class, who needed a more practical type of school, led to dissatisfaction with the church's role in education. The Free School Movement sought to emphasize freedom of choice in education. These schools had no entrance or leaving examinations, instruction was confined to the lectures, and the curriculum was unstructured.

Section 76 of the Danish constitution specifies that education shall be compulsory. In 1976 a new education act came into effect, introducing nine years of comprehensive primary and lower secondary education for all, a noncompulsory 10th year, and an optional preschool year. There is a noncompulsory leaving examination after ninth grade (taken by 90–95 percent of students), and a similar advanced leaving examination after 10th grade (for which about 85 percent sit). About one-quarter of Danish youths go no further than the basic course of education. A refinement in 1994 aimed to tailor instruction more individually to students' needs and talents.

Danish education is characterized by a rich variety of options for the schoolgoer. Although compulsory education begins at age seven, most children attend one of four types of preschools: *vuggestuer* (day nurseries) for children up to three, *bornehaver* (kindergartens) for three- to six-year-olds, *bornehaveklasser* (preschool classes) for five- to six-year-olds, and *integrerede institutioner* (integrated schools).

Education at the upper secondary level is divided into four main types: general upper secondary education (Gymnasium), which prepares students over a three-year course for higher education; Hojere Forbeledelseksamen (HF), the two-year higher preparatory examination course; the Hojere Handelseksamen (HHX), the higher commercial examination, a three-year course of study; and Hojere Teknisk Eksamen (HTX), the higher technical examination course, a three-year vocational and educational program. Each

of these courses leads to an examination that governs admission to higher education. There are separate schools that provide an apprenticeship-type vocational training course that prepares students for work in trade and industry.

There are about 80 residential folk high schools. For 14- to 18-year-olds there are continuation schools (*efterskoler*) and youth schools (*ungdomskoler*). The former have the flavor of folk high schools and teach young people practical subjects for a year beyond their compulsory schooling. Youth schools are designed for school leavers who lack particular aptitudes. The agricultural *landbrugsskoler* accept students for agricultural training.

About 12 percent of all Danish students are educated privately. All private schools are entitled to receive state subsidies that in principle match what is spent to educate pupils in municipal schools, minus the fees charged to parents of private school students, provided they meet a minimum enrollment standard and their instructional standards are comparable to those of the state schools.

For centuries the country's only university was the University of Copenhagen, which celebrated its 500th anniversary in 1979. The second was established at Århus in 1928. Odense followed in 1964, Roskilde in 1972, and Ålborg in 1974. Ålborg is a congeries of schools and colleges. Roskilde is an experimental university based on student participation and innovative instruction. On the whole, universities are fairly autonomous, with the general control of the Ministry of Education limited to examinations, degrees, enrollment, and staffing.

The country has recently restructured its university setup to match the model used in the English-speaking world.

Aside from the traditional universities, there are institutions to provide short-cycle nonuniversity higher education in technical, commercial, and agricultural disciplines and medium-cycle nonuniversity education in a wide range of fields. The specialized universities are the Technical University (engineering), the Royal Danish School of Pharmacy, the Royal Danish Veterinary and Agricultural University (these three having been founded in the 19th century), the Royal Danish School of Educational Studies, and three business schools (Copenhagen, Århus, and South Jutland).

Education is a state responsibility, shared by the central government, counties, and municipalities. Primary and lower secondary schools are under local government control, while Gymnasia and HF courses are run by the counties.

General adult education is offered on a nonformal basis to all who are over 18 years of age. There is also vocational training tailored to specific job market requirements and open education presented at vocational schools and universities.

SCIENCE AND TECHNOLOGY

Denmark is very technologically advanced. Cellular telephones and computers with Internet access are ubiquitous. The Ministry of Science, Technology, and Innovation is the government's main organization handling research and scientific development. The ministry was created in 2001 as an extension of the former Ministry of Information Technology Research. Its goal is to promote interaction of industry and business, coordinate scientific research and policy, and promote education, especially at Denmark's universities.

MEDIA

The Danish press dates back to 1666, when the first Danish paper, *Den danske mercurius*, was published by the Crown as an official bulletin. Press censorship existed until 1849, but since then the Danish press has been one of the freest. Article 77 of the Constitutional Act also bans any kind of censorship. Even military information can be published, unless the government prohibits it.

Four papers founded in the 18th century still publish today: *Berlingske tidende* (1749, Copenhagen), *Ålborg stiftstidende* (1767), *Fyens stiftstidende* (1772), and *Århus stiftstidende* (1794).

There is no truly national press. Most of the dailies are concentrated in Copenhagen, which claims about half of

the total daily newspaper circulation. Although the number of newspapers has been falling, circulation has remained stable enough to make per capita circulation one of the world's highest. The typical newspaper avoids sensationalism; the nearest approaches to it are found in the midday tabloids *BT* and *Ekstra bladet*, representing the Conservative and Radical Liberal party lines, respectively.

Ownership of the Danish press has traditionally been in the hands of local private families or limited-liability companies, but since 1945 there has been increasing concentration of ownership in the hands of a few publishing houses or chains. Some 25 percent of total circulation of all dailies plus two large weeklies, numerous district papers, a book-publishing business, and a print shop are controlled by the Berlingske Group. Another large newspaper chain is owned by the Berg Group, which publishes six dailies.

Special interest and political party affiliations are other old traditions in the Danish press. Only the Communist *Land og folk* is directly owned by a party, but beginning in 1849 newspapers began to be tied to or strongly espouse various parties. The rivalry among political party papers has continued to the present day. In Copenhagen, for example, *Berlingske tidende* is the Conservative voice, while *Politiken* supports the Radical Liberals and *Det fri aktuelt* the Social Democrats. The national Lutheran Church is represented by *Kristeligt dagblad*. The church also runs a news bureau called Kristeligt Pressebureau. With the weakening of the political press in recent years, the independents have grown stronger.

The country's most influential newspapers are *Berlingske tidende*, *Det fri aktuelt*, and *Politiken*, and the first is well regarded abroad. Among serious newspapers, *Information* has a place of its own. Among provincial papers, *Morgenavisen Jyllands-Posten* is the best known.

The national news agency is the Ritzaus Bureau, cooperatively owned by the Danish press. It has a working relationship with multinational agencies such as Reuters, AFP, and DPA, which have bureaus in Denmark.

Broadcasting used to be a monopoly of the Danish State Television and Radio Service (Danmarks Radio), which began operating in 1925. Although technically under the Ministry of Cultural Affairs, it is an independent institution governed by the Radio Council of 27 members elected by the Folketing. About half of the telecasts are imports. Revenues are derived solely from licenses, as there is no advertising. In 1986 the Folketing allowed private broadcasting for the first time, starting with independent local radio stations. The first commercial television channel started up in 1988, and a satellite channel first began beaming programs to viewers in 1991. Denmark had about 7.6 million radio receivers and a little over half as many television sets in 2000. Faeroese Radio and Greenland Radio are independent. Greenland Television is cable only.

Denmark has numerous publishing houses spread throughout the country but concentrated in Copenhagen.

Danish law guarantees freedom of expression to the press, and Danish media feel free to espouse a variety of political viewpoints. Journalists do not hesitate to criticize the government.

CULTURE

Denmark is world famous for its literature. Hans Christian Andersen's fairy tales are extremely well known; only the Bible has been translated into more different languages. Søren Kierkegaard was a philosopher whose ideas predated existentialism. Karen Blixen wrote the novels *Out of Africa* and *Babette's Feast*, both of which were made into successful movies. The most famous contemporary author is Peter Høeg, who wrote *Smilla's Sense of Snow*.

Danish fashion and design is also famous, especially the clean lines of Danish modern furniture. Danish cinema has been growing in popularity, with the film of *Babette's Feast* and Bille August's film of *Pelle the Conqueror* recent successes in the world. Lars von Trier is an up-and-coming new director; his film *Dancer in the Dark* won the 2000 Palme d'Or. Carl Nielsen is Denmark's best-known composer of classical music. The Royal Danish Ballet is regarded by many as the best dance troupe in Europe.

FOLKLORE AND MYTHOLOGY

Ancient Danish mythology drew on aspects of Germanic and Norse mythos. Medieval and early modern

Denmark was full of folktales featuring fairies and giants. Hans Christian Andersen's fairy tales, written in the mid-1800s, combine traditional folktales and motifs rewritten in Andersen's own style. Andersen published 168 stories in his lifetime and was immensely popular. Modern Danes do not care to incorporate folk elements into their lives, preferring to be as modern as possible.

ENTERTAINMENT AND RECREATION

Danes like to spend much of their free time indoors, cozy and snug and out of the rain and darkness of winter. Pubs and clubs are popular destinations for people going out in the winter; they drink beer, listen to music, and admire one another's clothes and appearance.

During long summer days, though, Danes love to go outdoors. Denmark has thousands of kilometers of cycling routes. People enjoy swimming and windsurfing in the sea and inland fjords. Yachting is popular among the many islands that surround the coastline. Fishing is another popular activity. Freshwater fish include pike, perch, and trout; common saltwater fish are mackerel, plaice, cod, and sea trout.

ETIQUETTE

Danes consider *hygge*, or coziness, to be a high ideal; they try to create warmth and intimacy and to shut out cold and strife from the outside. Praising an evening or a place as cozy is considered highly complimentary. Danes value punctuality and advance planning and appreciate telephone calls or explanations if someone is going to be late for an appointment. They shake hands when greeting one another. They are casual people. They are usually relaxed and tolerant of different viewpoints or lifestyles and forgiving of the occasional cultural misunderstandings.

FAMILY LIFE

Marriage is declining in Denmark, as in the rest of Scandinavia. Increasing numbers of couples choose to live together without marrying. The divorce rate has decreased since the early 1990s, but many experts attribute that to fewer couples marrying in the first place. People who live together without marrying are said to have an uncertified marriage and have the same legal obligations toward one another and their children as they would if they were formally married. Fertility is fairly low, at 1.74 births per woman in 2004. Abortion is free up to the 12th week of pregnancy. A form of same-sex marriage has been legal since 1989.

PERSONAL APPEARANCE

The typical Danish physical type is tall, blond, and blue-eyed, though not all Danes bear that appearance. Danes consider themselves extremely modern. They love high style and modern fashion. They do not like to wear the traditional folk costumes that are popular in other parts of central Europe, even at festivals. Generally people dress well but not ostentatiously; flashy clothing is not popular, especially among businesspeople.

SPORTS

Denmark has an excellent professional sports infrastructure. The government's National Olympic Committee (NOC) selects its Olympic athletes very carefully, usually insisting on stricter standards for participation than the international body. Officials are meticulous about testing for performance enhancing drugs. The NOC handles planning and logistics of competition. Denmark sent 92 athletes to the 2004 Athens Olympics.

CHRONOLOGY

- 1945** Denmark is liberated from German occupation; Vilhelm Buhl takes office at head of coalition government.
- 1948** Faeroe Islands granted home rule.
- 1949** Denmark joins NATO.
- 1953** New constitution promulgated along with new Act of Succession permitting female succession to throne; Greenland integrated into the Kingdom of Denmark.
- 1955** Parliament approves appointment of a national ombudsman on Swedish model.
- 1958** Education Act passed incorporating far-reaching reforms.
- 1960** Agricultural Commission initiates reform of land tenure.
- 1962** Helsinki Agreement on Nordic Cooperation is signed, with Denmark as a founding member.
- 1966** Odense University founded.
- 1968** Radical Liberal/Conservative/Liberal governing coalition courts controversy by attempting to outlaw pornography.
- 1970** Local government reform reduces number of local administrative units and rationalizes their finances.
- 1971** Helsinki Agreement is revised.
- 1972** King Frederik IX dies; his daughter succeeds to the throne as Queen Margrethe II; Roskilde University founded; New Primary Education Act is passed.
- 1973** Denmark joins European Community; abortion legalized.
- 1975** Social Democrat Anker Jørgensen returns to office, remains in power until 1982 as head of four cabinets.
- 1976** Social Assistance Act is passed; government razes "Free City" zone of counterculturists in Copenhagen.
- 1982** Jørgensen quits; Poul Schlüter heads a Conservative/Liberal coalition; Greenland decides in referendum to leave European Community, becomes overseas territory in association with the community in 1985.
- 1984** General election confirms Schlüter in power with fresh coalition of center-right parties.
- 1986** Folketing fails to approve European Community's Single European Act for harmonizing trade; Schlüter gains act approval through referendum.
- 1988** Controversy stirred by proposal to ban NATO warships that might be carrying nuclear warheads from Danish ports; compromise allows NATO to continue with its policy of secrecy.
- 1989** Denmark is first nation to allow same-sex civil marriages.
- 1990** Increase in popularity of antitax, anti-immigrant Progress Party; ruling coalition responds by putting cuts in social welfare on agenda.
- 1992** Referendum rejects Maastricht Treaty on European Union after it has gained Folketing approval; negotiations allow Denmark to opt out of European plans for a common defense, common citizenship, border controls, and common currency; longest suspension bridge in Europe is completed to link Zealand with Jutland.
- 1993** Scandal over an immigration case causes resignation of Schlüter and formation of a Social Democrat-led government under Poul Nyrup Rasmussen; fresh referendum approves Maastricht Treaty with the opt-out provisions.
- 1994** Parliamentary elections confirm Rasmussen team in office with a coalition of Social Democrats, Social Liberals, and Center Democrats.
- 1995** Danish National Socialist (neo-Nazi) Movement is barred from launching radio station.
- 1998** Referendum backs Treaty of Amsterdam designed to further integration of European Union; Denmark endorses EU Schengen Agreement allowing for "borderless" community by participants but defers decision on joining Economic and Monetary Union; new governing bloc in Faeroe Islands seeks greater degree of sovereignty.
- 2000** Danes reject adoption of the euro as their national currency by 53 percent. A new bridge and tun-

- nel open up rail and automobile traffic between Denmark and Sweden.
- 2001** The Liberal Party wins a majority of seats in parliamentary elections and forms a minority government with the Conservative People's Party. Anders Fogh Rasmussen becomes prime minister.
- 2002** Government proposes laws to limit immigration, sparking protests.
- 2004** United States and Denmark sign agreement to modernize air base in Thule, Greenland.
- 2005** Anders Fogh Rasmussen and his coalition government win second term.
- 2006** Cartoon depiction of Prophet Mohammad published in a Danish newspaper causes worldwide protests by Muslims.

Blue and green horizontal stripes on the fly and white triangle on the hoist with a five-point star

NATIONAL EMBLEM

None

NATIONAL ANTHEM

“Arise with Strength”

NATIONAL HOLIDAYS

June 27 (Independence Day, National Day), various Islamic festivals

DATE OF INDEPENDENCE

June 27, 1977

DATE OF CONSTITUTION

September 4, 1992

GEOGRAPHICAL FEATURES

Djibouti (formerly known as French Somaliland and later as the French Territory of the Afars and the Issas) is in northeastern Africa and occupies an area of 23,000 sq km (8,880 sq mi). The coastline on the Gulf of Aden and the Gulf of Tadjoura runs 314 km (196 mi). Djibouti shares its total international land boundary of 516 km (321 mi) with three countries: Ethiopia (349 km; 217 mi), Eritrea (109 km; 68 mi), and Somalia (58 km; 36 mi).

The entire country is mostly a sand and stone desert broken in places by lava streams and salt lakes. The three principal geographic regions are the coastal plain, less than 200 m (650 ft) in elevation; the mountains backing the plains with lofty peaks, such as Moussa Ali (2,101 m; 6,894 ft); and behind the mountains, the plateau rising

from 300 to 1,500 m (1,000 to 5,000 ft). The coastline is deeply indented by the Gulf of Tadjoura, which is 45 km (28 mi) across at its entrance and penetrates 58 km (36 mi) inland.

Few streams flow above the surface except following rains. The drainage is partly eastward to the coast and partly inland to Lakes Assal and Abbe.

Djibouti is essentially a city-state; two-thirds of the population lives in the capital, avoiding the arid interior.

CLIMATE AND WEATHER

The climate is torrid and dry. There are two seasons: a hot summer from May to October and a relatively cool

season from November to April. In the summer, temperatures in Djibouti reach 40°C (104°F) on most days, with occasional readings of 45°C (113°F). The rainfall is sparse and erratic, with a national average of 127 mm (5 in) annually.

Climate and Weather

Mean Temperature: 85°F to 104°F
Average Rainfall: 5 in

FLORA AND FAUNA

Because of Djibouti's desert climate, vegetation is sparse. Plant growth depends on rainfall. The driest areas have scanty growth of succulents and thorny bushes, with some annual grass cover. Areas with a rainy season have lush plant growth. Animals include ostriches, antelopes, gazelles, jackals, and hyenas as well as a huge variety of insect species and smaller mammals and birds. Many of these species are endangered. Herders in rural areas raise sheep and goats, and traders transport goods on camels. The oceans off the coast are full of sea life, including plentiful grouper, barracuda, and tuna.

ETHNIC COMPOSITION

The indigenous population is divided almost equally between two Hamitic groups: the Somalis (also known as Issas or Ishak) and the Afars (also known as Danakils).

The Issas live in the south and the Afars in the north and west.

Djibouti's foreign community makes up an estimated 10 percent of the population. Arabs and French make up the majority; other foreigners include Greeks, Indians, and Italians.

LANGUAGES

The official languages are French and Arabic, but both Somali and Afar are commonly used in daily life. Neither Afar nor Somali has a script, although attempts are being made to devise a Somali script.

RELIGIONS

Islam is the religion of virtually the entire native population. There is a Roman Catholic bishopric in Djibouti with about 7,500 communicants, mostly French. Djibouti also has Protestant and Greek Orthodox churches.

Religious Affiliations

Muslim	448,000
Christian	28,000

HISTORICAL BACKGROUND

The region that makes up modern day Djibouti was once grazing lands used by several tribes, including the Afars of Ethiopia and the Issas of Somalia. By A.D. 825 the tribes that settled there had converted to Islam. For more than seven centuries the region was under the control of Arab traders, who were replaced in the 16th century by sultans from the Afar tribe. Although both the British and French vied for control of the region, Djibouti (formerly known as French Somaliland) was under French rule from 1859 to 1977. At the time of independence it was France's last overseas territory on the African mainland. One of the most inhospitable and arid regions in the world, Djibouti's only attraction to its French rulers lay in the port of Djibouti, which was, until the closure of the Suez Canal, France's third largest port. The only major French presence outside the capital was the rail link to Ethiopia owned by the Compagnie du Chemin de Fer Franco-Ethiopien. The French departure was peaceful, and current relations between France and Djibouti are good.

Djibouti's political stability is balanced precariously on the relations between its two major communities—Afars (of Ethiopian origin) and Issas (of Somali origin)—as well as the military inclinations of its two neighbors, Somalia and Ethiopia. The politically dominant Issas

supported independence, while the Afars wanted continued connection to France. Preindependence fighting between the two communities was marked by bombing, kidnappings, and terrorism on behalf of the Somalis. After independence the Afars were more actively involved in acts of violence. At independence Hassan Gouled Aptidon, the leader of the Ligue Populaire Africaine pour l'Indépendance (LPAI), became president. He chose Ahmed Dini, an Afar, to be prime minister in a cabinet in which Issas dominated almost two to one. Since independence, all prime ministers have been Afars, but the government has essentially been a one-party state dominated by Issas.

Racial riots led to Dini's resignation in 1977 and the appointment of a special Commission of Afars; the president agreed to its demands for more Afar representation in the civil service and the military. In February 1978 a new cabinet was announced, with Abdullah Kamil, an Afar and the head of the Commission of Afars, as prime minister. That same year there was yet another reshuffle, with Kamil being replaced by Barkat Gourad Hamadou, who launched a policy of rapid detribalization.

In 1981 President Gouled was reelected for a six-year term in a single-man race. That same year a constitutional amendment established a single-party state, with the Popular Rally for Progress (Rassemblement Populaire pour le Progrès, RPP), which had replaced the LPAI, as the sole legal party. The Afar opposition went underground.

Gouled achieved a measure of stability during the 1980s and was reelected unopposed in 1987. All candidates for the legislature were also elected unopposed that year. Ethnic tensions remained and seemed to increase during the last years of the decade.

In 1990 the two main underground groups opposed to President Gouled met in Brussels and decided to form a common front. The Democratic Front for the Liberation of Djibouti, supported mainly by the Afars, and the National Djibouti Movement for the Installation of Democracy, supported mainly by the Issas, joined forces under the name of the Union of the Democratic Movement. In late 1991 rebels from the Afar Front for the Restoration of Unity and Democracy (FRUD) sought to take control of the traditional northern territory. Civil war erupted and the fighting lasted nearly four months.

In 1992 Gouled's government, pressured by France, agreed to create a limited multiparty system and a new constitution. The FRUD representatives were not allowed to participate in the elections, however, and Gouled's RPP won all legislative seats. The war continued until 1994, when a power-sharing arrangement gave the FRUD some say in governmental affairs.

Entering the 1997 general elections there was renewed conflict between a remaining faction of Afar separatists and the Issa-dominated government. Hassan Gouled used force this time to crush the rebels and af-

ter the election also crushed the Issa-Somali rebels who sought their own republic of Somaliland. In 2000 Ismail Omar Guelleh, who helped Gouled defeat the Issa-Somalis, became president of Djibouti and sought to strengthen its ties with France. In February he signed a peace agreement with the rebels, finally putting an end to the civil war. In March of that year Ahmed Dini, the former prime minister and leader of the FRUD, returned to Djibouti after nine years living abroad in exile. In December 2000 the former police chief General Yacin Yabeh Galab attempted a coup and was accused of conspiracy.

In January 2002 Western soldiers began arriving in Djibouti to take advantage of its strategic location with regard to the war on terror. German warships arrived to patrol the shipping lanes in the Red Sea while the United States entered Afghanistan. That September Djibouti declared that it did not want to be used as a base for attacks on Islamic countries in the Middle East; nevertheless, U.S. soldiers set up a presence there.

Djibouti politics changed in 2002 when a 1992 law limiting the number of parties in elections expired, allowing multiple parties to compete against the ruling party. In January 2003 Guelleh once again won the presidential election, this time in a multiparty election; he was supported by a coalition, the Union for Presidential Majority. That autumn the government began cracking down on illegal immigrants, who comprised 15 percent of the population.

LIST OF MODERN RULERS

1977–2000 Hassan Gouled Aptidon
2000– Ismail Omar Guelleh

CONSTITUTION

Djibouti held a constitutional referendum in 1992 in which the single political party rule of the country ended. The referendum (approved by 96.6 percent of the voters) authorizes the existence of up to four political parties, which must maintain ethnic balances. The nation has a presidential form of government, with a prime minister and cabinet drawn from the Chamber of Deputies. The president is the head of state and is elected for a six-year term. All adults over the age of 18 are allowed to vote. Legislative power is in the hands of a 65-member Chamber of Deputies.

PARLIAMENT

The national legislature is the Chamber of Deputies, a 65-member unicameral body. Members are elected for five-year terms; although elections were formerly lim-

ited to the ruling party, RPP, since 2002 Djibouti has had multiparty elections. The list of candidates is claimed to reflect the traditional balance between different ethnic groups.

In the elections held on January 10, 2003, the RPP took 62.2 percent of the vote, while the FRUD took 36.9 percent, and the RPP took all 65 legislative seats. The opposition claimed massive fraud by the ruling party, but the legislature is weak and the president strong, so the legislators and voters were powerless to demand change.

POLITICAL PARTIES

Between 1992 and 2002 Djibouti recognized only four political parties: Front Pour la Restauration de l'Unité et de la Démocratie (FRUD), which was founded in 1991 through the merger of militant Afar groups that sought ethnic representation in the government and which engaged in armed conflict in order to advance its cause; Parti National Démocratique (PND), a centrist party that sought democratic reforms; the Parti du Renouveau Démocratique (Party of Democratic Renewal, PRD), which was founded in 1992 and sought the formation of a parliamentary system of democracy; and the Rassemblement Populaire pour le Progrès (RPP), the only legal party in the country from 1979 to 1992. Since 2002 several more parties have appeared, including the Djibouti Development Party (PDD), the People's Social Democratic Party (PPSD), the Republican Alliance for Democracy (ARD), and the Union for Democracy and Justice (UDJ). These parties have formed into coalitions to give themselves more political power in elections. The Union for Presidential Majority (UMP) includes the RPP, the FRUD, the PPSD, and the PND. The Union for Democratic Changeover (UAD) includes the ARD, the UDJ, and the PDD.

LOCAL GOVERNMENT

For purposes of local administration Djibouti is divided into five *cercles*, or administrative areas: Djibouti, Dikhil, Ali-Sabieh, Tadjourah, and Obock.

LEGAL SYSTEM

The judicial system is based on Islamic law and the French civil law system. The system consists of two types of courts: Tribunaux de Première Instance, which hear only civil cases; and Tribunaux Supérieur d'Appel, which hear criminal cases. Cases involving Muslim personal law and customary law are heard by the *qadi* and by tribunals of the first and second degree. The judiciary has remained

largely independent of military and executive pressures. However, there were several allegations in 1984 of corruption within the judiciary, including one that individuals could arrange favorable judgments in commercial disputes through bribery.

HUMAN RIGHTS

Djibouti has a dismal human rights record. Citizens have not yet been allowed to exercise the right to change their government; despite the multiparty elections in 2002 and a sizable minority of votes cast for the opposition, the ruling party managed to win all legislative seats, probably through fraud. Members of the security forces committed at least one extrajudicial killing. There are credible reports that some members of the security forces beat and otherwise abuse, and at times torture, detainees and sexually assault female inmates. There are credible reports that soldiers rape women in rural districts. Prison conditions are harsh. The government continues to harass, intimidate, and imprison political opponents and union leaders and to arrest and detain persons arbitrarily. It also infringes on citizens' privacy rights.

The government at times restricts freedom of speech and the press. Police occasionally jail or intimidate journalists. The government has limited freedom of assembly and restricted freedom of association. The government discourages proselytizing. There are some limits on freedom of movement. Discrimination against women continues, and the practice of female genital mutilation is still widespread. Discrimination on the basis of ethnic or clan background and nationality persists. The government imposes some limits on unions and their leaders, and there are reports of instances of forced labor as well as child labor.

FOREIGN POLICY

Djibouti is in one of the most vulnerable regions in Africa and is faced with three hostile neighbors, Ethiopia, Eritrea, and Somalia. Its population is mixed, containing both Ethiopian-oriented Afars and Somali-oriented Issas. Somalia has long viewed Djibouti as part of Greater Somalia, while Ethiopia, without an outlet to the sea, has coveted the country's fine port; indeed, Djibouti has been Ethiopia's only port since the port of Eritrea was closed due to war. The Somali civil war ignited the ethnic tensions in Djibouti, resulting in a deterioration of the relations between the two countries. A territorial dispute with Eritrea flared in 1996, leading to a severance of diplomatic relations.

Djibouti's location on the Horn of Africa makes it strategically valuable to Western nations on humanitarian and peacekeeping missions. Germany based troops there

during its mission to Somalia in 1993–1994 and during the 1998 Ethiopian–Eritrean war. The United States has a military base in Djibouti at Camp Lemonnier, and since 2002 the country has been the U.S. base for Operation Enduring Freedom, the name given to the war on terror. The country's security depends on a French garrison of over 2,000 troops, and France remains the guarantor of Djibouti's independence.

Djibouti participates as a moderate member of international organizations, including the United Nations, the Arab League, the African Union, and the Non-Aligned Movement. The regional organization Intergovernmental Authority on Development, (IGAD) is based in Djibouti.

DEFENSE

Djibouti maintains its own armed forces, which grew when civil war began in 1991 but has been downsizing in recent years. The total strength of the armed forces was 8,000 (including some 1,500 gendarmerie) in 1999. This number is expected to decrease as part of the peace accord made by the government with the FRUD party in 2001. The army is deployed along the Somali and Ethiopian borders. France also maintains a military base in Djibouti with over 2,000 soldiers.

Almost all members of the armed forces come from the Issa ethnic group, which has dominated the government since independence. Afar demands for parity have been resisted by the government and continue to plague efforts toward intertribal harmony.

ECONOMY

The economy is based on service activities connected with the country's strategic location and status as a free-trade zone in northeast Africa. Two-thirds of the inhabitants live in the capital city, the remainder being mostly nomadic herders. Scanty rainfall limits crop production to fruits and vegetables, and most food must be imported. Djibouti's most valuable economic asset is its strategic location at the intersection of shipping routes between the Indian Ocean and the Mediterranean Sea. Djibouti provides services as both a transit port for the

region and an international transshipment and refueling center. It has few natural resources and little industry. The nation is, therefore, heavily dependent on foreign assistance to help support its balance of payments and to finance development projects. An unemployment rate of 50 percent continues to be a major problem. Inflation is not a concern, however, because of the fixed tie of the franc to the U.S. dollar. Per capita consumption dropped an estimated 35 percent through the 1990s because of recession, civil war, and a high population growth rate (including immigrants and refugees). Also, renewed fighting between Ethiopia and Eritrea disturbed normal external channels of commerce. Faced with a multitude of economic difficulties, the government fell in arrears on long-term external debt and has been struggling to meet the stipulations of foreign aid donors.

Poverty is Djibouti's most serious obstacle to development. Per capita gross domestic product (GDP) was \$1,300 in 2002, which was relatively high for sub-Saharan Africa, but 50 percent of the population is poor, and 10 percent is poor enough to be unable to buy sufficient food for minimal caloric intake. Refugees from other countries burden Djibouti's social-services system. Indeed, poverty has increased noticeably in the last few years and is hurting Djibouti's ability to improve its economic situation. Children of poor parents are unable to attend school and as a result cannot find skilled jobs, so they in turn become poor parents. The World Bank has made its first goal in Djibouti the reduction of poverty, including through the expansion of education and the improvement of the health-care system and social safety net. If poverty comes under control, Djibouti will then be able to devote more of its resources to infrastructure and to improve efficiency through privatization.

ENVIRONMENT

The desert climate is Djibouti's greatest environmental problem, as the desert continues to encroach. Also of concern is the lack of potable water for the country's rapidly growing population. Rainfall is unpredictable and makes life difficult for rural people; when rain does not fall, famine results, and livestock die. Djibouti lies on the convergence of the African and Arabian tectonic plates and experiences frequent earthquakes and the occasional volcanic eruption.

LIVING CONDITIONS

Djibouti is a very poor country. Half of the population lives below the poverty line. About one-third of Djibouti's people, particularly nomads in the interior, live without access to potable water or any kind of sanitary plumbing. Approximately 60 percent of the population do not have water in their homes. This problem is especially bad for those who are already poor, as they often find themselves paying twice as much for water from trucks as they would if they were connected to a municipal water system.

Two-thirds of Djibouti's population lives in the city of Djibouti. The city has a decent telephone system and rudimentary Internet access but is also polluted with sewage and garbage. The nation as a whole has fewer than 3,000 kilometers of roads, only 13 percent of which are paved. There is one stretch of railroad track 100 km long; it runs to Addis Ababa, Ethiopia. Djibouti has 13 rudimentary airports, three of which have paved runways.

HEALTH

Djibouti has serious health problems; important health indicators are below standards for the region, to say nothing of the world. Life expectancy is just over 43 years, a decrease from 50 years in 1997. The infant mortality rate is high, with 106 children dying for every 1,000 born. Malnutrition is a problem for many people, especially women and children under five. On average women have 5.5 children. Many mothers die in childbirth—about 730 per 100,000 live births. Anemia caused by malnutrition and rapid childbearing causes additional problems, as does female genital mutilation. Infectious diseases are very common, especially tuberculosis. About 3 percent of adults are HIV-positive.

FOOD AND NUTRITION

Djibouti does not have enough food to feed its people, and malnutrition is a major problem. The climate is dry and the soil is rocky, which makes it difficult to nurture crops or livestock. Djibouti imports almost all of its food, including rice, flour, sugar, fruits, and vegetables. The pastoral areas in the southeast and northwest suffer periodic famines from lack of rainfall. Pastoral herders depend on milk from their goats and camels, and famines decrease milk production as the animals themselves become malnourished. In the city food is generally available but expensive; thus, the poor in Djibouti City suffer from famines in the form of higher food prices, which force them to choose between food and other expenses such as education.

People must take precautions with all their food in order to prevent diarrhea, washing fresh fruits and vegetables, boiling water, and making sure all meat is thoroughly cooked. Street food is of the North African variety, featuring flat bread, lentils, chicken, fish, and fried meat. Grilled or barbecued Red Sea fish is especially popular. Restaurant food is French-influenced. Fresh fruits and vegetables can be purchased at an open-air market but must be carefully washed before consumption. Alcohol is not readily available.

STATUS OF WOMEN

Women legally possess full civil rights, but in practice, due to custom and traditional societal discrimination in

education, they play a secondary role in public life and have fewer employment opportunities than men. Few women work in managerial and professional positions; women are largely confined to trade and secretarial fields. Customary law, which is based on Islamic sharia law, discriminates against women in such areas as inheritance, divorce, and travel. The vast majority of women are still circumcised as children in an extreme form of female genital mutilation known as infibulation. Though activists have begun speaking out against this practice, which is extremely painful and causes numerous health problems, most girls still undergo the procedure.

WORK

Most adults in Djibouti do not have jobs. The unemployment rate was officially estimated at 50 percent in 2004, but some experts believe the rate is much higher. About 80 percent of youths between 15 and 20 are unemployed. Women have more difficulty finding jobs than do men. Income distribution is very uneven, with one-fifth of the population earning two-thirds of the income. The largest employer is the government, which runs the port, the airport, and the electrical and telecommunications systems. The U.S. government, through the military and the embassy, is the second-largest employer.

EDUCATION

Djibouti has not yet introduced compulsory, universal, free education. Schooling lasts 13 years, as divided into six years of primary school, four years of middle school, and three years of secondary school. The academic year runs from September to May. The medium of instruction is French. There is a general lack of qualified teachers and funding for facilities. France sends aid; it has also

sent teachers, helped coordinate policy, and sponsored a teacher-training center.

In 2001 about 34 percent of children were attending primary school; only 30 percent of all girls were attending. The number of students drops during famines, when families must use their money to buy food instead of school supplies. The nationwide literacy rate is about 68 percent; 78 percent of men and 58 percent of women can read.

SCIENCE AND TECHNOLOGY

Djibouti concentrates much of its technological expertise on the development of its port. The port is the main port for Ethiopia, and imports and exports have increased drastically in recent years, particularly of petroleum products destined for Ethiopia. As of 2004 the government was in the midst of a \$15 million expansion of the port's terminal, including \$2 million for computerizing the facilities. The Dubai Port Authority has agreed to invest in and administer Djibouti's port for 20 years.

MEDIA

The state news agency is the Agence Djiboutienne d'Information. Four newspapers are published (all in French) in Djibouti. The government owns the principal one, *La nation de Djibouti*. *Le renouveau* is run by the op-

position Party for Democratic Renewal, and *La république* by the opposition Parti National Démocratique. Book publishing does not exist.

The government controls all electronic media, and most journalists refrain from criticizing government policies. The official radio and television service, the government-owned Radiodiffusion-Télévision de Djibouti (RTD), operates one shortwave and two medium-wave transmitters and one television station. Radio programs are broadcast in French, Afar, Issa, and Arabic. The BBC and Radio France Internationale broadcast in Djibouti. Voice of America is available over a local FM relay. The television station, with one transmitter, can reach 80 percent of the population.

There are two public libraries. The Public Library of Djibouti has 11,000 volumes.

CULTURE

Djibouti's traditional culture comes from its history of nomads, warriors, merchants, and caravans, combining Arab, Somali, and Afar customs. These traditions have evolved into songs, poems, folktales and legends, dances, games, and costumes. The Issa people share an oral tradition with the Somali that encompasses proverbs, aphorisms, and the lives of Sufi saints; this tradition has been written down in Somali, Arabic, and French. The Afar people's oral tradition revolves around songs, such as love songs, songs for weddings or markets, war songs, and boasting songs.

Djibouti's ancient port city of Tadjourah was once the site of a wealthy sultanate. The white domes of its seven mosques formed a landmark for sea traders and caravans coming from the desert. The city of Djibouti itself was built in the 1890s of coral blocks decorated with French art deco plasterwork and Islamic patterns and calligraphy.

FOLKLORE AND MYTHOLOGY

Djibouti's folklore mixes stories from Somalia, Ethiopia, and ancient Abyssinia with Islamic traditions. The ancient Egyptians knew Djibouti as the land of spices and incense, the destination of nomadic camel traders traversing the area between Egypt and the Middle Eastern countries across the Red Sea. The modern state of Djibouti is quite young as a nation. It has attempted to create cultural unity and national pride by encouraging artists, musicians, and performers to create works that express the character of their ancient homeland. The government has sent performers abroad to present original works at arts festivals in an effort to show the world Djibouti's culture. Their works idealize traditional cultural moments, such as weddings, circumcisions, and the induction of sultans or tribal chiefs, and romanticize the nomadic desert culture—which most modern residents of Djibouti eschew.

ENTERTAINMENT AND RECREATION

Djibouti has limited recreational facilities and the climate can make outdoor entertainment unappealing. The Red Sea beaches offer swimming and diving, though sharks present a minor threat. People can take four-wheel-drive vehicles on expeditions into the countryside, where there are black lava fields, some hills, and an extinct volcano. It is possible to windsurf on wheels on Petit Bara, a salty, sandy field. Lake Asal is an attractive lake with flamingos and a popular excursion site.

Djibouti does have a nightclub scene, but the young people who frequent such establishments also tend to have a very high rate of HIV infection as well as tuberculosis. Alcohol is difficult to find, but most people spend the afternoon chewing khat, or qat, a mild stimulant grown in the hills of Ethiopia; in many places work stops all afternoon while people chew khat.

ETIQUETTE

The people of Djibouti are relatively tolerant but conservative. Provocative clothes, especially on women, are considered improper. Verbal excesses are frowned upon. Most people do not like to be photographed, and photographers must ask permission before taking someone's picture.

FAMILY LIFE

Family life in Djibouti is governed by a hierarchy in which people are ranked by age, sex, and clan. Historically, men have been the heads of families and the breadwinners. Women take care of cooking, collecting firewood and water, and handling other domestic activities. In many cases women control their family's finances. Boys are usually more highly valued than girls and are more likely to go to school. The advent of AIDS is transforming family dynamics, creating orphans as parents die.

PERSONAL APPEARANCE

The climate is hot and the culture is Muslim, which means people dress modestly but lightly. Local men wear long pants or a *futa*, which is a kind of sarong. Women wear long skirts or dresses covered with a colorful gauzy drape called a *shalma*. French expatriates occasionally wear shorts, but the local people do not.

SPORTS

Djibouti does not have much of a sports scene. One of its noted athletes is the marathon runner Hussein Ahmed Salah.

CHRONOLOGY

- 1946** French Somaliland becomes a French overseas territory.
- 1957** The territory is granted limited autonomy.
- 1958** The first territorial assembly is elected.
- 1967** The territory, now renamed Territory of the Afars and the Issas, is granted a semi-autonomous executive headed by a president and a council of eight members, elected by a Chamber of Deputies.
- 1968** Ali Arif Bourhan, Afar leader, is elected president, and his party gains 26 of 32 seats in the Chamber of Deputies.
- 1973** The territory reaffirms ties with France.
- 1975** France announces decision to grant full and unlimited autonomy to the territory but with a French military presence; Somali-inspired violence erupts against the decision.
- 1976** Ali Arif Bourhan resigns the presidency.
- 1977** The Territory of the Afars and the Issas gains independence under the name of Djibouti. Issa leader Hassan Gouled Aptidon is elected as the nation's first president; Gouled names the first cabinet, with Ahmed Dini Ahmed as prime minister.
- Djibouti joins the United Nations, Organization of African Unity (OAU), and Arab League; Ahmed Dini Ahmed resigns along with four cabinet members following Afar-Issa strife.
- 1978** Foreign Minister Abdallah Muhammad Kamil is named prime minister but later is replaced by Barkat Gourad Hamadou, another Afar.
- 1979** Afar guerillas attack military barracks with Ethiopian help. President Gouled announces formation of a new political party, Popular Rally for Progress (Rassemblement Populaire pour le Progrès, RPP). Landlocked East African nations draw up initial agreements to airlift goods to Djibouti for transshipment through the Suez Canal.
- 1981** Djibouti is declared a free port. The constitutional law is approved.
- 1982** In new elections to the Chamber of Deputies, RPP wins all seats, with a reported 91 percent of the eligible voters approving the party's single list. Legislation is enacted making RPP the country's only legal political party.
- 1983** Refugees from Ethiopia cross into Djibouti.
- 1987** Gouled is reelected unopposed.
- 1989** Somali refugees escaping their country's civil war flee to neighboring Djibouti.
- 1990** The two main underground opposition groups form a common front, the Union of the Democratic Movement.
- 1992** A new constitution is approved that allows up to four political parties. RPP wins all of the seats in the assembly.
- 1994** Rebels in the northern part of the country who make up the Front for the Restoration of Unity and Democracy (FRUD) join the ruling party in a coalition government.
- 1997** In parliamentary elections, the RPP-FRUD coalition wins all 65 seats. Hassan Gouled Aptidon celebrates 20 years as president of Djibouti.
- 1998** Barkat Gourad Hamadou begins his 20th year as prime minister.
- 1999** Ismail Omar Guelleh is elected president.
- 2000** The government and the radical faction of FRUD sign a peace agreement, putting an end to the civil war. Soon thereafter, Ahmed Dini, the former prime minister and leader of the radical faction of FRUD, returns to Djibouti after nine years in exile.
- 2001** Dileita Mohammed Dileita becomes prime minister.
- 2002** Law limiting elections to four parties expires. German and U.S. soldiers arrive in Djibouti to conduct war on terror.
- 2003** Guelleh reelected president.

GEOGRAPHICAL FEATURES

The largest of the Windward Islands, Dominica is at the northern end of the Windward chain of the Lesser Antilles, between Guadeloupe and Martinique. Dominica is roughly rectangular in shape, 47 km (29 mi) long and 26 km (16 mi) wide, with a total land area of 754 sq km (291 sq mi). The total length of the coastline is 148 km (92 mi). The island is dominated by a high mountain range running like a spine with lateral spurs on either side. The highest peak is Morne Diablatins (1,447 m; 4,746 ft). None of the many rivers is navigable, but they give limited access to the interior.

CLIMATE AND WEATHER

The climate is tropical, with extremes of heat and humidity tempered by constant sea breezes, which sometimes reach hurricane force during the hurricane season from July to September. The temperature range is 21.1°C to 32.2°C (70°F to 90°F). Rainfall varies, with the eastern coast receiving 5,000 to 7,600 mm (200 to 300 in), whereas the drier western coast receives 1,000 to 1,800 mm (40 to 72 in). The wettest season is normally June to October, although January sometimes has more rain.

West Coast: 40 in to 72 in

FLORA AND FAUNA

Dominica has a great profusion of plant and animal life. Its Morne Trois Pitons National Park was designated a World Heritage Site by the UN Educational, Scientific and Cultural Organization (UNESCO) in recognition of its unique natural beauty and biodiversity. Two species of parrot are unique to Dominica: the Imperial, or Sisserou, Dominica's national bird, and the Jaco, a smaller parrot with a red neck. Dominica is also home to several species of hummingbird, the broad-winged hawk, the magnificent frigate bird, the *siffleur montagne*, the rufous-throated solitaire, and the barn owl. Some tour operators specialize in bird-watching trips. Dominica has two species of large mammal, the agouti and the *manicou* (similar to an opossum), as well as many bats. Numerous species of reptile live there, including iguanas and several kinds of snake. A large frog known as the *crapaud* or "mountain chicken" is a popular meat. The seas around Dominica teem with fish and marine mammals, including many types of whales and dolphins, and its coral reefs are spectacular, making the island a popular destination for scuba divers.

Dominica's plant life is also lush. The island is covered with orchids and ferns, and its national flower is the Bwa Carib. Banana trees and cashew nut trees grow abundantly.

ETHNIC COMPOSITION

The island was once occupied by the Arawaks, who were exterminated by the Caribs, a warrior tribe. Only some 1,200 members of this tribe survive, at the Carib Reserve at Salybia. Most of Dominica's modern inhabitants are descended from West African slaves imported as plantation laborers in the 17th and 18th centuries; many of them are the products of unions between blacks and whites. The white colonial class was historically privileged over the black majority and resisted any attempts to change the social structure well into the 20th century.

LANGUAGES

English is the official language, but most of the people speak a French patois of uncertain origin.

RELIGIONS

Roman Catholics constitute about 70 percent of the population, but there are long-established Anglican and Methodist Churches. The 1979 "Dread Act" bans the Rastafarian sect, but this law is not enforced.

Religious Affiliations

Roman Catholic	53,000
Protestant	10,000
Other	6,000

HISTORICAL BACKGROUND

Dominica was originally inhabited by first the Arawaks and then the Carib Indians, who named the island

Wai'tukubuli, or "Tall Is Her Body." The Kalinago or "Island Caribs" had paddled northward up the chain of the Antilles, and the Arawakan-speaking Igneri are thought to have settled in Dominica around c.e. 400.

The first known Europeans to sight the island were led by Christopher Columbus, who sailed past on a Sunday in 1493 (hence the name Dominica). Dominica was claimed by both France and England in the 17th century, but in 1748 it was stipulated that the island should be left in the hands of the Caribs. In 1763 Dominica was assigned to Great Britain under the Treaty of Paris but was captured by the French in 1778, then restored to Great Britain in 1783. In 1795 the French made an abortive attempt to seize the island and burned the capital in a later attempt in 1805. Finally, the French were induced to abandon their claims upon the payment of 8,000 pounds. Dominica joined the Federation of the West Indies as an independent member in 1958 and remained so until the dissolution of the federation in 1962. In 1967 Dominica became one of the West Indies Associated States, with full autonomy in internal affairs. Following a decision in 1975 by the Associated States to seek independence, Dominica became an independent republic within the Commonwealth in 1978.

Dominica experienced a great deal of political instability related to race in the 1960s, 1970s, and early 1980s. The white ruling class refused to abandon their position of power, despite increasingly stringent protests from the black majority. The resulting political unrest hampered Dominica's efforts to establish a tourist industry. After the independence constitution took effect the political scene grew much more stable and Dominica was finally able to develop its reputation as a Caribbean resort destination; the delay may well have benefited Dominica, which was then able to market itself as pristine and unspoiled by development, unlike other Caribbean islands.

Upon independence Patrick Roland John, the leader of the Dominica Labour Party (DLP), became prime minister. In 1979 John was forced to step down as a result of unrest following government attempts to introduce legislation restricting trade unions and the press. James Oliver Seraphine was designated his successor. Both John and Seraphine were denied reelection in July 1980. The Dominica Freedom Party (DFP) won those general elections decisively, and its leader, Mary Eugenia Charles, became the first woman to become a prime minister in the Caribbean.

Security issues dominated Charles's first years in office. In January 1981 the government disarmed the Defense Force because of reported trading of weapons for marijuana. Later that year it instituted a state of emergency following two coup attempts by John's supporters. John was implicated in the plots and imprisoned. He was initially tried and acquitted on the charges, but

in 1985 he was retried and sentenced to 12 years' imprisonment.

In January 1985 the DLP joined ranks with two other opposition parties—the Dominica Liberation Movement and the United Dominica Labour Party—to form the Labour Party of Dominica (LPD). In the July 1985 general elections the DFP was returned to power, winning 15 of the 21 seats in the House of Assembly. By 1987 the DFP had gained two more seats in the House of Assembly, with the remaining four belonging to the LPD.

In the May 1990 general elections Charles and the DFP were returned for a third five-year term, but with a sharply reduced majority. The DFP retained only 11 seats in the House of Assembly, the LPD won four, and the two-year-old United Worker's Party (UWP) won six. In 1995 Charles stepped down as leader of the DFP, and Brian Alleyne took her place.

In 1995 the United Workers Party was swept into power, with Edison James becoming the new prime minister. In 2000 the LPD won 10 seats in the House of Assembly, and Roosevelt "Rosie" Douglas became prime minister. In October of that year Douglas died unexpectedly, and Pierre Charles became prime minister. That year parliament passed a law allowing the state-owned National Commercial Bank to provide offshore financial services, part of Dominica's plan to provide financial services to the world. In 2002 Charles confessed that Dominica was facing an economic crisis; he cited globalization and the decline in tourism as the causes.

Charles died in January 2004 at the age of 46. The education minister, Roosevelt Skerrit of the Labour Party, succeeded him as prime minister. He pledged to bring Dominica's ailing economy back up to a healthy state. In November 2004 Dominica suffered an earthquake that caused millions of dollars worth of damage.

1978–79	Patrick Roland John
1979–80	James Oliver Seraphine
1980–95	Mary Eugenia Charles
1995–2000	Edison James
2000	Roosevelt Douglas
2000–04	Pierre Charles
2004–	Roosevelt Skerrit

CONSTITUTION

Under its constitution, Dominica is a sovereign democratic republic with an elected president and a parliamentary form of government. The president is elected by the House of Assembly for a term of five years and may not hold office for more than two terms. A presidential candidate is nominated jointly by the prime min-

ister and the leader of the opposition, and automatically elected upon such nomination. In case of disagreement the choice is made by secret ballot in the House of Assembly. Executive authority is vested in the president, the head of state, who appoints as prime minister that member of the House of Assembly who commands the support of the majority of other elected members. Other ministers, who together with the prime minister constitute the cabinet, are appointed on the advice of the prime minister, who is head of government. Not more than three ministers may be chosen from among appointed senators. The president can remove a prime minister from office if a resolution of no confidence is passed by the House of Assembly and the prime minister does not either resign within three days or advise the president to dissolve the House of Assembly.

PARLIAMENT

The unicameral House of Assembly consists of 21 elected representatives and nine senators. Depending on the wishes of the House of Assembly, the senators may be elected or appointed by the president: five on the advice of the prime minister and four on the advice of the leader of the opposition. The life of the House of Assembly is five years, and it can amend the constitution. The leader of the opposition is appointed by the president and wields considerable influence. Every citizen over age 18 is eligible to vote.

POLITICAL PARTIES

There are three major political parties in Dominica. In 2004 the United Workers' Party (UWP) held nine of the 21 seats in the House. The Dominica Freedom Party (DFP) held two seats. The Labour Party of Dominica (LPD), the left-wing party founded in 1985, held 10. There was also a small leftist party called the Dominica Liberation Movement (DLM).

LOCAL GOVERNMENT

The administration of the towns of Roseau, Portsmouth, and Canefield is entrusted to town councils. There are 37 village councils. The Carib Council administers Carib affairs. All councils exist to give local people a say in government affairs, to provide social services, and to allow people to govern themselves at the local level. Councils handle matters such as acquisition of public land, maintenance of parks and recreational facilities, local sanitation, road maintenance, collection of property taxes, regulation of markets and slaughterhouses, and control of the water supply.

LEGAL SYSTEM

The legal system is based on English common law and statute law and is administered by the East Caribbean Supreme Court in St. Lucia, consisting of the Court of Appeal and the High Court. One of the six puisne judges of the High Court is resident in Dominica and presides over the Court of Summary Jurisdiction. Four magistrates or district courts deal with summary offenses and civil offenses involving not more than \$500. The attorney general is the principal legal adviser to the government as well as the director of public prosecutions. The island's only prison is Goodwill Prison at Roseau.

HUMAN RIGHTS

In terms of civil and political rights Dominica is a free country. The government generally respects human rights. The principal human rights problems are the occasional use of excessive force by the police, poor prison conditions, societal violence against women and children, and discrimination against indigenous Carib Indians.

FOREIGN POLICY

Dominica is a member of the Commonwealth, the Organization of American States (OAS), and the United Nations, and its diplomatic contacts outside of these groupings are negligible. It maintains only a token presence in Washington, and the United States, likewise, has no immediate representation in Roseau. However, Dominica receives and is dependent on U.S. foreign aid and generally sides with the United States on regional issues. In March 2004 Dominica ended diplomatic relations with Taiwan in order to accept an offer of \$100 million in aid from mainland China.

DEFENSE

The Dominican defense force was officially disbanded in April 1981. There is no ministry of defense. The only military organization is the Commonwealth of Dominica Police Force, which includes a coast guard.

ECONOMY

Dominica is one of the lower-middle-income countries of the world, with a free-market economy in which the private sector is dominant.

The economy is dependent on agriculture, primarily the production of bananas, coconuts, citrus fruits, and root crops. Low production in 2003 hurt the banana industry badly enough to cause a 1 percent decline in gross domestic product (GDP). A small manufacturing sector is based on the soap and garment industries.

Despite its location Dominica is not a major tourist destination; the industry remains undeveloped because of rocky beaches and a lack of transportation facilities. The lack of an international airport is a major drawback, though tourists who venture to Dominica usually appreciate its great beauty. The government wants to encourage tourists to come and has tried to promote the island as an ecotourism destination, unspoiled by development. Tourism increased in 2003 and 2004 after a decline in 2002.

In 2003 the government began restructuring the economy, eliminating price controls, privatizing the banana industry, and increasing taxes. It is trying to develop financial services for businesses in need of offshore financial help and wants to build an oil refinery on the eastern side of the island.

ENVIRONMENT

The island of Dominica has made a conscious effort to protect its lush tropical resources, in large measure to protect its growing tourist industry. The government has been working for many years to ensure that the country

continues to be one of the most beautiful and pristine nations in the world while at the same time allowing for economic development. In some places rain forests have been cut down for timber and fuel, resulting in soil erosion and habitat destruction, but for the most part this is not a major problem. The sea around the island is still in excellent shape, though sewage runoff from the city of Roseau harms the waters in the immediate vicinity.

LIVING CONDITIONS

Dominica is a relatively poor country—30 percent of the people live below the poverty line—and living conditions could improve. Roseau, the capital city, is seriously overcrowded, with shanty houses sharing space with concrete government housing. Most people build their own houses privately, taking out personal loans to buy land and build structures. Because their incomes are so low, building homes and paying off loans can take many years. The city's sewage system, built in 1932, is now inadequate to treat the waste it receives, which is causing damage to the sea around Roseau. Hurricanes hit the island every few years, causing massive property destruction. In 1979 Hurricane David left 75 percent of Dominica's population homeless; some of these people still had no homes five years later. The island has no real disaster response schemes. Roseau gets its electricity from hydropower, mostly from a dam on Freshwater Lake, and from diesel fuel. Freshwater Lake is also Roseau's water source. Water is abundant and of good quality, and Dominica is able to export some of its water to other Caribbean islands.

HEALTH

Dominica has a long life expectancy, of over 74 years, and a fairly low infant mortality rate—fewer than 15 babies die for every 1,000 births. Fertility is low, and women have on average slightly less than two children. Births have outpaced deaths, but emigration more than offsets this growth, such that the population is actually declining.

Hospital facilities are adequate for basic needs, but seriously ill patients must travel to other countries for specialized medical care. Dominica's hospitals are gradually adding advanced equipment and beginning to perform more specialized surgeries. Mental health care is

seriously underfunded and neglected. The Infirmary of Roseau is a nursing facility that can house about 95 elderly people.

FOOD AND NUTRITION

Dominica's food consists mostly of fresh vegetables, fruits, meat, and fish. Most people cook their food Creole style and use natural seasonings, preferring those to the expensive store-bought versions. Local foods include yam, fig, plantain, breadfruit, mountain chicken (frogs called *crapaud*), agouti and *manicou* (indigenous mammals), chicken, goat, fish, and crab. Tap water is highly chlorinated and safe to drink. Fresh mountain water is usually safe as well. There are some restaurants in towns; there is very little fast food.

STATUS OF WOMEN

Beyond the general protection of the constitution, women do not benefit from any specific civil rights legislation. There is little open discrimination against women, yet sexual harassment and domestic violence cases are common. Property ownership continues to be deeded to "heads of households," who are usually males. When the male head of household dies without a will, the wife cannot inherit the property or sell it, although she can live in it and pass it to her children. The Dominica National Council of Women, a nongovernmental organization, has

developed local adult education and small business training programs for women. Girls attend school at the same rate as boys. Women hold fewer than one-fifth of the seats in parliament. There are no women at higher levels of government. Women constitute by far the majority of Dominicans employed in the service sector, while men dominate in agriculture and industry.

WORK

Dominica's unemployment rate in 2000 was 23 percent. Of those who are employed, 40 percent work in agriculture, 32 percent in industry and commerce, and 28 percent in services. Agricultural workers grow bananas, citrus, coconuts, cocoa, mangoes, and root crops. Agriculture no longer brings in the income it formerly did—the banana export market dropped precipitously in 2003—and many workers are now trying to earn money from tourists. The tourist industry employs many service workers in hotels and restaurants and as guides. The government is trying to develop its financial-services industry and offshore oil drilling, but so far these enterprises do not employ many Dominicans. A few people work in factories producing soap, garments, and furniture.

EDUCATION

Education is free and compulsory for 10 years, from ages five to 15. Schooling lasts for 14 years, divided into seven years of primary school, five years of secondary school, and two years of postsecondary courses. All schools are taught in English. The school year runs from September to July. Administrative responsibility for education rests with the Board of Education, headed by a chief education officer. Higher education is available at the University of the West Indies, but students must travel to Trinidad,

Barbados, or Jamaica to attend; future teachers attend the Teacher Training Institute in Roseau.

Before the 1960s lack of transportation put education out of many people's reach, but between the 1960s and 1980s Dominica built a substantial public school system. Since the 1970s there has been an islandwide day-care and preschool system run by the Social League, a Roman Catholic women's organization, and funded by the government. There is strong social pressure to get an education, so most families send their children to school, and Dominica's literacy rate is correspondingly high.

SCIENCE AND TECHNOLOGY

Dominica hopes to increase its technological expertise in order to transform its economy from dependence on agriculture to a knowledge-based system that would keep the most educated Dominicans at home. Proposed projects include the creation of a Dominica Institute of Technology, where Dominicans could conduct projects such as a wind-energy program or develop products such as banana-based food items. Dominicans who have emigrated want the government to concentrate on sustainable energy projects and ecotourism; so far the government has not embraced these ideas.

MEDIA

Three nondaily newspapers are published in the capital: the *Chronicle*, the *Sun*, and the *Tropical Star*. The press is

vigorous, and its attack on government corruption was a major factor in the success of the opposition Dominica Freedom Party in 1980. The government does not interfere with the media, and the media is sometimes outspokenly critical of governmental policies.

Dominica does not have a national television service. Private cable television is available on part of the island. There are several radio stations, both public and private.

CULTURE

Dominica has a Creole culture that combines African, West Indian, and Carib traditions in language, customs, art, and food. People still use Carib-style dugout canoes and build their houses on stilts. Clothing often displays African styles and colors. Reggae is popular, and Rastafarian dreadlocks are a common hairstyle. Calypso and zouk are other popular music styles. The French had a more lasting effect on Dominica's culture than the British, which is why the local patois is French instead of English, most people are Roman Catholic, and French names are widespread.

Dominica's main contribution to literature is in the person of Jean Rhys, born in Roseau in 1890. Her books *Voyage in the Dark* and *Smile Please* draw upon her childhood in Dominica.

FOLKLORE AND MYTHOLOGY

Dominicans love to tell folktales at night. Many of the tales are dark and frightening, featuring *soukoyant* (female witches), *lougarwoo* (male witches), dogs turning into people, and people making pacts with the devil. One story

says that if someone were to put an egg in his armpit and make a pact with the devil, the egg would then hatch into a creature called Moose; Moose would furnish money as long as the individual kept his faith with the devil.

ENTERTAINMENT AND RECREATION

Dominicans love Caribbean music, such as reggae and calypso. Aside from music, most of Dominica's entertainment options are found outdoors. Dominica's natural beauty offers a wealth of recreational possibilities. Diving and snorkeling are excellent, and hiking, mountain biking, and camping are likewise good. Cabrits National Park has both natural beauty and an 18th century British garrison. The government wants to encourage the development of more entertainment options to attract tourists who want to do more than sightsee and dive.

ETIQUETTE

Dominica is a very casual island. Dominicans are friendly and are comfortable being quite close to other people; they do not have the same ideas about personal space as many North Americans. People are not shy about trying to sell goods and services, especially to tourists. Tipping for services is customary.

FAMILY LIFE

Dominicans may legally marry at the age of 16. Most women use contraception, which has reduced the birthrate to less than two children per women. If parents are legally married they share practical custody of their children, that is, the children live with and are cared for by both parents, but legal custody lies with the father. If the parents are not married, the mother usually has legal custody. Fathers can obtain custody by proving that the mother is dead, mentally unbalanced, or otherwise unfit. Many households are headed by women, and in the Caribbean mothers exercise a great deal of moral authority over their families. Households headed by women are more likely to be poor than households headed by men, but this income gap is narrowing as more women find work outside the home.

PERSONAL APPEARANCE

Dominica's year-round temperatures are tropical, and half of the year is quite rainy; most people wear light cotton clothing. Casual dress is the norm. In the city most women wear dresses or skirts, and men wear long pants instead of shorts.

SPORTS

Cricket and soccer are the most popular sports in Dominica. In 2002 Dominica placed a player on the prestigious West Indies Cricket Team for the first time in 20 years.

CHRONOLOGY

- 1978** Dominica achieves full independence within the Commonwealth, with Patrick Roland John as prime minister and incumbent governor Sir Louis Cools-Lartique as head of state. Fred E. Degazon, Speaker of the House of Assembly, is elected and sworn in as president.
- 1979** Following a general strike President Degazon retires, and his successor, Sir Louis Cools-Lartique, resigns after only 24 hours in office; Jenner Armor is named interim president and James Oliver Seraphine interim prime minister pending general elections.
- 1980** In general elections the opposition Dominica Freedom Party wins 17 of the 21 elective seats in the House of Assembly; the party's leader, Mary Eugenia Charles, is appointed prime minister, with Aurelius Marie as president. Hurricane David and Hurricane Allen hit the island and virtually wipe out the plantations and fishing industry.
- 1983** As a member of the Organization of East Caribbean States, Dominica takes part in the U.S.-led invasion of Grenada.
- 1985** The Dominica Labour Party joins with the Dominica Liberation Movement and the United Dominica Labour Party to form the Labour Party of Dominica. The Dominica Freedom Party wins the general elections.
- 1989** Hurricane Hugo causes severe damage to the island and its banana industry.
- 1990** Charles is reelected prime minister; the Dominica Freedom Party wins 11 seats in the House of Assembly, the Labour Party of Dominica four, and the Dominica United Worker's Party six.
- 1992** The government begins a policy that grants citizenship to foreigners who invest in the Dominican economy.
- 1993** Sir Crispin Anselm Sorhaindo is elected president in October.
- 1995** After 15 years in office, Prime Minister Charles resigns. The United Worker's Party wins 11 of 21 seats in the House of Assembly; its leader, Edison James, becomes prime minister. Hurricane Luis devastates Dominica's banana crop.

- 1998** Vernon Lorden Shaw of the United Worker's Party is elected president.
- 2000** In January popular elections the Labour Party of Dominica wins 10 seats, making Roosevelt Douglas prime minister; in October, Douglas unexpectedly dies.
Pierre Charles becomes prime minister.
- 2004** Pierre Charles dies. Roosevelt Skerrit becomes prime minister. An earthquake damages the northern part of the island.
- 2005** Skerrit wins general elections.

NATIONAL FLAG

A white cross superimposed on a field of four rectangles with the upper left and lower right in blue and the upper right and

lower left in red. At the center of the cross is the national emblem.

NATIONAL EMBLEM

A shield divided by a white cross into alternating blue and red quarters. In the foreground is a white Bible opened to the first chapter of the Gospel of St. John, resting on six national flags in saltire, three to a side. Above the Bible is a gold pulpit cross, and above the shield, on a blue riband, is the national motto, *Dios, patria, libertad*, (God, country, liberty). The shield is flanked by green branches of laurel and palm tied at the bottom with a white, red, and blue ribbon. On a red scroll at the base is the country's name in black letters.

NATIONAL ANTHEM

"Dominicans, Let Us Raise Our Song."

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 6 (Epiphany), January 21 (Altagracia Day), January 26 (Duarte Day), February 27 (Independence Day, National Day), April 14 (Pan American Day), May 1 (Labor Day), July 16 (Foundation of Sociedad la Trinitaria), August 15 (Crowning of Our Lady of Altagracia), August 16 (Restoration of Independence), September 24 (Day of Our Lady of Las Mercedes), October 12 (Columbus Day), October 24 (United Nations Day), November 1 (All Saints' Day), December 25 (Christmas), various Christian festivals

DATE OF INDEPENDENCE

February 27, 1844

DATE OF CONSTITUTION

November 28, 1966

GEOGRAPHICAL FEATURES

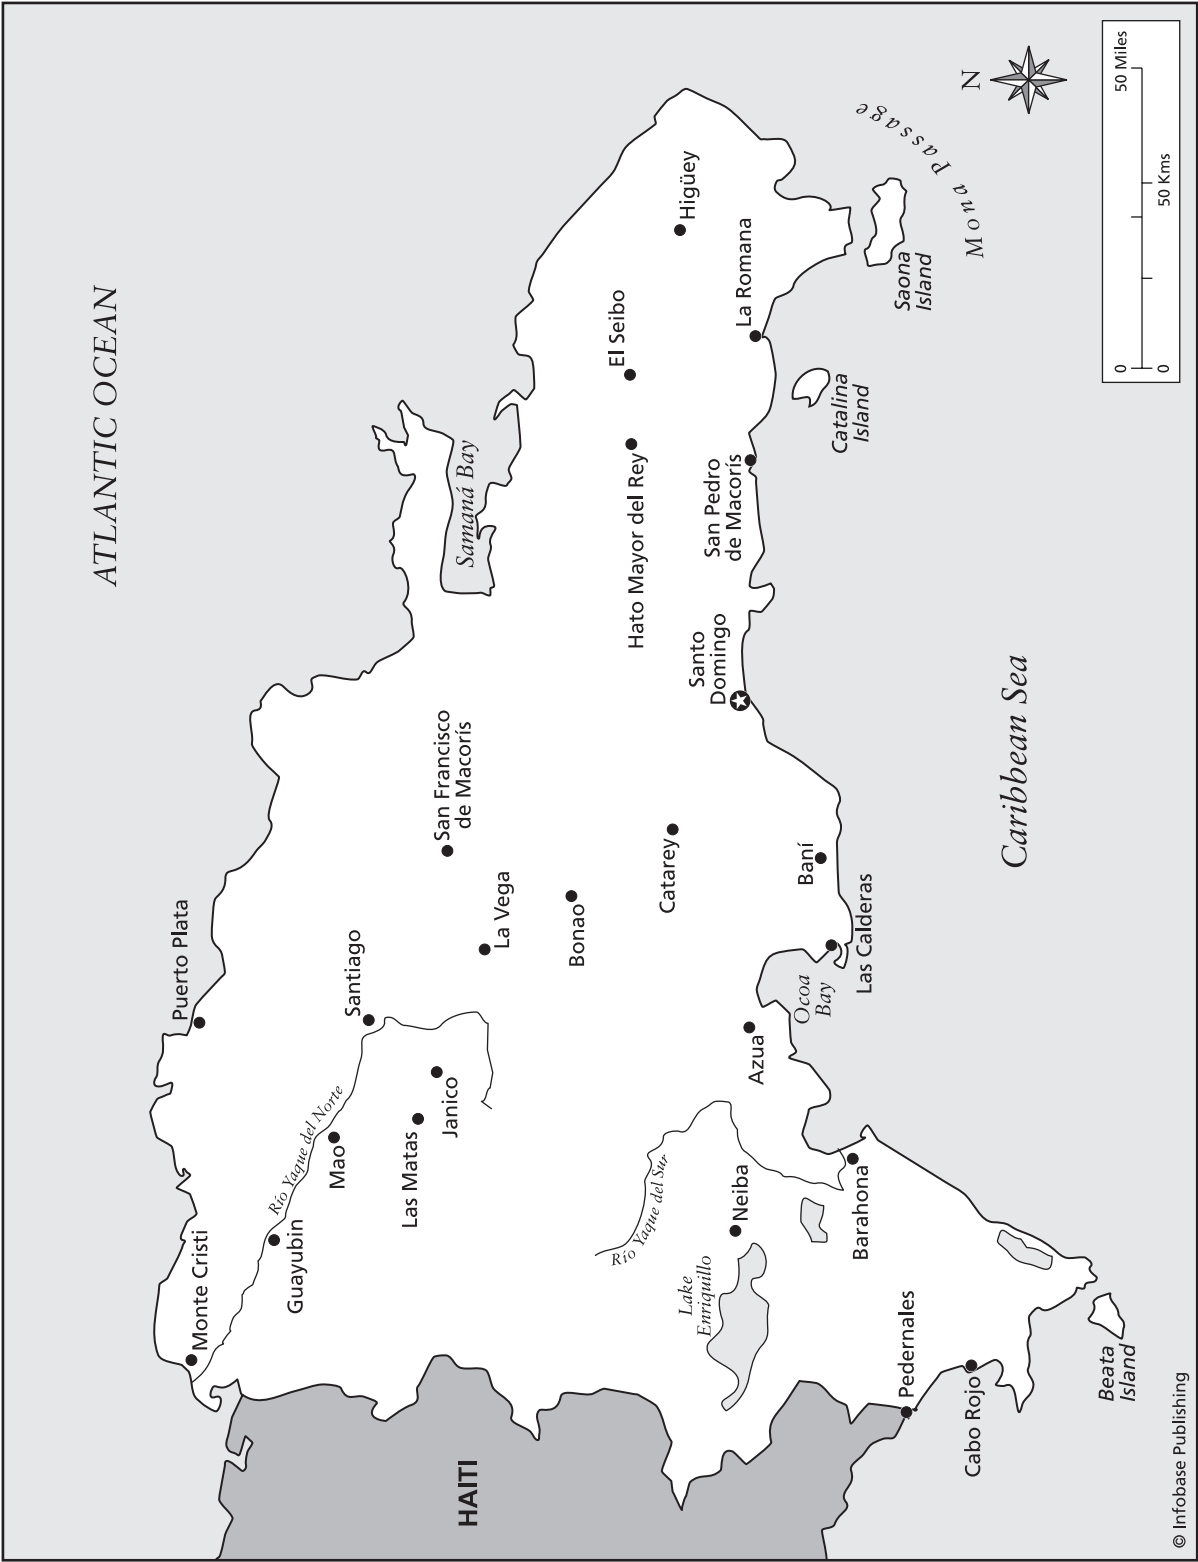

The Dominican Republic occupies the eastern two-thirds of the island of Hispaniola and includes the islands of Beata, Catalina, Saona, Alto Velo, and Catalinita in the Caribbean Sea, with a total land area of 48,730 sq km (18,815 sq mi). The country extends 386 km (240 mi) east to west and 261 km (162 mi) north to south. The coastline on the Atlantic Ocean and the Caribbean Sea stretches 1,288 km (800 mi). The Dominican Republic

shares its total international boundary of 360 km (224 mi) with Haiti.

The capital is Santo Domingo, founded in 1493, the oldest European settlement in the New World and the site of the oldest cathedral and the oldest university in the Western Hemisphere. The city's population in 2003 was 2,851,300, which made Santo Domingo by far the most populous city in the nation.

The Dominican Republic is divided geographically into more than 20 regions, but the main topographical di-

Dominican Republic

700 Dominican Republic

visions are the highlands and the lowlands. The highlands consist of four parallel mountain ranges in the west—the Cordillera Central, Cordillera Septentrional, Sierra de Neiba, and Sierra de Baoruco (Bahoruco)—and the Cordillera Oriental in the east. The Cordillera Central, which divides the country into two parts, contains Pico Duarte, the highest peak in the West Indies, with an elevation of 3,175 m (10,417 ft). The lowlands consist of long parallel valleys lying for the most part in a northwest-to-southeast direction. The most extensive of these valleys, the Cibao, is drained on its western flank by the Yaque del Norte, the country's longest river, and on its eastern flank by the Yuna River. The San Juan Valley is drained by a tributary of the Artibonito River and by the Yaque del Sur and its tributary, the San Juan. The Caribbean coastal plain is drained by the Ozama River and the Macorís River. All these rivers are for the most part shallow and subject to seasonal changes in flow. Both the Ozama and the Macorís are navigable for short distances.

---------------	-----------

CLIMATE AND WEATHER

The country has a tropical maritime climate, but the heat of the tropics is moderated by the ocean currents and year-round trade winds as well as by the general elevation. The temperature averages between 22.2°C (72°F) and 28.3°C (83°F). It rarely falls below 15.6°C (60°F) or rises above 32.2°C (90°F). The coastal plain has an annual mean temperature of 25.5°C (78°F), but the Cordillera Central has a more temperate climate, with a mean of 20°C (68°F). Frosts are common at higher elevations.

The rainy season extends from May to November, with the maximum precipitation in the late spring and fall. In general, rainfall is heaviest in the north and east and diminishes toward the rain-shadow regions of the south and west. The highest annual precipitation recorded in

the country is 2,790 mm (110 in) on the northeastern slopes of the Cordillera Oriental. The Samaná Peninsula, La Vega, El Seibo, and the Puerto Plata region receive moderately heavy rainfall, although Santiago de los Caballeros, Monte Cristi, and the Neiba Valley receive scant rains. Nationwide the mean rainfall is between 1,390 mm and 1,520 mm (55 in to 60 in).

The Dominican Republic is exposed to Caribbean hurricanes from June through November, although it lies out of the two tracks of maximum intensity, which pass to the east and west.

Climate and Weather

Mean Temperature: 72°F to 83°F
 Coastal Plain: 78°F
 Central Cordillera: 68°F
Average Rainfall: 55 in to 60 in

FLORA AND FAUNA

The Dominican Republic, with its tropical climate and range of elevations, is home to a rich variety of plants and animals. More than 5,600 species of plants have been identified on the island of Hispaniola. The lowlands are home to mangroves, sweet acacia, wild frangipani, West Indian boxwood, poisonwood, and Monte Christi sage. Plants that favor higher elevations include bamboo, tree ferns, West Indian cedar, sierra palms, pasture fiddlewood, and Krug wild avocado. Almost one-third of the plants in the Dominican Republic grow there and nowhere else.

The Dominican Republic also contains many animal species, though it does not have the variety of birds or large mammals found in mainland Central America; in particular, it has never had any large cats. Large lizards and tarantulas, however, are abundant. The seas around the island teem with fish and other sea creatures, such as manatees and sea turtles. Humpback whales mate just off the northern coast. Many of the island's species are endangered, including the humpback whale, the Pacific pilot whale, the Caribbean monk seal, the Atlantic spotted dolphin, the Caribbean manatee, the Antillean manatee, the American crocodile, the rhinoceros iguana, the Hispaniola ground iguana, the loggerhead turtle, the green turtle, the leatherback turtle, the hawksbill turtle, the *jutia* (a large rodent), the *coterra* (a parrot), and many others. The Dominican Republic has passed laws attempting to protect these species but for the most part does not enforce them.

POPULATION

ETHNIC COMPOSITION

Mulattoes, considered a separate race in official censuses, form the largest group in the Dominican Republic, accounting for 73 percent of the population, followed by whites, accounting for 16 percent, and blacks, 11 percent.

Haitians constitute the bulk of the black population; a smaller portion of blacks is made up of descendants of former American slaves who immigrated to Haiti in the 19th century. The white population includes those of pure Spanish descent, Lebanese, and German Jews. The heaviest concentration of whites is in Santiago de los Caballeros because only those of pure Spanish blood were once allowed to settle there. Other ethnic groups include Chinese, Japanese (a small colony of Japanese farms the Constanza Valley), and other Asians.

Although race is an important determinant of social status, there is no overt racial discrimination in the Dominican Republic other than a general prejudice against Haitians. Mulattoes have dominated the government and the armed forces since the rise of Trujillo, himself a mulatto of middle-class origin.

LANGUAGES

Spanish is the official language and is spoken by about 98 percent of the people. The remaining 2 percent speak Haitian Creole, especially along the Haitian border.

The use of English is growing, and the Dominican vocabulary includes many American words as a result of cultural connections with the United States.

RELIGIONS

By the Concordat of 1954, Roman Catholicism is the state religion of the Dominican Republic. More than 90

percent of the population consider themselves Catholics, at least nominally, although very few attend mass regularly.

Religious minorities include Protestants, Haitian voodoo (vodou) cultists, Baha'is, and Jews. Religious freedom for these communities is protected by law, though most practitioners of voodoo keep their beliefs secret because the majority of people consider voodoo a pagan practice

HISTORICAL BACKGROUND

The first inhabitants of the island of Hispaniola were a branch of the Arawak nation known as Taino. The people were largely wiped out within a century of Spanish colonization, but vestiges of their language, culture, and agricultural practices survive. European settlement began with the first voyage of Columbus in 1492–93. After the Spaniards claimed most of Central and South America, however, they neglected their Caribbean colonies, allowing the French to seize and settle the western half of Hispaniola in the late 17th century. Misgovernance by Spain in the restoration period following the Napoleonic Wars led the colony of Santo Domingo to proclaim its independence in 1821, but a year later the new country was invaded and occupied by Haitians led by President Jean-Pierre Boyer. The Haitians abolished slavery; nonetheless, their overlordship was deeply resented. The Dominican Republic achieved independence from Haiti in 1844, under Juan Pablo Duarte.

The period from 1844 to 1864 was dominated by two strongmen: Pedro Santana and Buenaventura Báez. Both tried repeatedly to make the Dominican Republic a protectorate of a foreign power to guard against incursions from Haiti; this led to reannexation by Spain in 1861. But popular revolt put an end to Spanish rule in 1865. The departure of the Spanish left groups in several regions and factions contesting power; chaos prevailed until the late 1870s. The 1880s and 1890s saw the country ruled over by Ulises Heureaux, first as president, then as dictator, growing gradually more despotic and extravagant until his assassination in 1899. Another era of prolonged instability followed, with rival factions taking up arms; this culminated in the assassination of President Ramón Cáceres in 1911. A military coup in 1916 prompted direct intervention by U.S. Marines, who remained until 1924, when a civilian government led by Horacio Vásquez assumed control.

Rafael Leonidas Trujillo, a marine-trained sergeant, overthrew Vásquez in 1930 and began a three-decade-

long dictatorship in which he ruled at times directly (1930–38, 1942–52) and at other times through surrogates, including his own brother and protégé, Joaquín Balaguer. Trujillo expanded industry and public works and liquidated the country's debt; he also set up state monopolies over all main economic activities, which enriched his family and associates. But no form of popular representation was permitted, and power was maintained through blackmail, torture, and murder. In 1937 the regime slaughtered between 10,000 and 20,000 Haitian immigrants in a retaliatory strike against Haiti's uncovering of covert Dominican agents in Port-au-Prince. In 1960 Trujillo's agents tried to assassinate the Venezuelan president Rómulo Betancourt, leading the United States to downgrade its relations with Santo Domingo.

Trujillo's assassination in 1961 ushered in another period of political turmoil. The left-of-center democrat Juan Bosch Gaviño won the 1962 presidential election, the country's first free elections since the 1920s, but was overthrown by a military coup in 1963 and replaced by a three-man civilian junta. The junta, in turn, was overthrown by Bosch supporters in 1965. A civil war ensued, during which U.S. troops briefly intervened to prevent the pro-Bosch forces from regaining control. The war ended inconclusively, with an agreement to hold new elections. Balaguer, the candidate of the conservative Partido Reformista Social Cristiano (PRSC), won the 1966 election, defeating Bosch, the candidate of the left-wing Partido Revolucionario Dominicano (PRD). The political situation remained volatile, however, with both the left and the right mounting unsuccessful coups.

The period from 1966 to 1996 was the era of Balaguer, who served as president for all except an interlude from 1978 to 1986 when the PRD won two elections. Balaguer's early rule witnessed rapid growth, though many did not share in the prosperity, and persecution of political opponents. Under the PRD president Antonio Guzmán Fernández there was considerable political liberalization, which included the replacement of military officers not inclined to support civilian rule. Guzmán's economic reform efforts were hampered by opposition control of the Senate; rising oil prices and declining sugar prices forced him to implement unpopular belt-tightening measures. Guzmán committed suicide just before his term ended in 1982, for reasons that remain unclear. His successor, Salvador Jorge Blanco, could not cope with low export prices for sugar, rising inflation, diminished U.S. aid, hurricanes, and growing corruption. In 1985 there were violent confrontations between protesters and police over price rises for staple goods and austerity measures demanded by the International Monetary Fund (IMF) in return for loans. The aged Balaguer's return to power was characterized by profligate spending on public works and grandiose prestige projects as well as Machiavellian machinations to retain political control.

The 1996 election was a three-way contest that saw the PRSC candidate eliminated in the first round of voting, leading Balaguer to throw his party's support behind the centrist Partido de la Liberación Dominicana (PLD) candidate and ultimate victor, Leonel Fernández Reyna. Fernández was praised for ending the country's relative isolation and improving relations with other Caribbean countries, but he was also attacked for tolerating continued administrative corruption and for failing to translate renewed economic growth into the alleviation of poverty. Hipólito Mejía, the leftist PRD candidate, won the 2000 presidential election by promising to fight corruption and improve social programs.

During the early 2000s the Dominican Republic suffered from economic woes, including high unemployment, climbing inflation, and a steadily declining currency, and Mejía lost popularity almost as soon as he was inaugurated. Thousands of people lost their jobs in 2000 and 2001, and thousands more took to the streets to protest the government's policies. Fernández campaigned for president again by promising to reduce inflation, stabilize the currency, and improve the investment climate, and won a second nonconsecutive term in 2004. He announced numerous cuts in state spending when he took office in August 2004.

LIST OF MODERN RULERS

1966–78	Joaquín Balaguer
1978–82	Antonio Guzmán Fernández
1982	Jacobo Majluta Azar
1982–86	Salvador Jorge Blanco
1986–96	Joaquín Balaguer
1996–2000	Leonel Fernández Reyna
2000–04	Hipólito Mejía
2004–	Leonel Fernández Reyna

CONSTITUTION

The Dominican Republic is currently on its 25th constitution, which was promulgated in 1966 and reformed in 1994. All of the Dominican Republic's previous constitutions guaranteed the rights of citizens and set up governments based on fine checks and balances, yet few of their provisions were ever observed in practice.

The constitution of 1966 set up a civil, republican, democratic, and representative government. Among the many freedoms that it guarantees are the right to own private property, freedom of worship, freedom of speech, freedom of association, freedom of movement, and the right to strike. It also charges the state to provide free, universal, and compulsory education, redistribute land and eliminate the large estates (known as *latifundios*), introduce Social Security services, and promote family life.

Executive authority is vested in the president, elected to four-year terms by direct popular vote. A vice president is elected on the same ticket. The president is the head of the public administration and the supreme chief of the armed forces. The president also appoints cabinet ministers called secretaries of state. As of 1994, no president is allowed to serve consecutive terms.

Legislative power is vested in a bicameral legislature. The highest court is the Supreme Court, manned by at least nine judges elected by the senate.

Suffrage is universal and compulsory by law for all citizens over the age of 18 and all who are or have been married, even if they are not yet 18.

PARLIAMENT

The National Congress (Congreso Nacional) consists of a 30-member Senate (Senado) and a 149-member Chamber of Deputies (Cámara de Diputados). Members of the Congress are elected for four-year terms.

Both houses normally meet each year on February 27 and August 16 for sessions of 90 days, extendable for periods of 60 days. Bills may be introduced by the president of the republic, senators, deputies, the Supreme Court (in judicial matters), and the Central Electoral Board (in electoral matters) and must be approved by both chambers before being submitted to the president. A presidential veto may be overridden by a two-thirds vote in both chambers.

The Congress has broad legislative powers and is empowered to approve or reject treaties, levy taxes and approve expenditures, regulate the national debt, and grant authorization to the president to leave the country for more than 15 days. It can proclaim a state of siege or national emergency.

POLITICAL PARTIES

Since the end of the 1965 civil war Dominican politics has been dominated by the Christian Social Reformist Party (Partido Reformista Social Cristiano, PRSC), a conservative party that draws its support mainly from the church, the peasantry, and the middle class.

In 1978 the Dominican Revolutionary Party (Partido Revolucionario Dominicano, PRD), having moderated its political philosophy, won the presidency for the first time, promising greater personal liberties along with a more populist (and less U.S. oriented) economic program. The party's founder, Juan Bosch, broke away in 1974 to start a new party, the Dominican Liberation Party (Partido de la Liberación Dominicana, PLD).

The PLD later metamorphosed into a centrist party, and in 1996 its presidential candidate, Leonel Fernández, won; however, it remained a distinct minority in Con-

gress. The PRD won a majority in both legislative houses in the 2002 election, with the PLD second and the PRSC third.

There are a dozen or so minor parties. The Dominican Communist Party was outlawed from 1962 until 1977.

LOCAL GOVERNMENT

The country is divided for the purposes of local government into 31 provinces, each headed by a governor, and one district, the Distrito Nacional.

The provinces are subdivided into 154 municipalities and municipal districts. The Distrito Nacional is governed as a municipality. Each municipality is governed by a mayor assisted by a municipal council, consisting of no fewer than five members. Both the mayors and the members of the municipal council are popularly elected for four-year terms. There are 868 rural townships directly administered by the central government.

Local governments have only the slightest of revenue-raising capabilities, and their budgets have been kept meager by the central government; moreover, the state has recently privatized a number of basic local administrative responsibilities such as water, sanitation, and transport.

LEGAL SYSTEM

The legal system is based on French civil codes. The Dominican judicature is headed by the Supreme Court of Justice, consisting of at least nine justices appointed by the National Judicial Council (whose own membership is nominated jointly by the three leading parties) and an attorney general appointed by the executive. The Supreme Court has the power to rule on constitutional questions and has jurisdiction in all cases involving the president, vice president, cabinet members, members of Congress, and members of the judiciary.

Immediately below the Supreme Court are five courts of appeal. Each court of appeal has five judges, including the president. Judges are independent of the executive branch. Their terms of office correspond to that of the president and other elected officials.

Each of the 29 provinces and the Distrito Nacional form judicial districts with courts of first instances. These judicial districts are further divided into municipal districts, each with one or more local justices of the peace. Judges of the lower courts are appointed by the Supreme Court and are subject to the high court's discipline.

The national penitentiary is La Victoria in Santo Domingo. There are some 20 other prisons, of which the largest are located at La Vega, Puerto Plata, San Francisco de Macorís, Moca, San Juan, San Cristóbal, and

Barahona. There is no provision for capital punishment in the Dominican legal system.

In 2004 the government was beginning to modify the legal system to move away from the French civil code and toward an accusatory system.

HUMAN RIGHTS

The Dominican Republic has made great strides toward political freedom since the assassination of the dictator Trujillo, the civil war of 1965, and the period of instability that followed. The peaceful transfer of power in 1978, the first to occur from one civilian party to another in this century, was a landmark in this process of democratization. Dominicans now enjoy the broad range of human rights guaranteed in the 1966 constitution, aside from significant but episodic lapses.

The country's biggest human rights problem remains mistreatment of and racism toward Haitian immigrants. Aliens have virtually no legal recourse against deportation, and even those legally present are routinely discriminated against in employment and other areas of life; on some plantations the working conditions of Haitians approach indentured servitude. Women also suffer from domestic violence, sexual harassment and abuse, and circumscribed economic opportunities.

There are problems of extrajudicial killings by uniformed personnel—at times by the military or civil defense forces but mainly by the police—abuse of suspects, and arbitrary detention.

Trials are fair and open, and court-appointed lawyers are assigned free of charge for the indigent. No special political or security courts exist, and civilians may not be tried in a military court. A residence may not be searched without due process, and this means in the presence of a prosecutor or assistant prosecutor.

Unions are generally allowed political space to organize, with the notable exception of the free-trade zones, an issue to which international human rights groups have called attention.

Many political exiles returned after the 1979 amnesty, but a ban remained in effect for certain members of the Trujillo family. Political parties are allowed to exist and campaign freely. However, parties that do not register with the Central Electoral Board are considered illegal.

FOREIGN POLICY

The Dominican Republic joined the United Nations in 1945. It is a member of 16 UN organizations and various other international organizations, including the Organization of American States, the Ibero-American Community of Nations, and the Africa-Caribbean-Pacific (also

known as the Lomé Convention) group of the European Union.

Much recent Dominican diplomacy has been oriented toward facilitating trade and tourism. Concerns that the North American Free Trade Agreement (NAFTA), signed in 1993, would cause the United States to shift a considerable portion of investments in manufacturing from the Dominican Republic to Mexico led the Dominican government to support the eventual expansion of NAFTA into a Free Trade Area of the Americas. In 1997 President Fernández signed a free-trade pact with five Central American countries. The following year he upgraded relations with Cuba to consular level.

One of the Dominican Republic's biggest concerns is illegal immigration by destitute Haitians, who sneak across the border on foot and take up residence in their comparatively prosperous neighbor. Since the departure of Balaguer, relations with Haiti have improved, though tensions remain over border issues, illegal immigration, and treatment of Haitians in the Dominican Republic; many Haitians work essentially as indentured servants on Dominican plantations. Many Haitians manage to live peacefully in the Dominican Republic, though the country occasionally cracks down and sends many of them back to their country of origin.

The United States and the Dominican Republic have several shared areas of concern. The Dominican Republic wants more access to U.S. markets and more U.S. investment. The Dominican government maintains an ongoing interest in the welfare of its large expatriate community in the New York area and elsewhere. A growing concern in 2004 was the increasing number of Dominicans and Haitians migrating illegally across the Mona Passage to Puerto Rico. One of the Dominican Republic's most pressing problems is illicit drugs; it has become a transshipment point for a variety of drugs traveling from South America to the United States, Canada, and Europe as well as ecstasy being shipped from the Netherlands and Belgium to North America, and it is also a favored site for money laundering by Colombian drug traffickers.

DEFENSE

The defense structure is headed by the president of the republic as supreme commander. The line of command runs through the secretary of state for the armed forces and the deputy secretaries of state for the army, navy, and air force to the chief of staff and general staff of each branch.

Military manpower is provided through voluntary service, though the constitution states that each Dominican has the duty to provide whatever civil or military service the state requires.

Annual military expenditures in 1998 totaled \$180 million, representing 1.1 percent of gross domestic product (GDP).

The armed forces of the Dominican Republic have only limited offensive capability and are designed to provide primarily symbolic protection. Most of the hardware is supplied by the United States, which intervened twice in the 20th century.

ECONOMY

Until the 1980s sugar was the Dominican Republic's chief commodity. With sugar and other commodity export (coffee, cocoa, and tobacco) prices in a slump through most of the 1980s and early 1990s, the Dominican Republic resolved to diversify its economic base. By the end of the 1980s mining was an important industry, and exports of ferronickel, bauxite, gold, and silver constituted 38 percent of GDP. The promotion of special export processing free-trade zones helped boost the manufacturing sector to 17 percent of GDP by 1996, eclipsing agriculture (including fishing, livestock, and forestry, making up 12.9 percent of GDP) in value, though not in number of jobs. Tourism became the country's leading source of foreign exchange by the mid-1990s; hotels were built rapidly to attract foreign tourists, who come to enjoy the island's beautiful beaches and salubrious climate, as well as its favorable exchange rate. This increase in tourism has created abundant jobs in the service sector, but most of these pay less than \$10 a day.

In 1991 an agreement with the IMF and a debt-rescheduling deal with the "Paris Club" of creditor nations helped bring about macroeconomic stability, but overspending on public works continued to feed inflation. The growth of the free trade zones and tourism reduced the state's share of the economy, as those industries are largely tax exempt.

Under President Fernández the country enjoyed several years of healthy growth, yet important constraints remain: the ongoing, severe "brain drain" to the United States (somewhat offset by the remittances sent back home), a poor education system, lack of retraining for those whose jobs are lost as a result of more open trade, the inefficiencies of the state-owned electricity industry, and the limits on the willingness of the United States to absorb the country's textile exports. In December 2000 the new Mejía administration passed

broad tax legislation, which it hoped would provide enough revenue to offset rising oil prices and to service foreign debt.

Despite these efforts the Dominican economy suffered in the early 2000s. Unemployment was rampant and inflation raged out of control. In 2004 the unemployment rate was 16.5 percent, and 25 percent of the people lived below the poverty line. Income distribution is a major problem; about 5 percent of people are wealthy and perhaps 60 percent are poor, leaving only about 35 percent in the middle class. For this reason many Dominicans try to emigrate to other nations, especially the United States, often in the area around New York City. These expatriates have become an important source of cash for their family members still in the Dominican Republic.

ENVIRONMENT

Owing to its variety of microclimates, the Dominican Republic's biodiversity is impressive; one passes from deserts of giant cacti to mountain pine forests to palm-fringed shores and sugarcane plantations. The natural scenery, which includes mountain forests and pristine beaches, is one of the country's major resources. Nevertheless, the republic does not have the financial resources to protect its natural assets, and environmental degradation is proceeding at an alarming rate. The seas around the island have been overfished to the point that some areas are no longer attractive to scuba divers. The development of tourist facilities, especially along the northern coast, has brought with it pollution and destruction of habitat. Freshwater on the island is often polluted with microbes, and both tap water and water in streams are unsafe to drink.

Deforestation has been the Dominican Republic's most serious environmental problem. Despite the government's ban, tree cutting goes on throughout rural areas as the poor, having no access to gas or electricity, collect wood for cooking fuel. About 28 percent of the land remains covered by forest and woodland. The strip-ping of trees has caused extensive erosion in many areas and increased destructive flooding following tropical storms, damaging not only soil quality but also marine reefs and the aquatic life they support due to runoff.

The Dominican Republic knows that protecting the environment is important and to that end has created 10 national parks to protect plant and animal life; the largest is the Parque Nacional Jaragua. Unfortunately, the country cannot afford to police those national parks, so poaching and the illegal cutting of trees occur there as everywhere.

One of the Dominican Republic's environmental marvels is amber, fossilized tree resin. Experts consider Dominican amber the finest in the world, for both its color and its inclusions, animals and plant fragments that are trapped inside the stone.

LIVING CONDITIONS

The Dominican Republic is a poor country, and the vast majority of its people live in fairly primitive conditions. The supply of electricity is unsteady, and power outages lasting anywhere from a few hours to a few days occur frequently. The water supply is contaminated and most households buy bottles of water for drinking. Indoor toilets with plumbing are uncommon. Garbage collection does not happen frequently, so the streets of the cities are often covered with litter; many households burn their garbage, which contributes to pollution.

The nation has a decent highway system between major cities, but paved roads are the exception in the countryside. There is a good public bus system, and many people use inexpensive public taxis to get from place to place. Traffic is terrible, especially in the cities, and traffic accidents are common.

Haitian immigrants live in especially woeful conditions, in shantytowns filled with houses made of corrugated metal and plywood.

HEALTH

The health-care system in the Dominican Republic is adequate but nowhere near the standard of developed Western nations. There is a short supply of bandages and

medicines, so patients are often expected to buy their own pharmaceutical supplies. Families of patients in hospitals often bring in their own sheets, electric fans, and food. Hospitals are plagued by the same power outages as the rest of the country, so refrigeration for drugs and ice is not guaranteed. On the other hand, a visit to a doctor is inexpensive by U.S. standards.

The Dominican Republic is plagued by various tropical diseases. Malaria, dengue fever, hepatitis, schistosomiasis, intestinal parasites, and various gastrointestinal ailments are all fairly common. In addition, Dominicans suffer a fair number of traumatic injuries, particularly from motorbike accidents and domestic violence.

FOOD AND NUTRITION

Food in the Dominican Republic is inexpensive and nutritionally adequate for those who can afford it, although malnutrition does occur among the poorest people. Cooking traditions come from the indigenous Taínos people, the African slave ancestors of the majority of the population, and the Spanish colonialists. The typical Dominican meal is called *la bandera*, or "the flag," after the three colors of the Dominican flag; it consists of white rice, red beans, fried green plantains, salad, and stewed meat. Goat meat and pork are common, as are a variety of vegetables. Dominicans love snacks, such as *pastelitos* or empanadas (turnovers filled with meat or cheese), fried plantains, and pork rinds. Desserts made from milk or fruits are very popular. Fresh fruit juices are common. The most popular alcoholic beverages are rum and beer, especially the Presidente brand.

Food and Nutrition

Undernourished % of total population: 25
 Daily Available Calories per capita kcal: 2,310
 Amount of Cereal Available per person per year kg: 77.9
 Amount of Fruits and Vegetables Available per person per year kg: 156.1

STATUS OF WOMEN

Although sexual discrimination is prohibited by law, women have not traditionally shared equal social and economic status with men. Dominican men are extremely aggressive toward women. Domestic violence, sexual harassment, and sexual exploitation are persistent and large-scale problems. The government has an Office of Women's Rights to help women assert their legal rights and combat spousal abuse, but there are no shelters for battered women. Prostitution and trafficking in women and girls are rife, and HIV infections are increasing.

Women made considerable economic and social progress in the 1980s and 1990s. Women are increasingly participating in nongovernmental organizations, cooperatives, and community-based organizations to circumvent barriers that have largely excluded them from traditional politics. Women now represent well more than half of all university students; finding ways to keep these highly educated women productively engaged in the country rather than abroad remains a challenge. Divorce is easily attainable by either party, and women can hold property in their own names apart from their husbands. Among urban households, around one-quarter are headed by women. The employment rate for women, once the lowest in Latin America, has grown at more than double the rate for men. Industrial processing jobs in the free-trade zones in particular have opened up new opportunities for women in apparel and electronics assembly; some 70 percent of workers in these zones are female. However, with labor organizing actively discouraged in the free-trade zones, hours are long, conditions substandard, and wages average 20 percent below the legal minimum for the country.

 Women's Share of Wage Employment Non-agricultural %: 34.9

WORK

Work is not easy to find in the Dominican Republic. Most jobs do not pay well, and opportunities for educated Dominicans are especially rare. Although tourism has created a large number of jobs and brought the country an influx of foreign cash, the majority of tourist workers perform low-paying service jobs. Many people have to work several jobs to support their families. For this reason thousands of Dominicans emigrate to work abroad. More than one million Dominicans live in the United States, many in or around New York City, where they find work

that allows them to support their families back home in high style by Dominican standards.

EDUCATION

The national educational system is directed by the Ministry of Education and the National Council for Education, and the cost of public education is borne by the central government. Education is free, universal, and compulsory for eight years from the ages of six to 14. Schooling lasts for 12 years, as divided into six years of primary, two years of lower secondary, and four years of upper secondary school. Secondary education is divided into a two-year cycle for all students and a four-year upper-secondary cycle for students preparing for university entrance. Upon completion of secondary school students receive the baccalaureate (*bachillerato*). Classes are taught in Spanish, while students can also study English or Portuguese in secondary school. Higher education is provided by eight universities and various other institutions, such as the Institute of Higher Studies and the Higher Institute of Agriculture. The universities enrolled over 280,000 students in 2002. Adult educational programs include literacy, vocational training, and teacher training. Agricultural education is provided in four agricultural schools, industrial education in polytechnic institutes and schools of arts and crafts, and business and commercial education in private commercial schools.

Compulsory primary education notwithstanding, many children do not receive much of an education. Academic standards are low, and grade repetitions and dropouts are common. Only 17 percent of rural primary schools contain all six grades, which makes a complete primary education an impossibility for many students. Schools do not supply textbooks, so parents must buy books for their children, which causes many parents to decide not to send their children to school at all. Less than half of Dominicans ever enter secondary school. Private school enrollment is increasing at a faster pace than public school enrollment. Nearly all of the private schools are located in urban centers, and most are church operated.

Despite these difficulties many Dominicans are devoted to the idea of education. The national literacy rate was 85 percent in 2003. Many adults attend university

classes simply out of a love of learning and interest in a subject, even though they know that a university education will not necessarily help them find better-paying jobs.

SCIENCE AND TECHNOLOGY

The Dominican Republic has not been at the forefront of scientific research and development, but the government is attempting to rectify this. In 2005 the country will open a new institute next to the Institute of Technology for the Americas in Santo Domingo. This institute will focus on the development of technologies for business growth and industrial job creation. President Fernández has created a new position, Presidential Advisor for Science, Technology, and Innovation, in the hopes of making the nation into a center for advanced engineering, computer and telecommunications technology, pharmaceuticals, and biotechnology. The nation's hope is that its energetic young population will embrace technological opportunities if given the proper education and that the republic will then be able to compete in the global marketplace.

MEDIA

Although it is regulated by the government, the Dominican press is reasonably free of political controls. All of the Dominican Republic's television channels, radio

stations, and newspapers are owned by a few wealthy and politically powerful companies. The government rarely interferes with radio or television programming, although most broadcasters are careful to avoid touchy subjects, such as the military or the Catholic Church, or issues that affect the interests of the companies owning the papers. The government occasionally affects publication of news stories through taxes and denial of advertising. In 2003 one of the main media companies was charged with fraud, which led to the seizure of several print and broadcast publications and the cancellation of two daily newspapers.

There is no Dominican national news agency. UPI, EFE, ANSA, and IPS have permanent bureaus in Santo Domingo. The Dominican Republic has several daily newspapers and numerous nondaily newspapers and magazines. The Dominican Republic has had television since 1952. It has several land-based television channels and approximately 30 cable television operators. There are more than 200 commercially operated radio stations, two of which are operated by the government. Radio stations from Miami can reach the Dominican Republic, where they are quite popular. Favorite programs include baseball and American films and soap operas. Internet is available in some places, though it is dependent on the unreliable electrical system and telephone lines.

CULTURE

The Dominican Republic has several rich cultural traditions. Dominican painting is world famous, partly thanks to Rafael Trujillo's sponsorship of creative arts and his creation of the National School of Fine Arts. Dominican painting has a distinctly Spanish look to it, a result of the large number of Spanish painters who fled to the Dominican Republic during the Spanish civil war in the 1930s. Primitive art is also common, both in the traditional "Caribbean" style and in the style of the indigenous Taíno people.

Dominicans have been writers since the Spanish colonial days; two famous early works, *History of the Indies* and *General History of the Order of Mercy*, were written by Spanish priests helping to colonize the island. In the 19th

710 Dominican Republic

century Dominican literature took on a French flavor, followed by a movement toward indigenous and populist styles. Nowadays most popular Dominican writers actually live in New York, where they write of the hardships of life back home.

FOLKLORE AND MYTHOLOGY

Much of Dominican folklore comes from the Taíno people, the indigenous people who lived on Hispaniola when Columbus arrived. The Taíno believed in two main deities, Atabey, the goddess of freshwater and fertility, and her son Yúcahu, the lord of cassava and the ocean. They also worshipped their ancestors and a host of other spirits in natural objects. Taíno myth describes a disease that seems to be syphilis, and it is believed that the Spanish acquired Europe's first venereal disease from the Taíno.

Postcolonial folklore developed as a combination of Taíno mythology, African folklore, and Spanish traditions. There are now numerous stories about the exploits of Columbus and his men and the settlers of the colonial period, which have assumed the status of folklore because they cannot be historically verified.

The Dominican Republic values its folk traditions as an important part of the nation's culture and also as an attraction to tourists. The large cities now have museums devoted to the Taíno and to Dominican folklore.

ENTERTAINMENT AND RECREATION

Dancing is a favorite pastime in the Dominican Republic. Merengue, salsa, and indigenous *bachata* music are all extremely popular. Many Dominicans love to spend their evenings at dance clubs, dancing and drinking rum and coke. Other popular activities include swimming at the beach or in streams and rivers, watching baseball, betting on baseball, and watching television or listening to the radio. Dominicans also enjoy spending evenings sitting at outdoor restaurant tables, watching people go by and greeting friends. Prostitution is legal, and some men like to spend their free time visiting bordellos, or *casas de chi-*

cas; most male guests are in fact simply visiting to talk to the women, bring them gifts, and buy drinks.

ETIQUETTE

Dominicans are very friendly and open, but they are also very proud. They consider it important to always maintain their dignity in the face of suffering and look down on those who lose their temper or complain about difficulties. Politeness is very important. Dominicans always greet one another and preface conversations with pleasantries and smiles. Dominican men are quite aggressive when speaking to women, and women must be careful not to encourage their advances unless they want them; women in particular must be careful about how they dress and act so as not to be considered sexually provocative.

FAMILY LIFE

Dominicans value family solidarity. The extended family is still very important to most Dominicans; families often own businesses, eat and play together, and look to one another for support. Three generations of a family will often share a home, with the oldest man acting as head of the household. People also form pseudo-blood relationships, such as that of godparents to godchildren.

Many Dominicans do not marry, and single mothers are fairly common. Couples often live together because they cannot afford the cost of a wedding. Weddings can be either civil or religious; divorce from a civil union is quite easy to get, such that couples from other countries occasionally visit the Dominican Republic to obtain divorces. Fathers often do not provide child support after leaving their families, and the law only requires child support for children who have been formally recognized by their fathers.

Traditional gender roles are the rule. Men are expected to be strong, adhering to the ideal of machismo, or exaggerated masculinity. They find nothing wrong with having relationships and children with multiple women, though the societal ideal would have a man supporting all of his dependents. Women are supposed to be submissive and take care of the home. Economic necessity, however, often dictates that women must go out to work, especially when a father does not support his children. Households headed by mothers or grandmothers are quite common.

PERSONAL APPEARANCE

Dominicans are very careful to dress neatly and attend to their personal grooming. They dress somewhat conservatively and find it odd that foreign tourists choose to go out in public dressed in sloppy shorts or even bathing

suits. Women often wear shirts over their bathing suits at the beach. Many women wear dresses or skirts that fall below the knee. When going out for a formal evening, people dress very well.

SPORTS

Baseball is by far the most popular national sport. Dominicans pay attention to both Dominican and American teams; the Dominican season runs from November through February, and the American season from April through October, which means Dominicans watch, listen to, and bet on baseball year-round. The best Dominican players play on both Dominican and American teams and are considered national heroes. Dominican baseball games sell out quickly.

Cockfighting is the other Dominican national sport, particularly in rural areas. Men raise and train roosters to fight one another in small round rings; roosters often die, whereupon they are skinned and eaten by their owners. The betting on cockfights is nearly as intense as the betting on baseball.

CHRONOLOGY

- 1930** Rafael Leonidas Trujillo overthrows Horacio Vásquez and begins a three-decade-long dictatorship.
- 1937** Following Haiti's discovery of Dominican spies on its soil, Trujillo orders slaughter of 10,000 to 20,000 Haitian immigrants.
- 1947** Trujillo outlaws Dominican Communist Party.
- 1959** Invasion attempted by dissident Dominicans supported by Cuba's Fidel Castro fails.
- 1960** Agents of Trujillo injure Venezuelan president Rómulo Betancourt in assassination attempt.
- 1961** Trujillo assassinated; Joaquín Balaguer, already serving as president, continues in office.
- 1962** Juan Bosch of leftist Dominican Revolutionary Party (PRD) elected president.
- 1963** Bosch overthrown in military coup; new regime led by Donald Reid Cabral.
- 1965** Uprising by Bosch supporters succeeds temporarily; civil war ensues with rightist military officers; United States intervenes decisively in support of rightists.
- 1966** Balaguer, leading right-wing Reformist Party, wins election.
- 1978** PRD wins power under Silvestre Antonio Guzmán Fernández.
- 1982** Guzmán commits suicide; PRD retains presidency as Salvador Jorge Blanco is elected.
- 1985** Strikes and violence against government and IMF-imposed austerity measures occur.
- 1986** Balaguer returned to presidency at head of Christian Social Reformist Party (PRSC).
- 1988–89** Further violent protests take place against high prices of staples and utilities.
- 1990** Balaguer reelected by slim margin over Bosch; government initiates, then relaxes (after a general strike leads to the death of 12 people) austerity program aimed at securing an IMF agreement.
- 1991** Balaguer government rounds up and deports thousands of Haitian workers in response to international concern about near serfdom on sugar plantations; IMF standby loan agreement and debt-rescheduling agreement with the "Paris Club" of nations are both signed.
- 1992** Country commemorates 500th anniversary of Columbus's arrival with the dedication of a monumental mausoleum to the explorer and a giant lighthouse in the shape of a cross.
- 1994** Balaguer wins sixth term as president amid widespread fraud charges and a campaign branding his chief opponent, José Francisco Peña Gómez, a "Haitian"; Balaguer accedes to certain constitutional changes, including a law barring presidents from succeeding themselves.
- 1996** Leonel Fernández Reyna elected president with barely 51 percent of vote in runoff.
- 1997** Partial privatization of certain state-owned companies signed into law by President Fernández.
- 1998** Fernández government criticized for poor preparedness and slow response in the wake of severe damage done by Hurricane Georges.
- 2000** Hipólito Mejía of PRD elected president.
- 2001–03** Economic downturn occurs, with high inflation and unemployment.
- 2004** Leonel Fernández Reyna elected president
- 2005** Congress approves the proposed Central American Free Trade Agreement (CAFTA).

Basic Fact Sheet

OFFICIAL NAME

Democratic Republic of Timor-Leste (República Demokrátika Timor Lorosa'e; República Democrática de Timor-Leste)

ABBREVIATION

TL

CAPITAL

Dili

HEAD OF STATE

President Kay Rala Xanana Gusmão (from 2002)

HEAD OF GOVERNMENT

Prime Minister Marí Bin Amude Alkatiri (from 2002)

NATURE OF GOVERNMENT

Parliamentary democracy; republic

POPULATION

1,040,880 (2005)

AREA

15,007 sq km (5,794 sq mi)

MAJOR ETHNIC GROUPS

Austronesian (Malayo-Polynesian), Papuan, Chinese

LANGUAGES

Tetum (official), Portuguese (official), Indonesian, English

RELIGION

Roman Catholicism

UNIT OF CURRENCY

U.S. dollar

NATIONAL FLAG

Red, with a black isosceles triangle based on the hoist side superimposed on a slightly longer yellow arrowhead that extends to the center of the flag; there is a white star in the center of the black triangle.

NATIONAL EMBLEM

Crossed swords on a red shield superimposed on a black shield from which yellow rays radiate, surrounded by a light blue ring with the words "República Democrática de Timor-Leste" above and the letters "RDTL" below. In a red banner at the base is the national motto, *Honra, patria, e povo* (Honor, homeland, and people).

NATIONAL ANTHEM

"Pátria, Pátria, Timor-Leste, Nossa Nação"

NATIONAL HOLIDAYS

January 1 (New Year's Day), August 30 (Consultation Day), September 20 (Liberation Day), November 12 (Santa Cruz Day), November 28 (Indonesian Independence Day), December 25 (Christmas), various Christian festivals, including Good Friday, Assumption

DATE OF INDEPENDENCE

May 20, 2002

DATE OF CONSTITUTION

March 22, 2002

GEOGRAPHICAL FEATURES

Timor-Leste is located on the eastern half of the island of Timor (such that it is also referred to as East Timor), in the easternmost part of the Indonesian archipelago, southwest of Irian Jaya and southeast of Flores. It includes an area in the western part of Timor called Oecussi, or Ambeno, which is on the north coast and entirely surrounded by Indonesian territory. Dili, the capital city, is located on the northern coast.

The island of Timor is mostly rugged limestone hills and mountains. The highest point is Foho Tatamailau, at 2,963 m (9,719 ft). The soil is rocky, and there are no major rivers.

Dili	49,900
------	--------

November to May, bringing extreme thunderstorms and flooding.

CLIMATE AND WEATHER

Timor-Leste has three main climatic zones. The northern area has almost no rain between May and November, about 1,020 mm (40 in) of rain the rest of the year, and a year-round average temperature of 24°C (75.2°F), though summer temperatures can be much hotter. The central mountains have a slightly cooler average temperature, slightly more rainfall, and a four-month dry season. Nighttime temperatures in the mountains can be quite cool. The southern coast is exposed to winds from Australia and so receives much more rain than the rest of the country, though the coast still has a three-month dry season. Rains throughout the country are governed by the monsoons, which blow from the northeast from

Climate and Weather

Mean Temperature: 75.2°F
Average Rainfall: 40 in

FLORA AND FAUNA

Timor-Leste is located in the Australasian ecological zone and shares common flora and fauna with Australia, New Guinea, and other neighboring islands. Some of the native mammals are marsupials, such as the phalanger and the wallaby. Deforestation from slash-and-burn agriculture and loss of biodiversity are serious problems. The United Nations has declared several local species endangered, including sea turtles, sea turtles, marine

mammals such as bottlenose dolphins, whales, dugongs, wallabies, and crocodiles.

ETHNIC COMPOSITION

The majority of Timor-Leste's population is Austronesian, of Malayo-Polynesian descent, or Papuan, from Papua New Guinea. There is a small Chinese minority.

LANGUAGES

The constitution designates Portuguese and the local language Tetum as the official languages, while Indonesian, also referred to as Bahasa Indonesia, and English are working languages. About 91 percent of the population speaks Tetum, 17 percent Portuguese, and 63 percent Indonesian. About 16 indigenous languages are spoken, including, most widely, Galole, Mambae, Kemak, and Fataluku.

RELIGIONS

About 90 percent of Timor-Leste's population is Roman Catholic, as a result of years of Portuguese colonization and missionary work. The remaining 10 percent are Muslim, Protestant, Hindu, or Buddhist. The majority of Timor-Leste's people also maintain certain animist beliefs, especially worshipping spirits of the dead. A few Timorese still consider animism their main religion.

HISTORICAL BACKGROUND

Timor-Leste was originally settled several thousand years ago by immigrants from Southeast Asia. Europeans discovered the island of Timor in the 1500s, and Portuguese and Dutch traders found it a good source for sandalwood and spices. Portugal tried to take over the island in 1642, wrangling with the Netherlands until the two nations agreed to split the island in 1749. Portuguese missionaries converted many of the local people to Catholicism and taught them the Portuguese language.

The Japanese invaded Timor in 1942, fighting Australian troops and killing some 65,000 Timorese in the process. The Japanese left in 1945, and Portugal resumed control.

In 1974 an anti-Fascist revolution in Portugal led the nation to promise to free its colonies, much to the delight of activists in Timor-Leste. The following year Portugal withdrew its administration to the island of Atauro, various factions in Dili fought a short civil war, and, in November, the Revolutionary Front for an Independent East Timor (Frente Revolucionária de Timor-Leste Independente, FRETILIN) declared the nation independent. That December Indonesia invaded from West Timor, claiming that Timor-Leste might become Communist and should be stopped, and annexed Timor-Leste as a province. The United Nations did not recognize this claim and ordered Indonesia to withdraw its troops. Some Western nations, however, were willing to listen to Indonesia's claims that FRETILIN was Communist and refused to confront Indonesia.

For the next 20 years Indonesia oppressed the Timorese. Between 100,000 and 250,000 East Timorese died of violence or hunger during the occupation. In 1991 Indonesian troops killed about 100 East Timorese at a funeral, an event dubbed the Santa Cruz massacre. East Timorese activists continued to agitate for freedom. Xanana Gusmão, the leader of the guerilla unit Falintil, the armed branch of FRETILIN, was imprisoned by Indonesia between 1992 and 1999.

In 1999 Indonesian President Jusuf Habibie announced that the East Timorese should vote on independence in a referendum. On August 30 about 99 percent of eligible voters cast votes, with 78 percent voting for independence. Unable to accept this conclusion, the Indonesian military organized Timorese militias and launched a terrorist campaign. They killed over 1,000 East Timorese and forced between 250,000 and 300,000 people out of the

country into West Timor, where they spent the next three years or so living as refugees. The nation's infrastructure was almost completely destroyed. Australian peacekeeping troops arrived on September 20 and ended the violence, but damage was too extensive to be repaired quickly.

The United Nations then sent a diplomatic team to set up a provisional government and help Timor-Leste put itself back together. In 2001 the people elected a constituent assembly, which wrote a constitution and then took office as the first National Parliament in 2002. The country officially became an independent republic on May 20, 2002. The former guerilla leader Xanana Gusmão was elected president, and FRETILIN leader Marí Alkatiri became prime minister. The United Nations kept its personnel in Timor-Leste for another two years, gradually reducing the size of the force. The two national leaders have somewhat different styles: Gusmão has favored reconciliation with Indonesia and anti-independence East Timorese and has sought a unified national government; Alkatiri has a reputation for being more authoritarian. The national leadership must face many difficulties and years of hard work to fully rebuild the country.

LIST OF MODERN RULERS

Prime Minister

2002– Marí Alkatiri

CONSTITUTION

The constitution, which went into effect on March 22, 2002, is based on the Portuguese model. The president, elected by popular vote to a five-year term, serves as the head of state. His role is largely symbolic, though he does have the right to veto some legislation. The prime minister functions as the head of government. The first prime minister was the leader of the party that won a majority in the first legislative election, which may have set a precedent for future regimes. The president is assisted by a 29-member Council of Ministers, which functions as his cabinet.

The UN Transitional Administration in East Timor oversaw Timorese government between 2000 and 2002. It was replaced by the UN Mission for the Support of East Timor in May 2002, which has continued to provide support to the government, assisting in creating laws and running local elections. By May 2004 the United Nations had reduced its peacekeeping force from 3,000 to 700 people, with plans to end support entirely by May 2005.

PARLIAMENT

There is a single National Parliament. According to the constitution the Parliament should have between 52 and 65 members, elected by popular vote to five-year terms.

The first Parliament, however, was not elected and had 88 members. Instead of holding elections, delegates who had been elected to the national convention in 2001 named themselves legislators in 2002, with plans to hold official elections for the first time in 2006.

POLITICAL PARTIES

The Revolutionary Front for an Independent East Timor (FRETILIN) won a majority in the 2001 election of convention representatives and as such claimed a majority of parliamentary seats in 2002. Prime minister Marí Alkatiri is the secretary-general of FRETILIN, and most of the members of the cabinet are also FRETILIN members.

Other parties include the Associação Social-Democrata Timorese (ASDT), the Christian Democratic Party of Timor (PDC), the Christian Democratic Union of Timor (UDC), the Democratic Party (PD), the Liberal Party (PL), the Maubere Democratic Party (PDM), the People's Party of Timor (PPT), the Social Democrat Party of East Timor (PSD), the Socialist Party of Timor (PST), the Sons of the Mountain Warriors (KOTA), the Timor Democratic Union (UDT), the Timor Labor Party (PTT), the Timorese Nationalist Party (PNT), and the Timorese Popular Democratic Association (APODETI).

LOCAL GOVERNMENT

Timor-Leste is divided into 13 administrative districts: Aileu, Ainaro, Baucau, Bobonaro, Cova-Lima, Dili, Ermera, Lautem, Liquica, Manatuto, Manufahi, Oecussi-Ambeno, and Viqueque. The national government has been working to develop local authorities and infrastructure to allow for a certain degree of local government.

LEGAL SYSTEM

Timor-Leste has been working since independence to create a fully functioning legal system. The constitution calls for a Supreme Court of Justice, with one judge appointed by the National Parliament and the rest appointed by a Superior Council for the Judiciary. Until the Supreme Court is established the Court of Appeals functions as the highest court. There are severe shortages of trained legal personnel and court-system resources, which has hampered the country's efforts to grant speedy trials to those accused of crimes. Prolonged pretrial detention occurs frequently.

HUMAN RIGHTS

The Timorese government has done a reasonably good job protecting the human rights of its citizens. Problems

include police brutality and the use of excessive force, poor prison conditions, lack of due process, and long waits for trials. There have been reports of abuses by government officials. Numerous refugees fled the country during the years of fighting; some citizens reportedly feel that they cannot leave the country without facing reprisal from militias in Indonesian West Timor or in Timor-Leste.

Domestic violence, child labor, and human trafficking are all problems.

FOREIGN POLICY

Timor-Leste joined the United Nations in 2002 and immediately applied for observer status in the Association of Southeast Asian Nations (ASEAN) and membership in the ASEAN Regional Forum. The republic has been cultivating relations with its neighbors, including Indonesia, Malaysia, and Singapore, and with donors such as the United States, the European Union, Australia, Japan, and Portugal. Timor-Leste has opened an embassy in Washington, D.C., and receives millions of dollars in aid from the United States annually. The U.S. Peace Corps sends numerous volunteers to the nation.

DEFENSE

The Timor-Leste Defense Force includes an army and a navy. Citizens may volunteer for service at the age of 18. The defense force gradually assumed responsibility for national security as the UN peacekeeping forces left. The military is responsible to the civilian secretary of state for defense. There is also a police force, the Policia Nacional de Timor-Leste, responsible to the civilian minister of internal administration.

ECONOMY

As of late 2004 Timor-Leste's economy was in shambles, and the nation was the poorest in Asia. By 1999 it had lost almost all of its economic infrastructure in the war with Indonesia, and about 260,000 citizens had fled to West Timor. The refugees have gradually returned, but the country faces terrible economic conditions. Rural areas still lack infrastruc-

ture and the resources needed to reconstruct facilities. The entire country still lacks electricity. There are not enough jobs, and there are not enough educated people to fill all the newly established government positions. A drought in 2003 and the gradual departure of UN peacekeeping forces have held back initial attempts at growth.

Because it cannot provide for itself, Timor-Leste receives a large amount of foreign aid, but that aid is scheduled to taper off as the economy improves. The nation is working on rebuilding its infrastructure and has plans to develop oil and gas reserves, which could bring in substantial revenue.

ENVIRONMENT

Timor-Leste suffers from some major environmental problems. Slash-and-burn agriculture has caused deforestation and soil erosion, which make it that much more difficult for people to gather fuel and grow crops. Floods and landslides are common during the rainy season. The island is subject to occasional earthquakes, tsunamis, and cyclones.

LIVING CONDITIONS

Most Timorese are desperately poor. Both cities and rural areas lack electricity and reliable drinking-water supplies, though these problems are much worse in rural areas. Some of the main cities and numerous towns were largely destroyed during the 1990s, forcing inhabitants

to fend for themselves in the countryside, and most infrastructure has not yet been rebuilt. Public transportation is by bus, taxi, and bicycle taxi. Most roads are unpaved and become impassible during the wet season. The cost of living is disproportionately high for the region due to shortages in basic foods and consumer goods.

HEALTH

Numerous health problems plague Timor-Leste. Diseases such as dengue fever, malaria, Japanese B encephalitis, tuberculosis, and rabies are common and have been exacerbated by poor living conditions. Australian and other foreign experts have been assisting the Timorese with their efforts to improve the health-care system. Life expectancy in 2005 was 65.9 years. Fertility was still somewhat high, at 3.6 children per women, and a population growth rate of over 2 percent is not helping the nation solve its problems.

The United Nations has attempted to supply vaccines to all Timorese children, but the lacks of refrigeration, transportation, and understanding of the reasons for vaccinations have kept many parents from bringing their children in. As a result, perhaps 30 percent of young children have received no vaccines against communicable diseases; only 5 percent of one-year-olds have been fully vaccinated by Western standards.

FOOD AND NUTRITION

Food shortages have always been common on the island of Timor due to weather patterns, which make it difficult to grow crops consistently. The fighting of 1999 created acute food shortages on both halves of Timor, as refugees fled from the east to the west. This put pressure on the forests in which people have tra-

ditionally foraged for food, as refugees cut down trees for fuel and to clear land for crops. Various nations have provided food aid to prevent thousands of people from starving to death.

The staple food for most people is rice, as served with condiments and side dishes that may contain meat, fish, vegetables, eggs, or bean curd enlivened with various local spices. The custom for many families is to cook food early in the day and leave it out for family members to help themselves when they are hungry. The midday meal is the largest, and the evening meal often consists of leftovers from lunch. Most people cook over oil burners or wood fires.

 Amount of Fruits and Vegetables Available per person per year kg: 48.8

STATUS OF WOMEN

Domestic violence and sexual abuse are common problems, and the police do not usually take any action against perpetrators. Men typically get jobs ahead of women, often because women themselves have traditionally deferred to men. In some areas local laws prevent women from inheriting or owning property. The UN transitional team created a Gender Affairs Unit to train women entering public services and to ensure women a voice in the new society. The East Timorese Women's Forum and East Timor Women against Violence are groups that support women's rights and aid victims of domestic violence. Some nongovernmental organizations have been providing microcredit loans to women who want to open small businesses.

WORK

There are no reliable figures for unemployment rates, but the figure was estimated to be 50 percent in 1992, including underemployment, and was similarly high in 2004. The labor force is expanding rapidly as the country's many children grow up, and there are not nearly enough jobs for the population. Conversely, the government cannot find enough educated and trained workers to fill certain jobs. Possible areas

of development include petroleum extraction; agriculture, such as the growing of coffee, sandalwood, and vanilla; and the production of handicrafts and woven cloth.

Employment and Labor

EDUCATION

The constitution calls for free compulsory education for all children, but the nation has yet to establish a minimum level of required education or a workable school system. About 75 percent of the nation's children do attend primary school, although attendance is much lower in rural areas. Only about 20 percent of children attend secondary school, and about 10 percent never attend school at all. Attendance figures are the same for both boys and girls.

MEDIA

The United Nations handled media broadcasting between 1999 and May 2002, but since that time Timor-Leste has taken charge of national public radio and television broadcasting. Almost the entire population can receive radio broadcasts, while television reception is much sparser. International agencies fund and provide equipment and assistance to community radio stations, which spend much of their airtime assisting in the process of reconstruction. There are two daily newspapers and numerous weekly publications.

The new constitution guarantees the freedom of the press, and the government respects those rights for the most part, though on occasion government officials have suggested that journalists be disciplined for criticizing politicians. Generally, journalists criticize the government with impunity.

CULTURE

East Timorese culture has been heavily influenced by centuries of Portuguese domination, which has left the nation largely Catholic. People hold celebrations for Catholic festivals such as Assumption and Christmas. They also hold local festivals at the end of the wet season.

FOLKLORE AND MYTHOLOGY

The Portuguese who first colonized Timor-Leste noted the beliefs of the native people, such as a belief in demons living among the sandalwood trees in the forest. The majority of Timorese still maintain ancient animist beliefs,

frequently combining traditional practices with Christianity. They worship the spirits of the dead, called *luliks*, which live in stones, animals, streams, wells, and other objects. *Luliks* can be both good and evil and have magical powers that allow them to affect the lives of the living.

ENTERTAINMENT AND RECREATION

The lack of infrastructure has hampered recreational possibilities in Timor-Leste. There are some restaurants and bars in Dili and the other cities. The nation has beautiful beaches with excellent swimming, diving, and snorkeling possibilities. The interior is a good place for hiking and mountain climbing.

ETIQUETTE

Timorese shake hands when greeting people of the same sex but not of the opposite sex, though men may shake hands with foreign women. When dining, a guest should not sit down until invited to do so by the host. It is impolite to fill one's plate at the beginning of a meal, and eating a variety of foods is considered more important than eating a large quantity.

FAMILY LIFE

Timorese families have faced many difficulties in recent years, with some families split as a result of fleeing or choosing different sides in the struggle with Indonesia. The constitution has enshrined the principles that both men and women have the same rights in the family and that children are entitled to special protection from abandonment, abuse, and exploitation. Within families, there are often strict divisions along gender lines. Men take responsibility for cooking and cutting up coconuts, while women do smaller, more repetitive cooking tasks. Women are still considered subservient to men in some regions.

PERSONAL APPEARANCE

Timorese are for the most part conservatively Catholic and dress modestly, though in light clothing due to the warm climate. The traditional article of clothing is called the *tai*, a handwoven length of cloth decorated with ikat dyeing. Men wear a version called the *mane*, while women wear a version called the *feto*; men tie theirs around their waists, and women wear theirs like dresses. Western clothing is popular for both sexes, but clothing is generally in short supply, and most people are too poor to have extensive wardrobes.

SPORTS

Timor-Leste has a young population, many of whom love sports. Popular sports include soccer, basketball, volleyball, cycling, karate, tae kwon do, boxing, weightlifting, tennis, and track and field. All the nation's sports facilities were destroyed during the years of Indonesian occupation and the fighting of 1999, so the nation's athletes had to begin from scratch in 2000. Despite these difficulties, Timor-Leste was determined to send a team to the 2004 Olympics; the nation ended up sending two athletes: the female marathoner Agueda Fatima Amaral and the male runner Gil da Cruz Trindade.

CHRONOLOGY

- 1749 Portugal and the Netherlands split Timor, with Portugal taking the eastern half.
- 1942 The Japanese invade and take control of Timor until 1945.
- 1974 Portugal promises to free its colonies after an anti-Fascist revolution.
- 1975 The Portuguese administration leaves Timor-Leste. FRETILIN declares Timor-Leste independent. Indonesia invades Timor-Leste, annexes it as a 27th province, and begins years of repression resisted by the East Timorese.
- 1981 Xanana Gusmão becomes leader of the guerrilla wing of FRETILIN.
- 1991 Indonesian troops kill more than 100 people at a funeral for a FRETILIN supporter in the Santa Cruz cemetery massacre.
- 1992 Xanana Gusmão is arrested by Indonesian troops and sentenced to life in prison.
- 1993 East Timorese enter foreign embassies in Jakarta to ask for political asylum.
- 1995 East Timorese at the Dutch and Russian embassies in Jakarta protest the 20th anniversary of the Indonesian invasion.
- 1996 Carlos Belo, the bishop of Dili, and José Ramos Horta, a resistance leader, win the Nobel Peace Prize.
- 1998 Indonesian President Suharto resigns; his successor, Jusuf Habibie, proposes giving Timor-Leste special status within Indonesia.
- 1999 Indonesia offers to make Timor-Leste independent but without autonomy. Xanana Gusmão moves from prison to house arrest and orders his troops to resume the fight for independence. Portugal and Indonesia agree to let the East Timorese vote on independence; 78 percent of voters favor independence in the September referendum. An anti-independence militia and the Indonesian army launch a campaign of terror, killing 1,000 people and forcing per-

haps 260,000 to flee to West Timor. Australian peacekeepers arrive and restore order. UN Transitional Administration in East Timor is established. International donors promise aid to rebuild the nation.

- 2000** Anti-independence militias murder three refugee agency workers in West Timor, prompting the United Nations to evacuate its staff. Indonesia sentences the culprits to 20 months in prison.
- 2001** Timor-Leste and Australia sign an agreement to share future oil and gas revenues from the Timor Sea. A constituent assembly is elected, with a FRETILIN majority.
- 2002** A truth and reconciliation commission opens in an attempt to resolve differences between Timor-Leste and Indonesia. The constituent assembly creates a constitution calling for a parliamentary government. Xanana Gusmão wins the presidency. The United Nations sets up a mission of support to help the new government establish order. Timor-Leste gains UN membership.
- 2003** The United Nations extends the mandate of its mission for another year.
- 2004** Portugal promises \$63 million in aid. Production begins at the Bayu Undan offshore gas field. The United Nations reduces its peacekeeping force to 700 personnel.
- 2005** Indonesian President Susilo Yudhoyono visits Dili. Timor-Leste and Indonesia sign a border agreement.

NATIONAL FLAG

Tricolor, with the top yellow stripe being equal to the combined height of the blue center stripe and the red lower stripe, with the coat of arms superimposed at the center

NATIONAL EMBLEM

An oval shield on which Mt. Chimborazo is shown against a light blue sky; a river flows down the mountain slopes to the deep blue waters in the foreground, sailing on which is a steamboat, with the caduceus, the symbol of Mercury, the god of commerce, as the mast; above the mountain is a white band with a golden Mayan sun and four zodiac signs; the shield is crested by the condor of the Andes, flanked by a panoply of flags on either side and branches of laurel joined at the base by the Roman fasces.

NATIONAL ANTHEM

“Hail, O Fatherland”

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), May 24 (Battle of Pichincha), July 24 (Birth of Simón Bolívar), August 10 (Independence of Quito), October 9 (Independence of Guayaquil), October 12 (Discovery of America), November 3 (Independence of Cuenca), December 6 (Foundation of Quito), Christian festivals, including Good Friday, Easter, All Souls' Day, All Saints' Day, and Christmas

DATE OF INDEPENDENCE

May 24, 1822

DATE OF CONSTITUTION

August 10, 1998

GEOGRAPHICAL FEATURES

Ecuador straddles the equator on the northwest coast of South America, occupying an area of 283,560 sq km (109,482 sq mi), extending 714 km (444 mi) north to south and 658 km (409 mi) east to west. The length of the Pacific coastline is 2,237 km (1,390 mi). The national territory includes the Galápagos Islands, an archipelago scattered over 59,570 sq km (23,000 sq mi) of ocean with a total land area of 7,770 sq km (3,000 sq mi).

Ecuador shares its total land boundary of 2,010 km (1,249 mi) with Colombia (590 km, 366 mi) and Peru (1,420 km, 881 mi).

The Andes split the country into three distinct topographical regions: the Costa, or coastal plain; Sierra, or highlands; and Oriente, or Amazon region.

The Costa makes up 16.5 percent of the national territory and forms a rich agricultural belt stretching from the Pacific to the Sierra. Its width varies from 25 km (15 mi) to 200 km (125 mi).

Ecuador

The Sierra, constituting 24.3 percent of the national territory, is a plateau 2,500 m (8,200 ft) to 3,000 m (9,850 ft) above sea level between two parallel spines of the Andes, the Cordillera Occidental and the Cordillera Central. The Sierra is studded with 22 massive volcanoes, the highest of which are Chimborazo (6,271

m; 20,574 ft) and Cotopaxi (5,896 m; 19,344 ft). The Sierra is subject to occasional severe earthquakes and landslides.

The Oriente, constituting 57.4 percent of the national territory, is a flat and gently undulating expanse of rain forest east of the Andes.

The Costa is drained by the Guayas, Esmeraldas, Daule, and Vinces rivers. The rivers of the Oriente, such as the Pastaza, Paute, Nape, and Zamora, eventually flow into the Atlantic through the Amazon.

CLIMATE AND WEATHER

Ecuador has a tropical climate in the Costa and the Oriente, where monthly temperatures average 26.7°C (80°F). There are two seasons: a hot, rainy period from January to May and a cool, dry season the rest of the year.

In the Sierra the annual mean temperature varies between 10°C (50°F) and 15.6°C (60°F). There is virtually no seasonal change, and days and nights are of equal duration throughout the year. However, temperatures may vary by as much as 22.2°C (40°F) in a single day.

Rainfall is heavy throughout the Amazon Basin and in the Costa but scanty in the Andean plateau. Precipitation ranges from 355 mm (14 in) at Ancon on the dry Santa Elena Peninsula to 1,140 mm (45 in) in Guayaquil, 1,470 mm (58 in) in Quito, 2,540 mm (100 in) on the lower Andean slopes and 5,080 mm (200 in) in the Oriente.

The prevailing winds blow from the east across the Amazon Basin and from the west across the warm Equatorial Current in the rainy season and the cold Humboldt Current in the dry season.

Climate and Weather

 Costa 80°F
 Sierra 50°F to 60°F
 Quito 55°F
 Average Rainfall
 Santa Elena Peninsula: 14 in
 Guayaquil: 45 in
 Quito: 58 in
 Lower Andean Slopes: 100 in
 Oriente: 200 in

FLORA AND FAUNA

Ecuador has some of the world's greatest biodiversity in its relatively small area. The Galapagos Islands are particularly valuable for their unique species. There are about 20,000 species of plants in Ecuador, including 4,500 orchids. There are over 300 species of mammals, including alpacas, llamas, sloths, and 17 types of monkeys. Bird life is especially rich; over 1,500 types of birds live in Ecuador, including the Andean condor and 58 endemic Galapagos species. There are also a great many freshwater fish, including stingrays, electric eels, tiny candirú catfish, and the ravenous piranha.

ETHNIC COMPOSITION

Ecuador does not include ethnicity in its census. Unofficial data ranks mestizos as Ecuador's majority group, with 65 percent, followed by Indians at 25 percent, Spanish and other whites at 7 percent, and blacks at 3 percent.

Blacks occupy a social position slightly higher than that of Amerindians but lower than that of mestizos. The percentage of unmixed blacks is small.

There are as many as 700 separate Amerindian groups. In the Sierra the most distinctive are the Otavalos, the Salasacas, and the Saraguros. There are only two groups of unassimilated Amerindians on the Costa: the Colorados and the Cayapas. The three most primitive tribes live in the Oriente: the Jívaros, Aucas, and Yumbos. The Amazon basin is also the home of the Zaparos, Cofán, and other tribes.

The largest alien ethnic group are Lebanese, who are concentrated in Guayaquil. The most famous members of this group are former presidents Mahuad and Jamil Abdalá Bucaram. Chinese are found throughout Ecuador but are centered primarily on the coast in the town of Quevedo. Small expatriate English, Irish, French, and German communities are found in the major cities.

LANGUAGES

Spanish is spoken by about 93 percent of the population. Almost all Indians speak the Ecuadorian variant of Quechua. In the western Costa, the Cayapa and Colorado languages are still spoken. The most widespread Amerindian language in the Oriente is Jívaro. Zaparo, Tetete, Cofán, Aushiria, and Siona are also spoken.

RELIGIONS

Ecuador has no state religion, but 95 percent of the population are at least nominally Roman Catholic. The constitution guarantees freedom of worship.

The Catholic Church in Ecuador takes bold stands on social issues, advocating tax and land reforms and, in some cases, family planning and rejection of the capitalist order.

Non-Catholic religious groups account for 5 percent of the population. They include Protestants, who maintain about 12 schools. Jews number about 2,000. Amerindians in the Oriente profess tribal religions, but little information is available about these religions.

Religious Affiliations

Roman Catholic	12,695,000
Other	668,000

HISTORICAL BACKGROUND

Pre-Hispanic Ecuador was inhabited by a number of diverse Amerindian tribes. By 1000 these groups formed a loose confederation called the Kingdom of Quito, which

became a part of the Inca Empire just before the arrival of the Spaniards. The Inca armies under Huayna Capac (r. 1493–1525) conquered Quito and made it a major administrative and military outpost. Before he died, Capac divided his empire between his eldest son, Atahualpa, born to a Quito princess, and his legitimate heir, Huascar. War broke out between Atahualpa and Huascar, in which the latter was defeated and slain in the Battle of Cajamarca.

The first Spanish conquistador to sight Ecuador was Bartolomé Ruiz, Francisco Pizarro's pilot in 1526, who was on his way to Peru. His first landing place was Esmeraldas, so named from the emeralds obtained by the Spaniards from the Amerindians. Arriving in Cajamarca in 1532, Pizarro invited Atahualpa to a meeting and then had him assassinated. One of Pizarro's lieutenants, Sebastián de Benalcazar, found the old Indian capital of Quito left in ashes by the retreating Incas and on that site founded in 1534 San Francisco de Quito. He became the first Spanish governor of Quito. In 1542 the Spanish Crown promulgated the so-called New Laws in an attempt to impose its authority. Opposition from the conquistadores to the New Laws led to the assassination of the Spanish viceroy as well as the governor, Gonzalo Pizarro. The Audiencia of Quito, as Ecuador was known before the War of Independence, was established by royal decree in 1563. The 16th and 17th centuries were relatively quiet periods in Ecuadorian history. By the beginning of the early 18th century the Spanish monarchy fell into a state of increasing weakness. The firm grip that had been maintained on colonial economic life was relaxed.

The struggle for independence took place in two phases. The first was precipitated by the Napoleonic invasion of Spain in 1808. A governing junta was established, composed of criollos, under the leadership of the president of the Audiencia. A congress in 1811 declared complete independence and established the state of Quito. Opposed by the Viceroyalty of Peru and the rest of the Audiencia, the junta launched a military offensive against the Spanish forces in which they were crushed in 1812. The second phase of the independence movement was launched in Guayaquil, where another rebel junta was formed. It sought the help of leaders of the independence movement in other parts of the continent, especially the Venezuelan Simón Bolívar and his lieutenant Antonio José de Sucre in the north and the Argentinean José de San Martín in the south. At the decisive Battle of Pichincha in 1822 the rebel forces won a great victory, thus ending the Spanish era.

The rebel leaders met in Guayaquil in 1822 to consider the future of the liberated provinces. For the next eight years, Ecuador was part of Gran Colombia, which included Venezuela, Colombia, Panama, and Ecuador. When this union collapsed in 1830, the Republic of Ecuador was established, with Juan José Flores as its first

president. Flores dominated Ecuadorian politics for the first 15 years of independence. Flores was ousted after a popular uprising, which produced bloody street fighting.

Although civilian rule was established, the influence of the military was paramount during the next 15 years, in which the chief figure was General José María Urbina. Between 1845 and 1860 Ecuador experienced a new period of political turbulence. The country was ruled by 11 presidents or juntas, in most cases members of the Liberals Party; there were frequent civil wars and three constitutions. General García Moreno, a pro-Catholic conservative, seized power during this anarchy and retained it for the next 15 years. Under his authoritarian rule, conservatism and the Conservative Party reached new heights, and church-state relations were closer than they have ever been since.

The conservative era lasted until 1895, when the Revolution of 1895 brought the Liberal Flavio Eloy Alfaro to power. He and his liberal successors reversed Moreno's policies. Church and state were separated, and freedoms of the press and worship were established. Eloy Alfaro was overthrown in 1911 by a military uprising. His successor, General Leonidas Plaza Gutiérrez, who had served as president once before from 1901 to 1905, faced a deepening economic crisis, which led to his ouster by a junta in 1925. The junta named Isidro Ayora as president, but pressured by the deteriorating economic climate and opposition from the military, he was forced to resign in 1931.

The 1930s were a period of anarchy in Ecuador. The decade marked the rise of one of Ecuador's stormy petrels, José María Velasco Ibarra, who, with a large following among the lower classes, was president five times (1934–35, 1944–47, 1952–56, 1960–61, and 1968–72). The border dispute between Ecuador and Peru came to a head in 1942 when Peru invaded Ecuador's Southern and Oriente provinces. The Río Protocol awarded to Peru the greater part of the Amazon territory claimed by Ecuador. During his second term as president, Velasco Ibarra formally suspended the 1945 Liberal constitution and promulgated a new constitution in 1946 that granted more power to the president. This marked the end of the Liberal era in Ecuadorian politics. The election of Galo Plaza Lasso in 1948 ushered in a period of relative stability. He was the first chief executive since 1924 to complete his term of office. He was followed by a series of interrupted presidencies punctuated by juntas. Velasco's three terms as well as the term of his 1961 successor, Carlos Julio Arosemena Monroy, ended prematurely in coups.

In 1972 the military under Gen. Guillermo Rodríguez Lara canceled the election and restored the Liberal constitution of 1945. The junta ruled until 1979 when Jaime Roldós Aguilera was elected president. Roldós was killed in a plane crash in 1981 and was succeeded by his Christian Democratic vice president, Osvaldo Hurtado Larrea. The conservative León Febres Cordero won the

1984 presidential election. In the 1988 presidential election Borja Cevallos of the Democratic Left won a comfortable majority. In 1992 Sixto Durán-Ballén Córdovez of the Republican Unity Party swept the polls by winning 19 of the 21 provinces. In 1996 the populist Abdalá Bucaram achieved his longtime goal of becoming president. But his administration was cut short in 1997 when the Chamber of Representatives ousted him for "mental incapacity," and designated its presiding officer Fabián Alarcón Rivera as his successor. In 1998 Jamil Mahuad Witt of Popular Democracy, a Christian Democrat, secured 51.3 percent of the vote to become president. Mahuad settled the long-standing border dispute (dating from the 16th century) involving a 125,000 sq mi tract of land between the Putumayo and Marañón Rivers with Peru. The agreement awarded the disputed territory to Peru, but control (although not sovereignty) of the town of Tiwintzá and a corridor from the border was assigned to Ecuador, which was also granted free navigation rights along the Amazon and the right to establish two port facilities within Peruvian territory.

In response to a faltering economy, Mahuad announced austerity measures in 1997, which were met with strikes and public protest. In 1999 the government defaulted on external loans. Seeking to stabilize the economy, Mahuad announced his plan to replace the national currency with the U.S. dollar. In January 2000 he was forced from power by the army and indigenous protesters, and Vice President Gustavo Noboa Bejarano became president. Noboa adopted the U.S. dollar as Ecuador's national currency in March 2000.

In 2001 Luis Maldonado became the first Amerindian to take a cabinet post not specifically associated with indigenous affairs when he was appointed minister for social welfare. The following November, the leftist candidate Lucio Gutiérrez won the presidency. In August 2003 former president Noboa fled to the Dominican Republic after facing charges of corruption. Gutiérrez did not trust the Supreme Court, claiming that it was biased against his party, so in December 2004 Congress dismissed most of the court and appointed new members to the bench. In April it ousted President Gutiérrez and Vice-President Alfredo Palacio took his place.

2005–	Alfredo Palacio

CONSTITUTION

Under its 18th constitution, passed in 1998, Ecuador has a president, who acts as head of state and head of government, and a 100-member unicameral legislature, known as the National Chamber of Representatives.

The president appoints the cabinet, provincial governors, and diplomatic representatives and directs international relations. He can declare a state of emergency upon notice to the Chamber. The president serves a four-year term and is ineligible for reelection.

Voting is by free, secret, direct ballot for all Ecuadorians 18 years and older and compulsory for literate Ecuadorians under age 65.

The constitution of 1998 establishes the autonomy of the Central Bank in setting monetary policy, mandates that the state maintain economic balances, and eliminates state monopolies over strategic areas of the economy.

PARLIAMENT

Legislative power is vested in the National Chamber of Representatives, whose 100 members are elected for four-year terms from lists of candidates drawn up by legally recognized parties. Representatives are eligible for reelection.

The National Chamber ratifies treaties, elects members of the Superior and Supreme Courts, and appoints the comptroller general, the attorney general, and the superintendent of banks. Congress can override the president's amendment of a bill and may reconsider a rejected bill after one year. It can request a referendum and revoke a state of emergency.

POLITICAL PARTIES

Political parties have typically been loosely organized groups with charismatic leaders but without any overarching ideology. The groups are highly factionalized, but the trend has been for groups with similar viewpoints to form

alliances. Administrations have alternated center-left and center-right positions. Indigenous people have been participating in politics more often since the 1996 election. Political parties include the moderate, center-right Social Christian Party (Partido Social Cristiano, PSC), with main strength in the Costa; the far-right Conservative Party (Partido Conservativo Ecuatoriano, PCE), centered in Quito; the socialist, left-center Democratic Left (Izquierda Democrática, ID), strong among government workers and professionals in the Sierra; the progressive, Christian-democratic Popular Democracy (Democracia Popular, DP), strong in Quito; the socialist, populist, left-of-center Radical Alfarista Front (Frente Radical Alfarista, FRA), whose main strength is in the Costa; the populist, centrist Roldosist Party (Partido Roldosista Ecuatoriano, PRE), which is strong in the Costa; the populist, left-of-center Concentration of Popular Forces (Concentración de Fuerzas Populares, CFP), strong in Costa; and the far-left, populist Pachakutik–New Country (Pachakutik–Nueva Patria, P-NP), which represents the indigenous movement and is strong in northern and central Sierra.

LOCAL GOVERNMENT

Ecuador is divided into 22 provinces, each administered by a governor appointed by the president. Provinces are subdivided into 115 cantons or municipalities. A canton is administered by a *jefe político*, or political chief, appointed by the president. Cantons are subdivided into *parroquias* (parishes), each administered by a *teniente político*, a political lieutenant.

LEGAL SYSTEM

In 1861 Ecuador adopted the Civil Code of Chile, which is based on the Napoleonic and Spanish codes.

The judiciary consists of a Supreme Court of Justice, higher divisional courts, provincial courts, cantonal courts, and parochial judges.

The Supreme Court consists of 15 judges and two prosecutors, elected by Congress for six-year terms. The president of the court is elected annually by the membership. The court usually sits in five chambers of three judges each.

Preventive detention is illegal, and the criminal code forbids isolated confinement for more than 24 hours. Mayors and municipal council presidents are constitutionally empowered to grant bail and habeas corpus.

Defendants have the right to counsel, to face their accusers, to refrain from testifying against themselves, and to appeal their sentences to intermediate courts and to the Supreme Court.

Judges play a central role in investigations as well as in deciding guilt or innocence. There is no trial by jury.

Legal investigations as well as prosecutions are carried out by the attorney general, solicitor general, and provincial prosecutors, who defend state interests in criminal and civil cases.

Military courts are empowered to try only those cases involving acts against military installations and infractions of military regulations.

The correctional system is operated by the National Directorate of Prisons under the Ministry of Government. The two largest institutions are the García Moreno prison in Quito and the Penitenciarío del Litoral in Guayaquil.

HUMAN RIGHTS

Ecuador has extensive human rights abuses stemming from corruption in the legal and judicial systems. Persons are subject to arbitrary arrest and, unless they pay bribes, may wait years before being tried. More than half the prisoners in jail have not been formally sentenced. Discrimination and violence against women and ethnic minorities has been an ongoing problem. Child labor is prevalent and increasing.

FOREIGN POLICY

The border dispute with Peru has been Ecuador's principal foreign policy issue. Ecuador asserted that the Río Protocol, which set a border between Ecuador and Peru following full-scale war in 1942, does not accurately describe the area of the Upper Cenepa River valley in the Cordillera, rendering demarcation "inexecutable."

In January–February 1995, soldiers fought an intense but localized war in the disputed territory. Peace was brokered by the four guarantors of the Río Protocol (Argentina, Brazil, Chile, and the United States), and in March 1999 Presidents Mahuad of Ecuador and Fujimori of Peru signed a treaty demarcating a definitive boundary.

The border with Colombia is an important consideration in Ecuadorian foreign policy. The Colombian border areas are unstable, and guerillas have ventured into Ecuador, where they endanger local people and the oil fields of the north. Ecuador has deployed more troops to the area to protect it.

The United States and Ecuador maintain close ties, cooperating to combat narcotics trafficking, build trade and investment, and foster Ecuador's economic development. About one million Ecuadorians live in the United States, and over 100 U.S. companies do business in Ecuador. Ecuador is a signatory to the United Nations and the Organization of American States. It belongs to the Río Group, the Latin American Integration Association, and the Andean Pact.

DEFENSE

The defense structure is headed by the president, who acts as commander in chief and is advised by the National Defense Council. The line of command runs from the president through the minister of national defense to the joint command of the armed forces and the commanders of the three services. The country is divided into six military zones (Quito, Guayaquil, Cuenca, Machala, and Loja, and a sixth zone encompassing the Oriente), three naval districts (Guayaquil, Quito, and the Oriente) and two air force districts (Quito and Guayaquil). All three services are independent.

Military manpower is provided by a compulsory one-year conscription law under which all able-bodied men are liable for service at the age of 20. In February 1999 President Jamil Mahuad announced that he would cut the draft by 60 percent and reassign one-quarter of the army to the police force. Domestic terrorism is a smaller problem in Ecuador than it is in Peru and Colombia, but the security of the northern frontier area against drug traffickers and insurgent Colombian groups is a continuing concern. In 2003 the country spent 2.4 percent of gross domestic product (GDP), or \$650 million, on the military.

ECONOMY

Ecuador is ranked as a lower-middle-income country with a mixed public-private economy. Despite increasing numbers of exports and a profitable oil industry, 70 percent of the population still lives in poverty. The nation is deeply indebted to foreign nations.

The country's economy is heavily dependent on petroleum exports and moves in lockstep with the price of oil in the world market. The country has opened the Oriente region to oil extraction, despite the economic devastation the industry wreaks. Other key exports are bananas, coffee, cocoa, and shrimp. Nontraditional exports such as flowers and canned fish have become more important in recent years. The forestry industry produces balsa wood and rubber.

Economic growth has been uneven in recent years due to the on-again, off-again application of fiscal stabilization reforms. In 1996 Abdalá Bucaram proposed a schedule for privatizing some government-owned industries, but popular discontent led to his dismissal

730 Ecuador

in February 1997. Confronting an economy racked by mismanagement, damage from El Niño, and low world oil prices, President Jamil Mahuad announced a fiscal austerity package in January 1999 that also provoked violent protests. The beginning of 1999 saw the banking sector collapse, which helped precipitate an unprecedented default on external loans later that year. Continued economic instability drove a 70 percent depreciation of the currency throughout 1999, which eventually led the government to adopt the U.S. dollar as the national currency in 2000. Shortly thereafter the International Monetary Fund (IMF) approved \$2 billion in aid for Ecuador.

Ecuador has established free-trade areas with Colombia, Chile, and within the Andean Community, and it belongs to the World Trade Organization (WTO) and Asociación Latinoamericana de Integración (ALADI).

ENVIRONMENT

Ecuador's constitution states that all citizens have the right to live in a pure environment. Yet Ecuador is under siege from a host of ecological stresses, including rapid urbanization and large-scale petroleum exploration and processing in the Oriente. Current environmental problems include soil and water pollution, deforestation, desertification, and soil erosion; pollution is an especially big problem in the delicate ecosystems of the Galapagos and the Amazon basin. In 1996 the Ministry of Environment was created to systematize ecological management and concentrate efforts to protect Ecuador's natural resources. Other efforts to confront ecological problems have been undertaken by groups representing peasant and indigenous communities and organizations such as

Fundación Natura, specializing in education in schools, and Ecociencia, primarily concerned with research.

Much domestic and international attention has been focused on the exploitation of the Oriente by the petroleum industry. In November 1993 five Amazon Indian tribes filed suit against Texaco to claim compensation totaling \$1.5 billion for the company's spilling some 17 million barrels of oil in its 25 years of operation in the region.

Ecuador has ratified the Biodiversity Convention, the Climatic Changes Treaty, and the Forest Declaration and abides by the principles of the Río Declaration. The Law of Forestry and Conservation of Natural Areas and Wildlife of 1981 established the national patrimony of natural areas and created 17 protected areas, including the Galápagos. A 2001 oil spill in the Galapagos Islands alarmed the government, which declared a state of emergency; eventually, major damage was avoided.

 CO2 Emissions per capita ton: 2.05

LIVING CONDITIONS

Housing conditions depend on socioeconomic status. Wealthy people live in comfortable, modern houses and apartments, while poor people live in shacks without running water or electricity. Poorly designed latrines in rural areas contribute to the spread of disease. Ecuador is a relatively safe place, though there is some street crime in Quito and Guayaquil. Traffic accidents are a common cause of death. Most people use public transportation, especially buses, trucks, and taxis. Passengers are allowed to ride on top of trains. The domestic airline system is efficient and inexpensive.

HEALTH

Ecuador has a national health-care system that provides medical care to all citizens at a nominal cost. The public system suffers from the lack of supplies, staff, and space, so those who can afford to pay for medical care usually choose to go to the excellent private hospitals and clinics. Two-thirds of Ecuador's medical professionals and hospitals are located in Guayaquil, which also happens to be where most of the money is located. Money for public health has been decreasing, and infectious diseases such as cholera, polio, typhoid, yellow fever, and malaria still occur, especially in rural areas.

Rural people often choose to visit traditional healers instead of doctors. These healers use Ecuador's many plants and herbs to concoct medicines that can be very effective in treating diseases. The antimalarial drug quinine comes from the bark of the Ecuadorian *Cinchona* trees and was discovered by an Ecuadorian Indian in 1630. Today, knowledge of the medicinal properties of plants has been dying out, and the trees themselves are endangered—just when Western researchers have discovered the potential of Ecuador for the discovery of new drugs.

FOOD AND NUTRITION

Common Ecuadorian ingredients are corn, rice, eggs, beans, vegetables, fruit, and fish. People eat many stews and soups. Fried plantains are a popular snack or side dish, as is popcorn. Fish is available throughout the country, and many people eat it raw as *ceviche*—marinated in lemon juice and garnished with tomatoes, cilantro, chili, and onion). There are numerous regional specialties, including roasted guinea pig, suckling pig, goat stew, and a soup made of boiled cattle hooves. Most people eat their largest meal in the middle of the day. Drinks include very strong coffee and *api*, a hot drink made of cornmeal.

 Amount of Cereal Available per person per year kg: 94.4
 Amount of Fruits and Vegetables Available per person per year kg: 189.2

STATUS OF WOMEN

Ecuador was the first country in Latin America to grant women suffrage (in 1929), and its constitution establishes complete legal equality for both sexes.

Because of the economic need to maintain more than one income per household, women are entering the workforce earlier and staying longer. Women filled three of 16 cabinet positions in 1999 and one party, the Independent Movement for an Authentic Republic (MIRA), is headed by a woman, Rosalía Arteaga Serrano, who served as Ecuador's interim president in 1997 (February 9–11) and as the first female vice president.

The Center for Women's Action, a nongovernmental organization, organizes and educates women about discriminatory labor practices, family law, and domestic violence. Largely due to its efforts, Ecuador in 1995 passed the Law against Violence Affecting Women and Children, which criminalized spousal abuse and created family courts. Some communities have established their own centers to counsel abused women, and the government began to address this question seriously with the formation of the *Comisaria de la Mujer*, or Women's Bureau, in 1994.

Abortion is illegal. Family-planning support is provided by the Ministry of Health, most universities, and two private organizations, *Asociación pro Familia Ecuatoriana* (APROFE) and the Ecuadorian Center of Family Education.

WORK

About one-third of the Ecuadorian workforce is employed in agriculture, most as laborers for landowners who grow cash crops such as coffee, cocoa, bananas, potatoes, and rice. The demand for laborers has declined in recent years, and many men have been forced to move to the cities to work menial jobs, leaving their families behind in the country. In the cities people are employed in services, commerce, and manufacturing. Many people work in family-owned businesses. Tourism employs a growing number of Ecuadorians. It has also allowed people who know traditional crafts to make a living selling their creations, such as weavings, carvings, sisal bags, and panama hats. Children work in the cities selling sundries such as chewing gum or cigarettes.

EDUCATION

Education is free, universal, and compulsory for eight years, from the ages of six to 14. Schooling lasts for 12 years, as divided into six years of primary school, three years of middle school, and three years of secondary school. Special programs have been developed to make primary educational facilities accessible to rural youths, an estimated 15 percent of whom are illiterate, but poor rural families still often cannot afford to send their children to school. Students attend schools in shifts, either in the morning or in the afternoon, in order to make the most of limited facilities and teachers.

The academic year runs from October to July in the Sierra and from April or May to January in the Costa. The medium of instruction is Spanish, although Quechua and other indigenous languages are sometimes used. Not all children speak Spanish, so the government has actively recruited teachers who speak indigenous languages.

Private schools account for about 22 percent of secondary-school enrollment and 18 percent of primary-school enrollment and are judged to be better than public schools. Private schools also account for more than half of the enrollment of technical schools. The Catholic Church runs about 800 schools, Protestant denominations about 12.

Public schools are run by the state or by the municipalities; in the latter case they are under the direction of the mayors or the municipal councils. Municipalities are obligated to allocate 30 percent of their budgets to education, although the actual figure rarely reaches 18 percent.

Ecuador has 20 universities (16 state and four private) and three technical colleges. Chief among the public universities are the Central University (the country's oldest), University of Cuenca, University of Loja, University of Guayaquil, and the Technical University of Portoviejo. The largest private universities are Catholic University of Quito, Catholic University of Guayaquil, and the Lay University Vicente Rocafuerte.

MEDIA

Ecuador's press is free and vigorous. Ownership of the media is broad-based, although foreign investment in broadcast organs is restricted. A law requires the media to give free air time to the government. Journalists are free to report as they wish, though they generally avoid excessive criticism of the government or the armed forces.

The daily newspapers of Quito and Guayaquil account for the bulk of newspaper circulation and readership. Foreign news bureaus represented include UPI, Reuters, Agencia EFE, AP, DPA, and ANSA.

There are eight major book publishers, with a modest annual output. Ecuador adheres to the Universal Copyright and Buenos Aires conventions.

Ecuador boasts more than 300 commercial radio stations, 14 of which are on the air for 24 hours. All stations are required by law to broadcast 15 minutes of adult education programs daily.

Television, introduced in 1959, now reaches more than one million inhabitants in five cities.

CULTURE

Ecuadorian Indians are known for their haunting music, which they play on panpipes, bamboo flutes, drums, violins, and ukuleles; one of the most famous folk songs is “El condor pasa.” The visual arts have long been popular, starting with pre-Colombian art, which can be seen in the museums in Quito. Many pre-Colombian figurines depict women, and modern sculptors have been imitating that form in their work. Simón Bolívar opened the first school of fine arts in 1822, under the direction of the sculptor Gaspar Sangurima. Ecclesiastical art combines both Spanish and native motifs. Well-known artists include Oswaldo Guayasamin, Manuel Rendon, and Camilo Egas. Graffiti is an important part of Quito’s urban culture; artists cover walls with poetry or political ideas, and journalists and politicians are known to quote their words in their speeches. Ecuador’s novelists include Jorge Enrique Adoum and Jorge Icaza.

FOLKLORE AND MYTHOLOGY

Indigenous people in rural areas have kept up folk traditions, such as the anaconda dance. In this dance the village shaman drinks an intoxicating beverage and is led into the spirit world, while other villagers dance in the shape of an anaconda. People maintain folkloric practices in their arts and crafts, some of which are identical to pre-Colombian products.

ENTERTAINMENT AND RECREATION

There are many possibilities for outdoor recreation in Ecuador. There are many beaches with warm water, though the undertow at Atacames kills swimmers every year. Scuba diving and snorkeling are beautiful both on the mainland and in the Galapagos. There is excellent climbing and hiking available in Parque Nacional Cotopaxi and the Area Nacional de Recreación las Cajas. Jungle hikes and bird watching are popular with tourists. Most national parks and reserves have designated camp-

ing areas and mountain shelters. Ecuadorians enjoy fishing for giant catfish in the rivers.

Ecuadorian children play many games, including hopscotch, marbles, and jump rope. They also play singing and guessing games. Adults like to play darts and cards during family gatherings.

ETIQUETTE

Ecuadorians consider friendly relationships very important, and they value the personal touch. A person at a social gathering should greet every person in the room individually, and should do the same thing when departing. Ecuadorians are comfortable simply dropping by the homes of friends and family, and people at home are always prepared to receive visitors and usually offer them a meal. When guests leave, their hosts frequently give them gifts.

FAMILY LIFE

Ecuadorians consider family ties very important; extended family members commonly live together. Older people are treated with great respect. Most Ecuadorians have godparents, who play important roles in their lives and may help them with finances.

Young people do not date in pairs very often, instead going out in groups. Girls receive special parties when they turn 15. Women marry young, usually in their early 20s, though most parents encourage their children to finish school before marrying. Many Ecuadorians have two marriage ceremonies, a religious one and a civil one. Living together before a Catholic wedding is frowned upon by religious families. On the other hand, common-law marriages are common.

A typical household includes a married couple and their unmarried children. The youngest son usually stays in his parents’ home even after he marries, on the understanding that he will care for his parents as they age. Women handle most of the housework and child-care duties, though this pattern has been changing as more women have entered the workforce.

PERSONAL APPEARANCE

In urban areas, most people dress in the modern Western style. People in the countryside wear hats and colorful shawls. People within an ethnic group tend to dress similarly. The highlands are cooler than the lower areas, and people in the hills cover their bodies fully. Shorts are more acceptable at lower elevations. Ecuadorians take pride in their appearance and dress with care.

SPORTS

Soccer is Ecuador's most popular sport, followed by volleyball and track. Ecuador's first Olympic gold medal came from a track athlete, the race-walker Jefferson Prez, who won the gold medal in 1996. Most players of organized sports are male, though some girls and women also participate. *Pelota* is a popular casual sport, played by people in city parks; two teams hit a ball back and forth and another team tries to stop the ball. Bullfighting is a popular spectator sport; every December, Quito holds a festival at which bullfighting takes place.

CHRONOLOGY

- 1945** Ecuador becomes a charter member of the United Nations; a new constitution is promulgated in December.
- 1947** President José María Velasco Ibarra is deposed in a military coup, whose leaders are in turn ousted by counterrevolutionaries; a provisional government is established.
- 1948** Galo Plaza Lasso wins presidential elections; Ecuador becomes a charter member of the Organization of American States (OAS).
- 1952** Former president Velasco is elected president.
- 1956** Conservative candidate Camilo Ponce Enríquez wins a narrow victory.
- 1960** Velasco is returned to the presidency by a wide margin.
- 1961** President Velasco signs the Alliance for Progress, a 10-year economic treaty with the United States; Velasco is forced to resign and Vice President Carlos Arosemena Monroy is sworn in as president.
- 1963** Arosemena is ousted and replaced by a military junta; the junta initiates liberal economic and social programs, including land reform.
- 1966** Violent demonstrations erupt across the country; the opposition forces the junta out of power; Otto Arosemena Gomez is named president.
- 1967** A new constitution is promulgated.
- 1968** Velasco is elected to the presidency a fifth time.
- 1970** Velasco assumes dictatorial powers.
- 1972** The military ousts Velasco and coup leader General Guillermo Rodríguez Lara assumes the office of president; Rodríguez's government announces a five-year economic plan emphasizing agriculture, housing, and industry; Ecuador begins exporting petroleum.
- 1976** Admiral Alfredo Poveda Burbano takes over government leadership at the head of a three-man junta.
- 1978** Jaime Roldós Aguilera is elected president.
- 1979** Roldós is sworn in; the new constitution takes effect; clashes with Peru erupt over the ongoing border dispute.
- 1981** International arbitration resolves the border conflict; President Roldós dies in a plane crash, and Vice President Osvaldo Hurtado Larrea is sworn in as president.
- 1983** Floods devastate Ecuador.
- 1984** León Febres Cordero Rivadeneira of the conservative Social Christian Party is elected president.
- 1986** World oil prices continue to decline, depressing Ecuador's economy; the Social Christian Party loses seats in legislative elections.
- 1987** President Cordero is captured and beaten in one of several unsuccessful military uprisings; a major earthquake causes widespread damage; its fiscal crisis deepening, Ecuador indefinitely suspends payments on foreign debt, which exceeds \$9 billion.
- 1988** Democratic Left candidate Rodrigo Borja Cevallos is elected president.
- 1992** Sixto Durán-Ballén Córdovez assumes the presidency.
- 1993** In the nation's worst-ever natural disaster, a landslide in Azuay province kills several hundred and causes more than \$100 million in damage; a wave of strikes protests President Ballén's privatization scheme.
- 1994** In midterm elections Social Christians gain a majority in Congress; massive roadblocks by Amerindian groups impede the government's plans to reclaim communal lands.
- 1995** Crossfire in the Cenepa frontier escalates into war with Peru; Vice President Alberto Dahik, accused of embezzlement of reserve funds, flees to Costa Rica.
- 1996** Abdalá Bucaram Ortíz of the Roldosist party becomes president, and Rosalía Arteaga Serrano, an independent, becomes the first woman vice president.
- 1997** About two million workers participate in a general strike in February; days later, as 10,000 mostly indigenous protesters lay siege to the capitol building, Congress dismisses Bucaram for "mental incapacity"; Vice President Arteaga proclaims herself president but steps aside when Congress elects Fabián Alarcón interim president; in July Congress votes to dismiss the entire Supreme Court; the El Niño weather pattern damages crops and leaves over 20,000 people homeless; numerous Ecuadorian banks collapse in the wake of the Asian fiscal crisis.
- 1998** Jamil Mahuad Witt of the Popular Democracy Party wins the presidency; a new constitution

is promulgated; in October President Mahuad and President Alberto Fujimori of Peru sign a treaty accepting border limits along a 78 km line of disputed territory.

- 1999** Annual inflation reaches 60 percent; banks close for five days; Ecuador defers payments on \$6 billion in debt.
- 2000** In January 10,000 protesters march on Quito to demand the resignation of President Mahuad, and 1,500 protesters take over the capitol building; a military junta briefly takes power in a coup; in the face of opposition from the United States, the United Nations, and the OAS, the junta relinquishes control, and Vice President Gustavo Noboa Bejarano is sworn in as president; the World Trade Organization allows Ecuador to impose \$200 million in economic sanctions on the European Union over the banana trade dispute; President Noboa replaces the sucre with the U.S. dollar as the official national currency; the International Monetary Fund approves \$2 billion in aid for Ecuador.
- 2001** An oil spill in the Galapagos Islands threatens the environment. Luis Maldonado becomes minister for social welfare, the first Amerindian to hold an ordinary cabinet post.
- 2002** Indigenous people protest that oil revenues should be invested in their communities. Lucio Gutiérrez wins the presidential election.
- 2003** Noboa goes into exile in the Dominican Republic after being charged with corruption.
- 2004** Prisoners take hostages to demand better conditions and shorter sentences. Congress dismisses the Supreme Court and appoints new members.
- 2005** Congress removes President Gutiérrez from office. Vice-President Alfredo Palacio takes his place.

EGYPT

Basic Fact Sheet

OFFICIAL NAME

Arab Republic of Egypt (Gomhuriyet Miṣr al-Arabiyyah)

ABBREVIATION

EG

CAPITAL

Cairo

HEAD OF STATE

President Muhammad Hosni Mubarak (from 1981)

HEAD OF GOVERNMENT

Prime Minister Ahmed Nazif (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

77,505,756 (2005)

AREA

1,001,450 sq km (386,660 sq mi)

ETHNIC MAJORITY

Egyptians

LANGUAGE

Arabic (official)

RELIGION

Islam (official)

UNIT OF CURRENCY

Egyptian pound

NATIONAL FLAG

Tricolor of three equal horizontal stripes—red, white, and black—with the national emblem in the central white stripe

NATIONAL EMBLEM

A stylized, upright eagle, gold and white in color, facing forward with wings partly raised and its beak turned to its own right. On its chest the stripes of the flag are vertically displayed, and in its claws is a scroll with the words in Arabic script, “Arab Republic of Egypt.”

NATIONAL ANTHEM

“To Thee, to Thee, My Country, I Give My Love and My Heart”

NATIONAL HOLIDAYS

June 8 (Evacuation Day), July 23 (National Day, Revolution Day), December 27 (Victory Day), various Islamic festivals, the Coptic festival Sham-al-Nasim. The Nile Food Festival, June 17, is an unofficial holiday.

DATE OF INDEPENDENCE

February 28, 1922

DATE OF CONSTITUTION

September 11, 1971

GEOGRAPHICAL FEATURES

Egypt is at the northeastern corner of Africa and forms a rough quadrangle covering 386,660 sq mi (1,001,450 sq km) and extending 976 mi (1,571 km) southeast to northwest and 743 mi (1,196 km) northeast to southwest. It is bordered on the south by Sudan and on the west by Libya. The Sinai Peninsula, found at the northern end of the Red Sea, is also a part of Egypt.

The capital is Cairo, one of the world's largest cities, with an urban population of 6,789,479 as of 1996. The other major urban centers are Alexandria (3,328,196), Giza (2,221,868), Shubrā al-Khaymah (870,716), and Port Said (469,533).

The country is divided into two regions: Lower Egypt, or Wagh al-Bahari, and Upper Egypt, or al-Said. Lower Egypt is the broad, alluvial Nile Delta, while Upper Egypt is a tableland rising to 1,500 ft (457 m).

The two main topographical divisions are the Western Desert and the Eastern Desert. The Western Desert, which covers 68 percent of the land area, is an arid region covered by vast, rolling plains of sand and large depressions, many of which lie below sea level. The Eastern Desert, also called the Arabian Desert, is an elevated plateau broken by deep valleys that covers 22 percent of the land area. Human settlements are limited to the Nile River valley and Nile Delta, which cover 4 percent of the land area.

Egypt

The Nile River is not only the longest river in Africa but also the lifeline of Egypt. It flows through Egypt for nearly 1,000 m (1,609 km) after entering the country at Wadi Halfa. Throughout the length of Egypt there are no significant tributaries entering the Nile. For centuries the annual flooding of the Nile has governed the agricultural life of the country. The day traditionally celebrated for the entry of the floodwaters is June 17. The water then continuously rises until, at full flood in September, 17.6 billion cu ft (500 million cu m) of water flows by Cairo daily. At Cairo the Nile spreads out over a broad estuary to form a fertile delta of 8,494 sq mi (22,000 sq km), through which flow the two main distributary branches:

the eastern Damietta and the western Rosetta. These are supplemented by a network of irrigation canals and four main shallow lakes. Below Aswan is a region of cascades known as the first cataract, which serves as a barrier to upstream navigation and isolates Egypt from Sudan.

The largest lake is the man-made Lake Nasser, a reservoir behind the Aswan High Dam.

CLIMATE AND WEATHER

Egypt has a warm, arid climate with two seasons: a cool winter from November to April and a hot summer from May to October. Prevailing northerly winds temper the climate along the Mediterranean coast, where temperatures in the summer rarely exceed 91°F (33°C). The interior has a true desert climate, with temperatures usually rising to 100°F to 110°F (38°C to 43°C). The desert temperatures are subject to wide variations. During the winter there may be occasional cold spells, and light frosts and light snow are not unknown.

Rainfall is almost entirely limited to the coastal area, where it averages 8 in (200 mm) a year. Cairo receives 1 in (25 mm) a year. In the interior it may rain only once in several years.

The climate is made oppressive in early summer by the dust-laden khamsin, a sandstorm from the south that blows intermittently and may continue for days, with accompanying winds of up to 90 mph (145 kph).

Climate & Weather

Mean Temperature
Cairo January 45°F to 85°F
Cairo July 71°F to 96°F
Interior 100°F to 110°F
Average Rainfall: Coastal Areas 8 in
Cairo: 1 in
Interior: 0 in

FLORA AND FAUNA

Camels and donkeys are the most common large animals. There are many rats and bats, 34 kinds of snakes (including cobra), and about 430 species of migratory birds; some two million birds stop in Egypt every year on their migrations north and south. Scorpions are plentiful. In the Red Sea there are turtles, dolphins, stingrays, and sharks as well as coral reef ecosystems. The vast majority of Egypt's original animal species are extinct within the nation's borders; these include cheetahs, leopards, hyenas, oryx, and most gazelles.

Most of Egypt's plant species are domestic. Palms and papyrus grow there. Farmers grow crops such as cotton, rice, corn, and sorghum.

POPULATION

Population Indicators

Total Population 2005: 77,505,756

Divorce Rate per 1,000: 1.1
Average Size of Households: 4.9
Induced Abortions: —

ETHNIC COMPOSITION

Egypt has remained ethnically homogeneous, with native Egyptians constituting over 90 percent of the population. This distinct ethnicity has been one of the strengths of the Egyptian nation.

The major ethnic minorities, who form about 10 percent of the population, are Bedouin Arabs, Nubians, Greeks, Italians, and Maltese, though none of these communities are numerically significant. Of these, the Bedouins and Nubians are being gradually assimilated into the native population.

LANGUAGES

Arabic is the official language and the language universally spoken by Egyptians. Though the government officially

favors modern Arabic, colloquial Arabic in its Egyptian form is widely used in the media and in many universities. The most important minority languages are Coptic and Nubian. Coptic, the ancient language of pharaonic Egypt, ceased to be a spoken language after the Arab invasion of the seventh century, but it survives in the liturgy of the Copts. A few thousand Berber tribespeople speak Berber, while the Arabic-speaking Nubians still retain Nubian as their mother tongue.

Both the English and French languages declined during the Nasser era (1954–70), when all Western influences became anathema. However, both English and French have remained popular, particularly among educated Egyptians.

RELIGIONS

Islam in its Sunni form is the official religion of Egypt and the religion of approximately 94 percent of the population. The power of Islam in Egypt is symbolized by the mosque and the University of al-Azhar, considered the oldest existing university and the most influential center of Islamic learning. Because of Islam's hold on the people, the government often seeks to enlist the aid of religion in furthering its programs and exercises considerable control over religious affairs. Public expressions of piety and participation in Friday communal prayers by public leaders are accepted means of eliciting popular support. However, presidents Nasser, Sadat, and Mubarak found themselves opposed by the fundamentalist Muslim Brotherhood, which continues to be the most serious threat to the regime.

The largest religious minority is the Coptic Christian community, constituting about 4 percent of the population. The Copts are descendants of ancient Egyptians who were Christianized in the early centuries of the Christian era. In the fifth century the Coptic Church seceded from the main body of orthodoxy at Constantinople and joined the Monophysite faith. The position of Coptic Christians in Egyptian society has become more difficult in recent decades. The Copts claim that they are persecuted by Muslim extremists bent on exterminating all non-Muslims in the Arab world. President Mubarak has publicly emphasized the full equality of Copts and other religious minorities with Muslims. The government also has made clear that Egypt, its Islamic character notwithstanding, remains a secular state governed by civil law based on the Napoleonic Code. Nevertheless, the Copts consider themselves victims of discrimination as well as overt persecution. As evidence they cite that all top civil service posts are held by Muslims, as are nearly all senior diplomatic positions and heads of universities.

Religious Affiliations

Sunni Muslim	72,855,000
Other	4,650,000

HISTORICAL BACKGROUND

Egypt has the oldest recorded history of any country outside China and India. It was ruled from around 3400 B.C.E. by many dynasties of pharaohs who presided over a great civilization and erected majestic monuments. As the power of the pharaohs waned, the country was periodically conquered by invaders, including the Assyrians and the Persians. In 332 B.C.E. Alexander the Great of Macedonia invaded Egypt and established the dynasty of the Ptolemies, who ruled Egypt from 323 B.C.E. to 30 B.C.E. The best known ruler of this dynasty was Queen Cleopatra, who was defeated along with her lover Marc Antony at the Battle of Actium in 31 B.C.E. by Octavius, later Emperor Augustus. Egypt became fully Christian around the third century C.E. After the official division of the Roman Empire under Constantine II around 340, Egypt became part of the Eastern or Byzantium Empire. In 639–42 Muslim hordes from Arabia conquered Egypt and during the next several centuries completely Arabized and Islamized the region.

The British, who came in 1882 and departed in 1922, were the last of many foreign rulers. The British were never really interested in colonizing Egypt but only in securing their passage through the Suez Canal. British control was nominal and indirect, though it remained until the end of World War II, with a true ending not written until Britain's debacle in the Suez invasion of 1956. French legal and educational traditions proved more durable in Egypt than those of Britain, and Western culture is even now filtered into Egypt through the medium of French.

Egypt's modern history began with a military coup in July 1952, which toppled King Farouk. The revolt of young officers was led by Maj. Gen. Muhammad Naguib. Farouk officially abdicated in June 1953. A republic was established under Col. Gamal Abdel Nasser, who was made prime minister in 1954 and president in June 1956. Nasser heralded Arab nationalism and unity as well as ardent opposition to Israel. Internally, he fostered social and economic change and strove to end British influence.

Unable to obtain satisfactory assistance from the West, in 1955 Nasser accepted military and other forms of aid from the Soviet Union. The next year Egypt nationalized the Suez Canal. As a result, Britain, France, and Israel invaded Egypt in October but withdrew under pressure from the superpowers and the United Nations. On February 1, 1958, Egypt and Syria formed the United Arab Republic (UAR) under Nasser's leadership, although Syria reasserted its independence in 1961.

Egypt suffered heavy losses in the Six-Day War with Israel in June 1967, including the occupation by Israel of the Sinai Peninsula. This defeat led to greater Egyptian reliance on the Soviet Union and the overhaul of both state machinery and the ruling Arab Socialist Union Party.

The death of Nasser in September 1970 was a turning point in recent Egyptian history. Power was transferred to Vice President Anwar al-Sadat, who eventually made peace with Israel and moved Egypt into the Western orbit. Yet Sadat was forced to reach for Soviet aid in preparation for renewed warfare with Israel. Egypt and Syria fought Israel for 18 days in October 1973. After initial Egyptian advances, Israel was gaining ground when the U.S. secretary of state Henry Kissinger arranged a cease-fire. Forces on both sides were disengaged east of the Suez Canal. Sadat was designated for a second six-year term as president in 1976 and the following year made a dramatic visit to Jerusalem seeking a settlement with Israel.

In March 1979 Egypt's new cabinet approved the peace treaty with Israel, which called for the gradual return of the Sinai Peninsula to Egypt and which was ratified in a public referendum. By 1981 Egypt relied heavily on the United States for military and economic support. In September 1981, facing growing domestic unrest, the government jailed about 1,000 dissidents, including Muslim fundamentalists, journalists, and Nasserites. On October 6, 1981, Sadat was assassinated by Muslim militants. The People's Assembly immediately nominated Vice President Muhammad Hosni Mubarak as Egypt's new president.

The years following 1981 were marked by growing domestic instability due to economic problems and the emerging strength of Muslim fundamentalism. Despite these challenges, Mubarak remained firmly in control. Egypt also reestablished relations with other Arab states following its isolation and condemnation over the treaty with Israel. Mubarak's diplomatic skill led to the ultimate return of the Sinai Peninsula to Egypt in 1982. President Mubarak was reelected to a second term as president in October 1987 and to a third term in 1993.

Egypt's new ties with the United States were strengthened during the Persian Gulf War in 1991. Although Mubarak first tried to bring about an Arab diplomatic solution, he later sent 40,000 Egyptian troops as part of a multinational force led by the United States in defense of Saudi Arabia.

In the 1990s several Muslim extremist groups carried out bombings and attacks on tourists to weaken the Mubarak government, seeking a government and society in Egypt ruled strictly according to Islamic doctrine. Mubarak himself narrowly escaped assassination by Muslim fundamentalists during a visit to Ethiopia in 1995. Egyptian security forces carried out raids against Islamic militants, but the challenge of Muslim fundamentalism remained.

In 1996 Kamal Ahmed al-Ganzouri was named prime minister, and he launched what was widely perceived as economic liberalization. His new cabinet emphasized Egypt's role as an advocate for stability and peace in the Middle East. In 2000 Mubarak again tried to broker peace between Israel and the Palestinians, but escalating violence toward the end of the year found him espous-

ing increasingly hostile positions toward Israel. In 2001 he condemned U.S. air raids against Iraq. Later that year Mubarak supported the U.S. campaign against terrorism that was prompted by terrorist attacks in New York City and Washington, D.C., on September 11, 2001.

Mubarak has maintained an ambivalent attitude toward Muslim extremism and violence. Egypt downgraded its relations with Israel in April 2002 as a result of Israel's efforts to oust Yasser Arafat. In late 2004 a series of bomb attacks aimed at Israelis killed more than 30 people on the Sinai Peninsula. Yasser Arafat died in November 2004, and his funeral was held in Cairo. In parliamentary elections in 2005 supporters of the Muslim Brotherhood, who ran as independents, won 20 percent of the seats.

LIST OF MODERN RULERS

1953–54	Muhammad Naguib
1954–70	Gamal Abdel Nasser
1970–81	Anwar al-Sadat
1981–	Muhammad Hosni Mubarak

CONSTITUTION

Egypt's government is based on the constitution of 1971, which proclaims Egypt as an Arab republic with a democratic and socialist system derived from the country's historical heritage and the spirit of Islam. The constitution provides for a strong executive. Executive authority is vested in the president, the head of state, who is nominated by at least one-third of the members of the People's Assembly, approved by at least two-thirds, and elected by popular referendum. The president serves a six-year term and may be reelected for subsequent terms. The president may take emergency measures in the interests of the state and can call a national referendum on "matters of supreme interest." The president also appoints the prime minister and other ministers.

Under the constitution of 1971 suffrage is universal over age 18. Voting is specified as a national duty, and failure to vote entails a fine. Presidential elections occur every six years, in the form of a plebiscite of approval in which only one candidate is presented to the electorate.

The Council of Ministers, described as "the government" in the constitution, is the supreme executive organ of the state. It consists of the prime minister, the head of government, deputy prime ministers, ministers, and deputy ministers. The principle of ministerial responsibility to the legislature is constitutionally established, and the assembly may pass a no-confidence vote against the prime minister.

After President Sadat's assassination in October 1981, a state of emergency was proclaimed. It was extended by presidential decree in successive years and renewed by

President Mubarak in 1992. Under these emergency laws designed to combat civil unrest and terrorism, certain constitutional safeguards that protect civil and political liberties can be suspended.

PARLIAMENT

The national legislative is called the People's Assembly (Majlis al-Shaa'ab), a unicameral body elected for five-year terms. It consists of 454 members, 444 elected by popular vote and 10 appointed by the president. Half the seats are reserved for "workers and peasants." The Assembly's legislative powers are circumscribed by the fact that the president has the right to rule by decree and to veto a bill passed by the Assembly. The Assembly functions primarily as a policy-approving rather than as a policy-initiating body.

There is also the Advisory Council, or Majlis al-Shura, which serves only in a consultative role. Its 264 members serve for six-year terms; 176 are elected by popular vote, 88 are appointed by the president.

POLITICAL PARTIES

Egypt has been a virtual one-party state since the 1952 revolution and has become increasingly intolerant of opposition under the Mubarak administration. The ruling party is the National Democratic Party (NDP), founded by President Sadat in 1978. Few of the opposition parties have significant legislative representation and most have no legal standing either. The elections of 2000 resulted in 34 seats in the Assembly going to members of opposition parties. Opposition parties generally tend to boycott elections because of electoral laws and practices designed to work against them. There are a number of clandestine Muslim fundamentalist groups working outside the political system. The most important of these groups is the Muslim Brotherhood, which wants to establish Egypt as a fundamentalist Islamic state.

LOCAL GOVERNMENT

Local government consists of three levels of jurisdiction: governorates, towns, and villages. In 1999 there were 26 governorates: Ad-Daqahliyah, Al-Bahr al-Ahmar, Al-Buhayrah, Al-Gharbiyah, Al-Iskandariyah, Al-Jizah, Al-Minufiyah, Al-Minya, Al-Qahirah, Al-Qalyubiyah, Al-Wadi al-Jadid, Ash-Sharqiyah, As-Suways (Suez), Aswan, Asyut, Bani Suwayf, Bur Sa'id, Dumyat, Janub Sina', Kafr ash-Shaykh, Matruh, Qina, Shamal Sina', and Suhaj.

Each governorate is administered by a governor, who is both the chief regional executive and the representative of the central government. Local self-government con-

sists of governorate councils, town councils, and village councils. An appointed chief executive is the head of the council at every level. All councils are also subject to national executive guidance and control. Local councils are composed of three types of members: nominated members (usually technical or professional persons), elected members chosen and designated by the National Democratic Party, and ex officio members assigned by appropriate ministries. All elected and nominated members have terms of four years. The financial resources of the local councils include local property and land taxes, subsidies from the central government, and revenues from a joint fund.

LEGAL SYSTEM

The legal system of Egypt is based on Islamic law, the Napoleonic Code, and English common law. Religious courts were abolished in 1956 and the entire court system was secularized and unified. Article 2 of the constitution states that Islamic jurisprudence is the principal source of law. However, the application of Islamic law is limited to the so-called family status courts, which have jurisdiction over such matters as divorce and inheritance for Muslims. Under President Mubarak the judiciary has enjoyed a relatively large measure of independence.

Courts are divided into four levels of jurisdiction. There are summary tribunals in each district, primary tribunals in each governorate, six courts of appeal, and the Supreme Court of Appeals in Cairo, with a chief justice, four deputy justices, and 36 justices. The Supreme Judicial Council guarantees the independence and integrity of the courts and supervises the whole judicial system.

Arrested persons have the right of habeas corpus, and there is a system of bail. Constitutional and legal safeguards of due process in the arrest and pretrial custody stages are generally observed. Arrests occur openly and with warrants, and the accused are brought before an independent judiciary. Exceptions to these procedures have sometimes occurred during the state of emergency laws enacted in the 1980s and 1990s following President Sadat's assassination.

Egyptian law provides for public trial and equal treatment before the law. Persons accused of espionage, plotting to overthrow the government, or similar crimes, however, are tried in state security courts, often in closed proceedings. Defendants are permitted to be present during these proceedings and are represented by lawyers conducting an active defense.

HUMAN RIGHTS

Egypt is a republic with a strong authoritarian presidency, and the country's political and economic structures have

been shaped largely by the ideological bent of the president. President Mubarak tends to use his power and influence with caution. However, in 1994 he extended the state of emergency decreed following Sadat's assassination in 1981 in order to counter "the regrettable terrorist acts in the country, including the attacks on tourists, assassination of officials, bombing of banks, and the treacherous killing of innocent civilians, police officers, and police commanders." The most significant political opposition to Mubarak's regime has been the powerful Muslim Brotherhood, which he allowed to engage in limited political activity in his first two terms but moved against more aggressively in the latter 1990s.

During the 1990s Egyptian security forces and terrorist groups continued violent exchanges, and the government's crackdown against Islamic terrorism restricted many basic rights. Security forces have arbitrarily detained people and have abused prisoners in their custody. The government has restricted freedom of the press and freedom of movement as well as some practice of religion. Police persecute homosexuals. Domestic violence against women and female genital mutilation continued. Child labor is widespread, and employers are known for abusing employees.

FOREIGN POLICY

Egypt has strengthened its ties with the Arab world, at the same time forging a closer relationship with the West, particularly the United States. Egypt was readmitted to the Arab League in 1989, and league headquarters returned to Cairo from Tunis. Mubarak served as the head of the Organization of African Unity (OAU, now the African Union) in 1989 and 1993, consolidating his country's position in that key group. Egypt also took a prominent role in the Persian Gulf War of 1991, firmly supporting the United States by sending 40,000 Egyptian troops against Iraq, constituting the second-largest army in the coalition forces.

Egypt continued to play a leading role in Middle East affairs during the 1990s, working actively in the peace process negotiations. It supported the 1994 Jordan-Israel peace treaty and other initiatives. Mubarak has met with Israeli leaders and worked with the United States to improve relationships between the countries of the Middle East. In the 2000s Egypt hosted several summits to resume the Camp David negotiations suspended in 2000, and the government has been working with Israel and Palestine to come to a stable resolution to an Israeli withdrawal from Gaza.

Egypt has also contributed to numerous peacekeeping missions in the Middle East and Africa, including in Sierra Leone, Liberia, and Sudan. Since 2001 Egypt has been assisting the United States in its war against terrorism. The United States in turn has donated a great deal of economic and military assistance to Egypt.

DEFENSE

Egypt's defense structure is headed by the president of the republic, who is also the military governor-general and supreme commander. In addition, the president presides over the National Defense Council, the senior policy body of the government in military affairs. Under the president are the minister of war and a deputy commander in chief, who also functions as the chief of staff and the commander of the army.

Military manpower is provided by compulsory conscription of adult males between the ages of 18 and 30 for up to 36 months of service. Egypt has one of the largest armed forces in the region. The military owns equipment from the United States, France, the United Kingdom, Italy, China, and the former Soviet Union. Egypt is committed to providing stability in the region, and its military has worked with the armies of several other Arab and African states. Egypt's defense spending in 2003 was \$2.44 billion, or about 3.6 percent of the country's gross domestic product (GDP).

ECONOMY

Egypt's economy is one of state capitalism, with increasing emphasis on the private sector. Agriculture remains the largest sector of the economy, involving 32 percent of Egypt's labor force, though it accounts for only 17 percent of the country's GDP. Industry, including manufacturing, mining, construction, and power, is the second-largest sector and accounts for 33 percent of GDP. Services bring in the remaining half of total GDP. The Suez Canal in particular has been a reliable source of income for many years.

By the late 1980s Egypt faced serious population pressure on its limited resources. Only 2.9 percent of its land is arable, the birth rate of 23.8 per 1,000 is among the highest in the world, 17 percent of the population lives in poverty, and Egypt must import three-fifths of its food. The collapse of world oil prices in the 1980s and the cost of the Persian Gulf War posed a crisis for the Egyptian economy, as its balance of payments deficit expanded rapidly.

To meet the economic crisis, Egypt began large-scale economic reforms, with the support of the International Monetary Fund (IMF). By the mid-1990s the government

had reduced budget deficits, curtailed inflation, ended many government subsidies, and built up foreign reserves. New business legislation marked the government's new policy toward privatizing industry and liberalizing trade and investment. This shift toward a more market-oriented economy brought increased foreign investment.

The massacre of tourists at Luxor in 1997 by Muslim extremists marked a significant setback, given tourism's key role in the economy. However, government action to counter terrorism and ensure public safety led to a revival of foreign visitors within a short period.

By mid-1998, however, the pace of structural reform slackened, and lower combined hard-currency earnings resulted in pressure on the Egyptian pound and sporadic U.S. dollar shortages. Monetary pressures have since eased, thanks to the 1999–2000 higher oil prices, a rebound in tourism, and a series of minidevaluations of the pound. The development of a gas export market is a major positive factor in future growth. In 2001 the aftereffects of the attacks of September 11 in New York City and Washington, D.C., and the ensuing war in Afghanistan dealt a heavy blow to Egypt's tourist industry.

The government is still working to transform its economy from state controlled to free market, and state-owned businesses still predominate in many areas. Agriculture is entirely privately owned. Tourism fared well in 2003–04, and the Suez Canal brought in substantial income. After the currency dropped in 2003, the government offered food subsidies, which worsened the deficit. In 2004 GDP grew at a rate of 3.1 percent.

ENVIRONMENT

Although Egypt has passed laws to protect its unique ecosystems, plants, and animals, environmental issues are secondary to the needs of a growing population and pressure for increased food production. Irrigating farmland has caused increasing soil salinization, estimated to affect 28 percent of all agricultural areas. In addition, urban sprawl and windblown sand continue to exclude arable soil from possible use.

Water pollution is a growing environmental threat, brought about by the runoff of salinized drainage water from irrigated areas, the use of farm pesticides, and a lack of adequate sewage disposal. Industrial and mining wastes also contribute to the problem. Oil pollution from offshore oil rigs and pipelines and coastal shipping is a significant threat to Egypt's coral reefs, fisheries, and tourist beaches. The Aswan Dam has stopped the floods that plagued the Nile valley for millennia, but it is also allowing the Sahara desert to encroach.

LIVING CONDITIONS

Egypt's public transportation system is widespread and inexpensive. There are trains, buses, boats on the Nile, minibuses, airplanes, camels, donkeys, and horses. Public transport is often crowded.

Rural people in small villages live in close-knit communities, often near extended family. They spend their time growing crops and raising livestock such as sheep, buffalo, goats, and chickens. They live in small brick houses. Villagers now have access to health care and clean water, as well as electricity, which makes television and radio possible. Many rural people, such as the nomadic Bedouin, have begun moving to the cities to find work.

Urban Egyptians live in more modern conditions, although cities have become very crowded. People depend on mosques and churches to supplement the social services provided by the government. Most urban dwellers live in apartments and like ornaments such as elaborate furniture and colorful tapestries and wall hangings.

HEALTH

Basic health care is free to all citizens, including those in rural areas. More elaborate care is available to those able

to pay for it. The health-care system has been feeling economic strain as the population grows rapidly. Population growth is the result of several factors, including an increasing life expectancy, decreasing infant mortality rate, and a moderate fertility rate of almost three children per women. The government has sponsored family-planning programs in an effort to help control the size of families. Egypt has done a great deal toward improving children's health, vaccinating children against polio, diphtheria, and measles.

The medical profession is held in high esteem, and the best students compete to enter medical school; the number of female doctors is steadily increasing. Many of Egypt's doctors, however, decide to move to other countries.

Health

FOOD AND NUTRITION

Most Egyptians eat three meals a day plus snacks. The basis of most meals is round, flat pita bread, which can serve as a pocket to fill with ingredients or to dip into sauces. At breakfast people drink tea and eat bread with beans, cheese, eggs, or jam; they also eat pastries such as baklava. Other meals feature meats such as lamb, chicken, or beef, fish, salad, pickles, yogurt, fruit, and many vegetables, which can include greens, eggplant, and okra. On the street people buy snacks such as falafel, fried balls of ground fava beans or chickpeas. The main meal is eaten around 3:00, and the evening meal is usually light. Mint tea, coffee, and a drink made of hibiscus leaves are popular drinks. Although Islam forbids the consumption of alcohol, alcoholic drinks are readily available at grocery stores and restaurants, except during Ramadan. Muslims do not eat pork.

Food and Nutrition

Undernourished % of total population: 3.5
 Daily Available Calories per capita kcal: 3,320
 Amount of Cereal Available per person per year kg: 235.2
 Amount of Fruits and Vegetables Available per person per year kg: 266.8

STATUS OF WOMEN

By law and in many respects in practice, women are granted equality. Women work outside the home and serve in the military. They are represented in the professions, including medicine, law, and education, and they serve in the People's Assembly and the cabinet. Labor laws guarantee women equal pay for equal work in the public sector, and women constitute 17 percent of business owners. Women are free to travel internally and abroad, though a married woman must have her husband's permission to obtain a passport.

In general, social pressures and the resurgent Islamic fundamentalist trend restrict women's rights in many ways. Moreover, in rural areas prevailing cultural values curtail many freedoms, and women often occupy subordinate roles in society there. Egyptian women are financially independent in most matters. In matters of inheritance, a woman is considered equal to half a man. Women's legal rights are limited in other ways. Few women currently attend university, though the number is gradually increasing. Domestic violence is common, and many women still undergo genital mutilation.

 Seats Held in Parliament by Women %: 3
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 0.85
 Women's Share of Wage Employment Non-agricultural %: 21.6

WORK

One-third of the Egyptian workforce is employed in agriculture. Some of these laborers, in rural areas, are subsistence farmers, growing food and raising animals to support their families. Most other adults work in the government, in industry, in tourism, or drilling for oil. Many children must work to supplement their families' incomes. In urban areas it is not uncommon for people to work two or three jobs. The government employs a large number of women.

 Services: 51
 Unemployment %: 9.9

EDUCATION

Education is, in principle, universal, free, and compulsory for six years, between the ages of six and 13. School-

ing consists of six years of primary school, three years of preparatory school, and three years of secondary school. Secondary schools teach either academic or technical subjects. Because the population has grown so quickly, class sizes in some locations have grown to 60 or 80 students. There is a shortage of classroom buildings, especially in rural areas, where literacy is very low. Private schools offer a higher quality of education and are therefore becoming more popular.

Higher education is provided by 14 state universities and technical colleges. Al-Azhar University, founded in 970 at Cairo, enrolls about 90,000 students. It is very difficult to get into a university. The government sets public examinations that students must pass in order to enter. There are also specialized arts colleges.

SCIENCE AND TECHNOLOGY

The ancient Egyptians had extremely advanced science and technology; they used irrigation techniques, understood astronomy, and proved able to build enormous pyramids. Modern Egypt funds many scientists as well. The United States and Egypt issue joint grants every year to further research into biotechnology, manufacturing techniques, environmental issues, energy, geology, and other areas. The Arab Academy for Science and Technology and Maritime Transport trains students to take technological jobs all over the world.

 Patent Applications by Residents: 464

MEDIA

Cairo is the largest publishing center in the Middle East and the media capital of the Arab world. The television and film industries there aspire to become the Hollywood of the Middle East. The press often criticizes the government, though with some restraint in light of the laws allowing prison sentences for “insults.”

Al-Abram is the country’s leading newspaper, and several other newspapers are published daily or weekly. There are two state-run national television stations and six regional ones. There are now several private stations that broadcast via satellite. Egyptian television has viewers throughout the Middle East. The state radio station is Egypt Radio Television Union; two private commercial stations opened in 2003. Egyptians also use the Internet; in 2003 about 2.7 million users were logging on.

CULTURE

Since ancient times, Egypt has produced excellent artists. Poetry has long been popular, and today in rural areas people still memorize and recite folk poems. People like all kinds of music. In the countryside people sing folk songs and dance traditional dances to mark the seasons or special events such as weddings. Men and women usually dance separately. Egypt today is the center of the Arab film and publishing industries. The author Naguib Mahfouz won the 1988 Nobel Prize for Literature.

Muslims celebrate two major holidays, Eid-al-Fitr at the end of Ramadan and Eid-al-Adha to commemorate Abraham’s willingness to sacrifice his son Isaac to God. The Muslim calendar is lunar. Coptic Christians have their own calendar, the Julian calendar, which has 12 30-day months and one 5- or 6-day month. Many folk festivals are celebrated by both Muslims and Christians.

FOLKLORE AND MYTHOLOGY

Egyptians have an elaborate ancient mythology, which dates from thousands of years before Christ. Ancient Egyptians believed in a number of gods, many of which had the shapes of animals. They believed that their kings, or pharaohs, were gods themselves, and they built elaborate tombs for their rulers to inhabit after death, erecting pyramids and filling the tombs with riches. The archaeological remnants of this time are still present in Egypt today.

Modern Egyptians still hold some superstitions. They fear the evil eye, which brings bad luck. Bedouins have their own set of beliefs and folklore.

ENTERTAINMENT AND RECREATION

All Egyptians enjoy socializing with family and friends, relaxing at home with tea or coffee or sitting in cafés to drink coffee and smoke water pipes. Arguing vigorously is part of the fun. In rural areas people spend relaxation time singing folk songs or reciting poetry; in the cities they may watch soap operas. People of all ages enjoy going to the cinema, restaurants, and clubs. The bazaar is a popular destination for shopping and visiting with friends.

ETIQUETTE

Egyptians have a good sense of humor and enjoy jokes. In coffeehouses discussions may become very loud and appear to be arguments, but Egyptians do not take such discussions too seriously and readily forgive one another and resume friendships afterward. They consider it rude to openly admire another person's possessions. Modesty is highly valued, especially among women.

FAMILY LIFE

Egyptians value their extended families very highly, and consider uncles, aunts, cousins, and other relatives to be part of the family. People are allowed to marry their cousins. Arranged marriages still occur, though in urban areas young people often choose their own partners. A bride joins her husband's family and initially has a very low status, below her husband and his mother. She keeps her

own family name. She gains status when she become a mother; sons are especially valued. Egyptians like to have large families and enjoy indulging their children. Muslim men are allowed to have up to four wives, as long as they can support them and treat them fairly.

PERSONAL APPEARANCE

Most urban Egyptians dress in typical western clothing. Women dress modestly for the most part. The half of the population still living in rural areas dress in more traditional clothes; the men wear long shirts called *gal-abiyah* over pants, and women wear brightly-colored long gowns.

SPORTS

Soccer is the most popular sport in Egypt. Wealthy people also like to play tennis and squash.

CHRONOLOGY

- 1946** British troops withdraw except from the Suez Canal Zone.
- 1952** Farouk is overthrown by the army in a bloodless coup and is exiled.
- 1953** Egypt is declared a republic under General Naguib as president.
- 1956** Naguib is replaced by General Gamal Abdel Nasser. Nasser announces nationalization of the Suez Canal. France, Britain, and Israel attack Egypt but are forced to withdraw following U.S. intervention.
- 1958** Egypt and Syria agree to a short-lived union as the United Arab Republic.
- 1967** Six-Day War with Israel ends in Arab defeat and Israeli occupation of Sinai and Gaza Strip.
- 1970** Nasser dies and is succeeded as president by Anwar Sadat.
- 1973** In the Yom Kippur War, Egypt attempts unsuccessfully to retake territory lost to Israel in Six-Day War.
- 1978–79** Camp David talks under the mediation of U.S. President Jimmy Carter result in historic peace treaty with Israel, which is immediately denounced by the Arab League. Egypt is expelled from the Arab League.
- 1981** Sadat is assassinated by Islamic Fundamentalists. Hosni Mubarak, vice president, assumes presidency.
- 1987** Mubarak is reelected president.
- 1989** Egypt rejoins the Arab League.

- 1993** Mubarak is reelected president.
- 1995** Mubarak is the target of an assassination attempt in Addis Ababa, Ethiopia.
- 1997** A total of 58 tourists are killed by gunmen, allegedly from Egypt's Islamic Group, in front of the Temple of Hatshepsut near Luxor.
- 1999** Mubarak begins his fourth term in office.
- 2000** The High Court brings to a legal end the common practice of men preventing their wives from traveling abroad. Egypt, Lebanon, and Syria sign an agreement to build a gas pipeline that will transport Egyptian natural gas to Tripoli, Lebanon, and Syria. Another pipeline would carry gas to Turkey and on to European markets. Mubarak recalls Egypt's ambassador to Israel in protest of the deaths of Palestinians at the hands of Israeli police.
- 2002** Egypt downgrades its relationship with Israel in response to Israel's attacks on Arafat. Hundreds of passengers die in a train fire south of Cairo.
- 2004** Terrorists detonate bombs on Sinai peninsula; more than 30 people die. Yasser Arafat dies and is buried in Cairo in November.
- 2005** In parliamentary elections candidates supporting the Muslim Brotherhood win an unprecedented 20 percent of the seats.

EL SALVADOR

Basic Fact Sheet

OFFICIAL NAME

Republic of El Salvador (República de El Salvador)

ABBREVIATION

SV

CAPITAL

San Salvador

HEAD OF STATE & HEAD OF GOVERNMENT

President Elías Antonio Saca (from 2004)

NATURE OF GOVERNMENT

Partial democracy; republic

POPULATION

6,704,932 (2005)

AREA

21,040 sq km (8,124 sq mi)

ETHNIC MAJORITY

Mestizos

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

U.S. dollar

NATIONAL FLAG

Tricolor consisting of a white stripe between two horizontal blue stripes. The national emblem appears in the center of the white stripe.

NATIONAL EMBLEM

An equilateral triangle in which a red Phrygian liberty cap, crowned by a radiant rainbow, rises from a range of five volcanic peaks bathed by two oceans. A golden nimbus around the cap carries the date 15 September 1821, the date of independence. The triangle is superimposed on a panoply of five national flags, two on either side and one at the apex. The emblem is framed in a circular laurel wreath of seven clusters on each side, both sides ending at the topmost lateral flags, and in an outer ring of golden letters bearing the name of the republic: *República de El Salvador en la América Central*. Beneath the triangle is the national motto: *Dios, union, libertad* (God, union, liberty).

NATIONAL ANTHEM

“Let Us Proudly Hail the Fatherland”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), September 15 (National Day, Independence Day), October 12 (Day of the Race), November 5 (First Call for Independence), December 31 (New Year’s Eve), Christian festivals, including Holy Week, Christmas, All Souls’ Day, and Feast of El Salvador del Mundo

DATE OF INDEPENDENCE

September 15, 1821

DATE OF CONSTITUTION

December 23, 1983

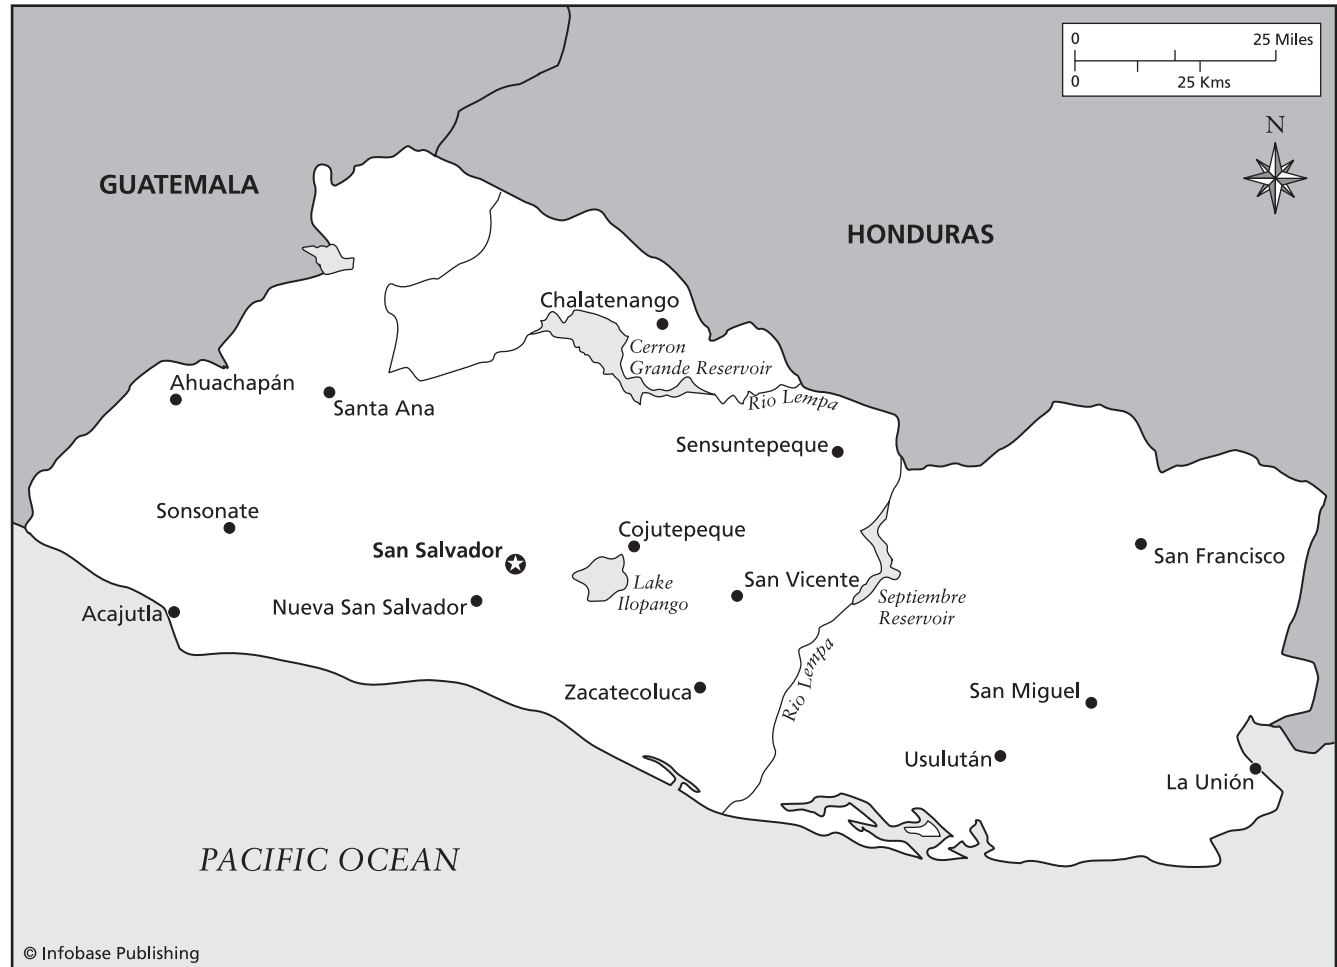

GEOGRAPHICAL FEATURES

El Salvador is the smallest mainland nation in the Western Hemisphere and the only Central American country with no Caribbean coast. It has an area of 21,040 sq km (8,124 sq mi). El Salvador shares its international border of 545 km (339 mi) with two countries: Honduras (342 km; 212 mi) and Guatemala (203 km; 126 mi). The border with Guatemala was established in 1938. The border with Honduras has never been demarcated or surveyed;

in 1992 the International Court of Justice settled the boundary dispute between Honduras and El Salvador, but the border is not yet marked. El Salvador, Honduras, and Nicaragua must still resolve a dispute regarding several islands and maritime rights in the Gulf of Fonseca.

The topography is very mountainous, and El Salvador is also known as the “Land of Volcanoes.” Earthquakes are common, the last severe one having occurred in 1986. The country has a Pacific coastline of 307 km and a plateau region in the central part of the country. San Salvador, the

El Salvador

capital, is divided by two east to west mountain ranges, the Coastal Range and the Cordillera Apeneca, and the country as a whole consists of three topographical regions: the southern coastal plain, the northern lowlands, and the central highlands plateau. The southern coastal plain is a narrow, relatively flat belt extending the length of the country from the Guatemalan border to the Gulf of Fonseca. El Salvador also includes the islands of Meanguera, Conehaguita, Martin Perez, Punta Zacate, and Meanguerita. The northern lowlands are formed by the valley of the Lempa River and the Sierra Madre. The central plateau, which runs between the two mountain ranges, is interspersed with mountains and volcanoes, the largest of which is Cerro El Pital (2,730 m; 8,950 ft). Other volcanoes include Santa Ana, or Lamatapec; San Vicente, or Chichoutepec; San Miguel, or Chaparrastique; San Salvador; and Izalco, which is known as the lighthouse of the Pacific because of its brilliant flares, visible for hundreds of miles at sea.

El Salvador is located in a very unstable geological zone and is subject to frequent earthquakes. San Salvador was completely destroyed by an earthquake in 1854

and was struck again in 1919, 1965, and 1986, causing destruction and loss of life.

Nearly 150 rivers flow across the country into the Pacific Ocean, but only the Lempa is navigable (260 km, 162 mi). There are three lakes, all noted for their scenic beauty and popular with tourists: Lake Guija, near the Guatemalan border; Lake Coatepeque; and Lake Ilopango, near San Salvador. The latter is in the crater of an old volcano.

CLIMATE AND WEATHER

El Salvador is located just within the tropic of Cancer, at latitude 14° north. The climate is warm rather than hot, and nights are cool, except on the coastal plain. There are two distinct seasons: a dry season from November to April and a rainy season from May to November. The annual average temperature ranges from 18°C to 32°C (64°F to 90°F). During the rainy season, rainfall averages 260 mm (10.2 in) per month. Although the country is not prone to hurricanes, in 1998 Hurricane Mitch damaged certain areas.

Climate and Weather

Mean Temperature: 64°F to 90°F
Average Rainfall: 10 in

FLORA AND FAUNA

El Salvador is covered with lush green vegetation and is full of animal species, but the vast majority of its native flora and fauna are severely endangered. Almost all of the country's forests have been cut down to make room for coffee, sugar, and cotton plantations. El Salvador's native vegetation includes over 200 species of orchids, pine, oak, cedar, mahogany, coconut, tamarind, orange, melon, and mango trees. On the coast there are swamps and estuaries. The animal population includes butterflies, hummingbirds, ducks, herons, vultures, quetzals, toucans, many other species of birds, turtles, alligators, iguanas, boa constrictors, armadillos, monkeys, jaguars, coyotes and white-tailed deer. Habitat loss and human encroachment have put many of these populations in danger of extinction.

ETHNIC COMPOSITION

El Salvador's population consists of 90 percent mestizo, or mixed indigenous and European ancestry, 1 percent indigenous ancestry, and 9 percent European ancestry. The two major indigenous groups are descendants of the Pipil, a Nahuatl-speaking Toltec people from Mexico, who arrived during the 11th century, and the Lenca, who are believed to be an offshoot of the early Mayans. Most European ancestry derives from the Spanish conquerors who came during the 16th through the 18th centuries.

LANGUAGES

The official language is Spanish, which is spoken by virtually the entire population. A few indigenous people speak Nahuatl, the language of the Pipil people, but for the most part indigenous languages are extinct.

RELIGIONS

Approximately 78 percent of the population is Roman Catholic. The patron of the country is El Salvador del Mundo (The Savior of the World), whose fiesta in August is a national holiday. Evangelical Protestant churches have grown significantly since 1992 (when the signing of the peace accords encouraged more missionary efforts from abroad), and now account for 17 percent of the population. The Catholic Church has been an active voice for social justice, and many members of the clergy were killed during El Salvador's civil war for their outspoken views on key issues, such as agrarian reform.

Religious Affiliations

Roman Catholic	5,229,000
Protestant	1,139,000
Other	337,000

HISTORICAL BACKGROUND

The land that is now El Salvador was home to early indigenous cultures. The Olmec culture, which was situated near present-day Chalchuapa, is believed to have existed around 2000 B.C.E., while other cultures existed from around 3000 B.C.E. The Mayan culture was prominent in the area, and archaeological ruins in present-day Joya de Cerén show evidence of a large civilization at about 600 C.E. The Payu culture, centered around present-day Tazumal, flourished from about 300–1200 C.E., especially after the descent and disappearance of the Mayan culture around 900.

At the time of Spanish arrival, the Pipil culture (descended from the Toltecs and Aztecs) was dominant in the area. Don Pedro de Alvarado arrived at the Port of Acajutla in 1524, and present-day San Salvador was founded in 1525. The Spanish controlled the area soon thereafter. It remained under Spanish rule as part of New Spain until the 19th century. El Salvador gained its independence from Spain in 1821, 10 years after Father José Matías Delgado made the first call for national independence from his church pulpit at La Merced. In 1824 El Salvador joined the United Provinces of Central America, remaining in that federation until 1841.

Abolition of communal land in the 1880s placed about 75 percent of land and 90 percent of wealth in the hands of the infamous 14 families. This set the stage for a ruling class of wealthy landowners, influencing much of Salvadoran politics and constituting a major factor in the civil war of the late 20th century.

During the 1930s demand for social change grew. In 1932 the army, led by Gen. Maximiliano Hernández Martínez, crushed a popular insurrection, murdering over 30,000 civilians. His highly autocratic and repressive regime lasted until 1944, when he was ousted following a general strike. The army continued to control politics through a series of civilian and military juntas. None of the governments were able to improve conditions for the majority of Salvadorans, who lived in extreme poverty. As El Salvador became more crowded, Salvadorans moved into the border area with Honduras. This small safety valve was eliminated when war broke out with Honduras in 1969 following a soccer match in San Salvador. While the government became more oppressive and paramilitary groups and death squads became more prominent, U.S. military support for the country grew.

Disillusionment with the government's inability to initiate social reform led to the formation of guerrilla groups in the 1970s. In 1979 a group of army officers overthrew the government of Gen. Carlos Humberto Romero. José Napoleón Duarte, a member of the junta, was sworn in as president in December 1980. The junta was unable to control violence by guerrilla groups or sec-

tions of the army and right-wing death squads, frequently hired by landowners to suppress opposition. Archbishop Oscar Romero was killed while saying mass in 1980, which incited further armed rebellion, led by the Farabundo Martí National Liberation Front (FMLN). By December 1981 over 300,000 Salvadorans were refugees, and large areas of some northern provinces were almost completely depopulated. U.S. support continued, even while many Americans protested U.S. involvement in El Salvador, and the American government continued to deny that any American soldiers were stationed in El Salvador. (Over 30 American casualties laid to rest in 1986 disprove that denial.)

Discussions in 1987 led to an agreement on forming a committee to negotiate a cease-fire and amnesty for the rebels, but following the murder of the president of the Human Rights Commission, the guerrillas withdrew from the talks. In 1989 Alfredo Cristiani won election. Violence continued, however, highlighted by the murder by military forces of six Jesuits that same year. In April 1990 the United Nations began mediation between the government and the FMLN. On January 16, 1992, a cease-fire took effect. In 1994 the National Republican Alliance (ARENA) member Dr. Armando Calderón Sol was elected president. While representing a conservative agenda, the ARENA has, as it has stayed in power, learned to balance its conservative views with the pressing needs of most Salvadorans. The land transfer program, which was agreed to in the cease-fire, has been carried out, but other poverty-related problems remain, although quality of life is improving. The country is still recuperating from the 12 years of civil war and rebuilding a gutted infrastructure. In March 1999 Francisco Flores, also of the ARENA party, became president.

The early 2000s were relatively peaceful for El Salvador, although the country suffered from major earthquakes in 2001 that left over one million people homeless. George Bush visited in 2002 and praised the country, leading up to an agreement with the United States and other Central American countries in 2003 as well as to El Salvador's sending soldiers to Iraq to assist the U.S. effort there. The ARENA once again won the presidential elections in March 2004, placing Antonio Saca in the presidency.

LIST OF MODERN RULERS

1989–94	Alfredo Cristiani Burkard
1994–99	Armando Calderón Sol
1999–2004	Francisco Flores
2004–	Antonio Saca

CONSTITUTION

El Salvador has had numerous constitutions since independence. The one that is currently in force was promulgated in 1983 and has been amended since then. It establishes a republican, democratic, and representative form of government. Executive power is vested in the president, who is elected for a five-year term by absolute majority vote and is ineligible for reelection. If no candidate receives 50 percent of the vote, there must be a runoff election. Suffrage is universal for adults over the age of 18. The president is also commander in chief of the armed forces and appoints cabinet ministers.

PARLIAMENT

The parliament is called the Legislative Assembly (Asamblea Legislativa). Its 84 members are elected for three-year terms by popular vote. It meets twice a year, beginning June 1 and December 1. Additional sessions may be called by the president or the Permanent Committee of the Assembly. The Permanent Committee also conducts business between legislative sessions.

POLITICAL PARTIES

El Salvador has two major political parties and several smaller ones. The conservative National Republican Alliance (ARENA) is the political party of the current president. Farabundo Martí National Liberation Front (FMLN) is a former guerilla organization that now has a voice in the political process. The smaller parties, including the centrist Christian Democratic Party (PDC), the United Democratic Center (CDU) and the right-wing National Conciliation Party (PCN), all received very few votes in the 2004 elections and thus face dissolution or reorganization.

LOCAL GOVERNMENT

El Salvador is divided into 14 departments, which are further divided into 39 districts and 262 municipalities. Departments are run by governors who are appointed by the president. Municipalities are run by municipal councils, each composed of a mayor, a legal representative, and from two to 12 councilmen, who are elected for four-year terms.

LEGAL SYSTEM

Salvadoran law is based on Spanish law, as influenced by Roman law and the Napoleonic Code, and has been modified by recent political changes. The legal system is headed by the Supreme Court. Below the Supreme Court are eight courts of second instance, composed of two magistrates and two substitutes each. On the third level are courts of first instance, located in each departmental capital and other major cities and towns. The lowest courts are justices of the peace, located in all towns. There are also special courts, such as the “peace courts,” which often rule on crimes committed during El Salvador’s civil war.

El Salvador continues to work on its judiciary. It replaced the entire Supreme Court in 1994, but replacing other incompetent judges has been difficult.

HUMAN RIGHTS

Human rights violations were rampant during the civil war, and El Salvador has been working to rectify these problems since then. The country created a Truth Commission after the cease-fire to investigate the worst offenses; the commission recommended numerous judicial and political reforms. In meeting the terms of the cease-fire, the government has reduced the military by over 70 percent. The military is no longer permitted to act with regard to internal security except in extraordinary circumstances; the state has withdrawn policing duties from the military and turned them over to a civilian police force. The former rebels have been integrated into political life (as the party known as FMLN), and they received almost 30 percent of the vote in the 1999 presidential elections. Problems still exist in the use of excessive force by police in some instances.

Violence against women and homosexuals is still widespread. Domestic violence is still a largely unresolved issue, as exacerbated by machismo attitudes and at times contributed to by ultraorthodox church doctrine. Homosexual prostitutes especially are at extremely high risk of violence, while gay nightclubs often have difficulty remaining open, both because of the nightclubs’ tendency to be a target of right-wing/homophobic groups and their patrons’ need to be anonymous for personal safety reasons. The Supreme Court stepped up efforts in 1998 to discipline judges for incompetence and corruption. However, those who have fought for human rights have often become the targets of violence themselves.

FOREIGN POLICY

The end of the civil war brought about a more peaceful foreign policy. Relations with Honduras have been more

civil, and there is a more concerted effort to maintain good relations with all other Central American countries.

El Salvador maintains something of a love/hate relationship with the United States. Although it maintains good relations and does extensive trade with the United States, many Salvadorans still resent U.S. involvement in the civil war. Many Salvadorans now live in the United States and Canada as a result of the civil war, sending home an estimated \$1 billion in aid (in the form of money, clothing, and other items) annually.

Beyond the Western Hemisphere, El Salvador has welcomed investment in the country in order to help it rebuild. The European Union has focused more on Central America in general, El Salvador in particular in 1999 and 2000.

DEFENSE

El Salvador's military has been drastically reduced since the early 1990s. By 1999 the military had 15,000 personnel, down from 63,000 at the height of the war. The government abolished the national police, national guard, and treasury police and placed military intelligence under civilian control. The nation has purged the military officers who committed the worst human rights violations.

Males between 18 and 30 years of age are conscripted for a 12-month obligation. Those who do not serve full-time perform 18 months' military service by participating in weekly training sessions. Defense spending accounts for about 1 percent of gross domestic product (GDP).

ECONOMY

El Salvador is one of the lower-middle-income countries of the world, but its once thriving economy was devastated by civil war in the 1980s as well as by a series of earthquakes. Per capita GDP was about \$4,800 in 2004, approximately half that of each of Argentina, Brazil, and Chile. There is great income imbalance, with a few people wealthy and a large number destitute. In 1998 the government emphasized conservative economic and fiscal policies to promote foreign investment. Inflation fell

to an unprecedented low of 2 percent. Exports reached a record level and were the main engine of growth. Productivity in other sectors remained weaker, however. For the last few years El Salvador has experienced sizable deficits in both its trade and fiscal accounts. The three earthquakes in 2000 and 2001 wreaked havoc in the economy. The government has stepped up privatization efforts, targeting the state telephone company as well as pension funds.

The U.S. dollar became the official currency in September 2001, and as a result the nation can no longer control its own monetary policy. The numerous El Salvadorans living abroad send almost \$2 billion a year back to their homeland, offsetting the country's trade deficit. The government is working to stimulate the economy by encouraging foreign investment and opening new export markets.

ENVIRONMENT

El Salvador has an extremely high level of environmental damage. El Salvador's two main environmental problems are the overuse of land (due to its population density) and pollution from manufacturing and energy production. The government has not passed environmental protection laws and allows industrial development to continue unfettered. Most of the country's rivers are polluted, and the nation faces the loss of much of its drinking water if pollution does not stop. People dump garbage wherever they like, often on the side of the road. The construction of hotels and industrial development are destroying natural beauty and resources. Almost all the country's original forests have been cut down for agriculture and houses. Many of the native plants and animals are in imminent danger of extinction.

LIVING CONDITIONS

Buses are the most common form of public transportation. They are inexpensive and run frequently, though they are often crowded. Most of the nation's roads are unpaved, driving habits are unpredictable, and livestock often wanders onto roadways, making driving dangerous. Drivers often lose their automobiles to theft or carjackings. Incomes are extremely polarized. Half the population lives in poverty, and there is not much of a middle class. Wealthy people live in gated estates with luxurious houses and security systems. Poor people live in shacks made of cardboard and tin or rent small apartments that share kitchens and bathrooms with other apartments. Before 2001 most rural houses were made of branches and mud, with thatched roofs; most of these fell down in the earthquake and are being rebuilt with concrete blocks.

HEALTH

El Salvador's Ministry of Health operates hospitals and clinics throughout the country, though most of them are concentrated in urban areas. Health care has improved in the past decade, but the country still suffers from numerous problems. Chronic malnutrition and concomitant illnesses are common. The infant mortality rate is high. Lack of sanitation results in human waste being washed into drinking water, causing numerous cases of cholera, dysentery, and diarrhea, which is deadly to children under the age of five.

FOOD AND NUTRITION

Dietary staples are rice, corn, and beans. People eat tortillas and tamales on a daily basis. Other common foods are eggs, fried plantains, *chicharrón* (fried pork rinds), cheese, cream, chicken, and occasionally beef or fish. People also eat many tropical fruits, including watermelon and mangoes. Drinks include fruit juices, soft drinks, coffee, hot chocolate, and *tic-tac*, an alcoholic beverage made from sugarcane. Lunch is the largest meal of the day. Most Salvadorans shop for groceries every day at open-air markets, though supermarkets exist in the larger towns. On the street, people buy snacks such as *pupusas*, which are tortillas stuffed with fillings and garnished with hot sauce and pickled cabbage, and *pastels*, or dough stuffed with meat, then deep-fried.

STATUS OF WOMEN

Although women have the right to vote, they are not as prevalent in high-ranking corporate and government positions and earn considerably less than their male counterparts. Domestic and other types of violence against women are widespread. Salvadoran men are known for their machismo, and it is considered unmanly for them to act too gently toward their families or to help care for the home and children. Women are expected to behave modestly and to care for both children and the home. Many women begin having children as teenagers. Single mothers have grown more common recently. Fertility rates have dropped but are still relatively high, at more than three children per woman.

 Seats Held in Parliament by Women %: 11
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 0.98
 Women's Share of Wage Employment Non-agricultural %: 31.1

WORK

Salvadorans consider work a family affair; all family members work to support everyone else. Further, all family members feel that they have a right to decide when and how other members will work. Children often must begin working at a young age.

About 30 percent of Salvadorans work in agriculture. Most work on commercial plantations, earning low wages for growing cash crops such as coffee, sugarcane, and cotton. Rural families may have gardens to grow food for personal consumption; women often tend these gardens while men work for pay. Many people work in factories, making clothing, furniture, pharmaceuticals, and rubber goods. Factories called *maquilas* employ a large number of women who assemble goods for North American markets; these factories have a reputation for abusive treatment of workers, but the government has been working on improving conditions.

A minority of people in the cities work as teachers, engineers, or doctors or in other professions. Many more work as street vendors, selling various items to passersby or performing services such as guarding cars or shining shoes.

Employment and Labor

Labor Force Total: 2,620,000
 Female Participation Rate %: 37.7
 Labor by Sector %:
 Agriculture: 30
 Industry: 15

 Unemployment %: 6.5

EDUCATION

Education is free and lasts for 12 years, although many students have traditionally dropped out after primary school. Salvadorans respect teachers highly. Literacy in 2003 was about 80 percent. Funding has long been inadequate, and schools lack teachers and supplies. Families must pay for school supplies and uniforms, which effectively prices education out of range of some people. Many families need their children to work, caring for younger children at home, working the fields, or selling goods on the streets, and so there is strong pressure on children to leave school early.

El Salvador has several universities and technical colleges. The most respected are the University of El Salvador, founded in 1841, and Central American University, established by Jesuits in 1966. The military runs a military college and a nursing school. Wealthy parents often send their children abroad for college. The faculty at both major universities were outspoken during the war, and many professors were forced to leave after being accused of subversive activities. Teachers were occasionally killed for belonging to teachers' unions.

SCIENCE AND TECHNOLOGY

The government is encouraging the development of science and technology as a means of improving the economy and living conditions. One-fifth of Salvadorans live abroad, where they encounter advanced technologies, and their families learn about technology from them. The Ministry of the Economy has a National Council of Science and Technology that works to implement scientific progress.

MEDIA

El Salvador's constitution guarantees freedom of the press, and this is generally observed; the media feel free to criticize the government and to cover the activities of opposition parties. Newspapers include the dailies *La prensa grafica*, *El mundo*, and *El diario de hoy*. Most television and radio broadcasting is done by private stations. Radio and television are widely available across the country, and people watch numerous international stations through cable. Television is a very popular form of entertainment; even in rural areas most families own a television and a cellular telephone.

CULTURE

Traditional Salvadoran music sounds like that of other Central American nations and employs instruments such as flutes, drums, and wooden xylophones. There is a small community of musicians who continue to play folk music as a form of political commentary. Radio stations commonly play merengue, salsa, ranchero, or American rock. Salvadorans love poetry and literature; popular writers include Francisco Rodríguez, Salvador Salazar Arrué, Claudia Lars, Roque Dalton, and Manlio Argueta. Visual arts include ceramics, such as the Nativity figurines produced by the town of Ilobasco and painting in the style popularized by Fernando Llorca. Traditional crafts include wicker, pottery, masks, and weavings.

FOLKLORE AND MYTHOLOGY

Folktales have long been popular, and people still tell them, especially in rural areas. Many of these stories come from the legends of Amerindians who lived in El Salvador centuries ago, such as the Mayans and the Pipil, and focus on the fight between good and evil. The predecessors of the Mayan Indians lived in El Salvador around 7,000 years ago, and they left traces of themselves in the archaeological site of El Tazumal, a pyramid built between 500 and 900 c.e.

ENTERTAINMENT AND RECREATION

People enjoy gathering in town plazas to meet friends and relatives; Sunday is an especially popular day for this, and people will walk to town from the countryside to visit their friends. Families enjoy outings to the beach, lakes, or national parks. Churches provide some organized social activities. Cities have nightclubs where people can dance to salsa music. Outdoor activities include hiking, rafting or kayaking on the rivers, surfing, boating, and camping. Facilities called *turicentros* offer amenities near lakes and beaches.

ETIQUETTE

Salvadorans are quite formal with one another and always use the formal form of address with others until they are invited to use the informal form. Pointing at a person with a finger or foot is considered rude. Guests at hotels or restaurants are expected to tip 10 percent, though taxi drivers do not expect tips.

FAMILY LIFE

El Salvadorans traditionally live in extended families including two or three generations. Older people receive a great deal of respect, and children are expected to obey all the adults in the family. In the countryside men usually work the fields and tend livestock, while women care for the home and children. Since the war rural men have had to venture to the cities or other countries to find work, leaving their families behind. In some cases the entire family moves to the city and both parents work. Many men died during the war, so about 25 percent of households are now headed by women.

PERSONAL APPEARANCE

Businesspeople are very formal; men always dress in suits and ties and women in suits or businesslike dresses. People dress very well for going out at night. In casual settings clothing is still fairly conservative.

SPORTS

Soccer, called *fútbol*, is by far El Salvador's most popular sport. Almost all males play, and every village has a playing field. Increasing numbers of girls are participating both as children and at the university level. The national men's team is a contender on the international level, and its best players are national heroes. Other sports include baseball, softball, basketball, and running; women often engage in these sports before they marry. Participation in sports is a function of family income; the poorest people have no opportunities to play sports aside from in make-shift games on their poor village facilities.

CHRONOLOGY

- 1943** Maximiliano Hernández Martínez raises the export tax, garnering widespread criticism from landed families.
- 1944** An attempted coup to oust Martínez fails; national strikes and civil unrest result; Martínez resigns.

- 1945** January elections are corrupted to ensure the election of President Salvador Castaneda Castro.
- 1948** Castaneda is ousted from power by the Juventud Militar (Military Youth); a junta, led by Maj. Óscar Osorio, takes over the country's rule.
- 1960** Lieutenant Colonel José María Lemus is overthrown; a military junta, led by Lieutenant Colonel Julio Adalberto Rivera, takes over; the Christian Democratic Party (PDC) is formed.
- 1961** A right-wing military faction overthrows the junta but retains Rivera as leader.
- 1962** Rivera is elected president, buoyed by the Partido de la Conciliación Nacional (PCN); the PCN continues to support national leaders and directly or indirectly rule the country.
- 1964** In a revised electoral process the PDC wins many assembly and mayoral seats, with José Napoleón Duarte Fuentes becoming mayor of San Salvador.
- 1967** The leftist PAR party is accused of Communism and suppressed; PCN candidate Colonel Fidel Sánchez Hernández becomes president.
- 1969** Honduras evicts Salvadoran people from Honduran border lands, spurring violent clashes between Salvadorans and the Honduran military; tension explodes into war after a soccer match in San Salvador between the two countries.
- 1972** Colonel Molina of the PCN suspends vote counting and has the assembly declare him president; Duarte, the apparent winner, is tracked down, arrested, beaten, and exiled.
- 1976** Molina attempts land reform but capitulates to the demands of the landed elite; death squads appear in large numbers, targeting Fuerzas Populares de Liberación Farabundo Martí (FPL) members and Catholic clergy of the Christian Base Communities.
- 1977** PCN candidate Carlos Humberto Romero is elected president in a corrupt election; hundreds of protesters are killed in postelection clashes.
- 1979** As violence sweeps the nation, Romero is deposed in an army-led coup; a state of siege is imposed; the new military, calling itself the Revolutionary Government Junta, invites two prominent Social Democratic civilians to join it.
- 1980** Another military coup establishes a new junta, which includes two Christian Democrats, Morales and Dada; the Revolutionary Coordinator of the Masses, a coalition of reform groups, calls for open insurrection; protests in January and February are violently put down by police, and dozens are killed; Archbishop Oscar Arnulfo Romero y Galdamez, one of the most respected figures in the country and an outspoken critic of the government, is murdered while saying mass; Dada resigns from the junta and is replaced by Duarte.
- 1981** Leftist guerrillas launch a "final offensive"; an electoral law is passed calling for a legislative assembly; Mexico and France recognize FDR-FMLN guerrillas as a legitimate political force.
- 1982** Five right-wing parties win 60 percent of the vote in national elections and form the Government of National Unity, with Alvaro Magana Borja as interim president; delegates sign the Pact of Apaneca, a peace treaty.
- 1983** An antigovernment army faction stages a mutiny at Sensuntepeque; Marianela García Villas, president of the Human Rights Commission, is assassinated; the Assembly ratifies a new constitution.
- 1984** Rebels and the army engage in numerous clashes; the PDC's José Napoleón Duarte wins presidential elections.
- 1985** Mexico resumes diplomatic ties with the Duarte regime; Duarte's daughter is kidnapped and released in exchange for captive guerrillas.
- 1986** In August, government-rebel peace talks take place in Lima, Peru; in October a severe earthquake causes extensive damage to San Salvador, killing 1,500 people and injuring more than 10,000.
- 1987** El Salvador is one of five Central American nations to sign a preliminary peace agreement calling for regional cease-fires; Herbert Anaya Sanabria, president of the Human Rights Commission, is murdered.
- 1989** National Republican Alliance (ARENA) candidate Alfredo Cristiani Burkard wins the March presidential election; following the breakdown of peace talks between the government and leftist rebels, Farabundo Martí National Liberation Front (FMLN) launches a major offensive in November.
- 1990** Cristiani suspends relations with Nicaragua over the issue of Sandinistas supplying arms to the FMLN; soldiers stand trial on charges of murder and terrorism in the 1989 slaying of six Jesuits.
- 1992** A UN-mediated cease-fire takes effect on January 16, ending the civil war, in which an estimated 75,000 to 150,000 were killed; FMLN becomes an opposition party.
- 1994** ARENA member Dr. Armando Calderón Sol is elected president.
- 1997** In March, FMLN wins elections in six of the 14 departments.
- 1998** Hurricane Mitch strikes El Salvador and other Central American countries.

- 1999** ARENA candidate Francisco Flores becomes president of El Salvador.
- 2001** Massive earthquakes kill 1,200 people and destroy tens of thousands of homes, leaving over one million homeless.
- 2002** George W. Bush visits El Salvador and praises the nation. A U.S. court finds two retired Salvadoran generals liable for atrocities during the civil war.
- 2003** El Salvador sends troops to Iraq. El Salvador signs a free-trade agreement with the United States.
- 2004** Antonio Saca of the ARENA party wins the presidency.

Coopération financière en Afrique centrale franc

NATIONAL FLAG

Tricolor of green, white, and red horizontal stripes with a blue triangle on the hoist side and the national emblem in the center of the white stripe

NATIONAL EMBLEM

A “God Tree” with six stars above and the national motto—*Unidad, paz, justicia* (Unity, peace, justice)—beneath

NATIONAL ANTHEM

“Let’s Walk through the Arbor of Our Immense Happiness”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), May 25 (Organization of African Unity Day), October 12 (Independence Day), December 10 (Human Rights Day), December 25 (Christmas), various Christian festivals, including Epiphany, Good Friday, Good Saturday, Easter, Day of St. Joseph the Worker, Ascension Day, Corpus Christi, Assumption, and All Saints’ Day

DATE OF INDEPENDENCE

October 12, 1968

DATE OF CONSTITUTION

November 17, 1991 (amended January 1995)

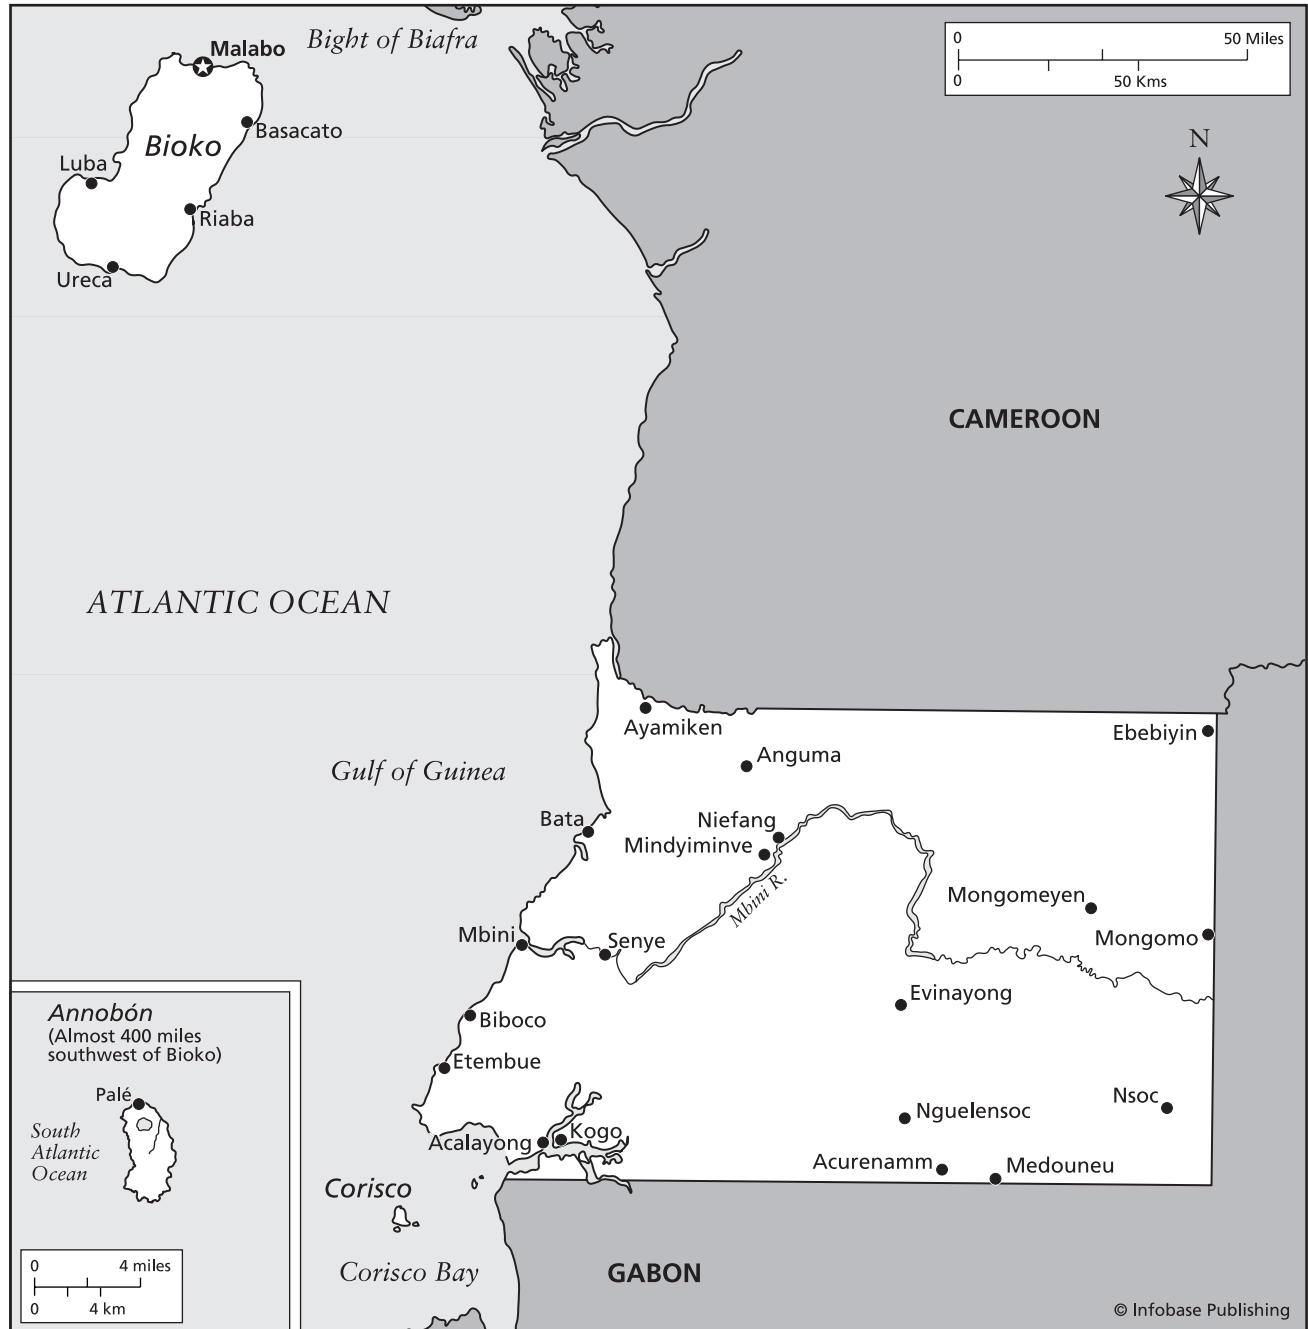

GEOGRAPHICAL FEATURES

Equatorial Guinea is on the western coast of west-central Africa and consists of a mainland province and five islands: Bioko (formerly Macias Nguema Biyogo and Fernando Po), Annabón (formerly Pagalu), Elobey Grande, Elobey Chico, and Corisco. Bioko is 32 km (20 mi) from the coast of Cameroon, and Pagalu is about 350 km (220 mi) from mainland Gabon. Corisco and the Elobey Islands are off the southwestern coast of Bioko and close to the Gabonese coast. The total land area of Equatorial Guinea is 28,051 sq km (10,830 sq mi), of which mainland Río Muni along with Corisco and the Elobey Islands cover

approximately 26,000 sq km (10,040 sq mi), while Bioko and Pagalu cover the remainder. Río Muni extends 248 km (154 mi) east-northeast to west-southwest and 167 km (104 mi) south-southeast to north-northwest. Bioko extends 74 km (46 mi) northeast to southwest and 37 km (23 mi) southeast to northwest. The total coastline is 296 km (184 mi) long.

Bioko is the largest island in the Gulf of Guinea and has two large volcanic formations separated by a valley that bisects the island. The coastline is high and rugged in the south but lower and more accessible in the north. In the north of the island is Mount Malabo, with Pico Basile reaching 3,008 m (9,866 ft). In the center is Pico de

Equatorial Guinea

Moka, with an alpine environment. In the south is Gran Caldera. Río Muni, on the African mainland, is a jungle enclave with a coastal plain rising steeply toward the Gabon border. In the interior the plain gives way to a succession of valleys separated by low hills and spurs of the Crystal Mountains. The highest peaks are Monte Chocolate (1,100 m; 3,609 ft), the Piedra de Nzás, Monte Mitra, and Monte Chime (1,200 m; 3,937 ft). Corisco, covering

15 sq km (6 sq mi), and Elobey Grande and Elobey Chico, each about 2.5 sq km (1 sq mi), are volcanic islands.

CLIMATE AND WEATHER

Equatorial Guinea has an equatorial climate, with average temperatures at Malabo exceeding 25°C (77°F) and average annual rainfall exceeding 2,000 mm (78 in). Wet and dry seasons alternate; from June to August Río Muni is dry, while from December to February it is wet, whereas the reverse is true in Bioko. March to May and September to December are transitional months.

Annual rainfall varies from 1,930 mm (76 in) at Malabo to 10,973 mm (432 in) at Ureka, Bioko. Rain falls almost daily on Pagalu Island. Malabo has an inhospitable climate, with average temperatures reaching 33.4°C (92°F), but in the southern Moka Plateau the average temperature is 20.6°C (69°F). On mainland Río Muni the average temperature range is 15°C to 21.6°C (59°F to 71°F).

Tornadoes and violent windstorms are frequent occurrences in the country.

Malabo	76 in
Ureka, Bioko	432 in

FLORA AND FAUNA

A wide variety of plants and animals flourish in Equatorial Guinea's tropical climate. Trees include rosewood, mahogany, teak, walnut, oak, and okoume. The area around Bioko has very rich volcanic soil, and plants grow there very successfully, often encroaching on cocoa farms. Río Muni also has very rich soil and thick vegetation. The forests are home to many animal species, including lions, gazelles, and elephants. Agricultural pressure is destroying forests, with corresponding deleterious effects on the fauna that live in them.

ETHNIC COMPOSITION

The ethnic composition of Equatorial Guinea is notable for its complexity and variety. The dominant group is the Fang (also known as Fon and, in Spanish, Pamue), who make up 80 to 90 percent of the population of Río Muni. The Fang dominate business and politics. Earlier settlers, such as the Kombe, Balengue, Bujebas, and Bengas, have been pushed toward the coast by Fang expansion. All Río Munians are of Bantu stock, as are the Bubi, who were the original inhabitants of Bioko. The Bubi are now estimated to number 50,000 on Bioko, but they are outnumbered by Fang migrants from the mainland and by a few thousand Fernandinos, descendants of slaves liberated by the British navy in the 19th century. Pygmies have long been integrated into the local population. There are about 3,000 Annobonese on the island of Annobon. On the coast of Río Muni there are about 3,000 Ndowe, 3,000 Kombe, and 2,000 Bujeda. There are fewer than 1,000 Europeans in the country, most of whom are Spanish.

Until recently the majority of the inhabitants of Bioko were Hausa, Ibo, Ibibo, and Efik contract workers on the plantations. Their numbers have been depleted by repatriation and voluntary emigration.

LANGUAGES

Spanish is the official language of the republic and the effective cultural and administrative medium of communication, although it is spoken by only 4 to 5 percent of the population. French is another official language. British sway over Bioko in the first half of the 19th century is reflected in the

use of pidgin English (known locally as Pichinglis). Fang is the main vernacular and the only indigenous language with a national status. A rare pidgin form of Bantu speech known as fa d'Ambo survives as an isolated language found on Pagalu. Some people speak Bubi and Ibo.

RELIGIONS

The constitution guarantees freedom of religion, and religious persecution is not a major problem in Equatorial Guinea. At least 90 percent of the population is believed to be nominally affiliated with the Roman Catholic Church. There are influential Protestant groups in Río Muni and on the islands. Church and state entered on a collision course in 1973, and Spanish priests and nuns of the Immaculate Conception were expelled from the country. Most Catholic schools were either closed or placed under the control of the single political party, Partido Unico Nacional de Trabajadores (PUNT, United National Workers' Party). All Catholic priests and nuns were arrested as the official campaign against the church intensified. Churches were closed and used to store agricultural produce. Macias Nguema Biyogo, described as a militant atheist, dropped his Christian name Francisco in 1975 to rid himself of Christian "trappings." President Obiang ordered the reopening of all Catholic churches following the 1979 coup.

The Fang people still hold to their traditional religious practices, as do most other ethnic groups.

Roman Catholic	482,000
Other	53,000

HISTORICAL BACKGROUND

During the 12th and 13th centuries the Bantu people moved to what is today Equatorial Guinea. The land was already inhabited by Pygmies and the Ndowe. In the end, however, the warlike Fang dominated the region. Eventually, the region came under the influence of the Portuguese, and the Fang were forced inland to avoid being part of the growing slave trade.

Equatorial Guinea was under the rule of Portugal from 1494 to 1778, Spain from 1778 to 1781, Great Britain from 1781 to 1843, and Spain from 1858 to 1968. From 1904 the country was ruled by the Spanish through an institution known as *patronato de indígenas* (patronage of the natives), under which the natives were classified as legal minors and *encomendado* (entrusted) to the Claretian missionaries. Natives were not allowed to dispose of their land freely or transact any business involving more than 2,000 pesetas. They were subjected to a system of forced

labor by contract. They were represented in courts by the *curadoria*, the Spanish legal representative of minors. In 1938 the colony was redesignated Spanish Territories of the Gulf of Guinea, and educated natives were permitted to claim Spanish citizenship as *emancipados*. Spanish Guinea became a province of Spain in 1959, and in 1964 Río Muni and Fernando Po (Bioko) were created as two provinces under an autonomous regional government. Full independence was granted in 1968. Power passed into the hands of a militantly anti-Western and anti-Christian Fang group led by Macias Nguema Biyogo who became the nation's first president. The following year Macias seized emergency powers during an international crisis and subsequently instituted a highly centralized, single-party state. The constitution adopted in 1973 gave the president virtually unlimited powers. During his 11-year rule Macias turned his country into the "Auschwitz of Africa": Throwing off all constitutional and civilized restraints he cut off his country from all contact with the outside world (except for a few hundred Cuban military advisers). As the economy disintegrated, he embarked on an orgy of mass executions and religious persecution that claimed thousands of lives.

In 1979 Macias was overthrown in a coup led by his nephew, Teodoro Obiang Nguema Mbasogo, who assumed the presidency of a Supreme Military Council. (Macias was subsequently arrested; put on trial; found guilty of treason, genocide, embezzlement, and violation of human rights; and executed by a firing squad.) In 1982 President Obiang Nguema was appointed president for another seven years immediately prior to the publication of a new constitution providing for the eventual return to civilian government.

President Obiang has proven himself to be one of the most durable of African dictators and also one of the most brutal. Although widely condemned both at home and abroad for his suppression of human rights, he has managed to keep himself in power by rigging elections and by imprisoning, torturing, and intimidating his opponents. Political parties were banned following Obiang's coup, and legislative elections were held in 1983 and 1988 that returned unopposed candidates nominated by the president. Obiang announced the formation of a government party, the Democratic Party of Equatorial Guinea, in 1987 as a step toward democratization and the possible legalization of other groups. However, no other parties have been permitted, and opponents are repressed. The Obiang regime survived four coup attempts, in 1981, 1983, 1986, and 1988, mainly with the help of the 500-man Moroccan mercenary palace guard. A new constitution was approved in 1991, and multiparty elections took place in November 1993 but were internationally condemned as undemocratic.

Obiang's regime continues to function essentially as a dictatorship. Obiang chooses his advisers from his family and ethnic group. He appoints governors, ratifies treaties, leads the armed forces, and generally has authority over ev-

everything. The opposition parties have no real opportunity to speak or act in government. In the 1996 election, the nation's first actual multiparty election, Obiang claimed victory with 99.6 percent of the votes. International monitors called this election as well as those held in 1999 a sham. In December 2002 Obiang once again won the election with almost all of the votes.

In 2001 one exiled opposition leader, Florentino Ecomo Nsogo, head of the Party of Reconstruction and Social Well-Being, returned home in response to an appeal by Obiang for parties to register for the election. Other opposition leaders declined, forming their own government-in-exile in Spain in 2003. There have been numerous coup attempts on Obiang, including one in 2004 that involved Sir Mark Thatcher, the son of the former British prime minister Margaret Thatcher; Obiang claimed that this attempt was engineered by foreign powers that wanted to overthrow him.

LIST OF MODERN RULERS

1968–79 Francisco Macias Nguema Biyogo
1979– Teodoro Obiang Nguema Mbasogo

CONSTITUTION

The current constitution, approved by referendum in 1982, provides for a president who is head of state, head of government, and commander in chief. He is empowered to appoint and dismiss ministers, determine and direct national policy, ratify treaties, appoint provincial governors, and, under Obiang's interpretation, do anything else he wants to do. The constitution also provides for a State Council of 11 members (including the chairman of the House of Representatives, the president of the Supreme Tribunal, and the minister of defense), which also acts as an electoral college. The national legislature is the House of Representatives, which is elected for a term of five years; its members must be 45 to 60 years of age. It sits twice a year, in March and September, for two-month sessions. The National Council for Social and Economic Development serves the administration in an advisory capacity. The constitution was modified in 1991 to allow for multiple political parties.

The government of Equatorial Guinea is entirely in the hands of its president. There is no effective rule of law.

PARLIAMENT

Under the constitution the national legislature is the Chamber of Representatives, a 100-member unicameral assembly whose members must be 45 to 60 years of age and are directly elected for five-year terms. It sits twice a

year, in March and September, for two-month sessions. The Chamber does the president's bidding and will not act without presidential approval. Of the 100 members elected in April 2004, only two come from genuine opposition parties.

POLITICAL PARTIES

While in theory (and to some extent in practice) Equatorial Guinea is a multiparty state, the country is ruled by its president and his party, the Democratic Party for Equatorial Guinea (PDGE), which holds 84 of the 100 seats in parliament. Other parties with some minimal influence include the Convergence Party for Social Democracy (CPDS), the Democratic Social Union (UDS), and the Liberal Democratic Convention (CLD). Additionally, there are more than a dozen political parties that have no representation in the national assembly.

LOCAL GOVERNMENT

For purposes of local administration Equatorial Guinea is divided into seven provinces, four mainland and two insular. Each province is subdivided into two to seven districts and several municipalities, which are administered by local councils. Regional and provincial administrations were abolished in 1973. The president appoints all governors. The Ministry of Territorial Administration handles internal affairs.

LEGAL SYSTEM

The judicial system is headed by the Supreme Tribunal at Malabo, which hears appeals from civil and military courts in the administrative divisions. All judges are appointed by the president and serve at his pleasure. Below the Supreme Court are the appeals courts, chief judges for the divisions, and local magistrates.

The current court system is a combination of traditional, civil, and military justice, which often operates in an ad hoc manner for lack of established procedures and experienced judicial personnel. Most trials are speedy. In cases of petty theft or civil dispute, all parties are brought before the judge, who listens, questions, and then most often sets a fine to be paid by one party or the other. Fines may also be levied in lieu of imprisonment in cases against the state. Judges will acknowledge tribal customs and laws when they do not conflict with national law.

HUMAN RIGHTS

In terms of civil and political rights Equatorial Guinea is classified as a country that is not free. The regime of dic-

tator Macias Nguema Biyogo was so repressive and brutal that any subsequent regime appears civilized in comparison, but Obiang's government is not known for its respect for human rights. The government has concentrated all its efforts on undoing the harm done by the former dictator but has stated that because of the destruction of the country's economy and social services under Macias, it may be years before the country enjoys political and civil rights. In the meantime, Obiang and his followers feel free to abuse the rights of the citizenry.

Security forces have abused and killed civilians and prisoners and imprisoned people without cause, though reports of torture and abuse have been declining. Prison conditions are so bad as to be life threatening. Soldiers used torture to get confessions from prisoners. Security forces have felt free to act with impunity, as the government has never stepped in to correct their abuses. The judicial system has not been a reliable source of due process of law. Rights to privacy and freedom of speech have all been limited, as have rights of assembly, association, movement, and occasionally religion. Human trafficking, child labor, forced prison labor, and abuse of women all continue to be problems. Discrimination against ethnic minorities, especially Bubi, has been rife.

FOREIGN POLICY

Because of continuing Spanish opposition to the Obiang regime, diplomatic relations between Spain and Equatorial Guinea were suspended in 1997. The opposition government-in-exile is based in Spain, which has caused relations between the countries to become increasingly strained. France is the only country still maintaining reciprocal diplomatic relations with Equatorial Guinea, which is the only nonfrancophone member of the Central African Customs and Economic Union (UDEAC). As the only Spanish-speaking African country, Equatorial Guinea is anxious to develop links with Latin America and has been accorded permanent observer status with OAS. It has tried to establish diplomatic ties with many European countries in an effort to acquire solid national status.

Equatorial Guinea has good relations with most African nations in the region, though it is involved in border disputes with both its neighbors, Cameroon and Gabon. English-speaking workers have migrated to Equatorial Guinea from Cameroon, Nigeria, and Ghana to take jobs with U.S. oil companies, but the government expelled many of them following the 2004 coup attempt.

The United States suspended diplomatic relations with Equatorial Guinea in 1995 but reopened a limited embassy in Malabo in 2003. The United States is the largest foreign investor in the country, and U.S. citizens are allowed to visit the country without a visa. Obiang visits the United States regularly to maintain political and business ties.

DEFENSE

The president is head of the armed forces, which consist of a 1,400-member army, a 200-member navy, a 120-member air force, and a police force of 400. There is also a gendarmerie entrusted with internal security; its membership numbers are unknown. All soldiers are poorly trained and ill equipped. The government is purchasing equipment from China and Ukraine in an effort to improve its forces. The president determines promotions based on family and ethnic ties and makes all military decisions. Between 1984 and 1992 the United States hosted members of the armed forces for training programs, after which period it cut funding for the program; since 1997 there has been no military exchange between the two countries.

ECONOMY

The discovery and exploitation of large oil reserves have contributed to dramatic economic growth in recent years. The economy grew at the rate of 15 percent in 2003. Oil companies have paved roads, upgraded the electrical system, and contributed money to health care and the environment, but it appears that most of this money is not benefiting most of the people. Oil wealth stays concentrated in the hands of a few people closely tied to the president. Foreign donors continue to withhold aid because of what is seen as governmental corruption.

Forestry, farming, and fishing are also major components of gross domestic product (GDP). Although pre-independence Equatorial Guinea counted on cocoa production for hard currency earnings, the deterioration of the rural economy under successive brutal regimes has diminished the potential for agriculture-led growth. A number of aid programs sponsored by the World Bank and the International Monetary Fund (IMF) have been cut off since 1993 because of the government's gross corruption and mismanagement. Businesses, for the most part, are owned by government officials and their family members. Undeveloped natural resources include titanium, iron ore, manganese, uranium, and alluvial gold. The country responded favorably to the devaluation of the CFA franc in January 1994. Boosts in production, along with high world oil prices, stimulated growth in 2000, with oil accounting for 90 percent of greatly increased exports.

768 Equatorial Guinea

Despite the economic growth offered by the oil industry, the vast majority of people still support themselves through subsistence agriculture, hunting, and fishing. Although per capita GDP is estimated to be \$2,700, that figure comes from oil revenues, and most of the population never sees any of the money. Unemployment was high, as exacerbated by illiteracy and a general lack of resources. People get what they need through barter.

ENVIRONMENT

One legacy of colonial Spanish rule was the preservation of much of Equatorial Guinea's biodiversity. Spanish rule helped preserve rain forests and animal life that might have otherwise been destroyed by overly rapid development. However, since the end of colonial rule the country's resources have been poorly managed and are now threatened. The country suffers from problems common to developing countries, including deforestation, shortages of potable water, and contamination of water resources. While the government has adopted a number of plans to curb deforestation and protect the biodiversity of the country, little has actually been achieved. With a stagnant economy and growing demand for agricultural land to feed a booming population, the exploitation of natural resources as a source of money and food is likely to continue.

LIVING CONDITIONS

Most people in Equatorial Guinea live in very primitive conditions. There is little electricity outside the cities, most roads are not paved, and housing is substandard. Almost no one owns an automobile, traveling instead by bus, minibus, bush taxi, or on foot. People grow, gather, hunt, and catch their own food and supply their own fuel to cook it. Most people do not have access to safe drinking water. There is some chance that increased income from oil revenues will modernize facilities throughout the country, but as yet that has not happened.

HEALTH

The people in Equatorial Guinea suffer from many health problems. There are not enough doctors or nurses, and hospitals are ill-equipped; 65 percent of the population has no access to medical care. Life expectancy is 55 years, which is better than many African nations but not good by Western standards. The infant mortality rate is 87 deaths per 1,000 live births. Tropical diseases are endemic; malaria, dengue fever, hepatitis, tuberculosis, diphtheria, rabies, and typhus are all common. In 2001, 3.4 percent of the population was infected with HIV; the majority of those infected are women.

FOOD AND NUTRITION

Most people consume a subsistence diet consisting of cassava or rice supplemented with vegetables, sauce, and perhaps meat. Many people do not get enough to eat; women and children are most likely to be malnourished. People grow their own food or trade for it in the market. There are restaurants in the cities that serve a range of food. Imported beer is expensive, but locally brewed beer is cheap. Safe water is in short supply.

STATUS OF WOMEN

The law states that both sexes, and all tribal groups, are equal and entitled to the same rights and privileges. In practice, women are accorded a lower status than are men and have a correspondingly lower status and influence in the society and government. Men often take several wives, but women are never permitted multiple husbands. Social tradition and the fact that women produce most of the basic food items keep most women engaged in agriculture or domestic work. Five times as many males as females enter secondary school, and eight times as many graduate at that level. Because of the severe need for skilled people of all types, however, women can have professional careers and do hold important jobs in the health sector and in other socially oriented ministries. There are almost no women in the government.

Legally, families are not allowed to discriminate against women in matters of inheritance or in divorce, but in practice such discrimination occurs and is exacerbated by the fact that tribal customs take precedence over national laws for most people. When a woman divorces, she usually must return the dowry she received from her husband when they married; the husband automatically takes custody of all children born after the marriage, though the mother can keep those born before the marriage. Women become members of their husbands' families when they marry. Women have the right to buy and sell goods, but most men refuse to give women access to funds needed to develop a business beyond small-scale market trading or to buy substantial property.

WORK

Most people work in subsistence agriculture, growing and hunting food for their own families. Some make a small income by trading in markets. The unemployment rate is extremely high, at about 30 percent. Some people work in forestry, commercial farming, or fishing. The oil industry employs some natives, but many oil company

employees are English-speaking Africans from neighboring countries.

EDUCATION

Education is, in principle, free, universal, and compulsory for eight years, from ages six to 14. Schooling is a 12- or 14-year program and consists of six or eight years of primary-level education, four years of middle-level education, and two years of secondary-level education. The academic year runs from October to June. Classes are taught in Spanish. Far more boys than girls attend school.

There is a teacher-training school at Malabo. Two other higher educational centers, at Malabo and Bata, are administered by the Spanish Universidad Nacional de Educacion a Distancia. Adult literacy rates increased from 20 percent in 1978 to 78 percent in 1998–99. In 2003, 85.7 percent of the population was literate.

SCIENCE AND TECHNOLOGY

Equatorial Guinea does not have a developed technological infrastructure. There are few telephone lines and cellular telephones. The electrical supply is uneven and does not

reach many areas. In 2004 there were only three Internet hosts in the entire nation and only a few thousand users.

MEDIA

The state controls all media. It allows very mild criticism of government institutions but absolutely no criticism of the president, and most journalists and broadcasters censor themselves. There is one television station in the nation, the state-run Television Nacional. Radio Nacional de Guinea Ecuatorial is run by the state. Radio Asonga is privately owned, but the owner happens to be the president's son. Radio France Internationale broadcasts in Malabo. *Ebano* is the state-owned daily newspaper. *La opinion*, *La nacion*, and *La gaceta* are all privately owned and publish weekly or monthly. There are also a few underground pamphlets that appear from time to time.

CULTURE

Equatorial Guinea has a mix of cultures from its many indigenous ethnic groups, with some Spanish and French influence. People still observe traditional rituals. People play music on homemade instruments such as wooden xylophones, drums, zithers, *sanzas* (a thumb harp made of bamboo), and bow harps. Bands of three or four men will play local music for festivals, and people will dance traditional dances such as the passionate *balélé* or the suggestive *ibanga*, which is popular in coastal areas. The *balelé* is also performed on Bioko, where it is used to celebrate holidays or Christmas.

FOLKLORE AND MYTHOLOGY

There is a bewildering array of traditional cultures present in Equatorial Guinea. Ethnic groups have their own gods and myths and practice rituals to ask for favors, prevent evil, and celebrate occasions such as marriages. The Fang people practice black magic, and their sorcerers are revered. They use song and dance to communicate with the deities. They use the ceremony called *abira* to ask the gods to get rid of evil in villages.

ENTERTAINMENT AND RECREATION

There are many celebrations and festivals in Equatorial Guinea; major Christian festivals are observed at the national level, but regions and villages also have their own unique celebrations that occur throughout the year. October 12 is Independence Day and an occasion for festivals and events.

The cities have bars, restaurants, nightclubs, and outdoor markets. Malabo is the most exciting city. There are no luxury accommodations or restaurants anywhere. There are some beautiful beaches on the coast. Hiking is possible in the interior and on Bioko.

ETIQUETTE

Bargaining is expected in the markets. People who look wealthy are expected to tip about 10 percent in more expensive restaurants and facilities; otherwise tipping is not customary.

FAMILY LIFE

Women are usually subordinate to their husbands, who are allowed to have more than one wife. Women marry quite young, especially in rural areas. Every woman on average bears almost five children; contraception is uncommon.

The naming system is very complicated. People have two first names, one Spanish and one African. For a surname, they use their father's first name followed by their mother's first name. Surnames change as each generation uses its parents' first names.

PERSONAL APPEARANCE

Many people dress in cotton robes dyed in brightly colored patterns. Men and boys often dress in pants or shorts with Western-style shirts.

SPORTS

Equatorial Guinea has a Ministry of Sports and a thriving national sports scene. Soccer is extremely popular. The country has a national soccer team that competes on the international level as well as a national women's team. Governmental corruption reaches sports as well, and in 2004 many sports journalists were suspended by the Ministry of Sports for failing to praise the government's efforts adequately, for criticizing referees, or for suggesting that teams were not properly prepared for competition.

CHRONOLOGY

- 1968** Equatorial Guinea formally proclaims its independence, with Macias Nguema Biyogo as president and Atanasio Ndong as foreign minister.
- 1969** New agreements covering economic and educational programs are signed with Spain. Conflict erupts between Fang and Bubi on Fernando Po Island (Bioko). Relations with Spain are strained as ethnic strife widens. Spanish troops withdraw from the country, and Spanish civilians are repatriated. Foreign Minister Ndong is accused of fomenting unrest and is arrested and reportedly killed; mass purge of Macias Nguema Biyogo's political enemies follows.
- 1970** PUNT is formed and declared the sole legal political party in the country.
- 1972** Macias Nguema Biyogo is proclaimed president for life. New agreement is signed with Spain.
- 1973** PUNT's Third Party Congress approves new constitution, and provincial autonomy is abolished. Under a program of Africanizing geographical names, Fernando Po is renamed Macias Nguema Biyogo, Santa Isabel is renamed Malabo, Annabon is renamed Pagalu, and Río Benito is renamed Mbini.
- 1974** Government launches a campaign of terror, causing nearly 100,000 citizens to seek asylum in neighboring countries. In a parallel campaign against the Catholic Church, Spanish bishops and nuns are expelled, Catholic schools and churches are closed, African nuns and priests are arrested, and Equatorial Guineans are compelled by decree to drop their Christian names. A minor dispute with Gabon is resolved as Gabon withdraws claim.
- 1975** The ekuele is introduced as the national currency, replacing the Guinean peseta. Nigerian government charges Equatorial Guinea with inhuman treatment of Nigerian workers; Nigerian workers are evacuated.
- 1976** United States suspends diplomatic relations with Equatorial Guinea.
- 1979** President Macias is overthrown in a coup led by his nephew Teodoro Obiang Nguema Mbasogo, who sets up the Supreme Military Council with himself as president; Macias is arrested, tried on a number of charges—including treason, embezzlement, genocide, and other atrocities—found guilty, and shot by a firing squad. King Juan Carlos of Spain visits the country and receives a warm welcome, signifying the pro-Spanish and pro-Western tilt of the new regime. Relations with the United States are restored.
- 1980** Fishing accord with the Soviet Union is revoked.
- 1982** Obiang is appointed president for a second term of seven years. New constitution is approved by 95 percent of the voters. Cristino Seriche Bioko is named prime minister.
- 1983** Equatorial Guinea joins the Customs and Economic Union of Central Africa and the Central African Economic Community.
- 1985** Equatorial Guinea adopts the CFA franc as its national currency.
- 1987** Obiang announces the formation of a government party, the Partido Democrático de Guinea Ecuatorial.
- 1989** Obiang is elected president in a contest in which he is the only candidate.
- 1990** Amnesty International accuses Equatorial Guinean authorities of torturing political prisoners.
- 1992** A 1991 law allowing for a multiparty democracy goes into effect.
- 1996** Obiang is reelected with 99 percent of the votes cast.
- 1999** Legislative elections dominated by the ruling Democratic Party of Equatorial Guinea are widely condemned as fraudulent.
- 2001** Oil industry brings in rapid economic growth. Eight opposition leaders living in exile in Spain form a coalition against Obiang. Opposition leader Florentino Ecomo Nsogo, head of Party of Reconstruction and Social Well-Being (PRBS), returns to Equatorial Guinea after appeal by Obiang.

- 2002** A total of 68 people are jailed for supposedly plotting a coup. Amnesty International accuses government of torturing them to obtain confessions. Obiang is reelected with 100 percent of the vote.
- 2003** The exiled opposition leaders form their own government in Spain. The government releases some of the coup suspects.
- 2004** Another suspected coup attempt leads to the arrest of mercenaries. Many immigrants are deported. Obiang's party wins 98 of 100 seats in parliamentary elections.
- 2005** Sir Mark Thatcher pleads guilty to participating in 2004 coup attempt.

ERITREA

Basic Fact Sheet

OFFICIAL NAME

State of Eritrea (Hagere Ertra)

ABBREVIATION

ER

CAPITAL

Asmara

HEAD OF STATE & HEAD OF GOVERNMENT

President Isaias Afewerki (from 1993)

NATURE OF GOVERNMENT

Transitional government

POPULATION

4,561,599 (2005)

AREA

121,320 sq km (46,842 sq mi)

MAJOR ETHNIC GROUPS

Tigrinya, Tigre, Kunama

LANGUAGES

Tigrigna, Arabic, English

RELIGIONS

Islam, Eritrean Orthodox

UNIT OF CURRENCY

Nakfa

NATIONAL FLAG

Red isosceles triangle (based on the hoist side) dividing the flag into two right triangles; the upper triangle is green, the lower one is light blue; a gold wreath encircling a gold olive branch is centered on the hoist side of the red triangle.

NATIONAL EMBLEM

In a circle is a camel standing on a desert; around the circle are a gold wreath and, on a banner beneath, the name of the country, "The State of Eritrea," in both English and Arabic.

NATIONAL ANTHEM

"Eritrea, Eritrea, Eritrea"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 8 (Women's Day), May 24 (Independence Day), June 20 (Martyr's Day), September 1 (Start of the Armed Struggles)

DATE OF INDEPENDENCE

May 24, 1993

DATE OF CONSTITUTION

Transitional constitution decreed May 24, 1993; replacement constitution adopted May 23, 1997 but not yet implemented

GEOGRAPHICAL FEATURES

Eritrea, a relatively new country, is located in the northern part of the Horn of Africa, with its eastern section bordering the Red Sea. Its size is 121,320 sq km (46,842 sq mi). On the western border lies Sudan, while to the south and southeast Eritrea borders Ethiopia and Djibouti, respectively. The country's geographical features provide a rich diversity of topography and climate within short distances of each other. The geographical features can be classified into four categories.

The first category is the Kebesa Plateau of central Eritrea, at 6,000–8,000 ft (1,830–2,440 m) above sea level. It features an elevated plain dotted with hills. Deep canyons, valleys, and fertile plains also mark the plateau. On the eastern part of the plateau, the area is covered with shrub, juniper, and olive trees. The Hazemo Plains,

a flat and fertile agricultural land, spreads to the south in the Akele Guzai districts, with ancient villages, archaeological sites, monasteries, and wildernesses of an eclectic mix. Here also is found Eritrea's highest mountain, Eimba Soira, a towering edifice with foreboding majesty. On the northern section of the plateau, the terrain breaks into an uneven descent of fertile valleys and rises to high mountains and intermediate plateaus called *roras*. The vegetation contains some wooded areas on the eastern slopes of the plateau, known as *babri*, with lush scenery in the summer. Some of the main rivers emptying their waters into the Red Sea include Komaile, Haddas, and Algede. About 30 miles west of Asmara, the terrain breaks into a steep descent to the Barka lowlands. The Mereb and Anseba rivers originate from the Kebessa Plateau and drain their waters into the Barka plains and Sudan. The MayBella River, which originates from the center of As-

Eritrea

mara, is one of the major tributaries of the Mereb. The Nefhee River originates just outside Asmara and is important for cultivation on the Gergar and Mensura Plains in the upper Barka.

The breadbasket of Eritrea is the Barka lowland, with elevations between 3,000 and 5,000 ft (915 and 1,830 m). It is a mixture of desert plains, arid prairies, palm trees, and fertile soil in the Gash valley, where wild animals such as lions, elephants, and a host of assorted game are abundant. The cities of Barentu, Tessenei, Tecombia, and Ali Ghider are important trading centers supporting the dynamic agricultural activity that was resurrected in the postliberation period of the 1990s. Some 70 miles due south, where the lowlands touch the highlands, is the spectacular Laito Canyon.

The Red Sea Plains on the eastern seaboard, at elevations between 1,000 and 3,000 ft (305 and 915 m), contain a strip of sandy soil running north to south paralleling the Red Sea itself. In the north the region is sandy and covered with sparse grass and shrubs. On the southern seacoast lies the Dankel (Danakil) Depression, featuring inhospitable terrain consisting of dark volcanic soil and extremely hot temperatures year-round.

The northern highlands feature bare and stark mountains with intervals of fertile valleys at 6,000 to 8,000 ft (1,830 to 2,440 m) above sea level. The rivers Lebka, Laba, and Falat originate from this area and drain their waters into the Red Sea. The small towns of Nakfa, Af Abet, Karora, and SheEb are closely identified with Eritrea's struggle for independence as military bases and sites of Eritrean wars of liberation.

Keren	74,800

CLIMATE AND WEATHER

Eritrea's seasons are classified into annual quarters as KewEy (fall), Ayet (winter), Hagay/Tsidiaya (autumn),

and Keremty (summer). These seasons correspond to seasonal rains for planting and harvesting crops. Traditionally, the year starts on September 1, when the annual Udet, a type of harvest festivity, is celebrated.

On the Kebessa Plateau the climate is moderate, with a year-round temperature of 60–65°F (16–19°C) around Asmara, the capital city. The northern plateau shares an identical climate to the Kebessa. The vast stretch of the seacoast, north to south, is hot and humid. Massawa, with an average temperature of 77°F (25°C), and Assab, slightly higher at 78°F (26°C), are the main coastal cities. In July the temperature for Massawa and Assab averages 95°F (35°C). Annual precipitation for Massawa is 7.6 in (193 mm). For Assab, the rainfall rarely comes above 1.2 in (30.5 mm). The rainfall in the south and west is similar to that of the western slopes, resulting in the lush forests and grasslands that support animals such as lions and elephants.

Climate and Weather

Temperature Range
 Summer: 90°F to 120°F
 Winter: 76°F to 82°
 Average Rainfall: 5.6 in

FLORA AND FAUNA

Eritrea's land is harsh and dry. In the central highlands near Sudan, the only plants that grow are those that can live with little water in sandy soil, such as desert grasses, juniper, and wild olives. Jackals, warthogs, gazelles, Abyssinian hares, and wild cats live there. The mostly uninhabited islands of the Dahlak Archipelago are home to many birds, such as the osprey and the Arabian bustard, and to the dugong, or sea cow. There is tropical forest northeast of Asmara. There are a few mangrove swamps in the east. The Red Sea has excellent coral reefs and sea turtles. Nearly all of Eritrea's plants and animals are endangered due to war, overgrazing, and bad agricultural practices.

ETHNIC COMPOSITION

Eritrea's population is composed of four major ethnic groups. The first group is the Nilotic extract consisting of the Baza/Kunama, Mogolo, and Nara, who speak Hamitic languages. They rely on sedentary agriculture, herding, and hunting. They occupy the southwestern part of the country along the Gash and Setit river banks. The Baza are considered the earliest inhabitants of the area.

The second group is the Baja and the Beniamir. They occupy the northwestern and northern stretch of the Barka and Anseba rivers, extending as far north as the Nakfa and Karora districts. They both use the Tigre and Hidareb languages. Their ancestry is variously attributed to the Beja from southern Egypt or to Sabea or Himyaritic groups from South Arabia.

On the southeastern seacoasts are found the third ethnic group, the Saho/Asawrta and Afar peoples, both of Hamitic origin and languages. They share a nomadic life of harsh existence in an inhospitable physical environment. The Afar make their nomadic tours in the Danakil areas. The Sahos migrate to the western lowlands from their habitat in the southeastern part of the Kebessa Plateau.

The fourth, and dominant, ethnic group, the Tigrigna-speaking population, is located at the Kebessa Plateau. They identify themselves as Agaazian, which means "onward marching warriors." The Arabs changed the nomenclature to Habash, meaning of mixed blood/race. The spoken language by the Agaazian people was Ge'ez, a Semitic language from which Tigre and Tigrigna were derived. They share a common heritage and ancestry with the Aksumite Kingdom of Tigray, in Ethiopia. The manner of their arrival in Eritrea is traced to South Arabia, from where they crossed the Red Sea and settled on the plateau. They intermingled with the local inhabitants to form the Habasha community, who have since dominated political and cultural life in the highlands of modern Eritrea and northern Ethiopia.

LANGUAGES

A variety of Cushitic, Nilotic, and Semitic languages are spoken in Eritrea, with Tigrigna, Arabic, and English all counted as official languages.

RELIGIONS

The Eritrean population is evenly divided between Muslims and Christians. Christianity entered Eritrea and Ethiopia at the same time in the fourth century c.e., when Syrian missionaries from Tyre succeeded in converting the Aksumite ruler, King Ezana, to Christianity. In the 15th century the first rift on doctrinal matters emerged between the Eritrean and Ethiopian churches. The theological rift led to protracted civil wars involving the northern and southern churches. Gradually, the violence subsided as the church in general lost its evangelical zeal and focused on administrative issues. Meanwhile, the church's relation with Alexandria, Egypt, continued until the 1940s, when the Ethiopian Church declared its autonomy from Alexandria. The war with Ethiopia in 1998 caused some politicization of the Eritrean Orthodox Church. In late 1998 the church separated itself from the Ethiopian diocese and established its own synod.

Islam was introduced in Eritrea sometime in the seventh century c.e., when the followers of the prophet Muhammad sought refuge in the region from their Jewish persecutors in Arabia. It gained its ascendancy when the Arabs overran Egypt, seriously crippling Egyptian and Nubian Christianity. Islamic warriors and merchants, mixing commerce with religious fervor, pushed southward to northeastern Sudan and penetrated the northern and western lowlands of Eritrea. Islamic mosques replaced churches and monasteries. On the seacoast they occupied the Eritrean islands of Dahlak, off Massawa, and marched on the eastern highlands. From there they edged upward to western and northern Eritrea in the mid-19th century.

Catholicism and Protestantism arrived late in the 1840s. Their evangelizing mission was thwarted due to the xenophobic impulses of the Orthodox Church. Today, the Eritrean government has enforced rights of worship on an equal basis and the dominance once enjoyed by the Orthodox Church has been severely curtailed.

Muslim	2,326,000

HISTORICAL BACKGROUND

Paleontologists have identified areas in Eritrea, as well as some on the Denakil Depression in Ethiopia, as sites of the origin of the human species. Whereas the Eritrean plateau was an integral part of the Aksumite Kingdom, which flourished from the fourth century b.c.e. until the sixth century c.e., the lowlands were independent principalities and dominions as far as eastern Sudan on the west and Massawa on the eastern part of the Eritrean coast.

However, the modern history of Eritrea is strongly affected by colonialism. From the 16th century the area was occupied by the Ottoman Turks. In the 17th century the Funj Kingdom of Sinar, modern Sudan, controlled the Gash-Barka lowlands and attempted to subjugate the Beniamir and Beja population. After the decline of the Funj, Egypt ruled over much of Eritrea from 1819 to 1886. Egyptian influence over Eritrean territories was precarious and costly. It gave way to European colonialism in the 19th century.

With the opening of the Suez Canal, the Red Sea became an important waterway for trade and commerce. The opening of the canal and its impact on the Red Sea also coincided with the colonial scramble for Africa. Italy gradually took initial steps in acquiring a foothold on the Red Sea coast. In 1869 an Italian company, in the name of the Italian government, bought the port of Assab from the local chief. Very quickly, Italian rulers invested energy and resources to develop Eritrea as an extension of Italy itself, and on January 1, 1890, Eritrea was declared Italy's first colony in Africa. Eritrea's political identity was to be forged anew through the political instruments that Italian colonialism brought to bear from 1890 to 1940 as well as during the 10 years of British military administration, 1941–51.

Italy mixed a brutal policy of racism with industrial ingenuity to rule Eritrea. The colony, with its ideal Mediterranean climate and sufficient space for immigration, was a valuable asset for Italy. To facilitate effective exploitation of the colony, Italian engineers built roads, railways, and tunnels and developed agriculture, making Eritrea an extension of the Italian model. In order to prevent local rebellion by the Eritrean peoples, the colonial rulers strictly enforced official segregation in all areas of life. When Italy joined the Axis during World War II, it unwittingly initiated its own demise as a colonial power in Eritrea. Britain targeted Italy as a threat to its interests in East Africa. In successive battles waged between 1939 and 1941, British forces crushed the Italian Fascists and dislodged them first from Eritrea and then from Ethiopia.

Between 1941 and 1951 Eritrea, still under colonial status, was administered by Britain as an occupied enemy territory. The British found that under Italian colonialism Eritreans endured horrendous oppression. Eritreans had yearned for freedom from Italian colonialism but were too alienated to be united with Ethiopia. Ethiopia's failure to contest the territory during Italian colonialism and its willingness to renounce its claim to Eritrea reinforced Eritrean alienation from Ethiopia. During the Italian rule of their land Eritreans solidified their sense of separate identity based on their colonial experiences.

The British Military Administration (BMA) was mandated by the United Nations to see Eritrea through a transitional phase leading either to independence or to a political union with Ethiopia. The BMA thus ruled

Eritrea as an occupied "enemy territory." As a result of Italy's belligerence during World War II, Britain decided to expropriate those economic resources established by Italy in Eritrea. With respect to industrial and economic capital, what the Italians built in Eritrea, the British uprooted and destroyed.

However, with regard to matters of political development, the British embarked on a liberal democratic restructuring of Eritrean politics. They expanded the educational sector, allowed for freedom of expression through free speech, and permitted freedom of assembly through political parties and labor unions.

When the British mandate over Eritrea ended in 1951, the United Nations decided to federate Eritrea with Ethiopia for 10 years, after which the Eritreans would be given a chance for self-determination—either for union with Ethiopia or independence. Federation allowed Eritrea to have its own parliament with complete control of domestic affairs. Eritrea's seaports, its currency, and its foreign affairs were delegated to the Ethiopian emperor, Haile Selassie. In 1961 Haile Selassie arbitrarily dissolved the Eritrean parliament over the objection of its independent-minded parliamentarians. He declared Eritrea an Ethiopian province in 1962. The same year, an independence movement calling itself Mahber Show-Ate (a company of seven) was formed as a clandestine movement for the liberation of Eritrea. Mahber Show-Ate evolved into the Eritrean Liberation Movement (ELM), later to be known as the Eritrean Liberation Front (ELF), with the declared goal of armed insurrection against the Ethiopian rulers.

The ELF demonstrated formidable military skills against the Ethiopian army. However, its political capacity lagged behind its military successes. As it evolved in military strength and organizational complexity, its key figures in the leadership failed to ameliorate simmering ethnic and religious conflicts. A splinter group, under the leadership of Isaias Afewerki, calling itself the Eritrean People's Liberation Front (EPLF), was formed in 1970.

EPLF took a stand against internal dissension, imposing rigid military discipline combined with economic and political development in the areas it controlled. It thoroughly politicized the populace as a base of support for its military operations against the Ethiopians. Meanwhile, ELF was sidetracked from its military mission against the Ethiopians and waged war against the EPLF. A civil war pitting the two liberation fronts erupted and continued between 1970 and 1980. In 1980 ELF forces were defeated and fled to Sudan, where they were disarmed by the Sudanese and allowed to live there as refugees.

Between 1980 and 1991 the EPLF faced successive military campaigns by Ethiopian troops equipped with Soviet weapons and military advisers from East Germany, Cuba, and South Yemen. After prolonged guerrilla attacks and ambushes, the Ethiopian army and its advisers were exhausted. Finally, in 1987 EPLF forces demolished one-

third of the Ethiopian army in the Battle of Af Abet. In 1990 EPLF liberated the port of Massawa and was poised to take over Asmara. The liberation war ended on May 24, 1991, when the EPLF liberated all of Eritrea.

On May 25, 1991, guerrilla forces led by the Ethiopian People's Revolutionary Democratic Front (EPRDF) marched into Addis Ababa and replaced the military regime that had ruled Ethiopia since 1974. The EPLF and the EPRDF, having agreed to cooperate in solving Ethiopian and Eritrean disagreements, peacefully subscribed to a two-year waiting period before formally declaring Eritrean independence. At the end of the two years, Eritrea would conduct a referendum under international supervision for Eritreans to vote for independence or a federal union with Ethiopia. In 1993 the referendum was conducted, and Eritreans overwhelmingly voted for Eritrean independence. On May 24, 1993, the country was declared a free and independent state. Ethiopia, Sudan, the United States, and the Organization of African Unity (OAU) extended recognition of Eritrea's independence.

After 30 years of liberation struggle, Eritrea focused on the tasks of reconstruction and rehabilitation. The government of Eritrea adopted a policy of self-reliance, vowing to use its manpower to carry out economic development. However, disagreements over contested borders with Yemen and Ethiopia led to open military clashes. The war with Yemen broke out in 1995 and was quickly settled by international arbitration. The dispute with Ethiopia proved to be more lasting.

In 1997 Eritrea abandoned the Ethiopian currency, the birr, as legal tender, and issued its own currency, the nakfa. Tensions on both sides of the border grew fast, with economic transactions becoming sources of conflict as a result of the different instruments of trade, the nakfa and the birr. The tension grew into a crisis when, early in 1997, Ethiopian militias destroyed border towns inhabited by Eritreans in the Badime district. Both countries established border commissions to deal with the crisis. Before the commission could begin its task, a border skirmish in June 1998 involving Eritrean regulars and Ethiopian militias grew into an open war when Ethiopia declared war on Eritrea. After two years of bloody war that claimed thousands of lives on both sides and resulted in the displacement of one-third of Eritrean civilians, the two countries signed an Agreement of Cessation of Hostilities on June 18, 2000. In December, Eritrea and Ethiopia signed a peace agreement that formally ended the war and established a commission to demarcate their border. By mid-2001 both Ethiopia and Eritrea had completed their troop withdrawal from the border zone. The United Nations continued to monitor the peace process. Between 2001 and 2003 Ethiopia and Eritrea continued to dispute the placement of their shared border, both claiming the town of Badme. The UN commission ruled in 2003 that Badme belonged to Eritrea; Ethiopia

grudgingly accepted this judgment in November 2004. However, border tensions continued and in 2005 Eritrea restricted the movements of the UN peacekeepers monitoring the border. Eritrea has also had some disagreements with Sudan, which claims that Eritreans have assisted Sudanese rebels.

LIST OF MODERN RULERS

1993– Isaias Afewerki

CONSTITUTION

The government of the State of Eritrea was a “provisional” government until the inauguration of the constitution. Since the referendum of 1993, the government had operated informally, lacking the ground rules established by constitutional provisions. Its organizational and operational directives were announced on May 19, 1993, in Proclamation No. 37/1993. In February 1994 the EPLF was disbanded and replaced by the People's Front for Democracy and Justice (PFDJ). The PFDJ divided the country into governorates and subgovernorates to be administered by officials handpicked from the ranks of the PFDJ and with experiences in EPLF political and military history.

The current governing body is the National Assembly, consisting of 75 members of the PFDJ and 75 elected from the provinces by popular vote. The president is the head of the Assembly and of the State Council, or cabinet. As a “transitional” regime, the government enjoyed enormous popularity among the people. However, the tentative nature of its structure handicapped the regime and prevented it from claiming formal legitimacy.

The constitution was written in 1996 and submitted to the National Assembly. After a lengthy debate the National Assembly accepted the constitution in 1997. On May 23, 1997, the Constituent Assembly, consisting of Eritreans from abroad and from the newly reconstituted electoral districts, ratified the Eritrean constitution.

The constitution emphasizes individual rights and liberties with particular attention to women's suffrage. Female soldiers made up more than 35 percent of both the Eritrean guerrilla forces before independence and the defense forces after independence. The voting age is set at 18 years.

PARLIAMENT

Eritrea's unicameral National Assembly has 150 members, 75 from the PFDJ and 75 who are popularly elected. The country's plan is to elect the entire Assembly, but the elections scheduled in 2001 were postponed indefinitely. Until the nation establishes a fully democratic govern-

ment, the National Assembly serves as the highest legal power, electing the president, approving the budget, and setting governmental policies.

POLITICAL PARTIES

The only existing party in Eritrea is the People's Front for Democracy and Justice (PFDJ). The constitution envisions a multiparty system based on secular party programs and platforms. Parties based on religious or ethnic affiliations are forbidden by the constitution. The government has recently announced that plans are under way to conduct elections based on specific election rules. The announcement anticipates spontaneous party formation of autonomous groups outside the party in government, the PFDJ. The National Assembly drafted a law on political parties in 2001 but has yet to vote on it.

LOCAL GOVERNMENT

Eritrea is divided into six regions: Anseba, Debub, Debubawi K'eyih Bahri, Gash Barka, Ma'akel, and Semenawi Keyih Bahri. Local government and administration resembles the ward system of city politics in Western societies like the United States, the difference being that there is a high level of authoritarian discipline and accountability strictly enforced by the PFDJ on provincial and local councils.

The PFDJ directs electoral activities and the grassroots recruitment of candidates, arguing that the population needs electoral education. Locally elected governing councils govern villages, towns, and cities. However, there is visible influence of the PFDJ in nominating and electing council members and village administrators as there is in the determination of district and province governors. The PFDJ has not shied away from exhibiting paternalistic authoritarianism throughout Eritrea, claiming that authority is indispensable for steady political and economic development.

LEGAL SYSTEM

The constitution, temporarily inactive due to the emergency situations declared as a result of the war with Ethiopia, provides for an independent court based on the Ethiopian legal code of 1957. The government has thus far used it as an ad hoc tool to activate the legal process. The judiciary branch consists of 29 district courts, 10 provincial courts, and the Supreme Court. District courts have mandates to try civil, criminal, and tort cases. Provincial courts serve as appellate courts and review the procedural and constitutional standards used at the lower court level. The Supreme Court is the court of last resort,

reviewing the appellate courts' decisions and calling for their standing or reversal. The judiciary is not independent of the government; in 2001 the president of the Supreme Court was detained for criticizing the government for interfering with the courts.

HUMAN RIGHTS

The written constitution guarantees personal and civil liberties, with provisions for due process of law. There are explicit guarantees for the free exercise of religion, assembly, and the press. Universal suffrage for those 18 years and over is guaranteed, and women enjoy equal rights in inheritance, property ownership, marriages, and child rearing. Due to the delay in the implementation of the constitution resulting from the war with Ethiopia in 1998, the government's credibility in abiding by the constitutional provisions has not yet been tested.

Eritrea's human rights record has been poor. Amnesty International, in its 1998 and 1999 reports, has declared that some political prisoners were detained in violation of their human rights and due process. The government has countered by claiming that the detainees belonged to elements of the Eritrean Liberation Front (ELF) who were engaged in attempts at violent overthrow of the government and in the murder of innocent civilians. The nation's security forces have made some people disappear, tortured prisoners, and abused army deserters. No international observers have been allowed to visit prisons. The court system does not in practice provide due process. Freedom of religion and of movement have been curtailed. Discrimination against women and against the Kunama ethnic group are continuing problems. Child labor occurs frequently.

FOREIGN POLICY

Eritrea is a member of the African Union (AU) and the Intergovernmental Agency for Democracy and Development (IGADD). It has good relations with most of Europe and the United States, which provide aid; those relations have been strained, however, by the government's crack-down on political dissidents in 2001. Eritrea's relations with its close neighbors are tense. In addition to the border war with Ethiopia, Eritrea has fought with Yemen over the Haynish Islands and with Sudan over Islamic extremists. Djibouti is its only nearby friend.

DEFENSE

The armed forces consist of the army, militia ground forces, navy, and air force. Armament expenditure is a closely guarded secret, though it was estimated to ap-

proach 12 percent of gross domestic product (GDP) in 2003. During the war for independence the military population grew to 110,000, about 30 percent of it female. In 1995 the government demobilized 45 percent of the armed forces. Many of these demobilized soldiers had never worked anywhere but the military, and the country assisted them in their transition to civilian life with extra compensation and training. By 1998 the army had only 47,000 soldiers.

This trend suddenly reversed itself when war broke out with Ethiopia; between 1998 and 2000 the armed forces ballooned to almost 300,000—nearly 10 percent of Eritrea's population. This was very expensive for the nation, and GDP fell during the war.

When the war ended in 2000, a UN peacekeeping force arrived to monitor the Security Zone separating Ethiopia and Eritrea. The government has gradually demobilized its enlarged army, though it has needed funding from external sources. The United States resumed limited military cooperation with Eritrea after the war ended.

ECONOMY

The capital base left by the Italians at the end of World War II was squandered when the British dismantled factories, stripped harbors, and destroyed government buildings. The Ethiopians repeated the plunder when they took down cable highways, telecommunication poles, and industrial machinery during the independence drive. Some 30 years of armed struggle further ravaged the roads, bridges, and overall infrastructure, leaving the country poor and bankrupt. The recent war with Ethiopia made it difficult for expatriate Eritreans to send money home.

Eritreans have since been struggling to put their country back together. Growth was zero in 1999 and -12 percent in 2000 but went back up to 2 percent in 2004. The truce with Ethiopia may help the economy recover further. The country has been working to develop the Red Sea coast to accommodate tourism and international trade and has been rebuilding Assab and Massawa, the main port cities.

Some 80 percent of the population practices subsistence agriculture, which does not contribute much to

GDP. The drought of 2004 hurt most rural people; both crops and livestock suffered, and the country must find food to support those affected. Salt derived from Red Sea water is one of Eritrea's major exports. The country has some industry, including food processing and textiles, which account for one-quarter of national revenue. There is a petroleum refinery in Assab.

ENVIRONMENT

In recent years drought has caused massive destruction of the Eritrean ecosystem. Deforestation, overgrazing, and topsoil erosion have occurred. The desert has been encroaching on the country, making agriculture increasingly difficult. Since 1991, under the banner of "every raindrop must be caught," the government has conducted environmental rejuvenation programs. Unfortunately, outdated technology, war, and numerous refugees have made it difficult to make any effective environmental changes.

Environment

Forest Area % of total land area: 15.7

LIVING CONDITIONS

In cities, houses are small; apartments are beginning to appear in Asmara. Many rural homes are made of clay or wood. Nomads make houses out of portable materials that they can pick up and transport on camels. The

Tigrinya live in houses called *hidmos*, which are made of sticks and clay.

Many Eritreans have no homes at all. Refugees from Sudan have returned to the country and are living in camps in desperate poverty.

Infrastructure is not good. In 1999 the entire country had only about 4,000 km (2,480 mi) of roads, mostly unpaved, and many roads were damaged during the war. Bus service is sporadic. The railroad has been in disrepair for some years. The only open border is with Djibouti.

HEALTH

Eritrea's health-care system is in shambles after years of war and droughts. Asmara has a few underequipped hospitals, and the rest of the country has almost nothing in the way of modern medical facilities. The government is trying to build medical facilities in the rural areas but does not have the resources to do very much. Private health care exists but is too expensive for the majority of people. The huge number of displaced people who have returned from Sudan after the war is causing additional problems; these refugees have no homes or money and have a high incidence of many diseases and malnutrition.

Malaria and dengue fever are both big problems. In 2003, 2.7 percent of the population, or about 60,000 people, were infected with HIV. The government has begun a grass-roots effort to educate the populace about HIV/AIDS.

Many Eritreans go to traditional healers when they get sick, using herbs and home remedies to treat themselves. Patients pay for their services with food, clothing, or other items.

Health

FOOD AND NUTRITION

Eritrean food is much like that of its neighbor, Ethiopia. The staple food is *injera*, a kind of bread or pancake. Peo-

ple eat this with every meal. They may eat it with *silsi*, a sauce made of tomatoes and onions, with a peppery sauce called *tsebhi*, or with vegetables and meat, such as goat. Local alcoholic beverages include beer, gin, and a honeyed wine called *mies*. People drink tea and coffee several times a day.

Both Eritrea and Ethiopia have experienced severe food shortages many times in recent years. As of early 2005 both nations were suffering famines as a result of the drought in 2004. Monocropping, unpredictable rainfall, and an inability to store rainwater have resulted in Eritrea being unable to produce enough food for its people. Thus, Eritrea relies on international food aid to feed its people; malnutrition is common despite contributions.

Food and Nutrition

Undernourished % of total population: 72.8
 Daily Available Calories per capita kcal: 1,710
 Amount of Cereal Available per person per year kg: 122.4
 Amount of Fruits and Vegetables Available per person per year kg: 8.8

STATUS OF WOMEN

The role of women in all sectors of society is highly visible. During the armed struggle women made up 35 percent of the Eritrean Defense Forces. The government encourages women's rights with a heightened zeal, making sure there is proportional and fair recruitment of women in education, employment, and the military services. Recently, however, the role of women in the military services has been reduced.

Despite the government's lip service to women's rights, women continue to suffer discrimination because of the nation's traditional, conservative culture. Some Muslim women have been imprisoned for refusing to join the armed forces, though they insist that they are forbidden to fight by their religion.

Female genital mutilation is extremely common; 90 percent of females have undergone the procedure, either during infancy or during childhood before the age of 7. The government has decided not to outlaw the procedure for fear of driving its practice underground; many people believe that it is required by religion and will have it performed on their daughters regardless of the law. The government has decided to focus on education and prevention as a means of reducing the practice.

WORK

The vast majority of Eritreans depend on agriculture, growing their own food and trading anything left over. People grow a grain called teff, which they use to make bread, wheat, barley, sorghum, millet, corn, and fruits and vegetables. Nomads keep herds of goats or camels. In the cities people work in the civil service, run their own businesses, or engage in professions; women are increasingly going to work in urban areas, though in rural areas they continue to grow food and raise the children. A large number of people work for the military, though the government has been demobilizing troops since ending the war with Ethiopia.

EDUCATION

Eritrea has been working to improve its educational system and has brought literacy rates up from 20 percent at independence to almost 60 percent in 2003. Education is free for all citizens. Public schools teach in two shifts; younger children attend in the morning, older ones in the afternoon. Primary school lasts for five years, middle school for two, and secondary school for four years. Enrollment drops steadily at each level. More boys attend than girls because girls are needed to work at home. There are no schools in many parts of the country, so no children attend at all. Many Muslim children attend separate Islamic preschools where they study the Koran before beginning public school.

Primary schools teach in local dialects, part of the government's effort to preserve its indigenous cultures. Students in higher grades study Arabic and English, and much of the instruction of older students is in English.

There is only one university, the University of Asmara. Admissions standards are lower for girls than for boys, as part of an effort to increase female enrollment.

SCIENCE AND TECHNOLOGY

Eritrea wants to develop its technological abilities in order to attract foreign investment. The Ministry of Education has developed the Eritrea Science Project to reform the nation's math and science curricula. As of 2004 technological facilities were severely limited.

MEDIA

There is no privately owned news media of any kind in Eritrea. The state closed the private press in 2001, claiming that it endangered national security. Many journalists published views dissenting with this claim and were arrested for their trouble.

There were several weekly private newspapers before the 2001 crackdown. Currently, the main newspapers are all government owned; they include *Hadas Eritrea*, published three times a week; *Eritrea Profile*, published weekly in English; *Tirigta*, a weekly aimed at young people and owned by the ruling party; and *Geled*, another weekly aimed at young people.

All television and radio is state run. The television station is Eri TV. Radio stations include Voice of the Broad Masses of Eritrea, which broadcasts programs in 11 languages, and Radio Zara, an FM network. The government's news agency is Erina.

The film and theater industry is in its infancy. There is eagerness and enthusiasm to demonstrate unique Eritrean cultural content in literature, film, and theater, but the level of creativity and development is seriously impaired by the absence of cultural organizations to shepherd the process.

CULTURE

Eritreans celebrate a number of festivals throughout the year. The most exciting are those for Orthodox holidays, especially Epiphany and Meskel. Music and dancing are popular at all festive occasions, such as weddings, births, and religious celebrations. Nationally famous singers include Berekhet Mengisteab and Atewebrhan Segid. Each ethnic group has its own unique rhythms and dancing styles. Many people can play traditional instruments similar to those used in Ethiopia, such as the *krar* and the *wata*, similar to a violin. Drumming is very important because the drummer sets the pace of dancing. The Kunama people dance as couples, performing sensual, emotional movements. The Tigre and Blin women perform a dance called the *sheleel* in which they swing their braids across their faces. Since the end of the war, the government has asked artists to paint pictures of landscapes and cultural heritage. Tirhas Iyassu is one of the most famous artists; she depicts people in situations contrary to gender stereotypes, such as men caring for children. Each ethnic group makes its own crafts, which are often vibrantly colorful. The Beni-Amer tribe makes daggers with curved blades and ebony hilts. The Nara make baskets and saddles.

FOLKLORE AND MYTHOLOGY

Eritrea's many ethnic groups all have their own folklore and cultural legends, many of which play a role in rituals. These stories are all passed down orally. The government is now encouraging people to learn to write native languages, and there is some possibility that the various ethnic folklores will be written down when this happens.

ENTERTAINMENT AND RECREATION

Eritrea's towns have only recently been rebuilt, so there are not a huge number of facilities for entertainment. Nevertheless, the people love music, dancing, and drinking gin, and there are always occasions for engaging in these activities. The Red Sea is beautiful; scuba diving and snorkeling in the Dahlak Archipelago are becoming popular because of the pristine coral reefs and the many sunken ships there. Fishing and water skiing are also possible. Some people enjoy hiking in the hills and mountains or in the tropical forests in the Filfil region, but landmines present a hazard for people walking in unfamiliar areas. There are also camels available to ride.

ETIQUETTE

Eritreans are hospitable and friendly. They greet one another with handshakes, kisses on the cheek, and numerous inquiries about the health of families. They do not typically thank one another for small favors, considering assistance to friends a duty.

At meals the hostess places a large tray on a low table, covers it with *injera* (flatbread), and also puts out spicy stews. The head of the family will say a prayer, and then everyone begins to eat. The proper technique is to break off sections of the bread, dip it into the stews, and put the food in the mouth without letting the fingers touch the lips or tongue. People eat with their right hands only. A sign of affection is to scoop up a portion of food and feed it directly to another person. Coffee is an important part of the diet, and people like to serve it as part of an elaborate ceremony.

Eritreans love the musicians who perform during festivals; people show their appreciation by hugging and kissing singers or by placing banknotes on singers' foreheads or in their hands.

FAMILY LIFE

Eritreans generally still live in large extended families. All adults are responsible for all children, and all children acknowledge the authority of all adults. The elderly are highly respected, and family members typically consult their elders before making any major decision. Old people are especially good at settling family disputes. Marriages are traditionally arranged by families, with the man's family proposing marriage to the woman's family, although in cities young people have begun selecting their own spouses. After a wedding, the bride stays home for two weeks and is pampered by her family and friends.

PERSONAL APPEARANCE

Good personal appearance is very important, and Eritreans like to dress well nearly all the time. Suits are standard in offices. Women dress modestly and do not wear shorts or bathing suits anywhere but at pools and beaches.

SPORTS

The most popular sports are soccer and cycling, which was imported from Italy. The country has about 200 official soccer clubs, and children play on the streets with homemade balls. Women have recently begun participating in the numerous cycling clubs. Camel racing is popular among the Tigre and Rashaida. The government runs youth clubs to provide athletic opportunities to young people.

Children still play traditional games, such as *fii fii*, a hopping and singing game; *bandai*, a game similar to jacks; and *gebetta* (mandala), a game that involves putting peas in cups.

CHRONOLOGY

- 1941** Britain wrests Eritrea from Italy and rules over the country as an occupied enemy territory under a UN mandate.
- 1950** United Nations calls for Eritrean federation with Ethiopia.
- 1952** Eritrea is federated with Ethiopia for a period of 10 years, after which complete union or independence is to be determined by Eritrean referendum.
- 1961** The Eritrean Liberation Front (ELF) launches armed resistance against Ethiopian subversion of the federal provisions.
- 1962** Emperor Haile Selassie of Ethiopia arbitrarily dissolves the Eritrean parliament and declares Eritrea an Ethiopian province.
- 1970** Eritrean nationals within the ELF split and form the Eritrean People's Liberation Front (EPLF).
- 1974** Emperor Haile Selassie is overthrown in a military coup, to be replaced by the Derg, a pro-Soviet military junta, whose hard stand on Eritrea escalates the war, precluding a mediated settlement.
- 1988** In the Battle of Afabet, Ethiopian troops suffer a serious defeat, in which EPLF fighters demolish one-third of the Ethiopian army.
- 1991** EPLF liberates Eritrea on May 24.
- 1992** Eritrea conducts a national referendum for independence or union with Ethiopia. Outcome confirms overwhelming vote for independence.
- 1993** Eritrea declares its independence on April 24.
- 1997** Eritrea issues its own currency, abandoning its use of the Ethiopian birr.

- 1998** War breaks out between Eritrea and Ethiopia.
- 2000** Eritrea and Ethiopia sign a peace agreement.
- 2001** Ethiopia and Eritrea complete their troop withdrawal from the border zone; the United Nations continues to monitor the peace process.
- 2002** Eritrea's National Assembly decides not to allow the creation of any political parties. Sudan threatens military action in retaliation for alleged attacks by Eritrea.
- 2003** UN boundary commission rules that Badme, a town in dispute, is in Eritrea. Ethiopia protests.
- 2004** Ethiopia claims to accept boundary determination.

Evangelical Lutheran, Eastern Orthodox

UNIT OF CURRENCY

Estonian kroon

NATIONAL FLAG

Three equal horizontal bands of blue (top), black, and white

NATIONAL EMBLEM

The coat of arms consists of three blue lions with silver eyes and red tongues facing left on a golden baroque shield. Except for at the top, the shield is surrounded by a garland of two intertwined golden oak branches.

NATIONAL ANTHEM

“My Native Land, My Joy”

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 24 (Independence Day), May 1 (Spring Day), June 23 (Victory Day), June 24 (Midsummer's Day), August 20 (Independence Restoration Day), December 25 (Christmas), December 26 (Boxing Day); Good Friday, Easter, Pentecost

DATE OF INDEPENDENCE

August 20, 1991

DATE OF CONSTITUTION

June 28, 1992

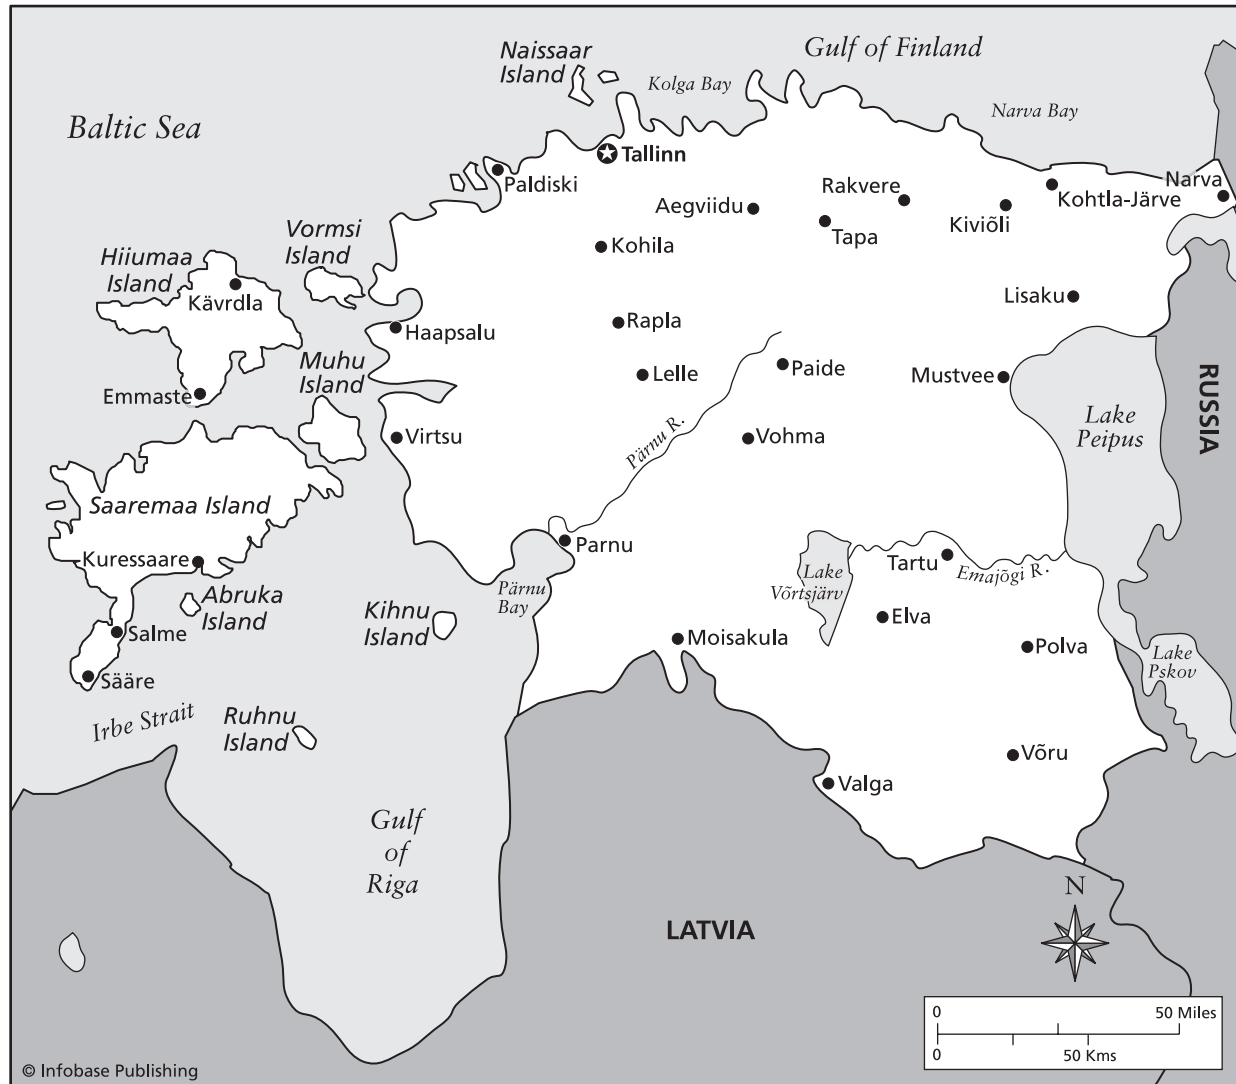

GEOGRAPHIC FEATURES

Estonia is located in northeastern Europe and borders both the Baltic Sea and the Gulf of Finland. The nation also borders Russia to the east and Latvia to the south. There is an ongoing border dispute with Russia over some 2,000 sq km (772 sq mi) in the Narva and Pechory regions of Russia, which Estonia claims on the basis of the 1920 Peace Treaty of Tartu. Along with Latvia and Lithuania, Estonia is one of the countries collectively known as the Baltic states. Its total area is 45,226 sq km (17,462 sq mi), although only 43,211 sq km (16,684 sq mi) are land; the other 5 percent of Estonian territory is water. There are nearly 1,200 lakes in the nation. The principal

lakes are Lake Peipus, which partially lies in Russia, and Lake Võrtsjärv. The longest rivers in the country are the Pärnu, the Kasari, and the Emajõgi. In total, there are over 7,000 rivers, streams, and drainage canals. Estonian territory includes 1,521 islands in the Baltic Sea, the largest of which are Saaremaa, at 2,922 sq km (1,128 sq mi), and Hiiumaa, at 1,023 sq km (395 sq mi).

The maritime location exerts a significant influence on the nation. It has 3,794 km (2,371 mi) of coastline, but its land border extends only 633 km (396 mi). The coast varies from limestone cliffs to sandy beaches in the west. The water of the Baltic Sea is brackish but contains abundant quantities of some fish species. Because of the distance from the Atlantic Ocean, tides have little variation.

Estonia

Estonia is comparatively flat, and two-thirds of the country is less than 50 m (163 ft) above sea level. Most of the terrain consists of marshy lowlands, and floods are common in the spring. The nation is rich in wetlands, with over 165,000 marshes. The highest point in both the nation and the Baltic region as a whole is Suur Munamägi (“Great Egg Hill”), which rises 318 m (1,043 ft). Much of the western mainland of the nation has emerged as the result of the gradual uplifting of Europe: the northwestern areas are rising at a rate of 2.5 mm per year. The central regions of Estonia are marked by the Pandivere Upland, which at its highest point rises 166 m (544 ft) above sea level. There is also a broad, flat limestone plateau that forms a coastal cliff along the south of the Gulf of Finland.

Tallinn is the nation’s capital and largest city; almost one-third of the population lives there. Other major cities

include Tartu and Narva. Some 48.7 percent of Estonian territory remains forested woodlands.

Tartu	101,190

CLIMATE AND WEATHER

Although Estonia is a northern country, the influence of the Gulf Stream keeps its climate relatively mild; the maritime influences dominate the nation's weather. There are moderate winters and cool summers. The warmest month is July, with the average temperature during the month ranging from 16 to 18°C (60 to 64°F). February is the coldest month, with temperatures as low as -12°C (10°F). Areas of Estonia are so far north that in the winter they receive daylight for a maximum of six hours per day. On the other hand, in the summer the north coast receives over 18 hours of sunshine daily. From December onward for approximately 100 days, most of the nation is permanently covered in snow. Average precipitation is 550–650 mm (21–26 in), with rainfall heaviest at the end of the summer and lightest during the spring.

Climate and Weather

Mean Temperature
West: 42.8°F
East: 36°F to 40°F
Average Rainfall: 21 in to 26 in

FLORA AND FAUNA

Estonia is home to 1,470 different species of plants. Nearly half the country is covered in northern forests. About 25 percent of the land is wetland, especially peat bogs, some of which are 20 feet deep. The forests are home to a variety of animals, notably large mammals such as elk and roe deer. Flying squirrels are also indigent. Estonia has protected its large raptors, which include the white-tailed eagle, the spotted eagle, the eagle owl, and the extremely rare and endangered golden eagle. The wetlands harbor 10 species of unusual amphibians, which are also protected.

ETHNIC COMPOSITION

Estonians constitute 65.1 percent of the population, which makes Estonia the most homogeneous of the Baltic states. Estonians are descended from the Finno-Ugric peoples and have ethnic and linguistic ties to both the Finns and the Hungarians. The Setu people of southeastern Estonia are ethnically distinct from the rest of the population. They number approximately 13,000 and speak a distinct dialect. The largest minority group in the nation is the Russians, who make up some 28.7 percent of the population. In addition, there are small groups of Ukrainians, Belarusians, and Finns.

Under a 1993 law on ethnicity, all minority groups with populations more than 3,000 have a right to cultural autonomy. However, the government has pursued a policy designed to integrate these groups into the larger society through education and social programs. Some 80,000–100,000 nonethnic Estonians, including Russians, Jews, Finns, Poles, Gypsies, and so forth, are recognized as Estonian through proficiency in language and because of historical ties.

LANGUAGES

Estonian is the official language. Estonian belongs to the Finno-Ugric family of languages spoken in Finland, Hungary, and Lapland. There are several dialects of Estonian, however, and some groups, such as the Setu, speak very distinct forms of the language. In addition, Russian and Ukrainian are spoken among minority groups. English and Russian are widely spoken and understood as second languages.

RELIGIONS

Christianity is the dominant religion in Estonia. There is no state church, and the constitution guarantees freedom of religion, conscience, and thought. Lutheranism is the main Christian denomination among native Estonians.

The Estonian Orthodox Church, under the leadership of the Patriarch in Moscow, and the Estonian Apostolic Orthodox Church, which follows the rule of Constantinople, also have a large number of members. There is a growing number of other churches, including Baptist, Seventh-Day Adventist, Pentecostal, and Roman Catholic. Religious activities are regulated by the Ministry of Internal Affairs in accordance with the Churches and Congregations Act (1993).

Religious Affiliations

Christian	609,200
Nonreligious	476,800

HISTORICAL BACKGROUND

In 3000 B.C.E. the first Finno-Ugrian settlements were established in Estonia. Between 1030 and 1050 Tartu and Tallinn were founded. Beginning in the 12th century Germanic knights invaded Estonia, and efforts were made to convert the native peoples to Christianity. In 1219 the Danish king Valdemar II conquered northern Estonia, including Tallinn. In 1248 Tallinn became part of the German Hanseatic League. In the 1300s an Estonian uprising prompted the Danes to sell the remainder of Estonia to the Germans, and feudalism and serfdom were established in the nation by the German Livonian Order (a branch of the Teutonic Order).

The Reformation swept through Estonia in the 1520s. The Livonian War led to the collapse of the Livonian Order, and Estonia was split, with the northern half under Swedish control and the southern territories under Polish-Lithuanian rule. In 1629 the Altmark armistice left Sweden in control of the Estonian mainland and northern Latvia. In 1645 the Swedes also took control of Saaremaa. While under Swedish control, Estonia became a Protestant country.

Russia gained control of Estonia as a result of the Great Nordic War (1700–21). However, the Estonian provinces retained a special status within the Russian Empire. It was not until 1819 that feudalism and serfdom were abolished in Estonia.

In the 1860s there was an awakening of Estonian nationalism, but the Russification efforts of Czar Alexander III resulted in Russian being designated the official language, and efforts were made to convert the population to Orthodox Christianity. Nonetheless, groups such as Noor Eesti (Young Estonia) continued to work toward Estonian independence.

In 1918 Estonia declared its independence and launched a war of liberation against both the Soviets and German occupation forces. On February 2, 1920, the Tartu-Dorpat Treaty granted Estonia full indepen-

dence. The 1919 constitution was promulgated, and Estonia became a parliamentary democracy. The nation oriented itself toward the West, and by the 1930s the standard of living of Estonia equaled that of most Western nations. In 1939 the Molotov-Ribbentrop Pact divided Europe between Adolf Hitler and Josef Stalin, and Estonia was placed in the Soviet sphere of influence. The Soviets occupied Estonia in 1940 and annexed the nation as part of the greater Soviet Union. Prominent Estonians were executed or sent to Siberia (some 11,000 in all). In response the Estonians began an armed resistance movement against the Russians and welcomed the German invasion of 1941. However, the German occupation proved just as harsh. The Soviets reoccupied Estonia in 1944 and annexed some 1,946 sq km (751 sq mi) of territory to the Russian federation. Resistance to Russian rule continued, and some 15,000 Estonians were killed in the fighting against the occupying forces. In an effort to suppress the rebellion and prevent flight from the nation, the Soviets closed the coastline to native Estonians and in 1949 began the collectivization of agriculture.

After Stalin's death those Estonians who were exiled to labor camps were allowed to return, beginning in 1956. However, tensions between the Estonians and the Soviets continued, and by the 1960s there were widespread protests against the occupation. These protests were given impetus by the "Letter of the Forty" and culminated in a protest movement led by intellectuals and students in 1979–80 against Russification.

Popular resistance reemerged in the 1980s. In 1988 the "Singing Revolution," which was marked by mass protests characterized by singing, led to the reintroduction of the Estonian flag. These events prompted the Estonian Supreme Soviet to assert Estonian sovereignty. Estonia was spared the harsh military crackdown imposed on the other Baltic republics in their struggles for independence, and in 1991 it declared independence in the wake of the failed coup against Soviet leader Mikhail Gorbachev.

Following the promulgation of a new constitution in 1992 and subsequent elections, Estonia became a member of the Council of Europe and NATO's Partnership for Peace Program and an associate member of the Western European Union. The last Russian troops withdrew from the nation in 1994, and in 1998 Estonia began accession discussions with the European Union.

In 1992 Lennart Meri became president, and Mart Laar, a member of the reform-minded Fatherland Union, became prime minister. After 1995 parliamentary elections a coalition of center-left parties formed the government, and Meri was reelected president in 1996. The Estonian Coalition Party won a majority of votes in 1999 parliamentary elections; however, Laar formed a governing coalition of center-right parties and became prime minister a second time.

Estonia continued to have disagreements with Russia. In 2000 Estonia and Russia expelled one another's diplomats, each accusing the other of spying. In October 2001 Arnold Rüütel became president. He immediately signed a law abandoning the requirement that candidates for public office speak Estonian. Prime Minister Mart Laar resigned in January 2002 after disagreements with the government's ruling coalition, and Siim Kallas of the Reform Party took his place; this created a coalition government between the Center Party and the Reform Party. In elections the following March the newly created pro-business party Union for the Republic Res Publica and the Center Party each won 28 parliamentary seats, leading to a coalition between the two parties, which entailed Res Publica's leader Juhan Parts assuming the position of prime minister. His government resigned in 2005 after a vote of no-confidence. Reform party leader Andrus Ansip became prime minister.

In the spring of 2004 Estonia made a major step toward equality in the modern Western global economy when it joined both the North Atlantic Treaty Organisation (NATO) and the European Union.

LIST OF MODERN RULERS

Prime Minister

1991–92	Edgar Savisaar
1992	Tiit Vähi
1992–94	Mart Laar
1994–95	Adres Tarand
1995–97	Tiit Vähi

1999–2002	Mart Laar
2002–03	Siim Kallas
2003–05	Juhan Parts
2005–	Andrus Ansip

President

1992–2001	Lennart Georg Meri
2001–	Arnold Rüütel

CONSTITUTION

Estonia is a parliamentary democracy. The head of state is the president; one must be a minimum of 40 years old to run for the office. The president is chosen every five years by the parliament. In the election, if no single candidate gains a two-thirds majority, there is a runoff election in which the president is chosen by an electoral assembly made up of the parliament and members of local governments (for a total of 374 members). In order to nominate a presidential candidate a party must have at least one-fifth of the seats in parliament. The head of the government is the prime minister, who is nominated by the president and confirmed by the parliament. The

president also appoints the Council of Ministers, which also must be confirmed by the parliament.

The voting age is 18, and suffrage is universal. In addition, resident noncitizens are allowed to vote in local elections.

PARLIAMENT

The Riigikogu is a unicameral body with 101 members elected by direct popular vote to serve four-year terms. The duties of the Riigikogu include considering legislation and overseeing the executive branch. In addition to passing legislation and controlling the budget, the Riigikogu appoints the chairman of the National Court, the president of the Bank of Estonia, the legal chancellor, and the commander in chief of the defense forces. The body must also approve international treaties and any government loans.

POLITICAL PARTIES

Estonia has several political parties and new ones are constantly forming. Prime Minister Juhan Parts comes from the newly formed Union for the Republic Res Publica, a business-oriented party. Other significant parties include the Center Party, the Estonian People's Union, the Estonian Reform Party, the Estonian United Russian People's Party (EUVRP), the conservative Pro Patria Union, the Russian Baltic Party, and the social Democratic Party (formerly the People's Party Moodukad). There are numerous minor parties as well.

LOCAL GOVERNMENT

The Local Government Organization Act of 1993 establishes the functions and organization of the subnational branches of government. Estonian local government is divided into two levels: counties and municipalities or rural towns. There are 15 administrative divisions, or counties, in Estonia. In addition, there are 254 towns and municipalities that have a high degree of local control over issues such as taxation and administration. Localities also have control over their budgets. Two-thirds of the local governments represent communities with populations of less than 3,000. Local government is usually made up of a council (*volikogu*) whose members are elected for three-year terms. The executive of the council is the government (*valitsus*), which is headed by a mayor elected for a three-year term. In most areas, noncitizen residents are allowed to vote in local elections.

LEGAL SYSTEM

The Estonian legal system is based on civil law. The court system is divided into three levels. At the local level there

are city, county, and administrative courts. Next, there are circuit courts that have appellate functions. The highest legal body is the Supreme Court.

The Supreme Court has administrative, civil, and criminal chambers. Each chamber has a chairman who oversees the caseload and conduct of cases. The chairman may also call upon members of other chambers to participate in cases. The Appeals Selection Committee, made up of members of each of the chambers, decides which appeals will be heard. Constitutional questions are examined by the Constitutional Review Chamber, whose members are elected by the Supreme Court. Members of the chamber may not serve more than two five-year terms.

Judges at all levels are appointed by the parliament and serve for life. They may be removed from office only by a court judgment. In addition, they are not allowed to hold any other elected or appointed position.

The Estonian constitution forbids the establishment of emergency or summary courts.

HUMAN RIGHTS

Universal suffrage is guaranteed by the constitution. In addition, Estonian law does not allow discrimination on the basis of race, nationality, gender, occupation, religion, or culture. The Estonian government has worked to preserve the rights of ethnic minorities in the nation. The National Minorities Cultural Autonomy Act of 1993 grants minority groups with at least 3,000 members special status and the right to establish local authorities in order to preserve cultural, religious, or linguistic identity.

Despite these protections, there have been some human rights violations, including the unlawful detention of prisoners and discrimination against people who did not speak Estonian. Violence against women has been a problem, and there have been many reports of sex trafficking.

FOREIGN POLICY

Since independence from the Soviet Union in 1991, Estonia has pursued closer ties with the West in both the economic and defense spheres. In the initial period after independence Estonia worked to quicken the pace of the Soviet troop withdrawal, which was not completed until 1994. Estonia also sought to resolve border disputes with Russia, including that over territory in the Russian areas of Narva and Pechory. Although a technical border agreement was reached in 1996, the accord has not been ratified. The nation has supported broad, collective security initiatives among the Baltic nations and regional integration in general. Estonia is a member of the Baltic Assembly and the Baltic Council of Ministers and belongs to the Baltic free-trade area.

Along with its other neighbors, Estonia sought entry into NATO, and in 1994 the republic entered the alli-

ance's Partnership for Peace program; it joined NATO as a full member in 2004. Estonia joined the European Union in 2004 and is also a member of almost 200 international treaty organizations. Estonia and the United States have a strong relationship based on aid and trade. In 1998 the United States, Estonia, Latvia, and Lithuania all signed the U.S.-Baltic Charter, designed to help integrate the Baltic states into European and international diplomatic and economic structures.

DEFENSE

The president is the commander in chief of the Estonian military. The nation has conscription for all men and women age 18. The length of service is 11 months. The armed forces are divided between an army, air force, and navy. The army has three battalions, and the navy consists of nine patrol and coastal defense vessels (several of which were donated to Estonia by Germany and Denmark). There is also a special company of troops used for peacekeeping missions under the auspices of the Baltic Peacekeeping Battalion (BaltBat) that participates in missions by international organizations such as NATO or the United Nations. Estonia has contributed troops to peacekeeping missions in the former Yugoslavia. In addition, there is the Kaitseliit, a volunteer paramilitary force. The unit serves as an auxiliary force for civil defense and emergency response. The Ministry of the Interior has some 2,000 border patrol troops under its command, and these include a small maritime force that functions as a coast guard. The country spent 2 percent of its gross domestic product (GDP) on defense in 2003.

As a small country bordering Russia, Estonia has attempted to enhance its security through integration with the West, including participation in NATO through the Partnership for Peace program and in the Western European Union as an observer. The nation officially joined both NATO and the European Union in 2004.

ECONOMY

After independence Estonia embarked on extensive efforts to foster free and open trade and orient its economy toward the West. The nation also pursued disciplined fiscal and monetary policies that contained inflation and unemployment, tying its currency to the German deutsche

mark at a fixed rate of 8 to 1 and entering into formal accession talks with the European Union in 1998. The government set a flat-rate income tax, balanced the budget, and made the country attractive to foreign investors in an effort to function as a gateway between East and West. Almost all formerly state-owned firms are now private. The banking system is extremely efficient, and foreigners are allowed to buy shares in Estonian banks. The nation supplies almost all of its own electricity and imports petroleum from western Europe and Russia.

Service industries make up the bulk of the nation's economy, although manufacturing and forest products are also significant. Industry and construction employ the largest number of Estonians among the major industries. The major manufacturing sectors are oil shale, shipbuilding, chemical products, textiles, electronics, and transportation. The nation's main exports are textiles, food products, machinery, and metals. Its most significant imports include machinery, food products, minerals, textiles, and metals. Estonia's main trade partners are Finland, Russia, Sweden, Germany, and Latvia. The nation has created a unique foreign trade environment with very few tariffs, which makes it attractive to foreign trading partners.

There are still some problems for the government to solve. Agriculture has been privatized, which hurts farmers. Income disparities are increasing; rural people and old people on fixed incomes are being especially hard hit. Industrial plants have been closing in the northeast, creating a depression in that area.

ENVIRONMENT

Estonia inherited several environmental catastrophes from the Soviet Union but has made tremendous improvements in the past decade. Power plants in the northeast of Estonia polluted the region by burning oil shale, such that the air has contained large concentrations of sulfur diox-

ide, producing acid rain. This problem has been improving steadily since the 1980s; emissions have been reduced by 80 percent in the past 25 years. Ground and water pollution from unpurified wastewater and industrial discharge have also improved tremendously, partly due to the construction of several new water purification plants; in 2000 the pollution level was 5 percent of that of 1980. Pollution from livestock and fertilizer remains a problem, however, and coastal seawater is still polluted in some places.

LIVING CONDITIONS

Estonia is a modern nation with a good standard of living. Transportation is easy; there are good bus and train systems, and the roads are excellent for either driving or bicycling. It is easy to get in and out of the country on airplanes, trains, or ferries across the Baltic.

Winters are cold, dark, and long. Housing has been improving since the Soviet days, when many apartment buildings fell into disrepair. People live in either apartment buildings or stand-alone houses, which can have small gardens even in the cities.

HEALTH

Since the early 1990s Estonia has been restructuring the public health system inherited from the Soviets. Historically, there has been a shortage of nurses, hospital beds, and medical supplies, though aid from the West has abated this problem somewhat. Life expectancy has gradually increased to its 2004 level of over 71 years. The infant mortality rate is quite low, at about 8 deaths per 1000 live births. About 1 percent of the population is infected with HIV.

FOOD AND NUTRITION

Estonian food is fairly heavy, with emphases on fish and meat and without much in the way of vegetables. A wide variety of sausages appear on Estonian tables; a Christmas specialty is blood sausage and blood pancakes, made from pig blood. Smoked fish is a local specialty; trout is one of the most common smoked fish. People drink a great deal of beer, including the local specialties Saku and Saare. Some people like warm mulled wine called *bõõgvein*. The main hard liquor is the sweet Vana Tallinn, which people drink with milk or coffee.

 Amount of Fruits and Vegetables Available per person per year kg: 150

STATUS OF WOMEN

The constitution of Estonia guarantees equal protection under the law. However, women continue to face disparities in opportunity in the economic and political spheres. Women earn only about two-thirds what men do; economists attribute some of this to women's work habits, but most of it appears to be the result of discrimination. Many Estonian women work in the sex industry, as "brides seeking foreign marriage" or as sex slaves. Sex traffickers exploit Estonian women and girls both within Estonia and internationally.

WORK

Nearly 70 percent of Estonians work in services. Another 20 percent are employed in industry, the remainder in agriculture. Telecommunications, information technology, and electronics are especially important employers. Per capita GDP rose to \$12,300 in 2004. The unemployment rate is about 10 percent. Older women have the hardest time finding jobs.

 Industry: 20
 Services: 69
 Unemployment %: 10.1

EDUCATION

Estonia completely reorganized its educational system in the early 1990s. Education is compulsory up through the ninth grade, with 12 years of education available in total. High schools offer specialized training in particular subjects, and there are numerous vocational schools. The majority of schools teach in Estonian, though many teach in Russian, and there are a few schools teaching in minority languages such as Swedish, Ukrainian, and Hebrew. Estonia has nearly 100 percent literacy.

The nation has six major universities, including Tartu University, which was founded in 1632. The system of higher education was reorganized in the 1990s, and the degree path is now similar to that in much of the West.

MEDIA

Before independence, the Estonian press was controlled by the Communist Party. During the early 1990s a host of newspapers were created. One of the first private papers to be created was *Eesti ekspres*, a general interest and entertainment weekly. The first private daily was *Postimees*. In 1997 there were seven national dailies, two of which were published in Russian. There were also numerous weeklies and regional papers, several of which are published in Russian as well as Estonian. Many of these newspapers failed to survive, however, and there are fewer titles in print now than there were in the mid-1990s.

Radio and television broadcasting also mushroomed in the early 1990s. The first private licenses for television stations were issued in 1992. Eesti Televisioon is the public television station; the two principal privately owned stations are TV3 and Kanal 2, which are owned by Norwegian and Swedish businesses. There are also numerous foreign stations available through cable. In 1993 Estonia stopped transmission of Russian broadcasts from Moscow and St. Petersburg, but Eesti Televisioon airs Russian-language programs and news.

Eesti Raadio is the nation's public radio station and broadcasts on four different channels, including a Russian-language channel. There are several private stations. Estonia's news service is the privately owned Baltic News Service (BNS).

CULTURE

Estonians take literature seriously. The 19th-century poet Kristjan Jaak Peterson wrote Estonia's first modern poetry. Friedrich Reinhold wrote *Kalevipoeg*, a national epic poem, in the mid-1800s. The modern authors Jan Kross, Jaan Kaplinski, and Anton Hansen Tammsaare are world famous.

Estonia's culture is visible everywhere in its architecture. Tallinn's Old Town is full of medieval walls, buildings, and cobblestones. Toomkirik, a cathedral in Toompea, was built during the 13th century. Toompea is also the location of the Russian Orthodox Alexandr Nevsky Cathedral, built in the 19th century.

FOLKLORE AND MYTHOLOGY

The oldest Estonian song type is the runic chant; this form dates back over 2,000 years. It consists of lines of eight syllables that gradually develop a theme. Estonian folk poems cover such subjects as family life, farming and the land, the seasons, love, and myths of the gods and goddesses. Estonians kept their traditional folklore alive through hundreds of years of foreign domination by passing on their songs and poems orally. Estonians still sing their old songs. In July the city of Tallinn holds the Baltika Folk Festival, at which people sing, dance, and enjoy Baltic folk traditions. Every five years the country holds the All Estonian Song Festival, at which a choir of 30,000 people sings traditional songs. Every November Estonians remember their dead ancestors during the Time of Spirits; it is believed that spirits come back to visit at this time.

ENTERTAINMENT AND RECREATION

Estonians make the most of their summers, which are short but have extra-long days. People enjoy canoeing and walking in the bogs of the national parks and nature reserves. People from all over Europe go to Estonia to watch birds, especially in the Käina Bay Bird Reserve and the Matsalu Nature Reserve. The Lahemaa National Park offers sailing, diving, and the opportunity to build canoes out of logs. Winter sports such as skiing, snowboarding, and snow-biking are also popular. Many people enjoy visiting saunas throughout the year.

There are many festivals during the summer months. The night of June 23 is very significant; it is midsummer eve, the shortest night of the year, and a time for dancing, singing, lighting bonfires, and searching for a mystical flower that supposedly only blooms that night. In August the White Lady Festival takes place; the ghost Haapsalu is said to visit during this event.

ETIQUETTE

Estonian etiquette is very similar to practices in the rest of Europe, though there are some differences due to holdovers

from the Soviet days. Estonians can be very sensitive about their culture and appreciate listeners taking an interest in their history. It can be difficult to arrange meetings, especially with older people, and it is always a good idea to confirm that an arranged meeting really will happen. Estonians greet everyone in a room with a handshake; businessmen hand business cards to everyone. It is not proper to show physical affection too soon. Sarcasm is appreciated. No one schedules important meetings in the summer if they can possibly avoid it, because there are so many holidays then. Tipping has not yet become customary, though taxi drivers and waiters appreciate tips when they get them.

FAMILY LIFE

The marriage rate has declined dramatically in the last decade. The divorce rate is high, though it has declined slightly since 2001; this may be because fewer people are marrying in the first place. The average woman has 1.37 children. Well over 60 percent of births occur outside marriage. The mean age at which women are first giving birth has increased slightly, to 24.6. Abortions have been declining. Under Estonian law divorced spouses are entitled to equal use of marital property, and a spouse who is unable to work is entitled to maintenance from his or her former partner. This applies to women who are pregnant at the time of the divorce and for the first three years after the birth.

PERSONAL APPEARANCE

Most Estonians dress in typical Western clothes, dressing very warmly in the winter; styles are fairly conservative. Many people own traditional folk costumes that they wear to the summer folk festivals.

SPORTS

Estonians of all ages are involved in a variety of sports, including soccer, basketball, cricket, and winter sports. Estonia has had an Olympic Committee since 1923, though its independent participation was suspended during the years of Soviet occupation. Estonian athletes have won several medals in recent Summer and Winter Olympics. Erki Nool won gold in the decathlon in 2000, and the cross-country skier Andrus Veerpalu won both a gold and a silver medal in the 2002 Winter Olympics. Estonian skiers have also performed well at the world championships.

CHRONOLOGY

1918 Estonia declares independence from Russia and engages in an armed struggle against both German and Russian forces.

- 1920** The Tartu-Dorpat Treaty recognizes Estonian independence.
- 1939** The Molotov-Ribbentrop Pact places Estonia in Soviet sphere of influence.
- 1940** Soviets invade Estonia.
- 1941** German occupation of Estonia.
- 1944** Soviet reoccupation of Estonia and the annexation of Estonian territory; Estonian resistance to Soviet rule leads to massive deportations and the deaths of some 15,000 Estonians.
- 1949** The forced collectivization of agriculture begins.
- 1956** Those surviving Estonians who were deported to Siberia begin to return.
- 1968** First open, mass protests against Soviet occupation since the end of World War II.
- 1979–80** “The Letter of the Forty,” a protest by intellectuals against continuing efforts at Russification of the country, is written; mass student protests.
- 1988** “The Singing Revolution”—mass demonstrations by 300,000 Estonians in Tallinn, marked by singing—occurs; Estonian flag is reintroduced; popular resistance organizations are established; the Estonian Supreme Soviet declares the nation “sovereign.”
- 1989** Estonian is reestablished as an official language.
- 1990** The Congress of Estonia is organized in an effort to assert independence from the Soviet Union; Estonia is spared the harsh military crackdown imposed on Latvia and Lithuania.
- 1991** After the failed coup against Soviet leader Mikhail Gorbachev, Estonia declares its independence; on September 6, Estonian independence is recognized by Moscow.
- 1992** The Republic of Estonia is reestablished and elections are held that place conservatives in power; a new constitution is promulgated. Lennart Meri is elected president.
- 1993** Estonia becomes a member of the Council of Europe and enters into a trade agreement with the European Union; along with Latvia and Lithuania, the republic creates a Baltic free-trade zone.
- 1994** The last Russian troops leave Estonia; the republic joins NATO’s Partnership for Peace program and becomes an associate member of the Western European Union.
- 1998** Estonia begins accession talks with the European Union.
- 1999** Prime Minister Mart Laar forms a center-right coalition government.

- 2000** Estonia and Russia each claim that the other has been spying and expel one another's diplomatic representatives.
- 2001** Former Communist Party member Arnold Rüütel becomes president. Rüütel signs a law eliminating the requirement that candidates for public office speak Estonian. Mart Laar resigns as prime minister and is replaced by Siim Kallas of the Reform Party.
- 2003** The Centre Party and Union for the Republic Res Publica form a coalition government. Estonians vote to join the European Union.
- 2004** Estonia is admitted to NATO and the European Union.
- 2005** Reform Party leader Andrus Ansip becomes prime minister and forms a new government.

ETHIOPIA

Basic Fact Sheet

OFFICIAL NAME

Federal Democratic Republic of Ethiopia (Ityop'iya Federalawi Demokrasiyawi Ripeblik)

ABBREVIATION

ET

CAPITAL

Addis Ababa

HEAD OF STATE

President Girma Wolde-Giorgis (from 2001)

HEAD OF GOVERNMENT

Prime Minister Meles Zenawi (from 1995)

NATURE OF GOVERNMENT

Federal republic

POPULATION

73,053,286 (2005)

AREA

1,127,127 sq km (435,184 sq mi)

MAJOR ETHNIC GROUPS

Oromo, Amhara, Tigre

LANGUAGES

Amharic (official), English

RELIGIONS

Orthodox Christianity, Islam, animism

UNIT OF CURRENCY

Birr

NATIONAL FLAG

Tricolor of green, yellow, and red horizontal stripes, with a yellow pentagram and single yellow rays emanating from the angles between the points on a light blue disk centered on the three bands

NATIONAL EMBLEM

A circle within a wreath. Within the circle are a star with 14 points, a cogwheel, and a plow.

NATIONAL ANTHEM

"Ityop'iya, Ityop'iya, Kidemi"

NATIONAL HOLIDAYS

March 2 (Commemoration of the Battle of Adawa of 1896), April 6 (Victory Day), May 1 (Labor Day), September 12 (National Day, National Revolution Day), September 11 (Ethiopian New Year's Day and Reunion of Eritrea with Ethiopia), various Christian festivals, including Maskal, or the Feast of the Finding of the True Cross, Christmas, Timkat, or Epiphany, and Good Friday according to the Coptic calendar, various Islamic festivals

DATE OF INDEPENDENCE

Ethiopia is one of oldest independent countries in the world and was under foreign rule—Italian military occupation—for only six years, from 1935 to 1941.

DATE OF CONSTITUTION

August 22, 1995 (effective)

GEOGRAPHICAL FEATURES

Ethiopia, in the Horn of Africa, has an area of 1,127,127 sq km (435,184 sq mi), extending 1,639 km (1,018 mi) east to west and 1,155 km north to south. Ethiopia is landlocked, with no coastlines. It borders Djibouti and Somalia to the east, Eritrea to the north, Kenya to the south, and Sudan to the west.

The Abyssinian plateau has some of the highest elevations in Africa. Swift rivers and tributaries forming spectacular gorges, river valleys, and low-lying plains dissect

the whole country. At the highest summit in the Northern Mountains, northeast of the famous Lake Tana, the elevation climbs to 4,620 m (15,153 ft). The Ethiopian Plateau, which makes up two-thirds of the country, consists of two topographical regions: the high plateau bisected by the Great Rift Valley to the west and the lower Somali Plateau to the east. The high plateau or central plateau is marked by a number of mountain ranges, such as the Cercher, Aranna, and Chelalo. Toward the southeast lies the Somali Plateau, a flat, arid, and sparsely populated semidesert. The southern half of Ethiopia is bisected by

Ethiopia

the Great Rift Valley, which runs in a northeast-to-southwest direction. Its floor, 40 to 60 km (25 to 37 mi) in width, is occupied by a number of lakes, such as Zwai, Langano, Abiata, Shala, Awasa, Abaya, and Chamo. To the north the Great Rift Valley is marked by the Danakil Depression, a large triangular region of the Afar Plains. The Danakil Depression, extending northeast beyond the border with Eritrea, is believed to be the hottest place on earth.

Numerous rivers originate in the highlands and flow outward in many directions through the deep gorges. Because of the westward slope of the highlands, many of the larger rivers are tributaries of the Nile. Of these, the largest are the Abbai (Blue Nile), the Tekeze in the north, and the Baro in the south, which account for half of the outflow of water from the country. The Blue Nile has its source in Lake Tana. Lake Tana is the country's largest lake, in the west-central section of the plateau. The lake contains islands on which ancient churches and church relics of classical significance can be found. Some 32 km (20 mi) downstream the river drops through the Tisisat (Smoke of Fire) Falls. The Baro River drains the southern plateau, which is navigable up to Gambela, the Akobo, and the Gilo. Together they form the headwaters of the Sobat River in Sudan. The only river west of the Great Rift Valley that is not part of the Nile system is the Omo, which drains southward into Lake Rudolph and is known in its upper course as the Gibbie. There also are a number of closed river basins, of which the largest, the Awash, flows through the Afar Plains into Lake Abe. The Wabi Shebele and Genale (Juba in Somalia) river systems drain the highlands of the southeast.

CLIMATE AND WEATHER

Ethiopia has three climatic zones: a cool, or *dega*, zone, consisting of the central parts of the western and eastern sections of the high plateaus and the area around Harer, with terrain generally above 2,400 m (7,900 ft) in elevation; a temperate, or *weina dega*, zone, comprising portions of the high plateau between 1,500 and 2,400 m (4,900 and 7,900 ft); and the hot, or *kolla*, zone, encompassing the area with an altitude of less than 1,500 m (5,000 ft) and including the eastern Ogaden, the Blue Nile, and Tekeze valleys and the Kenyan and Sudanese border regions. In the cool zone the hottest months are March to May, and temperatures range from 15.6°C (60°F) to near freezing. Near the mountaintops snow falls in winter, and alpine conditions prevail. In the temperate zone temperatures range from 15.6 to 29.4°C (60 to 85°F).

There are two distinct seasons: the rainy season, or *kremt*, lasting from mid-June to mid-September; and the dry season, or *bega*, lasting from mid-September to mid-June. The main rainy season is preceded by a period of sporadic rains, known as the *balg*, during April and May. Rains are heaviest in the southwest, near Gore, where they reach 2,640 mm (104 in) per year. Average annual precipitation over the central plateau is 1,200 mm (48 in).

The prevailing wind system is the southwesterly monsoon in the rainy season and the northeasterly wind from the Eritrean seacoast in the dry season.

 Denakil Depression: 4 in

FLORA AND FAUNA

Ethiopia was once home to a variety of flora and fauna, but much of it has disappeared or declined. Nearly all of the country's trees have been cut down. Eucalyptus trees were planted during the 19th century in an effort to reverse deforestation, but they have caused their own problems, such as soil erosion, and local animals will not live in them or eat their leaves. Much of the land is covered in grasses, which die during droughts. There are bamboo stands and rain forests in wetter areas. Animals include antelope, monkeys, baboons, lions, elephants, giraffes, gorillas, rhinoceroses, and zebras, though almost all of these are in decline. Birds are still thriving, and Ethiopia is home to numerous endemic species.

ETHNIC COMPOSITION

The great Ethiopian historian Carlo Conti Rossini described Ethiopia as an “ethnic museum.” His description is apt given that Ethiopia comprises more than 70 ethnic groups distinguished by separate origins, physical appearance, culture, religions, and languages.

There are at least 100 minor ethnic groups, which include the Falasha, or Ethiopian Jews, who live in the Semien Mountains and around Lake Tana. The Nilotic tribes along the Sudan border and the Agew of the central plateau are some of the ancient ethnic groups. Although they constitute about one-third of the Ethiopian population, the Amhara and the closely related Tigray dominate the country politically, culturally, and linguistically. The largest ethnic group, estimated to constitute over 38 percent of the Ethiopian population, is the Oromo. In the last two decades the rise of a nationalist political consciousness among the Oromo has led to the quest for independent statehood for Oromia. The Amhara and the Tigray are Semitic and speak two distinct Semitic languages. They occupy the highland provinces that form the historical and geographical core of Ethiopia. With the exception of the Shankella, the vast majority of the populations of Ethiopian peoples are part of the Afroasiatic race.

Whereas previous governments attempted to assimilate the various ethnic groups through policies of Amharization, the current regime in Addis Ababa has divided the country along ethnic lines. The regime argues that organizing the country along ethnic lines will help those ethnic groups that were neglected under the Amharization assimilation programs of previous regimes. The Amhara,

whose domination of the political system was challenged by the decentralization of ethnic groups, have rejected the program and openly protested its implementation. In the northern areas the process of Amharization has advanced significantly, resulting in the complete Amharization of a significant number of Falasha and Tigray in Gonder. The constitution of 1955 recognized the existence of different population groups and provided safeguards of their identities. However, it did not regard Ethiopia as a pluralistic and open state.

LANGUAGES

More than 70 languages and 200 dialects are spoken in Ethiopia, but only six are spoken by a large number of people. The six languages commonly used in the country are: Amharic, Oromo, Somali, Guragie, Agaw, and Danakil. Amharic is the official language of Ethiopia proper, and Oromo is regaining popularity among the Oromo people. Amharic uses the Ge'ez script, while Oromo uses the Latin script. At least half of the population speaks Amharic, but the country has more speakers of Cushitic than of Semitic languages. As a consequence of the large number of languages, many Ethiopians are bilingual or trilingual. Only the Shankellas speak languages belonging to the Nilo-Saharan family.

Ge'ez, or Ethiopic, is considered a sacred language as well as the language of philosophy and literature and is usually referred to as *Lesana Ge'ez/AgAzeeyan* (the tongue of the free). It is no longer spoken, but its syllabary is used in writing Amharic and Tigrinya. Ge'ez is the liturgical language of the Ethiopian Orthodox Church and until the 19th century was the exclusive language of literature. Amharic, called the language of the king (*Lesane Nigus*), is the national language, the lingua franca, and the language of instruction at the primary level and in administration.

At the turn of the 20th century French was the language of instruction in secondary schools. Italian was used for a brief period in the 1930s, mainly in the civil service sector. Both French and Italian were eclipsed by the popularity of English when it became the language of instruction of secondary and higher education as well as that employed in the civil services.

RELIGIONS

Until 1975 the Ethiopian Orthodox Church was the state church of Ethiopia. The Ethiopian Orthodox Church, associated with the Coptic Church of Egypt, is one of the oldest Christian churches in the world, having been established in the fourth century, when the Ethiopian king Ezana was converted by the Syrian missionary Freminatious. Until 1959 the Ethiopian Church was subordinate

to the Church of Alexandria and was administered through an *abuna*, or metropolitan, who was always an Egyptian Copt. In 1959, under pressure from the emperor, the Ethiopian Church became autocephalous under its own patriarch. Members of the clergy are numerous, and it is estimated that one in every five Ethiopians belongs to an ecclesiastical order. The church's influence has declined in recent years, facing stiff competition from Islam and Protestantism. The resurgence of Islam, compounded by Middle Eastern funds for the building of mosques and Islamic schools, has eclipsed the remarkable dominion held by the Orthodox Church in Ethiopia.

The estimated population of Christians is about 42 percent. For administrative purposes the church is divided into 10 dioceses. The number of churches is estimated at over 20,000.

Other religions, particularly Western Protestant evangelical denominations, have unrestricted access to proselytize and participate in welfare delivery activities. Missionaries and aid workers affiliated with the Protestant, Catholic, and Muslim faiths, and the Orthodox Church itself, are allowed to proselytize and engage in charitable services.

Although it does not possess the same monolithic unity as the Ethiopian Orthodox Church, Islam is followed by an estimated 45–50 percent of the population, and its adherents are spread over more ethnic groups and geographical regions. In the lowland regions of the west and south, traditional animist religions persist. The number of animists is estimated at only 15 percent of the population, but certain animist beliefs and practices pervade much of the popular religions of Christians and Muslims.

The Falasha, also known as Beta Israel (House of Israel) or Black Jews, follow a primitive form of Judaism built on the Torah, which includes not only the Pentateuch but also the Old Testament. They also observe all the major Jewish holidays. Most of them live in Semien, south of Gondar.

HISTORICAL BACKGROUND

One of the oldest nations in the world, Ethiopia was also one of the most stable countries in Africa until the overthrow of Emperor Haile Selassie in 1974. In its classical sense, the country's name is associated with the ancient empire known as Ethiopia ruled by the biblical queen Sheba. Classical Ethiopia extended its realm as far as

southern Egypt and covered the whole length of East Africa and beyond, including the island of Madagascar, South Arabia, and parts of southwestern India. It was replaced in the first century c.e. by a much weaker realm covering only the Ethiopian plateau and part of South Arabia. With the advent of the Persian Empire and its subsequent rule over Asia Minor in the seventh century, Ethiopia's rule declined. Sometime between 300 and 400 c.e. Christianity entered Ethiopia.

Ethiopian legend tells of the Queen of Sheba visiting King Solomon. During her long stay the queen conceived a son, who was then born on her way to her capital of Aksum, in northern Ethiopia. All Ethiopian emperors claimed royal lineage to King Solomon through the Queen's son, whom she named Menelik I.

In the fourth century c.e. two kings, Abraha and Asbaha, declared Christianity a state religion. Some two centuries later, in the sixth century, the Persians invaded South Arabia and Asia Minor and reduced the empire to its African base in northern Ethiopia. Islamic conquests in the seventh century further deprived the empire of its northern territories in eastern Sudan and caused it to shrink to the territory encompassed by northern Ethiopia today. The empire remained docile and isolated until the 16th century, when Portuguese explorers, curious about its geographical features and religious traditions, made extensive studies of the country. The Portuguese visit was propitious because it coincided with a massive Islamic invasion under the leadership of Ahmad Ibn Ibrahim Gran, supported by the Ottoman Empire at his base in southeastern Ethiopia. Christopher da Gama and a contingent of 400 Portuguese soldiers fought against Gran and restored the tattered empire. In the 17th and 18th centuries the Ethiopian kingdom disintegrated due to internal strife. In 1855 Emperor Tewodros reunited the country and restored central authority. He distinguished himself as a unifier of the empire, but his rule was also marked by wonton violence directed against all sectors of society. In 1867 he detained a group of British and European visitors. Britain sent an expeditionary force to release the hostages. In the ensuing battle at Magdala, Tewodros's capital, his forces were defeated, and he committed suicide in 1868.

Emperor Yohannes succeeded Tewodros and kept the country united. He confronted persistent Muslim and European invasions until his death in 1889 in the battle of Mettemma, with a resurgent Muslim sect from Sudan. Menelik II, who showed adroit diplomatic and military skills, succeeded Yohannes. Menelik is recognized for his victory over the Italians in the Battle of Adawa in 1896. When he died in 1913, his daughter Zauditu ruled as an empress but was overshadowed by her regent successor, Tafari Makonnen, later to be known as Emperor Haile Selassie.

Haile Selassie's rule lasted for 44 years, with the exception of a five-year interval (1936–41) during which the country was under Italian control. In his long years in

power the emperor expanded educational opportunities and modernized the armed forces and the civil service. He also instituted a series of government reforms, such as granting a constitution and establishing a cabinet and parliament. Yet real power remained firmly in his hands. Despite his reforms the country remained feudal, with a coterie among the noble class amassing disproportionate wealth at the expense of the vast peasant class.

During the 1960s support for his regime crumbled. Discontent increased after an abortive 1960 coup, and secessionist movements were established in several provinces, particularly Eritrea. In 1974 a wave of strikes broke out in response to Haile Selassie's autocratic rule as well as deteriorating economic conditions and the government's failure to prevent the death of over 200,000 people in the 1972–74 famine. Haile Selassie was deposed in a military coup in September 1974; a Provisional Military Administrative Council (PMAC), also known as the Derg, composed of junior officers took power.

In December 1974 Ethiopia was declared a socialist state. The government nationalized foreign interests and began a program of land reform. In 1977 Col. Mengistu Haile Mariam became head of government as the chairman of the PMAC. Besieged by political opponents on the left and confronted with secession demands by Eritrea, he ruthlessly eliminated his opponents and aggressively fought the secessionists. Taking advantage of the situation, Somalia invaded the Ogaden in July 1977. With the aid of Cuba, the Soviet Union, and South Yemen, which had been Somalia's allies, Ethiopia forced Somalia out of the area by March 1978. However, sporadic fighting continued until 1988.

Mengistu conducted eight military offensives, employing Soviet-supplied MiGs, tanks, and military advisers, against the Eritreans. The Eritreans, under the leadership of the Eritrean People's Liberation Front (EPLF), mobilized strong resistance and, in 1989 at the Battle of Afabet, destroyed one-third of the Ethiopian army. The Tigray People's Liberation Front (TPLF), the Oromo Liberation Front (OLF), and the Ethiopian People's Revolutionary Democratic Front (EPRDF) coordinated their military offense with that of the EPLF and assaulted the Ethiopian army in the provinces south of Eritrea. By 1988 Mengistu was forced to concede that much of Eritrea was in the EPLF's hands. By the end of 1989 the military balance had shifted against the Mengistu regime. The EPLF in Eritrea and the EPRDF in Ethiopia escalated the war, forcing the Ethiopian army to retreat to the vicinity of Addis Ababa. On May 28, 1991, the Ethiopian civil war came to an end when the EPRDF took possession of Addis Ababa and announced a coalition government. Mengistu had resigned on May 21, fleeing the capital to seek refuge in Zimbabwe.

Meanwhile, the Eritrean People's Liberation Front gained control of the Eritrean capital of Asmara and announced the formation of a provisional government to

administer Eritrea until a referendum could be held on the issue of independence.

A multiparty conference in Addis Ababa adopted a national charter providing guarantees for human rights. It also elected an 87-member Council of Representatives, whose chairman, Meles Zenawi, became de facto interim president. In accordance with the National Charter's promise of self-determination for ethnic groups, the country was divided into 14 regional administrations, which would have autonomy in matters of regional law and internal affairs. Nevertheless, the transitional government found itself locked into a struggle with the Oromo and the Eritreans. Hostilities between the Oromo Liberation Front and the EPRDF continued in various parts of the country for two years, until the former joined the government. Meanwhile, Eritrea proclaimed its independence in 1993. The severe famine that began in the early 1980s continued through the early 1990s. By 1992 more than 13.5 million people had been affected by the drought, and a further 1.4 million were affected by internal conflicts. More than 200 people were dying of starvation every week in the southeast. In 1995 Ethiopia was formally proclaimed a federal democratic republic with a titular federal president. Negaso Gidada was elected president and Meles Zenawi was named to the far more powerful office of prime minister.

When Eritrea became independent from Ethiopia, the common border had not been precisely defined, and in 1998 clashes broke out between the two nations, each accusing the other of seizing territory. By 1999 the dispute had developed into a full-scale war, and tens of thousands of soldiers died before a peace agreement was signed in December 2000. By mid-2001 Ethiopian and Eritrean troops had withdrawn from the border region, and the United Nations was monitoring the peace process. Meles was reelected prime minister in October 2000.

In 2001 Ethiopia withdrew its remaining troops from Eritrea. In 2002 the two countries drew up a common border but still could not agree on the ownership of the town of Badme, which both claimed. In 2003 an independent commission ruled that Badme belonged to Eritrea; Ethiopia initially refused to accept this ruling but in November 2004 grudgingly agreed that the town was Eritrean.

LIST OF MODERN RULERS

1889–13	Menelik II (emperor)
1913–16	Iyasu V (emperor)
1916–30	Zauditu (empress)
1930–36	Haile Selassie (emperor)
1936–41	Victor Emmanuel III ("emperor")
1941–74	Haile Selassie (emperor)
1974–77	Tafari Benti (chairman of the Provisional Military Administrative Council)

- 1977–87 Mengistu Haile Mariam (chairman of the Provisional Military Administrative Council)
 1987–91 Mengistu Haile Mariam (president)
 1991 Tesfaye Gebre Kidan (acting president)
 1991–95 Meles Zenawi (interim president)
 1995– Meles Zenawi (prime minister)

CONSTITUTION

The constitution of 1995 establishes a three-branch government. The legislative body is composed of the House of People's Representatives and the House of Federation. The House of People's Representatives is elected by a plurality from electoral districts within each of the nine *kililoch* for five-year terms. State assemblies appoint members to the House of Federation.

The executive branch includes the president of the republic as head of state and the prime minister as head of government. The head of state exercises ceremonial functions with little or no effect on policy deliberations. The prime minister, by contrast, wields enormous powers through cabinet appointments. He is also the commander in chief of the armed forces. The constitution as it stands in its 1995 form accommodates the political goals of the EPRDF, which is itself dominated by the Tigray People's Liberation Front (TPLF). Critics argue that most cabinet appointments and policy deliberations are driven by the TPLF.

PARLIAMENT

The tradition of parliamentary government in Ethiopia started in 1955 when Haile Selassie reformed the 1931 constitution to expedite modernization. After the overthrow of Haile Selassie in 1974, the succeeding Marxist regime abrogated the 1955 constitution. In 1987 the Workers Party of Ethiopia, an ideologue Marxist party created in 1984 and controlled by the then dictator Mengistu Haile Mariam, introduced the People's Democratic Republic of Ethiopia (PDRE) under a new constitution. A parliament known by its Amharic name as the Shengo, comprising 835 members from electoral districts representing 80,000 inhabitants of rural areas and 15,000 residents of urban areas, was seated. The Shengo proved ineffective as a representational body because the personality of Mengistu Haile Mariam overshadowed and undercut parliamentary functions. With the overthrow of Mariam in 1991 the PDRE was replaced by the new Federal Democratic Republic of Ethiopia (FDRE), introduced by the EPRDF in 1995.

In 1995 the EPRDF introduced a new constitution ratified by a Constituent Assembly. The new constitution created the Federal Democratic Republic of Ethiopia, comprising nine states and the cities of Addis Ababa and

Harer as autonomous constituencies. The head of state is the president of the republic, while the head of government, in whom the majority of power is vested, is the prime minister.

The nine states were districted into electoral ethnic constituencies to ensure parliamentary representation of all ethnic groups and nationalities. Voting age is 18 years or older. Parliament consists of two chambers. The lower house, or House of People's Representatives, has 548 seats, and the upper house, the House of the Federation, has 108. The assemblies of the federal states elect the upper house. The term of service is five years. In May 2000, 50 parties and 500 independent candidates contested for elections to the council. Those affiliated with the EPRDF scored an overwhelming electoral victory, guaranteeing Meles Zenawi, the EPRDF's leader, another term in office as prime minister.

POLITICAL PARTIES

The Ethiopian People's Revolutionary Democratic Front (EPRDF) is the main political party. There are about 50 other small parties, all ethnically based, but the EPRDF controls all power. The EPRDF itself is composed of a coalition of 18 smaller ethnic-based organizations, all of which are subordinated to and under the virtual control of the dominant party, the Tigray People's Liberation Front (TPLF).

Political awareness is extremely limited among the masses. Ethiopia's high birthrate and vast geography combined with minuscule investment in the development of human capital have resulted in a low level of literacy. Lack of exposure to the practice of establishing organizations that would articulate the political ideas, beliefs, and values of organized groups with a mature sense of political judgment and would hold political elites responsible for the successes or failures of a party agenda and platform have never been allowed to flourish.

In an attempt to introduce pluralism in 1991, the TPLF leadership encouraged the creation of various ethnic political groups. Among those groups that initially subscribed to the TPLF's overtures, the most prominent was the Oromo Liberation Front (OLF), representing the largest single ethnic group in Ethiopia. By contrast the TPLF represented the smallest ethnic group, the Tigray of the northern province. The tension created by the inequalities of power among the affiliated ethnic coalitions was bound to create political friction, which spilled over into regional crises. The first crisis started in the snap elections of 1992, when some of the ethnic organizations, particularly the OLF and the All Amhara People's Organization (AAPO), refused to participate, claiming that they deserved to play larger roles in the exercise of political power. They refused to accept TPLF's institutional domination and boycotted the election. Subsequently, the

OLF withdrew from the governing coalition and resorted to armed struggle. It called for Oromo self-determination, the outcome of which would be either federation or complete independence.

The AAPO also withdrew from the government, but before it could organize armed resistance, TPLF cadres overpowered the leadership. Its leader, Asrat Woldeyes, was taken to jail, where he developed persistent illnesses, leading to his release and subsequent death in the United States, where he went for medical treatment. His fate generated bitter anger among his ethnic constituency, the Amhara. They accused the TPLF of having prolonged his detention unnecessarily and causing his premature death. The Ogaden Liberation Front and the Western Somali Liberation Front participated in the elections of 1992 and 1995. Their influence has since been overshadowed by the EPRDF's policy of exclusive exercise of power, leading to diminished political efficacy and sporadic rebellion in their constituent region, the Ogaden territory. Subsequent developments promoting the democratic evolution of party activity from that of a controlled and contrived posture to a genuine representation of an articulate ideology have produced little progress.

LOCAL GOVERNMENT

In June 1991 town meetings were held throughout the country in which Peace and Stability Commissions were selected by local citizens to act as de facto local governments. These commissions were slated to administer local affairs until after a transitional national government was established and a new constitution was written and ratified. Subsequently, the commissions were used to expedite the snap election of June 1991. Under the directives given in the 1991 Transitional Charter (part 1, article 2), local governments were defined as components of the local government. Each unit of government was recognized as an extension of the autonomous regional states (*kilil*), each delegated with the mandate to "preserve its identity and have it respected, promote its culture and history, and use and develop its language." The constitution of 1995 reiterated the same clause.

The organization of authority, as stated in article 46, no. 2, in the new constitution, takes into consideration ethnolinguistic differences and "settlement patterns" and attempts to address them by drawing borderlines for the purpose of creating the member states of the federal system. At the apex of authority is the federal government. It is composed of nine states (*kilil*) and two cities (Addis Ababa and Harer) with chartered status. A collection of *weredas* inhabited by peoples of similar language and ethnic affiliations make a state. Similarly, collections of villages are designated as *weredas*. The smallest unit of local government is the village, or *kebele*. There are ap-

proximately 32,000 *kebeles* and 600 *weredas* in Ethiopia, constituting the nine *kililoch* and two chartered cities.

The administrative practices of local governments are eclectic and decidedly autonomous, mainly due to the experimental nature of the *kilil* system, which is still resented by a large segment of the population. In all aspects of local government, the traditional patterns of local and city administration, especially the mayoral (*kentiba*) hierarchy of city governance, are apparent in towns and cities.

LEGAL SYSTEM

The judiciary branch is stipulated by the 1995 constitution as constituting the third branch of government. The court system consists of the Federal Supreme Court, the Federal High Court, and the courts of first instance (original jurisdiction). There is an overlap of judicial functions between the federal and state courts. The courts of first instance and the Federal High Court serve simultaneously as courts of original jurisdiction and supreme courts for the federal states. The federal courts have sole jurisdiction of judicial review with respect to state cases. Regional and local courts also play a role in the judicial system.

HUMAN RIGHTS

Under the Haile Selassie monarchic state and the Marxist dictatorship that replaced it, Ethiopia experienced widespread violations of human rights. The administrative laws enacted in 1991 extended freedom of movement, which was under tight control during the Communist era, but residence and employment in a particular province is largely restricted to the dominant ethnic group within that province.

The human rights record of the current EPRDF regime is also regarded as dismal. The level of brutality against the defenseless and disregard for the rights of civilian prisoners and prisoners of conscience by successive Ethiopian regimes were uniformly repudiated by independent observers such as Africa Watch and Amnesty International. All Ethiopian regimes have been constantly engaged in suppressing revolts of insurgent groups and waging border conflicts with Somalia, Sudan, and Eritrea. They also share the same patterns of conducting arbitrary arrests, torture, and summary executions.

Part of Ethiopia's war strategy, under the EPRDF, involved the mass expulsion of Eritreans and Ethiopians of Eritrean blood, dumping them in a no-man's land at the Eritrean border. According to Eritrean official data, close to 70,000 civilians were stripped of their possessions and their citizenship in contravention of the 1995 Ethiopian constitution and deported to Eritrea. The deportees included women, children, senior citizens, hospital patients, and children whose parents were deported separately.

As of 2004 the U.S. state department still found Ethiopia's human rights record to be poor. Arbitrary arrests and detentions, murders of suspects, and terrible prison conditions were all common. The government has continued to detain Eritreans. The judicial system is gradually becoming more independent and is working its way through a backlog of cases. Fewer journalists have been detained than in previous years. Violence against women and child abuse were common. Female genital mutilation persists, though the government is trying to eliminate the practice. Child prostitution, child labor, and human trafficking have all remained problems.

FOREIGN POLICY

The liberation and subsequent independence of Eritrea introduced a new dilemma for Ethiopia. The loss of Eritrean ports rendered Ethiopia landlocked and dependent on Eritrea and Djibouti for access to the sea. Even though Eritrea pledged free access to the sea for Ethiopian goods, tension between the two countries gradually escalated into deeper misunderstandings on matters of port administration, maintenance, and management. Ethiopia gradually shifted its primary port activity to Djibouti. When Eritrea abandoned the Ethiopian birr as its legal tender and introduced its own currency, the nakfa, Ethiopia refused to accept the Eritrean currency and demanded trade transactions between the two countries to be conducted on the basis of letters of credit backed by hard currency, specifically the American dollar. Relations between the two countries soured and deteriorated, resulting in open warfare in May 1997 in the Badme War. When Ethiopian border police started dismantling border posts and uprooting Eritrean farmers from their villages and farms, Eritrea responded by occupying the Badme plains on the western border connecting the two countries. Between May 1997 and February 2000 the two countries clashed in intermittent battles, summarily involving the deployment of an estimated half million troops. Afterward, the United Nations, the Organization of African Unity (OAU), and the European Union attempted to mediate a reconciliation between the two countries. During the 35th Ordinary Session of the Assembly of the Heads of States of the OAU held in Algiers, Algeria, on July 12–14, 1999, the OAU endorsed the Framework Agreement and Modalities for resolving the border war between the two countries. Both subscribed to the documents initially, but Ethiopia later balked at accepting the Technical Agreement for Implementation of the Framework Agreement and Modalities. Repeated mediation by the United States, the European Union, and the OAU failed to produce any reconciliation, as Ethiopia upped the ante by demanding that Eritrea renounce any border claims. Eritrea refused to do so, adamantly stating that to abandon territories it considered legally belonging to it would amount to renouncing its won sovereignty and supremacy over its own borders.

Following the diplomatic failures, Ethiopia carried out new waves of attacks on Eritrean positions in May 2000. Eritrean troops were driven away from their defensive positions at the border and deep into Eritrean territory. Ethiopia's gain in the military offensive resulted in both countries agreeing to new terms of cease-fire. On June 18, 2000, both countries signed the Agreement on Cessation of Hostilities. On July 31, 2000, the UN Security Council authorized the creation of the UN Mission in Ethiopia and Eritrea (UNMEE). The mandates of UNMEE include monitoring the cessation of hostilities, troop redeployment, and the implementation of a UN observer force of about 4,200 to be stationed inside Eritrean territory until the borders are eventually demarcated.

Relations with Sudan deteriorated after 1994 when Sudan was singled out as supporting terrorists espousing an Islamic mission to destabilize the Horn of Africa. Ethiopia, along with Eritrea and Uganda, sought help from the United States to confront Islamic terrorists inspired and supported by Sudan. Relations with Sudan remained irreconcilable until the closing weeks of 1999. In early 2000 the two countries drew closer in view of Ethiopia's attempt to isolate its new enemy, Eritrea. In March 2000 Ethiopia and Sudan concluded agreements for peaceful resolution of conflicts, border security, and the use of Sudanese ports for Ethiopian imports and exports.

In general, Ethiopia's foreign policy, as it enters the 21st century, is driven by Ethiopia's determined hostility to Eritrea. In order to isolate Eritrea, Ethiopia has made overtures to erstwhile suspicious neighbors, including Sudan, Yemen, Egypt, Libya, and the Arab world in general. Its diplomatic pronouncements carry a conciliatory tone to Middle Eastern countries as part of an effort to dispel disapproval of Ethiopia's traditional alliance with Israel. Because Addis Ababa, Ethiopia's capital, serves as the headquarters for the African Union (the successor to the Organization of African Unity), Ethiopia is well regarded by sub-Saharan African countries. In 2004 Ethiopia grudgingly agreed to the UN resolution of its border dispute with Eritrea, and there is some possibility of more cordial relations between the two countries in the future.

The United States has traditionally had good relations with Ethiopia, though this changed somewhat during the regime of the Provisional Military Administrative Council, or the Derg. In July 1980 the two countries limited diplomatic ties with one another. Since the fall of the longtime Derg leader Mengistu, however, relations have once again improved. The United States reinstated its ambassador in 1992 and in the past decade has furnished Ethiopia with over \$2 billion in aid.

DEFENSE

Currently, the Ethiopian National Defense Forces (ENDF) has about 200,000 members, though it had about

300,000 during the 1998–2000 border war with Eritrea. Universal conscription is enforced for all males aged 18 and over, though boys as young as 13 fought in the war.

During the struggle with Eritrea the Ethiopian government spent a great deal of money rebuilding its air and ground forces. Most of the equipment bought between 1998 and 2000 came from Russia, though Israel, Bulgaria, Ukraine, and Turkey also emerged as major arms suppliers for the Ethiopian armed forces. In the spring of 1999 North Korean armament specialists arrived in the country, reportedly to expand its armament industry.

Since the end of the war the nation has demobilized some 100,000 troops and is transitioning from a guerilla army to a volunteer professional military. The United States and other countries are helping with training programs. Ethiopia has sent contingents of peacekeepers to Liberia and Burundi.

ECONOMY

Ethiopia is poverty stricken. Since the 1890s it has been plagued with apocalyptic famines, and it has never had a decade in which it managed to feed its population independently. Ethiopia was still as heavily dependent on foreign food aid at the beginning of the 21st century as it was at the beginning of the 20th century. The combined effects of persistent drought, protracted wars, natural disasters, and misguided economic policies of the Derg in recent years have had terrible effects on the economy. Overall economic growth has declined since 1985, and by 1998–99 gross domestic product (GDP) growth was flat. The economy had negative growth in 2004; per capita GDP was \$700. Meanwhile, the population has grown as the economy has declined, making matters worse. In November 2001 Ethiopia was classified as a Highly Indebted Poor Country for purposes of debt relief. The droughts of 2002 and 2004 once again devastated the countryside and resulted in calls for more external aid. The country persists in spending a great deal of money on its military, which diverts funds from feeding the population.

In order to rehabilitate the economy, the Transitional Government of Ethiopia (TGE) pledged that it would adapt liberal free-market policies and singled out agriculture as a primary engine of growth and development, but

so far the nation has made little to no economic progress. Traditionally, the Ethiopian economy has been heavily dominated by subsistence agriculture, with poor or non-existent provisions for environmental control, soil erosion, deforestation, and pest control. The government owns all land and leases it to the people on long-term bases. This system hampers growth and makes it difficult for entrepreneurs to open businesses because they cannot use their land as collateral for loans. Ethiopia depends on its coffee crop for export income, but prices have fallen, and many farmers have switched to growing the mild stimulant khat, a popular supplement throughout the region.

ENVIRONMENT

The Ethiopian highland plateau, as among the highest elevations in Africa, contains several rivers and streams that dissect the ground surface and wash out topsoil, rendering agricultural enterprise unproductive. The Blue Nile, originating from Lake Tana in the heart of Ethiopia, accumulates massive floods with rich soil contents that serve to benefit Sudanese and Egyptian farmers. Even if Nile waters were to be harnessed by Ethiopia, the level of capital development for the utilization of water is at a primitive state. There exists no supplemental infrastructure, such as agricultural equipment, pest control, animal husbandry, and sophisticated skills, that would complement the availability of Nile waters.

Ethiopia is endowed with a suitable environment for agricultural and recreational industry. However, deforestation and drought combined with incessant wars have degraded the topography. The forest fires that hit at the heart of Ethiopia's virgin forests in February–March 2000 consumed 70,000 hectares, including ancient trees and rare

animals unique to Ethiopia. In view of the fact that only 5 percent of Ethiopia's forests remain due to clear-cutting for lumber and fuel, the damage caused by the fires is expected to have a lasting impact on the remaining forests.

There is a low level of industrialization in Ethiopia. As a result, industrial waste and pollution are minimal, except in the cities, where smog from congested streets creates unacceptable levels of pollution. The capital, Addis Ababa, like many other Ethiopian cities, suffers from poor sanitation. Local authorities tolerate disorderly urban development by allowing the construction of squalid cardboard houses in the business districts and in the vicinity of government offices.

LIVING CONDITIONS

Most Ethiopians live in rural areas in small clusters of homes near relatives. Traditional homes are circular huts made of mud with conical roofs made of branches and straw. A group of friends and relatives will usually share a farm and operate it together. Towns have mutual aid societies, to which everyone makes weekly contributions; the fund pays out when people need money for weddings, funerals, or illness, or when the local area needs repairs. When a couple marries, the community helps build a house for the newlyweds or at least gives them furniture and money. The society can also furnish small business loans. This system has been breaking down as more people move to the city. High-rise apartments have been appearing in urban areas.

HEALTH

Ethiopia has some of the worst health conditions in the world. The country provides free medical care to the poor and has private hospitals for those who can pay for them. Yet most medical facilities are in cities, and much of the countryside has no modern clinics or hospitals. The country has a major shortage of medical professionals; pharmacists commonly give medical advice. Most Ethiopians in the countryside still visit traditional healers for home remedies, either herbal or spiritual. Midwives and neighbor women help during childbirth. Life expectancy is quite low, less than 41 years, and the infant mortality rate is over 100 deaths per 1,000 live births. Most women have five or six children. In 2003, 1.5 million Ethiopians were estimated to have HIV, making it a serious problem

for the country. Venereal diseases are common in urban areas. Most of the population has no access to clean water, and waterborne diseases are endemic, as are tropical diseases such as malaria and dengue fever. The World Health Organization (WHO) and the United Nations Children's Fund (UNICEF) have attempted to institute vaccination programs, but low literacy and a lack of access to clinics have impeded their efforts.

FOOD AND NUTRITION

Ethiopia does not have enough food to feed its people. The drought of 2004 has resulted in severe food shortages.

Ethiopian cuisine is centered around *injera*, a flat bread made from a grain called teff. People eat this bread at every meal. They serve it with various stews, such as *wat*, a spicy stew made of meat or vegetables cooked with onions, red peppers, and spices, or *alicha*, a stew flavored with onions and ginger. Curds and whey are popular. Most Ethiopians do not eat pork. Vegetarian dishes are common because of the large number of fasting days in the Ethiopian calendar. Tea and coffee are ubiquitous. There are few sweets in Ethiopian cuisine, though people do eat honey. Popcorn is a common snack.

Food and Nutrition

 Amount of Cereal Available per person per year kg: 140.4
 Amount of Fruits and Vegetables Available per person per year kg: 21.4

STATUS OF WOMEN

Ethiopian women are among the most disadvantaged sectors of the population, due to cultural and traditional biases, marriages imposed at a very young age, the hard

and time-consuming labor of rural women, and inadequate employment opportunities and wages for urban women. Women in the countryside work very long hours raising children and tending crops. Women and children are especially likely to suffer from malnutrition. Urban women are more likely to work outside the home, but they usually are paid less than men. Village leadership is male, and all clergy are male. Female circumcision is practiced in the northern parts of the country, although the government has stated its opposition to the practice. The government's token efforts to improve conditions for women have had minimal effect. The Revolutionary Ethiopia Women's Association has encouraged women to organize workplace groups to address gender inequality.

WORK

The vast majority of Ethiopians live in rural areas and work in agriculture, most of them growing crops to feed their families and to trade on a small scale. Droughts, pests, and soil erosion have made farming difficult; the drought of 2004 left many people starving. Ethiopians who do not farm work in service, government, or business. Professionals of both sexes are more likely to live in urban areas. Some people work in industry, manufacturing food products, textiles, and beverages. The country has vast mineral resources which, if exploited, could be a good source of employment.

EDUCATION

Traditionally, education was under the complete control of the Ethiopian Orthodox Church. By 1974 the church no longer played any role in educational life. Education is compulsory from ages seven to 13, though most children do not attend for all of those years. Public education is free from the primary to the college level. There is a

considerable difference between urban and rural school enrollment rates. Nearly 65 percent of urban children of school age attend school, whereas only 4 percent of rural children do so. The rural figure is bound to decline even further, as the provision of educational opportunities for Ethiopian children has failed to keep up with the phenomenal increase in the country's birthrate. There is a severe shortage of teachers and materials.

Schooling consists of 12 years, as divided into six years of primary school, two years of middle school, and four years of secondary school. National examinations are held at the conclusion of the eighth and 12th grades, and secondary education is concluded with the Ethiopian School Leaving Certificate. Dropout rates are high, averaging between 68 and 70 percent in the primary cycle. Less than 50 percent of first-grade enrollees complete public school. The curricula are based on European, particularly British and French, models. The alien character of the curricula is reinforced by the lack of locally written texts and the absence of qualified indigenous teachers.

The academic year runs from September to June. The medium of instruction, which was formerly Amharic at the primary level, has been replaced by ethnic and local languages. It is too early to judge whether language segmentation will contribute to or hinder learning.

There are 17 institutions of higher learning, six of them universities; the biggest are Addis Ababa University and Mekele University. Women often go to college to study teaching. College and university education suffers from uncertainty and interruptions as the government makes use of students for various campaigns, such as literacy drives in the countryside, or national emergency measures, such as service in the armed forces. Many Ethiopian families value higher education, and the wealthiest families often send their children abroad to study.

SCIENCE AND TECHNOLOGY

Ethiopia is still working to build up its technological infrastructure. Electricity is not universal. In 2003 there were only nine Internet hosts in the country and about 75,000 Internet users. The Ethiopian Science and Technology Commission was first established in 1975 and then reestablished in 1994 to promote traditional and new technologies and make the country's technological and scientific systems more efficient and productive.

MEDIA

The Ethiopian News Agency (ENA), founded in 1942, served continuously as a news gathering and disseminating organ of government until it was restructured in 1994 as a semiprivate agency with the stated purpose of expanding press freedom. The major impact of the 1994 reform was the expansion of media conglomerates owned and operated by political parties affiliated with the ruling party, TPLF/EPRDF. Among the media organizations that enjoy particular favor in the governing centers are the Walta Information Center, with extensive holdings in the print, electronic, and broadcasting media, and Radio Fana.

Theoretically, the government allows press freedom. The current press laws make a point of ensuring free expression for the media but at the same time place heavy burdens on journalists for disseminating inaccurate or "defamatory" information. The condition placed on journalists was cited by the Committee to Protect Journalists (CPJ), a nonprofit and independent organization, as a "draconian" law. The head of the Ethiopian Free Press Journalist's Association (EFJA) defected in 1999, citing persecution. CPJ and other human rights organizations accuse the government of employing extrajudicial treatment against journalists and independent publishers of newspapers and magazines.

The situation improved greatly in the early 2000s. Privately owned newspapers have been printing criticism of the government and for the most part have not been punished. Private radio broadcasters were allowed to apply for licenses in 2004, and there are plans to deregulate the media. Opposition groups have been broadcasting in Ethiopia from overseas.

CULTURE

Ethiopians follows the Julian calendar, which has 12 30-day months plus one month of five or six days. The Ethiopian calendar is now almost eight years behind the usual Western calendar. The Islamic calendar is determined by the phases of the moon and sets dates for festivals such as Ramadan. During Ramadan, Muslims fast during the day, and businesses may close. Ethiopian Christians uphold many practices similar to those of Jews, such as avoiding pork. Christians fast during Lent and Kuskam as well as on Wednesday and Friday; on those days they eat nothing before noon and no animal products after noon. Ethiopian Jews have their own unique rituals and scriptures, written in Ge'ez instead of Hebrew.

FOLKLORE AND MYTHOLOGY

Indigenous religions still survive among Ethiopians, especially among the Cushitic people in the southern and western lowlands, who practice animism. They believe that all natural objects are imbued with sacred energy. The Afar and Oromo people worship their ancestors. People all over the country wear charms to prevent disease and ward off evil spirits; one type of charm is the *katab*, a roll of parchment that carries spiritual energy.

ENTERTAINMENT AND RECREATION

The most popular pastime among Ethiopians is visiting friends and family and drinking coffee with them in an elaborate ritual. In big cities people go to movies, plays, musical performance, and nightclubs. Some people like to play Italian billiards at bars.

Various kinds of outdoor activities are popular. People go to the lakes of the Rift Valley for swimming, sailing, and fishing. Wildlife safaris and hiking are possible in the interior. Tourists can ride horses or go on cycling tours.

ETIQUETTE

It is common to hand out business cards when meeting people on business. The best time to schedule business meeting is October through May. Tipping is expected. It is polite to ask permission before photographing someone, and people often expect to be tipped for allowing themselves to be photographed.

Ethiopian hosts always offer guests tea or coffee; guests are expected to drink three cups. At meals Ethiopians eat with their right hands. They begin a meal by washing their hands at the table. The hostess places a platter on the table with *injera* bread and stew. The diners tear off portions of bread, dip it in the stew, and place it in their mouths without touching their lips or tongues with their fingers. No one ever touches food with the left hand.

Women are not permitted in many houses of worship.

FAMILY LIFE

Most Ethiopians live close to their extended families, and much of daily life is based on cooperation with relatives and close neighbors. Marriage practices vary by ethnic group. Most families are patriarchal. Parents arrange marriages for their children, and brides go to live with their husbands' families. Families exchange goods and livestock when their children marry. Women keep their names and property after they marry, and husbands and wives are expected to treat one another as equals. Either spouse can initiate a divorce; dowry goods are not returned. Ethiopian children are taught to respect all adults, and adults feel responsible for the children of their relatives and neighbors. Informal adoptions are common.

PERSONAL APPEARANCE

Ethiopians display a neat personal appearance. Men wear suits and ties for business. Women also dress up. Women especially dress modestly, wearing shorts or bathing suits only when they are at the beach. Hairstyles are a popular medium of self-expression. Women of the Harar group make their hair into two buns behind their ears, while people of other ethnic groups like to mold their hair with clay and decorate it with feathers.

SPORTS

The most popular sport across the country is soccer, which is played on any kind of terrain, sometimes using a handmade bundle of cloth instead of a ball. Ethiopians are excellent runners, and many Ethiopian men and women

have won Olympic running events and set world records, especially in long-distance events. Other common sports are cycling, basketball, volleyball, boxing, tennis, wrestling, and pole-vaulting. Horse racing is popular in rural areas, as is *gugs*, a game in which men ride on horseback and throw spears at one another. People play a hockey-like game called *genma* at Christmastime. Children like to play jacks and hopscotch.

CHRONOLOGY

- 1941** British and Ethiopian forces return Emperor Haile Selassie to the throne after an Italian occupation of Ethiopia.
- 1947** After an Allied treaty with Italy regarding disposition of the former Italian colonies of Eritrea, Italian Somaliland, and Libya, the UN General Assembly votes in favor of a federation of Eritrea with Ethiopia, to be completed by September 1952.
- 1955** Haile Selassie issues a revised constitution giving limited powers to the parliament.
- 1960** Members of the imperial guard stage an unsuccessful coup.
- 1963** Haile Selassie founds the Organization of African Unity in Addis Ababa; a long-standing border dispute between Ethiopia and the Somali Republic erupts into armed warfare.
- 1964** A truce between Ethiopia and the Somali Republic establishes a demilitarized zone along the border.
- 1965** Ethiopia accuses Sudan of abetting an Eritrean independence movement.
- 1967** 7,000 Eritreans flee to Sudan to escape Ethiopian military reprisals against secessionists.
- 1970** Ethiopia lays siege to regions of Eritrea in a failed attempt to end the guerrilla warfare.
- 1972** A severe drought lasting through 1975 strikes northern Ethiopia.
- 1974** Soldiers led by Major Mengistu Haile Mariam oust the emperor and institute socialist reforms under a Provisional Military Administrative Council, also known as the Derg.
- 1975** Mengistu begins a program of land reform, abolishes the monarchy, and declares Ethiopia a republic.
- 1977** Critics of the military regime, led by the Ethiopian People's Revolutionary Party (EPRP), launch the "White Terror," a campaign of urban guerrilla warfare; the government responds with its own "Red Terror" campaign, arming Ethiopians loyal to the Derg, who kill an estimated 100,000 people suspected of being enemies of the government. The United States withdraws its support for the government.

814 Ethiopia

- 1978** Mengistu secures support from the USSR and Cuba and wins back territories lost to the revolutionaries.
- 1984** A northern drought lasting until 1986 plunges the country into famine, and one million die of starvation; the government attempts the forced resettlement of 600,000 northerners to the south.
- 1987** Mengistu proclaims a new, Soviet-style constitution with popular elections and renames the country the People's Democratic Republic of Ethiopia; power remains in the hands of the Derg, who elect Mengistu president; the Eritrean People's Liberation Front (EPLF) and the Tigray People's Liberation Front (TPLF) again stage armed resistance.
- 1989** Having lost the support of the USSR, the Ethiopian national assembly conducts peace talks with the EPLF and the Ethiopian People's Revolutionary Democratic Front (EPRDF), a coalition of opposition groups led by the TPLF.
- 1990** EPLF forces capture the strategic Eritrean port city of Massawa; EPRDF forces overtake Ethiopia's capital, Addis Ababa.
- 1991** The EPRDF overthrows Mengistu's government and establishes the Transitional Government of Ethiopia.
- 1992** Ethiopia's first snap elections are conducted to facilitate redistricting and redrawing of electoral lines along ethnic and language affiliations.
- 1994** The Constituent Assembly is elected to implement ratification of a new constitution.
- 1995** A new constitution is promulgated and the Federal Democratic Republic of Ethiopia announced, with Negasso Gidada as head of state and Meles Zenawi as prime minister.
- 1997** War breaks out between Eritrea and Ethiopia over the Badme Triangle, a disputed territory in southwestern Eritrea.
- 2000** The EPRDF party wins an overwhelming victory in national elections; under supervision of UN troops, Ethiopia and Eritrea sign a peace agreement in December.
Haile Selassie is buried in the Trinity Cathedral of Addis Ababa.
- 2001** Ethiopia withdraws troops from Eritrea.
- 2002** Ethiopia and Eritrea draw up new boundary; they both claim the town of Badme.
- 2003** An independent boundary commission gives Badme to Eritrea; Ethiopia disagrees.

- 2004** Ethiopia accepts the boundary decision on Badme "in principle."

FIJI

Basic Fact Sheet

OFFICIAL NAME

Republic of the Fiji Islands

ABBREVIATION

FJ

CAPITAL

Suva

HEAD OF STATE

President Ratu Josefa Iloilo (from 2000)

HEAD OF GOVERNMENT

Prime Minister Laisenia Qarase (from 2000)

NATURE OF GOVERNMENT

Republic

POPULATION

893,354 (2005)

AREA

18,270 sq km (7,055 sq mi)

MAJOR ETHNIC GROUPS

Fijians, Indo-Fijians

LANGUAGES

English (official), Fijian, Hindustani

RELIGIONS

Christianity, Hinduism, Islam

UNIT OF CURRENCY

Fijian dollar

NATIONAL FLAG

A blue field with the Union Jack in top left corner and the Fijian coat of arms on the fly. The coat of arms shows a gold, imperial lion carrying a coconut in its forepaw, a flying dove carrying an olive branch, stalks of sugarcane, bananas, and a coconut palm.

NATIONAL EMBLEM

The Fijian coat of arms flanked on either side by a Fijian warrior and hunter, with an outrigger canoe on the top. Beneath is the legend *Rerevaka na Kalou ka Doka na Tui* (Fear God and honor the Queen).

NATIONAL ANTHEM

“God Bless Fiji”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 18 (National Youth Day), May 29 (Ratu Sukuna Day), June 14 (Queen Elizabeth’s Birthday), October 10 (Independence Day, National Day), November 1 (All Saints’ Day), November 11 (Remembrance Day), November 14 (Prince Charles’ Birthday), December 25 (Christmas), December 26 (Boxing Day), various Christian festivals (Good Friday, Easter Monday), Hindu festivals (Dipavali), and Islamic festivals (Muhammad’s Birthday, Ramadan)

DATE OF INDEPENDENCE

October 10, 1970

DATE OF CONSTITUTION

July 25, 1990; amended July 25, 1997

GEOGRAPHICAL FEATURES

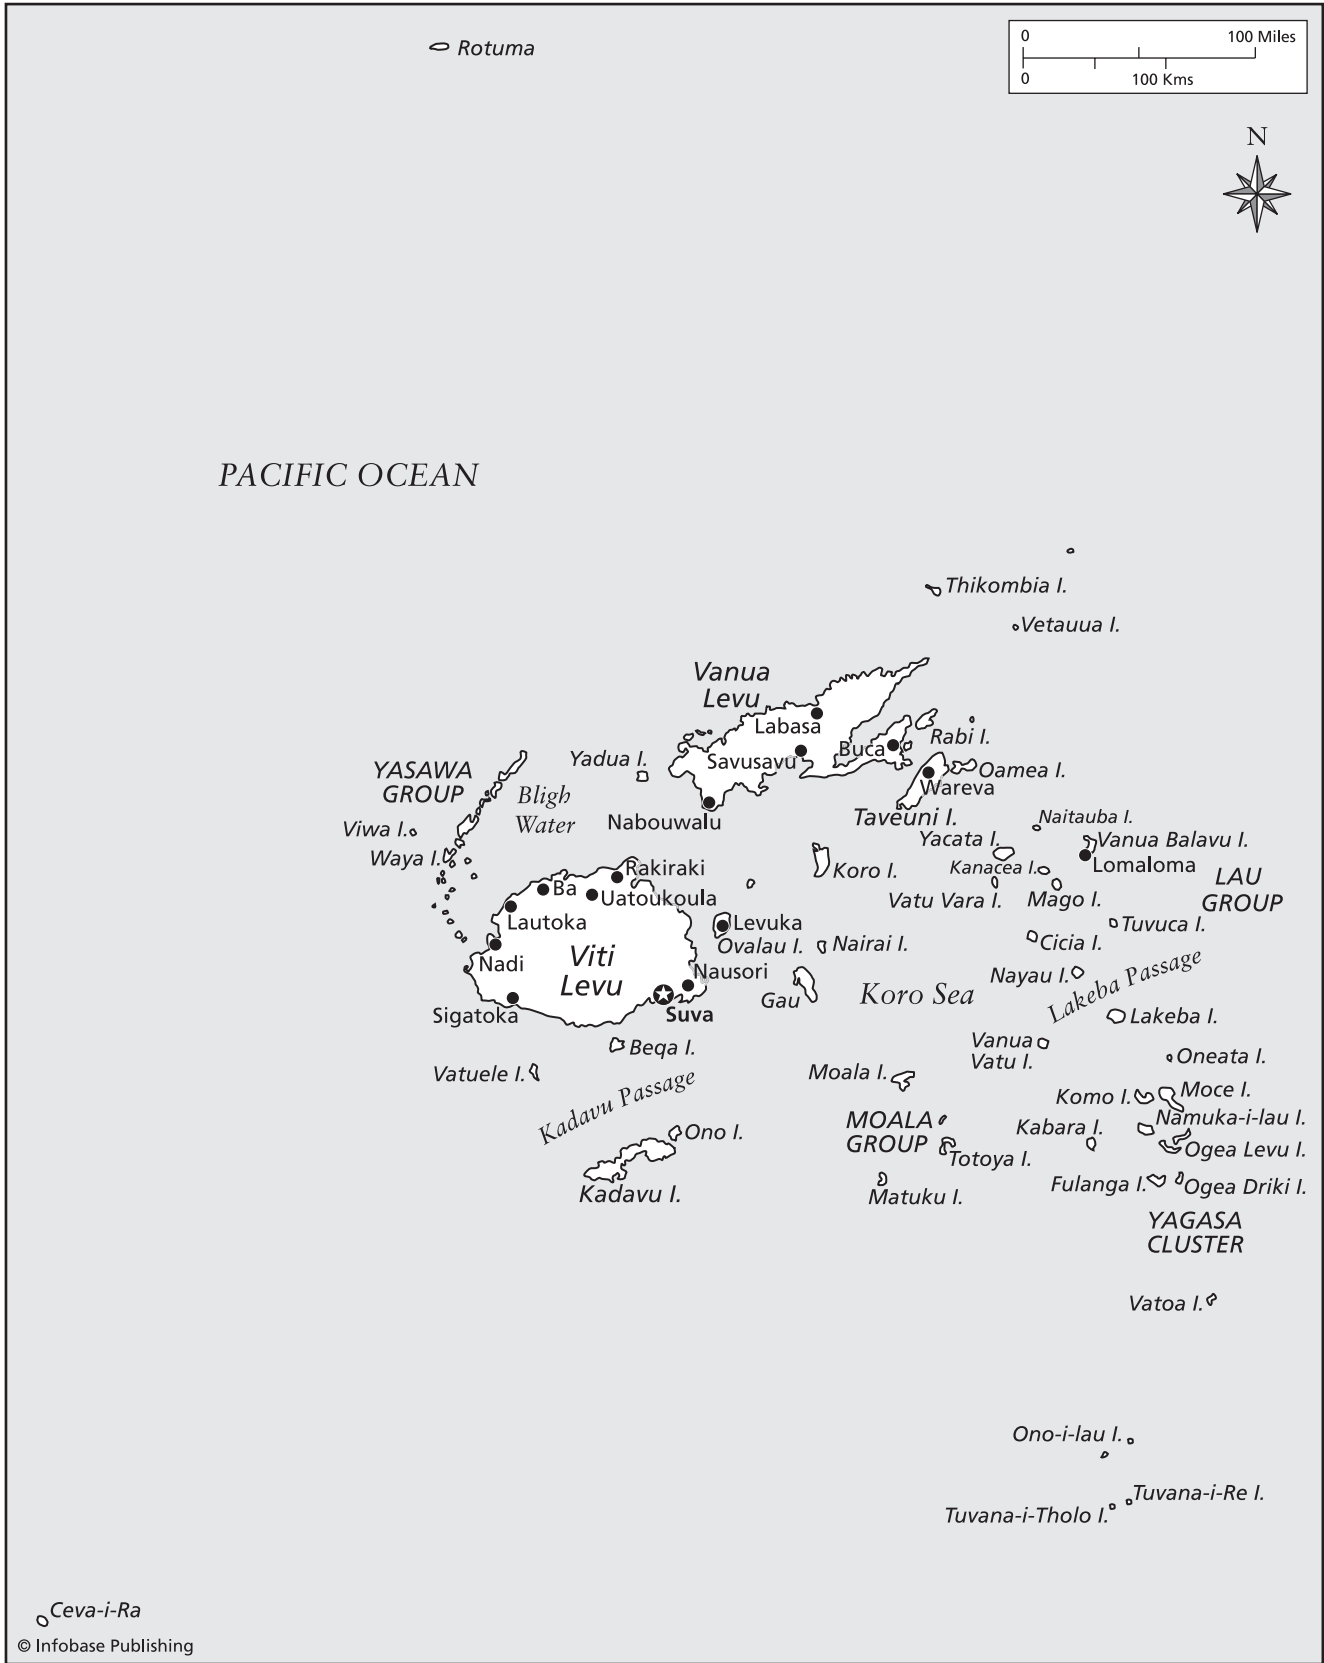

Fiji, in the South Pacific, is about 2,735 km (1,700 mi) northeast of Sydney, 1,769 km (1,100 mi) north of Auckland, and 4,466 km (2,776 mi) southwest of Honolulu. The country consists of over 822 islands stretched over a total area of some 650,000 sq km (250,000 sq mi). The total land area, including the island of Rotuma, which is geographically separate from the main archipelago, is 18,270 sq km (7,055 sq mi). Only 105 of the islands are inhabited; over 500 are islets, and some are mere rocks a few meters in circumference. The largest islands are

Vanua Levu, with 5,535 sq km (2,137 sq mi), and Viti Levu, with 10,386 sq km (4,010 sq mi). The total coastline stretches 1,129 km (700 mi).

Fiji’s larger islands are mountainous and of volcanic origin, often rising precipitously from the shore. On the southeastern windward sides the islands are covered with dense tropical forests. The highest elevation is atop To-manivi (1,324 m; 4,343 ft); there are 28 other peaks over 900 m (3,000 ft). Most islands are surrounded by coral reefs.

The major river is the Rewa on Viti Levu, which is navigable by small boats for 113 km (70 mi).

CLIMATE AND WEATHER

On the leeward sides of the islands there are two seasons: wet and dry. Mean annual rainfall ranges between 1,780 mm (70 in) and 2,030 mm (80 in), with Suva receiving the maximum precipitation of 3,120 mm (123 in).

Temperatures at sea level vary from 15.6°C to 32°C (60°F to 90°F). The prevailing trade winds blow from the east for most of the year.

Climate and Weather

Mean Temperature: 60°F to 90°F
 Average Rainfall: 70 in to 80 in
 Suva: 123 in

FLORA AND FAUNA

There are about 3,000 plant species on the Fiji Islands. These include rare tropical flowers and valuable hardwoods, including mahogany.

Originally, Fiji had only a few species of terrestrial mammals, six species of bats, and one species of rat. The earliest settlers 3,500 years ago brought pigs, chickens, and dogs with them, which immediately resulted in the extinction of several types of native birds. Other imported mammals include goats and the Indian mongoose, which was introduced to catch rats in sugarcane fields and is now the most common wild animal. There are also turtles, snakes, and a crested iguana that somehow reached the islands from South America. About 100 species of birds live in Fiji.

The seas around Fiji teem with plant and animal life, including spectacular coral reefs and all the flora and fauna that live around them. There are also large marine animals such as sharks, rays, whales, and dolphins.

POPULATION

ETHNIC COMPOSITION

Fijians, who are ethnically Melanesian with a Polynesian admixture, constitute 51 percent of the population, while Indo-Fijians, descendants of immigrants who were brought to Fiji as indentured laborers from India, constitute 44 percent of the population.

There are small colonies of Americans, Britons, Australians, and New Zealanders.

There has been considerable ethnic hostility between Indo-Fijians, who suffer economic and political discrimination, and Fijians, who wish to preserve the Melanesian character of the country.

LANGUAGES

The official language is English, which virtually all literate Fijians speak, although both Fijian and Hindustani are used in parliament and in the administration. Fijian belongs to the Malayo-Polynesian group of languages. The spoken dialect is Bau throughout the archipelago, except on Rotuma Island, where Rotuman is spoken. Most Indian descendants retain Hindustani as their lingua franca.

RELIGIONS

Virtually all native Fijians are Christian, while about 80 percent of Indo-Fijians are Hindus and about 15 percent

are Muslims. Of the Christians, 85 percent belong to the Methodist Church and 12 percent to the Roman Catholic Church. There is a Roman Catholic archbishopric and an Anglican bishopric in Suva. The Methodist Church is organized under a president.

Religious Affiliations

Christian (mostly Methodist and Roman Catholic)	464,000

HISTORICAL BACKGROUND

The first settlers of the Fiji islands were Lapita who arrived around 1500 B.C.E. Some 2,500 years later, Polynesians invaded from Tonga and Samoa, engaging the Melanesians in large-scale wars. Intermarriage and time helped merge the two ethnic groups together.

In 1643 the first known European to sight the Fijian islands was Abel Tasman. His description of the dangerous reefs and his account of cannibalism kept Europeans away until 1774. In that year James Cook stopped at Vatoa. In 1789 Captain William Bligh stopped under the duress of mutineers on the HMS *Bounty*.

The 1800s saw an increase in interaction between Fijian society and Westerners, as traders used the nations ports when seeking sandalwood and *bêche-de-mer* (succulent sea cucumbers prized in Asia). The traders fueled interclan warfare by swapping goods for guns and metal tools. Stories of cannibalism were propagated as most shipwrecked Westerners were eaten. One notable exception was Charles Savage, a Swede, who managed to serve as an interpreter and diplomat between warring chiefs.

Early missionary attempts also failed to civilize the Fijians. In 1867 the Reverend Thomas Baker was eaten (his shoes are on exhibit at the Fiji Museum). However, Westerners refused to leave the islands alone, as they became more important as Pacific trading posts. One such post, Levuka, was razed in 1847 in order to restore peace.

Interaction with Westerners was growing, and Fiji was slowly becoming more Western and open. Cakobau, the self-proclaimed King of Fiji, attempted to form a Western-style government in 1871, but it collapsed after just two years. Afterward Fiji was under British rule from 1874, when a convention of chiefs ceded Fiji unconditionally to the United Kingdom, to 1970, when it became a fully independent dominion within the Commonwealth. British rule was marked by the pacification of the countryside, the spread of plantation agriculture, and the introduction of Indian indentured labor. At the same time many traditional institutions, such as communal ownership of land, were maintained intact.

The British introduced a new constitution in 1966 that gave Fiji a ministerial form of government with a

predominantly elected Legislative Council. The electoral system was based on a complex combination of communal rolls and cross-voting, reflecting traditional ethnic tensions between Fijians and Indians. In 1967 Ratu Kamisese Mara, head of the Alliance Party (AP), became the chief minister. Fiji achieved independence within the Commonwealth in 1970; upon independence Mara became prime minister.

Fiji's political history has been dominated by ethnic tension between the Fijians, who were a minority but maintained political power, and Indians, who were discriminated against in politics and in land tenure. In 1977 Mara's Alliance Party lost the legislative election to the National Federation Party (NFP), traditionally supported by Indians. The NFP was unable to form a government, however, and the AP was returned to power that same year with the largest majority it had ever achieved. In light of the continuing ethnic tensions and the development of the Fijian Nationalist Party, which ran on a "Fiji for the Fijians" program, Mara suggested forming a government of national unity in 1980. The suggestion received little attention, as disagreements continued between the AP and NFP over Indian demands for reformed land tenure. In 1982, in an election dominated by race, the AP retained power but saw its majority dramatically reduced.

A coalition of the NFP and the Fiji Labor Party (FLP), which had been formed in 1985 with the idea of promoting more effective parliamentary opposition and establishing more extensive government social services, won the general election of April 1987. The new government, led by Timoci Bavadra, was the first in Fijian history to have a majority of Indian ministers. This government was overthrown in May by a military coup under the leadership of Sitiveni Rabuka, who wished to preserve Fijian political domination. In an effort to end the political crisis, Bavadra and Mara agreed to form a bipartisan government, but before it could be established, Rabuka staged another coup. He assumed the position of head of state, announced the establishment of a republic, and appointed a temporary Council of Ministers, whose members were primarily Fijian. Rabuka resigned at the end of the year and was replaced by Ratu Sir Penaia Ganilau, the former governor-general. Mara was reappointed prime minister, and Rabuka became home minister.

Fiji returned to civilian rule after 1990 when General Rabuka stepped down as home affairs minister and later resigned his commission to become head of the recently organized Fijian Political Party (SVT). In 1992 the SVT won an overwhelming majority in parliament, and Rabuka formed a government of national unity with the support of the Indians. In 1997 a new constitution was passed, replacing the 1988 ethnically discriminatory constitution. It provided for the continued Melanesian domination of the Senate but opened the door to possible Indian control of the House. Following the adoption of the new constitution, Fiji was readmitted to the Commonwealth. In

new elections in 2000 Indians managed to obtain legislative majority and the leader of the Indian-dominated Fijian Labour Party, Mahendra Lal Chaudhry, was elected prime minister. However, during a legislative meeting Fijian nationalists stormed the building and held the prime minister and a number of his colleagues hostage. All hostages were released in July, and the Great Council of Chiefs appointed the Fijian Ratu Josefa Iloilo president. The leader of the insurrection, George Speight, was arrested and charged with treason. The Commonwealth suspended Fiji again in June 2000.

In 2001 the Fiji High Court ruled the current government illegal, and new elections were held in August that brought the Fijian United Party to power. Its leader, Laisenia Qarase, was named prime minister. He immediately defied the constitution by refusing to offer cabinet positions to members of the Labour Party, which was dominated by ethnic Indians. Speight was expelled from parliament. In December 2001 Fiji was once again admitted to the Commonwealth.

In February 2002 Speight came to trial for treason. He was sentenced to death, but Iloilo commuted his sentence to life imprisonment. The following July the Supreme Court ruled that ethnic Indians from the Labour Party must be included in Qarase's parliament. In August 2004 Vice President Ratu Jope Seniloli was jailed briefly, after being found guilty of treason for his involvement in the coup attempt of 2000.

LIST OF MODERN RULERS

Governor-General

1970–73	Sir Robert Sidney Foster
1973–83	Ratu Sir George Cakobau
1983–87	Ratu Sir Penaia Ganilau

President

1987	Sitiveni Rabuka (interim)
1987–93	Ratu Sir Penaia Ganilau
1993–2000	Ratu Sir Kamisese Mara
2000	Major General Frank Bainimarama (interim)
2000–	Ratu Josefa Iloilo

Prime Minister

1967–87	Ratu Kamisese Mara
1987	Timoci Bavadra
1987–92	Ratu Kamisese Mara
1992–99	Sitiveni Rabuka
1999–2000	Mahendra Lal Chaudhry
2000–	Laisenia Qarase

CONSTITUTION

Fiji's constitution was promulgated in 1990 and amended in 1997 to make multiparty government mandatory and to allow non-Fijians a greater say in government. In 1998

the amended constitution entered into force after the Great Council of Chiefs approved the draft. Under its terms, executive authority is vested in a president who is appointed by the Great Council of Chiefs, who hold their positions based upon lineage. The president serves for five years and selects a prime minister to lead the cabinet. The prime minister, who must be a Fijian by ethnicity, selects the remaining members of the cabinet.

The legislature is a bicameral system in which the upper house consists of 34 members appointed by the president upon recommendations made by the Council of Chiefs, the cabinet, and the opposition. The House of Representatives consists of 71 members elected by all citizens over the age of 21. The seats are allocated along racial lines, with 23 for ethnic Fijians, 19 for Indians, three for other races, and the remaining 25 open to all. The legislative session may last as long as five years.

The judiciary consists of the High Court and the Supreme Court, which are the final arbiters of the constitution.

PARLIAMENT

The parliament consists of two houses. The Senate (upper house) has 34 members. The president selects 24 of them on the basis of advice from the Great Council of Chief and appoints 9 himself, leaving one representative to be appointed by the council of Rotuma. The House of Representatives (lower house) consists of 71 members. The majority of the seats are reserved for specific ethnic groups, with 23 for Fijians, 19 for Indians, three for others, one reserved for the council of Rotuma, and the remaining 25 open to any race. The session may last no longer than five years.

POLITICAL PARTIES

There are more than 15 active political parties in Fiji. The largest and strongest of them are Soqosoqo ni Vakavulewa ni Taukei (SVT), which defends the right of native Fijians to control politics in the country, and National Federation Party, formed in 1960 with the merger of several smaller organizations; the National Federation Party advocates multiracial politics, though it is largely Indian. In addition to these two large parties, the Fijian Association Party is a multiracial faction of the SVT, and the Fiji Labour Party is a strong Indian party.

LOCAL GOVERNMENT

For purposes of local administration, Fiji is divided into four administrative divisions, each headed by a division commissioner, who is assisted by district officers. In addition, eight main urban areas are governed by local author-

ities. Suva has a city council, Lautoka a town council, and six other main urban areas are administered by township boards. Some members of urban councils are appointed, but the majority of members are elected.

The Fijian community is under a separate administration, known as the Fijian Administration, headed by the Fijian Affairs Board. The Fijian Administration comprises 14 *yasanas* (communal provinces), each with its own partially appointed and partially elected council. Each council has an elected majority and has powers to make bylaws and draw up its own budget. Members are elected for two-year terms, and the council elects a chairperson from among its own members. At the apex of the Fijian Administration is the Great Council of Chiefs, presided over by the minister of Fijian affairs and rural development.

LEGAL SYSTEM

The judiciary is completely independent of the legislative and executive branches of government. The judicial power of the state is vested in the High Court, the Court of Appeal, the Supreme Court, and various small magistrate courts. Magistrate courts handle small matters. The High Court hears more significant criminal and civil cases. The Court of Appeal hears appeals from the High Court. The final appellate court of the state is the Supreme Court; four of the five Supreme Court justices also serve in courts in Australia or New Zealand.

HUMAN RIGHTS

Fiji has successfully maintained the legal, political, and human rights traditions of its former British rulers. In constitutional practice, there are safeguards that ensure freedom from torture; respect for the integrity of the person and the home; right to a fair and open public trial; freedom from arbitrary arrest and imprisonment; and equal treatment before the law irrespective of race, creed, or sex.

FOREIGN POLICY

Fiji has close relations with its neighbors in the South Pacific but somewhat cool relations with the rest of the world. In the South Pacific, Fiji has hosted various regional summits and the 2003 South Pacific Games. The governments of other Pacific islands tend to be sympathetic to Fiji's ethno-political difficulties. Fiji's military coups have had an adverse effect on its foreign relations with other nations, particularly its close trading partners Australia and New Zealand. It was expelled from the Commonwealth in 1987 but readmitted after a few months. In 1999 the appointment of the first ethnically Indian prime minister led to a siege of the parliament by

Fijian extremists. This led to further ostracism of Fiji by the international community. Fiji has recently been working on improving its relations with China, admitting Chinese immigration and accepting Chinese aid.

DEFENSE

Until 1970 the defense of Fiji was the responsibility of the United Kingdom, and even today there is only a small regular force supplemented by a territorial force and a reserve. Only about 9,000 men reach military age each year, and the force is correspondingly small. There is no draft. The armed forces are overwhelmingly Fijian in membership, as is the national police force. The command structure of these forces is not clearly established.

ECONOMY

Fiji, endowed with forest, mineral, and fish resources, is one of the most developed of the Pacific island economies, though it still has a large subsistence sector. Sugar exports and a growing tourist industry are the major sources of foreign exchange. Sugar processing makes up one-third of industrial activity. Every year Fiji exports many tons of tuna—fresh yellowfin to Japan and Hawaii and canned tuna to Canada and the United Kingdom. It also exports mahogany and pine, though the government has banned the export of some indigenous hardwoods. There are also gold mines on Vanua Levu and Viti Levu. Imports currently outpace exports, and the government is actively encouraging the development of new industries, such as garment manufacture.

Roughly 300,000 to 400,000 tourists visit each year, including thousands of Americans, following the advent of regularly scheduled nonstop air service from Los Angeles. The political unrest of the early 2000s slowed the growth of tourism somewhat.

Fiji's growth slowed in 1997 because the sugar industry suffered from low world prices and rent disputes occurred between farmers and landowners. Drought in 1998 further damaged the industry, but its recovery in 1999 contributed to robust gross domestic product (GDP) growth. Long-term problems include low investment and uncertain property rights. The political turmoil in Fiji has had a severe impact; the economy shrank by

8 percent in 1999, and more than 7,000 people lost their jobs. The economy seemed to have recovered by 2004, growing at a rate of 4.8 percent.

ENVIRONMENT

As an idyllic Pacific island with few manufacturing industries, it might be expected that Fiji is free from many of the environmental problems to which mainland nations are subject. The two main islands have a rich ecosystem. But Fiji's natural beauty and marine attractions are in themselves the cause of some of its pollution; indeed, many problems are caused by the tourism industry itself. Resorts typically dump their wastewater straight into the ocean, where it kills the fish tourists come to see. Coral sand extraction, oil and gas exploration, sewage and waste disposal, and overfishing pose a serious threat to the marine environment. Toxic waste, sewage, and air pollution persist in urban areas, while widespread use of pesticides, fertilizer runoff, and slumping and salination of groundwater contribute to pollution in rural areas. Inadequate farming practices on sloped land and poorly managed logging operations cause soil erosion. Soil transported into coastal ecosystems smothers coral reefs, chokes mangroves, and reduces the local fish population. Since 1969 there has been a more than 40 percent reduction in Fiji's forest resources, primarily as a result of logging. The loss of forest cover is particularly threatening to the highly diverse native flora as well as to the few species of wildlife. In many places the landscape is barren.

In 2003 Fijians launched a plan to protect their coral reefs from pollution and from dangerous crown-of-thorns

starfish, which eat coral. Fijian women have been working with a group called Ecowoman to discuss ways to protect the environment while maintaining the economy.

LIVING CONDITIONS

Traditional Fijian homes are bamboo and thatch structures built on raised mounds; the higher the mound, the higher the family's status. Modern homes are more commonly built of corrugated iron and concrete blocks. A typical house has one room and little furniture. People sleep and eat on the floor and share all possessions. The women cook in a smaller hut separate from the living quarters.

Most Indo-Fijians live in the cities. Many ethnic Fijians have also begun moving to the cities to find work. As a result, it has become difficult to find housing in urban areas, and homelessness is becoming a problem.

Public transportation is good. There are regular boat and ferry connections between most of the islands, and air service is fast and reliable, though more expensive than boats. Larger islands have bus systems.

HEALTH

Fiji is a healthy place, with a life expectancy of nearly 70 years. It has a good public health system; the government subsidizes most of the cost, and patients pay small fees for services. There are numerous hospitals and clinics throughout the island system, and even the smallest islands have airstrips where medical staff can land. Diseases such as malaria, dysentery, and tuberculosis are uncommon, though dengue fever and filariasis do occur.

Sexually transmitted diseases and alcoholism have been increasing, and the government is trying to educate people about them. Some fish have become poisonous due to water pollution, and pollution has also harmed the drinking-water supply.

Indigenous Fijians like to visit traditional healers instead of modern doctors or nurses. Healers can be either men or women. They diagnose two kinds of illness, spiritual and physical, and they prescribe herbs or massage for treatment. Kava is commonly prescribed as a diuretic.

FOOD AND NUTRITION

The typical Fijian meal consists of a large portion of some starch, such as cassava, yam, breadfruit, or taro, and a side dish to give the starch flavor, such as meat, fish, or vegetables. Taro leaves cooked in coconut milk are a popular side dish. Fish is a common food and is prepared in a variety of ways, such as baked or marinated in lime juice. Villagers will work together to catch fish by standing in a circle in the water and gradually driving the fish to the center of the circle, where women can catch them in nets. For feasts people prepare meats by roasting them in pits filled with coconut husks. People also enjoy eating *balolo*, a small ocean worm that can only be caught two nights out of the year. Different ethnic communities have different cooking styles. Chinese and Indian Fijians eat a great deal of rice and curry as well as typical native dishes. Muslims do not eat pork, and Hindus do not eat beef. Most of the different ethnic traditions have blended together. Almost all people drink kava, a mildly narcotic drink made from the *yagona* plant.

STATUS OF WOMEN

Few women hold high-level economic or political positions. There is a growing awareness among women of both the Fijian and Indian communities of their right to participate more actively in social and political endeavors outside their homes. As Fiji modernizes, more women work in the cities especially, where they gain employment as nurses or teachers or in garment factories. Women in

the rural areas continue to fill the traditional roles of village life. Tribal inheritance is usually based on a patriarchal system. Women can and do, however, inherit status as chiefs; Fiji's third-highest-ranking chief is a woman.

Official policy favors the reduction of population growth and supports family planning. Fiji is among the countries participating in the World Fertility Survey. The private Family Planning Association, founded in 1962, plays an active role in the distribution of contraceptives and the monitoring of birth-control programs. In 1982 a total of 33.4 percent of married women of childbearing age were believed to use family-planning services.

WORK

Approximately 70 percent of the workforce is employed in agriculture—including subsistence agriculture—growing sugarcane, coconuts, cocoa, ginger, vanilla, and bananas for export and other foods for themselves. Many work in forestry or fishing. Tuna is an especially lucrative fish. Thousands of people work in garment factories, making clothing to sell in North American markets. Gold mines employ some Fijians. About 40,000 work in the tourism industry.

EDUCATION

Education is free but not compulsory for the first eight years. Parents must pay for secondary school, but state subsidies are available in cases of hardship. Schooling consists of 12 years, as divided into eight years of primary school and four years of secondary school. The curriculum is of British origin, and courses culminate in British school certificates. The academic year runs from January to December. Instruction is in English, but Fijian is taught in all schools. Though the state

does not segregate its ethnic groups, Indians and native Fijians usually attend separate schools. Of the over 700 schools, only a very small portion are controlled by the government; the rest are run by Christian missions or other private organizations.

The University of the South Pacific, jointly owned by 12 Pacific island nations, has a campus in Suva. Suva is also home to a medical school, a nursing school, an agricultural college, and an institute of technology. There are vocational colleges throughout the island system.

Almost all children attend primary school. Indian children are more likely than Fijians to graduate from secondary school and attend college or university. The Ministry of Education has tried to correct this imbalance by offering scholarships to Fijians and reserving half of the first-year seats at the university for them. The government has also made efforts to keep girls in school as long as boys.

SCIENCE AND TECHNOLOGY

Fiji has an Institute of Technology in Suva. Maritime studies and fisheries are specialties. The country has become increasingly interested in marine ecosystems and preventing water pollution. Many of the institute's graduates go into mechanical, civil, or electrical engineering.

Fiji has a fairly modern and sophisticated technological infrastructure, with cable connections, many telephone lines, and a large number of Internet users.

MEDIA

Two dailies are published in English at Suva. In addition, five nondailies and periodicals are published in English, three in Fijian, and three in Hindi. All but one are published in Suva. Newspapers regularly criticize the government, and politicians have protested this treatment. There is no national news agency, but the government public relations office supplies news to the media. Fiji has a modest book publishing industry, with at least four active full-time publishers. Fiji adheres to the Berne and Universal Copyright conventions.

Radio is the main source of information on the islands. The official broadcasting organization, the Fiji Broadcasting Commission (FBC), operates 10 medium-wave and FM transmitters at Suva and Lautoka. The domestic service is on the air for 110 hours per week in English, 54 hours in Hindi, and 38 hours in Fijian. The content of all broadcasts is subject to government control.

Most of the films shown in the country are of U.S. or Indian origin. The largest libraries are the Suva Public Library, the University of the South Pacific Library, and the Western Regional Library at Lautoka. There is one museum, with annual attendance of over 40,000.

CULTURE

The culture of Fiji blends Hindu, Muslim, Chinese, and native traditions. Holidays are an important part of social life. Christmas is a major festival for most people; Diwali and Holi are significant to Hindus, and Ramadan and Eid al-Adha are important to Muslims. The Hibiscus Festival takes place in Suva for one week every summer. Lautoka holds a Sugar Festival every September.

Fiji has many beautiful traditional art forms. Women dye cloth in elaborate patterns. Pottery, basket weaving, and woodcarving are all common. Music, singing, and dancing are all important parts of social life and festivals. Fijian choral singing is famous around the world. Indian artistic traditions have become part of Fijian culture; Indians perform traditional Hindu dances and music at their own festivals.

Fiji has produced a number of authors, most of whom write in English. They include novelist Joseph Veramu,

playwrights Vilsoni Hereniko and Jo Nacola, and writers Marjorie Crocombe, Subramani, and Raymond Pillai.

FOLKLORE AND MYTHOLOGY

Traditional Fijian mythology taught that there are many deities, all led by the snake god Degei. The spirits of ancestors were also important to the lives of the living. Before taking any action, priests would have to consult the deities and ancestors and perform rituals. The practice of cannibalism was part of a ritual in which people would consume the flesh of their enemies and therefore also consume their spirits. Fijians have kept their myths and legends alive through oral tradition, storytelling, and singing. At festivals, people will wear traditional costumes woven of leaves and perform war dances, humorous dances, sultry dances, or reenactments of legendary events. Most Fijians still believe in ancestral spirits and consume kava as a way of reuniting with their forebears. Many Fijians, including Indians, perform fire walking as a means of purification.

ENTERTAINMENT AND RECREATION

Kava drinking is the most popular activity in Fiji. People will spend hours in the evening drinking kava and talking, and a morning kava break is a standard part of the workday. Markets sell a wide variety of objects, from fruits and vegetables to traditional war clubs. Scuba diving, snorkeling, and other water sports are all extremely popular and among the main reasons tourists come to Fiji.

ETIQUETTE

Fijian families typically eat together, sitting on the floor. Indian families eat together at ordinary meals but follow an elaborate hierarchy of rank on formal occasions, when guests eat first, starting with the older men; hosts may not eat until the guests are completely finished.

The most important formal ceremony is the kava-drinking ceremony. People sit around a large wooden bowl;

a braided cord runs from the bowl to the guest of honor. The person running the ceremony mixes crushed *yagona* root with water to make the kava. The guest of honor drinks first and then the other participants take their share.

The giving of gifts is extremely important. A guest always brings a small gift for his or her hosts; *yagona* root is standard. The most valuable gift is a polished sperm whale tooth; no one keeps these teeth indefinitely, instead passing them on to other people. It is extremely rude to refuse a gift.

Tipping is not expected.

FAMILY LIFE

Traditional Fijians are members of a tribe that is subdivided into several clans, each of which includes several extended families. Older people are held in high esteem. Brothers live near one another and treat one another's children as their own. All adults in a community care for all of the children. Parents are rarely affectionate to their children in public, though they do love them. Though the father is considered the head of the household and women do most of the housework, husbands value the work women do and are expected to show humility to their wives.

Relatives are always welcome to stop by a family's home. When one family has guests or otherwise needs help, other families will give what they have of food or other items.

Indian families follow the Hindu caste system. Families arrange marriages within castes. Indians and Fijians almost never marry one another.

PERSONAL APPEARANCE

Typical Fijian attire is the *sulu*, a kind of sarong or wrap-around skirt. Men and women both wear it, but they tie it differently. Fijian men sometimes wear a shirt, tie, and suit jacket over a dark grey *sulu*. In traditional times, hair expressed a man's status. Fijian men devoted hours to arranging their hair; they would dye it different colors and make it into unusual shapes. A chief might spend two days in a row with his hairdresser, creating a sculpture more than six feet across.

SPORTS

Rugby and soccer are the two most popular sports in Fiji. Native Fijians like rugby, which boys begin playing in school. Fiji's national rugby team is one of the best in the world. The Indian community prefers soccer, which they learned from the French during colonial times. People also play cricket, volleyball, field hockey, wrestling, golf, and lawn bowling. Fiji has sent representatives to the

Summer Olympics since 1956, and it hosted the South Pacific Games in 1963 and 2003.

Outrigger canoe racing is an important traditional sport. The 1998 world championships were held in Fiji. Fijians have surfed the waves for centuries. They also enjoy whitewater rafting on the islands' rivers. Children like to play a game similar to baseball.

CHRONOLOGY

- 1943** Fiji is occupied by Allied forces waging the Solomon Islands campaign; Fijian Indians, offered far less money than their ethnically European and Fijian counterparts, decline to work for the war effort.
- 1962** The Fijian legislative council is reconstituted.
The franchise is extended to women.
- 1966** Fiji is granted internal self-government.
- 1970** Fiji becomes a sovereign and independent state within the Commonwealth, with Ratu Sir Kamisese K. T. Mara as prime minister.
- 1972** In elections to the House of Representatives, Sir Kamisese's Alliance Party wins 33 of 52 seats.
- 1973** Ratu Sir George Cakobau is named governor-general, succeeding Sir Robert Foster.
- 1974** The Fijian dollar's link with sterling is severed.
- 1977** In elections to the House of Representatives, the Alliance Party improves its majority by capturing 35 seats.
- 1978** The Emperor Gold Mining Company, the nation's fourth-largest employer, lays off 1,000 employees.
- 1982** In elections to the House of Representatives the ruling Alliance Party loses eight seats but maintains a majority.
- 1983** Governor-General George Cakobau dies and is succeeded by Penaia Ganilau.
- 1985** The Fiji Labour Party is founded by leaders of the Fiji Trades Union Congress.
- 1987** In the April elections the ruling Alliance Party is defeated by a coalition of the National Federation Party (NFP) and the Fiji Labour Party (FLP). Lt. Col. Sitiveni Rabuka leads a military coup that overthrows the government. On September 22 Timoci Bavadra of the FLP and Ratu Sir Kamisese Mara of the AP agree to form an interim bipartisan government. Three days later Rabuka stages a successful second coup. Rabuka revokes the constitution and declares Fiji a republic.
- 1988** A new draft constitution ensuring key government positions for ethnic Fijians is proposed by the interim government.
- 1990** Rabuka resigns from the cabinet; Mara agrees to remain as prime minister of the interim government; the new constitution is promulgated by decree of the president; the NFP and FLP claim they will boycott any elections held under the new charter.
- 1994** Mara is once again reelected prime minister of a coalition government that guarantees a majority of seats for ethnic Fijians.
- 1997** Fiji rejoins the Commonwealth.
- 1998** A new constitution is established creating an ethnic balance between native Fijians, Indians, and other groups.
- 1999** In the May elections, the FLP defeats Rabuka's Fijian Political Party, and Mahendra Chaudhry, an ethnic Indian, becomes prime minister.
- 2000** In May, George Speight leads Fijian ethnic nationalists, who take hostage Prime Minister Chaudhry and 26 others in an attempt to roll back Fiji's efforts at creating a multiethnic society; in July the military storms the rebel stronghold and releases the hostages, and the Great Council of Chiefs appoints Ratu Josefa Iloilo president. George Speight and 369 of his supporters are arrested and charged with treason.
- 2001** The Fiji High Court rules that the military-backed government is illegal. Parliamentary elections in August bring the Fijian United Party to power. Its leader, Laisenia Qarase, is named prime minister and refuses to admit members of the Labour Party to his cabinet. Fiji is readmitted to the Commonwealth.
- 2002** Speight is sentenced to death, but Iloilo commutes his sentence to life in prison. Government announces privatization plan to shore up sugar industry.
- 2003** Supreme Court rules that Qarase must include Labour Party members in his cabinet.
- 2004** Vice President Ratu Jope Seniloli is found guilty of treason during the 2000 coup attempt.

January 1 (New Year’s Day), December 6 (Independence Day), all major Christian festivals

DATE OF INDEPENDENCE

December 6, 1917

DATE OF CONSTITUTION

March 1, 2000

GEOGRAPHICAL FEATURES

Finland is in the far north of the European continent, with one-third of its territory above the Arctic Circle. Its coastline on the Gulf of Finland, the Baltic Sea, and the Gulf of Bothnia is deeply indented and studded with islands. The capital is Helsinki, on a peninsula on the Gulf of Finland west of the estuary of the Vantaanjoki. It was founded in 1550 by Gustavus Vasa about four miles north of its present site, to which it was transferred when the old site was destroyed by fire in 1640. It became the capital in 1812. There are at least 15 other cities with a population of over 40,000.

The Finnish landscape is characterized by a rather asymmetric distribution of hills and plains, with higher elevations to the north. More than half of eastern Finland is hilly, with the land gently sloping toward the southwest. Paralleling the coast of the Gulf of Bothnia is a belt of plains. The separation between these plains and the hills is rather sharp in the north compared with the southwest. The surface of the land has been scoured and gouged in recent geological times by glaciers that have left thin deposits of gravel, sand, and clay. The resulting formations can be seen most clearly in the shape of complex features such as the Salpausselka ridges and numerous eskers running north to west and south to east.

Finland

Another reminder of the Ice Age is the fact that Finland is still emerging from the sea, such that its area grows by 7 sq km (2.7 sq mi) annually and the land rises 1 to 3 ft every 100 years.

The entire Finnish coast is paralleled by an island zone that reaches its greatest breadth and complexity in the southwest. Finland's offshore islands number in the tens of thousands—the Åland Archipelago alone has nearly 7,000. The Åland and Turku archipelagoes are rich in flora and fauna and abound in fish.

Finland's coastal zone is appropriately known as the golden horseshoe. It is dominated by the two cities of Helsinki and Turku (Åbo), the former capital of the country, situated on the mouth of the Aurajoki. The developed coastal zone extends northward from Turku through the so-called Vakka Suomi and on to the Koke-maki River, which drains the lakes of Häme to the port of Pori. Eastward the coastal plain extends to the Russian border. Ostrobothnia (Pohjanmaa to the Finns) also has its coastal zone. It is a land of little relief but of many rivers. Its southern coastal plains, the broadest in Finland, are traversed by a series of parallel flowing rivers, such as Oulujoki, Finland's most impressive river, Ijoki, Simojoki, Kemijoki, and Tornionjoki.

Lakes cover a greater part of southern Finland. In relation to its size Finland has more lakes than any other country. There are 55,000 small lakes and 19 large lakes, including the artificial reservoirs of Lokka and Portipahhta. The largest, Lake Saimaa, is the fifth largest lake in Europe. The lakes are dominated by long, sinuous esker ridges clad in lofty pines and flanked by sandy beaches. Such ridges as Punkaharju, Pyynikki, and Pulkila are nationally renowned.

The eastern part of Finland is Karelia, part of which was ceded to the Soviet Union by the Armistice of 1944 and the Peace Treaty of 1947. It is dominated by the Saimaa Canal.

Nearly half of Finland's land area is the North Country, or Nordkalotten (Pohjoiskalotti in Finnish), the land of the Lapps. The timberline passes through it. Below and above the tree line the North Country has extensive swamps, and about one-third of the area is covered with bog land. The North Country is intersected by some of the country's longest rivers, such as the Kemi, Muonio, and Tornio. Many of these rivers empty into the freshwater Gulf of Bothnia, but some, such as the Paatsjoki and Tenojoki, drain into the Arctic, and others have carved dramatic gorges through to Russian Karelia.

Turku	239,018

CLIMATE AND WEATHER

The Finnish climate is considerably warmer than the country's location close to the Arctic Circle might seem to warrant. Temperatures are ameliorated by the Baltic Sea and the west winds that bring air currents from the Atlantic warmed by the Gulf Stream. In contrast, winds from the Eurasian continent bring cold spells in winter and heat waves in summer. Winter is the longest season. Its short dark days are made up for by the long, light nights of summer. In most of Lapland, the dark-free summer, when the sun does not go below the horizon, lasts more than 70 days. The snow cover lasts for more than 90 days in the southwest and up to 250 days in the north.

Climate and Weather

Summer: 55°F to 68°F

Winter: 9°F to 27°F

Average Rainfall

South: 24 in to 28 in

North: 20 in to 24 in

FLORA AND FAUNA

Finland is one of the most densely forested countries in Europe, with pine, spruce, and birch forests covering about 75 percent of the terrain. In the north much of the soil is covered by reindeer moss. In the forests to the south, below the Arctic Circle, many types of berries can be found. Water lilies cover Finland's lakes. Throughout the country can be found such flowers as marguerites and buttercups. Finland also provides many varieties of mushroom.

The fauna of Finland includes bear, wolf, lynx, fox, wolverine, and fur-bearing animals such as mink, marten, and ermine. The size of the reindeer herds has been diminishing. Lemmings live in high areas above the tree lines, and elk can be found primarily in southern Lapland. Finland

has 11 species of frogs and reptiles and about 350 species of birds (230 migratory species). The seas contain 77 species of fish, including pike, bass, perch, salmon, and trout.

ETHNIC COMPOSITION

The overwhelming majority of the population is Finnish. National minorities include the Swedish Finns, whose language enjoys an official status on a par with Finnish, as well as the Sami (Lapps) and the Romani (Gypsies). The Swedish-speaking minority makes up less than 6 percent of the population, down from some 14 percent in the late 19th century. That minority traces its origins to the Swedish colonists from between the 12th and 19th centuries, when Finland was under varying degrees of Swedish rule. The Swedish culture is strongest in the autonomous Åland (Ahvenanmaa) Islands, where Swedish is the primary language, and around Turku, but it blends with Finnish culture around Helsinki.

The number of Sami is estimated at under 6,000. Generally, Sami are divided into two groups: mountain Sami, who are reindeer herders, and forest Sami, who are farmers and fishermen. Younger Sami are giving up their traditional lifestyles and adopting Finnish customs and lifestyles. The constitution recognizes the Sami as an indigenous people and guarantees that minority groups such as the Sami and Romani have the right to maintain their language and culture.

Romani seem to have first appeared in the region of Finland in the 16th century. At the end of the 20th century they numbered several thousand, living primarily in or near the urban areas of southern Finland.

Some 104,000 foreign nationals, among them Russians, Estonians, and Swedes, were residents of Finland in 2002, up from 21,000 at the beginning of 1990. Among the foreigners were several thousand refugees from such countries as Somalia, Vietnam, and Iraq.

LANGUAGES

Finnish is spoken by nearly all inhabitants of the country. Swedish is spoken by a large minority, with Russian, Estonian, and Sami all also spoken by smaller minorities.

RELIGIONS

The central facet of Finnish religious life is the dominance of Lutheranism. In 2003 approximately 84 percent of the population was registered with a parish of the Evangelical Lutheran Church. Both the Eastern and Western branches of Christianity reached Finland by the 12th century. Finland was largely pagan before the crusade by Eric IX of Sweden in 1155.

The Evangelical Lutheran Church is divided into nine dioceses, including one Swedish-speaking diocese, and some 80 deaneries. There are 576 parishes, which range in size from a few hundred members to tens of thousands.

The status of the church is defined by the constitution and the Ecclesiastical Law and may be described as a "special relationship." The government consults the Church Assembly on issues touching on such "mixed matters" as marriage, divorce, oaths, the care of the poor, and religious instruction. The state, in turn, has a voice in church administration, particularly regarding such matters as whether new dioceses and parishes should be founded and whether new churches should be built. The church and state also cooperate on other programs. The church keeps records of births, marriages, and deaths of all members and cares for most of the country's cemeteries. Roughly half of Finnish children aged four to six make use of day-care facilities provided by the church. On its side, the state pays the salaries of the theological faculty of the National University and provides chaplains and religious instructors for the army, navy, prisons, and hospitals. The second-largest church is the Finnish Orthodox Church, with nearly 60,000 members in 2002, divided among 25 parishes. There are three dioceses: Karelia, Helsinki, and Oulu. Like the Evangelical Lutheran Church, the Finnish Orthodox Church has enjoyed special status as a national church. Its chief source of revenue is the church tax.

The Roman Catholic Church was entered on the register of religious groups in 1929. The diocese of Helsinki still has a relatively small membership, with approximately 5,000 in the year 2000, and just seven parishes.

Among other religious communities in Finland, the Pentecostals are almost as numerous as the Orthodox. Smaller groups include the Finnish Evangelical Free Church, Seventh-Day Adventists, Baptists, Methodists, Jehovah's Witnesses, Mormons, and Jews. By 2000 the proportion of the population unaffiliated with any church was about 10 percent, up from 2.7 percent in 1950.

Up to the end of the 19th century, Finns had to be members of either the Lutheran or Orthodox church. With independence, the state adopted a more neutral stance toward religion. Complete freedom of religion was guaranteed by the Freedom of Religion Act of 1923. Schools provide religious instruction, but this is in accord with the beliefs of the majority of the students at the school, and students who do not belong to any denomination may study other philosophies of life.

HISTORICAL BACKGROUND

The ancestors of modern day Finns were a Mongoloid people who reached Finland in the early centuries of the Common Era. The region fell under the control of the Swedes following several religious crusades, the first in 1154. By 1293 Swedish rule extended as far as Karelia. Finland shared Swedish history for the next six centuries. In Finland proper, Swedish became the official language while Finnish continued to be spoken by the peasantry, but both Swedes and Finns shared a common faith, first Catholic and then Lutheran. After Sweden's military defeat in 1808–09, Finland was transferred to Russia. Alexander I granted Finland a privileged autonomous status as a grand duchy, and the Finns never revolted, unlike the Poles, and succeeded in retaining a large measure of autonomy. The czar respected the Lutheran religion and never imposed the Russian language on the Finns. During the era of conservative reaction (1809–62) a liberal nationalist movement emerged.

During World War I, Finland took advantage of the Russian Revolution to declare independence on December 6, 1917. A short civil war ensued (January 28–May 10, 1918) in which the Finnish war hero Karl Mannerheim beat off both Germany and the Russian Bolsheviks. In 1919 Finland became a democratic and parliamentary republic. During the next 20 years, following the settlement of disputes with Sweden over the Åland Islands and with the Soviet Union over East Karelia, Finland made considerable economic and social progress as a nation. However, at the beginning of World War II, the Soviet Union demanded territorial concessions from Finland and, when they were rejected, invaded the coun-

try in 1939. A large area, including the Karelian Isthmus, Viipuri, and the northwest shore of Lake Ladoga, were ceded to Russia in the peace treaty of 1940. After the German attack on Russia in 1941, the Finns took part in the campaign on the side of the Axis powers. With German defeat, Finland was forced to sign an armistice under which it ceded Petsamo and agreed to lease Porkkala headland to Russia as a military base. It also undertook to pay reparations.

A new Treaty of Friendship and Mutual Assistance was signed with the Soviet Union in 1948. Finnish politics from World War II to 1994 were marked by a considerably stable presidency under three Finnish statesmen—J. K. Paasikivi (1946–56), Urho K. Kekkonen (1956–81), and Mauno Koivisto (1981–94)—and a volatile parliamentary system with short-lived coalition governments based on shifting alliances. Most have been center-left administrations dominated by the Social Democratic Party, especially under the premiership of Kalevi Sorsa between 1972 and 1987. In 1995 Finland joined the European Union. In May 1998 Finland agreed to replace its national currency with a new single European currency; the euro was officially adopted in 2002. In February 2000 Tarja Halonen of the Social Democratic Party became Finland's first female president.

In 2002 the Finnish parliament approved construction of the nation's fifth nuclear power plant, the first in western Europe since 1991 and the first in Finland for 30 years, prompting the Green Party to withdraw from the government coalition. In 2003 the Center Party of Anneli Jäätteenmäki defeated the Social Democrats in the general election and formed a new coalition with the Social Democrats and the Swedish People's Party, but two months later Jäätteenmäki resigned in the face of charges that she had illegally obtained secret documents about the war in Iraq when she was opposition leader. (She was acquitted of these charges in 2004.) Matti Vanhanen took over as prime minister.

LIST OF MODERN RULERS

President

1946–56	Juho Kusti Paasikivi
1956–82	Urho Kaleva Kekkonen
1982–94	Mauno Henrik Koivisto
1994–2000	Martti Oiva Kalevi Ahtisaari
2000–	Tarja Kaarina Halonen

Prime Minister

1946–1948	Mauno Pekkala
1948–1950	Karl Fagerholm
1950–1953	Urho Kekkonen
1953–1954	Sakari Tuomioja
1954	Ralf Törngren
1954–1956	Urho Kekkonen
1956–1957	Karl Fagerholm

1957	Vaino sukselainen
1957–1958	Rainer von Fieandt
1958	Reino Kuuskoski
1958–1959	Karl Fagerholm
1959–1961	Vaino sukselainen
1961–1962	Martti Miettunen
1962–1963	Ahti Karjalainen
1963–1964	Reino Lehto
1964–1966	Johannes Virolainen
1966–1968	Rafael Paasio
1968–1970	Mauno Koivisto
1970	Teuvo Aura
1970–1971	Ahti Karjalainen
1971–1972	Teuvo Aura
1972	Rafael Paasio
1972–1975	Kalevi Sorsa
1975	Keijo Liinamaa
1975–1977	Martti Miettunen
1977–1979	Kalevi Sorsa
1979–1982	Mauno Koivisto
1982–1987	Kelevi Sorsa
1987–1991	Harri Holkeri
1991–1995	Esko Aho
1995–2003	Paavo Lipponen
2003	Anneli Jäätteenmäki
2003–	Matti Vanhanen

CONSTITUTION

A new constitution took effect in Finland on March 1, 2000. It consolidated and updated the previously existing body of constitutional law, which consisted of four separate constitutional acts dating from early in the 20th century plus numerous amendments. Much of Finland's earlier constitutional history was linked to that of Sweden and Russia.

Of the four fundamental laws at the basis of the former constitutional legislation, the most important were the Constitution Act of 1919 and the Parliament Act of 1928, which derived from the Parliament Act of 1906. The 1906 legislation, adopted during the period of Russian rule, established one of the most modern forms of representative government in Europe. It replaced the previous Diet comprising four estates with the unicameral Eduskunta, a legislature of 200 members elected on the basis of proportional representation and universal suffrage.

The new constitution that came into force in 2000 by and large preserved the fundamental principles of the previous constitutional legislation but strengthened the parliamentary features of the Finnish system of government. The individual rights of citizens are guaranteed in chapter 2 of the constitution, which declares that everyone is equal before the law. These rights encompass freedom of movement, speech, religion, and association and freedom from arbitrary arrest. The right to vote in national elections and referendums is guaranteed to all

Finnish citizens who are at least 18 years old. The chapter also mandates protection of the right to privacy, the right to receive a basic education, and the right to gainful employment and to social security. While confirming that Finnish and Swedish are the national languages, it requires that the rights of the Sami, Romani, “and other groups” to maintain their languages and cultures be protected. Chapter 2 also imposes on everyone a responsibility for protection of the environment.

The primary responsibility for ensuring that legislative proposals do not violate the constitution rests on the Eduskunta, with its Constitutional Law Committee playing a leading role. There are two ways in which the constitution may be amended. Under the normal procedure, a proposal must first be approved by the Eduskunta and left in abeyance, by a simple majority, until the first parliamentary session after the next general election. At that time it may be adopted if it has not been materially altered and receives at least two-thirds of the votes cast. The other procedure is more rapid, to permit timely responses to emergency situations. Under this procedure the Eduskunta must declare the constitutional proposal urgent, by a five-sixths majority. The proposal can then be adopted, without abeyance, if it receives a two-thirds majority.

The constitution spells out the separation of powers among the governmental branches, guaranteeing legislative authority to the Eduskunta, which also makes decisions on state finances. Executive power is vested in the president and in the Council of State, or government—that is, the prime minister and the other ministers. Judicial authority is granted to independent courts of law, with the highest courts being the Supreme Court and the Supreme Administrative Court.

The president is elected by direct vote for a term of six years and may serve no more than two consecutive terms. Impeachment of the president, on grounds of treason or an offense against humanity, requires a three-fourths vote in the Eduskunta. Traditionally the president has no party ties while in office.

The powers of the Finnish presidency are more circumscribed than they were decades ago. Nonetheless, the president wields substantial authority as commander in chief of the armed forces and as head of state, and the president continues to direct foreign policy (although the constitution now specifies that this be done “in cooperation with the Council of State”). The president appoints the prime minister (upon election by the Eduskunta) and cabinet ministers (upon nomination by the prime minister). The president, the Council of State, and ministries may issue decrees in accordance with the authority granted them in the constitution or by law, but principles involving the rights and obligations of private individuals and other matters of a legislative nature are governed by parliamentary acts.

Upon proposal by the prime minister, the president can dissolve the Eduskunta and can dismiss the Council of State or a minister. (Dismissal is also possible if the Council

of State ceases to enjoy the confidence of the Eduskunta.) The powers of the president also include the appointment of department heads and judges and the issuance of pardons. The chancellor of justice, who monitors the actions of officials and others performing public duties to make sure they are in accordance with the law, is appointed by the president and is attached to the Council of State but has no vote. Although the president is the supreme commander of the armed forces, command may be transferred to another Finnish citizen upon recommendation by the Council of State. This was the case when President Kyosti Kallio named Marshal Carl Gustav von Mannerheim commander in chief in 1939 at the outset of the Winter War.

Most legislative initiatives in the Eduskunta are proposed by the government, although individual members of the Eduskunta also have the right to submit bills. The State Council's responsibility to the Eduskunta is expressed largely through interpellations by 20 or more representatives addressed to the government or an individual minister, with a response required in a plenary session of the Eduskunta within 15 days. There is also a question hour, introduced in 1966, when members may cross-examine ministers once a week.

By the year 2003 Finland had had 68 governments since its 1917 declaration of independence. Some lasted just a few months, and one, the third cabinet of Julio Vennola in 1931, held office for less than a month. The longest-serving government was the first administration of Paavo Lipponen, which took office in 1995 and lasted 1,464 days.

PARLIAMENT

The national legislature is the unicameral Eduskunta (Riksdag in Swedish) of 200 members, elected by universal suffrage in a proportional representation system known as the d'Hondt method. A party receives seats in the Eduskunta in proportion to the number of votes received by that party in each electoral district. The period between elections cannot exceed four years. While the Eduskunta is in session, the president has the right to dissolve it, upon the recommendation of the prime minister and after having consulted the parliamentary groups. The Eduskunta is ordinarily in session almost year-round, except in the summer and on state holidays. Parliamentary activity tends to take place along party lines. When a new government is formed, it must immediately present a statement of its program to the Eduskunta for a show of confidence.

At the outset of each session the Eduskunta chooses from among its members a speaker, whose duties include chairing plenary sessions of the Eduskunta. Also chosen are two deputy speakers, who, together with the speaker and the heads of the select committees, constitute the Speaker's Council, which directs the Eduskunta's work. The Eduskunta appoints a parliamentary ombudsman

and two deputy ombudsmen, who are expected to be prominent jurists. The ombudsman oversees the courts, public officials, and other individuals performing public duties to make sure they obey the law, fulfill their responsibilities, and maintain fundamental and human rights.

Committee work undergirds all legislative activity; the committees' makeups generally reflect the relative strengths of the various parties. Ministers, the speaker, and deputy speakers are not permitted to be committee members.

The so-called Grand Committee, with 25 regular members (plus 13 alternates), was once most important in playing a sort of supervisory role, making up for Finland's lack of an upper house. The Grand Committee is now the main committee responsible for studying EU matters on behalf of the plenary session.

The ultimate forum is the plenary session, in which party groups are seated from the speaker's left to the speaker's right in ideological order. The agenda is prepared by the speaker, who is not allowed to take part in debates or vote in plenary sessions. Legislative proposals must ordinarily be considered in plenary session in two readings. Discussion precedes vote, and no time limit is placed on speeches, interjections, or replies; indeed, members of the Eduskunta enjoy broader freedom to speak on all matters under consideration than is found in the parliaments of many other countries. This right is protected in the constitution.

Matters considered by the Eduskunta may be in the form of bills submitted by the government or legislative, budgetary, or petitionary initiatives put forward by members. After a piece of legislation is approved by the Eduskunta, it is submitted to the president for ratification. If the president does not ratify it, the measure is returned to the Eduskunta for reconsideration; if readopted without material changes, the measure becomes law without ratification. In addition to its legislative function, the Eduskunta supervises the governmental administration, maintaining oversight over financial management and budget compliance with the assistance of the independent State Audit Office.

All Finnish citizens who have reached the age of 18 have the right to vote. For general elections the country is divided into at least a dozen electoral districts, with seats varying in number based on the number of citizens residing in the district. The semiautonomous Åland (Ahvenanmaa) Islands are guaranteed their own constituency, with one representative. As of the year 2004 Finland had 15 electoral districts, including the one for Åland.

POLITICAL PARTIES

The Finnish Center Party, or Kesk, was once known as the Agrarian League and still has a strong rural base of support. Other prominent political parties include the Social Democratic Party, which is socialist; the Chris-

tian Democrats; the Green League, an environmentalist party; the Left Alliance, composed of the People's Democratic League and Democratic Alternative; the conservative National Coalition Party; and the Swedish People's Party for Swedish speakers.

LOCAL GOVERNMENT

The main units of local administration are the municipalities, which carry the primary responsibility for providing citizens with education, health, social welfare, and other basic services. Finland has been divided into six provinces since 1997, when nine of the previous 12 provinces were combined into three in an effort to streamline the administration and improve efficiency. The provincial administrations monitor the provision of services by the municipalities, provide regional commands for police and rescue services and the like, and carry responsibility for inspections and certain licenses. The provincial governors are appointed by the president. As of 2004 Finland was divided into 15 electoral districts for parliamentary elections. Under the Local Government Act of 1995 the only official form of local government is the municipality, although a particular municipality may be called a town or city. Municipalities vary enormously in land area and population size. The highest administrative organ of a municipality is the Local Council, elected every four years. This body names the Local Executive Board, which oversees the management of local government functions in accordance with the council's decisions. The board's executive officer is the municipal manager. Vocational colleges, hospitals, and other operations that may be too large and expensive for individual municipalities, especially smaller ones, to deal with may be handled by intermunicipal corporations, of which there are a few hundred in Finland.

At the beginning of 2004 Finland had a total of 452 municipalities, 67 of which were urban municipalities, 70 semiurban municipalities, and 315 rural municipalities. Citizens of other countries residing permanently in Finland are permitted to vote in municipal elections.

The Swedish-speaking Åland Islands (Ahvenanmaa) constitute a separate province and a separate electoral district and have a semiautonomous status under law. The power of the governor in this province is nominal and subordinate to that of the Lagting (Parliament), whose 30 members are elected every four years. The Lagting elects the Executive Board, with five to seven members. The speaker of the Lagting is the highest official in the province, ranking above the chairman of the Executive Board. The Lagting has legislative authority applicable to the province. In addition, it has special taxing and budgetary powers beyond those pertaining to other regions, including the right to levy an increment on state income revenues. Also, treaties between Finland and other countries that affect Åland cannot come into effect in the province without the Lagting's consent.

LEGAL SYSTEM

There are three types of courts: the general courts, a parallel system of courts of administrative law, and the special courts. Tenured judges are appointed by the president. The president also appoints the prosecutor-general (who heads the prosecution service), the chancellor of justice, and the deputy chancellor of justice. The Eduskunta appoints the parliamentary ombudsman and two deputies. The chancellor of justice and the parliamentary ombudsman safeguard the legal rights of citizens and the legality of state actions.

The general courts handle both civil and penal cases and exist in three tiers: the local courts, appellate courts, and the Supreme Court. In penal cases and in some civil cases the local court usually consists of a chairman and three lay members, with each having a vote. Less important cases may be dealt with by the chairman alone. Appeals of decisions by the local courts are handled by six appellate courts, located in Helsinki, Turku, Vaasa, Kuopio, Kouvola, and Rovaniemi. Each appellate court consists of a president and several councillors. The highest court is the Supreme Court, which accepts appeals of important cases from the appellate courts and also some special courts. It consists of a president and approximately 20 justices, with five justices constituting a quorum.

The system of administrative courts, headed by the Supreme Administrative Court in Helsinki, was established in the 20th century. A network of eight regional administrative courts serve as general courts for administrative matters. Most of the appeals handled by the regional administrative courts deal with tax issues. The courts also hear legal disputes between local and central government organs or private individuals and the government, as well as cases involving civil liberties, such as the confinement of a drug addict or a mentally ill person. Like the Supreme Court, the Supreme Administrative Court consists of a president and about 20 justices, with five required for a quorum.

Among the various special courts is the Court of Impeachment, which tries ministers and justices of the Supreme Court and the Supreme Administrative Court as well as the chancellor of justice and the parliamentary ombudsman when arraigned for illegal acts in the exercise of their official functions. This court also tries the president if the chief of state is charged with treason or an offense against humanity. The Swedish General Code of 1734 is still basic law in Finland, although only some articles and the general framework remain in force. The court system has undergone reform, and much of the code has been revised, since 1734.

The Finnish prison population has been dropping for decades, primarily because of a decline in convictions for crimes against property. Meanwhile, prisoners convicted of drug-related crimes or crimes of violence and/or robbery have increased slightly in recent years.

HUMAN RIGHTS

Finland has experienced no major violations of human rights in recent years. The constitution asserts that human dignity and the rights and freedoms of individuals shall be inviolable, although temporary exceptions to the guarantee of basic rights are allowed in such serious situations as an armed attack on Finland. The importance of the rule of law is underlined in the constitution. Everyone, it declares, shall be equal before the law. Discrimination on such grounds as “sex, age, origin, language, religion, convictions, opinions, state of health, disability” is barred “unless there is an acceptable reason for the same.” Among the rights guaranteed to all in the constitution are freedom of association and the right to hold meetings and demonstrations without a permit. The constitution prohibits the deportation or extradition of foreigners in cases where they face a risk of a “death sentence, torture or other treatment violating human dignity.” The chancellor of justice and the parliamentary ombudsman are responsible for supervising the implementation of human rights in public life. The ombudsman for aliens monitors discrimination against foreigners. The Council for Equality and the equality ombudsman oversee the progress of equal rights.

In 1999 Amnesty International accused Finland of imprisoning people for their conscientious beliefs under the Military Service Act, which came into effect the previous year. The law reduced the length of military service, but the alternative civilian service required for conscientious objectors remained as long as 395 days, more than twice the time served by half of the conscripts under the new measure; the penalty for refusing alternative service was imprisonment. Amnesty International argued that the length of alternative civilian service was punitive and violated international principles on conscientious objection.

FOREIGN POLICY

The constitution declares that Finland will take part “in international cooperation for the protection of peace and human rights and for the development of society.” The president, “in cooperation with the State Council,” is responsible for the direction of Finland’s foreign policy, which is implemented by the Foreign Ministry. The government, however, is required to keep the Eduskunta, in particular the Eduskunta’s Committee for Foreign Affairs and its Grand Committee (regarding European Union matters), informed of developments concerning foreign and security policy. Decisions on war and peace are made by the president with the consent of the Eduskunta.

Having lost two wars with the Soviet Union in 1939–44, Finland was constrained in the ensuing decades to maintain a *modus vivendi* with its powerful neighbor. Finland founded its foreign policy on the principles of neutrality and friendship with Moscow as well as of sup-

port for Nordic cooperation. In 1992, shortly after the collapse of the Soviet Union, Finland signed a new treaty with Russia that lacked the military obligations imposed in the old, superseded Soviet-Finnish agreement.

The Soviet Union had been Finland’s chief trading partner, however, and the new Russia floundered economically, creating severe stresses in the Finnish economy. Finland sought to energize its trade relations with the West. Finland applied in 1992 to join the European Union (EU), although the Finnish public was divided over the merits of EU membership. But EU membership won the endorsement of some 57 percent of the voters in a 1994 referendum and was subsequently approved by the Eduskunta. To allay concern that Finland would lose its neutrality, the Finnish leadership announced that the country would not move to gain admission into NATO. (Finland has cooperated with NATO’s Partnership for Peace program, however.)

After officially becoming a member of the EU on January 1, 1995, Finland joined in the movement toward economic and monetary union, adopting the new EU currency, the euro, in 1999, along with most of the other member states. Finnish policy has tended to support increased economic integration of the EU member countries, as distinguished from their political integration, for which Finland has shown less enthusiasm. Finland, not neglecting its traditional regional interests, pushed the EU to adopt a “northern dimension” policy aimed at promoting partnership with Russia and other countries in the vicinity of the Baltic and Barents seas in such fields as energy, the environment, and economic management. To promote democracy and regional stability, Finland has supported expansion of the EU to include additional countries in central and eastern Europe. Finland, along with other Nordic countries, has built close ties with Estonia, Latvia, and Lithuania.

Finland has for decades supported the central role of the United Nations in international peacekeeping operations and has taken an active role in them, although Finnish law imposes restrictions on participation in peace enforcement—that is, the use of military force to push warring parties to a peace settlement. Finland has also assisted in peacekeeping operations under the leadership of other organizations, such as the NATO-led International Fellowship of Reconciliation operation in Bosnia in the late 1990s.

Finland pursues its foreign policy objective of promoting human rights largely by working through the EU. Finnish aid to developing countries is delivered both via bilateral programs and through participation in EU assistance programs.

DEFENSE

The terms of the Treaty of Paris, signed with the Allied Powers after World War II in 1947, imposed certain re-

restrictions on the Finnish army. It limited the size of the armed forces to 34,400 men, the air force to 3,000 men and 60 combat aircraft, and the navy to 4,500 men with ships totaling 10,000 tons. The treaty also prohibited bombers, submarines, and missiles as well as nuclear weapons, but in a 1963 agreement Finland was allowed to acquire certain classes of defensive missiles. Today Finland's military consists of about 35,000 active-duty personnel, and the nation's defense budget is about 1.2 percent of gross domestic product (GDP).

The constitution requires every Finn to take part, or at least assist in, national defense. It vests supreme command of the armed forces in the president of the republic, who may, however, entrust this duty to another person, upon the proposal of the Council of State. The decision to mobilize the armed forces is made by the president, again upon a proposal by the Council of State. The chief military planning and coordinating body is the Defense Council, consisting of the prime minister, the ministers of defense, foreign affairs, interior, finance, trade, and industry, along with other ministers the president may name as members as well as the chief of defense and the chief of the general staff.

The armed forces consist of three military commands (western, eastern, and northern) as well as the air force and the navy, which are separate services with their own commanders in chief and headquarters.

Every Finnish male becomes subject to compulsory military service at the beginning of the year in which he turns 18 and remains on call until the end of the year he turns 60. Military service typically lasts 180, 270, or 362 days, depending on rank and skills. After this obligatory service conscripts enter the reserves and are subject to periodic refresher training.

Finnish participants in international peacekeeping operations are not permitted to total more than 2,000 at any given time. They are operationally subordinate to the organization carrying out the operation, such as the United Nations or the Organization for Security and Cooperation in Europe. However, they sign a contract with the Finnish government, and the Defense Forces help with peacekeeper training and readiness. In the late 1960s Finland became the first country to set up a separate peacekeeper training program. Between 1956 and 1999 more than 35,000 Finns served in United Nations peacekeeping missions worldwide. Almost all Nordic military observers are trained at an instruction center in Niinisalo; since 1984 trainees have also included officers from NATO members, the Baltic nations, Asia, and South America.

ECONOMY

During the 20th century Finland developed from a primarily agrarian possession of the Russian Empire, with industrial activity rooted largely in the abundant Finnish forests, into a member nation of the EU, with an advanced industrial economy occupying a prominent role in the information and telecommunications revolution transpiring at century's end.

The early 1990s were marked by severe recession, in part a reflection of economic disruption in the former Soviet Union, which had long been a key trade partner. By middecade, however, Finland was again registering substantial growth in GDP (4.8 percent a year in 1995–98, compared with 2.4 percent for the EU as a whole), although continuing high levels of unemployment (hovering around 10 percent at the end of the 1990s) remained a concern. The increased investment and sharpened competitive pressures attendant on Finland's entry into the EU in 1995 assisted the recovery from recession. Pursuing a policy of economic integration into the EU's Economic and Monetary Union, Finland was among the 11 member countries that launched the euro currency in 1999.

Based on its forest resources, capital investment, and high technology, Finland has a strong industrial economy and in recent years has become a net exporter of capital and has outperformed other euro nations in economic growth. In 2000 growth was 5.1 percent, though that figure fell to 1.2 percent in 2001. More recently growth has been modestly stronger: 2.2 percent in 2002 and 2 percent in 2003. The nation has cut taxes to spur consumption and growth, which is forecast at 2.5 percent in 2004 and 2.75 percent in 2005. Unemployment has decreased since 1994 but still remains high at 9.2 percent (2004), above the EU average. One cause of high unemployment has been high employer-paid social security taxes, which impede employment growth. In 2004 investment represented 18 percent of GDP. Inflation in 2004 was negligible, at just under 1 percent.

A total of 33 percent of Finland's GDP comes from exports of goods and services. Its main industries are metals, engineering, and timber. Outside of Europe and Russia, the United States is Finland's largest trading partner, and the total value of U.S. exports to Finland in 2003 was \$2.1 billion, primarily in machinery, telecommunications equipment and parts, aircraft and aircraft parts, computers and software, electronic components, chemicals, medical equipment, and agricultural products. Major Finnish exports include ships and boats, paper products, refined petroleum products, telecommunications equipment and parts, and automobiles.

Finland depends on imports for most of its raw materials, energy, and manufactured products. Its farms are

838 Finland

small, but most farmers own timber to supplement their income during nongrowing seasons. The nation's main agricultural exports are dairy products, meats, and grains.

ENVIRONMENT

Finland is heavily forested, and the country has taken active measures to protect and conserve its natural wealth. The Nature Conservation Act of 1923 led to the establishment of Finland's first national parks in 1938. By 2004 Finland had 35 national parks, occupying 8,150 sq km (about 3,147 sq mi), or about half of the country's total protected area.

Important environmental legislation was enacted in the 1970s and 1980s. In the 1990s Finnish environmental law was adapted to the requirements of European Union regulations, and a policy statement on the environment was added to the constitution. The Nature Conservation Act of 1996 focused efforts on preserving natural diversity through the protection of varied habitats and native species.

The Ministry of the Environment has jurisdiction over the regulation and protection of the environment. Other agencies playing a role in Finnish environmental policy include the Ministry of Agriculture and Forestry, the Finnish Forest and Park Service, the Finnish Environment Institute (a research center), and several regional environment centers.

The chief concerns faced by Finnish environmentalists in recent years include air pollution from industrial emissions, acid rain produced by power-plant emissions, pollution of water by industrial wastes and agricultural chemicals, and the threat posed to wildlife by the loss of habitats. The 1995–99 environmental program for Finnish agriculture placed limits on the use of fertilizers to help reduce the leaching of phosphorus and nitrogen from farms into waterways. Chemical pesticides have also been the target of restrictions.

LIVING CONDITIONS

Finland is a Scandinavian welfare state, so the level of social benefits is high. Social insurance programs include health, pension, and disability payments. In addition, the state provides maternity allowances, children's allowances, child-support payments, and municipal housing allowances. All of these programs account for one-fifth of the nation's GDP and are financed by taxes and employer contributions. Finland's system of payments for maternity and child care is among the most generous in the world.

Traditional homes in Finland were constructed of wood, usually by the owner-occupant. Many of these homes, both in rural areas and cities, have been torn down since World War II and replaced by apartment buildings. Apartments are small—generally two or three rooms with a kitchen. Many Finns own cabins in the forests. Because driving in the snow and ice can be treacherous, the nation has a well-developed rail system, with over 5,800 km of tracks. The sparseness of Finland's population has made cell phones popular, with nearly twice as many cell phones in use as landlines.

Alcoholism is an endemic problem. Although Finland's consumption of alcohol is about average for the EU, its rate of alcoholism is much higher and weekend binge drinking is common.

HEALTH

Finland has a highly developed health-care system, with a network of 265 state-financed medical centers. About \$1,600 per Finn per year is provided by public and private sources for health care. The entire population is covered by medical insurance. In 2004 life expectancy was nearly 75 years for men and nearly 82 years for women. The infant mortality rate was low, at 3.59 per 1,000 live births. A continuing problem is the high mortality rate for men over 25, because of heart disease, alcoholism, and suicide. Finns believe that saunas provide relief from pain and illness and are avid users of saunas for social and family bathing.

FOOD AND NUTRITION

The Finnish diet is similar to that of other Western nations, consisting of fish and meat, vegetables, and bread and butter. Finns consume a great deal of milk, both as a beverage and in various soured and cultured forms such as cheese and yogurt. It is a common ingredient in soups, puddings, and stews, as well as in bread making. Since the 1950s Finns have come to rely on sausage as a type of convenience food. Because of the high rate of cardiovascular disease in Finland, successful efforts have been made to cut fat consumption by replacing butter with margarine, encouraging the use of low-fat and skim milk, and emphasizing less fatty meats. Finns are obsessive coffee drinkers and have the highest rate of coffee consumption in the world. Coffee is drunk throughout the day and is part of sauna bathing and special occasions. About 12 percent of Finns are obese, with the number equally divided between men and women. About 4.3 percent of Finnish babies are of low birth weight.

 Amount of Fruits and Vegetables Available per person per year kg: 166.9

STATUS OF WOMEN

In 1906 Finland, while still a part of the Russian Empire, became the first country in Europe to grant women the right to vote and the first in the world to permit them to run for office. Almost 10 percent of the members elected to the first Eduskunta (Parliament) the following year were women. Despite this promising beginning, the picture of women's rights in Finland over the ensuing years was mixed, with slow progress toward full equality. The first female government minister in Finland took office in 1926. Four years later the Marriage Act freed wives from the guardianship of their husbands and granted them the

right to their own property. But it was not until 1988 that women were permitted to enter the clergy of the Evangelical Lutheran Church. It was not until 1994 that a woman became speaker of the Eduskunta, and it was not until 2000 that a woman was elected president.

Of the 200 members elected to the Eduskunta in 2003, 75, or 37.5 percent, were women, one of the highest proportions in the world. Eight women received portfolios in the government that was formed after the 2003 elections: ministers for labor, culture, finance, transport and communication, education, culture, foreign trade, and social care. Yet women's average pay was only four-fifths that of men's. Women were still not equally represented in politics and the workplace. In the governmental apparatus, just one-fifth of parliamentary committees were chaired by women, and most provincial governors were men, as were most municipal managers and municipal council chairpersons. In the educational sphere, students' choices of fields of study continued to reflect sex distinctions, with men tending to prefer engineering, manufacturing, construction, and agriculture programs, and women health, welfare, education, services, and humanities.

Still, movement toward full equality between the sexes quickened in recent decades, and this in part reflected a strengthening of legal requirements for equality. The constitution now explicitly stipulates, "Equality of the sexes is promoted in societal activity and working life, especially in the determination of pay and the other terms of employment." This mandate was spelled out in the Act on Equality between Women and Men, which came into effect at the beginning of 1987 and was aimed at improving the status of women and preventing discrimination on the basis of sex, particularly in the workplace. It required the authorities and employers to promote equality and mandated that men and women be provided with equal opportunities for education and professional development, and implementation is monitored by the office of equality ombudsman. The law was amended in 1992 to prohibit discrimination on the basis of pregnancy and parenthood. An amendment adopted in 1995 required that each sex account for at least 40 percent of the members of government committees, advisory boards and similar bodies, and municipal bodies (but not municipal councils).

WORK

Finland's labor force in 2004 was 2,599,000. Nearly 90 percent of women in their 30s and 91 percent of women

in their 40s are labor-force participants. Unemployment remained high, at over 9 percent. A total of 8 percent of Finns work in agriculture and forestry, 22 percent in industry, 6 percent in construction, 14 percent in commerce, 10 percent in finance, insurance, and business services, 8 percent in transportation and communications, and 32 percent in public services. Per capita gross domestic product was high in 2004, at \$27,400, even though the average Finn enjoys 126 days per year off work, ranking fifth in the world in days off. Finland has undergone a dramatic revolution in high technology. Nokia, one of Finland's major corporations, was known in the 1980s for paper and rubber products but by the 1990s was one of the world's major exporters of cell phones, computers, and telecommunications products.

EDUCATION

The constitution guarantees to everyone the right to a basic education free of charge and mandates that all shall have an "equal opportunity to receive other educational services in accordance with their ability and special needs, as well as the opportunity to develop themselves without being prevented by economic hardship." Compulsory basic education is provided to all children between ages seven and 16. After 16 education is voluntary, with students spending two to four years, or more, at an upper secondary or vocational school.

An 1872 act removed secondary schools from ecclesiastical control and placed them under civil authority. It also grouped them under three types: *lyceer* (*lycea*), *realskoler*, and higher schools for girls. The *lyceer* offered both a four-year course leading to technical high school and an eight-year course leading to university.

A hallmark of these reforms was the principle of comprehensiveness, which means that all children attend the same basic school and follow the same curriculum. Under the Basic Education Act, which took effect in 1999, either of Finland's two official languages, Finnish and Swedish, may be used in teaching. Instruction can also occur in Sami or Romani and in sign language. Special groups or schools may be set up to teach students in a language that is not their mother tongue.

Education is free of charge for degree candidates at the some 20 universities and institutions of higher education in Finland (whose students total more than 280,000, 59 percent of them women) as well as at the 29 polytechnics. Students entering a university may study for a bachelor's degree, which can take three or four years, but most individuals are admitted to programs leading to a master's degree, which can take five to six years to complete. Those who wish to continue their studies may seek a doctorate. In many fields, however, they may first take an optional predoctoral licentiate's degree; this typically requires about two years of full-time study.

The financial costs of education are borne by both the state (which funds two-thirds of public education expenditures) and the municipalities (one-third). As it is the right and duty of every citizen to be educated, all municipalities are required by law to provide education of equal standard irrespective of financial capacity.

SCIENCE AND TECHNOLOGY

Funding for scientific and technological research in Finland increased dramatically from 1991 to 2003. In 1991 the nation spent the equivalent of about 1.7 billion euros; that number rose to almost 4.9 billion euros, or \$6.67 billion, in 2003. Business and industry invested the lion's share, 69.5 percent; the remainder was sponsored by the government (10.7 percent) and universities (19.8 percent).

MEDIA

In 2004 Finland had over 1.2 million Internet hosts and over 2.65 million Internet users. Finland's total newspaper circulation per capita (445) ranked third in Europe and third in the world in 2004. The total number of registered periodicals exceeded 2,800, and their overall circulation was 18 million.

The volume of book publishing is enormous, with an annual output in 2000 of over 13,000 titles, most of them in Finnish. The production of titles per 10,000 inhabitants ranked among the highest in Europe. The annual output of Swedish-language titles numbers in the hundreds. Finland has a well-developed network of libraries. As of the late 1990s, book borrowers amounted to roughly half the population, and most libraries provided access to the Internet.

As of 2004 the Finnish mass media were dominated by three major corporations: Sanoma-WSOY, Alma Media Oy, and the state-owned, noncommercial Finnish Broadcasting Company, YLE. National television programming is broadcast on four channels: two public-service channels and two commercial channels supported by advertising. YLE broadcasts nationally (including Swedish-language programming) on TV 1 and TV 2. The two companies with commercial TV broadcasting licenses, MTV Oy and Oy Ruutunelonen Ab, broadcast on the MTV3 channel and channel Nelonen, or channel 4, respectively. In the late 1990s Finland had five nationwide radio stations, four public service and one commercial. There were approximately 60 local radio stations, including about a dozen commercial stations in the Helsinki area. YLE dominates radio broadcasting and in 1989 launched a weekly five-minute broadcast of Finnish and international news in Latin.

CULTURE

A prominent feature of Finnish cultural life is the hundreds of festivals held around the country, including theatrical and musical presentations, among them the well-known Savonlinna Opera Festival. Artistic and cultural activities such as theater, dance, cinema, and music benefit from regular state subsidies, which helps explain why there are almost

60 permanent theaters in such a small country. Tickets are consequently relatively inexpensive, and it is said that virtually every other Finn attends the theater at least once a year. National theatrical arts institutions of note include the National Opera, the National Theater, the TTT Theater in Tampere, and the Svenska Teatern (Swedish Theater) in Helsinki. Film production has been averaging about a dozen or so movies annually in recent years.

Finland has a rich musical tradition. Roughly 40,000 Finns belong to a professional or amateur music association, and choirs are especially popular. The country has some 30 subsidized symphony and chamber orchestras, drawing a million people a year, a large figure for a country with a total population of some five million. Finland's most famous composer was Jean Sibelius.

Several ministries provide support to cultural activities, but most funding comes from local authorities and from the Ministry of Education, which is the state body with the chief responsibility for promoting and developing culture. The ministry oversees the Arts Council of Finland, which includes the Central Arts Council, a provider of project grants, as well as nine separate councils that allocate artist grants. There also exist more than a dozen regional arts councils that promote both professional and amateur arts.

Finland's classic national epic is the *Kalevala*, which has had a major impact on the nation's culture and fine arts. In 1939 a Finn, Frans Eemil Sillanpää, won the Nobel Prize for Literature.

 Annual Attendance: 7,000,000

FOLKLORE AND MYTHOLOGY

The *Kalevala* is important not only to Finnish literature but to the nation's folklore history as well. The folk tales of the epic were first collected and published by Elias Lönnrot in 1835, and these tales have formed the bases of musical compositions by such composers as Jean Sibelius as well as sculptures and paintings, especially those of Akseli Gallen-Kallela.

Of great significance is the Finnish creation myth. The hero in the creation of the world, Väinämöinen, is said to have entered the primeval waters and created the world from the broken pieces of an eagle's egg. Variations of this

story explain the creation of the ancient seabed and the freeing of the sun and moon from the stomach of a fish.

Finnish folktales tend to be melancholy and suffused with mystery, in large part because they originated in dense forests where wildlife such as wolves posed danger. Some folklore has to do with Midsummer night. For example, a person looking for wealth is told to sit that night on top of a house whose roof had been replaced three times; there he is to look for fires over a swamp or lake. Also on Midsummer night, the flowering of a fern was said to make a person invisible.

ENTERTAINMENT AND RECREATION

Finns are great readers. The literacy rate in Finland is among the highest in the world, and for a nation with a relatively small population it produces an enormous number of newspapers, periodicals, and books. Libraries are used extensively. Additionally, Finns enjoy the theater, the opera, classical music, soccer, and relaxing in the sauna; many social gatherings take place not in a living room but in the sauna, where friends can relax with a drink or the ever-present coffee.

ETIQUETTE

Finns are known for being reserved, cautious, and silent, even to the point of being taciturn. Small talk tends not to be important, and loud conversation is frowned upon in public, although Finns are more outgoing with close friends and family in the privacy of their homes, including the sauna. Public formality is maintained through the use of professional titles when appropriate, the second-person plural with those who are not family and close friends, and greetings that consist of a firm handshake and a nod of the head rather than embracing or kissing.

FAMILY LIFE

Family life in modern Finland, particularly in the cities, follows the Western model, with the nuclear family being the norm. Family size has dropped, and the age of first birth for women has risen to over 27, consistent with women entering the workforce and government. Traditionally, though, mates were nearly always chosen from the same village, parish, or town, with joint families having the same background and status. Thus, the founding couple's male children, along with their wives, would continue to live on the same farm together in a unit that often comprised 20 to 25 people. Today more couples are living together before marriage, though these arrangements are generally con-

sidered to be "trial marriages." Child rearing in Finland places great emphasis on perseverance, personal autonomy, and respect for the privacy of others.

PERSONAL APPEARANCE

Finns wear Western-style clothing. At work or for formal occasions men wear suits, and both sexes wear casual clothing such as jeans for informal occasions. Traditional costumes for men include a full-sleeved white shirt with a stiff collar and a colorful waistcoat, for women a long, gathered skirt, often black with a red border, a blouse, a vest, and a cap.

SPORTS

Finns were historically accomplished long-distance runners. One national hero is Paavo Nurmi, who won nine Olympic gold medals as a runner in the 1920, 1924, and 1928 Olympics. Undoubtedly, though, skiing is the quintessential Finnish sport, especially since skiing was always important as a mode of transportation. Finland claims to have invented skiing, and 3,700-year-old skis have been found in the country. There are over 200 ski jumps in Finland, which regularly makes a good showing at the Winter Olympics. In 2002 the Finnish skier Samppa Lajunen won three gold medals. Hockey, too, is a favorite winter sport, and baseball is popular in the summer.

CHRONOLOGY

- 1946** Marshall Carl Gustav von Mannerheim retires as president; Prime Minister Julio Paasikivi is named president, and Mauno Pekkala becomes prime minister.
- 1948** Agreement of Friendship, Cooperation, and Mutual Assistance is signed with the Soviet Union; Finland cedes part of eastern Karelia to Soviet Union and agrees to pay war reparations. Karl Fagerholm forms first Social Democratic ministry.
- 1950** Urho Kekkonen heads Agrarian League government.
- 1953** Sakari Tuomioja heads no-party government.
- 1954** Ralf Törngren of Swedish People's Party heads brief government, followed by Urho Kekkonen, who becomes prime minister for the second time.
- 1955** Finland joins the United Nations and the Nordic Council.
- 1956** Karl Fagerholm heads his second government; Urho Kekkonen is president.
- 1957** Vaino Sukselainen heads the government, followed by Rainer von Fieandt.

- 1958** Raino Kuuskoski forms a no-party government but yields to Karl Fagerholm's third government.
- 1959** Vaino Sukselainen forms his second government.
- 1961** Martti Miettunen forms his first government. Finland joins the European Free Trade Association.
- 1962** Ahti Karjalainen forms his first government.
- 1963** Reino Lehto forms a no-party government.
- 1964** Johannes Virolainen forms a Center Party government.
- 1966** Rafael Paasio heads a Finnish Social Democratic government.
- 1968** Mauno Koivisto heads a Finnish Social Democratic government.
- 1970** Teuvo Aura heads a brief no-party government but is replaced by Ahti Karjalainen's second government.
- 1971** Teuvo Aura heads his second no-party government.
- 1972** Rafael Paasio heads a brief Social Democratic government but yields to Kalevi Sorsa of the same party.
- 1975** Keijo Liinamaa heads a brief government but is replaced by Martti Miettunen's second government. Finland hosts the Conference on Security and Cooperation in Europe.
- 1977** Kalevi Sorsa heads his second government.
- 1979** Mauno Koivisto heads his second government.
- 1981** Urho Kekkonen dies. Mauno Koivisto is elected president.
- 1982** Kalevi Sorsa heads his third government. Mauno Koivisto becomes president.
- 1987** Finland's first conservative-led government takes office under Harri Holkeri as prime minister.
- 1991** Esko Aho of the Center Party forms a center-right coalition government.
- 1994** Martti Ahtisaari is elected president.
- 1995** Finland becomes a member of the European Union. Social Democrat Paavo Lipponen forms a coalition government.
- 1999** Paavo Lipponen forms his second coalition government.
- 2000** Social Democratic Party-member Tarja Halonen becomes Finland's first female president.
- 2002** The euro replaces the local markka. The Green Party withdraws from the government coalition after parliament approves the construction of the nation's fifth nuclear reactor.
- 2003** Anneli Jäätteenmäki's Center Party defeats Lipponen's Social Democrats in the general election, forming a new coalition with the Social Democrats and the Swedish People's Party. Prime Minister Jäätteenmäki resigns amid charges that she had illegally obtained secret documents about the war in Iraq while she was the opposi-

tion leader; she was later acquitted. Matti Vanhanen becomes prime minister.

DATE OF INDEPENDENCE

August 843

DATE OF CONSTITUTION

October 4, 1958

GEOGRAPHICAL FEATURES

France is the largest country in Western Europe, with an area (including the island of Corsica) of 547,030 sq km (211,208 sq mi). It extends 962 km (598 mi) north to south and 950 km (560 mi) east to west. Its total boundary length of 2,889 km (1,795 mi) is shared with seven countries: Belgium, Luxembourg, Germany, Switzerland, Italy, Andorra, and Spain. France’s maritime boundaries lie along the Mediterranean Sea; the Bay of Biscay and the Atlantic Ocean, including islands; and the North Sea and English Channel.

The capital is Paris, on both banks of the Seine River shortly below its junction with the Marne River. It is

the largest city in France and the eighth-largest city in Europe. Paris is not only the administrative and political capital but also the country’s intellectual and artistic center.

Shaped in the form of a hexagon, France is distinguished topographically by clear-cut features and divisions. The present landscape is dominated by four Hercynian massifs, composed of granite, sandstone, or shale. Between the massifs lie undulating floors of sedimentary formation linked to each other by a series of lowland corridors. Beyond them, to the southeast and southwest, rise the high walls of mountain ranges—the Jura, the Alps, and the Pyrenees—that form the frontiers of France.

France

Of the Hercynian massifs, the first, the Ardennes Plateau, occupying 1,295 sq km (500 sq mi), is the western tip of a block that is part of the Middle Rhine uplands of Germany and has an elevation of 456 m (1,500 ft). The Vosges, in the south, rises to rounded granite summits more than 1,219 m (4,000 ft) high. The Ardennes and the Vosges enclose the Paris Basin on its eastern side, separating it from the Alsace Plain. The Armorican Massif, which protects the Paris Basin to the west, covers 64,767 sq km (25,000 sq mi) and thrusts out into the Atlantic in two rocky promontories, Brittany and the Cotentin Peninsula. Its hills run east to west in a series of ridges that seldom exceed 366 m (1,200 ft). Finally, there is the Central Massif, which covers 77,720 sq km (30,000 sq mi) and has a summit that rises to 1,524 m (5,000 ft) or more.

The Pyrenees, whose uplift occurred before that of the Alps, form a barrier that rises more than 3,034 m (10,000 ft) and more or less seals off the border with Spain. From their foothills stretches eastward to the Alps the southern fringe of France—the coastal plain between the Central Massif and the sea. The plains are broken by chains of low hills.

The French Alps represent only a small area of the mountain chain; nonetheless, they occupy 38,860 sq km (15,000 sq mi) of French territory and include the highest peak in Europe, Mont Blanc (4,807 m; 15,767 ft). The Jura Mountains rise to 1,524 m (5,000 ft) along the border, completing the line of natural fortification.

The drainage system of France is based on five major rivers: the Seine, Loire, Garonne, Rhône, and Rhine. The Nord is the terminal point of the lowlands bordering the English Channel, including coastal Flanders and the Walloon areas. The Paris Basin is the cradle of France. At the center of the basin lies Paris, the heart of French culture and history. The basin includes the Île-de-France, parts of Orleans, Upper Normandy, and Picardy. The eastern region comprises Lorraine, the Vosges Mountains, and Alsace, including the French Rhineland. Burgundy and the Upper Rhine encompass the corridor between Alsace and central France. A series of ridges project north and northeast from the Central Massif, increasing in elevation toward the south and reaching more than 914 m (3,000 ft) in the star-shaped cluster of the mountains of Beaujolais. South of Dijon is the Alps region with its Mediterranean influences. The area is enclosed on the east by the Alps, which are represented by the massifs of Belledune and Pelvoux, the latter rising to over 3,657 m (12,000 ft).

The Mediterranean region lies on the border with Spain and Italy and consists of Languedoc and Provence. Marseilles and Toulon provide gateways to the Mediterranean, and the island of Corsica exhibits the same features as Provence though they are separated by 161 km (100 mi) of water. The island rises to 2,710 m (8,990 ft) at Mont

Cinto and possesses a coastal strip only on its eastern side. Languedoc, on the western bank of the Rhône, is rocky and mountainous. Aquitaine covers the basins of the Garonne and the Adour. The center is occupied by the wide Garonne Plain, and the region is bordered on the west by the Bay of Biscay. The Central Massif is a triangular area from which many of the nations' rivers flow. Although it is called central, it is situated almost entirely in the southern half of the country, and its outer edge is less than 80 km (50 mi) from the Mediterranean. While the massif divides northern and southern France, the Loire Valley and the Atlantic region reunite them. This area makes up the central section of the Atlantic seaboard between the Loire and the Gironde. Amorica comprises Brittany and Lower Normandy. Eastern Lower Normandy is geologically part of the Paris Basin, but southwest of Caen the region is hilly and therefore known as the "Norman Switzerland." Extending far out into the English Channel is the Cotentin Peninsula, at the tip of which lies Cherbourg. To the south of Normandy is Celtic Brittany, stronghold of the Bretons. Brittany remains one of the few provinces of France where the rural areas are still overpopulated.

CLIMATE AND WEATHER

The three main divisions of European climate—maritime, continental, and Mediterranean—are all found in France. The Atlantic influence brings the country the benefits of the warm waters of the North Atlantic drift. The seasons are marked by mild onsets, frequent fine rain or drizzle, and westerly winds. The continental climate covers eastern France. Its features are a wide seasonal range of temperatures, with cold winters, 80 to 100 days of frost, long periods of snow cover, warm summers with thundershowers, and calm autumns. The Mediterranean influence extends only a short distance northward from the coast. It is characterized by absence of clouds, high evaporation rates, infrequent but heavy rains between seasons, and strong winds of which the cold Mistral blowing in from the north is best known.

France receives an average of 450 billion cu m (15,891 trillion cu ft) of precipitation every year as either rain or snow. Coastal areas receive the most in autumn and winter, while inland areas receive the maximum amounts in summer and autumn. The amount of snowfall varies with elevation. The amount of snowfall may rise as high as 47 m (154 ft) on the summit of Mont Blanc.

In the summer southern France's temperature will average 21°C (70°F), and the north's is 18°C (65°F). In winter the extreme southern regions' average temperature is 6°C (42°F), but the rest of the nation has temperatures close to freezing.

Climate and Weather

Paris and Marseille: 22 in

Bordeaux and Lyon: 35 in

Brittany and the northern coast: 44 in

FLORA AND FAUNA

Climate and elevation have a major impact on the flora of France. Alpine pastures that provide grazing for sheep and cattle can be found on mountains slopes. At lower elevations grow coniferous forests of pine, fir, spruce, and larch. Farther down are deciduous forests of chestnut, beech, and oak. Along the Mediterranean coast, where summers are hot and dry, can be found expanses of maquis, or evergreen shrub. Also along the coast are olive, cork oak, and Aleppo pine trees.

France provides habitat for various species of deer and foxes, and in remote forest areas can be found red deer, roe deer, and wild boar. In the Alps and the Pyrenees lives a rare type of goat called the chamois, and brown bear and lynx inhabit the Pyrenees. Smaller mam-

mals include otters, beavers, and badgers. Many species of migratory birds, including ducks, geese, and thrushes, winter in France. Exotic bird species along the Mediterranean coast include flamingos, bee-eaters, egrets, herons, and black-winged stilts. France has few reptiles and only one species of poisonous snake, the adder.

ETHNIC COMPOSITION

Until France acquired a sizable minority community in the 20th century, it was an ethnically homogeneous country, with all of its inhabitants of Celtic and Roman stock.

Recent estimates put the number of foreigners living and working in France at about three to four million, or about 6 percent of the population. Estimates of the number who have become naturalized French citizens range from 1.3 to 2.4 million. As part of its perceived imperial obligations, France opened its doors to migration from its colonial and former colonial possessions. The largest numbers came from Algeria, Morocco, Tunisia, French Indochina, and France's West African colonies. In addition, labor shortages in the 1950s and 1960s led the nation to encourage non-European immigration. By the 1970s efforts were initiated to stem the flow of immigrants. Successive laws were passed to tighten immigration. The major minority groups in France include the Basques, Arab North Africans, West Africans, and Indo-chinese. The increase in the number of non-European aliens has led to anti-immigrant sentiment and the rise of right-wing, anti-immigrant parties, as well as ethnic violence in some urban areas.

LANGUAGES

French is the official and national language spoken by virtually everyone within French borders. It is also an official language in Francophone Africa and in French dependencies and territories overseas. While it has lost its preeminence in international diplomacy since World War II, it remains a popular third language. There are a number of regional dialects within the nation that are rapidly disappearing. These include Provençal, Breton, Alsatian, Corsican, Catalan, Basque, and Flemish. The influx of English words into the French language has led to a hybrid dialect known as Franglais. This has become a major concern for Francophiles, and efforts have been taken to discourage the use of Franglais and promote the French language.

RELIGIONS

France was Christianized by the second century, and a strong Christian community had been established in Lyons by 150 C.E. The mass baptism of the Frankish king Clovis with his warriors in 496 established the Christian faith as the national creed. The Roman Catholic Church dominated society throughout the Middle Ages, and France was part of the schism that resulted in two rival popes, one at Avignon and the other at Rome. France was less affected by the Reformation than many other nations of Europe, but the movement led to the establishment of some 2,000 Protestant Huguenot churches. Religious conflict was widespread until the Edict of Nantes granted some degree of religious freedom in 1598. The revocation of the edict by Louis XIV in 1685 led to a new wave of persecution and the exile of thousands of non-Catholics. Protestants remained a persecuted minority until the French Revolution. Church-state relations were not resolved until the constitution of 1905, which reaffirmed the secular nature of the government. The principle of secularism is not absolute, and the government has some control over the appointment of clergy. Also, all clergy are considered civil servants and receive their pay from the state.

Roman Catholics still make up some 86 percent of the population, although their number has been in decline since World War II. Protestants make up about 2 percent of the population and Jews 1 percent. Most Protestants live in Alsace and the Rhône Valley and are members of the Lutheran Church. Islam is the fastest-growing religion in France, with about five million adherents thanks to the recent waves of immigrants from North Africa. This has led to conflict over the wearing of religious garb in public and especially in the otherwise secular school systems.

HISTORICAL BACKGROUND

Little is known of the present territory of France before its conquest by Julius Caesar in 58–51 B.C.E. The land was inhabited by a Celtic tribe known as the Gauls. Roman rule lasted for five centuries. Roads and cities were built, and Latin superseded the Celtic language. Early in the fifth century Teutonic invaders, including the Visigoths, the Burgundians, and the Franks, conquered regions of Gaul.

The first ruler who took upon himself the title of King of the Franks was Clovis, who in 486 routed the forces of the last Roman governors and established an empire that extended into western Germany. A century of warfare and anarchy followed his death and was brought to an end by Charles Martel, who defeated the Saracens at Tours in 732 and prevented an Islamic invasion of Western Europe, and Charlemagne (768–814), who was crowned emperor of the West by the pope in 800. After his death, Charlemagne's Carolingian Empire broke apart. However, his brother's grandson Hugh Capet (987–96) established the royal line that would rule France for the next 800 years.

By the ninth century feudalism was well established in France, and the Capetians had only nominal hegemony over their territories. Some areas, such as the Duchy of Brittany, were practically independent kingdoms. For several centuries the kings of France would have to fight to retain power over these feudal holdings and also battle the English. By the 12th century, the English controlled Normandy, Brittany, Anjou, and Aquitaine. However, as the power of the French kings expanded, that of the feudal lords and the English waned. The reign of Philip the Fair marked the apogee of the early Capetian power. His emissaries arrested Pope Boniface VIII and removed the seat of the papacy to Avignon, where the popes resided until 1378.

Philip the Fair had no heirs, and the throne passed to his nephew, Philip VI, who became the first of the Valois kings. Philip's claim to the throne was challenged by Edward III of England and resulted in the Hundred Years' War (1337–1453). Although the English won most of the early battles, led by Joan of Arc and Bertrand du Guesclin, the French were able to ultimately defeat them during the reign of Charles VII, and by his death in 1461 the English had been driven from most of France.

Following the expulsion of the English, the French kings were able to consolidate their power and subju-

gate the feudal lords. Meanwhile, the rise of Protestantism led to a new civil conflict between the Protestant, or Huguenot, groups and the established Catholics. In 1572 thousands of Protestants were slaughtered in the Saint Bartholomew's Day Massacre. However, following the death of Henry III, the Protestant Henry of Navarre ascended the throne as the first ruler of the House of Bourbon. Although he converted to Catholicism in order to consolidate his power, in 1598, he signed the Edict of Nantes, which guaranteed religious freedom for Huguenots. Henry restored peace and stability and embarked upon a course of geographical exploration in the New World.

His successor, Louis XIII, demolished the power of the Protestants at home and the Hapsburgs abroad through the Thirty Years' War. He was succeeded by his son Louis XIV, who established France as the dominant power on the Continent. Louis reigned for 54 years and transformed France into a centralized absolute monarchy. Known as the Sun King, Louis built the great palace at Versailles, and his reign was the golden age of French culture. The French Enlightenment produced such luminaries as Voltaire, Jean-Jacques Rousseau, and Diderot, but it also produced a class that questioned the absolutism of the monarchy.

The signal for the fall of the *ancien régime* was the summoning of the Estates General in 1789 by Louis XVI in an effort to impose new taxes to restore the treasury. Meeting separately, the third estate, the Commons, proclaimed itself the National Assembly and overcame royal opposition. This initiated the French Revolution. In 1791 the National Assembly forced Louis to accept a new constitution. Austria declared war on France in an effort to restore the monarchy and in response the First French Republic was declared. Louis was tried and executed for treason. France then underwent the "Reign of Terror" as radicals, known as Jacobins, sought to eradicate all vestiges of the aristocracy. Although the revolution was launched with the goals of liberty and equality, France soon reverted to totalitarianism.

In 1799 Napoleon Bonaparte established a consulate with himself as first consul. After a series of military victories, Napoleon had himself crowned emperor in 1804. Although he was able to conquer most of Europe, with the notable exception of Great Britain, the emperor's ill-fated invasion of Russia and insurgencies in Spain and Portugal led to his downfall. By 1814 the Allied powers had conquered Paris and restored the Bourbon monarchy. Napoleon was forced into exile, only to return in an attempt to reclaim the throne. Allied forces under the Duke of Wellington defeated Napoleon at the Battle of Waterloo in 1815, and the former emperor was forced into exile on the island of Saint Helena.

From 1815 until 1848 France was ruled by three kings, the last of whom was Louis-Philippe of the House

of Orleans, who attempted to rule as a citizen-king. After the fall of Louis-Philippe the Second Republic was established, with Louis Napoleon, nephew of Napoleon I, as its president. Louis engineered a coup in 1852 and proclaimed himself Napoleon III. His reign was known as the Second Empire (1852–71). He embarked on an aggressive foreign policy that led to conflict with Prussia and his ultimate defeat in the Franco-Prussian War (1870–71). As a result of the war, France lost Alsace and Lorraine, and Napoleon III was overthrown. A new government, the Third Republic, was established.

The republic's constitution, adopted in 1875, granted freedoms of press, speech, and religion and established a weak presidency and a strong national legislature. Much of World War I (1914–18) was fought on French soil, and although the nation was devastated by the conflict, it was able to regain Alsace and Lorraine. The postwar years were marked by economic depression, political instability, and social unrest. France was unable to counter German aggression following the rise of Adolf Hitler, and when the German dictator invaded Poland in 1939, France joined with Great Britain in declaring war.

At the onset of the war French military strategy relied on the supposedly impregnable Maginot Line of fortresses between France and Germany. However, the German army was able to easily defeat French forces and Marshall Philippe Pétain, an aged hero of World War I, hastily formed a government and sued for peace. With the exception of a small zone near Vichy, France was placed under German control, and the Third Republic ended. Opposition to the Germans coalesced around the underground resistance within France and the Free French Forces of General Charles de Gaulle. In the wake of the liberation of Paris in 1944, de Gaulle formed a provisional government. In 1946 the Fourth Republic was proclaimed under a new constitution, which unfortunately reproduced most of the weaknesses of the Third Republic.

In 1953 de Gaulle retired from public life as the nation struggled through a series of weak and rapidly changing governments. A year later France was defeated at the Battle of Dien Bien Phu and was forced to withdraw from its colonies in Indochina.

France was one of the forces behind the drive for economic and political integration in Europe and in 1957 was one of the founding members of the European Economic Community, which in 1965 became the European Community. However, disagreements with the United States led to the withdrawal of France from the integrated command structure of the North Atlantic Treaty Organisation (NATO) in 1966.

In response to a military insurrection in Algeria in 1958, de Gaulle was invited to form a government. He proposed a new constitution, which, after its adoption, established the Fifth Republic. Algeria was granted in-

dependence in 1962. As president, de Gaulle endeavored to maintain the status of France as a great power in an era of declining national resources. In 1968 there were widespread student protests, but de Gaulle was reelected president. However, the following year, he resigned after voters rejected his proposed constitutional amendments. He was replaced by Georges Pompidou. De Gaulle died in 1970.

After Pompidou died in office in 1974, he was replaced by Valéry Giscard d'Estaing, who served until 1981. The election of François Mitterrand marked the end of two decades of rule by the conservative Gaullist parties. Mitterrand's tenure as president was marked by severe economic crises and by deepening integration into the European Union. In 1985, French special forces sank the Greenpeace ship *The Rainbow Warrior* in Auckland, New Zealand, creating a diplomatic crisis. After his reelection in 1988, Mitterrand presided over the nation as it faced the reunification of Germany and fought alongside the United States and Great Britain in the Persian Gulf War.

The election of Jacques Chirac in 1995 returned the Gaullists to power. Chirac adopted a much more conciliatory approach toward the United States. He also continued on the path of integration, and in 1999 France was one of the first nations to join the European Monetary Union. Chirac was reelected in May 2002 in a landslide victory against the far-right National Front leader Jean-Marie Le Pen. In legislative elections that year, the center-right coalition won a landslide victory, with the National Front failing to win a seat in parliament. In the years after his reelection, Chirac dealt with a variety of issues, including leading the opposition to the U.S.-led war in Iraq, worker unrest over privatization and increased contributions to pension funds, efforts to devolve taxing and other powers to local areas, separatist violence in Corsica, and a 2003 heat wave that killed 11,000 people. In late 2005 his government was confronted with urban riots by immigrant youth followed by student protests in early 2006.

LIST OF MODERN RULERS (FIFTH REPUBLIC)

1959–69	Charles de Gaulle
1969–74	Georges Pompidou
1974–81	Valéry Giscard d'Estaing
1981–95	François Mitterrand
1995–	Jacques Chirac

CONSTITUTION

The Fifth Republic is governed by the constitution passed on September 28, 1958. It replaced the constitution of the Fourth Republic, under which France had notoriously un-

stable governments. The new constitution was very much the work of one man, Charles de Gaulle, and one event, the Algerian crisis. The constitution replaces the old weak central government with a strong executive, which suited de Gaulle's style. It encompasses the concept of stewardship, by which the president does not hold authority strictly as the servant of the people, because his power embodies the historical fact of French statehood, the grandeur of the nation, and the totality of its existence. Hence, the president must be sufficiently removed from politics to make decisions that are in the best interests of the nation but which may run counter to public opinion. The constitution of the Fifth Republic is unique in French history in both the power it delegates to the executive and the power it retracts from the legislature. Under its terms the president can dismiss parliament, call for early elections, and issue decrees that carry the weight of law.

Under the constitution, the president is head of state, commander in chief of the military, and presiding officer of the Council of Ministers. The French president's power is broadly divided into three sectors: a "reserved" sector involving foreign affairs and security matters in which the head of state is directly involved; a "delegated" area in which technical matters are assigned to bureaucrats; and a "supervisory" part in which the president intervenes only when necessary.

Presidents are elected through either an absolute majority on the first ballot or, failing that, a second runoff ballot cast 14 days later in which only a simple majority is needed. In the runoff election only the top two candidates from the first election may run. There is no limit to the number of seven-year terms a president may serve.

The office of the prime minister has been described alternatively as that of a power broker, a vice president, and a chief of staff. The position has five major tasks: 1) to initiate policy, 2) to coordinate the government's activities, 3) to provide a liaison between the government and the legislature, 4) to maintain a governing coalition or party, and 5) to resolve conflicts between the government and the legislature. Normally the president and prime minister have a close working relationship, but matters become strained when the two figures are from different political parties, a situation known as "cohabitation."

Although it is responsible to the legislature, the government is not a part of it. When a government is chosen, its members must resign from the legislature if they are members. However, the government does have supremacy over the conduct of legislative business. For instance, if the two houses of the parliament are unable to agree on an act, the government may intervene to secure a compromise.

Two other bodies play a monitory role in the Fifth Republic: the Council of State and the Constitutional Council. The Council of State is a remnant of the prerevolutionary Conseil du Roi. Although it is not mentioned

in the constitution, it has an administrative function to advise the government on all legislation, and it provides constitutional interpretations. The Constitutional Council advises the president, cabinet, and legislature on matters of law. This council also supervises elections.

PARLIAMENT

In the Fifth Republic the parliament is a bicameral body made up of the *Assemblée Nationale* (National Assembly) and the *Sénat* (Senate). The National Assembly consists of 577 seats, and the Senate of 321, although plans are to raise that number to 346 by 2010. The National Assembly is the lower house but maintains a slight edge in legislative power. If there is disagreement between the two houses and the disagreement persists for more than two formal readings and if a joint committee convened to resolve the dispute fails, the National Assembly can rule definitively.

The constitution gives the parliament the power to force the government to resign and to declare war. The parliament also has sole legislative power. Members of either house also enjoy parliamentary immunity, and legal action can be taken only after they have left office or if their immunity is stripped by the legislature.

Parliament meets for two short sessions during the year. The first begins on October 2, lasts 80 days, and is concerned mainly with budgetary matters. The second session begins on April 2 and is principally involved with legislation. Special sessions may be convened by the president, prime minister, or a majority of parliament.

On the opening of the October session, each chamber elects its bureau, which provides leadership for the session. In the National Assembly, the bureau consists of a president, six vice presidents, 12 secretaries, and three *questeurs*. In the Senate, there is a president, four vice-presidents, eight secretaries, and three *questeurs*. The presidents do not have the stature of their counterparts in the United States or Great Britain. The secretaries supervise records and tally votes, and the *questeurs* are responsible for financial and administrative matters. The bureau is responsible for the conduct of business, including quorum and discipline.

Bills may be introduced in either house, although finance bills must be submitted to the National Assembly. All bills must go through the appropriate committees. There are six standing committees. Four are specialized committees consisting of a maximum of 61 members each, dealing with defense, foreign affairs, finance, law, and administration. The remaining two committees, consisting of a maximum of 121 members each, deal with economic affairs and cultural and social affairs.

Members of the National Assembly are elected for five-year terms, with all seats being filled at the same time through direct majoritarian election. Senators are elected for nine-

year terms, and one-third of the body stands for reelection every three years. They are elected by local electoral colleges composed of mayors, municipal and departmental councilors, and deputies of the department. There are also 12 senators who represent French citizens living overseas and who are nominated by an official advisory committee.

POLITICAL PARTIES

Political parties in France run the gamut of ideologies. There are three extreme Communist parties, although these are generally considered minor parties with limited impact. Three left-of-center parties include the *Parti Radical de Gauche* (Left Radical Party), the *Parti Communiste Français* (French Communist Party), and the *Parti Socialiste*, the major Socialist Party. On the political right are the *Union pour la Démocratie Française*, or Union for French Democracy, and the *Union pour un Mouvement Populaire* (UMP), or Union for a Popular Movement, a major party whose membership includes President Jacques Chirac and Prime Minister Jean-Pierre Raffarin. In the elections of 2004 the UMP made the strongest showing, winning 156 seats in the Senate and 355 seats in the National Assembly. The next strongest party showing was that of the Socialist Party, which won 97 seats in the Senate and 140 seats in the National Assembly. In addition to these major parties, there are numerous minor parties, including environmental parties and parties that oppose integration with the rest of Europe.

LOCAL GOVERNMENT

With 36,782 communes as of 2004, France has more units of local government than any of the other members of the European Union, but only 2 percent of these communes have a population of over 2,000, while 90 percent have fewer than 10,000. These territorial divisions do not reflect demographic or economic realities but rather traditional boundaries.

The lowest level of local government is the commune, dating from 1789 and based on the parish system of the old regime. At the next level are 100 departments. Above the departments are 22 regions. Successive governments have tried to limit and reduce the number of governments but to no avail.

National power over the localities is exercised by the Ministry of the Interior and the Council of State. Local governments are funded by a complex and intricate system of finance by which localities receive loans and subsidies and aid from Paris for particular joint projects, such as urban integration.

In local politics the mayor has substantial power, and the municipal council is weak and has limited pow-

ers. This trend is reinforced by the fact that many mayors also hold national positions in parliament or government. Municipalities with populations over 100,000 enjoy a special privileged status and have more autonomy than smaller communities. They have greater control over issues of finance, planning, and zoning.

LEGAL SYSTEM

The distinctive characteristic of the French judicial system is its division into two jurisdictions: the civil and criminal and the administrative. Civil cases are heard in 454 courts of first instance or, in cases of substantial sums, in courts of great instance, which also have an appellate function. Criminal law is dispensed in one of three sets of courts, depending on the gravity of the offense. Police courts function in almost all localities and deal with minor infractions. More serious matters are brought before correctional courts. Finally, major felonies and crimes are tried at periodic settings of the assize courts, which have three judges and nine jurors. (The other courts do not utilize juries.) French judges are career civil servants.

French law allows only one appeal in civil and criminal cases. In civil cases, the appeals go to one of 27 regional appeals courts. Criminal cases also go to an appeals court, but there is no effective appeal possible from an assize court. The highest court of the land is the Court of Cassation, which has one criminal and five civil chambers. The entire judiciary is overseen by the Superior Council of the Judiciary, which reports to the president and government.

The administrative court system is much simpler than the civil and criminal systems and involves those cases of abuse of official power or of civil servants' failing to perform their duties and therefore harming private interests. The highest administrative tribunal is the Council of State, which hears appeals from the administrative tribunals.

HUMAN RIGHTS

Although France does not have a bill of rights, all political and civil liberties are secured by legal guarantees. Two institutions serve as watchdogs of these rights: the Constitutional Council and the Council of State. Both of these institutions investigate and condemn illegal administrative encroachments on individual freedom. Freedom from invasion of privacy is guaranteed by law and respected in practice. The search of a private residence requires a search warrant, except under special circumstances such as in drug cases. There is no direct equivalent of habeas corpus in the French legal system, although there is a limit of two days before a suspect is transferred to a magistrate for investigation.

The promotion of human rights is also a tenet of French foreign policy. There is a secretary of state for human rights to oversee policy in this regard. The major problem for French authorities in the realm of human rights has been terrorism. The government has granted the power to summarily expel foreigners suspected of terrorism without legal proceedings.

FOREIGN POLICY

De Gaulle established the main principles of French policy that continue to underlie French foreign policy. He attempted to reassert France's position as a global power, all the while maintaining a high degree of autonomy. As a result, France developed and maintained independent military capabilities, including nuclear weapons. France refused to sign the nuclear-test-ban and nonproliferation treaties, preferring to establish its own *force de frappe* (the French nuclear force). Paris also endeavored to utilize the institutional framework of the West to augment its rank in the world. France accepted the economic provisions of the Treaty of Rome but resisted efforts at political integration on a supranational level and twice vetoed British entry into the European Community. Although it was a founding member of NATO, France withdrew its military forces from the alliance and refused use of its territory for Allied military actions. In economic as well as military relations, de Gaulle assailed U.S. primacy and asserted French autonomy on issues such as recognition of China, U.S. involvement in Vietnam, and condemnation of Israel.

Although the basic premises of Gaullist foreign policy have never been formally repudiated, successive presidents have retreated from its more extreme positions. The anti-U.S. and anti-British tenor of French policy were reversed, and France was brought into closer alignment with the Western alliance. In the process, French foreign policy has become less visionary and more pragmatic.

The election of the socialist president François Mitterrand in 1981 aroused great hopes of a break with the policies of the previous three presidents. However, Mitterrand continued the Gaullist tradition but modified it to conform to changing global circumstances. Mitterrand reaffirmed his commitment to the established Gaullist line of autonomous national membership in the Atlantic alliance. He then went further than his predecessors and supported a buildup of NATO missiles in Europe. France also supported U.S. actions in other international areas. Mitterrand also managed to both open ties with Israel and restore Franco-Arab relations after the opening.

Within the European Community, Mitterrand continued the close relations between France and Germany. In 1987 the two nations held bilateral military exercises and later announced the creation of the Franco-German

Brigade, a joint military force that was, in turn, expanded to the Eurocorps, a multilateral military force. France worked to develop an autonomous military arm for the European Union and supported increased economic and political integration.

French relations with the developing world have been uneven as the nation's pursuit of nuclear tests in the South Pacific during the tenure of Mitterrand and his successor, Jacques Chirac, angered many nations in the region. In addition, the 1985 government-sponsored sabotage of the Greenpeace ship *The Rainbow Warrior* led to the resignation of the French head of the secret service and the minister of defense. Moreover, French support for the military regime in Algeria has soured relations with some Arab states and led to terrorist acts on French soil. Conversely, even as France granted independence to its colonies, it was able to maintain close ties with many of its former possessions, especially in Africa. The Francophone states of Africa have close economic, cultural, and military ties with France. For instance, France aided Chad in repulsing Libyan invaders in 1987. Relations with Iran were initiated under Mitterrand, over objections by the United States.

Under Chirac, France drew closer to the United States as the president sought to maintain French influence in light of diminishing resources and power. Hence, Chirac ordered the reintegration of France into NATO as a means to maintain French influence as NATO expanded and took on new missions. Chirac also supported increased integration in the European Union, including monetary union, in order to preserve influence against a reunified Germany. Relations with the United States, however, were severely strained by Chirac's vocal opposition in 2002 and 2003 to the U.S.-led war in Iraq.

DEFENSE

The French army claims to be the oldest national army in the world and has a long history marked by both great military victories and innovations and ignominious failures. The constitution of 1958 clearly establishes the primacy of the president in defense matters. He is the commander in chief of the armed forces and oversees governmental committees on national defense.

Conscription was long a hallmark of the French military, but it was done away with under President Chirac in 2001 in an effort to both cut costs and improve the professionalism of the military. In the post-cold war era, successive governments have dramatically cut military expenditures in an effort to meet the criteria necessary for European Monetary Union. Nonetheless, the French maintain a large standing military force of 360,000 in 2003, divided between the army, navy, and air force. In 2003 France's military expenditures were \$45.2 billion, about 2.6 percent of the nation's gross domestic product (GDP).

French military commitments run along two lines. The first is the defense of Western Europe. During the cold war, in spite of the fact that France was not an integrated member of NATO, security policy centered on defense against a Soviet attack. The backbone of this policy was, and continues to be, close military cooperation with Germany. Although Chirac reintegrated France into NATO, present French security policy continues to support the development of an autonomous European Security and Defense Identity (ESDI), which would lessen European reliance on the United States. The second main tenet of French security policy is the defense of national interests around the world. France has bilateral defense agreements with 11 of its former colonies in Africa and with a number of states in the Middle East. Paris has honored these treaties on several occasions by deploying troops to aid these nations. In 2004, 34,000 French troops were deployed overseas, many in peacekeeping operations in such troubled countries as Côte d'Ivoire, Chad, Afghanistan, Kosovo, and the Sudan.

The French policy of autonomy led governments to maintain a large defense-industrial complex both to supply the national military forces and to export weapons systems around the world. France continues to spend more money on research and development, as a percentage of GDP, on new weapons than any other nation except the United States. Also, French forces almost exclusively use domestically produced weapons, aircraft, and ships. In addition, France developed and deployed its own nuclear weapons (outside the framework of NATO). The *force du frappe* consists of submarine-launched nuclear missiles, air-dropped weapons, and land-based ballistic missiles.

ECONOMY

France maintains a mixed economy that includes a growing services sector, a shrinking but diversified manufacturing base, and a significant agricultural complex. Services now account for the majority of the nation's GDP, but industrial products provide the main export earnings. Major French industries include steel, machinery, chemicals, automobiles, aircraft, electronics, textiles, and tourism. Major exports are manufactured equipment, chemicals, automobiles, textiles and clothing, foodstuffs, and other agricultural products. Imports consist mainly

of oil, machinery, chemicals, and iron and steel products. The nation's primary trading partners are Germany, Italy, Great Britain, Spain, Belgium, and the United States.

More so than in any of the other industrialized nations, the French government maintains substantial influence in the economy and owns majority stakes in key industries such as railways, electricity, aircraft manufacturing, and telecommunications. Efforts to privatize these industries have been proceeding slowly and are often met with resistance by the public. Through the 1980s and 1990s the French economy was plagued by a persistently high unemployment rate of over 10 percent, and in 2004 the rate was still 9.7 percent. A 35-hour workweek was mandated in an effort to create new jobs, but the result has been labor-market inflexibility. France entered the European Monetary Union in January of 1999, and the strict fiscal requirements for admittance have forced successive governments to curtail spending on programs to stimulate the economy and to raise taxes. More recently, taxes have been cut in an effort to boost employment, and the nation's budget deficit of 4 percent exceeds the European Union's 3 percent debt limit. However, governments have also avoided deep cuts in the nation's generous social welfare system or the widespread governmental bureaucracy. French agriculture, too, remains highly protected from market forces. The nation is also one of the world's largest commercial fishing powers.

ENVIRONMENT

The environmental movement in France has not gained the popularity or support that it has in other nations. Environmental parties were able to gain nine seats in parliament in the 1998 elections, but after the most recent elections the Green Party held no seats in the Senate and just three in the National Assembly. The most

controversial environmental issue in France involves nuclear energy. In an effort to lessen dependency on imported oil, the French government aggressively built nuclear power plants. Nuclear waste and the potential for accidents have now diminished the popularity of the plants. In addition, the French were roundly criticized for their decision to conduct nuclear tests in the South Pacific.

LIVING CONDITIONS

France is a nation with sharp class divisions and a wide gap between rich and poor. As of 2000, 6.5 percent of the population lived below the poverty line. Additionally, France continues to grapple with a high unemployment rate and inadequate housing, especially for the nation's aging population and large number of immigrants, who often live in crowded and rundown suburban communities. Industrial strikes often interrupt public services, and public protests are common. The environment is threatened by industrial pollution and lack of landfill capacity, especially for toxic wastes.

Yet for many visitors to France, the nation epitomizes history and romance. Paris, the "City of Lights," is a premier world capital filled with museums (especially the Louvre), culture, and arguably the world's finest cuisine. The countryside is dotted with world-class vineyards and wine producers, as well as breathtaking scenery and quaint country villages. France has a modern, efficient transportation system, including state-owned railways and its high-speed train, the TGV (*train à grand vitesse*), that has been connected by the new Channel Tunnel ("Chunnel") with England. The Métro, Paris's subway, carries over one million passengers a day.

HEALTH

In 2003 life expectancy for women was over 83 years and for men nearly 76 years. The rate of infant mortality was low, at 4.3 deaths for every 1,000 live births, and the rate of low-birth-weight babies was 6.4 percent. The number of people living with AIDS in 2003 was estimated at 120,000, and France's rate of AIDS is second only to that of the United States. (The AIDS virus was first identified at Paris's Institut Louis Pasteur, a major research institute.) The major causes of death are heart disease and

cancer, but the third-leading cause of death is complications from alcoholism. Health care in France is provided by the government, funded by social security payments from wages, with the national health system covering medical expenses and hospitalization. Many people buy supplemental health insurance. Total spending for health care per capita was \$2,348 in 2003.

FOOD AND NUTRITION

French cuisine is world famous, and throughout the world no city of any pretensions to good taste and culture is without at least one restaurant that serves French cuisine, including French wine and cheeses, a source of national pride. Also prominent would be such regional French dishes as *choucroute*, an Alsatian dish made of cabbage in white wine with pork and sausages; *boeuf bourguignon*, or beef in wine sauce, from central France; ratatouille, a vegetable stew from the Mediterranean region; and the quintessential French dishes coq au vin, or chicken simmered with vegetable in red wine, and *canard à l'orange*, or duck in an orange sauce—all served with the baguette, a thin loaf of white bread with a soft inside but a crunchy crust. With all of this rich food, including cream sauces, it is surprising to some observers that the rate of obesity—nearly 10 percent for both men and women—is not higher than it is. Nutritionists are concerned that because of time constraints, the French, like many Westerners, are relying more on less nutritional convenience foods and fast food.

 Amount of Fruits and Vegetables Available per person per year kg: 237.8

STATUS OF WOMEN

Women enjoy full civil rights in France, including universal suffrage. The penal code prohibits spousal abuse, and law enforcement authorities vigorously enforce this law. In 2003 the Ministry of Interior reported 10,408 cases of rape and 15,394 instances of other criminal sexual assault, down very slightly from 2002. Numerous private and public organizations assist abused women. Prostitution is legal in France, but pimping is not. A government agency, the Central Office on the Treatment of Human Beings, deals with trafficking in women and prostitution. In theory women receive wages equal to men for comparable work, but in practice they do not. In the 5,000 largest French firms, the average difference in salary between men and women is 27 percent. The law prohibits sex-based job discrimination and sexual harassment in the workplace. But the scope of the law is narrow, and the fines and compensatory damages are modest. The Women's Bureau in the Ministry of Social Affairs and Employment is responsible for the promotion of women's rights.

WORK

France's labor force consists of 27.39 million people, with 4.1 percent employed in agriculture, 24.4 percent in industry, and 71.5 percent in services. Most French workers belong to influential labor unions. The workweek had been 39 hours, but in 2002 it was lowered to 35 hours. The minimum hourly wage is 7.6 euros, or about \$10.35 (late 2004 exchange rate). Most workers enjoy a two- to three-hour lunch break, when the main meal of the day is often eaten (although this tradition has been changing in recent years). The government provides partial funding for day care for the children of workers. French workers receive five weeks of vacation each year and a total of 117 days off work each year. About 6 percent of the labor force consists of foreign workers. Youth unemployment is high at 20.7 percent.

 Services: 71.5
 Unemployment %: 9.7

EDUCATION

France has a rich educational history beginning with Charlemagne and the founding of the University of Paris in the 12th century. For the next six centuries education was controlled by the Catholic Church. The Revolution led to the dismantlement of the church schools, and Napoleon established lycées, divided the nation into academies, and consolidated higher education. The present school system was established in 1975 and reformed in 1983.

The school year runs from the end of September to the end of June, with short holidays. Education is compulsory between the ages of six and 16. Preprimary education is not compulsory, but it is free and nearly universal. Elementary education runs from grades one through five, and secondary education begins at grade six and ends at grade 12. At the end of grade nine, students choose between two tracks: one which prepares them for the university and the other for vocational fields. Education in France is highly centralized, and the bureaucracy is the largest of the French government.

Most French universities date back to the Renaissance. The earliest was the University of Paris, founded in 1150. Higher education in France is free and offered by the traditional university, two-year technical colleges, and prestigious *grandes écoles* for postgraduate work. French university students have a long tradition of protest and activism. This has made governments unwilling to undertake significant reforms of the educational system.

SCIENCE AND TECHNOLOGY

France is one of the world's leaders in funding for science; the nation ranks third in the world in government funding for research and development. Most scientific research is conducted by such agencies as the Center for National

Research, the French National Space Agency, and the National Institute for Health and Medical Research. France has produced six winners of the prestigious Fields Medal, the Nobel Prize in mathematics. Among its six Nobel Prize winners in chemistry was one of the world's most famous scientists, Marie Curie, who discovered radium and polonium.

MEDIA

The first French newspaper was published in 1631, and the nation has a long history of a free and vocal press (with the notable exception of the Vichy period). Formal freedom of the press was first established with the constitution of 1789. Eleven major general-interest newspapers are published in Paris. The largest is *France soir*. *Le monde* is the most influential paper in France and one of the most influential throughout Europe. Also noteworthy is *Le figaro*, a more conservative paper. Paris also publishes 60 nondaily newspapers and 8,800 periodicals, including 1,300 with general news and politics and 2,000 technical publications. The leading magazine is *Paris match*. There is a monthly Catholic magazine, *L'écho des françaises*. Five groups control the French press; the largest is the Franpar-Hachette group, arguably the most powerful publishing group in the world.

Journalism is heavily organized, and union members account for some 60 percent of all French journalists. Strikes are common but usually involve local issues and are quickly resolved. In addition, most publications are subsidized by the government, with the average subsidy amounting to 12 percent.

There are approximately 800 FM and 41 AM radio stations in France, although private advertising on the radio was only legalized in 1987, and the state heavily regulates the industry. There are two state-run television stations and an increasing number of private stations. Government regulation of the content of these stations has boosted the popularity of satellite stations, which bring in programming from around the world. The main purpose of government regulation in the broadcast media is not direct censorship but the promotion of French culture and language.

As in many nations, French culture can be divided into high culture (art, literature, music) and low culture, which encompasses both traditional forms of culture and popular culture. In the post-World War II era, France began to lose its dominance as the center for world culture. Other major cities, including London, Rome, and

New York, have developed well-established cultural outlets. In addition, the advent of cinema and modern forms of music has transferred the center of popular culture to the United States. In response, the French government has enacted legislation to protect its film and television industry from outside competition. Paris remains the center for such fields as fashion and design.

CULTURE

French culture is the envy of the world. The nation achieved cultural prominence during the Middle Ages, and Paris was a magnet for artists and writers during the 16th, 17th and 18th centuries. French literature and art made major contributions to the Renaissance and Age of Enlightenment. Its cathedrals, such as Chartres and Notre Dame in Paris, draw millions of visitors each year. Any list of major French writers and artists would read like a “who’s who.” Among writers would be François Rabelais, Voltaire, Henri Rousseau, George Sand, Victor Hugo, Stendhal, Honoré de Balzac, Gustave Flaubert, and Marcel Proust. Among artists would be Eugène Delacroix, Jean-François Millet, and many impressionists, including Claude Monet, Jean Renoir, Camille Pissarro, Edgar Degas, and Édouard Manet, as well as postimpressionists, including Henri Matisse, Paul Cézanne, and Georges Seurat. Twentieth-century artists are Georges Braque and Auguste Rodin. In drama, France produced Molière, Hugo, Jean Racine, Alexandre Dumas (père and fils), Jean Anouilh, and Jean Genet. The Comédie-Française in Paris is a major institution. Opera is popular among all classes of people in France, and theater flourishes throughout the provinces. The French cinema is subsidized by the government more than that of any other nation in Europe, and it has produced major directors, such as François Truffaut and Louis Malle. Each year in May, Cannes is the site of a major international film festival.

FOLKLORE AND MYTHOLOGY

The different regions of France all have their own folklore. In Basque legends, for example, witches and caves dwellers with supernatural powers are prominent. Ancient Celtic beliefs are reflected in religious sites in Auvergne. Folklore surrounding death is prominent in Breton, where death is seen as a skeletal figure, Ankou, who carries a scythe and whose arrival can be sensed by the creaking of a cart. When a death occurs, doors and windows are left open so that the person’s spirit can escape, and mirrors are turned to the wall.

France’s chief cultural hero is Charlemagne, or Charles the Great, whose exploits as king are chronicled in France’s national epic, *The Song of Roland*.

ENTERTAINMENT AND RECREATION

Businesses and offices in France close late, often at 6:00 or 7:00 p.m., so there tends to be little leisure time in the evenings. Many French watch television, but other activities abound. Half of men and one-third of women take part in at least one sporting activity, and one-quarter of the French belong to some sort of organized sports federation. One popular activity is gathering for coffee and conversation at one of the thousands of cafés in the cities. Cooking is a popular leisure-time activity, and as many as one-third of the French are regular gardeners. The rate of movie attendance is the fourth highest in the world. Vacation trips are also popular. Traditionally, the French took their vacations at one time in August, but in recent years the trend has been to take vacation days throughout the year. In the provinces, folk crafts and folk dancing are popular activities. Among the Basques, for example, there is a folk dance troupe in nearly every village.

ETIQUETTE

The French suffer from a reputation for being rude and haughty, but this is an unfair judgment that fails to account for a natural reserve and formality, combined with pride in French culture. Many rules of etiquette are intended to maintain class distinctions. Greetings tend to be rather formal. A kiss on each cheek (called a *faire la bise*) is common among both men and women but is reserved for family members and close friends. Otherwise, a handshake is common, and the titles “Monsieur,” “Madame,”

and “Mademoiselle” are used with the name. In public, eye contact and smiling at others are avoided. Smaller shops are not “self-service”; rather, the shopkeeper helps the customer pick out items for purchase. Dinner guests always bring along a gift of wine or flowers for the host and hostess.

FAMILY LIFE

As in many Western nations, the traditional extended family, including grandparents, is not as common as it once was. Today a nuclear family with two or three children is the norm. In recent years the marriage rate has been declining, and the age at which people marry has been rising—29 for men and 27 for women. Divorce rates are high, with one in three marriages ending in divorce. All marriages in France have to be endorsed by a civil ceremony that precedes the religious ceremony, so it is not uncommon for a wedding party to go first to the mayor’s office and then proceed to a church. More and more young people are cohabitating, and recent laws have permitted legal unions for cohabitating couples, including gay couples. A 1999 law called the *Pacte d’association civile et solidaire* created an intermediate union between cohabitation and marriage.

PERSONAL APPEARANCE

Most French wear modern, Western-style clothing, both for formal and for casual occasions. The most recognizable item of French clothing is perhaps the men’s beret. Women in France tend to be stylish, for France was the leader of the fashion world throughout much of the 20th century, and fashion designers such as Coco Chanel, Yves Saint-Laurent, and Christian Dior are known throughout the world. In the provinces traditional costumes are worn at festivals and include bonnets, lacy blouses, and colorful aprons.

SPORTS

As in much of Europe, soccer is an immensely popular sport, and the nation has some 8,000 organized soccer clubs. In 1998 France won soccer’s World Cup. The French also enjoy rugby, horse racing, and auto racing. A major event in France is the Tour de France, a grueling, 2,000-mile-long bicycle race that lasts for three weeks in July. Also common are fishing, skiing, swimming, tennis, and mountain climbing. As a nation of sports enthusiasts, France placed seventh in the medal table at the 2004 Summer Olympics in Athens with a total of 33 medals, 11 of them gold.

CHRONOLOGY

- 1944** Liberation of France from German control
- 1946** The Fourth Republic is established.
- 1953** De Gaulle retires from public life.
- 1954** France is defeated by the Viet Minh in the Battle of Dien Bien Phu and is forced to evacuate Vietnam.
- 1957** France signs the Treaty of Rome, establishing the European Economic Community.
- 1958** In response to a military insurrection in Algeria, de Gaulle is invited to form a government to resolve the crisis; he proposes a new presidential-type constitution, which leads to the formation of the Fifth Republic with de Gaulle as the first president.
- 1962** Algeria is granted full independence.
- 1965** France signs the Brussels Treaty, which establishes the European Community.
- 1966** France withdraws from NATO.
- 1968** Student riots spark mass protests; de Gaulle is reelected president.
- 1969** De Gaulle resigns following voter rejection of his constitutional amendments in a referendum; Georges Pompidou is elected president.
- 1970** De Gaulle dies.
- 1974** Pompidou dies; Valéry Giscard d’Estaing is elected president.
- 1981** Socialist François Mitterrand is elected over Giscard d’Estaing.
- 1984** Socialists abandon plans to establish unified secular education.
- 1985** French special forces sink the Greenpeace ship *The Rainbow Warrior* in Auckland, New Zealand, creating a diplomatic crisis.
- 1988** Mitterrand is reelected president.
- 1991** France joins the coalition against Saddam Hussein.
- 1995** Gaullist Jacques Chirac is elected president.
- 1999** France joins the European Monetary Union.
- 2002** The euro replaces the franc as the national currency.
Chirac is reelected president in a landslide victory against right-wing National Front leader Jean-Marie Le Pen. In legislative elections Chirac’s center-right coalition wins a landslide victory.
- 2003** A heat wave kills almost 15,000 people; France leads opposition in the United Nations to the U.S.-led war in Iraq.
- 2005** Voters reject proposed EU constitution, government imposes emergency measures to quell riots by immigrant youths.
- 2006** Widespread protests follow new youth employment law.

GABON

Basic Fact Sheet

OFFICIAL NAME

Gabonese Republic (République Gabonaise)

ABBREVIATION

GA

CAPITAL

Libreville

HEAD OF STATE

President Omar Bongo (from 1967)

HEAD OF GOVERNMENT

Prime Minister Jean Eyeghe Ndong (from 2006)

NATURE OF GOVERNMENT

Multiparty democracy

POPULATION

1,389,201 (2005)

AREA

267,667 sq km (103,346 sq mi)

MAJOR ETHNIC GROUPS

Fang, Eshira, Mbede, Okande

LANGUAGES

French (official), Fang (vernacular)

RELIGIONS

Christianity and animism

UNIT OF CURRENCY

Coopération financière en Afrique centrale franc

NATIONAL FLAG

Tricolor of green, golden yellow, and royal blue horizontal stripes

NATIONAL EMBLEM

Two black panthers balanced on the spreading roots of a yellow okoume tree grasp a shield with their forepaws. The shield is divided horizontally into two sections: The larger, bottom section shows a fully rigged black schooner flying the national flag; the smaller, top segment shows three flat ornamental disks. The Latin motto *Uniti progrediemur* (United we shall go forward) appears just below the spreading branches of the okoume tree, and the French motto *Union, travail, justice* (Union, work, justice) appears above its roots.

NATIONAL ANTHEM

“United in Concord and Brotherhood, Awake, Gabon, Dawn is at Hand”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 12 (National Day, Renovation Day), May 1 (Labor Day), May 25 (African Freedom Day), August 17 (Independence Day), various Christian festivals, including Assumption, Easter Monday, All Saints’ Day, Christmas, and Pentecost Monday

DATE OF INDEPENDENCE

August 17, 1960

DATE OF CONSTITUTION

March 14, 1991

GEOGRAPHICAL FEATURES

Gabon is situated on the western coast of Africa, straddling the equator, with an area of 267,667 sq km (103,346 sq mi). The greatest distance north-northeast to south-southwest is 717 km (446 mi); east-southeast to west-northwest, 644 km (400 mi). The Atlantic coastline is 885 km (550 mi) long.

Gabon’s total international land boundary of 2,551 km (1,585 mi) is shared with three countries: Cameroon (298 km; 185 mi), Republic of Congo (1,903 km; 1,182 mi), and Equatorial Guinea (350 km; 217 mi).

The low-lying coastal plain is narrow in the north (29 km; 18 mi) and south but broader in the estuary region of Ogooué. South of the Ogooué are numerous lagoons, such as N’Dogo, M’Goze, and M’Komi, along the coastline. The interior relief is more complex though nowhere dramatic. In the north the Crystal Mountains enclose the valleys of the Woleu and N’Tem rivers and the Ivindo Basin. In southern Gabon the coastal plain is dominated by granitic hills. Between N’Gounie and the Ogooué the Chaillus Massif rises to 915 m (3,000 ft). The highest point in Gabon is Mount Iboundji (1,575 m; 5,167 ft).

CLIMATE AND WEATHER

The climate in Gabon is equatorial, with abundant rain in the rainy season, small variations in temperature, and a hot and dry summer. From June to September there is virtually no rain, and there is only occasional rain in December and January. Rainfall is very heavy during the rest of the year, averaging 2,540 mm (100 in) per year at

Libreville. Farther north of the coast the average annual rainfall rises to 3,810 mm (150 in). Being on the equator, the country enjoys a uniform temperature throughout the year, varying only slightly from the average mean of 26.6°C (80°F). The cold Benguela Current lowers the coastal temperatures.

Climate and Weather

Mean Temperature: 80°F
Average Rainfall: 100 in to 150 in

FLORA AND FAUNA

Although Gabon has some savanna, and mangrove forests can be found along estuaries on the Atlantic seaboard, more than three-quarters of the country is covered by dense equatorial rain forest with some 8,000 plant species, up to 20 percent of them native to Gabon, that provide habitat for 200 mammals and 600 species of birds. Commonly sighted in Gabon are elephants, buffalos, panthers, antelopes, hippopotami, crocodiles, chimpanzees, and grey parrots. Gabon is home to up to four-fifths of Africa's gorillas and chimpanzees.

ETHNIC COMPOSITION

Excluding the Pygmies, who are the original inhabitants of the country, Gabonese belong to 40 Bantu tribes divided into four tribal groupings: Fang, Eshira, Mbede, and Okande. The largest tribal group is the Fang, who

came from the north, perhaps Cameroon, and settled in the middle Ogooué and its estuary in the 19th century. The peoples of the Myene language group—Mpongwe, Orungu, Galoa, and Nkomi—occupy the lower Ogooué and the coast. The Mitshogo-Okande group occupy the center. The Jumba and the Inenga also live along the lower Ogooué. The Kota, known for their carved wood figures, occupy the northeast. Other groups include the Duma, Kanda, Seke, Mbee, and Bongom or Bakele. There are only approximately 3,000 Pygmies in the population. Ethnic distinctions are less sharply drawn and ethnicity is less divisive in Gabon than elsewhere in Africa.

Gabon has a large expatriate population, estimated at over 100,000, of whom 27,000 are French. There are more French in Gabon today than there were in colonial times. One of the most famous of these expatriates was Dr. Albert Schweitzer, whose hospital at Lambaréné is a national landmark.

LANGUAGES

French is the official language of the republic. Fang is the main vernacular, spoken primarily in northern Gabon. Other vernaculars include Myene, Bateke, Bapounou/Eschira, and Bandjabi.

RELIGIONS

Gabon is the most Christian of the Francophone states in Africa and often is called the “Bastion of the Cross of Africa.” About 50 percent of the population are Roman Catholics. The Catholic Church has 36 missions, about 120 priests, and 251 schools under the archbishop of Libreville. The Christian and Missionary Alliance devotes its activities to the south of the country, while Eglise Evangélique de Gabon is active throughout the country and runs four colleges, 66 primary schools, and two hospitals. Muslims constitute an estimated 1 percent of the population. Additionally, there are some 2,300 Jehovah's Witnesses in Gabon.

Religious Affiliations

Other	681,000

HISTORICAL BACKGROUND

Sometime between the 16th and 18th centuries the Pygmies, the original inhabitants of the region, and Bantu-speaking people, who arrived around the first century c.e., were displaced by the Fang, who migrated south from

Cameroon and Equatorial Guinea. The first westerners were Portuguese who arrived in 1472. While the Portuguese focused their attention on Bioko and São Tomé, British, Dutch, and French traders stopped in order to obtain slaves, ivory, and precious tropical woods. By 1849 the capital, Libreville, was established as a settlement for freed slaves.

Gabon was under French rule from 1890, when it formally became a part of French Congo. It was separated into an administrative region in 1903 and was reorganized as part of French Equatorial Africa in 1910. Gabon became independent along with other units of French Equatorial Africa in 1960. It allied itself with other moderate states that preferred to retain political, economic, and cultural ties with France.

At independence, Gabon was led by Léon M'Ba, the conservative, pro-French head of the Bloc Démocratique Gabonais (BDG). The opposition centered around the Union Démocratique et Sociale Gabonaise (UDSG), led by Jean-Hilaire Aubame. The two parties, which were evenly matched in support, agreed on a joint slate for elections in 1961, following the adoption of a new constitution. M'Ba won the election with 99.6% of the votes cast. He became the nation's first president, and Aubame was appointed minister of foreign affairs.

M'Ba attempted to merge the two parties, but when the UDSG resisted, its members, including Aubame, were forced to resign from the government. Aubame led a coup that deposed M'Ba in 1964. However, M'Ba was reinstated with the help of the French military, and Aubame was imprisoned. The BDG won the majority of seats in the 1964 elections, with the remainder going to a reorganized UDSG.

President M'Ba died in 1967 and was succeeded by Vice President Albert-Bernard (later Omar) Bongo. The following year Bongo announced the restructuring of the BDG into a broad-based political grouping, the Parti Démocratique Gabonais (PDG), and declared Gabon a one-party state.

During the 1970s the country remained politically stable. Discontent with the existing one-party system was limited because of high living standards—Gabon had the highest per capita income in sub-Saharan Africa—and economic growth. Beginning in 1981 banned opposition groups began to emerge and call for a multiparty system. Bongo resisted reform, insisting that democratic debate was permitted within the PDG. Bongo survived a coup attempt in 1985, but poor economic conditions in the late 1980s resulting from a decline in the world oil market led to social unrest. Acceding to popular demands, Bongo consented to multiple parties in 1990. He appointed a new prime minister, Csimir Oye-Mba, who named six opposition figures to his cabinet.

In national elections held in 1993 and 1998 Omar Bongo easily won reelection, although his opponents charged that the elections were tainted by massive fraud.

A qualified multiparty system was introduced in 1991. Constitutional amendments approved by the legislature in 1997 lengthened the presidential term from five to seven years and empowered the president to name both the prime minister and a vice president. The president has since managed to successfully divide the opposition while creating token democratic institutions like the National Democracy Council. In 2002 the PDG retained a convincing majority in parliamentary elections, and in 2003 the constitution was amended to allow the president to run for office as often as he wishes. In 2004 Gabon took steps to strengthen its economy by signing a deal with a French firm to export Gabonese oil to China as well as a deal with China to mine one billion tons of iron ore.

1961–67 Léon M'Ba

1967– Omar Bongo

CONSTITUTION

The legal basis of the Gabonese government is the constitution of 1991, which was adopted by referendum in July 1995. The constitution established a presidential form of government in which the president is elected for a seven-year term by direct universal suffrage. In 2003 the constitution was amended to allow the president, Omar Bongo, to run for office as often as he wants. The head of the government is the prime minister, who appoints the council of ministers. The bicameral legislature consists of the National Assembly and the Senate. The 120 members of the National Assembly and the 91 members of the Senate are directly elected for terms of five years. The judiciary includes the Supreme Court, the High Court of Justice, the Court of Appeal, the Superior Council of Magistracy, and other lesser courts.

PARLIAMENT

The bicameral national legislature consists of the National Assembly (*Assemblée Nationale*) and the Senate (*Sénat*). The 120 members of the National Assembly and the 91 members of the Senate are directly elected for five-year terms by universal suffrage. The national legislature normally holds two sessions per year. It may be dissolved or prorogued for up to 18 months by the president; in the case of dissolution, new elections must be held within 20 to 40 days. Legislation may be initiated by the president or by members of the national legislature. The national legislature may override a president's veto by a two-thirds vote.

Suffrage is universal over age 21.

POLITICAL PARTIES

Gabon is a multiparty state that is largely ruled by the successor party to the one party that originally ruled the country. The main party is the Gabonese Democratic Party (PDG), which succeeded the Gabon Democratic Bloc. Other minor parties include the National Rally of Woodcutters, or *Bûcherons RNB*, whose leader Father Paul Mba Abesole won 27 percent of the vote in the 1993 presidential election; the People's Unity Party (PUP); the Circle of Liberal Reformers (CLR); and the Gabonese Party for Progress (PGP).

LOCAL GOVERNMENT

For purposes of regional administration Gabon is divided into nine provinces, each administered by a governor. These provinces are divided into 37 prefectures (departments) headed by presidentially appointed prefects. There are eight subprefectures led by subprefects. These officers answer to the central government directly. The original system of regions, districts, and administrative control posts was supplanted by the present system in 1975.

Only towns and cities have popular representative institutions. Libreville and Port-Gentil have popularly elected mayors and municipal councils. Four towns—Oyem, Bitam, Mouila, and Lambaréné—have communal administrations that are partly elected and partly appointed.

LEGAL SYSTEM

The judicial system is headed by the Supreme Court, which has four chambers: constitutional, judicial, administrative, and accounts. Immediately below the Supreme Court are three superior courts: the High Court, whose judges are appointed by and from the deputies of the National Assembly; the Court de Sûreté de l'Etat, with 12 members; and the Court of Appeal. Subordinate courts, or *tribunaux de grande instance* (county courts of first instance), are found in Libreville, Port-Gentil, Lambaréné, Mouila, Oyem, Franceville, and Kolamoutou. Appeals from these courts may be heard by the courts of second instance.

HUMAN RIGHTS

In terms of political and civil rights Gabon is ranked as a country that is not free. Human rights are tightly restricted. Gabonese law enforcement officials use beatings in conjunction with interrogation regularly. Central Prison, the government's primary prison, deprives prisoners of proper living conditions, medical facilities, and

sufficient food. Amnesty International has reported numerous instances in which criminals and illegal aliens have been beaten and tortured. Law enforcement officials defy legal constraints against arbitrary detention, detaining persons without charge under the constitutional specification prohibiting "acts against the Chief of State." Search warrants are optional, and ransacking of detainee homes is permissible.

Before 1990 freedom of speech was restricted. Criticism of the president and advocacy of multiparty systems were prohibited. At present, all outdoor meetings must be approved or organized by the ruling party. Jehovah's Witnesses and several small syncretistic sects have been banned from practicing. The right of workers to strike is severely restricted under recently imposed regulations as well as a curfew.

FOREIGN POLICY

Gabon is heavily dependent on French support but nevertheless resents French dominance in the country's affairs. In 1995 relations between the two countries were temporarily broken off but were quickly restored. Relations with neighboring countries are often strained as a result of the large number of illegal immigrants from Benin, Cameroon, Congo, and Equatorial Guinea. Nevertheless, Gabon actively participates in the Economic Community of Central African States and holds close relations with Congo, whose president, Denis Sassou-Nguesso, is President Bongo's father-in-law. The country is engaged in a continuing maritime boundary dispute with Equatorial Guinea over oil-rich Mbane Island.

DEFENSE

Gabon has virtually no military capability of its own; total armed forces personnel number about 7,000, and the size of Gabon's army and navy ranks last in the world. Defense is based on a series of mutual defense and military assistance agreements with France. France continues to supply arms, equipment, and instructor-advisers. Annual French assistance is in the range of \$800,000. In 2003 Gabon spent about \$149 million, or 2 percent of its gross domestic product (GDP), on defense.

ECONOMY

Gabon enjoyed a per capita income of \$5,500 in 2004, equal to four times that of most nations in sub-Saharan Africa. This has supported a sharp decline in extreme poverty, yet because of high income inequality a large proportion of the population remains poor. Gabon depended on timber and manganese until oil was discovered offshore in the early 1970s. The oil sector accounted for 50 percent of GDP in the early 2000s. Gabon continues to face fluctuating prices for its oil, timber, manganese, and uranium exports. Despite the abundance of natural wealth, the economy is hobbled by poor fiscal management. In 1992 the fiscal deficit widened to 2.4 percent of GDP, and Gabon failed to settle arrears on its bilateral debt, leading to a cancellation of rescheduling agreements with official and private creditors. Devaluation of its currency by 50 percent on January 12, 1994, sparked a one-time inflationary surge, to 35 percent; the rate of inflation dropped to 6 percent in 1996, and in 2004 it stood at just 0.5 percent. The International Monetary Fund (IMF) provided a one-year standby arrangement in 1994–95 and a three-year Enhanced Financing Facility (EFF) at near commercial rates beginning in late 1995. Those agreements mandate progress in privatization and fiscal discipline. France provided additional financial support in January 1997 after Gabon had met IMF targets for mid-1996. In 1997 an IMF mission to Gabon criticized the government for overspending on off-budget items, overborrowing from the central bank, and slipping on its schedule for privatization and administrative reform. The rebound of oil prices in 1999–2000 helped growth, but drops in production hampered Gabon from fully realizing potential gains. In 2004 the real growth rate stood at 3.4 percent. Oil production stood at almost 300,000 barrels per day.

ENVIRONMENT

Gabon is blessed with an abundance of natural resources and biodiversity. In the early 2000s three-quarters of the land was covered with lush rain forests, of which 35 percent had never been exploited. The country's high standard of living (the highest in sub-Saharan Africa) is largely due to the exploitation of its oil reserves. The use of oil has protected other natural resources such as forests. However, with worldwide oil prices remaining unstable, there is growing pressure to expand Gabon's economy and to exploit other natural resources, especially timber. Increased logging threatens Gabon's forests.

 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 2.8

LIVING CONDITIONS

Gabon's standard of living is generally much better than that of other African nations. It has the second highest per capita income on the continent, largely because of an abundance of oil and timber and a low population density. In cities such as Libreville and Port Gentil, a significant number of people live in relative luxury, with modern apartments, late-model luxury cars, and satellite dishes. These cities, however, are surrounded by shantytowns filled with rural immigrants and immigrants from other countries in Africa looking for work. Throughout Gabon much of the population lacks access to modern facilities, including medical care, education, plumbing, electricity, and the like: Only 30 percent of the rural population in 2002 had adequate sanitation facilities; 37 percent of the urban population had such facilities. Many Gabonese live through subsistence farming, and while much of the nation's labor force is employed in farming, Gabon imports most of its food.

HEALTH

Health care in Gabon is poor. Hospitals are ill equipped, and Gabonese in the cities, who have some access to health care, have to pay for pharmaceuticals out of pocket. Health-care spending amounts to only about \$127 per person. As of 2004 life expectancy was only about 56 years, and the infant mortality rate was about 54 deaths per 1,000 live births. In 2003 over 8 percent of the adult population was living with AIDS, and 3,000 people died of the disease. Additionally, such infectious

diseases as malaria and tuberculosis are widespread, and few people receive treatment for them. Only about 55 percent of children are immunized against measles. The sale of alcohol is not regulated, so alcoholism is rampant. Many Gabonese turn to *ngangas*, or medicine men, for health-care needs.

FOOD AND NUTRITION

Staples in Gabon, which are relatively uniform throughout the country, include such fruits as bananas, papayas, pineapples, mangoes, avocados, and coconuts; vegetables include eggplants, corn, peanuts, plantains, and tomatoes. The main starch is the nutritionally poor cassava. Another staple is manioc root, which is ground, soaked, and fermented and sold in blocks resembling cheese. Protein is provided by fish and bush meat such as wild turkey, monkey, and even cat among the Fang. Beverages include beer, palm wine, and a great deal of American cola.

From 1998 to 2003 about 14 percent of Gabonese infants were of low birth weight. About 2 percent of children under age five were severely underweight, and 10 percent were moderately underweight. A total of 21 percent of children under age five suffered from stunting.

STATUS OF WOMEN

In recent years women have begun to play an increasing role in the economic, political, and cultural life of the country, particularly in urban areas. The govern-

ment and the ruling PDG have become more sensitized to women's issues. Newly created government and party institutions are actively promoting women's rights. The Ministry of Women's Affairs in 1984 commanded additional resources, creating a national commission for the promotion of women. The ministry's action program is still largely in the planning stage, although an effort is under way to determine women's needs and aspirations in the traditional agricultural sector. The party's women's union is active in organizing women's cultural presentations throughout the country.

WORK

Gabon's labor force in 2004 was 610,000 strong, with 60 percent employed in agriculture, 15 percent in industry, and 25 percent in services. The unemployment rate is high, at 21 percent in 1997. As a result, one worker often supports dozens of people on a single salary. Much work in Gabon is carried out in the informal sector, with people scratching out livings selling fruits and vegetables, driving unregistered taxicabs, or sewing. In rural areas men make a living by hunting and fishing or running subsistence farms.

EDUCATION

Education is free, universal, and compulsory, in principle, for 10 years, from ages six to 16. Schooling consists of six years of primary school, four years of middle school, and three years of secondary school, leading to the *baccalauréat*. The curricula are based on French models, and Gabonization is being introduced only gradually.

The academic year runs from September to June. The medium of instruction is French throughout the school system.

Teachers are trained at six teacher-training institutions.

Private schools are fully integrated with the school system and account for 29 percent of enrollment at both the primary and secondary levels. Approximately 70 percent of higher secondary teachers are foreigners.

Technical training is provided in 12 technical schools. Higher education is provided by the Université Omar Bongo.

SCIENCE AND TECHNOLOGY

As a relatively poor country, Gabon supports little scientific infrastructure. The major research facilities are the Université Omar Bongo and, in the south, the University of Science and Technology. What research is conducted in Gabon focuses on the discovery of chemicals and pharmaceuticals in the rain forest. Because resources are so limited, Gabonese scientists tend to leave for other countries where research facilities are more available. Foreign organizations involved in scientific research include the World Wildlife Fund, which sponsors ecological research and wildlife preservation, and GTZ, a German organization that sponsors the Gabonese National Forestry School.

MEDIA

An information bulletin, *Gabon-matin*, is issued daily in French by the Ministry of Information. The government

also owns 75 percent of the daily *L'union*. The national news agency is the Agence Gabonaise de Presse, founded in 1961.

The official broadcasting organization is Radiodiffusion Télévision Gabonaise (RTG), with stations at Libreville, Franceville, Oyem, and Port-Gentil. The national network broadcasts 24 hours a day on shortwave and medium wave bands in French and local languages. A 100 kw shortwave transmitter at Libreville covers the whole country and is supplemented by relay stations throughout Gabon. A French-built international radio station, Africa No. 1, the most powerful on the continent, was opened at Moyabi in February 1981. It is a 35 percent state-controlled international commercial radio station, broadcasting in French and English.

RTG operates a television service, with two main 50 kw transmitters at Libreville and Port-Gentil, supplemented in 1972 by two 2 kw transmitters. Coverage now extends inland as far as Kango and Lambaréné. Programs are transmitted by satellite to other African countries. Color television broadcasts began in 1975.

CULTURE

Culture in Gabon has largely been influenced by the French. Gabonese authors write in French, and newspapers and television broadcasts are in French. The French Cultural Center features dance performances and choral singing. Libreville is the site of the International Center for Bantu Civilizations, created in 1983, and Gabon's history and artifacts are featured at the Gabonese Museum. The Fang are particularly noted for their masks and basketry; they don masks for ceremonies and hunting and also carve protective figures on boxes called *bieri* that hold the remains of ancestors. In the south, soapstone carvings of female heads, called *pierres de m'bigou*, are highly prized and have become something of a national symbol.

FOLKLORE AND MYTHOLOGY

The languages of Gabon were not written down until the 19th century. As a result, the nation has a long history of oral storytelling. These stories transmit the values of the nation's various ethnic traditions. Common to these ethnic groups are morality tales, such as one involving a wasp that alienates his mate because of his pride in his trim waist and beautiful stripes. After Gabon nationalized, some folk heroes emerged. One is Charles Tchorere, who fought bravely with the French against the Germans in World War II.

ENTERTAINMENT AND RECREATION

Much of Gabon's entertainment is influenced by the West. Traditional pastimes have given way to music and television from the United States and France. Popular television shows in recent years have included *Dynasty*, *Dallas*, and soap operas as well as French film. The Gabonese enjoy central African music. A major form of entertainment is visiting friends, neighbors, and relatives; many such visits are unannounced, and gossip is the staple of conversation. Also popular is checkers, and bars and cafés commonly have checkerboards set up, often using bottle caps as the checkers.

ETIQUETTE

Because Gabonese culture is very communal, the people do not demand, nor do they receive, much personal space. Staring is common, and foreign visitors are often put off when Gabonese simply ask for items that they would like to have, such as watches and shoes. Nonetheless, the Gabonese tend to be reserved with strangers, both in social and business settings. Conversation in social settings tends to be slow to develop. When meeting friends, the Gabonese commonly exchange four kisses, two on each cheek. Men often walk hand in hand. Among the older generation, the sexes tend to segregate in social settings, and elderly people are held in high respect.

FAMILY LIFE

Family arrangements in Gabon tend toward the loose and unstructured. Many women give birth to several children

before marriage then have further children with a husband. Many "marriages" in Gabon, however, are never legal; rather, men and women simply pair off, the man refers to the woman as his "wife," and they are presumed married. While polygyny is legal, it is not practiced as much as it once was because of the expense. Extended families are large. When a woman marries, she generally moves to her husband's village and takes up residence with her husband's parents and brothers and sisters and their families as well as with grandparents, aunts and uncles, and nephews and nieces. In some Gabonese cultures families are matrilineal and include the mother's parents and siblings. Children tend to be raised communally and often roam about through villages until they are old enough to attend school.

PERSONAL APPEARANCE

Most Gabonese wear Western clothing. Suits and ties are common for men; women wear Western-style dresses, though these dresses are often elaborately embroidered or are made from colorful West African print fabrics. A traditional garment is the *boubou*, a robe that extends to at least the knee. Beneath, men wear loose matching pants and women wear double-wrapped *pagnes*, colorful strips of African cloth often also used for tying babies to mothers' backs.

SPORTS

The national sport in Gabon is soccer, although basketball and martial arts are popular as well. In 1993 a national tragedy struck when eighteen members of the Gabon soccer team lost their lives in an air crash off the country's coast. In 2004 the then unheralded Gabon soccer team shocked heavily favored Algeria in World Cup competition.

CHRONOLOGY

- 1960** Gabon is formally proclaimed an independent nation with Léon M'Ba as prime minister.
 - 1961** M'Ba is elected president and heads a government of national union with his opponent, Jean-Hilaire Aubame, as foreign minister.
 - 1963** Aubame is relieved of his foreign affairs portfolio.
 - 1964** Aubame leads a successful coup; French troops, responding to M'Ba's appeal, intervene and restore him to office; Aubame is sentenced to 10 years in prison.
- In new elections M'Ba's party, the Gabon Democratic Bloc, wins 31 seats to the 16 seats for the

- opposition, the Gabonese Democratic and Social Union.
- 1965** Dr. Albert Schweitzer dies at Lambaréné.
- 1967** M'Ba is reelected president but dies within months; Vice President Albert-Bernard (later Omar) Bongo succeeds to the presidency.
- 1968** Parti Démocratique Gabonais (PDG) is proclaimed the sole legal political party in the country.
- 1969** Gabon recognizes dissident Biafra in Nigerian civil war.
- 1972** Equatorial Guinea accuses Gabon of invading its islands; Gabon withdraws claims and the issue is settled.
- 1973** Bongo is reelected president.
- 1975** Leon Mebiame is named prime minister.
- 1978** Beninese workers are expelled.
At the Franco-African summit Bongo asks for an African joint force.
- 1979** As the sole candidate in the national presidential election, Bongo is reelected for a second seven-year term.
- 1980** In national municipal and legislative elections independents are permitted to run against official candidates.
- 1981** Over 10,000 Cameroonians are expelled following a riot in Douala, Cameroon, against a soccer team from Gabon.
- 1982** Members of the opposition Mouvement de Redressement National (MORENA) are arrested for "insulting the president" and sentenced to harsh prison terms, provoking a strong reaction from Paris.
- 1983** The Owenda-Booué section of the Trans-Gabonais Railway is opened by the French and Gabonese presidents.
- 1984** France agrees to supply Gabon with a 300 mw nuclear power plant, the first in black-ruled Africa.
- 1986** The Chernobyl accident in the USSR causes the cancellation of Gabon's nuclear power plant. MORENA political prisoners are freed.
- 1990** After much social unrest and increasing pressure from disgruntled workers, President Bongo legalizes opposition and names Casimir Oye-Mba prime minister.
In the country's first multiparty election Bongo's PDG wins 65 seats in the legislature, while opposition parties take the remaining 55.
- 1991** The government promulgates a new constitution.
- 1993** Omar Bongo is reelected president, a post held since 1967.
- 1995** The constitution, which has been in effect since 1991, is approved by referendum.

- 1996** An Ebola outbreak kills 13 in a remote Gabon village; in legislative elections the PDG wins 89 of 120 seats in the National Assembly and 53 of 91 Senate seats.
- 1998** Bongo is reelected, gaining two-thirds of the vote.
- 2001** An outbreak of the deadly Ebola virus occurs in December.
- 2002** The PDG retains a convincing majority in the parliamentary elections.
- 2003** The constitution is amended to allow the president, currently Omar Bongo, to run for office as many times as he wishes.
- 2004** Gabon strikes major deals to export oil to China and to allow China to mine iron ore in Gabon.

OFFICIAL NAME

Republic of the Gambia

ABBREVIATION

GM

CAPITAL

Banjul (formerly Bathurst)

HEAD OF STATE & HEAD OF GOVERNMENT

President Yahya Jammeh (from 1994)

NATURE OF GOVERNMENT

Republic

POPULATION

1,593,256 (2005)

AREA

11,300 sq km (4,363 sq mi)

MAJOR ETHNIC GROUPS

Mandingo, Fula

LANGUAGES

English (official), Wolof, Mandinka

RELIGIONS

Islam, Christianity

UNIT OF CURRENCY

Dalasi

NATIONAL FLAG

Tricolor of red, blue, and green horizontal stripes divided by narrow white stripes

NATIONAL EMBLEM

Two heraldic lions holding a blue shield displaying a Mandingo hoe and a Locar ax with a scroll beneath. At the crest of the design is a blue knight's helmet with a green oil palm and peanuts sprouting from a mound. On the scroll is the national motto, "Progress, Peace, Prosperity."

NATIONAL ANTHEM

"For the Gambia, Our Homeland"

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 18 (Independence Day, National Day), April 24 (Republic Day), August 15 (Queen's Birthday), various Christian festivals, various Islamic festivals

DATE OF INDEPENDENCE

February 18, 1965

DATE OF CONSTITUTION

April 24, 1970; rewritten and approved by national referendum on August 8, 1996

GEOGRAPHICAL FEATURES

The Gambia is on the western coast of Africa along both banks of the Gambia River, with a total land area of 11,300 sq km (4,363 sq mi). The greatest distance east to west is 470 km (292 mi), while the greatest distance north to south is only 47 km (29 mi). The country's Atlantic coastline is 80 km (50 mi) long.

The Gambia is an enclave within Senegal, with which it shares its entire international border of 740 km (459 mi).

Most of the Gambia is low-lying, but the country is generally divided into three regions on the basis of topo-

graphical features: the valley floor, built up of alluvium, with areas known as Bango Faros; a dissected plateau edge consisting of sandy and often precipitous hills alternating with broad valleys; and a sandstone plateau that extends, in places, across the border into Senegal.

The Gambia River is one of the finest waterways in western Africa and is navigable as far as Kuntaur, 240 km (150 mi) upstream, by seagoing vessels and as far as Koina by vessels of shallow draft. Thick mangrove swamps border the lower reaches of the river, and behind these mangroves are the "flats," which are submerged completely during the wet season. Near Banjul the river is 4.8 km (3 mi) wide.

CLIMATE AND WEATHER

The Gambian climate is subtropical, with a hot, wet season from June to October alternating with a cooler dry season from November to April. Average annual rainfall is about 1,016 mm (40 in), concentrated in the rainy season, with August being the wettest month. Near the coast the summer temperatures vary between 18°C and 32°C (65°F and 90°F), but inland the range is greater, from 10°C to 40°C (50°F to 105°F). From November to April cooler weather prevails, with temperatures as low as 7°C (45°F) in Banjul and surrounding areas. The dry season, however, is plagued by the dusty harmattan wind blowing from the Sahara. Floods are common in the wet season but not destructive. Receding floodwaters leave swamps, where rice is cultivated.

Climate and Weather

Mean Temperature
 Summer Coastal Region: 65°F to 90°F
 Summer Inland: 50°F to 105°F
 Winter: 45°F
 Average Rainfall: 40 in

FLORA AND FAUNA

The flora of the Gambia is similar to that found throughout West Africa. Mangrove trees are common, but mahogany, rosewood, oil palm, and rubber vine trees can be found as well. There are many varieties of fern, and the cassava and indigo plants are indigenous.

Fauna include lions, leopards, several kinds of deer, monkeys, bush cows, and wild boars. There are also many baboons, hyenas, jackals, and antelope. Hippopotami are found in the upper part of the river, and crocodiles abound

in the creeks. Over 400 species of birds can be observed, including bush fowl, bustards, guinea fowl, quail, pigeon and sand grouse; the Gambia is regarded as a major bird-watching destination. Dolphins can be spotted as far up-river as Albreda.

ETHNIC COMPOSITION

Despite its small size, the population of the Gambia is characterized by great diversity; no ethnic group commands an absolute numerical majority.

The Mandingo are the most westerly extension of the Manding group of people, who include the Bambara, Dyula, and Kuranko. The Fula, Fulani, Peul, and Fulbe are found in great numbers from Cameroon and Sudan to the Atlantic coast. The Jola are related to the Serer, with whom they maintain a close relationship. The Serahuli are a mixture of Mandingo, Berber, and Fulbe.

The Mandingo are found throughout the country and make up about 42 percent of the population. The Fula are concentrated in the east, the Wolof in the west, and the Serahuli in the easternmost region. Two other important communities are the Aku, who are numerous in the capital, and the Diola, who live in the west.

LANGUAGES

The official language of the Gambia is English, although less than 2 percent of the population speak it. Wolof and Mandinka are used as lingua francas and as trade languages. The more Islamized inhabitants speak Arabic.

RELIGIONS

The constitution does not specify a state religion, but about 90 percent of Gambians are Sunni Muslims. Though Islam was introduced in the 12th century, it was not until the Soninke-Marabout wars of the mid-1850s that most of the population was converted to Islam. Of the major tribes, the Mandingo, Fula, and Serahuli are almost entirely Muslim.

Christians are estimated to constitute about 9 percent of the population, concentrated in the capital. The most influential Christian tribe is the Aku, who until recently dominated the government and commerce. There is a Roman Catholic bishopric at Banjul.

Most of the Jola tribesmen follow traditional African religions.

Muslim	1,434,000
Other	159,000

HISTORICAL BACKGROUND

Beginning in the 13th century the region that is now the Gambia was settled by the Wolof, Mandingo, and Fulani, all of them Islamized peoples from Mali. European exploration began with the discovery of the Gambia River by Portuguese navigators in 1555. The first English merchants arrived in 1587. The Royal Africa Company acquired a charter in 1687 and established a small fort on James Island, a small island in the river estuary. After suffering losses as a result of attacks by the French, the company was divested of its charter in 1750. From 1765 to 1783 the fort and the nearby settlement were part of the British colony of Senegambia, with the capital at St. Louis. In 1779 the French captured and destroyed Fort James, and in 1783 the greater part of the colony was handed over to the French, excluding the small enclave that is now the Gambia.

The Gambia was under British rule from 1816, when Captain Alexander Grant entered into a treaty with the chief of Kombo for the cession of Banjul Island, to 1963, when the Gambia attained full self-government. British power in the Gambia was never seriously challenged by internal or external forces. Most Gambians were exhausted by the half century of wars that preceded British arrival and welcomed Pax Britannica. The British system of indirect rule also left unchanged the political and social systems that had existed prior to the 19th century. British cultural penetration was limited to Bathurst (now Banjul). British economic and financial administration was characterized by conservatism; the British Colonial Office expected all territories to live within their budgets, and reserves were normally not used for development. British

contributions to the development of political institutions were more lasting. The Gambia is one of the few states in Africa to have remained faithful to the basic concepts of Westminster-type parliamentary democracy. The British departure was peaceful, and there is no significant anti-colonial sentiment in the country. The Gambia remains a member of the Commonwealth, and current relations with Britain are cordial.

The Gambia gained full independence in 1965 and became a republic in 1970. Sir Dawda Jawara, a Mandingo, and his People's Progressive Party remained in power almost continuously from independence to 1994. The national unity that characterized the first years of independence broke down during the 1970s, with growing resentment over the power of the Mandingo and Jawara's failure to deal with government corruption and demands for confederation with Senegal. In July 1981, when President Jawara was in London to attend the wedding of Prince Charles, the field force took over Banjul. The uprising was quelled, however, with the help of Senegalese troops dispatched under the terms of a 1965 mutual defense and security treaty.

In February 1982 Senegal and the Gambia announced plans for the creation of the Senegambian Confederation. The process of confederation continued during the mid-1980s. Tariff barriers were harmonized and transportation links improved. Important steps were taken to implement protocols on defense and security. The Gambia gendarmerie was organized on the Senegalese model and was trained and initially commanded by a Senegalese officer. The Gambian army was also trained by Senegalese. Despite the movement toward economic union, the two states continued to function as separate entities, and the confederation was formally dissolved in 1989 after Senegal unilaterally withdrew the troops it had stationed in the Gambia in the wake of the 1981 coup.

Following the breakup of the Senegambia Confederation, the Jawara government was overthrown in 1994 in a bloodless coup led by army officers who installed Lieutenant Yahya Jammeh as chairman of a five-member Armed Forces Provisional Ruling Council. Three days later the council named a 15-member government composed equally of military and civilian members. In 1995 Jammeh named a constitutional commission charged with drafting a constitutional document for the holding of multiparty elections. The regime survived many abortive coups until 1996, when Jammeh was elected to a five-year presidential term as the candidate for the newly formed Alliance for Patriotic Reorientation and Construction (APRC). In the 1997 legislative elections APRC won 33 of the 45 contested seats, giving the ruling party the two-thirds majority necessary to make constitutional changes. In 2001 Jammeh was reelected president in elections that were called fair and democratic by international observers. In 2002 the APRC swept the parliamentary elections, which were boycotted by the opposition. That year, too,

Sir Dawda Jawara returned to the Gambia for the first time since he was exiled in 1994. In 2004 the nation announced the discovery of large reserves of oil.

LIST OF MODERN RULERS

- 1965–94** Dawda Jawara (prime minister 1965–70; president 1970–94)
1994– Yahya Jammeh (president)

CONSTITUTION

The basis of the Gambian government is the constitution of 1970, which established a republican and presidential form of government. Under the constitution executive power is vested in the president, who is both head of state and head of government and who is elected directly for a five-year term. He designates a vice president, who is required to belong to the same party as the president and who exercises the functions of a prime minister and leader of government business in the parliament. The president also appoints the cabinet and the principal civil servants.

Legislative power is in the hands of a unicameral parliament, which is elected for a five-year term. The Supreme Court is the highest in the land. There are also a Court of Appeal and various subordinate courts and Islamic courts.

A referendum in 1996 changed the parliament to a National Assembly and increased the membership to 45 directly elected members and four nominated members, which numbers have since risen further. The ban on political parties was also lifted.

PARLIAMENT

The national legislature is the National Assembly, a unicameral body currently consisting of 53 members who serve for five-year terms. Of those, 48 are elected by universal suffrage, while five are appointed by the president. The attorney general sits *ex officio*.

Among African countries, the Gambia is noted for its fair and free elections. Suffrage is universal over age 18.

POLITICAL PARTIES

Although the Gambia is a multiparty state, the Alliance for Patriotic Reorientation and Construction as of 2004 controlled 45 of the 48 elected seats in the National Assembly. The APRC is the political party of Yahya Jammeh, who seized power in 1994. Additional parties represented in the national assembly include the United Democratic Party (UDP), the National Reconciliation Party, and the People's Democratic Organization for Independence

and Socialism. The government banned several political parties in 1996, including the People's Progressive Party (PPP), which was headed by former president Dawda K. Jawara, and the National Convention Party, headed by the former vice president Sheriff Dibba. The PPP recently formed a coalition with the Gambian People's Party and the UDP to form a single party currently headed by Ousainou Darboe.

LOCAL GOVERNMENT

For purposes of regional administration, the Gambia is divided into five divisions and one city, each headed by a commissioner appointed by the president. The divisions are subdivided into 35 districts administered by chiefs with the help of village mayors and councillors. The districts are grouped into seven area councils, each with an elected majority. Each council has its treasury and is responsible for local government services. Banjul is a separate region with its own city council.

LEGAL SYSTEM

The judicial system is based on English common law as modified by the legislative enactments of the Gambian National Assembly. Under a Muslim Law Recognition Ordinance, a Muslim court exercises jurisdiction in cases between, or exclusively affecting, Muslims.

Three kinds of law operate in the Gambia: sharia, general, and customary law. Sharia law, governing certain aspects of social interaction of rural Muslims, is observed, even in the capital of Banjul, in marriage, inheritance, divorce, land tenure and utilization, local government, and all other civil and social relations originating in the traditional religious and ethnic situation of the country. General law, based on English statutes and modified to suit the Gambian context, governs criminal cases and trials and most organized business practices. If there were a conflict between general and sharia law, general law would prevail. Trial procedures in general law are carefully regulated to ensure protection of the rights of the accused.

The court system is headed by the Court of Appeal and the Supreme Court. The Court of Appeal consists of a president, justices of appeal, and judges of the Supreme Court *ex officio*. The Supreme Court consists of a chief justice and a lower judge. It has unlimited jurisdiction but is subject to the appellate power of the Court of Appeal. The subordinate courts are known as magistrate and divisional courts. These are courts of summary jurisdiction presided over by a magistrate or, in his absence, by two or more lay justices of the peace. In 1974 a system of traveling magistrates was introduced to speed up the administration of justice in rural areas. In some areas

chiefs retain the power to dispense justice according to customary law.

HUMAN RIGHTS

In terms of civil and political rights, the Gambia is classified as a free country. The Gambia is a multiparty, functioning democracy in which human rights are guaranteed by the constitution and observed in practice. Constitutional provisions against torture, cruel and inhuman punishment, disappearances, and arbitrary arrests and imprisonments are strictly enforced. The judiciary is independent of the executive and, since there are no armed forces, military courts do not exist. The legal system, modeled on that of the United Kingdom, ensures fair and open trials for all defendants.

Censorship is nonexistent, although a media law passed in 2002 required journalists and the press to register with a state-run commission. The law was widely condemned and eventually repealed in 2004, but a new law passed in 2004 mandated jail time for journalists found guilty of libel and sedition, the eliciting of widespread protest, especially after a prominent journalist who opposed the law was shot and killed. Opposition viewpoints are discussed openly both in the print media and on the radio. Although the Gambia is 90 percent Muslim, there is no discrimination against non-Muslim minorities. One of the few multiparty states in Africa, the Gambia provides full freedom, both in law and in practice, to form and promote political groups of any persuasion and to contest elections under any label. In 1980 the Gambia hosted the 37-nation Organization of African Unity (OAU) Conference on Human and People's Rights.

FOREIGN POLICY

The Gambia's closest external relations have been with two countries: Senegal, which borders the Gambia on three sides, and the United Kingdom, its former colonial master and the source of much of its foreign aid. For some time in the early 1980s the Gambia was a partner in the Confederation of Senegambia, but relations between the two countries rapidly deteriorated after the dissolution of the union in 1989. Since 1998 the Gambia has taken an active role in quelling the civil unrest in Guinea-Bissau. Further, the Gambia struggles to stem refugees, cross-border raids, arms smuggling, and political instability from the separatist movement in southern Senegal's Casamance region.

DEFENSE

A defense agreement made in 1965 with Senegal provides for a joint defense committee with a permanent secretariat. Military training may be provided by the United

Kingdom and Senegal, if requested by the Gambia. Following the 1981 coup the government reorganized the field force into a national gendarmerie in which service is voluntary. The gendarmerie is trained by Senegal. Total armed forces number 1,000. In 2003 the nation spent only about \$900,000 on defense, 0.3 percent of gross domestic product (GDP).

ECONOMY

The Gambia has no important mineral or other natural resources and has a limited agricultural base. About 75 percent of the population depends on crops and livestock for its livelihood. Small-scale manufacturing activity features the processing of peanuts, fish, and hides. Reexport trade has normally constituted a major segment of economic activity, but the 50 percent devaluation of the franc of the African Financial Community (CFA franc) in January 1994 made Senegalese goods more competitive and hurt the reexport trade. The Gambia benefited from a rebound in tourism after its decline in response to the military's takeover in July 1994, but tourism began to decline again in 2000. Short-run economic progress remains highly dependent on sustained bilateral and multilateral aid, responsible government economic management as forwarded by International Monetary Fund (IMF) technical help and advice, and expected growth in the construction sector. Annual GDP growth was estimated at 3 percent in 2004. Inflation remained high in 2004, at 14 percent.

ENVIRONMENT

Like many developing African nations, the Gambia suffers from environmental problems that have to do with supporting the population. The land is being deforested both for fuel and for the creation of agricultural lands. However, the land is also becoming more desert-like as farming methods and deforestation rob the land of essential nutrients. The country has a large number of waterborne diseases that routinely infect the population.

LIVING CONDITIONS

The Gambia is a nation beset by living problems. The unemployment rate is high, at roughly 15 to 20 percent for people in the 20 to 50 age bracket. Poverty is rampant. Over 59 percent of the population has an income of under \$1 a day, and an astonishing 83 percent live on less than \$2 a day. Further, income distribution is poor: While the richest 10 percent enjoy over 38 percent of consumption, the poorest 10 percent get by on only 1.6 percent of consumption. Given these conditions, as well as inadequate water and sanitation, it is no surprise that the Gambia suffers from widespread infectious diseases. While the class of businessmen, professionals, and senior civil servants enjoy relatively comfortable lives, with cars and adequate housing, the bulk of the population, especially in rural areas, live in homes made of mud or corrugated metal. Cities such as Banjul are choked with traffic during rush hour, and the roads are generally in poor condition, especially after the rainy season.

HEALTH

While modern health care can be found in the cities, health in the Gambia is generally poor. Life expectancy is only a little under 55 years. The infant mortality rate is high, at over 73 deaths per 1,000 live births. Per capita spending on

health care is only about \$19. Tropical diseases, many of them waterborne, are a major cause of death. Over 27 percent of deaths are caused by intestinal diseases, and each year the swampy areas around the river, breeding grounds for mosquitoes, lead to 17,340 cases of malaria for every 100,000 people. Additionally, each year there are 283 new cases of tuberculosis for every 100,000 people. A large proportion of the Gambian population, up to 0.4 percent, is blind; nearly one-fifth of blindness is caused by trachoma. About 6,800 people were living with AIDS in 2003.

FOOD AND NUTRITION

Diet varies with ethnic group. The Mandingo rely on rice, supplemented by millet, as do the Jola. The Wolof, Fulbe, and Serahuli rely on millet and sorghum. Where cattle are kept, millet is often cooked with curdled milk. Common fruits include bananas, grapefruit, papayas, mangoes, and oranges; common vegetables, grown during the dry season, include tomatoes, eggplant, okra, shallots, and onions. Traditional Gambian dishes include various types of stews made with chicken or fish cooked with vegetables, leaves, and rice, though meat tends to be reserved for festivals or other special occasions, and most fish is smoked or sun-dried.

From 1998 to 2003, 17 percent of Gambian children suffered from low birth weight. Further, 4 percent of children under age five were severely underweight, with an additional 13 percent moderately underweight. Nearly one in five children under age five suffered from moderate to severe stunting, and nearly one in 10 suffered from wasting.

STATUS OF WOMEN

The education of women is increasingly accepted, and women participate in both professions and political life, although only about one-third of Gambian women are literate. Marriages are still often arranged, but there is increasing freedom of personal choice. Family planning, focused on the health and welfare of mother and child, remains controversial but is gaining acceptance. The Women's Bureau in the Office of the President actively promotes debate on women's issues.

WORK

The most recent statistics available show a labor force in the Gambia of about 400,000. A total of 75 percent of people make their living through agriculture, 19 percent through industry, commerce, and services, and 6 percent through government. Per capita GDP is only \$1,700 per year. Farming is often done with animal labor, including ox plows and weeding machines pulled by donkeys. Women tend to be responsible for rice cultivation and dry-season gardening, men for clearing the land and growing millet and groundnuts. The Gambia has some manufacturing, mostly in such industries as groundnut processing, fish smoking, and furniture making. Many people make livings operating small shops or market stalls, others in the tourist trade. Still others make their livings through smuggling.

EDUCATION

The Gambia has not yet introduced universal, free, and compulsory education.

Primary education lasts for seven years and is followed by a junior secondary cycle of four or five years and a senior secondary cycle of two years. Secondary edu-

cation culminates in the "advanced" level examination of the West African Examination Council.

The academic year runs from September to July. The medium of instruction is English throughout.

Private and missionary schools are integrated within the school system. Private schools account for 2 percent of primary school enrollment but over 28 percent of secondary-school enrollment. Vocational training is provided at Banjul and Sapu.

Primary- and secondary-education policies and programs are coordinated by the Ministry of Education. For purposes of educational administration, the country is divided into two regions.

Many Gambians who wish to pursue higher studies go abroad rather than attending one of the Gambia's three tertiary institutions: The University of the Gambia (established in 1999), Gambia College, and the Gambia Technical Training Institute. Gambia College at Brikama offers postsecondary courses in teacher training, agriculture, and health.

According to 2003 estimates, only 40 percent of the population can read or write by the age of 15; the figure is 48 percent for males and 33 percent for females.

SCIENCE AND TECHNOLOGY

As a poor nation, the Gambia devotes few of its resources to science and technology. The Ministry of Agriculture has a number of agencies that carry out research in such areas as crops, livestock, fisheries, soil, and water. Gambia Horticultural Enterprises conducts horticultural research. Some research is conducted at the University of the Gambia and at such places as the School of Public Health at Gambia College. A two-year technical-training program is offered at the Gambia Technical Training Institute.

MEDIA

There are two daily newspapers in the country: the *Point* and the state-owned *Gambia Daily*. Six nondaily newspapers are published, of which the *Gambia News Bulletin*, published three times per week by the government information office, enjoys the widest circulation. Six periodicals are also published, with a total circulation of 4,000.

Gambia News Agency, located in Banjul, is the country's national news agency.

Radio Gambia, the official broadcasting service, operates one shortwave transmitter and one FM transmitter. There are four private commercial radio stations and three community ones. Television service began in 1995; the government operates one channel serving about 60 percent of the country.

CULTURE

A number of Gambian authors have written books in English, including the playwright Gabriel Roberts, the poets Tijan Sallah and Swaebou Conateh, the novelists Lenrie Peters and Ebou Diba, and the short-story writer Nan Humasi. In recent years collections of Gambian folktales have been published. The most prominent Gambian graphic arts are decorative and ceremonial masks. Music is a primary form of cultural expression. Men often sing as they work the fields or paddle a canoe; the Fula play fiddles as they tend cattle, and young men play flutes while guarding fields. Group singing takes place during games or as workers till their fields, and singing is an important part of ceremonial occasions, to cure the sick, or to bring rain. The kora is a 21-stringed instrument unique to the Gambia, and musicians who play the *salam*, an ancestor of the guitar, go through a long apprenticeship and are held in high regard, actually representing a caste.

FOLKLORE AND MYTHOLOGY

The Gambia has a rich tradition of oral folklore. Folktales and legends are related by professional storytellers called griots, to whom the Wolof refer as *gewel* and the Mandingo as *jalola*. The stories are often told to the accompaniment of a stringed instrument. One group of folktales, about the Hare and the Hyena, is similar to the Brer Rabbit and Brer Fox stories in English. Hare is sometimes himself seen as a *gewel*, sometimes as a trickster. Other groups of tales deal with the theme of injustice and how matters are set right through the agency of a spirit or an old woman. Many tales are intended to enforce cultural and family norms, such as respect for elders, bravery, and obedience to parents.

ENTERTAINMENT AND RECREATION

In addition to listening to Radio Gambia, Gambians have been able to watch television since 1995. Videocassettes are available in some stores. Additionally, small movie theaters show films, primarily from India. Tourists enjoy watching the National Dance Troupe, and weekend wrestling tournaments are popular. Gambians play a form of checkers, pachisi (called *ludo*), and *wari*, a board game in which counters are moved around a board. Gambians are also skilled at folk arts and crafts, including wood carving, gold- and silver-smithing, leatherwork, weaving, basketwork, and especially dyeing. Some Gambians use paper to make lanterns in the form of ships or houses. During the Christmas season these lanterns are lit from within and paraded about town.

ETIQUETTE

Gambians have an elaborate code that governs greetings, which can differ depending on the time of day, the place, the social status of the parties, and whether the occasion is formal or informal. The normal Arabic greeting is "*Salaam aleekum*," roughly meaning "Peace be with you." This is followed by an inquiry such as "Have you spent the day in peace?" It is important to know another's surname in order to be able to honor the person's clan. It is also important to inquire about the other person's relatives. Generally, a lower-ranking person initiates greetings with superiors,

while people of equal rank often greet one another simultaneously. Only after these greetings are exchanged can business be conducted. Also important to Gambians is a sense of peace and tranquility. Accordingly, most are soft-spoken and avoid conflict and confrontation.

FAMILY LIFE

Patterns of marriage and family life tend to differ between ethnic groups, many of which are changing with modernization. Marriage is regulated by three sets of laws. Customary law applies to non-Muslims, while sharia law applies to Muslims. General law is a legacy of British colonialism. Polygyny is allowed among most ethnic groups. Women in either polygynous or monogamous marriages have the right to divorce their husbands and remarry. Most marriages are arranged, with people tending to marry someone from their own caste or class. Family units in rural areas typically live in compounds, with houses arranged around a central courtyard. The family is generally patrilineal. Men (including adolescent boys) and women generally live in separate sections, with small children staying with their mothers and wives visiting their husbands at night. The oldest man in the family is generally a kind of ruler, settling disputes and allocating land. While the Jola and some Fulbe tend to be egalitarian, most Gambian ethnic groups are highly stratified socially.

PERSONAL APPEARANCE

Western-style clothing is generally worn in offices, and younger people enjoy copying American fashions, wearing jeans, T-shirts, and baseball caps; there is an active market for secondhand clothing from the United States, as in much of Africa. Men wear elaborate robes for religious purposes and at special events. Women usually wear long skirts with a loose upper garment and another piece of cloth for carrying children on their back. They nearly always wear headscarves, tied in various fashions. Hairstyles among women tend to be elaborate, and differences in hairstyle reflect age differences.

SPORTS

Water sports are popular in Gambia, with fishing (both in the ocean and in the Gambia River), swimming, and windsurfing leading the way. The Gambia Sailing Club in Banjul sponsors races, including an annual race to Dog Island. The Banjul Golf Club has a course near the ocean, and the Gambia Cricket Association organizes matches. The major sport, however, is soccer, played in a large stadium built by the Chinese. The soccer star Edrissa Sonko is a national hero among Gambian youth.

CHRONOLOGY

- 1965** The Gambia attains full independence within the Commonwealth, with David (later Dawda) Jawara as prime minister. Proposal to establish a republic is defeated in a referendum by a narrow margin.
- 1967** The Muslim Congress Party merges with the ruling People's Progressive Party (PPP).
- 1968** Sherif Sisay, on being expelled from the PPP, forms a rival political party, the Progressive People's Alliance.
- 1970** Republic status is approved by voters in a second referendum. The Gambia becomes a republic, with Dawda Jawara as first president.
- 1971** The dalasi is introduced as the Gambia's national currency.
- 1972** In national elections the ruling PPP wins 28 of 32 seats in House of Representatives; President Jawara is reelected.
- 1973** The capital, Bathurst, is renamed Banjul. President Jawara visits Senegal.
- 1975** Two new opposition parties are founded: the National Convention Party and the National Liberation Party.
- 1976** President Senghor of Senegal visits Banjul; new cooperation agreements are signed between the two countries, including one that establishes the Gambia Basin Development Organization.
- 1977** In election to the House of Representatives the ruling PPP gains 28 of 35 seats.
- 1979** The PPP holds its first congress in 16 years. President Jawara announces formation of the National Planning Commission.
- 1981** Members of the field force unit of the police force stage a coup and seize Banjul while President Jawara is in London. Senegalese forces help quell the revolt under a 1965 mutual defense and security treaty. A state of emergency is declared; over 1,000 people are killed.
- 1982** The Confederation of Senegambia comes into being, with Jawara as vice president of the new federation. Jawara's PPP wins 35 seats in elections to the House of Representatives.
- 1987** Jawara is reelected president. His People's Progressive Party retains its overwhelming majority in the House of Representatives, capturing 31 seats. The opposition National Convention Party wins five.
- 1989** The Senegambian Confederation is officially dissolved.
- 1991** Gambia and Senegal sign a bilateral agreement of friendship and cooperation.

884 The Gambia

- 1994** A military junta seizes power under Lieutenant Yahya Jammeh.
- 1996** Jammeh is elected president of the country over three other candidates.
- 1997** In national elections, the Alliance for Patriotic Reorientation and Construction gains 33 of the National Assembly's 45 elected seats.
- 2001** Jammeh is reelected president.
- 2002** Alliance for Patriotic Reorientation and Construction gains 45 of the 48 elected seats in the National Assembly; elections boycotted by the opposition.
Sir Dawda Jawara returns to the nation for the first time since his 1994 exile.
The Gambia passes restrictive media laws, repealed in 2004.
- 2004** Government passes new law requiring imprisonment for journalists guilty of libel and sedition; law meets with widespread protest, especially after a prominent journalist who opposed the law was gunned down.
President announces discovery of large oil reserves.

DATE OF CONSTITUTION

August 24, 1995

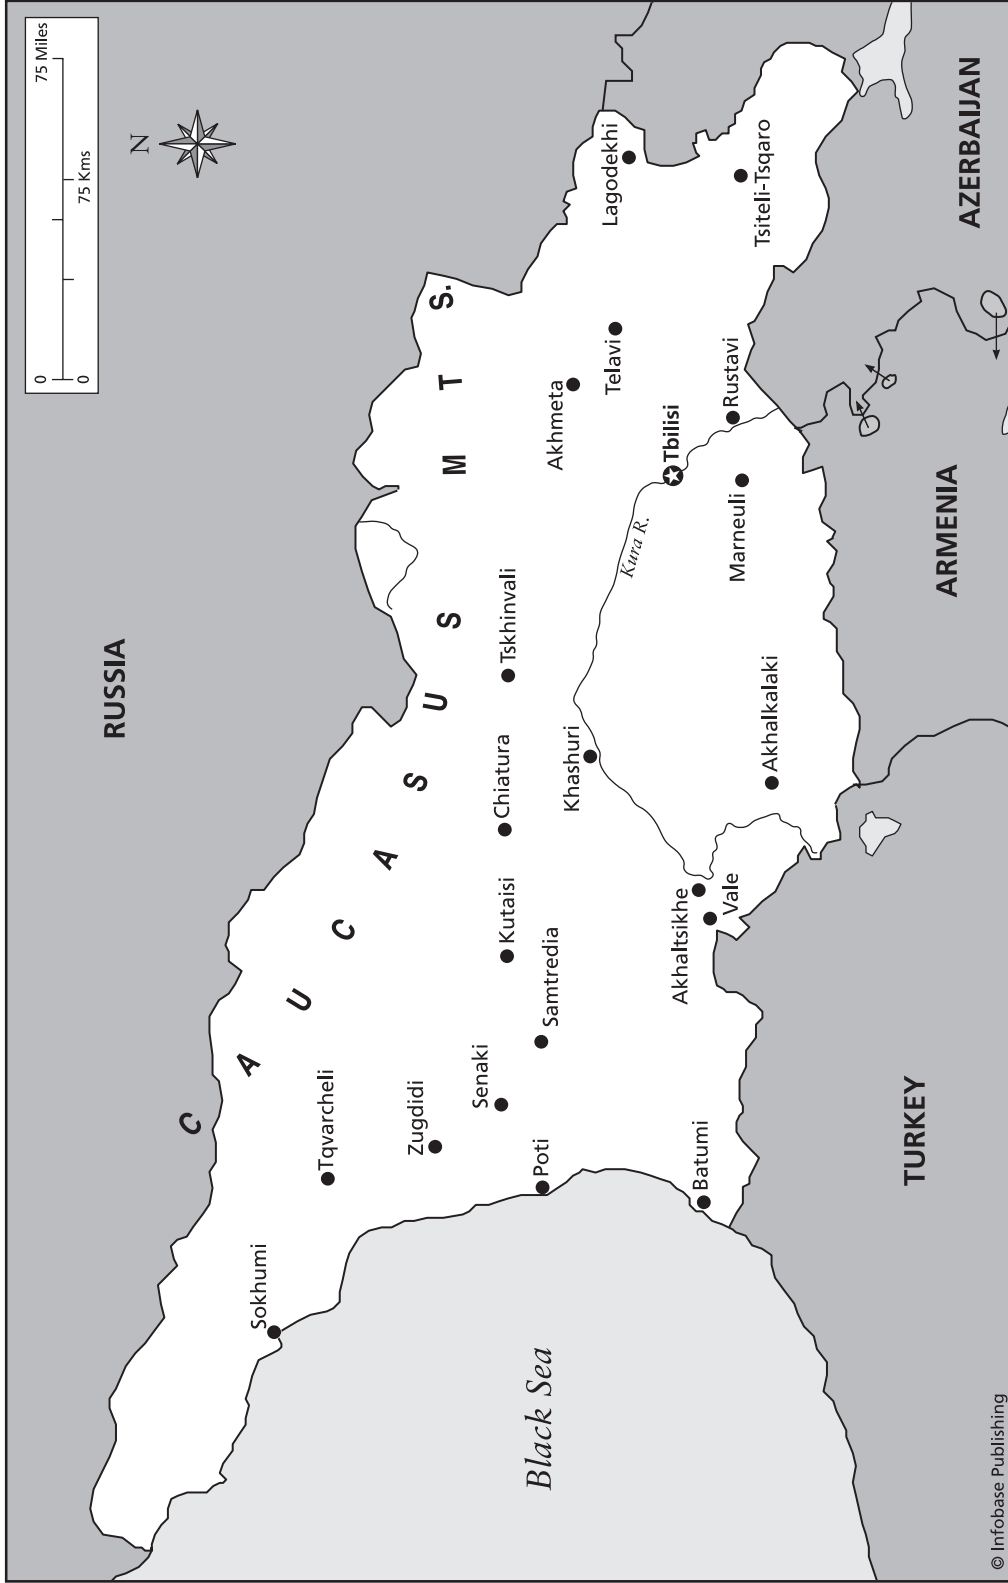

GEOGRAPHIC FEATURES

Georgia is situated in the southwestern Caucasus on the northern periphery of the subtropical zone, between 41°07' and 43°35' north latitudes and 40°05' and 46°44' west longitudes. Georgia borders Turkey and Armenia to the south, Russia to the north, Azerbaijan to the east, and the Black Sea to the west. The length of its land borders totals 1,461 km (908 mi), with 310 km (193 mi) of coastline. Georgia covers 69,700 sq km (26,911 sq mi). Its area exceeds that of such countries as the Netherlands, Belgium, Switzerland, Denmark, and Israel.

Georgia is a mountainous country. Land below 1,967 ft occupies only 31 percent of the total area; 44 percent of its territory lies between 1,967 ft and 5,900 ft and 25 percent above 5,900 ft. Mountainous areas are located mainly along the northern and southern borders. The highest mountains are Shkhara, 5,201 m (17,059 ft); Janga, 5,059 m (16,598 ft); Mkinvartsveri (Kazbek), 5,048 m (16,562 ft); Shota Rustaveli, 4,866 m (15,965 ft); Tetnaldi, 4,858 m (15,939 ft); and Ushba, 4,700 m (15,420 ft).

Georgia is divided into three major geographical zones: the northern highlands Caucasus (Kavkasioni in Georgian), the intermountain lowlands, and the uplands

Georgia

of southern Georgia. Kavkasioni and the southern upland are joined by the Likhi Range, which divides Georgia into western and eastern parts.

The main topographical unit of the Kavkasioni highlands is the main range of the Caucasus (average heights of 9,843 ft–11,483 ft above sea level). Caucasus ranges have steep slopes and are separated by deep river basins.

The intermountain lowland covers two-fifths of Georgian territory. The lowland is narrowest in its central part and widens out to the east and the west. The intermountain lowland consists of two major units: on the east, the Iberia lowland, consisting of the Shida Kartli Plain, the Alazani Plain, and the Bri Plateau, and, on the west, the Kolkheti lowland, made up of the Kolkheti lowland itself, the Imereti Plain, and premountain hills.

The highest summit of the southern upland, Mount Didi Abuli, reaches 10,844 ft (average height—6,562 ft). The southern upland comprises the Meskheta-Trialeti, Dmanisi, and Gomareti volcanic plateaus and Arsiani, Meskheta, Shavsheti, Trialeti, Samsari, and other minor ranges, which are dissected by canyon-like river gorges.

The hydrological network is not equally distributed in Georgia. Compared with the eastern part of the country, the western part is highly saturated with river basins. The rivers of Georgia belong to the basins of the Black and Caspian seas. The Mtkvari River—the longest at 1,364 km (847 mi)—with its numerous tributaries belongs to the Caspian basin. The Black Sea basin rivers include the Rioni (327 km; 203 mi) and Enguri (213 km; 132 mi). The largest lake is Lake Paravani (37.5 sq km; 14.4 sq mi), and the deepest are Lake Ritsa (116 m; 448 ft) and Lake Amtkeli (72–122 m; 286–400 ft), both of which are impounded lakes.

CLIMATE AND WEATHER

Georgian climate varies markedly. The relatively small territory is covered by different climatic zones, which are determined by distance from the Black Sea and by altitude. Climatic zones range from the humid subtropical to the glacial. Georgia's climate is affected by subtropical influences from the west. The main range of the Caucasus protects Georgia from the cold northern winds. The Likhi Range serves as the dividing line between western and eastern Georgia. In western Georgia the dominant subtropical climate features high humidity and heavy precipitation (average is 1,600 mm). The midwinter average temperature is 8°C (46°F), and the midsummer average is 22°C (72°F). Eastern Georgia has a more continental, moderately humid subtropical climate, with a considerably lower level of precipitation (average of 600 mm). The average temperature in summer is 20°–24°C (68–72°F) and in winter is 2°–4°C (36–39°F).

High climate zonality is typical for the mountainous areas. Alpine and highland regions have distinct microclimates. Alpine conditions start at 2,100 m.

Glaciers are found only on the main range of the Caucasus (688 sq km) and occupy 508 sq km. The regular snow line begins at 2,800 m.

Climate and Weather

Mean Temperature
 July: 73.8°F
 January: 27.3°F
 Average Rainfall: 20 in

FLORA AND FAUNA

Georgia is heavily forested, with 43 percent of the country covered by forest. At higher elevations there are alpine meadows and coniferous forests. At lower elevations deciduous forests cover the land.

Georgia is home to 100 species of mammals, 330 species of birds, 48 species of reptiles, 11 species of amphibians, and 160 species of fish. Some species that are unique to Georgia include the Dagestanian and the Caucasian goats, the striped hyena, the Caucasian mink, the Gudaurian field vole, the steppe eagle, and the Caucasian salamander.

ETHNIC COMPOSITION

Out of 4.6 million inhabitants, 70 percent are of Georgian ethnicity. More than 80 other nationalities make up the balance, including Armenians (8.1 percent), Russians (6.3 percent), Azeris (5.7 percent), Ossetes (3 percent), Greeks (1.9 percent), Abkhazians (1.8 percent), Jews (0.5 percent), and others (2.6 percent).

The ancestors of today's ethnic Georgians were mentioned in Assyrian records about 3,000 years ago. Although Georgians are divided into a dozen distinctive regional groups, they are all highly conscious of Georgian common traditions and cultures. The Georgians constitute an absolute majority in West Georgia (81.4 percent of total population). Abkhazians mainly reside in the northwest, Greeks in the central part of the country, Azeris and Armenians in the south, and Jews, Kurds, and Slavs in larger urban centers.

The exact ethnic makeup and origin of Abkhazians are debated political issues. Most scholars trace their ancestry back at least two millennia in Georgia and consider them Georgians by origin. Present-day Abkhazians have been a minority within Abkhazia, forming less than 20 percent of the population. There is an autonomous region of South Ossetes, created by the Bolsheviks in 1922 as part of a divide-and-rule policy in Georgia.

LANGUAGES

The Georgian language is the state language of the country. The Georgian alphabet is among 14 existing throughout the world. Georgian script is an independent, unique system, conveying the sound composition of Georgian speech and forming the written and printed symbols of the national Georgian language. It belongs to the Kartvelian group of Ibero-Caucasian languages. It has 33 letters (five vowels and 28 con-

sonants) and uses the original script, which has been only slightly modernized.

Most people in urban areas can speak Russian. Ethnic minorities speak their native language in addition to Russian and Georgian. After Russian, English is the most widely spoken foreign language, followed by German, French, and Turkish. The Ossetes speak an Iranian language.

RELIGIONS

Two-thirds of the population belongs to the Georgian Orthodox Church, 10 percent to the Russian Orthodox Church, and approximately 8 percent to the Armenian Apostolic Church; about 1 to 2 percent of the population is of the Roman Catholic faith. About 11 percent of the total population are adherents of Islam. Jews represent 0.5 percent of the population and live mainly in urban areas.

The Orthodox Church of Georgia traces its foundation to the time of Constantine the Great. Georgia adopted Christianity in 337. In the fifth century (around 466–68) the Georgian Church gained autocephaly, and in the 11th century the Georgian Patriarchate was formed. The liturgy is celebrated in Georgian.

HISTORICAL BACKGROUND

It has been a very long time since humans arrived in Georgia. Near the town of Dmanisi, a human skull 1.8 million years old was found. Archaeological evidence attests that there was a flourishing Neolithic culture in the fifth and fourth centuries B.C. in the territory of modern Georgia. The western region was known as Egrisi (or Kolkheti), and eastern Georgia was known as Iberia. In about the fourth century B.C. Georgia was united into a single kingdom with Mtskheta as its capital.

In the fifth century the capital of Georgia moved to Tbilisi. Until the seventh century control over Georgia was contested by the Persian and Byzantine empires. The region was conquered by the Arabs in the seventh century and by the Turkish Seljuks in the 11th century. However, in the 11th century, unified Georgia, with its capital in Kutaisi, was one of the major powers in the region.

King David IV the Builder (1089–1125), one of the greatest Georgian kings, expelled the Turks in the early 12th century and reunited Georgia as a kingdom. Dur-

ing the reign of Queen Tamar (1184–1213) the Georgian kingdom reached the apex of its political might. This was the era of great architectural projects and flourishing literature, including the great epic poem *The Knight in the Panther's Skin*, dedicated to Queen Tamar by Shota Rustaveli.

Georgian domination in the Caucasus was crushed by the Mongol invaders in the 12th century, which led to the breakup of Georgia into individual principalities. Thereafter Georgia was divided into spheres of influence between Ottoman Turkey and Safavid Iran until the 18th century. In the 18th century Vakhtang VI compiled *Kartlis Tskhovreba* (History of Georgia). A Georgian kingdom was proclaimed in the mid-18th century. The Russian czar absolved the last Georgian king in 1801, and Georgia became a part of the Russian Empire.

In 1918 Georgia became an independent republic. However, in 1921 a Soviet regime was installed by the Red Army. In 1922 it became one of the four republics constituting the newly formed USSR. In 1924, after an attempted uprising led by Georgian Mensheviks, more than 5,000 patriots were executed. Georgia had to pass through the ordeal of industrialization and collectivization, suffering severely during the depression of the 1930s and repression of 1937–38. Three hundred thousand Georgian soldiers fell in World War II.

The struggle for independence assumed the form of a widespread national liberation movement and brought victory to Georgians in late 1989. In 1990 multiparty elections were held, and on April 9 a new national parliament declared the independence of Georgia. The well-known dissident Zviad Gamsakhurdia was elected the first president of independent Georgia. Although earlier he had been a victim of totalitarianism, he showed neither a desire nor an ability to maintain a dialogue with the growing opposition.

On December 11, 1990, in reaction to a declaration by Ossetian separatists to secede from Georgia and join with Russia, the Supreme Council of Georgia abolished the autonomous region of South Ossetes as a political and administrative unit. Fights broke out between Georgians and Ossetians and did not abate until a peacekeeping force of Russians, Georgians, and Ossetians was deployed.

In the winter of 1991–92 a military rebellion by the opposition forced Gamsakhurdia to leave Georgia. Unable to cope with many international, economic, and other domestic problems, the rebel Military Council formed a State Council, inviting Eduard Shevardnadze, the former USSR minister of foreign affairs, to Georgia. In October 1992 a new Georgian parliament was elected, along with Shevardnadze as head of state.

After Georgian independence Abkhazian separatists tried to make Abkhazia a part of Russia. Heavy fighting between Georgian troops and Abkhazian separatists started after the central authorities sent troops to protect supply routes in August 1992. The Abkhazian side

received support from Russia, and as a result more than 250,000 Georgian refugees were expelled by October 1993. In the same month, the Georgian government was forced to seek Russian military help and joined the Commonwealth of Independent States (CIS). In 1994 Abkhazian separatists agreed to a UN peacekeeping force, which consisted of a Russian contingent.

In 1995 Shevardnadze survived a bomb attack, and he was reelected president with 76.8 percent of the vote. A new constitution was promulgated in the same year. The rebel district of Abkhazia conducted elections to its own assembly in 1996, which Georgia declared invalid. At Georgia's request, the CIS imposed sanctions on the district to force Abkhazia to rejoin Georgia. Brokered by Moscow, a new accord was reached with South Ossetian representatives in 1996. Despite this accord, South Ossetians held a direct presidential election. In 1998 Shevardnadze survived a second assassination attempt. He was reelected president in April 2000.

Tensions over Abkhazia continued into the new millennium. In March 2001 Georgia and the separatist region of Abkhazia signed an accord agreeing not to use military force, but in October clashes erupted between Abkhaz troops and Georgian paramilitaries. Tensions increased when Russia accused Georgia of harboring Chechen terrorists, and in 2002 the Russian president warned of military action if Georgia did not root them out. In the parliamentary elections of 2003 many international observers noted irregularities, leading to widespread protests and seizure of the parliament building by demonstrators. Under pressure, Shevardnadze resigned, and Mikheil Saakashvili won the election in a landslide in early 2004. Immediately Saakashvili faced problems with the autonomous region of Ajaria, which refused to recognize the Georgian president's authority, claimed that Georgian forces were about to invade the region, and blew up all the bridges connecting Ajaria and Georgia. Similar problems occurred in South Ossetia, which held parliamentary elections unrecognized by Tsibili.

LIST OF MODERN RULERS

1990–92	Zviad Gamsakhurdia
1992–2003	Eduard Shevardnadze
2004–	Mikheil Saakashvili

CONSTITUTION

On August 24, 1995, the parliament of Georgia adopted the new constitution. Separation of powers is declared in the constitution as the basic principle of organization. According to the constitution, a publicly elected president directly governs the executive branch and possesses other important powers, but he is not authorized to dis-

miss the parliament. The president is simultaneously the head of state and the head of executive authority; the state minister is a part of the government who directs the president's office and is entrusted by the president to fulfill his separate tasks. The parliament independently exercises the legislative functions and supervises executive bodies.

PARLIAMENT

Georgia has a single-chamber parliament consisting of 235 members. The members of the parliament are elected by proportional (150 deputies) and plurality-majority (85 deputies) electoral systems. A party must gain more than 7 percent of the vote in order to be seated in the parliament. The last parliamentary elections were held in March 2004, and only two parties could get more than 7 percent of nationwide votes. Those were the National Movement–Democrats, which won 67.6 percent of the votes and 135 seats, and the Rightist Opposition, which won 7.6 percent of the votes and 15 seats.

POLITICAL PARTIES

There are more than 60 parties and up to 10 blocs registered in Georgia. Although they represent different political platforms, most of them are small and lack well-developed party organization.

LOCAL GOVERNMENT

The administrative division of Georgia is organized on three levels. At the regional level the country is divided into 12 territories: two autonomous republics (AR)—Abkhazia and Ajara—which have constitutions, nine regions, and the independent city of Tbilisi. The local government at the regional level is a branch of the national government, except for the ARs. The president appoints district governors, who liaise with the local authorities within the regions.

The Ajara AR is governed by its Supreme Council, which elects a chairman among its members. The Abkhazia AR has unilaterally seceded from Georgia, and its authorities are not recognized.

At the second level, the *rayon*, the local government is twofold, comprising a district governor, a presidential appointee who represents the national government and is in charge of the executive branch, and a *rayon* council, a publicly elected body. At this level there are 53 *rayons* and seven towns.

At the third level, each *rayon* is split into *sakrebulo* (1,031), which are administered by directly elected councils.

LEGAL SYSTEM

The legal system of Georgia is based on the civil law system. The president represents the executive branch, and the parliament has legislative power. Judicial branches are represented by the Supreme Court, the Constitutional Court, the Council of Justice, the supreme courts of the ARs, courts of appeal, circuit courts, and regional and city (districts or town) courts.

The Supreme Court of Georgia is the Highest Cassation Court. The Supreme Court supervises general courts.

The Constitutional Court of Georgia rules on whether the laws and decisions adopted by state and local administrations abide by the constitution.

The Council of Justice, an advising body, chooses and appoints judges for the first level of the general courts—the regional and city courts. Circuit courts comprise several bodies that rule on issues in criminal law, civil law, and so forth. The courts of appeal comprise the courts of appeal of Georgia and the Supreme Courts of Ajaria and Abkhazia. The courts of appeal are second-instance courts, which consider decision made by the courts of the first instance.

HUMAN RIGHTS

The constitution of Georgia sets up legal, organizational, and institutional guarantees for human rights and freedoms in the country. Its second chapter contains the list of universally acknowledged rights and freedoms.

Georgia joined several conventions protecting human rights—the International Covenant on Economic, Social, and Cultural Rights, the International Covenant on Civil and Political Rights, and the Optional Protocol to the International Bill of Human Rights; the International Conventions on the Rights of Children and the Elimination of All Forms of Discrimination against Women; and the Convention against Torture and Other Cruel and Inhuman or Degrading Treatment or Punishment.

Amnesty International (1998) lists the major human rights abuses in Georgia as torture and ill treatment of prisoners, poor prison conditions, and weak trial standards.

FOREIGN POLICY

Given its geographical proximity and historical relationship with Russia and as a member of the CIS, Georgia plays a key role in regional and current international affairs. Georgia joined Partnership for Peace in 1994 to secure limited military cooperation with the North Atlantic Treaty Organisation. In 1999 Georgia joined the Council of Europe and was accepted into the World Trade Or-

ganization. Georgian embassies operate in 20 countries. Georgia continues to have boundary disputes with its neighbors. A third of the boundary with Russia remains unspecified, including several strategic segments. Similarly, several key segments of boundary with Armenia and Azerbaijan remain in dispute.

DEFENSE

The total number of active-duty military personnel is over 29,000, which includes ground forces and the national guard, air and air defense personnel, naval personnel, and border and internal security troops. In fiscal year 2000 the nation spent \$23 million, or about 0.6 percent of gross domestic product (GDP), on defense. Georgia requires its conscripts to serve for 18 months.

ECONOMY

Georgia's economy has traditionally revolved around Black Sea tourism; cultivation of citrus fruits, tea, and grapes; mining of manganese and copper; and output of a small industrial sector producing wine, metals, machinery, chemicals, and textiles. The country imports the bulk of its energy needs. Its only sizable internal energy resource is hydropower. Despite the civil war, the economy has made substantial gains, increasing GDP growth and slashing inflation; growth for 2004 was estimated at 9.5 percent, and inflation was down to 5.5 percent. Georgia still suffers from energy shortages. The Caspian oil pipeline through Georgia has spurred greater Western investment in the economy. The start of construction on the Baku-Tbilisi-Ceyhan oil pipeline and the Baku-Tbilisi-Erzurum gas pipeline are bringing needed investment and job growth to a nation with 17 percent unemployment in 2001.

ENVIRONMENT

With the assistance of the World Bank, Georgia has prepared a National Environmental Action Plan that has strengthened overall institutional capacity and environmental institutions and encouraged integration of environmental concerns in economic and sectoral policies.

Despite this institutional framework, current major environmental issues include deforestation; erosion; air pollution, particularly in Rustavi; heavy pollution of the Mtkvari River and the Black Sea; inadequate supplies of potable water; soil pollution from toxic chemicals; and inadequate hazardous and solid-waste management.

LIVING CONDITIONS

The transition from a Communist to a capitalist economic system has been difficult for Georgia. Food is often in short supply, and energy supplies are irregular at best, often leaving Georgians with no electricity or gas in the winter. In 2001, 54 percent of the population lived below the poverty line, and the gap between rich and poor is wide. Some people have prospered from the transition to capitalism and enjoy the earmarks of wealth, but others live in poverty. Schools are in poor repair, with leaky roofs and lack of equipment and textbooks. Items that used to be free or heavily subsidized under Communism, including rent, education, and health care, are often too expensive for the ordinary Georgian to afford.

HEALTH

In 2004 life expectancy was just under 76 years. Infant mortality is relatively high, at over 18 deaths per 1,000 live births. Spending on health care is low, at just \$25 per person per year in 2002.

FOOD AND NUTRITION

Because Georgia has traditionally been a “crossroads” nation, its cuisine reflects Turkish, Greek, Arabic, and Indian influences. In the west the emphasis is on vegetables prepared with walnuts and spices such as tarragon, basil, coriander, and pepper. Common vegetables include tomatoes, potatoes, radishes, pumpkins, eggplant, beans, and cabbage. Corn bread and cheese made from cow’s milk are common. In the east more emphasis is placed on meat, especially mutton and pork; wheat is preferred to corn; and cheese made from sheep’s milk is more common. In the mountain regions a popular food is *kbinkali*, a type of meat dumpling. Georgia has an abundance of walnuts, which are used in many dishes, as well as wild berries.

Although Georgians are forced to spend a high percentage of their income on food—up to two-thirds—the state of nutrition is relatively good. From 1998 to 2003 about 6 percent of infants were of low birth weight. The number of children under five years of age who were severely underweight was negligible, while only about 3 percent were moderately underweight. Continuing problems include lack of clean drinking water, especially in rural areas, and iodine-deficiency disorders.

Food and Nutrition

Undernourished % of total population: 26.6
 Daily Available Calories per capita kcal: 2,440
 Amount of Cereal Available per person per year kg: 174.6
 Amount of Fruits and Vegetables Available per person per year kg: 130.1

STATUS OF WOMEN

There is a strong tradition of respect toward women in Georgian society that leads to socially defined roles for women.

Most women care for the household and children and also work outside the home. Following the transition to a market economy, women have become more successful at work than men have, and in the majority of families women are the principal breadwinners.

Women still play a secondary role in politics, but there are a few female ministers in Georgia. As of 2004 the minister of environment, the minister of infrastructure and development, and the minister of foreign affairs were women. There were 22 female members of parliament as of 2004.

 Women’s Share of Wage Employment Non-agricultural %: 45.2

WORK

In 2001 the Georgian labor force was estimated at 2.1 million, with 40 percent in agriculture, 20 percent in industry, and 40 percent in services. Common agricultural pursuits include growing citrus fruits, tea, grapes, nuts, and vegetables and tending livestock. Those in industry are most likely to produce steel, machine tools, aircraft, electrical appliances, wine, chemicals, and wood products or to mine manganese and copper. The unemployment rate is high, estimated at 17 percent in 2001. Per capita GDP in 2004 was estimated at \$3,100. Many Georgians survive only by having two or even three jobs; others survive by selling goods on the black market. The elite are generally former Communist officials, who lead lives of privilege.

EDUCATION

Obtaining a good education is a high priority for Georgians, and almost the entire population can read and write; the literacy rate is 99 percent.

In 2002 there were some 700,000 pupils attending primary and secondary schools. The larger ethnic minorities have their own schools, and Russians, Armenians, Azeris, Abkhazians, and Ossetians use their native languages for instruction.

There are 21 state-run institutions of higher education and up to 130 private schools, including 12 and 83, respectively, situated in Tbilisi. The oldest and the most prestigious is Tbilisi State University.

SCIENCE AND TECHNOLOGY

During the Soviet period, science and technology in Georgia were well funded and highly developed, primarily because of their applicability to defense. Since independence, however, there has been almost no funding for science and technology, and many scientists have emigrated for better opportunities in other countries.

MEDIA

The constitution and the 1991 press law provide for freedom of the press, and new laws further support this freedom; however, even though the independent press has become increasingly active, the government constrains some press freedoms. According to journalists, security and law-enforcement authorities have attempted to intimidate the press through public comments and private

admonitions. The recent Administrative Code contains a freedom-of-information section that provides for public access to government meetings and documents. Journalists have lacked effective legal protection, a circumstance that has hindered investigative journalism. The Civil Code and other legislation make it a crime to insult the honor and dignity of an individual and place the burden of proof on the accused.

Some 200 independent newspapers are in circulation. The press increasingly serves as a check on government, frequently criticizing the performance of high-level officials. Increasingly, independent newspapers have been replacing the government-controlled press as the population's source of information; the leading independent daily newspaper, *Alia*, has a national circulation nearly 20 percent higher than the government-controlled daily. However, observers report that this seems to be mostly a Tbilisi-based phenomenon and that independent newspapers continue to struggle in the provinces. Several newspapers are serious and reputable sources of information. High printing costs and general poverty, especially in the countryside, limit the circulation of most newspapers to a few hundred or a few thousand. The government finances and controls one newspaper (which also appears in Russian-, Azeri-, and Armenian-language versions) and a radio and television network with a national audience; they reflect official viewpoints.

CULTURE

The economic and political crises of the 1990s and early 2000s largely dried up funding for the arts. Both cinema and the book trade collapsed. As a result, much of the nation's culture is traditional. Georgians enjoy music, and many play the piano or guitar. Georgia has produced a number of world-class classical musicians and has theater, opera, and ballet companies, though funding is always tight. The *duduk*, a double-reed wind instrument, and the *panduri*, a lute with three strings, are often used to accompany folk music. Choirs are popular and often sing at church services. The Georgia State Dance company is a hit with international audiences, and folk dancing is popular throughout the country. These dances include the *sammaia*, a dance performed by three women, and a military

dance called the *mkbedruli*. Poetry is often recited among friends or at meals.

FOLKLORE AND MYTHOLOGY

Georgia has a particularly rich tradition of folklore, with characters including magicians, beasts, spirits, and heroes. Georgian folktales were first printed in collections in the 17th century and survive in song and in rituals surrounding death, the new year, and the harvest. Much of the symbolism, folklore, and mythology of Georgia reflect the confluence of Eastern and Western traditions, including European Christian and pagan, Byzantine, and Persian influences. One prominent character is the *mzetunakhavi*, or the most beautiful woman in the world; others include the *modzalade devi*, a three-headed monster, and the *natsarkekia*, a ne'er-do-well. Important mythological characters include Saint George and Amirani, a hero similar to the West's Prometheus. The Greeks set the story of the Golden Fleece in the Georgian kingdom of Colchis. Both the Abkhazians and the Ossetians have a mythological cycle that deals with the exploits of a semidivine race.

ENTERTAINMENT AND RECREATION

Georgians enjoy singing around the table with family and friends. The nation also has a long history of crafts and folk art. Pottery such as wine bowls, called *pialebi*, and long-necked pots for pouring wine, called *dokebi*, can be purchased in many villages. Rug making with traditional Georgian patterns is a widely practiced craft, as is gold and silver work, enameling, and jewelry making; in fact, the Georgians' skill at metalwork explains in part why the Greeks set the myth of the Golden Fleece in the ancient Georgian kingdom of Colchis. Most young Georgians, like youth in much of the world, are fans of Western rock-and-roll music.

ETIQUETTE

An important value to Georgians is loyalty to kin and family. For this reason, nepotism is viewed favorably, in

contrast to the United States. To fail to help a kinsman or kinswoman get a job or a promotion, secure a business opportunity, or gain entrance to a university would be considered an act of disloyalty. Another important value has to do with the treatment of guests. Even those who cannot afford to do so treat a guest lavishly, often by having a feast, called a *keipi*, in the guest's honor; the *keipi* is an important component of Georgian social life. Such a feast is held for all important social occasions, such as marriages, and is marked by elaborate toasts in which speakers compete to offer eloquent and poetic homage to friends, family, and Georgian history and tradition.

Georgians are very expressive with family and friends. They adhere to three rules: never sit with your back to another, always rise when someone enters a room, and always greet others properly. Georgians also tend to be superstitious. In the countryside it is common to see ribbons that symbolize wishes tied around trees, a legacy of pagan beliefs in wood spirits.

FAMILY LIFE

Although some instances of extended families living under the same roof can be found in rural areas, the typical Georgian family is nuclear. It is not uncommon, though, for young married couples to live with the husband's parents or, in some cases, the wife's parents. Generally, a person's extended family lives nearby, including grandparents, who often play a major role in the upbringing of children. Families in Georgia are generally very close, and one's family consists of aunts and uncles, cousins, nephews and nieces, grandparents, and even godparents. The large extended family assembles for any important events, such as a birth, death, or marriage, and it is considered shameful to neglect the extended family. This strong sense of kinship has become important for economic survival, as the family provides a support network in helping Georgians face hardship and the loss of social welfare benefits.

PERSONAL APPEARANCE

Georgians have long enjoyed a reputation as stylish dressers. The latest fashions can be seen on the people strolling down Rustaveli Prospect, the main boulevard in Tbilisi. Although Georgians usually wear modern clothing, they also wear traditional clothing on special occasions and at festivals. The men wear regional hats or tunics belted at the waist; the women wear the *kartuli kaba*, which consists of a silk veil, full sleeves, and a long dress gathered at the waist. Many traditional costumes are associated with particular regions. Women from Khevsureti, for example, wear woven tunics with intricate patterns. Virtually all women in Georgia wear jewelry made with silver and

semiprecious stones, reflecting the nation's centuries-old metalworking skills.

SPORTS

Traditional sports in Georgia include fencing, wrestling, archery, horseback riding, a form of polo, and a game similar to rugby, called *leloburti*. The most popular sport is soccer. Georgian teams have their own league, but they also compete internationally and won the European Cup Winners' Cup in 1981. As part of the Soviet Union, Georgians won 23 Olympic gold medals from 1952 to 1980. In the 2004 summer Olympic Games in Athens, Georgians took home four medals, two gold and two silver.

CHRONOLOGY

- 1940s** Two million Meshketians are deported from South Georgia to Siberia on Joseph Stalin's orders.
- 1953** Stalin dies; Nikita Khrushchev becomes first secretary of the Communist Party of the Soviet Union and begins a process of de-Stalinization throughout the Soviet Union.
- 1972** Eduard Shevardnadze becomes the first secretary of the Communist Party of Georgia.
- 1977** Zviad Gamsakhurdia forms the Initiative Group for the Defense of Human Rights.
- 1985** Mikhail Gorbachev becomes leader of the Soviet Union and initiates policies of glasnost (openness) and perestroika (restructuring), which inadvertently fuel the nationalistic sentiment of Georgia.
- 1989** The Georgia Supreme Soviet declares Georgian the official state language; secessionist Abkhazian and Ossetian nationalists demand autonomy for their regions, provoking violent demonstrations.
- 1990** In Georgia's first multiparty elections, the Round Table-Free Georgia coalition, a collection of pro-independence parties led by Gamsakhurdia, wins a majority of seats in the Georgia Supreme Soviet.
- 1991** On April 9 the Georgia Supreme Soviet formally declares Georgia's independence from the Soviet Union; in May Gamsakhurdia is elected Georgia's first president; Georgia declines to join the new CIS; violent clashes between Gamsakhurdia supporters and Shevardnadze supporters escalate into a full-scale civil war; Gamsakhurdia declares a state of emergency in Tbilisi and orders the arrest of opposition leaders.
- 1992** With military and Russian backing, Gamsakhurdia is ousted in January; the presidency is abolished, and Shevardnadze is named acting chairman of the State Council, the new national legislature; elections confirm Shevardnadze as chairman of the State Council; Abkhazia reinstates its 1925 constitution; a mostly Russian peacekeeping force enforces a cease-fire between Ossetians and Georgians.
- 1993** Pro-Gamsakhurdia forces are suppressed; Gamsakhurdia dies in exile; Abkhazi separatists repel Georgian forces, and over 200,000 ethnic Georgians flee Abkhazia; Georgia joins CIS.
- 1994** Georgia agrees to permit Russia to continue operating three military bases in Georgia in exchange for military supplies and training; the United Nations brokers a cease-fire between the government of Georgia and Abkhazi separatists and dispatches a Russian peacekeeping force of 2,500; Abkhazia adopts a new constitution declaring independence; by the year's end 30,000 refugees reportedly have returned to their homes in Abkhazia.
- 1995** Shevardnadze survives an assassination attempt; a privatization program is launched; Georgia adopts a new constitution reinstating the office of president, and Shevardnadze is named president; President Shevardnadze is reelected in November with over 70 percent of the vote, and his party, the Citizens' Union of Georgia, wins the most seats in parliament.
- 1996** CIS imposes economic sanctions on Abkhazia at Georgia's request.
- 1997** Shevardnadze denounces Russia's importation of Abkhazian fruit; more than 1,700 prisoners are granted amnesty and released.
- 1998** Shevardnadze survives a second assassination attempt; Russia agrees to allow Georgia joint control of military airbases in Georgia; four UN military observers are taken hostage by Abkhazian separatists; Georgia and Turkey agree to build a major oil pipeline across Georgia; more than 30,000 ethnic Georgians flee Abkhazia after renewed fighting breaks out in May; the United Nations brokers a cease-fire.
- 1999** Georgia is admitted to the Council of Europe; Pope John Paul II visits Georgia; the Citizens' Union of Georgia again dominates legislative elections.
- 2000** Shevardnadze is reelected president, receiving nearly 80 percent of the vote.
- 2001** Georgia and separatist region of Abkhazia sign an accord agreeing not to use military force to resolve tensions, but clashes erupt between Abkhaz troops and Georgian paramilitaries; Russia accuses Georgia of harboring Chechen terrorists.
- 2003** International observers note irregularities in 2003 parliamentary elections, in which She-

vardnadze's party wins 67 percent of the vote and 135 of 150 elected seats in the parliament, prompting widespread protests leading to Shevardnadze's resignation.

- 2004** Mikheil Saakashvili wins the presidency; clashes continue with the autonomous region of Ajaria and with South Ossetia.
- 2005** Georgia accuses Russia of sabotage when gas and electricity supplies are disrupted following explosions that damage pipelines.

Basic Fact Sheet

OFFICIAL NAME

Federal Republic of Germany (Bundesrepublik Deutschland)

ABBREVIATION

DE

CAPITAL

Berlin

HEAD OF STATE

President Horst Köhler (from 2004)

HEAD OF GOVERNMENT

Chancellor Angela Merkel (from 2005)

NATURE OF GOVERNMENT

Federal republic; parliamentary democracy

POPULATION

82,431,390 (2005)

AREA

357,021 sq km (137,847 sq mi)

ETHNIC MAJORITY

German

LANGUAGE

German

RELIGIONS

Protestantism, Roman Catholicism

UNIT OF CURRENCY

Euro

NATIONAL FLAG

Tricolor of black, red, and gold horizontal stripes

NATIONAL EMBLEM

Stylized black eagle displayed with red beak and claws against a dark gold shield

NATIONAL ANTHEM

No official national anthem, but “Deutschlandlied” is used widely, especially its third verse

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), October 3 (German Unity Day), all major Christian festivals

DATE OF INDEPENDENCE

Germany became a kingdom on January 18, 1871; the Federal Republic of Germany (West Germany, FRG) was created on May 23, 1949, the German Democratic Republic (East Germany, GDR) October 7, 1949; FRG and GDR united on October 3, 1990, and once again became the independent nation of Germany on March 15, 1991

DATE OF CONSTITUTION

May 23, 1949 for FRG; became constitution of united Germany on October 3, 1990.

GEOGRAPHICAL FEATURES

On October 3, 1990, the unification of communist East Germany with democratic West Germany increased the new nation’s land area; the western portion grew overnight by 30 percent with the accession of the eastern lands, from 248,577 sq km (95,976 sq mi) to 357,021 sq km (137,847 sq mi), making the country about the size of the state of Montana, in the United States.

Germany now extends 877 km (548 mi) from north to south and 640 km (400 mi) from east to west. These extremities include the cities of List in the north, Oberstdorf in the south, Deschka in the east, and Selfkant in the west.

Germany has an extraordinary variety of landscapes. From north to south it is divided into five regions with different topographical features: the North German Plain (northern lowlands), Central Upland Range, Terrace Region (scarp lands), alpine foothills, and Bavarian Alps.

The greater part of the country drains into the North Sea via the Rhine, Ems, Weser, and Elbe rivers. A small area north and northeast of Hamburg drains into the Baltic Sea. Moreover, a large area in the southeast lies in the Danube River basin, which eventually empties into the Black Sea from Romania. The divide between the watersheds of the Danube and Rhine basins winds around Baden-Württemberg and Bavaria; most of the

Germany

900 Germany

water drains into the Danube. A small area north of the Bodensee drains into the Rhine.

CLIMATE AND WEATHER

Germany is situated in a climatic zone where westerly winds and a maritime climate from the Atlantic Ocean prevail over most of the country most of the year. Sharp changes in temperature are rare, and there is precipitation year-round. Maritime influences are predominant in the northwest along the coast. Continental conditions and greater temperature extremes between day and night and between summer and winter occur increasingly inland. The continental high-pressure center with easterly wind flows sometimes influences the eastern regions of the country, making for colder winters and warmer summers in that area. In addition to the maritime and continental climates to which most of Germany is exposed, the Alpine regions in the extreme south and, to a lesser degree, a few of the upland sections of the central and western areas have a mountain climate in which temperatures decrease with higher elevations and precipitation increases when moisture-laden air is forced to lift over higher terrain. Variable local winds develop as high and irregular terrain deflects prevailing winds.

FLORA AND FAUNA

Germany has been inhabited by humans for millennia, and much of its native foliage has been cleared for such a long time that its native plant and animal species are rare. Germany was originally covered in forests and had large wetland habitats of fens, peat bogs, and wet forests. About 30 percent of Germany is currently covered in mixed broadleaf and conifer forests, with oak and hornbeam forests in the southern part of the nation and pine forests in the north. Most of these forests have been planted by humans instead of occurring naturally. The wetlands have mostly been drained for agriculture and human housing.

Germany used to be home to numerous large carnivorous and grazing species, including wolf, lynx, steppe polecat, spotted sousek, and the European bison, but most of these animals are now endangered or threatened due to habitat loss and human hunting. Germany also was home to many species of birds, many of which are also threatened; these include the corncrake, the lesser kestrel, the aquatic warbler, the white-tailed eagle, and the greater spotted eagle. Most of the indigenous animals were adapted to life in the old mixed forests and do not find modern tree farms, which consist largely of pine trees, to be satisfactory habitats.

ETHNIC COMPOSITION

The German nation grew out of a number of tribes, including the Franks, Saxons, Bavarians, and Swabians. The differences among them are still felt today. Bavarians, Swabians, and Franks reside in the south of Germany; Rhinelanders, Palatinans, and Hessians inhabit the center; Westphalians, Lower Saxons, and Schleswig-Holsteiners live in the north; and Thuringians, Brandenburgers, and other Germans reside in the eastern states. Strong group loyalties complement and counterbalance German national consciousness and often vie with it as a focus of citizens' self-identity.

Germany's population has always been predominantly Caucasian, and Germans have traditionally been very conscious of race and ethnicity; the systematic extermination of Jews and other non-Teutonic people by the Nazis made the country even more ethnically homogenous in the mid-20th century. In the late 1950s and early 1960s Germany invited numerous "guest workers" to come to the country; these workers came from Italy, Greece, Spain, Portugal, Yugoslavia, and Turkey. Some returned to their homes, but others settled in Germany. Germany has been a common destination for refugees from war or political instability and has thus become home to people from Vietnam, Pakistan, and Afghanistan, and after the fall of the Soviet Union about 2.5 million ethnic Germans immigrated to Germany from former Eastern bloc countries. Germany's economic prosperity has attracted a large number of immigrants in the late 1990s and early 2000s. The overall influx of new residents has changed the ethnic and social landscape of Germany, which until the 1970s was one of the most ethnically homogenous countries in Europe. Today about 9 percent of the population is non-German. Turks make up about 2.4 percent of the population. Ethnic mixing has not been an easy process for Germany, which is plagued with racial violence, instigated both by immigrants who feel shortchanged and by right-wing groups who resent the newcomers.

Though Jewish people tended to avoid Germany in the decades after the Second World War, in the 1990s Germany's Jewish population grew rapidly, and in 2004 there were an estimated 105,000 Jews living in the country, though this number is still only one-fifth the number of Jews of the late 1930s. Gypsies have also been returning to Germany, especially from the former Yugoslavia;

the German government does not keep information on ethnicity, so it is impossible to say exactly how many Gypsies live in Germany, but estimates put their population around 70,000, compared to a prewar population of 500,000. Germany is also home to about 60,000 Sorbs, a Slavic people who live in Brandenburg and Saxony; about 50,000 Danes in Schleswig-Holstein; and about 60,000 Frisians in Schleswig-Holstein and Niedersachsen.

LANGUAGES

Germany's official language is German. German is a Germanic language, related to English, Dutch, and the Scandinavian languages. Standard German, also called High German (Hochdeutsch) is the version of the language taught in schools and used by the media. German is a fairly complicated language. Nouns come in three genders (masculine, feminine, and neuter), definite and indefinite articles decline according to case, word order follows very specific rules, verbs often divide into two portions that must be placed at different points in a sentence, and extremely long compound words are common. German uses one diacritical mark, the umlaut, which is two dots over a vowel; its effect is to add an "e" to the vowel sound. So, for example, Chancellor Gerhard Schröder's name is pronounced as if it were spelled "Shroeder."

Germany is also home to a profusion of regional dialects; most people grow up speaking both a dialect and standard German. German dialects are very distinctive, and Germans often find it difficult to understand unfamiliar dialects.

RELIGIONS

The experience of Nazi interference in church affairs persuaded Roman Catholic and Protestant clergy that safeguards were essential for church autonomy. Beyond accepting freedom of conscience, the Basic Law (Grundgesetz) of 1949 adopted Weimar's formulation of church-state relations, which provided for church autonomy in religious matters. The German preamble, thus, states, "The German people . . . conscious of their responsibility before God and man . . ." The constitution guarantees freedom of religion in a free state and avers that no state church exists. There are no politico-religious ties between the German state and German church administrations. Churches are independent of state control.

Yet, separation between church and state is not total. Unlike in the United States, German society has created a working partnership between church and state. This relationship is subject to the Basic Law and governed by agreements. Churches are involved in education, social services, and the military. The state finances parts of the costs of certain church establishments (e.g., kindergartens

and schools). The churches, meanwhile, are empowered to levy taxes on their members, which the state collects against reimbursement of costs. The clergy are trained mainly at state universities, and the churches have a say in appointments to chairs of theology. Church charity plays an integral role in German public life.

Most Germans still belong to churches, but Germany is becoming increasingly secular. In 2004 about 38 percent of Germans said they were Protestant, 34 percent Roman Catholic, and 1.7 percent Muslim. The remaining 26.3 percent were either members of other religions or not affiliated with any organized religion.

Religious Affiliations

Protestant (mostly Evangelical Lutheran)	31,300,000
Roman Catholic	28,000,000
Muslim	1,400,000
Other (mostly nonreligious)	21,800,000

HISTORICAL BACKGROUND

Germanic tribes first appeared in European history in the first century B.C.E., when the Cimbri and Teutons clashed with Roman legions in Gaul and on the Alps. Later, as the Roman Empire began to disintegrate, the Alemanni, Burgundians, Franks, Lombards, Ostrogoths, and Visigoths settled in the region between the Rhine and the Elbe rivers. However, it was not until Charlemagne (768–814) that the Germans acquired political unity. After Charlemagne's death, his empire soon fell apart. In the course of various inheritance divisions, a western and an eastern realm developed, with the eastern realm called Deutschland—the land of Deutsch speakers. Germany's western frontier was fixed relatively early and has remained fairly stable, but the eastern frontier was pushed eastward for hundreds of years, until it contracted in the 20th century.

The transition from the East Franconian to German Reich is usually dated from 911, when Conrad I was elected the first German king, the official title being "First Frankish King." The monarch later became the Roman king while the name of the realm was the first Roman Empire, and later the Holy Roman Empire, and the words "of the German Nation" were added to the title. The monarchy was originally electoral but later became dynastic. Otto I, the greatest of his dynasty, united Germany and Italy and was crowned first Holy Roman Emperor in 962. His successors were engaged in constant struggles within Germany as well as with the papacy, and it was not until the Salian dynasty that a new upswing occurred. Under Henry III (1039–56), German power reached its zenith, only to later decline once again. In 1138 a century of rule by the Staufer began the Hohenstaufen dynasty. Its most brilliant ruler was Frederick I, "Barbarossa" (1115–90), who led the empire into a

golden age. Under his successors, the empire broke up. With the end of Hohenstaufen rule in 1268 the princes became sovereign land dukes. Germany did not again become a true national state until the 19th century.

The Hapsburgs took power in the 13th century under Rudolf I (1273–91). The Golden Bull, or the Imperial Constitution, issued by Charles IV in 1356 regulated the election of the German king by seven electors privileged with special rights. These sovereign electors and their towns gradually gained in power and influence. The towns linked into leagues, the most important of which, the Hanseatic League, became the leading Baltic power in the 14th century. The power of the emperors was curtailed and increasingly eroded by capitulations, which they negotiated at their elections with the various princes. The empire was further weakened in the 16th century by the Reformation, which led to the division of Germany into two camps. In 1522–23 the Reich knights rose in revolt, and in 1525 the Peasants' Revolt erupted, the first revolutionary movement in German history. The dukes profited most from the Reformation when they were given the right to dictate the religion of their subjects by the Treaty of Augsburg of 1555. This treaty failed to end the conflict between the faiths, although four-fifths of the country had become Protestant. In the following decades the Catholic Church was able to recapture many areas. A local conflict in Bohemia triggered the Thirty Years' War (1618–48), which widened into Europe's worst and perhaps last major religious conflict. The war devastated and depopulated much of Germany. In 1648 the Treaty of Westphalia ceded territories to France and Sweden and ultimately confirmed the withdrawal of Switzerland and the Netherlands from the Reich.

In the 18th century, Prussia became the premier German state, especially through the military brilliance of Frederick II (Frederick the Great, 1740–86). During the French Revolution and the Napoleonic wars German nationalism resurfaced and triumphed briefly in the Frankfurt Parliament of 1848. The following decades witnessed the rise of Prussia under its autocratic prime minister, Otto von Bismarck. After a series of successful wars (1864–71) with Denmark, Austria, and France, Bismarck brought about the union of German states (excluding Austria) that formed the Second Reich. In 1871 Wilhelm I was proclaimed the German emperor in the Versailles Hall of Mirrors. This signaled the eclipse of France and the rise of Germany as a European superpower. Bismarck avoided further wars by creating an elaborate alliance network. With the advent of Wilhelm II as German emperor and the dismissal of Bismarck, the delicate international equilibrium was disturbed after 1890. Under Wilhelm II Germany undertook a collision course with the other major imperial powers, leading to World War I, in which it suffered an ignominious defeat. Both the military and the monarchy collapsed. Wilhelm II abdicated and fled the country. Germany became a republic in 1918.

The new state, known as the Weimar Republic, confronted anarchic conditions. The Social Democratic Party, which as the majority party was charged with the transition to the new political order, left the political structure of the Second Reich untouched. The armed forces remained under the command of the imperial officer corps, while the reactionary bureaucracy entrenched themselves in the administration. In 1925 Field Marshal Paul von Hindenburg was elected president. Bedeviled by inflation, the Ruhr occupation by France, and left-wing and Nazi coups, the Weimar Republic's final deathblow came with the world economic crisis of 1929.

The Weimar Republic not only died unmourned but also begat a monster in Adolf Hitler. On January 30, 1933, Hitler became Reich chancellor. The 12 years that followed were the blackest in German history. It witnessed the most brutal of dictatorships, the virtual annihilation of European Jewry, and the bloodiest war in military annals. The Third Reich was consumed in the ashes of a vast *Götterdämmerung*, which pales in comparison to all other historical disasters. Most of Germany lay in ruins and under the heels of occupying powers. Germany's future looked bleak. In 1945 Germany was divided by the victorious Allies into four occupation zones controlled by the Soviet Union, United States, United Kingdom, and France. In 1949, pending a peace settlement, the U.S., British, and French zones were consolidated into West Germany (the Federal Republic of Germany, FRG) and the Soviet Zone into East Germany (German Democratic Republic, GDR). Former German territories in the East, including East Prussia, were ceded to Poland and the Soviet Union. The city of Berlin, inside the Soviet Zone, was likewise divided into four zones under the four occupying powers. Eight districts in Berlin were united with the GDR and 12 with the FRG. For the first 20 years of its existence the FRG was under the rule of Christian Democrats led by Konrad Adenauer, Ludwig Erhard, and Kurt-George Kiesinger. There was a major shift in 1969 when the Social Democratic Party swept into power under Willy Brandt. The Socialists remained in power until 1982, when the Christian Democrats were returned to power under Helmut Kohl as chancellor. Kohl remained in power until 1998, presiding over the reunion of East Germany and West Germany in 1990 with the collapse of the Soviet Union. Germany took a lead in the formation of the European Union and has remained one of its strongest supporters.

In 1998 Kohl lost the chancellorship to the Socialist candidate Gerhard Schröder. Schröder and his Green Party allies kept the majority in parliament in the 2002 elections, though they lost some numbers. Schröder has worked to reduce racial violence, attempting unsuccessfully to ban the neo-Nazi National Democratic Party in 2003. Horst Köhler, a Christian Democrat, won the presidency in 2004. Following very close elections in 2005 the Christian Democrats and Social Democrats formed a grand coalition headed by Chancellor Angela Merkel.

LIST OF MODERN RULERS

German Democratic Republic
1949–64 Otto Grotewohl
1964–73 Willi Stoph
1973–76 Horst Sinderman
1976–90 Willi Stoph

1969–74 Willy Brandt
1974–82 Helmut Schmidt
1982–98 Helmut Kohl
1998–2005 Gerhard Schröder
2005– Angela Merkel

CONSTITUTION

The German constitution is the Basic Law (*Grundgesetz*) and was enacted on May 22, 1949, for the former West German state. It was viewed as a temporary constitution until Germany was reunited. The authors of the Basic Law used the Weimar Constitution of 1919 and the post-World War II constitutions of the various states as models. The framers determined to avoid both the weak, multiparty democracy of the Weimar Republic and the authoritarianism of the Third Reich. Although amended some 30 times in its first 32 years, the Basic Law has functioned successfully, giving Germany its longest period of democracy in modern times, including a successive transition in the postunification era.

Articles 1 through 19 enumerate the basic rights that apply to all citizens. They include equality before the law; freedom of speech, assembly, the press, and worship; freedom from prejudice based on race, sex, religion, or ideology; and the right of conscientious objection to military service. Article 18 provides a caveat to these rights and sanctions their forfeiture in the case of those who abuse them.

The majority of the 146 articles of the Basic Law outline the makeup and functions of the various governmental bodies as well as the careful system of checks and balances that governs their interactions. Other major areas addressed by the Basic Law are the distribution of power between the federal government and the various state governments, the administration of federal laws, government finance, and administration during emergencies. Economic matters are largely ignored, although Article 14 does guarantee property and the rights of inheritance and restricts expropriation to cases involving the public weal.

The system of federalism established in the Basic Law follows a tradition dating to the founding of the Second Reich in 1871. The Federal Republic of Germany is a community of states, each having its own constitution and administrative structures. Sovereignty is vested in the

federation. The Basic Law divides authority between the federation and the states, thus constitutionally guaranteeing a mutual dependence and an ongoing important role for the states.

The federal government can legislate only in areas specifically prescribed by the Basic Law. Areas that come under the exclusive administrative and legislative jurisdiction of the federal government include foreign affairs, defense, citizenship, currency, rail and air transportation, and postal services. Areas of concurrent legislation relating to the economy and ecology have also increasingly come under federal jurisdiction. By virtue of their omission from the enumerated exclusive or concurrent federal powers, a large number of matters, including education, culture, church affairs, police, media, and local government are left primarily to the jurisdiction of the states. The states also retain considerable powers of taxation.

The Federal Constitutional Court is vital to the preservation of German federalism. The Bundesrat (Federal Council, upper house of parliament), representing state interests, elects its judges. Its jurisdiction extends to cases involving differences or incompatibilities between federal and state laws or between federal and state rights and duties as well as interstate disputes. Thus, this house of parliament is the guardian of German federalism.

Amendments to the Basic Law require the affirmative vote of two-thirds of the members of the two federal legislative bodies—the Bundestag (Federal Assembly, lower house of parliament) and the Bundesrat.

Within the dual executive created by the Basic Law, the president, as head of state, is clearly subordinate to the federal chancellor, the head of government. The president's functions are largely formal or ceremonial.

The federal chancellor and his cabinet ministers are collectively known as the federal government. The chancellor controls the composition of the cabinet. Although ministers are given considerable freedom of action, only the chancellor is responsible to the Bundestag for government policies. The Bundestag may not censure cabinet ministers. The chancellor controls the federal bureaucracy, the distribution of public funds, and the implementation of legislation. He may veto budgetary appropriations not to his liking. In wartime, the chancellor assumes supreme command over the armed forces from the minister of defense. The number of ministers is left to the discretion of the chancellor. As a rule, German cabinets are highly stable. Nearly all ministers rise and fall with the chancellor, and resignations for political reasons are rare, even though the realities of coalition governments generate occasional public differences.

PARLIAMENT

The federal legislature consists of two chambers: the Bundestag and the Bundesrat (the lower and upper cham-

bers, respectively). The Bundestag is the only popularly elected organ at the federal level and is by far the more important of the two legislative chambers. Its members are elected every four years. The size of the Bundestag has gradually increased, from 402 in 1949 to 669 in 2000.

The key organizing agents of the Bundestag are the caucuses (Fraktionen), parliamentary groups of the political parties. Deputies belonging to the same party constitute a single caucus provided there are 15 party members in the house. Technically, although not constitutionally, the Bundestag is composed of caucuses and not individual deputies. Only caucuses may initiate legislative proposals. Debate time and representation in the standing committees are determined in accordance with the relative strength of the caucus. Even independent delegates have visiting rights with the caucuses. The importance of the caucuses in organizing the work of the chamber also extends to the relationship between the leadership of the parties and individual deputies. Party discipline and hence party voting are high—about 85 percent to 90 percent of all votes are straight party votes, with deputies following the caucus leadership or the results of a caucus vote. Free votes, where the party gives no binding instructions to its deputies, are rare. A deputy who cannot support a party line may leave a caucus and join another without having to run for election again.

The daily agenda of the chamber is determined by the Council of Elders (Ältestenrat), in essence a steering committee, composed of the Bundestag president, who is himself a member of the largest caucus, three vice presidents, and 12 to 15 representatives of all the caucuses. The Ältestenrat schedules debates, allots time to each party, and assigns committee chairmanships to each in proportion to its parliamentary strength. A second executive body in the Bundestag is the Präsidium, consisting of the president and the vice presidents, which is responsible for overall administration and personnel recruitment.

Parliamentary committees are more important in Germany than in Great Britain or France but less so than in the United States. There are about 19 functional standing committees (Ausschüsse), each of which has 17 to 29 members. Opposition parties sometimes have shares of committee chairmanships. The committees cannot pigeonhole or reject bills but must examine them carefully, take testimony, and propose amendments, if necessary, to the whole house.

POLITICAL PARTIES

Since the first general election held in unified Germany in 1990, six parties have emerged in prominence in the Bundestag: the Christian Democratic Union (CDU), Christian Social Union (CSU), Free Democratic Party (FDP), Social Democratic Party of Germany (SPD), Party for Democratic Socialism (PDS), and Alliance '90/The Greens. The SPD, CDU, CSU, and FDP were formed

in the western states between 1945 and 1947. In the five decades since their establishment these four parties have undergone significant changes. At the federal level they have all at one time formed coalitions with one another or been in opposition. Today they all see themselves as “popular” parties representing a cross section of German society. Other parties in the unified Germany are new and small. Although the Green Party (Die Grünen) existed in the former West Germany since 1979, it joined forces with Alliance ‘90 (Bündnis 90) in 1993 so that both could contend at the national political level. The Party for Democratic Socialism (Partei für demokratischen Sozialismus, PDS) is the successor to the former Socialist Unity Party of Germany (Sozialistische Einheitspartei Deutschlands, SED), the Communist party that ruled in the former GDR. In the 1998 election it cleared the 5 percent hurdle due largely to the support of voters in the former GDR, thus acquiring parliamentary group status. In the 2002 elections the SPD received 38.5 percent of the vote, the CDU 29.5 percent. The CSU, Greens, FDP, and PDS each received less than 10 percent of the vote. Germany also has numerous fringe parties, such as extreme right-wing groups, but these parties are regarded with suspicion by most of the people and usually fail to make any progress on the national level.

LOCAL GOVERNMENT

Germany consists of 16 states: Baden-Württemberg, Bayern (Bavaria), Berlin, Brandenburg, Bremen, Hamburg, Hessen (Hesse), Niedersachsen (Lower Saxony), Mecklenburg-Vorpommern (Mecklenburg-West Pomerania), Nordrhein-Westfalen (North Rhine-Westphalia), Rheinland-Pfalz (Rhineland-Palatinate), Saarland, Sachsen (Saxony), Sachsen-Anhalt (Saxony-Anhalt), Schleswig-Holstein, and Thüringen (Thuringia). The Basic Law requires that the “constitutional order in the states . . . conforms to the principles of republican, democratic, and social government based on the rule of law.” With this exception, the states are free to form any type of governmental structure. Most states are governed by a cabinet led by a minister-president and have a unicameral legislative body known as the Landtag. The relationship between the legislature and the executive duplicates the system at the federal level. Legislatures are popularly elected, normally for four-year terms of office. The Council of Elders (Ältestenrat) manages the affairs of the Landtag. The Landtag elects the chief executive (Ministerpräsident), who in turn appoints the members of his cabinet. State cabinets (Staatsregierung) contain eight to 10 ministers.

There are three levels of local government under the states. The largest states are divided into districts (Regierungsbezirke), each headed by a district president (Regierungspräsidenten), who is subordinate to the state’s minister

of the interior. There are no separate legislative or judicial agencies at this level. The next fundamental units of local government are the counties (Kreise), administered by a Landrat, Kreisrat, or Oberkreisdirektor. The legislative body at this level is the Kreistag. The third level of local government is the Gemeinde, which may apply to a town, village, or city. Gemeinden also contain elected councils, which in turn elect executive Bürgermeisters (mayors).

LEGAL SYSTEM

Germans are a very law-conscious and court-minded people. There is hardly any area of human relations untouched by some rule, order, or regulation, whether it be the nighttime working hours of bakers or the time when parents should keep their children quiet. Germans are more inclined to settle their disputes through legal means than through informal negotiations and bargaining. Further, the judicial process is relatively speedy and inexpensive. On a per capita basis there are nine times as many judges in Germany as in the United States, and over half of all lawyers are either judges or in the civil service. Thus, the complexity of law affects the social, political, and economic arenas as well.

German law is an amalgam of two streams of influence: Roman legal codes introduced by Italian jurists in the Middle Ages and the Napoleonic Code enforced in the Rhineland during the French occupation in the 19th century. After the founding of the Second Reich in 1871, a process of legal revision began that was completed only toward the turn of the century. These codes form the basis of a unified legal system and are the same in all states, even in such matters as bankruptcy, divorce, criminal offenses, and extradition. The codified character of German law also means that, unlike Anglo-American law, there is no judge-made or common law. The German judge may not set precedents and thus make law but must be a neutral administrator only, fitting particular cases to the existing body of law. Although neutral in theory, the German judge is not, according to the rules of procedure, a disinterested referee of court proceedings but an active inquisitor, trying to appraise the facts and determining their legal relevance.

The Basic Law guarantees the rights of defendants. A suspect cannot be forced to talk to the police. If statements were made under duress, they may be retracted later during a court trial. Suspects may not be subjected to physical abuse, torture, drugs, deceit, or hypnosis. Only the minimum force necessary for arrest is authorized. A suspect must be brought before a judge no later than the day following arrest, and the judge must issue a warrant of arrest specifying the reasons for detention or else release the suspect.

There is no separate system of federal and state courts. With the exception of the national high courts

of appeal, all regular tribunals are state courts. Although national law outlines the basic organization of the judiciary, it is established and administered by state statutes. The other significant characteristics of the court structure are its collegial nature and the extensive system of specialized courts. Regular courts, both civil and criminal, are organized on four levels: local, district, appellate, and federal. The 670 local courts (Amtsgerichte) are located in small and medium-sized towns and are usually staffed by single judges, who may be assisted by two lay judges in criminal cases. These courts also perform some administrative functions, such as in bankruptcy. At the next level are the district courts (Landesgerichte), each consisting of separate chambers of three to five judges. At the third level are the appellate courts (Oberlandesgerichte), which take cases only on appeal, except for cases involving treason and anticonstitutional activity. In Germany, appeals involve both reexamination of the facts in a case and its procedural and legal aspects. These courts are also divided into panels of three to five judges. At the apex is the Federal Court of Justice at Karlsruhe, which has 132 judges divided into 20 panels, or senates. It holds no original jurisdiction. There are five kinds of special courts, most under state control: administrative, social, labor, financial, and the single Federal Patents Court in Munich. The highest level of each kind of court falls under the authority of the federal government. The final type of court is the constitutional court. There are several constitutional courts that function in several of the different states. All of them are administratively independent and financially autonomous. Judges of the Federal Constitutional Court may be removed only upon a motion from the court itself.

HUMAN RIGHTS

Germany has a fairly good record of respecting the human rights of its citizens and has a well-developed legal system to deal with individual cases of human rights abuses. The Basic Law is as strong a bulwark of freedom as can be found in any country. Virtually all the classic liberties are specified and guaranteed, including academic freedom, privacy of mail and telephone, freedom from censorship, and the right to refuse military service. Finally, in an extraordinary departure from German constitutional tradition, Article 20 declares that "all Germans shall have the right to resist any person or persons seeking to abolish the constitutional order, should no other remedy be possible." Major controversies involving alleged violations of these basic liberties have occurred only infrequently.

Germany's critics suggest that the rule of law applies less to lower-status, disadvantaged groups than to the "establishment." There is no German version of the Ameri-

can Civil Liberties Union and no culturally ingrained sympathy for the underdog. The German humanistic tradition is, above all, abstract and philosophical, not pragmatic. Germany does not have a strong civil libertarian tradition. German legal and political theory for the most part has emphasized the duties of the individual vis-à-vis the state rather than state responsibilities toward the protection of individual liberties.

The legal system itself has a strong upper-class flavor. The bottom half of society is estranged from the courts not only because of these class differences but also because of the pedantic legalese and jargon in which legal procedures and principles are couched. Bureaucratic red tape, often a mask for inefficiency and lack of compassion, also deters the less fortunate from even seeking justice. Nevertheless, there has been remarkable progress in this direction in the past 40 years.

Many of Germany's human rights difficulties stem from racism. The mushrooming of terrorist and deviant groups, both indigenous and foreign, in the 1970s placed a strain on the evolution of human rights. Much of the domestic violence associated with the notorious Red Army Faction has been contained, although there have been sporadic incidents involving U.S. army personnel stationed in the former West Germany, some of them racially motivated attacks on black U.S. soldiers. Efforts to curb Middle Eastern violence have been less successful because of retaliations against German citizens in Lebanon. In its 1986 report Amnesty International expressed concern over the length of pretrial detention spent in isolation by persons detained on suspicion of terrorism. The German police have on occasion been accused of human rights abuses against asylum seekers and foreign nationals, and there have been numerous cases of foreigners being killed by Germans, particularly by right-wing anti-immigration factions. Germany also has a serious problem with violence against women and the trafficking of girls and women as sex slaves.

FOREIGN POLICY

Since 1989 international conditions have changed the framework of German foreign policy. Germany is reunified and sovereign in its foreign policy, and its security situation has improved greatly. Previously inconceivable forms of cooperation are now possible in the whole of Europe and the world. German foreign policy is thus oriented toward maintaining peace and prosperity, promoting democracy, and developing respect for human rights the world over. It includes the further development of the European Union as a unit capable of action in all areas of global policy; the safeguarding of peace, democracy, and prosperity in Europe to be achieved through EU enlargement; the strengthening of Pan-European cooperation within

the Organization for Security and Cooperation in Europe; the further development of the Atlantic Alliance and transatlantic cooperation with the United States; the strengthening of international organizations (e.g., the United Nations) and a more active role for Germany in these organizations; the promotion of human rights; the further development of relations based on equal partnership with the regions bordering the European Union (e.g., the Mediterranean and Middle East); and the preservation of a habitable world for future generations.

Ever since its founding in 1949 the Federal Republic of Germany has been one of the main advocates of European unification. The FRG's founders believed that European unification would strengthen Europe's position in the world and serve to promote peace, freedom, and prosperity on the continent. Germany signed the Single European Act of 1986, the Maastricht Treaty on European Union of 1992, and the Treaty of Amsterdam of 1997 and in 2002 transitioned its currency to the euro.

Germany and France have suffered strained relations due to disagreements about farm subsidies and Europe's political future, but in 2003 the two countries reaffirmed their amity. Germany, along with France and Russia, refused to support the U.S. war in Iraq in 2003.

DEFENSE

The German armed forces were dismantled after the Second World War. In 1955 the Bundestag, fearing encroachment by the Soviet Union during the Cold War, authorized the formation of the Bundeswehr (federal armed forces), composed initially of volunteers. The Basic Law says almost nothing of the status of the army because none existed at the time of its formulation in 1949 and none was envisaged. It does not, however, prohibit the raising of an army (as it does waging an aggressive war), so the federal government found no serious impediment to its creation of one in 1956. Authorities have inferred, though, that because the army may not wage war, the sole mission of the Bundeswehr is defense.

Parliament promulgated legislation on compulsory military service in 1956. By the end of that year the force numbered 65,000, including 10,000 volunteers from the Federal Border Force (Bundesgrenzschutz, BGS), almost all of whom were World War II veterans. Many West Germans bitterly opposed the re-creation of a German military.

Throughout the remainder of the cold war era the former East Germany became an integral part of the Warsaw Pact coalition of Communist nations led by the former Soviet Union, which was aligned against the North Atlantic Treaty Organisation (NATO) coalition of

democratic nations led by the United States. Occupation forces from the superpowers remained in Germany until the early 1990s, when they gradually disbanded as a result of the Two Plus Four Agreements, which facilitated German unification.

The German armed forces consist of an army, a navy, an air force, a joint support service, and a central medical service. Military service is compulsory, and all German men must serve a nine-month tour of compulsory military service or equivalent state service. Germany spent over \$35 billion on the military in 2003, which was 1.5 percent of the country's gross domestic product (GDP).

ECONOMY

Germany is one of the major industrial countries of the developed world, Europe's largest economy, and the fifth-largest national economy in the world. Its economic growth in the late 20th century was very strong. After price adjustments GDP has doubled in the past 30 years and increased fivefold over 45 years. Per capita GDP in 2003 was \$27,600.

Germany currently suffers major economic problems, however. Between 2001 and 2003 economic growth stalled completely. The western part of the country is still economically much better off than the east; many eastern businesses collapsed in the face of western competition and the infrastructure of the east is substandard after years of inadequate investment. Racial unrest and social divisions do not help matters; the western states in particular resent having to bear the financial burden of taxes to support the east. The west transfers about \$70 billion to the east every year. Since 1995 the German unemployment rate has remained high, ranging from 9.5 percent to 11.5 percent; unemployment is especially bad in the eastern states. Unemployment is partially caused by governmental policies regulating the workplace and strictly limiting the number of people who can be hired and fired. Germany's population is aging, which puts a strain on the social security system. The government is working to liberalize Germany's rigid workplace laws and to restructure corporations to meet the demands of the global marketplace, hoping to cure Germany's economic problems in the future.

ENVIRONMENT

Germany is deeply concerned about the environment and has long been a world leader in environmental legislation. Germany's environmental problems include air pollution caused by coal-burning utilities, acid rain that damages forests, pollution in the Baltic Sea and rivers in eastern Germany, and hazardous wastes. Environmental conditions in the eastern states are typically worse than those in the west. The national government has signed numerous international treaties and agreements in an effort to reduce pollution and is working with the European Union to identify nature preservation areas as part of the union's Flora, Fauna, and Habitat directive. Germany's government passed several laws in the 1990s that have already had perceptible effects on the environment. In 1996 over 50 percent of Germany's trees had been damaged by air pollution. At that time the government introduced a comprehensive clean-air program to check pollution sources through the use of filters, scrubbers, and catalytic converters. As a result, sulfur dioxide emissions from industrial firing installations and power stations in the western states fell by more than 85 percent between 1980 and 1994, and nitrogen oxide emissions decreased by 65 percent. Laws regulating the discharge of wastewater have resulted in the fish stocks in rivers being restored to 1920 levels. The Soil Protection Concept of 1985 and the Federal Soil Conservation Act of 1998 protect soil. The Packing Ordinance requires manufacturers to reclaim and recycle their packing materials, and the Duales System Deutschland ("Green Dot") collects used packaging materials from consumers and recycles them.

Germany's government is actively working to create energy sources for the future, including solar, wind, and nuclear fuels. Concern about nuclear radiation has

prompted the government to pass several laws regulating the use of atomic energy and protection from radiation exposure.

LIVING CONDITIONS

Germany has a high standard of living. Most people live in comfortable dwellings with all the usual modern amenities, such as telephones, television, heat, and furniture. A wide variety of consumer goods is available in most cities and towns. Germany is fairly crowded, and real estate prices are accordingly high. Public transportation is efficient and widely available. Roads are good; Germany is especially known for its Autobahn superhighway, which has no posted speed limit.

The German standard of living declined slightly at the beginning of the 21st century as the economy stagnated. Poverty increased from 12.5 percent in 2001 to 13.5 percent in 2002. Conditions were worse in the east than in the west. On the whole, German people were dissatisfied with their quality of life, and Germany ranked toward the bottom of EU countries in terms of standard of living.

HEALTH

Germany has an excellent health-care system. Over 90 percent of the populace is covered by compulsory national health insurance. The national health-care system is run by a combination of public and private doctors and hospitals and administered by insurance companies known as sickness funds. All people below a certain level of income are required to enroll in a sickness fund. Workers and their employers share equally the cost of their insurance premiums, and the government subsidizes insurance for the unemployed, the poor, and old people. Patients pay copayments for prescription drugs and hospital services, though in some cases the fees are waived. People with high incomes are allowed to choose between enrolling in a sickness fund or purchasing private health insurance, which allows patients to see any doctor they want and obtain the best available services. Patients who are obligated to join sickness funds are also allowed to purchase supplemental private insurance. There are usually no waits for nonemergency services, unlike in many other European countries. Germany is working to streamline the health-

insurance system to increase revenues to hospitals, avoid duplication of tests, and otherwise save costs while maintaining the standard of care.

Germans are in general a healthy people. Life expectancy is over 81 years for women, over 75 years for men. The infant mortality rate is very low.

FOOD AND NUTRITION

Germany has ample food to feed its people. The traditional German diet is heavy. Germans eat a great deal of cold meats, cheese, veal, pork, bread, dumplings, and the ubiquitous potatoes. Sausages are very popular, and many of Germany's states have their own sausage specialties; Bavaria is especially famed for its bratwurst with sauerkraut. Schnitzel (breaded fried veal cutlet) is popular. In the north people eat more fish, in the south more meat. Cabbage is one of the most common vegetables, often served sautéed with vinegar or as sauerkraut. Germans make a variety of pastries, such as strudel. Fast food is readily available in most German towns, as are stands selling Turkish *döner kebabs* (gyros). Germany is famous for its beer, which comes in numerous varieties. It also produces some excellent wines, such as the apple wine from Frankfurt.

Germans have become more health conscious over the last few decades and now eat many more fresh vegetables and salads than they did in the mid-20th century. Obesity has been increasing in Germany, as in much of the developed world, and in the early 2000s the government was trying to encourage people to eat a healthy diet and get more exercise.

STATUS OF WOMEN

Germany's Basic Law confers equal rights to men and women. Women's groups, however, feel that women remain excluded from opportunities available to men. They believe the actual practice of equal treatment remains more of an ideal than a reality regarding employment, family, and politics, even though women make up the majority of Germany's population. Under pressure from the German Women's Council—a women's lobby representing 52 associations with 11 million members—governmental officials have broadened the constitutional and statutory foundations for establishing equality among the sexes.

In 1919 women obtained the right to vote and stand for election. Since then the number of politically active women has increased steadily, though it remains smaller than that of men. Most political parties have introduced quotas to increase the number of female representatives on executive committees. The number of women in Parliament increased from 8.4 percent in 1980 to 32.8 percent in 2003. Each federal government since 1961 has included at least one woman. In 2003 women headed six of the 13 federal ministries, and there were about 40 female ministers in state governments. All state governments have ministers or commissioners for women's affairs, and nearly 1,500 municipalities have created "equality posts" for women.

In 1958 the Act on Equal Rights for Men and Women introduced equal rights for women within the institution of marriage based on the assumption that women were housewives. Almost 20 years later, in 1977, the First Act to Reform the Marriage and Family Law eliminated the traditional marriage model, assuming instead that spouses divide responsibilities as they see fit. It legislated the partnership principle by ensuring equal rights for women in marriage and divorce. Further reform developed in 1994, with the Act to Amend the Law Relating to Family Names, which ensured the equality of men and women regarding the right to the use of a name. The law accords no unilateral preference to the man's family name. Rape within marriage became a punishable offense in 1997.

Educational opportunities for females have improved greatly in Germany. More than half of the secondary students obtaining university entrance qualifications and over 43 percent of all students in higher education are women. The number of women completing courses in vocational training has increased sharply since the 1950s. With more education and equality, over 55 percent of the women in Germany between the ages of 15 and 65 have employment. In 2002, 64 percent of women with children below the age of 18 were working outside the home. Despite such success, women's groups still complain of discrimination. Women tend to lose their jobs faster than men, find new ones less quickly, receive fewer

apprenticeships, and receive lower wages than their male counterparts. Only one-third of top managers in industry are women, and very few women are members of the boards of large corporations. Women still assume most of the responsibility for home and family, which interrupts their careers, though the government has tried to improve this situation by providing allowances for raising children, establishing all-day schools and nurseries, and encouraging men to become involved in their families. In 2002 women earned about 30 percent less than their male counterparts, though the discrepancy was much less in the eastern states.

Women serving in the armed forces received equal rights to men in 2001, which means they can train for armed combat if they so choose, thereby earning a chance at the full range of career possibilities offered by the military.

WORK

Some two-thirds of Germany's workers are employed in the service sector, a number that has increased dramatically over the last two decades. In 2002, 34.6 million people worked for employers, four million were self-employed, and another four million people of working age were unemployed. The unemployment rate was 7.6 percent in western Germany and 17.7 percent in the east. The government has made reducing unemployment its top priority. Of particular concern are those who spend more than a year looking for work; most of these people are insufficiently trained or unskilled, elderly, or disabled, but they also include a large number of east German women. Almost 40 percent of the chronically unemployed have no vocational qualifications. Western Germans with high levels of education enjoy nearly full employment, and their job situations are not affected by fluctuations in the labor market.

The Federal Agency for Employment handles all job-related matters, including job placement and the payment of unemployment benefits. All workers and their employers must pay into the unemployment benefits scheme. Any worker who has paid unemployment insurance for two years is entitled to payment of unemployment benefits for a limited time. If the worker still has not found work after exhausting these benefits, the government may provide more unemployment assistance, after testing the individual's need.

EDUCATION

Formal compulsory education begins at age six and extends for nine years. Thereafter it is partly compulsory—there are no penalties if pupils drop out—for an additional three years. There is virtually 100 percent enrollment at the primary level. Most students attend public schools. Girls and young women are well represented at all levels of education. They have long formed the majority of students at the primary and intermediate levels, and in 2002–03 new students enrolling in institutions of higher education were 50.4 percent female.

In current terminology Germans refer to preschool programs as the elementary stage (*Elementarstufe*) and to the first four years of school as the primary stage (*Primarstufe*). Preschool programs are voluntary and usually not part of the formal school system. Primary school (*Grundschule*) includes grades one through four. The primary school offers 23 to 27 class hours of instruction per week, half of it devoted to German and mathematics. At the end of the fourth year the child and his or her parents must make a decision regarding secondary education. In the 1970s a so-called orientation phase was introduced in all states, designed to extend the period of decision and to make the transition to the appropriate secondary school easier.

There are four types of general secondary education, together known as continuation schools: the *Hauptschule*, the *Realschule*, the *Gymnasium*, and the *Gesamtschule*. Students who plan to attend universities usually choose either the *Gymnasium* or the *Gesamtschule*. Alternate routes to university education include a part-time evening school called *Abendgymnasium* or an institution called *Studienkolleg*, meant primarily for foreigners. The *Gymnasium* is also called the grammar school or the senior high school. The *Gymnasium* extends for nine years, from grades five through 13, and is the most academic and prestigious branch of the secondary-school system. The upper secondary school culminates in the *Abitur*, an examination that students must pass to enter a university. The *Gesamtschule* offers an all-inclusive curriculum for students from ages six through 19, who are allowed to take whatever courses they choose. Some of the *Gesamtschulen* are all-day schools, unlike the *Gymnasien*, which have classes only part of the day but have extensive home-

work assignments. Within the secondary educational tradition, most pupils attend *Gymnasium*, though the *Gesamtschule* is growing in popularity.

Students who do not plan to pursue higher education attend either the *Hauptschule* or the *Realschule*. The *Hauptschule* is referred to as the secondary modern or short-course school and the *Realschule* as the intermediate school. The *Hauptschule* is the main type of secondary school, covering grades five through nine. Most of its students come from lower social groups and many of them are children of foreign workers. *Hauptschulen* have typically geared their curricula to less academically gifted children, although more recently advanced courses (*Aufbauzüge*) have been offered from grades eight through 10 to enable pupils to enter academic secondary school in the 11th grade. The *Realschule* comprises grades five through 10 or seven through 10, concluding at age 16 with the intermediate certificate (*Realschulabschlusszeugnis*), often called middle maturity (*mittlere Reife*). There is a parallel continuation (*Aufbau*) school for those who transfer from the *Hauptschule*. The *Realschule* offers between 30 and 34 class hours weekly and is a popular choice among the lower middle class, craft workers, and industrial workers because it offers safe passage to white-collar jobs in middle management without the rigors of the *Gymnasium*.

There are well over 100 institutions of higher education in Germany, including specialized institutions such as the Medical University in Hannover, the army universities in Hamburg and Munich, and the Sports University in Cologne. The majority of the institutions fall into three groups: the traditional-type university (*Universität*), technical universities (*Technische Hochschulen*), and the comprehensive universities (*Gesamthochschulen*), combining multiple institutions.

Higher education is tuition free and admits students from both the *Gymnasium* and the so-called second-route institutions. The basic right of the holder of an *Abitur* to enroll at any university in the Federal Republic has been sharply curtailed in recent years by a rapid increase in the number of qualified applicants and the lack of facilities. Thus, admissions in almost all fields are curtailed by *numerus clausus* restrictions. To assist academically qualified students to find places in higher education, a central registry was established in Hamburg in 1971. This registry was replaced in 1973 by a mandatory federal selection process involving all student applications in those fields in which the number of applications exceeds available seats.

In 1998 the Fourth Act to Reform the Framework Act for Higher Education instituted a fundamental overhaul of the higher education system. Through deregulation, a stronger performance orientation, and the creation of incentives to excel, it aimed to encourage competition and differentiation, thereby ensuring the international com-

petitiveness of Germany's higher education institutions in the 21st century.

SCIENCE AND TECHNOLOGY

German researchers have made many significant contributions to the world's scientific knowledge. The German government finances research at universities and at public and private institutions, such as the Max Planck Gesellschaft, which does research in the natural and life sciences, social sciences, and humanities; the Fraunhofer Gesellschaft; the Helmholtz Gesellschaft, which focuses on aerospace, nanoparticles, cancer, and climate and the environment; and the Wilhelm Leibnitz Gesellschaft. Several universities include academies of science; the most prominent are in Düsseldorf, Gottingen, Heidelberg, Leipzig, Mainz, Munich, and Berlin. The German Academy of Natural Scientists Leopoldina specializes in medicine. Private industry also conducts research. German scientists have been involved in the German Genome Project and the European Organization for Nuclear Research. The government's main scientific administrative organization is the German Research Council, which provides financing for projects, donates money to universities, and sets up research networks among scientists. The government especially wants to develop nanotechnology, plasma technology, superconductors, nonlinear dynamics, and magnetoelectronics, all of which show promise for developing Germany's economy in the future.

MEDIA

According to the International Press Institute in Vienna, Germany is one of the few countries where the state respects the strong position of a free press. Article 5 of the Basic Law establishes formal guarantees for freedom of opinion, freedom of the press, and rights to accessible information sources. There is no censorship. The state cannot restrict, abridge, or even indirectly interfere with this freedom. Legislators, however, have written two basic restraints into the law: The first provides for lifting constitutional protection in cases of subversion. The second requires the press to observe the general laws protecting personal honor and general propriety. The ultimate judge of the legality of the specific applications of these restraints is the Federal Constitutional Court. The court has enlarged the application of the law to cover not only publication but also the technical processes of production, transportation, and sales. In other words, the law guarantees not only freedom of the press as a theoretical adjunct of freedom of speech and expression but also independence of the press as an intellectual and business institution. Presently, there are nearly 1,200 accredited correspondents in Bonn and Berlin. They are members of the Federal Press Conference or the Foreign Press Association, both of which are entirely independent of the authorities. Thus, the press is on a par with other national institutions with clearly defined legal status and functions for its well-lobbied membership.

CULTURE

Germany has never had a central culture and has never had a national ministry of culture; instead, individual states and cities maintains their own cultural centers and traditions. Cologne, Kassel, and Düsseldorf are known for fine arts. Berlin is famous for its theater. Berlin, Dresden, Stuttgart, Nuremberg, Munich, Frankfurt, Cologne, and Hildesheim have the best museums. Weimar and Marbach have fine literary archives. Hamburg is home to many media companies. The federal library, the Deutsche Bibliothek, has branches in Berlin, Leipzig, and Frankfurt am Main. The national German Cultural Council serves as a contact for federal states and local governments and ensures that matters of national cultural policy get debated.

The federal government also funds various organizations that promote German culture at home and abroad, such as the Goethe Institut, the German Academic Exchange Service, the Alexander von Humboldt Foundation, and the Institute for Foreign Relations.

Germany has spawned a large number of famous artists, composers, and other cultural figures, ranging from Johann Sebastian Bach and Johann Wolfgang von Goethe to the mid-20th century Gruppe 47 and the postunification artists. German architecture introduced the Bauhaus style in the early 20th century. German filmmakers such as Werner Herzog and Volker Schlöndorff have won international awards for their groundbreaking work.

FOLKLORE AND MYTHOLOGY

Germanic people lived in central Europe centuries ago, migrating from place to place and spreading their beliefs throughout the area that is now Germany. Medieval Germanic people were the ancestors of the Vikings. The old Germanic gods were the predecessors of Norse deities, and for that reason many German and Norse deities have similar names. The Norse king of the gods is called Odin, while the same god was called Wotan in Germany; his wife was called Frigg in Norway, Freya in Germany. The mythical world was populated with rather frightening gods and goddesses, dwarfs, elves, goblins, dragons, and other monsters. The old religions were gradually replaced by Christianity, but German people continued to tell the old stories about them. Mythology formed a core of the German national identity that emerged in the 19th century. Richard Wagner incorporated Germanic myths into his Ring cycle, and Germany was one of the first places to engage in research into folklore. The brothers Grimm were especially famous for their work in this area during the 1800s, collecting folk tales from older and rural people and compiling them in their collection of fairy tales.

ENTERTAINMENT AND RECREATION

Germans have a great deal of free time. The workweek averages 36.7 hours, and most people receive up to six

weeks of vacation every year. This leisure time combined with a substantial disposable income amounts to a great deal of time spent on recreation. Many people spend much of their free time at home, watching television, listening to music, gardening, painting, or pursuing other hobbies. They also enjoy going out to movies, concerts, and restaurants. Museums are very popular destinations for Germans.

About 70 million Germans belong to one or more of the nation's 345,000 clubs. There are clubs to meet almost any interest: sports, dog breeding, childrearing, marksmanship, carnival activities, singing, regional culture, and many others. Many citizens volunteer with their clubs or other organizations.

Germans travel a great deal. In 2002 Germans spent \$53 billion traveling abroad.

ETIQUETTE

Germans are known for being rule oriented. They insist on punctuality; arriving late for an appointment is considered insulting, as is missing a deadline. They are often serious and do not appreciate humor or surprises in business situations, though they do not mind them so much during leisure time. Compliments are not considered a necessary part of conversation, and Germans will assume that their performance in something is satisfactory unless they are informed that it is not. German men greet one another with a handshake, often accompanied by a slight bow, and both parties are expected to meet one another's eyes. The rules on handshakes are not so well established between men and women. Age is important, and older people expect to speak or enter a room before younger ones. Germans are fond of titles, and often address one another as Herr (Mister) or Frau (Mrs. or Ms.) even when they know one another well. They will also address a person with multiple titles if he or she possesses them, such as "Herr Professor Doktor Schmidt." Only family members and close friends use first names with one another. People usually use the formal form of address, reserving the informal *du* for friends and relatives, although young people generally use the informal form more often.

At German restaurants it is not unusual for strangers to share a table, but it is not necessary for everyone seated at the same table to talk to one another. Germans eat using the continental system of flatware manipulation, holding the fork in the left hand and the knife in the right at all times. Germans often drink large amounts of beer, but they do not approve of public drunkenness. They usually do not request tap water at restaurants, though they will drink mineral water with meals. Restaurants include a service charge with the price of the meal, and tipping is not necessary.

FAMILY LIFE

Germans consider family very important. Some 81 percent of Germans live in a family, most in a traditional family consisting of a married couple and their children. Germans are quite tolerant of nontraditional family arrangements, however, and it is becoming increasingly common for couples to live together without being married. Only 17 percent of Germans live alone, most of them women. Same-sex couples exist; officials estimate that Germany contains somewhere between 50,000 and 150,000 same-sex households. Traditional gender roles have been changing, and men are sharing more of the household chores with their female partners.

Germany's Basic Law protects marriage and the family by giving married couples preferential tax treatment and by providing financial support to families with children. Both mothers and fathers are allowed up to three years of leave from work after the birth of a child; the state pays them an allowance for two years of this time. This encourages Germans to have children, in part to combat the declining birthrate, which was 1.38 children per woman in 2004. Germans do not necessarily indulge their children, but they consider the use of violence against children to be wrong.

PERSONAL APPEARANCE

Germans consider personal appearance very important and usually dress carefully. Businesspeople wear conservative dark suits, usually with white shirts. Even during leisure Germans do not appear in sloppy or excessively casual clothing, nor do they chew gum while talking to one another. Women usually do not wear much makeup. In the summer people may wear shorts and sandals, often with socks. Regional garments are still popular in some areas, such as Bavaria, where men appear in Lederhosen (short leather pants) and women in Dirndlkleider (traditional dresses with aprons) both during festivals and on ordinary days.

SPORTS

Germans are avid sports fans. The German Sports Federation (Deutsch Sportbund, DSB) has 27 million members and oversees a variety of sports. In addition to soccer, it sponsors clubs engaging in a variety of sports of interest to both men and women. The DSB offers sports badges to outstanding participants, and every year nearly one million Germans attempt to win these badges. Germans especially enjoy watching soccer (football) both live and on television, and many Germans, the vast majority of them male, also play. Some 6.26 million Germans belong to the German Football Association. Soccer's World Cup will be held in Germany in 2006.

The government places a high priority on training and supporting professional athletes. Germany's Olympic training facilities are among the best in the world. The government has also increased support for high-level athletics by the disabled, and it is working to build more modern sports facilities in the east.

Many Germans like to ride bicycles. One popular event is traffic-free day, when stretches of road are closed to automobiles, allowing bicyclists stress-free travel. The wine route in Rhineland-Palatinate is a popular traffic-free destination.

CHRONOLOGY

- 1949** The Federal Republic of Germany is born and enacts a new constitution called the Basic Law. The Deutsche Mark replaces the Reichsmark as the national currency. Economic Affairs Minister Ludwig Erhard lifts all price controls. Theodor Heuss is elected president, and Konrad Adenauer enters his first term as federal chancellor.
- 1951** Revision of the occupation statute grants the Federal Republic limited autonomy in foreign relations.
- 1954** The Treaty of Paris is signed between the occupying powers and the Federal Republic.
- 1955** The Hallstein Doctrine proclaims West Germany the sole representative of the German people and prohibits diplomatic relations with countries recognizing East Germany. Western occupation formally ends as West Germany enters NATO and is accepted as a sovereign state.
- 1956** The Bundestag accepts remilitarization and the creation of the Bundeswehr.
- 1957** West Germany joins the European Community (EC); the Saar joins West Germany.
- 1958** Soviets and East Germans close off land access to West Berlin; for the next three years the Allies airlift people and materials to the besieged city.
- 1959** Heinrich Lübke is elected second president of West Germany.
- 1961** East Germany constructs the Berlin Wall, sealing off East Berlin's inhabitants from contact with the West.
- 1963** West Germany signs a treaty of friendship with France. Following the Der Spiegel Affair, which led to the dismissal of Defense Minister Franz Josef Strauss, Adenauer steps down and is succeeded as chancellor by Ludwig Erhard.
- 1966** Diplomatic relations are established with Romania, contrary to the Hallstein Doctrine. Ludwig Erhard yields chancellorship to Kurt-Georg Kiesinger, who enters into a Grand Coalition with the SPD and FDP.
- 1969** Following the CDU electoral reversal, the SPD and FDP join in a coalition government. Gustav Heinemann is elected West Germany's third president. Willy Brandt becomes chancellor.
- 1970** Brandt launches Ostpolitik treaties with East Germany and the Soviet Union, legitimizing the existing German boundaries.
- 1971** Four-power agreement is signed in Berlin.
- 1972** Munich Olympics is marred by terrorist kidnappings of Israeli athletes. Treaty on the Basis of Relations is signed with East Germany.
- 1973** West Germany and Czechoslovakia sign a peace treaty.
- 1974** Following a spy scandal, Brandt resigns and is succeeded by Helmut Schmidt of the SPD as chancellor. Walter Scheel is elected West Germany's fourth president.
- 1977** In a daring rescue operation, West German police free captives held by hijackers of a Lufthansa plane in Mogadishu, Somalia.
- 1979** Karl Carstens is elected West Germany's fifth president.
- 1982** The FDP leaves Schmidt's coalition government and joins with the CDU to form a new government under Helmut Kohl.
- 1983** The CDU/FDP coalition is returned to power with a large majority in national elections.
- 1984** Richard von Weizsäcker is elected West Germany's sixth president.
- 1987** In national elections the CDU suffers significant losses, but Kohl retains the chancellorship.
- 1989** The Berlin Wall is torn down in the wake of the collapse of the Honecker regime.
- 1990** East Germany and West Germany begin discussions on reunification, a process culminating with the monetary and political union of the two states. The German electorate chooses Helmut Kohl to be the first chancellor of a united Germany.
- 1991** Richard von Weizsäcker becomes the first Bundespräsident (federal president) of a united Germany and Germany's sixth overall. The first elected Bundestag of the unified Germany convenes and passes legislation making Berlin the new capital by 2000.
- 1992** With 2 million guest workers already, Germany accepts 450,000 asylum seekers, of which 27 percent come from the former Yugoslavia. This represents a 70 percent increase from the year before. The government registers nearly 2,500 attacks by right-wing extremists against foreigners.
- 1993** Germany becomes the final nation to ratify the Maastricht Treaty on the European Union. It tightens asylum restrictions, which immediately decreases the number of asylum applications.
- 1994** National elections return the CDU/FDP coalition to power with a slim majority, allowing Chancellor Kohl to return for his second term

in the unified Germany and fourth overall. Russian and Allied troops complete their final withdrawal from Berlin. The German High Court rules that German military participation in UN peacekeeping missions outside of NATO is constitutional, thus removing a major impediment to Germany's bid for a permanent seat on the UN Security Council.

- 1995** Roman Herzog is elected as united Germany's second president and Germany's seventh overall. German courts charge seven former East German party officials with manslaughter, making them partly responsible in the "shoot-to-kill" orders issued to border guards.
- 1996** After five years the Bundesrat finally resolves to follow the Bundestag to Berlin. Mounting financial strains from German unification and EU integration raise the unemployment rate to 11 percent, the highest level since World War II. Under protest from unions and the SPD, Chancellor Kohl announces a plan to reduce welfare benefits in order to bring the German economy into line with the strict criteria for EU monetary union set for 1999.
- 1997** The German unemployment rate rises to 13 percent, forcing 5 million people out of work, exacerbating Germany's ability to meet EU monetary qualifications. Germany and the Czech Republic sign treaties of joint apology for misdeeds executed during World War II.
- 1998** The SPD and Bündnis 90/Die Grünen win in the national elections, making Gerhard Schröder united Germany's second chancellor and Germany's seventh overall.
- 1999** Johannes Rau is elected as united Germany's second president and Germany's eighth overall. Former chancellor Helmut Kohl and others are accused of a campaign finance scandal.
- 2000** Germany and the nuclear industry come to a social consensus regarding the phasing-out of nuclear energy by 2032. Kohl is forced to resign as the CDU's honorary chairman.
- 2002** Germany adopts the euro as its national currency.
- 2004** Horst Köhler elected president. Germany's government suggests cutting unemployment benefits and welfare spending, resulting in massive protests.
- 2005** Angela Merkel becomes the first East German and first woman chancellor of Germany.

GH

CAPITAL

Accra

HEAD OF STATE & HEAD OF GOVERNMENT

President John Kufuor (from 2000)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

21,029,853 (2005)

AREA

239,460 sq km (92,456 sq mi)

MAJOR ETHNIC GROUPS

Akan, Ewe, Mole-Dagbane

LANGUAGE

English

RELIGIONS

Christianity, animism, Islam

UNIT OF CURRENCY

New cedi

NATIONAL FLAG

Three horizontal stripes of red, gold, and green, with a black star in the middle of the gold stripe

NATIONAL EMBLEM

A blue shield supported by golden eagles with upswept wings. The shield is quartered by a golden cross with a golden lion in the center. The four quarters show a silver castle, a cocoa tree, a gold mine, and a crossed sword and baton. At the crest and around the necks of the eagles are black stars, and on a gold ribbon beneath the emblem is the national motto, "Freedom and Justice."

NATIONAL ANTHEM

"Hail the Name of Ghana"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 13 (National Redemption Day), March 6 (National Day, Independence Day), Good Friday, Holy Saturday, Easter Monday, July 1 (Republic Day), December 25 and 26 (Christmas)

DATE OF INDEPENDENCE

March 6, 1957

DATE OF CONSTITUTION

April 28, 1992

GEOGRAPHICAL FEATURES

Ghana is on the Gulf of Guinea on the western coast of Africa. The total land area is 239,460 sq km (92,456 sq mi). The total length of its land border is 2,094 km (1,301 mi), consisting of a 549 km (341 mi) northern border with Burkina Faso, a 668 km (415 mi) western border with Côte d'Ivoire, and an 877 km (545 mi) eastern border with Togo. The length of the coastline is 539 km (335 mi).

Low plains consisting of scrub-covered savannas (the flat and featureless Accra plains), the Volta delta, and

the Akan lowlands cover the southern part of the country. To the north lie the rich Ashanti highlands (which produce most of the cocoa), the generally arid Volta basin, and the forest-covered Akwapim-Togo ranges. High plains occupy the northern and northwestern parts of the country.

The entire country is crisscrossed by a network of streams and rivers, although the smaller rivers dry up during the dry seasons. The largest river is the Volta, with its three branches. Its vast drainage system covers some 157,989 sq km (61,000 sq mi), or two-thirds of the country.

CLIMATE AND WEATHER

The climate resembles that of other equatorial countries. The eastern coastal belt is warm and comparatively dry, the southwest is hot and humid, the eastern forest belt is warm and humid, and the northern plains are hot and dry. Variations in the weather are governed by the interplay between the dry harmattan winds from the Sahara, the southwesterly monsoons, and the cool equatorial easterlies. In the north there are two seasons: a hot season from November to March or April, and a rainy season from April or May to October. In the south there are four seasons: two wet seasons, from May to June and from September to November, and two dry seasons, from July to August and from December to April.

The annual mean temperature ranges from 26.1°C to 28.9°C (79°F to 84°F). Temperatures run higher in the north, with annual mean maximum temperatures near 34.4°C (94°F). The highest recorded temperature was 42.8°C (109°F), at Navrongo, and the lowest 10.6°C (51°F), at Kumasi and Tafo. The hottest month is generally February or April; the coolest, December. Humidity in the coastal zone is high throughout the year, reaching between 95 and 100 percent, dropping to only about 15 percent in January when the dry harmattan blows from the northeast.

The southwest has the heaviest average annual rainfall, with over 2,230 mm (88 in). The amount of precipitation gradually decreases northward, with Kumasi receiving only 1,450 mm (57 in) and Tamale 1,070 mm (42 in). Accra has a low average rainfall, only 740 mm (29 in). There also are considerable annual variations in rainfall.

Climate and Weather

Mean Temperature: 79°F to 84°F
North: 94°F
Average Rainfall
Kumasi: 57 in
Tamale: 42 in
Accra: 29 in

FLORA AND FAUNA

About one-third of Ghana, primarily the western region, is covered by high evergreen and semideciduous forest that includes silk cottons, kolas, and hardwood such

as mahogany, odum, and ebony. Most of the rest of the country is covered by savanna grasslands interspersed with shea trees, acacias, and baobabs. Ghana has about 3,600 species of flora, over 2,200 found in the high forest. Large mammals such as elephants and lions used to roam the savannas, but these animals are now largely confined to nature reserves. The forests provide habitat for monkeys, snakes, and, along the rivers, crocodiles. Ghana is a bird-watcher's paradise, with at least 725 species of birds.

ETHNIC COMPOSITION

More than 100 ethnic groups distinguishable by culture, language, or race are found in Ghana. No single group constitutes more than 15 percent of the population, and no part of Ghana is ethnically homogeneous. In the south, five clusters of the Kwa peoples—the Akan, Ewe, Ga-Adangbe, Guan, and Central Togo—constitute about 70 percent of the population. In the north, the three clusters of the Gur peoples—Mole-Dagbani, Gurma, and Grusi—dominate, making up 20 percent of the population. Among the non-Ghanaian population there are more than 15 major ethnic groupings. Tribal ties among members of each group are still strong and, in many cases, determine social and political attitudes.

LANGUAGES

More than 100 languages and dialects are spoken in Ghana. Because no single language is spoken or understood by the majority of Ghanaians, English is the official

language and is extensively used in government, business, education, and communications. The constitution of 1969 required all members of the National Assembly to read and speak English with reasonable fluency. In most regions Hausa is used as a lingua franca.

The most important indigenous languages are the Kwa languages (Twi-Fante, Ga, and Ewe) in the south and the three subdivisions of the Gur family (Dagbane, Grusi, and Gurma) in the north. Only a handful of the 100 languages have writing systems. Most scripts were introduced by missionaries, and in many cases the Bible was the first published work in the languages. Ashanti, Fante, Ewe, Ga, and Dagbane have developed a considerable body of literature, by African standards. The related languages of Twi and Fanti are the most widely used. The government has selected nine languages for development and use in schools: Akuapem-Twi, Ashanti-Twi, Dagbane, Dangbe, Ewe, Fanti, Ga, Kasem, and Nizima.

RELIGIONS

Though statistical data have only limited validity in Ghana, as in other African countries, in determining the exact nature of religious affiliations, 63 percent are classified as Christians, 21 percent as followers of traditional religions, and 16 percent as Muslim. In many cases, however, self-professed Christians continue to participate in traditional rituals associated with African religions.

Religious Affiliations	
Christian	13,250,000
Indigenous beliefs	4,415,000
Muslim	3,365,000

HISTORICAL BACKGROUND

Oral traditions suggest that the area that is now Ghana was inhabited about 3,000 to 4,000 years ago, although there is no definite link between the earlier inhabitants and present-day Ghanaians. Some of the kingdoms that later developed in northern Ghana were ruled by Mande speakers ethnically related to the rulers of the empire of Mali. By the 13th century the town of Jenné (Djenné) became the headquarters of the Dyula traders from Mali, and much of their trade was with the Akan speakers of southern Ghana. The states of Akany and Twifu in the Ofin River valley became noted for their gold mines. Meanwhile, the Mande moved southwestward to found the states of Dagomba and Mamprusi and the kingdom of Gonja in northern Ghana. Although the Mande rulers themselves were not Muslims, they brought with them Muslims as scribes, traders, and medicine men. From the

15th to the 18th centuries Islam expanded its influence in the north and in the Akan states, especially among the Ashanti.

Of the groups that make up modern Ghana, the Ashanti are the most prominent. The Ashanti are members of the Twi-speaking branch of the Akan people who settled in the vicinity of Lake Busumtwi. By the mid-17th century they formed the most powerful of the states of the central forest zone. Under Chief Oti Akenten a series of military operations helped to found an alliance of states known as the Ashanti Confederation. At the end of the 17th century Osei Tutu became the *asantabene* (king) of Ashanti, and under his rule the alliance of Ashanti states threw off the domination of Dankyira, the most powerful state in the coastal hinterland, which had been exacting tribute from other Akan groups in the central forest. The capital of the confederation then moved to Kumasi. During the reign of Osei Tutu, a golden stool was caused to fall from the sky by the Ashanti high priest, Okomfo Anokye, and this golden stool was accepted as the national symbol, representing the united spirit of the confederation.

This was the state of the country when the first Portuguese arrived in 1471 on what became known to the Europeans as the Gold Coast. While large quantities of gold were found, it was the slave trade that proved most lucrative. Other European nations also built forts in order to participate in the slave trade. By the 19th century there were 76 forts on the coast.

When the slave trade came to an end, the British remained on the Gold Coast, using its outposts for customs. The Ashanti people prospered. However, when they refused to cede their capital of Kumasi to the British in 1873, the British sacked the city and declared the Gold Coast a Crown colony. More than two decades of fighting ensued, with the Ashanti people eventually being beaten.

Ghana was under British rule from 1901 to 1957, although the British had remained in control of the coastal region from the early part of the 19th century and the British presence was over 300 years old in some areas. British rule was relatively benevolent and was marked by the progressive development of self-governing institutions, especially after 1946. Ghana was the first West African nation to achieve independence. British influences continue to be felt in every aspect of society, most strongly in language, education, justice, and commerce. Political relations with Great Britain have remained close, despite a brief suspension of diplomatic relations under Kwame Nkrumah.

In 1957 Ghana was led by Kwame Nkrumah, who had been prime minister of the Gold Coast since 1952. Ghana became a republic in 1960, with Nkrumah as executive president. Nkrumah gradually consolidated his own power and that of his party, the Convention People's Party (CPP), establishing a single-party socialist state in

1964. His autocratic rule and his financial mismanagement led to growing discontent and finally to his overthrow by the military in 1966. The National Liberation Council (NLC), composed of four military and four police officers, took control under the leadership of General Joseph A. Ankrah. Following admission of corruption, Ankrah resigned in 1969 and was replaced by General Akwasi Amankwa Afrifa.

The NLC prepared the way for the return to partial civilian government in 1969, lifting the ban on political parties in preparation for legislative elections. The Progress Party (PP), led by Kofi Busia, won decisively, and Busia became prime minister. The NLC still exercised presidential power until August 1970, when Edward Akufo-Addo became head of state. The Busia administration, unable to deal with Ghana's economic problems, particularly rampant inflation and a huge foreign debt, and increasingly unpopular as a result of charges of corruption, was toppled by the army under Colonel Ignatius Kutu Acheampong in 1972. Acheampong established the military National Redemption Council (NRC) to head the government, banned all political parties, dissolved the legislature, and abolished the Supreme Court.

Acheampong focused on the nation's economic problems, instituting policies of self-reliance and austerity that permitted the government to reschedule its tremendous foreign debt. However, inflation continued, reaching three figures, the black market flourished, and corruption increased. From 1975 to 1977 food prices rose between 300 and 600 percent. The regime became increasingly unpopular, with five coup attempts in five years. In 1975 Acheampong disbanded the NRC and replaced it with a seven-member Supreme Military Council (SMC). Acheampong was forced to resign as leader of the SMC in 1978 and was replaced by General Frederick Akuffo, who promised an end to corruption and a return to civilian rule in 1979.

The Akuffo government, unable to fulfill its promise, was toppled in a coup led by Lieutenant Jerry Rawlings in June 1979. Rawlings went ahead with preparations for legislative elections, which were won by the People's National Party, led by Hilla Limann, who became civilian president. Like previous governments, Limann's was unable to deal with the nation's economic problems, and it was toppled by Rawlings in 1981. He abrogated the constitution, abolished political parties, and dissolved parliament. The prodemocracy Movement for Freedom and Justice demanded a referendum on the reestablishment of a multiparty system, and the Provisional National Defense Council (PNDC) pledged to accept the results of a national consensus.

Military rule came to an end in 1993, when the Fourth Republic was declared on January 7. Multiparty elections were held three years later, with Jerry Rawlings winning the presidency. In 2000 term limits precluded Rawlings

from seeking the presidency again. In a runoff election John Kufuor of the New Patriotic Party was elected president, receiving 57 percent of the vote. The Kufuor government eliminated fuel subsidies, causing gasoline prices to rise by 60 percent, and worked out a debt relief plan by the World Bank and the International Monetary Fund (IMF). The government also attempted to stamp out the legacy of the Rawlings years by eliminating the public holiday celebrating Rawlings's military coup and appointing a "reconciliation commission" to investigate human rights abuses during those years. The commission began hearings in 2003. After a group of current and former military personnel were arrested on charges of planning to destabilize the government prior to the 2004 elections, Kufuor was elected to a second term.

LIST OF MODERN RULERS

1957–66	Kwame Nkrumah

1978–79	Gen. Frederick Akuffo
1979–81	Hilla Limann
1981–2000	Lt. Jerry Rawlings
2000–	John Kufuor

CONSTITUTION

One of the first acts of the Provisional National Defense Council (PNDC), which assumed power following the coup of December 31, 1981, was to abrogate the constitution of 1979. The Council of State was abolished, and the National Assembly and political parties were dissolved. On January 21, 1982, a 17-member, all-civilian cabinet was appointed, including a number of prominent individuals of "spotless integrity."

A massive government reorganization was initiated by a 1983 edict setting out the principles of state policy. Intended to supplement the proclamation of January 1982, the law allows the PNDC to mobilize all available personnel and resources as it deems fit and to occupy and use land for any purpose conducive to public welfare or to the interests of Ghana. Under this edict a number of bodies, such as the National Security Council and the Press Commission, were eliminated, and new bodies, such as the Education Commission and the Land Valuation Board, were created.

In 1992 a referendum adopted a new constitution with a presidential system of government, a multiparty parliament, and an independent judiciary. The president is elected by universal suffrage and has a four-year term, which is renewable only once.

PARLIAMENT

The former national legislature, the unicameral National Assembly, was suspended by the PNDC following the 1981 coup and the suspension of the constitution of 1979. With the adoption of a new constitution in 1992, parliamentary elections were held in 1996. The most recent elections were held in December 2004. The new parliament is a unicameral body consisting of 200 members, who are elected by direct popular vote to serve four-year terms.

POLITICAL PARTIES

Ghana is a multiparty state that until recently was largely controlled by one ruling party, the National Democratic Congress (NDC), which holds 92 of the assembly's 200 seats, but in the 2000 elections the New Patriotic Party captured 100 seats. Several other opposition parties have representatives in the assembly, including the People's National Convention (PNC) with three seats, and the Convention People's Party (CPP) with one seat. Four seats were held by independents.

LOCAL GOVERNMENT

For purposes of local government Ghana is divided into 10 regions. Each region is administered by a regional commissioner. The regions are further divided into 110 districts. The larger urban centers are organized as cities and municipalities. The institution of chieftaincies, with traditional councils and regional houses of chiefs, has been retained. Periodic attempts to decentralize the administration have been undertaken through regional, district, local, and urban councils.

LEGAL SYSTEM

The civil law is based on common law, doctrines of equity, and general statutes and the criminal law on the Criminal Code. Both are derived from Great Britain. Customary Ghanaian law is also enforceable in courts.

Traditional legal safeguards remain available in the established court system, which includes the High Court, the Court of Appeals, and the Supreme Court, headed by a chief justice. However, the Rawlings government also established a number of other judicial-type bodies that parallel the older court system. These organs include public tribunals, the Citizens' Vetting Committee (recently renamed the Office of Revenue Commissioners), the National Investigations Committee, the Special Military Tribunal, and the Public Tribunals Board.

Council Law 78, effective December 21, 1983, established a new public tribunals board to supervise the

public tribunals, originally set up in 1982. National Public Tribunals, set up in 1984, hear appeals from Regional Public Tribunals, which decide certain types of criminal cases and other cases presented to them by the PNDC. Critics of the public tribunals, however, decry the almost complete absence of trained and experienced legal practitioners on them and insist that accepted rules of evidence and procedure are not always followed. Government officials acknowledge imperfections but defend the new tribunals as a means of providing justice more quickly, to more people, with less corruption. They defend the ability of laypersons to make independent judgments and have instituted a training program for lay officials.

HUMAN RIGHTS

In terms of civil and political rights Ghana is classified as a not-free nation. The early years of the PNDC regime were marked by a number of systematic violations of human rights. These were regarded by the government as necessary to achieve its task of cleaning up the Augean stable. By 1984 some positive trends began to emerge, however. The universities were reopened. The curfew imposed since the assumption of power by the Rawlings regime in 1981 was lifted, and the country's borders, closed since September 1982, were reopened. A number of detainees, including all journalists, were released. Physical attacks on various institutions and groups ceased. A freely elected trade union leadership supplanted a government-appointed management group. Discipline is gradually being restored in the uniformed services, the police, and among militant political cadres. The government of John Kufuor has attempted to eliminate the legacy of military rule by appointing a commission to investigate human rights violations during the Rawlings years. Generally, the media are considered free. While there have been major improvements in the human rights record under Kufuor, serious problems remain, including corruption in the judiciary and police brutality.

FOREIGN POLICY

Under Rawlings, Ghana has received favorable international attention, particularly because of the country's internal stability relative to many of its neighbors. In contrast, relations with neighboring African countries have been stormy, particularly with Togo from 1977 to 1995. The border between the two countries was periodically closed during this period, as the two countries accused each other of carrying out acts of subversion.

Relations with Burkina Faso and Côte d'Ivoire have also been strained, primarily because of personality conflicts between Rawlings and the former Côte d'Ivoire president Félix Houphouët-Boigny. The assassination of Thomas Sankara of Burkina Faso was a personal blow to

Rawlings, while the expulsion of Ghanaians from Côte d'Ivoire and Nigeria also caused a near rupture of diplomatic relations with those countries. In 2004 Ghana was still dealing with the problem of refugees and nationals fleeing rebel fighting in Côte d'Ivoire.

DEFENSE

The defense structure is headed by the chairman of the PNDC. The line of command runs through the chief of the defense staff to the chiefs of the army, air force, and navy and the commandant of the border guards.

Manpower is provided by voluntary enlistment. The total strength of the armed forces is 7,000. In 2003 the nation spent \$44 million, or about 0.6 percent of gross domestic product (GDP), on defense. Ghanaian armed forces are second only to Nigeria in West Africa in offensive and defensive capability. Though as yet untested in battle, the armed forces have rendered a good account of themselves in handling civil disturbances and as part of international peacekeeping forces.

ECONOMY

Well endowed with natural resources, Ghana has twice the per capita output of the poorer countries in West Africa. Even so, Ghana remains heavily dependent on international financial and technical assistance. Gold, timber, and cocoa production are major sources of foreign exchange. The domestic economy continues to revolve around subsistence agriculture, which accounts for 35 percent of GDP and employs 60 percent of the work force, mainly small landholders.

In 1995–97 Ghana made mixed progress under a three-year structural adjustment program in cooperation with the IMF. On the minus side, public sector wage increases and regional peacekeeping commitments have led to continued inflationary deficit financing, depreciation of the cedi, and rising public discontent with Ghana's austerity measures. Political uncertainty and a depressed cocoa market led to disappointing growth in 2000. A rebound in the cocoa market was predicted to push growth over 4 percent in 2001–2002. In 2002 Ghana opted for debt relief under the Heavily Indebted Poor Country Program. Receipts from the gold sector should help GDP growth, estimated

at 4.7 percent in 2004, but inflation, at 26.7 percent, and an unemployment rate of 20 percent remain problems.

ENVIRONMENT

Ghana suffers from a number of environmental problems due to its rapid population growth and chaotic urbanization. Chief among its problems is the deforestation of the country, which has wiped out nearly 70 percent of the country's original forests for fuelwood, logging, and agricultural clearing. The country's growing population has also contributed to soil erosion by overfarming. Urban and industrial areas have highly polluted water supplies, and the disposal of solid waste is a growing concern. The mining industry has polluted most of the country's waterways and air. The water supply has dangerous levels of arsenic and cyanide.

LIVING CONDITIONS

With nearly one-third of the population below the poverty line, life is a struggle for many Ghanaians. A large percent-

age of the population makes a living through subsistence farming, and one of the country's major export crops is cocoa. While the minimum working age is 15, many younger Ghanaians take employment out of economic necessity. Ethnic relations are generally quite good, although many ethnic immigrants from the poorer northern regions of the country face discrimination in the more affluent south and are forced by low wages to live in segregated enclaves called *zongos*. Visitors to Ghana are struck by the vibrancy of its urban life, where much commerce is conducted in open-air markets. Wealthier Ghanaians live in Western-style homes, but most live in traditional homes where renters mingle in central courtyards.

HEALTH

Life expectancy in Ghana is low, at just over 56 years, and the infant mortality rate is high, at just over 52 deaths per 1,000 live births. Ghana has a major problem with AIDS: In 2003, about 3.1 percent of the adult population, or 350,000 people, were living with AIDS, and some 30,000 people died of the disease. Ghana has a relatively modern medical system funded by the government, church groups, and various international agencies, but the system reaches only those who live in the cities and larger towns. Dispensaries in smaller towns have had some success in dealing with common diseases such as malaria. Many Ghanaians rely on traditional medicine, which emphasizes supernatural causes of disease or herbal medicine, and efforts have been made in recent years to find links between indigenous herbs and Western scientific medicine.

FOOD AND NUTRITION

Ghanaian cuisine tends to be spicy, with cayenne, all-spice, curry, ginger, garlic, and onions used in many

dishes, primarily soups and stews, including groundnut, or peanut, stew. In the south, plantain, cassava, and tropical yams are widely used, along with rice and corn. Common dishes include "red-red," or black-eyed peas served with rice and fish, and *plava*, a spicy stew. In the north, millet is a more common staple. People of all social levels tend to eat the indigenous diet. In urban areas many people eat indigenous "fast foods" sold by street vendors and at "chop bars." This reliance on street food—for up to 40 percent of the diet in at least one city—helps to account for the poor state of nutrition in Ghana. From 1998 to 2003, 11 percent of Ghanaian infants were of low birth weight. During the same years 5 percent of children under age five suffered from being severely underweight, and 20 percent were moderately underweight. Some 10 percent suffered from wasting and 25 percent from stunting.

 Amount of Fruits and Vegetables Available per person per year kg: 149.5

STATUS OF WOMEN

Women's rights in the economy, business, and the civil service, as well as in the home, have long been well established and respected. Although women in urban centers and those who have entered modern society encounter little bias in most endeavors, role pressures still exist. Women in the rural agricultural sector remain subject to practices that reinforce their subservience to males in spite of efforts by the government and more enlightened elements in the society to curtail these practices. In 1988 the government appointed a secretary for the National Commission for Women and Development. Ghana ranks first in the world for the percentage of women ages 50 to 64 who engage in some form of economic activity.

WORK

In 2004 the Ghanaian labor force was estimated at 10 million, with 60 percent in agriculture, 15 percent in in-

dustry, and 25 percent in services. Farmers typically grow cocoa, rice, coffee, cassava, corn, peanuts, shea nuts, and bananas; many agricultural workers are employed in forestry. Industries include mining (of gold, diamonds, manganese, and bauxite), lumbering, light manufacturing, aluminum smelting, and food processing. Many people along the coastline make their living by fishing, and tuna and lobster are major exports. Still others throughout Ghana produce and sell handicrafts, including woven clothes, leather goods, bead necklaces, and carved masks. Figures from 1997 showed unemployment at 20 percent. Per capita GDP in 2004 was \$2,200.

 Unemployment %: 20

EDUCATION

The state provides free, universal, and compulsory education for 10 years, from age six. The academic year runs from September to August. English is the medium of instruction. Schooling consists of six years of primary school (followed by a two-year prevocational continuation course for those not going to secondary school) and seven years of secondary school, consisting of five regular years and two years of the sixth form, an advanced secondary course that prepares students for university work. Only one of five students entering secondary school reaches the sixth form. Ghana currently has 12,130 primary schools, 5,450 junior secondary schools, 503 senior secondary schools, 21 training colleges, and 18 technical institutions.

There are regional disparities in education, with significantly fewer children from the north attending school. In 2003 there was an overall national literacy rate of 74.8 percent, but the rural and largely Muslim north has a lower rate. National literacy efforts are coordinated by the People's Education Association, a voluntary organization with 134 branches.

Approximately 1.8 percent of secondary-school students are in the vocational stream. Technical education is provided by primary-technical schools, technical institutes, and polytechnic schools. A number of private schools are run by foreign missions and churches, especially Roman Catholic, Presbyterian, Anglican, and Methodist.

Higher education is the responsibility of the National Council for Higher Education, an autonomous body. The

universities are governed by academic boards responsible to the council. The five universities are the University of Ghana, the University of Science and Technology at Kumasi, the University of Cape Coast, the University for Development Studies, and the University College of Education.

SCIENCE AND TECHNOLOGY

Ghana is a poor nation, so few resources are devoted to scientific research. Most research is conducted by the University of Ghana and the University of Science and Technology, and most of it is concentrated on agriculture, especially cocoa cultivation. Additionally, the University of Science and Technology conducts research in industrial engineering and medicine. The Ministry of Health, in conjunction with the World Health Organization, conducts health-related research.

MEDIA

The Ghanaian press provides four dailies, all in English. The majority of the nondailies are also published in English. The Bureau of Ghana Languages sponsors monthly papers in eight vernaculars—Ashanti, Fante, Akwapim, Ewe, Ga, Nzema, Dagbane, and Kasem. The periodical press consists of 74 titles, almost all in English, of which the best-known is *Drum*.

The national news agency is the Ghana News Agency. Major foreign agencies in Accra include the Associated Press, ITAR-TASS, United Press International, and New China News Agency.

Broadcasting is a state monopoly of the Ghana Broadcasting Corporation, which operates 17 short-wave transmitters and seven VHF-FM transmitters, with stations at Accra, Ejura, and Tema. Television was introduced in 1965 and is controlled by Ghana Broadcasting Corporation (GBC), which has 11 transmitters.

CULTURE

Modern culture suffered under the regime of Kwame Nkrumah, whose government censored the arts. After his overthrow the arts began to flourish. Prominent contemporary playwrights include Kofi Awoonor, Efua Sutherland, and Joe Graft; Awoonor has also written novels, along with Ayi Kwei Armah and Ama Ata Aidoo. Ghanaian poetry is influenced by the nation's oral tradition; prominent poets include Awoonor, Atukwei Okai, and Vincent Odamtten.

With little funding for the arts, Ghanaian artists have to be self-supporting, and many practice traditional arts. Woodcarving is especially developed, with Ghanaians known for stools carved in one piece out of large logs into the abstracted shapes of animals. Performance arts tend to be connected to traditional and religious rituals. Music and dance is especially important in traditional cultures. For example, among the Ga, the Homowo Festival is a kind of "debutante ball" for adolescent girls, where traditional drum music is played. Funeral ceremonies among the Dagomba include musical performances by as many as six different groups. Traditional dances include the *baamaya*, performed by dancers in headdresses with fans and with bells tied around the hands and feet. The University of Ghana is home to the highly regarded Ghana Dance Ensemble, which performs internationally.

FOLKLORE AND MYTHOLOGY

Storytelling is an important part of Ghanaian culture. Stories are told to children, and even to adults, to enforce cultural norms. Each Friday schoolchildren are invited to share the oral stories told to them by their parents and grandparents. Traditions of oral storytelling extend back centuries. The Akan, for example, had a set of fixed texts that had to be recited word for word. Today, among the Akan as well as the Guan-speaking people, popular folklore characters include hares, vultures, crows, and tortoises. One especially well-known folk character is Kwaku Ananse, a spider that conquers his enemies through cunning and humor. These spider tales were introduced to Jamaica by Akan slaves transported to the Caribbean, where they are referred to as the "Anancy tales." A well-known folk hero to all Ghanaians is the Ashanti queen Yaa Awantewa, who declared war on the British in 1900.

ENTERTAINMENT AND RECREATION

In addition to sports, music, dancing, and folk arts and crafts, there is one unique form of entertainment in Ghana: concert parties. These are comic musical performances in the Akan language that are especially popular in coastal towns, where some 50 troupes put on performances that blend Western musicals, slapstick humor, political and social satire, masquerade, and oral storytelling traditions. Typically, the performances begin with a late-evening dance, followed by the troupe's performance, which lasts well past midnight.

ETIQUETTE

Ghanaians tend to be formal and extremely polite in their interpersonal relationships. It is considered rude to point, stare, or wave with the left hand. Greetings consist of a formal handshake and inquiries about family and friends, and those who begin conversation with exchanges of greetings are considered rude. Great importance is attached to social status. Visitors to a home greet each member of the family, and only after they are seated are they greeted by each person present. Hosts and hostesses invite visitors to have food and drink, and it is considered rude to decline. When a person is about

to take or returning from a long journey, a drink to the person's ancestors is shared. It is common for friends of the same age and sex to hold hands while walking. Ghanaians regard certain English words that are considered innocuous in the West, such as "silly" or "nonsense," as highly offensive.

FAMILY LIFE

Western influences have made the nuclear family more common in Ghana, but a number of complex traditional family life patterns can still be found that involve extended families. Akan-speaking groups, such as the Fante, have matrilineal families, so that a person traces descent through the female line. Other groups are patrilineal, where ancestors are traced through the male line. Still other patterns are "natalocal" arrangements, in which spouses remain with their families after marriage, and "avunculocal" families, where a man resides with his mother's brother. In many cultures men and women occupy different quarters after they are married. All of these forms of extended family provide Ghanaians with a social and economic support network, and failing to support a member of the extended family is strongly disapproved of. Although Christian Ghanaian men have only one wife, non-Christian cultures allow for polygyny, and having a dozen or more wives is regarded as a sign of status and wealth. Traditionally, Ghanaian marriages are arranged by the families, though this, too, is changing with westernization.

PERSONAL APPEARANCE

Ghanaians can be seen wearing either Western or traditional clothing, and either is considered appropriate in, for example, business settings. With regard to traditional dress, while certain styles or materials were formerly associated with a specific region or ethnic group, today a given item of traditional dress may be seen throughout the country. An example is the striped cotton *fugu* shirt traditionally worn by elderly Dagomba and Kassina men on ceremonial occasions but now worn widely. Many women wear what is called a "kaba and slit," a blouse and long skirt made from colorful African cloth. Traditional cultures also dictate what leaders must wear on ceremonial occasions. The queen mother of the Fante, for example, must wear her hair naturally and wear handmade sandals on all public occasions.

SPORTS

Basketball and tennis, as well as cricket, tend to be favored by the more affluent, but soccer is the sport played

and watched by ordinary Ghanaians. Each city has its own stadium and team, and the national team, called the Black Stars, is made up of the best players from each of these teams.

CHRONOLOGY

- 1957** Ghana becomes an independent dominion within the Commonwealth of Nations, with Kwame Nkrumah as prime minister.
- 1958** The Constitution Act and the Preventive Detention Act are passed, giving Nkrumah wide extraconstitutional powers to suppress opposition. Regional assemblies are dissolved. The first Conference of Independent African Nations is attended by five independent nations in Africa.
- 1960** The nation approves a republican constitution, with Nkrumah as president, in its first plebiscite.
- 1961** Nkrumahism becomes the official ideology of the nation. Ghana becomes a one-party state, with the Convention People's Party as the sole political party. K. A. Gbedemah, leader of the CPP's right wing, is dismissed.
- 1962** An assassination attempt against Nkrumah is followed by wholesale arrests of Nkrumah's political rivals, including Tawia Adamafo, Ako Adjei, and John Tettegah.
- 1963** Ghana joins in the founding of the Organization of African Unity. Supreme Court acquits alleged plotters in the 1962 assassination attempt. Nkrumah retaliates by dismissing the chief justice and packing a new court.
- 1965** Ghana suspends relations with the United Kingdom. In first national elections the CPP wins all parliamentary seats with an unchallenged slate.
- 1966** Akosombo Dam, built over the Volta River at a cost of \$414 million, is completed. Nkrumah is overthrown, while on a visit to Beijing, by a military coup led by Emmanuel Kotoka, Akwasi Afrifa, and John Harlley. Nkrumah is given asylum in Guinea. National Liberation Council assumes supreme power.
- 1967** New cedi is introduced with a devalued rate of exchange. Kotoka is killed in abortive countercoup. Ghana joins West African Economic Community.
- 1969** New constitution of Second Republic is promulgated. In the first free national elections, Progress Party, led by K. A. Busia, wins absolute majority. Busia

- forms cabinet. A three-man presidential commission consisting of Harley, Afrifa, and A. K. Okran is appointed to serve as head of state.
- 1970** Presidential troika is abolished. Edward Akufo-Addo is elected president.
- 1972** Busia government is overthrown by military coup under Ignatius Acheampong. National Redemption Council assumes supreme power. A countercoup by Busia's supporters is foiled. Supreme Court is abolished. Nkrumah dies in Bucharest, Romania. His body is returned to Ghana and is buried with state honors. NRC repudiates foreign loans and nationalizes mining and textile firms.
- 1975** Supreme Military Council is created as the highest legislative and administrative body in the state, with a reconstituted NRC as a subordinate cabinet.
- 1977** Acheampong promises return to civilian rule by 1979.
- 1978** Frederick Akuffo, Acheampong's deputy, assumes power in a bloodless coup. Local assembly elections are held, and National Assembly is set up.
- 1979** Six-year ban on political parties is lifted. Flight Lt. Jerry John Rawlings leads a coup of junior officers. Armed Forces Revolutionary Council takes over power and begins house-cleaning campaign. Revolutionary Court finds Acheampong, Akuffo, and seven other senior officers guilty of corruption, treason, and other offenses and sentences them to death. A new constitution is adopted as a prelude to the return of civilian rule. In presidential elections Hilla Limann, candidate of the People's National Party, is elected.
- 1981** Rawlings seizes power for the second time in a bloodless coup. He suspends National Assembly, political parties, and Council of State. Rawlings sets up Provisional National Defense Council with himself as chairman.
- 1984** National Commission for Democracy is named, with Justice D. F. Annan as chairman.
- 1986** Preparations for a raid on Ghana by American mercenaries in the pay of Ghanaian exiles are discovered, and five officers suspected of plotting against the government are arrested.
- 1988** Three universities are closed for four months following student boycotts over proposals to make them pay for their education. The first of three stages of local council elections begins in December.
- 1989** The government tightens controls over the media.
- An attempted coup reportedly takes place in September.
- 1990** Ghana sends troops to Liberia as part of a peace-keeping force under the auspices of the Economic Community of West African States. A prodemocracy organization, Movement for Freedom and Justice, demands a national referendum on establishing a multiparty system.
- 1992** A new constitution is adopted by referendum in April. Rawlings is elected president in multiparty elections in November.
- 1993** The Fourth Republic is proclaimed on January 7.
- 1995** A state of emergency is declared in the northern portion of the country, as fighting between the Konkomba and Manumba peoples leaves more than 150,000 refugees.
- 1996** President Rawlings is reelected with 57 percent of the vote against two other candidates.
- 2000** Term limits preclude Rawlings's standing for a third term. John Kufuor of the New Patriotic Party is elected president.
- 2003** A government-appointed reconciliation commission begins hearings on human rights abuses during the Rawlings regime.
- 2004** Kufuor is reelected president.

DATE OF INDEPENDENCE

February 30, 1830

DATE OF CONSTITUTION

June 11, 1975

GEOGRAPHICAL FEATURES

Greece, the southernmost country in the Balkan Peninsula, has a total land area of 50,942 sq mi (131,940 sq km), about one-fifth of which is composed of several hundred islands in the Ionian and Aegean seas. Continental Greece has a length of 584 mi (940 km) north to south and a width of 480 mi (772 km) east to west. The country is bounded on three sides by seas—the Ionian, Mediterranean, and Aegean.

The capital, Athens, about 5 mi (8 km) from the seaport of Piraeus, is one of the largest Mediterranean cities. Other major cities are Salonika, Piraeus, and Iráklion.

Greece is divided into nine geographical regions, six mainland (Thrace, Macedonia, Epirus, Thessaly, Central Greece, and Peloponnese) and three insular (Crete, the Ionian Islands, and the Aegean Islands).

The region of Thrace is in the northeastern corner of Greece and includes the island of Samothrace. The Maritsa River runs along eastern Thrace and forms the border between Turkey and Greece.

Macedonia is the largest geographical region, extending from the Mesta (Nestos) River to the Albanian border in the west. Its northern boundary runs through the mountain ranges that Greece shares with the former Yugoslav republic of Macedonia and Bulgaria, while the

Greece

southern border is the Aegean Sea. Salonika is second only to Athens both as a port and as a city.

Epirus lies southwest of Macedonia and to the south of Albania. Its southern limits are the Ambracian Gulf and Central Greece. The high Pindus Mountains to the east have rendered Epirus the most isolated region of mainland Greece.

Across the Pindus Mountains from Epirus and south of Macedonia is the region of Thessaly, which stretches to the Aegean Sea. The plains of Thessaly are the most extensive lowlands and most fertile agricultural lands in the country. Mount Olympus, the legendary home of the gods, is at the northeast corner of Thessaly.

South of Epirus and Thessaly, stretching from the Ionian Sea to the Aegean Sea, is Central Greece. The plains of Central Greece yield grains, olives, grapes, figs, and cotton, while the foothills make good pastureland.

The Peloponnese, a peninsula of 8,278 sq mi (21,446 sq km), is connected to Attica (the southeastern end of Central Greece) by the narrow Isthmus of Corinth. The Corinth Canal cuts through this mountainous isthmus to connect the Gulf of Corinth with the Saronic Gulf.

Crete is the largest of the Greek islands, with an area of 3,207 sq mi (8,308 sq km). The site of the first European civilization, Crete is long, narrow, and mountainous, with some fine natural harbors in the north. Mount Ida, at 8,058 ft (2,456 m) is the highest point on Crete.

The Ionian Islands are spread along the coast from Albania to the Peloponnese. The northernmost and second largest of the Ionian Islands is Corfu, which lies off the southern coast of Albania and is divided from mainland Greece by the Corfu Straits. The four other major islands in the Ionian group are Cephalonia, Leukas, Ithaca, and Zante.

The Aegean Islands are remnants of a land bridge that once connected Greece to Asia. The Aegean Island region includes the Cyclades, a group of 29 islands spread from a few miles to 120 miles southeast of Attica. The Dodecanese archipelago comprises 18 islands east of the Cyclades and just off the southwestern coast of Turkey, the largest and most famous of which is Rhodes (540 sq mi; 1,399 sq km).

A mountainous country, Greece has at least 20 peaks of more than 2,000 m (6,562 ft), most of them only a few miles from the sea. The highest mountains, in descending order, are Olympus (9,571 ft; 2,917 m), Smolikas (8,652 ft; 2,637 m), Voras (8,281 ft; 2,524 m), Grammos (8,268 ft; 2,520 m), Giona (8,235 ft; 2,510 m), Tyrphi (8,193 ft; 2,497 m), Tzoumerka (8,101 ft; 2,469 m), and Parnassus (8,061 ft; 2,457 m). There are few large rivers in Greece because of the mountainous terrain and low rainfall. The major rivers are the Vistritsa (Aliákmon), Achelous, Pinios, Maritsa (Evros), Maritsa Mesta (Nestos), Struma (Strymon), and Thíamis. There are few lakes, and they are relatively small in size.

Greece is an area of frequent earthquakes and earth tremors. In the 1950s the country was ravaged by earthquakes, particularly among the Ionian Islands, along the western coast, and on some of the Aegean Islands.

CLIMATE AND WEATHER

The Mediterranean climate generally characterizes Greece, and one season makes a smooth transition to the next. A short spring with moderate temperatures is followed by a long, hot summer, then by autumn, with average temperatures above those of spring, and finally a mild and sunny winter. There are about 3,000 hours of sunshine each year, rain in the summer is rare, and a cooling northwestern wind called the *meltemi* blows from the sea.

In addition to these common features, each region has its climatic particularities. In Thrace the Mediterranean climate prevails in the plains, but in the mountains the winters are colder, as in continental climates. The climate of Macedonia is Mediterranean, with continental influences more pronounced away from the coasts. The hot, dry summers and the cold, damp winters are somewhat moderated along the coasts. Epirus, on the windward side of the Pindus Mountains, has annual precipitation greater than any other mainland region. In Thessaly summers on the plains are hot and dry, while winters are cold and damp. The Ionian Islands have a favorable climate, and their fertile lands are well watered. Central Greece has generally moderate temperatures. Crete has hot, dry summers with northerly winds that parch the interior, and its total annual precipitation is received only in the winter.

ETHNIC COMPOSITION

In the 20th century Greece remained more ethnically homogeneous than most northern European nations. The population is about 98 percent Greek, 1 percent Turkish, and 1 percent Vlach, Slav, Albanian, and Jewish.

Most of the Turkish minority lives in Thrace, with a few thousand Turks in the Dodecanese Islands. Many Thracian villages have Turkish majorities that regularly elect Muslim councillors and mayors. The Vlaches are predominantly Greek Orthodox but speak a dialect of Romanian. Slavs belong to two groups: the Macedonian Slavs, living mainly in Macedonia, and the Pomaks, Bulgarian-speaking Muslims living in Thrace. Most Albanians are Greek Orthodox and identify themselves as Greeks. Most of the Jews live in Salonika and a few urban centers in Macedonia.

FLORA AND FAUNA

The Greek islands offer a rich abundance of flora, with more than 6,000 species, some 700 to 750 of them indigenous. Trees include pine, fir, and beech at the higher elevations and olive, mulberry, Judas, plane trees, and citrus at lower elevations. Other vegetation varies depending on the location and elevation. Mount Olympus, for example, abounds in wildflowers. In the forests can be found tulips, gentians, fritillaries, lilies, and orchids. In the alpine areas are pansies, saxifrage, columbine, bellflowers, yellow Spanish broom, anemone, violets, narcissus, and a variety of wild herbs such as oregano, basil, chamomile, and sage. Greece has 116 mammal species, 422 species of birds, and 447 of the 579 species of fish found in the Mediterranean Sea.

LANGUAGES

Linguistically, Greece is a homogeneous country in which 98 percent of the population speaks Greek as its mother tongue. The minority languages include Turkish, Macedonian, Slav, Vlach, Albanian, and Pomak.

Greek is an ancient Indo-European language. Of the many dialects used in ancient times, the Attic dialect of Athens became dominant. During the seventh and sixth centuries B.C.E., as the Greeks established colonies from Spain to the Black Sea, the Attic dialect, or Koine (common), became the lingua franca of the civilized world. Koine was the language used for writing the New Testament. However, Koine as a sacred language began to stagnate and fossilize. Meanwhile, the common, or demotic, Greek language continued to change, assimilate new words, and drop old ones. In the 19th century a reform movement aimed at restoring the Attic dialect of Classical Greece developed Katharevousa (pure language). In addition, journalists began a fourth form of Greek called *kathomiloumeni*.

The battle over the various forms of Greek lasted for most of the 20th century, becoming a political issue that threatened the life of governments and erupted in riots. As a result, schoolchildren had to learn one form of Greek for everyday speech, another for reading classical literature, a third for reading newspapers, and a fourth for understanding church liturgy. Finally, in 1977 the government of Konstantinos Karamanlis decreed an end to the language conflict by adopting the demotic form and proscribing both Katharevousa and *kathomiloumeni* for official use. However, the church was permitted to use Koine.

English and French are other languages that are widely understood in Greece.

RELIGIONS

The established religion of Greece is the Orthodox Church, to which 98 percent of the population belongs. It is the “dominant religion,” according to the constitution. The relationship between the Orthodox Church and the state is unique. The state provides for and protects the church, which is a public entity, both financially and administratively. Throughout the educational system and up to the university level, religious instruction is given in the Orthodox faith.

Church-state relations are extremely complex due to both the Byzantine heritage and the growth of socialist ideas during the second half of the 20th century. Relations between the church and the state were smooth for most of the 20th century, until the Papandreou government in 1977 passed laws authorizing the government to take over most of the land held by the Orthodox Church. The state also exercises supervision over the church through several government ministries. Crises became frequent, either as a result of internal church conflicts that drew state intervention or as a result of state efforts at reform, usually resisted by the clergy and the conservative public.

Monasticism is an important element of Orthodoxy, but Orthodox monks are solely devoted to the practice of asceticism. Mount Athos and its 20 monasteries has been the site of colonies of monks since 959 C.E.

Muslims compose 1.3 percent of the population, with Catholics and Protestants accounting for 0.7 percent.

Other	75,000

HISTORICAL BACKGROUND

Greek civilization was born in Crete and Asia Minor in the second millennium B.C.E. Adapting the Minoan culture of Crete to their own native traditions, the Greeks developed what became the basis of Western civilization.

During the second millennium B.C.E. Greece was ruled by the Achaeans, then was later conquered by the Aeolians, Ionians, and Dorians. In the first millennium B.C.E., overpopulation in a land with scant resources forced many Greeks to emigrate and colonize nearby Anatolia (part of modern Turkey) as well as distant lands, such as France and Spain. The fifth century B.C.E. witnessed the Golden Age of Athenian culture, the defeat of Athens by Sparta in the Peloponnesian Wars, and the defeat of Persia.

Internecine strife led to the annexation of most of Greece by Philip II of Macedon (Macedonia) in 338 B.C.E. and also by his son Alexander the Great. Alexander’s armies carried Greek culture as far east as the Indus River and as far south as Nubia in Africa. After the breakup of Alexander’s empire, Greece yielded its supremacy on the world stage to Rome, which annexed the country in 146 B.C.E. and made it a Roman province. When the Roman Empire was split in 395 C.E., Greece became the seat of the Byzantine Empire, and Greek culture was reborn in Byzantine art and civilization.

The Ottoman Turks conquered Constantinople in 1453, and the four darkest centuries in Greek history followed. Although the Ottomans gave the Greeks considerable local autonomy, the Greek people faced forced religious conversions, high taxation, and cycles of repression and persecution. Communal affairs of the Greeks were controlled by the Greek Orthodox Church, which, in the absence of a free government, represented the nation.

Following an unsuccessful attempt to regain national freedom in 1770, the Greeks, led by the archbishop of Patras, proclaimed a war of independence against the Turks on March 25, 1821. Britain, France, and Russia came to the aid of the Greeks. Greek independence was recognized and guaranteed by the London Protocol of 1830, which Turkey accepted. Greece also acquired a German-born monarch, Otto I of Bavaria, who was overthrown in 1862 in favor of Prince George I of Denmark. King George I ruled until he was assassinated in 1913.

During the century following independence, Greece gradually added islands and neighboring territories with Greek-speaking populations, including the Ionian Islands, ceded by the British in 1864, Thessaly, seized from Turkey in 1881, and Macedonia, Crete, and many Aegean Islands in 1913. After World War I Greece gained the former Italian possessions of Rhodes and the Dodecanese Islands.

The aftermath of World War I witnessed the expulsion of Greeks from Asia Minor during a disastrous war with Turkey, followed by a period of republican rule. Italian and German troops occupied Greece during World War II. The end of World War II led to the restoration of the monarchy in 1946 amid a civil war, between the Soviet-backed Communists and the anti-Communists, that had erupted in 1944. The civil war ended with the defeat of the Communists in 1949, with British and subsequent U.S. military assistance.

A succession of conservative governments held office until 1963, when the Center Union Party, a left-center coalition led by Georgios Papandreou, won a parliamentary majority. Disagreements with King Constantine on military and other issues led to the dismissal of Papandreou in 1965, initiating a series of crises culminating in a military coup and the establishment of a military junta in 1967. An unsuccessful effort by the king to mobilize

support against the junta led to his expulsion, the appointment of a regent in his place, and the reorganization of the government, with Col. Georgios Papadopoulos as prime minister. In 1973, following a naval mutiny designed to restore the king, Constantine was deposed and a republic was proclaimed.

Papadopoulos was ousted in 1974 and replaced by Gen. Dimitrios Ioannides. The junta collapsed the same year, and the conservative elder statesman Konstantinos Karamanlis was invited to form a caretaker civilian government. The conservatives held power under Karamanlis and Georgios Rallis until 1981, when the Panhellenic Socialist Movement (PASOK) swept to victory with a margin of 22 seats under Andreas Papandreou (son of Georgios Papandreou), who formed Greece's first socialist administration. PASOK won the 1985 elections but, damaged by a series of financial and sexual scandals, was defeated in 1989. Papandreou's parliamentary immunity was lifted, and he was ordered to stand trial on a number of charges, including bribery, receipt of stolen goods, and authorization of illegal wiretaps. The 1989 elections were inconclusive, and Greece suffered from a series of unstable caretaker or coalition governments.

In 1992 Papandreou was acquitted of all charges against him and, despite poor health, led his party to victory in 1993. Papandreou resigned because of ill health in 1995 and was succeeded as prime minister by Kostas Simitis, who called for an early election in 1996. PASOK won the election handily, amassing 162 seats out of 300.

U.S. and North Atlantic Treaty Organisation (NATO) air strikes against Serbia in 1999 placed great strains on Greece, whose natural sympathies lay with the Serbs. That year, too, a major earthquake hit Athens, killing dozens of people and leaving thousands homeless. In 2000 a senior British diplomat was assassinated by November 17, a left-wing guerrilla group.

In February 2004 Simitis called for March elections and stepped down. In March the conservative New Democracy Party led by Konstantinos "Kostas" Karamanlis won the general election, ending a decade of PASOK rule. In the summer of 2004 Greece took center stage in the world when the Olympic Games returned to Athens.

1980–81	Georgios Rallis
1981–89	Andreas Papandreou
1990–93	Konstantinos Mitsotakis
1993–96	Andreas Papandreou
1996–2004	Kostas Simitis
2004–	Kostas Karamanlis

CONSTITUTION

The Greek republic dates from 1975, when the monarchy was abolished and a republican constitution was proclaimed and approved in a popular referendum. The constitution established a parliamentary democracy in which power is clearly divided between the branches of government.

The executive branch comprises the prime minister as head of government and the cabinet, known as the Council of Ministers. The cabinet usually numbers 19 ministers. The prime minister must always enjoy the confidence of the parliament, which may pass a censure motion approved by two-fifths to force new elections.

The head of state is the president, who is elected indirectly for a five-year term by the Greek parliament, the Vouli. The president is constitutionally above the government structure. The president's authority, while largely ceremonial, enables the holder of the office to break political deadlocks if no political party has a majority in parliament.

PARLIAMENT

The Greek parliament, the Vouli, is a unicameral body of 300 members elected by direct popular vote to serve four-year terms. Parliament is frequently divided into two sections, equal in size and proportionately representative of the strength of the political parties in the whole chamber. Each section has jurisdiction over half of the government ministries. Most legislation is introduced by the government, while individual members devote most of their time to servicing constituency needs.

The constitution does not specify electoral laws, and no two Greek elections have been held under precisely the same system. Each successive government has tried to manipulate elections in its favor.

All Greeks age 18 and over have a right to vote, and those over age 25 are eligible to run for election. Voting is compulsory in a system of proportional representation. Current electoral laws work in favor of larger parties and give a modest advantage to the party winning the most votes over the runners-up.

POLITICAL PARTIES

Greece has a clear two-party system, unlike most democracies in continental Europe. The two major parties, which have alternated in power during the past 25 years, are the Panhellenic Socialist Movement (PASOK), founded in 1974 by Andreas Papandreou, and the New Democracy, founded the same year by Konstantinos Karamanlis. PASOK won a majority in parliament for the first time in 1981, when Papandreou became prime minister. PASOK lost power in 1986 but returned in 1993. When Papandreou died in 1996, he was succeeded as

leader of the party and prime minister by Kostas Simitis. The New Democracy is the Greek version of a conservative party, and it was in power in the late 1970s, the 1980s, and the early 1990s and returned to power in 2004. The party is now led by Prime Minister Kostas Karamanlis, the nephew of the former president.

Minor parties include the Communist Party, with 12 members of parliament, and the Progressive Coalition, with six.

LOCAL GOVERNMENT

Greece is divided into 13 regions, or *diamerismata*, subdivided into 51 prefectures, or *nomoi*, each administered by an official (*nomarch*) appointed by the minister of the interior. Each *nomos* is further divided into one or more provinces called *eparchies*, of which there are 147.

The two important units of local self-government are municipalities, or cities of more than 10,000 inhabitants, and communes, with 300 to 10,000 inhabitants. The central government exercises administrative control over local government through the prefect, whose responsibilities have increased significantly in recent years.

LEGAL SYSTEM

The Greek legal system is based on codified Roman civil law. Greek justice is administered through a civil and criminal court system and a system of administrative courts. Administrative courts are specialized by legal areas; there are local arbitration courts, social security courts, and tax courts.

The lowest courts in the civil and criminal system are the 360 justice of the peace courts and the 48 magistrate's (or police) courts, which handle minor civil and criminal cases, respectively. Above these courts, the courts of first instance handle the bulk of civil and criminal litigation. Appeals from the courts of first instance are heard by courts of appeal. The Supreme Court hears cases brought from the courts of appeal on questions of law.

HUMAN RIGHTS

Citizens are guaranteed the full range of human rights by the constitution, including full political rights. Although Greece suffered human rights abuses during the period of junta rule (1967–74), later governments have been sensitive to the protection of individual rights.

The constitution provides for freedom of religion and prohibits discriminatory practices against religious minorities. The Muslim minority, living mostly in Thrace, constantly alleges persecution and discrimination, however, often related to political tensions flaring in recent decades between Greece and Turkey.

Fair and public trials are ensured by the constitution, and defendants enjoy a presumption of innocence. All trials are public, and defendants and their attorneys may confront witnesses.

FOREIGN POLICY

Greek foreign policy may be divided into two parts: One is its relations with its neighbors in the Balkans and the Middle East, the other its long-standing troubled relations with Turkey, which have brought tensions and near warfare since the 1970s. The Turkish invasion of Cyprus in 1974, following a failed coup by Greek army officers there, deeply strained relations between Greece and Turkey. In subsequent years deep divisions continued over the status of Cyprus as well as territorial disputes and drilling rights in the Aegean. By 2004 Greece and Turkey were involved in discussions to resolve their long-standing dispute.

The Middle East has also had a key role in Greek foreign policy. Greece sent personnel to the UN military force defending Kuwait in the Persian Gulf War of 1991, and in 1994 it signed a defense cooperation agreement with Israel. In 1995 Prime Minister Papandreou visited Jordan and Syria to encourage the peace process in the Middle East. In the war against Serbia in 2000 Greek sympathies were with its Slavic neighbor, but Greece nevertheless officially supported NATO's actions.

DEFENSE

The Greek army is primarily an infantry force that borrows heavily in doctrine and training from the U.S. army. All Greek citizens capable of bearing arms are required to serve in the defense of their country by the 1975 constitution. Young men are eligible for military duty at age 17, and if they have not enlisted voluntarily by age 21, they may be conscripted. Less than one-quarter of the army's strength consists of long-service regulars. In 1977 armed forces careers were opened to women, and women between 20 and 32 were made liable for compulsory service for 14 months. The Greek armed forces number over 180,000. In 2003 the country spent about \$7.3 billion on defense, 4.3 percent of its gross domestic product (GDP).

ECONOMY

Greece has a mixed capitalist economy, with the public sector composing about half of GDP. In the 1990s the government launched economic reforms designed to qualify Greece to join the European Union's euro currency. These reforms led to a steadily improving economy, in which the national budget deficit was cut sharply to just 2 percent of GDP and tightened monetary policy brought inflation to 3.1 percent in 2000—the lowest rate in 26 years—and 3.6 percent in 2004. The government also planned to privatize some major state enterprises. Greece adopted the euro currency on January 1, 2002.

Tourism is a key industry that provides 15 percent of Greek GDP and foreign exchange earnings. Greece also benefits from EU aid, amounting to about 3.3 percent of GDP in 2004. GDP growth was estimated at 4.7 percent in 2004.

ENVIRONMENT

Athens, where one-third of Greece's population lives, suffers from air pollution, as do many Greek cities that have rapidly industrialized since the 1970s. New textile and chemical factories, power stations, increasing car traffic, and high-sulfur oil used in central heating have contributed to the problem. To combat air pollution, the government limited or banned truck and auto traffic throughout Athens, with frequent declarations of emergencies, in the 1980s and 1990s. All motor vehicles must now meet required emission standards.

The government has encouraged the use of nonpolluting energy sources, such as solar power, wind power, and hydropower. Currently, Greece has the largest area powered by solar energy collectors in Europe, many of which are on the numerous Greek islands.

Pollution of Greece's coastal waters is a serious environmental issue. Untreated industrial waste is emptied into nearby gulfs, and oil tankers and ships spill oil and empty bilge into the seas. Runoff from farmlands adds to the threat, as since 1950 Greek farmers have doubled the amount of nitrous fertilizers applied to their land.

LIVING CONDITIONS

Since World War II Greece has changed from a largely rural nation to a largely urban one, as people have moved from the mountains and internal, rural areas to cities such as Athens, where economic opportunities, trade, government functions, and education are more readily available. By 1991 only about 25 percent of Greeks lived in rural settlements. In rural areas homes tend to house single families and are constructed of stone or brick. They often lack running water and rely on wood stoves for heat. In the cities apartment buildings of five to 10 stories are the norm, but home ownership is prized in Greece, so most apartments are owned, not rented. Greeks also place a high value on privacy, so homes generally have walled courtyards while apartments tend to have tented balconies. Greece has little violent crime because of a strong sense of what is called *philotimo*, or love of honor, although the concept of family honor sometimes leads to blood feuds.

HEALTH

The quality of health care in Greece is generally high. Life expectancy is almost 79 years, and the infant mortality rate is under 6 deaths per 1,000 live births. The country has a relatively low incidence of AIDS, with fewer than 100 people dying of the disease in 2001. Per capita funding for health care each year amounts to just under \$1,200. The state-run National Health Service, established in 1983, provides health care in public facilities, but private facilities are available to those who can afford them. Most towns and cities have health centers, and efforts have been made to extend health care to more remote areas, where many

people continue to rely on folk healers, spells, and herbal remedies and place great stock in the effects on health of the wind, certain foods, temperature, and anxiety.

FOOD AND NUTRITION

While Greece is a European nation, its diet is predominantly Middle Eastern. Greek cooking makes extensive use of native herbs, including oregano, thyme, basil, sage, and rosemary. Lamb is a commonly used meat, and olive oil consumption is high, averaging about 35 pints per capita per year. Staple items in the diet include rice, yogurt, figs, cheese made from goat's milk or sheep's milk, and whole-grain breads. Quintessential Greek items include such dishes as moussaka and baklava, as well as phillo dough, a paper-thin dough used to make pastries, and ouzo, a strong liquor made from the residue of winemaking. Greece has the highest incidence of obesity in Europe, with 35 percent of men considered obese. This trend is attributed to higher consumption of prepared foods and fast food. In spite of this high rate of obesity, Greeks rank seventh in the world in longevity and have the lowest heart disease rate in Europe, a phenomenon some nutritionists attribute to the "Mediterranean diet" and olive oil consumption.

 Amount of Cereal Available per person per year kg: 152.4
 Amount of Fruits and Vegetables Available per person per year kg: 412.5

STATUS OF WOMEN

The constitution of 1975 provides for equality before the law and full protection of all citizens. Greek women enjoy broad legal protection, including equal pay for equal work, though women often earn less because they are

hired for low-level jobs. In fact, it is estimated that women's 1997 salaries in manufacturing were 70 percent of those of men and that women face a "glass ceiling" in promotions in both the public and private sectors. Though still relatively few women occupy senior positions, larger numbers of women in recent years have entered the traditionally male-dominated professions

There are no legal restrictions on women in politics, but their representation at the higher levels of government remains low. In 2005 women held only 42 of the 300 seats in parliament and were underrepresented in the leadership of the two primary parties, though the head of the Communist Party was a woman. One of the most visible Greek women in recent years was "Iron Lady" Gianna Angelopoulos-Daskalaki, who almost single-handedly organized the 2004 Olympic Games in Athens.

WORK

Greece's labor force in 2004 was estimated at 4.39 million, with 20 percent employed in agriculture, 20 percent in industry, and 60 percent in services. Unemployment is high, at 9.4 percent in 2004, and youth unemployment approaches 30 percent. Agricultural products include grains such as wheat, corn, and barley as well as olives, tomatoes, wine, and beef and dairy products. While most farming is done on commercial farms, small farms of 10 acres or less that rely on horses or donkeys can still be found. Industries include not only tourism but also food processing, textiles, chemicals, metals, and mining. Many businesses in Greece are family owned and have fewer than 10 employees.

EDUCATION

Education is free, and school attendance is compulsory from age six until age 15. The state school system has two main levels. Primary school lasts six years, after which

students enroll in gymnasium for the remaining three years of compulsory education.

Greece currently has 18 institutions of higher learning, including 11 general universities, six specialized universities (such as for agriculture and the fine arts), and a naval academy. The two largest universities are the University of Athens and the University of Thessaloniki. Admission is highly selective, with fewer than one-third of applicants gaining admission.

SCIENCE AND TECHNOLOGY

The university of Athens, founded in 1837, conducts scientific research. Other universities and technical schools offer theoretical and applied science courses. State-funded research centers include the National Center for Scientific Research, the National Center for Social Research, and the Center for Programming and Economic Research.

Science and Technology

 High-Tech Exports \$million: 962.4
 Patent Applications by Residents: 614

MEDIA

There are 38 daily papers in the Athens metropolitan area and 130 daily papers in the rest of Greece. Most national political dailies are heavily partisan, biased, and geared to sensationalism in coverage. Although investigative reporting is relatively new, criticism of the government is vigorous and uninhibited.

Radio and television broadcasting is operated by government-run agencies. U.S. imports dominate the entertainment segments of most programs.

Greece has a vigorous book publishing industry, with over 50 active publishers.

CULTURE

The cultural heritage of Greece is familiar to any student of Western philosophy, literature, and history. The works of the philosophers Plato and Aristotle are still widely read; dramas written by Aeschylus, Sophocles, Euripides, and Aristophanes are performed worldwide; Homer's *Iliad* and *Odyssey* rank among the world's great epic poems; and early Greek historians virtually invented the discipline. Until well into the 19th century the mark of an educated person was the ability to read the works of these authors in the original Greek. Ancient Greek architects gave the world the Parthenon and the Doric, Ionian, and Corinthian architectural styles.

Today Greek culture is funded in large part by the Ministry of Culture. Throughout Greece can be found local theaters, institutes for the study of folklore, orchestras, dance troupes, and literary groups. Greece has two Nobel laureates in literature, George Seferis and Odysseas Elytis. The nation has a long tradition of graphic arts, including metalworking, woodcarving, textiles, and rug making. Painters and sculptors work in contemporary and traditional Orthodox forms. Music and dance are an integral part of Greek culture, and a great deal of music is performed with instruments that are unique to Greece and a part of Greek national identity.

FOLKLORE AND MYTHOLOGY

Greek mythology has been an endless source of fascination for students of history. The ancient Greeks believed in a polytheistic universe in which a pantheon of gods and goddesses ruled humans' fates, foretold the future, and frequently quarreled among themselves. The Olympians were 12 gods and goddesses, including Aphrodite, the goddess of love; Apollo, who daily harnessed his chariot to drive the sun across the sky; and Zeus, the head of the gods of Mount Olympus. The Titans were a group of gods and goddesses who ruled the universe before being overthrown by the Olympians. Among the best known of the Titans are Prometheus, who brought fire to the world; Mnemosyne, the goddess of memory and mother of the Muses (and the source of the English word *mnemonic*, referring to a tool such as a rhyme or song to aid memory); and Atlas, condemned by Zeus to hold the world on his back. In Greek mythology, oracles could foretell the future. The most famous of these was the oracle at Delphi. The original Olympics were held in honor of the Olympian gods, and households in ancient Greece honored the gods and goddesses with statues and offerings of food and wine.

ENTERTAINMENT AND RECREATION

Entertainment and recreation in Greece are tied to the nation's cultural and folklore traditions. Many people attend theatrical presentations, particularly at the open-air theater in Epidaurus. They also enjoy operas, concerts, ballets, and folk music played on traditional Greek instruments such as the bouzouki. Folk dancers give performances in colorful, traditional costumes. Also popular are shadow puppet shows featuring the wily character of Karagiozis. For day-to-day recreation, coffeehouses are popular among men who gather for conversation and strong Turkish coffee.

ETIQUETTE

Greeks have a reputation for being lively and free spirited. Much of their time is spent in gatherings with family and friends in coffeehouses, taverns, village squares, and homes, drinking, talking animatedly (with both their voices and hands), singing, and dancing. Greeks open their homes to visitors on the feast day of the saint for which the homeowner is named, and visitors seize the chance to make an unannounced call. Hospitality is typically warm, and it is considered rude to refuse offers of food and drink. Men often walk down the street arm in arm or hand in hand as a sign of friendship.

FAMILY LIFE

The nuclear family is the norm in Greece, but elderly parents frequently move in with their grown children when they can no longer take care of themselves, it is common for adult children to remain with their parents until they marry, and it is equally common for young married couples to live with the parents of one of the spouses until they can afford a home of their own. Only relatively recently did the Greek government grant women the right to vote, pass laws to make divorce easier and protect the rights of the woman, and repeal laws making adultery a crime (which were enforced primarily against women). A key part of family life is honor, or *philotimo*, which often gives rise to feuds between families over such matters as land, property, and power. These feuds, in turn, give rise to insults, theft, and occasionally murder. It has been estimated that two out of three murders in Greece occur from such feuds and the perceived need to defend family honor.

PERSONAL APPEARANCE

Most Greeks wear Western-style clothing. The traditional men's costume consisting of a tunic, vest, and pants belted tight at the knees are seen during festivals and in the remotest parts of the country.

SPORTS

The national sport of Greece is soccer, but also enjoyed are basketball, volleyball, tennis, swimming, water skiing, mountain climbing, sailing, fishing, and golf. On the island of Corfu cricket is popular. In the 2004 Summer Olympic Games in Athens, Greek athletes won 16 medals, including 6 gold and 6 silver. Still a hero to many Greeks is Spyridon Louis, a 24-year-old shepherd who won the first Olympic marathon in 1896 in donated shoes. The marathon celebrates in name the Greek victory at the Battle of Marathon in 490 B.C.E., news of which was carried from Marathon to Athens by a runner who, upon reaching Athens, collapsed and died.

CHRONOLOGY

- 1941** German forces seize Greece and share occupation of the country with Italian and Bulgarian forces.
- Active resistance groups form, including the National Liberation Front (EAM) of the Communist Party (ELAS) and the National Greek Republican League (EDES).
- A famine takes hold, during which 100,000 die.

- 1942** British soldiers parachute into Greece to aid resistance movements.
- 1943** Nearly the entire Jewish population is deported to Nazi death camps in Poland. ELAS and EDES resistance forces engage in civil war in the mountains.
- 1944** Occupying troops withdraw. A bloody confrontation breaks out in Athens between ELAS and British troops escorting the exiled government of King George II back to Greece.
- 1945** EAM agrees to disarm and disband ELAS in exchange for the right to participate in elections. Right-wing death squads pick off known Communists.
- 1946** The first elections in 10 years, boycotted by leftist voters, bring a monarchist government to power by a landslide. A plebiscite confirms the monarchy. Civil war erupts between leftist and rightist groups. The Communist EAM establishes the Democratic Army.
- 1947** The United States articulates the anti-Communist Truman Doctrine. The Greek Communist Party is declared illegal. The Communists establish a provisional government.
- 1949** With military aid from Britain and the United States, monarchists defeat the Communist partisans, ending two and one-half years of civil war, in which 160,000 died and 800,000 were made homeless.
- 1952** The right-wing Greek Rally Party comes to office, with Alexandros Papagos as prime minister. Greece becomes a member of NATO. A new constitution is promulgated, granting women the franchise.
- 1955** Papagos dies. King Paul names as prime minister the political unknown Konstantinos Karamanlis. Karamanlis dissolves the Greek Rally Party and establishes the National Radical Union, a virtually identical party.
- 1959** Britain refuses to allow the union of Cyprus with Greece.
- 1960** Cyprus becomes a republic under the British Commonwealth, aligned with both Greece and Turkey.
- 1961** Karamanlis is narrowly reelected in snap elections. The opposition, led by Georgios Papandreou of the Center Union Party, alleges election fraud.
- 1962** Greece becomes a member of the European Community, later known as the European Union.
- 1963** Unable to resolve conflicts with King Paul, Karamanlis resigns.
- 1964** The Center Union Party achieves a sweeping victory, and Georgios Papandreou becomes prime minister. King Paul dies and is succeeded by his son, the young Constantine II.
- 1965** King Constantine accuses Prime Minister Papandreou of political maneuvering to protect his son Andreas Papandreou, himself a member of parliament and a suspected radical-left conspirator. Papandreou resigns.
- 1967** To forestall May elections, which Georgios Papandreou's Center Union Party was expected to win, anti-Communist military officers known collectively as "the Colonels" seize power in April under Georgios Papadopoulos. King Constantine goes into exile after a counter-coup fails. Political activity is banned, and leftists are sent to prison camps.
- 1968** A new constitution formalizes the military regime.
- 1969** The Council of Europe's Commission of Human Rights condemns the junta for maltreatment of political prisoners. The junta withdraws Greece from the council.
- 1973** Papadopoulos abolishes the monarchy and declares Greece a presidential republic, then is elected president in a race in which he is the sole candidate. Student protests are brutally suppressed. Dimitrios Ioannides, head of the military police, seizes power.
- 1974** Ioannidis launches a coup to depose Makarios III, president of Cyprus. Turkey invades Cyprus to protect Turkish Cypriots, ultimately controlling 40 percent of the island. Unable to mobilize for war with Turkey, the Greek military regime self-destructs. Recalled from self-imposed exile in France, Konstantinos Karamanlis forms the Government of National Salvation and neutralizes hostilities with Turkey. The Communist Party is legalized. Karamanlis is confirmed as prime minister in multiparty elections won overwhelmingly by his conservative New Democracy (ND) party. In a referendum 69 percent vote to abolish the monarchy.
- 1975** A new, nonmilitary constitution is promulgated.
- 1980** Karamanlis is elected president.
- 1981** In a stunning electoral victory, Andreas Papandreou of the Panhellenic Socialist Movement (PASOK) becomes Greece's first socialist prime minister. Greece joins the European Community.

- 1983** Turkish Cypriots declare the Turkish Republic of Northern Cyprus.
- 1985** President Karamanlis resigns. PASOK candidate Christos Sartzetakis is elected president.
- 1990** The ND party wins a small legislative majority, with Konstantinos Mitsotakis as prime minister. Karamanlis is reelected president.
- 1991** Yugoslavia's constituent republic of Macedonia declares independence as the Republic of Macedonia. Greece objects to Macedonia's name and national symbols and accuses the republic of positioning itself to claim Greek territory.
- 1993** PASOK and Andreas Papandreou return to power. The Republic of Macedonia amends its constitution to disavow territorial claims to Greece and is admitted to the United Nations as the Former Yugoslav Republic of Macedonia (FYROM).
- 1994** Greece imposes an economic blockade on FYROM.
- 1995** ND candidate Konstantinos Stephanopoulos is elected president. Greece lifts the economic blockade on FYROM.
- 1996** PASOK candidate Kostas Simitis succeeds Papandreou as prime minister. Numerous territorial disputes between Turkey and Greece nearly culminate in war, but hostilities are averted.
- 1998** Simitis imposes economic austerity measures to qualify Greece for membership in the EU currency zone. Public servants and their sympathizers, including opposition members of parliament, stage a general strike in April, bringing the country to a standstill. Annual inflation is below 2 percent for the first time in 26 years.
- 1999** A major earthquake hits Athens, killing dozens and leaving thousands homeless.
- 2000** President Stephanopoulos is reelected. Turkey and Greece sign a series of agreements pledging more cordial relations. PASOK wins parliamentary elections with a narrow margin over ND. A heat wave and high winds fan more than 100 forest fires in July. A senior British diplomat is assassinated by the Greek left-wing terrorist group November 17.
- 2001** Greece adopts the euro currency on January 1.
- 2004** Simitis steps down and calls for new elections. The New Conservative Party, led by new Prime

Minister Kostas Karamanlis, wins the general election.

Athens hosts the Summer Olympic Games.

Basic Fact Sheet

OFFICIAL NAME

Grenada

ABBREVIATION

GD

CAPITAL

St. George's

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Sir Daniel C. Williams (from 1996)

HEAD OF GOVERNMENT

Prime Minister Keith C. Mitchell (from 1995)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

89,502 (2005)

AREA

344 sq km (133 sq mi)

ETHNIC MAJORITY

Black

LANGUAGE

English

RELIGION

Christianity

UNIT OF CURRENCY

East Caribbean dollar

NATIONAL FLAG

A red border surrounding a rectangle divided into two gold and two green triangles—gold at the top and bottom and green at the fly and hoist. Seven yellow stars, six on the red border and one at the apex of the four triangles. On the green triangle near the hoist is a pot of nutmeg.

NATIONAL EMBLEM

The principal elements of the national coat of arms are a shield with four quarters flanked by an armadillo and a dove. Beneath appears the motto "Ever conscious of God we aspire build and advance as one people."

NATIONAL ANTHEM

"Hail, Grenada, Land of Ours, We Pledge Ourselves to Thee"

NATIONAL HOLIDAYS

January 1 and 2 (New Year's Days), February 7 (Independence Day, National Day), May 1 (Labor Day), June 2 (Queen's Birthday), last Thursday in November (National Day of Prayer), various Christian festivals, including Christmas, Boxing Day, Good Friday, Easter Monday, Whitmonday, and Corpus Christi

DATE OF INDEPENDENCE

February 7, 1974

DATE OF CONSTITUTION

December 19, 1973

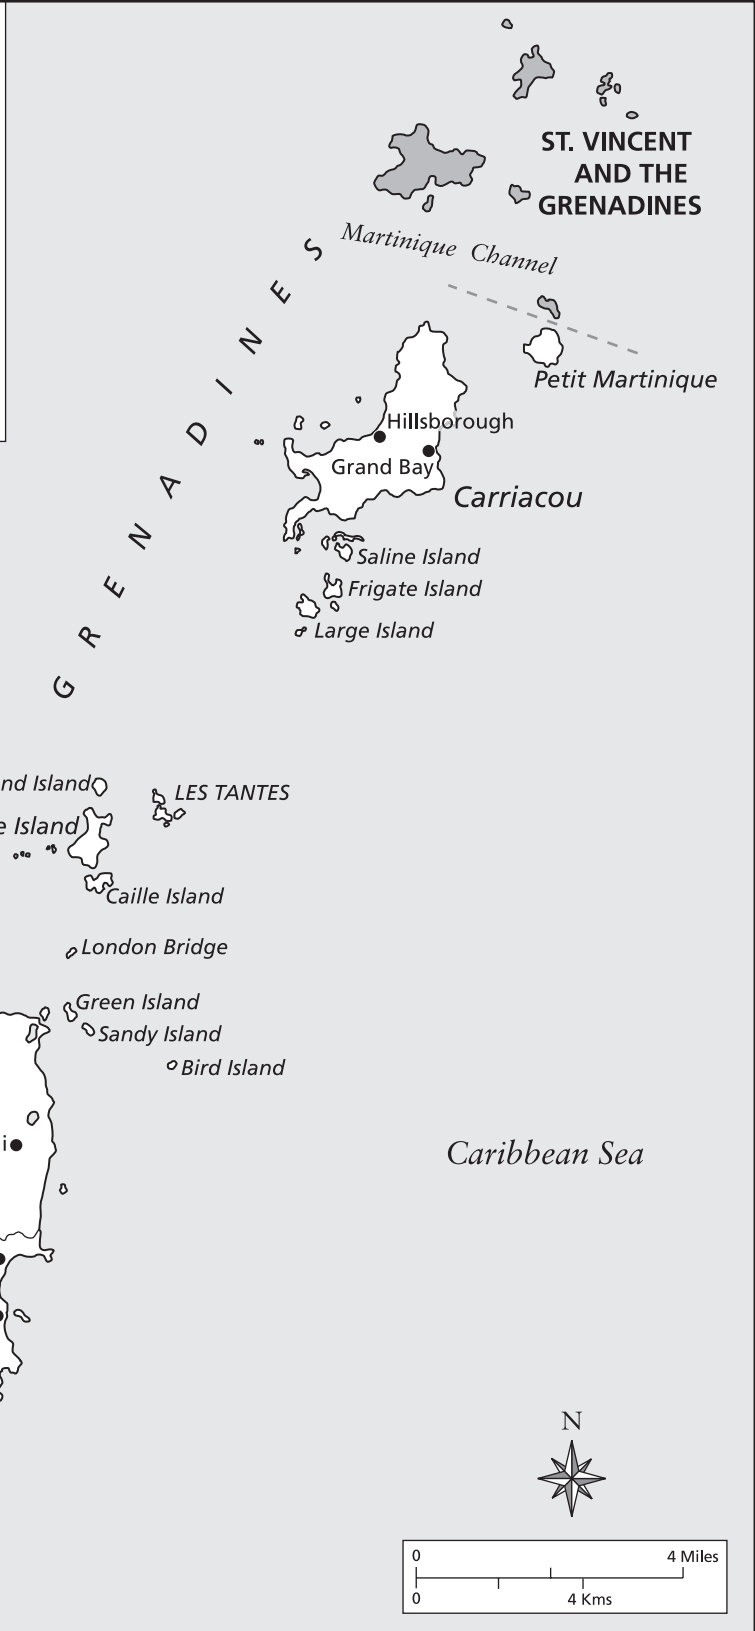

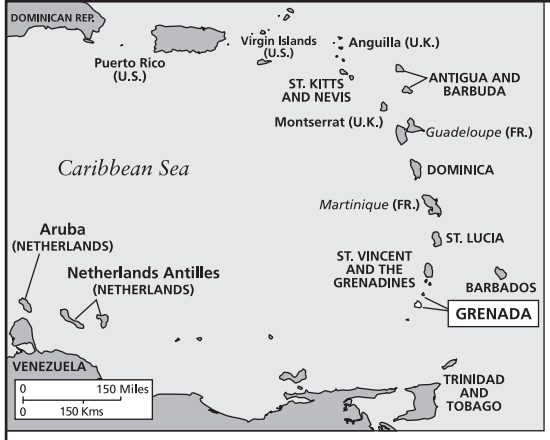

GEOGRAPHICAL FEATURES

Grenada is about 241 km (150 mi) southwest of Barbados and 145 km (90 mi) northwest of Trinidad and Tobago. The state of Grenada consists of the island of Grenada, the most southerly of the Windward Islands; the islands of Carriacou and Petite Martinique; and a number of smaller islets of the Grenadines. Grenada is the smallest of the Caribbean countries, with an area of 344 sq km (133 sq mi), extending 34 km (21 mi) northeast to

southwest and 19 km (12 mi) southeast to northwest. The length of the coastline is 121 km (75 mi).

The island is almost wholly volcanic. The mountain mass in the center of the main island consists of a number of ridges, some of which contain crater basins and one a larger crater lake, Grand Etang. Close to the northeastern coast there are two other crater lakes, Lake Antoine and Levera Pond. The highest peak is Mount St. Catherine, 840 m (2,756 ft) above sea level. The coastline is indented with beautiful beaches and bays.

CLIMATE AND WEATHER

Grenada has a semitropical climate. A mild dry season lasts from January to May, with night temperatures dropping to 15.6°C (60°F); the wet season lasts from June to December, with November the wettest month. During the wet season the temperature rises to 32.2°C (90°F), and the humidity is high both night and day. The average annual temperature is about 23°C (78°F). Rainfall varies from 1,524 mm (60 in) in the coastal districts to 5,080 mm (200 in) in the mountains. The Grenadines tend to be drier, and Carriacou has an average rainfall of only 1,270 mm (50 in).

The prevailing winds are northeasterly trades. The hurricane season extends from June to December.

Climate and Weather

Mean Temperature: 60°F to 90°F
 Average Rainfall
 Coastal districts: 60 in
 Mountains: 200 in
 Grenadines: 50 in

FLORA AND FAUNA

Grenada's islands are small, but they present a diverse range of habitats. Perhaps the most popular with tourists is the rainforest that surrounds Grand Etang, where towering stands of mahogany and gommier trees and a rich array of ferns and tropical wildflowers can be seen. Also popular are the coastal regions, where estuaries, mangrove swamps, and coral reefs can be explored. Grenada's beaches provide nesting for sea turtles. The islands are perhaps best known for bird watching. At least 117 spe-

cies of birds have been identified, and although none are endemic to Grenada alone, many are endemic to the Caribbean, including the Antillean crested hummingbird, the Antillean wren, the lesser Antillean bullfinch, the lesser Antillean tanager, the purple-throated carib, the scaly-breasted thrasher, and the scaly-naped pigeon.

ETHNIC COMPOSITION

The bulk of the Grenadan population is of African descent, and there are no traces of the Arawaks and Caribs who lived on Grenada when it was discovered by Columbus. The proportion of blacks is estimated at 82 percent and that of mulattoes at 13 percent. East Indians and whites comprise the remaining 5 percent of the population.

LANGUAGES

English is the official and national language of the country. A French patois is spoken by a small number.

RELIGIONS

The predominant faith is Roman Catholicism (53 percent), but there is a strong and influential Anglican minority consisting of nearly 14 percent of the population. Other Protestant groups—Seventh-Day Adventists, Methodists, Plymouth Brethren, and Presbyterians—make up 33 percent. There are also a few hundred Hindus.

Religious Affiliations

Roman Catholic	47,000
Anglican	12,000
Other	30,000

HISTORICAL BACKGROUND

Grenada was discovered by Christopher Columbus in 1498. When Columbus discovered the island, it was already inhabited by the Carib Indians, who had migrated from the South American mainland. The Carib Indians had killed or enslaved the original island inhabitants, the peaceful Arawak. The Amerindians called their island Camerhogue, but Columbus renamed the island Concepción.

The island was renamed by French settlers who were attracted to St. George's Harbor during the 16th century. In 1650 it was purchased by Governor Du Parquet, who sold it to Comte de Cerillac in 1657. In 1674 the French government annexed Grenada, and the island remained under French control until 1762, when it was captured by Admiral George Rodney of Great Britain. It was again under French control from 1779 to 1783. The last pre-modern challenge to British rule in Grenada was in 1795, when a French-led native uprising was suppressed.

Grenada remained a British colony until 1958, when it joined the Federation of the West Indies, which dissolved in 1962. In 1967 it gained internal autonomy and became a member of the West Indies Associated States, a loose association of the United Kingdom and five of the West Indies territories: Antigua, St. Kitts-Nevis, Dominica, Grenada, and St. Lucia. Grenada gained full independence in 1974.

Politics during the pre-independence period was dominated by Eric M. Gairy, founder of the Grenada United Labour Party (GULP), who served as chief minister until he was removed from office by the British in 1962 for alleged corruption. He became premier following the 1967 elections and again after the 1972 elections. Gairy assumed the office of prime minister upon Grenada's independence.

The opposition viewed Gairy as autocratic and corrupt, comparing him to "Papa Doc" Duvalier of Haiti for his totalitarian tendencies and his efforts to terrorize opponents. In 1976 the various parties united to oppose Gairy and the GULP. As a People's Alliance, the Grenada National Party (GNP), the New Jewel Movement (NJM), and the United People's Party (UPP) failed to win the election but reduced the size of GULP in the lower house.

In March 1979 the Gairy government was overthrown, and a People's Revolutionary Government (PRG) was established, with Maurice Bishop, leader of the New Jewel Movement, serving as prime minister. The government was subsequently joined by two members of

the Grenada National Party and nine working-class representatives. The constitution of 1967 was suspended and Parliament dissolved, although Bishop stated that no changes were envisaged in Grenada's relationship with the British Crown; the governor-general continued to represent Queen Elizabeth II as head of state, and the prime minister as head of government exercised executive power on her behalf.

By mid-1982 relations with the United States, the United Kingdom, and the more conservative members of CariCom, the Caribbean Community, became increasingly strained, as Grenada was aligning more closely with Cuba, suppressing the free press, and establishing a Marxist dictatorship. Cuba was supplying about 40 percent of the funds and several hundred construction workers for the controversial international airport at Point Salines, which was believed to be intended to provide a Soviet facility for military maneuvers.

On October 13, 1983, long-standing divisions between the more liberal wing in the ruling PRG's elite, led by Prime Minister Bishop, and the hard-liners, led by his deputy, Bernard Coard, broke into the open. Bishop was ousted and placed under house arrest by General Hudson Austin, commander of the People's Revolutionary Army. Six days later, having been freed by rioting supporters, he was recaptured and executed. General Austin was installed as head of a 16-member Revolutionary Military Council. The PRG was abolished, and a shoot-on-sight curfew was imposed.

In the wake of this outrage, Sir Paul Scoon, the governor-general, requested that the Organization of Eastern Caribbean States (OECS) intervene and restore democratic order. The OECS in turn requested help from the United States, which, already concerned for the safety of some 1,000 U.S. nationals on the island and convinced that Grenada was being turned into a "Soviet-Cuban colony and military bastion for the export of terror," in the words of President Reagan, readily complied. On October 25 some 1,900 U.S. troops invaded the island, accompanied by 300 troops from Jamaica, Barbados, and other OECS islands. Fighting continued for some days, and U.S. troop strength grew to 7,355 before General Austin's army was overwhelmed. General Austin, Coard, and others involved in the coup were captured and imprisoned.

On November 9, 1983, Sir Paul Scoon appointed a nonpolitical interim government until elections could be held. The government was headed by Sir Nicholas Braithwaite. The constitution of 1974 was reinstated, and an election commission was appointed to prepare for elections within 12 months. The United States began a gradual withdrawal of troops.

Several political parties that had gone into exile or underground during the PRG interregnum reemerged. Eric Gairy himself returned to Grenada in January 1984 to lead his Grenada United Labour Party (GULP). Ap-

prehensive over a GULP return to power, four centrist parties—the Grenada National Party, led by Herbert Blaize; the Christian Democratic Labour Party, led by Winston Whyte; the Grenada Democratic Movement, led by Francis Alexis; and the National Democratic Party, led by George Brizan—merged to form the New National Party (NNP), led by Blaize. Whyte's party soon left the coalition. In the December elections the NNP won 14 out of 15 seats in the House of Representatives and garnered 59 percent of the popular vote. Blaize was sworn in as prime minister on December 4, 1984. On February 4, 1985, the new House of Representatives approved a bill validating all laws enacted during the suspension of the constitution from March 1979 to November 1983, while a commission to amend the constitution was sworn in on February 14.

Factional discord between various components of the NNP climaxed with the resignation of three cabinet members in 1987. The ministers, including the former leaders of the National Democratic Party and the Grenada Democratic Movement, formed a new political party, the National Democratic Congress (NDC), which included all opposition members in the House of Representatives. In 1989 Blaize lost control of the NNP to his main rival, Keith Mitchell, but remained prime minister. Factional fighting continued within the NNP, and in mid-1989 Blaize dismissed Mitchell from the cabinet. In response several other members of the government resigned, and Blaize lost his legislative majority. In an effort to hold power, Blaize launched a new political party, the National Party (TNP), in August, but Blaize died in December 1989 and was succeeded by TNP's vice president, Ben Jones.

Grenada held legislative elections in March 1990. The contest proved inconclusive, with the NDC winning only a plurality in Parliament. The party achieved a majority shortly thereafter, however, when a member of the GULP joined the NDC. Nicholas Braithwaite, the party leader, became prime minister that same month. In 1991 Grenada joined the Organization of Eastern Caribbean States.

The NNP won a decisive victory in the 1995 parliamentary elections, and its leader, Keith C. Mitchell, became prime minister. In 1996 Grenada signed two treaties with the United States. In an effort to repair relations with Cuba, broken off after the U.S. invasion in 1983, Prime Minister Mitchell visited Cuba in 1997, and Fidel Castro returned the visit in 1998. In the 1999 elections the NNP won all 15 of the country's parliamentary seats.

In 2000 the government launched a Truth and Reconciliation commission to examine the "revolutionary years" of 1976 to 1983. That year, too, Grenada expelled Chinese diplomats for alleged interference in the nation's internal affairs. In 2001 opposition leaders criticized the government for establishing diplomatic ties with Libya. Money laundering was a major issue in the early 2000s. In

2001 the Paris-based Financial Action Task Force black-listed Grenada for failing to deal with the problem of offshore money laundering, though it removed the country from the list in 2002 and the U.S. Treasury Department removed its advisory on Grenada in response to the country's efforts to eliminate the problem. In 2003 Keith Mitchell narrowly won a third term in office; in 2004 he had to deal with the widespread devastation caused by Hurricane Ivan.

LIST OF MODERN RULERS

(Note: The following list excludes interim military leaders.)

1974–79	Eric M. Gairy
1979–83	Maurice Bishop
1984–89	Herbert Blaize
1990–95	Nicholas Braithwaite
1995–	Keith Mitchell

CONSTITUTION

The constitution of 1967, which had been adopted when Grenada became an associated state, was modified only slightly with independence in 1974. The constitution established a parliamentary form of government based on the British model. Executive authority is exercised by the prime minister, who is the leader of the majority party in the lower house. The bicameral legislature is composed of a popularly elected House of Representatives and an appointed Senate. The judicial system includes a Supreme Court composed of a High Court of Justice and a two-tiered Court of Appeal. There are also eight magistrate's courts.

PARLIAMENT

The bicameral Parliament comprises an appointed Senate of 13 members (10 appointed by the government, 3 by the leader of the opposition) and a popularly elected 15-member House of Representatives. Parliament was suspended from March 1979 to December 1984.

Elections are held every five years, with the most recent in 2003. Suffrage is universal over age 21.

POLITICAL PARTIES

There are eight active political parties in Grenada. The largest (in terms of seats in the legislature) is the New National Party, the centrist party founded in 1984. It won all 15 seats in the House of Representatives in 1999 but held only 8 after the 2003 elections. The second largest

party is the National Democratic Congress, which was formed in 1987 out of the left-of-center parties, including the Democratic Labour Congress and the Grenada United Labour Party. It held the remaining seven seats in the House of Representatives after 2003.

LOCAL GOVERNMENT

Grenada is divided into six parishes and one dependency—Carriacou and Petite Martinique—with 52 village councils.

LEGAL SYSTEM

The law of the land is English common law and statute law. The highest court is the West Indies Associated States Supreme Court, which consists of the Court of Appeal, comprising the chief justice as president and two justices of appeal, and the High Court of Justice, comprising the chief justice and six puisne judges. The judges are appointed on the advice of the Judicial and Legal Service Commission, although the chief justice is appointed by the lord chancellor of the United Kingdom. Appeals go from the Supreme Court to the Privy Council of the United Kingdom.

The courts of summary jurisdiction are presided over by puisne judges. Two magistrate's courts exist in each of the three magisterial districts. Magistrates are appointed by the governor-general on the advice of the Judicial and Legal Service Commission.

Grenadan police retain the right to arrest individuals "on suspicion" without a warrant, but they are required to abide by time restrictions as to when those detained must be formally charged or released.

There is a functioning system of bail, although those charged with murder or any other capital offense are not eligible. Habeas corpus is found in Grenadan law.

The main correctional facility is Richmond Hill Prison.

HUMAN RIGHTS

With the restoration of constitutional government, all civil and human rights have been restored and constitutional guarantees reinstated.

FOREIGN POLICY

The U.S. invasion of Grenada in 1983 was the central event in modern Grenadan history. It severed Grenada's relations with Cuba and brought it firmly into the U.S. orbit. The United States helped to restore parliamentary

government on the island. Subsequently, Grenada participated in the U.S.-backed regional security plan designed to avert future leftist takeovers, and Grenada became one of the strongest supporters of the U.S. presence in the region.

In 1997 Grenada resumed diplomatic relations with Cuba. That year Prime Minister Keith Mitchell made a visit to Cuba, the first by a Grenadan president since 1983, and Fidel Castro returned the visit in 1998. In recent years Grenada has made efforts to strengthen its ties with Libya and China in response to a drop-off in aid from the United States and Great Britain.

DEFENSE

Grenada has no standing army. A paramilitary unit known as the Special Service Unit, trained by U.S. advisers, acts as the defense contingent and is part of the Regional Security System, a defense pact with other East Caribbean nations.

ECONOMY

Grenada is one of the lower-middle-income countries of the world, with a free-market economy in which the dominant sector is private. The economy is heavily agricultural and centers on the production of spices, primarily nutmeg (up to a third of the world's supply), and tropical plants, such as bananas and cocoa beans. About 7.7 percent of the country's gross domestic product (GDP) is accounted for by agriculture, while 23.9 percent is provided by light industry and 68.4 percent by services, including financial services. Tourism is the leading source of foreign exchange.

ENVIRONMENT

Like many other developing nations, Grenada faces environmental challenges in terms of managing limited land. Marginal agricultural practices, including the cultivation of steep slopes, has led to increased soil erosion and the sedimentation of rivers. As tourism and the population increase, the country is also susceptible to growing concerns over waste disposal. In recent years Grenada has made strong efforts to protect its natural resources, with, for example, the establishment of the Grand Etang Forest Reserve, the 450-acre Levera National Park, and the La Sagesse Nature Centre.

LIVING CONDITIONS

While Grenada is a relatively poor country, with 32 percent of the population living below the poverty line in 2000, it had a fairly respectable per capita GDP of \$5,000 in 2002, and few Grenadans go hungry. The land is fertile, and most people have a plot of ground on which to grow food to feed their families, with enough left over to sell at markets. While some Grenadans enjoy comfortable and brightly painted bungalows for homes, others, especially in the rural areas, live in huts made of wood with tin roofs. The cities are generally free of slums and shantytowns. Few Grenadans own cars, relying instead on buses. Grenada's fortunes took a turn for the better after the completion of the Point Salines International Airport in 1984, further opening the country to tourism and trade. Crime consists largely of such offenses as petty theft, and the rate of violent crime is low.

HEALTH

Life expectancy in 2004 was 65 years, while the infant mortality rate was 14.6 per 1,000 live births—down significantly from 28 in 1990. Grenada's medical facilities are limited, though there are three hospitals, six health-care centers, and 30 district medical clinics, and St. George's University, a private school funded by Americans, provides medical training. Many people turn to herbs and medicinal plants, especially nutmeg mixed in a toddy of rum, lime, and honey, which is said to remove blood impurities. Taking sweat baths and writing sacred words on the skin with special pens are also common folk medicinal practices. Per capita spending on health care is only about \$262 per year.

FOOD AND NUTRITION

Because Grenada is an island nation, its citizens predictably eat a great deal of fish; some 20 varieties are caught in the waters surrounding the islands. Staples include rice, bread, and a variety of fruits and vegetables, including yams, avocados, pigeon peas, callaloo greens, citrus, papayas, plantains, mangoes, and coconuts. Chicken is commonly eaten, pork is reserved for special occasions, and beef is virtually nonexistent. Two common local dishes are "oildown," a mixture of pork, breadfruit, and vegetables steamed in coconut milk, and "turtle toes," or deep-fried mixtures of lobster, conch, and other seafood. Grenadan dishes are commonly seasoned heavily with local spices. Overall, the state of nutrition in Grenada is rather high. In 1998 only about 2.8 percent of children were undernourished, and obesity was not a major problem. Grenada's most prevalent nutritional issue is iron deficiency, or anemia. The most recent studies show more than half of children and women (but only about one-fifth of men) suffering from iron deficiencies in their diet.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita: —
 Amount of Cereal Available per person per year kg: 86.6
 Amount of Fruits and Vegetables Available per person per year kg: 250.8

STATUS OF WOMEN

Sexual harassment and domestic violence are common. However, there are no courts to deal with this problem, nor are there specific spousal abuse laws. In 1998 a new Sexual Offenses Act went into effect to replace a previous act that required medical evidence or witness corroboration for indictment. The Department of Labor has a permanent counselor to assist women who are victims of domestic violence. The Welfare Department assists victims of spousal abuse by finding shelters, providing counseling, and recommending police action.

While there is no legal discrimination against women, property ownership continues to be deeded to heads of households, who are usually males. When the male head of a household dies without a will, the wife cannot inherit the property or sell it, although she can live in it and pass it to her children. The Dominica National Council of Women oversees programs that help women find jobs.

WORK

The most recent estimates (1996) put the size of Grenada's labor force at about 42,000. A 1999 study shows that 24 percent work in agriculture, 14 percent in industry, and 62 percent in services. The rate of unemployment in 2000 was relatively high, at 12.5 percent, although that figure was down from 25 percent in 1994. Those in the agricultural sector cultivate or harvest cocoa, bananas, nutmeg, citrus, avocado, sugarcane, root crops, corn, and vegetables. Industry is concentrated in food and beverages, textiles, construction, and light assembly operations. Women are beginning to be a dominant presence in the banking industry.

EDUCATION

Education is free, universal, and compulsory for eight years, from ages six to 14. Compulsory attendance is not enforced, such that about 84 percent of children attend primary school and only 45.5 percent attend secondary school. Literacy is high, at 98 percent.

Schooling lasts for 14 years and is divided into seven years of primary school, five years of junior secondary school, and two years of senior secondary school. Secondary education is not free, but the government grants scholarships on the basis of competitive examinations. The academic year runs from September to August. The medium of instruction is English.

There are five institutions of higher learning in Grenada: the University of the West Indies in St. George's, the Teacher Training College, the School of Medicine at St. George's, the School of Agriculture at Mirabeau, and the School of Fishing at Victoria.

SCIENCE AND TECHNOLOGY

Grenada has little in the way of infrastructure to support science and technology. Few Grenadans can afford to attend the medical school at St. George's. Many Grenadans rely on scholarship and exchange programs in Cuba and the United Kingdom to study sciences and technology. In 2004 Grenada's prime minister called for sweeping changes to promote scientific research and innovation in Grenada and throughout the Caribbean.

MEDIA

Among the country's newspapers are *Grenada Guardian*, *Grenadian Voice*, *Indies Times*, *Informer*, *National*, *Tribune*, and *West Indian*, as well as the official government weekly, the *Government Gazette*. There is no institutionalized censorship.

Grenada has no national news agency. No foreign news bureaus function in St. George's.

Grenada Broadcasting Corporation, a government-owned entity, runs Radio Grenada and Grenada Television. In addition, there are four independent radio stations and a private cable TV company on the island. Television programs are also received on Grenada from Trinidad and Tobago and from Barbados.

CULTURE

The arts and culture in Grenada are supported primarily by the tourist trade and a fairly large expatriate community. Grenadians are best known for their skill in the visual arts. One prominent artist is Canute Caliste, who depicts traditional life on the islands; another is Elinus Cato, whose paintings have been exhibited in London and Washington, D.C. Grenadan painters rely on a wide variety of materials for canvases, including bamboo, calabash, wood, and metal. Woodcarving is highly developed, with Stanley Coutain one of the nation's leading wood sculptors. Folk arts abound, with big drum music, derived from African song, dance, and drumming, an indigenous art form. Big drum music blends rhythmic percussion with rings of dancers and songs that emphasize social commentary and satire. Other folk arts include weaving of items such as hats, placemats, and baskets with straw, bamboo, and wicker. Mahogany and cedar are used to fashion carved kitchenware and furniture.

FOLKLORE AND MYTHOLOGY

Grenadan folklore is dominated by animal tales from Africa. Especially popular are the Anansi (or Anansy) fairy tales, in which animals play tricks on or frighten their adversaries, sometimes by taking on the shape of human beings. These and other stories are often called "crick-crack" stories because they are told in groups; the storyteller begins by saying "crick," and the listeners reply "crack." Earlier beliefs in supernatural characters, including the zombie, or a dead person returned to life to carry out the bidding of a voodoo priest, survive in carnival figures and bedtime stories. Much Grenadan folklore survives in folk remedies used to cure illnesses.

ENTERTAINMENT AND RECREATION

Grenadians watch television programming from the United States on the Grenada Broadcasting Corporation television station as well as on private stations operated on the islands. Song and dance, including calypso and steel drum music, provide other popular forms of entertainment. Meals, especially on holidays such as Christmas, when they are accompanied by local rum or a rum grog, provide entertainment. Funerals are also social occasions. Carnival was traditionally celebrated during the weekend before Ash Wednesday but is now celebrated in August to generate more tourist dollars.

ETIQUETTE

Even among strangers, greetings are part of everyday good manners. Girls and younger women can often be seen walking down the street hand in hand, and boys and younger men often walk with their arms around each other's shoulders. Crowded buses demand strict rules of etiquette, with priority given to women, especially older women and those with children. Children are reared never to speak out of turn; corporal punishment of children is common.

FAMILY LIFE

Because Grenada is a predominantly Catholic country, marriage is expected and families have traditionally consisted of 10 or more children, although that is changing as birth control has become more widely available and used and as women have begun working outside the home. In 2004 the fertility rate was 2.41 children per woman. Extended families are very strong, and it is common for three generations, including grandparents, siblings, and aunts and uncles, to live in the same house—with everyone playing a role in the upbringing of children. This role sharing is especially important in those families where a wage earner goes abroad to earn a better income.

PERSONAL APPEARANCE

Most Grenadans wear Western clothing. Dresses and floral print blouses are common on women, as are hats to shield their wearers from the intense sun. Men wear suits in business settings and on formal occasions. Because of the tropical climate, light, cool, casual clothing is the norm.

SPORTS

While soccer is a popular sport in Grenada, cricket is the “national pastime.” Cricket is played formally in a large stadium, Queen’s Park, outside St. George’s, and is played informally almost everywhere, even on the beaches. Sir Vivian Richards, a West Indies cricket legend, has said that “cricket has become a religion” in Grenada.

CHRONOLOGY

- 1974** Grenada proclaims independence as riots against Prime Minister Eric Gairy rock the island. Governor-General Hilda Bryce resigns, protesting Gairy policies, and is replaced by Leo de Gale.
- 1976** Gairy’s party, the Grenada United Labour Party, wins a narrow victory over the united opposition front, the People’s Alliance, but its majority in the House of Representatives is reduced.
- 1978** Grenada’s minister of state for agriculture is assassinated.
- 1979** Gairy is overthrown in a coup led by Maurice Bishop of the New Jewel Movement. Bishop is named prime minister of the People’s Revolutionary Government. The constitution and Parliament are retained. The opposition paper *Torchlight* is forced to close as a threat to national security.
- A two-year technical pact is signed with Havana. Following an assassination attempt on Bishop, the nation is placed on a war alert, and the government reveals an “imperialist plot” against it.
- 1982** Work on Point Salines International Airport begins with Cuban aid.
- 1983** Maurice Bishop goes to Washington but is unable to meet with President Reagan. Bishop is ousted, placed under house arrest, and later executed by General Hudson Austin, commander of the People’s Revolutionary Army. Austin is installed as head of a 16-member Revolutionary Military Council. A curfew is declared. Governor-General Sir Paul Scoon requests that the Organization of Eastern Caribbean States (OECS) intervene and restore order. The OECS seeks U.S. help. U.S. and OECS forces invade the island and after heavy fighting capture General Austin, Bernard Coard, and other coup leaders. Sir Paul Scoon appoints a nonpolitical interim government headed by Sir Nicholas Braithwaite. The constitution of 1974 is reinstated.
- 1984** In general elections the New National Party (NNP) wins 14 of 15 seats in the House of Representatives. NNP leader Herbert Blaize is sworn in as prime minister.
- 1985** The House of Representatives validates all laws enacted during the suspension of the constitution from March 1979 to November 1983.
- 1987** The National Democratic Congress is formed by George Brizan and Francis Alexis as well as a number of other anti-Blaize figures.
- 1989** Blaize announces the formation of the National Party. Blaize dies in office on December 19. The governor-general, Sir Paul Scoon, appoints Ben Jones prime minister.
- 1990** The National Democratic Congress wins a majority in March elections. Nicholas Braithwaite becomes prime minister.
- 1995** Dr. Keith C. Mitchell becomes prime minister, as the New National Party wins a decisive victory in parliamentary elections.
- 1996** Sir Daniel C. Williams is appointed governor-general.
- 1999** The ruling New National Party, led by prime minister Keith Mitchell, is reelected after winning all 15 of the country’s parliamentary seats.
- 2000** The government appoints the Truth and Reconciliation Commission to examine the revolutionary years of 1976–83. Chinese diplomats are expelled for alleged interference in the nation’s internal affairs.

- 2001** Grenada strengthens diplomatic ties with Libya. Grenada is placed on a Financial Action Task Force blacklist because of widespread money laundering; the country is removed from the list in 2002.
- 2003** Mitchell narrowly wins a third term in office. The New National Party captures eight seats in the House of Representatives; the National Democratic Congress wins the other seven.
- 2004** Grenada is devastated by Hurricane Ivan.

UNIT OF CURRENCY

Quetzal

NATIONAL FLAG

Three vertical stripes of blue, white, and blue, with the national coat of arms in the center of the white stripe

NATIONAL EMBLEM

The principal elements of the national emblem are crossed gold sabers and red and gold rifles with their silver bayonets fixed; entwining laurel branches tied with blue and white ribbons; a scroll with the words “Libertad 15 de Septiembre de 1821,” commemorating the liberation of Guatemala from Spain; and perched above it on a rifle muzzle, a quetzal, a native bird with red, green, and yellow plumage and a long tail.

NATIONAL ANTHEM

“Guatemala Feliz” (Guatemala be praised)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), June 30 (Anniversary of the Revolution of 1871), September 15 (National Day, Independence Day), October 12 (Columbus Day), October 20 (Anniversary of the 1914 Revolution), various Christian festivals, including Christmas

DATE OF INDEPENDENCE

September 15, 1821

DATE OF CONSTITUTION

January 14, 1986 (promulgated June 1985); last amended November 1993

GEOGRAPHICAL FEATURES

Guatemala is in Central America to the northwest of the Isthmus of Panama, occupying an area of 108,890 sq km (42,042 sq mi), extending 457 km (284 mi) north-northwest to south-southeast and 428 km (266 mi) east-northeast to west-southwest. Guatemala, the third-largest country in Central America, has a total land border of 1,687 km, shared with Mexico to the west and north, Belize to the northeast, and El Salvador and Honduras to the southeast. The border with Belize is still in dispute, resulting from Belize’s 1981 independence from Great Britain.

The country is divided into four topographical regions. The Pacific coast, some 48 km (30 mi) wide, is a

tropical, fertile savanna plain interspersed with wet lagoons. From the plain a piedmont region rises in a system of mountains and high plateaus extending from Mexico to El Salvador and Honduras, covering 50 percent of the total surface area. The principal mountain chains are the Sierra Madre, Sierra de Chaucus, Sierra de las Minas, Montañas del Mico, Sierra de los Cuchumatanes, and Sierra de Chama. The region contains some 33 volcanoes, some of them still active. The four highest are Tajumulco (4,211 m; 13,812 ft), Tacaná (4,053 m; 13,300 ft), Fuego (3,834 m; 12,579 ft), and Agua (3,795 m; 12,451 ft). To the north of the volcanic belt lie the Continental Divide and the Caribbean lowlands. Three deep river valleys—the Motagua, the Polochic, and the Sarstoon—extend in-

Guatemala

land from the coast and serve as links to the interior, but they are separated from one another by mountain ranges. The fourth region is the vast Petén, constituting one-third of the national territory (35,000 sq km; 13,510 sq mi), extending into the Yucatán Peninsula. It is a rolling limestone plateau covered with dense tropical forest.

A total of 18 relatively short rivers flow from the highlands to the Pacific Ocean, most of them navigable

for short distances. Of these, the Samalá and Michatoya rivers serve as sources of power. The Motagua, Polochic, and Sarstoon Rivers drain the Caribbean lowlands. Petén is drained by the Chixoy, Usumacinta, Pasión, San Pedro, Belize, and Azul Rivers. There are four major lakes in the country. One, Lake Atitlán in the Sierra Madre highlands, is considered to be one of the most beautiful lakes in the world. The others are Lake Amatitlán, also in the Sierra

Madre; Lake Izabal, to the north of the Sierra de las Minas and Montañas del Mico; and Lake Petén Itzá, in Petén.

CLIMATE AND WEATHER

Guatemala has a rainy season from May until October and a dry season from November through May. There are three climatic zones: the *tierra caliente* (hot country), extending from sea level to 750 m (2461 ft), with temperatures from 25° to 32°C (77°F to 90°F); the *tierra templada* (temperate country), from 750 m (2461 ft) to 1,700 m (5278 ft) with average temperatures from 23.9°C to 26.7°C (75°F to 79°F); and the *tierra fría* (cold country), over 1,700 m (5278 ft) high, with average temperatures from 15°C to 21.1°C (59°F to 70°F). Rainfall is heaviest in central Guatemala and along the southern slopes exposed to air from the Pacific. The prevailing winds are the northeastern trades, which blow inland from the Caribbean.

Climate and Weather

Mean Temperature
 Tierra caliente: 77°F to 90°F
 Tierra templada: 75°F to 80°F
 Tierra fría: 59°F to 70°F
 Average Rainfall
 Central Guatemala: 70 in to 200 in
 East Highlands: 32 in to 79 in

FLORA AND FAUNA

Guatemala has 18 distinct ecosystems. Along the coast, mangrove forests can be found on lagoons and estuar-

ies. Tropical forests dominate the Guatemalan lowlands. Oak trees dominate on the lower slopes of the mountains, but above 2,100 m (7,000 ft) conifer forests are prevalent. Throughout the nation flowers such as orchids are abundant. In the sparsely populated lowlands, deer, monkeys, and piglike animals called peccaries are common. Other mammals include jaguars, tapirs, and pumas. Crocodiles can be found in some rivers. The nation is home to over 700 species of birds, including the increasingly rare, brightly colored national bird, the quetzal, as well as species of jays, woodpeckers, parakeets, owls, swallows, and piprites.

POPULATION

Population Indicators

Total Population 2005: 14,655,189
 World Rank: 62nd
 Density per sq km: 113.5

ETHNIC COMPOSITION

Mestizos—or people of mixed European and indigenous ancestry, also called ladinos—make up 55 percent of the population of Guatemala. Most European ancestry stems from the conquering of Central America by Spanish settlers in the 15th to 18th centuries. Those whose ancestry is entirely indigenous constitute at least 43 percent of the population (some sources put this figure higher). The indigenous population, descended from the ancient Mayan civilization, has inhabited the area since around 2500 B.C.E. Central American blacks, called Black Carib or Garifuna, constitute less than 1 percent of the population; as of the 1991 census, they numbered only 16,700. The Black Carib population stems from freed and runaway African slaves who intermarried with Carib Indians and were transported to Central America from the Caribbean Island of St. Vincent by the British in 1797.

LANGUAGES

The official language is Spanish, and it is spoken by 60 percent of the population. The remaining 35 percent speak one of 23 indigenous languages, of which Kekchi, Mam, and Quiché are the most commonly used. The Black Carib population speaks its own language, called Garifuna.

RELIGIONS

The main religions are Roman Catholicism, Protestantism, and traditional Mayan religion. Current estimates put the Catholic population at about 75 percent, but this includes practitioners who combine the Mayan and Catholic religions. Indigenous religion is most prevalent in traditional stories, usually passed along verbally to new generations, as well as in a handful of traditional feast days, such as the Rabin Ajau, a traditional Kekchi festival held in July.

Religious Affiliations

Roman Catholic	8,645,000
Protestant	5,862,000
Traditional Mayan Religions	147,000

HISTORICAL BACKGROUND

The first signs of life in what is now Guatemala date from around 2500 B.C.E., when the first indigenous people, Mayans, occupied the area, setting up temples, cities, and an extensive culture. The Mayan civilization reached its peak around 600 C.E., and much of the civilization moved to the lowlands around 900. Individual cities continued to flourish even after 900 in the highlands of Guatemala.

The first Europeans came to the area in 1501, bringing both warfare and diseases that were previously nonexistent in the indigenous population. By the time the conquistador Pedro de Alvarado came in 1523, much of the indigenous population was enslaved, dying from unfamiliar disease, or had been killed directly by conquering European invaders. Guatemala was a Spanish colony until 1821.

After winning its independence, Guatemala was annexed briefly to Mexico (1822–23) and was a part of the Federation of Central American States, from which it withdrew in 1838. Rafael Carrera, who led a mainly indigenous revolt against the federation, served as Guatemala's first president from 1838 until his death in 1865.

In 1871 Justo Rufino Barrios became president and set up policies that would have serious ramifications for the Guatemalan people, plunging many into poverty and increasing the country's reliance on exported crops

and thus foreign influence. Barrios favored the wealthy landowners who grew export crops—sugar, coffee, and cotton—and encouraged foreign companies to come to Guatemala. The United Fruit Company, owned by American businessmen, came in 1901, becoming the largest landowner and employer in Guatemala and starting a period of American influence, chicanery, and domination that would last for most of the century.

Another prolonged dictatorship under the right-wing general Jorge Ubico ruled Guatemala from 1931 to 1944. Ubico allied himself with the large landowners, disbanded trade unions, and cracked down on opponents, until he was overthrown by an alliance of students, liberals, and dissident members of the military. The decade from 1944 to 1954 was a period of reform, first under José Arévalo and then Jacobo Arbenz Guzmán. The latter launched a land reform program in 1952 that provided for the confiscation of land owned by the United Fruit Company. As a result Arbenz, denounced as a Communist by the U.S. government, was overthrown by a coup in 1954. The coup was instigated by the United States and carried out by the American Central Intelligence Agency (CIA). Arbenz was replaced by the right-wing colonel Castillo Armas. Most of Arbenz's reforms were rescinded, and all of United Fruit's land restored.

From 1955 to 1985 Guatemala was ruled directly or indirectly by the armed forces, although elections remained a feature of political life. Between 1970 and 1982 voting became a narrow choice between conservative parties allied with the military. The country was constantly marked by violence. Manuel Osorio, an army general who had led many counterinsurgency attacks with the CIA's assistance, became president in 1970. He was alleged to have said that he would “turn the country into a graveyard” to bring order, and whether he actually said the words or not, his alleged statement set the tone for the next decades.

In elections marked by regular fraud and widespread abstention, the presidency rotated between officers selected for the position by the high command of the armed forces and endorsed by powerful conservative private interest groups. The number of people in poverty rose sharply, as wealth was concentrated into fewer and fewer hands. Labor groups were outlawed, and labor leaders and other protesters were hunted down and killed by death squads. In 1980 protesters took over the Spanish embassy to call attention to their plight. Almost 40 of the protesters were killed, as were several Spanish embassy officials, which resulted in Spain's breaking of diplomatic ties with Guatemala.

In the 1982 election this pattern unraveled against a background of economic decline, an escalating guerrilla war, and factional strife within the military and among its civilian backers. After evidence of unusually blatant fraud, army officers ousted the official candidate, Defense Minister Gen. Anibal Guevara, in a bloodless coup. Gen.

Efraín Ríos Montt, himself a former presidential candidate believed to have been robbed of victory by fraud in 1974, declared himself president in 1982. The military ruled by decree, banned all civilian political activity, and suspended the traditional parties. Ríos's approach for handling unrest and protest within the country encouraged "death squads" and a "scorched earth" policy of burning entire villages and killing their inhabitants. In 2004 he would be placed under house arrest for his role in these crimes.

Amnesty International reported increased human rights violations in the late 1980s. By this time the United States had reversed its stance. While U.S. president Jimmy Carter enforced sanctions against Guatemala because of its human rights abuses, the Reagan administration, which governed the United States for most of the 1980s, dismissed any human rights-related agenda in Guatemala and again sold arms and provided soldiers. The concern over mistreatment was backed by other groups, however, and in 1984 the World Council of Indigenous Peoples accused the Guatemalan government of genocide. (Later reports cite high percentages of indigenous people among Guatemalans who were killed, disappeared, or were tortured.) Although Marco Vinicio Cerezo, a civilian, became president in 1986, he was a puppet leader, and the military maintained complete control over the country.

Urged by international groups, Guatemala sat down with its Central American neighbors in an attempt to bring peace to the region in 1987. This was the beginning of an extended period of negotiations, violations of accords, and attempted reconciliation. Though there was little actual progress as a result of the talks, the Guatemalan government did meet with the opposition forces in Oslo, Norway, in 1989. Again, in 1990 America Watch charged that rights abuses under the civilian government had reached levels that had prevailed under past military dictatorships. In 1991 the United Nations was able to begin peace talks between the guerrillas and the government. While those continued, in 1993 Jorge Serrano Elías, who had won the presidency in a runoff election two years prior, tried to disband Congress and the Supreme Court. Amidst threatened sanctions by the United States and other countries, Serrano was ousted, and Ramiro de León was elected by the Congress to finish out Serrano's term. A peace treaty was finally signed in 1996.

Although the peace treaty was signed, there are still reports of human rights abuses, crime is high, and indigenous peoples especially continue to struggle for equality. The Catholic Church instituted the Recovery of Historical Memory project, an attempt to document the atrocities of the 36-year civil war. In 1998, days after Bishop Juan Gerardi released the report, he was assassinated. In 1999 the United Nations-led Historical Clarification Commission delineated the widespread torture, killing, and corruption of the late 20th century, putting blame al-

most exclusively on the Guatemalan dictatorships and the United States, which put or kept many of the dictators in power. In a visit to Guatemala in March 1999, U.S. president Bill Clinton apologized to Guatemala for the atrocities that the United States had propagated in the country, although official U.S. documentation (especially from the State Department and the CIA) rarely acknowledges this culpability.

In the elections held in November 1999, the Guatemalan Republican Front won the majority of seats. In December 1999 Alfonso Portillo Cabrera was elected president; he took office in 2000. In the years that followed Guatemala continued to deal with the fallout from the nation's civil war. In 2001 the president agreed to pay \$1.8 million in compensation to the families of men, women, and children who were killed by special forces and paramilitaries in the village of Las Dos Erres, and in 2004, \$3.5 million was paid to other victims of the civil war. Meanwhile, major cuts were made in the military, and the government formally admitted culpability in human rights crimes. In 2002 the Organization of American States (OAS) sponsored talks to resolve the border dispute with Belize. In 2003 Óscar Berger won the nation's presidential election.

LIST OF MODERN RULERS

(Note: The following list excludes interim presidents and those who served for less than a year.)

1982–83	Gen. Efraín Ríos Montt
1983–86	Oscar Humberto Mejía Victores
1986–91	Marco Vinicio Cerezo Arévalo
1991–93	Jorge Antonio Serrano Elías
1993–96	Ramiro de León Carpio
1996–2000	Álvaro Enrique Arzú Irigoyen
2000–04	Alfonso Antonio Portillo Cabrera
2004–	Óscar Jose Rafael Berger Perdomo

CONSTITUTION

The constitution, written in 1985 and amended in 1993, established a democratic form of government. In order to prevent the return of dictatorships, presidential power was diluted by the reduction of the presidential term from six to four years and by the establishment of the office of vice president. The executive branch also consists of the Council of State, which acts in an advisory role, and various ministries. Reelection and prolongation of the presidential term are punishable by law, although the president may suspend constitutional guarantees for up to 30 days in the event of a national emergency. The vice president may succeed the president if the president dies or becomes disabled but cannot be elected president immediately after serving as vice president. Although its

role has diminished since the peace accords, the military still plays a significant part in the country's government.

PARLIAMENT

Legislative power rests with the 80-member Congress of the Republic. There are 158 members of Congress, and each of them serves a four-year term. Congress meets on June 15 each year, and ordinary sessions last four months. The president may veto congressional bills, but Congress may override a veto by a two-thirds vote. Between sessions a standing committee of eight deputies serves as a watchdog on the actions of the executive branch, with the power to call a special session of Congress if needed.

POLITICAL PARTIES

As of the 2003 elections there were five major Guatemalan political parties. Berger's Grand National Alliance (GAN) won 49 seats in Congress. The Guatemalan Republican Front (FRG), the conservative party, won 41. The National Unity for Hope Party (UNE) won 33, and the National Advancement Party (PAN) won 17. The Christian Democratic Party (DCG) is the centrist party. Additionally, the Guatemalan National Revolutionary Union (URNG), the former guerrilla faction, has been incorporated into the electoral process.

LOCAL GOVERNMENT

Guatemala is divided into 22 administrative departments, each headed by a governor. Each department is divided into a number of *municipios* (townships) governed by elected *alcaldes* (mayors) and autonomous municipal councils, whose members are popularly elected for two-year terms. The municipal council membership also includes *syndics*, or local officials who act as judges or advocates.

LEGAL SYSTEM

The judicial system consists of the Supreme Court, Civil Courts of Appeal, Courts of First Instance, and a number of special courts. The president of the Supreme Court is also the head of the judicial branch, with authority over all courts. The president of the Supreme Court and all other judges are elected by Congress for five years.

HUMAN RIGHTS

Since the peace treaty signed in 1996, Guatemala has made attempts to improve its human rights record. However,

alleged killings by the police forces, along with police harassment and possible elimination of "undesirables" (e.g., street children and juvenile delinquents), remain a serious problem. There have also been frequent mob lynchings of criminal suspects, due in part to citizen frustration at judicial inefficiency. Violence against women, including domestic violence, is a widespread problem.

Since the 1500s indigenous peoples, especially, have been subjugated, enslaved, and abused. This unfortunately continues to the present day. In a press conference in 2000 René Godínez García of Guatemala's Movimiento de Jóvenes Mayas por la Objeción de Conciencia stated that 88 percent of those who disappeared and 83 percent of those tortured during Guatemala's civil war were indigenous people. Carlos Coc Rax, an indigenous leader, disappeared in 1999.

The government has been trying to make some amends, but progress is slow. No convictions have been made for the 1998 murder of Bishop Gerardi. The Presidential High Command, which leads the army, has yet to be disbanded, and reports of killings by security forces and other military and paramilitary groups are still common, as are death threats against public officials who investigate the atrocities. Still, millions of dollars have been paid to the families of the victims of civil war. General Efraín Ríos Montt was placed under house arrest in 2004, and the government has made a formal admission of guilt in human rights abuses during the civil war.

Children are also at especially high risk in Guatemala. In 1999 the United Nations stated that kidnapping, child prostitution, and child pornography were serious problems.

FOREIGN POLICY

Guatemala has sought to strengthen its ties with other countries and became a founding member of the World Trade Organization (WTO) in 1995. The end of the 36-year civil war in 1996 further strengthened foreign trade and investment in the country. A number of laws were passed from 1996 to 1998 to encourage foreign investment in Guatemala. In 2003 the nation signed a free-trade agreement with the United States, a sign of improved relations after U.S. president Bill Clinton's apology to the nation for the U.S. role in human rights abuses in the 1980s.

DEFENSE

Reforms in 1998 allowed for a civilian minister of defense. Personnel is provided by a draft system of all males of 18 to 50 years of age. In 2003 the country spent \$203 million on defense, about 0.8 percent of the gross domestic product (GDP). Although a civilian police force

was implemented in 1997, the military continues to play a significant role in government. In 2003 the nation had over 50,000 military personnel.

ECONOMY

The Guatemalan economy is still largely agricultural, and coffee remains by far the single most important source of foreign revenue. Agriculture generates 22.5 percent of GDP and two-thirds of exports and employs half the labor force. Most of the industrial sector is in the hands of ladinos, the traditional moneyed elite, and foreign interests and consists mostly of sweatshops exploiting unskilled workers.

The signing of the peace accords in 1996, ending 36 years of civil war, removed a major obstacle to foreign investment. In 1997 the government met its economic targets when the GDP growth rate accelerated to 4.1 percent and inflation fell to 9 percent. The government also increased tax revenues—historically the lowest in Latin America—to 9 percent of GDP and created a new tax administration. Debt service costs declined in 1998. Throughout 1998 the Central Bank maintained a tight money supply, but it also caused high interest rates. By 2004 growth had slowed to 2.1 percent, but inflation had also continued to decline, to 5.5 percent.

Ongoing challenges include increasing government revenues, negotiating further assistance from international donors, increasing the efficiency and openness of both government and private financial operations, curtailing drug trafficking, and lowering the deficit—over \$1 billion in 2004. Guatemala, along with Honduras and El Salvador, reached free-trade agreements with Mexico and with the United States and has moved to protect international property rights.

ENVIRONMENT

Guatemala still has substantial forests, covering more than one-third of the country, but deforestation has increased alarmingly. This has contributed to accelerated erosion and soil loss, especially on mountain lands. The natural ecosystem is exceptionally diverse and harbors a wide variety of plant and animal species. Unfortunately, deforestation is accelerating the rate of species extinction. The largest protected area in Guatemala—4,559,000 acres—is the Maya Biosphere Reserve.

LIVING CONDITIONS

In a nation in which 75 percent of the population lives below the poverty line, ethnic and class tensions divide the country, and the legacy of a civil war that killed as many as 200,000 people persists, life in Guatemala is filled with uncertainties and social problems: illegal drugs, money laundering, police brutality, abridgments of civil rights, and others. Social class is based on education and wealth, creating a virtual caste system in which the lowest 10 percent of households have about 1.6 percent of the nation's income, while the highest 10 percent have 46 percent, and in which some 2 percent of the population owns 70 percent of the cultivable land. Ladinos dominate in business, education, and the professions, while others scratch out livings in subsistence farming and small trade. Ladinos accept Indians only if they possess wealth and adopt a Western style of life, although this attitude is slowly changing. The Garifuna are shunned by all groups. Domestic violence is rampant and receives little attention. While 11 years of schooling are compulsory, less than 30 percent of teenagers attend secondary school, and child labor is common. In 2004 population growth was high, at 2.61 percent per year; the birthrate was 34.58 per 1,000 people, while the death rate was only 6.79 per 1,000.

HEALTH

Guatemalans have a life expectancy at birth of just a little over 65 years, while the infant mortality rate is high, at nearly 37 per 1,000 live births—an unsurprising figure in a nation where only 41 percent of births are attended by medical staff. Poor sanitation often leads to gastrointestinal disease, which accounts for over 23 percent of deaths. Malaria continues to be a major problem in coastal and low-lying areas. Spending on health care is only about \$93 per person per year. While high-quality medical care is available in the capital city, the rural areas go virtually without health care and rely instead on herbal remedies, magic, and prayer.

FOOD AND NUTRITION

Staples for most Guatemalans include corn made into tamales and tortillas, beans, rice, and bread. The more affluent can afford meats, and those along the coasts eat fish and seafood. The country grows a wide variety of vegetables: avocados, radishes, potatoes, squash, carrots, beets, onions, tomatoes, lettuce, green beans, broccoli, cauliflower, artichokes, and turnips. Fruits include pineapples, papayas, mangoes, melons, citrus, peaches, pears, plums, and guavas. The large meal of the day has traditionally been eaten at midday, though that custom is changing as traffic congestion makes it increasingly harder for people to get home for lunch and back to work in a timely manner.

Despite this rich array of foods, the state of nutrition is generally poor, especially for the six million people who live on less than \$2 a day. Some 90 percent of energy requirements come from beans, grains, and sugar, with little animal protein and few micronutrients. Among children under five years of age, 24 percent are underweight and 46 percent are stunted; in rural areas these numbers approach 70 percent.

STATUS OF WOMEN

Guatemala signed the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) in 1981 and made significant progress in the 1990s in implementing legal protection for women. However, although women have the right to vote, they are not prevalent in high-ranking corporate and government positions, and they earn considerably less than their male counterparts. As of 2004 women made up only 8 percent of parliamentary representatives, holding 13 seats out of 158. Domestic and other types of violence against women are widespread. Laws governing rape allow the perpetrator to be exonerated if he marries the victim, if she is over 12 years of age.

WORK

Guatemala's labor force in 2004 was estimated at 3.84 million, with 50 percent employed in agriculture, 15 percent in industry, and 35 percent in services. The unemployment rate was 7.5 percent in 2003. Unions represent only 5 percent of the workforce. Ladinos tend to dominate in the professions, as well as among shopkeepers, government employees, and workers in industry, although some poorer ladinos provide seasonal labor in the fields. A large portion of the population, primarily Amerindians, makes its living through subsistence farming as well as through the sale of handicrafts and seasonal work on plantations. Plants that use imported materials and semiskilled labor to produce items such as clothing for export, called *maquilas*, provide relatively high wages for some Guatemalans.

EDUCATION

The literacy rate is only 70.6 percent. While education is free and compulsory for 11 years, many rural residents cannot afford additional education, and many children must work to support their families rather than attend school. The wide variety of indigenous languages, and the lack of written communication in them, leaves Spanish as the only widespread language for formal education, which frequently results in the marginalization of indigenous oral traditions.

In the 1990s and early 2000s several small private universities opened, bringing the total in the country to nine. The largest university, with an enrollment of 90,000, is San Carlos University, founded in 1676.

SCIENCE AND TECHNOLOGY

The scientific community of Guatemala is based in the universities, the National Meteorological Agency, and the Academia de Geografía e Historia. Several research centers have been formed under the sponsorship of the Central American Common Market. One of these is the Central American Nutritional Research Center, headquartered in Guatemala City. Most scientific research is geared toward economic development, especially agriculture.

MEDIA

There are well over 100 radio stations, including 25 AM and 50 FM stations, in Guatemala City. There are six television stations, including two that are government owned, and seven major national newspapers, five distributed in the morning and two in the afternoon, including *Diario la hora* and *Prensa libre*.

CULTURE

Guatemala's primary art forms are textiles and painting, though colorful pottery and wood carvings are also produced. Exhibits are held at the Instituto Guatemalteco-Americano and other galleries. The Patronato de Bellas Artes promotes the arts and the preservation of the nation's cultural heritage, including Mayan and Spanish art forms. The government has an agency similar to the National Endowment for the Arts in the United States. The National Symphony Orchestra and the National Ballet Company perform as finances allow. The Biannual Paiz Cultural Festival showcases the visual and performing arts, the latter at the modern National Theater complex. Guatemala's national musical instrument is the marimba.

The country is best known for its textiles. Each of the nation's ethnic groups preserves its cultural roots through native textiles and distinctive costumes, including the hand-woven blouses called *huipiles*. The Ixchel Museum, on the campus of Francisco Marroquin University, houses collections of indigenous textiles in an effort to protect this art form from the proliferation of machine-made goods.

FOLKLORE AND MYTHOLOGY

Much of the folklore and mythology of Guatemala derives from Amerindian beliefs and those brought by Spanish conquerors. Mayans believed that shamans had the ability to predict the future and to influence natural forces that affect the fate of humans. Shamans were also healers and practiced herbal medicine. Many folk beliefs grew out of agricultural concerns. Before planting, for example, the seed was blessed. The night before planting, the men burned incense in the fields and sprinkled the ground with a concoction made of sugarcane, while the women prayed before candles, which the next morning were placed in the fields in the direction of the four winds. It was also believed that every person has a *nagual*, or animal totem. Tecún Umán was a heroic Quiché warrior who was killed by the Spaniard Pedro de Alvarado; his *nagual* was Guatemala's national bird, the quetzal.

ENTERTAINMENT AND RECREATION

Films are popular, and a number of theaters, especially in Guatemala City, offer recent U.S. films as well as films from Mexico, Italy, France, and Argentina. The 2,000-seat National Theater hosts plays, concerts, and dance performances and has been a stop on the tour for the Moscow Ballet, the National Ballet of Spain, and the Berlin Philharmonic. A widespread form of popular entertainment is the fiesta, with dancing, music, food, and fireworks. Almost every city and town has a marimba group that performs at social functions such as weddings. A lively arts community offers numerous exhibitions.

ETIQUETTE

In the past, Amerindians were expected to show deference to ladinos, but today a more egalitarian attitude prevails. Among the Mayans, children greet adults with their hands folded and bow; adults greet other adults by inquiring about the person's health and that of his or her family. Ladinos are physically more demonstrative. When women greet one another, embraces and kisses on the cheek are common; men will commonly kiss a new female acquaintance on one cheek. In public, Guatemalans are accustomed to giving one another less personal space than are Americans; when they converse, touching and patting are common. Almost all social events in Guatemala begin later than the scheduled time.

FAMILY LIFE

The nuclear family is the most common domestic unit, among both ladinos and Amerindians, although many

Amerindian households include the extended family. While some marriages are arranged, most spouses are freely chosen. Amerindians rarely marry outside their villages and linguistic group. Although the country is primarily Catholic, divorce is common, and many men keep mistresses. Among ladinos, children are raised by mothers, grandmothers, and nannies; Amerindian women tend to rely on older children to help raise the younger ones.

PERSONAL APPEARANCE

Personal appearance is an important indicator of caste or class. In the cities, ladino men in the professions and in business wear Western business suits, while women wear dresses with nylons and high-heeled shoes. Poorer ladinos often buy secondhand clothing from the United States. Indian men and women are more likely to wear traditional garb, and a person's village of origin can often be identified by the design of the cloth from which clothing is made. Among women, this includes long, colorful wraparound skirts and the *huipil*, a smock-style woven blouse. Also common are scarves and shawls. While many Amerindian men wear traditional clothing, including colorful pants, tunics, jackets, and straw hats, as a way of asserting cultural identity, many wear Western clothing, including cowboy boots and hats.

SPORTS

Guatemalans are passionate about soccer. National and international soccer matches are frequently held in Guatemala City's soccer stadium, the largest in Central America. On January 2, 2005, however, the world soccer federation banned all Guatemalan teams from international competition in response to the Guatemalan government's seizure of the country's soccer federation. Bicycle racing, car racing, baseball, and softball are increasing in popularity. Joggers and competitive runners can be seen around the city, and several organizations sponsor races. Although facilities are limited, bowling is also becoming popular.

CHRONOLOGY

- 1941** Guatemala declares war on Germany, Japan, and Italy.
- 1944** Jorge Ubico is forced out of office and an interim government is overthrown.
Juan José Arévalo is elected president, introducing laws that provide protection for workers and improve health care.
- 1945** A new constitution is written. Women are given the right to vote.

- 1950** Jacobo Arbenz is elected president.
- 1952** Arbenz introduces agrarian reform. The United Fruit Company and the U.S. government attempt to overthrow Arbenz's government.
- 1953** The government seizes the United Fruit Company lands, redistributing uncultivated land (400,000 acres) to peasants.
- 1954** The U.S. government publicly accuses Arbenz of Communism, while the CIA stages a coup and overthrows him, putting Col. Carlos Castillo Armas in power.
- 1957** Armas is assassinated. In the ensuing turmoil the military takes over and declares Guillermo Flores Avendaño president.
- 1962** A breakaway army faction initiates war with the military regime. The U.S. government sends Green Berets to the aid of the Guatemalan dictatorship. The M-13 and Rebel Armed Forces (FAR) guerrilla groups are formed.
- 1966** Julio César Méndez Montenegro becomes president. U.S. Special Forces launch a counterinsurgency campaign, led by Gen. Carlos Manuel Arana Osorio, killing 8,000. Right-wing death squads, such as the White Hand, appear.
- 1969** The U.S.-backed government wins over the guerrillas. Death squads continue to operate.
- 1970** General Arana Osorio becomes president and enforces order ruthlessly.
- 1976** An earthquake hits Guatemala, leaving 25,000 dead and more than 1 million homeless.
- 1977** The United States suspends all economic and military aid to Guatemala due to human rights violations.
- 1978** Gen. Fernando Romeo Lucas García is elected president.
- 1980** When the Committee for Peasant Unity (CUC) occupies the Spanish embassy to call attention to the plight of peasants, the government attacks the group, killing 39 protesters and several embassy staff members. Spain breaks diplomatic ties.
- 1982** General Efraín Ríos Montt comes to power. Civil patrols are instituted. Guerrilla organizations combine to become the Guatemalan National Revolutionary Unity (URNG).
- 1983** United States announces the resumption of arms sales to Guatemala, then suspends economic aid after two U.S. government officials are killed by the Guatemalan military.
- 1983** Ríos Montt is ousted in a coup. General Oscar Mejía Victores becomes president.
- 1984** The Guatemalan government writes a new constitution and schedules elections for 1985. The World Council of Indigenous Peoples accuses the Guatemalan government of genocide.
- 1985** The new constitution is promulgated. In national elections Christian Democrat Marco Vinicio Cerezo Arévalo wins 68.7 percent of the vote and the presidency, becoming the first civilian in the office in 15 years.
- 1987** The presidents of five Central American nations meet in Guatemala and sign a peace plan aimed at settling the conflicts in Nicaragua, El Salvador, and Guatemala. The government and URNG guerrillas meet in Spain to discuss peace initiatives.
- 1988** Costa Rica accuses Guatemala and the other three countries of violating the 1987 peace accord. Two coups are attempted, unsuccessfully. The military continues its bloodshed.
- 1989** URNG and the National Reconciliation Commission (NRC) begin talks in Oslo, Norway.
- 1990** The election campaign is marred by political violence. The United States suspends most military aid but continues to provide training.
- 1991** Jorge Serrano Elías is elected president in a runoff vote. The peace process, moderated by the United Nations, begins again. The United States releases \$50 million in funds. The Communities of Population in Resistance (CPR) demands recognition and protection.
- 1992** Activist Rigoberta Menchú receives Nobel Peace Prize.
- 1993** Serrano attempts to dissolve Congress and the Supreme Court. Serrano is ousted by Congress, which then elects Ramiro de León as president.
- 1995** The Accord on Indigenous Rights and Identity is signed.
- 1996** Álvaro Arzú is elected president. Peace treaty is signed. Pope John Paul II visits Guatemala.
- 1997** The National Civilian Police (PNC) is created in January.
- 1998** Congress passes a number of constitutional reforms in compliance with the 1996 peace treaty, including recognition of ethnic, cultural, and linguistic groups and allowing a civilian minister of defense. In October Hurricane Mitch hits Guatemala. Bishop Juan Gerardi is murdered two days after delivering the Catholic Church's report on

the Recovery of Historical Memory project (REHMI), which discussed responsibility for numerous human rights abuses during the civil war.

- 1999** The UN Historical Clarification Commission issues its report, citing widespread human rights abuses, genocide on the part of the Guatemalan military and government and the U.S. government, and deaths numbering 200,000 due to the 36-year civil war.
President Bill Clinton apologizes for the role of the United States during Guatemala's civil war.
- 2000** Alfonso Antonio Portillo Cabrera becomes president
- 2001** A sum of \$1.8 million in compensation is paid to the families of the 226 people killed by paramilitaries and soldiers in the village of Las Dos Erres in northern Guatemala in 1982.
- 2002** OAS sponsors talks to resolve the Guatemala-Belize border dispute.
- 2003** Óscar Berger wins a second term as president.
- 2004** Guatemalan government pays \$3.5 million to victims of the civil war and formally admits culpability in human rights crimes.

Basic Fact Sheet

OFFICIAL NAME

Republic of Guinea (République de Guinée)

ABBREVIATION

GN

CAPITAL

Conakry

HEAD OF STATE

President Lansana Conté (from 1984)

HEAD OF GOVERNMENT

Prime Minister Cellou Dalein Diallo (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

9,467,866 (2005)

AREA

245,857 sq km (94,926 sq mi)

MAJOR ETHNIC GROUPS

Fulani (Peul), Malinke, Soussou

LANGUAGES

French (official), Peul, Arabic, national languages

RELIGIONS

Islam, animism

UNIT OF CURRENCY

Guinea franc

NATIONAL FLAG

Tricolor of red, green, and yellow vertical stripes

NATIONAL EMBLEM

The principal elements of the national emblem are a dove with an olive branch; the elephant (the national animal); and the motto *Travail, justice, solidarité* (Work, justice, solidarity) on a scroll under a heraldic shield.

NATIONAL ANTHEM

“Liberty”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), September 28 (Referendum Day), October 2 (Independence Day, National Day), November 1 (Army Day), various Christian festivals, including Assumption, Easter Monday, All Saints’ Day, and Christmas, various Islamic festivals

DATE OF INDEPENDENCE

October 2, 1958

DATE OF CONSTITUTION

December 23, 1990

GEOGRAPHICAL FEATURES

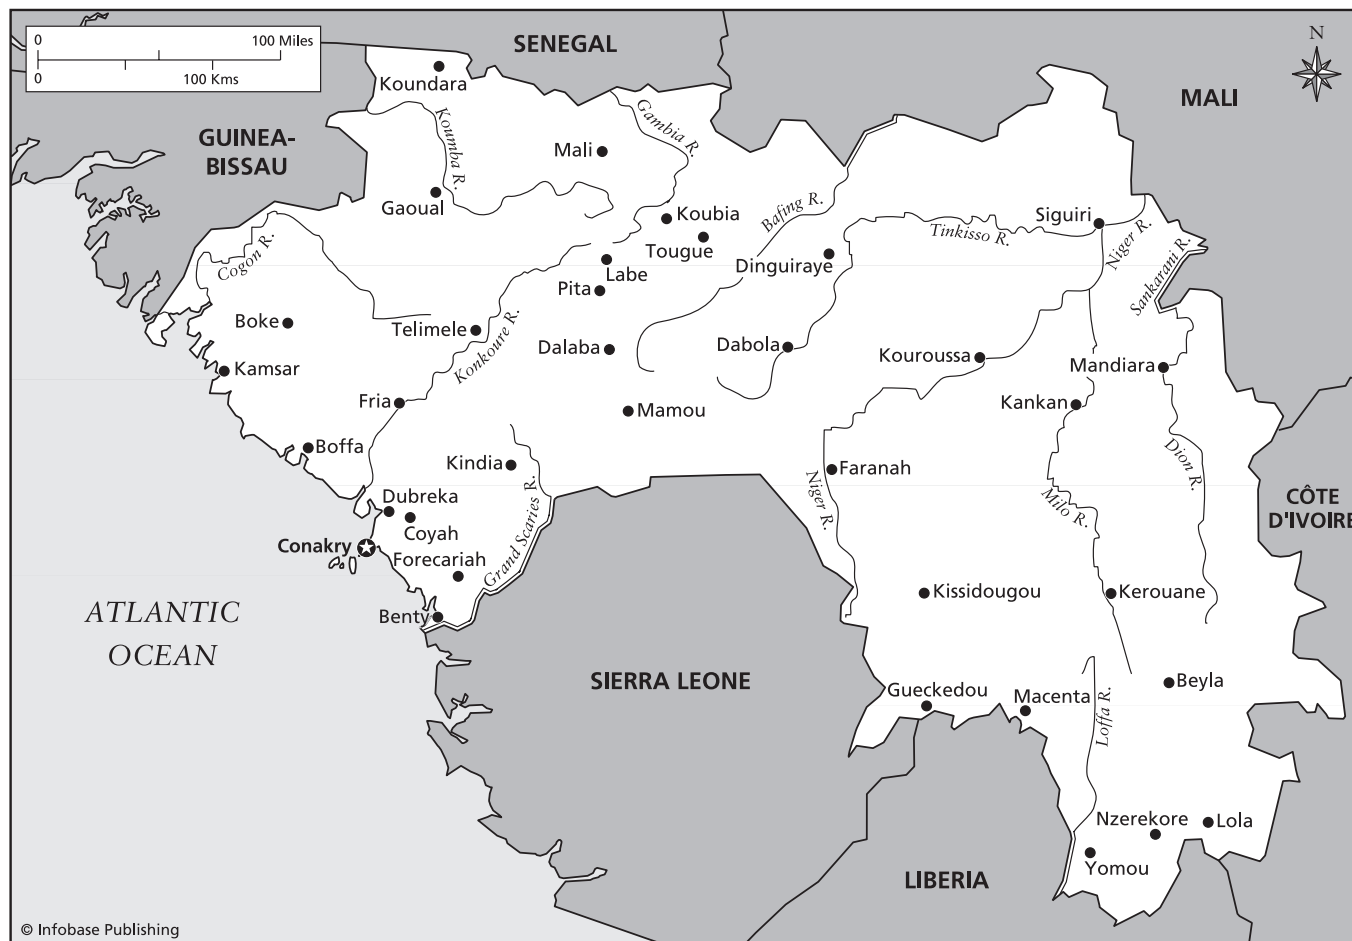

Guinea is located in southwestern West Africa, in an arc curving over Sierra Leone and Liberia. Guinea’s total land area of 245,857 sq km (94,925 sq mi) extends 831 km (516 mi) southeast to northwest and 493 km (306 mi) northeast to southwest. Its Atlantic coastline stretches 320 km (199 mi). Guinea’s total international land boundary of 3,399 km (2,112 mi) is shared with six countries: Guinea-Bissau (386 km; 240 mi), Senegal (330 km; 205 mi), Mali (858 km; 533 mi), Côte d’Ivoire (610 km; 379 mi), Liberia (563 km; 350 mi), and Sierra Leone (652 km; 405 mi).

Guinea’s varied terrain is divided topographically into four regions: Lower, or Maritime, Guinea; Middle Guinea, including the Fouta Djallon highlands; Upper

Guinea savannas; and the forest region of southeastern Guinea. Lower Guinea stretches from the coastal swamps across an alluvial plain, 50–90 km (30–55 mi) broad, crossed by winding tidal rivers. About 50 km (30 mi) inland the Kakoulima Massif rises to 1,124 m (3,688 ft). Lower Guinea also contains the Kaloum Peninsula; the island of Tombo, on which the capital, Conakry, stands; and the Los Islands.

Middle Guinea, formed by the Fouta Djallon Massif, consists of a stepped plateau with an average elevation of 900 m (3,000 ft), deeply cut in many places by narrow valleys. Upper Guinea, in the northeast, is a region of grassy plains and savannas. The forest region, in the southeast, reaches its highest elevation at Mt. Nimba (1,752 m; 5,747 ft). The forest region’s major feature is the Guinea

Guinea

Nzerekore	107,329

CLIMATE AND WEATHER

Guinea has a tropical climate with two distinct seasons. Although there are seasonal variations, the wet season generally lasts from April or May to October or November, with the heaviest rainfall during July and August. The dry season lasts from November to April. April is the hottest month.

Lower Guinea has an average rainfall of 2,400 mm (95 in) annually, although in some places, such as Conakry, the rainfall may exceed 4,300 mm (169 in) in most years. Toward the interior the rainfall diminishes in volume but is more evenly distributed. The average varies from 2,540 mm (100 in) in southern Fouta Djallon to 1,830 mm (72 in) in the savannas of Upper Guinea.

Temperatures and humidity are high. Conakry has an annual average maximum of 29°C (85°F) and an annual average minimum of 23°C (74°F). In Upper Guinea the temperature range is 18°C to 40°C (64°F to 104°F). Temperatures are lower in the Fouta Djallon region, with daily mean temperatures between 12.2°C (54°F) and 34.4°C (94°F) in the dry period and 18.3°C (65°F) and 26.7°C (80°F) in the wet period.

The prevailing wind systems are the southwestern monsoons and the northeastern harmattan, the latter a dry, scorching wind from the Sahara. Tornadoes and thunderstorms are common in coastal areas.

Climate and Weather

Mean Temperature

Conakry: 74°F to 85°F

Upper Guinea: 64°F to 104°F

Fouta Djallon: 54°F to 94°F (dry period), 65°F to 80°F (wet period)

Average Rainfall

Fouta Djallon: 100 in

Upper Guinea: 72 in

FLORA AND FAUNA

Guinea is home to a wide variety of animals, including forest elephants, chimpanzees and monkeys, hippopotamuses, crocodiles and snakes, and many birds and insects. Many of these animals are endangered due to poaching and habitat loss. The eastern part of Guinea is covered in plants and forests, though they are not virgin forest. Years of logging, farming, and burning have resulted in a great deal of deforestation, which has worsened in recent years, as an improved road system makes it easier to transport logs out of the forest.

ETHNIC COMPOSITION

Guinea has three main ethnic groups and numerous smaller groups. The Peul (also known as the Fulani,

Fulbe, or Foulah) account for about 40 percent of the population, the Malinke for 30 percent, and the Soussou for about 20 percent. The Soussou are most numerous in Lower Guinea, the Peul in Middle Guinea, and the Malinke in Upper Guinea. The smaller forest groups, including Gerz and Toma, together make up 10 percent of the population. Ethnic affiliations are fluid, however, and the smaller groups are subject to a constant process of assimilation within the larger ones. Though ethnic loyalties tend to be pervasive and persistent, ethnic differences are less crucial in Guinea than in most other African countries.

Since independence the government has sought to break down ethnic barriers and to de-ethnicize politics. The process of national integration has been accelerated by the fact that the tribal groups no longer have access to the traditional machinery of keeping alive historic cultural and emotional ties among their members. The government also has encouraged mixed marriages to build up a new community without clear-cut ethnic affiliations.

Non-Guineans living in Guinea include other West Africans and a scattering of Lebanese, French, and other Europeans.

LANGUAGES

Guinea has one official language, French, and eight major vernaculars: Peul, Malinke, Soussou, Kissi, Guerze, Toma, Coniagui, and Bassari. Because these vernaculars do not have their own scripts, they are transcribed into a modified Latin alphabet. Among Guinea's vernaculars, Baga, Landouma, Mmani, Nalou, Peul, Badyaranke, Kissi, Coniagui, and Bassari belong to the West Atlantic family of languages. Soussou, Mikhifore, Dialonke, Diakhanke, Malinke, Ouassoulounke, Guerze, Toma, Mano, Kono, Konianke, Kouranko, and Toma-Manian belong to the Mande family of languages. Of these, Soussou and Malinke serve as lingua francas over large areas. Peul, using Arabic script, has an extensive literature.

French is understood by about 20 percent of the literate population.

RELIGIONS

Guinea is a secular state, but Islam is the religion of the majority of the people, cutting across ethnic lines. Slightly more than one-third of the people adhere to traditional African beliefs, and fewer than 2 percent are Christian. Even within the frameworks of Islam and Christianity, traditional beliefs and practices have survived, if in modified forms. Islam is believed to be growing at the expense of other faiths; at the same time, in the process of being adopted by the majority of Guineans, Islam has assumed a specifically local quality.

The Christian community is primarily Catholic and is concentrated in Lower Guinea. The Roman Catholic Church in Guinea is presided over by the archbishop of Conakry and two bishops, at Kankan and N'Zérékoré.

Religious Affiliations	
Muslim	8,050,000
Christian	760,000
Indigenous Beliefs	660,000

HISTORICAL BACKGROUND

Most of Upper Guinea belonged to the Empire of Ghana at the height of its power in the 14th century. By the 17th century French, Portuguese, and British traders were competing with one another along the coast. Guinea was one of the centers of the slave trade, and the Guinea creeks along the deeply indented coast of the southern rivers afforded secluded hiding places for slavers harried by the ships of the Royal Navy. The Peace of Paris of 1814 affirmed French rights along the Guinea coast. In 1725 a jihad, or holy war, against the Malinke was declared in Fouta Djallon by the Muslim Fulani under the leadership of Kamamoko Alfa. Eventually, the Fulani of the Fouta Djallon became a united nation under Almany (Chief) Alfa of Timbo, who in 1881 accepted the protectorate of the French.

However, effective French colonial rule in Guinea did not begin until 1898, with the capture of the Malinke adventurer Samory Touré, who had overrun Upper Guinea by the late 1870s. Guinea was part of French West Africa until 1958, when it became the first and only state in francophone Africa to vote against the French Community concept proposed by President Charles de Gaulle.

French rule revolved around the central concept of assimilation as the instrument of a civilizing mission to extend France's language, institutions, laws, and customs to Africa. Under the influence of this concept, all existing political and legal institutions were dismantled and replaced by French ones with little or no modification. The process of Frenchification became counterproductive by the end of World War II, however, as it created a class of labor leaders and teachers deeply influenced by the French school of Marxism and hostile to all forms of colonialism.

On independence the break with France was complete and decisive. France showed its displeasure at Guinea's opting out of the French Community by suspending aid, withdrawing administrative personnel, and rescinding the favored-nation status of Guinean exports to France. Guinea retaliated by de-Westernizing education and administration. Relations between the two countries were suspended from 1965 to 1975. Anti-French feelings were very strong in the Ahmed Sékou Touré administration.

At independence on October 2, 1958, Touré, the leader of the dominant Parti Démocratique Guinée (PDG), became president. The following month he established the PDG as the sole party, eliminated all opposition, and instituted a program of economic and political centralization. In principle, Touré policies were directed toward building "scientific socialism," but in practice they were a reflection of party corruption and the president's desire to maintain power.

Touré's administration was dominated by political unrest and attempted coups, with Touré developing a siege mentality that resulted in the imprisonment, torture, and execution of those thought to oppose him. In 1970 Portuguese troops and dissident Guineans attempted an invasion. The coup failed, but in response Touré unleashed a reign of terror against all suspected enemies. In 1976 Touré's minister of justice, Diallo Telli, was arrested on charges of conspiracy against the government and executed while awaiting trial.

Touré died in March 1984 while undergoing heart surgery, and Prime Minister Lansana Beavogui assumed office as acting president. Several days later the military staged a successful coup, forming a Comité Militaire de Redressement National (CMRN). The committee installed Col. Lansana Conté as president and Col. Diarra Traoré as prime minister. The CMRN immediately acted to reduce political repression. It released more than 1,000 political prisoners, lifted censorship, and restored freedom of speech and internal travel. It also promised to liberalize the economy and to return property confiscated in Touré's drive toward centralization. As a result, some of the two million Guineans who had fled Touré's regime returned.

In the following months Conté consolidated his power by abolishing the office of prime minister and demoting Traoré to education minister. In 1985 Traoré led an unsuccessful coup that was crushed by troops loyal to Conté. Traoré was arrested and executed without trial.

Following the coup Conté continued to press for economic reform and the implementation of austerity programs demanded by the World Bank and the International Monetary Fund (IMF) before foreign aid would be granted. These measures, together with serious inflation, prompted civil unrest in 1988. The following year Conté promised a return to a two-party system and a transitional government, composed of military and civilians, that would oversee the transition to democracy.

After the failed coup of 1985 there were no significant challenges to President Conté's authority until the abortive military coup of 1996, when approximately 2,000 soldiers demonstrating for higher wages stormed the presidential palace and held Conté hostage. The president reached an agreement with the rebels, but shortly thereafter all the coup leaders were arrested. Conté was popularly elected for a five-year term in 1993 and again in 1998.

Conté is widely regarded as a dictator. In 2001 the people voted for a referendum that removed the two-term limit on presidents, which allowed him to run for president again in 2003. Though the opposition boycotted the election and the constitutional amendment was regarded as a coup to allow him to rule Guinea for the rest of his life, Conté won the election and is currently serving his third term as president. During 2004 Conté fired several unpopular ministers and appointed technocrats in their places.

LIST OF MODERN RULERS

1958–84 Ahmed Sékou Touré
 1984 Louis Lansana Beavogui
 1984– Lansana Conté

CONSTITUTION

From 1984 to 1990 Guinea was ruled by the 20-person Military Committee for National Redress (CMRN), led by Conté. In 1989 Conté promised a return to a two-party system as well as to the democratic election of the president and assembly after a transitional period, which would be supervised by a National Recovery Council, composed of military personnel and civilians.

In December 1990 a referendum was held on a new five-year transitional constitution. In October 1991 President Conté allowed for the formation of multiple political parties, and in December the ruling Transitional Council for National Recovery replaced the CMRN. The new constitution calls for a unicameral National Assembly, whose 114 members must be at least 25 years of age and serve five-year terms. The constitution also calls for the election of a president who serves a five-year term and appoints a prime minister to serve as head of government. Suffrage is universal at the age of 18. In November 2001 voters endorsed a constitutional amendment that extends the presidential term to seven years. The referendum was boycotted by the opposition.

Guinea's power is effectively concentrated in the strong president, who governs as assisted by civilian ministers he appoints himself. Most of Conté's appointees come from his Soussou ethnic group.

PARLIAMENT

The National Assembly was dissolved by the CMRN in April 1984. After several postponements by President Conté, the first assembly elections in a decade were held in June 1995. The ruling Party for Unity and Progress won 71 of the 114 seats in an election marred by fraud and boycott.

POLITICAL PARTIES

Political parties were illegal for Conté's first eight years of rule. In 1992 political parties were legalized by the government. More than 40 parties registered to participate in the 1995 elections. However, the ruling party, the Party for Unity and Progress (PUP), won 71 of the parliament's 114 seats. Opposition parties that won seats include the Democratic Party of Guinea–African Democratic Rally (PDG-RDA), the Democratic Party of Guinea (PDG-AST), the National Union for the Prosperity of Guinea (UNPG), the Party for Renewal and Progress (PRP), the Rally for the Guinean People (RPG), the Union for Progress of Guinea (UPG), the Union for a New Republic (UNR), and the National Union for Prosperity (UNP). These opposition parties have not been a unified voice in opposing the ruling Conté government. They generally do not have access to electronic media, and this hampers their ability to confront the leadership.

LOCAL GOVERNMENT

For administrative purposes Guinea is divided into four levels. At the apex are four regions corresponding to the four geographic regions: Lower Guinea, Middle Guinea, Upper Guinea, and the Forest Region, each headed by a minister delegate or super governor. At the next level are 33 prefectures, or administrative regions (*régions administratives*), each under the authority of a governor appointed by the president. Each administrative region has a popularly elected 40-member general council. The third tier is the district or subprefecture (*arrondissement administrative*), of which there are 175. The commandant, or the executive head, of a district is responsible to the governor of the administrative region. The basic village-level unit of government is the local revolutionary authority (*pouvoir révolutionnaire local*, PRL), numbering 7,800 and combining local administrative organs. Leaders at the lowest level are elected; the president appoints all others.

LEGAL SYSTEM

Despite frequent attempts to Guineanize the legal system, French commercial and civil codes have been retained almost intact. A new Penal Code was introduced in 1965 and a new Code of Criminal Procedure the following year.

The court system was reorganized in 1973; people's courts were created in villages and city wards and presided over by the mayors. The other two members of each of these courts are also elected party members. People's courts also exist at the *arrondissement* and administrative region levels, but only at the latter level are they headed

by magistrates. Criminal courts and courts of appeal are at Conakry and at the four regional headquarters. The seven members of these courts consist of three professional judges and four officials. At the apex of the court system is the Superior Court of Cassation, composed of three magistrates and two people's judges. Outside of the regular court system are the High Court of Justice, which hears cases concerning state security, and the Special Court, which tries crimes concerning external commerce.

Judges are known to be influenced by political concerns and external pressures.

HUMAN RIGHTS

In terms of political and civil rights, Guinea is classified as a partly free country.

A general amnesty of all Guinean exiles was declared in July 1977, and thousands of emigrants returned to Guinea. Immediately after the 1984 coup the military government released 250 political prisoners, mainly from Camp Boiro, the principal political detention center, and permitted reporters to describe the heinous conditions and practices, including standard tiny concrete cells and the "black diet" (total deprivation of food and water). The new military government invited Amnesty International to interview former political detainees in the early fall and signed an instrument of adherence by the Republic of Guinea to the Geneva Conventions of August 12, 1949 (plus additional protocols), on Civil and Political Rights. It also announced its intent to adhere to the Universal Declaration of Human Rights.

However, following Traoré's unsuccessful coup in 1985, the military began a purge of suspected followers. Traoré was executed immediately, and 60 other officers were sentenced to death following a secret trial.

As of 2004 external observers believed Guinea's human rights record to yet be poor. The government has severely restricted democracy by controlling elections and outlawing broadcast media. Members of the security forces have beaten, killed, arrested, imprisoned, and generally abused civilians without punishment from the government. Prison conditions have been deplorable. All essential freedoms have been limited, and the government has not respected privacy rights. Ethnic discrimination, discrimination and violence against women, child labor, child prostitution, and human trafficking have continued to be problems.

FOREIGN POLICY

President Lansana Conté has pursued a foreign policy that reversed the socialist directions of his predecessor, Ahmed Sékou Touré. Nevertheless, Guinea remains a

one-party state without broad support among Western nations. It also has a number of problems with neighbors, though relations have vastly improved since the 1970s.

The Liberian civil war placed Guinea at the front of the line of nations trying to restore peace in Liberia. The political and military volatility of Guinea's neighbor was underscored in 1995 by the cross-border incursions of Liberian rebel forces into Guinea. Since Charles Taylor of Liberia went into exile in 2003, relations between Guinea and Liberia have improved. The civil war in Sierra Leone also brought Guinea into the vortex of West African conflict. The border between the two countries was closed in 1998 after rebels from Sierra Leone attacked a town in Guinea. Relations with Mali also suffered after Guinean troops stormed into the Malian embassy at Conakry in search of a leader of the November 1996 military uprising against President Conté.

Guinea belongs to the United Nations and most of the relevant African treaty organizations, including the African Union and the Economic Organization of West African States (ECOWAS). It has gotten involved in diplomatic and military efforts with the aforementioned nations, sending peacekeeping troops and offering asylum to refugees. The United States has maintained close relations with Guinea, assisting the nation with economic development and various social and environmental programs. The United States also provides Guinea with funds for military training, language training, and humanitarian assistance. More than 100 Peace Corps volunteers work in the country, collaborating with the U.S. Agency for International Development (USAID) on natural resources management, assisting with health education, and teaching in schools.

DEFENSE

Guinea's armed forces have four branches: army, navy, air force, and gendarmerie. There were about 12,000 soldiers serving in the armed forces in 2003, including fewer than 1,000 in each of the navy and air force and several thousand gendarmes. The gendarmerie and national police together handle internal security; they are infamous for oppressing the citizenry. The presidential guard in particular has wide latitude and is answerable only to the president himself. The chiefs of the various branches report to the chairman of the joint chiefs of staff, Colonel Kerfalla Camara. The president serves as commander in chief and also heads the Ministry of Defense, of which he took command in 2000.

Military manpower is provided by voluntary enlistment. A conscription law created by ordinance in 1959 makes all able-bodied male citizens liable for military service between the ages of 19 and 49, but it has never been enforced. Military personnel are liable for reserve duty after release.

ECONOMY

Guinea possesses major mineral, hydropower, and agricultural resources yet remains a poor, underdeveloped nation. The agricultural sector employs 80 percent of the workforce; most people are engaged in subsistence agriculture, growing food to support themselves. Guinea possesses over 25 percent of the world's bauxite reserves and is the second largest bauxite producer. It also mines gold and diamonds. The mining sector accounted for about 75 percent of exports in 1999.

Long-term improvements in government fiscal arrangements, literacy, and the legal framework are needed if the country is to move out of poverty. For the most part the economy is market based, but the government controls the price of rice and other important commodities. Economic growth was slow in 2004, at only 3 percent, and foreign aid has declined. Donors are reluctant to contribute funds due to governmental corruption, the government's refusal to reform fiscal policies, and increased defense spending.

ENVIRONMENT

Since 1985 the Republic of Guinea has tried to protect its considerable natural resources while promoting socio-economic development. While Guinea is not as ecologically diverse as many neighboring countries, the abundance of natural resources provides it with the means for sustainable development. Unfortunately, it does not appear that the nation will be able to avoid environmental destruction. Deforestation is already a big problem; forested areas are overpopulated, and the presence of refugees from other countries has made conservation impossible. Guinea has no national parks, and its plants and animals are dying as they lose their habitat to logging and cultivation or are hunted for meat. Some areas of the country are turning into desert. The soil has become contaminated in places, and erosion is occurring; poor mining practices are especially likely to damage the ground. The coastal waters have been overfished.

 Nationally Protected Areas % of total land area: 6
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 0.17

LIVING CONDITIONS

The cost of living in Guinea is relatively high. Electricity and water supplies are unreliable, and the country suffers frequent shortages of both. Food is expensive. Wages have not risen at the same rate as inflation. High fuel prices have sparked riots and protests. Most roads are unpaved. There are numerous navigable streams and rivers, though water levels sometimes fall too low to sustain boat traffic. Public transportation is by bus, minibus, and bush taxi and occasionally by riverboat or hydrofoil. Minibuses are usually crowded and fairly dangerous. Buses are slow and unreliable but cheap. There are no trains. Fewer than 30 percent of people live in cities. Only half the population has access to safe water.

HEALTH

Guinea's health infrastructure is primitive, and the country has many health problems. Diarrhea caused by unclean food and water occurs very frequently; typhoid fever and cholera are among the most serious gastrointestinal ailments. Malaria, dengue fever, yellow fever, sleeping sickness, filariasis, onchocerciasis, and leishmaniasis are all caused by insects. Hepatitis of all varieties is common. Life expectancy is about 49 years. The infant mortality

rate is 92 deaths per 1,000 live births, and some 40 percent of children die before their fifth birthdays. Fertility is high; women on average bear nearly six children. Contraceptive use is uncommon; only 4 percent of the population uses modern methods of preventing pregnancy. Only 3.2 percent of the population is infected with HIV; 9,000 people died of AIDS in 2003.

FOOD AND NUTRITION

Food is fairly expensive. Occasional food shortages result in panic buying, followed by more shortages. Most people subsist on rice or cassava supplemented with vegetables and occasional meat, such as monkey. Malnutrition is not uncommon among the poorer people. Towns of all sizes have restaurants that sell meals of rice and sauce, or stalls selling grilled fish, peanuts, cake, and meat brochettes. The larger towns have more elaborate restaurants that serve slightly more formal food with meat, chicken, or potatoes. In Conakry people can buy fare more typical of Western nations, such as pizza and hamburgers. French cafés serve coffee with cake and other pastries.

 Amount of Cereal Available per person per year kg: 113.9
 Amount of Fruits and Vegetables Available per person per year kg: 158.2

STATUS OF WOMEN

Women in Guinea have enjoyed special status as a result of the important political role they played prior to independence. Guinean women are represented in all professions, from civil engineering to the national police and armed forces, though they are typically paid less than men

in the same jobs. An Office of Women's Affairs has been established in the Ministry of Social Affairs. The majority of students enrolled in the National Medical College have been women. Women are still economically and socially constrained, however, and have been demanding better representation in government.

Women have been instrumental in bringing about peace between Guinea, Sierra Leone, and Liberia. The Mano River Union Women's Peace Network insisted that President Conté negotiate with Charles Taylor of Liberia. Men have been resistant to listening to women, but the women who have spoken out in support of peace have had some success.

The government's health-care policies have stressed prevention and child and mother care, but the quality of care has been low, owing to inadequate facilities and medical supplies. Women claim that men do not take responsibility for their share of reproductive health. Improvement of the national health sector is one of the CMRN's priorities. Violence against women is still common, and female genital mutilation is widespread.

WORK

Most of the population—80 percent—works in agriculture, the majority growing food for themselves, especially rice and cassava. Many people sell their fruits, vegetables, palm oil, cloth, or yogurt at public markets and roadside stands, using small-scale trade to meet their needs. Bargaining is fierce. Those who produce cash crops grow coffee, palm kernels, bananas, pineapples, and sweet potatoes. Logging can also be profitable, though deforestation is limiting the viability of that trade. One-fifth of the workforce is employed in industry and services. Mining is one of the more lucrative industries, accounting for 75 percent of exports in 1999; bauxite mining is especially profitable. Most people are illiterate and thus unable to hold more technological jobs, which for the most part do not exist anyway.

Employment and Labor

Labor Force Total: 3,000,000

EDUCATION

Guinea has introduced free, universal, and compulsory education for six years, from ages seven to 13. However, this requirement has had little effect on school enrollment rates, which remain low: 36 percent in the primary age group (five to 14) and 16 percent in the secondary age group (15 to 19), for a combined enrollment rate of 26 percent. Girls in particular are likely to be kept out of school to work. Schools do not have adequate supplies, and there are severe shortages of teachers. The national literacy rate is very low, at only about 36 percent; for women the rate is close to 22 percent.

Schooling consists of 12 years, as divided into six years of primary school, three years of the first cycle of secondary school, and three years of the second cycle of secondary school. French curricula and degrees have been retained, but under Touré history and social studies were Africanized. Primary studies are nonspecialized, and secondary studies consist of 40 percent general coursework, 20 percent vocational instruction, and 40 percent productive activities. The academic year runs from September to July. The medium of instruction is French, but eight vernaculars have been added to the curriculum below the fourth grade. Guinea has no university, but there are three institutions of higher learning, including two polytechnics and the Higher School of Administration.

The United States has been contributing money to Guinea's education system. In 2004 President George W. Bush's Africa Education Initiative gave 500,000 textbooks to schools. School attendance for the youngest students increased in 2002–03, giving the government cause for hope.

SCIENCE AND TECHNOLOGY

Guinea does not have an advanced technological infrastructure. Electricity is uncommon and unreliable and most people cannot read. There were only about 26,000 land telephone lines in use in 2003, though there were well over 100,000 cellular telephones. In 2004 there were about 300 Internet hosts, with 40,000 users.

MEDIA

The state controls much of the media, including the nation's only daily newspaper and the radio and television stations. The government does not allow itself to be criticized and restricts coverage of the opposition. The government is allowed to censor publications. There are more than 10 private newspapers that do criticize the government, but the high cost of printing forces them to publish either weekly or even less frequently. The state-run television station is Radiodiffusion-Télévision Guinéenne (RTG); RTG also runs the state radio station, which broadcasts in French, English, and several local languages.

CULTURE

There is a great deal of traditional culture in Guinea. People still listen to traditional music, although modern music is becoming more popular. Musicians have been blending African musical styles with Western instruments. Guinea has a recording label called Syliphone, which has produced numerous recordings of various musical genres. The Malinké people produce little in the way of art, aside from some antelope carvings, unlike their neighbors in Mali.

FOLKLORE AND MYTHOLOGY

Many Guineans still hold their traditional animist beliefs and follow the rituals their ancestors have used for centuries. Most tribes have creation myths that feature gods who are unhappy with their human creations and try to destroy them in some way. Humans are left to take care of themselves, but they often attempt to build ladders to reach heaven and communicate with the deities. The gods who take an interest in earthly matters usually enjoy earthly activities themselves, such as hunting and drinking. The deities often use animals as a medium of communication with humans.

ENTERTAINMENT AND RECREATION

Guinea's cities have a spirited public life during both day and night. Street celebrations and public musical performances are common. Cafés and restaurants serve patrons strolling down the boulevards. Most of Guinea's big events are established by the Muslim calendar and include Ramadan and Tabaski. Outdoor recreational options include swimming at the beaches near Conakry and hiking in the interior.

ETIQUETTE

For the most part behavior is casual and people are friendly. People shopping in markets are expected to bargain for their purchases. Foreign visitors and wealthy locals are expected to tip about 10 percent in hotels, restaurants, and taxis. In Muslim areas, people act more modestly and follow Muslim practices.

FAMILY LIFE

Men and women are supposed to be equal in families, but in rural areas wives do not have the same freedoms as their husbands. Inheritance laws favor male heirs, putting pressure on women to bear sons. Women bear the burden of subsistence farming and raising children.

Many men still have more than one wife, though polygyny is illegal. When a divorce occurs, the man usually receives the lion's share of assets and the custody of children. Many girls marry at a very early age—as young as 11 years in some parts of the forest, although such marriages are illegal.

PERSONAL APPEARANCE

Most people dress in brightly colored cotton robes. Households grow indigo plants and use these to dye cloth themselves, often in bright patterns. Men often wear Western shirts and shorts or pants. Businessmen usually wear safari suits without ties. Women typically carry burdens on top of their heads.

SPORTS

Guineans enjoy sports of all kinds. Soccer is the favorite, but they also enjoy basketball, volleyball, running, and other sports. The government's Ministry of Youth and Sport oversees national sports programs for young people. Guinea has a good national soccer team, but the sport's international governing body, FIFA, banned the team from international competition in 2001 after Guinea's government refused to reinstate the national soccer association it had dissolved earlier that year.

CHRONOLOGY

- 1958** Republic of Guinea is proclaimed, as Guineans overwhelmingly reject the French Community in national referendum.
New constitution is promulgated.
- 1960** Guinea withdraws from the franc zone, establishes the Central Bank of the Republic of Guinea (Banque Centrale de la République de Guinée), and introduces the Guinean franc as the national currency.
- 1961** The Guinean school system is secularized and nationalized.
A teachers' union strike is put down, and the Soviet ambassador is expelled for alleged complicity in the strike.
- 1965** Diplomatic relations with France are suspended over French support for Guinean dissidents.
- 1966** The U.S. Peace Corps is expelled, and the American embassy in Conakry is attacked.
Kwame Nkrumah is named copresident of Guinea following his overthrow in Ghana.
- 1968** The "Cultural Revolution" is launched, and de-Westernization programs are intensified.
Sekou Touré is reelected president.

- 1969** Over 1,000 Guineans, including three cabinet ministers, are arrested in the so-called Labe Plot.
- 1970** Portuguese-backed Guinean dissidents mount a sea-borne invasion of Conakry. The invasion is foiled. In the aftermath of the invasion, mass purges are ordered by Touré. Nearly 10,000 are arrested, and over 100 are sentenced to death. Over 250 are convicted and sentenced to life imprisonment, including the Roman Catholic archbishop of Conakry.
- 1972** The office of the prime minister is created, and Louis Lansana Beavogui is named to the post. The syli is introduced as the national currency.
- 1973** Local revolutionary authority (*pouvoir révolutionnaire local*) is created as the basic unit of village-level administration.
- 1974** In extensive constitutional changes the PDG is elevated as the supreme state organ. Touré is reelected to a third seven-year term.
- 1978** At a meeting in Monrovia, Liberia, Guinea and five other nations—Senegal, Côte d'Ivoire, Liberia, Togo, and Gambia—sign a treaty of non-aggression and mutual assistance. Touré meets with Leopold Senghor of Senegal and Félix Houphouët-Boigny of Côte d'Ivoire in a Summit of Reconciliation at Monrovia. Diplomatic relations with Senegal are reestablished. The country is renamed the Popular and Revolutionary Republic of Guinea.
- 1979** Private enterprise is legalized. Ten ministers are dismissed in a government reshuffle. In legislative elections, voters approve list of 210 candidates to the National Assembly. Touré visits the United States for the first time and meets with President Carter. Two hundred political prisoners are released, out of the more than 2,000 believed to be held in Guinean jails.
- 1984** President Touré dies. Before PDG names a successor, the army seizes power and installs the Military Committee for National Redress (CMRN), with Col. Lansana Conté as head. The CMRN dissolves the PDG, suspends the constitution and the National Assembly, and releases all political detainees.
- 1985** Diarra Traoré leads an unsuccessful coup. He is arrested and immediately executed.
- 1989** Conté promises a return to a two-party system.
- 1990** A new constitution authorizing the transitional government is adopted.
- 1992** Parliamentary elections are postponed twice by President Conté.
- 1993** Facing seven opponents, Conté is reelected president with 51 percent of the vote.
- 1995** Parliamentary elections are finally held after more than two years' delay. The ruling Party for Unity and Progress wins a majority of seats.
- 1996** Nearly a quarter of the military riots in the streets of Conakry, demanding higher pay and better working conditions. Thirty are killed, and the presidential palace is set ablaze in the melee. Conté dismisses his defense minister and negotiates with the protesters.
- 1998** Conté is reelected. Immediately thereafter Conté jails Alpha Condé, the leader of the opposition Guinean People's Rally (RPG), raising public criticism.
- 1999** Political unrest in Sierra Leone spills into Guinea.
- 2000** Sierra Leone militants again enter Guinea, some taking Guinean hostages.
- 2001** In a poll that is boycotted by the opposition, voters approve President Conté's proposal to extend the presidential term from five to seven years.
- 2002** Guinea, Sierra Leone, and Liberia agree on a plan to stop insurgency and secure borders.
- 2003** Conté wins a third term as president. Opposing parties boycott the election.
- 2004** Prime minister François Lonseny Fall resigns during visit to the United States. Cellou Dalein Diallo is appointed to the post.
- 2005** Alpha Gondé returns from exile.

President João Bernardo Vieira (from 2005)

HEAD OF GOVERNMENT

Prime Minister Aristides Gomes (from 2005)

NATURE OF GOVERNMENT

Democracy

POPULATION

1,416,027 (2005)

AREA

36,120 sq km (13,946 sq mi)

MAJOR ETHNIC GROUPS

Balanta, Fula, Manjaca, Mandinga, Papel

LANGUAGES

Portuguese (official), Crioulo

RELIGIONS

Animism, Islam

UNIT OF CURRENCY

Communauté financière d'Afrique franc (CFA franc)

NATIONAL FLAG

Three stripes two horizontal, yellow over green at the fly, and a red vertical at the hoist, with a black star in the center of the red stripe

NATIONAL EMBLEM

A green wreath on the left and right flanking a black star at the top and the national motto *Unidade, luta, progresso* (Unity, struggle, progress) and a yellow seashell at the bottom.

NATIONAL ANTHEM

"This Is Our Well-Beloved Land"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 20 (National Heroes' Day), March 8 (International Women's Day); May 1 (Labor Day), August 3 (Day of the Martyrs of Colonialism), September 24 (Independence Day), November 14 (Day of the New Order), December 25 (Christmas Day)

DATE OF INDEPENDENCE

September 24, 1973 (de facto), September 10, 1974 (de jure)

DATE OF CONSTITUTION

May 16, 1984; amended 1991, 1993, 1996

GEOGRAPHICAL FEATURES

Guinea-Bissau is on the coast of West Africa and occupies a total land area of 36,120 sq km (13,946 sq mi), including land under water during high tides. The country extends 336 km (209 mi) north to south and 203 km (126 mi) east to west. Its Atlantic coastline stretches 398 km (247 mi). Guinea-Bissau shares its total international land boundary of 724 km (450 mi) with two countries: Senegal (338 km; 210 mi) and Guinea (386 km; 240 mi).

Guinea-Bissau consists of a mainland, the Bijagos Archipelago, and various coastal islands, such as Jeta,

Bolama, Melo, Pecixe, Bissau, Areicas, and Como. The Bijagos Archipelago consists of over 18 islands, among them Caravela, Caraxe, Formosa, Uno, Organo, Orangoziinho, Bubaque, and Roxa. The mainland relief consists of a coastal plain and a transition plateau forming the Planalto de Bafata in the center and the Planalto de Gabu abutting the Fouta Djallon. The highest elevation is 244 m (80 ft), in the southeast.

The country is drained by a number of meandering rivers flowing into the Atlantic through wide estuaries. The main rivers are Cacheu, also known as Farim for part of its course; the Mansoa; the Gêba; the Corubal;

Guinea-Bissau

the lower course of the Rio Grande; and on the southern border with Guinea, the Cacine. These rivers provide the principal means of transportation. Oceangoing vessels of shallow draught can reach most of the main towns, and flat-bottomed tugs and barges can reach smaller settlements, except those in the northeast.

CLIMATE AND WEATHER

Guinea-Bissau has a typical tropical climate with two seasons: a dry season from December to May and a rainy season from June to November. April and May are the hottest months; December and January are the coolest; August is the rainiest. Rainfall is abundant and exceeds 1,980 mm (78 in) in the north. The maximum temperature is 30°C (86°F), the minimum about 25°C (77°F). During the dry season the prevailing wind is the hot, dry harmattan blowing from the desert.

Climate and Weather

Mean Temperature: 77°F to 86°F
 Average Rainfall: 88 in

FLORA AND FAUNA

Guinea-Bissau has a great diversity of animal and plant life. Mangroves and rain forests grow along the coast, while inland is savanna. Swamp estuaries are especially rich in plant and animal life. None of this area is protected, and all flora is endangered by overgrazing, soil erosion, and deforestation. Many fruit trees and cashew trees grow in the country. Animals that live in Guinea-Bissau include crocodiles, African buffalo, hippopotamuses, elephants, birds, lizards, and chimpanzees. The coastal areas are rich in fish, but overfishing is a problem.

ETHNIC COMPOSITION

Guineans may be broadly divided ethnically into mulattos, of mixed African and non-African backgrounds; *assimilados*, of Guinean stock; and *indigenas*, or Africans proper, who constitute 95 percent of the population. There are five principal African ethnic groups: the Balante of the central region (30 percent), the Fulani of the north (20 percent), the Malinke of the north-central region (13 percent), the Mandyako (14 percent), and the Pepel of the coastal area (7 percent). Most Africans are farmers who still hold to traditional animist beliefs.

The small foreign community consists mainly of Lebanese and Syrian traders and Cuban advisers, who have been temporarily assigned from Cuba to help in the reconstruction of the country. No Americans are known to reside permanently in the country.

LANGUAGES

The official language is Portuguese, but the lingua franca and trade language is Crioulo, an Africanized Portuguese patois. Most people speak the language of their ethnic group. Many people speak French.

RELIGIONS

Guinea-Bissau is a predominantly animist country, where over 50 percent of the population adheres to traditional religious beliefs. Some 45 percent of the population, mainly Malinke and Fulani tribesmen, are Muslim.

Christians account for less than 5 percent of the population, and their influence is marginal. There is an apostolic prefecture at Bissau.

Religious Affiliations	
Indigenous Beliefs	708,000
Muslim	637,000
Christian	71,000

HISTORICAL BACKGROUND

The earliest known inhabitants of Guinea-Bissau were the Baga, who came from the east. The Portuguese explorer Nuno Tristão arrived in the region in 1446 and established the first trading posts; he was followed by the French and British, who set up trading posts in the 17th and 18th centuries. The slave trade expanded in the 17th century, centering around the port of Bissau. British claims to the coastal region were dismissed by arbitration in 1870.

Guinea-Bissau was under Portuguese rule from 1879, when it was made a Portuguese dependency subordinate to Cape Verde, to 1974, when the country won its independence after a 17-year underground struggle. Guinea-Bissau was not a settler colony; Portuguese influence on the interior, which was not effectively occupied until 1920, was nominal. Guinea-Bissau became a Portuguese overseas province in 1951, but five years later a group of dissident Cape Verdeans founded an underground movement known as Partido Africano da Independência da Guiné e Cabo Verde (PAIGC), with Amílcar Cabral as secretary-general. The long struggle that followed took a heavy toll in men and material and undermined the Portuguese administrative apparatus. By 1973 PAIGC was in virtual control of the country, and its unilateral declaration of independence was accepted by the United Nations. When Portugal finally granted *de jure* independence in 1974, it represented not so much an act of statesmanship as one of capitulation.

At independence Luiz Cabral, the brother of Amílcar, became president. He was reelected in 1977, and João Bernardo Vieira was designated vice president; Vieira became prime minister the following year. PAIGC became the sole political party and was synonymous with the state. However, the armed forces would exercise decisive political influence.

In November 1980 Cabral was overthrown in a coup led by Vieira. Cabral was placed under house arrest and later exiled to Cuba. The coup stemmed from a long-standing struggle between the blacks of Guinea-Bissau and the mulattoes of Guinea-Bissau's sister republic, Cape Verde. Although both were Marxist-leaning countries and former Portuguese colonies, there were splits between the two because of racial animosity and the issue

of unification. Cabral was a mulatto from Cape Verde, and Vieira was a black from the mainland. A special party conference in 1981 legitimized the new regime and reaffirmed its socialist orientation.

Politics in Guinea-Bissau during the 1980s were characterized by instability, with frequent changes of ministers, constitutional amendments, and several attempted coups. In 1984 Prime Minister Victor Saúde Maria was dismissed, the office of prime minister abolished, and the presidency strengthened. The following year Paulo Correia, the first vice president and minister of justice, was accused of plotting a coup against Vieira. He was executed after a trial in 1986.

Beginning in 1983 Vieira initiated a plan of economic liberalization designed to reduce state controls over trade and the economy. In 1990 Guinea-Bissau began the process of becoming a multiparty state. In the country's first multiparty elections, held in 1992, President Vieira was reelected handily.

In May 1999 President Vieira was overthrown in a military coup led by Gen. Ansumane Mané. General Mané was appointed president of the National Assembly, and Malan Bacai Sanhá was named president. In January 2000 runoff elections, Kumba Yalá of the Social Renewal Party was elected president with a 72 percent electoral majority. After an uneasy coalition government with the former military junta was established briefly, in November 2000 General Mané and eight of his supporters were killed in a clash with government forces. President Yalá worked to continue to establish civilian control of the government.

The economic and political situation in Guinea-Bissau failed to improve in the early 2000s, and many people blamed Yalá. Yalá himself appeared increasingly unstable and erratic. He dismissed foreign minister Antonieta Rosa Gomes for criticizing him, fired prime minister Faustino Imbali for failing to meet expectations, and claimed that the army was trying to stage a coup in 2001. In late 2002, after continuing disagreements with his prime minister, Yalá announced his intention to dissolve parliament and hold early elections. The following September 14 the military ousted him in a bloodless coup.

The new civilian administration was sworn in on September 28, 2003. The new interim leaders were president Henrique Rosa and prime minister António Artur Sanhá. Political and military leaders agreed to hold new elections. The following March the PAIGC once again won a majority of legislative seats. President Rosa appointed a new prime minister, Carlos Gomes Júnior, on May 9. In July 2005, Vieira, who had returned from exile a few months earlier, won presidential election.

LIST OF MODERN RULERS

1973–80 Luís de Almeida Cabral (chairman of the Council of State)

1980–84	João Bernardo Vieira (chairman of the Council of the Revolution)
1984	Carmen Pereira (president of the National People's Assembly)
1984–94	João Bernardo Vieira (chairman of the Council of State)
1994–99	João Bernardo Vieira (president)
1999	Ansumane Mané (commander of the military junta)
1999–2000	Malam Bacai Sanhá (acting president)
2000–03	Kumba Yalá (president)
2003	Veríssimo Correia Seabra (interim president)
2003–2005	Henrique Rosa (interim president)
2005	João Bernardo Vieira (president)

CONSTITUTION

The Republic of Guinea-Bissau returned to a form of constitutional government in 1984. Under the May 1984 constitution the African Party for the Independence of Guinea and Cape Verde (PAIGC) was “the guiding political force of Guinea-Bissau society and the state.” The constitution established a 15-member Council of State headed by President Vieira. All powers remained concentrated in the hands of the president, whose legitimacy came from a nomination by the PAIGC general congress. Elections at the district, regional, and national levels were controlled by the party. In 1991 a multiparty system was approved, and the constitution was amended several times, in 1991, 1993, and 1996. Legislative power is now vested in the National People's Assembly, whose 102 members are directly elected to four-year terms. The legislature elects the Council of State and its prime minister, who heads the government. The country's first multiparty elections were held in 1994.

PARLIAMENT

The national legislature is the National People's Assembly, a unicameral body of 102 members elected or appointed for terms of four years. The assembly meets at least once a year. The most recent election was held in 2004.

The constitution provides for universal adult suffrage over 18. The country's first multiparty election was held in January 1994.

POLITICAL PARTIES

The country has more than 10 active political parties. The largest political party is the Partido Africano da Independência da Guiné e Cabo Verde (PAIGC), which was founded in 1956 and was the ruling party of Guinea-Bissau and Cape Verde up until the coup in 1980 and a leading

institution until the November 1999 elections. Resistência da Guiné-Bissau–Movimento Bah-Fatah was formed in 1986 as a party in exile and continues to operate outside the country, with offices in Paris, France. The Partido para a Renovação Social (PRS) is a social democratic party formed in 1992. União para a Mudança is a coalition party that sought to challenge the ruling party in the 1995 elections. Frente de Luta para a Libertação da Guiné is an external opposition party that was founded in 1962 but did not become legally registered until 1992. The remaining parties have historically accounted for less than 10 percent of the vote. In 1999 the PRS won 38 of 102 National Assembly seats, ending 26 years of domination by the PAIGC. In the 2004 legislative elections the PAIGC once again dominated, winning 45 of the 102 seats.

LOCAL GOVERNMENT

For purposes of local administration, Guinea-Bissau is divided into three provinces, each subdivided into regions, sectors, and villages. Party committees are organized at each level. The nine regions are Bafata, Biombo, Bissau, Bolama, Cacheu, Gabu, Oio, Quinara, and Tombali; there has been talk of changing the name of Bolama to Bolama/Bijagos. Each region has a regional council, consisting of elected representatives from its sectors. There are sector state committees at the sectoral level. The lowest unit of administration is the *tabanca* (village). In addition, there are nine municipalities also administered by party committees.

LEGAL SYSTEM

The judicial system is headed by the Supreme Court, which is led by nine justices appointed by the president. The Supreme Court is the final court of appeals for both criminal and civil cases. Each of the nation's nine regions has its own regional court, which is the first level of appeal for sectoral court decisions and which serves as a trial court for all civil cases valued at over \$1,000 and all felony criminal cases. The nation's 24 sectoral courts hear misdemeanor criminal cases and civil cases under \$1,000. Sectoral court judges do not have to be trained lawyers.

The judiciary is known to be influenced by the desires and money of politicians. There is no published civil or criminal code. Habeas corpus based on the Portuguese penal code exists in urban areas but is generally not observed in rural areas, where traditional law prevails. There are no bail procedures. In rural areas nonpolitical offenders in other than the most important criminal and civil cases are often tried outside the formal court system, under traditional law. The private practice of law is prohibited. Defendants are assigned legal assistants from the Ministry of Justice when available. The interval between arrest and trial may be lengthy.

HUMAN RIGHTS

Guinea-Bissau has a bad human rights record with many violations. The army and police tend to abuse people, beating, harassing, and arbitrarily imprisoning their enemies. Rebel forces have looted, robbed, beaten, and otherwise assaulted civilians. Occasional killings are the rule, and the government never punishes its armed forces for abuses. Prison conditions are bad, and the government often holds prisoners without allowing them any communication. The judicial system is notoriously corrupt. Violence against women is common, as is female genital mutilation. Child labor and child slavery occur, and the army is known to recruit child soldiers. The government has interfered with journalistic freedom and the privacy rights of ordinary citizens.

On the positive side, elections are for the most part free and fair, and citizens are permitted to vote.

FOREIGN POLICY

Guinea-Bissau maintains a nonaligned foreign policy. It is a member of the United Nations and various other international groups, including the World Bank, the International Monetary Fund (IMF), and the World Health Organization (WHO) as well as many African organizations. Guinea-Bissau has abandoned its earlier orientation toward the former Communist bloc in favor of better relations with Portugal and other Western nations. A border dispute with neighboring Senegal led to clashes in 1990 and to the Senegalese bombing of a Guinea-Bissau border village in 1995. Both countries agreed to abandon hostilities and signed an agreement to share equally in offshore mineral and energy resources. In recent years Cape Verde has drifted away from its original links with Guinea-Bissau, which were prominent during the common liberation struggle. The eventual merger of the two countries mentioned in the 1984 constitution now appears impossible.

The United States broke off relations with Guinea-Bissau in 1998 and currently has no diplomatic representation there. The Peace Corps withdrew at the same time. Numerous other countries still maintain embassies in the country or conduct negotiations with Guinea-Bissau through their embassies in Senegal.

The United States has nevertheless provided aid to Guinea-Bissau since it declared independence, since 1998 furnishing over \$800,000 for the purpose of removing land mines, \$1.6 million in food aid, and \$3 million for state building. Before 1998 the United States also provided educational and military aid.

DEFENSE

The Guinean armed forces, known as the People's Revolutionary Armed Forces (FARP), are headed by the pres-

ident, and the line of command runs through the state commissioner for the armed forces. The FARP is manned mainly by Balanta and Nalu tribesmen. The nation spent 2.8 percent of its gross domestic product (GDP), or \$8.4 million, on the military in 2003. Guinea-Bissau has a defense treaty with Senegal, apparently directed against Guinea, which claims two of the Piolu Islands in southwestern Guinea-Bissau.

The Ministry of the Interior maintains a police force that is charged with handling internal security, but it lacks funds and training and so is ineffectual.

ECONOMY

Guinea-Bissau is one of the 10 poorest countries in the world. Per capita income was only \$800 in 2003, and the economy suffered a 7 percent decline in 2004. External debts and very high unemployment have made it difficult for the nation to revive its economy from the slump it suffered during the war in the late 1990s. In particular, the nation has been unable to repair the damage done to infrastructure during fighting. The population supports itself through fishing and subsistence farming. Cashews have become the major cash crop, and Guinea-Bissau is now sixth in the world in cashew production. Other exports include fish, timber, peanuts, and palm kernels. There are unexploited oil reserves off the coast, but the country has not yet had the financial ability to exploit those and other mineral resources. Income distribution is extremely unequal, with most of the nation's money in the hands of very few people. The government has not managed to implement a coherent economic policy, and prospects for economic growth in the near future are not good.

ENVIRONMENT

Guinea-Bissau is a country nearly completely dependent on its natural resources for survival. However, it faces a number of environmental challenges, including deforestation, soil degradation because of poor farming techniques, water contamination, and coastal degradation. The country suffers from extensive brushfires, which burn large portions of its forests each year. In recent years agricultural areas have suffered from droughts, which have increased soil erosion and concerns over water quality and access. The coastal waters have been overfished.

The low-lying coastal areas flood frequently; flood waters occasionally cover as much as one-third of the country. Rice farming in these areas is destroying the native mangrove swamps, while peanut farming is depleting the soil of nutrients.

The nation is party to several environmental treaties, including treaties on climate change, biodiversity, endangered species, wetlands, desertification, and the Law of the Sea. Guinea-Bissau has designated several national parks, including the Bolama-Bijagos Biosphere Reserve, the Cacheu Natural Park, the Cantanhez Natural Park, and the Cafada Natural Park.

LIVING CONDITIONS

Living conditions are for the most part very poor. Most people are subsistence farmers and live in primitive conditions. There are some good hotels, restaurants, and houses, but these are available only to the wealthiest people and visiting foreigners. Most people use cash for financial transactions; credit cards are uncommon, as are banks. Roads are mostly unpaved and become impassible during the rainy season. During wet months canoes and boats are often better transportation options. There are no bridges, so any river crossing involves a ferry or boat, such as a motor-canoe. Few people own automobiles.

Public transportation consists of bush taxis, minibuses, and trucks. There are no internal flights.

Some areas of the country are still plagued by fighting and are quite dangerous; muggings and landmine injuries occur frequently. This problem is especially bad near the Senegalese border.

HEALTH

Guinea-Bissau has major health problems. The infant mortality rate is 109 deaths per 1,000 live births. On average, each woman has five children. Life expectancy is only 47 years. Some 10 percent of the population is infected with HIV. Tropical diseases such as cholera, malaria, typhoid, yellow fever, schistosomiasis, and hepatitis A are endemic. Less than 60 percent the population has safe water to drink. There are very few doctors, and medical facilities are few and far between.

FOOD AND NUTRITION

Most people survive on domestically grown rice, Guinea-Bissau's main subsistence crop. To this rice people add vegetables and occasionally meat; monkey meat is common, though people also eat beef and goat. Within the city of Bissau, there are numerous restaurants, especially seafood restaurants and French-influenced patisseries. Almost all soft drinks and beers are imported. Local alcoholic beverages include palm wine, rum, and cashew rum.

STATUS OF WOMEN

The Constitution prohibits discrimination on the basis of sex, race, and religion. However, in practice discrimination persists. The National Women's Movement is active nationally. Women hold some senior government and party positions. The president of the National Assembly and the mayor of Bissau were both women in 1999. Political activity by women is officially encouraged at all levels. By statute, party organizations must have a stated proportion of women officeholders. Official discrimination against women in the modern sector of society does not take place.

In most rural sectors, however, traditional male-dominant sociological practices prevail, imposing attendant limitations on women. Physical violence, including beating, is an accepted means of settling disputes. There is no government agency or mechanism to report rape or other domestic abuse. Female genital mutilation is a widespread practice.

WORK

Guinea-Bissau suffers from high unemployment and an extremely low per capita income. The vast majority of people—82 percent—work in agriculture, most of them subsistence farmers, growing food to support their families and not to sell. Some people work growing cash crops such as cashews or as fishermen. The remainder of the workforce is employed by the government, industry, services, and commerce.

EDUCATION

The national adult literacy rate is 42.4 percent (58.1 percent for males and 27.4 percent for females).

Guinea-Bissau has introduced universal, free, and compulsory education, in principle, from ages seven to

13. Schooling consists of 11 years, as divided into six years for the basic first cycle, three years for the basic second cycle, and two years for the secondary cycle. The curriculum has been completely Africanized, but shortages of textbooks and educational materials plague the system. The academic year runs from October to July. The medium of instruction is Portuguese.

In 1985 there were 3,910 teachers, as compared to 30 in 1962; by 2000 there were over 4,600. Mass literacy campaigns have been launched by the PAIGC youth organization, Juventude Africana Amilcar Cabral (JAAC). The United States previously helped the nation with education but since withdrawing diplomatic relations in 1998 has not provided as much assistance.

Guinea-Bissau has no institution of higher learning.

SCIENCE AND TECHNOLOGY

Guinea-Bissau is not technologically advanced. Its electricity consumption is low. In 2003 there were slightly over 10,000 telephone lines in use, and there were only 1,300 cellular telephones. Internet use is still quite low.

MEDIA

Under President Kumba Yalá the media was seriously oppressed; journalists were imprisoned, and RTP Africa, the Portuguese broadcaster, was taken off the air. Since

Kumba Yalá's overthrow in 2003 the media has been rejuvenated.

Nô pintcha is the state-run newspaper. It was founded in 1990 and is published in Portuguese. Private newspapers include *Correio de Bissau*, *Fraskera*, and *Banobero*. Finances are tight at private newspapers because they must use the expensive state-run printing house. As of 2004 the government did not appear to be interfering excessively with the private newspapers.

Radiodifusão Nacional, the official station, broadcasts in shortwave, medium-wave, and FM. The domestic program is on the air for about 15 hours a day. Private radio stations are now allowed to broadcast as well. The country's only television station is Radio Televisão de Guinea Bissau (RTGB), although the Portuguese-managed RTP Africa, launched in 1997, does broadcast some programs.

CULTURE

Bissau's biggest cultural event is its carnival, which lasts for several days each February and involves the wearing of masks and costumes, dancing, and parades. Ramadan and Tabaski are the most important Muslim events. The nation's ethnic groups hold their own annual holidays.

Traditional music has much in common with the music of Gambia and Senegal. Typical instruments include the *kora*, a kind of harp made from a gourd covered with cowhide and strung with 21 fishing lines, and the *balafon*, a kind of xylophone. Dances are frenetic. Musical performers are called *griots*; they sing and tell stories and histories in verse. One of the most popular musicians in the country is Kaba Mané. Guinea-Bissau also has modern music that blends traditional styles with Portuguese and Spanish music. Salsa is popular.

FOLKLORE AND MYTHOLOGY

The majority of Guinea-Bissau's people hold traditional animistic beliefs, which vary by ethnic group and tribe. Many of these old traditions are displayed annually at the Bissau carnival, though people in the city tend to put aside tradition for the rest of the year. The Bjango people on the islands are notable for maintaining their traditional practices year-round. They conduct farming and initiation rituals in the presence of statues of the spirit Iran, who wears a top hat. During their rituals people wear elaborately carved animal masks, including representations of sawfish, sharks, bulls with real horns, and hippos so big the masks have attached legs.

ENTERTAINMENT AND RECREATION

The city of Bissau is the country's center for nightlife and urban culture. There are some historical sights for interested tourists; the Centro Artístico Juvenil, where local young people make arts and crafts; and two markets that sell fruit, crafts, and Senegalese-style clothing. There are also restaurants and nightclubs for people with the money to pay for them. Bicycling, swimming, hiking, and deep-sea fishing are popular pastimes.

ETIQUETTE

For the most part, behavior is casual. Businessmen usually wear safari suits without ties. Foreign visitors and wealthy locals are expected to tip about 10 percent in hotels, restaurants, and taxis. In Muslim areas people act more modestly and follow Muslim practices. It is a good idea to ask permission before photographing anything or anyone.

FAMILY LIFE

Many people follow traditional practices of arranging marriages. Parents meet with each other several times to negotiate marriage agreements, bringing gifts of local alcohol. Wedding ceremonies are accompanied by rituals and dancing, and after the marriage the bride undergoes a ritual washing that involves all the women in the village; all men must leave while this happens. The minimum age for marriage is 14 for girls and 16 for boys. Most women have many children—five is the average—but the infant mortality rate is high.

PERSONAL APPEARANCE

People wear casual clothing. Many people dress in a style similar to that of neighboring Senegal. Lightweight cot-

ton clothing is most common because of the hot weather. Modest attire is the rule in Muslim areas.

SPORTS

Guinea-Bissau does not have the money to fund many professional athletes, though it does have a national Olympic committee in Bissau.

CHRONOLOGY

- 1956** African Party for the Independence of Guinea and Cape Verde (PAIGC) is founded.
- 1973** PAIGC secretary-general Amilcar Cabral is assassinated. Aristides Pereira takes over leadership of the movement.
PAIGC unilaterally proclaims the establishment of the Republic of Guinea-Bissau.
United Nations welcomes the proclamation, by 97 votes to 30.
New nation adopts a constitution for itself.
- 1974** Military coup in Portugal is followed by cease-fire in Guinea-Bissau, ending 17-year insurrection. Negotiations follow with rebel leaders. By formal agreement Portugal acknowledges independence of Guinea-Bissau and withdraws all Portuguese troops from the territory.
- 1975** Aid agreements are signed with Portugal, France, the Soviet Union, China, Senegal, and other countries.
National People's Assembly passes legislation nationalizing most lands and domestic and foreign trade.
- 1976** Protocol is signed with Cape Verde providing for the integration of the judicial systems of the two countries as a prelude to political union.
- 1977** Guinea-Bissau attends France-Africa summit in Dakar, Senegal.
- 1980** President Cabral is ousted in a coup led by Prime Minister (Principal Commissioner) João Bernardo Vieira.
New Revolutionary Council is set up.
Relations with Cape Verde are broken, and the foreseeable prospect of a union between the two countries is shattered.
- 1984** A new constitution is promulgated, suspending the military administration.
President Vieira is elected as president for a five-year term.
Prime Minister Victor Saúde Maria is ousted along with other left-wingers in the cabinet.
- 1985** Col. Paulo Alexandre Nunes Correia and a number of other prominent military and civilian officials are accused of attempting to overthrow the government.

- 1986** Correia and five of his associates are executed.
- 1990** Vieira announces movement toward a multiparty system.
- 1991** Government officially legalizes opposition political parties.
- 1994** Vieira defeats seven opponents to retain the presidency of the country.
- 1997** Vieira is reelected prime minister.
- 1998** Former army chief of staff Ansumane Mané attempts to overthrow the government led by Vieira. United States withdraws embassy staff and ends diplomatic relations.
- 1999** The country again erupts into civil war.
- 2000** In national elections the Party for Social Renewal (PRS) defeats PAIGC. In presidential elections, Kumba Yalá of the PRS defeats incumbent Malan Bacai Sanhá. Alamara Nhassé is named prime minister. Mané is killed, allegedly trying to stage a coup against Yala.
- 2001** World Bank suspends aid, claiming that millions of dollars from development funds have disappeared under Guinea-Bissau's watch. Yalá behaves erratically, sparking concern. Foreign minister Rosa Gomes is dismissed for criticizing Yalá's behavior. Army is accused of attempting a coup.
- 2002** Yalá announces plan to dissolve parliament and hold early elections.
- 2003** Yalá is ousted in military coup. Interim president Henrique Rosa and interim prime minister António Artur Sanhá are sworn in.
- 2004** PAIGC once again gains majority in parliament. Soldiers mutiny, demanding payment of outstanding wages, and kill head of armed forces. Carlos Gomes Júnior is sworn in as prime minister.
- 2005** Vieira returns from exile and wins presidential elections.

NATIONAL FLAG

Green field, with a red triangle half the width of the flag edged with black superimposed on a yellow triangle the width of the flag edged with white, both pointing toward the fly

NATIONAL EMBLEM

A white shield flanked by gold and black indigenous jaguars rampant, one holding a sugarcane stalk and the other a miner's pickax. The shield is divided by three wavy blue lines. The upper half displays the Victoria Regina lily, the national flower, and the lower half the Canje pheasant, with red feathers and white breast. The design is crested by a golden helmet mantled in blue and white, bearing a candy-striped wreath and the blue-feathered headdress of an Amerindian chief with two diamonds in the headband. Beneath the emblem is the national motto, One People, One Nation, One Destiny, on a red and gold riband.

NATIONAL ANTHEM

"Dear Land of Guyana, of Rivers and Plains"

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 23 (Republic Day, National Day), May 1 (Labor Day), first Monday in July (Caribbean Day), August 1 (Commonwealth Day), October 24 (UN Day), various Christian festivals, including Easter Monday, Good Friday, and Christmas, various Hindu and Islamic festivals

DATE OF INDEPENDENCE

May 26, 1966 (from England); February 23, 1970 (became republic)

DATE OF CONSTITUTION

October 6, 1980

GEOGRAPHICAL FEATURES

Guyana, on the northern coast of South America, has an area of 214,970 sq km (83,000 sq mi), extending 807 km (501 mi) north to south and 436 km (271 mi) east to west. The length of the Atlantic coastline is 459 km (285 mi). Guyana shares its total international boundary of 2,462 km (1,529 mi) with three countries: Brazil (1,119 km; 695

mi), Venezuela (743 km; 461 mi), and Suriname (600 km; 372 mi).

Guyana is divided into three major geographical zones: a coastal plain, a forest zone, and a grass-covered savanna. The coastal plain, about 15–65 km (10–40 mi) wide, is made up of alluvial mud from the Essequibo River, but much of the plain is below sea level by as much as 1.2–1.5 m (4–5 ft) at high tide. A barrier of swamps

Guyana

divides the plain from the interior forest zone, which occupies over 80 percent of the land area. Geologically, the zone consists of an eroded plateau from which hill ranges

known as the Pakaraima Mountains and the Kaieteurian Plateau rise. The savanna zone includes the Rupununi River valley in the extreme southwestern part of an in-

intermediate savanna about 95 km (60 mi) inland from the Berbice (northeast) coast.

CLIMATE AND WEATHER

Guyana has a subtropical climate with two rainy and two dry seasons. Although there are high temperature ranges in the interior mountains, nowhere are they extreme, and in general temperatures are moderated by sea breezes throughout the year. Georgetown's mean temperature is 26.6°C (80°F), with a daily range of less than 11°C (20°F). Temperatures in the Rupununi River valley range from 18.9°C (66°F) to 39.4°C (103°F), with the higher range common during the long dry season from August to May.

The coastal rainy seasons are from April to July and from November to January; in most years rain falls for 200 days. The amount of rainfall increases moving up the coast, from an average of 2,280 mm (90 in) in Georgetown to 3,560 mm (140 in) in the forest zone. Humidity is high throughout the year.

Climate and Weather

Mean Temperature
 Georgetown: 80°F
 Rupununi River Valley: 66°F to 103°F
 Average Rainfall
 Georgetown: 90 in
 Forest Zone: 140 in

FLORA AND FAUNA

The vast majority of Guyana is covered with jungle, most of it unexplored and unexploited; only about 15 percent of the land is inhabited by humans, most of whom live on the

coastal plains. The area contains some of the world's best tropical rain forests, with profusions of trees and flowers. A variety of tropical animals live there, including toucans and other colorful birds, many types of monkeys, ocelots, and tapirs as well as an assortment of reptiles, amphibians, and insects. The southwestern part of the country is savanna grasslands, which are home to termites who live in gigantic mounds. This is also the area people use to graze cattle.

ETHNIC COMPOSITION

Guyana has a varied ethnic composition, with seven definable groups. Ethnicity is an important element in the nation's political, economic, and cultural life.

Most of the East Indians came to Guyana between 1844 and 1917 under what was known as the indenture system. Unlike Africans, East Indians were permitted to retain their cultural, religious, and linguistic traditions. Their cultural isolation was reinforced by the compulsory education law of 1871, which exempted them from attending Christian schools. Bound by strong kinship and family ties, the East Indians have developed into a cohesive community with few Guyanese attachments other than to their land. Most East Indians live in rural villages as farmers and have avoided participation in politics, government service, and social activities. Their resistance to assimilation poses the gravest threat to national integration.

The Afro-Guyanese, who form the largest minority, are descendants of slaves imported from the Guinea coast of West Africa. They form the most mobile sector of the population and the predominant working class in

the larger towns and cities. They are actively involved in politics and occupy the most important positions in the national government.

The mixed, or mulatto, group forms the second largest minority in Guyana. This group formerly held a privileged position in society and are often better educated and wealthier than other Guyanese. The small Chinese minority has been completely assimilated as a result of frequent intermarriages with Africans. Most Chinese have converted to evangelical Christianity and retain few of the traditional bonds of overseas Chinese. The Amerindians, the original inhabitants of the land, form three linguistic families: Warrau, Arawak, and Carib. There are six Carib-speaking groups—Carib, Akawaio, Patamona, Arekuna, Makusi, and Waiwai—most of whom live in the interior.

Permanent Western communities include British and Portuguese nationals, who generally do not identify themselves with the Guyanese.

LANGUAGES

English is the official language, though many people also speak Guyanese Creole. People from different ethnic groups speak a number of vernaculars, such as Hindi (Hindustani), Urdu, Portuguese, and Chinese, used by the older immigrants; English is gradually displacing all of these languages. Amerindians speak languages belonging to three linguistic families: Warao, Arawak, and Carib.

RELIGIONS

The religious affiliations of the Guyanese correspond to the ethnic patterns. About 50 percent declared themselves as Christian, 35 percent as Hindu, and 10 percent as Muslim. The largest Christian denomination is the Anglican Church of the West Indies. The Roman Catholics are mostly drawn from the Amerindian and Portuguese populations. Christian values predominate in Guyana, although they are coming into conflict with the traditions of the East Indians. There remains a natural tendency to split along ethnic and religious lines and to find solidarity and identity as members of religious groups rather than as members of the Guyanese nation.

Religious Affiliations

Christian	380,000
Hindu	270,000
Muslim	75,000
Other	38,000

HISTORICAL BACKGROUND

The aboriginal inhabitants of the Guyanese coast were Carib Indians, who had driven the peaceful Arawak north and westward into the Antilles. The first European settlers in Guyana were the Dutch, who founded the settlement of Kijkorveral in 1616. In 1621 the colony was placed under the direction of the West Indian Company of the Netherlands, which administered it for the next 170 years. The British then began migrating to the colony in large numbers and by 1760 constituted a majority of the population of Demerara. The British occupied the colony in 1796 and again in 1803 and gained formal possession in 1814. The two most important events in the early years of the British administration were the abolition of slavery in 1837 and the institution of the indenture system, under which thousands of coolies were imported from India from 1844 through 1917.

The colony was granted full self-government in 1961 and final independence in 1966.

Guyanese politics has been characterized by conflicts between the urbanized Africans and rural East Indians. In the years before independence this was reflected in the conflict between the People's Progressive Party (PPP), led by Cheddi B. Jagan, and the People's National Congress (PNC), led by Forbes Burnham. The former was backed primarily by East Indians, the latter by Africans. The PPP won the general elections of 1957 and 1961 but was defeated in 1964, following the introduction of a system of proportional representation that made possible the formation of a coalition government composed of the PNC and the more conservative United Force (UF). Burnham became the premier of Guyana, remaining in office through independence within the Commonwealth in 1966 and the adoption of a republican government in 1970. His government won reelection in 1968 and 1973 amid charges of fraud and the 1968 withdrawal of the UF from the coalition.

Following the end of the coalition, Burnham pushed for measures to bring about a transition to socialism, beginning with the change to Cooperative Republic status in 1970 and continuing in succeeding years through the nationalization of all bauxite and major sugar-producing operations. At the same time the PNC increasingly attempted to present itself and the government as synonymous.

In 1980 a new constitution was declared in effect. It replaced the largely ceremonial office of the president with a powerful office of the same name that combined responsibilities of head of state, chief executive, and commander in chief of the armed forces. Forbes Burnham, for which the office was tailor made, declared himself president. That year the PNC was credited with an overwhelming majority in elections considered fraudulent by international observers.

In 1985 Forbes Burnham died and was succeeded by Vice President Hugh Desmond Hoyte. The general elec-

tions held in December of that year gave Hoyte a five-year mandate, again amid reports of widespread fraud. Hoyte made revitalization of the economy his chief priority, and in 1987 he announced the “roll-back of cooperative socialism.” During the late 1980s Hoyte, in return for International Monetary Fund (IMF) assistance, was forced to implement a stringent IMF-sponsored austerity plan, which resulted in social unrest and industrial disruption. His government was also buffeted by increasing demands for electoral reform. However, presidential and parliamentary elections promised for early 1991 did not take place.

Elections were held in 1992, and the U.S.-educated dentist Dr. Cheddi Jagan, the candidate of the PPP, was victorious. A committed Marxist, Jagan faced economic turmoil. He attempted to privatize several state industries and worked closely with the IMF to turn the country’s economy around. After his death in 1997 his wife, the American-born Janet Rosenberg Jagan, became president. In 1999 Jagan retired due to health problems, and Bharrat Jagdeo succeeded her. He was reelected president in 2001.

In 2000 a long-standing border dispute between Guyana and Suriname resulted in serious conflict when Guyana gave permission to a foreign oil company to explore the offshore area for oil, and Suriname sent gunboats to evict the rig. This dispute still had not been settled in 2004, when the United Nations created a special commission to intervene. During 2002 and 2003 the nation experienced a rash of crimes, which were partly due to political unrest started by the 2001 elections, which the opposition PNC had disputed. Matters had improved somewhat by 2004. The year 2005 began badly, with massive flooding in the capital city; the government declared the zone a disaster area.

LIST OF MODERN RULERS

1964–85	Forbes Burnham
1985–92	Desmond Hoyte
1992–97	Cheddi Jagan
1997	Sam Hinds
1997–99	Janet Rosenberg Jagan
1999–	Bharrat Jagdeo

CONSTITUTION

The constitution of 1980 established Guyana as a cooperative republic within the Commonwealth. The constitution is the supreme law of Guyana and prevails over all other laws. It includes a bill of rights based on the 1950 European Convention for the Protection of Human Rights and Fundamental Freedoms and the UN Covenant on Human Rights. The constitution secures a citizen’s

political and legal rights and guarantees the freedoms of property, religion, expression, association, assembly, and movement as well as freedom from discrimination. The constitution also spells out the social and educational rights of citizens and the rights of workers. Special protection is extended to Amerindians.

Under the 1980 constitution the largely ceremonial office of president was replaced by an executive presidency, which combined the responsibilities of head of state, head of government, and commander in chief of the armed forces. The office of prime minister, which was retained, was made subsidiary to the presidency, as were other cabinet positions, including a number of vice presidencies. Appointments to cabinet positions, including prime minister and vice presidents, are made by the president. The president is not directly elected but is chosen from the party with the largest number of votes in legislative elections.

Legislative power is vested in the unicameral National Assembly. Members of the National Assembly are elected by a system of proportional representation, with each voter casting his or her vote in favor of a list rather than a candidate. The seats are allocated from those among the list in proportion to the popular vote, but there is no minimum percentage that a party must receive to ensure representation. Elections are conducted by the Elections Commission. The constitution provides for a Supreme Court of Judicature, consisting of the Court of Appeal and the High Court.

The voting age is 18; suffrage is universal.

PARLIAMENT

The unicameral National Assembly consists of 68 members, 65 of whom are elected for five-year terms under a system of proportional representation; of the remaining three, one is elected as speaker of the house, and the president appoints the other two. The National Assembly may make laws “for peace, order, and good government” of Guyana. It also may amend the constitution, subject to certain constitutional provisions. Any member may introduce a bill. The president may dissolve the Assembly and call for new elections at any time during its five-year term. This action could cost the president his or her office, if a different party wins the majority of legislative seats.

POLITICAL PARTIES

Guyana is largely a two-party system in which party discipline is quite strong. Electoral laws ensure that political parties are the central institution in the legislature. Additionally, party leaders are permitted to fill legislative seats after the elections. The current ruling party, the People’s

Progressive Party/Civic (PPPC), is a centrist party that is seen as largely representing the needs of the Indo-Guyanese community. The People's National Congress (PNC) is identified largely as an Afro-Guyanese party. Political disagreements between the two parties were the source of major unrest during the early 2000s; the parties were committed to working out their differences in 2003–04 but still had not resolved all their problems.

LOCAL GOVERNMENT

For purposes of local government Guyana is divided into 10 administrative regions, each administered by a chairman and council. There are five municipalities—Georgetown, New Amsterdam, Linden, Rose Hall, and Corriverton—each administered by a mayor and a town council. The number of councillors varies according to the population, but their functions are more or less similar.

LEGAL SYSTEM

The legal system is based on English common law, with some elements of Roman-Dutch law. The judicial structure of Guyana comprises the Supreme Court of Judicature, consisting of the Court of Appeal and the High Court as the superior courts, and a number of subordinate courts of summary jurisdiction.

The Court of Appeal consists of the chancellor as president, the chief justice, and a varying number of justices of appeal, as prescribed by the National Assembly. The High Court consists of the chief justice and nine junior judges. The lower courts are presided over by magistrates. Criminal cases are always tried by juries of 12 persons.

The courts are known to be inefficient and subject to political influence.

HUMAN RIGHTS

In terms of civil and political rights, Guyana is ranked as a partly free country. The People's National Congress (PNC) government ruled Guyana for some 25 years, from 1966 until 1992, preserving the facade of parliamentary democracy without the substance. The party employed government apparatuses to advance its aims and to maintain political power in the hands of a ruling elite. Guyanese who were not members of the ruling party elite were effectively denied meaningful participation in the decision-making processes of the state. Since the PPP took power in 1992, conditions have been somewhat better, though there are still abuses and intolerance of opposition viewpoints. In 2003 the government charged a political activist and a television talk show host with treason for expressing opposition viewpoints.

The Security Act allows the police to search for and seize illegal weapons, ammunition, and explosives without a warrant. Sometimes these raids have led to the seizure of “subversive” literature. Wiretaps, mail interception, and physical surveillance are used to monitor and intimidate political opponents of the government. The police are known to abuse suspects and kill people unlawfully and continue to do so with impunity despite minor efforts by the government to investigate abuses. Prison conditions are poor, and the delay between imprisonment and trial is lengthy due to the inefficiency of the courts.

The government has used the religious sect known as the House of Israel (founded by an American fugitive from justice) to harass the Catholic Church. The opposition has accused the government of employing “hit men” from the sect to murder those in official disfavor and to break strikes and opposition meetings.

The government record on academic freedom is mixed. Several opposition Working People's Alliance leaders teach at the University of Guyana, and opposition parties have organized student groups there. However, some teachers critical of the government's educational policies have been summarily fired without explanation.

The Guyana Human Rights Association was founded in 1980. The government has not interfered with the activities of this organization.

Guyana suffers other usual human rights problems. Violence against women and children and discrimination against women and ethnic minorities continue. Human trafficking and child labor have been problems.

FOREIGN POLICY

Guyana's principal foreign policy issues relate to its boundaries with its eastern and western neighbors, both of whom claim territory that Guyana believes to be Guyanese. In 1962 Venezuela claimed a large chunk of Guyanese territory; Suriname has also claimed a portion of Guyana's land and some of the offshore territory that Guyana considers its own. This dispute became especially touchy in 2000 when a Canadian company wanted to drill for oil in the disputed territory. These disputes remain unresolved.

Guyana has been an active member of the international community since independence in 1966. It has served on the UN Security Council, the International Court of Justice, and has diplomatic relations with the European Union, the World Health Organization (WHO), the Organization of American States (OAS), and the Caribbean Community (CariCom). The government is particularly interested in regional cooperation with other American nations. Guyana has been working to improve relations with the United States since 1992, and the two nations were on good terms with one another by the early 2000s.

DEFENSE

Guyana's professional military is the Guyana Defence Force (GDF), which handles internal security and national defense. There is also a paramilitary organization called the Guyana Police Force, which is responsible for internal law and order. The defense structure is headed by the president as head of state. Command and administration of the defense forces are vested in the Defense Board. Military manpower is provided by voluntary enlistment.

The Guyanese armed forces are maintained more for prestige than for any pressing military or defense needs. The army has no significant military traditions, and its combat-worthiness has never been tested in the field. Its mission seems to be to help preserve law and order. The security forces tend to run rampant, however, without any checks by the government, killing and abusing suspects and arresting those they consider a threat to the state.

ECONOMY

Guyana is one of the poorest nations in the Americas. Severe drought and political turmoil contributed to Guyana's negative growth of 1.8 percent in 1998, following six straight years of growth of 5 percent or better. Growth came back to a positive 1.8 percent in 1999 and 3 percent in 2000 but returned to a stagnant 0.5 percent in 2004. Underlying growth factors have included expansion in the key agricultural and mining sectors, a more favorable atmosphere for business initiatives, a more realistic exchange rate, a moderate inflation rate, and continued support by international organizations. The nation is plagued by a poor infrastructure and an uneducated workforce that cannot perform skilled jobs.

President Jagdeo, the former finance minister, is taking steps to reform the economy, including drafting an investment code and restructuring the inefficient and unresponsive public sector. Numerous businesses have been privatized, and the country has hired international companies to manage the nation's sugar company (GuySuCo) and the biggest state bauxite mine. The government has removed most price controls and has reformed the tax system to support exports.

The nation has tremendous mineral resources, including gold, diamonds, and bauxite. The country exports sugarcane and cattle.

Guyana has a large amount of foreign debt, which limits the funds it can devote to its own infrastructure. Increasing fuel prices have hurt industry. Many Guyanese choose to emigrate to the United States or Canada rather than try to support themselves and their families at home.

ENVIRONMENT

Guyana suffers from the same general environmental problems as most developing nations, including deforestation, water pollution from agricultural runoff and industrial chemicals, and waste disposal concerns. Coastal areas flood periodically. The rain forests have recently become the target of multinational companies interested in their timber and gold-mining potential, which could cause serious problems in the near future. Hydroelectric companies have been considering using the giant waterfalls of the interior to generate electricity for the nation. Guyana has tremendous natural beauty, which it could leverage into ecotourism if it develops an adequate infrastructure and protects the wild areas from exploitation.

 CO2 Emissions per capita ton: 2.1

LIVING CONDITIONS

Most Guyanese live on the coastal plain. The majority of people are quite poor; 35 percent of Guyanese live below the poverty line. The nation suffered from a wave of crime in the early 2000s, and many urban areas are plagued with shootings, carjackings, kidnappings, and home invasions. People avoid walking in cities at night. Few roads are paved, though there is plenty of ferry transportation on the rivers. The country still lacks some aspects of infrastructure; electricity is unreliable, and the telephone system is only fair.

HEALTH

The government has been trying to improve the health-care system since 1993, but care is still substandard. Life expectancy is fairly low, at under 63 years, and the infant mortality rate is high. Health care is free but facilities are inadequate. Wealthy people usually go to other countries for treatment of severe illnesses. Many medical professionals have emigrated to other countries, leaving a severe shortage of doctors and nurses in their wake. In the interior there are no clinics or doctors, so people treat ailments themselves with herbs and roots. The diseases associated with developing tropical nations are all common; these include malaria, dengue fever, cholera, typhoid, and tuberculosis. In 2004, 2.5 percent of the population was infected with HIV.

FOOD AND NUTRITION

Guyanese cuisine blends the cooking traditions of its many ethnic groups. Rice is the staple starch, though people also eat bread, Indian roti, cassava, and yams. People eat a large amount of vegetables, eggs, cheese, butter, beans, and meat, though Hindus do not eat beef, and Muslims

do not eat pork. Milk may appear at more than one meal every day. The evening meal is the largest. Popular dishes include curry, Chinese stir-fries, and pepper pot, a stew made of meat, hot pepper, and cassava juice. People drink tea, coffee, ginger beer, and drinks brewed from bark and vegetables.

 Amount of Cereal Available per person per year kg: 128.8
 Amount of Fruits and Vegetables Available per person per year kg: 165.9

STATUS OF WOMEN

The Burnham and Hoyte regimes were generally supportive of women's rights. A Women's Affairs Bureau was established in 1981 within the Ministry of Labour to combat discrimination toward women and promote their development and full integration into national life. In 1983 the government passed legislation to erase the stigma of illegitimacy and accord legal rights to children of unwed mothers. Women serve in many high government and business positions, and Afro-Guyanese women form the core of the People's National Congress. In 1990 the government established a credit bureau to assist women running small businesses. In 1997 it created the Guyana Women's Leadership Institute to train women how to be leaders and decision makers in order to facilitate equality, believing this to be fundamental to national development. Women have served in the Guyanese armed forces since the 1960s.

WORK

Most Guyanese work as farmers, raising rice, vegetables, and livestock to support their families and working on sugarcane plantations or cattle farms for pay. In farming families, all members work year-round, including children. Women are responsible for the home and the children as well as field work. In urban areas many people make crafts for sale, work for shops, or manufacture goods in factories. Some families own their own shops or businesses, which they may keep open seven days a week. Educated people work as civil servants, teachers,

or in the professions. The business workday runs from 8:00 a.m. to 4:00 p.m. The public sector works from Monday through Friday, but many private businesses open on Saturday as well. Unemployment is fairly high; officially, it was at least 9 percent in 2000, and it was probably higher.

EDUCATION

Education is free, universal, and compulsory for eight years, between ages six and 14. Schooling lasts for 12 years, as divided into six years of primary school, four years of lower secondary school, and two years of upper secondary school. Schooling culminates in the College of Preceptors' O-level examination. Pupils are permitted to choose their courses at the end of the third year in secondary schools, selecting an academic or vocational course of study.

The curriculum emphasizes Guyanese and Caribbean history, science, and commercial subjects. The government has been accused of politicizing education, which critics cite as a principal cause of declining educational standards. All teaching is in English. The school year runs from September through August.

The University of Guyana, founded in 1963, is the only university in the country, though there are two technical colleges and several trade schools. The government runs several adult education programs in an effort to equip adults with the skills they need to enter universities at home or abroad.

Schools at all levels are underfunded and ill equipped. Many teachers have emigrated to other countries; private organizations raise money to import foreign teachers to tutor children during vacation. The nation does have several prestigious public schools that select their students on the basis of entrance examinations given at the age of 11 or 12; most students who win national scholarships for university study are graduates of these schools.

SCIENCE AND TECHNOLOGY

Guyana is working to develop its technological potential. The Institute of Applied Science and Technology is an industrial research organization that sponsors research into ways to develop Guyana's natural resources in a way that will best benefit the country, while working within governmental parameters. The Information Network for Science and Technology (INSAT) is a network of scientific resources within Guyana. Guyana's physical infrastructure is still noticeably deficient, which delays its adoption of significant technologies.

MEDIA

There are two daily newspapers, the most important of which is the government-owned *Guyana Chronicle*. The other is the privately owned liberal publication *Stabroek News*. There are several weekly and biweekly papers. Newspapers are allowed to print what they wish, though most journalists refrain from criticizing the government.

The government owns the country's only national radio network, the Guyana Broadcasting Corporation. It also owns the Guyana Television Corporation. There are many other private channels, which criticize the government freely.

CULTURE

Guyana has produced several authors, the best-known of whom is E. R. Braithwaite, author of *To Sir, with Love*. Visual arts are popular, and Guyanese artists are skilled at painting and sculpture. Favorite themes are the landscape, ethnic variations, and native people. Famous artists include Philip Moore, Ronald Savory, Stanley Greaves, and Aubrey Williams, who won the Commonwealth Prize for painting in 1964 and the Guyanese Golden Arrow Prize in 1970. Local people make excellent baskets and pottery.

Music is very popular, especially at social events. Songwriters compose in Guyanese Creole and in Hindi. Calypso songs make fun of politics and local customs; calypso composers enter their works in annual calypso competitions during the festival of Mashramani, which takes place during Republic Week. Another kind of comic song is called chutney; these songs are written partly in Hindi and partly in English.

FOLKLORE AND MYTHOLOGY

Guyanese folklore combines African, East Indian, and indigenous legends. One favorite character is the Old Hag, a female vampire who sheds her skin and travels around as a ball of fire and sucks people's blood. East Indians call her a *sukhanti*. The symptoms of an attack by the Old Hag include a feeling of weakness and a blue spot somewhere on the body. If a person sees a woman engaging in suspicious behavior such as shedding her skin and turning into a fireball, they are supposed to rub the empty skin with hot pepper, which will kill the Old Hag when she returns from blood-sucking and tries to put her skin back on.

ENTERTAINMENT AND RECREATION

Guyanese people love visiting relatives, with whom they eat, drink, and talk for hours. Families enjoy going on picnics at rivers, where they cook food and swim; these outings may be very large, including relatives and friends of all ages. People like to play dominoes and cards. In Georgetown, walking on the old Dutch dykes is a popular pastime. Movies are also popular, particularly East Indian films and westerns.

ETIQUETTE

Guyanese etiquette is casual. Guyanese have a great sense of humor and often tease one another, even on somber occasions such as funerals; this is meant to lighten the atmosphere and is not considered impolite. In 2004 the government introduced a new program into the schools designed to teach students about office and business etiquette in an effort to expand the nation's economic possibilities.

FAMILY LIFE

When Guyanese people talk about family, they are referring also to extended families, including aunts, uncles, cousins, and grandparents. Nonparental relatives help raise children, and relatives stand ready to resolve family disputes. Adult children often do not move out of their parents' homes until they can afford to buy their own houses, even if this means living at home after marriage. Houses tend to be large and rambling, the result of numerous additions being built as families get bigger. Large groups of relatives will often go visiting en masse, especially on weekends, and these occasions turn festive, with much food, drink, and conversation.

PERSONAL APPEARANCE

Most people in Guyana dress casually in cool clothes suitable to heat and humidity. Businessmen usually wear shirts and ties and women dress in suits or dresses.

SPORTS

Cricket, introduced by the British, is the most popular sport. Both sexes play it at all levels, from village to school to national. Guyanese cricket players are often recruited to play on British teams. Soccer is the next-most popular sport. People also cycle and play tennis, American football, volleyball, basketball, golf, and badminton.

CHRONOLOGY

- 1966** Guyana becomes a self-governing dominion within the Commonwealth, with Forbes Burnham as prime minister.
Venezuela occupies Anakoka Island and asserts a claim to land west of the Essequibo River.
- 1968** Burnham's People's National Congress (PNC) wins electoral victory following the controversial enfranchisement of overseas Guyanese.
United Force (UF) leaves coalition, protesting irregularities in the elections.
- 1969** National Social Insurance Scheme is introduced.
Government suppresses Rupununi rebels trying to establish an independent state.
Border clashes with Suriname revive old border dispute.
- 1970** Guyana is proclaimed a cooperative republic.
Post of governor-general is abolished. Supreme Court justice Arthur Chung is elected president.
- 1971** Demerara Bauxite Company is nationalized.
- 1973** Legislation is passed permitting preventive detention without trial and restricting freedom of movement.
- 1974** By the Declaration of Sophia, the PNC is transformed into a socialist party committed to nationalization of all foreign enterprises and redistribution of land.
- 1975** Reynolds Guyana Mines are nationalized.
- 1976** Booker Sugar Estates are nationalized.
Government announces plans to nationalize the school system.
Guyana permits Cuban planes to refuel on their way to Angola.
U.S.-Guyana relations deteriorate.
- 1977** CIA reports illegal payments to Burnham.
Burnham rejects plan of Cheddi Jagan, leader of the opposition People's Progressive Party (PPP), for a national coalition government.
Strike by sugar workers becomes stormy and violent as the government uses the police to break it.
- 1978** Government wins constitutional referendum extending term of the National Assembly.
Guyana signs the eight-nation Amazon Pact.
Jonestown, Guyana, is the scene of the bizarre and grisly suicide-murder of over 900 members of the People's Temple Commune, led by U.S. cultist Jim Jones.
- 1979** Burnham postpones national elections because of the dislocations caused by the Jonestown tragedy and industrial strikes.
Minister of Education Vincent Teekah is slain.
- 1980** Guyana adopts presidential form of government, as new constitution is approved. Burnham becomes the first president under the constitution, and Ptolemy Reid, his longtime aide, is named prime minister.
- 1985** Burnham dies and is succeeded in office by Hugh Hoyte, who promises to continue Burnham's leftist policies.
In national elections Hoyte is elected president, and the PNC wins predictably with a massive majority. Hamilton Green is named prime minister.
- 1988** The IMF begins negotiations for economic assistance in Guyana.
- 1990** Guyana accepts IMF conditions and begins receiving assistance. The World Bank and the Caribbean Development bank also resume lending.
- 1991** Guyana becomes a member of the Organization of American States (OAS).
- 1992** Dr. Cheddi Jagan is elected president.
Jagan administration attempts to privatize sugar and bauxite industries.
- 1997** President Jagan dies.
Jagan is succeeded by his wife, American-born Janet Rosenberg Jagan, who wins 55 percent of the votes.
- 1998** Violent riots erupt in the capital after opposition members and Guyanese of African descent accuse the ruling PPP of discrimination. The government declares a state of emergency.
- 1999** President Janet Jagan resigns due to poor health. Bharrat Jagdeo becomes president.
- 2000** Guyana and Suriname argue about offshore oil drilling in disputed territory.
- 2001** Bharrat Jagdeo is reelected president in March.
- 2002** Television talk show host Mark Benschop is charged with treason for encouraging a protest at the presidential complex. A crime wave begins, and the murder rate quadruples.
- 2003** The crime wave continues.
- 2004** Home Affairs Minister Ronald Gajraj steps down after allegations of his association with a death squad that executed hundreds of suspected criminals. The United Nations sets up a tribunal to resolve the border dispute between Guyana and Suriname.
- 2005** Severe floods hit Georgetown.

NATIONAL FLAG

Two horizontal stripes, blue at the top and red at the bottom, with the Haitian coat of arms in a small white rectangular center panel.

NATIONAL EMBLEM

Six blue and red national flags and six rifles with fixed bayonets guarding a tall, indigenous palm tree, above which flies a blue and red national flag. In the front are two gold cannons on red caissons with gold cannonballs. At the base of the palm is a gold drum, and nearby are golden fouled anchors. Over the horizon are two hauled-down warships with pennants flying, and in the foreground is a white scroll with the national motto: *L'union fait la force* (Union makes strength).

NATIONAL ANTHEM

"La Dessalinienne" (Song of Dessalines)

NATIONAL HOLIDAYS

January 1 (Independence Day, National Day), January 2 (Heroes of Independence Day), April 14 (Pan American Day), May 1 (Labor and Agriculture Day), May 18 (Flag and University Day), May 22 (National Sovereignty Day), June 22 (President's Day), October 22 (United Nations Day), November 18 (Battle of Vertieres and Armed Forces Day), December 5 (Discovery of Haiti Day), all major Catholic festivals

DATE OF INDEPENDENCE

January 1, 1804

DATE OF CONSTITUTION

March 1987

GEOGRAPHICAL FEATURES

Haiti occupies the western third of the island of Hispaniola, the second-largest island in the Caribbean Sea. Haiti's total land area of 27,750 sq km (10,714 sq mi) includes the islands of Gonave, Tortuga (Île de la Tortue), Vache, and the Cayemites. The mainland extends 485 km (301 mi) east-northeast to west-southwest and 386 km (240 mi) south-southeast to north-northwest. The total length of the coastline is 1,771 km (1,099 mi).

Haiti has only one land neighbor, the Dominican Republic, with which it shares a border of 360 km (224 mi).

Because of the pressures of illegal emigration across the border, Haiti has closed the border and banned the construction of homes within 1 km (0.62 mi) of it.

Covering three-fourths of the land area are five mountain ranges, which meet one another to form a continuous highland. The most extensive of the ranges is the Massif du Nord, which forms part of the Caribbean Antillean system, which extends from the Virgin Islands and Puerto Rico westward to Cuba. To the southwest are the Montagnes Noires, separated by the Artibonite River from another range, the Chaîne de Mateaux, which extends into the Dominican Republic as the Sierra de

Haiti

Neiba. To the far south is a system that extends the full length of the Tiburan Peninsula. To the west it is known as Massif de la Hotte, to the east as Massif de la Selle. The latter range contains the country's highest peak, Morne de la Selle (2,680 m; 8,793 ft).

Lowlands cover about one-quarter of the country's territory. The largest of the country's four major flatlands is the central plateau, which extends eastward from the Montagnes Noires. The northern plain is between the Atlantic Ocean and the Massif du Nord. The Artibonite Plain is to the north of the Chaîne de Mateaux. The Cul-de-Sac, between the Chaîne de Mateaux and the Massif de la Selle, is the fourth. There are 16 smaller valleys and plains.

Haiti has more than 100 small rivers, all flowing into the Gulf of Gonâves and the Caribbean Sea. The largest are the Artibonite; Trois Rivières; Grande Anse; the Massacre River, also known as Rio Djabon; and the Ped-

ernales River. None of the rivers is navigable, but each is used for irrigation.

There are large lakes in the southern half of the island, the Étang Saumâtre and the Étang de Miragoâne, the former salty and the latter fresh.

CLIMATE AND WEATHER

Although the climate is tropical, the country is generally semiarid because the mountains in the middle of the island cut off the moist trade winds. The temperatures in the main population centers tend to be warm, ranging from 20°C to 34°C (68°F to 94°F). The differential between summer and winter temperatures is only 4.4°C to 5.6°C (8°F to 10°F). The highest temperatures are recorded from June through September, the lowest from February through April.

Most of the country lies in a rain shadow, and the heaviest rainfall received in the north is no more than 2,540 mm (100 in). Port-au-Prince has two rainy seasons, April through June and August through November, during which it receives 1,370 mm (54 in).

Haiti lies in the Caribbean hurricane belt, but the main paths of maximum hurricane frequency pass to the north and to the south of the island. Thunderstorms are common and sometimes destructive.

FLORA AND FAUNA

More than 5,600 species of plants have been identified on the island of Hispaniola. The lowlands are home to mangroves, sweet acacia, wild frangipani, West Indian boxwood, poisonwood, and Monte Christi sage. Plants that favor higher elevations include bamboo, tree ferns, West Indian cedar, sierra palms, pasture fiddlewood, and Krug wild avocado. Most of Haiti's forests have been cut down, and the diversity of species has decreased sharply in recent years. Parc National Macaya contains some of the last remaining virgin rain forest.

The island also contains many animal species, though it does not have the variety of birds or large mammals found in mainland Central America; in particular, it has never had any large cats. Large lizards and tarantulas, however, are abundant. The seas around the island teem with fish and other sea creatures, such as manatees and sea turtles. Humpback whales mate just off the northern coast. Many of the island's animals are endangered; en-

dangered species include the humpback whale, the Pacific pilot whale, the Caribbean monk seal, the Atlantic spotted dolphin, the Caribbean manatee, the Antillean manatee, the American crocodile, the rhinoceros iguana, the Hispaniola ground iguana, the loggerhead turtle, the green turtle, the leatherback turtle, the hawksbill turtle, the *jutia* (a large rodent), the *coterra* (a parrot), and many others.

ETHNIC COMPOSITION

The Haitian population is relatively homogeneous, with blacks constituting 95 percent and mulattoes and a few whites the balance. Mulattoes have had educational advantages and have traditionally received the best military and government jobs. Mulattoes speak French, as opposed to the Haitian Creole of the blacks. Until the 20th century the mulattoes were the elite class, and much of Haiti's turbulent history may be explained through the rivalry between blacks and mulattoes. Even now the 1 percent of the population that controls 44 percent of the nation's wealth is mulatto. The small white community is concentrated in the capital and includes French, Danish, German, Syrian, Lebanese, and Corsican nationals.

LANGUAGES

Haiti is the only republic in the Western Hemisphere where French is the official language. However, true French is spoken by only 20 percent of the people; the

rest speak Haitian Creole, which is almost unintelligible to those who speak only French. Approximately 7 percent of the population is bilingual. In 1969 a law was passed granting legal status to Creole and permitting its use in the legislature and law courts but not in schools, where French is the language of instruction.

English is used in the capital and provincial cities, and a Spanish Creole is spoken along the Dominican Republic border.

RELIGIONS

The official religion of the state is Roman Catholicism, which is nominally practiced by 69 percent of the population. Ecclesiastically, the church is organized under the Archdiocese of Haiti, as headed by an indigenous archbishop, and six suffragan bishoprics. Almost all the members of the clergy are native Haitians.

Despite its official status, Roman Catholicism has little influence other than in the urban areas, outside of which its place is taken by the folk religion of Haiti, Vodou, commonly known as voodoo. Vodou in Haiti is an amalgam of African beliefs and Christian practices. It is an informal religion with no set theology, scriptures, or clergy. Its principal elements are dance, music, magical invocation and rites, and cults of the dead. Priestly functions are exercised by *houngans* (medicine men), *mambos* (priestesses), and *bocors* (sorcerers). The Haitian peasant regards Catholicism and Vodou as inseparable and considers himself or herself a member of both religions, giving rise to the aphorism “Haiti is 90 percent Catholic and 100 percent Vodoo.” Moreover, black nationalists favored and emphasized Vodou in opposition to the Western value systems represented by the Catholic Church. President François Duvalier himself openly encouraged and reputedly practiced Vodou, retained Vodou priests as advisers, and had a running battle with the Roman Catholic clergy. Haiti recognized Vodou as an official religion in 2003.

Protestantism, particularly Anglicanism, has had considerable success in recent years. The success of Protestant efforts is explained by the church’s emphases on education and social welfare, its use of Creole rather than French, and active missionary work in rural areas. Most of the Protestant clergy are indigenous Haitians. There is no significant discrimination against Protestants.

HISTORICAL BACKGROUND

The first known inhabitants of Haiti were Taino Arawak Indians. Haiti’s colonial experience began in 1492 with the Spanish conquest of the Taino Indians on Hispaniola, but the Spanish period had little political or cultural significance. Colonization technically began only with the arrival of the French planters and their African slaves in the middle of the 17th century. Successful uprisings by African-descended slaves between 1791 and 1803 led in 1804 to the declaration of the world’s first independent black republic, ruled by Jean-Jacques Dessalines, who had succeeded Toussaint Louverture, among the original leaders of the insurrection.

Although the French presence in Haiti was of very short duration—shorter, in fact, than that of any other colonial power in the New World—its impact was much greater and more durable. French legacies included racism and capitalism on the one hand and Roman Catholicism, education, and culture on the other. Haiti accepted these legacies and value systems wholeheartedly and has never seriously attempted to shake them off. The French actually left three nations in Haiti: the white elite; the mulattos, who aspired to higher positions in society through the attainment of wealth, education, or power; and the black slave masses. Racial strife between these three groups led to the slave revolts and the establishment of the Republic of Haiti in 1804.

Haiti’s third colonial period was the U.S. occupation from 1915 to 1934. Although Americans supported the mulattoes, U.S. policies tended to create and strengthen a strong black middle class and reinforce black consciousness among the educated class.

Mulatto presidents retained power until 1946, when Dumasris Estimé, a black, was elected. He was overthrown by a 1950 military coup led by another black, Gen. Paul Magloire. Magloire was forced to resign in 1956, and in 1957 Dr. François “Papa Doc” Duvalier was elected president. Duvalier quickly became a dictator who maintained his power through the means of a private army that used extortion and intimidation to quell all opposition.

Duvalier’s son, Jean-Claude “Baby Doc” Duvalier, became president upon his father’s death in 1971. The younger Duvalier’s regime was slightly more humane than his father’s. He released political prisoners and appointed more moderate cabinet ministers. However, a new law was introduced in 1979 that banned all criticism of the president or government officials and any media activities deemed subversive. The first municipal elections in 25 years were held in 1983–84. President Duvalier had promised that these would be free and democratic, but because no opposition candidates were allowed, Duvalier’s party won all the National Assembly seats.

Uprisings to protest widespread poverty and government corruption began in 1984, and despite Duvalier’s attempts to calm the unrest by introducing humanitar-

ian reforms, he was forced to flee the country in 1986. He was replaced as president by Gen. Henri Namphy. Unrest continued in 1986 to protest the inclusion of pro-Duvalier officials in the new government, and it persisted into 1987 to protest the government's attempt to dissolve Haiti's principal trade union, the Centrale Autonome des Travailleurs Haïtiens (CATH).

Concurrent legislative and municipal elections were held in January 1988, and Leslie Manigat was elected president. Manigat did not include any pro-Duvalier members in his cabinet, which initiated protests by Duvalier supporters. In June 1988 Manigat was ousted by disaffected army members and replaced by Gen. Namphy, who reinstated Duvalier's violent policies.

Gen. Namphy was overthrown in a coup in September 1988 and was replaced by Brig. Gen. Prosper Avril. Avril introduced radical reforms, purged the armed forces of pro-Duvalier members, and promised to hold democratic elections. The Avril government withstood two coup attempts in March 1989. In September 1989 Avril released a timetable for elections.

The president came under increasing criticism for mismanagement of the economy and for failing to put an end to a wave of robberies and killings, believed to have been carried out in many instances by soldiers. During the fall of 1989 Haiti experienced a series of general strikes in response to the increased taxation that was part of Avril's economic reform program. To prevent the continuation of antigovernment protests and to restore order, in January 1990 Avril imposed a 30-day state of siege. He also announced that all political exiles were to be permitted to return to Haiti in preparation for elections. At the same time he announced the release of all political prisoners.

In the face of growing antigovernment protests, Avril resigned in March. He was immediately succeeded by the acting army chief, Maj. Gen. Harard Abraham, who turned power over to the civilian Ertha Pascal-Trouillot, a Supreme Court justice chosen by a coalition of opposition leaders, the Group of 12. Her appointment marked the first time since Duvalier's overthrow that Haitian civilians had taken power for themselves and chosen their own leader. Pascal-Trouillot was to rule with a Council of State until elections.

The presidential and legislative elections took place, as scheduled, in December 1990. Jean-Bertrand Aristide, a left-wing Catholic priest who was the candidate of the Front National pour le Changement et le Démocratie, won by an overwhelming margin. One month before Aristide was to be inaugurated, Roger Lafontant, a former head of Duvalier's private militia, led armed supporters in the seizure of the presidential palace. He forced the resignation of Pascal-Trouillot, but loyalist army forces crushed the coup the following day. Aristide was inaugurated in February. He immediately sought the extradition of Duvalier from France and undertook the reform of the armed forces. In April former president Pascal-Trouillot

was arrested and charged as an accomplice in the coup that had tried to overthrow the government in January, although Lafontant reportedly told investigators that Trouillot had willingly handed over the presidency.

Aristide was overthrown September 30, 1991, in a coup staged by the nation's powerful military. The coup leaders established a three-man junta, headed by Gen. Raoul Cédras, to lead the country. In early October, under pressure from the military, the National Assembly declared the presidency vacant and as mandated in the constitution swore in Supreme Court Justice Joseph Nerette as interim president.

Aristide was finally returned to power in 1994 under diplomatic and military pressure from the United States, which sent both former president Jimmy Carter and 20,000 troops. The following year the United Nations sent a peacekeeping force, and in December René Préval won the presidency. In 1997 internal fighting continued, and the prime minister, Rosny Smarth, was forced to resign; Préval was prevented from selecting another. The UN peacekeepers left the country. In 2000 Aristide was declared president in an election that was plagued by irregularities.

The early 2000s were difficult for Haiti's government. In 2001 there were two coup attempts, apparently instigated by the army. Anti-Aristide factions agitated during 2002 and 2003. During the bicentennial celebrations at the beginning of 2004 rebels launched violent uprisings throughout the country. Aristide resigned from office and went into exile in South Africa, claiming that the United States had forced him out of power; he declared his intent to return. In the meantime, Boniface Alexandre, chief justice of the Supreme Court, was sworn in as interim president. The rest of 2004 was equally tumultuous: two major storms caused flooding that devastated the country, and political violence continued, resulting in many murders. In general elections held in February 2006 René Préval again won the presidency.

LIST OF MODERN RULERS

1930–41	Sténio Vincent
1941–46	Élie Lescot
1946	Franck Lavaud (chairman of Military Executive Committee)
1946–50	Dumarsais Estimé

1991–92	Joseph Nérette (provisional)
1992–93	Marc Bazin (acting)
1993–94	Jean-Bertrand Aristide
1994	Émile Jonassaint (provisional)
1994–96	Jean-Bertrand Aristide
1996–2001	René Préval
2001–04	Jean-Bertrand Aristide
2004–06	Boniface Alexandre (provisional)
2006–	René Préval

CONSTITUTION

Haiti is the oldest black republic in the world and the second-oldest republic in the Western Hemisphere, after the United States. Haiti has had more than 20 constitutions, the first of which was drawn up in 1801 by Toussaint Louverture, the last in 1987. However, most of the chief executives of Haiti during its turbulent history have ruled with virtually absolute authority as dictators. The title of president-for-life was first created in 1807, abolished in 1843, reintroduced in 1868, again abolished in 1870, and re-created in 1964. Another remarkable feature of Haitian constitutional history has been the existence of constitutions that were constantly ignored but not actually suspended by the chief executives.

Haiti's most recent constitution was approved by the electorate in 1987. It was suspended in 1988, with most of its articles reinstated in 1989; the government claimed to be following the constitution in 1991, but it was not formally reinstated until October 1994. Under its provisions executive power is vested in a president who is elected to a five-year term by universal adult suffrage. The voting age is 18. The president may not serve two consecutive five-year terms. The president selects a prime minister from the controlling party in the legislature, who in turn selects a cabinet after consulting the president. The constitution specifically bars military rulers. The interim president chief justice Boniface Alexandre assumed office in 2004 in accordance with the constitution.

PARLIAMENT

Legislative power is vested in a bicameral National Assembly (Assemblée Nationale) consisting of an 83-mem-

ber Chamber of Deputies, whose members serve four-year terms, and a 27-member Senate, whose members serve six-year terms. The terms of the last group of legislators expired in January 2004, and as of the beginning of 2005 no replacements had been elected; the prime minister, Gérard Latortue, was ruling by decree.

POLITICAL PARTIES

Aristides' party, the Famille Lavalas (FL), is the largest single party in the country. It controlled the vast majority of seats in both legislative houses in the early 2000s. There were numerous smaller parties that opposed the FL. The political situation was in turmoil at the beginning of 2005, with no legislature and thus no party holding a majority.

LOCAL GOVERNMENT

For purposes of local government, Haiti is divided into nine departments: Artibonite, Centre, Grand'Anse, Nord, Nord-Est, Nord-Ouest, Ouest, Sud, and Sud-Est. Each department is headed by a prefect appointed by the central government.

At the secondary level there are 27 arrondissements (districts), and at the third level there are 112 communes. Each commune has an elected mayor.

LEGAL SYSTEM

The basis for law in Haiti is the Roman civil law system. The judiciary is headed by the Court of Cassation, composed of a president, a vice president, and 10 judges. Usually, the Court of Cassation functions in two chambers of five judges each. The second tier of the judiciary consists of four courts of appeal, in Port-au-Prince, Cayes, Gonaïves, and Cap Haïtien; the court in the capital has a president and five judges. Courts of first instance are of two types: civil and criminal. Justice of the peace courts, in each of the country's 124 communes, are each presided over by a single judge.

All judges are appointed by the president.

HUMAN RIGHTS

In terms of political and civil rights, Haiti is ranked as not free. Haiti has had a long, troubled history of authoritarian rule characterized by serious human rights abuses. Nominally a republic, it is run more like a monarchy, with the president wielding all actual power for life—or as long as he can hold on. During the eight months that the legislative chamber is in recess the president rules by decree, and during the

other four months the legislative chamber simply rubber-stamps his decrees. Despite clear constitutional guarantees against arbitrary arrest and imprisonment, such measures are routinely used against political opponents. Similarly, the provision for a fair public trial is more honored in the breach, and defendants often languish in the jails for months without trial. Persons detained for political or security reasons are seldom charged or brought to trial. Some have been held for years. Searches without warrants are routine. The courts not only are dependent on the executive but also seem willing to follow government directions in sensitive cases. Haiti is also plagued with many of the usual human rights problems of developing nations, including violence and discrimination against women, child abuse, and human trafficking.

A press law promulgated in 1980, while milder than a 1979 code, retains serious restrictions on the media: a formal requirement (impossible in the case of daily newspapers) that all publications be submitted to censors 72 hours in advance, the licensing of journalists by the Ministry of the Interior, and the prohibition of material critical of the president and his family. Because prescreening is difficult in practice, publishers issue newspapers and journals at their own risk. Most media practice some self-censorship; however, the press is frequently critical of the government.

In 1980 the government established the Division of Human Rights within the Ministry of Foreign Affairs. The League of Human Rights has also been allowed to function without interference.

FOREIGN POLICY

Although a member of the United Nations, Haiti, as the only major French-speaking country in the Western Hemisphere, has avoided close ties with its neighbors, most of whom speak English or Spanish. It has also for the same reason distanced itself from any Caribbean economic and political integration, though it finally became a full member of the Caribbean Community (CariCom) in 2003. Haiti's most sensitive foreign policy issue is its porous border with the Dominican Republic. Each year thousands of Haitians cross the border illegally and make their homes in the neighboring country, which periodically rounds them up and sends them back to Haiti.

The single most important country for Haitian foreign policy makers is the United States, which has historically served as a patron, absorbing the nation's refugees, providing financial aid, and providing military men and material in times of near-anarchy. The United States is particularly interested in fostering Haiti's economic development. In 2004 the United States promised Haiti \$230 million in aid over the following three years, the majority earmarked for health and nutrition. During the

1994 crisis U.S. military intervention involved 20,000 troops, but this force was subsequently scaled down. There is a steady flow of illegal Haitian immigrants into the United States, in addition to the 13,000 or so who immigrate legally each year. Between 1985 and 2004, the U.S. Coast Guard caught an estimated 100,000 Haitians attempting to sneak into the United States; the majority of these came between 1991 and 1994, when the military was ruling the country.

DEFENSE

Haiti disbanded its armed forces in 1995 and created the Haitian National Police (HNP) in its place. The HNP is now the nation's only security force. It is ostensibly a civilian-run institution and autonomous from the government, but in fact it has long been manipulated by politicians. Aristide gave away HNP positions to political allies regardless of experience or qualification for the jobs in question. HNP officers have been implicated in narcotics trafficking and other forms of corruption, including arresting people without reason. The HNP has been unable to maintain order within the country and was helpless in the face of the violence and killings that overtook the country in the early 2000s, especially 2004.

ECONOMY

About 80 percent of the population lives in abject poverty, while a small elite controls most of the nation's wealth. The majority of Haitians depend on the agriculture sector, which consists mainly of small-scale subsistence farming and employs about two-thirds of the economically active workforce. Most of this labor is informal, which makes it difficult for the government to collect taxes. The country has experienced little job creation since 1996, although the informal economy is growing. Still, unemployment and underemployment remain major problems.

Haitians living abroad, especially in the United States, sent about \$931 million back to Haiti in 2002. Other sources of income were textiles, assembled goods, leather, agricultural products, and handicrafts. Economic growth was flat in 2004, and inflation was extraordinarily high at 37.8 percent. One of Haiti's problems is its shortage of skilled labor; the nation has abundant unskilled

1014 Haiti

workers, but in order to increase foreign investment it needs a more substantial educated class.
