 Internet Users per 1,000 people: 2

ENVIRONMENT

Mali does not have adequate supplies of potable water. The land also suffers from deforestation and soil erosion, which is leading to increased desertification. Poaching of game is also a major problem in wildlife management.

LIVING CONDITIONS

One of the poorest countries in the world, Mali ranked 174th out of 177 countries on the UN 2004 Human Development Index, which measures standard of living. Life expectancy as of 2004 was 45 years. Only 26 percent of eligible students were enrolled in Mali's primary, secondary, and tertiary schools in 2002, and the literacy rate was a low 46.4 percent. Per capita GDP in 2004 was only \$900; Mali was 93rd among 95 developing countries on the UN's poverty index, with most of the population living on less than \$1 per day.

Since 1992 the government has toiled to improve the basic infrastructure of the country, but there is still much to be done. Salaries are low, housing is in short supply, and infrastructure is in need of upgrading. The most commonly owned consumer goods are transistor radios and motorbikes or bicycles, although with an increasing number of households having access to electricity, supplied either by public utilities or generators, television sets and VCRs are becoming popular consumer items. Furnishings are simple. Urban families may have a couch, table and chairs, and cabinets, but rural homes are more modest. Courtyards and shaded balconies are the scenes of much of daily life in this warm country. Most income goes toward food, clothing, and health care.

Housing in Bamako is similar to that in European cities, with high-rise apartments and bungalows. In rural areas, housing ranges from the tents of the Tuareg nomads to the circular mud huts with thatched roofs characteristic of indigenous African villages, in addition to the traditional Sudanese architecture made of *banco*, a mixture of wet mud and straw that dries to form cement. As of 2001, 32 percent of the population lived in urban areas, while about 10 percent of the inhabitants are nomadic and the remainder rural.

HEALTH

Malaria, with a 4 percent incidence rate, is a major health problem in Mali, and although medication to treat the

disease is available, the cost is generally high. Gastrointestinal diseases also arise as a result of lack of refrigeration, poor sanitation, and lack of access to adequate water supplies. In 2002, 45 percent of the population had access to improved sanitation, 48 percent to safe drinking water. Respiratory illnesses, parasites, and infections of various kinds are also common among both children and adults. Leprosy and tuberculosis are chronic issues. Most doctors practice in urban areas, while nurses and midwives provide health care in rural areas. Many people still rely on herbal cures and the help of local healers rather than Western-style medicine.

Much of the country's health care is provided by public services. The Institute of Tropical Ophthalmology and the Marchoux Institute for Leprosy in Bamako treat patients and carry out research. However, there are few adequately equipped hospitals or clinics, and there is also a lack of trained doctors and nurses. As of 2004 there were fewer than five doctors per 100,000 people, and just 41 percent of births were attended by trained health-care providers. Infant mortality is correspondingly high; in 2004 it stood at a very high 117 deaths per 1,000 live births. In 2003, HIV/AIDS incidence was 1.9 percent. There were 12,000 HIV/AIDS deaths that year, and 140,000 more were living with the illness. Some 75,000 children under 17 were orphaned by AIDS in 2003.

The government spends 2.3 percent of GDP on health, which is not enough to establish infrastructure and provide public access. Private expenditures on health care amount to 2.2 percent of GDP. Immunization rates are low. As of 2003 the rate of immunization for tuberculosis was 63 percent, for DPT 69 percent, for polio 65 percent, and for measles 68 percent. The government provides free immunization, but access to clinics is limited for much of the population. Female genital mutilation is still practiced in Mali; in 1996 an estimated 80 percent of women underwent the procedure.

FOOD AND NUTRITION

Two staple foods exist: rice and millet. For those able to afford it, rice is the more popular of the two; both grains are served with a spicy sauce with vegetables, meat, or fish. The main meal is usually served at noon, with leftovers eaten for dinner. Fried plantains or boiled rice and milk also provide light meals. Millet mush or pancakes made from millet flour are usually served for breakfast.

Cooking is usually done over a fire or brazier in the open or in a separate kitchen hut. Food is served family style, with the entire family eating out of one bowl using their hands. Typical dishes include *poulet yassa* (grilled chicken in chili sauce), *riz yollof* (vegetables or meat cooked in a sauce of oil and tomato), and *couscous*. Along the Niger River fish dishes are popular, including Nile perch either fried, grilled, baked, or stewed.

Nutrition is poor in Mali. As of 2001, 29 percent of the population was undernourished. Between 1995 and 2002 one-third of children younger than five were underweight.

Food and Nutrition

Undernourished % of total population: 29.2
 Daily Available Calories per capita kcal: 2,400
 Amount of Cereal Available per person per year kg: 179.7
 Amount of Fruits and Vegetables Available per person per year kg: 27.2

STATUS OF WOMEN

Women are free to participate in the Malian political process and, while underrepresented, are present at all levels of government, especially at the local level. A limited number of women occupy positions of responsibility in most ministries. In 1985 the first woman cabinet director was appointed, for the Ministry of Health. The Union of Malian Women is an active political organization under party auspices and acts as a channel through which women can voice their concerns.

The role of women is negatively affected in Mali more by social, cultural, and general poverty factors than by political or economic determinants. Custom often restricts women to "women's issues" when they do participate in politics. The Union of Malian Women promotes health and education issues and has disseminated information on the disadvantages of female circumcision, but the practice is still widely followed, without government sanction, throughout the nation.

WORK

In 2001 the workforce was estimated at almost 4 million, 80 percent of whom were involved in agriculture. The majority of Malians are self-employed, making a living through subsistence agriculture, pastoralism, fishing, trade, craft production, and services. Some work in small-scale enterprises, some in the tiny industrial sector. Unemployment in 2001 was 14.6 percent in urban areas and 5.3 percent in rural areas. Many Malians, single men as well as entire families, emigrate in search of work and better opportunities, on a short- or long-term basis.

The major union confederations in Mali are the National Union of Malian Workers and the Syndicated Confederation of Malian Workers. The nation has about a dozen active unions. Since membership is restricted to wage earners, such membership numbers are relatively low. The right to strike is protected, except for in certain essential services. The labor code allows for workers as young as 12, though only for two hours daily. However, as much of the work in the country is performed in the private sector, such a law is impossible to enforce, as are the 40-hour workweek, workplace safety and health regulations, and the minimum wage, which was about \$53 per month in 2003.

EDUCATION

Mali is a nation with a large number of linguistically diverse ethnic groups and a significant nomad population. These factors have made the development of a uniform educational system difficult. Illiteracy is a major problem; only 46 percent of the population was literate in 2003. In an effort to solve linguistic difficulties, the country adopted French as the language of instruction. Education is technically universal, free, and compulsory for nine years, between ages six and 15.

Schooling lasts for 12 years, as divided into three cycles: a lower-primary cycle of six years, an upper-primary cycle of three years (these two cycles composing what is known as basic education), and a secondary cycle of three years. The school year lasts from October to July.

Primary-school teachers are trained in secondary-level normal schools, and secondary-school teachers in a teachers' college. There is no university per se, but higher education is provided in five advanced-level schools, including

the teachers' college, an administration school, an engineering school, a medical school, and an agricultural institute. In addition to the secular schools, there are also modernized Muslim schools (madrassas) that combine an Islamic education with general education in French.

Public expenditures on education in 2001 were 2.8 percent of GDP. Net primary enrollment in 2002 was just 45 percent of eligible students; these students were taught in classes with 57 students for every teacher. Of these primary-school students, 84 percent reached grade five, but the number who went on to secondary school was extremely low.

SCIENCE AND TECHNOLOGY

Research into tropical diseases and agriculture are the two main scientific and technological focuses in Mali. In general, the country has a shortage of trained personnel and must rely on foreign scientists in many areas. In 2001 there were only 300 full-time researchers at work in five different government agencies. Of these, about 30 percent had doctorates, 46 percent had master's degrees, and 24 percent had bachelor's degrees.

The National Center of Scientific and Technological Research in Bamako coordinates all research activity in the country. The Institute of Tropical Ophthalmology and the Marchoux Institute for Leprosy carry out medical research projects. The National Directorship for Meteorology deals with agrometeorology and climatology, and there are national centers for fruit and animal research. All of these institutions are located in Bamako. A national association for mineral research and mining is located in Kati.

Some research is also carried out in educational institutions. National schools of engineering and of medicine and pharmacology are located in Bamako. The Rural Polytechnic Institute of Katibougou not only provides in-

struction but also conducts research in crops, agricultural economics, stockbreeding, forestry, veterinary science, and rural technology.

MEDIA

There are six daily newspapers in the country, with very slight total circulation. The daily *L'Essor—La Voix du peuple* is the government organ; *L'Aurore*, *Le Républicain*, and *L'Independent* are privately owned. *Les Echos* is affiliated with the ruling party. The national news agency is the Agence Malienne de Presse et de Publicité. Foreign news agencies represented in Bamako include CTK, Novosti, ITAR-TASS, and AFP. Édition Imprimerie du Mali, the only book publisher in the country, has an annual output of about five titles.

Radiodiffusion Télévision du Mali manages much of the broadcasting in the country. As of 2001 there were 28 FM radio stations and 1 AM station, both public and commercial. In 2003 there were a quarter of a million cellular telephone users and 25,000 Internet users. In 2001 there were 180 radios and 15 television sets in use for every 1,000 people.

The constitution also provides for free speech and a free press, and the government is said to respect these rights in practice. Although libel is still considered a criminal offense and press laws include punitive presumption-of-guilt standards, Mali's media are among Africa's most open. Reporters without Borders, an international media watchdog group, ranked Mali 72nd out of 167 countries on its 2004 press freedom index.

CULTURE

Mali is made up of a welter of different tribes and ethnic groups, each of which has left its own distinctive cultural

imprint on the country. Music and dancing have an especially rich heritage among the Malinke and Songhai peoples. The Bamana and the Voltaic groups are known for their wood carvings of masks, statues, stools, and fetish objects used in animist worship. The *tiewara*, or gazelle mask, of the Bamana is particularly remarkable for its fine carving. The Tuareg nomads are known for artwork as well as their fierce fighting ability. The Dogon homeland, Pays Dogon, has been designated a World Heritage site. The Dogon are also known for their elaborate masks.

The traditional music of Mali is based on the songs of the *jalis* (or griots), a distinct social caste since the days of the Mali Empire. *Jalis* accompany their songs with the *kora*, a harp-lute string instrument with 21 strings. Mali has produced some of the great superstars of modern African music: the *kora* player Toumani Diabaté, the singers Salif Keita and Oumou Sangaré, dance bands like the Super Rail Band, and the river-blues man Ali Farka Touré.

Architecture is well developed in the Niger valley. The Sudanic style, using *banco*, or mud covering, can be seen in the houses and intricate mosques of Djenné and Timbuktu.

The Museum of the Institute of Research and Documentation, in Bamako, has collections of art from most of the country's regions. The Malian Ballet Troupe performs throughout the world. Artists are trained both at the National Institute of Arts and at the Artisan Center of Bamako.

Most of the country's written literature is in French. Major writers include Amadou Hampâté Bâ, Seydou Badian, Nagognime Urbain Dembélé, and Massa Makan Diabaté.

FOLKLORE AND MYTHOLOGY

Malian folklore includes many legends and folktales of heroes. Primary among these is Sunjata Keita, the founder of the empire that gave the country its name; the epic oral poem *Sunjata* recounts the deeds of this 13th-century founder. Only specially trained griots or praise-singers and oral historians from certain families are allowed to recite the epic.

Common mythical figures include Faro, the sky and water god of the Bamana, who gave birth to the human

race. The Dogon people have several mythic figures: Nommo, half man and half snake, is their cultural hero and teacher; Yurugy is the trickster; and Amma is the god of fertility and rain, as well as the father of Nommo.

Proverbs form an important part of Malian folklore. One favorite proverb is "One does not give without a motive."

ENTERTAINMENT AND RECREATION

Listening to music on the radio is one of the favorite pastimes throughout the country. African traditional and folk music is popular, as is Western-inspired rock. Youths form bands and have created a rich musical scene in Bamako and throughout the rest of the country.

With increasing access to electricity, Malians are also watching more television. Movies attract crowds in the towns and cities, with martial arts films and Indian imports among the favorites. Visiting with friends and relatives is also a popular pastime.

ETIQUETTE

Muslim traditions are strong in Mali. Thus, shaking hands with the opposite sex is not done, and pointing is considered rude. The right hand should be used to give or receive and for eating. Shoes should be taken off before entering a mosque. Personal dignity is important, and as such greetings can be long and involved.

FAMILY LIFE

Muslim law allows up to four wives, but polygamy is not usual in Mali. Families are larger in the countryside than in the city. Overall fertility rates are high; in 2004 there were 6.5 children born per woman. However, infant mortality rates are also high. Most women perform extra work outside the home, in small trades or crafts or in agriculture. Households tend to be nuclear in cities, but in rural areas multigenerational families are typical. Among the Bamana, families include a man and his wife or wives along with their sons and their respective wives and children.

PERSONAL APPEARANCE

Dress is a mixture of Western and more traditional styles. For men, the full-length tunic called a *boubou* or *jellabiya* is typical, and for women the wraparound skirt called *pagne* and a matching tunic and headdress are usual. Social and economic class is indicated by the quality of ma-

terial used for these garments, as well as by the designs and embroidery. Hand dying is employed for the most distinctive designs.

Men also wear Western trousers or shorts with T-shirts, especially when working.

SPORTS

Soccer is the most popular sport in the country, and some of the stars of the country's leagues play for international teams. The national team competes for the African Nations Cup. In the 2004 Olympics the national team reached the quarterfinals, losing to Italy in a well-fought match. The country also sent Ibrahima Maiga to compete in the 400-meter hurdles.

Basketball is also becoming popular and is played by both males and females.

CHRONOLOGY

- 1958** Following a referendum in which the new Constitution of the Fifth French Republic is approved by the voters, the French Soudan becomes the République Soudanaise within the French Community.
- 1959** Mali Federation is established, with Senegal and the République Soudanaise as members. Modibo Keita is elected president of the federation.
- 1960** Mali Federation breaks up as Senegal withdraws. Republic of Mali is proclaimed in Bamako. New constitution is promulgated.
- 1962** At the Sixth Congress of the Union Soudanaise, the government affirms its socialist ideology. Malian franc is introduced as the national currency.
- 1963** The Tuareg begin a two-year revolt against the national government.
- 1966** Comité National de Défense de la Révolution is established.
- 1967** Malian franc is devalued by 50 percent. President Keita launches a cultural revolution on Chinese model. The Popular Militia is reactivated with Chinese advisers.
- 1968** National Assembly dissolves itself. President Keita is overthrown by a military coup. CMLN is formed, with Lt. Gen. Moussa Traoré as president. Provisional government is formed with Capt. Yoro Diakité as prime minister. Fundamental Law replaces the constitution of 1960.
- 1969** Attempted coup by Capt. Dilby Silas Diarra is suppressed. Traoré replaces Diakité as president.

1524 Mali

- 1972** Diakité is expelled from the CMLN and sentenced to hard labor.
A three-year catastrophic drought affects the Sahel. Some 80,000 refugees are housed in 33 camps.
- 1974** New constitution is approved by an overwhelming majority in a national referendum.
- 1975** Border dispute erupts between Mali and Burkina Faso (then called Upper Volta), followed by border skirmishes.
- 1976** UDPM is formed as the nation's sole legal political party according to the constitution.
- 1978** In a major cabinet reshuffle, four civilians are dismissed from the cabinet. Foreign Minister Charles Cissokho and Defense Minister Kissima Doukara are accused of complicity in an antistate plot and expelled from the CMLN and the government.
- 1979** First national elections under the constitution of 1974 are held.
The CMLN is disbanded; President Traoré is elected to a five-year term. The National Assembly is reconvened, and more civilians are included in the cabinet.
- 1981** The constitution is amended to limit the term of the National Assembly to three years.
- 1982** Elections are held for the National Assembly.
- 1983** Border dispute with Algeria is settled, while that with Burkina Faso is submitted to the International Court of Justice.
President Traoré visits Guinea and issues joint declaration on eventual unification of the two countries.
- 1985** Presidential and legislative elections are held. President Traoré is reelected with 98 percent of the vote.
Border fighting with Burkina Faso reerupts.
- 1986** The post of prime minister is re-created.
Burkina Faso and Mali accept World Court settlement of dispute over Agacher Strip.
- 1988** The post of prime minister is abolished.
- 1990** Some 175 prominent Malians publish an open letter demanding multiparty democracy.
- 1991** Traoré is ousted after four days of violent protests. Lt. Col. Amadou Toumani Touré, the coup's leader, becomes head of the National Reconciliation Council and promises to establish multiparty democracy in Mali.
- 1992** Mali adopts a new constitution.
Alpha Konaré is elected president as his party, the ADEMA, wins 76 of the 116 assembly seats.
- 1993** A pro-Traoré coup attempt fails.
- 1994** The CFA franc is devalued by 50 percent.
Ibrahim Boubacar Keïta is named prime minister.
- 1996** The World Bank praises the economic turnaround headed by Konaré's government.
- 1997** Violent opposition to the Konaré government and elections voids the results of the April election. Opposition members boycott new election in July.
- 1999** Konaré dismisses more than a dozen senior officials as part of an anticorruption drive.
Traoré is convicted and sentenced to death on corruption charges, but Konaré commutes the sentence to life imprisonment.
Health workers strike.
Ethnic fighting breaks out in the north.
Konaré announces that he will not run for a third term as president.
- 2000** Prime Minister Keïta steps down unexpectedly. Konaré names as prime minister Mandé Sidibé, a former IMF official.
Mali's anticorruption commission publishes a report revealing rampant embezzlement and waste among public services.
- 2002** Prime Minister Sidibé resigns. He is replaced by Modibo Keïta, who in turn is replaced by Ahmed Mohamed Ag Hamani in April. Amadou Toumani Touré, who overthrew Traoré in 1991, returns to power after winning a landslide victory in presidential elections.
- 2003** Clashes between rival Muslim groups leave 10 dead.
- 2004** Prime Minister Mohamed Ag Hamani resigns in April and is replaced by Ousmane Issoufi Maïga. A severe locust plague destroys 45 percent of the harvest.

NATIONAL FLAG

Two equal vertical stripes, white at the hoist and red at the fly, with a representation of the George Cross, edged with red, in the canton of the white stripe.

NATIONAL EMBLEM

Shield divided into two equal sectors: one white with the George Cross on the upper left, the other red with no decorations. Above the shield is a crown in gold with five turrets, and to either side are olive branches, symbolizing peace, tied at their bases by a red-backed white ribbon upon which is written the name of the republic in Maltese.

NATIONAL ANTHEM

"L'Innu Malti" (The Maltese hymn)

NATIONAL HOLIDAYS

National Day (March 31), Republic Day (December 13), all major Christian festivals, including the Shipwreck of St. Paul (February 10) and L'Imnarja, the feast of Sts. Peter and Paul (June 28–29)

DATE OF INDEPENDENCE

September 21, 1964

DATE OF CONSTITUTION

September 21, 1964; amended 1974, 1987

GEOGRAPHICAL FEATURES

Malta is an archipelago of five islands in the central Mediterranean. Three of the islands (Malta, Gozo, and Comino) are inhabited; two, Cominotto and Filfla, are uninhabited. Malta, the main island, lies 93 km (58 mi) south of Sicily and 290 km (180 mi) north of the Libyan coast. The inhabited islands of Malta have a total area of 316 sq km (122 sq mi), of which the island of Malta accounts for 246 sq km (95 sq mi), Gozo 67 sq km (26 sq mi). The total coastline of the inhabited islands is 253 km (157 mi).

The islands have neither mountains nor rivers. The terrain consists of low hills running east to northwest up

to a maximum height of 253 m (830 ft), with clefts that form deep harbors, bays, creeks, and rocky coves.

Valetta	7,048

CLIMATE AND WEATHER

The Maltese climate is typically Mediterranean, with subtropical summers and mild, rainy winters with occasional fog and rare frosts. The average winter temperature is 9.4°C (49°F), the average summer temperature 30.5°C (87°F). Rainfall averages 559 mm (22 in) per year, falling almost entirely between October and April.

Climate and Weather

Mean Temperature
Winter: 49°F
Summer: 87°F
Average Rainfall: 22 in

FLORA AND FAUNA

Few plants grow in Malta, due to the thin, rocky soil. A few protected areas, such as Buskett Gardens, are heavily forested with orange and other trees. Some 10 million migratory birds stop in Malta every year, including many species of raptors. Hunters come from all over to shoot these birds as they pass through, and some experts estimate that 30 percent of the birds stopping in Malta are shot or trapped.

POPULATION

Population Indicators

Total Population 2005:	398,534
World Rank:	165th

ETHNIC COMPOSITION

Most Maltese are believed to be descendants of ancient Carthaginians and Phoenicians, with strong Arab and Italian admixtures. The foreign community consists largely of retired British nationals and their dependents.

LANGUAGES

Malta has two official languages, Maltese and English. Maltese is a Semitic language with Romance language assimilations. Italian is also widely spoken.

RELIGIONS

The 1964 constitution affirms that the religion of Malta is “the Roman Catholic and Apostolic religion” but guarantees full freedom to all other religions. It stipulates that the Catholic Church is independent from the state in terms of its administration and that the Catholic religion is to be taught in state schools. State legislation on marriage runs parallel to canon law, and there is provision for neither civil marriage nor divorce.

Nevertheless, there is no concordat between church and state, and both remain, in practice, separate. Neither the clergy nor the churches receive remuneration or subsidies from the state, with the exception of schools. There is no department or ministry of religious affairs.

Religious Affiliations

Roman Catholic	390,000
Other	8,000

HISTORICAL BACKGROUND

Malta has successively fallen under the rule of the Carthaginians, Phoenicians, Greeks, Romans, Byzantines, Saracens, Norman-Sicilians, Aragonese, Knights of St. John, French, and British. The Knights of St. John ruled the Maltese islands from 1530 to 1798, when they surrendered them to the French. Two years later the British ousted the French, with British possession of Malta confirmed in 1814 by the Treaty of Paris. During the next 150 years Malta remained a loyal Crown Colony, with only occasional disturbances. In 1942 the entire population was awarded the George Cross for exemplary gallantry under fire.

Malta became a sovereign and independent nation within the Commonwealth in 1964. It became a republic in 1974, with the Malta Labour Party (MLP) in power under Dominic Mintoff, an anticlerical socialist. The next 10 years of MLP rule were marked by a bitter strug-

gle with the Catholic Church. The church-state dispute was not officially resolved until 1986. The MLP lost its parliamentary majority in 1986, when the rival Nationalist Party (NP) took office, under Edward Fenech Adami. The NP has retained power since then, with only a brief interlude during 1996–98. Malta applied for EU membership in 1990, but in 1996 the Labour Party regained power and shelved the application. Adami returned to power in 1998 and resubmitted the application. Guido de Marco became president in 1999.

In 2002 the European Union approved Malta's application and invited the nation to join. Malta held a referendum on the issue in March 2003, and 53 percent of voters affirmed their accordance. Adami's Nationalist Party retained power in the 2003 general elections, ensuring Malta's willingness to enter the European Union. Adami resigned as prime minister in 2004 to take office as president; his successor as prime minister was Lawrence Gonzi. In May 2004 Malta and 10 other nations acquired EU membership.

LIST OF MODERN RULERS

President

1974–76	Anthony Mamo
1976–81	Anton Buttigieg
1981–82	Albert Hyzler
1982–87	Agatha Barbara
1987–89	Paul Xuereb
1989–94	Censu Tabone
1994–99	Ugo Mifsud Bonnici
1999–2004	Guido de Marco
2004–	Edward Fenech Adami

Prime Minister

1962–71	George Borg Olivier
1971–84	Dominic Mintoff
1984–87	Carmelo Mifsud Bonnici
1987–96	Edward Fenech Adami
1996–98	Alfred Sant
1998–2004	Edward Fenech Adami
2004–	Lawrence Gonzi

CONSTITUTION

The Maltese independence constitution came into effect on September 21, 1964. It was superseded by the 1974 republican constitution, which replaced the British monarch as head of state with the president, who is appointed by the legislature to a five-year term. The head of government is the prime minister, who is the leader of the majority party in the House of Representatives. The president officially appoints the prime minister and the members of the cabinet.

PARLIAMENT

The legislature is the House of Representatives, the members of which are elected to five-year terms on the basis of proportional representation. There are usually 65 members, but the party that wins the most popular votes is occasionally assigned extra seats such that it holds a majority. The legislature is required by the constitution to convene at least once a year. The legislature appoints the president.

POLITICAL PARTIES

The two largest political parties in Malta are the Nationalist Party (a centrist party advocating EU membership, founded in 1980) and the Labour Party (a democratic socialist party founded in 1921). A third party, Alternativa Demokratika, was formed in 1989 to address social and environmental issues.

LOCAL GOVERNMENT

There are no local government bodies except for the Gozo Civic Council, which has limited responsibility for public works. Gozo affairs are handled by a cabinet minister and a resident commissioner.

LEGAL SYSTEM

The legal system is based on English common law and Roman civil law. The superior courts are the Constitutional Court and the Court of Appeal. The subordinate courts are the Court of Criminal Appeal, two civil courts, and a commercial court. Nine judges, including the chief justice, serve on the superior courts. The president appoints the chief justice and other key judges. The Constitutional Court hears appeals related to the validity of laws or the constitution or in cases of human rights violations, as well as disputed parliamentary elections.

HUMAN RIGHTS

The human rights situation in Malta improved considerably after the 1987 elections, which ended 16 years of Labour Party rule, and the political atmosphere became appreciably less tense.

Generally, there is freedom from arbitrary arrest and detention. However, any police officer above the rank of inspector may issue an arrest warrant without need of a court order. The police may, on suspicion, arrest a person for questioning, but such a person must be brought before the courts and charged or released within 48 hours. The police also may stop and search private

vehicles without cause or warrant between 9:00 P.M. and 6:00 A.M.

Judicial procedures guarantee a fair trial. Defendants have the right of counsel of their choice (at public expense for the indigent), are presumed innocent, may confront witnesses and present evidence, and have the right of appeal.

The print media are heavily politicized, and the opposition press engages in its adversary role with gusto. State radio and television provide equal time for both parties and organize televised debates between candidates. The constitutionally mandated Broadcasting Authority ensures impartiality in broadcasting. However, there is a certain degree of bias toward the ruling party and some self-censorship.

A 1987 constitutional amendment based on the Foreign Interference Act bans political activity by foreigners for nine months prior to the publication of election results.

FOREIGN POLICY

In the context of Maltese politics, the Labour Party has been consistently pro-Arab, anti-West, and anti-EU, while the Nationalist Party has been pro-West and pro-EU. However, the official Maltese foreign policy is neutral. A 1980 agreement with Italy guarantees Malta's neutrality. Malta concluded an association agreement with the European Union in 1970 and applied for full membership in 1990. Prime Minister Alfred Sant put Malta's application on hold in 1996, but in 1998 Prime Minister Edward Fenech Adami reopened Malta's bid for EU membership. Malta finally joined the European Union in 2004.

Malta's former close relations with Libya were placed on hold as a result of UN sanctions against Libya over the Lockerbie affair. In 1990 Malta and Libya renewed their close cooperation and further strengthened ties by abolishing visa requirements between the two countries and establishing a common radio station, Voice of the Mediterranean.

DEFENSE

The Maltese army took form in 1965, a year after independence, when the government took over the three Maltese Territorial (Reserve) Units hitherto maintained by the British. The next year they were reduced to two: the Light Air Defense regiment and the First Battalion. The regular Maltese units were transferred to the Maltese government in 1970; they consisted of the First Regiment Royal Malta Artillery (RMA), the RMA band, and the Logistics Unit. A Helicopter Flight was added in 1972. With the 1973 raising of three battalions of the Malta Pioneer Corps, a voluntary paramilitary force, the force arrived at its pres-

ent structure, known as the Armed Forces of Malta (AFM). The AFM is headquartered at St. Andrew's Barracks, while the Helicopter Flight division is based at Luga Airport. Basic training is provided on the island. There is also a Police Corps, which is responsible for internal security.

In 1980 Malta entered into an agreement with Italy whereby it declared its neutrality and permitted Italy to use its base on occasion in return for a lump sum payment of \$20 million and an annual grant of \$5 million.

ECONOMY

Tourism is the most significant source of income on Malta, though the export of semiconductors has also become profitable. Earnings from tourism have increased steadily since the late 1970s; though the attacks of September 11, 2001, slowed the tourist industry, it rebounded in 2003. The labor market is fairly flexible, and unemployment has held at about 7 percent (2004).

The government has been gradually liberalizing the economy, removing governmental interventions and allowing free-market mechanisms to take over. The currency has been pegged to the euro, the pound sterling, and the dollar, which has kept inflation low. The budget deficit was high, at 9.7 percent, in 2003. The Maltese government has plans to reform the national pension and welfare systems and to reduce further public sector involvement in the economy.

ENVIRONMENT

The island's biggest challenge may be the continued depletion of natural freshwater resources and the nation's corresponding increased reliance on desalination to fill the gap. In addition, the country's growing urbanization has created problems with waste and sewage pollution.

Environment

Forest Area % of total land area: 0.0

LIVING CONDITIONS

Malta is a modern European nation with good living conditions, while prices are lower than in many other parts of Europe. People live in modern apartments and houses. Roads are good, and there is an efficient public bus system, as well as ferry service connecting the various islands to one another. In the summer there is ferry service between Malta and Sicily and Genoa.

HEALTH

The Maltese are very healthy, with a life expectancy of almost 79 years and very low infant mortality. The Ministry of Health, the Elderly, and Community Care provides health-care services and monitors health conditions. It offers wellness programs designed to help the Maltese improve their health, such as by losing weight, stopping smoking, and avoiding sexually transmitted diseases. Fertility is low, at 1.5 children per women, but the island still has an extremely high population density.

FOOD AND NUTRITION

Maltese cuisine resembles that of Sicily. People eat a great deal of pasta and vegetables, including olives, and like to drink wine. There are also some British culinary practices, and a common meal features a large piece of meat with a few vegetables on the side. People like to eat rabbit, either fried or baked in a pie, cheese pastries called *pastizzi*, and a baked macaroni dish called *timpana*. The country is known for its sweets, especially nougat.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 190.3
 Amount of Fruits and Vegetables Available per person per year kg: 235.4

STATUS OF WOMEN

For cultural reasons women's rights are not associated with human rights. Laws guaranteeing equal opportunity for both sexes are not always enforced. Working women lose all entitlements and seniority personally acquired upon marriage. The husband is under law the head of the family unit. Divorce and abortion are illegal, though younger Maltese want to liberalize these laws. A comprehensive family law revision has been under consideration by the House of Representatives for some years.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 9
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.02
 Women's Share of Wage Employment Non-agricultural %: 33.0

WORK

Almost three-quarters of working Maltese are employed in services, particularly tourism. Nearly one-quarter work in industry, producing electronics (especially semi-conductors), clothing, and footwear or building and repairing ships. No more than 5 percent of the workforce is employed in agriculture. The unemployment rate was 7 percent in 2003, while per capita GDP was \$17,700.

Employment and Labor

Labor Force Total: 160,000
 Female Participation Rate %: 28.6
 Labor by Sector %:
 Agriculture: 5
 Industry: 24
 Services: 71
 Unemployment %: 7.0

EDUCATION

Education is compulsory between ages five and 16. It is free in both government schools and, since 1986, Catholic schools. Primary schooling starts at five and lasts for six years; secondary education begins at 11 and lasts up to seven years, comprising a first cycle of five years and a second cycle of two years. Both cycles lead to British equivalency certificates. The Roman Catholic Church provides an extensive system of primary and secondary education free of charge under a 1985 agreement with the government. The net enrollment ratio is almost 97 percent at the primary level and 82 percent at the secondary level. The literacy rate is 92.8 percent.

Higher education is provided at the University of Malta, founded in 1769; the College of Arts, Science, and Technology; the College of Education; and other institutions.

Education

SCIENCE AND TECHNOLOGY

The Malta Council for Science and Technology coordinates the government's national policy on science and technology. It includes many representatives from private industry as well as the public sector and academia. Malta's well-educated populace has allowed the nation to expand its electronics industry, particularly the profitable export of semiconductors. The nation has a good telephone system, with coverage for nearly all interested persons. In 2002, 120,000 people were using the Internet.

Science and Technology

MEDIA

Many of Malta's daily and weekly newspapers are affiliated with political parties. For example, the daily *L'orizzont* is owned by the Labour Party-affiliated General Workers' Union, while *In-nazzjon* is owned by the Nationalist Party.

For a small country, Malta has an unusually extensive book-publishing industry.

Malta has had radio since the 1930s and television since 1957, when the islands began receiving television programming from Italy; Italian shows remain very popular. Malta Television was founded in 1962. Though for years all broadcasting was done by the Catholic Church and the two main political parties, there are now many private commercial radio and television stations. There has been cable television since 1992, and many people have satellite television.

CULTURE

Malta has been inhabited for millennia, and its culture has been influenced by Phoenicians, Greeks, Romans, and the British, as well as the Catholic Church. Nowadays the Church is the source of most Maltese traditions, and the celebrations of local saints' days turn much of the year into holidays.

Malta's best-known authors are Joseph Attard and Dashielle Hammet. Maltese artisans make excellent lace, fabric, silver filigree, and blown glass.

FOLKLORE AND MYTHOLOGY

The Maltese know stories about numerous saints and celebrate their feast days with unique festivals that feature

parades, confetti, and candy. Folk music is still extremely popular. Every year the country holds a national folk-song competition.

ENTERTAINMENT AND RECREATION

Saints days and Catholic holidays are occasions for major festivals, which occur frequently throughout the year. Christmas, Carnival and Holy Week, the Feast of St. Paul's Shipwreck, and the Feast of Sts. Peter and Paul are some of the biggest events, but each town also has its own local celebrations honoring patron saints. People celebrate by eating fried rabbit and other delicacies, watching parades, dancing, singing folk songs, racing horses, and listening to stories.

Malta has a few good beaches and some excellent scuba diving sites. Tourists enjoy walking about the islands, touring ancient and medieval ruins, and exploring caves.

ETIQUETTE

The Maltese shake hands when meeting new people; businesspeople usually exchange business cards. Friends and relatives greet one another with kisses on both cheeks. Friends of the same sex, both male and female, commonly walk around holding hands. When a Maltese person offers hospitality, it is considered rude to decline; a guest should bring a small gift when visiting someone's house.

FAMILY LIFE

In Malta, a husband is legally the dominant partner in a marriage. Divorce and abortion are both illegal. While the Catholic Church's influence has been declining in recent years, and many Maltese want to see reforms in family law, most Maltese people still believe that marriage is an important institution and that the best environment for a child is in a home with two married parents. Most families have one or two children. Ties to grandparents and other relatives are still important, and many people care for their aging parents.

PERSONAL APPEARANCE

The Maltese wear typical Western clothes, though they are more conservative than some other Europeans. No one wears skimpy or provocative clothing in public. Most people try to dress well.

SPORTS

Many sporting facilities are available to the Maltese, who participate in activities such as archery, swimming, bad-

minton, wrestling, basketball, cycling, dance, gymnastics, and, of course, soccer. The nation has an Olympic committee and regularly sends athletes to participate in the Olympic games.

CHRONOLOGY

- 1964** Malta becomes an independent member of the Commonwealth under a new constitution.
- 1971** Winning a clear majority in the elections, the Malta Labour Party comes to power under Dominic Mintoff.
- 1972** Malta renegotiates the Mutual Defense and Assistance Agreement with the United Kingdom and wins a new seven-year agreement tripling the rental payment for the use of naval and military facilities.
- 1974** Malta becomes a republic, with Sir Anthony Mamo as first president.
- 1981** Legislation restricts the power of the courts to challenge government action.
In national elections the Labour Party wins a majority in the House of Representatives, while the Nationalist Party wins a majority of the popular vote. In protest, the Nationalist house members refuse to take their seats and organize a campaign of civil disobedience.
- 1983** Nationalists resume their seats in the house, ending a 15-month boycott, but immediately walk out, protesting a government resolution to loosen ties with the European Economic Community.
The House of Representatives passes another controversial bill, expropriating 75 percent of church property on the islands.
- 1984** Treaty is signed with Libya providing for economic and military assistance.
The courts strike down the law expropriating church property.
The House of Representatives retaliates by forbidding church schools to charge fees or accept donations.
The archbishop of Malta closes all church schools for several months in protest.
Mintoff steps down from office and is succeeded by Carmelo Mifsud Bonnici.
- 1987** In new elections the Nationalists obtain a majority of seats in the house under a new law. Edward Fenech Adami, the Nationalist leader, is named prime minister.
President Agatha Barbara retires and is succeeded in office by Paul Xuereb.
- 1994** Working to establish itself as a center of international finance, the Malta Financial Services Centre is established as an autonomous government agency to regulate financial services.

- Ugo Mifsud Bonnici becomes president of the country.
- 1996** After nine years of rule, the Nationalists are defeated by a slim majority by the Labour Party, and Alfred Sant becomes prime minister. Malta suspends its request for EU membership.
- 1998** Edward Fenech Adami is again elected prime minister. Malta renews its bid for EU membership.
- 1999** Guido de Marco becomes president.
- 2001** Pope John Paul II visits Malta and beatifies three Maltese clerics.
- 2002** The European Union invites Malta to join in 2004.
- 2003** Some 53 percent of Maltese voters vote to support joining the European Union in a referendum. The ruling Nationalist Party wins the election and confirms the EU referendum result.
- 2004** Adami becomes president. Lawrence Gonzi becomes prime minister. Malta gains EU membership.

DATE OF INDEPENDENCE

October 21, 1986

DATE OF CONSTITUTION

May 1, 1979

GEOGRAPHICAL FEATURES

The Republic of the Marshall Islands is located in the central Pacific Ocean between latitudes 4 and 14° north and longitudes 160 and 173° east. It is made up of five islands and 29 atolls with many islets. The islands and islets are divided into two parallel chains, the Ratak (Sunrise) chain to the east and the Ralik (Sunset) chain to the west. The total land area is only 181 sq km (70 sq mi), spread over about 1,950,000 sq km (750,000 sq mi) of ocean.

Two-thirds of the population live in Majuro and Ebeye. Very few people live on the outer islands, which lack employment opportunities.

CLIMATE AND WEATHER

The Marshall Islands have a tropical climate. Conditions are usually hot and humid, with a consistent average tem-

perature of 80 degrees Fahrenheit, though trade winds make the climate pleasant most of the year. Nighttime temperatures are slightly cooler than daytime ones, but the coldest temperatures on the islands generally occur after daytime rainstorms. The skies are usually cloudy, with a predominance of cumuliform clouds. Minor rainstorms are quite common, but major tropical storms are not. Rainfall varies from 20 inches a year on the north-

1538 Marshall Islands

ern atolls too 160 inches a year in the south. The rainiest months are between May and November.

FLORA AND FAUNA

Much of the soil on the islands is fragile and cannot support a great deal of plant life. About 14 percent of the land is covered with meadows and pastures, while 23 percent are forest and woodland. About one-third of the land is devoted to agriculture. In all, perhaps 60 percent of the land has coconut palms growing on it. Other crop plants include banana, breadfruit, taro, yam, arrowroot, tapioca, pandanus, and pumpkin. There are no native species of vegetation growing on the islands.

There are a great many animal species living in and around the Marshall Islands. There are hundreds of species of coral inhabiting the shallow waters around the atolls, and all five of the world's sea turtle species have been found there. Tuna and game fish are abundant, as are other fish species. There are perhaps 27 species of whales, dolphins, and porpoises. Bird life is plentiful; about 70 species have been spotted there, with 31 using the islands as breeding grounds. The only indigenous land mammal is the Polynesian rat. There are seven lizard species, one blind snake species, numerous insects and arthropods, and many coconut crabs, prized for their meat.

ETHNIC COMPOSITION

The people of the Marshall Islands are mostly Micronesian, descendants of ancient emigrants from Southeast Asia. There are a few people with mixed ethnicities, combining Micronesian with German, Japanese, or American ancestry.

LANGUAGES

Marshallese and English are the official languages. Marshallese belongs to the Austronesian language family, which is a member of the Malayo-Polynesian group. There are two main dialects of Marshallese, one spoken in the Ralik chain and the other in the Ratak chain. The two dialects are quite similar to each other.

RELIGIONS

Most Marshallese are Protestants. The United Church of Christ is the largest Protestant denomination, and there are also many others. There are some Roman Catholics, Seventh-Day Adventists, Mormons, Jehovah's Witnesses, and members of the Salvation Army. There is a small Baha'i community. Most people use Sundays to go to church and relax; the culture is quite religious.

HISTORICAL BACKGROUND

The Marshall Islands were originally settled by waves of people who migrated from Southeast Asia across the western Pacific about 3,000 years ago. Little is known about how these ancient inhabitants lived. The first European contact with the Marshalls came in 1529, when the Spanish explorer Miguel de Saavedra landed there. Spain claimed the islands in 1592.

In 1799 the British naval captain John Marshall visited the islands and named them after himself. In 1864 Adolph Capelle of Germany established a trading company on the Marshalls, which was followed by several other trading companies over the next few years, all dealing primarily in copra. Germany bought the islands from Spain in 1885 for \$4.5 million, and the following year Germany established a protectorate over the islands. The Jaluit Company, one of the island group's several trading companies, was given the right to govern them, while traditional chiefs continued to handle local affairs.

The Japanese took the Marshalls from the Germans in 1914, and the League of Nations gave Japan a mandate

to administer the Marshalls in 1920. In 1944 the United States wrested control of the Marshall Islands from the Japanese. Immediately after the end of World War II the Americans began a program of nuclear testing, starting with 1946's Operation Crossroads on Bikini Atoll. The local leader, Chief Juda, agreed to move his people to nearby Rongerik Atoll on the assumption that the move would be temporary and that they would be allowed to return soon. The following year the United Nations established the Trust Territory of the Pacific Islands, which included the Marshall Islands and six other entities; the United States was named trustee.

In 1948 the United States expanded its operations to Enewetak Atoll, which was also evacuated. In 1954 Americans detonated the largest hydrogen bomb ever tested, Bravo, on Bikini Atoll. Bravo was a 15-megaton bomb, 1,000 times the strength of the bomb dropped on Hiroshima. Radiation from the test site spread over Rongelap, Rongerik, Utirik, and Ailinginae atolls, causing radiation burns on those in the immediate area and forcing the evacuation of all Marshallese and American servicemen. Nevertheless, the United States continued testing bombs. Evacuated islanders suffered great privation on their temporary home islands, which were inhospitable and difficult to cultivate; food shortages were a major problem, and starvation was a constant risk.

The people of Rongelap were allowed to return home in 1957, despite some lingering radiation. The nuclear testing was concluded in 1958, after the detonation of 66 nuclear weapons. As the 1960s progressed, Marshall Islanders began noticing acute health problems, especially thyroid tumors and growth retardation. U.S. officials declared Bikini Atoll safe in 1969, but the Bikini Council was not satisfied with the information and decided not to return en masse, although individual islanders did return. More detailed information about the levels of contamination was released in the mid-1970s, and it became apparent that the water and soil on Bikini was too contaminated for human habitation. The Bikini residents sued the United States, demanding surveys and comprehensive cleanup.

In 1979 the United States recognized the government of the Marshall Islands and its new constitution and supported the nation's efforts toward eventual complete independence and self-government. The islanders elected Amata Kabua as their first president.

In 1986 the United States ratified the Compact of Free Association, which made the Marshall Islands independent and arranged for financial aid and compensation for the extensive aftereffects of the nuclear testing. It established a Nuclear Claims Tribunal in 1988 to create a comprehensive compensation package; through the 1980s and 1990s the United States and the Marshall Islands continued to work on cleanup, surveys, and negotiations for damages. The islanders particularly resented having essentially been used as guinea pigs in American experi-

ments regarding the effects of radiation on humans, as has been concluded through the examination of declassified documents regarding the nuclear tests performed. As of 2001 the United States had paid out millions of dollars to affected Marshallese, and negotiations of final amounts remained ongoing, with no complete resolution foreseen in the near future.

In 1990 the United States terminated its trusteeship over the Marshall Islands. Amata Kabua died in office in 1996, and his first cousin Imata Kabua was elected to replace him. Kessai Note won the 1999 election after campaigning on a reform platform; he was reelected in 2003. Note, the first commoner to be elected president, expressed a desire to make the country self-reliant and end dependence on aid from governments, both local and international.

LIST OF MODERN RULERS

President	
1980–97	Amata Kabua
1997–2000	Imata Kabua
2000–	Kessai Note

CONSTITUTION

The constitution was adopted on May 1, 1979. The parliament elects the president from among its own members to a four-year term. The president functions as both head of state and head of government. The president selects his cabinet from among the members of parliament. Suffrage is universal, and the voting age is 18.

Though the democracy of the Marshall Islands is new, it has functioned well, and most local and national elections have been fair and democratic. Kessai Note won 100 percent of the vote in the 2003 election.

PARLIAMENT

The Marshall Islands has a bicameral parliament. The lower house, or Nitijela, has 33 members, called senators, from 24 districts. They serve concurrent four-year terms. The upper house is an advisory council of high chiefs, called the Council of Iroji, a 12-member body that advises the government on matters of customary law.

POLITICAL PARTIES

There are no formal political parties in the Marshall Islands, though there are no formal laws against them. There are associations that function as interest groups or factions, operating without formal platforms or party structures. They include the traditional Kabua Party and

1540 Marshall Islands

the reform-minded United Democratic Party, the party of President Note. Political alliances are still formed according to clan affiliation and are influenced by traditional hierarchies. The first two presidents, Amata Kabua and Imata Kabua, were both chiefs. President Kessai Note is a commoner.

LOCAL GOVERNMENT

The Marshall Islands are divided into 33 municipalities: Ailinginae, Ailinglaplap, Ailuk, Arno, Aur, Bikar, Bikini, Bokak, Ebon, Enewetak, Erikub, Jabat, Jaluit, Jemo, Kili, Kwajalein, Lae, Lib, Likiep, Majuro, Maloelap, Mejit, Mili, Namorik, Namu, Rongelap, Rongrik, Toke, Ujae, Ujelang, Utirik, Wotho, and Wotje. These municipalities correspond roughly to the individual atolls of the nation. There are four district centers, which each have their own elected council, mayor, local officials, and local police. The districts raise their own money and also receive grants from the federal government.

LEGAL SYSTEM

The Marshall Islands has four judiciary levels: the Supreme Court, a high court, district and community courts, and the traditional rights court. The traditional rights court handles disputes arising from customary law and traditional practices, particularly property disputes. Either judges or juries decide cases. The legal system is based on customary law, acts of the legislature, common law, and Trust Territory laws.

HUMAN RIGHTS

For the most part, the human rights record of the Marshall Islands is very good. The legal and judicial systems function well. Prison conditions are substandard. Violence against women and children is a continuing problem.

FOREIGN POLICY

The Republic of the Marshall Islands is a sovereign nation in "free association" with the United States; the two nations presently have amicable relations. The United States has placed more than 40 government agencies in the Marshalls to render assistance, including the Federal Aviation Administration, the U.S. Postal Service, the Federal Emergency Management Agency, and the Small Business Administration. The United States and the Marshalls signed an amended Compact of Free Association in 2004 whereby the Marshalls will receive \$57 million in U.S. aid through 2014 and \$62 million from

2014 to 2024. The two nations have been working out the details regarding compensation for nuclear test victims for decades, and as of 2005 the process was far from complete.

The Marshall Islands have diplomatic relations with 67 nations, including most of its Pacific island neighbors, and it considers regional cooperation to be very important. All foreign relations are conducted under the terms of the Compact of Free Association.

DEFENSE

The United States is responsible for the security and defense of the Marshall Islands. The government may not take any actions that would interfere with U.S. defense responsibilities. The U.S. Department of Defense has the use of the lagoon and several islands located at Kwajalein Atoll, which it is allowed to use as a missile test range.

ECONOMY

The Marshall Islands have yet to develop a self-supporting economy, and the nation depends heavily on U.S. aid, which accounted for 55 percent of the national budget for fiscal year 2003. The nation must import most consumer goods, food, machinery, and petroleum products.

External revenue comes from the U.S. Army installation on Kwajalein Atoll and from tourists. The nation has begun developing a ship registry and as of 2004 had registered over 600 vessels, constituting the ninth-largest fleet in the world; registering ships brings in about one million dollars each year. The nation also sells fishing rights to foreign nations. Copra cake and coconut oil are the largest exports.

There is a modern service economy in Majuro and Ebeye, which have retail establishments, restaurants, banking and insurance, professional services, and other urban industries. The outer islands have some copra production. The government subsidizes these businesses to keep excessive numbers of outer islanders from migrating to the densely populated cities. The government plans to further develop fisheries, aquaculture, and tourism.

ENVIRONMENT

Because the Marshall Islands are essentially at sea level, the government has long been concerned about global climate change. It has participated in negotiations for the UN Framework Convention on Climate Change and has also allowed research into climate change and sea levels by a team from Harvard University. The only line of defense between ocean surges and most of the islands and atolls are fragile rings of coral reefs. The islanders legitimately fear for their safety in the case that the oceans rise even slightly, which would probably force all residents to evacuate. Under some scenarios, the entire nation could be covered with water as early as 2030.

Majuro's lagoon has become polluted with wastes discharged from fishing boats as well as homes. The increasing population puts increasing pressure on already inadequate supplies of potable water.

LIVING CONDITIONS

Living conditions are relatively poor. The cities have become crowded in recent years, and the country has limited economic resources. The cost of living is relatively low, but there are not many amenities available. Freshwater is in short supply. Public transportation is by shared taxis and minivans, which are cheap and ubiquitous. There are some state-run boats between the islands, but most people use their own boats or hire privately owned ones. People from Bikini Atoll and other nuclear test sites have had especially difficult existences for most of the past half century, having been forced to evacuate to temporary island homes that proved difficult to live on and incurring radiation sickness when attempting to return to their true homes.

HEALTH

The people of the Marshall Islands have numerous health problems. Rapid population growth and crowded cities

with limited economic opportunities have resulted in the increased incidence of diseases such as tuberculosis and leprosy. Meanwhile, Westernization has increased obesity, alcoholism, tobacco use, teenage pregnancy, and suicide. Malnutrition is a chronic problem for many people. Fertility is high; in 2004 each woman had an average of nearly four children. The government has been trying to find solutions for these problems, as assisted by the World Health Organization, but currently lacks medical resources.

Some areas of the Marshalls have exceptionally high levels of cancers associated with radiation exposure from the nuclear testing in 1954 and from living on islands contaminated with radioactive materials; thyroid cancer is extraordinarily common. The nation sued the United States, alleging that islanders were deliberately resettled onto contaminated islands so that the United States could study the effects of radiation exposure. The nation has received many millions of dollars in compensation.

Health

FOOD AND NUTRITION

The Marshallese have always had difficulty acquiring adequate amounts of food, and malnutrition has been a chronic problem for centuries. The work of farming and fishing remains difficult. Fish and seafood are the main source of protein. Tuna is a staple food, as are coconut crabs. Breadfruit, coconut, taro, and pandanus are the main plant crops. People on the northern islands grow arrowroot, which they make into flour. The consumption of Western processed food has increased in recent years, with corresponding rises in obesity.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: —
 Amount of Fruits and Vegetables Available per person per year kg: —

STATUS OF WOMEN

Women have fairly high social status owing to the matrilineal transfer of property and traditional rank. Women occupy important positions both in the government and within tribes. Women work at all levels of employment, though many have low-paying jobs with no hope for advancement.

Spousal abuse and domestic violence are common and are usually related to alcohol consumption. One survey found that more than 80 percent of Marshallese women had been affected by spousal abuse. Women in cities risk assault if they walk alone at night. Spousal abuse and domestic violence are not against the law, which prohibits only forced rape. Prostitution is illegal, but it does occur.

Women

 Seats Held in Parliament by Women %: 3
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 30.9

WORK

Many residents are employed in a subsistence economy, growing crops and catching fish mostly for their own consumption. Copra and handicraft production provide small incomes for some outer islanders. About 580 women work at a tuna canning plant, where they earn \$1.50 an hour. The government is the largest employer, accounting for 64 percent of workers earning salaries.

Employment and Labor

Labor Force Total: 28,700
 Female Participation Rate %: —
 Labor by Sector %:
 Agriculture: 21.4
 Industry: 20.9
 Services: 57.7
 Unemployment %: 30.9

EDUCATION

The Marshall Islands have a public school system that provides compulsory education for children up to age 14, around eighth grade. Elementary schools are bilingual and bicultural; students begin studying English in fourth grade. Secondary schools are selective, and students must pass a test to enter them. The Marshall Islands have two institutions of higher education: a pre-university branch of the University of the South Pacific and the two-year

College of the Marshall Islands. Students who want a fuller university education must go elsewhere.

 Public Expenditure on Education as % of GDP: 11.2

SCIENCE AND TECHNOLOGY

Scientific training in the Marshalls focuses on fishing techniques, aquaculture, and seabed mining, all of which the government hopes to develop as sources of income. The nation has a modern telecommunications system, including digital switching equipment, international calling, telex, and internet facilities. Nevertheless, the nation remains fairly undeveloped technologically, and most residents do not use much technological equipment. In 2003 there were about 4,500 telephone lines and 600 cellular telephones in operation on the islands; only about 1,400 people were using the Internet.

MEDIA

The Marshallese media enjoys freedom of speech and disseminates a wide range of views, though it generally handles sensitive political issues with tact, avoiding direct confrontations and accusations. The state-owned radio station is run by the Marshall Islands Broadcasting Company. Micronesia Heatwave is a commercial radio station, while V7AA is religious. AFN Kwajalein, the U.S. military radio and television station, can be received in some areas. MBC TV is the state-run television station. Many

1544 Marshall Islands

households receive television broadcasts through cable. The government publishes a monthly magazine, the *Marshall Islands Gazette*, which avoids coverage of political issues. There is one privately owned weekly newspaper, which is published in both Marshallese and English.

CULTURE

The Marshallese produce numerous handicrafts. They weave baskets and other objects with intricate patterns, using local materials such as pandanus leaves. Stick charts, an ancient form of oceanic navigational chart, are still produced for tourists, though most modern Marshallese can no longer use them to navigate the ocean. The nation is trying to revive the art of canoe building. Tattooing was a traditional art, and before the missionaries arrived all Marshallese were tattooed, receiving decorations as a rite of passage.

FOLKLORE AND MYTHOLOGY

The Marshallese maintain a rich oral tradition of legends, songs, and chants. Many myths focus on oceanic navigation, and these were historically used to teach navigation and weather observation skills to young sailors. The creator god, Lowa, brought the islands into existence by humming. The main evil characters are cannibal spirits and ogres. Marshallese myths are related to stories from Asia, Micronesia, and Polynesia, reflecting the common origins of those peoples.

ENTERTAINMENT AND RECREATION

For the Marshallese, entertainment revolves around the family. Relatives visit one another frequently and often hold large family gatherings, with feasting, singing, and dancing. Visitors to the Marshall Islands generally come to enjoy the spectacular snorkeling and scuba diving or to tour wrecks of World War II airplanes and ships.

ETIQUETTE

The Marshallese do not customarily tip for services, though they welcome tips from visitors. Bargaining is not the custom in markets, though people do occasionally barter with one another.

FAMILY LIFE

Marshallese society is organized by tribes, each of which is under the leadership of a chief and clan head and supported by workers. Chiefs control the use of land and other resources and settle disputes. Clan heads maintain the land and organize daily activities. The other tribe members perform all the daily work. The tribes are matrilineal, and land is passed down through mothers. Extended family is very important, and people maintain close ties with numerous distant relatives. Family members are expected to care for one another if necessary. Family gatherings are very important, especially on such occasions as a child's first birthday.

PERSONAL APPEARANCE

Marshallese people dress in casual, lightweight clothing but still observe rules of modesty. Women wear dresses, skirts, or sarongs; it is considered offensive to expose bare thighs in public. Men generally wear pants rather than shorts.

SPORTS

Through the early 200s there was a revival of interest in canoe racing, and there are now frequent sailing races throughout the islands. The Outrigger Marshall Islands Cup race is one of the biggest; captains sail 18-foot canoes made of breadfruit tree logs out and back on a six-mile course. The outcome of the race often depends on how rapidly the captain can reverse the direction of his sail for the return voyage.

CHRONOLOGY

- 1788** British captain John Williams Marshall names the Marshall Islands.
- 1864** Germans begin establishing trading companies in the Marshalls.
- 1885** Germany buys the Marshall Islands from Spain for \$4.5 million.
- 1887** Germany entrusts the Jaluit Company with governing the Marshall Islands.
- 1914** Japan captures the Marshalls and builds military bases.
- 1920** The League of Nations gives Japan a mandate to govern the Marshalls.
- 1944** The United States takes the Marshalls from Japan.
- 1946** The United States begins nuclear weapons testing on Bikini Atoll, evacuating the Bikini islanders to Rongerik Atoll and promising to return them soon.
- 1947** The United States takes over the administration of the Marshall Islands, which become part of the Trust Territory of the Pacific Islands.
- 1948** The U.S. nuclear weapons testing program is expanded to Enewetak Atoll, forcing Enewetak islanders to evacuate.
- 1954** Bravo, the most powerful hydrogen bomb ever tested, is detonated on Bikini Atoll.
- 1965** The United States creates the Congress of Micronesia in order to introduce self-government to the region.
- 1969** The United States initiates attempts to decontaminate Bikini Atoll.
- 1970** Bikini Atoll's residents return to their island throughout the decade, only to expose their bodies to dangerous levels of radiation. They are evacuated again. Many islanders become seriously ill.
- 1973** The Marshall Islands withdraw from the Congress of Micronesia, preferring to govern themselves independently.
- 1979** The Marshall Islands establish a government and ratify a constitution. Amata Kabua is elected president.
- 1980** The residents of Enewetak Atoll return home after most of the topsoil is removed in an attempt to clean up nuclear contamination.
- 1980** The nation names itself the Republic of the Marshall Islands.
- 1983** The Marshalls enter into a Compact of Free Association with the United States, which will give the Marshalls political independence with American military and financial aid. The United States retains its military base on Kwajalein Atoll.
- 1985** The United States promises to finish decontaminating Bikini Atoll by 2000.
- 1986** The United States grants the Marshalls independence as agreed upon in the Compact of Free Association of 1983. The compact promises islanders compensation for damage suffered from nuclear testing.
- 1988** The U.S. Nuclear Claims Tribunal is established to determine the amount of compensation due the Marshalls.
- 1989** The United Nations predicts that global warming could cause the Marshalls to be completely submerged by 2030.
- 1990** The United Nations terminates the Marshall Islands' trustee status.
- 1991** The Marshall Islands join the United Nations. The United States begins efforts to clean up Bikini Atoll.
- 1996** Bikini Atoll is declared safe for human residence and tourism.
- 2000** Kessai Note becomes president.
- 2001** The Nuclear Claims Tribunal announces the amount of damages owed by the United States to the Bikini islanders, but the fund for paying damages does not contain enough money. The Bikini islanders are told to petition the U.S. Congress for more compensation.
- 2003** President George W. Bush signs a new Compact of Free Association with the Marshall Islands and Micronesia.
- 2004** President Kessai Note begins his second term as president.

MAURITANIA

Basic Fact Sheet

OFFICIAL NAME

Islamic Republic of Mauritania (République Islamique de Mauritanie; Al-Jumhuriyah al-Islamiyah al-Muritaniyah)

ABBREVIATION

MR

CAPITAL

Nouakchott

HEAD OF STATE

Colonel Ely Ould Mohammed Vall (from 2005)

HEAD OF GOVERNMENT

Prime Minister Sidy Mohamed Ould Boubacar (from 2005)

NATURE OF GOVERNMENT

Republic

POPULATION

3,086,859 (2005)

AREA

1,030,700 sq km (397,950 sq mi)

MAJOR ETHNIC GROUPS

Mixed Moor/black, Moor, black

LANGUAGES

Arabic (official); Pular, Soninke, and Wolof (national); French, Hassaniya

RELIGION

Islam

UNIT OF CURRENCY

Ouguiya

NATIONAL FLAG

A yellow star over a yellow crescent on a light green field

NATIONAL EMBLEM

A circular badge bearing an Islamic star and crescent, stalks of millet, and a date palm, with "Islamic Republic of Mauritania" in Arabic and French on the border

NATIONAL ANTHEM

"Mauritania"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), May 25 (African Liberation Day), November 28 (Independence Day, National Day), various Islamic festivals

DATE OF INDEPENDENCE

November 28, 1960

DATE OF CONSTITUTION

July 12, 1991

GEOGRAPHICAL FEATURES

Mauritania, in northwestern Africa, extends 1,515 km (941 mi) northeast to southwest and 1,314 km (816 mi) southeast to northwest. It has a total land area of 1,030,700 sq km (397,950 sq mi). Mauritania's Atlantic coastline stretches 666 km (414 mi), and the nation's total international land border of 5,074 km (3,153 mi) is shared with four countries: Algeria (463 km; 288 mi), Mali (2,237 km; 1,390 mi), Senegal (813 km; 505 mi), and Western Sahara (1,561 km; 970 mi), which is occupied by Morocco.

The country is a vast, flat plain divided in the middle by a series of plateaus with elevations above 450 m (1,500 ft). To the east of these plateaus lies El Djouf, or the empty quarter. To the west are clayey plains, or *regs*, and sandy dunes, or *ergs*. Topographically, the country is divided into four zones: the Sahara; the Sahel; the Senegal River valley, or Chemama; and the coast. The Saharan zone constitutes two-thirds of the country. The Sahelian zone consists of grasslands and steppes. The Chemama zone is a narrow belt of land extending 15–30 km (10–20 mi) north of the Senegal River. The coastal zone extends the length of the Atlantic coast in an arc from Cape Blanc to the Senegal River.

CLIMATE AND WEATHER

Mauritania has four climatic zones, corresponding to the topographic zones. The Chemama zone has the high-

est rainfall in the country, with up to 660 mm (26 in) per year, beginning in May and lasting until September. Temperatures are cooler than in the rest of the country, with a maximum of 34.4°C (94°F) and a minimum of 23.3°C (74°F).

The Sahelian zone has one rainy season, from July to October, with a maximum of 460 mm (18 in) of rainfall. Temperature extremes are less severe than in the Sahara.

The coastal zone has a humid but temperate climate modified by trade winds from the Canary Islands. Rainfall is less than 25 mm (1 in) annually. Temperatures are moderate, ranging from maximums of 26°C (79°F) in January and 32°C (90°F) in October to minimums of 13°C (56°F) in January and 19°C (66°F) in July.

The Saharan zone receives 25–127 mm (1–5 in) of rain annually during the rainy season, called *hivernage*, from July to September. Temperature extremes are more pronounced. Winter temperatures range from 0°C (32°F) at night to 37.8°C (100°F) at midday, while summer temperatures range from 15.6°C (60°F) at night to over 48.9°C (120°F) at midday. The hottest months are May, June, and July.

Climate and Weather

Mean Temperature

Chemama zone:	74°F to 94°F
Coastal zone:	Winter 56°F to 79°F
	Summer 66°F to 90°F
Saharan zone:	Winter 32°F to 100°F
	Summer 60°F to 120°F

Average Rainfall

Saharan zone:	1 in to 5 in
Coastal zone:	1 in
Sahelian zone:	18 in
Chemama zone:	26 in

FLORA AND FAUNA

About 60 percent of Mauritania's land is desert, and that proportion grows yearly as the Sahara spreads; very little grows or lives there, aside from a few gazelles and bustards that can survive on almost no water. In the Sahel there are low grasses, acacia trees, and bushes. The southern part of the country is wetter, and the area near the Senegal River is actually fertile and can support many plants, such as the baobab tree; most of Mauritania's food crops are grown there, including dates. The Diawling National Park is full of endangered species, especially birds, and a number of birds also live along the Atlantic coast. The Banc d'Arguin National Park is a stopping point for millions of migratory birds. Desert animals include insects, sandfish, foxes, and gerbils. Lions and monkeys live in the more fertile regions.

ETHNIC COMPOSITION

The largest ethnic group is the Moor, who constitute about 70 percent of the population when people of mixed black-Moor blood are included. The remaining 30 percent are blacks belonging to the Fulbe, Toucouleur, Soninke, Wolof, and Bambara groups.

The Moors are of Arab-Berber stock and are divided into subgroups based on the degree of black admixture and social status. The white Moors, or *bidan*, are predominantly Arab-Berber. The noble white Moors—both the warrior class, or *bassan*, and the religious elite, the *zwaya*—lay claim to pure Arab ancestry. The common white Moors, or the *zenaga*, are clearly Berber. The black Moors are also Berber in origin but have a greater admixture of black African ancestry. The black Moors are essentially a slave class, though they are officially called *barratin* (freedmen). Moor society is characterized by a rigid hierarchical caste system and tribal divisions within the context of an Islamic society, with the *zwaya* and *bassan* at the top and the *barratin* at the bottom.

Of the five black ethnic minority groups, the largest is the Toucouleur. The other four—the Fulbe, Soninke, Wolof, and Bambara—are representative of widely dispersed peoples who are found in greater numbers in neighboring countries. The Fulbe, like the Moors, are nomadic, while other minorities are sedentary farmers concentrated in the fertile Senegal River valley.

The European presence in the country consists of nearly 2,000 French and Canary Islanders.

Mauritanians are not Western-oriented and are uncomfortable when confronted with traditions and ways of

life alien to their own. Whatever degree of receptivity to the West exists is limited entirely to the blacks.

LANGUAGES

The constitution of 1961 designated Arabic as the national language and French and Arabic as the official languages. The 1991 constitution specifies the national languages as Arabic, Pular, Soninke, and Wolof and the official language as Arabic. The Moors speak various dialects of Arabic, grouped together as Hassaniya. The Moor elite classes speak a purer form of Arabic, while the white Moor commoners and the black Moors speak a form of Arabic mixed with Berber.

All the black groups speak languages belonging to the West Atlantic, or Mande, subgroups of the Niger-Congo group of the Congo-Kordofanian family. Nearly all these languages have some Arabic elements introduced as a result of contact with the northerners. The Fulbe speak Fulfulde, or Pular, and the Toucouleur speak a dialect of Fulfulde. Soninke (Sarakole) and Bambara are Mande languages, while the Wolof have absorbed more Arabic words than others.

Language is a sensitive issue that has served to widen the ethnic division between the Moorish north and the black south. The introduction of Arabic as the medium of instruction in primary schools touched off riots in 1966. The compulsory use of Arabic in all schools was suspended in 1979 but reintroduced in 1988.

RELIGIONS

Islam is the official religion of Mauritania and is adhered to by virtually all Mauritania. The centers of religious orthodoxy in the country are the two major brotherhoods, called *tariqa* (ways): the Qadiriya and the Tijaniya, both of which are organized hierarchically. Mauritania subscribes to the Malikite rite of the Sunni branch of Islam. Chinguetti, in the district of Adrar, is considered the seventh holy place in Islam.

Most of the 6,500 Christians in the country are Roman Catholics, under the jurisdiction of the bishop of Nouakchott. Proselytism and the construction of churches and other non-Islamic houses of worship are prohibited without express government permission, which has been granted in several instances, however, to Mauritania's small Roman Catholic community. Several Catholic churches operate freely.

HISTORICAL BACKGROUND

At one time Mauritania was covered with lakes and other sources of freshwater. However, about 10,000 years ago the Sahara Desert began to encroach upon the land. At some point in the third century c.e. nomads (Berbers) inhabited much of the region, trading salt, gold, and slaves. In the ninth and 10th centuries the Empire of Ghana, with its capital in southwest Mauritania, emerged. As the Islamic faith swept northern Africa, the Muslim Berber Almoravids captured the northwest portion of the continent and established a capital in Marrakesh, from which they destroyed the Empire of Ghana. As the Islamic empire in North Africa grew, it split in two, one centered in Morocco and the other ruled by the Berbers of Mauritania. Defeated by invading Arabs in 1674, the resulting cultural blending gave rise to the Moors.

When Europeans began to gain control over Africa, Mauritania was relatively unscathed. It suffered no depopulation due to slavery, no reorientation of the economy to cash crops, and no stripping of precious minerals. In 1814, however, France gained the right to control the Mauritanian coast. By 1904 Xavier Coppolani, delegate-general of the government of Mauritanian Sahara, had established French military posts in southern Mauritania. His work was continued by Gen. Henri Gouraud, who, as the commissioner of the Civil Territory of Mauritania, captured Atar in 1904. By 1912 all resistance in Adrar and southern Mauritania had been put down. Except for minor raids by Moor warriors, French dominance was never challenged, until 1961.

The French policy of assimilation and direct rule was never applied vigorously in Mauritania. Rather, the French relied on existing political structures to maintain power. Further, no attempts were made to develop the economic resources of the country. French rule was summed up by the former president Moktar Ould Daddah in saying, "Mauritania has hardly known colonization and has, therefore, neither suffered its ill effects nor realized its benefits."

In 1958 Mauritania became a self-governing member of the French Community. It gained full independence on November 28, 1960, with Moktar Ould Daddah as head of both state and government. By 1964 Daddah had established a one-party state under the rule of the Parti du Peuple Mauritanien (PPM).

From late 1976 to mid-1979 many of Mauritania's political and economic problems stemmed from disputes over the Western Sahara territories, which had been ceded by Spain to Mauritania and Morocco in November 1975, with the agreement to take effect in March 1976. On July 10, 1978, a bloodless coup replaced Ould Daddah with Lt. Col. Mustapha Ould Salek. The constitution was suspended, and the government and the PPM were dissolved. The newly formed Military Committee for National Recovery (CMRN) would exercise execu-

Religious Affiliations

Sunni Muslim

3,080,000

tive authority. Salek's continued desire to end hostilities over the disputed Western Sahara led him to replace the CMRN with the Military Committee for National Salvation (CMSN) in April 1979. At the same time he gave over the prime ministry to Lt. Col. Ahmed Ould Bouceif, who was killed in a plane crash the following month. Lt. Col. Mohamed Khouna Ould Haidalla, formerly the minister of defense, was then appointed by the CMSN as a replacement. Salek resigned in June, and the presidency was filled by Lt. Col. Mohamed Mahmed Ould Ahmed Louly. On August 5, after talks in Algiers, Mauritania formally renounced all claims to the Western Sahara regions called Tiris el-Gharbia and subsequently withdrew troops from the territory, which was quickly occupied by Morocco. At the same time Algiers and Mauritania reestablished diplomatic relations.

In 1980 Haidalla consolidated his position by taking over the presidency from Louly and moved toward introducing civilian rule and a multiparty system, with the government to be headed by Sid Ahmed Ould Bnejara. But civilian participation in the government ended following an attempted coup by a group of officers in March 1981 in which Morocco was accused of involvement. Prime Minister Bnejara was replaced by Col. Maaouya Ould Sid'Ahmed Taya on April 26. A planned coup was uncovered early in 1982 and resulted in the arrest and imprisonment of the former president Salek and the former prime minister Bnejara.

Student unrest in 1984 led Haidalla to take over the prime minister's office. In December, while Haidalla was out of the country, Taya effected a bloodless coup and assumed the role of head of both state and government. An amnesty for all political prisoners was announced. In the next several years Taya restructured the administrative system and began a major program of economic recovery.

In the mid-1980s civil disturbances broke out, with black Mauritians claiming oppression by Moorish ethnic groups. In late 1987 a discovered coup attempt led to the arrest of 51 people reported to be of the black Toucouleur ethnic groups. Secret trials in December sentenced three officers, who were executed, and 41 others, who were imprisoned. Internal problems in 1988 were followed by the arrest of several hundred people linked to the pro-Iraqi Baathist movement. At the same time Amnesty International and the black African opposition group Forces de Libération Africaine de Mauritanie (FLAM) accused the government of inhuman treatment of prisoners in the desert Walata prison.

President Maaouya Ould Sid'Ahmed Taya has remained entrenched in power since the 1984 military coup. He was inaugurated as president in 1992 and reelected to another six-year term in 1997. The Taya regime is heavily antiblack and has been accused of systematic repression of southern blacks, specifically the executing or torturing of several thousand black army officers and government officials. In January 2002 the government banned the opposi-

tion party Action for Change, which had been agitating for increased rights for blacks and the descendants of slaves. Taya was reelected in November 2003 with 67 percent of the vote, in elections that the opposition called flawed.

During 2003 and 2004 the government rebuffed three attempted coups in 15 months. The coup attempt of July 2003 involved heavy fighting on behalf of the president's forces, who managed to retake the capital, which had been seized by rebel soldiers. Former president Haidalla, the main opposition candidate in the 2003 presidential election, was given a suspended sentence for his role in attempting to overthrow the government. In September 2004 the government accused Libya and Burkina Faso of funding the rebels. In August 2005 President Taya was ousted in a military coup led by Ould Mohammed Vall.

LIST OF MODERN RULERS

1960–79	Moktar Ould Daddah
1979	Mustafa Ould Salek
1979–80	Mohamed Mahmed Ould Ahmed Louly
1980–84	Mohamed Khouna Ould Haidalla
1984–2005	Maaouya Ould Sid'Ahmed Taya
2005–	Ely Ould Mohammed Vall

CONSTITUTION

In 1991 Mauritania adopted a new constitution, which instituted multiparty elections. The frame of government calls for a president who is elected by universal suffrage for a renewable six-year term. The voting age is 18. Six candidates ran for president in the 2003 election, including one woman and one *barratin*, from a former slave family. The executive branch keeps tight control of the government. Parts of the constitution were suspended on August 6, 2005, following a military coup.

PARLIAMENT

The 1991 constitution vests legislative power in a bicameral legislature, comprising the 81 members of the National Assembly, elected by universal suffrage, and the 56 members of the Senate, elected by municipal leaders. The parliament's powers are severely limited by the constitution, though it can override a presidential veto. Assembly members serve for five years, Senate members for six. Representatives are elected by universal suffrage by all those 18 years of age and older.

POLITICAL PARTIES

Political parties were legalized by the constitution passed July 12, 1991, though politics continue to be tribally based.

All parties in the country must have an Islamic orientation. As of 2004, 12 major political parties were active. The parliament has been dominated by the Democratic and Social Republican Party (PRDS) since 1994. Other parties include Action for Change (AC), the Alliance for Justice and Democracy (AJD), the Mauritanian Party for Renewal and Concord (PMRC), the National Union for Democracy and Development (UNDD), the Party for Liberty, Equality, and Justice (PLEJ), the Popular Front (FP), the Popular Progress Alliance (APP), the Popular Social and Democratic Union (UPSD), the Progress Force Union (UFP), the Rally of Democratic Forces (RFD), the Rally for Democracy and Unity (RDU), and the Union for Democracy and Progress (UDP). Action for Change was banned in 2002, but its members kept their seats in the National Assembly.

The fundamental divide in Mauritanian politics is between those who consider it to be an Arab country and those who want sub-Saharan blacks to have equal governing roles. Many members of both groups, however, want a diverse society with a place for all races.

LOCAL GOVERNMENT

For purposes of regional administration Mauritania is divided into 12 numbered regions plus the capital district of Nouakchott. Each region is headed by a governor. The regions are divided into 49 departments, each headed by a prefect, and subdivided into arrondissements.

LEGAL SYSTEM

Mauritanian law is based on a combination of French civil law and Islamic sharia law. The Malikite school of Islamic law is the law of the land in all social and family matters. Criminal and commercial law is largely based on French sources.

At the apex of the judicial system are the Supreme Court, the State Security Court, and the High Court of Justice. The Supreme Court, with six members, has a modern jurist as president and an Islamic judge as vice president. It has four functions under the constitution: constitutional, appellate, administrative, and financial. The State Security Court consists of nonprofessionals appointed by the president. The High Court of Justice consists of a president and 11 other judges, six of whom are elected by the National Assembly from among its own members and five of whom are elected by the National Assembly from a list of Islamic jurists.

HUMAN RIGHTS

During the 1990s Mauritania's human-rights record remained generally poor, although there were areas of improvement. Democratic institutions remained

rudimentary. Police used excessive force, arbitrary arrest and detention, and illegal searches; however, reports of police abuses decreased during the year 2000. Prison conditions remained harsh and unhealthy, but a new men's prison was completed in Nouakchott that improved overcrowding and unsanitary conditions. Pretrial detention continued; however, the lengths of pretrial detentions were shorter due to the improved organization of the courts. The government continued its program of judicial reform and training, but the executive continued to exercise significant pressure on the judiciary, and in practice the right to a fair trial was not always realized.

While the government tolerates a critical independent press, it continues to censor individual editions. Discrimination against women continues, and female genital mutilation remains a serious problem despite government efforts to halt the practice. Ethnic tensions continued to ease, but the largely southern-based ethnic groups, including the Halpular (also called Fulani or Peuhl), Soninke, and Wolof, remain underrepresented in political life, and some of their members feel excluded from effective political representation. Child labor in the informal sector is common.

A system of officially sanctioned slavery in which government and society join to force individuals to serve masters does not exist; however, there continue to be reports that slavery in the form of forced and involuntary servitude persists in some isolated areas, or that unofficial voluntary servitude persists and that former slaves continue to work for former masters or others for food, shelter, and clothing, though under no legal compulsion to do so.

FOREIGN POLICY

Mauritania is a nonaligned country but an active member of the African Union, the Arab League, and the Union of the Arab Maghreb. Mauritania supported Saddam Hussein in the Gulf War but later shifted its support to Saudi Arabia and the Gulf states and distanced itself from Baghdad. In 1995 it made overtures to Israel, provoking Libya to suspend relations. As a former French colony it continues to have a special relationship with France, especially in monetary and military affairs. Mauritania's settlement with the Polisario Front, fighting for the independence of Western Sahara, was followed by the restoration of diplomatic relations with Algeria.

In 1989 violence erupted along the border with Senegal, provoking race riots in the capitals of both nations. In subsequent months 170,000 to 240,000 Mauritanian expatriates fled Senegal, while Mauritania expelled 70,000 Senegalese and 40,000 blacks. Diplomatic relations were severed, but they were restored in 1992. Mauritania's relations with Mali were also strained, with the black-

dominated regime accusing Nouakchott of inciting its ethnically Berber Tuareg population. Morocco is another source of tension. In September 2001 King Mohammed of Morocco visited the country, a step toward normalizing relations between the two countries.

Mauritania has for the most part maintained good relations with the United States, though Mauritania's various human rights violations and its perceived support of Iraq in 1991 caused some problems. The nation is eligible for U.S. trade benefits under the Africa Growth and Opportunity Act (AGOA). Mauritania opened diplomatic relations with Israel in 2000.

DEFENSE

The defense structure is headed by the president, who is also the commander in chief of the armed forces. The line of command runs through the minister of national defense to the chief of the national staff of the armed forces. The country is divided into three military regions.

Military manpower is provided by voluntary enlistment, although mandatory conscription for two-year periods of service was introduced in 1962. After service periods, veterans are subject to recall in the event of a threat to national security.

In size and equipment the armed forces of Mauritania are geared not to an external, offensive role but only to internal peacekeeping operations. In terms of combat-worthiness and capability of sustained operations, the armed forces have a poor track record and repeatedly had to pull back when faced with the better-disciplined Polisario Front forces. In fact, the army's poor performance in the field persuaded the Mauritanian government to seek a nonmilitary solution to the Western Saharan problem, finally abandoning its claim to Tiris el-Gharbia and seeking its own peace settlement with the Polisario Front in the face of Moroccan pressures. However, martial traditions are strong in the country, and the armed forces have an influence on national life that is not limited to defense needs. The armed forces provide a pool of technical and administrative skills and function as the engine of the modernization processes.

Until French military aid was withdrawn in 1973, France was the major supplier of equipment and training programs to the Mauritanian army.

ECONOMY

Many of Mauritania's subsistence farmers and nomads moved to the cities in the 1970s and 1980s during a period of recurrent droughts, but half the population still lives in rural areas and depends on farming and livestock. Mauritania's two main sources of revenue are iron ore deposits and coastal fisheries, but foreign fishermen have depleted fish stocks, and world demand for iron ore has declined in recent years. Droughts and economic mismanagement are perennial problems.

The result of these difficulties has been a buildup of foreign debt, which has been alleviated somewhat by debt relief that began in 2001. In the early 2000s the government improved the foreign investment climate and began investigating the possibility of drilling for oil offshore. The International Monetary Fund (IMF) has been working with the government to improve fiscal discipline, reduce poverty, improve education and health, and privatize the economy.

ENVIRONMENT

Mauritania suffers from growing desertification caused by overgrazing, deforestation, and soil erosion. These worsening conditions have been exacerbated by drought. The country has limited freshwater resources away from the Senegal River, which is its only perennial river. The country is occasionally struck by plagues of locusts. One bright spot is the recently opened Diawling National Park, which has been attracting endangered species of birds.

Environment

 Nationally Protected Areas % of total land area: 2
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 1.22

LIVING CONDITIONS

Half of Mauritians live below the poverty line; though per capita GDP was \$1,800 in 2003, the wealthiest 10 percent of the population consumes 30 percent of the wealth. Living conditions are poor for most people. Roads are bad, and there is little public transportation. The capital city, Nouakchott, was built to accommodate 200,000 residents, but over half a million people now live there, many of them in metal shacks and tents. Crime is steadily increasing in urban areas. Many people still live a nomadic existence, moving about the desert with herds of animals.

HEALTH

Life expectancy is about 52 years. Infant mortality is fairly high, at over 72 deaths per 1,000 live births. Fertility is extremely high, with each woman averaging 6 children in 2004. HIV/AIDS has not yet become a major problem, though malaria is endemic. Women typically give birth at home, but the state has been retraining traditional midwives and encouraging urban women to deliver their babies in hospitals. The government and the United Nation's Children's Fund (UNICEF) have launched programs to encourage mothers to breastfeed their babies instead of using formula in an effort to reduce the infant mortality rate and space births.

FOOD AND NUTRITION

Frequent droughts, plagues of locusts, and the encroachment of the desert hampers Mauritania's ability to feed its people. In 2003 nearly one million Mauritians faced starvation after a drought; in 2004 locusts ate most of the growing plants, precipitating another crisis. Rice and tea are staples of the Mauritanian diet. People drink some fruit juices and eat dates. Fish is a common source of protein along the coast, and nomads eat camel, goat, and sheep.

Food and Nutrition

Undernourished % of total population: 9.5
 Daily Available Calories per capita kcal: 2,660
 Amount of Cereal Available per person per year kg: 172.2
 Amount of Fruits and Vegetables Available per person per year kg: 23.4

STATUS OF WOMEN

Although Mauritanian women are legally free to participate fully in governmental affairs and private business, traditional values and practices limit their scope of activities. A number of women have risen to important positions in the fields of health and education, and some hold midlevel government positions. Their number is small, however, and the possibilities for advancement are slight.

Girls attend school at a much lower rate than boys, especially in rural areas, where they tend to marry early or stay at home to help their parents. The government has opened boarding schools specifically for girls and offered prizes to keep them in school. Some people still practice female genital mutilation, and in some regions parents force-feed daughters to fatten them up for marriage.

Women

WORK

About 80 percent of Mauritians depend on their own crops and livestock to feed themselves; unemployment was estimated to be 21 percent in 1999. Many Mauritanian men have emigrated to other countries to look for work. Of those Mauritians who are employed, about half work in agriculture, growing dates, millet, sorghum, rice, and corn or raising cattle and sheep. The main in-

1556 Mauritania

dustry in the country is the mining of iron ore and gypsum, though some people also work in fish processing.

Despite laws and governmental protestations to the contrary, many Mauritians insist that slavery still exists in the country, often claiming to themselves be escaped slaves. The status of slaves is inherited, so that the children of slaves are themselves born into slavery.

Labor Force Total: 786,000
Female Participation Rate %: 43.5
Labor by Sector %:
Agriculture: 50
Industry: 10
Services: 40
Unemployment %: 21.0

EDUCATION

Mauritania has introduced free, universal, and compulsory education for six years, from ages six to 12.

Schooling consists of 12 years, as divided into six years of primary school, three years of middle school, and three years of secondary school. The academic year runs from October to June. The media of instruction are Arabic and French in the primary grades and Arabic, French, and English in the secondary grades. Many students drop out of school.

Strong racial tensions, present throughout the society, have been consistently reflected in the educational system. An attempt to enforce the use of Arabic in all schools was abandoned due to strong opposition by blacks, who traditionally prefer the use of French and their tribal tongues. Nevertheless, a plan was introduced in 1988 to make Arabic the compulsory first language in all schools.

One of the reasons for the poor educational attainments of Mauritians is the continuing emphasis on purely Islamic education at all levels. Traditional Islamic schools are found in both nomadic communities and settled villages. The best known of these Islamic schools is the Institute of Islamic Studies at Boutilimit.

The majority of the teachers in the school system are black because of the greater educational attainments among blacks and the opposition of Islamic marabouts to secular education. Teaching personnel and curricula have been completely Mauritanianized.

Mauritania has 10 technical schools. Both COMINOR and SOMIMA, the nation's mining companies, run their own vocational schools. Vocational enrollment accounts for 12.5 percent of secondary school pupils.

Public education is administered by the Ministry of National Education and the Ministry of Primary Education.

The École Nationale d'Administration and the École Naturelle des Sciences in Nouakchott began degree

courses in 1982. The University of Nouakchott opened in 1983 and by 1986 had an enrollment of 2,850.

Education

SCIENCE AND TECHNOLOGY

Mauritania has little in the way of technological infrastructure. The telephone system is rudimentary, though it is rapidly improving, and in 2002 only 10,000 people were using the Internet. Only about 40 percent of the population can read, which hampers technological progress. Agriculture is still performed with traditional tools and labor-intensive methods.

MEDIA

Mauritania's first daily newspaper, *Ach Chaab*, was founded in 1975. Other papers include *Horizon*, a French paper, and *Nouakchott Info*, a private daily. Mauritania's press laws are fairly restrictive; a newspaper can be banned for publishing anything that "undermines" Islam or insults the government. A national news agency, Agence Mauritanienne d'Information, was founded in 1975. AMP maintains a bureau in Nouakchott.

The state owns the radio and television stations, which not surprisingly broadcast only material favorable to the government. In 2000 the state shut down an FM relay of Radio France Internationale, which had supposedly been saying negative things about Mauritania. The

official broadcasting organization is Radiodiffusion-Télévision de Mauritanie, which broadcasts in Arabic, French, Toucouleur, Sarakole, and Wolof. Limited television service was inaugurated in 1984.

CULTURE

The most notable aspect of Mauritanian culture is the music, which usually has wailing vocals accompanied by an *ardin*, a kind of harp, and a *tidnit*, a four-stringed lute. Arab poetry furnishes the lyrics to these songs. The Moors are known for their elaborate goldsmithing. There are some interesting archaeological sites. The ancient town of Tichit has some elaborately decorated mosques. Koumbi Saleh was the legendary capital of the medieval empire of Ghana and might have been home to many thousands of people; excavations are only partly complete.

FOLKLORE AND MYTHOLOGY

Mauritania has a variety of folkloric traditions stemming from its different ethnic groups. The Kewri societies are especially known for their folklore. In ancient times Mauritania was wet and lush, and there are still rock drawings by the Bafour people that give some notion of conditions in those days.

ENTERTAINMENT AND RECREATION

There is not a great deal of entertainment in Mauritania. People spend their free time sitting and drinking tea.

There are a few places to go fishing or bird-watching. Some people go surfing or swimming along the coast. Muslim celebrations are festive. Some of the cities have movie theaters.

ETIQUETTE

Mauritanians are known for their social solidarity and hospitality. People assume that they will share what they have with others, or that others will share with them; starvation is fairly rare when people have relatives and neighbors who can help. Every visitor receives glasses of strong tea with mint; they will typically be given three glasses during a short visit. Serenity is highly valued; people do not usually react passionately to anything.

FAMILY LIFE

Some 30 percent of Mauritanian families are headed by women. There are some cases of polygamy, but most Mauritanians disapprove of the practice, believing it bad for children. A certain number of children are abandoned every year by parents unable to care for them; many of these grow up to be street children who are at risk of being sexually or otherwise abused.

PERSONAL APPEARANCE

Mauritanians are very conservative in their dress; they keep their arms and legs covered most of the time. The covering serves a practical purpose as well, keeping out the desert sun and sand and keeping the wearer warm during cold desert nights. Large rectangular pieces of cloth form the basis of most wardrobes, and people fold and tie them in various ways to achieve different effects. Many women wear full veils, covering all but their eyes. Men wear loose trousers and turbans.

SPORTS

Mauritania has no organized sports. There are a few private sporting clubs in Nouakchott, Nouadhibou, and Rosso.

CHRONOLOGY

- 1960** Mauritania gains independence as a member of the French Community, with Moktar Ould Daddah as prime minister.
- 1961** New constitution is promulgated, establishing a presidential form of government. Ould Daddah assumes the presidency.

1558 Mauritania

- Mauritanian People's Party (Parti du Peuple Mauritanien, PPM) is founded through a coalition of four existing parties.
- 1963** Treaty of Kayes is concluded with Mali, defining the border between Mali and Mauritania.
- 1964** PPM is declared the sole political party and the supreme state organ.
- 1968** Government efforts to abandon French and introduce Arabic as the official language and medium of instruction in schools lead to riots in the black south.
The great Sahelian drought disrupts the economy, brings famine to thousands, and decimates the livestock population.
- 1969** Diplomatic relations with the United States are resumed.
- 1971** Ould Daddah is reelected president.
Riots mark French president Pompidou's state visit to the country.
Mauritania joins Organization for the Development of the Senegal River (Organisation pour la Mise en Valeur du Fleuve Sénégal).
- 1973** Revised agreement of cooperation is concluded with France, excluding monetary and military programs.
French military advisers are withdrawn.
Mauritania withdraws from the franc zone and introduces new national currency, the ouguiya.
Mauritania joins the Arab League.
- 1978** Ould Daddah is ousted in a bloodless coup led by army chief of staff Mustapha Ould Mohamed Salek.
The constitution of 1961 is suspended, and the National Assembly and the PPM are dissolved.
The Military Committee for National Rectification (CMRN) is set up as supreme executive and legislative authority.
- 1979** Following internal power struggles, Ahmed Bouceif is named prime minister.
Following Bouceif's death in an air accident, Mohamed Khouna Ould Haidalla succeeds as head of government.
President Salek resigns office and is replaced by Mohamed Mahmed Ould Ahmed Louly.
Organization of African Unity summit conference calls for referendum in former Spanish Sahara.
Mauritania renounces territorial claims on Tiris el-Gharbia and signs peace treaty with Polisario Front.
- 1980** Mohamed Haidalla takes over as president, as Louly steps down.
The nation experiences an economic upturn, as iron ore production edges upward.
Haidalla resigns posts of prime minister and minister of defense.
- An entirely civilian cabinet is named, with Sid'Ahmed Ould Bnejara as prime minister.
A draft constitution is drawn up.
- 1981** An attempted coup, believed to be backed by Morocco, is foiled.
Civilian rule ends. A new military-dominated cabinet is named, with Col. Maaouiya Ould Sid'Ahmed Taya as prime minister and minister of defense. Draft constitution is abandoned.
Coup led by former president Salek and former prime minister Bnejara is foiled.
- 1984** Prime Minister Taya ousts Haidalla in a bloodless coup.
- 1987** High government officials, along with the former governor of the Central Bank, are arrested in connection with a financial scandal.
A coup attempt by members of the black Toucouleur ethnic group opposed to ethnic inequality is thwarted. In secret trials held by the Special Court of Justices, 41 are found guilty and sent to prison, and three officers are sentenced to death and executed.
- 1988** Following the executions it is reported that some 500 black officers are dismissed from the armed forces.
Some 600 people are arrested in connection with the pro-Iraqi Baathist movement.
FLAM and Amnesty International accuse the state of inhuman conditions at its desert prison in Walata.
Haidalla and five associates are released on the anniversary of Taya's takeover.
Students at the University of Nouakchott boycott classes, protesting for improved education and welfare facilities and for better distribution of grants.
- 1989** Mauritania signs a treaty with Algeria, Libya, Morocco, and Tunisia to establish the Union of the Arab Maghreb.
- 1991** A new constitution is adopted, calling for multi-party politics.
- 1992** Taya wins the national elections and retains power.
- 1997** Taya and the PRDS are reelected.
- 2001** The king of Morocco visits.
- 2002** Mauritania receives \$1.1 billion in debt relief.
The government bans the pro-black opposition party Action for Change.
- 2003** Opposition forces led by former president Haidalla attempt a coup, which is rebuffed by the soldiers of President Taya. Taya is reelected in November with 67 percent of the vote; the opposition forces allege voting fraud.
- 2004** The government reports another failed coup attempt and blames Burkina Faso and Libya for financing it and the other recent coup attempts.

2005 President Taya is ousted in a coup d'état led by Col. Ely Ould Mohammed Vall.

CAPITAL

Port Louis

HEAD OF STATE

President Sir Anerood Jugnauth (from 2003)

HEAD OF GOVERNMENT

Prime Minister Navinchandra Ramgoolam (from 2005)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

1,230,602 (2005)

AREA

2,040 sq km (788 sq mi)

MAJOR ETHNIC GROUPS

Indo-Mauritian, Creole

LANGUAGES

English (official), French (official), Creole, Hindu, Urdu, Tamil

RELIGIONS

Hinduism, Christianity, Islam

UNIT OF CURRENCY

Mauritian rupee

NATIONAL FLAG

Four equal horizontal stripes of red (top), blue, yellow, and green

NATIONAL EMBLEM

A shield of alternate blue and yellow quarters in which are displayed a golden sailing vessel with crossed masts and rowing oars, three palm trees, a red key, and a triangle capped by a white star. The latter two symbols are based on the national motto, which appears on a white ribbon at the base: *Stella clavisque maris Indici* (Star and Key of the Indian Ocean). The device is flanked by a dodo on one side and a sambar (deer) on the other, each holding a stalk of sugarcane.

NATIONAL ANTHEM

“Motherland”

NATIONAL HOLIDAYS

January 1 and 2 (New Year’s Days), March 12 (National Day, Independence Day), October 24 (United Nations Day), various Christian festivals, including Assumption, Easter, Good Friday, Holy Saturday, All Saints’ Day, Christmas, and Boxing Day, nine Hindu festivals, three Islamic festivals, one Chinese festival

DATE OF INDEPENDENCE

March 12, 1968

DATE OF CONSTITUTION

March 12, 1968; amended March 12, 1992

GEOGRAPHICAL FEATURES

A roughly semicircular island in the Indian Ocean about 800 km (500 mi) east of Madagascar, Mauritius extends 61 km (38 mi) north to south and 47 km (29 mi) east to west, with a coastline of 217 km (135 mi). Associated with the main island are a number of lesser islands. The combined area of 2,040 sq km (788 sq mi) includes Rodrigues Island, the Cargados Carajos Shoals, and the Agalega Islands.

The capital is Port Louis. Other major urban centers are Beau Bassin–Rose Hill, and Vacoas-Phoenix. Both Mauritius and Rodrigues are of volcanic origin. The surface of Mauritius consists of a broad plateau sloping toward a northern coastal plain, with elevations up to 826 m (2,710 ft) near the southern coastline. The island has a jagged coastline with many natural harbors and is nearly encircled by a coral reef. Rodrigues is composed of basalt and is mountainous throughout, with very little flat land.

CLIMATE AND WEATHER

Mauritius has a tropical maritime climate. From April to October, when southeasterly trade winds blow, the climate is mild on the plain and cold on the plateau. A hot and wet season lasts from November to March. The temperature varies from 16.6°C (62°F) to 30°C (86°F) at sea level and from 13°C (56°F) to 26°C (79°F) in the highlands.

Rains are heaviest in summer and autumn, from December to May, with the southeastern and central regions receiving 1,520–5,080 mm (60–200 in) of rain annually. The relatively dry western coast, where the capital is located, receives less than 1,010 mm (40 in) of rain per year. Devastating tropical cyclones occur from November to March.

Southeastern and central region: 60 in to 200 in
Western coast: 40 in
Rodriguez: 49 in to 69 in

FLORA AND FAUNA

Mauritius was covered with forests of ebony and mahogany trees before the 1600s; many unique plant species also grew there. However, European settlers cut down most of the hardwoods to plant vegetables and sugarcane. The forests are now largely composed of introduced eucalyptus, casuarina, and evergreens. The island has some nature preserves and botanical gardens that still harbor indigenous plants.

The dodo bird once lived on Mauritius, but it was quickly killed off by Dutch settlers and their pets. The Dutch introduced the sambar deer, which is now a protected species. Wild animals include pigs, macaques, pink pigeons, echo parakeets, Mauritian falcons and kestrels, and the Mascarene paradise flycatcher.

ETHNIC COMPOSITION

When the Dutch settled Mauritius in the late 16th century, there was no indigenous population on the island, and none of the Dutch remained after 1710. The earliest permanent inhabitants were the French and their African slaves. Later immigrants to the island included Indians, Chinese, and mulattoes. About 68 percent of the present population are Indo-Mauritians, 27 percent are Creoles or people of French descent, 3 percent are Chinese, and 2 percent are white. On Rodrigues the ethnic proportions are reversed, with Europeans and Creoles forming a large majority of the population.

Interethnic relations are characterized by intense economic and political rivalry. No two ethnic communities share common values or institutions, and each community has its own sector of the economy in which it has a virtual monopoly. Because ethnic identity is usually reinforced by religious and linguistic heritage, ethnic barriers tend to be fixed and inflexible. Only the Creoles permit some degree of assimilation.

LANGUAGES

English is the official language, but the lingua franca is Creole. Creole on Mauritius is a language, not a dialect, derived from French but with its syntax, pronunciation, and vocabulary modified through borrowing from African languages. Originally a slave language, it has managed to coexist with and even displace French over the years. Six Indian languages are spoken in Mauritius. Three—Hindi, Urdu, and Tamil—are spoken by sizable numbers. Chinese is a minor language.

French enjoys more prestige than English and is spoken by more than 40,000 persons, although the quality of spoken French varies according to the educational level of the speaker.

RELIGIONS

The religious configuration of the country closely follows the ethnic and religious divisions. Nearly 51 percent of the population is Hindu, 34 percent Christian, and 16 percent Muslim. Religious minorities include Buddhists, Confucians, Baha'is, and Ahmadiyyahs; the latter two are heterodox sects related to Islam. Of the orthodox Muslims the vast majority belong to the Sunni sect.

Christianity, the oldest religion on the island, also has the greatest ethnic diversity among its adherents, with membership among all races. The largest single religious institution is the Roman Catholic Church, which also maintains the most extensive educational system on the islands. The Anglican diocese of the Church of England is headed by a bishop in Phoenix.

Religious Affiliations	
Hindu	640,000
Christian	348,000
Roman Catholic	320,000
Protestant	28,000
Muslim	204,000
Other	38,000

HISTORICAL BACKGROUND

Mauritius was an uninhabited island before the arrival of the Europeans. The first Europeans to visit Mauritius were the Portuguese, probably around 1510. The Dutch, who settled the island in 1598, named it Mauritius after their stadtholder, Prince Maurice of Nassau. They introduced sugarcane and the Java deer before abandoning the island in 1710.

The French took possession of the island in 1715. The island was governed by the French East India Company until 1767, then by the French government until 1810, when British forces, acting to protect British and Indian shipping, seized control during the Napoleonic Wars. Possession was confirmed by the Treaty of Paris in 1815. The most important events during British rule were the abolition of slavery in 1835 and the importation of indentured laborers from India. Since 1948, when property qualifications were abolished and the franchise was made universal, the Indian community has dominated the legislature.

Mauritius became independent on March 12, 1968, with a constitution based on the British parliamentary system. It changed its status to a republic within the Commonwealth on March 12, 1992. Since that time the political history of Mauritius has been marked by the development of political parties based on ethnic rather than ideological divisions and by the formation of coalition governments.

Governor-General Veerasamy Ringadoo became the first president when Mauritius transformed into a republic but was quickly replaced by the first elected president,

Cassam Uteem of the Mauritian Militant Movement (MMM); he held office until 2002. During his time in office, Mauritius was hit by Cyclone Hollanda in 1994, which did \$81 million in damage, and the Creole singer Kaya died while in police custody in 1999, sparking four days of riots. Uteem and his vice president resigned in 2002 after a disagreement over an antiterrorism bill, and the National Assembly elected Karl Hoffman as the replacement president. Hoffman was replaced in the 2003 elections by Anerood Jugnauth, the leader of the Militant Socialist Movement (MSM) and former prime minister. Jugnauth chose Paul Bérenger as prime minister, making Bérenger the first non-Hindu to hold the office.

LIST OF MODERN RULERS

President

1968	Sir John Shaw Rennie
1968–72	Sir Arthur Williams
1972–77	Sir Abdul Rahman Muhammad Osman
1977–79	Sir Henry Garrioch

2000–03	Sir Anerood Jugnauth
2003–05	Paul Bérenger
2005–	Navinchandra Ramgoolam

CONSTITUTION

The Mauritius Independence Order of 1968, amended by the Constitution of Mauritius (Amendment) Act 39 of 1969, established Mauritius as an independent parliamentary democracy within the Commonwealth, with the British monarch as head of state. In 1992 a constitutional amendment gave Mauritius a republican form of government, with a president as head of state, still within the British Commonwealth.

Legislative power is vested in the unicameral National Assembly, chosen every five years and consisting of 62 elected and up to eight nonelected members. The nonelected members are added to the assembly by the election commission based on the "best loser" system to provide balanced representation of all ethnic groups. All citizens of Mauritius age 18 and older have the right to vote.

The president and vice president are elected by the National Assembly for terms of five years. Executive

power is exercised by the Council of Ministers, headed by the prime minister, who, as leader of the majority party in the assembly, is appointed to office by the president. The leader of the opposition, who is the leader of the largest opposition party or coalition in the assembly, also has official status and must be consulted by the prime minister on certain appointments.

PARLIAMENT

The National Assembly is a unicameral body with up to 70 members, of whom 62 are elected (including two from Rodrigues). The other representatives, up to eight, are appointed from among the unsuccessful candidates who received the most votes; these usually represent communities underrepresented in the assembly. The legislative term is five years.

The 2000 assembly elections resulted in a landslide victory for the opposition coalition of the Militant Socialist Movement and the Mauritian Militant Movement, which won 54 of the 62 seats. The Labor Party won six seats, the Organization of the People of Rodrigues two. The MSM leader Sir Anerood Jugnauth became prime minister and announced that after three years he would hand the post over to his MMM partner, Paul Bérenger, which he did.

POLITICAL PARTIES

Shifting coalitions of the principal parties in the National Assembly have dominated the recent history of Mauritius. The Mauritian Labor Party (MLP) dominated politics from 1947 to 1982. The Mauritian Militant Movement (MMM) and Mauritian Socialist Party (PSM) won the 1982 election, but in 1983 members of both parties formed a new party, the Militant Socialist Movement (MSM). The MSM realigned with the MMM in 1991 and won all but three of the elected parliamentary seats. In 1995 the MLP formed a coalition with the MMM and returned to power. Prime Minister Navinchandra Ramgoolam dismissed the MMM in 1997, leaving the MLP in power. In 2000 the MSM-MMM alliance won the majority, and MSM leader Anerood Jugnauth became prime minister on the understanding that the MMM leader would take over in 2003, which duly happened when Paul Bérenger became prime minister in 2003.

LOCAL GOVERNMENT

Mauritius is divided into nine administrative districts, with separate councils for urban and rural areas. There are five municipal and town councils in urban areas. Both urban and village councils have elected and nominated members. They set their own taxes, make their own by-

laws, regulate property rights, and handle road building, sanitation, and water and food supply.

There are also three dependencies: the Agalega Islands, Carajos Shoals, and Rodrigues. Of the dependencies, Rodrigues has considerable autonomy under a resident commissioner and five parish councils; the island sends two elected representatives to the legislative assembly and has a minister in the cabinet.

LEGAL SYSTEM

The Mauritian legal system is a blend of English common law and French civil law. The country's judicial system, modeled on that of Great Britain, consists of a Supreme Court with appellate powers and a series of lower courts. The Supreme Court consists of a chief justice and five junior judges, who also preside over the courts of civil and criminal appeal. Final appeal to the Judicial Committee of the Privy Council in the United Kingdom is provided for by the constitution. There are no political or military courts. An intermediate criminal court with three senior magistrates can try criminal cases without juries. The subordinate courts are the district courts, with both civil and criminal jurisdiction, and the industrial court, with jurisdiction over labor disputes.

The courts have a very good record of assuring fair, public trials to those charged with crimes. Defendants have the right to private or court-appointed legal counsel.

HUMAN RIGHTS

Because of its British political and legal system, Mauritius has successfully adhered to generally accepted standards of human rights. There are no political prisoners, although members of the opposition parties are occasionally arrested and held for brief periods.

Trials are conducted in conformity with the constitution, and no instances of cruel, inhuman, or degrading treatment or torture have been reported. The sanctity of the home is guaranteed under law and respected in practice, as are the basic freedoms of the press, assembly, speech, and religion. There are no restrictions on movement within the country, foreign travel, or emigration. Political participation is open to every adult citizen. Labor unions are free to organize, bargain collectively, and strike.

There have been no allegations by political parties, human rights groups, or the media of political bias in the judiciary. In the past the judiciary made several politically unpopular decisions, such as finding a prominent minister guilty of corruption.

FOREIGN POLICY

For historical reasons Mauritian ties are closest to the United Kingdom, France, and India, in that order. In re-

cent years Mauritius has moved to promote greater regional cooperation between the nearby island nations. It also has close relations with the nations of southern and eastern Africa and has joined some regional trade organizations, such as the African Union and the Southern African Development Community. South Africa is its largest regional trading partner, while Mauritian investors are becoming involved with Madagascar and Mozambique.

DEFENSE

Although there is a formal Ministry of Defense and Home Affairs, Mauritius has no standing army. The United Kingdom is bound by treaty to defend the island against external attack. The Commissioner of Police maintains 10,000 active duty personnel, who handle all security and police functions. Some 8,000 of those belong to the National Police, while the rest belong to the Special Mobile Force and the National Coast Guard, the only two paramilitary units on the island.

ECONOMY

Mauritius has a very strong economy—one of the strongest in Africa. During the 1980s Mauritius moved from a single-crop agricultural economy based on sugar to a mixed economy. The Export Processing Zone, established in 1971, attracted foreign investment in manufacturing and has shown remarkable growth in a number of enterprises and in both employment and foreign-exchange earnings. Growth averaged just below 5 percent between 1999 and 2003. Sugar exports, the manufacture of textiles, and tourist attractions accounted for most of this economic growth.

The sugar and textile export businesses have begun to slow down as preferential trade arrangements come to an end, and the government has been trying to diversify its economy. In the early 2000s the nation was working to attract the offshore financial services business and to build its information and communications technology sector. The state has been promoting Mauritius as a hub for the seafood industry and has been modernizing the sugar and textile sectors with better technology. Mauritius has a good commercial and legal infrastructure and has a long tradition of private enterprise, which makes it attractive to foreign companies.

ENVIRONMENT

Forests, largely felled to make room for sugarcane cultivation, now make up only 8 percent of the island's area. One area became a national park in 1994.

The Mauritius Wildlife Foundation, a private organization, has worked closely with the government since 1994 to conserve and manage the island's flora and fauna. The population of the Mauritius kestrel, once the world's rarest bird, with only four live specimens, now numbers more than 300. Predatory cats, rats, and monkeys and a loss of habitat have severely reduced the population of animals like the pink pigeon (the world's rarest), the echo parakeet, and the fruit bat. Perhaps the historically most important ecological note is the fact that Mauritius was once the home of the extinct dodo.

Nationally Protected Areas % of total land area: 1
Emissions of Organic Water Pollutants kg per day: 17,699
CO2 Emissions per capita ton: 2.44

LIVING CONDITIONS

Until recently, most Mauritian houses were built of wood with large windows and verandas. Such houses are vulnerable to cyclone damage, so most newly constructed homes are concrete with flat roofs. The public bus system is cheap and fairly efficient. The road system is adequate, though not all roads are well paved and drivers tend to ignore the rules of the road. Electricity and water supplies are moderately reliable.

HEALTH

The Mauritian government provides health care free to all citizens; the Ministry of Health oversees the system. There

are four large regional hospitals and several smaller clinics. There are also private clinics for those who choose to pay for their care. The health of Mauritians has improved tremendously since the 1950s, especially with the elimination of malaria, cholera, and yellow fever. One result of this was that the population grew very quickly in the 1960s and 1970s. Now the government encourages family planning, and the fertility rate is about two children per woman.

FOOD AND NUTRITION

Mauritian cooking mingles the cuisines of the ethnic groups that make up the population, including Creole, Indian, Chinese, French, and English. Rice is the most typical starch and appears at nearly every meal. Seafood is a common meat, though people also eat chicken, pork, and beef. There are French pastries and flans, Indian curries, and Chinese restaurants. Typical Creole dishes are *rougaille*, a stew of tomatoes, onions, garlic, and ginger, and *daube*, a meat stew with tomatoes, onions, and garlic. Popular fast foods are roti, Indian pancakes with condiments, or *dhobi puri*, pancakes stuffed with split peas. Fresh fruits are eaten at nearly every meal. People drink *lassi*, a yogurt drink, and *alouda*, made from agar and milk. Beer and rum are made locally; wine is available but usually imported.

Food and Nutrition

Undernourished % of total population: 5.6
 Daily Available Calories per capita kcal: 2,970
 Amount of Cereal Available per person per year kg: 159.3
 Amount of Fruits and Vegetables Available per person per year kg: 112.9

STATUS OF WOMEN

The Mauritian government has taken steps to improve the status of women. Amendments to laws ranging from emi-

gration to inheritance have removed sexually discriminatory sections. The emphasis on mother-child health care has encouraged food supplements for pregnant women, greater prenatal care, and female education. There is a Ministry of Women's Rights and Family Affairs, headed by a woman.

The literacy rate is currently 82.7 percent for women, as compared to 88.6 percent for men. Women tend to occupy the less-skilled and lower-paid jobs in the economy, such as those of operators in the textile plants. They are particularly susceptible to layoffs during economic downturns.

Women in Mauritius are free to participate in all types of political, business, and social activities, and a few hold high positions. Nonetheless, conservative religious and ethnic attitudes do inhibit women. Some legal inequality remains, including a prohibition against women serving on juries.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 6
 Female Administrators and Managers %: —

WORK

The unemployment rate in 2003 was 9.8 percent. Almost 40 percent of the workforce was employed in construction and industry. Many of these workers are women employed by textile factories, producing garments for Europe and North America. Around 15 percent of workers are employed in agriculture, especially sugarcane and fishing. Services are employing a growing number of Mauritians, especially in tourism and the nascent high-tech industry.

 Other Services: 24
 Unemployment %: 9.8

EDUCATION

Educational standards are high. Almost all eligible children attend primary and secondary schools. Primary education is compulsory for children between the ages of five and 12. Schooling is divided into six years of primary

school, three years of lower secondary, and four years of upper secondary school. Most secondary schools are operated by religious orders or other private groups.

The school year is the calendar year. The language of instruction is English, but French is also stressed. Teachers are flexible about language, using Creole or Indian languages to explain words to students who do not understand English well. The curriculum follows the British model. Higher education is provided at the University of Mauritius and at several vocational training schools and other institutions. The Mauritius College of the Air broadcasts its instruction on audio and video media. Wealthy families send their children abroad to study, usually in France, which offers scholarships to Mauritians, or Réunion.

SCIENCE AND TECHNOLOGY

Mauritius has an advanced technological infrastructure. The government has invested a great deal of money in state-of-the-art digital telecommunications facilities and information technology, including high-speed Internet access and international leased lines, as well as computer training for all citizens. The nation liberalized its telecommunications services in 2003. The newly built Ebene Cyber City outside Port Louis is the showpiece of the state's ambitions of becoming a high-tech "cyber island," where nations all over the world will purchase technological services, such as backups for data, call centers, web hosting, and e-commerce.

MEDIA

Mauritius has a long tradition of a free press, broken only during an emergency in the early 1970s. Print journalists habitually criticize the government and political parties. There are numerous daily, weekly, and monthly publications, and most of Mauritius's languages have their own publications. *L'express*, *Le Mauricien*, and *Le matinal* are the most prominent daily newspapers.

Mauritius News is a media service based in the United Kingdom, providing news in English. Both Reuters and AFP maintain bureaus in Port Louis. Mauritius has a fairly active book-publishing industry. It does not adhere to any copyright conventions.

The government-controlled Mauritius Broadcasting Corporation operates medium-wave and shortwave transmitters, broadcasting in French, English, Indian languages, and Chinese; its broadcasting adheres to government opinions. Privately owned radio stations appeared for the first time in 2002, and there are now several stations. Top FM broadcasts Western pop and Bollywood music. BBC World service is also available.

Television, introduced in 1965, is broadcast over main and auxiliary stations. Several channels are available in Port Louis.

CULTURE

Mauritius is moderately famous with respect to literature. A number of French authors lived there, including Bernadin de St. Pierre, author of *Paul et Virginie*, and Joseph Conrad, Mark Twain, and Charles Baudelaire all visited the island. Modern authors are producing works in Creole. The unique Mauritian musical style is the *sega*, in which a singer is accompanied by musicians playing a *ravane* (a drum made of goatskin), a triangle, and a *maravane* (a kind of rattle). Dancers move to the music, first shuffling on their feet and then sitting on the floor to lean forward and back.

Mauritius has produced a number of visual artists, such as the painters Danielle Hitié, Herve de Cotter, and Serge Constantin. Architects of the 18th century developed a distinctive style, which can still be seen in colonial buildings in Port Louis.

Cultural Indicators

Public Libraries Number: 2

FOLKLORE AND MYTHOLOGY

Each of Mauritius's ethnic groups has its own folk practices and rituals. Hindus, Muslims, Buddhists, and Christians each observe their own events and tell their own stories. The Mahatma Gandhi Institute's Folk Museum maintains numerous artifacts and archives documenting Mauritian Indian folk culture.

ENTERTAINMENT AND RECREATION

Mauritius offers many types of outdoor recreation, which has made it very attractive to tourists. People enjoy water sports such as surfing, swimming, windsurfing, fishing, snorkeling, and scuba diving. Some resorts offer "under-sea walks" or rides in semisubmersible boats. Hiking in the mountains is also popular; former railroad tracks have been turned into hiking trails.

There is some nightlife available. The Le Caudan Waterfront in Port Louis has restaurants, bars, cinemas, casinos, and shopping.

ETIQUETTE

Mauritians remove their shoes before entering temples or mosques. It is polite to ask permission before taking a person's photograph. Bargaining over prices is customary.

FAMILY LIFE

Mauritians typically live close to their relatives; it is not uncommon for three generations to share a house. Children live with their parents until they can afford to buy homes of their own, which may be years after they marry. Very few old people go to retirement homes, because their families care for them. Weddings come in several varieties, for Hindus, Muslims, Creoles, and Chinese. The different groups also have their own practices for welcoming new children.

PERSONAL APPEARANCE

Mauritians are fairly conservative in their dress. Women especially cover themselves in public; they never appear in bathing suits or shorts. On formal occasions men wear jackets and ties, and women wear dresses or long pants.

SPORTS

Soccer is the most popular sport. The nation supports amateur teams at all levels, from school to region, but has no national team. Horse racing is also popular between May and November, when thousands of Mauritians go to the Champ de Mars in Port Louis to watch the races. There are also facilities for tennis, golf, and volleyball. The first international paragliding competition took place in Mauritius in 1993.

CHRONOLOGY

- 1968** Mauritius gains independence from Great Britain and becomes a member of the Commonwealth of Nations. Sir Seewoosagur Ramgoolam of the Mauritian Labor Party (MLP) leads the new nation.
- 1979** Cyclone Claudette strikes Mauritius, damaging property and crops.
- 1982** Mauritian Militant Movement gains control of the National Assembly, as led by Anerood Jugnauth.
- 1983** Ousted by the MMM, Jugnauth forms the Mauritian Socialist Movement (MSM), whose coalition with the MLP wins a parliamentary majority, making Jugnauth prime minister.
- 1987** Jugnauth's coalition is reelected.
- 1991** Jugnauth's coalition is reelected.
- 1992** Mauritius becomes a republic. The National Assembly elects Cassam Uteem president.
- 1993** Prime Minister Jugnauth dismisses Paul Bérenger, his foreign minister and the leader of the MMM, for openly criticizing the government. The government offers interest-free loans to encourage workers to invest in the Mauritian stock exchange.
- 1994** Mauritius's three-year development program, involving 280 projects and 19 economic sectors, reaches its halfway point. The stock exchange achieves a sixfold increase in volume since its opening in 1988.
- 1995** The opposition alliance of the MLP and the MMM wins two-thirds of the vote and all 60 seats in parliament, defeating the MSM-Mauritian Socialist Party coalition. Navinchandra Ramgoolam, MLP leader and the son of

1570 Mauritius

- Sir Seewoosagur Ramgoolam, becomes primes minister.
- 1996** Mauritius sees substantial improvements in literacy, life expectancy, health services, water supply, and sanitation, and per capita national product exceeds \$3,000.
- 1997** After months of conflict within the governing coalition, Prime Minister Ramgoolam dismisses Deputy Prime Minister Paul Bérenger. Seven members of Bérenger's MMM resign from the cabinet.
- 1998** In February Mauritius signs a protection-of-investments agreement with South Africa and announces plans to join the proposed South Africa–Malaysia underwater cable. Mauritius hosts the South African Development Community summit in April, which stresses economic integration.
- 1999** Three days of rioting by Creole youths in February results in damages estimated at \$150 million. Discontent among Creoles over their failure to participate in Mauritius's economic progress is cited as a cause. Mauritius and Madagascar agree to an 80 percent tariff reduction. Mauritius signs a protection-of-investment agreement with the Czech Republic.
- 2000** The parliamentary elections in September produce a landslide victory for the opposition coalition of the MSM and the MMM. MSM Leader Sir Anerood Jugnauth becomes prime minister. Mauritius gets a seat on the UN Security Council.
- 2002** President Cassam Uteem and his vice president refuse to sign an antiterrorism bill and resign from office. The head of the legislature becomes president and signs the bill. The National Assembly elects Karl Hoffman president.
- 2003** Anerood Jugnauth becomes president; his son Pravind becomes leader of the MSM. Paul Bérenger becomes the first non-Hindu prime minister.
- 2005** In parliamentary elections the MSM/MMM coalition is defeated and Navinchandra Ramgoolan of the Alliance Sociale becomes prime minister.

February 5, 1917

GEOGRAPHICAL FEATURES

Mexico lies at the south of the North American continent, covering 1,972,550 sq km (761,602 sq mi), with 49,510 sq km (19,120 sq mi) of rivers and lakes. Mainland Mexico extends 3,220 km (2,001 mi) south-southeast to north-northwest and 1,060 km (659 mi) east-northeast to west-southwest. The total coastline runs for 9,330 km (5,797 mi), with roughly one-quarter along the Gulf of Mexico and the Caribbean and three-quarters along the Pacific Ocean.

Mexico shares its 4,353 km (2,705 mi) of land borders with the United States of America to the north (3,141 km; 1,952 mi) and Belize (250 km; 155 mi) and Guatemala (962 km; 598 mi) to the south. The border is fully demarcated, and except for a dormant Mexican claim to

Belize north of latitude 17° north (from an 1882 treaty with Guatemala), there are no current border disputes. By 1971 all earlier minor disputes with the United States over the courses of the Rio Grande and the Colorado River were resolved. The U.S.-Mexican border is perhaps the world’s busiest international frontier.

Mexico City, the capital, is the former capital of the Aztec Empire and the oldest continuously inhabited urban settlement in the Americas.

Two-thirds of Mexico is mountainous; Hernán Cortés, the 16th-century conqueror of Mexico, compared the topography of the country to a crumpled piece of paper. For official purposes the country is divided into five natural regions: the North Pacific, the North, Central Mexico, the Gulf Coast, and the South Pacific.

The North Pacific region lies to the west of the Sierra Madre Occidental and includes the peninsula of Baja California. Most of this region is the Sonoran Desert, which continues south into Sinaloa. A narrow coastal plain extends inland for 15–25 km (10–15 mi). Baja California is mostly desert on which block mountains up to 2,750 m (9,000 ft) in elevation drop precipitously into the Gulf of California (Mar de Cortés).

The North extends eastward from the crests of the Sierra Madre Occidental to the Gulf of Mexico. Apart from a small coastal area, this region constitutes the Northern Plateau of Mexico, narrowing slightly from north to south as its elevation increases.

Central Mexico is the heartland of the country, consisting of rolling hills and old volcanic cones interspersed with broad basins and valleys with floors at elevations of 1,500–2,500 m (5,000–8,000 ft). The seven largest valleys are Puebla, Toluca, Guanajuato, Jalisco, Morelos, Aguascalientes, and Mexico.

The Gulf Coast is made up of the broad Veracruz plain, Tabasco, and the Yucatán Peninsula, the northeastern tip of which is desert.

The South Pacific is a mountainous enclave in the region of Central Mexico.

The principal mountain systems of Mexico are the Sierra Madre Occidental and the Sierra Madre Oriental, a series of north-to-south ranges with an average elevation of 3,000 m (10,000 ft). Three of their volcanic peaks reach 5,200 m (17,000 ft): Popocatepetl (5,452 m; 17,887 ft) and Iztaccíhuatl (5,286 m; 17,343 ft), both of which are located near Mexico City, and the highest peak in Mexico, Pico de Orizaba (5,700 m; 18,696 ft). Most of the volcanoes are dormant or extinct, but Popocatepetl experienced a minor eruption in 1996, and volcanic activity continues. South of the Isthmus of Tehuantepec, the Sierra Madre de Chiapas extends to the Guatemalan border, and the Chiapas highlands occupy most of the interior to the east and south.

Mexico has few large rivers, but there are a number of short rivers in the North Pacific, Central Mexico, and South Pacific regions, including the Sonora, Yaqui, Fuerte, Sinaloa, Culiacán, Lerma, Santiago, Grijalva, Usumacinta, Balsas, Panuco, Soto la Marina, and Papaloapán. The largest lake is Lake Chapala, south of the city of Guadalajara, at 80 km (50 mi) long and 13 km (8 mi) wide.

CLIMATE AND WEATHER

Mexico is half inside and half outside the tropics, but the climate is modified by a number of factors, such as altitude, winds, and cool Pacific currents. On the basis of natural terrain, there are three climatic zones: the tropical and subtropical zone (*tierra caliente*), rising up to 900 m (3,000 ft) in elevation; the temperate zone (*tierra templada*), at elevations between 900 and 1,800 m (3,000 and 6,000 ft); and the cool zone (*tierra fría*), at over 1,800 m (6,000 ft). The *tierra caliente*, which includes the coastal plains, the Yucatán Peninsula, and the lower areas of southern Mexico, has a mean temperature of 25 to 27°C (77 to 80.6°F), with a minimum of 15.6°C (60°F) and a maximum of 49°C (120°F). The *tierra templada* has a mean temperature of 15.5°C (59.9°F), while the *tierra fría*, where Mexico City is located, has a mean annual temperature of 17°C (63°F).

Most of Mexico is dry; only about 15 percent of the national territory receives adequate rainfall in all seasons. Densely populated Central Mexico lies in the rain shadow of the Sierra Madre Oriental, but the two coastal belts on the Gulf of Mexico and the Pacific Ocean receive an average of 1,000 mm (39 in) to 3,600 mm (118 in). The highest precipitation is recorded in Chiapas and Tabasco (5,020 mm, 200 in) and the lowest in Baja California, where no rain may fall in some years. During summer and autumn both coastal areas are subject to hurricanes, and Mexico has also suffered from the effects of El Niño, an oceanic and atmospheric phenomenon along the Pacific Coast.

Climate and Weather

Mean Temperature
Tierra Caliente: 77°F to 80.6°F
Tierra Templada: 59.9°F
Tierra Fría: 63°F
Average Rainfall
Coastal Belt: 39 in to 118 in
Highest Rainfall: Chiapas and Tabasco 200 in

FLORA AND FAUNA

Mexico no longer has nearly the biodiversity it once had. The land has multiple microclimates, and vegetation types include rain forest, savanna, swamp, temperate forest, and

desert. Before the arrival of Europeans at least two-thirds of Mexico was covered with forests. As of the early 2000s only 20 percent of the land was still covered with natural vegetation; these areas were mainly in the east and south.

Common wild animals include snakes, rabbits, armadillos, howler monkeys, spider monkeys, anteaters, ocelots, jaguars, tapirs, peccaries, macaws, parrots, toucans, deer, pumas, and coyotes. Pressure on most wild species is great, as domesticated cattle and other grazing animals are taking over habitats.

ETHNIC COMPOSITION

Some 80 percent of Mexico's population is mestizo. Indigenous peoples make up approximately 8 percent of the population, and people of European ancestry, primarily Spanish, make up about 9 percent. About 2 percent of all Mexicans are immigrants from abroad.

Mestizos are guardians of the Hispanic culture, although most of them are predominantly of Native American descent. Individual Amerindians join mestizo society by adopting Spanish surnames, speaking Spanish, and adopting Western dress. Few Mexican Amerindians retain their pre-Hispanic cultural traits. Amerindians are distinguished from their mestizo countrymen not so much by racial differences, because Spanish genetic influences on the racial stock are slight, as by social organization. There are six primary distinguishing factors used to identify Amerindians: language, community type, village government, economic organization, family and kinship, and religion. Furthermore, most Amerindians are rural dwellers who are closely attached to the land,

from which they draw their economic, social, and religious sustenance. Amerindians lose their ethnic identity when separated from land, community, family, or village. Amerindian life is least affected by the Hispanic value systems at the family or village level.

Amerindian groups live outside the mainstream of mestizo and white society. Relations between the two groups are characterized by the exploitation of Amerindians on the one hand and attempts to integrate them on the other. Inequality of status between the two groups is reflected in the use of the term *indio* in a pejorative way, implying inferiority, whereas mestizos are called *gente de razón* (reasonable people). The integration of Amerindians into national society is carried out through education, health, and agricultural programs. At the same time there is a need to preserve Amerindian cultural heritage. In 1994 in the southern state of Chiapas, the Zapatista Army of National Liberation, an Amerindian guerrilla group, led an uprising to demand better economic, political, and social conditions for Amerindians.

Amerindians are concentrated in the regions of Mexico where indigenous civilizations were located at the time of the conquest. These regions are mainly in central, southern, and southeastern Mexico. The state of Yucatán, where the Mayan civilization was dominant, has the highest concentration of Mexicans who speak an Amerindian language, at 44 percent. The state of Oaxaca is second with 39 percent, followed by Yucatán's neighboring states of Quintana Roo and Chiapas, with 32 and 26 percent, respectively. The central states of Hidalgo and Puebla also have significant proportions of Amerindians.

Other ethnic minorities include blacks, mulattoes, and Chinese. The Spanish are the largest of the European communities, numbering close to half a million, followed by French and Italians. Europeans occupy a number of important economic and political positions. The North American community includes descendants of southerners who fled the United States after the Civil War, and more recent arrivals include Jews, who play an important role in the economy.

LANGUAGES

Mexico is the world's largest Spanish-speaking country, with more Spanish speakers than Spain. Several indigenous languages are found among the Amerindian population, the two most common being Nahuatl, spoken by 23 percent of the Amerindian population, and Mayan, spoken by 13 percent. Mayan is a cluster of mutually unintelligible languages spoken in Yucatán and Chiapas. The two largest linguistic groups in the southern Mexican Highlands are the Macro-Mixtecan, comprising Zapotec, Mixtec, Popolocán, and Macro-Mayance, including Zoqueán and Mixe. Other groups in this region are Chontol, Tlapanec, Cuitlatec, and Nahua, all related to Nahuatl.

There are three linguistic families in the Central Mexican highlands: Uto-Aztecan, Otomian, and Totonacan. Nahuatl, the most important Uto-Aztecan language, is spoken primarily in Puebla, the heart of what was once the Aztec Empire. Modern Nahuatl contains a large number of Spanish loanwords, and Mexican Spanish contains many Nahuatl words. Otomian includes two major subgroups: Otomí and Mazahua. The Totonacan group comprises Totonac and Tepehua. The major language in western Mexico is Tarascan. There are three language families in northwest Mexico: Tarachitan, together with its three subfamilies, Cahitan, Tarahumara, and Opatán; Piman, including Tepehuan; and Aztecoïdan, together with the subfamilies Cora and Huichol. These languages belong to the Uto-Aztecan group.

RELIGIONS

Despite Mexico's long history of conflict between church and state, about 89 percent of the population were Roman Catholic as of 2003, with 6 percent Protestant and 5 percent adhering to other religions or atheist. The bitter anticlericalism of the eras of Benito Juárez (1867–72) and the Revolution of 1910 appears to have passed, and there has been a significant resurgence of Catholicism in national life.

The constitution reflects the anticlerical period, however, devoting many provisions to restrict the influence and privileges of the church. Until major reforms were undertaken in 1992, ecclesiastical corporations had no legal rights and theoretically could not acquire property. In 1992 many of the severe restrictions on the Catholic Church and other religions were lifted. Reforms included the repeal of measures that prevented the clergy from voting, although they are still prohibited from direct involvement in political affairs. In a paradoxical reversal of roles, the church emerged in recent times as the defender of social justice, and the more progressive clergy ally themselves with underprivileged groups to work for economic and social reform. Yet this trend contains the potential for a new rift, not only between church and state but also between conservative and liberal wings within the church.

For ecclesiastical purposes Mexico comprises 14 archdioceses, 55 dioceses, seven territorial prelatures, and one Apostolic vicariate.

Many Amerindians practice a form of folk Catholicism, participating in rituals more fervently than others do. For Amerindians, spiritual practices and beliefs impinge on temporal affairs almost constantly. Particularly significant is the Amerindian veneration of the Virgin of Guadalupe, the patron of Mexico, who appeared in a vision to a poor Amerindian named Juan Diego during the early days of the conquest. The Shrine of the Virgin is considered the holiest in Mexico.

There is a very small group of Jewish Amerindians who speak Hebrew and attend synagogue. Protestant evangelists, especially from outside Mexico, are active and especially successful in certain rural, largely indigenous communities. Although there have been several cases of official persecution of Protestant groups under the old anticlerical laws, in some areas Protestants have benefited from government attacks on the Catholic Church.

HISTORICAL BACKGROUND

Mexico was the home of two of the most advanced Amerindian civilizations in North America: the Mayas and the Aztecs. The Mayan civilization of the Yucatán Peninsula flourished from the third century B.C.E. to the 13th century C.E. Around the 10th century the Nahua culture, including the Toltecs and later the Aztecs, established an empire in the Valley of Mexico. In 1517 the first European to visit Mexico, Francisco Fernández de Córdoba, arrived, and two years later Hernán Cortés began the Spanish conquest. It was from the last Aztec monarch, Montezuma II, that Cortés wrested Mexico. The territory became the viceroyalty of New Spain, or Nueva España, ruled by Antonio de Mendoza, in 1535. The Spanish ruled Mexico for nearly 300 years, until the wars of independence (1810–21), extending their dominion gradually north toward what is now the United States and south toward Guatemala.

Mexican independence was formally recognized in 1836. The mid-19th century was a period of political instability and strained relations with the United States, which went to war with Mexico in 1844. Under the Treaty of Guadalupe Hidalgo of 1848, Mexico ceded one-half of its territory to the United States. Attempts at political and social reform culminated in the War of Reform of 1858–61. In 1861 French troops invaded Mexico, ostensibly because the nation had not paid its foreign debts, and installed Archduke Maximilian of Austria as emperor. Benito Juárez overthrew him, and the republic was restored in 1867. Porfirio Díaz seized power in 1876 and, with the exception of the period of 1880–84, was president continuously until 1911. Under Díaz, Mexico modernized, opening its doors to foreign investors. Díaz strengthened the central government and formed an alliance with the landed interests. Dissent was suppressed, while the problems of the peasants were ignored. Díaz was overthrown in 1911 in a nationalist, reformist revolt that lasted until 1917. That year a constitution was proclaimed that embodied the aims of the revolution. It

curtailed the power of the Catholic Church, established state education, declared mineral and subsoil rights the property of the nation, ensured basic labor rights, and limited the president to one term in order to prevent the recurrence of a long period of dictatorship.

From 1929 to 2000 the country was dominated by the Partido Revolucionario Institucional (PRI), until 1946 known as the Partido Nacional Revolucionario, in an effective one-party system, while maintaining a democratic form of election. Not until 1997 did the PRI lost its majority in parliament.

The 1940s were a period of dramatic economic development, an “economic miracle” that ensured political stability and laid the foundation for economic expansion and the rise of the middle classes in the postwar years. In the 1970s, however, the economy began to decline in the face of the rapidly rising population, an end to agricultural self-sufficiency, and an international slump in petroleum prices. The country reached a crisis in 1982 when it was forced to acknowledge that it could not make payments on its foreign debt. Economic problems continued until the presidency of Carlos Salinas de Gortari, from 1988 to 1994, when Mexico opened its economy to privatization and negotiated the 1991 North American Free Trade Agreement (NAFTA). Salinas’s presidency was plagued, however, by widespread allegations of corruption and by worsening conditions for many of the country’s Amerindians, culminating in the Chiapas rebellion of 1994.

That same year the election campaign was marred by tragedy when the PRI presidential candidate Luis Donaldo Colosio Murrieta was assassinated in Tijuana. The PRI narrowly retained the presidency when Ernesto Zedillo Ponce de León was elected in August. Presidential elections in July 2000, however, ended 71 years of PRI rule, with the victory of the opposition Partido Acción Nacional (PAN, National Action Party) candidate, Vicente Fox Quesada. The Alliance for Change party barely won the most votes in the parliamentary election, though the PRI was very close behind.

In March 2001 Zapatista guerillas marched to Mexico City from Chiapas to bring attention to their demands. That September parliament passed a bill increasing the rights of indigenous people, but the Zapatista leader Subcomandante Marcos insisted that the bill would actually harm the indigenous people and vowed to continue the uprising in Chiapas. President Fox began investigating the disappearance of left-wing political activists in the 1970s and 1980s, producing a vast amount of evidence of torture and murder by security forces; he pledge to prosecute those responsible. The former president Luis Echeverría and several army officers were among those accused of abuses.

Fox’s regime did not make as much progress as it hoped in its first term. The PAN then lost the 2003 mid-term parliamentary elections to the PRI. That September, world trade talks in Cancun collapsed over the matter of farm subsidies. The following July a judge refused to or-

der the arrest of Luis Echeverría in connection with 1971 attacks on student protesters, even after Fox's investigator determined that the attacks had been genocide. In 2004 the government was also frustrated in its investigations of the murders of over 250 women in Ciudad Juárez.

LIST OF MODERN RULERS

1917–20	Venustiano Carranza
1920	Adolfo de la Huerta
1920–24	Álvaro Obregón
1924–28	Plutarco Elías Calles
1928–30	Emilio Portes Gil
1930–32	Pascual Ortiz Rubio
1932–34	Abelardo L. Rodríguez
1934–40	Lázaro Cárdenas
1940–46	Manuel Ávila Camacho
1946–52	Miguel Alemán Valdés
1952–58	Adolfo Ruiz Cortines
1958–64	Adolfo López Mateos
1964–70	Gustavo Díaz Ordaz
1970–76	Luis Echeverría Álvarez
1976–82	José López Portillo y Pacheco
1982–88	Miguel de la Madrid Hurtado
1988–94	Carlos Salinas de Gortari
1994–2000	Ernesto Zedillo Ponce de León
2000–	Vicente Fox Quesada

CONSTITUTION

The legal basis of the Mexican government is the constitution of 1917, which established a federal republic with 31 states and one Federal District. Although Mexico has been subjected to at least 40 forms of government since independence, the nation has had only three constitutions: those of 1824, 1857, and 1917. The present constitution divides the government into the executive, legislative, and judicial branches. However, the executive branch dominates the other branches to such an extent that the country is effectively controlled by its president. The distribution of power is asymmetrical but not sufficient to qualify the country as a dictatorship.

Executive authority is vested in the president—the head of state as well as government—who is elected for a nonrenewable term of six years. There is no vice president; should the president die or resign, the Senate elects a provisional president. The presidency is the most important institution in the state, and the extent of the president's power is limited only by his capacity to use it. In addition to broad appointive powers, he controls foreign relations, defense, the budget, and other vital economic and financial areas. The executive branch initiates 90 percent of Mexico's legislation, and the president orders the introduction of laws into the National Congress.

The president is assisted by a cabinet, which is split into smaller groups, such as economic and national security cabinets, that make policy recommendations to the president or respond to his policy initiatives. The most powerful cabinet member after the president is the minister of government, combining the portfolios of justice and interior.

Suffrage is universal over age 18. Voting is compulsory under the constitution, but this provision is rarely enforced.

The constitution contains many radical sections on the collective ownership of land, waters, seas, natural resources, and sources of power and fuel, although these have been under attack by the privatization program introduced in the late 1980s. There are also elaborate provisions on the rights of labor. The concept of *amparo*—a wider form of habeas corpus that the individual Mexican may invoke in protection of his rights—is enshrined in the first 29 articles of the constitution. The right of *amparo* also safeguards personal equity and property rights.

PARLIAMENT

The National Congress (Congreso de la Unión) is a bicameral body consisting of a Senate (Cámara de Senadores) and a Chamber of Deputies (Cámara de Diputados).

The Senate consists of 96 members elected by geographic district, with each state and the Federal District entitled to three seats, and 32 additional members, whose positions are allocated to political parties on the basis of the popular vote.

The Chamber of Deputies consists of 500 members elected for three-year terms. A total of 300 members are elected by majority vote from single-member electoral districts based on population size, with a minimum of two members from each state. The remaining 200 members are elected from multimember constituencies by proportional representation under a system using regional lists. Members of congress may be reelected, but not for consecutive terms.

Regular sessions of congress run from September 1 to December 15 and from March 15 to April 30. A Standing Committee, composed of 19 deputies and 18 senators, functions during recesses of congress. Legislation may be introduced by the president, senators, deputies, or by acts of state legislatures. Each house has a number of commissions to study and recommend bills. The powers of congress include approval of the federal budget, review of the annual public accounts, ratification of international treaties, constitutional amendments, federal legislation, impeachment proceedings, and horizontal control of the administration.

July 2000 saw elections for all seats in the Senate and the Chamber of Deputies. Following the last round of federal elections, the PRI was no longer in absolute con-

trol of the Chamber of Deputies and narrowly retained its absolute majority in the Senate, but without the qualified majority needed for constitutional changes. It recaptured the majority in the Chamber of Deputies in 2003.

POLITICAL PARTIES

For most of the 20th century political parties other than the Institutional Revolutionary Party (PRI) played influential roles neither in politics nor in the decision-making process. Since it was founded in 1929, the government party monopolized most national political offices; the PRI did not lose a senate seat until 1988 or a gubernatorial race until 1989, and it held the presidency until 2000.

The Electoral Reform Act of 1977 resulted in the registration of three new political parties. The presidential election campaign of 1988 was widely criticized as unfair and put increased pressure on the government to loosen its grip on the system. Further constitutional changes in 1995–97 introduced measures to strengthen the fairness of the electoral system, including a limit on the number of Senate seats elected by proportional representation, limits on overrepresentation in the Chamber of Representatives, greater independence for the Electoral Tribunal, complete autonomy for the Federal Electoral Institute (which organizes elections), and moves towards campaign finance reform. In addition, direct elections to the government of the Federal District were held for the first time in 1997, and the mayoral position was won by Cuauhtémoc Cárdenas of the opposition Party of the Democratic Revolution (PRD).

Opposition parties now enjoy greater influence and power over government than at any time since the revolution. By 1999 opposition parties had won elections at all levels of government except the presidency, although in the 1988 elections the PRI dissident Cárdenas headed a coalition of smaller parties and came close to winning the presidency, amid claims that ballot rigging and fraudulent voting ensured a Salinas victory. In 1997 the PRI lost its majority in the Chamber of Deputies for the first time, also losing several gubernatorial races as well as that for mayor of Mexico City. The 2000 presidential contest was the first to elect a non-PRI candidate in 71 years. As of 2004, the PRI was back in control of both houses of parliament.

The Partido Revolucionario Institucional (Institutional Revolutionary Party) was founded in 1929 and was strongly rooted in the Revolution of 1910. While initially moderately left-wing, with a broad base of support from labor groups, the peasantry, civil servants, and teachers, the PRI recently moved to a more liberal economic position, advocating the liberalization and privatization of the economy. The PRI remains the most powerful political group in Mexico.

The Partido Acción Nacional (National Action Party) was initially formed as a conservative reaction to PRI nationalization and land confiscation in the 1930s. Support for the PAN derived primarily from the Roman Catholic Church, the business sector, and other groups alienated by the PRI. Since the mid-1980s the PAN's economic program has become almost indistinguishable from that of the PRI.

The Partido de la Revolución Democrática (Party of the Democratic Revolution) was formed after a split within the PRI in 1988. The PRD emphasizes social welfare concerns and opposes most of the economic reforms implemented since the mid-1980s. It remains committed to greater state control of the economy and proposes the renegotiation of parts of NAFTA with the United States and Canada.

There are several other small parties, including the Workers Party (PT), the Convergence for Democracy (CD), and the Mexican Green Ecological Party (PVEM).

LOCAL GOVERNMENT

For purposes of local administration, Mexico is divided into 31 states and a Federal District (Distrito Federal). Each state has a constitution and a unicameral legislature. Ordinary sessions of the legislatures are held annually, and bills may be introduced by legislators, state governors, state supreme courts, or municipalities. The principal units of the states are the municipalities, numbering 2,434, which are governed by elected municipal councils. Each state governor is elected for a six-year term of office under a mixture of proportional representation and relative majority voting.

LEGAL SYSTEM

The Mexican legal system is built on Spanish law, with an admixture of U.S. elements. The judiciary is divided into federal and state systems, with both headed by the Supreme Court. The Supreme Court is composed of 21 justices, called ministers, and five auxiliary judges, as organized into four general chambers (*salas*)—penal, administrative, criminal, and labor—each with five justices. The position of chief justice rotates among the justices annually, but a chief justice may be reelected. A fifth chamber, the auxiliary chamber, takes the overload from the other chambers.

Below the Supreme Court are three levels of courts: five circuit collegiate tribunals, each with three magistrates; six circuit unitary tribunals, each with six magistrates; and 46 one-magistrate district courts.

Each state has its own judiciary, generally following the federal pattern. The highest state courts are known as the state superior courts, whose judges are appointed by

the governors with the consent of the state legislatures. They in turn appoint members of subordinate courts, such as courts of first instance and justices of the peace, also called police judges.

The system of trial by jury exists but is not commonly employed. The most powerful judicial instrument is the writ of *amparo*, similar to habeas corpus. The death penalty has not been applied in Mexico since 1929, when the assassin of president-elect Obregón was executed. The federal death penalty was abolished under the Federal Penal Code of 1930, and by 1975 all state codes had also eliminated the death penalty.

Under the constitution trial and sentencing must be completed within 12 months of arrest for crimes that would carry at least a two-year sentence. Nevertheless, trial delays are often caused by cumbersome court procedures and by defendants' inability or unwillingness to pay bribes, in the form of "gratuities," to bring cases to trial. Defendants have the right to counsel, and public defenders are available. Although certain sections of the criminal code provide for convoking tribunals with juries, in practice this almost never takes place. In most cases a judge, generally acting alone, examines written statements, expert opinion, and, less commonly, oral testimony and then renders his verdict.

The penal system has both federal and state correctional facilities. The largest federal prison is the penitentiary for those sentenced in the Federal District. Criminals serving long sentences are sent to one of two penal colonies. Each state has its own state penitentiary; in addition, there are over 2,300 municipal jails. Overcrowding of prisons is chronic. Mistreatment of prisoners, a lack of trained guards, and inadequate sanitary facilities compound the problem. Prisoners frequently exercise authority, displacing prison officials. Violent confrontations, often linked to drug trafficking, are common between rival prison groups.

Mexico signed a Prisoner Transfer Treaty in 1977 with the United States. This allows U.S. prisoners in Mexican jails and Mexican prisoners in U.S. jails to serve their sentences in their home countries. There is also an extradition treaty between the United States and Mexico, implemented in January 1980, which requires the mutual recognition of crimes as defined by the laws of each nation. Because of the extensive processing required under extradition requests, however, informal cooperation has developed among police on both sides of the border. Suspected criminals who flee to the neighboring country to escape apprehension are routinely turned over without formal proceedings to police in the country where the crime was committed.

HUMAN RIGHTS

The Mexican constitution consistently affirms social justice and equality as the basic ideals of the Revolution of

1910. Individual rights, such as the right to a fair trial, are guaranteed by the constitution, and Mexico is a signatory to major international human rights conventions. In December 1998 Mexico officially accepted the jurisdiction of the Inter-American Court of Human Rights. Despite these guarantees, human rights abuses in Mexico remain a considerable problem and attract the concern and condemnation of international groups such as Human Rights Watch, Amnesty International, and the Inter-American Court of Human Rights. Abuses by members of security forces are pervasive and largely escape punishment. Practices include the use of torture, extrajudicial killings, disappearances, arbitrary detention, and other cruelties perpetrated against private persons and prisoners. Most of the victims are criminal suspects, but abuses are also perpetrated against indigenous leaders and civil rights activists.

In the past, unofficial paramilitary groups, incorporating various police officials, operated against rural and urban guerrillas and other groups. The most notorious such group was the White Brigade (Brigada Blanca), thought to be active from 1977 until 1980, when the government, though denying its existence, dismantled it. The White Brigade was responsible for the "disappearance" of several hundred leftists, and while "disappearances" declined sharply during the 1980s, they were once again reported in the mid-1990s in connection with the unrest in Chiapas. Fox's government has been investigating allegations of torture and murder by security forces in the 1970s and 1980s but has received limited cooperation from the judiciary.

The growth in drug production and trafficking in Mexico has also led to an increase in human rights abuses, both by the drug traffickers and by law enforcement agents, and to increased militarization in the war on drugs, which feeds this increase. Police linked to drug rings have been accused of extrajudicial executions, and the armed forces have been implicated in several cases. In November 1999 American agents and Mexican soldiers began excavating six mass graves in northern Mexico near the American border, which appeared to hold the remains of around 100 victims of drug violence, both American and Mexican. The drug traffickers implicated are believed to have operated with the knowledge and sometimes support of local police officers.

The border city Ciudad Juarez has experienced a rash of murders since 1993, mostly of poor young women. The government is attempting to solve the mystery, but local officials have been notoriously uncooperative and unwilling to admit the existence of a problem.

In 1990 the Mexican government established the National Human Rights Commission (Comisión Nacional de Derechos Humanos, CNDH). Initially under the Secretariat of Government, the CNDH was granted consti-

tutional status and full autonomy under a law enacted in 1992, and in 1998 the funding and presidency, previously controlled by the government, was brought under the control of the legislature. According to the CNDH, the illegal deprivation of liberty is the most common human rights complaint among its cases.

FOREIGN POLICY

The principles of Mexican foreign policy are respect for international law, the judicial equality of states, the sovereignty and independence of nations, nonintervention in the domestic affairs of other countries, the peaceful resolution of conflicts, and the promotion of collective security through participation in international organizations. Traditionally, Mexico's foreign policy is considered leftist, prorevolutionary, and nationalistic. The country has demonstrated independence from the United States through support for the Cuban government during the 1960s, the Sandinista revolution in Nicaragua during the late 1970s, and leftist revolutionary groups in El Salvador during the 1980s.

As for most of Mexico's history, its foreign policy in the 1990s was dominated by relations with the United States, its largest trading partner and the most powerful actor in the Western Hemisphere. The central theme is free trade, especially as delineated by NAFTA, but agreements have also been signed with Venezuela, Colombia, and Bolivia. Mexico is also important to the United States in terms of its strategic location and large oil deposits.

Along with trade, two other issues dominate Mexican-U.S. relations: immigration and drugs. Illegal immigration from Mexico to the United States runs at an average of 300,000 to 500,000 people per year, and the presence of so many immigrants in places such as Southern California has led to anti-immigration legislation, which places more strain on the countries' relations. Closely related to the immigration issue is the drug problem. Mexico is a major transit country for drugs entering the United States from South America and an important producer of heroin and marijuana. Drug trafficking has fueled widespread corruption on both sides of the border and has prompted harsh military responses, which have contributed to human rights abuses and violent crime in the border region. Each country holds the other responsible for the trade: Mexico blames the U.S. demand for drugs, while the United States blames the lack of Mexican effort through antidrug programs. The assassinations and scandals surrounding top Mexican politicians and their links with drug barons have further complicated relations with the United States.

Mexican policy toward Cuba remains one way for the nation to assert independence from U.S. policies. As part of this policy, the Mexican president pays an official visit

to Cuba during the last year of his term, and Mexico and Cuba hold many formal agreements on economic, educational, and cultural issues.

Guatemalan refugees, both economic and political, continue to cross the border to work in Mexico. This situation contributes to the border region's social and economic problems, which include the Zapatista guerrilla movement and drug trafficking.

Internationally, Mexico maintains relations with over 175 countries, is a founding member of the United Nations, and is a member of the World Trade Organization (WTO), the Organization for Economic Cooperation and Development (OECD), and NAFTA.

DEFENSE

The president—who exercises control through the minister of national defense, customarily a professional military officer—heads the defense structure. Mexico is divided for military purposes into 35 zones, corresponding with the 31 states, except that Oaxaca, Veracruz, and Guerrero each have two zones and the Federal District one. While compulsory military service exists for all males over 18, in practice this is widely ignored, and military manpower is obtained through voluntary enlistment.

Mexico's last foreign war was in 1846; the nation has been at peace for over 150 years. The army has been considerably depoliticized, although some officers are still elected to congress every session.

The Mexican armed forces are smaller in relation to the national population, and military expenditures are smaller in relation to gross domestic product (GDP) and the national budget, than in nearly every other country in Latin America. The logic behind this low profile is that the great size of Mexico's northern neighbor, the United States, would make resistance to armed invasion useless, and the small size of southern neighbors makes a large army simply unnecessary. There is significant internal defense production, mainly in small arms and ammunition.

The main threats requiring military response are guerrilla insurgencies and drug trafficking. The army is deployed in the search for Zapatista rebels in Chiapas and in counternarcotics operations, along with the air force, throughout the country. With Mexican-U.S. relations focused partly on the drug issue, military training and assistance from the United States contributes significantly to the professionalism, equipment, and combat readiness of the armed forces. While the military is subordinate to civil authority, it has the potential to be involved in politics due to its important role in internal police tasks. Military involvement in the war on drugs and in counterinsurgency operations also has negative effects, such as increases in claims of human rights abuses and corruption involving members of the armed forces.

ECONOMY

Mexico is a semi-industrialized country rich in industrial resources such as petroleum and metals. Manufacturing output centers on basic goods, such as steel, machinery, and petrochemicals, and a wide range of consumer goods. Agriculture remains the largest source of employment; however, many rural workers are subsistence farmers earning barely enough to survive. After years of economic growth following World War II, Mexico's economy experienced stagnation and massive foreign debt in the late 1970s and 1980s. Borrowing against future oil revenues crippled the economy with debt repayments once the price of oil fell in the early 1980s, and recession took hold.

Economic restructuring, austerity programs, and foreign debt relief restabilized the economy in the late 1980s, and by the 1990s Mexico was pursuing a policy of privatization and market liberalization. Mexico also began to integrate its economy into the more competitive regional and global economies, in 1992 entering into NAFTA with the United States and Canada, which came into effect on January 1, 1994. The agreement exists to promote free trade and remove tariffs between its members.

While this restructuring provided the basis for economic growth, Mexico's economic foundations remained shaky. The peso became overvalued in relation to the dollar, and an attempt to control this via devaluation in December 1994 led the currency to crash, prompting massive capital flight and threatening economic collapse. An emergency loan provided by the United States and the World Bank prevented total collapse, although the resulting depression was the worst since the global depression of the 1930s, with increased poverty and declining GDP.

By 1997 the economy was recovering, and the emergency loan from the United States was paid off three years early thanks to increased oil revenues. At the turn of the century Mexico's economy was continuing to grow, as boosted by the lengthy U.S. economic boom. In 2001 Mexico entered free-trade agreements with Guatemala, Honduras, El Salvador, and the European Free Trade Area. Trade with Canada and the U.S. has tripled since NAFTA was implemented in 1994. The government has been slowly modernizing the tax system and labor laws, encouraging investment in energy, and upgrading infrastructure. Despite these efforts, growth was very slow in

the early 2000s, largely due to the slowdown in the U.S. economy. Income inequality remains a major problem.

ENVIRONMENT

Significant environmental challenges affect almost every section of Mexico. In the southern and southeastern tropical forests, vast areas have been cleared for cattle raising and agriculture. This contributes to serious levels of soil erosion, which is a nationwide problem, particularly in the north and northwest, where more than 60 percent of land is considered to be in a total or accelerated state of erosion.

Coastal pollution is also a problem, such as in the Coatzacoalcos-Minatitlán zone in the Gulf of Mexico, where poorly regulated petroleum exploration has caused serious damage to the waters and fisheries of Río Coatzacoalcos. In 1992, 190 people were killed when petroleum from a Pemex pipeline seeped into the municipal sewer system in Guadalajara and combined with gases and industrial residuals to produce a massive explosion.

The capital, Mexico City, presents many more environmental challenges. Geography and extreme population levels combine to produce one of the world's most polluted urban areas. Mexico City sits in a valley surrounded on three sides by mountains, which trap contaminants produced by the area's 15 million residents. Vehicle pollution releases carbons and hydrocarbons into the atmosphere, with sulfur and nitrogen coming from industrial plants. During the dry winter months, untreated fecal matter also becomes airborne. This pollution results in a wide range of respiratory illnesses and has damaged the surrounding ecosystem as well. Wastewater from Mexico City that flows north and is used for irriga-

tion in the state of Hidalgo has been linked to congenital birth defects and high levels of gastrointestinal diseases.

In the mid-1980s the government began to attack the pollution problem, introducing measures such as vehicle emissions inspections, unleaded petrol, and the installation of catalytic converters on new vehicles. Pollution has reached such dangerous levels at various times that the government has declared environmental emergencies, with requisite temporary cutbacks in vehicle use and industrial production.

LIVING CONDITIONS

Some 40 percent of Mexicans live below the poverty line. Housing is substandard, as not all households have running water or electricity, and diseases are rampant. Wealthy Mexicans, on the other hand, live as well as prosperous Europeans or Americans, in comfortable houses and apartments furnished with all the modern amenities; the gap between rich and poor has been widening. Driving can be dangerous both as a driver or a passenger on a bus; dangers come from poor road surfaces, old vehicles, and highway robbers. Crime is a serious problem in the cities; common crimes include sexual crimes against women, various kinds of theft, and kidnapping.

HEALTH

Health insurance is available for the employed, and there are some state medical programs for the poor. Three-quarters of the population uses public health services. There are special programs for mothers and their small children. Wealthy people often choose to pay for services at private clinics. There is a shortage of doctors, nurses, and medical supplies, especially in rural areas, and these shortages have become worse as the population has grown. Most of the population does, however, have access to care when they need it. Mexico has completely eliminated some infectious diseases, and life expectancy had increased to 75 years by 2004.

FOOD AND NUTRITION

Corn, beans, and hot peppers are the staple ingredients of Mexican cooking. People form corn into tortillas, the flat bread that appears at nearly every meal. Beans are wrapped in tortillas, boiled and fried, or cooked in soups. People supplement the staples with vegetables and fruits. Fresh-squeezed fruit juices are a popular drinks, while alcoholic beverages include beer, mescal, tequila, and *pulque*, made from the sap of the maguey.

STATUS OF WOMEN

Since the 1970s dramatic changes have occurred in the role of women in the Mexican economy. In 1990 women represented 31 percent of the economically active population, twice that of 1970. Demographics also changed during this period. Previously, the typical female worker was under 25 years of age, and her participation in the workforce was usually transitional and would end with marriage or childbirth. With the emergence of a feminist movement in the 1970s, it became more acceptable for educated women to pursue careers. The 1980s economic crisis brought many women back into the workforce to supplement their husbands' incomes. About 70 percent of women workers in the mid-1990s were employed in the tertiary sector of the economy, usually at wages below those of men.

In 1995 a survey found growing acceptance that men and women should share in family responsibilities. These views were strongly related to income and educational level, with low-income and minimally educated respondents still regarding household tasks as women's work.

Traditional norms remain strong in Mexico, and men often subject women to control, domination, and

violence. Machismo is still the ruling sentiment; many men simply believe they are superior to women. Women are generally held to a stricter sexual code of conduct than men, particularly concerning sexual activity outside of marriage, which is regarded as immoral for “decent” women but acceptable for men.

 Seats Held in Parliament by Women %: 23
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 37.4

WORK

Though the official unemployment rate in 2003 was only 3.3 percent, underemployment is closer to 25 percent. Per capita income is one-quarter that of the United States. Mexico has a young population, and the nation is unlikely to be able to provide ample jobs for the next generation of workers. For that reason many Mexicans choose to emigrate to other countries. Almost one-fifth of Mexico's workers are employed in agriculture, and one-quarter work in industry. Almost 60 percent are employed in services, including tourism.

Many Mexicans work six days a week. Some people in rural areas still follow the custom of going home in the middle of the day for a leisurely lunch and a nap, after which they return to work. This practice is no longer common in the cities, where people typically work too far from home for it to be feasible.

Employment and Labor

 Female Participation Rate %: 34.0
 Labor by Sector %:
 Agriculture: 18
 Industry: 24
 Services: 58
 Unemployment %: 3.3

EDUCATION

Education is free, universal, and compulsory for six years, from ages six to 11. The medium of instruction is Spanish throughout. Schooling lasts for 12 years, as divided into six years of primary school, three years of lower secondary school, and three years of upper secondary school. Due to the history of Catholic Church involvement in education throughout the colonial period, after independence religious influences of any sort were banned in primary schools. The federal government controls the curriculum

and provides textbooks for primary schools. School attendance is high among six- to 14-year-olds, with 85 percent of all children in class. Attendance declines significantly after 13, however, as youths unofficially join the workforce. Around 45 percent of the population age 15 or older has completed some secondary or college education.

Due to Mexico's high birthrate, while the actual number of illiterate adults has stayed constant, literacy rates have increased as a proportion of the population. Overall literacy was 92 percent in 2003. Amerindians tend to have the lowest literacy rates, with correspondingly high rates of poverty, unemployment, and underemployment. There are over 11,000 adult literacy centers, and the government runs literacy programs on radio and television.

Responsibility for education rests with the Secretaría de Educación Pública, with day-to-day maintenance and operations run by state and municipal governments. Private schools are required to be entirely secular and to conform to standards set by the government.

Higher education, provided in various universities and institutes, is dominated by public institutions, many of them in the capital.

SCIENCE AND TECHNOLOGY

Mexico is working to develop its technological infrastructure. In 2003 the telephone system was inadequate for most private users, though there was sufficient coverage for business and government. Far more people—over 28 million in 2003—use cellular telephones than land lines. Many of these users make calls with prepaid cards, and many can only receive incoming calls. Some 10 million people were using the Internet in 2002. The formerly state-owned company Telmex has a monopoly on telecommunications, but some international firms are beginning to offer competition.

MEDIA

Mexico is considered the media power center of Spanish-speaking Latin America due to the sheer number of newspapers, publishers, radio stations, and television networks in the country. The constitution of 1917 explicitly guarantees the freedom of the press. Article 7 forbids prior censorship, and an amendment to Article 6 adopted in 1977 declares that “the right of information will be guaranteed by the state.” However, these guarantees are highly qualified in practice. The Press Law of 1917, for instance, restricts the press on matters of personal privacy, morality, and public health, and many other regulations govern the news media.

Mexico City is the center of the nation’s newspaper industry. The major newspapers with daily circulation over 100,000 issues are *Esto*, *La prensa*, *Novedades*, *Ovaciones*, *El heraldo de México*, *Excélsior*, *El financiero*, and *El universal*. Several magazines, noted for their independence and criticism of the government, are also published in Mexico City, and there are multiple national news agencies. All leading international agencies have bureaus in Mexico City.

There are two types of radio stations: commercial and cultural. Commercial stations are financed by advertising, both public and private, but must provide 12 percent of broadcasting time for government use, while cultural stations are operated either by government agencies or by educational institutions.

Although nominally independent, news media are subject to a variety of mainly indirect economic and political pressures from the government. Government tolerance of press freedoms varies according to the sensitivities of the president in office. Since the 1980s greater political debate has brought about more criticism in the media, and governments have generally been more tolerant of this situation. Television remains highly biased toward the PRI, with open support from the Televisa network, although recent economic policies under Salinas and Zedillo reduced state intervention and promoted private ownership of the media. TV Azteca and foreign satellite and cable broadcasters have recently become serious competitors in the television market.

CULTURE

Mexico has been inhabited for many centuries and has a rich culture, combining indigenous traditions with Spanish religious motifs. The archaeological sites left by the Aztecs, Mayans, and Olmecs are increasingly popular places to visit. Painting and the visual arts have been popular since pre-Hispanic times. The ancient Amerindians made stone sculptures and murals. Modern artists such as Diego Rivera painted giant murals to decorate public buildings, and Frida Kahlo was an immensely popular surrealist. Mexican writers include Laura Esquivel, Carlos Fuentes, Octavio Paz, and Juan Rulfo.

FOLKLORE AND MYTHOLOGY

Mexico has a long tradition of mythology associated with the cultures of the Aztecs, Olmecs, and Mayans. These people lived in Mexico between 1500 B.C.E. and 1521 C.E. and had elaborate systems of beliefs. They worshipped various gods that looked like monsters or animals. Paintings and sculptures of these deities still exist at archaeological sites such as Teotihuacan. Their religious rituals were notable for their bloodiness and violence; human sacrifice was common.

ENTERTAINMENT AND RECREATION

Mexicans love to spend their free time visiting family members on weekends and holidays. They eat and drink in one another’s homes or travel to the country for picnics and recreation. Most Mexicans do not engage in outdoor recreation, but a number of activities are available to the many tourists who visit the country; these include mountain climbing, trekking, white-water rafting, scuba diving, and a wide range of other water sports.

ETIQUETTE

Men shake hands with one another in greeting; they can shake hands with women, but the woman must initiate the action. Women greet one another with kisses and hugs or with pats on the forearm or shoulder. Men sometimes hug one another. Mexicans tend to stand close together when speaking and often touch one another; on the other hand, they avoid frequent or intense eye contact during conversations. It is considered rude to speak too directly about a topic, and Mexicans will often talk around an issue before coming to the point.

FAMILY LIFE

For most Mexicans, family takes priority over work. Men and women typically adhere to traditional gender roles, with men working and acting as heads of families and women caring for the home and children. It is very important to Mexican men that they appear strong, confident, proud, and in control, in accordance with the machismo code of behavior. Children usually live with their parents until marriage, though some young urban people move out before marriage. Boys have more freedom than girls, who are closely supervised until marriage. Most Mexicans use the family names of both their mothers and their fathers.

PERSONAL APPEARANCE

Most Mexicans dress in typical Western fashion. Businesspeople tend to dress conservatively; it is very important to present a neat appearance, with ironed clothing and polished shoes. Women usually wear dresses or skirts and high heels, not trousers; femininity is expected. Most people dress very meticulously and do not go around in shabby clothing, tennis shoes, or shorts. Some people wear jeans, but they must be very neat.

SPORTS

Soccer is the most popular sport, with men and boys alike playing in villages and members of the national team members bearing the status of cult heroes. Mexicans also like to play baseball and American football. Many people ride horses and enjoy watching rodeos. Bullfighting is extremely popular with the older generation; though the government has periodically attempted to restrict the sport, their efforts have been ineffectual. The largest bullfighting arena in the world is in Mexico City.

CHRONOLOGY

1929 Partido de la Revolución Mexicana, the National Revolutionary Party, predecessor of the PRI, is established.

- 1946** The ruling Partido de la Revolución Mexicana is renamed the Partido Revolucionario Institucional (PRI). Miguel Alemán Valdés is elected president.
- 1947** Suffrage is extended to women.
- 1951** Baja California Norte is granted statehood, becoming the 29th state.
- 1952** Adolfo Ruiz Cortines is elected president.
- 1958** Adolfo López Mateos is elected president.
- 1961** Electoral law is reformed, giving national opposition parties additional seats in proportion to their overall vote.
- 1964** Gustavo Díaz Ordaz is elected president. Mexico opposes Organization of American States sanctions against Cuba and decides to maintain diplomatic relations with it.
- 1964–67** Mexico settles outstanding territorial disputes with United States.
- 1968** Olympic games in Mexico City are marred by riots and demonstrations, which are violently suppressed by troops and police.
- 1970** Luis Echeverría Alvarez is elected president.
- 1973** President Echeverría embarks on world tour to demonstrate Mexico's solidarity with the developing world.
- 1974** Baja California Sure and Quintana Roo are admitted as states.
- 1976** José López Portillo y Pacheco is elected president.
- 1977** Agreement is concluded with the United States transferring U.S. citizens in Mexican jails to the United States.
- 1978** Four former ministers in the Echeverría cabinet are arrested on charges of corruption. Under a new electoral law, the Communist Party and two other opposition parties are legalized, and the opposition is guaranteed at least 25 percent of the membership in the Chamber of Deputies.
- 1979** The ruling PRI wins an absolute majority in national elections to the Chamber of Deputies. The former shah of Iran is granted asylum in the country.
- 1981** Mexico hosts the Cancun North-South Conference.
- 1982** In general elections the PRI retains control of the assembly, but the PAN makes gains. The peso is devalued twice in a year, and an austerity program gets under way under International Monetary Fund monitoring. President López steps down, and Miguel de la Madrid is installed as president. All private banks are nationalized. Foreign creditors assemble a bailout package, as Mexico is unable to meet its debt repayment schedule.

- 1983** A total of 60 police chiefs are dismissed, as widespread bribery scandals break open.
- 1985** Earthquake hits Mexico City, killing over 4,000 and destroying many buildings.
- 1988** PRI candidate Carlos Salinas de Gortari is elected president in an election tainted by accusations of corruption and fraud.
- 1989** Mexico reaches agreement with the "Paris Club" on rescheduling its foreign debt.
- 1990** An official Mexican research institute publishes a report stating that human rights abuses among the police are widespread.
- 1992** On August 12 the North American Free Trade Agreement is signed by the presidents of Mexico, Canada, and the United States.
- 1994** On January 1, NAFTA comes into effect; the Zapatista National Liberation Army (EZLN) launches an uprising in Chiapas, southern Mexico.
On March 2, following extensive army operations against the guerrillas, a tentative peace agreement is signed.
On March 23 PRI presidential candidate Luis Donaldo Colosio Murrieta is assassinated at a political rally in Tijuana.
Ernesto Zedillo Ponce de León wins the presidential election for the PRI.
- 1995** Following the devaluation of the peso in December 1994, the currency crashes, prompting massive capital flight and threatening economic collapse. An emergency loan provided by the United States and the World Bank prevents total collapse.
President Zedillo replaces the entire Supreme Court and picks a member of the main opposition party as attorney general.
- 1996** The Zapatistas announce the formation of a new civilian political organization, the Zapatista National Liberation Front (FZLN). Leaders say that the new organization will seek to foster democracy through constitutional reforms.
Zapatista representatives and the Mexican government sign the first of six peace accords.
A new guerrilla movement, calling itself the Popular Revolutionary Army, attacks government targets in Guerrero, Oaxaca, México State, and Puebla.
FZLN breaks off peace talks, claiming governmental failure to implement reforms.
- 1997** Three years ahead of schedule, Mexico makes the last repayment on the U.S. emergency loan of 1995.
U.S. President Bill Clinton visits Mexico, his first official visit to Latin America.
In congressional elections, the PRI loses its majority for the first time since 1929.
- Cuahtémoc Cárdenas of the PRD is elected mayor of Mexico City.
- Unknown masked assassins massacre 45 peasants in Chiapas province.
- 1999** Raúl Salinas de Gortari, brother of ex-president Carlos Salinas, is convicted of masterminding the 1994 shooting of José Francisco Ruiz Massieu, the secretary-general of the PRI. He is sentenced to 50 years in prison.
Pope John Paul II visits Mexico, holding a mass for 100,000 people at Mexico City's Azteca Stadium.
Weeks of heavy rain cause floods, which kill more than 400 people and leave tens of thousands homeless.
The PRI chooses its presidential candidate in the first-ever open primary; Francisco Labastida, President Zedillo's choice, wins.
- 2000** The government sends in police to end a 10-month student takeover of the National Autonomous University.
For the first time in 71 years, the PRI loses the presidency, to PAN candidate Vicente Fox. In the lower house of congress the PAN takes 224 seats, the PRI 209, and the PRD 67.
- 2001** Zapatistas enter into negotiation with the Fox administration, but Subcomandante Marcos, the rebel leader, rejects the government's efforts and promises to continue the uprisings. The Fox administration begins investigating the disappearances of political activists in the 1970s and 1980s.
- 2002** Fox's administration uncovers evidence of widespread abuses during the 1970s and 1980s; former president Echeverría is implicated.
- 2003** The National Action Party loses midterm parliamentary elections to the PRI. Multilateral trade talks in Cancun collapse over the issue of farm subsidies.
- 2004** The federal government begins investigating murders in Ciudad Juárez. A judge refuses to arrest Echeverría on charges that he ordered an attack on student protesters in 1971.
- 2005** Drug gangs riot in prisons, resulting in the deaths of six guards.

CAPITAL

Palikir

HEAD OF STATE & HEAD OF GOVERNMENT

President Joseph J. Urusemal (from 2003)

NATURE OF GOVERNMENT

Constitutional government in free association with the United States

POPULATION

108,105 (2005)

AREA

702 sq km (271 sq mi)

MAJOR ETHNIC GROUPS

Micronesian, Polynesian

LANGUAGES

English, Chuukese (Trukese), Pohnpeian, Yapese, Kosrean, Ulithian, Woleaian, Nukuoro, Kapingamarangi

RELIGIONS

Roman Catholic, Protestant

UNIT OF CURRENCY

U.S. dollar

NATIONAL FLAG

Light blue with four white five-pointed stars in a diamond formation in the center

NATIONAL EMBLEM

In a circular seal is a plant growing out of the ocean, topped by four stars, below which is a banner bearing the national motto, "Peace unity liberty," and the year 1979; around the seal is written "Government of the Federated States of Micronesia."

NATIONAL ANTHEM

"Patriots of Micronesia"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 10 (Constitution Day), October 24 (United Nations Day), November 3 (Independence Day), December 25 (Christmas)

DATE OF INDEPENDENCE

November 3, 1986

DATE OF CONSTITUTION

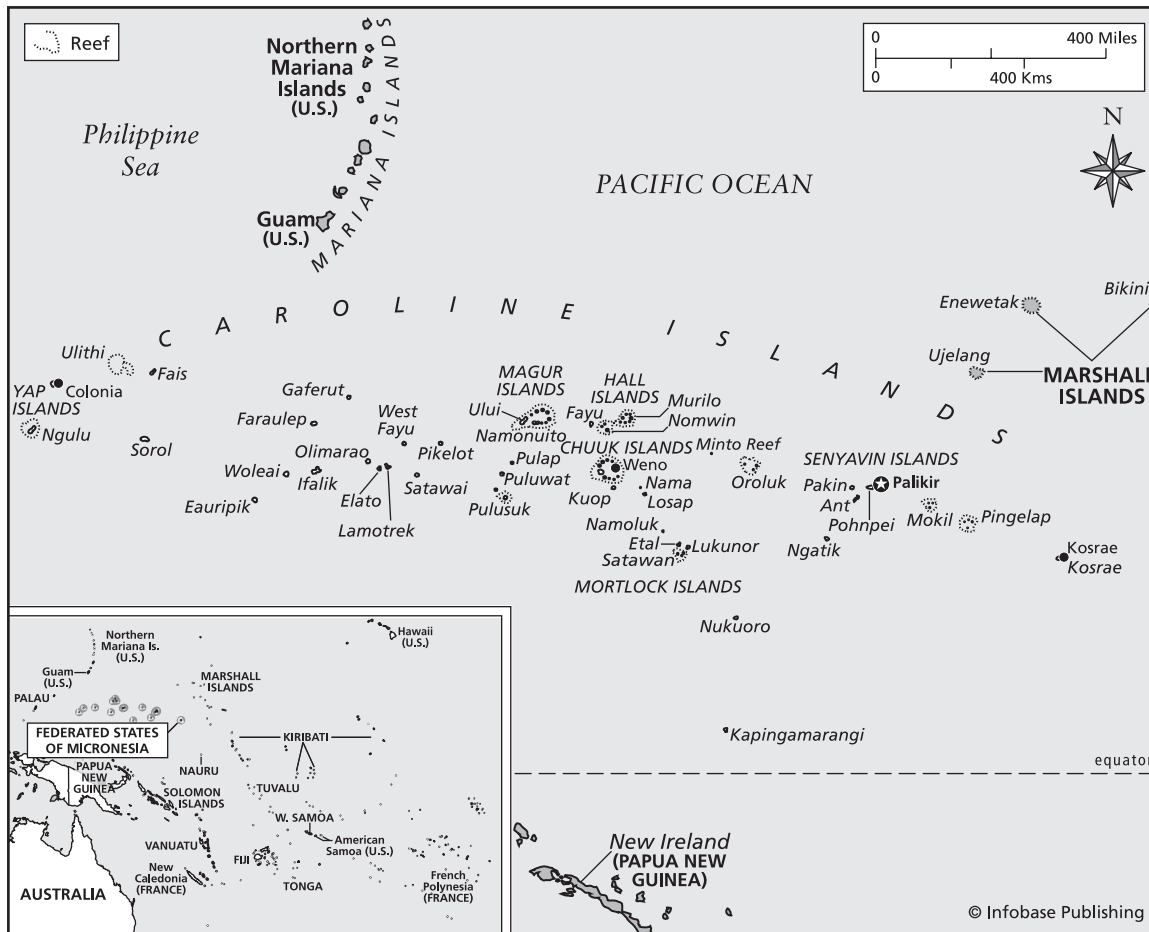

May 10, 1979

GEOGRAPHICAL FEATURES

Micronesia is made up of 607 small islands in the western Pacific. It is located just north of the equator about 4,000 km (2,500 mi) southwest of Hawaii, 3,200 km (2,000 mi) east of the Philippines, and 1,600 km (1,000 mi) north of Papua New Guinea. The total land area is 702 sq km (271 sq mi), but the nation occupies over one million square miles of the Pacific Ocean and extends 2,900 km (1,800 mi) from east to west. It encompasses the islands of the Western and Eastern Caroline archipelagos.

Each of Micronesia's four states centers on one or more "high islands," volcanic islands with fertile soils, plentiful fresh water, and thick vegetation. Chuuk State encompasses seven island groups and has a total land area of 127.4 sq km (49.2 sq mi). Yap State has 118.1 sq km (45.6 sq mi) of land distributed among four large islands, seven small islands, and 134 atolls. Pohnpei State is comprised mainly of Pohnpei Island, the largest island in Micronesia; Pohnpei Island is 336.7 sq km (130 sq mi), and Pohnpei State has a total land mass of 345.5 sq km (133.4 sq mi). Kosrae essentially consists of one high island with a total land mass of 109.6 sq km (42.3 sq mi).

Palikir	9,900

CLIMATE AND WEATHER

Micronesia has a subtropical climate, with a year-round temperature of about 27.2°C (81°F). Precipitation is

heavy; Pohnpei receives up to 8,400 mm (330 in) of rain a year. Typhoons hit the area every year and are particularly destructive to the lower atolls. Droughts occur occasionally when El Niño moves into the western Pacific, and groundwater sometimes falls to dangerously low levels.

Climate and Weather

Mean Temperature: 81°F
 Average Rainfall: 170 in

FLORA AND FAUNA

Marine species are the predominant life forms in Micronesia. The oceans contain numerous types of corals and other invertebrates, a profusion of fish species, whales, porpoises, sea turtles, and shellfish. The most famous shellfish species is the giant tridacna snail. Some 200 species of seabirds live on and around the islands. Few species of animals inhabit the tiny landmass; large fruit bats are the only indigenous land mammals. A few sambar deer from Asia still live on Pohnpei. There are large monitor lizards, skinks, geckoes, and numerous insects, but no

snakes. Trees include coconut, lime, tangerine, banana, betel nut, and pepper. Micronesian coconut trees have been turning sterile, which has hurt the copra industry.

ETHNIC COMPOSITION

The population of Micronesia is made up of nine ethnic Micronesian and Polynesian groups, with the majority of the population Micronesian. The original settlers came from the Philippines and Indonesia between 4000 and 2000 B.C.E., followed by people from Melanesia. Each state has developed its own distinctive culture.

LANGUAGES

English is the official language. People on different islands speak indigenous languages from the Malayo-Polynesian linguistic family. The eight principal languages are Yapese, Ulithian, Woleaian, Chuukese, Pohnpeian, Kosraean, Nukuoro, and Kapingamarangi.

RELIGIONS

Most Micronesians are Christian. About half are Roman Catholic, and nearly half are Protestant.

Religious Affiliations

Roman Catholic	54,000
Protestant	50,800
Other	3,200

HISTORICAL BACKGROUND

Micronesia was settled between 4,000 and 6,000 years ago by people traveling by canoe from Southeast Asia and the Philippines. Later immigrants came from Melanesia. These arrivals developed an elaborate social system based on clan ties and social castes that eventually centered on an imperial government on Yap. European explorers reached the islands, which they called the Caroline Islands, in the 1500s, with Spain claiming them as Spanish territory.

Germany took over Micronesia in 1898. The Japanese laid claim to the islands in 1914, holding them until the United States took control in 1947, assuming the role of trustee of the Trust Territory of the Pacific, which also included the Marshall Islands, Palau, and the Northern Mariana Islands; these island groups began moving toward independence in the 1970s.

On May 10, 1979, Yap, Pohnpei, Kosrae, and Chuuk ratified a new constitution forming the Federated States of Micronesia. The Marshall Islands, Palau, and the Northern Marianas separated from Micronesia at that time. Tosiwo Nakayama was elected as the first president of the new nation.

Micronesia became independent in 1986, when it signed a Compact of Free Association with the United States, which was allowed to maintain a military presence on the islands in exchange for economic aid and the right of Micronesians to live and work in the United States. The compact was renewed in 2003 with the promise of another 20 years of financial aid.

In the early 2000s the Micronesian government's goal was to reduce dependence on U.S. aid by developing the local economy, to expand international partnerships with Australia, Japan, and other Pacific island nations, and to combat climate change, the effects of which are particularly noticeable on low-lying islands.

LIST OF MODERN RULERS

1979-87	Tosiwo Nakayama
1987-91	John Haglelgam
1991-96	Bailey Olter
1996-99	Jacob Nena
1999-2003	Leo Falcam
2003-	Joseph J. Urusemal

CONSTITUTION

The 1979 constitution guarantees fundamental human rights and separates governmental powers. The president and vice president are elected by the Congress from among the four state-based senators. They serve four-year terms. The president serves as both head of state and

1592 Micronesia, Federated States of

head of government. An appointed cabinet advises the president and vice president.

PARLIAMENT

Micronesia has a unicameral Congress with 14 members, or senators. Each of the four states elected one senator to serve a four-year term. These four senators serve as presidential candidates, and the president and vice president are chosen from among them. The two states whose senators become president and vice president then hold special elections to refill their congressional seats. The other 10 members of congress are elected from congressional districts to two-year terms. Suffrage is universal; the voting age is 18.

POLITICAL PARTIES

There are no formal political parties in Micronesia.

LOCAL GOVERNMENT

Micronesia is divided into four states: Chuuk (formerly Truk), Kosrae, Pohnpei, and Yap. Each state has its own constitution, governor, and elected legislature. States set their own budgets and have considerable autonomy.

LEGAL SYSTEM

The legal system is based on laws passed by Congress, Trust Territory laws, common law, state or municipal law, and customary laws. The president appoints all judges, as assisted by Congress. The Supreme Court is the highest court in the nation. Below are trial courts and appellate courts.

HUMAN RIGHTS

Micronesia has a good human rights record and an efficient judiciary and legal system. The main problems are domestic violence, child abuse or neglect, and traditional customs that discriminate on the basis of sex and social status. The government has had limited success in changing those traditional practices.

FOREIGN POLICY

Micronesia has had close relations with the United States since the mid-20th century. The two governments entered into a Compact of Free Association in 1986, and an amended compact took effect in 2004. Under this agreement the United States will provide Micronesia with \$92 million in assistance through 2024. This money is man-

aged by a Joint Economic Management Committee, with representatives from both nations.

Micronesia joined the United Nations in 1991. It has established relations with many of the world's nations, especially its neighbors in the South Pacific, and is a strong proponent of regional cooperation.

DEFENSE

The United States has full authority and responsibility for the defense of Micronesia under the Compact of Free Association.

ECONOMY

Micronesia depends on foreign aid for most of its income. Between 1986 and 2001 the nation received about \$2 billion from the United States under the Compact of Free Association. Grants in 2002 were worth \$100 million, more than one-third of the nation's GDP that year. Grants go to six sectors: education, health, infrastructure, public-sector capacity building, private-sector development, and environment. Because of the amount of assistance received, Micronesia has a light tax burden and can maintain a large trade deficit. It currently carries a large external debt because of loans taken out in the early 1990s against future Compact of Free Association disbursements.

The government is trying to develop the economy to create more financial independence. Fishing is important: Micronesia earns over \$20 million a year from selling fishing rights to foreign commercial fishing fleets, accounting for nearly 30 percent of revenues; exports of fish to Japan account for nearly all national export revenue. Tourism has potential because of the pleasant climate, excellent scuba diving conditions, and World War II battle sites, but lack of infrastructure and the nation's remote location have prevented large numbers of tourists from descending on the islands. Manufacturing is confined to two garment factories on Yap.

ENVIRONMENT

Thus far, Micronesia does not suffer from major environmental problems. Overfishing and ocean pollution are becoming concerns, however, and global climate change is of great interest to the islanders, who would face the loss of much of their land mass if sea levels were to rise substantially.

Environment

LIVING CONDITIONS

Most Micronesians now live in Western-style homes, but there are still some traditional houses and community buildings made of mahogany, with roofs of thatched nipa palm. Yap is the state that has clung most strongly to traditions, and many people there still live in traditional homes. Electricity and running water are in short supply, and most people supplement the public water supply by catching rainwater around their homes. Transportation between islands is by air or boat; most islands have small airstrips. The larger islands have extensive systems of unpaved roads. Public transportation is by shared or private taxis. The cost of living is relatively high owing to the isolated nature of the islands and the fact that all consumer goods must be imported. There is an increasing disparity between rich and poor, as some officials and businessmen manage to secure the lion's share of U.S. aid. More than one-quarter of Micronesians live below the poverty line.

HEALTH

Micronesia has benefited from U.S. involvement in its health-care system. The U.S. Public Health Service provides doctors to the state hospitals in each of the four states, and American volunteer physicians visit the islands regularly to perform specialized surgeries. Micronesians are gradually being trained in medicine through the Medical Officer Training Program in Pohnpei. Some

emergency cases are flown to hospitals in Guam and Hawaii. As a result of this comprehensive system, health is fairly good, with a life expectancy of over 69 years and infant mortality of about 3 percent. Fertility is relatively high, with each woman bearing more than three children in 2004. Typhoid is a common disease.

FOOD AND NUTRITION

Breadfruit, bananas, coconut, cassava, and seafood are the staples of the Micronesian diet. The residents of Chuuk make a dish called *oppot*, which is breadfruit layered with banana leaves and buried in the ground to ferment for months. People in Pohnpei eat yams and dogs. The people of Yap chew betel nuts constantly. *Sakau* is a drink made from the roots of pepper plants; it has a narcotic effect and is popular on Pohnpei.

Food and Nutrition

 Amount of Fruits and Vegetables Available per person per year kg: —

STATUS OF WOMEN

Women have equal rights under the law; they can own property, receive equal pay for equal work, attend all levels of education and work in all areas, and have been increasingly successful in private business. The National Women's Advisory Council lobbies the government to improve women's rights, and the Department of Health, Education, and Social Affairs has a Women's Interest Section that works toward the same end.

Spousal abuse and domestic violence are serious problems. Few women report abuse or pursue prosecu-

tion owing to family pressure. Unmarried women are often assaulted and are presumed to invite assault by living alone. Families have traditionally handled cases of abuse internally, but increasing urbanization is slowly changing this system, which has yet to be replaced by governmental programs.

WORK

Micronesians traditionally provided for themselves through subsistence farming and fishing, but the importance of agriculture has declined. A small share of the formal labor force works in agriculture, producing copra, bananas, betel nuts, cassava, and sweet potatoes. Still, about half the population works in agriculture to some extent, and local agriculture accounts for nearly two-thirds of food consumed. Fishing is very important and accounts for 85 percent of export revenue, mainly from exports of fish to Japan. Some Micronesians are employed in the tourist industry, guiding scuba divers and deep-sea fishermen. The national and state governments employ two-thirds of the nation's workforce. Unemployment is fairly high, at 16 percent in 1999.

Employment and Labor

Labor Force Total: —
 Female Participation Rate %: —
 Labor by Sector %:
 Government: 66
 Other: 34

EDUCATION

The school system has grown tremendously since the 1960s, when U.S. Peace Corps volunteers served as the first teachers, and as of 2000 many teachers were Micronesian. Micronesian children are required to attend school through eighth grade, and most do. In 2000 about 32 percent of those eligible attended secondary school. About 18 percent of students went on to higher education, attending institutions such as the College of Micronesia, which has campuses in all four states and receives assistance from the United States. Some students go to the University of Guam or to U.S. colleges. Most

current government leaders were educated at American universities.

SCIENCE AND TECHNOLOGY

The development of science and technology in Micronesia has been hampered by lack of infrastructure and unreliable electrical supplies. There are perhaps 10,000 telephone lines in the nation and around 2,000 cellular telephones; cellular service is available on Yap, Pohnpei, and Kosrae. About 6,000 people were using the Internet in 2002. The islands are connected by shortwave radio lines, satellite ground stations, and some coaxial and fiber-optic cable. The government has plans to develop deep-seabed mining techniques. The Micronesia Maritime and Fisheries Academy in Yap trains high school and college students in fishery-management techniques.

MEDIA

Most Micronesians get their news from radio. Each state has its own radio station, and the Baptist Church also operates a station. There are cable television broadcasts available on Chuuk and Pohnpei, and Yap has a state-run television station. There are no daily newspapers. The government publishes the *National Union* every two weeks, and the *Island Tribune* is a private weekly newspaper.

CULTURE

Each state has its own cultural traditions that have been developed for centuries. Dancing and singing are an important part of indigenous culture. On Yap, people use loud and colorful dances to tell stories and legends, record history, and entertain themselves. Men and women dance separately, often chanting in unison. Ocean navigation has been a part of Micronesian culture for thousands of years. People still build single-outrigger canoes out of hollowed breadfruit logs and larger oceanic vessels out of planks bound with coconut husk fibers.

Micronesians historically used shells, clams, beads, and other objects as units of currency. The people of Yap had the most distinctive form of currency: They carved giant stone discs with holes in the center (*rai*) and used these as money. Many of the stones were too big to carry, so their owners simply left them in place on the ground. Many can still be seen today, though the Yapese no longer use them as money.

FOLKLORE AND MYTHOLOGY

Micronesian myths are related to those of neighboring areas, including other Pacific islands and Southeast Asia. Ocean navigation is a common theme. Some myths surround the ruins of Nan Madol, on Pohnpei, a city that once housed what may have been a royal civilization, with kings and sorcerers. The people of Mortlock used to carve wooden masks to ward off evil spirits and protect soldiers during battle.

ENTERTAINMENT AND RECREATION

Micronesians spend much of their free time visiting relatives. Clan celebrations involve dancing, singing, feasting, and the consumption of substances such as betel nut or the narcotic drink *sakau*. Visitors to the islands have numerous possibilities for recreation, including scuba diving, exploring World War II wrecks above and below the ocean, and lying on the beach.

ETIQUETTE

Micronesians take their cultural traditions very seriously and appreciate when visitors do the same. They are usually friendly but shy. On Yap it is impolite to take someone's photograph without asking first. In some places there are rules about appropriate clothing.

FAMILY LIFE

Micronesia society is based on clans, which can extend across islands. Clan heads can trace their ancestry back to the original settlers of Micronesia. Descent passes through the maternal line in most of the nation; on Yap, it passes through the paternal line. Most people live with or near many close and not-so-close relatives, including people "adopted" into the family. Relatives depend on one another for support and are expected to help one another when they can, either with money or by helping with chores such as home building, laundry, or child care.

PERSONAL APPEARANCE

Though Western attire has made some inroads in Micronesia, many residents still wear traditional clothing. The people of Yap have clung to traditions more than the other states. The men there often wear a kind of loincloth called a *thu'u*, and the women wear long grass skirts. Traditional costumes are especially important during festivals. In some areas there are laws prohibiting the wearing of Western clothing such as T-shirts, baseball caps, shirts, and pants.

SPORTS

Micronesia formed a National Olympic Committee in 1996, and it was recognized by the International Olympic Committee the following year. In preparation for the application, the nation organized numerous national games. The first Federated States of Micronesia Games were held

on Pohnpei in 1995, when over 900 athletes and coaches competed in 12 sports. The nation's plan is to develop a junior sport program that will develop athletes who can represent the country in the future. The nation is particularly interested in cultivating female athletes, who are currently in very short supply. Popular sports include basketball, tennis, softball, baseball, volleyball, wrestling, weightlifting, swimming, and athletics.

CHRONOLOGY

- 1898** Germany makes the Caroline Islands a German colony.
- 1914** Japan occupies the nation.
- 1939** Through 1945, many World War II battles are fought in Micronesia.
- 1947** The United States takes over administration of Micronesia as part of the Trust Territory of the Pacific Islands.
- 1979** Kosrae, Pohnpei, Chuuk, and Yap set up the Federated States of Micronesia and ratify a constitution.
- 1986** Micronesia and the United States enter into a Compact of Free Association, under which the United States provides economic aid and is allowed to establish military bases on the islands.
- 1991** Micronesia joins the United Nations.
- 2002** Typhoon Chata'an devastates Chuuk.
- 2003** Micronesia and the Marshall Islands renew the Compact of Free Association, which will bring in several hundred million dollars over the following twenty years.
- 2004** Typhoon Sudel devastates Yap, destroying most of the island's infrastructure.

NATIONAL HOLIDAY

August 27 (Independence Day)

DATE OF INDEPENDENCE

August 27, 1991

DATE OF CONSTITUTION

August 27, 1994

GEOGRAPHICAL FEATURES

Moldova borders Romania to the west and Ukraine to the northeast and south. The richly diverse topography ranges from steppes in the north and south to forested uplands in the central region. Moldova's highest point, in the central Balti Plain, is Mount Balanesti, at 1,411 ft (430 m). Broadly hilly, the Balti Plain is intersected by a multitude of rivers and streams. The most important rivers in Moldova are the Nistru, Dniester, and Prut.

Moldova is richly fertile, with almost three-quarters of the land covered in a very fertile soil called chernozem.

Moldova

CLIMATE AND WEATHER

Moldova's climate is essentially continental, with long, warm summers and dry, mild winters. Long spells of dry weather are not uncommon.

Average rainfall is greater in the north (600 mm; 23.6 in) than in the south (400 mm; 15.7 in). However, heavy rainfall in early summer and late fall has been responsible for extensive soil erosion and river silting.

Climate and Weather

Mean Temperature

January: 24°F

July: 68°F

Average Rainfall: 22.8 in

FLORA AND FAUNA

Most of Moldova's native plants and animals have been displaced by the dense human population and killed off by chemical fertilizers, pesticides, and the overclearing of forests. Most of the flora now present are cultivated grapevines, wheat and vegetable fields, fruit trees, and sunflowers. There are a few wild animals left, including deer, foxes, wolves, wild boars, and badgers, but for the most part Moldova lacks its former biodiversity.

ETHNIC COMPOSITION

In 1998 the largest nationality in the republic—ethnic Romanians, or Moldovans—numbered 2,795,000 persons, accounting for 64.5 percent of the population. The other major nationalities were Ukrainians, numbering about 600,000 (14 percent); Russians, 562,000 (13 percent); Gagauz, 153,000 (4 percent); Bulgarians, 88,000 (2 percent); and Jews, 66,000 (2 percent). There were also smaller numbers of Belarusians, Poles, Roma (Gypsies), and Germans. In Transnistria, a region between the Dniester and Bug Rivers that twice attempted secession in the early 1990s, on the other hand, ethnic Romanians accounted for only 40 percent of the population in 1989,

followed by Ukrainians (28 percent), Russians (25 percent), Bulgarians (2 percent), and Gagauz (1 percent).

LANGUAGES

The Moldovan dialect of Romanian, spoken by the majority of the people, was considered by the Russian Empire and the Soviet Union an impediment to control, and its use was banned. Stalin justified the creation of the Moldavian Soviet Socialist Republic by claiming that a distinct "Moldovan" language indicated that "Moldovans" were a separate nationality from the Romanians in Romania. In order to give greater credence to this claim, in 1940 Stalin imposed the Cyrillic alphabet on "Moldovan" to make it look more like Russian and less like Romanian.

On August 31, 1989, the Supreme Soviet of Moldova made Moldovan written in the Latin alphabet the official language of the Moldavian SSR. This was confirmed in the constitution adopted August 27, 1994. In 2002 the Moldovan government suggested the possibility of increasing the use of Russian in schools and making Russian an official language, but the citizenry was vehemently opposed to the idea. In 2004 Transnistria closed some schools that were using the Latin script, favoring Cyrillic and Russian instead.

RELIGIONS

Citizens in independent Moldova have much greater religious freedom than they did under the Soviet regime. In 2000 over 98 percent of the population was estimated to belong to the Eastern Orthodox faith.

Moldova also has a Uniate minority, mainly among ethnic Ukrainians, although the Soviet government declared the Uniate Church illegal in 1946 and forcibly united it with the Russian Orthodox Church.

Despite the Soviet government's suppression and ongoing harassment, Moldova's Jews managed to retain their religious identity. About a dozen Jewish newspapers were started in the early 1990s; there were six Jewish communities of worship throughout the country. As of 2000 about 1.5 percent of Moldovans were Jewish.

Baptist and Other	22,200

HISTORICAL BACKGROUND

During the 15th century the region that is now Moldova became a vassal state of the Ottoman Empire. For the

next 300 years it suffered repeated invasions by Turks, Crimean Tatars, and Russians.

In 1792 Moldova, then known as Bessarabia, was absorbed into the Russian Empire. During World War I political leaders in Bessarabia declared independence.

In 1922 the Soviet government established the Moldavian Autonomous Soviet Socialist Republic. In June 1941 German and Romanian troops attacked the Moldavian SSR. Three years later Soviet forces reoccupied Bessarabia and Transnistria. With the restoration of Soviet power in Moldavia, government policy was to both Russify the population and destroy all remaining ties with Romania. The government's harsh regime, whose actions included requisitioning the harvest, induced a severe famine. The situation led to deep resentment, which led in turn to brutal suppression, in which thousands of people were deported or killed.

The resultant hostility continued for another 30 years, until Mikhail Gorbachev introduced his policies of glasnost and perestroika. In this climate of openness, political self-assertion escalated in the Moldavian SSR in 1988. Large demonstrations by ethnic Romanians led to the designation of Romanian as the official language. However, opposition was growing to the increasing influence of ethnic Romanians, especially in Transnistria, home to many Slavic-speaking minorities, and in the south.

During the 1991 coup d'état in Moscow, Soviet military commanders sought to impose a state of emergency in Moldova, but the Moldovan government resisted and declared its support for President Yeltsin. On August 27, following the coup's collapse, Moldova declared its independence from the Soviet Union. At the same time the Gagauz (Christian Turks) declared a separate republic in the south, while Slavs proclaimed the Dnestr Moldavian Republic in Transnistria, with Igor Smirnov as president. In this seething cauldron 50,000 armed Moldovan nationalists marched on Transnistria, where a civil war was averted only by the intervention of the Russian 14th Army.

In 1993 a referendum on reunification with Romania was defeated by an overwhelming margin. In 1995 an accord was reached with the Transdnestr rebels, according them a special status within the republic. Also in 1995 Moldova was admitted to the Council of Europe. In the 1997 presidential election Petru Lucinschi won with 54 percent of the vote; he then named Ion Ciubuc prime minister.

The 2001 election results came as a surprise to many observers. Slightly more than half of the voters sided with the Communist Party, which resulted in the election of a clear Communist majority in parliament and a Communist president, Vladimir Voronin. Voronin's government tried to reduce poverty, improve the social safety net, and privatize industries. In 2002 the government attempted to make Russian an official language and increase its use

in schools but backed down after massive protests. Communists kept their majority in the 2003 elections, but lost the biggest race, for mayor of Chişinău.

Transnistria continued to be a source of dissension. The government spent the early 2000s in negotiations with the region and with Russia but failed to come to any acceptable arrangement. Transnistria has passed its own laws designating Moldovans as "foreigners" and subjecting them to the same restrictions as citizens of other nations. As of 2004 Russia had refused to withdraw from the region until it and Moldova resolved their conflict, but Moldova and Transnistria had broken off negotiations after a dispute over the use of Latin script in the region's schools.

LIST OF MODERN RULERS

1990–97	Mircea Snegur
1997–2001	Petru Lucinschi
2001–	Vladimir Voronin

CONSTITUTION

The 1994 constitution, the first after independence, describes Moldova as a parliamentary presidential republic based "on political pluralism and the preservation, development, and expression of ethnic and linguistic identity."

Executive power is vested in the president, who is elected by Parliament to a maximum of two four-year terms. The president nominates the prime minister and the Council of Ministers, whose members are subject to approval by the unicameral Parliament, whose members are elected by proportional representation for four-year terms. Passage of a no-confidence motion in Parliament forces the resignation of the Council of Ministers.

Other constitutional clauses assert Moldova's permanent neutrality and proscribe the stationing of foreign troops on national territory. The 1994 constitution also authorized special status for the Gagauz region and the Transnistrian region, where separatists are active. The former has a regional executive leader called the *basbkan*; the latter has its own bicameral legislature and president, but the situation is complicated by the presence of Russian troops.

PARLIAMENT

Moldova is a democracy with a unicameral legislature, the Moldovan Parliament. Following the earlier Soviet model, the Moldovan Parliament maintains a Presidium, which performs legislative functions when the larger body is not in session. Parliament has 101 members di-

rectly elected for four-year terms. Parliamentary leadership consists of a chair and two deputy chairs elected by the delegates. The work of the legislature is undertaken by 15 permanent committees.

In 2000 Parliament cancelled direct, popular elections of the president, and Parliament now selects the president itself.

POLITICAL PARTIES

Moldova has several substantial political parties and alliances and numerous small parties. The ruling party is the Communist Party of the Republic of Moldova (PCRM). The Democratic Moldova Bloc consists of the Democratic Party, Our Moldova Alliance (formerly the Braghis Alliance), and the Social Liberal Party. There is also a Christian-Democratic People's Party (PPCD).

In 1998 the reestablished Communist Party won the largest number of seats; in February 2001 the Communist Party increased its number of seats from 40 to 71, giving it a clear majority. Our Moldova Alliance held 19 seats and the PPCD 11.

LOCAL GOVERNMENT

The Republic of Moldova is segmented administratively into 32 *raioane*, each of which is governed by a locally elected council. In addition, Chişinău (the national capital), Bălţi, and Bender are defined as municipalities and directly administered by the central government. Transnistria, officially referred to in Moldova as Stînga Nistrului, and Găgăuzia are classified as semiautonomous territorial units.

In 1991 Moldova considered the reorganization of local government and intended to reintroduce a system of counties (*judete*) and communes. Under the plan the counties would centralize functions carried out by the smaller *raioane*, with local executives being elected directly. However, this effort was halted by Transnistria's and Găgăuzia's secession.

LEGAL SYSTEM

Moldova's judicial system is based on Soviet-era models. The most powerful legal institution is the General Prosecution Office. The prosecutor general is responsible for directing investigations and prosecuting criminal cases as well as administering the judicial system.

Moldova's legal framework is based on a network of local courts and higher-level appeals courts, with the highest being the Supreme Court (Curte Suprema). The Constitutional Court reviews legislative acts and governmental decisions. There is only a limited tradition within the judicial system of judicial independence. The govern-

ment has launched reform procedures, but corruption and a poorly organized administration continue to hamper these efforts.

HUMAN RIGHTS

The 1994 constitution codified a number of universal human rights, including the rights to private property and individual freedom of movement, expression, and assembly. However, the constitution still contains language restricting the activities of political parties and the media. Although there is no overt government censorship of Moldova's press, journalists complain that editors encourage them to soften their criticisms of government officials for fear of retribution. After pressure from various European institutions, Parliament liberalized the law.

The Ministry of the Interior and the Ministry of National Security were investigated in 1994 as to whether they had exceeded their legal authority. The police are believed to regularly beat prisoners, and there have been reports of police monitoring political figures and searching their belongings illegally. Calumny laws have restricted press freedom. There are documented restrictions of the freedoms of association and religion. Human trafficking in women and girls as sex slaves is a serious problem.

Because the security forces and the government of the semiautonomous "Transnistrian Republic" are so closely connected, human rights abuses in Transnistria are more flagrant.

FOREIGN POLICY

Moldova joined the Commonwealth of Independent States in 1994 and the Council of Europe in 1995. The nation also belongs to the North Atlantic Treaty Organisation's (NATO) Partnership for Peace, the United Nations, the Organization for Security and Cooperation in Europe, the World Trade Organization, the North Atlantic Cooperation Council, and the European Bank for Reconstruction and Development. In 1998 Moldova helped form GUAM, a regional agreement that also includes Georgia, Ukraine, and Azerbaijan. Moldova's activities with GUAM include information exchange, border control, and projects related to energy, trade, and transportation, but it has refused to participate in any mutual defense initiatives suggested by the group. The country is sensitive to terrorism and supports American efforts in the Middle East, having contributed peacekeepers to provide humanitarian assistance in Iraq.

DEFENSE

Moldova's government originally conceived of a force of volunteers, but when fighting erupted in 1991 between

the central government and supporters of separatist regions, full-scale mobilization was ordered, and Moldova's military was temporarily expanded to meet the demands of the Transnistrian conflict. The nation now requires all males to do twelve months of military service when they turn 18. The military consists of ground forces and an air force.

Moldova has accepted the arms restrictions imposed on the former Soviet Union, limiting its possession of military equipment and destroying weapons that exceed the limit. It acceded to the Nuclear Non-Proliferation Treaty in 1994 and the Biological Weapons Convention in 2004.

ECONOMY

Moldova is the poorest country in Europe. It enjoys a favorable climate and good farmland but has no major mineral deposits. As a result the economy depends heavily on agriculture, featuring fruits, vegetables, wine, and tobacco. Moldova must import all of its supplies of oil, coal, and natural gas, largely from Russia. Energy shortages contributed to sharp production declines after the breakup of the Soviet Union in 1991. As part of an ambitious reform effort, Moldova introduced a convertible currency, freed all prices, stopped issuing preferential credits to state enterprises, backed steady land privatization, removed export controls, and freed interest rates. Yet these efforts could not offset the impact of political and economic difficulties, both internal and regional. In 1998 the economic troubles of Russia, Moldova's leading trade partner, were a major cause of the 8.6 percent drop in gross domestic product (GDP). In 1999 GDP fell again, by 4.4 percent; exports were down, and energy supplies continued to be erratic.

Beginning in 2000 GDP began to grow, and in 2004 growth was 8 percent. The currency finally stabilized in late 2004, after several years of fluctuation. The government has been working to create a viable free-market economy and has encouraged the privatization of state industries. Unfortunately, several large state enterprises have yet to be privatized, and political uncertainty and lack of law enforcement have discouraged foreign investors. In 2004 imports continued to increase more rapidly than exports, and the cost of fuel outpaced export income.

ENVIRONMENT

Poor agricultural techniques adopted during the era of Soviet control have led to a variety of negative environmental results. The overuse of fertilizers and pesticides (including DDT and other banned substances) has caused widespread soil contamination and groundwater pollution. The continuing destruction of forests has led to topsoil erosion and loss of biodiversity. Moldova has entered into several initiatives to fix environmental damage; it is party to treaties on air pollution, biodiversity, climate change (including the Kyoto Protocol), desertification, endangered species, hazardous wastes, and protection of the ozone layer.

LIVING CONDITIONS

Living conditions are not particularly good for most Moldovans. Some 80 percent of the population lives below the poverty line. Water supplies are unreliable. Infrastructure does not work efficiently, and people can have difficulty accomplishing daily tasks such as buying groceries or banking. The economy is based entirely on cash, with no one using credit cards. Public transportation is usually crowded, while fuel is too expensive to be purchased by ordinary people. Many people cannot buy clothing or other necessary items.

Transnistria is especially plagued by poverty. Two-thirds of the citizens are elderly and miss the social security of Soviet days. The currency there is nearly worthless, wages are especially low, and the borders are guarded by

soldiers with guns, who consider Moldovans to be foreigners and require them to register with police when they enter the region.

HEALTH

The Soviets built health-care facilities when Moldova was part of the USSR, but since independence the system has fallen into disrepair. Life expectancy in Moldova is low for Europe, 65 years on average, which is in fact lower than it was under Soviet rule, and the infant mortality rate is relatively high. Alcoholism is common, as are illnesses brought on by exposure to herbicides, pesticides, and other forms of pollution. Cardiovascular and respiratory diseases and cancer are the leading causes of death.

 Access to Improved Water Source %: 92

FOOD AND NUTRITION

Moldovans are not renowned for their cooking. Soft cornmeal mush called *mamaliga* appears at most meals. People usually eat their mush with Turkish kebabs or with fried pork topped with a fried egg. People also eat Jewish-style stews and Russian dumplings in sauce. Meat and vegetables are commonly boiled until they are very soft. Baklava is a popular dessert. Moldova's wine is its one culinary claim to fame; the nation has some of the best vineyards and vintages in Europe, and wine tasting is a popular activity.

Food and Nutrition

Undernourished % of total population: 10.8
 Daily Available Calories per capita kcal: 2,730
 Amount of Cereal Available per person per year kg: 193.1
 Amount of Fruits and Vegetables Available per person per year kg: 163.2

STATUS OF WOMEN

Spousal violence is a serious problem in the country. According to a women's rights group, one-half of women are victims of domestic violence. Women abused by their husbands have the right to press charges, and husbands convicted of such abuse may face prison sentences of up to six months. There is a woman's shelter in Chişinău established by the first lady and the mayor. A private organization operates a confidential service to support abused spouses, including a hot line for battered women.

Trafficking in women is a serious problem, as in many other countries in Eastern Europe. Moldova is a source country for women and girls who accept job offers in other countries as dancers, models, or nannies. The traffickers then take their passports and force them into sexual bondage or sell them in Italy, Israel, Turkey, Greece, and the Middle East.

Women

 Seats Held in Parliament by Women %: 16
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.01
 Women's Share of Wage Employment Non-agricultural %: 54.6

WORK

Moldova has a highly educated population but very few good jobs available. About one-fourth of Moldovans have left the country since independence, hoping to have better luck finding work abroad than they did at home; they typically take unskilled jobs, regardless of their education level. Many of those who remain in Moldova would also leave if they had the funds. Young people without hope of work are vulnerable to con artists who promise them work overseas; women and girls get turned into sex slaves, and men and women have been known to sell their kidneys. In 1998, of the workers who remained in Moldova, 40 percent were employed in agriculture, 14 percent in industry, and 46 percent in services.

Employment and Labor

Labor Force Total: 1,383,000
 Female Participation Rate %: 48.3
 Labor by Sector %:
 Agriculture: 40
 Industry: 14
 Services: 46
 Unemployment %: 8.0

EDUCATION

Prior to independence the Moldavian SSR's education system had made substantial progress toward universal

accessibility. By 2003 the adult literacy rate had risen to 99 percent.

Under Moldova's postindependence education system, 10 years of basic education are required. In 1992 the proportion of students going on to higher education institutions had risen to just under 2 percent; by 1995 Moldova had 10 institutions of higher education, four of which had been established since independence. As of the early 2000s the education system had become strong and effective at producing an educated populace, including a large number of people with college degrees.

Education

 Gross Enrollment Ratio: 29.8
 Public Expenditure on Education as % of GDP: 4.9

SCIENCE AND TECHNOLOGY

Moldova's Academy of Sciences provides good training in physics, electronics, computer science, engineering, and other technical and scientific fields. The nation has many people who are well trained in science and technology. Unfortunately, there are very few openings in skilled jobs, such that they usually do not have the opportunity to use their abilities in employment.

The country's telephone system is outmoded and inadequate, especially outside the capital city, and people must wait long periods of time to have lines hooked up. Cellular telephones are becoming more common. In 2002 about 150,000 people were using the Internet.

Science and Technology

Scientists and Engineers in R&D per 1 million people: 324
 Expenditures in R&D as % of GDP: 0.81
 High-Tech Exports \$million: 7.57
 Patent Applications by Residents: 437

MEDIA

The Moldovan constitution guarantees freedom of the press, but Moldovan laws place strict limits on that freedom; defaming or insulting the state is illegal. Many of the newspapers sold in the country are Moldovan translations of Russian papers, though there are some publications produced by Moldovans in the local language. Political parties publish their own magazines and newspapers and typically criticize the government, though with some caution. Basa Press, an independent news service, was established in November 1992. Other news services include Interlic and Moldova Azi.

As of 2003 Moldovans could access more than 20 radio stations and about 30 television stations, many of which broadcast from Romania or Russia. Moldova One is the state television station, and Radio Moldova is the state radio station; both are run by Teleradio-Moldova.

CULTURE

Moldova's culture comes from a combination of Russian, Romanian, and Turkish influences, all processed through years of Soviet socialism. The country has many medieval monasteries, fortresses, churches, and war memorials, decorated with art such as gilded icons, crosses, and frescoes depicting popular medieval Christian themes. Moldovans like to read; Moldovan translations of Russian works of literature sell well. A park in Chişinău has a tree-lined lane decorated with busts of writers and public figures. There are some good history and art museums in Chişinău.

The republic has yet to develop a firm sense of national culture. The main public holiday is Independence Day on August 27, but the people of Transnistria do not agree that this is a day for celebration.

FOLKLORE AND MYTHOLOGY

Folk dancing is extremely popular; people dress in old-fashioned embroidered tunics, dirndls, and bonnets to dance in circles and lines to traditional music played on violins, bagpipes, flutes, and panpipes.

ENTERTAINMENT AND RECREATION

Moldova does not have a wide range of recreational possibilities. There are few cities, and the restaurants are typically not very attractive. There are some bars and cafés in Chişinău, but they have trouble making ends meet. Cities also offer the possibility of taking music or dance lessons and other culturally enriching activities. Rural areas have far fewer amenities and greater poverty, which limits recreation. Drinking wine is the most popular activity; people who are especially interested in wine can visit the nation's vineyards.

ETIQUETTE

Moldovans are typically friendly people, though visitors complain that hotel and restaurant staff can be surly. Tipping 10 to 15 percent is expected. When visiting a person's home it is polite to bring a gift; fresh flowers and wine are popular. It is typical for Moldovans to arrive slightly late to events. Many people remove their shoes upon entering a home.

FAMILY LIFE

Traditionally, Moldovan women have stayed home to raise their children while their husbands go out to work, but economic realities have recently forced many women to work if they can find employment. The economic and political difficulties of the country are passed on to families; in 1996, 52 percent of marriages ended in divorce. Many of Moldova's young people have no hopes of finding jobs, marrying, and raising families at home. This has led many young women to offer themselves as "mail-order brides" over the Internet.

PERSONAL APPEARANCE

Moldovans dress casually but conservatively. People dress up for formal occasions or workplaces, but ordinarily men do not need to wear coats and ties.

SPORTS

Moldova has some sporting facilities and clubs where people can play tennis, swim, and engage in other activities. Sport dance is a popular sport, and Moldovans do well in international competitions. Moldova has some good boxers. Many people like to play soccer, and the country has a national team.

CHRONOLOGY

- 1991** The Republic of Moldova is proclaimed a sovereign state on August 27.
 Moldova joins the Commonwealth of Independent States.
 Mircea Snegur wins the first presidential elections.
- 1992** Moldova becomes a member of the United Nations.
 War breaks out with secessionist groups in the Transnistria region in February.
 In July a cease-fire is established, as overseen by Russian peacekeeping troops.
- 1994** The anticommunist Agrarian Democratic Party (ADP) dominates Moldova's first multiparty parliamentary elections, and Prime Minister Andrei Sangheli leads the first government.
 Referendum confirms the sovereignty of the Republic of Moldova.
 Parliament approves a new constitution.
- 1995** Local referendum secures autonomy for Găgăuzia, a territory composed mostly of Gagauz (Christian Turks).
 Elections are held for local governments.
 Moldova is admitted to the Council of Europe.
- 1997** Petru Lucinschi is elected president in the first multiparty presidential election.
 The International Monetary Fund (IMF) approves a \$195-million loan to Moldova, contingent upon privatization and market reforms.
- 1998** The Communist Party of Moldova (CPM) wins the most seats in parliament. Moldova's three center-right parties form a coalition government under Ion Ciubuc.
 Russia reduces energy delivery due to nonpayment.
 Parliament approves an austerity budget.
 In the wake of Russia's currency crisis, Moldova's leu collapses.

1608 Moldova

- 1999** Ciubuc resigns, and Parliament is unable to agree on a leader of government for a month.
Ion Sturza becomes prime minister.
Parliament rejects agricultural privatization plans.
The IMF and the World Bank suspend payments to Moldova.
Prime Minister Sturza resigns.
- 2000** Russia cuts power supplies due to nonpayment.
Romania and Moldova exchange formal recognition of sovereignty.
Parliament reduces presidential powers.
- 2001** The CPM wins 70 of the 101 seats in Parliament.
Communist leader Vladimir Voronin is elected president.
- 2002** The government announces plans to make Russian an official language but abandons them after protests. The OSCE extends the deadline for Russia to withdraw weapons from Transnistria until the end of 2003, later extended again to 2004.
- 2003** Opposition leaders claim the Communist government wants to strengthen ties with Russia and has failed to confront poverty. President Voronin refuses to sign a Transnistria settlement agreement on the grounds that it gives Russia too much influence.
- 2004** Russia refuses to withdraw forces from Transnistria until Moldova and Transnistria resolve their conflict. Transnistria closes schools using Latin script instead of Cyrillic, and Moldova retaliates by imposing economic sanctions on Transnistria and pulling out of the talks on the region's status.
- 2005** The CPM wins a majority of seats in parliament and president Voronin begins his second term.

NATIONAL EMBLEM

The princely arms of the House of Grimaldi: a shield rendered in red and white diamond-shaped checks, encircled by the red-and-green collar of the Order of St. Charles, its gold and bejeweled cross suspended beneath the emblem; flanking the design, each with a hand on the shield, are two bearded monks in brown robes, brandishing silver swords. Shield and supporters are backed by an open red and gold crown of the Holy Roman Empire. On a white scroll appears the Grimaldi motto: *Deo juvante* (With God's help).

NATIONAL ANTHEM

"Hymne Monegasque" (Hymn of Monaco)

NATIONAL HOLIDAYS

January 27 (Feast of St. Devote), November 9 (Prince's Festival), all major Christian festivals

DATE OF INDEPENDENCE

February 2, 1861

DATE OF CONSTITUTION

December 17, 1962

GEOGRAPHICAL FEATURES

The second-smallest country in Europe as well as the world, Monaco borders the southeastern part of the French department of Alpes-Maritimes. The area, including recent reclamation, is 187 ha (1.95 sq km; 0.75 sq mi). The principality's length is 3.18 km (1.98 mi) east to west, its width 1.1 km (0.68 mi) north to south. The total boundary length is 8.5 km (5.2 mi).

The principality has four distinct divisions: La Condamine, the business district around the port; the casino; Monaco-Ville, on a rocky promontory about 61 m (200 ft) above sea level; and Fontvieille.

Monaco

CLIMATE AND WEATHER

The climate is typically Mediterranean, with warm summers and mild winters and temperatures rarely below freezing. The January average is 8.4°C (47°F). The summer heat is moderated by cool sea breezes; the July and August average is 25.5°C (78°F). Rainfall is light, averaging about 737 mm (29 in). Sunshine domi-

nates for 300 days a year, when there is no precipitation whatsoever.

Climate and Weather

Mean Temperature
 January: 47°F
 July: 78°F
 Average Rainfall: 29 in

FLORA AND FAUNA

Monaco is almost entirely urban. Any flora and fauna that exist have been acquired and nurtured by humans or are vermin such as roaches and rats.

ETHNIC COMPOSITION

The Monegasques, believed to be of Rhaetian stock, make up only 16 percent of the population; the remaining 84 percent of the population is foreign. French make up 47 percent and Italians 16 percent, with the rest coming from a variety of other nations.

LANGUAGES

French is the official language. Monegasque—a mixture of the French Provençal and the Italian Ligurian dialects—Italian, and English are also widely spoken.

RELIGIONS

The state religion is Roman Catholicism, which is adhered to by 90 percent of the population. Monaco was a part of the Diocese of Nice from 1247 to 1887, when it became a diocese in its own right, directly subject to the Holy See. The prince functions as the patron of the church, and when there is a vacancy in the episcopal see, he presents a list of three candidates for papal selection. In return the church receives substantial subsidies.

The large English-speaking community is served by St. Paul's Church, attached to the Anglican Diocese of Gibraltar. Monaco is the center of operations for Trans World Radio, an important Protestant missionary outreach.

Other	3,200

HISTORICAL BACKGROUND

The ruling family of Monaco, the House of Grimaldi, traces its ancestry to Otto Canella (1070–1143), consul of Genoa in 1133. The Genoese built a fort on the site of present-day Monaco in 1215, of which the Grimaldi family secured control in the late 13th century. It became a principality in 1338 under Charles I, and the title passed through Princess Claudine to her husband, Lambert, during whose reign, in 1489, the independence of Monaco was recognized by the Duke of Savoy. The first Monegasque coins were struck in the 16th century. Full recognition of the princely title was suspended in 1793, but the principality's independence was restored with the fall of Napoleon in 1814. In 1815 the Treaty of Stupingi placed Monaco under the protection of the Kingdom of Sardinia. In 1861 the principality became an independent state under the protection of France. Its first constitution was promulgated by Prince Albert in 1911. Agreements in 1918 and 1919 with France provide for Monaco's incorporation into France should the reigning prince die without leaving a male heir.

Prince Rainier III ascended the throne in 1949. His early reign saw the development of Monaco as a center of gambling and tourism. His 1956 marriage to the Hollywood actress Grace Kelly put Monaco on the map as a destination for cosmopolitan sophisticates; they had a son, Albert, in 1958, assuring the Grimaldi family's succession for that generation. Kelly's death in 1982 dealt a blow to the nation's image and economy. In 1963 the principality concluded a new convention with France, bringing under French fiscal authority Monaco-based French companies. After a three-year struggle with the Greek shipping tycoon Aristotle S. Onassis, Prince Rainier gained control of the company that owns the Monte Carlo Casino in 1967.

In 1993 Monaco became a member of the United Nations with full voting rights. Rainier spent the end of the 20th century trying to reduce the nation's dependence on tourism by attracting businesses. In 2002 the state installed a huge floating jetty in its port, intended to double port capacity. Monaco has generally been safe from terrorism, but it suffered its first bomb attack in 2004, when an explosion damaged the main sports stadium. Prince

Rainier passed away in 2005, and Prince Albert II took over as head of state.

LIST OF MODERN RULERS

1949–2005 Rainier III

2005– Albert II

CONSTITUTION

The current constitution is that of 1962, which replaced the Prince Albert Constitution of 1911. It vests legislative power jointly in the prince and the elected National Council. Executive power is vested in the prince and exercised jointly with the four-member Council of Government, which is headed by the minister of state, a French civil servant. The minister of state also directs the executive services, commands the police, and is in charge of foreign affairs. The monarch chooses the minister of state from a list of three French national candidates presented by the French government.

The nation revised its constitution in 2002 to allow the Grimaldi family to retain the Monacan throne if the then-childless Crown Prince Albert failed to produce an heir; eligibility for succession has been extended to Rainier's daughters and other family members.

PARLIAMENT

The National Council is a 24-member unicameral body whose members are elected by universal suffrage for five-year terms; 16 members are elected by a list majority system, 8 by proportional representation. The electorate comprises only Monegasque citizens age 21 or over—just 15 percent of the total resident population. Should the prince dissolve the National Council, new elections must be held within three months. Usually meeting twice annually, the council votes on the budget and endorses the laws proposed by the prince. All ordinances passed by the National Council must be submitted to the prince within 80 days for his signature; if he does not express opposition within 10 days, they automatically become law.

POLITICAL PARTIES

The National and Democratic Union (UND) has dominated politics in Monaco for decades. It is closely associated with the monarchy and the prince. The Union for Monaco (UPM) is a coalition party that includes the National Union for the Future of Monaco; the UPM and

the Rally for the Monegasque Family are opposition parties that have succeeded in the past in gaining seats in the National Council.

LOCAL GOVERNMENT

The principality's local affairs are administered as one municipality, or commune. The Communal Council is headed by a mayor, who is assisted by 15 elected members. Their jurisdiction is limited to the four communal quarters: Monaco-Ville, La Condamine, Monte Carlo, and Fontvieille.

LEGAL SYSTEM

The legal system is based on the Code Louis, promulgated by Prince Louis I and derived from French legal codes. Justice is dispensed in the name of the prince, who delegates judicial responsibilities to various courts. The independence of the judiciary is guaranteed by the constitution. The highest court is the Supreme Tribunal, composed of five chief members and two assistant judges; it hears judicial appeals and interprets the constitution.

HUMAN RIGHTS

All basic human rights are guaranteed by law and respected in practice.

FOREIGN POLICY

Monaco linked its foreign policy to that of France with the treaty of July 1918; France agreed to defend the independence and sovereignty of Monaco, and Monaco agreed to exercise its sovereign rights in conformity with French interests. The two nations recently renegotiated the treaty to give Monaco higher status among the world's nations as preparation for Monaco's joining the Council of Europe as a full member, which it did in October 2004.

Monaco is a full member of the United Nations and has 10 diplomatic missions in western Europe, as well as honorary consulates in 45 countries. Monaco and the United States have had excellent relations, made stronger by Grace Kelly's marriage to the prince.

DEFENSE

Monaco has no armed forces. By treaty, France is responsible for the defense of Monaco.

ECONOMY

Tourism, commerce, and finance are Monaco's main sources of income. The casino opened in 1856, and since then tourists have flocked to the principality; in 2002 tourism accounted for about 25 percent of annual revenue. Prince Rainier tried to reduce the nation's dependence on gambling income, and by the early 2000s gambling furnished no more than 5 percent of gross domestic product (GDP). Monaco has low business taxes and no income tax, which have attracted many businesses, especially banks; foreign jetsetters have long settled in Monaco because of its tax policies. The state has a monopoly on tobacco, the post, and the telephone service. The nation has no agriculture and very little industry and must import all its food and most other consumer items. Monaco publishes no economic figures, and so all estimates of GDP and other numbers are rough.

LIVING CONDITIONS

The people of Monaco enjoy a high standard of living, comparable to that of other western European metropol-

itan areas. There is no income tax and the government provides cradle-to-grave security. The roads are good, and there is efficient bus service within the city and to and from neighboring countries. The cost of living is fairly high, but most consumer goods are readily available.

HEALTH

Monacans are on the whole very healthy. The government provides good health coverage to all citizens. Life expectancy was over 79 years in 2004. Fertility is low; each woman has on average 1.76 children.

FOOD AND NUTRITION

Cooking styles in Monaco are the same as those in France, and most people drink French wine. Fresh bread is an important component of almost every meal. Coffee is a popular beverage, with milk in the morning or black later in the day.

STATUS OF WOMEN

Violence against women is strictly prohibited and rarely reported to occur. Women are fairly represented in the professions, although less so in business. The law governing transmission of citizenship discriminates against women, in that women who acquire Monegasque citizenship cannot transmit it to their children, while natural-

ized male citizens may do so. Women have had the right to vote since 1962.

EDUCATION

Primary and secondary school are universal and free in Monaco. In 1989 there were 10 public schools and three private religious schools operating under state contracts. The curriculum is similar to that of France, with emphases on international exposure, examination of national culture, and special artistic and literary programs. Total enrollment is around 4,500 students annually. The government grants scholarships in general studies, languages, and internships. Literacy is near universal.

MEDIA

Monaco has no daily newspapers of its own; most people read French papers. The government publishes a weekly magazine called *Journal de Monaco*. Radio Monte-Carlo has broadcast within and outside Monaco since the 1960s and still has many listeners in France and Italy. Radio France Internationale operates the Arab-language station formerly called Radio Monte-Carlo Moyen Orient. The Monte Carlo Television festival occurs yearly and attracts international attendees.

CULTURE

Prince Rainier encouraged the development of the arts in Monaco, which is now home to a world-famous ballet, opera, and symphony, as well as numerous theaters. The Monacan people are still devoted to their religion and have special ceremonies on saints' days. January 27 is the day for the torchlit ceremony celebrating the patron saint Dévôte. Sts. Roman and John are also important.

FOLKLORE AND MYTHOLOGY

Monaco's mythology is quite modern, as centered on the ruling Grimaldi family, and has attracted interest around the world. The Grimaldis are supposedly subject to an ancient curse that brings them misfortune. Rumors abound about the lives and misdeeds of Grace Kelly and her three children, Stephanie, Caroline, and Albert.

ENTERTAINMENT AND RECREATION

Casino gambling is big business in Monaco and has attracted visitors to the principality since the mid-1800s. The city has restaurants, nightclubs, discos, shopping, and almost any other sophisticated urban activity a visitor might desire. The Monte Carlo beach is not known for its swimming but is one of the best places in the world to spot celebrities or simply lie in the sun. People with connections may attend parties on private yachts. Numerous international events take place in Monte Carlo, such as the Formula One Grand Prix and the Monte Carlo Motor Rally. There is also an international Circus Festival every January, a magic competition called the Great Magic Prize in March, and an International Fireworks Competition in July.

ETIQUETTE

Social customs and standards of politeness in Monaco are the same as those in neighboring countries. Many people greet one another with kisses on the cheeks. A higher level of politeness is expected at formal events such as the ballet or opera.

FAMILY LIFE

Family life in Monaco is similar to that in neighboring France. Most couples have just one or two children, and family units are typically small. Women are still more likely than men to give up their careers to care for children. Many foreigners want to marry in Monaco, but because they must have been resident in the principality for thirty days, vow-renewal ceremonies masquerading as marriages are very popular.

PERSONAL APPEARANCE

People in Monaco dress and groom themselves as do other western Europeans. There is a greater emphasis on formal wear than in most other places, especially in the casino and during international festivals.

SPORTS

The Ministry of Education, Youth, and Sports encourages all citizens to participate in sporting activities. There is an extensive program of physical education at all levels of school, starting with movement classes in preschool and swimming at age five. Specialized teachers instruct children in one hour of physical education every day in elementary school; secondary school students have two or three hours weekly, plus an hour of swimming. On Wednesday afternoons students are encouraged to participate in various athletic clubs. Monacans of all ages participate in the full range of sporting activities available in the region.

CHRONOLOGY

- 1949** Prince Louis II dies and is succeeded on the throne by Prince Rainier III.
- 1959** Prince Rainier suspends part of the 1911 constitution.
- 1962** Prince Rainier promulgates new constitution.
- 1963** Monaco settles tax dispute with France.
- 1982** Princess Grace dies in an auto accident.
- 1993** Monaco becomes a member state of the United Nations.
- 2000** The French Ministry of Finance accuses Monaco of condoning money laundering. Prince Rainier demands a renewal of Monaco's full independence.
- 2002** The constitution is revised to allow the Grimaldi family to keep the throne even if Prince Albert does not produce an heir.
- 2004** A bomb explodes in the main soccer stadium.
- 2005** Prince Rainier dies; Prince Albert II ascends the throne.

UNIT OF CURRENCY

Tugrik

NATIONAL FLAG

A light blue vertical stripe between two red stripes; in gold, on the red stripe nearest the hoist, is the Soyombo, the first character of the Soyombo script, which serves as the national symbol.

NATIONAL EMBLEM

The national symbol is the Soyombo, an ideogram of geometric figures representing fire, earth, water, and air. Together these ideograms represent the ritual dagger of Buddhist Lamaism used in exorcising evil spirits. The national emblem is a circular seal with a golden ring of interconnected swastikas around a blue field, on which are displayed the lotus flower, the eight-wheeled charka, and a blue silk scarf, with, in the center, a winged horse bearing the Soyombo in the location of the saddle.

NATIONAL ANTHEM

“Our Sacred Revolutionary Country”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), July 11 (Independence Day), three days in summer (Naadam), November 26 (Day of Proclamation of Mongolia), Mongol New Year’s Day

DATE OF INDEPENDENCE

July 11, 1921

DATE OF CONSTITUTION

February 12, 1992

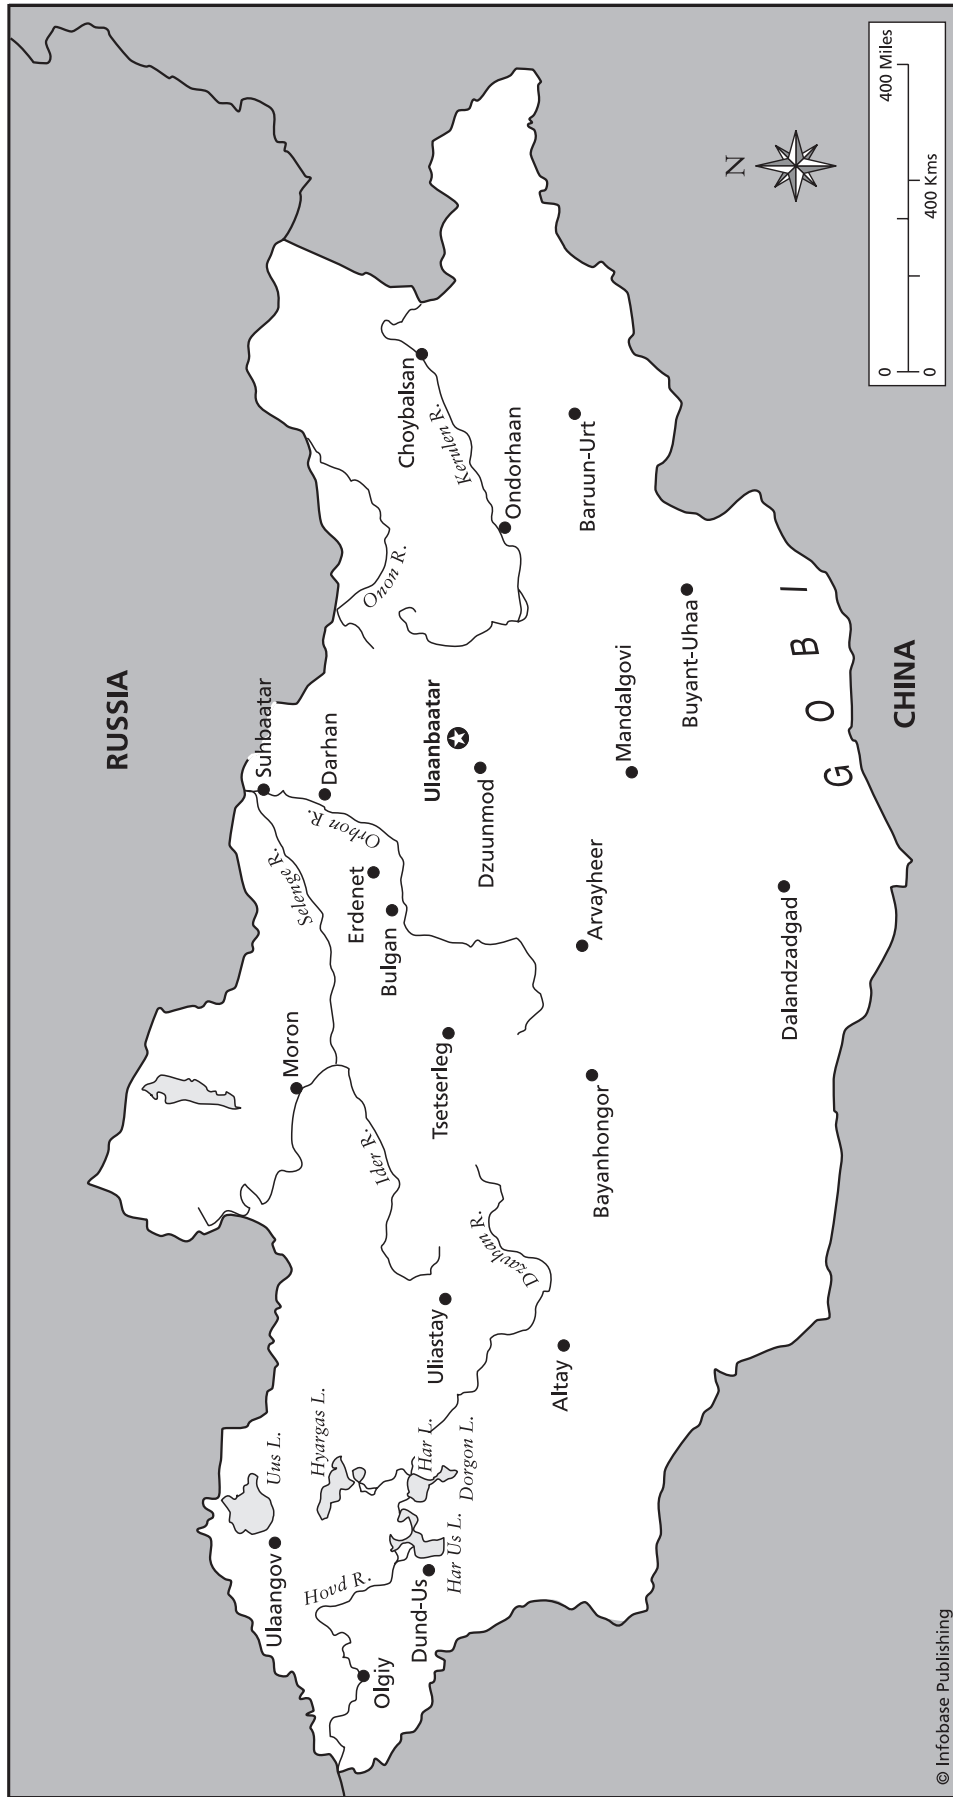

GEOGRAPHICAL FEATURES

Located in East-Central Asia, Mongolia has an area of 1,565,000 sq km (604,248 sq mi). A landlocked country, it shares its total boundary length of 8,220 km (5,108 mi) with two neighbors: Russia (3,543 km; 2,202 mi) and China (4,677 km; 2,906 mi).

Most of northern, western, southwestern, and central Mongolia consists of mountains, plateaus, and depressions. Mongolians divide their country into a Khangai zone and a Gobi zone, but Russians enumerate five natural regions: the mountainous Altai, the Great Lakes De-

pression, the mountainous Khangai-Khentej, the uplifted eastern plains, and the nearly treeless Gobi. Nowhere lower than 457 m (1,500 ft) above sea level, Mongolia has average elevations between 914 and 1,524 m (3,000 and 5,000 ft). In the extreme west in the Altai Range, Nayramadlin (Huyten) Orgil peak soars to 4,374 m (14,298 ft). There is some glaciation. Elevations decline from the northwest to the southeast, from alpine snowy peaks to low hills and flat plains. One-third of the country consists of the Gobi, a desert stretching southeast into Chinese Turkistan. Particularly in the east it is a rocky desert of claylike soil blanketed thinly by shifting sand.

Mongolia

1620 Mongolia

In the north exists a considerable river system. The Selenga rises in the Khangai uplands and flows into Lake Baikal, in Russia; about 595 km (370 mi) of the river lies within Mongolia. Among its numerous tributaries are the Orkhon (1,126 km; 700 mi) and the Tula (703 km; 437 mi). Also originating in this region is the Yenisei and a minor affluent of the Irtysh. In the east, the area of Pacific drainage, the longest river is the Kerulen. In the Great Lakes Depression and in the Central Asian Basin flow the Dzabkhan (805 km; 500 mi), the Tes (563 km; 350 mi), and the Khobdo (499 km; 310 mi). Rivers in the Gobi region vanish in the salt lakes. Only two sizable rivers are of foreign origin: the Khalkhyn, in the extreme east, and the Khobdo, in the extreme west. With the exception of the Selenga, most waterways are not suitable for navigation and are used mainly for floating timber, for watering cattle, and for irrigation.

Mongolia has hundreds of lakes, and those with outlets have freshwater. Most of the biggest lakes are in the northwest. Fed by 200 rivers and rivulets, the bitter Ubs Nur (3,368 sq km; 1,300 sq mi) is the largest saline lake without an outlet. Forty-six rivers empty into the alpine Lake Khubsugul (2,591 sq km; 1,000 sq mi), the country's deepest (518 m; 1,700 ft) and the largest freshwater lake, sometimes called the Mongol Sea. There are more than 300 lakes in the Great Lakes Depression. In the east the largest lake is Buir Nor. There are also more than 200 natural mineral water springs, hot and cold.

CLIMATE AND WEATHER

Mongolia has a typically severe middle-latitude continental climate, as characterized by very low rainfall and wide and constantly variable diurnal, seasonal, and yearly extremes in temperature. In the winter the area is encompassed by great masses of cold air, forming huge high-

pressure zones. In the short and relatively warm summer, the remnants of the southwestern monsoon combine with low-pressure systems to produce modest precipitation, often in the form of brief, localized cloudbursts. January temperatures range from -15°C to -30°C (5°F to -22°F), with the extreme below -46°C (-50°F), July temperatures from 10°C to 27°C (50°F to 80°F), with extremes over 38°C (100°F). The average annual temperature in Ulaanbaatar is a little below freezing.

The total annual precipitation (some 70–80 percent occurring in July and August) varies from 254 to 381 mm (10 to 15 in) in the mountainous northern regions (where Khubsugul receives the most snowfall) to less than 127 mm (5 in) in the Gobi. The mean annual rainfall in Ulaanbaatar is 208 mm (8.2 in). The sun shines for 250 days a year, making Mongolia the “Land of the Everlasting Blue Sky.” Annual average relative humidity is benign, varying from 45 percent to 75 percent year-round. Except for sudden blizzards, the winter winds are weak and local, mainly from the north. In the summer and autumn moister winds emanate from the southwest.

CLIMATE AND WEATHER

Climate and Weather

Mean Temperature
January: 5°F to 222°F , Extreme 250°F
July: 50°F to 80°F , Extreme 100°F
Average Rainfall
Ulaanbaatar: 8.2 in
Northern Mountains: 10 to 15 in
Gobi Desert: 5 in

FLORA AND FAUNA

About two-thirds of Mongolia is grassland, or steppe. Over 3,000 species of plants thrive on the steppe, including 150 that are endemic to the country. The majority of the remainder of the terrain is the Gobi Desert, which is very dry but does support some grass. Mongolia's animals are similar to those that inhabit Siberia; there are 136 species of mammals, 436 birds, 22 reptiles, 8 amphibians, and many fish and insects. Many herd animals, such as sheep, goats, and camels, live in Mongolia, including some in the Gobi Desert. The country's famous *takhi* horses, used by Genghis Khan, live on the grasslands.

ETHNIC COMPOSITION

Although tribal divisions have weakened, they survive. About 76 percent of the population are Khalkha Mongols, who live in the vast heartland from the east to the Altai and the valleys of the Great Lakes. West Mongols (also known as Oirat, Durbet, Olot, and Torgut) account for about 5 percent. The largest minority, the pastoral nomad Kazakhs (a Muslim people of Turkish origin), constitute another 5 percent and are located in the far west, in their own national province, or *aymag*, of Bayan Uluguei. Lesser minorities, none of whom constitutes more than 3 percent, include Buryats, Tuvinians, and Darigangas, generally found in pockets to the west, northwest, and east, respectively. Nonnatives, such as Russians and Chinese, each making up about 2 percent, live mainly in urban areas. The Chinese are mostly the Mongolized descendants of the ruling Chinese group of preindependence days.

There is virtually no national minority problem. However, some four million Mongols live outside Mongolia, mostly in Inner Mongolia, China, as well as in former Soviet republics. Pan-Mongol sentiments were strong in the early years of autonomy (1911–21) but have since disappeared among the younger generations.

LANGUAGES

The standard Mongolian language, Halh, is that spoken by the Khalkha, the dominant social group. Some 14 percent of the population speak Mongol languages differing only slightly from Khalkha, such as the Oirat, Buryat, Dariganga, and Darkhat. The remaining speak non-Mongolian languages belonging to the same Altaic branch of the Ural-Altaic language family. Of these, the most important are the Turkic and Tungus-Manchu languages. Turkic speakers include numerous linguistically distinctive groups, mainly in the Khobdo region.

Minor Mongolian languages include Darkhat, spoken in the Darkhat region around Lake Khubsugul; Dariganga, spoken in the southeast; and Buryat, spoken by Russian Mongols.

Russian has been a strong second language for most Mongols and a major qualification for officials who have had to deal with their Russian counterparts.

RELIGIONS

The difference between the old Mongolia and the new Mongolia is nowhere more complete and dramatic than with regard to religion. Until 1911 Mongolia was a theocratic state, with the local religion a mixture of shamanism and Buddhism. By the late 19th century more than a quarter of inhabitants were monks, theoretically celibate and thus contributing to a decline in the population. The Buddhist establishment was in effect a state within a state, and monks constituted the most influential special-interest group. The Buddhist dignitaries, known as the “yellow” lords (from the color of their headgear), occupied a position of importance equal to that of the “black,” or secular, lords.

Parallel to this system there existed vestiges of older shamanism, which was the original religion of the Mongols. By heredity, training, spontaneous vocation, or election by supernatural beings, the shaman was a combined medicine man, wizard, and priest with special magical powers, such as the ability to leave his body at will and to communicate with the supernatural world. The shaman’s most important function was healing. He also functioned as guardian of tribal lore and as oral historian.

Thus, when the Communists seized power with Soviet help in the early 1920s, the Buddhists were one of the earliest targets. By the outbreak of World War II, Buddhism was severely diminished.

The war against religion was more successful in Mongolia than in the Soviet Union and its other former satellites. Despite the extensive religious structures, Buddhism had shallow roots in the country, and even outside the ruthless and harsh methods employed by the Communists, religious traditions and practices had become moribund. The government has boasted that Mongolia is today one of the world’s most atheistic nations and that most cities are free of religious superstitions and piety. Nevertheless, approximately half the population still identifies with one or more religious traditions.

HISTORICAL BACKGROUND

The Mongols are believed to be descended from the nomadic tribes of Central Asia in the pre-Christian era. The

most warlike of these nomadic groups was the Xiongnu (Hsiung Nu), against whom the Chinese emperor Shi Huangdi built the Great Wall in the third century B.C.E. In the second century B.C.E. the Xiongnu, finding that the wall was not a serious obstacle, overran northern and western China north of the Yangzi, until they were driven back once again by the Chinese emperor Wudi, known as the Martial Emperor. During the following century there was incessant warfare between the Chinese, the Xiongnu, who forced their way back to Gansu, and other nomadic peoples: Xianbei from the north, remnants of the Xiongnu from the northwest, and the Chang from Gansu and Tibet. By the end of the fourth century the region between the Yangzi and the Gobi was dominated by the Toba tribe of the Xianbei under the Northern Wei dynasty. But by the beginning of the sixth century they were overthrown by a new nomadic group of marauders known as the Gougen, who had established a powerful empire under their leader, Toulun.

In turn, the Gougen were overthrown by the Turks, a subject people in the Altai region. The Turkish Empire was soon split into a number of warring principalities, such as the western Turks, the eastern Turks, and the Uighur Turks. It was not long before the western and eastern Turks followed the trail of the Xiongnu, the Xianbei, the Toba, and the Gougen into China, but they were repulsed by the Tang emperors, who formed an alliance with the Uighurs to reestablish Chinese sovereignty over Xinjiang. As Chinese allies and vassals, the Uighurs conquered much of western and northern Mongolia until, by the middle of the eighth century, their empire extended from Lake Balkash to Lake Baikal. At about that time the rising tide of Islam reached central Asia. Although the Chinese were ejected by Muslims from the Oxus Valley, the Chinese repulsed Muslim efforts to penetrate into Xinjiang. Thereafter, the power of the Uighurs waned, as the Kyrgyz and the Karluk Turks drove them north to the Tarim Basin.

The decline of the Uighurs coincided with the ascendancy of a new Mongol tribe, the Khitans of northern Manchuria. By 925 the Khitans ruled eastern Mongolia, most of Manchuria, and much of China north of the Yellow River. Soon they established themselves as emperors of North China and were known as the Liao dynasty.

As the stage was being set in the 11th and 12th centuries for the most momentous era in the history of the Mongols, the Mongols and the Tartars held sway over the northern and eastern areas; the Turks over western Asia and southeastern Europe; and the Tanguts, who were partly related to the Tibetans, over eastern Xinjiang, Gansu, and western Inner Mongolia. Both the Tanguts (who were also known as Hsi-Hsia, or western Hsia) and the Uighur Turks were allied with the Chinese or nominally under Chinese rule.

Early in the 12th century a new Tungusic people, the Juchen, moved southeastward from central Mongolia and

destroyed the Khitan Empire in a violent seven-year war (1115–22), then turned on their former allies the Sung Chinese. The Juchen leader proclaimed himself the leader of a new imperial dynasty, the Chin. Meanwhile, the defeated Khitan leader fled with a small remnant of his army to the Tarim Basin, where he allied himself with the Uighurs and established the kingdom of the Kara Khitai, or western Liao, which soon controlled both sides of the Pamirs.

In central Mongolia, following the migration of the Juchen, the Borjigin Mongols emerged as the leading clan of a loose federation of Mongols. Its leader was Kabul Khan, to whom was born in 1162 a grandson known as Temuchin. When Temuchin was only 12, his father was treacherously attacked by the Tartars, and Temuchin was left to die in a semidesert mountainous region. He survived, however, and by age 20 he became the leader of the Kiut subclan and by 1190 the undisputed leader of the Borjigin Mongols. Allying himself with the Keraites, he first subdued the region north of the Gobi. Later he broke with the Keraites and in a series of campaigns defeated all of the Mongol and Tartar tribes in the region from the Altai to Manchuria. His principal opponents in the struggle had been the Maiman Mongols, and he selected their capital, Karakorum, as the seat of his new empire. In 1206 Temuchin was formally acknowledged as the leader of all Mongols by the *khuraltai* (council) of Mongol chieftains, with the title of *kbagan* (great khan). They also gave him the honorific title of Chingis, or Genghis, the name by which he is known in history.

Genghis Khan was one of the greatest military leaders in history. He developed an extraordinary military system and one of the most formidable armies that the world has ever seen. Building on a permanent base of 30,000 warriors under arms at all times, Genghis could, by levies on the Mongol tribes, raise armies of more than 300,000 men on short notice.

Genghis Khan's campaigns spanned a period of more than 25 years, beginning in 1205 with the defeat of the Tangut forces in Gansu and Ninghsia, followed by the defeat of the Chin forces; the occupation of North China and the siege, capture, and sack of Beijing (then known as Yenching, or Chengdu) in 1213; the defeat of the Maiman Mongol leader Kushluk, who had seized the throne of Kara Khitai; the conquest of Khwarezm after defeating its Turkish rulers, Alaud-Din Mohammed and Jellaluddin, and sacking and razing to the ground Samarkand, Otrart, and Kohojend; the smashing of the Cumans, capturing of Astrakhan, and annihilating of a combined Russian-Cuman army on the banks of the Kalka River; and finally, the defeating of the combined Chin-Tangut armies in 1226 in a great battle on the banks of the frozen Yellow River. After accepting the surrender of the Tangut emperor, Genghis started back to Karakorum—dying en route.

In accordance with the will of the dead emperor, the *khuraltai* chose his son Ogatai as *kbagan*. The new ruler

completed the conquest of the outlying territories of the western Hsia and the Chin Empire, and in 1231 he sent an expedition to conquer Korea. Under Ogatai the Mongol Empire stretched from the Sea of Japan to Russia in the west and Syria in the south, although the Mongols themselves probably numbered fewer than one million. One of the most incredible empires in history, it was at this point the largest imperial power in the world. The sheer audacity with which the Mongols embarked on these wars was almost as remarkable as the success that invariably attended their operations. The empire was divided between the four acknowledged descendants of Genghis under the overall authority of Ogatai: Batu, son of Juji, was the ruler of the region to the north and west of Lake Balkash; Chagatai, the region comprising modern Afghanistan, Turkistan, and central Siberia; Ogatai, China and east Asia; and Tuli, the youngest, central Mongolia, the homeland, in accordance with Mongol custom.

In 1235 or 1236 Ogatai authorized two more expeditions: one against Tibet, led by his son Godan, which was completed in 1239, and the second against Europe, which was led by Batu and Subotai, one of the most brilliant of Genghis's generals. The European expedition started in 1237 with an army of 150,000 crossing the frozen Volga. For the next two years the Mongols spread death and destruction throughout Russia. In 1240 Subotai crossed the Dnieper and stormed and conquered Kiev. The Mongols then continued westward, advancing on a typically broad front in three major columns. To the north, the horde—a force roughly equivalent to a modern army corps and consisting of several *tumens*, or divisions—of Prince Kaidu went through Lithuania and Poland. After destroying Boleslaw V of Poland at Kraków, Kaidu crushed at Leignitz a combined army of Germans, Poles, and Teutonic Knights led by Prince Henry of Silesia. The southern horde, led by Prince Kadan, went through Transylvania into the Danube Valley and thence into Hungary. Meanwhile, Subotai and Batu, leading the central horde across the Carpathians, destroyed the army of King Bela IV of Hungary at the Sajo River. The Mongols then seized Pest. In 1241 the Mongols crossed the Danube, and their scouting parties reached Venice and Vienna.

Suddenly, the advance halted; the word had come that Ogatai had died. The princes, required by the law of Genghis Khan to return to Karakorum to take part in the election of a new *khagan*, led their armies back, never to return. In 1246 the *khuraltai* selected Kuyuk, a son of Ogatai, as the *khagan*. However, within two years Kuyuk died. His successor was Mangu, the eldest son of Tuli. Mangu resumed Genghis's plans for world conquest. Mangu himself, together with his brother Kublai, took the field against China. Another brother, Hulagu, was sent to Persia, where he became the first of the Ilkhans. He encouraged his cousin Batu to renew Mongol raids into central Europe. Mangu and Kublai—the latter appointed viceroy of China—swept

through China and as far as Hanoi, which fell in 1257. When Mangu died in 1259 Kublai was elected *khagan*. After a two-year war against his brother Arik-Buka, who had opposed his election, Kublai turned his attention to the completion of the conquest of China. Assisted by Bayan, the grandson of Subotai, he captured Hangzhou in 1256; in another three years all the outlying provinces were subdued. The last action in the war took place in 1279: a naval battle in the Bay of Canton, in which all the Sung ships were sunk by the Mongol fleet.

Meanwhile, to the west, the first signs of decline appeared in the vast imperial domains. In the absence of Hulagu Khan, who had returned to Karakorum on the death of Mangu, his deputy was defeated and killed at the Battle of Ain Jalut by a larger Mameluke force. This was the first significant Mongol defeat in 70 years. This defeat went unavenged, as both Hulagu and Kublai devoted their attention to rounding off their conquests elsewhere and suppressing dissidents. There were two abortive invasion attempts against Japan—in 1274 and 1281—and a brief invasion effort against Java—in 1292–93. Kublai had moved his capital from Karakorum to Beijing in 1263, and after the Song dynasty was destroyed in 1279, he established himself as the emperor of a united China, the first ruler of the Yuan dynasty. When he died in 1294, he was mourned by both the Mongols and the Chinese. The golden age of the Mongols was over.

The Yuan dynasty lasted in China until overthrown in 1388 by a leader of a robber band, Chu Yuan-chang, who proclaimed himself Emperor Hongwu, the founder of the Ming dynasty. With an army of 250,000 men, he pursued the defeated Yuan armies into Mongolia and won a decisive victory at the Battle of Puir Nor in 1388. Karakorum was destroyed, and 70,000 Mongols were made prisoners.

Meanwhile, Bereke, brother of Batu, the leader of the Golden Horde, had been converted to Islam, and he allied himself with the Mamelukes against Hulagu. This chain of events marked the end of Mongol expansion in southwestern Asia. The successors of Hulagu gradually yielded their powers to the Turkish viceroys, and the Ilkhan Empire fell apart before the end of the 13th century.

The Golden Horde, of the khanate of the Kipchak, had a longer life than the others. Under Bereke, the court at Sarai on the Volga became a prosperous center of commerce. The Mongols mixed with the Turks of the steppes to become the Tartars of Russia. The power of the khans declined, though, after the princes of Moscow, former vassals and tributaries of the Mongols, asserted their independence under Ivan II in 1480. One cause of the decline was the rise of Tamerlane, or Timur the Lame, during the latter part of the 14th century. This Turkish conqueror claimed to be a descendant of Genghis Khan through the family of Chagatai, and he reunited Turkistan and the khanate of the Ilkhans under his rule. In

1624 Mongolia

1391 he invaded Russia and defeated the Golden Horde, and he again ravaged the Caucasus and southern Russia in 1395. The khanate thereupon split into three separate kingdoms: Astrakhan, Kazan, and the Crimea. That of Astrakhan, home of the main body of the Golden Horde, was destroyed in 1502 by the combined armies of the Crimean Mongols and the Muscovites. The last reigning descendant of Genghis, Shanin Girai, of the khan of the Crimea, was deposed by the Russians in 1783.

By the middle of the 15th century the Mongol Empire had shrunk to a number of independent, warring tribes, particularly the Khalkhas and the Oirats. The latter gained ascendancy under Essen Tayi Khan, who defeated the Ming forces in 1449, and Dayan Khan, leader of a confederation covering north-central Asia between the Ural Mountains and Lake Baikal. Early in the 16th century the three independent sultanates of Khwarezm (Khiva), Ferghana, and Yarkand were overwhelmed by the Uzbek Turks. Despite internal bickering among the Mongol tribes, they continued their hostilities against the Ming. The leaders in the struggle were the Chahar Mongols, among whom the line of the khans had continued, although the title itself had by now become meaningless. In the middle of the 16th century Altan Khan, leader of the Tumed clan of the Khalkhas, reunited most of Mongolia. Tiring of the war with China, he concluded peace with the Ming emperor, thus ending a struggle that had lasted three centuries, perhaps the longest war in history. During an invasion of Tibet, Altan was converted to Buddhism, and in 1577 he proclaimed Buddhism as the state religion of Mongolia.

From the 17th century onward Mongolia was hemmed in by the westward expansion of the Manchus and the eastward expansion of the Russians. The evolution of the art of war, involving muskets and cannon, had also reduced the Mongols' military capabilities. Nevertheless, Mongolia produced several leaders who tried both to unite their people and to repel the incursions of the Russians and the Manchus. Among them were Ligdan Khan of the Chahar Mongols; Tsogto Taji, the national hero of this era; and Galdan Khan, or Bushtu Khan, of the Dzungar tribe. Because of the high quality of their leadership at this time, the Dzungars dominated the history of Mongolia for much of the 17th century. After conquering most of Kashgar, Yarkand, and Khotan from the Kyrgyz, Galdan turned eastward in about 1682, intending to conquer the Khalkhas. In 1688 the hard-pressed Khalkhas appealed to the Manchus for aid. The Manchus were more than pleased to respond, and a Chinese army was sent to Mongolia. This led to the calling of a *khuraltai* in 1689 at Dolonor, where most of the Mongol tribe accepted Manchu sovereignty against the Dzungars, thus marking the end of independent Mongolia for over 200 years.

In 1696 the Chinese host crushed the Dzungar forces of Galdan, near Chao-Modo (Urga, now Ulaanbaatar). This ended Dzungar influence in Mongolia, although they retained control of the western regions and parts of

Sinkiang and Tibet. The Dzungars continued to trouble the Manchus for another 20 years. In 1720 they were driven out of Tibet, then in 1732 defeated again.

Meanwhile, the Chinese and Russian Empires continued their expansion into central Asia. They found it expedient to delimit their respective areas of influence through the Treaty of Nerchinsk in 1689 and the Treaty of Kyakhta in 1727, which regulated Russian-Chinese boundaries for another 175 years. During the 18th and 19th centuries the Chinese generally neglected most of Mongolia. The southern provinces—Suiyuan, Chahar, and Jehl, known as Inner Mongolia—were in time absorbed into China.

The greatest single influence on Mongol life and culture during this period was Buddhism. In 1635 the khan of the Tushetu tribe proclaimed that his son was the reincarnation of the Buddha, and thus was born the tradition of the Living Buddha, or Jebtsun Damba Khutukhtu. Until the office was abolished in the 1920s, all reincarnations of the Living Buddha were from this tribe. To reduce the power of the tribal khans, the Manchus treated the Living Buddha as both the temporal and spiritual spokesman of the Mongols. Contributing to the increasingly theocratic nature of the society was the fact that over one-quarter of the male inhabitants were monks.

The train of events that led to the birth of modern Mongolia began with the overthrow of the Qing dynasty in China by the Republicans on October 10, 1911. In the wake of this Manchu collapse, on November 18, 1911, Mongolia proclaimed its independence on the basis that its allegiance had been to the Qing dynasty and not to China. The new government in Beijing refused to recognize Mongolian independence but was too busy with internal discord to do anything about enforcing its sovereignty. The Jebtsun Damba Khutukhtu was named Bogdo Khan, or ruler. Russia moved rapidly to take advantage of the situation by signing the Russo-Mongolian Treaty in 1912, but Russian involvement in World War I gave an opportunity for the Chinese to reassert their sovereignty. In 1919 the Chinese reoccupied Urga and disbanded the new Mongol army.

Meanwhile, the tides of the Russian civil war spilled over into Mongolia from the north, as the anti-Bolshevik White Russians under Baron Roman von Ungern-Sternberg moved into Mongolia from Siberia and drove the Chinese from Urga. Opposition to the "Mad Baron" led the Mongolian national leaders Sukhe Bator, Danzan Khorlo, and Horloogiyn Choybalsan, with the blessing of the Living Buddha, to appeal to Moscow for assistance. In response, the Revolutionary Provisional Government of Mongolia was established at Kyakhta, just inside Siberia from Mongolia, on March 13, 1921. This government's military force, comprising mostly Red troops, defeated the Mad Baron at the border town of Altan Bulak and then marched on Urga and occupied the capital. The Communist victors established a new national government at Urga, with the Living Buddha as the nominal head of state and a government headed by a monk named

Dogsomyn Bodo and controlled by the three national leaders. On November 5, 1921, a new Mongolian-Soviet treaty of friendship was signed, which recognized the People's Government of Mongolia as the only legal government, and ceded the northwestern portion of Outer Mongolia in the Altai Mountains to the Soviet Union. Dogsomyn Bodo, who opposed the extension of Soviet influence, was executed in 1922, and the next year Sukhe Bator died under mysterious circumstances; the death of the Living Buddha followed in 1924, while the People's Government forbade the selection of his successor. That same year Danzan Khorlo, the last remaining anti-Soviet nationalist leader, was shot.

With the elimination of all opposition, the stage was set for the formal withdrawal of Soviet forces and the establishment of a puppet state. On November 26, 1924, the Mongolian People's Republic was proclaimed, with a new constitution based on the Soviet model. At the same time Urga was renamed Ulaanbaatar (Red Hero). From 1924 to 1928 the leftists consolidated their power without any frontal assault on the two rival national institutions, the abbots and the nobles. A new currency and a new national bank were set up, a standardized tax system was instituted, and a Soviet-equipped and Soviet-trained Mongol army was created. A decisive clash between the nationalists, or rightists, and the Soviet-leaning leftists came in 1928 at the Seventh Party Congress of the Mongolian People's Revolutionary Party. All rightists were expelled, and the leftists seized control of the party and the government.

They rushed headlong into a series of radical reforms, including confiscation of all feudal estates and a relentless war against the Buddhist clergy. Forcible collectivization followed on Stalin's model. These brutal measures caused bloody uprisings. The government responded with still harsher measures and new party purges. The government banned all private enterprise, forced craft workers to join cooperatives, and nationalized all foreign and domestic trade and transportation. Extremism produced a near disaster, as the nation came to the verge of civil war. The angry and frightened nomads slaughtered their animals rather than hand them over to the state, and there was widespread famine as the food supplies failed.

Finally, the government was persuaded by the Soviets to retreat and end extremism. The party rejected its own earlier "left-wing deviation" and expelled several top leaders as "left-wing adventurers." The collective farm experiment was dropped, the worker cooperatives were abandoned, the cattle tax was reduced, and the herdsmen and peasants were again allowed to hold private property.

The new policy of gradualism continued through World War II and up until late 1947. This period witnessed the successful elimination of Buddhism as a national institution. Choybalsan consolidated his power through purges in which scores of top administrators and party and army officials were imprisoned or executed. The threat of Japanese invasion led to increasing concen-

tration on building up defense forces. Over 10 percent of the national population had been conscripted by the time Mongolia joined the Soviet Union in declaring war on Japan on August 8, 1945. Mongolia remained an independent Communist country through the cold war.

During all this time, since 1921, the country was under the influence of the Soviet Union and adopted many of the governmental policies and methods of the Soviets. However, as the Soviet Union began to fall apart in the 1980s, Mongolia was also seeing changes in its political structure. Jambyn Batmönh began his own reform movement in Mongolia. In 1989 Mongolia established full diplomatic relations with China.

The following year a large prodemocracy protest erupted in front of the parliament. Batmönh quickly lost power, and an amendment to the constitution in May called for multiparty elections. However, these elections resulted in the election of the Mongolian People's Revolutionary Party (MPRP), the former Communist Party. New elections were held in June 1996, and for the first time in 75 years a group other than the Communists won; the government then pursued reforms and privatization. The country suffered through its transition from a Communist state to a democratic one, with poverty, inflation, and famine combining to make the transition difficult. Despite difficulties, Mongolia created over 10,000 private businesses, opened its own stock market, and repealed all taxes on trade. However, the pace of Mongolia's transition created opposition, and in parliamentary elections in 2000 the MPRP won a landslide victory, securing 72 of 76 seats. The new government has announced further economic reforms, albeit at a more cautious pace.

President Bagabandi was reelected in 2001. That year international donors gave Mongolia millions of dollars in aid to boost the economy, alleviate poverty, and help herders caught in a severe winter. Relations with China became tense in 2002 after the Dalai Lama visited the country.

The parliamentary elections of 2004 resulted in a political deadlock, in which the MPRP and the opposition coalition Motherland-Democracy Coalition (MDC) won nearly equal numbers of seats. The two groups eventually worked out a deal to share power, and Tsakhiagiyn Elbegdorj was appointed prime minister. The coalition government collapsed in 2006 and Miyegombo Enkbold was chosen prime minister. MPRP candidate Nambaryn Enkhbayar won presidential elections in 2005.

2006– Miyeegombo Enkhbold

CONSTITUTION

The first constitution of the Mongolian People's Republic was adopted by the Great People's Khural on November 26, 1924, the same day on which the nation was established. The constitution was modeled on that of the Russian Soviet Federated Socialist Republic and represented the triumph of the pro-Russian leftists over the nationalists in the party.

Mongolia faithfully hewed to the official Soviet line from the Stalin era up through the Gorbachev era. In 1988 the Mongolian party began an unprecedented attack on both Stalin and former Mongolian leaders, particularly Horloogiyn Choybalsan and Yumjaagiyn Tsendenbal. Choybalsan was implicated in the mysterious deaths of his rivals in the 1920s and the purge and deaths of thousands of other party and army officials in the 1930s. Under Jambyn Batmönh both glasnost and perestroika became the watchwords of the Mongolian administration.

A series of dramatic prodemocracy protests and the beginnings of unprecedented opposition political activity led the Mongolian Communist Party to relinquish its constitutionally guaranteed monopoly of power on April 15, 1990. The decision paved the way for a transformation of Mongolia from a one-party system into a multiparty state. Thus, Mongolia became the first Asian Communist country to adopt the type of political reforms that had swept Eastern Europe in the preceding six months. Batmönh stepped down from his dual positions as head of state and general secretary of the party and was replaced by Gombojavyn Ochirbat as general secretary and by Punsalmaagiyn Ochirbat as president. Premier Dumaagiyn Sodnom was also ousted, with Sharavyn Gunjaadorj appointed in his stead.

In 1992 the country adopted a new constitution that abolished the "People's Republic" and established a democratic model with a market economy. The constitution calls for the election of a president and a single-chambered

legislature, out of which the prime minister is selected. Presidential candidates are nominated by political parties and elected to four-year terms by popular vote; no president may serve more than two terms.

PARLIAMENT

The parliament, now referred to as the State Great Hural, is the highest organ of state power and the sole location of legislative power. The Hural is unicameral and consists of 76 members. The members are elected to four-year terms by universal direct suffrage by all citizens 18 years of age or greater. The State Great Hural may consider on its own initiative any issue pertaining to domestic and foreign policies of the country. The parliament also appoints the prime minister and the members of the cabinet, who all serve at the pleasure of the Hural. The prime minister is usually the leader of the majority party.

POLITICAL PARTIES

Mongolia is a multiparty state with nearly two dozen parties; the largest is the Mongolian People's Revolutionary Party (MPRP), which is made up largely of former Communist Party members and holds nearly half the seats in the State Great Hural. Its main rival is the Motherland-Democracy Coalition (MDC), formed in 2003 between the Democratic Party, the Motherland-Mongolian New Socialist Democratic Party, and the Citizens' Will Republican Party.

LOCAL GOVERNMENT

The territory of Mongolia is divided administratively into 18 provinces, or *aymags*, the capital city, and the cities of Darhan and Erdenet. Each province and city is run by an elected *hural*, or assembly. Provinces are subdivided into regions, regions into communities. The capital city is divided into districts, districts into neighborhoods.

LEGAL SYSTEM

The legal system and laws of Mongolia are a unique blend of Russian, Chinese, Turkish, and Western elements. All judges are appointed by a General Council of Courts. Courts include the Supreme Court, provincial and capital city courts, and regional, interregional, and district courts. Specialized criminal, civil, and administrative courts are not subject to review by the Supreme Court. The Supreme Court serves as appeals court for people's and provincial courts but to date has rarely overturned the verdicts of lower courts. The constitution does not specify whether legislative acts are subject to judicial review.

All accused persons are provided due process, legal defense, and a public trial, although closed proceedings are permitted in cases involving state secrets, rape cases involving minors, and other cases provided by law. Defendants may question witnesses and appeal decisions.

HUMAN RIGHTS

Since the adoption of the new constitution in 1992, the government has generally respected the human rights of its citizens. Problems remain, however, including the occasional beatings of detainees and prisoners by members of the security forces, poor prison conditions, restrictions on due process for detainees, occasional government manipulation of the media, and violence against women. Police corruption is a problem. Child abuse and child labor occur, and some women who emigrate to work in other countries may be victims of human trafficking.

FOREIGN POLICY

Mongolia was for many centuries within the Russian sphere of influence and had little or no contact with the outside world. Historically, dependence on Russia stemmed partly from a fear of China, which had carved out Inner Mongolia from Mongolian territory. With the collapse of Communism, Mongolia recognized its need to open doors to the rest of the world and since then has particularly focused on developing amicable relations with China and Russia. It concluded its first formal agreement with China and restored air services between Beijing and Ulaanbaatar. In 1991 President Ochirbat became the first Mongolian head of state to visit the United States, and in the same year Secretary of State James Baker became the first Western statesman to address the Mongolian parliament. In 1992 Russia completed the withdrawal of all its troops from Mongolia, and during the next year the two countries concluded a treaty of friendship and cooperation. Mongolia signed a similar treaty with China in 1994.

Mongolia officially has a nonaligned foreign policy. It has downgraded relations with most eastern European nations and instead is more involved with Asia. It joined the Association of South-East Asian Nations in 1998 and the Pacific Economic Cooperation Council in 2000, and is seeking to join the Asia Pacific Economic Conference. It has close relations with South Korea and Japan; Japan is its largest bilateral aid donor. The United States has provided a great deal of aid for economic development and democracy; in 2004 the two countries signed a Trade and Investment Framework Agreement.

DEFENSE

The Mongolian armed forces are headed by the civilian Minister of Defense, a former military officer. The Minis-

try of Defense is responsible for external security, as aided by the Ministry of Justice and Foreign Affairs, which handles border issues in peacetime and is also responsible for the internal police force. The Mongolian People's Army includes ground and air forces. Mongolian men between 18 and 25 must serve 12 months in the military. The state uses the military to increase political awareness, literacy, and discipline among the nation's people, also employing soldiers on construction projects.

ECONOMY

Mongolia's economic growth has been steady since the late 1990s following a depression immediately after independence, when Mongolia lost the Soviet aid that had accounted for nearly one-third of the nation's gross domestic product (GDP); nevertheless, the economy is not strong and has much room for improvement. The government under the Democratic Union Coalition liberalized the economy, reducing price controls, restructuring the banking and energy industries, inviting foreign investment, and allowing domestic businesses to privatize. The former-Communist MPRP governments opposed free-market reforms, and in 1996 natural disasters and drops in global prices for cashmere and copper hurt the economy, but between 1997 and 1999 growth picked up. The nation joined the World Trade Organization in 1997. The economy was fairly strong between 2000 and 2004. Debt owed to Russia loomed as a major problem, but in 2004 Russia wrote off all but \$300 million of the total amount.

Mongolia's economy has traditionally been based on agriculture and herding, and the country currently lacks the infrastructure needed to develop much industry. The country has extensive deposits of copper, gold, coal, tin, tungsten, and molybdenum, and mining is an important sector of the economy. Cashmere from goats is also a profitable export. The nation's best hope for continued economic expansion is attracting more foreign investment, which depends on Mongolia's convincing foreign businesses that their investments would be safe.

ENVIRONMENT

Mongolia is a largely desertlike country that suffers from limited natural freshwater resources. The policies of the MPRP regime, promoting rapid urbanization and industrial growth, have raised concerns about their negative effects on the environment. The burning of soft coal in power plants and the lack of enforcement of environmental laws have severely polluted the air in Ulaanbaatar. The country also suffers from deforestation, overgrazing, and the converting of virgin land to agricultural production, which have increased soil erosion from wind and rain.

LIVING CONDITIONS

The typical Mongolian family still lives in the traditional nomadic tent, called a *ger*. These tents are common dwellings even in the cities. A *ger* is made of white felt and can be dismantled and moved easily. Some city dwellers live in high-rise apartment buildings dating from the Communist days. The country is huge and sparsely populated, and ground transportation between cities is slow and unreliable, especially during the harsh winters. Most roads are not paved, and drivers are unpredictable. Ulaanbaatar's public transportation system is old and inadequate for the growing urban population.

HEALTH

The Mongolian health-care system nearly fell to pieces with the withdrawal of Soviet aid. The government has

been working to improve preventive care and make health care more affordable to private citizens. One difficulty facing the nation is its size and population distribution; many people live nowhere near hospitals or medical professionals.

Mongolians face numerous health problems. Alcohol and tobacco use have risen since the early 1990s. Cholera and meningococcal meningitis are common illnesses. Infant mortality is about 55 deaths per 1,000 live births; the nomadic lifestyle is particularly hard on small babies. Life expectancy is 64 years.

FOOD AND NUTRITION

The Mongolian diet is based on sheep and starches, with few vegetables. Most meals feature mutton, usually boiled, with bread, rice, and butter. The Kazakhs in western Mongolia eat horse. Milk and dairy products also appear on the menu with some frequency. Herders use mare's milk to make the alcoholic drink *airag*, or its stronger distillation, *shimiin arkhi*. Tea is the most popular drink, often prepared with salt.

STATUS OF WOMEN

There is increasing public and media discussion of domestic violence, including spousal and child abuse, after many years of government and societal denial. Although there are no reliable or exact statistics regarding the extent of such abuse, human rights groups, women's groups,

resident diplomats, and other observers believe that it is a common phenomenon. The large economic and societal changes under way have created new stresses on families, including losses of jobs, inflation, and lowered spending on social and educational programs. These factors, coupled with the serious problems caused by extremely high rates of alcohol abuse, have led to increased instances of family abuse and abandonment and have added to the number of single-parent families, most of which are headed by women.

The constitution provides men and women with equal rights in all areas, and both by law and practice, women receive equal pay for equal work and have equal access to education. Women represent about half the workforce, and a significant number are the primary earners for their families. Although many women occupy mid-level positions in government and the professions, and many are involved in the creation and management of new trading and manufacturing businesses, women are almost completely absent from the highest leadership levels of both the public and the private sectors. There is no government agency that oversees women's rights, nor are there any notable efforts by the government to encourage greater representation by women in government policy making.

WORK

Almost half of Mongolia's population still live as nomadic herders, though their numbers are decreasing as more of them move to the city. The herding life is very difficult, especially in the winter, and herders tend to be quite poor. About 6 percent of the workforce is employed in manufacturing, particularly mining and the production of animal products such as cashmere. Some 10 percent work in trade and 5 percent in the public sector, leaving a third of the workforce in other occupations.

EDUCATION

The educational ladder begins with nursery schools and kindergartens, followed by an eight-year middle school or general polytechnic, as divided into four-year primary and four-year junior cycles, leading to a two-year technical and vocational school. The special-school and the senior-school tracks culminate in a university or in technical or professional institutions.

Higher education is provided primarily by the Mongolian State University at Ulaanbaatar, the country's only university. Students in higher education institutions follow a five-year course. The academic year officially opens on September 1, but first- and second-year students are required to work on state farms during September, and for them classes begin October 1. Students are graded on a five-point scale.

The education system at all levels is controlled and financed by the state. At the national level control is exercised by the minister of education, who is formally under a deputy minister who heads the Commission on Special, Middle and Higher Education. At the *aymag* level there are local education authorities who prepare budgets for schools under their jurisdiction. Some special schools are administered by ministries other than the Ministry of Education.

Transition to an open-market economy in the beginning of the 1990s hit Mongolia's centralized education system sharply. Many local schools and boarding houses were forced to close down due to lack of government funding, and dropout rates, which had been negligible before, increased dramatically. Family necessity forced children back into the home environment at the cost of receiving a formal education. However, the problem lay also in the schools themselves, which desperately needed new textbooks, teaching methods, and administrative approaches.

Since the late 1990s the situation for children and Mongolia's education system has begun to improve. Choices have become available, with many private schools and specialized places of learning emerging in the capital, catering to the children of Mongolia's increasing middle and upper classes. Rural schools, however, are still suffering. Kindergartens, once free to all workers, have become a novel luxury for those who can afford to send their three- to seven-year-olds, giving the upper classes a head start. Most children in the countryside, until the age of seven or eight, stay at home with their parents, herding livestock.

Current dropout rates are not as high as at the beginning of the 1990s but are significant enough to warrant concern from local educators and parents alike. Indeed, a full 11-year education is a luxury assured only to those whose parents have the money and resources to assist with their children's educational needs.

Education

Literacy Rate %: 97.8

SCIENCE AND TECHNOLOGY

Mongolia is not yet technologically advanced. Many people do not have electricity. In 2002 there were about 340,000 telephone lines, including cellular telephones, for the entire population. Only about 50,000 people were using the Internet. The government, through the Ministry of Science, Technology, Education and Culture, is taking steps to improve this situation, which it sees as key to enticing foreign investment and developing the economy. In 2003 the ministry created the Inner Mongolian University of Science and Technology in Baotou, equipped with computers and laboratories; more than 30,000 students attend the school.

MEDIA

The media are generally free to express their opinions, and reporters often criticize the government. There is one government daily newspaper, *Unen*, which was founded in 1920 and is run by the MPRP. The private paper *Onoodor* has the largest circulation among daily newspapers. There are many other papers registered, but most of them do not publish on a regular schedule and have very small circulations. The national news agency is Montsame (Mongol Tsahilgaan Medeeniy Agentlad, Mongolian Telegraph Agency), founded in 1957.

Radio broadcasting began in 1934, television broadcasting in 1967. Mongolradio, Voice of Mongolia, and

Mongolteleviz are the state-owned broadcasters. The Ulaanbaatar city government runs UBS TV. There are also some privately-owned television and radio stations. Transmissions include local programs as well as relays of Soviet programs received via the Ekran or Molniya satellites and the BBC World Service.

CULTURE

Tibetan Buddhism and nomadic customs are the leading forces in Mongolian culture, influencing music, dancing, and painting. Since independence there has been a major Buddhist revival, with monasteries reopening and many people becoming lamas. Traditional singing in the *khoomi* style is popular, wherein men train their voices to hit two or three tones simultaneously. Contortionism is a common component of traditional dances. Mongolian authors have written a huge body of works, using the Russian Cyrillic alphabet. The most important work is the *Mongol-un Nigucha Tobchiyan*, or *The Secret History of the Mongols*.

FOLKLORE AND MYTHOLOGY

Tibetan Buddhist and nomadic stories, as influenced by shamanism, form the foundation of Mongolian folklore. The Soviets tried to suppress traditional folk practices, but they survived and have been revived since independence. Nomads use the *tsam* dance to drive away evil spirits. The arrangement of *ger* tents is done according to specific folk practices; there are many rules and customs associated with the placement of family photographs, Buddhist images, and elder members of the family.

ENTERTAINMENT AND RECREATION

There are many possibilities for outdoor recreation around Ulaanbaatar, including hiking and skiing, both downhill and cross country. People enjoy riding horses, and some people also ride camels or yaks. Hiking is popular on the Four Holy Peaks, near the capital, and in other places, including the Gobi Desert. People enjoy fishing and kayaking on Khövsgöl Nuur lake.

Nadam is the biggest traditional festival. It occurs in July during the anniversary of the 1921 Revolution and features nomadic recreational activities such as singing, dancing, horse racing and polo, running, and trade negotiations. In the winter people enjoy festivities during Tsagaan Sar, which involves hard drinking and singing.

ETIQUETTE

Mongolians follow the nomadic tradition of hospitality, in which a guest is always welcome for the night. Hosts will offer their guests the best of what they have, and it is polite for the guest to accept everything. People pass food and drink with their right hands, never the left. When entering a *ger* tent, men walk to the left and women to the right, and no one ever places their back to the house shrine. Stepping on someone's foot is offensive; anyone who does this must immediately shake hands with the foot's owner. It is impolite to whistle inside a *ger* or to touch a person's hat.

FAMILY LIFE

Though traditionally most marriages were arranged, today Mongolians choose their own spouses. The ideal image of courtship features a young couple on the steppe riding horses and singing together. Wives set up their own households instead of joining those of their husband's parents. People typically marry within their social groups, so herders marry herders and professionals marry professionals.

PERSONAL APPEARANCE

Many Mongolians still wear the traditional clothing that has been around since the days of the khans and which is well designed for nomadic life on freezing steppes. Both men and women wear a *del*, a long coat with a sash, and long pants with boots. Everyone wears a hat, and a hat is considered a sign of status.

SPORTS

The nomads have long had their favorite sports, which include horse racing, wrestling, and archery. Falconry is also popular in the countryside.

CHRONOLOGY

- 1945** Mongolia declares war on Japan. In national plebiscite 100 percent vote for independence from China. Vote is recognized by China.
- 1946** Treaty of friendship and mutual assistance is concluded with the Soviet Union.
- 1949** Railroad from Soviet Union to Ulaanbaatar is completed.
- 1952** Marshal Horloogiyn Choybalsan dies in Moscow. Yumjaagiyn Tsedenbal is elected chairman of the Council of Ministers. Mongolia signs 10-year economic and cultural agreement with China.
- 1957** Railway line from Ulaanbaatar to Beijing is opened. Soviet Union hands over joint Soviet-Mongolian enterprises to Mongolia.
- 1960** New constitution is promulgated.
- 1961** Mongolia is admitted to the United Nations.
- 1962** Mongolia joins Council for Mutual Economic Assistance. Frontier agreement is concluded between Mongolia and China.
- 1972** Jamsarangiyn Sambu, president since 1954, dies. Tsedenbal assumes the position of president and yields the chairmanship of the Council of Ministers to Jambyn Batmönh.
- 1984** Tsedenbal is removed from all party and state posts. Batmönh replaces Tsedenbal as president and party first secretary. Dumaagiyn Sodnom is named chairman of the Council of Ministers.
- 1987** Mongolia and the United States establish diplomatic relations.
- 1988** Before the fifth plenum of the 19th Central Committee of the Communist Party, Batmönh attacks Choybalsan and Tsedenbal for their personality cults and violation of socialist democracy.
- 1990** Yielding to reformist pressures within the Mongolian People's Revolutionary Party, the former Communist Party, Batmönh steps down as general secretary of the party and head of state. He is replaced by Punsalmaagiyn Ochirbat as head of state and Gombojavyn Ochirbat as general secretary. Sharavyn Gunjaadorj is appointed chairman of the Council of Ministers in place of Sodnom. Opposition parties are permitted to form and contest elections, marking the beginning of a new era in Mongolian politics. In the first free national elections in the country's history, the MPRP retains control of government, with an absolute majority in the Great State Hural.

- 1992** Mongolia adopts a more democratic and market economy-oriented constitution.
- 1995** Trading on Mongolia's first stock exchange takes place.
- 1996** The Democratic Union Coalition wins parliamentary elections, marking the first time in 75 years that the Communists have not held power.
- 1997** Parliament abolishes all taxes on trade.
- 1998** Secretary of State Madeleine Albright visits Mongolia and pledges U.S. support for the country's transition to democracy.
- 2000** In parliamentary elections the MPRP secures 72 of 76 seats. The Social Democrats, National Democrats, and three other parties create a new Democratic Party.
- 2001** President Bagabandi is reelected. A harsh winter leads the International Monetary Fund to lend Mongolia money to help herders and the economy.
- 2002** The Dalai Lama visits Mongolia. China is furious.
- 2003** Mongolia sends 200 soldiers to Iraq.
- 2004** Russia writes off most of Mongolia's debts. The parliamentary elections end in a deadlock. Tsakhagiyn Elbegdorj becomes prime minister.
- 2005** Nambaryn Enkhbayar wins presidential elections.
- 2006** Elbegdorj's coalition government collapses and Miyegombo Enkhbold is elected prime minister.

Dirham

NATIONAL FLAG

A red field with a green five-pointed star in the center

NATIONAL EMBLEM

Two golden lions rampant, one facing outward, flank a central device crested by the royal red, gold, and green crown. Within the device appear a sun rising over the snow-capped Atlas Mountains and a blazing desert depicted in red. In the foreground is the five-pointed star known as Solomon's (or Suleyman's) star. Beneath the device a golden scrollwork carries in Arabic script a verse from the Koran: "If you aid God he will aid you."

NATIONAL ANTHEM

"Hymne Cherifien"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 3 (Feast of the Throne), May 1 (Labor Day), May 23 (National Day), August 14 (Anniversary of 1979 annexation), November 6 (Anniversary of the Green March), November 12 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

March 2, 1956

DATE OF CONSTITUTION

March 10, 1972; revised September 4, 1992; amended September 1996

GEOGRAPHICAL FEATURES

Morocco is in the northwestern corner of Africa and is separated from Europe by the 12 km (7 mi) Strait of Gibraltar. Geographically, it is part of a larger region called the Maghreb, and in Arabic the kingdom is called al-Maghreb al-Aqsa (Far West), meaning the far west of the Arab world. It extends 1,809 km (1,124 mi) northeast to southwest and 525 km (326 mi) southeast to northwest. Morocco covers an area of 446,550 sq km (172,413 sq mi), not including 178,000 sq km (68,726 sq mi) of Western Sahara, whose incorporation into Morocco proper is disputed. The total length of the Mediterranean and At-

lantic coastlines is 2,177 km (1,355 mi). The international border with Algeria runs 1,559 km (967 mi) and is the subject of recurrent controversies; the border with Western Sahara is 443 km (275 mi). The border with Spain (around Ceuta and Melilla) runs 15.9 km (9.9 mi).

Morocco's capital is Rabat. The largest city is Casablanca. Other major urban centers are Tangier, Marrakech, Fès, and Salé.

Morocco has an open, agriculturally rich, and populous area in the northwest, with mountains and plateaus in the eastern and southern areas. On the Atlantic coast there is a fertile plain, and the Mediterranean coast is mountainous. Between the mountains and the western

Morocco

plains is a transitional region of highlands and inland plains. The Atlas Mountains, running northeastward from the south to the Algerian frontier, average 3,353 m (11,000 ft) in elevation. The Middle Atlas make up the whole of central Morocco. To the east the range merges into the Sarho Mountains and drops gradually to rocky, pre-Saharan desert areas.

Morocco has an extensive river system, with the major river, the Monlouya, emptying into the Mediterranean. Other principal rivers flow into the Atlantic. The rivers terminating in the Sahara are known as *oueds*, or rivers that disappear completely in the dry season and contain water only intermittently in the winter.

CLIMATE AND WEATHER

Morocco has two climatic zones: a Mediterranean climate, with warm, wet winters and hot, dry summers in northern and central Morocco; and a semiarid climate in the pre-Saharan south. The coast in general has a more stable, fresher climate than the interior. The Atlantic coast is cooled by winds blowing off the sea. The mean temperature is 16.4 to 23°C (62 to 73°F) on the western coast and 10 to 27°C (50 to 81°F) in the interior. January is the coldest month, August the warmest.

The rainy seasons are from April to May and from October to November. Summer rain occurs only in the mountains. The amount of rainfall varies considerably between regions, from 1,000 mm (40 in) on the Atlantic coast to 100 mm (4 in) in the pre-Saharan region.

During the summer intensely hot winds from the Sahara, known as the sirocco, or *chergui*, sweep across the lowlands. The winds from the northwest are known as the levanter. Storms are common in the winter, especially in the mountains.

Climate and Weather
Mean Temperature

Western Coast: 62°F to 73°F

Interior: 50°F to 81°F

Average rainfall

Marrakesh: 10 in

Ifrne: 32 in to 40 in

Haouz: 4 in to 8 in

Eastern Morocco: 4 in

FLORA AND FAUNA

Plants in Morocco include herbs, grass, and low bushes in arid areas, along with date palms; evergreen oaks in the mountains; and eucalyptus and olive trees on the flat, fertile plains. The deserts are home to numerous reptiles, including snakes, chameleons, lizards, and the Berber skink, also called the "sand fish." Monkeys called Barbary apes live in the mountains.

ETHNIC COMPOSITION

Most Moroccans are Sunni Muslims of Arab, Berber, or mixed Arab-Berber stock. Morocco's Jewish minority accounts for some 0.2 percent of the population. Most of the foreign residents are French or Spanish. There are small groups of *barratins*, Berber-speaking black nomads, in the south.

Morocco is considered one of the least-Arabized regions of the Maghreb. However, distinctions between the Hamitic Berber and Semitic Arabs have ceased to have social and political significance because of the common bond of religion.

LANGUAGES

Arabic is the official and principal language, but French is widely used in government and commerce, except in the northern zone, where Spanish is spoken. In rural areas any of three Berber dialects, which are not mutually intelligible, are spoken.

Moroccan Arabic differs greatly from classical Arabic and would be unintelligible to a Syrian or an Iraqi Arab. In Morocco, classical Arabic is used by religious leaders and in literature.

Bilingualism is a feature of the country and a legacy of French rule. French has been the language of the modern bureaucratic, commercial, and intellectual sectors of society, while Arabic has been identified with old-fashioned religious authorities and does not offer prestige, jobs, or cultural mobility. There remains a social divide between individuals educated in French and those who speak only

Arabic, despite various attempts by the government to push Arabization.

RELIGIONS

Almost all Moroccans are Muslims of the Maliki rite of the Sunni sect. The government actively supports orthodox Islam through the *habas* (religious foundations) and the Islamic Affairs Ministry, the construction of new mosques at state expense, the establishment of Koranic schools, Islamic broadcasts on radio and television, and royal participation in religious activities. The center of religious life is the city of Fez.

The constitution provides guarantees for freedom of worship, and Judaism and Christianity are represented on a minor level, primarily in major cities. Conversion to another faith from Islam is strongly discouraged, however, and although the Jewish and Christian communities have experienced few conflicts with Muslims, they are not actively supported by the government.

Islamic fundamentalism has reared its head in recent years, most notably during the 1980s, but government spokesmen and the king have counseled the population against extremist religious philosophies and have admonished religious scholars to hew to orthodoxy.

Religious Affiliations

Muslim	32,300,000
Christian	360,000
Jewish	65,000

HISTORICAL BACKGROUND

Morocco's strategic location has shaped its history. Settled by the Phoenicians in the second millennium B.C.E., control of the area was subsequently held by Romans, Vandals, Visigoths, and Byzantine Greeks. Arab forces began occupying the area in the seventh century C.E., bringing with them Arab civilization and Islam. Portuguese and Spanish invasions helped to unify the land in defense. The Alouite dynasty, which has ruled Morocco since 1649, claims descent from the prophet Muhammad.

During the 17th and 18th centuries Morocco was one of the Barbary States, autonomous provinces of the Ottoman Empire. Attacks by local rulers on Mediterranean shipping and their support of piracy led to wars with Western powers and the United States (1801–05, 1815). European colonization in the region began in 1840. By 1904 France and Spain reached a secret agreement dividing Morocco into zones of influence, with France controlling almost all of the territory but Spain controlling the southwestern portion, which became known as Spanish, or Western, Sahara.

Morocco was a French protectorate from 1912 until 1956, when it was declared independent as the Sultanate of Morocco. In August 1957 Sultan Mohammed V became king. King Mohammed V assumed the role of prime minister in May 1960, but he died soon after, in February 1961.

He was succeeded by his son, Moulay Hassan, who took the title King Hassan II. During his nearly four decades in power, Hassan was able to override the relative instability of his early years as monarch. Despite coup and assassination attempts, demonstrations, and riots, he managed to consolidate power in the throne while at the same time allowing for a measure of political freedom in the form of the democratically elected Chamber of Representatives. Successive constitutions were drawn up during the period between 1962 and March 1972, when the current constitution was approved. A constitution promulgated in December 1962 had provision for a bicameral legislature, and in May 1963 Morocco's first House of Representatives was elected. In November Hassan gave up the role of prime minister. Students and workers rioted because of unfavorable economic conditions in 1965, and in June Hassan declared a "state of exception," taking on full executive and legislative powers. Emergency conditions remained in effect until July 1970, when a new constitution was approved, serving to strengthen monarchical power while at the same time providing for a modest return to parliamentary government through the creation of the Chamber of Representatives, which was elected in August.

The 1970s saw continued dispute over the Western Saharan territory. Tens of thousands of Moroccans occupied the area to back the government's claim. Spain withdrew control in 1976, and Mauritania overran the southern sector until 1979. Despite cease-fires declared in 1981 and 1991, Morocco's occupation of this area remains technically unresolved.

Expenditures for the Saharan dispute led to dissatisfaction with economic conditions and the king's programs. There were abortive military coups in 1971 and 1972, the former purportedly supported by Muammar Qaddafi of Libya and the latter by Gen. Mohammed Oufkir, Hassan's minister of defense.

In 1972 the current constitution was approved by popular referendum, but the king delayed elections until 1977, when parliamentary democracy was restored. The Government of National Unity was established, led by Ahmed Osman. The government was composed of members of the two most powerful political parties, Istiqlal and the Popular Movement, as well as promonarchist independents. Osman resigned his post in 1979, reportedly over his handling of the dispute over the Western Sahara. He was replaced by Maati Bouabid.

During the 1980s there were several occasions of serious internal upset—particularly in 1981 and 1984—as a result of rises in staple food prices and rumors of rises

in the cost of education. Using a mixture of ruthless suppression and the encouragement of some democratic participation, the king managed to consolidate and retain his power. Discontent was never channeled into effective political opposition.

In November 1983 the existing cabinet, which had reached the end of its constitutional six-year term, was replaced by an interim Government of National Unity, headed by Muhammad Karim Lamrani. Elections for the Chamber of Representatives resulted in Lamrani's again being named prime minister in 1985. Lamrani resigned for health reasons in 1986, and Hassan appointed Azzedine Laraki to replace him.

In 1985 Islamic fundamentalists were allegedly involved in a plot to overthrow the monarchy; 30 were arrested. Domestic opposition groups and Amnesty International charged the government with human rights abuses and the suppression of dissent throughout the 1980s. In response, Hassan issued amnesties for political and nonpolitical detainees in 1986 and 1987. A human rights group, Organisation des Droits de l'Homme, was created in 1988 and granted official status that same year. In 1989, on the anniversary of Hassan's enthronement, he issued a royal pardon for 1,200 prisoners.

Throughout the 1990s King Hassan promoted "Hasanian democracy," which allowed for significant political freedom while still keeping ultimate power with the monarch. In August 1999, after 38 years on the throne, the king died. His son, Prince Sidi Mohammed, was crowned King Mohammed VI. One of Mohammed VI's early acts as king was a tour of Western Sahara, where no Moroccan king had set foot in 10 years.

The early 2000s saw a fair amount of international disharmony. Morocco and Spain resolved their dispute over the uninhabited island of Perejil, which both nations claimed and which nearly led to the destruction of diplomatic relations between the two countries. In 2003 three Saudi Arabians were convicted by a court in Casablanca of planning attacks on American and British warships in the straits of Gibraltar as part of an al-Qaeda plot. Later that year a series of suicide bomb attacks in Casablanca killed 41 people and injured many others.

LIST OF MODERN RULERS

1927–61	Mohammed V
1961–99	Hassan II
1999–	Mohammed VI

CONSTITUTION

The constitution proclaims Morocco a sovereign Islamic state, part of the Great Maghreb, and an African state seeking realization of African unity. The monarchy is

described as constitutional, democratic, and social. The king is the highest authority in the state. He also bears the religious title of commander of the faithful and is commander in chief of the army. The cabinet and all top government positions are appointed by the king. The king can initiate amendments to the constitution, but they must be approved by popular referendum. He promulgates legislation that must then pass parliament, and he can submit legislation to popular referendum if he believes parliament will not approve it.

The government is headed by the prime minister, who countersigns laws, except those reserved to the monarch's sole power. The position of the monarch in the political system is the most crucial element determining the stability of the Moroccan government. The king commands widespread allegiance as commander of the faithful and as a descendant of the prophet Mohammed. On the negative side, the army's loyalty has been uncertain in the past, and power has become entrenched in a small and exclusive privileged class.

In 1992 King Hassan responded to popular pressure and constitutionally expanded parliament's powers. In 1996 there was a national referendum that established a new upper house along with direct representation in the House of Representatives.

PARLIAMENT

Since the 1996 constitutional reform, the bicameral legislature consists of the 325-seat lower House of Representatives, elected through universal suffrage, and the 270-seat upper House of Counselors, whose members are elected by various regional, local, and professional councils. The legislature initiates constitutional amendments, authorizes declarations of war, debates new legislation, calls for changes and reforms, and approves legislation. The parliament's powers, though limited, were expanded by the 1992 constitution and include authority over budgetary matters, the approval of bills presented by the king, and the establishment of ad hoc commissions of inquiry to investigate actions by the executive branch.

POLITICAL PARTIES

Morocco has many political parties. The National Rally of Independents (RNI) was founded in 1977 by the then prime minister Ahmed Osman, who continued to lead the party as of 2004. The Istiqlal (PI), founded in 1944, is Morocco's oldest political party and helped lead the fight for independence from the French. The party retains its strongly nationalistic philosophy and is among the most active on Pan-Arab issues. The Berber-based Popular Movement (MP) and breakaway National Popular Movement (MNP) have as their main issue the promotion and

protection of Berber culture and interests. The Union of Socialist Popular Forces (USFP), established in 1974, is in the tradition of the social democratic parties in Europe. It is strong in urban centers, among organized labor, and among youth groups. The center-right Constitutional Union Party (UC) was founded in April 1983. The National Democratic Party (PND) was formed in 1981 when it broke from the RNI. It is principally rural based. The Party of Progress and Socialism (PPS) is the latest label for the small Moroccan Communist party. The party is tolerated now but has been declared officially illegal in the past. Other significant parties include the Democratic and Social Movement (MDS), the Action Party (PA), and the Front of Democratic Forces (FFD). There are multiple smaller parties and independent candidates.

LOCAL GOVERNMENT

Morocco is divided into 16 administrative regions, which are further subdivided into 36 provinces and two urban prefectures. Each region is run by a *wali* and a governor appointed by the king. Western Sahara is administered as an annexed territory and divided into four provinces.

The basic regional units of the pyramidal structure of local government are the constituency, or *circonscription*; the *cercle*; and the province. The constituency is the traditional unit of administration; it is also called the *caïdat*, headed by an executive called the *caïd*. Constituencies are further subdivided into communes, each administered by a sheikh. Small villages within each commune are under the traditional authority of the *muqaddams*, or headmen. The urban constituencies are headed by officials known as pashas, while each municipal ward in an urban constituency is under a *khalif*. Each ward is the equivalent of a French *arrondissement*.

Representative institutions at the local government level include provincial and prefectural councils, or assemblies, and urban and rural communal councils, elected by universal suffrage.

LEGAL SYSTEM

Until independence the legal system was a mixture of the Islamic sharia code, Berber customary law, rabbinical law, and French and Spanish legal codes. The work of creating a unified legal structure and court system was undertaken between 1956 and 1959. The Code of Personal Status was compiled in 1958, and a reformed penal code was published in 1959.

The Moroccan judicial system is generally considered fair and is in most respects independent of political control. Cases are brought before an initial review court, which can call for a hearing. In cases involving serious crimes, courts generally move quickly to bring cases to

trial. If convicted by a court of first instance, a defendant has the right to appeal. The highest court in the independent judicial structure is the Supreme Court, the judges of which are appointed by the king.

Although most cases are handled by the civilian courts, Morocco also has a parallel judicial system using principles of Islamic law to deal with marriage, divorce, child custody, and inheritance.

The penal system operates under the Penitentiary Administrative Division of the Ministry of Justice. There are some 35 prisons in the country, including three maximum-security prisons. While sentences include the death penalty—with 75 people convicted as of 1999—executions have in fact not been carried out since 1993.

HUMAN RIGHTS

Morocco is an authoritarian state where human rights are enjoyed by the subjects at the sufferance of the government. Although criticism of the monarch is not permitted, criticism of the administration and government officials is commonplace. There is general religious tolerance, although in practice only Islam is encouraged and supported. The role of women remains restricted, although discrimination against them is prohibited by law. The constitution allows workers the right to join trade unions and strike. Constitutional provisions establishing periodic free elections notwithstanding, citizens do not have the full right to change their government.

Human rights groups have often charged that the government permits abuse and torture, and there are frequent charges of abuses of detainment and due process, prisoner abuse, and intolerable conditions. Progress was made during the 1990s, however, and the government released or pardoned detainees.

FOREIGN POLICY

Morocco has expanded its regional role in recent years, maintaining and expanding its relations with Arab countries and with Israel. The country has played a role in the search for peace in the Middle East, participating in peace talks and urging Arab moderation. In 1994 Morocco and Israel announced the opening of liaison offices in each other's countries. Morocco has close relations with Saudi Arabia and the Persian Gulf states; it was the first Arab state to condemn Iraq's invasion of Kuwait, and it sent troops to help defend Saudi Arabia. Relations between Morocco and Algeria have improved in recent years, as reflected by King Hassan's 1992 ratification of the long-pending border agreement.

The sovereignty of Western Sahara is Morocco's biggest foreign relations concern. Morocco claims the country based on the resident tribes' traditional loyalty to the

Moroccan king. An independence movement called the Polisario claim that Western Sahara should be an independent nation; Algeria agrees with this assessment. Morocco, Mauritania, and Spain all fought over the territory during the 20th century. In 1979 Mauritania withdrew, and Morocco built fortifications around the territory and claimed administrative control. The United Nations instituted a cease-fire between the two nations in 1991, but since then neither side has been willing to consider a settlement proposal. King Mohammed VI visited Western Sahara in 2001, the first visit by a Moroccan monarch in a decade and the source of some controversy.

Morocco has long been sympathetic to the West and shares U.S. concerns in regional peace and development. In 2004 a comprehensive bilateral Free Trade Agreement between the United States and Morocco came into effect.

DEFENSE

The defense structure is headed by the king as supreme commander and as chief of the general staff. The Royal Guard is directly under the king's personal command. Manpower is provided by national conscription. The three branches of the armed forces are the army, the navy, and the air force.

At independence the newly created Royal Moroccan Army received \$40 million worth of military equipment from France, and French military aid continued until 1966. Soviet aid began in 1960. From 1949 to 1983 U.S. aid amounted to nearly \$500 million, and Morocco has purchased arms from the United States and France. The United States has granted Morocco Major Non-NATO Ally status, and Morocco allows U.S. forces to use its facilities; NASA has also landed space shuttles in Morocco.

ECONOMY

The Moroccan economy is becoming increasingly diversified. The country has the largest phosphate reserves in the world, accounting for more than one-quarter of the economy. Other major industries include textiles, clothing, and metalworking.

The Moroccan government has pursued an economic reform plan supported by the International Mon-

etary Fund (IMF). Nevertheless, population growth, rural to urban migration, and higher labor force participation have contributed to rising unemployment.

As part of its IMF program, Morocco has reduced its budget deficit. The government actively encourages foreign investment and has made recent regulatory changes to improve the general investment climate.

In 1999, 2000, and 2002 drought conditions depressed activity in the key agricultural sector and contributed to a stagnant economy, though a good rainfall in 2003 led to growth of 6 percent. In the early 2000s Morocco sold a mobile-telephone license and partly privatized the tobacco and telecommunications industries, which contributed to economic growth. The nation's biggest concerns for the future are attracting foreign investment and improving education, which are essential to providing jobs for Morocco's many young people and improving living standards.

ENVIRONMENT

Environmental problems faced by Morocco include those related to agricultural practices, such as land degradation and desertification, soil erosion resulting from farming of marginal areas, and the destruction of vegetation. In addition, the water supplies are noted to be contaminated by raw sewage, and there is oil pollution of the coastal waters. In recent years strides have been made by the government to cooperate with international agreements, including those related to biodiversity, endangered species, hazardous waste and marine dumping, ozone-layer protection, and nuclear test bans.

LIVING CONDITIONS

Morocco does not have a good waste-disposal system; the water supply is contaminated in many places, causing diseases. The population has grown rapidly, which puts pressure on housing, transportation, and other facilities, especially in urban areas. Wealthy city dwellers live in modern apartments or houses, but large numbers of the poor live in shantytowns on the outskirts of the cities. Some nomadic tribes in the southern part of the country still wander the desert, stopping at oases for water and living in tents.

HEALTH

The government has worked to make health care available to all its people and to improve health generally. Urban areas now have ample facilities and personnel, and mobile medical units and pharmacies service rural areas. The government offers programs to teach people about health matters, such as hygiene. Since the early 1980s the country has eliminated smallpox and reduced the frequency of malaria, tuberculosis, and typhus. The state is working on eliminating sexually transmitted diseases and eye problems. Despite these efforts, many Moroccans have not been registered with the national health service, and some poor people do not have access to modern medicine. Small children are especially vulnerable to deadly diseases such as tetanus, measles, and whooping cough, and though infant mortality is much better than it once was, in 2004 it was still relatively high. Life expectancy is 70 years.

FOOD AND NUTRITION

Couscous—granular semolina—forms the basis of most Moroccan meals. Cooks mix couscous with spices, nuts, dried fruits, and vegetables and serve it with meat stew; lamb is the usual ingredient. People cook meat or fish for hours in a clay pot with a cone-shaped lid called a *ta-jine*. Semolina bread is also commonly eaten; home cooks make their own dough and form it into loaves, then bring it to the community's baker to be cooked. Moroccans eat many dried fruits and nuts, including raisins, figs, dates, dried apricots, dried lemons, pistachios, pine nuts, and almonds. Spices are crucial to Moroccan cuisine. Popular ones are cinnamon, chili, garlic, cumin, saffron, and coriander, as well as a spicy paste called *harissa*. Typical desserts are made of phyllo dough, nuts, honey, and cinnamon. People drink a great deal of tea, usually flavored with mint.

STATUS OF WOMEN

Women have more freedom in Morocco than in other Muslim countries, but they nevertheless suffer various forms of legal and cultural discrimination. The civil-law status of women is governed by the Code of Personal Status, which is based on Islamic sharia law. Although the code was reformed in 1993, women's groups still complain of unequal treatment, particularly under the laws governing marriage, divorce, and inheritance. Spousal abuse and rape are common but rarely reported, due to the difficulty of pressing criminal charges as well as to social stigma.

A new law passed in 2004, the *Mudawana*, has changed women's status, at least on paper. Men were previously able to divorce their wives for any reason at any time, and as a result many women ended up on the street, begging to support themselves and their children. The new law states that whichever parent keeps the children also keeps the family home, and that women over the age of 18 can act as their own guardians, a role that was previously given to fathers and other male relatives, who were thus allowed to decide the fate of their daughters. Women remain minors under the penal code.

Women make up around 35 percent of the workforce, and well-educated women can pursue professional careers, although few rise to the top echelons. Rural women are more subject to inequality, have lower literacy rates, and are more likely to undertake difficult physical labor.

There are various nongovernmental organizations focusing on women's rights in Morocco, including the Democratic Association of Moroccan Women, the Union for Women's Action, and the Moroccan Association for Women's Rights. These groups advocate political and civil rights as well as provide shelters for battered women, instruction in basic hygiene and family planning, and education.

 Women's Share of Wage Employment Non-agricultural %: 26.2

WORK

About 40 percent of the workforce is employed in agriculture, 15 percent in industry, and 45 percent in services. Farm employees work on large mechanized farms that grow wheat, corn, potatoes, sugar beets, citrus fruits, and grapes. Other agricultural workers cut down and process cork from the country's forests or catch fish. Some people still live as subsistence farmers, selling any extra produce in local markets. Industrial workers mine phosphates and other minerals, make clothing, pottery, or leather goods, or refine petroleum. Tourism employs a large number of Moroccans. Almost one-fifth of people of working age are unemployed, and many Moroccans have emigrated to Europe or North America to find work, sending money home to their families.

 Unemployment %: 19

EDUCATION

Education is free and compulsory through primary school. Education now surpasses national defense as the largest item in the government's budget. The curriculum includes learning the Koran by rote, Islamic history, and Islamic reading and writing. Besides Koranic schools, private schools are permitted to operate. Private schools include French Cultural Mission and Jewish schools. Public schools suffer from a shortage of teachers, particularly as the population grows, and rural children have difficulty attending school. Students must buy their own supplies

and provide their own transportation. In rural areas some students cannot attend school at all; boys get priority over girls in most cases. The government has set aside money specifically to educate girls, and the number of girls attending school has grown steadily since the 1980s. Despite this, in some rural areas female illiteracy is 83 percent.

Of Morocco's several universities, the most important is Mohammed V University in Rabat, where students study medicine, law, liberal arts, and the sciences. In Fez, Morocco's religious capital, students from around the world study Islamic law and theology at Karaouine University, which is more than 1,000 years old. Most university students benefit from government stipends.

SCIENCE AND TECHNOLOGY

Morocco has a modern telephone system, but its density is very low, especially in rural areas; there were just over one million landlines available in 2003. Many more people have cellular telephones; there were around seven million of them in the country in 2003. Approximately 800,000 people were using the Internet in 2003, by all accounts without restriction; the government does not block the sites people may view. Scientific research has been increasing in recent years, but the nation's technological plans are not coordinated, and there is some duplication of effort.

MEDIA

Although freedom of the press is guaranteed by the constitution, the government is empowered to adopt severe measures to limit that freedom, including through the suspension of newspapers, the seizure of copies, and the imprisonment of journalists who insult Islam or the monarchy, especially on the subject of Western Sahara. Though journalists tend to censor what they write, they can and do occasionally investigate other sensitive topics, such as women's rights. The country has several daily and weekly newspapers, and many foreign journals are available in Morocco. All publications, whether printed in Morocco or imported, require government approval before they can be sold. Many Moroccans cannot read, which limits readership of print publications.

The national news agency is the government-owned *Wikalat al-Maghreb al-Arabi*, with headquarters in Rabat. Foreign news agencies also maintain offices in Morocco. Most broadcasting is operated by *Radiodiffusion Télévision Marocaine (RTM)*, an agency of the Ministry of Information. Television, introduced in 1962, now covers all densely populated areas with programs in Arabic and French, and more programs are available by satellite receiver. The other television network is *Medi 1*, a privately owned station based in Tangier.

CULTURE

Moroccan artists make a wide variety of handicrafts and works of art, including leather goods, jewelry, and elaborately woven carpets. Artisans in the markets make metal objects such as decorated silver trays and bowls. Moroccan architecture is world famous; mosques and madrassas display the fullest extent of the architects' and mosaicists' skill.

Classical Moroccan music evolved in medieval Spain. *Rai* music, typical of Algeria, is very popular in Morocco, as is *chaabi*. Along with music, Moroccans cultivate the artistic use of language. Modern writers usually employ French; well-known authors include Tahar Ben Jelloun, Driss Chraïbi, and Ahmed Sefrioui. Morocco has been the setting for several major movies, including *Lawrence of Arabia* and *The Sheltering Sky*.

FOLKLORE AND MYTHOLOGY

Every tribe in Morocco has its own folklore, much of which is communicated through music and dance. Most Berber songs tell stories, which are often visually depicted by dancers. Every year a folklore festival is held in Marrakesh. Performances include dances from the Atlas Mountains, the dagger dance in which a young man and woman dance together, various warrior dances performed only by men, and many other dances done to traditional music played on pipes and drums, along with hand clapping and foot stomping.

ENTERTAINMENT AND RECREATION

Moroccans enjoy visiting and socializing with relatives and friends, either at home or in cafés, where they fuel conversation with endless cups of coffee or tea and occasionally smoke hookahs. Men and women both like to visit public steam baths, called *hammam*, where steam is produced by wetting burning wood shavings. Public markets are popular locations for shopping, socializing, eating from open-air stalls, and watching performers such as snake charmers, acrobats, and magicians.

ETIQUETTE

People always wash their hands before eating, and they always use their right hands to feed themselves, using only the thumb and first two fingers. Often women do not eat with men; a wife will place the meal on the table and then leave the male family members and guests to eat. A guest should never refuse food, and should continue nibbling even when full, unless all other diners are finished eating. It is proper for a guest to praise the meal lavishly. If a guest admires an object in a Moroccan home, his or her hosts will probably present it as a gift.

FAMILY LIFE

Moroccan social life is centered around the family. Though family units have become smaller in recent years,

especially in the cities, many households still consist of parents, unmarried children, and married sons plus their wives and children. Marriages are still arranged on occasion, and the families of the bride and groom are each expected to furnish the couple with a substantial sum of money. When couples divorce, the wife typically takes the property but the husband keeps the children. Traditionally, men and women kept to strictly separate spheres, but in modern times the lines between the sexes have blurred. Berber women have always had more freedom of motion than Arabs.

PERSONAL APPEARANCE

Though Western clothes have become fairly common, many Moroccans still wear traditional clothing. Both sexes wear the *jellaba*, a loose-fitting long-sleeved hooded robe. Women wear long robes called caftans, and many women veil their faces. Some men wear a red cap called a tarboosh, which is similar to the fez. Berber men like to carry elaborate daggers and wear white turbans.

SPORTS

Soccer is the most popular sport in Morocco, which was the first African nation to enter a team in the World Cup, in 1970. Children and adults play in the streets, and when games are broadcast on television almost everyone stops whatever they are doing to watch the national team, "The Lions of the Atlas." Track and field is the second-biggest sport, and Morocco has produced numerous male and female champions, including Nezha Bidouane and Hicham El Guerrouj. The Marathon des Sables is a week-long footrace across the desert that takes place every year and attracts participants from all over the world. Tennis, golf, rowing, and auto racing are also popular.

CHRONOLOGY

- 1956** Morocco gains independence, with Mohammed V as king. Relations with France are broken over the French hijacking of a plane carrying the Algerian leader Ben Bella. Spanish Tangier is restored to Morocco.
- 1958** The king's Charter of Public Liberties is issued. Spain relinquishes the southern zone of its Spanish protectorate. M'barek Bekkai and Ahmed Balefrej serve briefly as prime ministers. Abdullah Ibrahim is named prime minister, succeeding Balafrej.
- 1959** The dirham is introduced as the unit of currency, replacing the Moroccan franc.
- 1960** Agadir is destroyed in an earthquake, and 4,500 persons are killed. Ibrahim is ousted as prime minister; the king takes over the prime ministership. Diplomatic relations with France are broken over French nuclear testing in the Sahara.
- 1961** King Mohammed dies. Crown Prince Hassan succeeds to the throne as Hassan II. Hassan also heads the cabinet as prime minister.
- 1962** New constitution is promulgated, as ratified in a referendum.
- 1963** Border conflict erupts with Algeria. U.S. air bases in Morocco are returned to the Moroccan government. The king yields the prime ministership to Ahmed Bahnin.
- 1965** In the wake of nationwide riots, Hassan proclaims a state of emergency, or "of exception." The king takes over the prime ministership again. Diplomatic relations with France are suspended over the murder of nationalist leader and politician Mehdi Ben Barka in Paris by the king's agents.
- 1967** Mohammed Benhima is named to head the cabinet.
- 1969** Morocco hosts Islamic and Arab summit conferences at Rabat. Ahmed Laraki heads new government. Spain relinquishes province of Ifni to Morocco.
- 1970** National state of "exception" is lifted. New constitution is promulgated, as approved in a referendum.
- 1971** Hassan survives an assassination attempt and an army coup. Muhammad Karim Lamrani heads a new cabinet.
- 1972** Hassan survives a second assassination attempt, when his plane is shot at in midair. Mohammed Oufkir, the powerful defense minister, is implicated in plot and commits suicide. New constitution is promulgated, as approved in a referendum. Ahmed Osman takes over the prime ministership.
- 1973** Morocco accelerates Moroccanization and Arabization programs. All French-owned farms are taken over by the state. Morocco reaches accord with Algeria over disputed border.
- 1975** Hassan leads "Green March" to Spanish Sahara to demonstrate Moroccan claims to the region.
- 1976** Morocco and Mauritania divide Spanish Sahara between themselves, while Algeria supports Spanish Sahara's claim to independence. Morocco and Algeria reach the brink of war once again.
- 1977** In nationwide elections, independents and royalists gain absolute majority in the Chamber of Representatives.

- 1978** As Mauritania signs a unilateral peace treaty with the Polisario forces fighting for Saharan autonomy, Morocco claims the whole of Western Sahara and occupies Tiris el-Gharbia.
- 1979** Prime Minister Ahmad Osman steps down and is replaced by Maati Bouabid.
- 1981** Consultative Council of Western Sahara meets. Riots break out in major cities following hike in food prices and implementation of IMF austerity program.
- 1983** Muhammad Karim Lamrani is named prime minister, replacing Maati Bouabid.
- 1984** Arab-African Federation Treaty, signed by King Hassan and Colonel Qaddafi of Libya, is approved in referendum. Morocco leaves the Organization of African Unity (OAU) over the Western Sahara issue. New elections are held for the Chamber of Representatives.
- 1985** Some 30 Islamic fundamentalists are convicted of a plot to overthrow the monarchy. Morocco declares unilateral cease-fire in Western Sahara. UN General Assembly upholds Polisario's resolution that direct negotiations with Morocco must precede referendum on self-determination in Western Sahara.
- 1986** Morocco severs diplomatic relations with Syria. A total of 26 left-wing activists are sentenced to prison terms for subversion. Later in the year King Hassan declares a series of amnesties for political and nonpolitical prisoners. Morocco announces boycott of all UN talks on Western Sahara.
- 1987** Royal pardon is granted to Muhammad Basri, who had allegedly been involved in plots against King Hassan. Little progress is made in UN- and OAU-sponsored indirect talks between Morocco and Polisario. Intense fighting involving Moroccan and Polisario forces breaks out on Mauritanian border.
- 1988** By midyear 71 countries have granted diplomatic recognition to Western Sahara, formally proclaimed the Sahrawi Arab Democratic Republic (SADR). Morocco and Polisario provisionally accept a peace plan proposed by the UN secretary-general.
- 1989** For the first time in 13 years direct contact takes place between King Hassan and officials of Polisario and SADR, who meet in Marrakesh in January. Polisario announces cease-fire, which lasts six weeks. Polisario resumes hostilities in mid-March. Diplomatic relations with Syria are resumed.
- 1990** Morocco condemns the Iraq invasion of Kuwait and provides troops to defend Saudi Arabia.
- 1991** In response to pro-Iraqi demonstrations, the government supports a one-day general strike to express solidarity with the Iraqi people. King Hassan visits the United States.
- 1992** Major opposition parties form the National Front to contest government policies and demand electoral reforms. The new constitution is ratified, providing for a prime minister as head of government, to be appointed by the king. King Hassan ratifies the long-pending border agreement with Algeria.
- 1993** Elections are held in June, the fairest and most representative in Morocco since its independence. The Code of Personal Status is reformed, expanding women's rights.
- 1994** Morocco and Israel announce the opening of liaison offices in each other's countries.
- 1996** A national referendum to the constitution approves the creation of a second legislative chamber and the direct election of members of the existing Chamber of Representatives.
- 1999** King Hassan II dies after 38 years on the throne and is succeeded by his son, who is crowned King Mohammed VI.
- 2001** King Mohammed tours Western Sahara.
- 2002** Morocco and Spain engage in talks about the disputed island of Perejil.
- 2003** Morocco jails three members of al-Qaeda for plotting to attack British and U.S. ships. Suicide bomb attacks in Casablanca kill 41 people.
- 2004** Over 500 people die in an earthquake in the north. Morocco and the United States finalize a free-trade agreement.

OFFICIAL NAME

Republic of Mozambique (República de Moçambique)

ABBREVIATION

MZ

CAPITAL

Maputo

HEAD OF STATE

President Armando Guebuza (from 2005)

HEAD OF GOVERNMENT

Prime Minister Luisa Diogo (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

19,406,703 (2005)

AREA

801,590 sq km (309,494 sq mi)

MAJOR ETHNIC GROUPS

Makua, Sena, Ndau, Tsonga, Shangaan

LANGUAGES

Portuguese (official), Makua, Tsonga, Lomwe, Sena

RELIGIONS

Animism, Christianity, Islam

UNIT OF CURRENCY

Metical

NATIONAL FLAG

Three equal horizontal bands of green (top), black, and yellow with a red isosceles triangle based on the hoist side. The black band is edged in white. Centered in the triangle is a yellow five-pointed star bearing a crossed rifle and hoe in black superimposed on an open white book.

NATIONAL EMBLEM

The main elements of the national emblem are a cogwheel of 24 cogs, a white book outlined in black, and black silhouettes of a hoe and an AK-47 rifle placed on a relief of Mozambique, with the Indian Ocean in the foreground. The emblem appears within a wreath made of two corn husks, with a red star on the top and the legend "República de Moçambique" in a red banner at the bottom.

NATIONAL ANTHEM

"Viva, Viva FRELIMO"

NATIONAL HOLIDAYS

June 25 (National Day, Independence Day), all major Catholic festivals

DATE OF INDEPENDENCE

June 25, 1975

DATE OF CONSTITUTION

November 30, 1990

GEOGRAPHICAL FEATURES

Mozambique, on the southeastern coast of Africa opposite the island of Madagascar, has an area of 801,590 sq km (309,494 sq mi). Its coastline on the Indian Ocean stretches 2,470 km (1,535 mi). It shares its borders with Malawi, South Africa, Swaziland, Tanzania, Zambia, and Zimbabwe.

Topographically, the country is divided by the Zambezi River into two halves. North of the Zambezi the narrow coastline yields to hills and low plateaus and, farther

west, to rugged highlands, of which the most prominent are the Livingstone-Nyasa Highlands, the Shire or Namuli Highlands, the Angonia Highlands, the Tete Highlands, and the Maconde Plateau. South of the Zambezi the littoral is broader, extending in places almost the entire width of the country. In the south are the Gorongosa Highlands, an extension of the Mashonaland Plateau, and the Lebombo Mountains in the deep south. Only 44 percent of Mozambique is littoral lowlands and marshes; another 17 percent is low plateaus and hills, 26 percent is high plateaus, and 13 percent is mountainous area. The

Mozambique

highest points in the country are the mountain peaks of Namuli (2,418 m; 7,936 ft), Binga (2,436 m; 7,992 ft), and Serra Zaira (2,227 m; 7,306 ft).

Mozambique is drained by five major river systems and several smaller ones, all of which flow into the Indian Ocean. The largest and historically the most important

1650 Mozambique

is the Zambezi, which flows through Mozambique for 820 km (509 mi), of which 460 km (285 mi) are navigable. At Songo the river is the site of the Cabora Bassa Dam, one of the largest in the world and the last monumental legacy of Portuguese rule.

CLIMATE AND WEATHER

Mozambique has a tropical climate with two seasons: wet, lasting from October to March, and dry, lasting from April to September. During the wet season monthly temperatures average 26.6°C to 29.4°C (80°F to 85°F); during the dry season the June and July temperatures average 18.4°C to 20°C (65°F to 68°F).

Within this general framework there is considerable variation in climate, as influenced by differences in elevation, the presence of Lake Malawi in the west, and the warm Mozambique Current along the coast. Rainfall is particularly heavy along the central coast but decreases to the north and south of this region. Sofala (formerly Beira) receives more than 1,420 mm (56 in), while the southern coast receives 760–1,010 mm (30–40 in), the northern coast 610–1,220 mm (24–48 in), and the Zambezi lowlands 400–800 mm (16–32 in). Rainfall is irregular; the southern districts are subject to both droughts and floods. Cyclones are common in the wet season.

Climate and Weather

Mean Temperature
Wet Season: 80°F to 85°F
Dry Season: 65°F to 68°F
Average Rainfall
Sofala: 56 in
Southern Coast: 30 in to 40 in
Northern Coast: 24 in to 48 in
Zambezi Lowlands: 16 in to 32 in

FLORA AND FAUNA

Mozambique's landscape includes beaches with palm trees, swamps, grassy savannas, and mountains and plains covered with forests; the main types of trees are hardwoods, acacia, and papaya. More than 5,600 plant species have been identified. The Maputland Center of Plant Diversity and the Chimanimani Mountains have some of the most significant biodiversity in the world.

Many of Mozambique's large mammals were killed during the war; there are a few elephants and black rhinoceroses, but their numbers are alarmingly small. Buffalo seem to have disappeared entirely. The Burchell's zebra and the blue Niassa wildebeest seem to be reestablishing themselves, particularly in the Niassa Reserve. There are many kinds of insects, reptiles, amphibians, and birds. The Mozambique Bird Atlas Project is working to document avian biodiversity. In the ocean, there are many kinds of fish, turtles, and aquatic mammals, including whales, dolphins, and manatees.

Average Size of Households: 4.4
Induced Abortions: —

ETHNIC COMPOSITION

Unlike other African countries, the ethnic composition and groups of Mozambique have not been studied and analyzed in detail by ethnographers, and there are gaps in available data. Most scholars identify 10 ethnic clusters with certain common characteristics. However, few of these tribes have the social organization or cohesiveness usually associated with such groups; there are, in fact, few common bonds that transcend single villages or groups of villages. Social organization, while essentially tribal, is too fragmented to be described in general terms.

In terms of territoriality, the Makua-Lomwe cluster and the Neto subgroup dominate the region north of the Zambezi, while the Tsonga cluster dominates the region south of the Zambezi.

The number of Portuguese permanently resident in Mozambique has been variously estimated, but the generally cited figure is 15,000. The country's economic and political troubles and its growing Marxist orientation have been responsible for the steady exodus of even non-Portuguese Western residents.

LANGUAGES

Portuguese is the official language and the medium of administration, education, and commerce. Numerous African languages, including Ronga, Shangaan, Swahili, and Muchope, are widely spoken, but none predominates enough to be a *lingua franca*.

RELIGIONS

The majority of Mozambicans—estimated at 50 percent—adhere to traditional African religions. Muslims, found chiefly along the northern littoral, account for about 20 percent of the population, while about 30 percent are Christian, either Roman Catholic or Protestant.

Roman Catholicism was the dominant religion of Mozambique during Portuguese rule. Catholic missionary efforts began with the arrival of the Jesuits in 1560 and the Dominicans in 1577. Catholics are widely distributed among the population, while Protestants are found mainly in the south. The Niassa Nguni are perhaps the most completely Christianized of all tribes.

The constitution of 1975 established a secular state. The Mozambique Liberation Front leadership is explicitly atheist and particularly hostile to the Catholic Church. Most foreign-born priests and missionaries were expelled in 1976. Although the constitution of 1975 guaranteed freedom of religion, in the past the government placed restrictions on the activities of religious groups. It reserved the right to decide whether individual church buildings could be used and whether individual clergy could visit outlying areas. It also nationalized church schools and hospitals.

Through the early 2000s, however, there has been an improvement in church-state relations. Organized religions operate with relative freedom, and some churches are effective in social work activities and in acting as channels for distribution of emergency food donations to the poorest regions of the country.

HISTORICAL BACKGROUND

Archaeological evidence attests to the presence of *Homo sapiens* in the region of modern Mozambique more than 100,000 years ago. Around 2,000 years ago the Bantu people began to settle in the area. Many Arab trading posts were established on the coast, and the Bantu people became important players in international trade. Vasco da Gama arrived in 1498 intending to use the coast as a port for the Portuguese.

Mozambique was one of the first African territories to be colonized by a Western power and among the last to gain independence. The earliest Portuguese settlements were established in the 16th century. The territory was ruled as part of Goa, a Portuguese territory in India, until 1752, when it was given its own administration. After losing Brazil in 1822, Portugal made a conscientious effort to build its African territories. Mozambique was given a governor-general in place of a captain-general. The government also took over the task of providing formal education for the indigenes. By 1890 the borders of the colony were officially demarcated. At the end of the 19th century, when the Portuguese treasury was overburdened by the administrative costs of maintaining its African colonies, the territories were farmed out to chartered companies, which were granted virtual monopoly rights and even some measure of sovereignty. The three largest of these companies were the Zambezia Company, the Mozambique Company, and the Nyassa Company. The two latter companies came under the control of the British and Germans, respectively, thus effectively reducing Portuguese influence in the region. Portugal's general apathy about its African possessions and the rapacity of the private companies combined to inspire at least 16 African revolts between 1890 and 1905, including the Zambezi rebellion of 1917.

The next landmark in Portuguese rule was the rise of Antonio Salazar as finance minister from 1928 to 1932 and as dictator from 1932. Salazar introduced radical changes in Portugal's approach to its colonies. He broke up the special commercial interests and passed the Colonial Act of 1930, under which the colony was to be administered by a governor-general. Salazar envisioned a romantic and spiritual unity of Portugal and its African possessions. He encouraged Portuguese to emigrate to Mozambique and Africans to identify themselves as Portuguese. The government also expanded the economic base of Mozambique through the development of agriculture, industry, and transportation. Beginning in 1927 Africans who were able to speak Portuguese, who earned incomes from occupations in commerce or industry, and who became "civilized" by accepting Portuguese values and standards were legally defined as *assimilados* and freed from the humiliating restrictions imposed on other Africans, known as *indigenas*. Throughout the 1950s and 1960s Portugal made a number of cosmetic changes in

1652 Mozambique

colonial administration in response to external pressures. In 1951 Mozambique became an overseas province; in 1955 the Organic Law gave African areas their own local councils. The forced cultivation of commercial crops was ended; expenditures on education, health, and welfare were increased; and the legal distinction between *assimilados* and *indigenas* was abolished.

These efforts proved too little and too late, however. In 1962 three African resistance groups coalesced to form the Mozambique Liberation Front (Frente de Libertação de Moçambique, FRELIMO). Under the leadership of Dr. Eduardo Mondlane, FRELIMO initiated armed resistance to Portuguese rule in 1964, and by 1966 much of the north was under FRELIMO control. In 1969 Mondlane was assassinated, and after a brief power struggle, Samora Machel succeeded him as FRELIMO leader. FRELIMO then adopted a more radical, prosocialist ideology. A coup in Portugal in 1974 made possible negotiations between FRELIMO and the new Portuguese government. These led to a period of transitional government until full independence was achieved in 1975.

Machel assumed the presidency of the independent "people's republic." Elections were held from September to December 1977 for FRELIMO-sponsored candidates to local, district, provincial, and national assemblies, and at its third congress FRELIMO declared itself a Marxist-Leninist party, with its goals being the social, economic, and political transformation of the country.

Following independence there was a mass exodus of some 235,000 of the 250,000 resident Portuguese settlers. The Portuguese had been the educated, professional, and skilled segment of the population. In abandoning what they saw as their territory, they angrily destroyed many buildings and much machinery. The economy has not completely recovered from this devastating loss of property and trained manpower.

Government policy makers envisioned the nationalization of abandoned enterprises but were generally hindered in achieving their goals due to lack of experienced personnel. Collective farms were formed, but without skilled management there was a precipitous decline in agricultural production. Floods in 1977 and drought during the early 1980s further lowered agricultural production.

Perhaps the most significant hindrance to Mozambican development, however, was the presence of the subversive guerrilla force Resistência Nacional Moçambicana (RENAMO, Mozambican National Resistance). RENAMO was founded in 1976 and came into being through the workings of the Rhodesian Central Intelligence Organization. Its aim was to harass FRELIMO and to monitor Zimbabwean guerrilla forces within Mozambique. Following Zimbabwe's independence in 1980, RENAMO activities were fostered by South Africa. RENAMO became engaged in armed conflict with the Mozambican government, disrupting and sabotaging government initiatives. While South Africa actively sup-

ported RENAMO, Mozambique harbored South African opposition forces of the African National Congress (ANC). In March 1984 Mozambique and South Africa signed the Nkomati Accord. Each government agreed to prevent opposition forces from attacking the other from bases located in the other's territory. When in 1985 the terms of the agreement appeared not to be met by South Africa, Mozambique called on foreign powers for increased military assistance.

The Council of Ministers was divided into three sections in March 1986 to strengthen FRELIMO's control of the country. The post of prime minister was created in July and assumed by Mario Machungo, who had been minister of planning. Legislative elections that were to have been held in 1982, but which were postponed in October because of security problems, finally began in 1986. However, they were further delayed by internal conflict, and they were again postponed in October due to President Machel's death in an airplane crash. In November 1986 Joaquim Chissano, who had been minister of foreign affairs and was a longtime associate of Machel, was appointed president by the FRELIMO Central Committee.

Elections were resumed, but unlike with the 1977 election, voters had a choice of candidates. A total of 299 FRELIMO candidates were nominated for the 250 legislative seats. However, when elections were completed in December, all government and party leaders had been reelected. Reshuffling of the Council of Ministers took place in January 1987 and again in May 1988 and January 1989.

In late 1987 RENAMO activity intensified. Starvation and food shortages affected six million people, and three million people were displaced. Outside major cities security was minimal, and health and educational facilities were virtually nonexistent. In April 1988 the U.S. State Department declared RENAMO responsible for a "holocaust" resulting in the deaths of over 100,000 civilians in the two previous years. International donors volunteered \$270 million in emergency aid when urged by the United Nations.

Bowing to political pressure, FRELIMO adopted a new platform in December 1989 that abandoned Marxism-Leninism as the party's official ideology and expressed support for a free-market economy. In December 1990 representatives of the Mozambican government and RENAMO signed a partial cease-fire, the first ever in their 14-year-old civil war. One month earlier the Mozambique legislature had adopted a new constitution designed to establish a Western-style democracy. Under the new constitution the country's name was changed from the People's Republic of Mozambique to the Republic of Mozambique.

In 1992 the 16-year-old civil war was brought to an end with the Rome Protocol, which provided for new elections to the Assembly of the Republic by pro-

portional representation, the holding of simultaneous legislative and presidential balloting, the formation of a National Electoral Commission, the establishment of a 30,000-member army drawn equally from the official and rebel forces, a political amnesty, and a Western-financed repatriation of refugees. In the first presidential election under the agreement, Chissano was the clear winner. Chissano's mandate was renewed in the 1999 elections.

The early 2000s were tumultuous. In 2000 and 2001 massive floods swept through the countryside, destroying houses and displacing many thousands of people. In 2000 riots associated with RENAMO activity led to the deaths of more than 100 people. In 2002 defendants in a murder trial accused the son of Chissano of helping kill the journalist Carl Cardoso in 2000; the son denied any knowledge of the killing. AIDS became a growing problem, although in 2003 Brazil promised to build a pharmaceutical plant in Mozambique to produce antiretroviral drugs.

In December 2004 the FRELIMO presidential candidate Armando Guebuza defeated the RENAMO candidate Afonso Dhlakama. He was inaugurated in February of 2005.

LIST OF MODERN RULERS

1975–86	Samora Moisés Machel
1986–2005	Joaquim Chissano
2005–	Armando Guebuza

CONSTITUTION

The Mozambique legislature in November 1990 adopted a new constitution designed to establish a Western-style democracy. The document contains a bill of rights that affirms such rights as habeas corpus, freedom of speech and of the press, and the right to strike. However, many of these rights can be restricted, depending on circumstances. Citizens have the right to form political parties, although the legislature may enact laws discouraging splinter groups.

The constitution promises strict separation of the executive, judicial, and legislative branches. Under the new constitution executive power is vested in a president who is directly elected for a five-year term. There are no limits on reelection. The president heads the military forces and has the power to declare war. With the support of a legislative majority, he can declare martial law. He has the exclusive power to negotiate internationally and appoints all officers of the national government, except those in the Assembly of the Republic.

Voting is universal for all who have reached 18 years of age. The new constitution effectively ended 15 years of one-party rule by FRELIMO.

PARLIAMENT

Under the constitution of 1990, legislative power is vested in the unicameral Assembly of the Republic, or Assembleia da República. Its 250 members are directly elected by popular vote on secret ballots to serve five-year terms.

POLITICAL PARTIES

Before 1991 the sole legal party was the Frente de Libertação de Moçambique, or FRELIMO, formed in 1962 through the merger of three successive nationalist parties. FRELIMO's ideology was uncomprisingly Marxist-Leninist, as defined in 1977 at the Third National Congress of the party, which also restricted membership to those described as "the vanguard of the proletariat."

Both during the independence struggle and after independence, FRELIMO had to deal with a number of rival parties, collectively referred to by FRELIMO as phantom parties. Before independence the most serious threat came from the Partido de Coligação Nacional (PCN), led by the Rev. Uria Simango. Organized settler opposition took shape in the Frente Independente de Continuidade Ocidental (FICO, which means "I stay" in Portuguese). The most serious postindependence threat came from the Frente de Unidade Democrática de Moçambique (FUMO), led by the black socialist Domingos Arouca. In 1976 FUMO set up a government-in-exile and in 1977 claimed control of northern Cabo Delgado Province.

Today, the principal opposition is the Resistência Nacional Moçambicana, or RENAMO, also known as the Andre Group, after its founder Andre Matade Matsangai. It was formed in the early 1970s primarily as an intelligence network within Mozambique for the white Rhodesian government of Ian Smith. It later developed into an anti-FRELIMO insurgency, as financed by Portugal and South Africa; in 1987 it was Africanized and converted into a political party. After the failure of its insurgency, RENAMO guerrillas demobilized. Its leader, Gen. Afonso Macacho Marceta Dhlakama, lost his presidential bid in 1994, but the party gained 112 members (out of 250) in the Assembly of the Republic.

In the 2004 parliamentary elections FRELIMO took 160 seats and RENAMO 90.

LOCAL GOVERNMENT

For purposes of local government, Mozambique is divided into 10 provinces plus the capital. The constitution of 1990 provides for directly elected local assemblies in each province.

LEGAL SYSTEM

The legal system is based on Portuguese civil law and African customary law. Under the 1990 constitution the judicial system is headed by the Supreme Court, whose judges are appointed by the president and the assembly. From 1979 to 1990 two separate legal systems existed. The first was the civil and criminal system, with a judicial service and a police force under the authority of the Ministry of the Interior. The second system, which was characterized in its initiating legislation as transitional, was the military-run State Security System, which incorporated the secret police, the Serviço Nacional de Segurança Popular (SNASP, National Service of Popular Security). The latter system, established to deal with the growing armed insurgency, had jurisdiction over both political crimes against the state and economic sabotage. These two systems operated separately and were subject to separate controls.

Under the State Security System all investigations and arrests were carried out by the SNASP. Amnesty International recommended that the SNASP's power to detain persons be drastically reduced because it believed that the situation invited abuse and led to prisoner mistreatment.

The 1990 constitution abolished secret security or police forces. The accused is guaranteed a speedy trial and timely notice of the prosecutor's accusations. Guarantees of due process are written into the constitution. In actual practice, fair and speedy trials are uncommon because the judiciary is understaffed, underfunded, and inefficient.

HUMAN RIGHTS

Though Mozambique's human rights record has improved since the days of civil war, it remains poor. The police commit abuses, torturing, killing, and imprisoning people without trial. Prison conditions are life threatening. There have been some infringements of freedom of the press, freedom of association, and the right to privacy. Discrimination against women and domestic abuse have remained problems. Child prostitution has increased, and street children are often abused.

FOREIGN POLICY

Mozambique abandoned its earlier Marxist-Leninist orientation in favor of a more pragmatic approach, in light of changed international realities. This has meant the resumption of relations with former ideological enemies, such as the United States, Portugal, and South Africa. More than one million refugees from Mozambique who had fled to neighboring countries during the 1980s civil war were returned to Mozambique under the auspices of the UN

High Commission for Refugees. In 1995 Mozambique was admitted to the Commonwealth as the group's 53rd member as a unique and special case. In 1996 Mozambique negotiated security agreements with Malawi, Swaziland, and Zimbabwe to squelch border violence. At the same time Maputo and Pretoria inaugurated the Maputo Corridor Development Project with the aim of redeveloping the trade route from Johannesburg to Maputo.

Relations between the United States and Mozambique are good. The United States has provided large amounts of aid and established a U.S. Agency for International Development mission there in 1985.

DEFENSE

Before 1991 the armed forces, officially called Forças Populares da Libertação de Moçambique (FPLM), were under the control of the FRELIMO Political Committee. The army served mainly as a counterinsurgency force whose goal was the defeat of RENAMO. There were no ranks within the defense forces. A people's organization, Serviço Nacional de Segurança Popular, was established to assist the armed forces in matters relating to national security. Boats left behind by the Portuguese were used for coastal patrol work.

Currently, Mozambique maintains an army, navy, air force, and special forces. Internal security forces include Criminal Investigation Police, Mozambican National Police, and Rapid Intervention Police. The defense structure is headed by the president and the Ministry of the Interior. The leadership has placed greater emphasis on political training than on military capability. There is no evidence that the FPLM would be capable of defending the country against determined aggression by a capable enemy. The military has little funding and no long-term strategy, and though the civilian government controls the police force, at times police act on their own and commit human rights abuses.

ECONOMY

Before the peace accord of October 1992, Mozambique's economy was devastated by a protracted civil war and socialist mismanagement. In 1994 the nation ranked as one of the poorest in the world.

Mozambique has since undertaken a series of economic reforms. Almost all aspects of the economy have been liberalized to some extent; more than 900 state enterprises have been privatized. Pending are tax and much-needed commercial code reform, as well as greater private-sector involvement in the transportation, telecommunications, and energy sectors. Since 1996 inflation has been low and foreign exchange rates stable. Albeit from a small base, Mozambique's economy grew at an annual 10 percent rate from 1997 to 1999, one of the highest growth rates in the world.

Growth slowed and inflation rose in 2000 due to devastating flooding in the early part of the year. Both indicators recovered somewhat in 2001, but inflation rose again in 2002–03. The country depends on foreign assistance to balance the budget and to pay for a trade imbalance in which imports greatly outnumber exports. The opening of the Mozal aluminum smelter should improve the trade imbalance, and the country hopes that foreign investment in titanium extraction and garment manufacture will further increase export earnings. Mozambique has received a formal cancellation of a large portion of its external debt through an International Monetary Fund (IMF) initiative and is scheduled to receive additional relief.

Nevertheless, poverty is a major problem, as 70 percent of the population still lives below the poverty line. Illiteracy, crime, and major health problems confront the nation, presenting obstacles to substantial economic progress.

ENVIRONMENT

The civil strife that marked Mozambique's history until recently had serious environmental impact, in part through the spurring of mass migrations of people to urban and coastal areas. The country has also suffered from inter-mixed drought and flooding; floods in 2000–01 displaced

thousands of people. Growing deforestation has led to some people traveling more than five kilometers daily in search of fuelwood. Soil erosion, especially in high-rainfall areas, is also a growing concern. Hunters poach elephants for their ivory tusks. Most water is polluted.

Environment

LIVING CONDITIONS

Mozambique has a very low standard of living. More than one million land mines remain unexploded, and unsuspecting people find them regularly. Crime is a terrible problem, especially armed robbery. There is some public transportation. Roads are poorly maintained, and the police are apt to hassle motorists on invented pretexts.

HEALTH

Western medicine is rare, and most people still rely on traditional healers, including witch doctors; these healers sometimes include Western techniques in their repertoires of medical skills. Different healers specialize in different medical problems. HIV/AIDS is an extremely serious problem in Mozambique; in 2003, 12.2 percent of the population was infected with the virus, which has been seriously reducing average life expectancy (37 years in 2004) and devastating family structures. Land mines cause injuries and death on a regular basis. Endemic diseases include malaria, hepatitis, typhoid, tetanus, diphtheria, schistosomiasis, and meningococcal meningitis.

FOOD AND NUTRITION

Many people in Mozambique do not have enough to eat. Malnutrition is common, as are food and waterborne ailments.

Mozambique cooking is heavily influenced by Portuguese cuisine. Cassava, corn, peanuts, and cashews are ubiquitous ingredients, while hot peppers offer a common flavoring. In the cities, people like to eat shrimp and seafood, barbecued chicken, and *matapa*, a spinach and peanut stew. People eat many fresh fruits, including coconuts, pineapples, and papaya. There are many Indian restaurants and a few European ones. Beer is locally brewed, and both beer and wine are imported from South Africa. Locals use coconut milk to make an alcoholic beverage called *sura*.

 Amount of Fruits and Vegetables Available per person per year kg: 22.9

STATUS OF WOMEN

The status of women in Mozambique has not altered appreciably since independence. The constitution of 1975 provided that there should be no discrimination on the basis of sex. In fact, however, two distinct societies exist: the contemporary society of larger urban areas and the more traditional society of rural areas. Women play a prominent role in the urban society; they have equal access to education, and there is a surprisingly large number of women in the professions, the military, within the bureaucracy, and in policy-making positions. They also engage in a wide range of economic activity, including commerce. A few women hold important political posts, and there is a recently established organization devoted to women's affairs.

In the rural areas, traditional practices reinforce discrimination against women. Specific customs vary according to ethnic grouping, but women generally do much of the manual labor in agriculture as well as care for the home and family. In certain ethnic groups women may retain the earnings from cash crops they cultivate, but in most instances economic and political decisions are made by men. Women tend to marry young, which reduces their power in marriage. Girls attend school much less frequently than boys.

WORK

Four-fifths of Mozambique's people are subsistence farmers, most of them living well below the poverty line. Per capita gross domestic product (GDP) in 2003 was estimated to be a very low \$1,200. A few people are employed in industry, making textiles or processing food, aluminum, petroleum, or tobacco. Some 13 percent of workers are employed in services, including the professions; these workers account for more than half of GDP.

Employment and Labor

Labor Force Total: 9,200,000
 Female Participation Rate %: 48.4
 Labor by Sector %:
 Agriculture: 81
 Industry: 6
 Services: 13
 Unemployment %: 21

EDUCATION

Literacy has improved considerably since independence but is still low, at 48 percent in 2003; far more men can read than women.

Although children are required by law to attend school for seven years, only about 40 percent do; many of those who attend drop out after a year or two. Schooling lasts for nine years, as divided into four years of primary school, three years of lower secondary school, and two years of upper secondary school. Nearly 10 percent of secondary-level enrollment is in the vocational stream. The school year runs from September to August. The language of instruction is Portuguese throughout. All schools have been nationalized and secularized. Education is closely related to the needs of national development and emphasizes reading, vocational training, and food production. Political indoctrination is part of the curriculum.

During colonial days educational opportunities for blacks were limited, and 93 percent of the population was illiterate. The only schools available were run by missionaries; most of today's leaders attended such schools as children. After independence, the school system suffered from the exodus of non-African teachers. Nevertheless, the government wanted to educate the people and put energy into improving education, which temporarily brought literacy up to about 66 percent. In recent years, school construction has dropped off, and teachers have become scarcer, and literacy has fallen again.

Higher education is provided by the Universidade Eduardo Mondlane, named after the first president of FRELIMO, who was assassinated in 1969.

 Public Expenditure on Education as % of GDP: 2.4

SCIENCE AND TECHNOLOGY

Mozambique lacks technological infrastructure. Agricultural techniques are still primitive. In 2003 there were fewer than 84,000 telephone lines and about 430,000 cellular telephones in use; telephones are not available to most people. There were about 50,000 Internet users in 2002.

MEDIA

The two daily newspapers are the privately-owned *Diário de Moçambique*, published in Beira, and the partly state-owned *Notícias*; both use the Portuguese language. There are several weekly magazines. The official news agency is the *Agência de Informação de Moçambique*, which issues daily reports in Portuguese and English and a monthly bulletin in French and English. Most of the country's people are illiterate and thus do not read print media.

Radio is the most important source of news for the majority of the country. Private or commercial stations operate in most cities and towns. The government and the UN Education, Scientific, and Cultural Organization fund about 40 community radio and television stations. The two main television stations are the state-run *Televisão de Moçambique* and the private *Radio-Televisão Klint*.

The constitution guarantees freedom of the press, but opposition politicians claim that they do not get the same coverage as the government. Libel is a criminal offense, which deters some freedom of expression.

CULTURE

Mozambique is known for its excellent art, some of the finest in Africa; resident artists have continued to produce distinctive work despite the years of colonial occupation and war. The Makonde people produce excellent sculptures. Muralists decorate walls in the cities; there is a 310-foot-long mural depicting the Revolution near the Maputo airport. Many painters have emerged in the last fifty years, the most famous of whom is Malangatana.

Literature has become more important in recent years, and the country now claims a number of authors, including Mia Couto. Traditional musical instruments include the marimba xylophone and the *lupembe*, a kind of wind instrument. *Chope* musicians form orchestras of marimba players and perform throughout the country. The most typical musical form is the *marrabenta*.

FOLKLORE AND MYTHOLOGY

Folktales are very important to the people of Mozambique, who have transmitted the same stories orally for many generations. About half of Mozambique's people still practice animistic religions. They believe that all natural objects have spirits and find many sacred sites in nature; they also believe that the spirits of dead ancestors still play a role in the lives of the living. In tra-

ditional dancing, men represent the spirits of the dead and attempt to frighten women and children into believing that they are in danger and need men to protect them.

ENTERTAINMENT AND RECREATION

Maputo has a variety of entertainment options, including bars, restaurants, nightclubs, discos, and sidewalk cafés. The Mercado Xipamanine market is said to sell “everything.” The beaches and oceans of the coast are good for swimming, snorkeling, and scuba diving.

ETIQUETTE

The people of Mozambique are proud and courteous. Tipping is not traditional, but international workers have spread the custom, so restaurant workers and taxi drivers now expect tips of about 10 percent.

FAMILY LIFE

AIDS is changing the face of the Mozambican family, killing strong young adults and leaving thousands of children orphaned. In some regions, girls marry very young, often before age 15. This means they often have children young, which increases risks for both mother and child. Men in some areas have multiple wives. In 2004 the Assembly of the Republic passed a law raising the minimum age of marriage from 14 to 18, permitting women to inherit property if they divorce, and legally recognizing traditional marriages, which constitute the majority of marriages in the country.

PERSONAL APPEARANCE

Dress in Mozambique is casual. In the city people dress in typical Western fashion: pants and shirts, sometimes with coat and tie, for men, light dresses or pants for women. Many people dress in *capalunas*, which are traditional cloth garments.

SPORTS

Mozambique has an excellent national soccer team. The nation has set out to create its own identity in the soccer world and has worked to build its team since losing many players at independence. The national team has played in the African Nations Cup finals and were semifinalists in the 2004 Cosafa Castle Cup.

CHRONOLOGY

- 1975** Mozambique becomes an independent people's republic under FRELIMO auspices, with Samora Moisés Machel as president. White settlers continue to flee the country as the white-led FICO movement collapses. Army coup led by northern malcontents is thwarted.
- 1976** Mozambique closes border with Rhodesia. A joint cooperation committee is established with Tanzania. All private homes and buildings are nationalized. Lourenço Marques, the capital, is renamed Maputo, and other Portuguese geographical names are Africanized. Resistência Nacional Moçambicana (RENAMO) is formed.
- 1977** FRELIMO holds Third National Congress and defines its Marxist-Leninist ideology. Treaty of friendship and cooperation is signed with the Soviet Union. Portuguese nationals are expelled from the country, as relations with Portugal deteriorate. Rhodesian troops raid rebel bases in Mozambique.
- 1978** Banking is nationalized. The cabinet is reshuffled in an effort to stem the country's mounting economic difficulties.
- 1979** A total of 15 Catholic missions are ordered to be closed down, as the Marxist government enters on a collision course with the church.
- 1980** President Machel announces a reorientation in economic policy, permitting a greater role for private enterprise. The cabinet is reshuffled twice in a drive against corruption and inefficiency. Mozambique adopts the metical as unit of currency in place of the escudo. After Zimbabwean independence in April, South Africa assumes Rhodesia's former role as supporter of RENAMO.
- 1984** Mozambique joins the IMF and the World Bank and becomes a party to the Third Lome Convention. The Nkomati Accord is reached with South Africa, whereby the two countries agree not to offer asylum to rebels and guerrillas.
- 1985** Mozambique moves toward free enterprise in limited sectors of the economy. Major military offensive against RENAMO results in capture of rebel command center, “Casa Banana.”
- 1986** RENAMO recaptures Casa Banana. RENAMO declares war on Zimbabwe. President Machel dies in suspicious plane crash in South Africa. Joaquim Chissano is appointed president by Central Committee.

1660 Mozambique

- 1987** Rebel activities, including massacre of 424 civilians in town of Hormoine and ambush of convoy from Maputo, killing 270 people, lead to severe food shortages and increasing numbers of Mozambican refugees outside the country.
- 1988** Amnesty for RENAMO members who surrender weapons results in more than 3,000 rebel defections.
- 1989** Senior U.S. government official claims that South Africa is still providing supplies to RENAMO. FRELIMO abandons its Marxist-Leninist ideology. President Frederik Willem de Klerk, of South Africa, meets with Chissano and claims that his government has cut off all aid to RENAMO.
- 1990** The Mozambique legislature adopts a new constitution designed to establish a Western-style democracy. The country's name is changed to the Republic of Mozambique. The Mozambican government and RENAMO sign a partial cease-fire. Free, multiparty elections are scheduled to take place in 1991.
- 1992** A cease-fire signed by the president and opposition leader ends the civil war.
- 1994** President Chissano (FRELIMO) is elected president in the first-ever multiparty elections. FRELIMO holds power in the assembly by a narrow margin, and Pascoal Mocumbi is named prime minister.
- 1995** UN peacekeeping troops leave the country. Mozambique joins the Commonwealth.
- 1997** Mozambique opens relations with South Africa.
- 1998** The IMF authorizes \$3 billion in debt relief for Mozambique. RENAMO and 15 smaller parties boycott municipal elections, leaving only FRELIMO and the Democratic Union in the running. Queen Elizabeth II conducts a state visit. A consortium of British, Japanese, and South African investors finance the \$1-billion Mozal project, a plan to build a massive aluminum smelting mill near Maputo. Algeria and Mozambique sign four cooperation agreements.
- 1999** Mozambique's economy achieves 10 percent annual growth for the third consecutive year. FRELIMO candidates, led by Pascoal Mocumbi, win the most seats in assembly elections. Joachim Chissano of FRELIMO is reelected president. RENAMO boycotts parliamentary debates.
- 2000** The worst floods in 50 years devastate Mozambique, killing 700, displacing 500,000, and reportedly causing more damage than the civil war. International donors promise \$453 million in aid.

The government averts a strike by Mozambique's largest trade union by promising a 26 percent wage increase.

Production at the Mozal smelter begins six months ahead of schedule.

RENAMO agrees to participate in parliamentary debates. The Supreme Court certifies the 1999 assembly elections.

2001 Floods in the Zambezi valley displace 70,000 people.

2002 Chissano declines to run for a third term, and Frelimo chooses Armando Guebuza as its presidential candidate for 2004.

2003 Brazil offers to build a plant in Mozambique to manufacture AIDS drugs.

2004 Armando Guebuza wins the presidency.

Burmese

RELIGIONS

Buddhism, Christianity, Islam, animism

UNIT OF CURRENCY

Kyat

NATIONAL FLAG

Red with a blue canton in the upper left bearing two ears of rice within a cogwheel and a ring of 14 stars, all in white

NATIONAL EMBLEM

A red map of Myanmar over a white cogwheel is centered within a blue circular seal. Around the seal is ornate golden framework, topped by a white star and flanked by two blue heraldic cheetahs facing outward. The legend "Socialist Republic of the Union of Myanmar" is inscribed in red scrollwork in Burmese at the base.

NATIONAL ANTHEM

"Our Free Homeland"

NATIONAL HOLIDAYS

January 4 (National Day, Independence Day), February 12 (Union Day), March 2 (Peasants' Day), March 27 (Armed Forces Day), May 1 (World Workers' Day), July 19 (Martyrs' Day), December 25 (Christmas), various Buddhist festivals, including Full Moon of Tabaung, Thingyan (Water Festival), Full Moon of Kason, Waso (Beginning of Buddhist Lent), end of Buddhist Lent, Tazaungdaing, and Burmese New Year's Day

DATE OF INDEPENDENCE

January 4, 1948

DATE OF CONSTITUTION

January 3, 1974 (suspended September 1988)

GEOGRAPHICAL FEATURES

Myanmar (formerly known as Burma, and still referred to as such by the United States), the largest country on mainland Southeast Asia, has a total land area of 678,500 sq km (261,969 sq mi). It has a total coastline of 1,930 km (1,199 mi) and total international land borders of 5,876 km (3,651 mi) with five countries: China, Laos, Thailand, Bangladesh, and India. Most of the land frontiers are defined by mountains.

Myanmar is divided topographically into four regions. The eastern Shan Plateau, a highland region averaging 900 m (3,000 ft) in elevation, merges south with the Dawna Range and the Tenasserim Yoma toward the Isthmus of Kra. The Central Belt spans the valleys of the Irrawaddy, Chindwin, and Sittang rivers, with a mountainous region in the north and a vast, low-lying delta in the south that covers an area of 25,900 sq km (10,000 sq mi), where almost all of the nation's rice is produced. The Western Mountain Belt, also known as

Myanmar (Burma)

the Arakan Mountains, is a series of ridges that originate in the northern mountain arc and extend southward to the southwestern corner. The Arakan Coastal Strip is a narrow, predominantly alluvial belt lying between

the Arakan Mountains and the Bay of Bengal. In some places the strip disappears as the mountain spurs reach the sea. Offshore are hundreds of islands, many of which are cultivated.

The Irrawaddy River is the lifeline of the country, providing a vast drainage and navigation system. The river rises near the northernmost tip of Myanmar and flows nearly the entire length of the country, for about 22,173 km (13,850 mi). It receives the Chindwin, its principal tributary, just below Mandalay. The Irrawaddy enters its vast delta at Henzada. On one of its nine mouths is the port of Yangôn (formerly Rangoon). The Irrawaddy is navigable for 1,287 km (800 mi), while the Chindwin is navigable for another 160 km (100 mi). The Sittang River, which rises just south of Mandalay and parallels the Irrawaddy on the eastern flank, is also part of the Irrawaddy basin. The Sittang suffers from excessive silting and is navigable for short distances only.

CLIMATE AND WEATHER

Myanmar has a tropical climate with three distinct seasons: the monsoon season from May to October, the hot seasons in October or November and also April, and the cool season from December to March. Temperatures are high year-round, and the cool season is such only by comparison. The mean temperature is 26°C (80°F), with higher temperatures, reaching 37.8°C (100°F), in the lowlands and more moderate ones on the Shan Plateau.

Rainfall is regulated by the southwesterly and northeasterly monsoons, with considerable regional variations in amount. Along the coastal regions rainfall is heavy,

with a high of 5,080 mm (200 in). Lower Myanmar receives 2,540 mm (100 in), while central Myanmar, in the lee of the Arakan Mountains, receives only 630–1,140 mm (25–45 in).

FLORA AND FAUNA

About half of the country is covered with forests, although trees are being cut down at a rapid rate; teak is especially profitable. About 15 percent of the country is used to grow rice. In the north are snowcapped mountains and alpine plants. The valleys of the mountains have a subtropical climate and many plants. The climate in the central basin is semiarid, with acacia trees and cacti. The Shan Plateau is heavily cultivated with vegetables and citrus trees.

A huge variety of tropical and subtropical animal species live in Myanmar, including poisonous snakes and insects. Elephants perform work in the logging industry and in farming. Some tigers still live in the forests, but they are endangered, as they are hunted for certain body parts, which are exported to China as drugs. The nation has 17 wildlife sanctuaries and three national parks, but it does not enforce its wildlife protection laws, and poaching continues unchecked.

POPULATION

ETHNIC COMPOSITION

There are more than 100 indigenous ethnic groups and subgroups in Myanmar; the most numerous are the Burmans, Karens, Kayahs, Shans, Kachins, and Chins. The Burmans constitute the ethnic majority, with 65–70 percent of the population. The Shans form the largest minority group, estimated to be 9 percent of the population. The Shans, calling themselves *Tai* and speaking a *Tai* dialect, live primarily in Shan State; they are primarily a lowland people engaged in wet-rice agriculture. The Karens are the second largest minority group, estimated at 7 percent. Other minorities are mostly hill tribes. The Burmans, who are ethnically related to the Tibetans, descended into the Irrawaddy valley in historical times and intermarried with the Mon and Pyu peoples. The Karens, Shans, and others were later migrants.

The official policy of the Burmese government has been to deemphasize ethnic differences. Terms such as racial minorities and nationalities have disappeared from official usage.

Among the ethnic aliens of Myanmar, whose numbers have been in sharp decline in recent years, are Chinese, Indians, Pakistanis, and Bangladeshis. Similarly, the number of Eurasians has been eroded through emigration. The European population, outside of the diplomatic and UN community, is virtually nonexistent.

LANGUAGES

Under the constitution of 1974 the official language of Myanmar is Burmese. Spoken by 80 percent of the population, the language is Tibeto-Burman, with an alphabet derived from the Pahlavi script of South India. Burmese and to a lesser extent *Tai*, the language of the Shans, are also used as lingua francas by the minorities who retain their own languages. The most developed of these minority languages are Mon, Chin, Karen, and Kachin. According to the constitution, minority languages may be used in areas where their speakers predominate.

English is now taught in schools as a second language from the fifth grade onward, and its use is permitted in some types of official communications. English is now the medium of instruction in the universities.

RELIGIONS

Buddhism is the religion of almost 90 percent of the people. Under the U Nu regime the Theravada form of Buddhism was made the state religion, but it was disestablished by Ne Win, and the constitution of 1974 guarantees the “right of everyone to profess and practice his religion freely.”

An estimated 4 percent of the population is Christian, the majority belonging to the Karen group. Two other Christianized groups are the Kachin-Lisu and the Chin-Lushai. Christian missionaries have long been active in the delta and border areas; their greatest success has been among the hill peoples. Another 4 percent of the population is Muslim, concentrated in Arakan District. Animism and spirit worship have not been totally displaced among the hill peoples, and beliefs in spirits in some form or other persist even among Buddhists.

Religious Affiliations

Buddhist	38,190,000
Christian	1,715,000
Muslim	1,715,000
Animist	430,000
Other	860,000

HISTORICAL BACKGROUND

The Mons were probably the earliest ethnic group in Myanmar. Coming out of central Asia, they populated the area around the mouths of the Salween and Sittang rivers. Soon after, the Arakanese, Chins, Kachins, and several smaller groups, as well as the Pyus, reached Burma by way of Tibet. From the seventh to the ninth centuries Mon states dotted coastal Burma. Around this time Burma first appears in historical documents. The Burmans moved to the rice-growing areas of Upper Burma, where they founded the cities of Sittang, Pagan, Sagaing, Ava, Amarapura, and Mandalay.

Of these cities, Pagan, founded in 849, was the most important, becoming the stronghold of a dynasty of kings. This was the First Burmese Empire, lasting from 1044 to 1257. The dynasty was founded by Anawrahta (r. 1044–77), and its greatest king was Kyansittha (r. 1084–1112), who built the Ananda Pagoda (still in use) and during whose reign the Burmese language was first written down. In 1287 the Mongols, whose demand for tribute had been rejected, destroyed Pagan and looted and burned the temples.

During the 14th and 15th centuries Burma remained divided into several large and small states. The Shans held power in Ava, the capital of Upper Burma; at Pegu, in Lower Burma, the Mons had their own dynasty, founded by Wareru; and Arakan, with the capital at Chittagong, dominated the western coastal area. During this period of constant internecine warfare, the city of Toungoo gained control of the good rice-growing land of the Kyaukse region. Within a few years King Tabinshwehti (r. 1531–50) of Toungoo and his brother-in-law Bayinnaung (r. 1550–81) united Burma under their crown and established the Second Burmese Empire (1551–1752).

In the 17th century the first Westerners reached Burma, and the Dutch, British, and French all established trading posts in the port towns. The Third Burmese Empire (1752–1885) was founded by a warlord called Alaungpaya. To celebrate a victory over the Mons, Alaungpaya established a port at the little coastal town of Dagon and gave it the name of Yangôn, or Rangoon. In the 19th century the growing power of the British on the Indian Subcontinent brought Britain into conflict with the Burmese kingdom. In 1826, after two years of war, the Burmese king was forced to cede his claims to Assam, Arakan, and Tenasserim to the British East India Company. These arrangements were included in the Treaty of Yandaboo, which also obliged the Burmese court to accept a British resident. By 1853 all of Lower Burma had been annexed by the British. In 1886 Upper Burma was annexed, and all of the Burmese Empire became a colony of British India.

In 1937 Burma was separated from India and granted a constitution for limited self-government. During World War II the country was under Japanese occupation. Full independence was granted to Myanmar, which was then called the Union of Burma, on January 4, 1948.

The fledgling Union of Burma, led by U Nu, was almost immediately assailed by a widespread insurrection of Communists and ethnic insurgents. By 1951 the unrest was brought under control by government forces. Differences within Burma's ruling party, the Anti-Fascist People's Freedom League (AFPFL), led to an intraparty split in 1958. In order to maintain law and order, the government invited the army chief, General Ne Win, to assume temporary control of the country, until new elections could take place. After winning by an overwhelming majority in April 1960, U Nu resumed office.

U Nu was ousted from office in March 1962, when Ne Win staged a coup and regained control of the country. The constitution and parliament were suspended. Free enterprise and private trade were abolished, and privately owned companies were placed under military control. In July 1962 the Burma Socialist Program Party (BSPP) was formed. The BSPP was dominated by the military and was the only legal political party in the country.

The new constitution, which was promulgated in January 1974, called for a one-party socialist government. Despite the new constitution, power continued to be held by the military, with Ne Win as chairman of the council of state and president. Although Ne Win retired in 1981, he remained in charge of the BSPP, remaining the real source of political power in the country.

Economic problems and growing unrest among ethnic groups continued to plague the government. Student-led demonstrations in September 1987 marked the beginning of a 12-month period of turmoil. Massive demonstrations against Ne Win compelled him to resign his party post in August 1988. On September 18,

1988, General Saw Maung, at the head of the military-dominated State Law and Order Restoration Council (SLORC), assumed power, ostensibly to maintain order until multiparty elections could be held. The SLORC abolished all executive and legislative institutions (including the People's Assembly, the State Council, and the Council of Ministers). Although Ne Win held no official position in the new regime, it was widely believed that he retained a controlling influence over its leaders, all of whom, including General Saw Maung, were known to be his supporters.

In 1988 the law maintaining the BSPP as the sole party was abrogated, and the BSPP registered under a new name, the National Unity Party (NUP). Although new parties were encouraged to register for upcoming elections, the military arrested and harassed opposition leaders throughout 1989. In this year Burma's name was changed to Myanmar.

A new constitution was scheduled to be promulgated after the May 1990 general elections. Of the 485 parliamentary seats contested in the elections, however, the government-backed NUP won only 10, whereas the National League for Democracy (NLD) won nearly 400. The NLD's triumph only brought more repression by the military, which refused to step down from power. By December 1990 the military had arrested 50 NLD leaders. More than one year after elections, military leaders continued to refuse the NLD its place in government.

In 1991 the NLD leader Aung San Suu Kyi was awarded the Nobel Peace Prize for her courageous defiance of the military regime, which focused world attention on Myanmar's plight. This triggered a wave of domestic demonstrations, to which the government responded with more repression. Aung San Suu Kyi was released in 1995 but rearrested in 1996 following violent demonstrations on her behalf. She remained under house arrest until May 2002.

During the mid-1990s the government mounted a series of successful attacks on military insurgents. With the capture of Manerplaw, the headquarters of the Karen National Union and the fall of the its last stronghold, at Kawmoora, most ethnic opposition to the junta came to an end. When the Karenni National Progressive Party also abandoned its armed struggle, the junta claimed that 14 of 16 rebel groups had laid down their arms. Government troops also launched an offensive against the Mong Tai Army of the Shan drug lord Khun Sa and occupied his headquarters at Ho Mong. In 1997 the State Law and Order Restoration Council, the official name of the junta, was dissolved and replaced by the State Peace and Development Council.

In 1998, 300 members of the NLD were released from prison. However, the ruling council continued to break up student demonstrations and failed to reconvene parliament by the deadline set by the NLD. The follow-

ing year Aung San Suu Kyi's husband, Michael Aris, died of cancer in the United Kingdom; Suu Kyi did not get to see him before his death because she refused to comply with the ruling council's conditions for her to travel. In 2000 she and the ruling council began secret talks, and the council subsequently granted her and other NLD members more freedom of movement. Talks continued in 2001, and in May 2002 Aung San Suu Kyi was released from house arrest.

Aung San Suu Kyi once again ended up in "protective custody" in 2003, after her supporters fought with government troops. Khin Nyunt became prime minister and promised to draft a new democratic constitution; the constitutional convention proceeded in May 2004, but the NLD boycotted the event because Aung San Suu Kyi was still under house arrest. In October, Khin Nyunt was placed under house arrest and Soe Win replaced him as prime minister. The following month the government released thousands of prodemocracy protesters.

The Indian Ocean tsunami of December 2004 left more than 3,000 people in Myanmar homeless. In November 2005 the government suddenly announced that its seat of government is moving to Pyinmana.

LIST OF MODERN RULERS

(Note: Listed are those who effectively held power.)

1948–56	U Nu
1956–57	Ba Swe
1957–58	U Nu
1958–60	Ne Win
1960–62	U Nu
1962–88	Ne Win
1988–92	Saw Maung
1992–	Than Shwe

CONSTITUTION

The most recent constitution in Myanmar was promulgated in January 1974. This constitution was suspended following the army coup of September 18, 1988, although a national convention started on January 9, 1993, to draft a new constitution.

After the 1988 coup the SLORC was established. This body maintained unqualified executive, legislative, and judicial authority. The executive and legislative institutions established under the 1974 constitution (notably the People's Assembly, the State Council, and the Council of Ministers) were abolished. The new government lifted the ban on political parties, and in 1989 General Saw Maung announced that free, multiparty elections would take place in May 1990. Nonetheless, after the May elections the government refused to honor the outcome and barred the winning party from taking its seats in parlia-

ment. General Than Shwe and the SLORC continue to rule the country by decree.

On June 18, 1989, the country's name was officially changed to the Union of Myanmar. A new constitution was scheduled to be promulgated after the general elections of May 1990. However, the government refused to allow the winning party to take its seats in parliament and continued to rule by decree.

In November 1997 the SLORC was renamed the State Peace and Development Council (SPDC). The chairman of the SPDC, General Than Shwe, served as both head of state and head of government until a prime minister was appointed in 2003, although Than Shwe retained effective control of the country. Local government is administered by military officers appointed by the SPDC. The judicial system is headed by a Supreme Court whose five members are appointed by the SPDC.

PARLIAMENT

Before the 1988 coup the national legislature was the 485-member People's Assembly (Pyithu Hluttaw). Members were directly elected by secret ballot for terms of four years. Regular sessions took place twice a year, the intervening period being no more than eight months. All members of the People's Assembly belonged to the sole political party, the Burma Socialist Program Party. The last elections were held in 1990, but the assembly was never convened. This democratically elected but unconvened parliament has never recognized the name "Myanmar" and continues to call the country "Burma," as does the United States.

POLITICAL PARTIES

Myanmar has three substantial political parties and several political pressure groups. The NLD is Aung San Suu Kyi's party, the main opposition force. The NUP is pro-government. The Shan Nationalities League for Democracy is another opposition party, and there are several other small political parties. The main pressure group is the National Coalition Government of the Union of Burma, composed of individuals, some elected to parliament in 1990, who have fled to a border area and joined insurgents to form a government in exile. Other pressure groups include the Kachin Independence Army, the Karen National Union, the United Wa State Army, the progovernment Union Solidarity and Development Association, and several Shan factions.

LOCAL GOVERNMENT

For the purposes of local administration, Myanmar is divided into seven states (Chin, Kachin, Kayin, Kayah, Mon,

Rakhine, and Shan) and seven divisions (Ayeyarwady, Bago, Magway, Mandalay, Sagaing, Tanintharyi, and Yangôn). States are areas where a national ethnic minority is the local majority group. States and divisions are divided into townships, including village tracts and towns.

LEGAL SYSTEM

The basis of the Myanmar legal system is the Myanmar Code, which is derived from the Indian Penal Code of 1860 and the Indian Criminal Procedure Code of 1898.

The judiciary has been reorganized a number of times since independence. On September 26, 1988, the State Law and Order Restoration Council established by decree a new judicial structure under a Supreme Court of one chief judge and no more than five other judges. Subordinate state, divisional, and township courts, which are manned by judicial officers, were established by the Supreme Court on September 29, 1988.

There has been no provision in Myanmar law for a person in detention to seek judicial determination of the legality of the detention. In cases involving national security, persons sometimes were never formally charged but held in indefinite detention without trial. The government has neither acknowledged holding political prisoners nor considered itself compelled to justify the detention or imprisonment of anyone.

In common criminal cases police have often detained suspects for up to 24 hours, after which court orders have necessarily been sought from competent judicial authorities. These court orders, which were renewable, authorized extensions of the detention for 14-day periods until charges were formally brought before a court. Detainees have frequently been held incommunicado during periods of investigation and interrogation but have normally been allowed visitors thereafter.

HUMAN RIGHTS

In terms of political and civil rights, Myanmar is ranked as a country that is not free.

The government's long-standing severe repression of human rights continues. Citizens continue to live subject at any time, and without appeal, to the arbitrary and sometimes brutal dictates of the military dictatorship. Citizens do not have the right to change their government. The SPDC has given no sign of willingness to cede its hold on absolute power. There continue to be reports, particularly in ethnic minority-dominated areas, that soldiers commit serious human rights abuses, including extrajudicial killings and rape. Disappearances continue, and members of the security forces beat and otherwise abuse detainees. Prison conditions are harsh and life threatening. Arbitrary arrests and detentions for the expression

of dissenting political views continue with increasing frequency amid the regime's effort to intimidate the populace into submission in the face of deepening economic and political instability.

The SPDC maintains and continues to intensify its restrictions on the basic freedoms of speech, press, assembly, and association. Political-party activity remains severely restricted. The government pressures many party offices throughout the country to close and refuses to recognize the legal political status of key NLD party leaders, such as its general secretary, 1991 Nobel laureate Aung San Suu Kyi.

The government imposes restrictions on certain religious minorities and restricts freedom of movement. Thousands of citizens who fled army attacks against insurgents remain in refugee camps in Thailand. Societal discrimination and violence against women, trafficking in women and girls, and widespread adult and child prostitution are severe problems.

During the SPDC's anti-insurgency operations, members of the military forces were responsible for arbitrary killing, rape, village relocation, destruction of homes and property, and forced labor inflicted on ethnic minorities.

FOREIGN POLICY

Myanmar has become a pariah among nations because of its continued defiance of international calls for the restoration of democracy and the release of opposition leaders from jail. The United Nations and the 18 most-industrialized countries have publicly rebuked the regime for its refusal to surrender power to a democratically elected parliament. The government has repeatedly refused requests by the United Nations to allow human rights groups to visit. The United States has imposed economic sanctions against the military regime.

Since 1988 the government has attempted to improve relations with its neighbors. In 1994 Myanmar concluded a friendship pact with Thailand, but relations have remained cool. Myanmar military forces have repeatedly crossed the border in pursuit of guerrillas on Thai soil. The relationship improved somewhat in 2001, when Myanmar pledged to eliminate drug trafficking in the area by 2005 and Thailand shut down camps housing Burmese dissidents. Relations with Bangladesh have been stormy as well, because of the exodus from Burma of some 260,000 Rohingya Muslims who claimed that they were the target of an extermination campaign. Repatriations began in 1992 and were completed by 1998. In 2001 Chinese President Jiang Zemin became the first Chinese head of state to visit Myanmar since the military coup in 1988. China is becoming Myanmar's most important source of foreign aid and military supplies.

Myanmar joined ASEAN in 1997. The country is also a member of the Bangladesh, India, Myanmar, Sri Lanka, and Thailand Economic Cooperation and several other regional groups.

DEFENSE

After the 1988 coup all executive and legislative organs were abolished, and the armed forces were placed under the State Law and Order Restoration Council's command. Its leader, General Saw Maung, also served as minister of defense. Reflecting its British origin, the army was until quite recently based on the regimental system, each regiment being composed of a distinct ethnic group. Official policy now discourages ethnicity in regimental composition, favoring a racial mix that inhibits local or ethnic loyalties.

Since independence the Myanmar army has been continuously engaged in anti-insurgency operations. As such, the defense service is structured to meet internal security needs rather than to defend against external threats. The army consists largely of light, mobile infantry battalions, and the air force is designed for ground support. Both men and women can volunteer for service at the age of 18.

ECONOMY

Myanmar has a mixed economy, with private activity dominant in agriculture, light industry, and transport. Substantial state-controlled activity is found mainly in energy, heavy industry, and the rice trade. Government policy between 1989 and 2000 aimed at revitalizing the economy, after three decades of tight central planning, but state enterprises remain highly inefficient, and privatization efforts have stalled.

Published estimates of Myanmar's foreign trade are greatly understated because of the volume of black-market trade. A major ongoing problem is the failure to achieve monetary and fiscal stability. Myanmar remains poor, and for the majority of the population living standards have not improved in recent years. The short-term outlook is for continued sluggish growth because of poor government planning, internal unrest, minimal foreign

investment, and a large trade deficit. The government continues to award contracts to the few companies that support its policies, causing monopolies.

Inflation has been extremely steep, and the local currency is officially overvalued at more than 100 times the market rate. A banking crisis in 2003 and sanctions by the United States, the European Union, and Japan increased the economy's downward spiral. In 2004 the banking sector was near dead, making government contracts the only source of credit available to private businesses. The nation has many resources, including gems, jade, timber, fisheries, and excellent tourist potential, but it has failed to develop these industries. Agriculture accounts for more than 50 percent of GDP. Illicit opium and amphetamines bring a certain amount of money into the country, though the government has pledged to fight the narcotics trade.

LIVING CONDITIONS

Myanmar is an extremely poor country. Gross domestic product (GDP) per capita is \$1,700, but wealth is not evenly distributed, leaving much of the population in abject poverty; the average income for most people is closer to \$225. Public transportation is of poor quality and unreliable. Horse carts and human-powered trishaws (bicycle taxis) remain a common form of transport. Most roads are unpaved and vulnerable to rains. The water supply is contaminated and can spread illness. The electrical supply is unreliable and by no means universal. Houses in villages are made of bamboo and thatch, though wealthy people may have homes made of wood with metal roofs. City dwellings are built on concrete blocks and have plywood walls.

HEALTH

The government supposedly provides all people with health care, but in truth much of the population has no access to modern medicine. The World Health Organization ranks Myanmar toward the bottom of the world's nations in delivering health care. Sanitation is poor, and diseases such as typhoid, viral hepatitis, intestinal worms, and dysentery are common. Mosquitoes spread malaria and dengue fever. Tetanus and rabies both occur with some frequency, as does tuberculosis. In 2003, 1.2 percent of the population was infected with HIV, which has begun to spread at an alarming rate. Life expectancy is about 56 years.

FOOD AND NUTRITION

Almost every Burman meal is designed around rice. The universal flavoring is *ngapi*, a fermented shrimp paste. People eat many vegetables, either as raw salad or in

spicy curries that may include chicken or fish. Fresh fruit is a common ingredient in salads and other dishes. Chinese and Indian culinary influences are present, and the Shan people have their own cooking styles. People drink a great deal of tea, either Chinese or Burman, which is strong, milky, and sweet. Street vendors sell sugarcane juice. Alcoholic beverages include lychee wine, white liquor, orange brandy, and jungle liquor. Many people enjoy finishing their meals by chewing betel leaves.

Food and Nutrition

STATUS OF WOMEN

Women in Myanmar have distinct social roles, which vary according to cultural traditions and ethnic backgrounds. In general, Burmese women enjoy most of the same rights as Burmese men; women keep their own names after marriage, are active in trade, can own property, often control family finances, and enjoy the same legal rights as men. Buddhism, like many religions, limits the religious role of women and assigns them a status theoretically inferior to men. Women are greatly underrepresented in senior positions in the ruling SPDC. More women than men pursue higher education, especially in medicine; female doctors are in high demand because male doctors are not supposed to touch female patients.

WORK

Though the unemployment rate was officially only 5.2 percent in 2004, employment does not translate into prosperity for the majority of people. Most of the population are subsistence farmers, growing food for their own consumption; Myanmar once exported a great deal of rice, but the nation's people now eat most of the domestically grown rice. People who live near forests make a living by cutting and selling teak and redwood. The hill tribes grow poppies and sell opium, which has been a fairly profitable trade but is in danger of being eliminated by the government.

Employment and Labor

 Students: 555,060
 Gross Enrollment Ratio: 11.5

Public Expenditure on Education as % of GDP: 0.6

EDUCATION

Primary education is free and universal but not compulsory. Schooling consists of 11 years, as divided into primary (grades one through five), middle (six through nine), and secondary (10 and 11). The primary-school curriculum includes Burmese, science, social studies, and arithmetic; English is introduced at grade five. There are specialized agricultural and technical schools at the secondary level. The academic year runs from May to March. The medium of instruction is Burmese, but minorities are permitted to use their mother tongues.

Adult literacy courses are offered under the auspices of the Mass Education Council. Monastic schools (*ky-aungs*) continue to provide traditional Buddhist education in rural areas. All private schools have been nationalized.

Educational administration was previously centralized in the Ministry of Education; it is now administered by the SPDC. The country is divided into 13 educational zones, with an inspector in each for secondary education. For primary education each zone has three districts, with an education officer assisted by three or four inspectors. All public education is financed by the national government.

Higher education is consolidated under two large universities, the Arts and Sciences University of Yangon and the Arts and Sciences University of Mandalay, each with independent degree-granting colleges. A total of 10 colleges are affiliated with the University of Yangon, and five are affiliated with the University of Mandalay.

The government claims that more than 85 percent of the population is literate, but estimates of functional literacy are closer to 30 percent. Many rural students drop out of school after the first four years because they are needed by their families to work in the fields.

Education

Literacy Rate %: 85.3
 Male %: 89.2

 Teachers: 149,001
 Students: 4,889,325
 Student-Teacher Ratio: 32.8
 Net Enrollment Ratio: 84.2

SCIENCE AND TECHNOLOGY

Myanmar has little in the way of science or technology. Agricultural techniques are still primitive. Electricity is not widespread. The telephone system is barely adequate for governmental and business purposes; in 2003 there were only about 360,000 telephone lines and 67,000 cellular telephones. About 28,000 people were using the Internet.

MEDIA

Myanmar's media are wholly government owned, and all forms of communication are subject to government censorship. The two main newspapers are the state-run *Kyebmon* and the SPDC's *Myanmar alin*. There are numerous nondailies and periodicals, with combined circulation of well over one million. Two daily newspapers are published in English, the *Myanmar Times* and the *New Light of Myanmar*. The *Myanmar Times* prints heavily edited reports from international wire services, and its domestic content follows the government's dictates. Newspapers in languages other than Burmese or English are not permitted. There is little or no advertising. All the daily newspapers have national circulation.

All controversial materials are censored, and discussions of national policy in the press that do not praise the "Myanmar way to socialism" are banned.

The national news agency is the News Agency of Myanmar, which has no foreign correspondents, instead obtaining news from other news agencies. Radio is broadcast by the state-run Radio Myanmar, which, along with TV Myanmar, is run by the national television and radio department. The army has its own television channel, and the city of Yangon has its own entertainment-based radio station. The opposition runs the shortwave radio station Democratic Voice of Burma, which is based in Norway.

CULTURE

Myanmar has many traditional dance and musical forms, which are performed at nearly all festive occasions. *Zat pwe* are religious plays, *yok thei pwe* are puppet shows, and *anyei pwe* are comedies.

Burmese architecture is famous, and the countryside is covered with pagodas and temples decorated with paintings, gemstones, and carvings. The Shwedagon Pagoda in Yangôn is one of the most spectacular structures in Asia; it is covered with gold and various gemstones.

Burmese craftsmen are skilled at lacquerware, wood carving, and embroidery. Some artists make a cloth called *cheik* by weaving silk into twisted patterns.

FOLKLORE AND MYTHOLOGY

Buddhist folklore is important to the people of Myanmar. At festivals they perform elaborate plays and dances depicting stories from Buddha's life. Folk songs are still sung by people working in the fields, pounding rice, or going about other tasks. The hill people still practice animistic religions. Local mythology incorporates beliefs in various deities and fantastic animals, including dragons and sea monsters; statues of lions guard pagodas because people believe lions make the best guards.

ENTERTAINMENT AND RECREATION

Kite flying is popular in rural areas. Hiking and cycling are possible, but most locals do not engage in such

strenuous activities for fun. People love to watch plays and puppet shows, which can depict Buddhist legends or be comic. All performances are accompanied by music similar to that of Thailand, which is played largely on gongs, drums, and bamboo flutes. There are some restaurants in the cities, and people enjoy shopping in the markets.

ETIQUETTE

Meals are often served on a low table. Diners sit on the floor and help themselves to food from the dishes on the table; if there are no utensils, it is polite to use the right hand for eating. The soles of the feet are considered the lowest part of a person, and it is impolite to point them at someone. It is also impolite to point at a person or to touch another person on the head. People remove their shoes when entering a home or temple.

FAMILY LIFE

Arranged marriages are common in Myanmar; families choose spouses based on wealth, status, and astrology. Most marriage negotiators are female, usually aunts or grandmothers of the people marrying. Rural people still live in extended families, though family groups are now smaller in urban areas. When a child is born, the parents immediately consult an astrologer to choose a name in accordance with the child's horoscope. Babies are officially named when they are seven days old. Children come of age at nine, and both sexes undergo initiations; girls have their ears pierced, and boys go to spend a few weeks at a Buddhist monastery.

PERSONAL APPEARANCE

Both men and women dress in sarongs called *longyis*, which can be tied in different styles, topped with shirts called *eingyi*. Both sexes wear leather sandals. Women like to own and wear jewelry with pearls, sapphires, rubies, and jade, which they consider an investment. On special occasions men wear turbans.

SPORTS

People in Myanmar engage in a number of traditional sports, including kickboxing, *khe pai kauk* (leg rowing), *chinlon* (a game in which six people stand in a ring and try to keep a ball in the air using their feet and legs), and *gonnyin* (which involves throwing fruit pits at a target on a pole). Soccer, golf, and tennis are also popular.

CHRONOLOGY

- 1948** Burma becomes an independent republic, with U Nu as prime minister. White Flag Communists and Karen secessionists launch rebellions.
- 1951** In national elections, U Nu's AFPFL gains absolute majority.
- 1952** Kyat is introduced as Burmese currency, replacing the Burmese rupee.
- 1956** In second national election, AFPFL retains power but with a reduced majority. Soon after elections U Nu steps down from power for eight months. AFPFL is split into two factions: the Clean SF-PFL, led by U Nu, and the Stable AFPFL, led by U Ba Swe.
- 1958** Faced with internal dissension and threats from insurgents, U Nu yields power to a caretaker government led by Ne Win, the army chief of staff.
- 1960** U Nu returns to power in national elections at head of Clean AFPFL, later renamed Pyidaungsu Party. Border pact with People's Republic of China is concluded, followed by a Treaty of Friendship and Nonaggression.
- 1961** Buddhism is made the state religion.
- 1962** In a bloodless coup General Ne Win seizes power. He sets up the Revolutionary Council as supreme legislative and executive organ, promulgates a manifesto titled *The Burmese Way to Socialism*, and founds the BSPP. U Nu is placed in detention.
- 1963** All banks and major industries are nationalized. Under the Enterprise Nationalization Law, aliens such as Indians and Chinese are excluded from all types of economic activity.
- 1964** All political parties are banned except the BSPP, which becomes the sole political organization in the country.
- 1965** The government-controlled Buddha Sasana Sangha Organization is formed in an effort to reduce the political power of the monks.
- 1966** Burma leaves the sterling area.
- 1967** Anti-Chinese riots erupt in Yangôn. Sino-Burmese relations are strained.
- 1969** Former prime minister U Nu escapes and is granted asylum in Thailand.
- 1972** Ne Win and Revolutionary Council associates give up military ranks.
- 1974** New constitution is promulgated. The country's official name is changed to Socialist Republic of the Union of Burma. Ne Win is elected president. Buddhism is no longer the state religion.
- 1975** Kyat is devalued by 23 percent. Students riot in Yangôn over burial of U Thant, former secretary-general of United Nations. Five Kachin and Karen insurgent groups organize the Federal National Democratic Front to overthrow Ne Win.
- 1976** Plot to assassinate Ne Win is uncovered.
- 1977** U Maung Maung Kha is named new prime minister, replacing Sein Win.
- 1978** President Ne Win is reelected in national elections. Arakanese Muslims flee across the border into Bangladesh, charging persecution and genocide. Myanmar reaches peaceful accord with Bangladesh over repatriation of Muslim refugees and their resettlement in Burma.
- 1979** Burma quits the nonaligned movement after the Havana summit of nonaligned nations.
- 1980** Following general amnesty, former prime minister U Nu returns to Burma from Thailand. Government proposes two-tier citizenship in move to exclude naturalized Burmese of Chinese, Indian, or Pakistani origin from political and economic life of the country.
- 1981** Ne Win steps down as president in favor of San Yu.
- 1983** Former key Ne Win aide Tin U is arrested for corruption, and his supporters are purged. Bomb blast during visit of South Korean president kills 17 South Korean officials. North Korea is implicated in the terrorist attack. Burma cuts diplomatic relations with North Korea.
- 1985** Ne Win resumes BSPP chairmanship. San Yu becomes vice president of the BSPP.
- 1987** Students lead demonstrations against Ne Win. Civil unrest continues to grow.
- 1988** Antigovernment riots are violently repressed. Ne Win resigns his post in the BSPP. General Saw Maung, as head of the SLORC, assumes power in a military coup. Western aid to Burma is halted as thousands are killed in riots. The constitution is suspended, giving the SLORC unrestricted executive, legislative, and judicial authority. Maung's government lifts ban on political parties. The ruling BSPP changes its name to the NUP. The military arrests and harasses opposition leaders.
- 1989** Burma's name is officially changed to the Union of Myanmar (Pyidaungzu Myanmar Naing-gandaw). Maung announces upcoming free, multiparty elections and plans for a new constitution. Maung disqualifies two leading members of the NLD from contesting the May 1990 elections.

1674 Myanmar

- The government forcibly evicts 200,000 citizens from their city homes.
- 1990** Elections are held; of the 485 parliamentary seats contested, the NLD wins 397, the NUP only 10.
Saw Maung and the SLORC refuse to relinquish power. U Nu is placed under house arrest. Government troops kill thousands of protestors, including monks and students. Opposition leaders are arrested and tortured.
- 1991** NLD leader Aung San Suu Kyi is awarded the Nobel Peace Prize.
- 1992** General Than Shwe replaces General Saw Maung as SLORC chairman, prime minister, and minister of defense. U Nu is released from confinement.
- 1993** SLORC organizes a national convention to draft a constitution along the lines of that of Indonesia.
- 1995** Aung San Suu Kyi is freed from house arrest but is unable to participate openly in the political process.
Myanmar forces capture the Karen rebels' base at Mannerplaw.
NLD representatives withdraw from the constitutional convention, citing an absence of democratic principles in the drafting process.
- 1997** Myanmar becomes a full member of ASEAN, a powerful regional trading group.
SLORC arrests more than 200 NLD representatives for attempting to form an NLD party congress. SLORC is renamed the SPDC.
- 1998** Active fighting resumes between Myanmar troops and Karen rebels.
The United States and Japan pledge \$4 million to eradicate illicit opium production.
Myanmar and Thailand improve relations.
Bangladesh and Myanmar reach an agreement on the repatriation of Muslim refugees, known as Rohingyas, to Myanmar.
- 1999** The International Labor Organization denounces and expels Myanmar for use of forced labor.
Myanmar signs an agreement with India for mutual action against rebel activities and drug trafficking along the common border.
- 2000** Human Rights Watch condemns Myanmar for abusing Rohingyas.
Members of NLD, including Aung San Suu Kyi, are again taken into custody.
- 2002** Aung San Suu Kyi is released from house arrest.
- 2003** Aung San Suu Kyi is placed under house arrest again after her NLD supporters clash with the government's supporters.

- Khin Nyunt becomes prime minister and promises to work on creating a new constitution.
- 2004** The constitutional convention takes place, boycotted by the NLD.
Khin Nyunt is placed under house arrest; Soe Win replaces him as prime minister.
The December Indian Ocean tsunami hits the coast of Myanmar and other nations in the region.
- 2005** The military junta announces the surprise move of its capital to Pyinmana.

HEAD OF STATE

President Hifikepunye Pohamba (from 2005)

HEAD OF GOVERNMENT

Prime Minister Nahas Angula (from 2005)

NATURE OF GOVERNMENT

Democratic republic

POPULATION

2,030,692 (2005)

AREA

825,418 sq km (318,696 sq mi)

MAJOR ETHNIC GROUPS

Ovambo, Kavango, Herero, Damara, Nama

LANGUAGES

English (official), Afrikaans, German, Oshivambo, Herero, Nama

RELIGION

Christianity

UNIT OF CURRENCY

Namibian dollar

NATIONAL FLAG

A large blue triangle with a yellow sunburst in the upper-left section and an equal green triangle in the lower-right section; the triangles are separated by a diagonal red stripe bounded by two narrow white stripes.

NATIONAL EMBLEM

In the center of the national emblem is a shield with the motif of the Namibian flag. The shield rests on the roots of *Welwitschia mirabilis*, a plant unique to the Namib Desert that may live for more than a century. Above is a fish eagle representing the north and the water resources of the country, with a headband containing diamonds (which are important to the economy of the country) in his talons; supporting the shield are two oryx, which are indigenous to the northern parts of the country and considered brave animals. The national motto, "Unity, liberty, justice," appears at the bottom.

NATIONAL ANTHEM

"Namibia, Land of the Brave"

NATIONAL HOLIDAYS

March 21 (Independence Day)

DATE OF INDEPENDENCE

March 21, 1990

DATE OF CONSTITUTION

February 9, 1990

GEOGRAPHICAL FEATURES

Namibia is located on the southwestern coast of Africa. It is bordered by South Africa to the south and south-east, Botswana to the east, and Angola to the north. In the west Namibia has a long coastline on the Atlantic Ocean. The narrow Caprivi Strip, between Angola and Botswana in the northeast, extends Namibia to the Zambezi River, giving it a short border with Zambia as well.

Namibia covers a total of 825,418 sq km (318,696 sq mi). The capital is Windhoek, and the other principal urban centers are Swakopmund, Rehoboth, and Rundu. The country is divided into three basic geographic regions: the Namib Desert along the west coast, the central plateau, and the Kalahari Desert in the east. The Namib Desert covers about one-sixth of Namibia's total area and is uninhabitable. The central plateau, an area of savanna and bush, covers just over half of the land area. The most fertile

Namibia

and best-watered areas of Namibia are in the north near the Kunene River and in the Caprivi Strip.

Geography

Population of Principal Cities (2001)

Rundu	44,413
Windhoek	233,529

CLIMATE AND WEATHER

Namibia's climate is the driest in Africa, with sunny, warm days and cool nights. The mean January temperature at Windhoek is 23°C (73°F); in winter the mean temperature is 13°C (55°F). The fertile northern strip is always warmer.

The rainy season lasts roughly from December to March. Its length may be as short as one month in the Namib Desert, two to four months on the central plateau, and five months in the Caprivi Strip. The mean annual rainfall in the Namib Desert and the southern central plateau is 0–250 mm (0–20 in), in the Caprivi Strip and northern Ovamboland 500–1,000 mm (20–40 in).

Climate and Weather

Mean Temperature
Summer: 73°F
Winter: 55°F
Average Rainfall
Namib Desert and Central Plateau: 0 to 10 in
Kalahari Desert: 10 to 20 in
Caprivi Strip and Ovamboland: 20 to 40 in

FLORA AND FAUNA

Some 15 percent of Namibia's land area has been turned into national parks to preserve rare and endangered species of plants, animal, and bird life, and Namibia is one of the world's first countries to extend constitutional protection to its wildlife and environment. Etosha National Park contains substantial concentrations of big-game species, including elephants, lions, rhinoceroses, zebras, giraffes, and hartebeests, and the country has the world's largest population of cheetahs. The nation's deserts contain little vegetation, but the central plateau contains woodland savanna with various species of grass, shrubs, and succulents that have adapted to the lack of moisture.

ETHNIC COMPOSITION

Approximately 87.5 percent of Namibians are black, 6.5 percent are white, and 6.5 percent are of mixed descent. About 50 percent of the population belongs to the Ovambo tribe and 9 percent to the Kavango tribe. The black population can be subdivided into the Bantu-speaking Ovambo, Kavango, Herero, and Himba; the non-Bantu Damara; the Khoi, also known as Nama; the San; and various smaller groups related to communities in Angola, Botswana, and Zambia.

The Ovambo, the largest ethnic group, live mainly in the well-watered north. The second-largest group, believed to be an offshoot of the Ovambo, is the Kavango, who reside along the Okavango River in the northeast. The Damara live east of the arid coast and south of the Ovambo. The Herero, a herding people, range north of Windhoek. The Nama, also herders, live in the deep south.

The mulatto community, consisting of people of mixed Caucasian and black ancestry, includes the Rehoboth Bastards and some Cape mulattoes, who migrated from South Africa. The white community consists of descendants of the Germans and Afrikaners and a few English-speaking South Africans. Whites live predominantly in cities and in central and southern Namibia.

LANGUAGES

The official language is English, although Afrikaans and German are more widely used. Most of the African ethnic groups speak their own languages. Bantu-speaking groups in the northern regions include the Ovambo, Okavango, East Caprivan, and Kaolander ethnic groups. To the south the major ethnolinguistic division is between the Bantu-speaking Herero and Tswana and the Khoisan-speaking Bergdama, Nama, and San.

RELIGIONS

There is no official state religion, although about 85 percent of Namibians are Christian. Of the remaining 15 percent, a significant number follow traditional animist beliefs. The largest Christian denomination is Lutheran, with more than half the Christian population. Other denominations include Roman Catholic, Dutch Reformed, Anglican, and Methodist.

Religious Affiliations

Christian	1,725,000
Indigenous Beliefs	300,000

HISTORICAL BACKGROUND

Prior to European contact Namibia was occupied primarily by the San, Ovambo, Nama, Damara, and Herero tribes. These disparate peoples maintained predominantly agricultural societies. The San were the region's original inhabitants, but they were mostly displaced by the Khoi-Khoi from the south. There followed invasions by Bantu tribes around 1500, such that both the San and the Khoi-Khoi became minority groups within the region.

In the late 1480s Portuguese navigators first explored the country's coastal areas, followed by Dutch and British explorers. The German presence began in the 1840s with the arrival of the Rhenish Missionary Society. In 1878 Britain annexed Walvis Bay. An Anglo-German agreement in 1890 acknowledged German control of Namibia, then called German South-West Africa, with Britain retaining Walvis Bay. The Germans took the land and cattle from the indigenous population, creating a dispossessed African wage-labor force. In their effort to subdue the African inhabitants, the Germans fought extensive campaigns against the Herero and Nama. The resistance to occupation long maintained by these two groups ended in their near annihilation by the Germans. In 1904 the Herero again rose up against the Germans but were ruthlessly suppressed, their population being reduced from 80,000 to 16,000 starving refugees. German retaliation against Nama as well as Damara uprisings wiped out about half of those groups.

German rule ended during World War I; in 1915 South African troops defeated the Germans and occupied Namibia. The territory was mandated to South Africa by the League of Nations in 1920, to be administered on behalf of Britain, with the duty of preparing it for eventual self-determination. However, South Africa had no intention of giving up what was then called South-West Africa, which it governed as though it were another province of the Union of South Africa.

The first attempts to make South Africa adhere to its mandate came in 1945, after the formation of the United Nations as the successor to the League of Nations. While all other countries controlling trusteeship territories agreed to transfer them to UN trusteeships, South Africa refused, demanding full incorporation of South-West Africa into its union. The United Nations refused to accept this demand, and in 1950 the International Court of Justice ruled that the territory should remain under an international mandate. In 1966 the UN General Assembly terminated South Africa's mandate over South-West Africa and transferred the territory to UN control.

South Africa refused to accept the United Nations's right to end its administration and, in 1966, extended its apartheid laws to South-West Africa. In order to enhance its control, South Africa divided the territory into homelands for different ethnic groups, with whites receiving the best farming and mining areas and the remainder being allocated to the African population, resulting in mass forced removals of Africans.

In 1958 the South-West African People's Organization (SWAPO) was founded under Sam Nujoma. After political negotiations failed, in 1966 SWAPO initiated an armed struggle against the regime. In 1971 the International Court of Justice ruled that South Africa's claims were invalid, and in 1973 the United Nations recognized SWAPO as the sole legitimate representative of what it now called Namibia.

Ties between SWAPO and the Marxist Popular Movement for the Liberation of Angola (MPLA) led South Africa to invade Angola in 1975 in support of the anti-MPLA forces of the National Union for the Total Liberation of Angola. Throughout the 1970s and 1980s Namibia was a casualty of the cold war, as South Africa launched attacks against the Cuban- and Russian-backed MPLA and SWAPO training bases in Angola, while SWAPO launched insurgency raids against the regime from Angolan territory.

Meanwhile, South Africa attempted to develop an internal settlement of the Namibian insurgency. In 1975 a constitutional conference resulted in plans for a quasi-independent Namibia. SWAPO boycotted the conference, but the Democratic Turnhalle Alliance (DTA), made up of pro-South African whites and anti-SWAPO African groups, formulated a plan for independence by 1978, through which South African troops would remain in the country. In elections held in 1978, boycotted by SWAPO, the DTA won a majority of seats in a constituent assembly. However, the assembly had little real power and was not internationally recognized.

In 1978 the UN Security Council adopted Resolution 435, which called for the cessation of hostilities in the region, the withdrawal of South African troops from Namibia, and UN-supervised elections prior to full independence. Under the terms of a 1988 tripartite agreement, Cuba was to withdraw its troops from Angola in exchange for the South African withdrawal from Namibia and the implementation of UN Resolution 435.

Although there were further clashes between SWAPO guerrillas and South African forces, a 1989 cease-fire allowed elections to be held in November of that year under the auspices of the United Nations. SWAPO won 41 seats in a 72-member assembly, while the DTA won 21 seats. The assembly then produced a new constitution, which was formally adopted on February 9, 1990. Sam Nujoma was subsequently elected the nation's first president, and formal independence was declared on March 21, 1990.

In the 1994 elections Nujoma was reelected with 76 percent of the vote, and SWAPO continued to dominate the legislative assembly. In the elections the party increased its number of seats to 53, while the DTA retained only 15, with the remaining seats split between minor parties. Also in 1994 an agreement was reached whereby South Africa transferred control of Walvis Bay to Namibia.

In 1998 Namibia contributed 2,000 troops to the peacekeeping effort in the Republic of the Congo, which was embroiled in a civil war. In 1999 Nujoma won a third term, and SWAPO further increased its number of seats to 55. Later that year the World Court ruled against Namibia in a territorial dispute with Botswana over the Chobe River island of Sedudu. During Nujoma's final term, issues of land reform became a priority. In 2002 the new prime minister, Theo-Ben Gurirab, along with Nujoma, urged white farmers to accept the nation's land reform program. In 2003 a union representing black farmworkers planned to invade a number of white-owned farms, but the raids were called off after an agreement with the white farmers' group was reached. In November 2004 Nujoma's nominee, Hifikepunye Pohamba, was elected president.

LIST OF MODERN RULERS

1990–2004 Sam Nujoma
2004– Hifikepunye Pohamba

CONSTITUTION

Under its constitution, Namibia is a sovereign, secular, democratic, and unitary state, and the constitution is the supreme law. It guarantees the fundamental rights and freedoms of the individual regardless of sex, race, color, ethnic origin, religion, creed, or social or economic status and gives all citizens the right to form and join political parties.

Executive power is vested in the president and the cabinet. The president, who is head of state and the commander in chief of the defense force, is elected by direct, universal, and equal suffrage and must receive more than 50 percent of the votes cast. The term of office is five years, and there is a limit of two consecutive terms.

The cabinet consists of the president, the prime minister—who is head of government—and other ministers, whom the president appoints from among members of the National Assembly. The cabinet's functions include directing the activities of the government's departments, initiating bills for submission to the National Assembly, formulating the budget, and advising the president on matters of national defense.

Legislative authority lies with the parliament, a bicameral structure. The lower house is known as the National Assembly, while the upper house is called the National Council; the latter is made up of regional leaders. Amendments to or the repeal of provisions of the constitution require a two-thirds majority of the National Assembly and the National Council. The constitution provides for an independent judiciary, with the Supreme Court as its highest body.

PARLIAMENT

Legislative power in Namibia is vested in the National Assembly, which is composed of 72 members elected by general, direct, and secret ballots and not more than six nonvoting members appointed by the president. Every National Assembly may continue for a maximum period of five years, but it may be dissolved by the president before the expiration of its term.

The National Council has a term of six years and consists of two members from each of the 13 regions. Its functions include considering all bills passed by the National Assembly, investigating any subordinate legislation referred to it by the lower body for advice, and recommending legislation to the National Assembly on matters of regional concern.

POLITICAL PARTIES

The nation's major political party, with 55 seats in the National Assembly, is SWAPO, a socialist party. A number of other parties have small representations in the National Assembly, including the Congress of Democrats, with five seats; the DTA, a conservative coalition of 11 ethnically based parties, with four seats; and the United Democratic Front, a moderate-conservative coalition of eight parties, with three seats. Minor parties include the conservative white Monitor Action Group and the Democratic Coalition of Namibia.

LOCAL GOVERNMENT

Namibia is divided into 13 regions. Each of these areas is governed by an elected regional council, which in turn administers smaller local levels of government, including municipal governments and village management boards. These local-authority boards are elected with varying terms. Two members from each regional council serve in the National Council. Municipal and village governments provide a variety of local services, such as water and sanitation management. The most important functions of local governments are land distribution and adjudication.

LEGAL SYSTEM

Namibian law is based on Roman-Dutch law. The constitution provides for an independent judiciary, with the Supreme Court as the highest body. There is also an appellate High Court and 30 lower trial courts, known as magistrate's courts. A lack of qualified judges has led the legal system to be overburdened.

Those accused of crimes have the right to hear the charges against them and the right to legal counsel. However, budget shortages often prevent adequate legal representation in rural areas. In addition, persons have had to wait as long as a year for trials. The death penalty was banned after independence.

HUMAN RIGHTS

The constitution guarantees the fundamental rights of the individual regardless of sex, race, color, or social or economic status and gives all citizens the right to form and join political parties. It also makes apartheid a criminal offense, outlaws torture, and formally bans the death penalty. The bill of rights grants freedom of speech and religion and the right to a fair trial. The bill of rights may not be amended.

Elections are generally free and well administered, except for the occasional harassment of opposition members and unequal access to media coverage. Namibia is a first-asylum country, permitting asylum seekers to enter the country. Illegal immigrants from Angola, however, are rounded up and deported without judicial review.

FOREIGN POLICY

After independence Namibia became a full member of the United Nations and various international organizations, including the Organization of African Unity, now the African Union.

The continuing conflict in Angola remains one of the most pressing concerns for Namibia, which has supported various international efforts to resolve the battle between National Union for the Total Liberation of Angola and the MPLA-dominated government, and Angolan rebels still reside in Namibia. There are ongoing territorial disputes between Namibia and the nations of Zambia and Zimbabwe.

DEFENSE

Prior to independence national security was provided by the South African Defense Forces. After their withdrawal in 1990, recruitment began for a new national army. Military service is voluntary. Nations such as Great Britain

sent advisers to train the new force, which numbered 15,000 by 2003. The majority of the defense forces are former members of the military wing of SWAPO. The army is the only formal branch of the National Defense Force, although there is a small coast guard. In 2004 the nation spent \$168.4 million, or about 3.1 percent of gross domestic product (GDP), on the military.

ECONOMY

Namibia has a mixed economy, consisting of both private and publicly owned businesses. The nation has abundant mineral resources, including diamonds and such metals as uranium, copper, gold, lead, zinc, tungsten, silver, and tin, and mining accounts for 20 percent of the nation's GDP while employing just 3 percent of the population. Rich fisheries and limited agricultural products account for the rest of the nation's economy. The nation is not self-sufficient in food production. Its major trade partners include the United Kingdom, Germany, and the United States. Although per capita GDP is four times the per capita GDP of Africa's poorer countries, 50 percent of Namibia's people live in pronounced poverty because of large-scale unemployment, the great inequality of income distribution, and the large amount of wealth going to foreigners. GDP growth in 2003, estimated at 3.3 percent, was led by gains in the zinc, copper, silver, and fish sectors. Agreements have been reached on the privatization of several more enterprises in coming years, which should stimulate long-term foreign investment.

ENVIRONMENT

Namibia's main environmental dispute is with Spain, concerning overfishing; during the 1980s fish stocks were seriously depleted by foreign commercial fleets. In addition, the nation has a number of mine sites that require cleanup, but the government lacks the fiscal resources to address them.

Environment

Forest Area % of total land area: 9.8

LIVING CONDITIONS

Living conditions vary widely, with whites earning on average far more than many of the nation's blacks—though income statistics can be misleading because many black Namibians do not take part in the cash economy, measuring their wealth in cattle rather than in dollars. About 30 percent of the nation's population live in crowded urban centers, and many have resisted government efforts to lure them back to rural areas. While about two-thirds of Namibians have radios, less than 4 percent have televisions; refrigerators, cars, electricity, and plumbing are also scarce, and there are only about six telephones per 100 people. Perhaps surprisingly, Namibia has a relatively advanced transportation system, with more miles of paved road per capita than most African nations and with 21 airports with paved runways (as well as 115 airports with unpaved runways). A large percentage of rural Namibians continue to rely on donkeys for transportation.

HEALTH

While modern medical facilities can be found in Windhoek, most of the population relies on small local clinics or traditional healers. In general, the state of health care is poor, with life expectancy at birth under 44 years in 2005 and an infant mortality rate of nearly 50 per 1,000 live births. Annual spending per capita on health care was under \$100 in 2002. Malaria is a major problem in the moister north, with over 1,500 cases per 100,000 people in the early 2000s. But the country's biggest problem is AIDS, with an astonishing 21.3 percent of the adult population living with the disease in 2003 and 16,000 deaths from the disease that year.

 Access to Improved Water Source %: 80

FOOD AND NUTRITION

The state of nutrition is generally poor. According to UNICEF, from 1990 to 1997, 20 percent of Namibian children under the age of five were moderately underweight, with an additional 6 percent severely underweight. Some 9 percent suffered from moderate to severe wasting, and 28 percent suffered from moderate to severe stunting. While fish is a major export, Namibians have generally not consumed much of it, although in recent years the government has been trying to promote fish consumption. Dietary staples for crop farmers are sorghum and millet, while livestock farmers consume more dairy products. Few vegetables are grown and eaten. The main source of protein is beef produced by cattle farmers. Other subsistence crops include peanuts, pumpkins, and melons.

Food and Nutrition

Undernourished % of total population: 22.3
 Daily Available Calories per capita kcal: 2,600
 Amount of Cereal Available per person per year kg: 138.2
 Amount of Fruits and Vegetables Available per person per year kg: 37.1

STATUS OF WOMEN

The constitution provides for universal suffrage, and improving sex equity is a stated continuing goal of the national government, which has taken great strides to make women equal in the eyes of the law. Still, lingering gender discrimination is widespread. For instance, married women have few property rights. The unemployment rate among women is twice that of men, and many women in the workforce face inequity in pay and promotion. Of the 72 members of the National Assembly, only six were women in the late 1990s, but that situation steadily improved until in 2005, 25 percent of the National Assembly consisted of women and an impressive 42 percent of local government officials were women. The racial divide also compounds problems, as white females tend to have a greater range of opportunities.

 Seats Held in Parliament by Women %: 25
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.04
 Women's Share of Wage Employment Non-agricultural %: 50.8

WORK

In 2004 Namibia's labor force consisted of about 840,000 workers; the nation is legitimately concerned that the AIDS epidemic is wiping out much of the young adult labor force. About 47 percent of the population makes its living through agriculture, much of it subsistence farming, and in 2004 agriculture contributed just 11.3 percent to the GDP. An additional 20 percent of the workforce is employed in industry, 33 percent in services. The unemployment rate in 1998 was 35 percent, but this figure is of limited usefulness because many Namibians do not take part in the cash economy and have resisted government encouragement to turn away from traditional self-reliance to engage in commercial ranching and beef export.

Employment and Labor

Labor Force Total: 840,000
 Female Participation Rate %: 41.7
 Labor by Sector %:
 Agriculture: 47
 Industry: 20
 Services: 33
 Unemployment %: 35.0

EDUCATION

Since independence the government has worked to make education free and open for children up to 16 years of age. The nation has one of the lowest student-teacher ratios in all of Africa, but many teachers lack full qualification in English, which is the language of instruction. Higher education is provided by an academy and four teacher colleges.

The government has initiated informal local programs to improve literacy. A full 84 percent of the adult population is literate, women virtually as much so as men. In 2002 over 78 percent of primary-school-aged children were enrolled in school, while the enrollment ratio for secondary-school students was over 44 percent.

Education

SCIENCE AND TECHNOLOGY

The University of Namibia, the nation's only tertiary institution, was founded in 1992, and one of its primary goals is to provide professionals with the technical skills to needed to build the nation's commercial infrastructure. Scientific research at the university emphasizes applied sciences such as agriculture, forestry, fishing and marine science, natural resources management, health and nutrition, and the environment.

MEDIA

The Namibian press is one of the most free in southern Africa. There are four major daily newspapers, three in English and one in Afrikaans; their circulation is limited, however. There are two radio stations and one official television station. Many Namibians are able to access radio and television stations, including satellite programming, from South Africa. As of 2003 there were 65,000 Internet users in Namibia.

 per 1,000: 38

CULTURE

Prior to independence, much of Namibia's culture was influenced by European styles and tastes. After the nation achieved independence, the government grew concerned that the nation's tribal traditions might disappear, so it appointed cultural preservationists, who travel about the country and record art, music, history, indigenous tales, and oral culture. Many Namibians produced crafts; among the most prominent artisans are the Ovambo, known for their basketry, and the Kavango, known for wood carvings. The nation's various ethnic groups sponsor dance troupes that perform at various festivals, and the National Theatre of Namibia performs musical and theatrical works written by Namibians and artists from other nations.

 Annual Attendance: —

FOLKLORE AND MYTHOLOGY

Many of Namibia's heroic figures achieved their status through resistance to colonialism. In the 19th century an Ovambo named Madume Ndemufayo became a hero through his opposition to both the Portuguese and the Germans; he was ultimately captured and killed by the Germans. The Herero, too, resisted the Germans but were ultimately driven onto barren reservations, and as many as 75 percent of them were killed; Herero culture passes down various stories of heroic resistance to the Germans. Because much of the nation is arid, water has played a major role in folklore. Among the Ovambo, for example, the ability to control water and water supplies was traditionally regarded as divinely ordained, and church bells, for example, were thought of as signals to God to send water. The Namibia Oral Tradition Project has published such books as *The Secret of the Crocodile and Other Animal Stories from Namibia* and *The Tortoise Who Saw the World and Other Tortoise Stories*.

ENTERTAINMENT AND RECREATION

Many young Namibians enjoy American popular culture, including action films, singers such as Michael Jackson, and sports stars such as Shaquille O'Neal. Also popular

is South African "jive" music from such performers as Mahlathini and the Mahotella Queens, Yvonne Chaka Chaka, and Lucky Dube. The nation's many local and regional festivals provide opportunities for dancing.

ETIQUETTE

Greetings tend to be formal and elaborate. While the most common form of greeting is the handshake, among some ethnic groups women and young people bend their knees to older men, and the Caprivians clap their hands when greeting one another. In general, Namibians tend to be restrained in public, and displays of affection are discouraged. An interesting feature of Namibian etiquette is the place of the hug. During the years of SWAPO resistance, the hug became a kind of secret symbol of resistance among fighters. After independence, public hugging was discouraged, but the hug has persisted as a symbol of solidarity and opposition to apartheid.

FAMILY LIFE

A common Namibian joke tells of a man who died and left his wife only his belt, the punch line disclosing that the wife always wore the pants in the family anyhow. The joke reflects the extent to which women have traditionally reigned over family life; an estimated 45 percent of families in some ethnic groups are headed by women. The nuclear family is not the norm; most families contain at least some members of an extended family. Kinship groups are important, and they can be patrilineal, matrilineal, or bilateral, depending on the ethnic group. These kinship groups provide important social and economic networks; their members often jointly own property and run religious and political affairs. The ability of kinship groups to support their members has been strained in recent years by the AIDS epidemic.

PERSONAL APPEARANCE

Most Namibians, especially those in the cities, wear Western-style dress. Some ethnic groups, however, retain traditional clothing; the Himba, for example, wear leather thongs or skirts and rub a reddish pigment derived from iron ore over their bodies. Herero women continue to wear fashions imported from 19th-century Germany, including shawls, headdresses, and gowns with petticoats.

SPORTS

As in most of Africa, soccer is the most popular sport, and from an early age Namibian children will play soccer

with any type of ball they can find—or make. Namibians also excel at track and field, which they refer to as “athletics,” and in the 1996 Summer Olympics in Atlanta, the Namibian Frankie Fredricks won silver medals in the 100- and 200-meter races.

CHRONOLOGY

- 1920** South-West Africa is mandated to South Africa by the League of Nations, with the goal of eventual independence.
- 1945** First attempts are made to compel South Africa to adhere to its mandate and allow self-determination for South-West Africa.
- 1950** The International Court of Justice rules that South-West Africa should remain under an international mandate.
- 1958** SWAPO is founded.
- 1966** The United Nations terminates South Africa's mandate over South-West Africa. South Africa ignores UN action and extends apartheid laws to South-West Africa. SWAPO begins armed struggle.
- 1968** The United Nations changes the name of the territory from South-West Africa to Namibia.
- 1973** The United Nations recognizes SWAPO as the sole legitimate representative of the Namibian people.
- 1975** South African troops invade Angola.
- 1978** The DTA wins elections boycotted by SWAPO, and a South African-backed internal government is established. The UN Security Council adopts Resolution 435, which calls for full Namibian independence.
- 1988** A tripartite agreement between Angola, Cuba, and South Africa initiates implementation of Resolution 435.
- 1989** UN-sponsored elections are held. SWAPO wins majority in Constituent Assembly, which drafts a new constitution.
- 1990** New constitution is adopted. Sam Nujoma is elected the country's first president. Constituent Assembly becomes National Assembly.
- 1994** Nujoma is reelected president. South Africa transfers control of Walvis Bay to Namibia.
- 1998** Namibia contributes peacekeeping forces to the Republic of the Congo.
- 1999** Nujoma wins a third presidential term. The World Court rules against Namibia in its territorial dispute with Botswana.

- 2002** The new prime minister, Theo-Ben Gurirab, says land reform is a priority, and Nujoma urges white farmers to accept land reform programs.
- 2003** A union representing black farmworkers abandons plans to invade 15 white-owned farms after reaching an agreement with white farmers' group.
- 2004** A bridge across the Zambezi River between Namibia and Zambia opens, raising hopes of increased regional trade. Germany formally apologizes for the colonial-era killings of thousands of Herero but rules out compensation for victims' descendants.
- 2004** Hifikepunye Pohamba, President Nujoma's nominee, wins presidential elections.
- 2005** Nahas Angula is appointed prime minister.

NAURU

Basic Fact Sheet

OFFICIAL NAME

Republic of Nauru (Republik Naoero)

ABBREVIATION

NR

CAPITAL

None. The seat of government is in the district of Uaboe, while government offices are in the district of Yaren.

HEAD OF STATE & HEAD OF GOVERNMENT

President Ludwig Scotty (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

13,048 (2005)

AREA

21 sq km (8.1 sq mi)

ETHNIC MAJORITY

Nauruan

LANGUAGES

Nauruan (official), English

RELIGION

Christianity

UNIT OF CURRENCY

Australian dollar

NATIONAL FLAG

A blue field divided horizontally by a narrow gold band, symbolizing the equator. Below the band is a white 12-pointed star to the left.

NATIONAL EMBLEM

An oval crest is wreathed by palm fronds and ritual objects made of sharks' teeth and frigate bird feathers, with a 12-pointed star and the name Naoero on the top and the national motto, "God's Will First," at the bottom. Within the oval are a triangle surmounted by a cross, the alchemists' symbol for phosphorus; a frigate bird; and a sprig of tomano, a tropical plant.

NATIONAL ANTHEM

"Song of Nauru"

NATIONAL HOLIDAYS

January 31 (National Day, Independence Day), May 17 (Constitution Day), October 23 (Angam Day), various Christian festivals, including Christmas, Boxing Day, and Good Friday

DATE OF INDEPENDENCE

January 31, 1968

DATE OF CONSTITUTION

January 29, 1968

GEOGRAPHICAL FEATURES

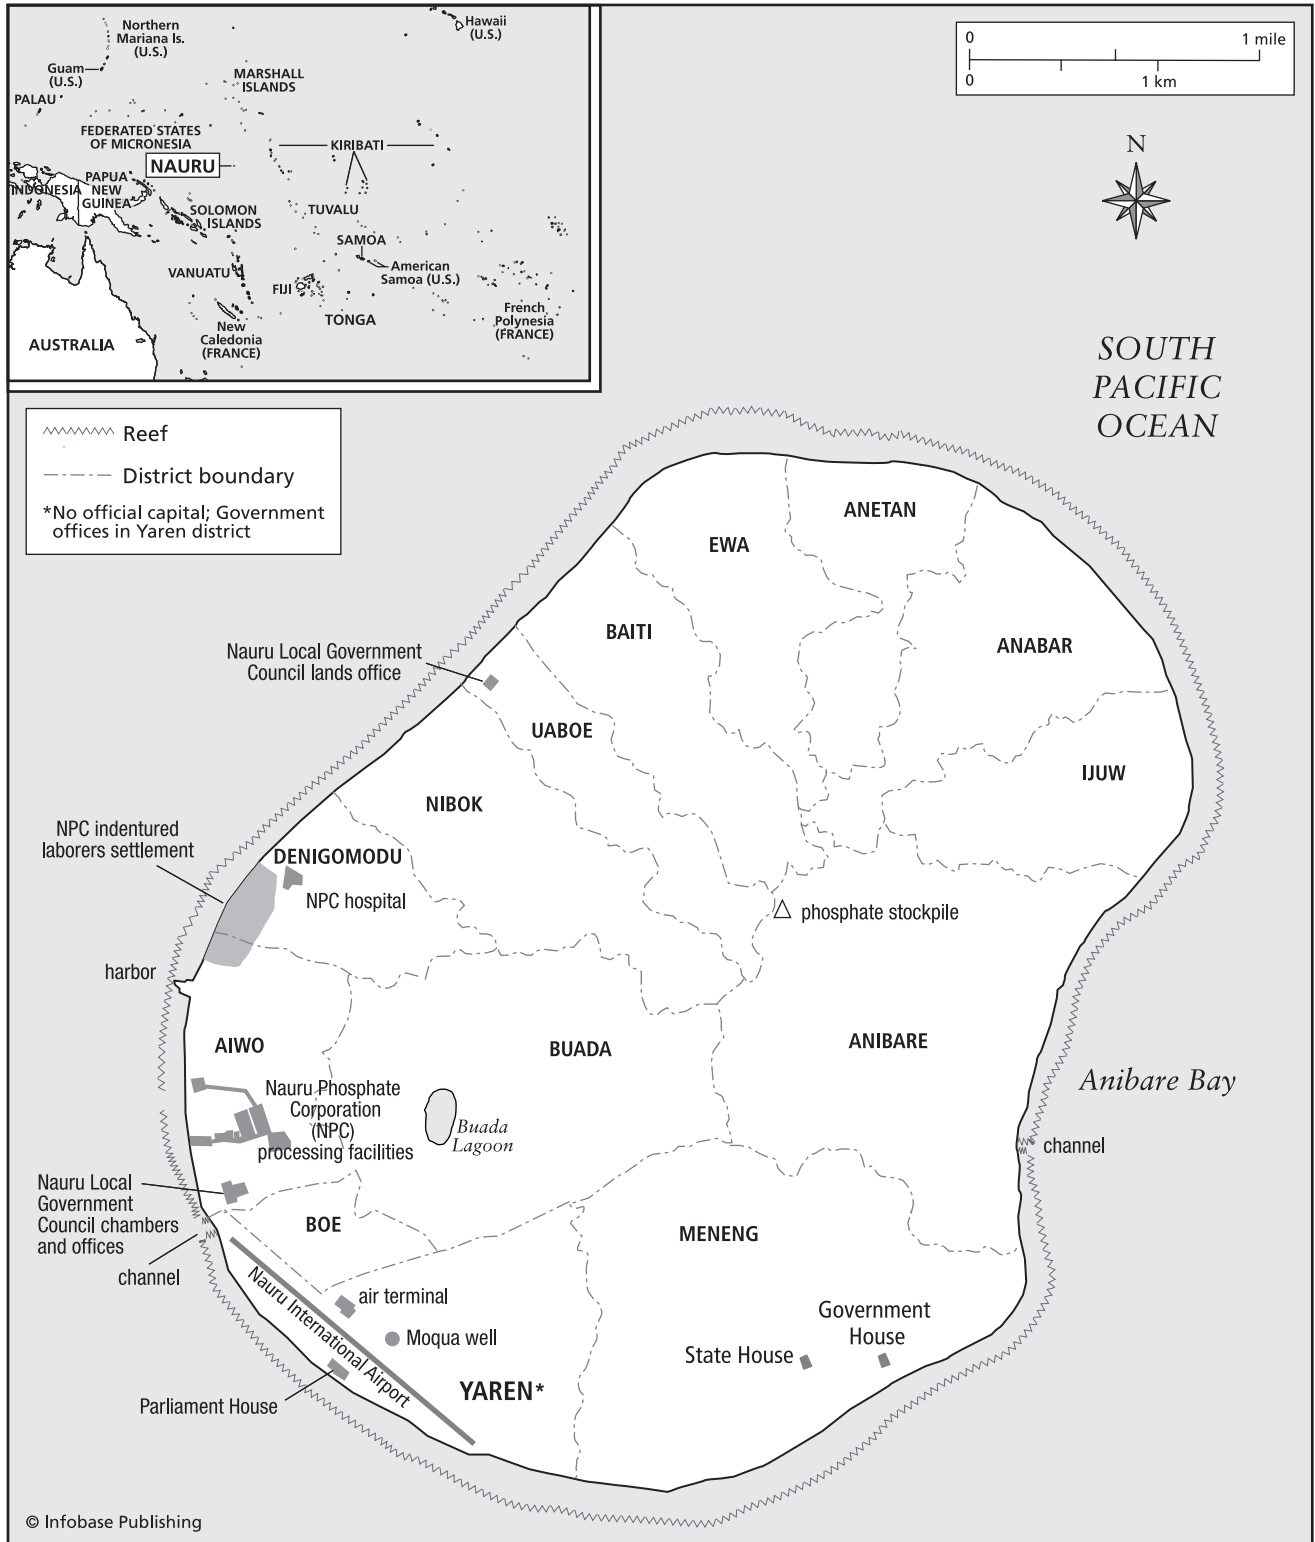

Nauru is an oval-shaped island in the western-central Pacific 53 km (33 mi) south of the equator, 3,539 km (2,200 mi) northeast of Sydney, and 3,934 km (2,445 mi) southwest of Honolulu. Nauru is the smallest nation in Asia, with an area of 21 sq km (8.1 sq mi). Its coastline stretches 30 km (18.6 mi).

The island is encircled by a sandy beach, which rises gradually to a fertile section no wider than 275 m (300 yd). A coral cliff rises from this belt to a central plateau about 60 m (200 ft) high. A brackish lagoon, known as Buada, covers some 121 ha (300 a) at the southeastern end of the plateau.

-------	-------

CLIMATE AND WEATHER

Nauru has a tropical climate, with a dry season from March to October and a wet season from November to February. The temperature in the shade ranges from 22.8°C (73°F) to 33.9°C (92°F). The average annual rainfall is only 45 mm (1.8 in), but the range of annual variation is great; in some years the annual rainfall is 10 times normal, while years with droughts are also common.

Climate and Weather

Mean Temperature: 73°F to 93°F
Average Rainfall: 18 in

FLORA AND FAUNA

As a small island that has been extensively mined, Nauru offers little in the way of flora and fauna. The central raised plateau, called “topside,” is sparsely vegetated, but the coastline and lagoon area have lush vegetation, including pandanus, coconuts, tomano trees, banyan trees, and frangipani. Marine species of interest include whales, sea turtles, dugongs, and saltwater crocodiles. The island is known for its numerous bird species, including the great frigate bird (the country’s national symbol), the Micronesian imperial pigeon, the Nauru reed-warbler, the white tern, the black noddy, the brown noddy, the wandering tattler, and the reef heron.

POPULATION

Population Indicators

Total Population 2005: 13,048
World Rank: 191st

ETHNIC COMPOSITION

In 2005 the population included 58 percent indigenous Nauruans, 26 percent Pacific Islanders—including Tuvaluans and Kiribatians—8 percent Chinese, and 8 percent Europeans. Nauruans are a mixture of the three primary Pacific racial groups: Micronesian, Melanesian, and Polynesian.

LANGUAGES

Nauruan is the official language, although English is used widely in government and the school system. The origin of Nauruan has not been determined by linguists. Nauruan syntax and vocabulary have no relationships to either Polynesian or Melanesian. The nation’s Department of Education is compiling the first-ever Nauruan dictionary.

RELIGIONS

Nearly all Nauruans are professed Christians. About two-thirds are Protestant and the remainder Roman Catholic.

Religious Affiliations

Protestant	8,700
Roman Catholic	4,300

HISTORICAL BACKGROUND

Little is known about the Polynesian inhabitants of the island before the 1798 arrival of British Capt. John Fearn of the whaling ship *Hunter*. From the 1830s to the 1880s Nauru was a haven for a succession of white beachcombers—primarily runaways, convicts, and deserters. Following the partition of the western Pacific into German and British zones of influence, Nauru came under German rule, and it remained so until occupied by an Australian expeditionary force in 1914. At the close of World War I, Nauru became a League of Nations mandate, administered jointly by Australia, New Zealand, and Great Britain under an Australian-appointed administrator. The Japanese came to occupy the island in 1942 and in the ensuing three years virtually devastated it. Two-thirds of the population was deported to Truk, a small atoll in the Federated States of Micronesia 1,609 km (1,000 mi) northwest of Nauru, and all mining facilities and houses were destroyed.

Australian forces reoccupied Nauru in 1945, and the Nauruans in Truk were repatriated to their homeland. In 1947 the island became a Trust Territory of the United Nations, administered by the former mandatory

powers. A system of progressive self-government introduced in 1927 culminated in the establishment of a local governing council in 1951 and an elected legislature in 1966. Full political independence came in 1968 with the establishment of a republic, and economic independence came in 1970 with the nationalization of the British Phosphate Commission, a three-man board that owned and operated Nauru's only natural resource, its vast phosphate mines.

Nauru's political life has been characterized by government instability. At independence the Parliament elected as president Hammer DeRoburt, who had been head chief since 1956. He was reelected in 1971 and 1973. Dissatisfied by DeRoburt's increasingly personal rule, the Parliament elected Bernard Dowiyogo president in 1976. Dowiyogo resigned in January 1978 because of a budgetary deadlock, only to be immediately reelected; however, he resigned again in April after the defeat of a bill dealing with phosphate royalties. His successor, Lagumot Harris, resigned three weeks later as a result of an impasse over an appropriations bill.

Harris was replaced by former president DeRoburt, who then won reelection in 1978, 1980, and 1983. He was forced to resign for 10 days in October 1986, during which Kennan Adeang served as president, and for four days following an election that December. DeRoburt was sworn in for a ninth term in 1987. Two years later he was removed by a vote of no confidence and replaced by his biological son Kenas Aroi. Aroi resigned on the ground of ill health in December 1989. During the 1990s Nauru had six presidents: Bernard Dowiyogo, who succeeded Aroi, Lagumot Harris, Kennan Adeang, Reubun Kun, Kinza Clodumar, and René Harris. The typically short presidential tenure reflects the high degree of political partisanship in the Parliament. Nauru became a member of the United Nations in 1999.

In 2001 and 2002 relations with Australia became strained after Australia paid Nauru to hold asylum seekers trying to enter Australia illegally. By 2002 Nauru was holding one thousand such persons, and President Harris accused Australia of violating its promise to deport them. Meanwhile, internal political instability persisted. In January 2003 Dowiyogo was again elected president; he agreed to U.S. demands that Nauru end money-laundering activities and gain control of offshore banking, but just two months into his term he died. In 2003 Ludwig Scotty was elected president, but after a vote of no confidence René Harris was again elected. After the nation defaulted on its loan payments, Harris himself lost a vote of no confidence and resigned, to be replaced by Ludwig Scotty in 2004. A month later Australia seized control of Nauru's finances, and two months afterward Scotty disbanded parliament for failing to pass a reform budget. Scotty was reelected, unopposed, in October 2004.

2003	Bernard Dowiyogo
2003	Derog Gioura
2003	Ludwig Scotty
2003–04	René Harris
2004–	Ludwig Scotty

CONSTITUTION

Nauru is the smallest independent republic in the world. The constitution of 1968 provides for a parliamentary government. The constitution restricts citizenship to those of Nauruan or other Pacific Islander descent; this is a subject of special importance because short-term migrants constitute over half the population. The constitution also defines Nauru's relationship with the British Commonwealth, which is that of a partial member attending all meetings except prime ministers' meetings. The president is the head of state, head of government, and chief minister of the cabinet. He is elected by Parliament from among its members for a three-year term that corresponds to that of Parliament. Although he wields broad powers, the constitution does not require his assent to parliamentary bills, which become law under the speaker's signature. The president is assisted by a five-member cabinet, which he appoints.

The constitution provides for a Supreme Court, which has original and appellate jurisdiction. Cases therein may be appealed to the High Court of Australia.

PARLIAMENT

The unicameral Nauruan Parliament consists of 18 members popularly elected for three-year terms. The speaker of Parliament has the right to certify bills into law.

Suffrage is universal for all citizens over 20 years of age, and voting is compulsory.

POLITICAL PARTIES

Nauru has three political parties: the Democratic Party of Nauru, which was founded in 1975; the informal Nauru Party; and the Nauru First (Naoero Amo) Party. In the 2003 elections Nauru First won three seats; the remaining 15 seats were won by independents.

LOCAL GOVERNMENT

For the purposes of local government, Nauru is divided into 14 districts: Boe, Aiwo, Anabar, Ijuw, Anibare, Anetan, Ewa, Buada, Denigomodu, Nibok, Uaboe, Baiti, Meneng, and Yaren. Nauruans place a great deal of emphasis on district affiliation, and it is expected that each person take part in district affairs.

Nauru's local government councils are elected from the same constituencies as is Parliament, except that seven constituencies return 14 members to Parliament, while Ubenide (Uaboe, Baiti, Nibok, and Denigomodu combined) returns four members to Parliament.

LEGAL SYSTEM

The legal system is based on English common law. The judicial system consists of the Supreme Court as the highest court of the land, the Central Court as the superior court of record, and the District Court, presided over by the resident magistrate. The chief justice presides over the Supreme Court, which exercises both original and appellate jurisdiction. The resident magistrate also acts as coroner under the Inquests Act of 1977. The Supreme Court and district courts are courts of record. The Family Court consists of three members, one being the resident magistrate, serving as chairman; the two other members are drawn from a panel of Nauruans.

A small compound in the southwestern corner of the island serves as a local jail.

HUMAN RIGHTS

Fundamental human rights are provided for in the constitution, and the government generally respects them in practice. The judiciary is independent, but most cases are settled out of court by traditional arbitration. There are only two trained lawyers on the island. The country has no print media, and the sole publication is a government bulletin. The sole radio station is run by the government.

FOREIGN POLICY

Nauru maintains formal diplomatic relations with only a dozen foreign governments, mainly through representa-

tives accredited to Australia and Fiji. For many years its resident diplomatic community consisted only of a Taiwanese consul general. Its principal international links are with the Commonwealth and the United Nations, of which it became a member in 1999.

In 1992 Nauru joined Kiribati, Tuvalu, and the New Zealand dependencies of the Cook Islands and Niue to form a group called the Small Island States, through which are addressed a number of common concerns, including air-space and fishing rights in exclusive economic zones. Nauru has strongly opposed France's nuclear testing program at Mururoa Atoll.

DEFENSE

Nauru has no standing army or other defense forces. The country has an informal agreement with Australia providing for defense.

ECONOMY

In the past Nauru was one of the higher-income countries of the world, maintaining a free-market economy in which the dominant sector is private. The economy has been based almost completely on phosphates, the reserves of which were largely exhausted by the beginning of the 21st century. There are few other resources and, as the topsoil has been depleted as a result of mining, almost no agriculture.

Indeed, phosphates gave Nauruans one of the highest standards of living in the world; virtually the entire gross domestic product (GDP) was received from the phosphate mines. In anticipation of the exhaustion of Nauru's phosphate deposits, substantial amounts of phosphate income were invested in trust funds to help cushion the transition and provide for Nauru's economic future. The government has borrowed heavily from the trusts to finance fiscal deficits, however, and such spending has virtually bankrupted the government. To cut costs, the government has called for a freezing of wages, a reduction of overstuffed public service departments, the privatization of numerous government agencies, and the closure of some overseas consulates. The government has also diversified into shipping, fishing, and tourism.

In recent years Nauru has encouraged the registration of offshore banks and corporations, with tens of billions of dollars channeled through such accounts. Few comprehensive statistics on the Nauruan economy exist, with estimates of per capita GDP varying widely; the U.S. Central Intelligence Agency put total GDP at \$60 million in 2001. In general, Nauru has neither sought nor received any foreign aid, though in 2000 the nation's fiscal crisis forced it to accept \$2.25 million from Australia in addition to some \$5 million from other countries.

ENVIRONMENT

While the overall population of the tiny country of Nauru is declining, the management of waste is a major concern, as groundwater is threatened with contamination. Additionally, deforestation and the increased use of agrochemicals are threats. The country has suffered from the environmental impact of phosphate mining, which has left the island's interior a virtual wasteland. The government has pledged to restore the interior and return the nation to its former status as "Pleasant Island"—which was, in fact, the official name—but there is virtually no revenue with which to do so.

LIVING CONDITIONS

Living conditions are in a state of transition. Nauruans formerly enjoyed a high standard of living and a high per capita income thanks to phosphate mining and the Nauru Trust funds established to provide for housing, education, health care, and the like. By the beginning of the 21st century, however, phosphates were essentially depleted, government revenues were down, the trust funds were being used to pay debts, and the government had cut back on services. Nearly all Nauruans live in the narrow coastal strip and around Buada Lagoon; because of the environmental damage caused by mining, little of the island's interior is usable, and there is virtually no arable land. The cost of living is high because the nation has to import virtually everything, including food. A few Nauruans are wealthy because of offshore accounts, but in general they do not flaunt their wealth.

HEALTH

In 2004 life expectancy at birth was just over 62 years, while the infant mortality rate was just under 10 per 1,000 live births. The island formerly had two hospitals, one a government-run facility for Nauruans and the other for contract phosphate workers, but the two amalgamated in 1999. Three major health problems afflict Nauruans: One is the high rate of alcohol abuse, especially among younger people; drunk driving is the leading cause of death on the island. The second is obesity, giving rise to diabetes, heart disease, hypertension, and other disorders. The third is smoking; Nauru ranks first in the world in the percentage of adult female smokers, 10th in the percentage of adult male smokers, and first in the world overall.

FOOD AND NUTRITION

Nauru imports nearly all of its food; the only exception is fish, which is supplied primarily by Kiribati fishermen. The basic staple is rice, although Nauruans have been able to purchase a wide range of supermarket foods, including such items as American breakfast cereals. It is common to find supermarket shelves virtually empty until the next shipment of imported food arrives.

STATUS OF WOMEN

Generally, spousal abuse and related incidents are settled by the extended family or by village elders, rather than

by official agencies. Equal opportunities are afforded to women in education and employment, and women are free to own property; in fact, the nation's matrilineal society gives preference to women in inheritance, and sons who inherit have to obtain permission from the extended family before passing property to their children. A woman's development officer in the government assists women in professional development. There were no female members of Parliament as of 2005, though women have served in the past.

WORK

Virtually the entire population of Nauru has been involved in the phosphate-mining industry, which provided nearly all of the nation's GDP. The only real exceptions were a tiny coconut industry and fishing done by the Kiribati Pacific Islanders, many using tame frigate birds or bows and arrows to catch fish. With the depletion of the mines, the government has been encouraging alternative economic sectors, including tourism, shipping, and banking.

EDUCATION

Education is free, universal, and compulsory for 10 years, from ages six to 16. Schooling lasts 11 years, as divided into seven years of primary school and four years of secondary school. The Roman Catholic Church runs a few mission schools.

The academic year runs from February to December. The language of instruction is English throughout.

Higher education overseas, mainly in Australia, is encouraged by the government in the form of scholarships. The University of the South Pacific Extension Centre offers opportunities for higher education on Nauru.

MEDIA

The only newspaper published on the island is a weekly official bulletin with a circulation of 750. There is no national news agency. No books are published locally. There is a small lending library containing a few thousand books.

The state-owned Nauru Broadcasting Service is on the air for 42 hours a week, through one medium-wave transmitter, offering programming from Australia and the BBC. Nauru Television (NTV) is government owned and broadcasts New Zealand programming sent by satellite or on videotape. There are two fixed cinemas, with 800 seats.

CULTURE

Nauruans maintain a strong sense of national identity. For example, citizenship as a Nauruan can be claimed only by someone with a Nauruan mother; one born to a Nauruan father and a mother of a different nationality can be registered as a Nauruan only with special permission. The nation's Department of Education attempts to preserve the cultural past, recording Nauruan history and compiling a Nauruan dictionary. Writers are encouraged in their efforts through the University of the South Pacific Extension Centre. Throughout Micronesia, including in Nauru, music has always had a special cultural place, with long traditions of vocal music accompanied by gestures, dance, and percussion instruments.

FOLKLORE AND MYTHOLOGY

Of particular importance to Nauruans is Angam Day, translated as “Day of Fulfillment” or “Homecoming Day.” In the 1920s Nauru lost much of its population to a flu epidemic; only 1,068 people were left. It was decided that 1,500 people were the minimum necessary to preserve the Nauruan people. On October 26, 1932, a girl named Eidegenegen Eidagaruwo was born, restoring the population to 1,500. The population found itself perilously depleted again after World War II, and a second Angam Baby was born on March 31, 1949. Angam Day, October 26, remains a time of great rejoicing for when the nation has pulled back from the brink of extinction.

Indigenous folklore is similar to folklore found through Micronesia, emphasizing gods and goddesses who represent the natural order of the world and explain its creation.

ENTERTAINMENT AND RECREATION

Movies and now television are major forms of entertainment. Most movies and programming come from Australia, New Zealand, and the United States, and much of it is out of date. Traditional feasts are common, and the

people take part in a variety of sports, including snorkeling and fishing.

ETIQUETTE

Because of the nation's historical connection with Australia, interpersonal norms, especially in public life, tend to reflect Australian customs. Since Nauru is a Christian country, prayers are a feature of many gatherings. Although they are indulged—as the birth of a child was a major event twice in Nauruan history—young people are supposed to show great deference to elders, and mothers hold a special place in the nation's matrilineal culture.

FAMILY LIFE

As Nauru is a matrilineal society, each person belongs to a kinship group descended from the mother; clan affiliation is noted on public birth certificates. Marriage partners are selected from different clans. While the nominal head of the household is the father, the mother is the main decision maker. While both sons and daughters can inherit property, only the daughters can independently in turn bequeath property to their children; sons need to obtain the consent of the extended family to do so. Also important to Nauruans are their political districts, which are inherited, though they can be changed. Each person is obligated to take part in the political and social affairs of his or her district.

PERSONAL APPEARANCE

Most Nauruans have adopted Western-style clothing, although some wear traditional dress on ceremonial occasions; Pacific Islanders can still be seen wearing grass skirts, usually over shorts, and carved ornamental accessories.

SPORTS

To overcome widespread obesity, the government is encouraging physical activity. Most sporting activities revolve around the water, such as with fishing, scuba diving, and snorkeling. Tennis has also grown in popularity, and the island has a nine-hole golf course. Traditional forms of competition included kite flying and singing and dancing, with teams organized according to clan.

CHRONOLOGY

1968 Nauru is granted full independence, with Hammer DeRoburt as president.

- 1970** Nauru takes over the British Phosphate Commission, owner of the island's phosphate mines.
- 1976** DeRoburt is replaced as president by Bernard Dowiyogo.
- 1978** President Dowiyogo is replaced by Lagumot Harris and later by Hammer DeRoburt.
- 1982** Nauru signs the South Pacific Regional Trade Agreement.
- 1983** DeRoburt is redesignated president.
- 1986** DeRoburt resigns for 10 days, during which Kennan Adeang serves as president.
- 1987** DeRoburt is again sworn in as president. Kennan Adeang forms the Democratic Party of Nauru.
- 1989** DeRoburt resigns as president and is replaced by Kenas Aroi. In December Aroi resigns and is succeeded by Bernard Dowiyogo, who forms his second government.
- 1990** President Dowiyogo takes a high profile at the meeting of the South Pacific Forum, arguing strongly that chemical weapons should not be detonated in the Pacific at Johnston Atoll because of the South Pacific Nuclear Free Zone Treaty.
- 1993** Australia agrees to pay for environmental damage caused by mining operations.
- 1997** New Zealand and the United Kingdom also offer compensation for mining operations.
- 1997** Kinza Clodumar is elected president.
- 1998** Bernard Dowiyogo is elected president for the third time.
- 1999** Nauru joins the United Nations.
- 2000** International pressure is put on Nauru's banking system to cooperate in the fight against money laundering.
- 2001** Australia pays Nauru to hold asylum seekers picked up trying to enter Australia illegally.
- 2003** Dowiyogo becomes president after a power struggle with René Harris.
- 2003** Dowiyogo accedes to U.S. demands to clean up Nauru's offshore banking industry, but shortly thereafter he dies.
- 2003** Ludwig Scotty is elected president, but he loses a vote of no confidence; in August, René Harris is reelected as president.

- 2004** Nauru defaults on its debts, and its assets are placed in receivership in Australia. In June, Harris resigns after a vote of no confidence, and Ludwig Scotty is elected president. Australia takes control of Nauru's state finances. President Scotty disbands parliament after it fails to pass a reform budget. Ludwig Scotty is reelected unopposed in general elections in September.

NEPAL

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Nepal (Nepal Adhirajya)

ABBREVIATION

NP

CAPITAL

Kathmandu

HEAD OF STATE

King Gyanendra Bir Bikram Shah Dev (from 2001)

HEAD OF GOVERNMENT

Prime ministry vacant

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

27,676,547 (2005)

AREA

140,800 sq km (54,363 sq mi)

ETHNIC MAJORITY

Nepali

LANGUAGE

Nepali (official)

RELIGIONS

Hinduism, Buddhism

UNIT OF CURRENCY

Rupee

NATIONAL FLAG

Two vertically stacked red right triangles edged with blue—the shorter upper triangle overlapping the peak of the taller lower triangle—bearing white emblems representing the moon (top) and sun

NATIONAL EMBLEM

The main elements of the national emblem are the national flower, the rhododendron; a white cow; a green pheasant; two Gurkha soldiers, one carrying a kukri and a bow and an arrow and the other a modern rifle; peaks of the Himalaya Mountains; the moon and the sun, both with faces showing Hindu caste marks; two crossed Nepali flags and kukris; the footprints of Gorakhnath, the guardian deity of the Gurkhas; and the royal headdress. At the base of the design a red scroll carries the national motto in Sanskrit: “The Fatherland Is Worth More Than the Kingdom of Heaven.”

NATIONAL ANTHEM

“May Glory Crown Our Illustrious Sovereign”

NATIONAL HOLIDAYS

National Day, Birthday of the King, January 11 (Prithvi Jayanti), February 18 (Independence Day), various Hindu and Buddhist festivals, primarily on lunar calendar

DATE OF INDEPENDENCE

1775

DATE OF CONSTITUTION

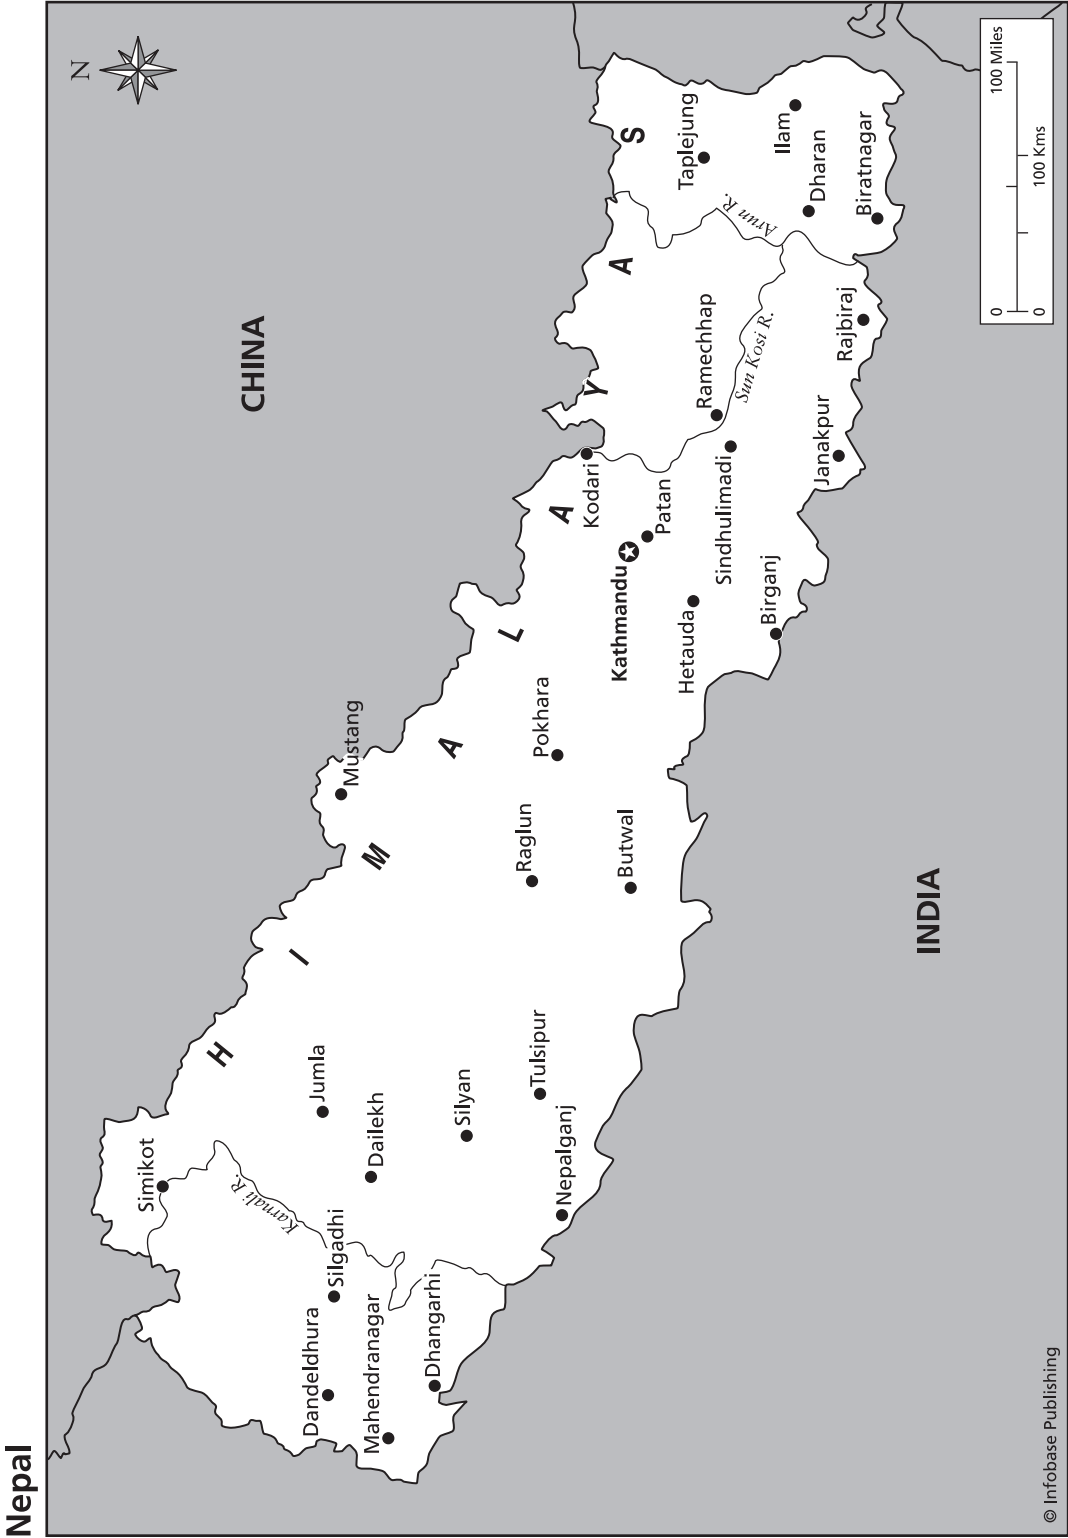

November 9, 1990

GEOGRAPHICAL FEATURES

Nepal lies in southern Asia along the southern slopes of the Himalaya Mountains. A landlocked country about 885 km (550 mi) long and 201 km (125 mi) wide, it has two neighbors, India and China, the largest nations in Asia. The total length of its border is 2,926 km (1,818 mi), of which the border with China is 1,236 km (767 mi) and that with India 1,690 km (1,049 mi).

Nepal has three main topographical regions: the high mountains of the main Himalayan range, covering one-third of the country; Kathmandu Valley; and the Tarai, a

narrow belt that extends along the boundary with India in the south. The complex mountain mass in the north contains some of the world's highest peaks, including Mount Everest (8,850 m; 29,028 ft), Mount Lhotse (8,500 m; 27,890 ft), Mount Makalu (8,480 m; 27,824 ft), Mount Cho Oyu (8,189 m; 26,867 ft), Dhaulagiri (8,172 m; 26,813 ft), and Annapurna (8,077 m; 26,502 ft). To the south, less than 60 km (37 mi) from the icy heights, is the narrow, flat belt of alluvial land 45–182 m (150–600 ft) above sea level known as the Tarai. In some places the Tarai is less than 80 km (50 mi) wide. On the northern border of the Tarai are tertiary ranges known as the Si-

Nepal

1698 Nepal

walik Hills and secondary ranges known as Mahabharat Lekh. Kathmandu Valley is a circular basin only 564 sq km (218 sq mi) in area north of the central Tarai.

The entire country is drained by three river systems: the Kosi and its seven tributaries in the east; the Narayani, or Gandak, in the center; and the Karnali, or Gogra, in the west.

CLIMATE AND WEATHER

Nepal's climate ranges from subtropical summers and mild winters in the south to cool summers and severe winters in the northern mountains. In the Tarai and Kathmandu Valley there are three seasons: hot, rainy, and cold. The hot season lasts from May to June, the rainy from July to September, and the cold from October to April. In January, the coldest month, average daily temperatures range between 2.2 and 17.8°C (36 and 64°F), while in the hot months they range between 26.7 and 32.2°C (80 and 90°F). The average annual rainfall in Kathmandu is about 1,520 mm (60 in). Violent thunderstorms are common.

Climate and Weather

Mean Temperature
Summer: 80°F to 90°F
Winter: 36°F to 64°F
Average Rainfall: 60 in

FLORA AND FAUNA

The forested Tarai contains khair, sissoo, and sal, the latter two a source of valuable timber. The region is home to tigers, leopards, elephants, buffalo, and various species of deer. At higher elevations vegetation consists primar-

ily of oaks, pines, rhododendrons, walnuts, poplars, and larch. At still higher elevations are found fir and birch. Just below the timberline of the Himalayas are forests of fir, spruce, juniper, cypress, and birch. Below the snow line at 14,000 feet are grassy areas. The alpine zone is home to deer, tahrs, goat antelopes, wild sheep, wolves, snow leopards, and pheasants.

ETHNIC COMPOSITION

By historical origin, linguistic connections, and religious affiliations, Nepalese may be divided into two broad ethnic categories: Indo-Nepalese and Tibeto-Nepalese. The Indo-Nepalese group, which constitutes nearly 80 percent of the population, includes the Pahari, Newar, Tharu, and Indians of the Tarai. The Pahari make up nearly half of the total population. In social organization and physical appearance, they resemble the inhabitants of northern India, though many of these features have been modified in the Nepali environment. The Newar, who make up half of the population of Kathmandu Valley, are distinctively Mongoloid in appearance but Hindu in social and religious organization, and their artistic skills have enabled them to play a dominant role in the country. The Tharu are also Hinduized as a result of long and intimate contact with the neighboring Biharese.

The Tibeto-Nepalese category, which makes up 20 percent of the population, includes a number of ethnic islands without any real sense of common identity. These groups are clustered in the northern and eastern parts of the country, where they live as subsistence farmers and stock raisers at higher altitudes.

Ethnic aliens include Indians and Tibetans, mostly refugees from Tibet. Since Nepal was closed to foreigners until 1951, aliens form, at best, a floating community.

LANGUAGES

Nepali (also called Gurkhali, Khaskura, or Parbatiya) is the official language, and its use in schools and offices has enabled it to displace minor languages. It is an eastern dialect of Pahari and is distinguished from western and central Pahari. Nepali is spoken by nearly half the population; minor languages, in descending order of prominence, include Maithili Pradesh, Newari, Tharuhati, Maithili, Magar, midwestern Tarai dialects, Rai, and Gurung, all spoken by between 2 and 6 percent of the population. Khambu, Yakha, Hayu, Limbu, and Thami belong to the Munda group of the Austroasiatic family; Gurung, Mahar, Newari, Sunwar, and Murmi belong to the Tibeto-Burman family; and Nepali belongs to the Indo-European group. Newari and Pahari show strong Sanskrit influence. Only Pahari and Newari have any literature of their own.

Tibetan is spoken by the Bhotias in the north, while dialects of Hindi—such as Bhojpuri, Kumaoni, and Maithili—are spoken along the southern border. English is the principal second language.

RELIGIONS

By the constitutions of 1962 and 1990 Nepal was officially proclaimed a Hindu state; about 86 percent of the population is Hindu, 8 percent Buddhist, and 4 percent Muslim.

Religious tolerance is traditional, and the constitution provides that “every person, having regard to the traditions, may profess and practice his own religion as handed down from ancient times.” However, the constitution also provides that “no person shall be entitled to convert another person from one religion to another.” The legal code provides a maximum penalty of one year in prison for any Hindu who converts to another religion and three to six years in prison for any person who seeks to proselytize a Hindu.

Religious Affiliations

Hindu	23,860,000
Buddhist	2,160,000
Muslim	1,050,000
Other	610,000

HISTORICAL BACKGROUND

Neolithic tools found in the Kathmandu Valley indicate that people were living in the Himalayan region in the

very distant past, although their culture and artifacts are only slowly being explored. Written references to the region appeared by the first millennium B.C.E., during which period political and social groupings in Nepal became known in northern India. The *Mahabharata* and other legendary Indian histories mention the Kiratas, who still inhabit eastern Nepal; some legendary sources from the Kathmandu Valley also describe the Kiratas as early rulers there, taking over from earlier Gopals or Abhiras, both of whom might have been cow-herding tribes. These sources agree that an original population, probably of Tibeto-Burman ethnicity, lived in Nepal 2,500 years ago, inhabiting small settlements with a relatively low degree of political centralization.

The period following the decline of the Licchavi dynasty witnessed little growth in the geographical or administrative power of the Nepalese state; in fact, that period is the least understood time in Nepal’s history, with only a very few inscriptional sources supplemented by dated religious manuscripts. Apparently, the Kathmandu Valley and surrounding valleys officially remained part of a single political unit, although there were struggles for the throne between different royal lineages and notable families. Donations to religious foundations have been dated to a Newari era beginning in 879, suggesting the founding of a new dynasty. Surviving records show a movement away from Sanskrit and admixtures of early Newari, the language of the Newar people in the valley.

The main influences on Nepal continued to come from Mithila or Tirhut to the south, which area intermittently came under the domination of warriors allied to the Chalukya dynasty from Karnataka, in southern India. One of their lieutenants proclaimed himself king in 1097 and founded a capital at Simraongarh in the Tarai. From there he launched raids that allowed the Chalukyas to later claim domination over Nepal without exerting a perceptible impact on Nepalese history. By the late 12th century, however, the king in Nepal was Somesvaradeva (r. ca. 1178–85), a name of Chalukya kings, indicating some degree of political contact with Indian rulers. By the end of Somesvaradeva’s reign there was evidence of mounting political chaos and fighting for the throne.

Profound changes also were occurring in the Nepalese religious system. The early patronage of Buddhism by the kings gave way to more strictly Hindu devotion, based on the worship of a variety of deities but ultimately relying on Pashupatinath, the site of one of Hinduism’s most sacred Shiva shrines. Within the Buddhist community the roles of the monks and monasteries changed slowly but radically. Early Buddhism had rested on the celibacy and meditation of monks and nuns who had withdrawn from the world in their own living complexes (*vihara*). As a more ritualistic *vajrayana* Buddhism expanded, a division grew between the “teachers of the thunderbolt” (*vajracharya*) and ordinary monks (*bhiksbu*) leading to castelike divisions and the marriage of reli-

1700 Nepal

gious teachers. Higher-ranking teachers monopolized worship in the monasteries and controlled the revenues brought in from monastic estates. Monasteries became social and economic centers, serving as workshops and apartments as well as shrines.

Among the small hill states struggling for power during the later Malla period was Gorkha, founded in 1559 by Dravya Shah in an area chiefly inhabited by Magars. Legends trace his dynasty to warrior princes who immigrated from Rajputana, in India, during the 15th century. During its early fight for existence, the house of Gorkha stayed out of the two major confederations in western Nepal. No major expansion of the kingdom occurred until the reign of Ram Shah, from 1606 to 1633, who extended his territories slightly in all directions. During the 17th and early 18th centuries Gorkha continued a slow expansion and appeared increasingly often as an ally of one or more of the three kingdoms in their quarrels with each other, giving the rulers of the hill states valuable experience in the affairs of the Kathmandu Valley. Nar Bhupal Shah (r. 1716–42) extended his lands toward the Kairang Pass in the north and Nuwakot in the east. He attempted to take Nuwakot and failed, but he did arrange the marriage of his son to the daughter of the raja of Makwanpur.

This son, Prithvi Narayan Shah (r. 1743–75), made full use of his position to achieve supreme power and was one of the great figures in Nepalese history. Following in his father's footsteps, he apparently dedicated himself at an early age to the conquest of the valley and the creation of a single state. Before going on the offensive, he traveled to Banaras, or Varanasi, to seek financial assistance and purchase armaments, thus obtaining a personal view of conditions in the outside world, especially the position of the British East India Company. On his return to Gorkha, he established a number of arsenals and trained his troops to use the more modern weapons he had obtained in India. He also arranged alliances with, or bought the neutrality of, neighboring states. Initially composed of 46 sovereign principalities, modern Nepal was founded in 1769 by the Gurkha ruler Prithvi Narayan Shah, who consolidated political power through conquest and assimilation.

From 1846 to 1951 the country was under the control of the Rana family, one of whose members always held the office of prime minister. Their autocratic rule ended in 1950, when a revolution, inspired by India's successful bid for independence, restored the power of the monarchy. The last of the Rana prime ministers resigned in 1951. A period of quasi-constitutional rule followed, until a constitution was promulgated in 1959.

The constitution provided for a parliamentary government but left true sovereignty in the hands of the king, who could dismiss the prime minister, prorogue parliament, and veto all legislation. Under the direction of Prime Minister Bishweshwar Prasad Koirala, head of the

Nepali Congress Party (NCP), the government began a program of land reform designed to give tenants greater security and redistribute some of the large Rana estates. However, tension increased between the prime minister and King Mahendra, who made no pretense of his dislike of parliamentary government and political parties. In 1960 the king, charging the government with misuse of power, staged a coup and assumed control. He jailed government leaders, suspended the constitution, and banned political parties. In 1962 a new constitution established the *panchayat*, or assembly, system, a four-tiered administrative structure headed by the king, who appointed the prime minister. Under the *panchayat* system, directly elected town and village assemblies elected members to hierarchically superior bodies.

The system encountered opposition from NCP supporters and university students. Increasing demands for political liberalization led to the resignation of two prime ministers during the 1970s and to prolonged demonstrations in 1979. That year King Birendra, who had inherited the throne from his father in 1972, announced a referendum offering a choice between the maintenance of the *panchayat* system or the institution of a multiparty system. The population voted for the latter, and in 1980 the king proclaimed several constitutional changes. A national assembly was to be chosen by direct election, and the prime minister was to be designated by the assembly, rather than by the king. In November 1990 Nepal adopted a new constitution that established a constitutional monarchy, with executive power vested in the prime minister, who was the leader of the majority party in the legislature.

In 1991, in Nepal's first multiparty general election, the NCP won control of the new House of Representatives, with Girija Prasad Koirala as prime minister; intraparty squabbles led to Koirala's resignation three years later. In the 1994 balloting the Communist Party won a plurality. A series of short-lived cabinets followed, led by Man Mohan Adhikari, Sher Bahadur Deuba, Lokendra Bahadur Chand, G. P. Koirala, and again Sher Bahadur Deuba in 2001. In 1996 Maoist rebels began a guerrilla insurgency aimed at abolishing the monarchy and establishing a people's republic. They stepped up their campaign in 2000, and thousands died in the violence.

In 2001 King Birendra and all immediate members of the royal family were murdered by Crown Prince Dipendra, who reportedly went into a drunken rage after his mother denied him his choice of marriage—to a member of the Rana clan. The king's brother, Gyanendra, then assumed the throne. That year Maoist rebels stepped up their campaign of violence, forcing the resignation of Koirala as prime minister. The new prime minister, Sher Bahadur Deuba, announced a truce with the rebels, but the truce collapsed in November 2001 and a state of emergency was declared after the deaths of hundreds of

people in violence that continued into May 2002. That month parliament was dissolved by the king over the issue of extending the state of emergency. Deuba was expelled by his party, the NCP, but continued to head an interim government. In October new elections scheduled for that year were delayed, and the king replaced Deuba with Lokendra Bahadur Chand as prime minister. Hopes for peace rose in January 2003 when a cease-fire with the rebels was declared. In May, Chand resigned as prime minister and was replaced by Surya Bahadur Thapa. In August, fighting began once again.

In May 2004 Thapa resigned as prime minister in the aftermath of weeks of street violence staged by opposition groups. The king reappointed Deuba to replace him. In August and again in December rebels blockaded Kathmandu, preventing supplies from reaching the capital city. In February 2005 the king dismissed Deuba once again, assumed executive power, and declared a state of emergency.

2001–	Gyanendra Bir Bikram Shah Dev

CONSTITUTION

Under the 1990 constitution Nepal is a constitutional monarchy, with the king as head of state and the prime minister as head of government. Executive power is vested in the prime minister, who is the leader of the majority in the 205-member parliament. The prime minister forms the cabinet, which is responsible to the legislature. Voting is the right of all citizens who have reached the age of 18. Since 1951 Nepal has been relatively free from violent changes of government, though rebel violence has led to the resignation of some government officials, including the prime minister. As of mid-2005, the office of the prime minister remained vacant.

PARLIAMENT

Under the 1990 constitution legislative power is vested in the bicameral parliament. Of the 60 seats in the upper chamber, the National Council, 35 are appointed by the lower chamber, the House of Representatives, 10 are appointed by the king, and 15 are elected by an electoral college. One-third of the members are elected every two years to serve six-year terms. All of the House of Representatives' 205 seats are filled by popular vote, the members serving five-year terms. The most recent election

was held in 1999; the king dissolved parliament in 2002, and elections scheduled for 2004 were postponed for a period of up to 12 months by the king.

POLITICAL PARTIES

Nepal is a multiparty state that is largely controlled by its left-leaning political parties. The two largest of the left-wing parties are the Communist Party of Nepal (Unified Marxist-Leninist) (CPN-UML) and the NCP. These two parties controlled 171 of the 205 seats in the house before parliament was dissolved by the king in 2002. Other parties include the National Democratic Party (NDP; also called the Rashtriya Prajatantra Party), the Nepal Sadbhavana (Goodwill) Party, and the Nepal Workers' and Peasants' Party.

LOCAL GOVERNMENT

Nepal has a unitary system of government. The country is divided into 14 zones and 75 districts, with the district as the basic unit of administration. Each zone is administered by a commissioner and assistant zonal commissioners, all appointed by the central government. At the district level the principal administrative officer is the chief district officer, formerly known as the governor, or *bada hakim*. The chief district officer also serves as secretary to the *panchayat* of each development district.

LEGAL SYSTEM

The present legal system is based on the Mulki Ain, the code of law promulgated in 1962. Among other things, the code ended discrimination based on caste and sex, permitted divorce, and abolished the death sentence except for treason.

The law provides for the right to a fair public trial in most cases (some security and customs cases excepted), and this right is usually honored. There are separate military and civilian courts. Military courts generally deal only with military personnel, but civilians may be tried in these courts for crimes involving the military. Judges are appointed by the government, and decisions in political and security cases sometimes reflect the government's view. All lower-court decisions (including acquittals) are subject to appeal, and the Supreme Court is the court of last appeal. The king may grant pardons and set aside judgments.

The judicial system consists of the Supreme Court and 15 zonal and 75 district courts. The Supreme Court is composed of a chief justice and nine judges. Judges are appointed by the monarch on the recommendation of the Judicial Council. The attorney general is assisted by three

advocates, and the zonal and district courts are provided with public prosecutors and defense advocates.

HUMAN RIGHTS

In terms of civil and political rights, Nepal is classified as a partly free country. The government generally respects citizens' human rights in many areas; however, problems remain. The police at times use unwarranted lethal force. One person is known to have died in custody as the result of torture, and the police continue to abuse detainees, using torture as punishment or to extract confessions. The police also conduct raids on newspapers suspected of having links to the Maoist rebels. The government rarely investigates allegations of police brutality or punishes police officers who commit abuses.

Prison conditions remain poor. The authorities use arbitrary arrest and detention. Lengthy pretrial detention, judicial susceptibility to political pressure and corruption, and long delays before trial remain problems. The government continues to impose some restrictions on the freedoms of expression and religion. Women, disabled persons, and lower castes suffer from widespread discrimination. Violence against women, trafficking in women and girls for prostitution, forced labor, and child labor also remain serious problems. There have been reported instances of forced child labor.

In 1996 the parliament unanimously enacted a bill providing for a permanent human rights commission with the authority to investigate human rights abuses. However, the commission had not been established as of 2005. Meanwhile, the state of emergency declared in early 2005 led to the suspension of press freedoms.

FOREIGN POLICY

Nepal is a buffer state between two rival powers, India and China, and it walks a fine line in endeavoring not to offend either. Relations with India are frequently frayed as a result of disputes regarding transit, the continued Indian military presence in the disputed Kalapani territory, and Nepal's arms purchases from China. Nevertheless, in 1996 Nepal and India signed one agreement calling for a joint hydroelectric project in the Mahakali River basin and another allowing Nepal transit rights across north-eastern India to ports in Bangladesh.

Bhutan's expulsion of illegal migrants from Nepal is the source of a dispute, which remained unsolved in 2005 despite multiple rounds of bilateral talks. In 2004 some 104,000 displaced persons from Bhutan were present in Nepal. Relations with India remained strained, as the two nations continued to dispute boundaries and India tightened its borders to stop the flow of Maoist insurgents into India.

DEFENSE

The defense structure is headed by the king as the supreme commander of the armed forces. Manpower is provided by volunteers; there is no conscription system. The strength of the armed forces is over 100,000. In 2004 the nation spent \$99 million, or about 1.5 percent of gross domestic product (GDP), on the military.

Nepal has neither an air force nor a navy. The army consists of two divisions, further composed of five infantry brigades; one parachute battalion; one palace guard brigade, including one cavalry squadron and one garrison battalion; one support brigade, including one artillery battalion, one engineer battalion, and one signals battalion; one logistics brigade, including one transportation battalion; and one air squadron. Equipment includes 16 light tanks, 25 combat vehicles, artillery, mortars, and antiaircraft guns. Nine aircraft constitute the army's aviation wing.

Nepalese Gurkhas are among the most noted martial ethnic groups in the world, and the average soldier has been described as tough, fearless, and intensely loyal. The Nepalese army has not been engaged in international military combat in modern times, but Gurkhas serve in the British, Indian, and Malaysian armies. The country's best defense, however, is not the army but the terrain, which would make it difficult for any enemy to penetrate, let alone subjugate, the nation.

Until 1969 Nepal had a mutual security agreement with India, under which it received arms and training. Britain and the United States have also provided military assistance; the latter gave \$2.4 million through 1983 in military hardware and training programs.

ECONOMY

Nepal is among the poorest and least-developed countries in the world, with 42 percent of its population living below the poverty line. Agriculture is the mainstay of the economy, providing a livelihood for over 80 percent of the population and accounting for 40 percent of GDP. Industrial activity mainly involves the processing of agricultural produce, including jute, sugarcane, tobacco, and grain. The production of textiles and carpets has expanded recently, accounting for about 80 percent of foreign-exchange earnings in the late 1990s. Agricultural production has grown by about 5 percent on average, as compared with annual population growth of 2.2 percent.

As of May 1991 the government moved forward with economic reforms, particularly encouraging trade and foreign investment, such as by reducing business licensing and registration requirements in order to simplify investment procedures. The government also cut expenditures by reducing subsidies, privatizing state industries, and laying off civil servants.

More recently, however, political instability—as exemplified by changes of government virtually every year since the early 1990s—hampered Kathmandu's ability to forge consensus to implement key economic reforms. Nepal has considerable scope for accelerating economic growth by exploiting its potential in hydropower and tourism, areas of recent foreign investment interest, but the terrorist attacks of September 11, 2001, hampered the tourism industry, as has the ongoing Maoist insurgency. Prospects for foreign trade or investment in other sectors will remain poor because of the small size of the economy and the nation's technological backwardness, remoteness, landlocked geographic location, and susceptibility to natural disaster. The international community's role of funding more than 60 percent of Nepal's development budget and more than 28 percent of total budgetary expenditures will likely remain a major ingredient of growth.

ENVIRONMENT

Nepal's use of its once-vast forests as its major source of fuel has started the process of deforestation, which has been accelerated by the clearing of forest for agricultural land use. Associated with the rapid deforestation is soil erosion, which threatens existing agricultural productivity. Water contamination and the associated health risks are additional environmental challenges facing Nepal.

LIVING CONDITIONS

Nepal is an isolated, landlocked country that is among the poorest in the world, with per capita GDP in 2004 at just \$1,500 and a poverty rate of 42 percent. Life expectancy is low, and infectious and parasitic diseases are the leading causes of death. Although cities such as Kathmandu, Patan, and Bhaktapur are becoming crowded, most of the population is rural, with some 87 percent living in villages, many with no electricity. Transportation is particularly difficult for Nepalese; the country has only about 4,000 km of paved roads (along with 9,100 km of unpaved roads) and a mere 59 km of railroads, so goods are transported primarily by pack animals. Natural disasters such as mudslides and floods are common, and ongoing rebel violence has led to political instability. Major problems have been the numbers of girls abducted into prostitution in Indian cities and child laborers exploited in the carpet trade.

HEALTH

Health care in Nepal is generally poor, with annual per capita spending on health care in 2002 at just \$12. In 2004 life expectancy at birth was just under 60 years. Infant mortality was nearly 67 per 1,000 live births—not surprising in a country in which a mere 12 percent of births are attended by medical staff. In 2001 a mere 27 percent of the population had access to adequate sanitation facilities. Hospitals are found only in urban areas, and most of these are poorly equipped; clinics in rural areas lack equipment and personnel. Many people turn to shamans or practice ayurvedic medicine, which involves restoring imbalances in the bodily humors, usually through diet.

FOOD AND NUTRITION

The state of nutrition in Nepal is poor. In 2001 the United Nations estimated that 12.6 percent of children under the age of five were severely underweight, with an additional 35.7 percent moderately underweight. Further, some 17 percent of the total population—over four million people—were undernourished. In much of Nepal, rice is the main staple, eaten with dal, a dish made of lentils, or with cooked vegetables. In mountainous regions where rice is unavailable, the staple is a paste or mush made with corn or millet. In some areas of the country, flat breads made with wheat supplement rice. Generally, Nepalese consume few fresh fruits or vegetables, contributing to vitamin deficiencies. Hindus, especially those in the higher caste, are strict vegetarians, though other castes eat pork and occasionally even beef.

 Amount of Fruits and Vegetables Available per person per year kg: 86.6

STATUS OF WOMEN

What legal rights women have through national legislation are irrelevant to the vast majority of Nepal's women. Lack of education, formidable communications obstacles, and communal and tribal customs that dictate secondary roles for women combine to make it virtually impossible for women to achieve the equal status with men that is ideally granted them by law. As a result, rights are conferred on or denied to women on the basis of community and ethnic tradition. An AID/Nepal-financed study of eight rural villages showed that women in these areas had no personal rights to landed property or inheritance but could gain access to such rights through marriage or male progeny. In Kathmandu Valley, on the other hand, women can hold land in their own right. Through the early 2000s, 12 women held seats in the 205-member parliament.

WORK

Estimating the size of Nepal's labor force is difficult because so many people make their living through sub-

sistence agriculture. Figures from 1996 put the total workforce at about 10 million. Some 81 percent of the labor force is occupied in agriculture, with just 3 percent in industry (though that figure was growing at a nearly 9 percent rate) and 16 percent in services. The unemployment rate in 2001 was 47 percent. Primary agricultural products include rice, corn, wheat, sugarcane, dairy products, root crops, and water buffalo meat. Primary industries include textiles and carpets, brick production, some food processing, and tourism—the latter largely a function of the nation's majestic mountains, such as Everest, and the work of Sherpas as guides. Other tourist activities include white-water rafting and canoeing, as well as the production of crafts and souvenirs for the tourist trade.

EDUCATION

Schooling is, in principle, universal, free, and compulsory for five years, from ages six through 11. It lasts for 10 years, as divided into primary (five grades), middle (two grades), and secondary school (three grades). The attrition rate is high, attendance is irregular, and facilities and equipment are inadequate. In 2003 the literacy rate was just 45 percent of the adult population; worse, that figure represents 62.7 percent of males but just 27.6 percent of females.

The academic year runs from February to December. The medium of instruction is Nepali in the primary grades and English in the secondary grades. Private schools are autonomous, but in the Buddhist *gompas* and the Sanskrit schools the range of study is considerably narrower, often limited to sacred texts. There is an acute shortage of teachers, which is partly made up through the hiring of Indian teachers and retired Gurkha soldiers.

Responsibility for public education is centralized in the Ministry of Education, which exercises this function through seven zonal inspectorates and 32 subinspectorates.

Nepal has only one true university, Tribhuvan University, in Kathmandu.

SCIENCE AND TECHNOLOGY

In 1982 the Royal Nepal Academy of Science and Technology was founded to encourage scientific development in Nepal, but the academy has accomplished little. Meanwhile, the university is underfunded and poorly equipped, and rampant poverty, low levels of literacy, and poor science education in the primary and secondary schools—which the National Institute of Science and Technology was formed in 1993 to correct—have hampered scientific research. San Francisco State University's Wildlands Studies program conducts onsite environmental research in Nepal.

MEDIA

After the liberalization of licensing policies, the number of daily newspapers increased substantially. Two of the more influential dailies are published in English: *Rising Nepal* and the *Motherland*. Nondaily publications and periodicals number over 2,000. Press freedoms in Nepal have been severely abridged as the government has declared states of emergency at various times in the early 2000s; in 2004 more journalists were arrested in Nepal than in any other country.

The official news agency is Rastriya Sambad Samiti, an autonomous company with 60 percent state participation.

Domestic book production is negligible. The Royal Nepal Academy, a state-sponsored society, is one of the few domestic publishers; there are six other publishers whose output is very uneven. Nepal does not adhere to any copyright conventions.

Radio Nepal, founded in 1951, broadcasts a domestic service for eight hours a day and an external service for two hours a week on two medium-wave (0.25 and 10 kw) and two shortwave (50 and 100 kw) transmitters. An annual license is payable for radio receivers. Nepal Television Corporation broadcasts for 32 hours per week; additionally, there are two private television stations. Feature films are imported, mostly from India.

CULTURE

Nepal's cultural roots extend back to the fourth century, with sculptures from the Licchavi period and wood carvings produced during the early medieval period. Newar architects created the tiered pagoda roofs typical of buildings throughout East Asia in the 13th century. The 11th century saw the production of magnificent illuminated manuscripts. More recently, Bhanubhakta Acharya adapted the Hindu epic *Ramayan* for readers in Nepal in the 19th century. In the 20th century Nepali writers sought publication outside the country because of heavy government censorship. Graphic arts tend to have religious themes, featuring statues of Buddhist and Hindu gods and *tangkas*, intricate paintings depicting Buddhist views of the universe. Dramatic productions, too, have traditionally focused on religious themes derived from Hindu epics. Nepal has a rich musical tradition, including chanting, sacred music, and the music of troubadours. The 72nd Street Band, based in Omaha, Nebraska, records Nepali songs. The Newars and Tibetans are sources of traditional dance forms.

FOLKLORE AND MYTHOLOGY

Virtually all of the folklore and mythology of Nepal is associated with the nation's Hindu and Buddhist past, though each ethnic group has its own traditions. The word *Himalayas*, for example, comes from the term *himalaya*, meaning "snow abode," and the mountains are regarded as the dwelling place of the god Shiva. The shrine at the sacred site of Swayambhunath in the Kathmandu Valley is linked to a legend that states that in ages past, the valley was the site of a lake on which floated a blue lotus flower with a sacred flame that was the first manifestation of the Buddha. Worshippers came to meditate at the lake, including the sage Manjusri, who wanted to approach the light of the flame, so he drew his sword of wisdom and sliced open the valley. The lotus settled on the valley floor as the water of the lake drained away to become the site of the shrine.

ENTERTAINMENT AND RECREATION

Many forms of modern entertainment have yet to fully penetrate Nepal. Those who can afford television sets watch limited amounts of programming on the state-run station. Movie theaters in the cities show the occasional Western movie, but most features come from India's thriving film industry. Otherwise, entertainment is provided primarily by religious festivals, folk music, and folk dancing.

ETIQUETTE

While men in the cities have adopted the practice of shaking hands with one another, the traditional greeting is to say *Namaste* (I greet the god within you) with the palms of the hands pressed together (as if in prayer) in front of the chest. In the mountains the most common greeting is *Khana khaiyo*, which literally translates as "Have you eaten?" People of the same sex show affection by touching in public, but people of the opposite sex do not. Stepping over a person, pointing the soles of one's feet at another, and hitting someone with a shoe or sandal is regarded as an insult. Considerable etiquette surrounds the act of eating. Guests may not assist with cooking or cleaning up; food is eaten only with the right hand, and because saliva is considered unclean, the right hand must be washed after eating.

FAMILY LIFE

In traditional Nepali families, marriages are arranged by older members of the extended family, who ensure that

the mate is of the right class, caste, and education level. The goal of most marriages is to strengthen as much as possible the families' network of social and economic ties and responsibilities. The family of the bride pays a dowry—often quite large—to the groom's family. The society is patriarchal and patrilocal, meaning that the bride adopts the kinship group of the groom's family and joins the groom's community. In rural areas the nuclear family is becoming the household norm, but among traditional landholding Hindus the norm is the extended family, in which the parents, their children, and their children's spouses and children live together, with new brides, especially those who have not yet borne children, dominated by the older women and given the most onerous work.

PERSONAL APPEARANCE

Dress varies according to ethnic group. People in the mountains dress like Tibetans, while those of the Tarai dress like Indians. The traditional Nepali dress for a woman consists of a sari, a blouse, and gold jewelry; for a man, a peaked cap, a jacket, a blousy shirt gathered with a belt, and pants with tight, tapered legs are worn.

SPORTS

The most popular sports in Nepal are badminton, table tennis, cricket, basketball, and soccer. The mountainous terrain is too rugged to make skiing possible. Nepal boasts an Elephant Polo Association, has developed a form of full-contact karate called *budokai-do*, and offers one of the world's highest bungee jumps, over the Bhoti Kosi River in the Himalayas.

CHRONOLOGY

- 1945** Padma Shamsheer Rana becomes prime minister.
- 1946** The NCP is founded.
- 1947** The United States establishes diplomatic relations with Nepal.
- 1948** The country's first constitution, the Government of Nepal Act, is promulgated. Padma resigns in the wake of opposition to the new constitution from conservative members of Rana family. Mohan Shamsheer becomes prime minister. The constitution is suspended.
- 1950** Ranas are in open conflict with the monarch, Tribhuvan. Tribhuvan, implicated in NCP conspiracy against Rana power, seeks and is granted asylum in India. General rebellion is stamped out. Second offensive by the rebels gains ground.

1708 Nepal

- Government troops desert to the rebel side.
Over 140 Ranas join the dissidents.
The Treaty of Peace and Friendship and Treaty of Trade and Commerce are signed with India.
- 1951** Mohan capitulates.
King Tribhuvan is restored to the throne. Elections and the formation of a constituent assembly are promised.
Rana power ends. Mohan Shamsher heads new coalition cabinet for 10 months.
Shamsher is succeeded by NCP leader Matrika Prasad Koirala as prime minister.
Interim constitution, the Government of Nepal Act, is promulgated.
- 1952** Koirala resigns. King assumes direct rule.
- 1953** Koirala is recalled as prime minister.
- 1955** Tribhuvan dies and is succeeded by Mahendra as king.
Nepal joins the United Nations.
National Police Front is formed.
Koirala resigns. Mahendra takes over direct control.
- 1956** Tanka Prasad Acharya is named prime minister. Border treaty with China is concluded.
- 1957** Acharya resigns. Kunwar Indrajit Singh becomes prime minister for a few months.
- 1958** USSR opens an embassy at Kathmandu. Subarna Shamshir is named new prime minister.
- 1959** The United States opens an embassy at Kathmandu.
New constitution is promulgated, superseding constitution of 1951.
First general elections are held. NCP wins absolute majority.
Tribhuvan University is founded.
- 1960** Bishweshwar Prasad Koirala heads first popular government.
Koirala's policies are opposed by the king, and Koirala is abruptly dismissed.
All political parties are banned.
The king takes over direct control of government.
Treaty of Peace and Friendship with China is concluded.
- 1961** King proclaims guided democracy.
Boundary treaty with China is renewed.
- 1962** New constitution, third since 1951, establishes *panchayat* form of government.
Land Reorganization Act and Mulki Ain, new legal code, are promulgated.
Anti-Indian riots erupt in Kathmandu over Indian aid to dissidents.
- 1963** Emergency is ended.
Panchayat elections begin.
National Guidance Council is formed.
- 1965** Local government is reorganized.
Giri resigns. Surya Bahadur Thapa is appointed prime minister.
- 1969** Thapa yields office to Kirti Nidhi Bista.
Indian military mission is withdrawn.
- 1970** Bista resigns. Gehendra Bahadur Rajbhandary becomes interim prime minister.
- 1971** Bista is recalled as prime minister.
New trade and transit treaty is negotiated with India.
- 1972** Mahendra dies and is succeeded as king by Birendra.
Tribhuvan University is closed.
Development regions are established under National Development Council.
- 1973** Nagendra Prasad Rijal is named prime minister.
Singha Durbar, the residence of the Ranas, is burned by rebels.
- 1974** Relations with India worsen.
- 1975** Rijal resigns. Tulsi Giri is appointed prime minister.
King Birendra is crowned.
National "Go to the Village" campaign is launched.
- 1976** Koirala returns from India and is arrested.
Treaty with India expires and is not renewed.
- 1977** Prime Minister Tulsi Giri resigns in the wake of corruption charges. Former prime minister Kirti Nidhi Bista is reinstated as prime minister.
- 1979** Following nationwide demonstrations by students, Bista is replaced as prime minister by Surya Bahadur Thapa.
King announces referendum on the *panchayat* form of government.
- 1980** In national referendum people vote for continuance of the *panchayat* form of government and against the reintroduction of political parties.
- 1983** Prime Minister Thapa is defeated in the Rashtriya *panchayat* and is replaced by Lokendra Bahadur Chand.
- 1986** Marich Man Singh Shrestha becomes prime minister.
- 1990** Nepal adopts a new constitution providing for the king as head of state. Executive power is to be exercised by a prime minister, who leads the majority party in the legislature.
- 1991** The NCP wins control of the parliament, with 110 of the 205 seats.
- 1994** Nepal becomes the first communist monarchy when the leftist CPN-UML coalition wins 88 of the 205 seats and forms a new government.
- 1995** A vote of no confidence in the government leads to a new government led by the Nepali Congress Party.
- 1996** The radical Communist Party of Nepal-Maoist begins a guerrilla insurgency to unseat the gov-

- ernment and establish Nepal as a people's republic.
- 1997** The CPN-UML coalition dissolves. The royalist NDP forms a new government coalition incorporating the CPN-UML. NDP splits into two factions, one of which forms another new government that excludes CPN-UML.
- 1998** A CPN-UML faction forms the Communist Party of Nepal (Marxist-Leninist). The NCP controls parliament.
- 1999** The NCP wins a majority of seats in May elections, with Krishna Prasad Bhattarai as prime minister.
- 2000** The king appoints as prime minister the NCP leader Girija Prasad Koirala, who leads the ninth government in 10 years. Maoist attacks, at first confined to remote mountain areas, have occurred in more than half the country's territory, resulting in the more than 1,400 deaths since 1996.
- 2001** King Birendra and all members of the royal family are murdered by Crown Prince Dipendra in a drunken rage. The king's brother Gyanendra assumes the throne. Koirala steps down as prime minister, and Sher Bahadur Deuba heads the government. Peace talks between the government and Maoist rebels begun in July break down in November. Rebels launch coordinated attacks on army and police posts, and a state of emergency is declared.
- 2002** Violence continues through May, when parliament is dissolved and fresh elections are called. In October King Gyanendra dismisses Deuba and indefinitely postpones elections scheduled for November. Lokendra Bahadur Chand is appointed prime minister.
- 2003** In January the rebels and the government declare a ceasefire. Chand resigns as prime minister; the king appoints Surya Bahadur Thapa as new prime minister. In August the rebels withdraw from peace talks with the government, and from late 2003 into 2004 violence continues, and opposition groups stage street protests.
- 2004** Nepal joins the World Trade Organization. Thapa resigns, and Deuba is reappointed prime minister.

In August and December Maoist rebels blockade Kathmandu.

- 2005** King Gyanendra ousts Deuba and his government, assumes executive power, and declares a state of emergency.

GEOGRAPHICAL FEATURES

The Netherlands forms part of the northwestern European plain and is bounded on the east by Germany, on the south by Belgium, and on the north and west by the North Sea. It is crossed almost at its central point by latitude 52° north and longitude 5° east. The total official area is 41,526 sq km (16,033 sq mi), including more than 4,243 sq km (1,638 sq mi) of territorial waters and inlets; the nation is slightly larger than Belgium and slightly smaller than Denmark or Switzerland. The official name is Netherlands (“lowlands”), but the country is commonly referred to as Holland, which, strictly speaking, applies

only to the western coastal provinces of North and South Holland. It extends 312 km (194 mi) north to south and 264 km (164 mi) east to west. Its total land boundary length is 1,027 km (637 mi), while the North Sea coastline is 451 km (280 mi) long.

The highest point is in the extreme southeast, 322 m (1,056 ft) above sea level. The areas in the north and west that lie below sea level account for nearly half of the total land area. The lowest area is a polder, an area reclaimed from the sea, northeast of Rotterdam 7 m (23 ft) below sea level. If the environmentally controversial reclamation of the Zuider Zee, or IJsselmeer (Lake IJssel), is ever completed, an area roughly equivalent to the

The Netherlands

1712 The Netherlands

area relinquished to the sea in past centuries will have been reclaimed.

Despite its small size, the Netherlands has a varied topography as a result of its complex geological history. The country is divided into two main regions, one constituting areas below sea level, or Low Netherlands, and the other those above sea level, or High Netherlands. The High Netherlands is composed chiefly of sand and gravel, while the Low Netherlands consists mainly of clay and peat. Among other differences, the High Netherlands is undulating and even hilly in places, with farms alternating with woodland and heath, while the Low Netherlands is predominantly flat and is intersected by natural and human-made waterways.

The Netherlands has nine distinct topographical regions: The South Limburg Plateau is the only part of the country not classified as lowland. The hills, which rise to more than 300 m (984 ft), are the foothills of the central European plateau. This is virtually the only area in the country where rocks can be found at or near surface levels.

The ground moraine region of Drenthe and East Friesland covers the northern part of the country approximately from Haarlem to Nijmegen.

The terminal moraine region covers the central part of the High Netherlands. There are parallel ranges of hills up to 100 m (328 ft) high in the provinces of Utrecht, Gelderland, and Overijssel, dissected by the valley of the IJssel River.

The remaining six regions are the sandy region of North Brabant and Limburg; the raised bog region, a transitional region between the High and Low Netherlands where marshy conditions are conducive to peat formation; the peat regions of Holland, Utrecht, Friesland, and Overijssel, which have historically been subject to erosion to the sea, and where the polders are more than 4 m (13 ft) below sea level; the young marine clay regions in the southwestern and northern coastal districts, including areas reclaimed from the Zuider Zee; the alluvial clay regions; and the dunes created by the action of wind and water, with the new dunes at least 30 m (98 ft) high in places and several kilometers wide.

Much of the Low Netherlands was wrested from the sea over the course of some eight centuries. After 1900, land reclamation was undertaken on a larger scale, with an ambitious plan drawn up for reclaiming land covered by sea after the last great ice age. Land is so limited in the Netherlands that, despite environmental and other objections, Wieringermeer was eventually drained (in 1930); the Zuider Zee, now called Lake IJssel, was sealed off from the Waddenzee; and Lauwers Zee and Maasvlakte were also reclaimed.

CLIMATE AND WEATHER

The Netherlands lies in the temperate zone of the Northern Hemisphere, with a maritime climate influenced by the North Sea and the Atlantic Ocean. Daily and annual temperature ranges are moderate; the mean temperature is a little over 1°C (33°F) in January, rising to 17°C (63°F) in July. Since the country is small, there is little variation in climate from region to region, but the influence of the sea is less on inland temperatures; indeed, regional differences are most marked with respect to temperatures. The average number of summer days with a maximum temperature of 25°C (77°F) or more ranges from five in the Frisian Islands, off the northern coast, to more than 35 in the southern province of Limburg. There is a lower incidence of frost in the coastal areas than inland.

Although the mild, damp climate is suited to grassland and to dairy and livestock use, there is too little sunshine in the summer months for much crop production. In winter the frequent changes in weather lead to slippery roads. The Netherlands is not subject to major wind systems.

Although spring is usually drier than autumn, rainfall is fairly even throughout the year, with an annual average of about 30 inches. There is no decrease in rainfall away from the coast, as summer storms are more frequent inland.

FLORA AND FAUNA

Much of the land in the Netherlands is used for agriculture, and little land remains in its natural state. Forests, consisting primarily of birch trees, cover only about 11 percent of the land. Most of the rest of the uncultivated land consists of sand dunes, muddy coastal areas, and lakes. In the coastal areas, sea birds and marine species such as mollusks dominate. Massive numbers of migrating birds pass through the region. Mammals include species of deer, badgers, foxes, beavers, boars, and muskrats.

ETHNIC COMPOSITION

The Dutch are an ethnically homogeneous people descended from Saxon, Frankish, and Frisian tribes. However, since the end of World War II ethnic homogeneity has been considerably diluted by the arrival of both European and non-European immigrants, as a result of which the Netherlands has become a pluralist society. As of 1998 the Dutch constituted 83 percent of the population, with Moroccans, Turks, and others making up the remaining 17 percent.

Immigrants are of two types: former colonials or repatriates and guest workers. The former colonials generally came to the Netherlands between 1945 and the 1960s. Since they were officially Dutch citizens, though born overseas, they were rapidly assimilated into Dutch society and experienced little if any prejudice.

The Dutch are less tolerant of guest workers. There have been anti-immigrant and race riots, owing to economic pressures arising from cheap labor supplies, and

the government tightened border controls to crack down on immigration. Although in 1981 the government officially recognized ethnic minorities' equal status with nationals in matters of housing, social services, and employment—and the new Netherlands constitution also granted them voting rights in local elections—little has been done to actually encourage a multiethnic society.

LANGUAGES

The official language is Dutch, or *Hollands*, which is the mother tongue of all inhabitants except the 700,000 Frisians, who speak their ancient language of the same name. Frisian is closely related to Anglo-Saxon, while Dutch belongs to the Germanic language group.

Dutch has six dialects, notably Gelders and Groningen. The general language of communication, or standard Dutch, is called *Algemeen Beschaafd Nederlands* (ABN), or General Civilized Dutch. There are some differences in sound and vocabulary between the language in the south and in the north, roughly comparable to the difference between the German spoken in Hamburg and that spoken in Vienna. The influence of Dutch goes beyond national borders. The language of the majority in Belgium is Dutch (called Flemish there). An earlier offshoot, known as Afrikaans, is one of the two official languages in South Africa.

Dutch has received less attention from linguists than it deserves because it tends to be overshadowed by German. The myth persists that the Dutch once spoke German and raised their local dialect to the status of a language only on achieving independence in the 16th century—an unfortunate conclusion based upon certain similarities in the two languages. The pronunciation of German is sharper, harder, and more precise than that of Dutch, which thus sounds slightly softer. Many German and Dutch words look alike but differ radically in meaning. Dutch is more analytical than German; long compounds and long sentences are considered ugly.

Frisian, the second official language of Friesland, is even older than Dutch and has an extensive literature of its own. In Friesland it is the language of instruction for the first three years of primary education and is taught well into the secondary grades. There are chairs of Frisian at five Dutch universities, and there are also Frisian libraries and the Frisian Academy.

RELIGIONS

The evangelization of the Netherlands began in the seventh century, when the Franks established a church at Utrecht, and was completed by the English missionaries Willibrord and Boniface during the first half of the eighth century. Holland was the center of a band of mystics,

1714 The Netherlands

known as the Brethren of the Common Life. After the Reformation, Holland became the refuge for the followers of Luther, Zwingli, and Calvin, the latter ultimately taking precedence. With the attempt of King Philip II of Spain to force conversion to Catholicism, the Dutch Reformation became allied with the struggle for freedom, which lasted from 1568 to 1648.

The Dutch Reformed Church became Holland's official religion in 1651, though that status has since been withdrawn. The mother church, also known as the Netherlands Reformed Church (Nederlandse Hervormde Kerk, NHK), retains a confessional balance between liberals and Calvinists. The NHK is divided into 11 church provinces, with a total membership of around 2.3 million. Reaction against liberalism and state influence in the NHK produced a number of neo-Calvinist schisms, beginning in the early part of the 19th century. In 2004 the NHK officially merged with two other churches, forming the Protestant Church of the Netherlands.

Religious freedom was established in several articles in the constitution of 1848. However, religious processions need official permission. The Netherlands has no concordat with the Holy See, and there has been no ministry of religious affairs since 1871. Although church and state are constitutionally separate, religious communities receive considerable aid and support from the state. These include laws enforcing Sunday observance and the prosecution of those who offend religious scruples. Religious bodies are given free radio and television time in the state-run electronic media. Confessional presence is strong in Parliament, where of the 14 political parties two are Catholic and four are Protestant. Theological faculties receive public subsidies, as do church-run elementary and secondary schools.

HISTORICAL BACKGROUND

At the time of Julius Caesar the lowlands near the mouth of the Rhine and the Meuse were populated by Celtic and Germanic tribes, among which the Batavi and the Frisians were the most numerous. Three hundred years later successive waves of new Germanic tribes, such as the Salic and West Franks, pushed the Frisians back to the east coast. By the time of Charlemagne the West Franks had taken over the region, and the Frankish language displaced the earlier languages of the Germanic tribes.

After the death of Charlemagne and the dismemberment of his realm, several duchies were founded in the region called the Low Countries. In the Middle Ages the province of Holland rose to prominence under Count Floris V (1256–96). As the seat of an ancient bishopric, Utrecht became an important principality, while Amsterdam, Haarlem, and Groningen became prosperous trading centers. In the 15th century most of the Low Countries came under the rule of the dukes of Burgundy and, later, on the marriage of Mary of Burgundy to Archduke (later Emperor) Maximilian I in 1477, the Austrian House of Hapsburg. Mary's son Philip of Hapsburg married Joanna of Castile, and their son Charles, became king of Spain in 1516. In 1519 he united the Netherlands and Spain and became the master of the Low Countries. The Spanish hegemony continued under Charles's son Philip II, who directed his energies toward stamping out Protestantism and suppressing the political and religious liberties of the Dutch. The 17 provinces of the Low Countries thereupon rose in revolt under the leadership of William the Silent, prince of Orange. Much of the country was freed by 1577, with William as the acknowledged ruler. However, in 1578 the southern provinces, now Belgium, turned against William. In 1579 the northern provinces concluded the Union of Utrecht as the United Provinces. Upon the assassination of William the Silent in 1584, his son Maurice was installed as the stadtholder of the republic. Final recognition of Dutch independence by Spain was not obtained until the Treaty of Westphalia in 1648. Meanwhile, the southern provinces remained loyal to Spain and were thereafter known as the Spanish Netherlands.

In the 17th century the United Provinces became the leading commercial and maritime power in Europe, with settlements and colonies in the East Indies, the crown jewel of its empire, as well as South Africa, the West Indies, and South America. For a time the Dutch were also dominant in Ceylon (now Sri Lanka). Alongside trade and commerce, arts, sciences, literature, and philosophy flourished; this was the golden age of the great Dutch masters in painting. In terms of religious freedom, the United Provinces was the most liberal country in the world during this period and a haven for refugees from religious persecution. At the peak of their power, the Dutch led several coalitions of European forces to victory over France. From 1688 to 1707 William III, the great-grandson of William the Silent, and his wife, Mary, were monarchs of England.

In the 18th century the Dutch decline was as swift as its rise. Intense rivalries among the provinces and four naval wars with the rising power of Great Britain sapped its strength. In 1795 a much-weakened republic was overrun by the revolutionary French armies. After the fall of Napoleon, the Congress of Vienna (1814–15) set up a new Kingdom of the Netherlands, composed of the United Provinces and the former Spanish-Austrian Netherlands

under a prince of the House of Orange, King William I. In 1830 the southern provinces broke away to form the Kingdom of Belgium. Dutch claims to the principality of Luxembourg ended with the death of William III in 1890. Thereafter, the Dutch became more insular, concerned mainly with domestic problems such as electoral reforms and conflict over secular versus religious instruction. The Dutch remained neutral in World War I but succumbed to Nazi forces in 1940. Dutch resistance lasted for only five days, and destruction, particularly in the cities of Rotterdam, Arnhem, and Nijmegen, was extensive. The Netherlands was liberated by Allied forces in May 1945. Queen Wilhelmina abdicated in 1948 and was succeeded by her daughter, Juliana. The Dutch had lost the East Indies to the Japanese in 1942; after the fall of Japan, a group of Indonesian nationalists proclaimed an independent republic and resisted Dutch reoccupation. After four years of hostilities, Indonesia was granted independence in 1949. Dutch Guiana, a Dutch possession in South America since 1815, became the independent nation known as Suriname in 1975.

Since 1945 the Netherlands has been governed by a series of coalition governments in which the large Catholic People's Party (KVP) played a pivotal role prior to its merger into the more inclusive Christen-Democratisch Appel (Christian Democratic Appeal, or CDA). Coalitions between the KVP and the Labor Party were the rule until 1958, when the latter went into opposition. A series of center-right coalitions followed, along with a few short-lived center-left coalitions. From 1982 to 1994 Dutch politics was dominated by Ruud F. M. Lubbers, the CDA leader. Since 1994 the Labor Party and People's Party for Freedom and Democracy have headed most of the cabinets. In 2002 the Labor Party suffered its worst election defeat since World War II. Shortly before the election, the right-wing political leader and candidate Pim Fortuyn was murdered. Outraged voters responded by supporting an anti-immigration, anticrime, antiestablishment platform rather than the Labor Party's eight-year record of economic prosperity. CDA and List Pim Fortuyn, the political party founded by its namesake, formed a new government, headed by the CDA leader Jan Peter Balkenende. Three months later the government collapsed, but in January 2003 the CDA won a narrow victory in the general election, and a center-right coalition was formed, with Balkenende as prime minister. In 2004 over 200,000 people demonstrated in Amsterdam against welfare reform and spending cuts. The Netherlands was in the news for three additional events in the early 2000s: In 2001 the former Yugoslav president Slobodan Milošević was turned over to The Hague to be put on trial for war crimes; in March 2004 Queen Mother Juliana died at age 94; and in November 2004 the Dutch filmmaker Theo van Gogh was murdered after receiving death threats in connection with a controversial

film he had made about the place of women in Muslim countries.

In 1957 the Treaty of Rome, instituting the European Economic Community, or Common Market, between six countries, including the Netherlands, was signed. The European Union was formed in 1993, as a natural outgrowth of the European Economic Community, with the Netherlands as one of the original members. The Netherlands was among the first 11 EU countries to introduce the euro as a common currency on January 1, 1999; in the Netherlands the euro replaced the guilder.

LIST OF MODERN RULERS

Prime Minister

1945–46	William Schermerhorn
1946–48	Louis Beel
1948–58	Willem Drees
1958–59	Louis Beel
1959–63	Jan de Quay
1963–65	Victor Marijnen

1982–94	Ruud Lubbers
1994–2002	Wim Kok
2002–	Jan Peter Balkenende

CONSTITUTION

The Netherlands is a constitutional monarchy. It has had three constitutions since the establishment of the monarchy: that of 1814–15, that of 1848, and the present one, which came into force on February 17, 1983. In addition, the relationship between the Netherlands and Netherlands Antilles is defined in the Charter of the Kingdom of the Netherlands, signed by Queen Juliana in 1954.

The constitution regulates the royal succession and regency in great detail. Article 10 states that “the crown of the Netherlands is and shall remain vested in the House of Nassau-Orange” and in the legitimate descendants of William Frederick. A successor to the throne may be appointed by an act of parliament if there is no heir apparent. In other cases, the sovereign is succeeded by his or her oldest child. The age of majority for a sovereign is 18 years. Until a sovereign attains that age, royal powers are exercised by a regent.

Executive authority is vested in the Council of Ministers (Ministerraad), which is appointed by the monarch but is responsible to the States General, the parliament. The ministerial responsibility to the States General is twofold:

1716 The Netherlands

under criminal law and under civil law, both specified in the constitution. There is also a political responsibility, of which the electorate is the ultimate judge.

General elections are held every four years to the lower house, and on that day the ministers of the outgoing government submit their resignations en bloc. Immediately after the election results are known, the queen seeks advice on the formation of a new government. Usually she consults the vice president of the Council of State, the speakers of both houses of parliament, and the leaders of all major political parties. Their initial verbal recommendations are followed by written reports. If no party commands clear majority in the lower house, the queen invites someone to act as a special adviser, called *informateur*, who then acts as a mediator. When the *informateur* has succeeded in this work, he or she withdraws and proceeds to form a cabinet, though not necessarily as prime minister. On the prime minister's advice the queen appoints the members of the new government.

The Council of State is the senior advisory body to the Crown. It must be consulted on all draft legislation, and over the years it has acquired additional functions. The queen presides over the Council of State but delegates its day-to-day affairs to the vice president. There are 24 other members, who are nominally appointed for life but who must retire upon reaching age 70. The Council of State is divided into sections, each of which is concerned with one ministry. The Council of State gives its recommendations upon all proposals before the States General, all drafts of general administrative orders, and all international agreements. The council examines the constitutionality and legality of all proposals. Where required by the national interest, it may call for legislative action on a specific issue, in the form of either a parliamentary bill or a general administrative order.

The constitution provides for a General Chamber of Audit, whose membership and functions are regulated by the Government Accounts Act of 1976. The chamber consists of three members, each of whom is selected by the Crown from a list of three people drawn up by the lower house. Each member has a deputy. Members and their deputies broadly enjoy the same legal status as members of the judiciary. Members are appointed for life (with mandatory retirement at age 70), and may be suspended or dismissed only by the Supreme Court. The General Chamber of Audit is divided into seven divisions, each division into sections that correspond to the various ministries.

PARLIAMENT

The Dutch parliament, known as the States General, has been bicameral since 1815, consisting of an upper house, or First Chamber (Eerste Kamer), and a lower house, or Second Chamber (Tweede Kamer).

Members of the First Chamber, also known as the Senate, are elected indirectly for four-year terms by each provincial council. The current strength of the First Chamber is 75. The speaker, appointed by the queen from among the membership, holds office for a one-year term only.

The 150 members of the Second Chamber are elected directly for four-year terms. As in the First Chamber, the speaker holds office for a one-year term only. The minimum age for membership is 25. Unlike in Great Britain, ministers and state secretaries are not permitted to sit in either house as a member.

Legislation may be initiated by either the Second Chamber or by the government—most often the latter. Government bills are drafted by civil servants and submitted by the concerned minister to the Council of Ministers together with an explanatory memorandum. After approval by the Council of Ministers, a bill is sent to the Council of State for its recommendations. Along with these recommendations, the bill is then submitted to the queen, who forwards it to the speaker of the Second Chamber with a royal message. After appropriate committee reports have been drafted, the bill is debated by the Second Chamber. The Second Chamber has the right to propose amendments, which may or may not be adopted.

Once a bill has been passed by the Second Chamber, it is sent to the speaker of the First Chamber for similar discussion and vote, with the important difference that the First Chamber has no right of amendment. For this reason individual clauses are not discussed and only the general bill is debated. After its passage through the First Chamber, the bill is sent to the queen for her signature and to the relevant minister for countersignature. Finally, the bill is published in the *Staatsblad*, or *Bulletin of Acts, Orders, and Decrees*.

Members of the Second Chamber have the right to initiate legislation, although few private bills end up as acts of parliament. The procedure for a private bill differs from that of a government bill. The former is drafted by a member or group of members with an explanatory memorandum, and the sponsors are responsible for leading the bill through the lower and upper houses. Only then is it sent to the Council of Ministers, which refers it to the Council of State, as required by law. Thereupon it is sent to the queen for her signature and to the concerned minister for his countersignature and is published in the *Staatsblad*.

Amendments to the constitution follow a special procedure. After passage of an amendment through the States General and publication in the *Staatsblad*, both the upper and lower houses are dissolved and new elections are held to give the electorate an opportunity to voice its opinion on the amendment. The newly elected States General may then accept or reject the proposal in its entirety by at least a two-thirds majority.

Parliamentary control over the executive is exercised through the right of the Second Chamber to consider, approve, or reject each item of revenue and expenditure in the national budget, the right of interpolation of individual ministers, the right to institute inquiries independently of government, and the right to pass motions to express the house's wishes or opinions or lack of confidence in the Council of Ministers.

Parliamentary seats are allocated among the parties that have reached or exceeded the electoral quota (calculated by dividing the total number of valid votes by 150, the number of seats in the Second Chamber). The number of votes cast for each list of candidates is divided by the electoral quota, and the quotient determines the party's initial allocation of seats. Individual candidates achieving more than half the quota, including preferential votes (in the proportional representation system), are placed, in order of popularity, at the top of their party list, the others remaining in the order in which they originally appeared on the ballot papers. The seats to which a party is entitled are filled on the basis of this order of preference. The first round of allocations does not normally fill all 150 seats, and those not filled are then apportioned among the parties, using the method of the highest average. The number of votes cast for each party is divided by one more than the number of seats allocated to it. The averages thus arrived at are listed in descending order, and the remaining seats are allotted to the parties heading the list until all the seats are filled.

In addition, the Netherlands elects 25 members to the European Parliament, where they serve five-year terms. They are elected on the basis of universal suffrage also among Dutch subjects in other EU member countries and nationals of EU member states who are resident in the Netherlands.

POLITICAL PARTIES

There are five main political parties in the Netherlands. The CDA, an amalgamation of three denominational parties, supports economic orthodoxy, the application of Christian principles to political life, and the North Atlantic Treaty Organisation (NATO) and Western alliances. The Labor Party, or the *Partij van de Arbeid*, is no longer Marxist but has a "personal socialism" label, meaning anything between humanism and militant socialism. The *Volkspartij voor Vrijheid en Democratie* is the People's Party for Freedom and Democracy. It is conservative and wedded to free enterprise, opposes any government economic intervention, and has vehemently supported the deployment of cruise missiles while simultaneously supporting social security programs. The *Democraten 66* (Democrats 66) is predominantly an urban liberal-radical party, with natural ties to the Labor Party. The *Democraten 66* advocates the abolition of proportional

representation and the direct election of the prime minister as well as environmental protection and progressive social policies, although its economic orientation is closer to that of the CDA. Finally, the Communist Party joined with three other leftist parties—the Pacifist Socialist Party, the Radical Party, and the Evangelical People's Party—in 1989 to form the *GroenLinks* (Green Left). This party emphasizes a healthy environment and a more equal division of wealth. In addition to these major parties are two smaller ones, the *ChristenUnie* (Christian Union Party) and the *Lijst Pim Fortuyn* (List Pim Fortuyn).

LOCAL GOVERNMENT

The Netherlands is divided into 12 provinces, varying considerably in size and population. The general administration of each province is carried out by the provincial council, the provincial executive, and a queen's commissioner. The provincial council is the provincial legislature, with its members elected by universal suffrage on a system of proportional representation for terms of four years. The size of the provincial council is proportional to the population and ranges from 50 to 86. Provincial executive members are in charge of day-to-day administration. They are elected by the provincial council from among its members for a term of four years. Each provincial executive has at least six members. They receive a salary and are eligible for pension. Their duties are specified in the Provinces Act and include control of the Water Boards. The Provinces Act also provides for the establishment of committees, which may include specialists who are not provincial council members. Certain administrative powers are generally delegated to these committees. The head of each provincial administration is a queen's commissioner, who also functions as chairman of the provincial council and as head of the provincial executive, in which he or she has a regular vote as well as a casting vote (which breaks a tie). Under the Provinces Act, the commissioner reports to both the minister for home affairs and the provincial executive. One of the major responsibilities of the queen's commissioner is to draw up a list of candidates from which the queen appoints burgomasters.

The provincial councils and executives may pass independent ordinances but are also required to enforce acts of parliament and central government ordinances. The Crown has the power to suspend provincial measures that are contrary to law or public interest or that conflict with central government regulations.

The constitution provides for the municipality as the only form of administrative unit at the local level. All towns, villages, and hamlets are part of one of approximately 820 municipalities in the country. They are governed by the Municipalities Act of 1851, which has been repeatedly amended.

1718 The Netherlands

Burgomasters are appointed by the Crown for renewable periods of six years. In the case of provincial capitals or municipalities with more than 50,000 inhabitants, the appointment is subject to the approval of the Council of Ministers. In the case of smaller towns, with a population of under 5,000, a burgomaster may head two municipalities if they are adjacent. The burgomaster presides over both the provincial council and the municipal executive, but in the former he or she has no vote, while in the latter he or she has a double vote in case of a tie. The burgomaster is assisted by the municipal clerk, who countersigns all official documents. As head of the municipal police force, the burgomaster has a particular responsibility in maintaining public order and civil peace.

The relationship between provinces and the municipalities is similar to that between the central government and the provinces, except that municipal authorities are accountable to both the provincial government and the central government. This accountability is defined in law, but in practice the provinces and the state do not readily intervene in municipal activities.

LEGAL SYSTEM

The Dutch legal system is based on civil law, with some influences from English common law. Trial by jury is unknown in the Netherlands. Whereas procedures for the administration of justice are mainly embodied in the Code of Civil Procedure and the Code of Criminal Procedure, provisions relating to administrative procedure are embodied in a variety of statutory measures. Some of these proceedings—in particular, all fiscal procedures—are dealt with by ordinary courts, while the rest are handled by special administrative tribunals, whose members are appointed either for life or for specific periods. Each type of tribunal has its own statutory rules. The judiciary is independent of the executive. Judges are retired on reaching age 70.

The ordinary administration of justice devolves upon 20 district courts (which absorbed the 62 lower or cantonal courts), five courts of appeal, and the Supreme Court—with about 800 judges in all. The district courts are courts of first instance. Appeals from the district courts lie with the courts of appeal.

The old cantonal courts had jurisdiction in all civil cases where the claims did not exceed 5,000 guilders and in criminal cases involving only misdemeanors. As of 1997, district courts now have jurisdiction in all civil cases, in divorce and bankruptcy cases, and in criminal cases relating to both felonies and misdemeanors. District court judges are assigned to one or more divisions, in each of which one or three judges sit. Courts presided over by a single judge may be a children's court, a police court, or an economic police court. Police courts handle simple and straightforward criminal cases where

the principal punishment may not exceed six months' imprisonment. The president of a district court may also issue injunctions and settle urgent civil cases by a simplified procedure. The courts of appeal have divisions in each of which three judges sit, except in fiscal cases. The Arnhem Court of Appeal has an agricultural division with five members, of whom two are lay experts. The Supreme Court at The Hague has several divisions, each consisting of five judges. It hears appeals in "cassation," involving nonobservance of procedural formalities or incorrect application of the law. It does not review findings of fact and reviews cases "in the interests of law." Its decisions do not set aside the judgments of the inferior courts but only affect subsequent judgments. Criminal proceedings may be instituted only by the Department of Public Prosecutions.

HUMAN RIGHTS

As a parliamentary democracy, the Netherlands ensures all human rights by law and respects all human rights in practice. The Netherlands attaches great importance to human rights in both domestic policies toward foreign workers and in foreign policy in dealing with states that violate human rights. First asylum is provided for refugees from Eastern European countries and permanent resettlement for a limited number of persons ("invited refugees"), principally from Vietnam and Iran. Support for human rights is also a key tenet of Dutch foreign policy, and the Netherlands has repeatedly condemned violations of human rights in Eastern Europe and Suriname as well as in South Africa.

The problem of integrating racial and ethnic minorities remains the most difficult issue related to human rights confronting the government. Following incidents of violence against these minorities, particularly Turks and Moroccans, the government introduced strong legislation against racial violence. Further, noncitizens who have resided in the Netherlands for more than five years are granted the right to vote in municipal elections.

FOREIGN POLICY

Officially neutral before World War II, the Netherlands reversed its policy after the war and became an active participant in Western alliances, such as the Benelux Union, NATO, and the European Union. The country's principal foreign policy focus in the 50 years since the end of World War II has been its uneasy relations with its former colonies, particularly Indonesia. These relations deteriorated in 1992 after the Jakarta regime renounced financial aid from the Netherlands in protest against Dutch criticism of reported Indonesian atrocities in East Timor. In 1992 the States General completed its ratification of the

EU's Maastricht treaty. However, the Netherlands does not participate in the Eurocorps military force launched by France and Germany in 1992. Instead, the Netherlands signed an agreement with Germany in 1994 for the creation of a joint Dutch-German force to be fully integrated into NATO. The Netherlands was a partner in the NATO International Force (IFOR) deployed in Bosnia under the Dayton Accords and was also a solid supporter of NATO aggression against Yugoslavia in 1999.

DEFENSE

The queen is the commander in chief of the armed forces. Under her, the defense structure consists of the Ministry of Defense, presided over by a minister of cabinet rank. There are four armed service branches: the Royal Netherlands Army, the Royal Netherlands Navy, the Royal Netherlands Air Force, and the Royal Netherlands Military Constabulary. The nation has a joint army corps with Germany and a joint navy base in Den Helder with Belgium. In 2003 the Netherlands had about 60,000 active-duty personnel. In 2004 the nation spent \$9.4 billion, or 1.4 percent of gross domestic product (GDP), on defense.

The Dutch Ministry of Defense has experienced periods of turbulence and relative quiet since the Netherlands abandoned its pre-World War II neutrality and became a United Nations member in 1945 and a NATO partner in 1949.

In 1989 the international context exhibited quite rapid change, with the Eastern Bloc nations engaged in the most rapid changes and NATO reacting conservatively to such developments as the fall of the Berlin Wall. At the national political level, people were divided as to what the developments meant or what reaction they required. By deciding to start a strategy-formation process, the new political executives took the initiative to use the space created by the chaotic international relations. They also anticipated changes in NATO strategy. The white paper then produced came out earlier than the renewed NATO strategy, but it did not represent a fundamental change of course, and internal barriers and conservative colleagues in the cabinet prevented the strategic initiative from getting any follow-through.

At first glance one could argue that the initiation of another strategy formation process in 1991 was motivated by the ongoing events in the deteriorating Soviet Union. A closer look, however, at the proceedings of the Second Chamber of the States General shows that financial questions set this process in motion. Several different political parties were worried that budgetary cutbacks would prevent the realization of the plans in the 1991 defense white paper. As a result of these questions the minister of defense agreed to an evaluation of that document, and as a result of a parliamentary motion the minister also

agreed to widen the research questions for the national committee looking into the future of the draft: It would also consider whether the draft should be maintained. A few months before the new white paper came out, it was decided to end the compulsory draft. The discussions were also influenced by the continuing budgetary cutbacks. During this strategy formation process the amount of room to act was not curtailed by the minister of foreign affairs. NATO criticized parts of the concept white paper, and accusations were made that the traditional task of defending Dutch and NATO territory was being neglected. The concept white paper made it clear that taking part in peacekeeping operations would, though not numbered that way, become the primary task. Indeed, the decisions concerning the core tasks and the draft showed that the mission of the armed forces had fundamentally changed. After this white paper, called the Defense Priorities Review, was published, the Dutch no longer had armed forces with draftees, but rather all-volunteer armed forces that prioritized peacekeeping operations and crisis management.

The minister of defense issued a new white paper at the end of 1999 outlining the Netherlands' two main defensive tasks as the NATO task of defending NATO territory and crisis management/humanitarian questions.

ECONOMY

The Netherlands has a developed free-market economy in which the private sector is dominant but the government has a great presence. The Dutch have both strong industrial and agricultural sectors and have sustained their economic growth partially through drastic spending cuts in subsidies and social security, which, combined with moderate inflation, falling unemployment, and a large account surplus, have left the country in a strong economic position.

In 2001 the government implemented its most comprehensive tax reform since World War II, designed to reduce high-income tax levels and redirect the fiscal burden onto consumption. The Dutch were among the first 11 EU countries to establish the euro currency zone, on January 1, 1999. The euro fully replaced the Netherlands guilder in 2002.

The prosperous Dutch economy depends heavily on foreign trade. Industrial activity includes food processing,

1720 The Netherlands

chemicals, petroleum refining, and electrical machinery. Although only 4 percent of the labor force is employed in agriculture, the country produces large surpluses for processing and export. The country has continued to attract a great deal of foreign direct investment. While growth slowed in 2001–03, the four prior years averaged 4 percent growth, above the EU average. The government has faced a deteriorating budget position and is trying to achieve the EU standard of a budget-deficit limit of 3 percent.

ENVIRONMENT

The Dutch have long been concerned with conservation and environmental protection. It is significant that the Report of the Club of Rome and Global 2000 received far greater public attention in the Netherlands than in the rest of Europe. Well into the latter part of the 1970s Dutch governments were substantially more concerned with accommodating social and environmental demands than in pursuing purely economic strategies. Dutch spending on environmental issues, measured as a percentage of national income, is among the highest in the world. The Dutch are proponents of sustainable development within a framework of eco-efficiency.

LIVING CONDITIONS

The Dutch enjoy one of the highest standards of living in the world. In 2004 the United Nations Human Development

Index, which measures such factors as literacy, education, life expectancy, and child welfare, ranked the Netherlands fifth in the world. For 2000–01 Freedom House ranked the country first in the world in terms of civil liberties. The country has an advanced transportation network, including over 6,000 miles of bicycle paths. The Netherlands is known for its social tolerance. The nation legalized same-sex marriage in 2001, takes a soft stand against minor drug infractions, and tolerates prostitution, including the famous “red-light districts” where women display themselves behind windows. There is virtually no violent crime. While the Netherlands maintains a vast network of social security programs, that system has come under strain because of budget deficits. One of the nation’s main social problems is overcrowding in the cities, which leads squatters to take up residence illegally in abandoned buildings.

HEALTH

The state of health care in the Netherlands is high, with annual per capita spending in 2002 of nearly \$2,300. In 2004 life expectancy was nearly 79 years, and the infant mortality rate was just over 5 deaths per 1,000 live births. Virtually everyone in the Netherlands has health insurance; the more well-to-do have private insurance, while the government provides health insurance to people in low-income brackets. In 2001 only about 0.2 percent of the adult population was living with AIDS, and in 2003 the number of AIDS deaths was fewer than 100. Virtually 100 percent of the population has access to sanitation and clean drinking water, and virtually 100 percent of births are attended by medical staff.

FOOD AND NUTRITION

The state of nutrition is high—perhaps too high, to the extent that obesity is becoming a problem, with about 10

1722 The Netherlands

percent of women and 9 percent of men considered obese in 2004. Dutch cuisine tends to the plain and hearty, reflecting the nation's Calvinist tradition. The Dutch consume a great deal of fish, especially herring, and common dishes include soups, stews, potatoes, and poultry; little of this food is spicy or served with rich sauces. The nation is known for its cheeses, including Gouda and Edam, and dairy products are a dietary staple. The Dutch rarely invite strangers of casual acquaintances to dine; instead, having coffee together is a ritual, and coffee breaks at the workplace are scrupulously taken.

STATUS OF WOMEN

Women enjoy full legal and political equality. However, women began working in substantial numbers outside the home later in the Netherlands than in other western European countries, and their salaries continue to lag behind those of men. Traditional male/female role stereotypes persist. The United Nations' Women Watch has recommended that employers in the Netherlands permit negotiations regarding shorter work hours and provide parental leave while also increasing women's participation at the decision-making level.

WORK

In 2003 the Dutch labor force consisted of 7.5 million people, with about 4 percent employed in agriculture, 23 percent in industry, and 73 percent in services. The unemployment rate in 2004 was 6 percent. Dutch workers are highly productive, with per capita GDP in 2004 totaling \$29,500. Agricultural products include grains, potatoes, sugar beets, fruits, vegetables, and livestock. Industries include agro-industries, metal and engineering products, electrical machinery, chemicals, petroleum, construction, microelectronics, and fishing. The country maintains a smoothly running economy through periodic negotiations that involve labor unions, the government, and employers' associations.

EDUCATION

The Dutch educational system is world renowned; it was transported both to its colonies and to areas to which the Dutch relocated, such as New York. The success of the Dutch educational system is exhibited by the nation's 99 percent literacy rate. Freedom of education is guaranteed under article 23 of the constitution, including the freedom to found schools on the basis of individual religious, ideological, and educational convictions. The current structure of the Dutch educational system consists of primary, secondary, and tertiary levels. Primary education starts at age four and is compulsory for children aged five to 12 years. About 70 percent of all students attend private schools—predominantly Roman Catholic, Protestant, or other religious schools, but also humanist, nondenominational, and foundation-run institutions. Secondary education, for students between the ages of 12 and 18, is divided into pre-vocational and secondary vocational education. Students participating in professional and middle-management training continue to age 20. Full-time education is compulsory until age 16, at which time students may attend part time until the age of 18. In 2004 there were about 700 public and private secondary schools, and about 1.4 million students were enrolled in secondary, vocational, or teacher-training schools. Pre-university education is for students aged 12 to 18.

Higher education is offered as higher professional education (HBO), university education (WO), and distance learning. HBO is the source of theoretical and practical training for a four-year degree, with the title of *ingenieur* or *baccalaureus*. In 2004 there were nearly 300,000 students in 56 HBO schools. University education, meanwhile, had 156,000 students attending 13 institutions. Most university education is four years in duration, with the exceptions of six years for doctors, dentists, pharmacists, and veterinary surgeons and five years for discipline-specific philosophers and some engineers and agricultural scientists. University graduates are titled with *ingenieur*, *doctorandus*, or *meester*. Teacher training is undergoing reform, stressing a uniform curriculum for primary teachers. Grade-two teachers—those teaching at the primary or first-stage secondary levels—receive their training through HBO. Grade-one training occurs at the university level.

MEDIA

The Netherlands was one of the first countries in Europe with a free and independent press; Amsterdam had two newspapers early in the 17th century. By 1830, when the first daily appeared, there was a flourishing press. The constitution of 1848 abolished censorship entirely, leading to a virtual publishing boom. Public libraries have been in existence in the Netherlands since only the 1890s.

Broadcasting was organized according to the old compartmentalization principle, airtime being divided among at least five groups of diverse political and religious orientations. The Netherlands has three AM and 12 FM broadcast stations, plus 39 repeaters, as well as 15 television broadcasters plus five repeaters. The EU “Television without Frontiers” directive forced the Netherlands to accept commercial broadcasting. Commercial

television and radio are relatively new phenomena in the Netherlands, with stations being legally allowed to broadcast on television only since 1989. As of 2000 there were at least five commercial television stations—three of them public television networks—and a number of commercial radio stations.

The Dutch Film Fund, the Dutch Fund for the Promotion of Audiovisual Culture, the Dutch Fund for Television Co-productions (COBO-Fund), the Hubert Bals Fund, and the Film Fund Rotterdam emphasize both public and government support for Dutch media. There are a variety of film festivals, such as the Cinekid Film Festival, the annual Worldwide Video Festival held in Amsterdam, the biannual Holland Animation Film Festival, the International Film Festival Rotterdam, and the Netherlands Film Festival.

CULTURE

The Netherlands has a rich cultural heritage. One of the nation’s major historical figures was the 16th-century humanist Desiderius Erasmus. During the “Dutch Golden Age” of the 17th century, major figures included the philosopher Baruch Spinoza, the writers Pieter Corneliszoon Hooft and Joost van den Vondel, the jurist Hugo Grotius, and the scientists Christiaan Huygens and Antoni van Leeuwenhoek. Major 17th-century Dutch artists included Jan Steen, Frans Hals, Jan Vermeer, and Rembrandt. In the 19th century the country produced the artist Vincent van Gogh, and in the 20th century the de Stijl movement produced Piet Mondrian and Theo van Doesburg. Graduates of the nation’s art academies receive monthly stipends for four years while they begin their art careers.

Holland’s Royal Concertgebouw Orchestra performs internationally, and Rotterdam has a world-renowned symphony. The nation has many museums, including the Rijksmuseum, the Rembrandt-Huis Museum, the Vincent van Gogh National Museum, the Mauritshuis (Royal Picture Gallery), and many others.

Perhaps the most famous work of Dutch literature is *Diary of a Young Girl*, written by Anne Frank, a Jewish girl who kept a journal while hiding in a secret annex with her family from the Nazis during World War II.

FOLKLORE AND MYTHOLOGY

During the Netherlands' heyday as a world power, wealthy burghers attempted to suppress folktales, riddles, and the like in favor of high culture, but the tales survived, in some cases as part of the nation's Christian tradition. The most famous is that of Sinterklaas, or Father Christmas, and his assistant, Black Peter, who is said to carry naughty children off to Spain in a sack. Most Dutch folktales have to do with the sea and feature mermaids and pirates. A popular folklore character is Joost, a devil who tried to tempt people with wealth and capture their souls.

ENTERTAINMENT AND RECREATION

The Dutch are outdoor enthusiasts, and much of their recreation involves such activities as fishing, sailing, boating, camping, hiking, and bicycle riding, as well as winter sports such as skating and curling. One world-famous event is the 124-mile Elfstedentocht ice-skating race in Friesland, where thousands of people race over the frozen canals if temperatures are low enough.

ETIQUETTE

The Dutch tend to be reserved, especially with strangers or casual acquaintances. They also tend to be extremely well organized and punctual. It is common to keep calendars listing appointments and obligations, and tardiness for a business meeting, for example, is strongly discouraged. The Dutch are a careful people, and business negotiations and decision making tend to proceed slowly. Greetings consist of a handshake, although women who are close friends will kiss each other on the cheek. The Dutch in general tend to avoid ostentation, dressing fairly casually and driving smaller automobiles. It is common in the Netherlands for families to leave their curtains open after dark, allowing passersby to see inside; this has been interpreted as an effort to allow neighbors to see the family's respectability.

FAMILY LIFE

The nuclear family has been the household norm since the 19th century; extended-family living arrangements are rare. In recent times the number of single-parent families and couples living together outside of marriage has been on the rise. The Dutch place a great deal of emphasis on a "cozy" family life, expressed by the word *gezelligheid*. Families tend to be small (on average fewer than three people), with just one or two children who often spend much time in nursery schools because both parents work outside the home; fully one-third of Dutch households consist of just one person. Dutch law forbids a parent to disinherit a child; by law, each child receives an equal share of the parent's estate.

PERSONAL APPEARANCE

Most Westerners are familiar with the traditional Dutch costume for women, consisting of wooden shoes, embroidered bodices, and a white, peaked hat with wings at the side. This costume can still be seen in Marken and Volendam, though it tends to be a concession to tourists. While some people continue to wear wooden shoes for such tasks as gardening, most people wear Western-style clothing for both casual and formal occasions.

SPORTS

Popular sports in the Netherlands include tennis, swimming, hockey and soccer. In 1988 the nation won the European soccer championship. Millions of people belong to sports clubs, including the Royal Netherlands Football Association. Field hockey is immensely popular; in 2003 there were 307 registered hockey teams, and the Netherlands is the only country in history to win men's field hockey's "Grand Slam": the Olympic gold medal in 1996 and the World Cup and Champions Trophy in 1998. The women's field hockey team has won the World Cup five times. In the 2004 Summer Olympics in Athens, the Netherlands won 22 medals, including four gold, nine silver, and nine bronze medals.

CHRONOLOGY

- 1945** William Schermerhorn heads Socialist government.
- 1946** Louis Beel begins first term as prime minister in a Catholic People's Party cabinet
- 1948** Willem Drees heads Socialist government; Queen Wilhelmina abdicates, and Juliana is named queen; the Netherlands joins Luxembourg and Belgium in the Benelux Customs Union.

- 1949 The Netherlands recognizes the independence of Indonesia.
- 1953 Heavy storm hits the Netherlands, inundating coastal regions and killing 1,800 people.
- 1954 Kingdom of the Netherlands Statute is promulgated, integrating the Netherlands Antilles as an organic part of the Netherlands.
- 1957 The Treaty of Rome is signed, instituting the European Economic Community, or Common Market, among six countries, including the Netherlands.
- 1958 Socialists are ousted, and Louis Beel returns as prime minister in a Catholic People's Party cabinet. The Benelux Economic Union is launched.
- 1959 Jan de Quay replaces Louis Beel as prime minister in a Catholic People's Party cabinet. Natural gas is discovered at Groningen.
- 1963 Victor Marijnen succeeds Jan de Quay as prime minister in a Catholic People's Party cabinet.
- 1965 Jozef Cals succeeds Victor Marijnen as prime minister in a Catholic People's Party cabinet.
- 1966 Jelle Zijlstra of the Antirevolutionary Party takes office as prime minister.
- 1967 Petrus de Jong leads the Catholic People's Party and returns to office as prime minister.
- 1969 The Netherlands relinquishes control of West New Guinea (now West Irian).
- 1971 Barend Biesheuvel of the Antirevolutionary Party is named prime minister.
- 1973 Johannes den Uyl of the Labor Party is named prime minister.
- 1975 Suriname is granted independence.
- 1977 Andreas van Agt of the Christian Democratic Party begins a five-year term as prime minister. Catholic and Socialist trade union federations merge into the Federated Netherlands Labor Movement.
- 1980 Queen Juliana abdicates, and Beatrix succeeds to the throne.
- 1982 Ruud Lubbers of the Christian Democratic Party is named prime minister in a Christian Democratic Party-led coalition.
- 1993 Netherlands joins the European Union, successor to the European Economic Community. Parliament begins to regulate euthanasia.
- 1994 Wim Kok of the Labor Party is named prime minister.
- 1995 Serious flooding prompts a state of emergency in which 250,000 are evacuated and expenses exceed \$1 billion.
- 1998 Kok's coalition is reelected to parliament.
- 1999 The euro currency is introduced on January 1.
- 2000 Euthanasia is legalized and its strict procedures codified; parliament approves legislation permitting homosexual couples to marry and to adopt children.
- 2001 Yugoslav president Slobodan Milošević is turned over to The Hague to be put on trial for war crimes.
- 2002 The government resigns following an official report criticizing its role in the Srebrenica massacre in Bosnia in 1995, when Dutch peacekeepers failed to stop Bosnian Serb forces from murdering thousands of Muslims. Shortly before elections scheduled for May, anti-immigration party leader Pim Fortuyn is assassinated by a lone gunman. The CDA and List Pim Fortuyn form the new government under Jan Peter Balkenende.
- 2003 The CDA wins a narrow victory in the general election, and a center-right coalition is formed, with Balkenende as prime minister.
- 2004 Over 200,000 people demonstrate in Amsterdam against welfare reform and spending cuts. Queen Mother Juliana dies at age 94. Filmmaker Theo Van Gogh is murdered after receiving death threats in connection with his controversial film about the place of women in Muslim countries.
- 2005 Voters reject the proposed EU constitution in a national referendum.

NATIONAL FLAG

Over a blue field, the red, white, and blue Union Jack lies in the upper left canton, the four-star Southern Cross in the right half, the stars red within white outlines.

NATIONAL EMBLEM

Supporting a shield are (on the right) a brown Maori chieftain in colorful yellow costume and blue headdress, with a traditional war club, or *taiaba*, in his hand, and (on the left) a woman of European ancestry wearing the simple sleeveless white dress of the early settlers and holding the national flag. The two figures stand on branches of green fern, the national plant, across which a white scroll bears the country's name. The shield, of alternate blue and red quarters, has a white vertical stripe running down its center, on which three antique ships are shown. In the blue upper-left quarter of the shield are the stars of the Southern Cross; moving clockwise, the other quarters depict a golden fleece, a crossed gold sledge and mallet, and sheaves of wheat. Above the shield is a crown.

NATIONAL ANTHEM

"God Defend New Zealand"

NATIONAL HOLIDAYS

January 1 and 2 (New Year's Day), February 6 (Waitangi Day), April 25 (ANZAC Day), first Monday in June (Queen's birthday), fourth Monday in October (Labour Day), Christmas, December 26 (Boxing Day), other major Christian festivals. Provincial anniversaries are observed by one-day holidays in each province.

DATE OF INDEPENDENCE

September 26, 1907

DATE OF CONSTITUTION

No formal constitution; the Constitution Act of 1986, though never made law, is the principal formal charter.

GEOGRAPHICAL FEATURES

New Zealand lies in the southwestern Pacific Ocean, 1,600 km (1,000 mi) southeast of Australia. It consists of two main islands and a number of smaller islands, with a total area of 268,680 sq km (103,737 sq mi). The to-

tal coastline is 15,134 km (9,398 mi) long. New Zealand is bordered by the Pacific Ocean to the north, east, and south and by the Tasman Sea to the west.

The main islands, North and South Islands, are separated by Cook Strait, which is 26–145 km (16–90 mi) wide. Among the nation's other land masses are what

New Zealand

are called nearby islands, such as Stewart Island and the Chatham, and outlying islands, including Raoul Island in the Kermadecs, far to the northeast, and Campbell Island, far to the south. New Zealand also has jurisdiction over Tokelau, north of Samoa, and the Ross Dependency

in Antarctica. Niue and the Cook Islands, between the Kermadecs and Tahiti, are self-governing states in free association with New Zealand.

The capital is Wellington, at the southern end of North Island, on an inlet of Cook Strait. The four other

major urban centers are Auckland, Christchurch, Hamilton, and Dunedin.

New Zealand is very mountainous, with less than a quarter of the land below 200 m (656 ft). South Island is much more mountainous than North Island; a massive mountain chain, the Southern Alps, runs across its length. There are at least 223 named peaks higher than 2,300 m (7,546 ft). Mount Cook, or Aoraki, the loftiest, is 3,754 m (12,313 ft) high.

The rivers are swift flowing and shallow, and only a few are navigable. They are, however, suitable for hydroelectric power generation, with their high rate of flow and reliable volumes of ice-free water.

Volcanic activity over the past few million years has played an important part in shaping the landscape. Compared with some other parts of the almost continuous belt of earthquake activity around the rim of the Pacific, such as in Japan, Chile, and the Philippines, the level of seismic activity in New Zealand is moderate, although earthquakes are common. The degree of activity may be compared roughly with that in California.

CLIMATE AND WEATHER

The presence of the axial mountain chain extending the length of New Zealand has a major effect on the climates of the various regions and produces sharp contrasts between west and east. In some inland areas of South Island just east of the mountains, the climate is distinctly continental in character, with large daily and seasonal temperature variations, despite the fact that no part of the country is more than 130 km (81 m) from the sea.

As the distribution of rainfall is mainly dictated by mountain features, the highest rainfall occurs where the mountains are exposed to the direct sweep of the westerly and northwesterly winds. The mean annual rainfall ranges from as little as 300 mm (12 in) in central Otago to over 8,000 mm (315 in) in the Southern Alps. The average for the whole country lies between 600 and 1,500 mm (24 and 59 in).

Mean temperatures at sea level decrease steadily southward, from 15°C (59°F) in the far north to 9°C (48°F) in the south of South Island. Temperatures also drop by about 2°C per 300 m (984 ft) of altitude. January and February are the warmest months of the year, July the coldest.

New Zealand is generally sunny. A large portion of the country has at least 2,000 hours of sunshine per year, and even Westland, despite its high annual rainfall, has 1,800 hours. In Southland and coastal Otago, the sunshine drops to about 1,700 hours a year. A pleasant feature is the high proportion of sunshine during the winter months. Humidity is commonly between 70 and 80 percent in coastal areas and about 10 percent lower inland.

Climate and Weather

Southern Alps: 315 in

Auckland: 39 in

South Island: 47 in

Milford Sound: 260 in

FLORA AND FAUNA

New Zealand's native vegetation—about 90 percent of which is unique to the country—covers about two-thirds of the land and consists largely of mixed evergreen forest. The most common native tree along the mountain chain is the beech. European settlers introduced a number of additional species, some for ornamental purposes, others to control erosion, including pines, conifers, willows, and poplars. When the islands were first settled, there was little in the way of higher animal life. In addition to frogs and bats were two species of lizard: the gecko and the “beak-headed” tuatara. European settlers introduced species such as red deer, opossum, goats, and rabbits, the populations of some of which have gotten out of control because of a lack of natural predators. Bird species include the flightless moa, weka, notornis, and kiwi; the kiwi is a national symbol, and many New Zealanders refer to themselves as “kiwis.” A species of thrush and the saddleback are unique to New Zealand, while many Australian birds can also be found, such as the tui, fantail, beebeard,

1730 New Zealand

gannet, skua, shad, and species of penguin and albatross. Marine species include marlin, tuna, shark, snapper, bass, grouper, flounder, and other salt- and freshwater fish.

ETHNIC COMPOSITION

Almost 80 percent of the population is classified as European, with the overwhelming majority being of British stock.

The most significant minority group is the indigenous Maori, who are of Polynesian ancestry. Their forefathers crossed the Pacific about 1,000 years ago to settle in Aotearoa, the Polynesian name for New Zealand. When Captain Cook touched New Zealand's shores, the Maori numbered some 200,000; the arrival of the Europeans led to the hastened disintegration of Maori society. European diseases decimated the populations of whole regions, and European muskets promoted internecine wars of extermination between the various tribes. Although the Treaty of Waitangi (1840) granted Maori all the rights and privileges of British subjects, along with the full and undisturbed possession of their lands, these guarantees were honored more in their breach than in their observance. By 1896 the Maori population had declined to less than 42,000. Since then, however, there has been a resurgence of Maori culture and growth in their numbers. In 2004 they constituted about 9.7 percent of the population.

LANGUAGES

English is the principal language and one of the three official languages. In 1987 Maori was admitted as a co-

official language under the Maori Language Bill, although virtually all Maori speak English. Maori is taught in schools as well as in *kohanga reo* (language nests) and at urban *maraes* (meeting places). New Zealand Sign Language is also an official language.

RELIGIONS

The earliest Christian mission was opened in New Zealand by an Anglican chaplain in 1814. The Anglican Church of New Zealand remains strong, though not dominant. It has eight dioceses, including the missionary diocese of Polynesia. Anglicans account for 24 percent of the population. The three other major Protestant denominations are Presbyterians (18 percent), Methodists (5 percent), and Baptists (2 percent). The Roman Catholic Church ranks third in size among the Christian churches, accounting for some 15 percent of the population.

By the mid-19th century a written language was developed for the Maori, and parts of the Bible were translated. Christian missionaries tried to protect the Maori in their struggle against colonial excesses but met with only indifferent results.

There is little or no church-state friction. New Zealand has no established church, nor is there any special regulation or law governing relations between church and state. However, ministers of religion are registered as such to maintain marriage registers. Church schools, hospitals, and social-service organizations do receive financial aid from the state. Furthermore, major state ceremonies are usually held in Anglican cathedrals.

Other Protestant	121,000
Unspecified or None	1,332,000

HISTORICAL BACKGROUND

Maori settlement of the New Zealand islands goes at least as far back as 1000 c.e.; the first European to discover the islands was Abel Tasman, a Dutch navigator who sighted the western coast of South Island in 1642. He was unable to land because of the hostility of the Maori inhabitants. Over a century passed before Captain James Cook of the British Royal Navy made his four voyages to New Zealand, in 1769, 1773, 1774, and 1777, circumnavigating the islands and mapping their coastlines.

In the 1790s small European whaling settlements sprang up around the coast, and colonization accelerated

after 1825. In 1840 the Maori chieftains entered into the Treaty of Waitangi, whereby they ceded sovereignty to the British Crown while retaining territorial rights. The first group of British settlers, sponsored by the New Zealand Company, arrived at Port Nicholson and founded the city of Wellington. Further settlements were made in Nelson in 1842, Dunedin (with the sponsorship of the Free Church of Scotland) in 1848, and Canterbury (with the cooperation of the Church of England) in 1850. After the Maori Wars (1860–70), New Zealand began to enjoy a long period of peace, prosperity, and growth. The discovery of gold in 1861 brought many settlers. The introduction of refrigerated shipping in 1882 enabled New Zealand to become one of the largest exporters of dairy products and meat.

Representative institutions were granted to the colony by the British Parliament after 1852. In 1907 New Zealand was made a dominion, and in 1947 the New Zealand government claimed the complete autonomy that had been available to self-governing members of the British Commonwealth under the 1931 Statute of Westminster.

New Zealand was one of the earliest British colonies to take the socialist road to development. Strongly influenced by the Fabians, Prime Minister Richard J. Seddon introduced far-reaching reforms to make the New Zealand worker the best protected in the world, gaining for the country the reputation of a “social laboratory.” By the end of the 19th century New Zealand had so outdistanced Australia in social legislation that it rejected the invitation to join the proposed Commonwealth of Australia as the seventh founding state.

New Zealand remained closely attached to Britain, fighting by its side in both World War I and World War II. American primacy in the Pacific after World War II led to the country’s establishment of closer relations with the United States, now its principal protector. This situation was reflected in the ANZUS Pact (1951), a defensive alliance among the United States, Australia, and New Zealand, and New Zealand’s joining Southeast Asia Treaty Organization in 1954. Reflecting the nation’s fear of Communism in Asia, New Zealand supported U.S. involvement in Vietnam.

While maintaining its close affinity with the United States, Britain, and the Commonwealth as a whole, New Zealand began to develop a more independent role in world affairs and to take a more active part in the affairs of Pacific countries. This resulted in part from the United Kingdom’s reducing its international role and the diminishing of U.S. influence. In the 1980s the Labour government took a strong stand against the proliferation of nuclear weapons in the area. Its decision to ban nuclear-powered and nuclear-armed vessels from New Zealand ports strained relations with the United States.

In the 1990 elections the National Party won easily, ushering in four years of conservative rule under Jim Bolger. By 1994 the conservative front began to fray. Without a majority in parliament for any party, the country began its

first experiments with coalition government. In addition to the two traditional parties, Nationalist and Labour, there surfaced three additional parties with strong parliamentary presences that together controlled the composition of the government: New Zealand First Party, Alliance, and ACT New Zealand. In the 1996 elections the conservative coalition retained a slight majority; in 1997 Jennifer Shipley became New Zealand’s first female prime minister, taking over the reins of government from Bolger.

The conservative coalition then endured a bumpy ride, with the desertion of several coalition members compensated for by the conditional support of opposition factions. The coalition’s dependence on the day-to-day support of independents and disaffected opposition members left the government unable to enact a consistent legislative program. Among the problems facing the government were Maori land and other claims amounting to over \$90 billion, the increasingly tenuous links to the British Crown, and constitutional and electoral reforms. In national elections in 1999 the Labour Alliance won 59 of the 120 seats, and its leader, Helen Clark, became prime minister. In June 2002 Clark formally apologized to the residents of Samoa for New Zealand’s treatment of the island in colonial times. The following month she won reelection as prime minister. Her government survived a no-confidence vote in 2004 after debate about nationalizing the sea bed, which the Maori said would infringe on their ancestral rights. Also in 2004 the country suspended relations with Israel after detaining two Israeli Mossad agents when they tried to obtain illegal New Zealand passports, and New Zealand and China began free-trade talks. Helen Clark won reelection in 2005.

LIST OF MODERN RULERS

Prime Minister

1949–57	Sidney Holland
1957	Keith Holyoake
1957–60	Walter Nash
1960–72	Keith Holyoake
1972	Jack Marshall
1972–74	Norman Kirk
1974–75	Bill Rowling
1975–84	Robert Muldoon
1984–89	David Lange
1989–90	Geoffrey Palmer
1990–97	James Bolger
1997–99	Jennifer Shipley
1999–	Helen Clark

CONSTITUTION

There is no formal, written constitution, but various acts of the New Zealand and British parliaments provide the

government's foundation. The Constitution Act of 1986, containing most of the provisions of written constitutions of unitary countries, has not been fully enacted. Fundamental political and civil rights, including Maori rights, are protected under separate legislation.

The Crown is the formal repository of much power. The British monarch is the head of state; the Crown is part of Parliament, and the governor-general's assent is required before bills can become law. Government administration is also carried out by the Crown through its ministers and state servants. Judges are appointed by the Crown. However, *de facto* powers rest with the prime minister as head of government and with the cabinet, which must carry parliamentary support through the party system for all its actions.

The governor-general is the representative of the sovereign in New Zealand. The sovereign appoints the governor-general on the advice of the prime minister for a term of five years. The governor-general's main constitutional function is to arrange for the leader of the majority party in parliament to form a government, thus becoming prime minister. By convention and law the governor-general is required to follow the advice of his ministers.

Parliament is a unicameral body, the House of Representatives, with 120 members chosen for three-year terms. The cabinet and the executive council are two bodies that in normal circumstances have the same membership but different functions. The latter is a formal body with formal functions, while the former is an informal body with deliberative functions. The executive council tenders advice to the governor-general on the basis of policy formulated in the cabinet. The council is the main legal vehicle for promulgating government decisions that form part of the law as statutory regulations, which are made by orders-in-council. The cabinet, which exists by convention, is nonetheless the actual government.

Citizens over 18 have the right to vote in parliamentary elections. Registration is compulsory, but voting is not. Maori may choose to register for either a Maori or a general constituency. Voter turnout averages 90 percent.

PARLIAMENT

The term Parliament effectively means the House of Representatives (formerly the General Assembly), although it technically includes the sovereign as well. Until 1996 members of the House were elected by popular vote in single-member constituencies for three-year terms. A 1993 referendum called for the replacement of the existing parliamentary system of constituency elections by "first-past-the-post" to one of mixed, member-proportional (MMP) representation. The 99-member Parliament was increased to 120 members—64 elected and 56 appointed from party lists.

The new MMP system of voting produced a pattern of electoral results that, while providing increased repre-

sentation to women, Maori, and smaller groups, made it increasingly difficult to form effective governments after elections. Negotiations by each of the two major parties with small groups in Parliament became necessary, each seeking a coalition to form an effective government. After two elections under the MMP system, New Zealanders appeared satisfied with the operation of the electoral system but at the same time expressed great dissatisfaction with the failure of coalition governments to provide clear policy direction.

The House meets as Parliament in answer to a summons from the governor-general. Sessions of Parliament are marked by a formal opening, whereby the government's legislative program is described in the Speech from the Throne, read by the governor-general, and a prorogation by proclamation. Parliament either is dissolved by the governor-general or expires after three years. The Constitution Act of 1986 (although not enacted as a constitution) forbids the House to allocate public funds for any purpose unless first recommended by the Crown. Thus, control of House business lies with the government. The Standing Orders also favor the ruling party and the government.

A seniority system operates in New Zealand's Parliament, somewhat similar to that of the U.S. Congress. In addition, there are safe seats, and members of Parliament who occupy these seats can be assured of advancement as long as they do not create political trouble.

Proposed laws are placed before the House as bills. There are three types of bills: public bills, dealing with subjects of national interest; local bills, dealing with local issues; and private bills. The procedure for passing a public bill starts when it receives a first reading, for a maximum debate time of two hours, although there is often no debate. Detailed scrutiny is carried out by the committee to which the bill is referred after the first reading. After the committee reports the bill back (with amendments, if made), the bill receives a second reading, during which a formal debate will occur on the substance of the bill. Following this the bill is considered by the whole House in committee and reported back to the full House for a third reading. Debate takes place during the third reading. The various stages do not follow a set time pattern; weeks or even months may elapse between readings. In addition, local and private bills must be advertised before they can be introduced.

The position of ombudsman (technically, the parliamentary commissioner for investigations), created in 1962, serves as an arm of Parliament in investigating complaints against the executive and local authorities.

POLITICAL PARTIES

New Zealand's two major parties have alternated in power for many years. The conservative National Party, which

had its worst showing in 70 years in the 2002 elections, tends to represent rural and affluent urban districts as well as business and management. The primary base of the Labour Party is trade union membership, especially urban, blue-collar workers. Both parties have broadened their ideological bases. Both also tend to be ideologically differentiated complexes; for example, intraparty conflicts over economic policy are often greater than between parties. The political-party scene was radically changed by the introduction of the MMP electoral system, which has led to emphasis on the importance of coalition building and alliances.

LOCAL GOVERNMENT

Local government is made up of a large number of local authorities, with the following common characteristics: each authority is created by an act of Parliament, which clearly defines its powers; each local authority is controlled by its own council; all local authorities rely on land taxes or charges from trading utilities for funding; and all local authorities determine their own expenditure priorities and set their overall levels of spending.

There are 12 regional authorities for environmental and transportation issues, but 74 territorial authorities administer such matters as housing and roads; these consist of 16 city councils, 57 district councils, and the Chatham Islands council. Local authorities are not involved in the funding or administration of education, social welfare, or police or urban fire services. Hospital boards and area health boards are totally funded by the central government; they are primarily accountable to their electors, and their decisions cannot be reviewed or overturned by the central government.

LEGAL SYSTEM

The law of New Zealand consists of common law, statute law enacted by the New Zealand Parliament, and a number of United Kingdom statutes still in force. New Zealand inherited from the United Kingdom a tradition of an independent judiciary. Both the Judicature Act of 1906 and the Constitution Act of 1986 contain a number of provisions establishing judicial independence. Judges have security of tenure and may not be removed from office except on grounds of misbehavior or incapacity, upon address by the House of Representatives.

The judicial hierarchy consists of the Court of Appeal, the High Court, and district courts. Appeals can also be made to the Judicial Committee of the Privy Council in London. All courts exercise both civil and criminal jurisdiction. Appeals to the Privy Council may be brought by leave of the court appealed from or by special leave (in criminal cases) of the council itself. The Court of Appeal

is the highest appeal court in New Zealand. Ordinarily, it hears appeals from the High Court, but certain other proceedings from inferior courts may, by order of the High Court, be appealed to it.

The philosophy and practice of the penal system have changed radically in the past 40 years. Wherever possible, nonprison sanctions are imposed on all except the most violent criminals.

HUMAN RIGHTS

New Zealand has a positive record in human rights, particularly in civil and political rights and antidiscrimination policies.

Despite the absence of overt discrimination, the Maori population, which is largely young and urbanized, has become increasingly vocal regarding complaints of historic injustices. They remain marginally educated and economically disadvantaged. The stresses of adapting from a rural, traditional society to an urban, Western one are evident in various social indicators.

In 1985 the government established a ministry of woman's affairs. In addition, the Human Rights Commission hears complaints about all forms of discrimination.

FOREIGN POLICY

Despite its isolation, New Zealand became active in foreign affairs in the 20th century, joining the United Nations and participating in World Wars I and II. In 1993–94 New Zealand had a seat on the UN Security Council, and it has participated in a number of UN peacekeeping activities.

New Zealand governments have become embroiled with those of other nations over antinuclear policies. In 1951 New Zealand signed the Pacific Security Treaty with the United States and Australia, providing for mutual aid in the event of aggression; essentially, the three nations agreed to act together to ensure their collective security in the Pacific region. However, in the mid-1980s New Zealand developed an antinuclear policy that banned nuclear-armed vessels from its ports, including U.S. Navy ships. The United States retaliated by suspending its treaty obligations to New Zealand, effectively rendering ANZUS inoperative. Also, in 1995 New Zealand spoke out strongly against French nuclear testing in the Pacific. In 2005 the only foreign policy issue that continued to involve New Zealand was its territorial claims in the Antarctic.

DEFENSE

The nominal commander in chief of the armed forces is the British monarch, represented by the governor-

general. Actual control is exercised by the minister of defense, assisted by the secretary of defense and the chief of defense staff as the principal civilian and military advisers, respectively. These three, along with the chief of naval staff, the chief of general staff, and the chief of air staff, constitute the defense council, charged with both military administration and the implementation of cabinet policy. Below the defense council is the defense headquarters. A joint operations command was established in 1987.

Militarily, New Zealand is one of the least vulnerable countries of the world. All military operations since World War II have been carried out in other countries.

Military service is voluntary and is popular among the Maori community, which supplies about 25 percent of enlisted persons and 40 percent of the infantry. As of 2003 New Zealand maintained an active-duty military of almost 9,000 troops, representing a 25 percent decline from earlier years. Because of small manpower needs, selection is fairly rigorous. In 2003–04 the country spent about \$1.15 billion, or 1 percent of gross domestic product (GDP), on defense.

ECONOMY

New Zealand has a free-market economy with a dominant private sector. Although New Zealand is a developed country in conventional terms, its essentially pastoral economy has a number of features common to those of developing countries, and it has never quite made the transition to an industrial economy. Historically, there has been a disproportionately high concentration on a narrow range of farm products favored by the benign climate and an industrious population. Even with recent diversification, agriculture has not lost its primacy, and this sector in New Zealand remains among the most efficient in the world.

Exports of farm products—chiefly wool, dairy products, lamb, mutton, and beef—have normally composed about 75 percent of merchandise exports and provide the great bulk of foreign exchange, upon which manufacturing relies for purchasing raw materials and capital equipment. The relatively great distances separating New Zealand from all other countries of any size (with the exception of Australia) add a high-transportation-cost component to international trade and reduce ben-

efits to the economy. Nevertheless, exports account for the survival of New Zealand. A great deal of economic power rests not so much with government as with the producers' marketing boards, such as the Dairy Board, the Meat Producers' Board, and the Wool Board, which make critical decisions regarding prices, standards, and markets.

Beginning in the 1980s New Zealand's government began a major economic restructuring push, moving from an agrarian economy dependent on a largely British market toward a more industrialized, free-market economy that could compete in markets around the globe. The traditional role of government intervention in the economy has gradually been reduced, with certain subsidies and tax incentives lowered. In a period of dynamic growth, real incomes grew, and the technological capabilities of the industrial sector broadened and deepened, while inflationary pressures were contained. Asian economic problems periodically slowed this impressive growth, but per capita GDP continued to grow, reaching 80 percent of the four largest EU nations, while the inflation rate (under 3 percent) and unemployment (under 5 percent) have remained low.

ENVIRONMENT

Principal environmental issues in New Zealand include deforestation, soil erosion, and the depletion of native flora and fauna, which have been seriously affected by species introduced from outside the country. The State Forest Service has been active in repairing the damage done to native forests and in the reforestation of exotic trees.

Environment

 CO2 Emissions per capita ton: 8.31

LIVING CONDITIONS

With an annual per capita GDP of \$23,200 in 2004, New Zealanders generally enjoy a high standard of living, although the transformation to a more industrialized and information-based economy has left many Maori behind, has increased tension between the Maori and the white population, and has created wider disparities between rich and poor. Most New Zealanders own their own homes with spacious gardens, although high-rise apartment buildings are a feature in the larger cities, which have become congested. Many people own cabins near lakes, streams, or the sea, which they use as weekend get-aways. One of the country's main social problems is alcoholism, with estimates that a quarter million people drink excessively and that over 50,000 people per year die of the effects of long-term alcoholism.

HEALTH

The state of health care in New Zealand is high. Life expectancy at birth in 2004 was almost 79 years, and the infant mortality rate was under 6 deaths per 1,000 live births, a low figure that reflects the fact that virtually 100 percent of births are attended by trained medical personnel. In 2002 per capita annual spending on health care was about \$1,250. In 2003 just 0.1 percent of the adult population was living with AIDS, and the number of deaths from the disease was under 200. Health care was formerly funded entirely by the state, but more recent legislation has created a mixed system of public and private health insurance. Many Maori continue to consult traditional practitioners.

FOOD AND NUTRITION

New Zealanders enjoy large hearty meals. Breakfast is likely to consist of eggs and sausage or bacon, lunch fea-

tures meat pies or sandwiches, and dinners consist of a meat dish, frequently lamb, with potatoes, sweet potatoes, soup, and a dessert. In recent years New Zealanders have begun to consume more fresh vegetables and fruit, including the native kiwi (the name given to what was originally called the Chinese gooseberry). The Maori consume a great deal of seafood, as well as mutton, pork, and fowl. A famous Maori tradition is the *hangi*, which refers both to a meal and to a way of cooking: A pit filled with hot stones is used to steam meat and vegetables over a period of several hours.

STATUS OF WOMEN

In a country with British traditions—like the United States, Canada, and Australia—women in New Zealand have full legal, political, economic, and social rights.

In the 1999 election women led both major parties. Labour Party leader Helen Clark (whose center-left coalition won 59 seats in Parliament) defeated Prime Minister Jenny Shipley of the National Party, and Clark became the new prime minister. The daughter of a dairy farmer, Clark was a lecturer in political science at Auckland University before entering Parliament in 1981. She was a health minister and deputy leader in the last Labour government (1987–90) and had led the opposition since 1993. In 1989 she became the nation's first woman deputy prime minister.

WORK

New Zealand's labor force consisted of just over two million workers in 2004. Agriculture employs about 10 percent of workers, industry 25 percent, and services 65 percent. The unemployment rate is under 5 percent, but the figure was higher among Maori and Pacific Islanders. Major agricultural products include wheat, barley, potatoes, fruit, wool, beef, dairy products, and fish. Major industries include food processing, wood and paper products, textiles, machinery, transportation equipment, banking and insurance, tourism, and mining. Despite efforts to increase the level

of manufacturing, the fastest-growing sector of the economy has been services, such as tourism, finance, banking, and computer software development. In former years labor unions were powerful, but as New Zealand has shifted to more of a service- and information-based economy, the labor unions have retained little clout.

EDUCATION

The first school in New Zealand, for the children of the British settlers, was established in 1842. It was a Sunday school, and it typified much of the early schooling provided through church agencies. The 1877 Education Act made primary schooling free, secular, and compulsory.

After 1945 the educational system began to expand, first quantitatively, through rising enrollments, then qualitatively, through improved curricula and assessment. Free education generally came to be accepted as the right of all citizens, with educational funding accepted as one of the first charges on the national budget. Pupils tended to stay on longer at school and to move beyond the secondary school to college and university.

The linchpin of New Zealand education is the Department of Education, which funds, supervises, and shepherds all educational activities. The system has almost universal enrollment in the nine compulsory years, coeducation with near parity among boys and girls, and extensive Maori enrollment.

The school year begins in February after a six- to eight-week summer vacation. The school year has three terms, roughly equal in length. The language of instruction is English, although schools on North Island with above-average Maori enrollment teach some classes in Maori. Private schools are subject to compulsory registration and must comply with standards of accommodation and teacher certification. In return they receive financial and other assistance from the state.

Preprimary education is available in all but the most sparsely populated areas. Primary education is compulsory from age six. Secondary schools, generally of a uniform type, admit students from any town or district, although area zoning regulations may apply. Many older city secondary schools have preserved traditions of academic superiority, while others are strictly technical. About three-fifths are coeducational.

Technical education maintains a traditional emphasis on practical subjects and operates independently of apprenticeship programs with compulsory technical training. Technical high schools no longer exist; they have been replaced by 22 polytechnics.

Higher education is provided by the state through seven universities, a college of agriculture, six teachers' colleges, 18 technical institutes, and six community colleges. The universities are autonomous institutions, but they are subject to financial scrutiny by the University Grants Commission, a statutory body that disburses funds for higher education.

The level of education among New Zealanders is relatively high. The literacy rate is 99 percent, and in 2002, over 99 percent of school-age children were enrolled in elementary school, over 92 percent in secondary school. In turn, tertiary enrollment amounted to 74 percent of college-age students; the country spent nearly 7 percent of GDP on education.

SCIENCE AND TECHNOLOGY

Science and technology find a hospitable environment in New Zealand, with its large number of technical institutes, universities, and private research agencies, with modern equipment and funding from the government's Ministry of Science and Technology, the Crown Research Institutes, and private foundations and institutes. Significant resources are devoted to medical research and to research in agriculture and, given the islands' volcanic origins, geology.

MEDIA

New Zealand's first newspaper was published in 1840, at the beginning of the first wave of British immigration. By the 1860s newspapers were being established at the rate of nine per year; by 1911 there were 193 newspapers, serving a population of a little over one million. During this period British traditions became deeply rooted and tended to set the standards of excellence in reporting. Like British newspapers, they were "decent, respectful, and reasonably responsible," but at the same time they were inclined to avoid controversy as well as religious and ethnic issues, prizing above all a sense of fairness and tolerance. These qualities have persisted to this day.

Seven metropolitan dailies, published in the four main cities, form the backbone of the nation's press. There is a flourishing local press composed of dailies in every sizable country town and biweeklies and giveaways in every community.

The periodical press is more varied than the daily press and is led by a very unlikely magazine, the *Listener*, published by the Broadcasting Corporation, which has a monopoly on the right to publish full details of radio and television programs more than 24 hours ahead of their presentation times. More than a program guide, the *Listener* is described as a quality, upscale journal publishing some of the best contemporary New Zealand writing.

Most newspapers are owned by private companies. In general, industrial relations in the media have been reasonably good, and the transition to new technologies, bitterly opposed by unions in other countries, has proceeded painlessly in New Zealand.

In the absence of a formal constitution, press freedom is based on historic conventions. The right to inform—and to be informed—is accepted as one of the basic rights of a citizen. However, there are more restrictions on the press in New Zealand than in the United States. All newspapers and periodicals must be registered under the Newspapers and Printers Act of 1955. The only major legal problem restraining the media is the threat of defamation charges.

With the Ministry of Commerce providing policy advice, Broadcast Communications, the state-owned company that owns and manages most of New Zealand's radio and television broadcast networks, has two major operating services. Radio New Zealand consists of three radio networks—National Radio, Concert FM, and the AM Network—in addition to RNZ International (a shortwave service), RNZ News and Current Affairs, and Sound Archives/Nga Taonga Korero. New Zealand Television has two national networks and 10 regional stations. Additionally, there are two private networks, a pay-TV network, and a Maori-owned network.

CULTURE

The culture of New Zealand is a blend of European and Maori traditions. In recent decades efforts have been made to preserve Maori culture, including traditions of weaving and wood carving as well as dances and songs, and numerous museums and galleries are devoted to Maori art. Leading modern artists among the white population include Sir Toss Wollaston, Colin McCahon, and Frances Hodgkins. Two major New Zealanders whose names are known internationally are the modern short-story writer Katherine Mansfield and the opera diva Kiri Te Kanawa. National arts fixtures include the National Symphony Orchestra, the New Zealand Drama School, the New Zealand Choral Foundation, the New Zealand Film Commission, and Chamber Music New Zealand. New Zealand devotes a portion of the profits from its national lottery to fund Creative New Zealand, which in turn funds the arts.

FOLKLORE AND MYTHOLOGY

Perhaps the most widespread folkloric tradition in white New Zealand is Guy Fawkes Day. In 1605 Guy Fawkes was found in the basement of the Parliament building in England with barrels of gunpowder, part of a Catholic plot to blow up Parliament and the King. The plot was foiled, but since then, on November 5, the people of Great Britain and New Zealand have celebrated Guy Fawkes Day with fireworks and hangings in effigy of the conspirators. In New Zealand children traditionally recited Guy Fawkes rhymes, while adults would toss pennies to the best performers. Sometimes the pennies were heated

over a fire, and children would burn their fingers picking the pennies up. Maori folklore, expressed through dance, art, and song, reflects the people's journeys by sea when they arrived in New Zealand a thousand years ago.

ENTERTAINMENT AND RECREATION

Entertainment and recreation are usually of the outdoor variety, to take advantage of the large amount of sunshine New Zealand receives each year. Most homes have spacious gardens, and gardening is almost a national obsession. Most people hike and camp to enjoy the nation's beautiful scenery, especially in national parks, and many people have a "bach" or "crib," which is a cabin on the beach or near the water.

ETIQUETTE

New Zealanders are generally reserved in public and tend to show good humor under circumstances that might give rise to impatience in many people. Men typically shake hands when they meet; women will give a kiss on the cheek to close friends. The common greeting is "Good day," pronounced something like "gidday," and friends refer to one another as "mates," much as they do in Australia. New Zealanders abroad, however, tend to be touchy about being confused with their larger neighbors and try to maintain an identity distinct from that of Australians. Among the Maori, the traditional greeting is the *hongi*, which entails pressing the noses together so that spirits can merge.

FAMILY LIFE

Among the white population, the small, two-parent nuclear family is the household norm, with the fertility rate in 2003 at 1.79 children born per woman. Arrangements among the Maori are more traditional. Many Maori live in extended families called *whanau*; these families can live in fluid arrangements either under the same roof or as neighbors. The social organization of the Maori consists not only of the extended family but also of the *hapu*, or lineage, and *iwi*, or tribe, and under the terms of the Treaty of Waitangi many Maori in recent years have attempted to reclaim their social affiliations.

PERSONAL APPEARANCE

Most New Zealanders, including the Maori, dress in Western-style clothing. Most people dress casually and comfortably, and it is not unusual to see men head off to the office in a dress shirt and tie with shorts. On special occasions

the Maori wear traditional costumes, consisting of fringed skirts made of flax. Both men and women wear the skirt, but women wear brightly colored dresses underneath and often accentuate the outfit with a long white cape.

SPORTS

The national game of New Zealand is rugby. The national team is called the All Blacks, because of their black jerseys, and they have done well in World Cup competition, winning the tournament in 1987 and regularly dominating their bracket. Also popular are cricket, skiing, and water sports such as rafting, canoeing, surfing, kayaking, and sailing. New Zealand took the gold medal in yacht racing at the 1988 Olympics, and in 1995 a New Zealand team won the America's Cup trophy.

CHRONOLOGY

- 1947** New Zealand invokes the Statute of Westminster and formally declares its independence.
- 1949** The National Party (NP) comes to power, ending the long tenure of the Labour Party (LP).
- 1950** New Zealand contributes troops to the UN's Korean War effort.
New Zealand takes part in the Colombo Plan, which provides aid for countries in Southeast Asia.
- 1951** Australia, New Zealand, and the United States sign ANZUS, an agreement for mutual defense.
- 1953** The Korean War ends, and troops return home.
- 1954** New Zealand joins other Pacific nations to form the Southeast Asia Treaty Organization.
- 1957** LP returns to power.
- 1960** Keith Holyoake leads the NP to electoral victory.
- 1963** New Zealand troops support a UN peacekeeping mission in Cyprus.
- 1965** New Zealand sends troops to support UN forces in the Vietnam War.
- 1973** The United Kingdom joins the European Community and imposes trade tariffs on non-European Community countries, resulting in a serious GNP decline for New Zealand.
Prime Minister Norman Eric Kirk (LP) and Prime Minister Gough Whitlam of Australia pledge closer ties between the two nations.
- 1974** Prime Minister Kirk dies.
- 1975** The NP returns to power under Robert Muldoon.
- 1984** David Lange of the LP becomes prime minister.
The United States suspends its ANZUS treaty obligations owing to New Zealand's ban on nuclear vessels in its waters.
- 1990** The NP is elected, with James Brendan Bolger as prime minister.

1740 New Zealand

- 1993** An unusually tight election produces a slight NP majority.
Via a 53.8 percent to 46.2 percent referendum, voters call for mixed, member-proportional (MMP) representation and increase parliament from 99 to 120 members.
- 1994** New Zealand records its first budget surplus in 17 years.
Sandra Lee, the first Maori woman elected to Parliament, becomes leader of the Alliance, a coalition of minor parties.
- 1995** Queen Elizabeth signs a parliamentary agreement that provides for cash and land compensation to settle claims of the Tainui on North Island and that contains a statement of "profound regret and apologies" for the loss of lives in past Maori-settler hostilities.
Prime Minister Bolger seeks to prohibit French nuclear testing in the Pacific.
- 1996** In the first elections implementing the new MMP system of voting, Maori representation doubles to 14 seats, the number of female MPs increases from 21 to 35, and 45 new MPs are chosen.
The New Zealand First Party (NZFP) forms an alliance with the NP.
- 1997** With 80 percent of the electorate voting on a referendum for a national compulsory retirement savings plan, 91.8 percent vote no.
Prime Minister Bolger resigns and is replaced by Minister of Transport Jennifer Shipley, of the NP, who becomes New Zealand's first female prime minister.
- 1998** Prime Minister Shipley fires Deputy Prime Minister Winston Peters of the NZFP. The NP-NZFP coalition collapses.
The Asian financial crisis pushes New Zealand's economy into a recession.
New Zealand completes a \$170 million land-grievance settlement with the Ngai Tahu, the aboriginal Maori tribe of South Island.
- 1999** In national elections the Labour-Alliance coalition obtains 59 of the 120 seats; its leader, Helen Clark, becomes prime minister.
- 2002** Clark formally apologizes to the people of Samoa for New Zealand's treatment of the island in colonial times. Clark later wins reelection as prime minister.
- 2004** Clark's government survives a no-confidence vote after debate about nationalizing the sea bed, which Maori said would infringe on their ancestral rights.
New Zealand suspends relations with Israel after detaining two Israeli Mossad agents when they tried to obtain illegal New Zealand passports.
New Zealand and China begin free-trade talks.
- 2005** Clark is reelected prime minister.

NICARAGUA

Basic Fact Sheet

OFFICIAL NAME

Republic of Nicaragua (República de Nicaragua)

ABBREVIATION

NI

CAPITAL

Managua

HEAD OF STATE & HEAD OF GOVERNMENT

President Enrique Bolaños Geyer (from 2002)

NATURE OF GOVERNMENT

Republic

POPULATION

5,465,100 (2005)

AREA

129,494 sq km (50,191 sq mi)

ETHNIC MAJORITY

Mestizo

LANGUAGE

Spanish

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Córdoba

NATIONAL FLAG

Two cobalt blue horizontal bands separated by a central white band with an encircled triangle, with the national emblem in the center

NATIONAL EMBLEM

An equilateral triangle encircled by the words “República de Nicaragua” above and “América Central” below. Within the triangle five mountains rise from the ocean beneath a rainbow in a blue sky. From the middle of the mountain range rises a red Phrygian cap of liberty on a pole.

NATIONAL ANTHEM

“Beloved Homeland”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), February 1 (Air Force Day), May 1 (Labor Day), May 27 (Army Day), July 14 (Abrogation of the Chamorro-Bryan Treaty Day), August 1 and 10 (Feast days of St. Domingo, Nicaragua’s patron saint), September 14 (Battle of San Jacinto Day), September 15 (National Day, Independence Day), October 12 (Columbus Day), all major Catholic festivals

DATE OF INDEPENDENCE

September 15, 1838

DATE OF CONSTITUTION

January 9, 1987; amended 1995 and 2000

GEOGRAPHICAL FEATURES

Nicaragua has an area of 129,494 sq km (50,191 sq mi), of which the land area, excluding the two large lakes, Lake Managua and Lake Nicaragua, is 120,254 sq km (46,610 sq mi). The country extends 580 km (360 mi) northeast to southwest and 494 km (307 mi) northwest to southeast. The total length of the coastline is 910 km (565 mi).

Nicaragua shares its total international land boundary of 1,231 km (765 mi) with two neighbors, Honduras (922 km; 573 mi) and Costa Rica (309 km; 192 mi). The Costa Rican border was settled in 1896; for much of its length, it follows the southern shore of Lake Nicaragua

and the San Juan River. The Honduran border was in dispute until 1960, when the International Court of Justice ruled in favor of Honduras.

Nicaragua has a number of ongoing border disputes. The nation is in dispute with Colombia over the San Andrés Islands and the Quita Sueño Bank. Nicaragua suspended trade with Honduras when the latter ratified a treaty with Colombia in late 1999 acknowledging the San Andrés Islands as belonging to Colombia. Nicaragua also disputes boundaries in the Caribbean Sea with Honduras. On the Pacific coast, it disputes its maritime boundaries in the Gulf of Fonseca with El Salvador and Honduras. The International Court of Justice has referred El Salvador, Honduras, and Nicaragua to the 1900 Honduras-

Nicaragua

Nicaragua Mixed Boundary Commission and has asked the three countries to work out a solution.

There are four main topographical divisions: the coastal highlands; the Great Rift, or the central lowlands; the central highlands; and the Caribbean lowlands. The first region consists of the coastal Diriamba Highlands, locally called sierras, which are structurally a continuation of the Costa Rican highlands. To the south the highlands trail off into the low Rivas Isthmus. The Great Rift, or the central lowlands, is partially occupied by the country's two large freshwater lakes, Lake Managua (known locally

as Xolotlan) and Lake Nicaragua (Cocibolca). Lake Nicaragua is about 161 km (100 mi) long and 72 km (45 mi) wide, occupying an area of 8,000 sq km (3,100 sq mi). Lake Managua is 56 km (35 mi) long and 24 km (15 mi) wide, with an area of 1,000 sq km (386 sq mi).

The central highlands lie to the north and east of the Great Rift. Structurally, these highlands form part of the system of volcanic ranges that begins in the Aleutians and the Alaskan mountains and continues through western British Columbia, the Rocky Mountains, the islands of the West Indies, and the Andes to Tierra del Fuego

and Cape Horn. Within Nicaragua the system includes the Cordillera Dariense, the Montañas de Huapi, and the Cordillera de Yolaina, terminating in the Punta del Mono (Monkey Point). The highest peak in this region is Mogoton (2,438 m; 7,997 ft). Toward the east the highlands merge into the Caribbean lowlands, also known as the Mosquito (or Miskito) Coast, comprising alluvial plains and valleys, with numerous shallow bays, lagoons, and salt marshes.

There are two drainage systems, one flowing into the Pacific and the other into the Caribbean. The most important river in the latter system is the San Juan, which receives the runoff from both Lake Nicaragua and—through the Tipitapa River (an underground channel for part of its course)—Lake Managua. The San Juan valley provides a nearly sea-level route from the Caribbean to Lake Nicaragua, the southwestern edge of which is only 19 km (12 mi) from the Pacific. Through modern engineering, this route could provide an alternative to the Panama Canal. The other east-flowing rivers are the Escondido, the Río Grande (with its tributary the Río Tuma), the Prinzapolca, and the Segovia, or the Coco. The main west-flowing rivers are the Río Negro and the Viejo.

Managua	864,201

CLIMATE AND WEATHER

Nicaragua has a rainy season from May to January and a dry season from January to May. As in other Central American countries, there are three climatic zones: wet tropical, wet and dry tropical, and mild highland. Temperatures range from 15 to 35°C (59 to 95°F). The city of Managua, the capital, was destroyed by earthquakes in 1931 and 1972. In November 1998 Hurricane Mitch caused much damage and killed more than 10,000 people in the region; the amount of rain during and after the storm also caused mudslides at Volcán Casita, by which several towns were engulfed.

Climate and Weather

Mean Temperature
 Pacific Coastal Region: 78°F
 Managua: 79°F to 86°F
 Higher altitudes in the interior: 60°F to 80°F
 Lower altitudes in the interior: 75.2°F to 89.6°F
 Average Rainfall
 Mosquito Coast: 100 in to 250 in
 Managua: 45 in
 Pacific Coast: 80 in

FLORA AND FAUNA

The forests of Nicaragua cover about one-quarter of the country and consist principally of mahogany, cedar, pine quebracho (also known as “ax breaker”) and a type of ironwood called guaiacum. Guapinol trees provide resin, and medlar trees yield a crabapple-like fruit. Fauna include deer, peccaries, and monkeys. Avifauna include egrets, eagles, macaws, and pelicans; reptiles include lizards, turtles, snakes, and crocodiles. Also found are numerous species of frogs, toads, mollusks, and fish.

ETHNIC COMPOSITION

Mestizos—people of mixed European and Amerindian ancestry—constitute 69 percent of the population, Amerindians about 5 percent, Caribbean blacks 9 percent, and people of European ancestry the remaining 17 percent.

Most of the indigenous people live in the Northern Autonomous Atlantic Region (RAAN) and the Southern Autonomous Atlantic Region (RAAS). The RAAN and

1744 Nicaragua

RAAS, which cover 47 percent of Nicaragua's territory, were formed in 1987 from the former department of Zelaya. Most Caribbean blacks occupy the islands and shores of the Caribbean coast.

The majority of indigenous people are of the Miskito tribe, which is centered in the RAAN, especially in and near Puerto Cabeza. Their numbers in Nicaragua were estimated to be 150,000–200,000 in the mid-1990s. (A significant number of the group are also found in neighboring Honduras.) Other groups include the Matagalpa (around 20,000), Monimbo (10,000), Rama (under 1,000), Subtiaba (5,000), and Sumo (7,000). The Miskito are one of the few groups that have maintained their own language. The Miskito, Rama, Sumo, and Subtiaba have, to a greater extent than have other groups, maintained some aspects of their indigenous cultures.

LANGUAGES

The official language is Spanish, which is spoken by most of the population. Some indigenous people also speak their native tongues, the most common of which are Miskito and Sumo. Other indigenous languages have disappeared or are nearly extinct. A large number of the Caribbean blacks on the Atlantic coast also speak a creole English.

RELIGIONS

Freedom of religion is guaranteed in the constitution. The main religion is Roman Catholicism, practiced by 85 percent of the population; most of the rest of the people are Protestant. Although the nation has been strongly Catholic from the days of the Spanish conquerors in the 1500s, Protestant religions have been on the rise since the late 20th century, especially among the Pentecostal and related denominations.

Religious Affiliations

Roman Catholic	4,645,000
Protestant	820,000

HISTORICAL BACKGROUND

Archaeological remnants date indigenous civilizations in Nicaragua to at least 10,000 years ago. In the 900s C.E. native peoples from what is now Mexico moved south and established settlements in the Pacific lowlands. The Aztecs, who are probably the best known of the indigenous cultures, are not believed to have established settlements in the area until the 1400s. Christopher Columbus came to Nicaragua in 1502, and the country's name comes from the indigenous chief of that time, *Nicarao*.

The Spanish settled and conquered the area, and Spanish rule (from Guatemala) continued for three centuries. Much of the indigenous population was wiped out; those not sent abroad to be slaves often died of diseases unfamiliar to them before the European conquerors arrived. During the colonial era Spanish conquerors had to deal with occasional incursions of Dutch and English invaders, and the British remained a key power throughout much of that time.

In 1821 the independence of the five Central America states, including Nicaragua, was proclaimed, and Nicaragua joined the United Provinces of Central America. In 1838 Nicaragua declared its independence from the United Provinces.

For 100 years Nicaraguan politics was dominated by a power struggle between the Liberal and Conservative parties. This struggle provided an easy opening for U.S. intervention, beginning with the Tennessee adventurer and mercenary William Walker's attempts to take over the country in the mid-1800s. The U.S. government was particularly keen to control whether, when, and where a canal would be dug in the Central American region. As a result, the Clayton-Bulwer Treaty was signed, ensuring that the United States had the sole rights to dig such a canal in Nicaragua. The following year, 1851, Cornelius Vanderbilt's Atlantic & Pacific Ship Canal Company developed a route whereby those in the eastern United States seeking gold in the western United States could travel through Nicaragua.

The United States sought continuous control of Nicaragua—as well as the rest of Central America—but was thwarted somewhat by the policies of President José Santos Zelaya. Elected in 1893, Zelaya eliminated the timber and mining concessions previously given to foreign companies. In retaliation, the United States assisted the conservatives to oust Zelaya from power through military intervention. U.S. Marines landed in Nicaragua in December 1909.

The United States maintained troops in the nation from 1912 to 1933. Subsequently, for more than 50 years (from 1938 to 1979), political power remained in the hands of the Somoza family, which used the National Guard and the National Liberal Party to maintain its dictatorship and domination of economic life. Although elections were held, the victors were always family members or their supporters. The Somoza regime received the continuous support of the United States.

During the 1970s the regime's continued repressive measures—including a ban on political opposition, various human rights abuses, and corruption—alienated large segments of society. The 1972 earthquake that devastated Managua brought in aid funds that wound up in the bank accounts of Somoza family members. In 1978 the newspaper editor Pedro Joaquín Chamorro, who was critical of the government, was assassinated.

The Somoza regime was overthrown in July 1979 by the Sandinista National Liberation Front (FSLN), a leftist guerrilla organization that had pursued its struggle against the Somoza regime since the early 1960s. The FSLN consolidated its dominant role in the revolutionary government within the first six months following Somoza's ouster. The Sandinista regime initiated a program of agrarian and industrial reform designed to improve the living standards of the lower classes, restore industry destroyed during the guerrilla war, and pave the way toward socialism. The government nationalized 40 percent of the nation's industrial capacity. Although civil rights were formally restored in January 1980, intimidation and the restriction of human rights were significant factors in the consolidation of power. Promised elections by the Sandinistas were postponed, and in August 1980 the leader of the junta, Daniel Ortega Saavedra, announced that the FSLN would remain in power until 1985.

Opposition to the government, both within and outside the regime, increased during 1981, and many of the opponents fled to Costa Rica and Honduras, where they formed guerrilla groups dubbed *Contras*. The *Contras* initiated guerrilla warfare against the Sandinista regime in 1982.

During this era the United States continued its interference in the country, both openly and covertly. While then president Ronald Reagan initially sent open support to Somoza sympathizers and other *Contras*, public opposition forced the aid to be stopped. It continued covertly, however, and was later the basis of the Iran-Contra scandal, which involved the Reagan administration, including Col. Oliver North.

Elections were held in 1984 for both the executive and legislative branches, and these elections were deemed fair by international observers. Important sectors of the political opposition declined to participate, however, because of the government's failure to establish the conditions necessary for a fair and free campaign. Pro-government forces repeatedly harassed opposition parties throughout the campaign, and press censorship prohibited the coverage of opposition rallies and statements. Ortega won the presidency, and the FSLN won the majority of seats in the legislature; real power continued to be wielded by the National Directorate of the FSLN.

Nicaragua was a signatory to the regional peace plan drawn up by President Oscar Arias Sánchez of Costa Rica in 1987. Under the agreement each government was to declare a cease-fire, open negotiations with unarmed internal opposition groups, restore civil rights, and hold free elections. In 1989 Central American presidents agreed on a program of electoral reform for Nicaragua that would permit free opposition parties. In elections held in February 1990, Violeta Chamorro, the candidate of a 14-party coalition and the widow of the slain newspaper editor, defeated the favored Ortega. Even before taking office the

Chamorro government negotiated an end to hostilities between the government and the *Contras*.

While Chamorro sought to restore unity within the country, violence periodically erupted, as instigated by both the *Contras* and the Sandinistas. In 1997 Arnoldo Alemán was elected president of the country. More conservative than Chamorro, he convinced voters that her government was too accommodating to the FSLN/Sandinistas. Economic and social struggles continued, however. In 1998 Hurricane Mitch devastated much of the country, leaving as many as 300,000 people homeless. Police brutality and election-related violence also continue to plague the country. In the 2000 elections Yatama Indians protested because of their lack of representation in the upcoming voting. The elections went on as scheduled, however, and the FSLN regained the mayoralty of Managua. The Liberal Party candidate Enrique Bolaños Geyer was elected president in the 2001 elections, defeating Daniel Ortega, who ran as the Sandinista candidate. The Liberal Party also won a majority of seats in the National Assembly, followed closely by the Sandinistas.

In 2002 the Sandinistas reelected Ortega as the party's leader, despite his three consecutive defeats in presidential elections. Meanwhile, former president Alemán was charged with embezzlement and money laundering while in office, and in December 2003 he was jailed. Steps were taken to improve Nicaragua's economy: In late 2003 Nicaragua joined Guatemala, Honduras, and El Salvador in negotiating a free-trade agreement with the United States. In 2004 the World Bank erased 80 percent of Nicaragua's debt to the bank, and in July Russia agreed to erase the country's lingering debt from the Soviet era. Bolaños faced charges of corruption, but in early 2005 opposition leaders, to avoid a constitutional crisis, agreed to recognize him as president until the end of his term.

1990–96	Violeta Barrios de Chamorro
1997–2002	Arnoldo Alemán Lacayo
2002–	Enrique Bolaños Geyer

CONSTITUTION

The constitution was signed in 1987 and widely amended in 1995. According to the 1995 version, the president is

elected for a term of five years, as are members of the National Assembly, Nicaragua's legislative body. The constitution guarantees certain rights, such as the freedoms of speech and religion. The National Assembly has the right to override presidential vetoes by a simple majority. In addition, the president can no longer automatically veto a bill.

The new constitution also puts additional limits on the police and military; for example, while other sectors may form unions, the police and military are barred from doing so. Voting is universal but not compulsory.

In January 2000 the constitution was further amended. The two largest parties, the FSLN/Sandinistas and the Liberal Constitutional Party became entitled to appoint members to the previously independent Supreme Electoral Council, which is responsible for organizing and conducting elections.

PARLIAMENT

The national legislative body is the Asamblea Nacional (National Assembly), whose 92 members are elected to five-year terms concurrent with that of the president. (Defeated presidential candidates with a certain number of votes also become members of the National Assembly.) The assembly elects Supreme Court judges, makes legislation, and can override the president's veto by a simple majority. The assembly also elects magistrates to the Supreme Electoral Council, the body responsible for running and organizing elections.

POLITICAL PARTIES

There are currently over 35 political parties in Nicaragua. These parties typically form alliances with a major right or left party to gain prominent political offices. Major political parties include the Liberal Alliance, the ruling party, which is a coalition of the Liberal Constitutional Party, the Independent Liberal Party, the Nicaraguan Party of the Christian Path, and other, mostly conservative parties. The Liberal Alliance won 48 seats in the 2001 elections; Bolaños belongs to this coalition. The FSLN is the faction that originally took the country into civil war and revolution in the late 1970s. Daniel Ortega Saavedra, the former president and revolutionary, remains the leader. The FSLN earned 41 seats in the 2001 elections.

LOCAL GOVERNMENT

There are four levels of local government: departments, *municipios*, *comarcas*, and *cantones*. Each department is headed by a *jefe político* (political chief) and each *municipio* by an *alcalde* (mayor). There are 15 departments. In addition

to the departments, there are two autonomous regions governed by indigenous tribes: the RAAN and RAAS.

LEGAL SYSTEM

The 16 judges of the Supreme Court are elected by the National Assembly for seven-year terms. The number of judges was increased in an effort to create a more independent judiciary. The country is continuing to struggle with an inefficient and backlogged judiciary system, chiefly brought on by the undoing of much of the land redistribution implemented by the Sandinistas in the 1980s.

The Supreme Electoral Council also falls under the legal system. Headed by five magistrates, it organizes and runs elections. Magistrates are elected to five-year terms by the National Assembly.

There are also separate appeals, district, and local courts, as well as separate courts for special considerations, such as labor and administrative courts.

HUMAN RIGHTS

The constitution outlaws discrimination based on nationality, political belief, race, sex, language, religion, and social conditions. However, Nicaragua's police and military forces continue to receive criticism from human rights groups for abuses of power, torture, and killing. Land disputes with the indigenous population are common. Domestic violence against women remains a large problem and is underreported. Women and gay groups have charged that Nicaragua's antisodomy law, passed in 1992, is so broadly worded as to criminalize all relationships of unmarried, cohabiting couples, gay and straight. The Bolaños administration has made some attempts to root out corruption, notably in bringing charges against former president Alemán.

FOREIGN POLICY

Nicaragua is involved in most major international bodies, and the nation currently depends heavily on foreign aid. Its economic plans rely on two key goals: further opening its markets to foreign trade and working out a payment structure with the International Monetary Fund (IMF). Although Nicaragua joined the Alliance for Sustainable Development with its Central American neighbors in 1994 at the Summit of the Americas, it continues to have border disputes with Honduras, El Salvador, and Colombia, stopping trade with Honduras as a result in late 1999.

DEFENSE

Bolaños established a civilian Ministry of Defense once he took office. Tensions remain between civilians and the

military, however, due to Nicaragua's history of having a corrupt military carry out extrajudicial torture and killings. In 2003 the nation had about 14,000 active-duty military personnel, representing a sharp decline from previous years. That year Nicaragua spent about \$33 million, or 0.7 percent of gross domestic product (GDP), on the military.

ECONOMY

The Nicaraguan economy, devastated during the 1980s by mismanagement and the civil war, began its long rebound in 1991, but the country remains one of the poorest in the Western Hemisphere. Up to 50 percent of the people live below the poverty line, and per capita GDP in 2004 was just \$2,300. Worse, income is distributed in a highly uneven fashion, with the poorest 10 percent of the population earning just 1.2 percent of income and the richest 10 percent earning 45 percent. President Chamorro began a long and ambitious stabilization program that reduced inflation and obtained substantial aid from abroad. Economic growth rose sharply due to surges in exports but then dropped in 1997 when the IMF suspended its Enhanced Structural Adjustment Facility. However, aid was resumed in 1998 by the Paris Club, under the Highly Indebted Poor Countries Initiative. Implementation of a 1997 accord to return properties confiscated by the Sandinistas also restored investor confidence; also in 1997 a free-trade agreement was signed with Mexico. The economy, however, received a massive setback in 1998 due to the destruction caused by Hurricane Mitch.

Donors have made aid conditional on improved governability, openness in government financial operations, poverty alleviation, and human rights advances. Nicaragua met conditions for additional debt service relief in December 2000. Growth was estimated at 5 percent in 2000 but had fallen to 2.3 percent by 2003. Economic policy is guided by a 2002 plan worked out with the IMF promoting both poverty reduction and economic growth.

ENVIRONMENT

Water pollution, soil erosion, and deforestation are all serious issues in Nicaragua. The country is frequently forced to put economic issues ahead of environmental issues, most notably regarding widespread pesticide use: Although this is a serious environmental and medical issue, heavy pesticide application continues due to the economy's heavy reliance on crops for export.

LIVING CONDITIONS

Living conditions in Nicaragua are generally poor, except for the small number of people who enjoy a disproportionate share of the country's income and wealth, especially landholders. The civil war during the 1980s left the nation devastated, and in the mid-1990s an estimated three-quarters of people lived below the poverty line. The Sandinista government struggled to make improvements, especially in health care; the infant mortality rate and deaths from infectious diseases both dropped, but a generally poor economy, coupled with the devastation caused by Hurricane Mitch in 1998, set back efforts to improve living conditions. An ongoing social problem is the shortage of housing, with estimates that the country's shortage amounts to nearly half a million units. In rural areas people typically live in straw and palm-frond huts with dirt floors. Around the towns and cities are shantytowns and squatters' villages. Also a problem is transportation. The country has virtually no railway system, and there are only about 2,100 km (1,300 mi) of paved roads.

HEALTH

Although Nicaragua has a respectable life expectancy of just over 70 years and an infant mortality rate of just under 30 deaths per 1,000 live births (a figure putting the country roughly in the middle of the world's nations), the state of health care is generally poor, with per capita spending in 2002 just \$60. The Sandinista regime made efforts to improve health care by establishing clinics throughout the country, and life expectancy indeed increased by about eight years, but the clinics remain understaffed, underequipped, and underfunded. As such, Nicaraguans continue to suffer from high rates of diseases such as malaria (402 cases per 100,000 population), tetanus, pneumonia, and measles. In 2002 only 66 percent of the population had access to adequate sanitation facilities, and nearly one-fifth lacked access to clean drinking water.

FOOD AND NUTRITION

The state of nutrition in Nicaragua is poor. The United Nations Children's Fund estimates that fully one-third of Nicaraguan children suffer from chronic malnutrition and nearly one in 10 suffer from severe malnutrition. From 1995 to 2005, one in five children under the age of five suffered from stunting, and from 1998 to 2003, 12 percent of babies were of low birth weight. The primary staples are corn and beans. Corn is used primarily to make tortillas, which are wrapped around beans and meat, typically seasoned with onions and garlic. Red beans are especially popular at breakfast, when they are eaten in refried form in a dish called *gallo pinto*, or spotted rooster. Also popular are tamales, which are cooked with corn, meat, rice, tomatoes, and cassava root. The main meal is generally eaten during the middle of the day, followed by a siesta during the afternoon heat.

Food and Nutrition

 Daily Available Calories per capita kcal: 2,240
 Amount of Cereal Available per person per year kg: 127.1
 Amount of Fruits and Vegetables Available per person per year kg: 41.5

STATUS OF WOMEN

Although women have the right to vote, they are not as prevalent in high-ranking corporate and government positions and earn considerably less than their male counterparts. Perpetrators in domestic violence crimes are rarely brought to trial, in part due to a lack of training in the police and court systems. Only in 1996 was the criminal code reformed to make domestic violence a crime. There are also "women's commissariats" that provide support and legal help to domestic violence victims.

WORK

In 2003 the Nicaraguan labor force consisted of about 1.9 million persons, with 31 percent employed in agriculture, 17 percent in industry, and 52 percent in services. The unemployment rate that year was 7.8 percent, but this figure does not reflect underemployment of nearly 50 percent. Many people take part in the informal economy, and many others scratch out livings as street vendors. Farmers rely on hand tools and oxen, and many farmhands are employed only seasonally. Primary agricultural products include coffee, bananas, sugarcane, cotton, rice, corn, tobacco, sesame, soy, beans, meat, and dairy. Major industries include food processing, chemicals, machinery, metal products, textiles, clothing, petroleum refining and distribution, beverages, footwear, and lumber.

EDUCATION

Education is free, universal, and compulsory for six years, from ages seven to 12. Schooling lasts for eleven years and is divided into six years of primary school and two cycles of secondary school, one of three years and one of two years. The majority of primary schools are rural and generally offer only one grade. Attrition and grade-repetition rates are high throughout the school system. The school year runs from February through November. The language of instruction is Spanish.

The most serious educational problem is a shortage of teachers. Only one-third of primary-school teachers and 5 percent of secondary-school teachers are certified.

Technical and vocational programs are offered in secondary schools during the second cycle in agricultural schools, public and private commercial schools, and the Instituto Nacional Técnico Vocacional.

Control of the school system is vested in the Ministry of Education, which establishes curricula, supervises examinations, regulates the teaching profession, appoints teachers, and builds and maintains schools.

Higher education is provided by four universities, of which the largest is the National Independent University. The University of Central America is run by the Jesuits.

SCIENCE AND TECHNOLOGY

Despite the country's political instability and poverty, Nicaraguans maintain some well-established institutions for science and technology. For example, the Polytechnical University of Nicaragua, formed in 1968 by the Baptist Church, awards degrees in the industrial arts, architecture, nursing, and engineering. The National University

of Agriculture in Managua, founded in 1929, gives students the opportunity to study natural-resource management, animal sciences, and agronomy. In 1980 the Observatorio Geofísico was founded to study volcanology, seismology, geology, and geophysics.

CULTURE

Easily the most famous writer in Nicaraguan history is Rubén Darío (1867–1916), whose modernist poetry earned him the title "Prince of Spanish-American Literature" and a banner on the Nicaragua National Assembly Web site with his words "*Si pequeña es la patria, uno grande la sueña*" (If the fatherland is small, someone great will dream it). Other important writers include the poets Azaria Pallai, Ernesto Cardenal, Alfonso Cortés, Salomon de la Selva, and Santiago Argüello (who also wrote plays). Nicaragua has a rich tradition of folk crafts, and the Ministry of Culture makes efforts to preserve crafts and train new artisans. Included among these crafts are earthenware and ceramics, wood carving, embroidery, silverwork, and sculpture. Nicaraguans are known for their folkloric dance traditions. Dances include *los diablitos*, *las inditas*, and *las negras*, which each use masked characters. *El güegüense* dates back to at least the 17th century and combines dance with satire.

FOLKLORE AND MYTHOLOGY

Nicaraguans have a folklore history that includes tales of tricksters such as Uncle Rabbit, who persistently outwits Uncle Coyote. This history includes *el güegüense*, a satiric folk dance that features a trickster figure who thwarts powerful people, including the Spanish monarchy. Indian mythology includes the Corn Goddess Cinteotl, and each year a feast was given in her honor featuring soups and fermented drinks made from corn. This is part of a larger tradition of feasts and festivals associated with planting and harvesting, based on the belief that the gods determined the bounty of a crop. Many Spanish folk practices were imported into Nicaragua, including beliefs in witchcraft, love potions, and folk medicine, and historically many Nicaraguans have believed in the magical powers of the *cuadro*, a picture of a saint kept in the home.

ENTERTAINMENT AND RECREATION

Nicaraguans enjoy films, most of which are in English with Spanish subtitles, and television has become more popular as the number of sets has increased. A considerable amount of the nation's entertainment revolves around its religious and folk heritage. Festivals include such activities as bullbaiting and bull riding, and religious and harvest festivals are a time for feasting. Dancing is a popular form of entertainment; traditional folk dances are common, but modern dancing in clubs is popular as well, and the largest disco club in Central America can be found in Managua.

ETIQUETTE

In rural areas, the concept of *machismo* is still common, and a great deal of emphasis is placed on a masculine sense of honor. This concept of honor pervades the country, making personal criticism directed at another something to be frowned upon. Respect is accorded through the use of professional titles, the words *señor*, *señora*, and *señorita* with the names of people of higher social standing, and the use of *don* and *doña* with the names of elders. Nica-

raguans tend to be demonstrative with one another, and their sense of personal space tends to be lesser than that of people in many other Western countries, such as the United States. Unannounced visiting of friends is commonplace, and people often exchange cards in both business and social settings.

FAMILY LIFE

Largely because of Nicaragua's strong Catholic heritage, formal marriage in a church is highly valued, although there are some common-law marriages. Because of housing shortages, the basic domestic unit is the extended family, with parents, children, aunts, uncles, cousins, and grandparents living together under the same roof. Newlyweds often live with the parents of either the bride or the groom, again because of poverty and a lack of available housing. In rural areas the extended family is regarded as especially valuable, for kin supply many hands to accomplish work on farms. A troublesome issue in recent years has revolved around the inheritance of land that the Sandinista regime seized from wealthy landowners and redistributed to the peasants who worked it; relatives of these wealthy people have been trying to reclaim land for their family, an effort that has become controversial.

PERSONAL APPEARANCE

Nicaragua is a hot and humid country, so dress tends to be lightweight and casual. Women wear cotton dresses, and both sexes wear sandals. Many men wear the *guay-avera*, a long cotton shirt, even in business settings. Traditional dress for women includes colorful, fringed shirts and blouses, often worn with shawls, jewelry, and flowers in the hair; for men it includes cotton trousers, a collarless white shirt, and a peaked straw hat.

SPORTS

Popular sports include boxing, basketball, volleyball, and water sports. Nicaraguans share with other Central American nations a love of soccer; unlike in those nations, however, baseball is the "national pastime" in Nicaragua. Its people have been playing baseball since the 1890s, and visitors to the country are struck by the local passion for the game; even the indigenous Miskito play. The saying *Nacio con un guante y una bona en la mano* means that every boy is born with a glove and ball in his hand. The Nicaraguan national team came in fourth in the 1996 Olympic Games in Atlanta, and the Major League Baseball pitcher Dennis Martinez, "El Presidente," who retired in 1997 after a career primarily in Baltimore and Montreal, was invited to run for president of the country—an offer he declined.

CHRONOLOGY

- 1936** With the help of the National Guard, Anastasio Somoza García ousts his uncle, Juan Bautista Sacasa, and declares himself president.
- 1939** Somoza visits the United States and is received by President Roosevelt, who allegedly remarks, "He's an SOB, but he's our SOB."
- 1945** Nicaragua joins Allied forces in World War II. Somoza takes over most of the land in Nicaragua.
- 1950** The ruling elite, backed by Somoza and his U.S.-trained National Guard, begin confiscating land in the Pacific Lowlands region in order to grow cotton.
- 1954** Costa Rica attempts to invade Nicaragua but is prevented by the Organization of American States. The Somoza regime allows Nicaragua to be used as a staging ground for Central Intelligence Agency activities in Guatemala.
- 1956** Somoza is assassinated. His son, Luis Somoza Debayle, becomes president.
- 1957** A border dispute with Honduras becomes violent.
- 1960** The International Court of Justice awards the Gracias a Dios area to Honduras.
- 1961** The Somoza regime allows Nicaragua to be used as a staging ground for the U.S. Bay of Pigs Invasion of Cuba.
- 1962** The FSLN is formed, based on the ideology and government opposition of Augusto César Sandino.
- 1965** The Somoza regime helps the United States invade the Dominican Republic.
- 1967** Luis Somoza Debayle suffers a heart attack and dies. His brother, Anastasio Somoza Debayle, assumes the presidency.
- 1972** In December an earthquake destroys Managua. National Guard soldiers loot the city. Aid for earthquake victims goes directly to the Somoza family.
- 1974** Sandinistas kidnap numerous leaders, including Somoza family members, releasing them only when political prisoners are flown out of the country.
- 1978** Pedro Joaquín Chamorro, a leader of the FSLN opposition, is assassinated. Opposition groups call a general strike. Sandinista commandos take hostage the entire Nicaraguan congress. Somoza imposes martial law.
- 1979** Sandinista rebels seize the capital. Somoza, whose family is now worth at least \$500 million, resigns and leaves the country. The Government Junta of National Reconstruction is formed, headed by Daniel Ortega Saavedra.
- 1980** Moderate members resign from the junta. Somoza is assassinated in Paraguay.
- 1981** The junta initiates land and other reforms. The United States publicly cuts off aid to the anti-government counterrevolutionaries, or Contras, and then restores that aid secretly, later launching the Iran-Contra scandal in the United States.
- 1982** Miskito Indians charge genocide.
- 1984** Constitutionally guaranteed civil liberties are suspended. In general elections, boycotted by most of the opposition, the FSLN wins an easy victory. The World Bank suspends loans to Nicaragua.
- 1985** Ortega is sworn in as president, and the junta is dissolved. The U.S. Congress votes against further aid to Contras. The United States imposes a trade embargo on Nicaragua.
- 1987** On January 9 a new constitution is promulgated. Nicaragua signs a regional peace plan, drawn up by Oscar Arias Sánchez of Costa Rica.
- 1988** Ortega attempts currency reform, introducing a new gold córdoba. The government signs a permanent cease-fire agreement with the Yatama group of Miskito rebels. Inflation reaches 35,000 percent.
- 1989** El Salvador suspends diplomatic relations with Nicaragua. The UN Security Council establishes the UN Observer Group in Central America (ONUCA) to monitor and prevent cross-border incursions by rebel groups.
- 1990** In February elections Violeta Chamorro, the candidate of a 14-party coalition, defeats President Ortega. The Chamorro government negotiates an end to hostilities between the government and the Contras. The United States pledges \$300 million in emergency aid.
- 1991** Chamorro announces an economic stabilization plan that includes the devaluation of the new córdoba. Former Contra rebels begin to rearm.
- 1993** Sandinistas rise up in Estelí. The Contras take 42 hostages in nearby El Zungana.
- 1994** A new military code is enacted, aiming to eliminate corruption and increase professionalism in the armed services.
- 1995** Gen. Humberto Ortega is replaced by Gen. Joaquín Cuadra as part of ongoing reforms. The 1987 constitution is amended, giving more power to the National Assembly.

- 1996** The National Assembly places the police under civilian rule and institutes a code of police conduct.
- 1997** Arnaldo Alemán is sworn in as president in January.
- 1998** Hurricane Mitch kills 4,000.
- 1999** Human rights groups cite continued police brutality in Nicaragua.
- 2000** Army and police confront indigenous protesters of the Yatama tribe in Puerto Cabezas, who claim they are being excluded from upcoming elections. The FSLN wins Managua's mayoral seat. The constitution is amended, giving more power to the two largest political parties.
- 2001** Liberal Party candidate Enrique Bolaños Geyer is elected president.
- 2002** Opposition Sandinista party reelects Daniel Ortega as its leader.
Former president Alemán is charged with embezzlement and money laundering during his term in office.
- 2003** Alemán is sentenced to 20 years for corruption. Nicaragua, Guatemala, Honduras, and El Salvador negotiate a free-trade agreement with United States.
- 2004** The World Bank erases 80 percent of Nicaragua's debt to the institution, and an agreement is reached with Russia to write off Nicaragua's debt from the Soviet era.
- 2005** Congress approves the Central American Free Trade Agreement (CAFTA).

OFFICIAL NAME

Republic of Niger (République du Niger)

ABBREVIATION

NE

CAPITAL

Niamey

HEAD OF STATE

President Mamadou Tandja (from 1999)

HEAD OF GOVERNMENT

Prime Minister Hama Amadou (from 1999)

NATURE OF GOVERNMENT

Republic

POPULATION

11,665,937 (2005)

AREA

1,267,000 sq km (489,190 sq mi)

MAJOR ETHNIC GROUPS

Hausa, Djerma, Fulani, Tuareg, Beri Beri

LANGUAGES

French (official), Hausa, Djerma, Tamajaq

RELIGION

Islam

UNIT OF CURRENCY

Communauté financière d'Afrique franc

NATIONAL FLAG

Tricolor of orange (top), white, and green horizontal stripes, with an orange orb in the center of the white stripe

NATIONAL EMBLEM

A shield displaying crossed gold Tuareg swords and lances, crossed ears of millet, a native buffalo head, and a blazing sun; four national flags are crossed behind the shield, two on each side, and a white scroll at the base carries the legend "République du Niger."

NATIONAL ANTHEM

"Stand Up, Niger"

NATIONAL HOLIDAYS

January 1 (New Year's Day), April 24 (Concord Day), May 1 (Labor Day), Easter Monday, August 3 (Independence Day), December 18 (Republic Day), Christmas, all major Islamic festivals

DATE OF INDEPENDENCE

August 3, 1960

DATE OF CONSTITUTION

January 1993; revised May 12, 1996, and July 18, 1999

GEOGRAPHICAL FEATURES

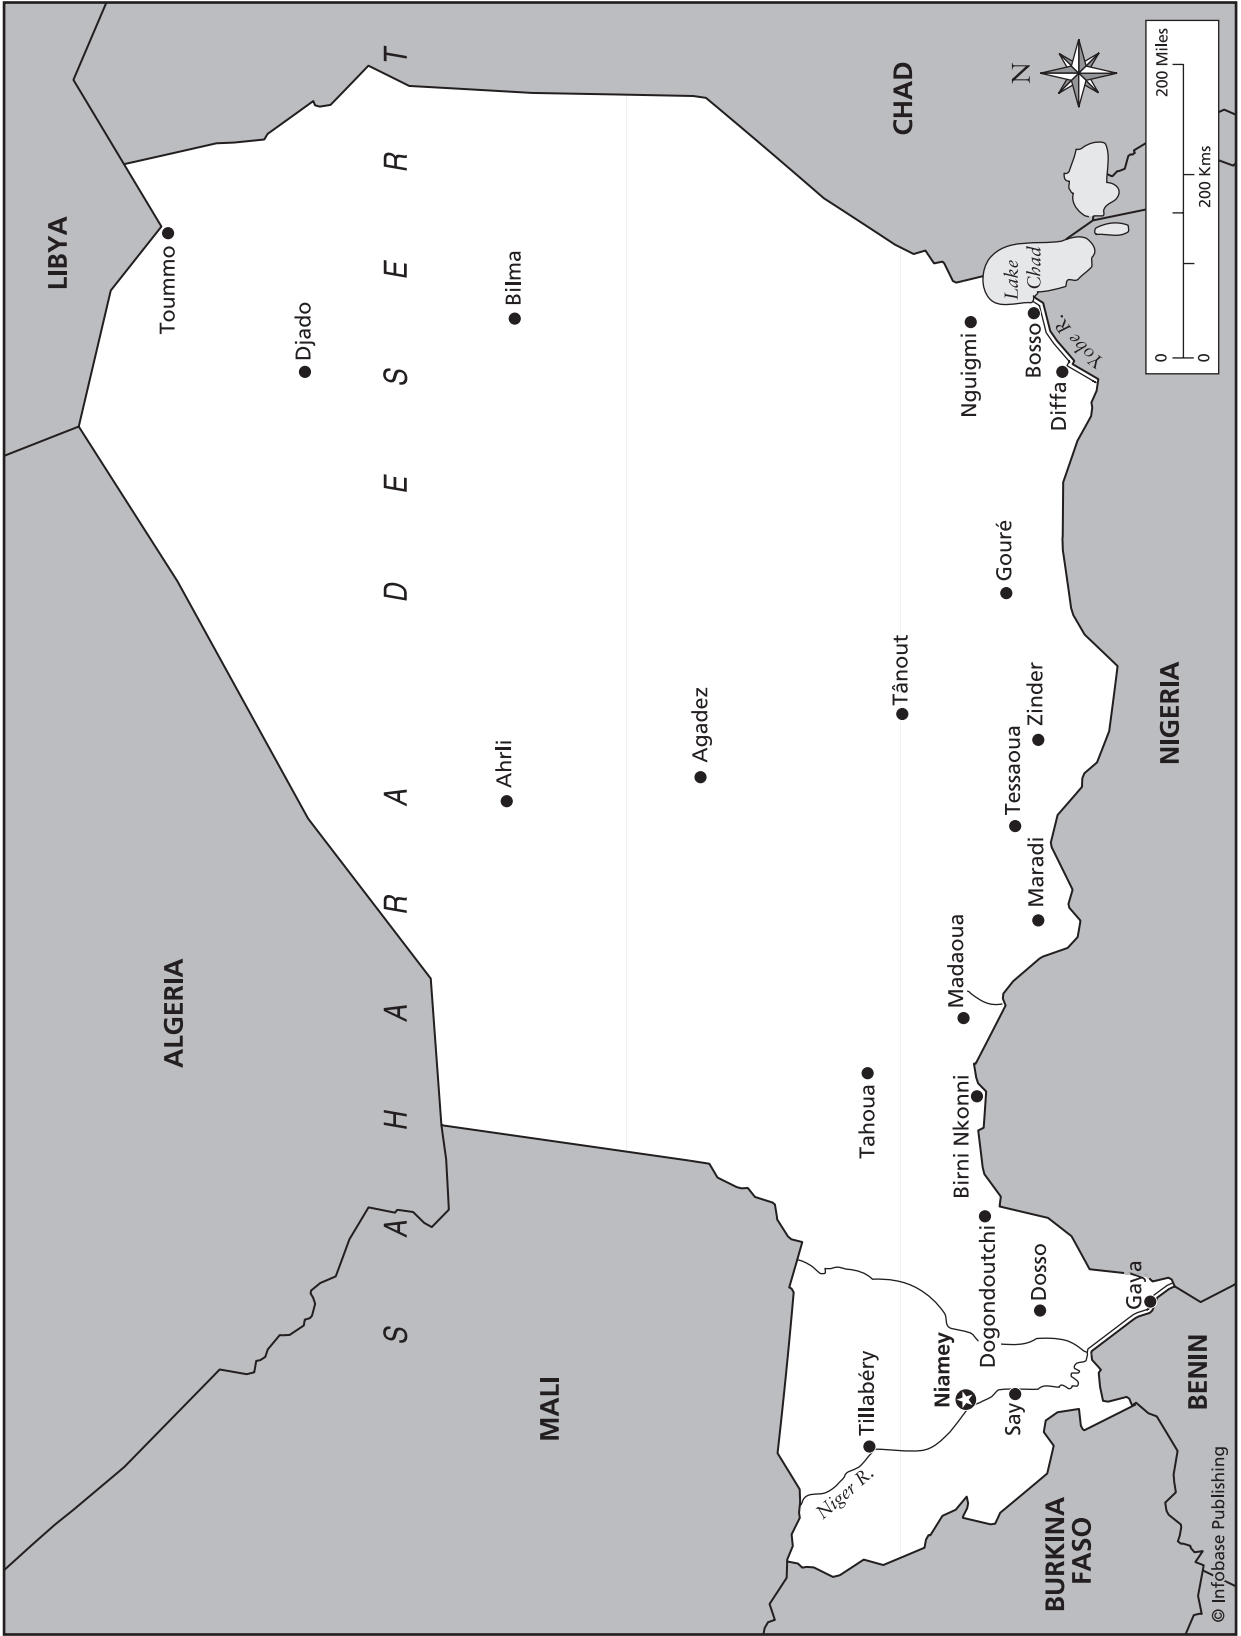

Landlocked Niger is the largest country in West Africa, with an area of 1,267,000 sq km (489,190 sq mi), extending 1,845 km (1,146 mi) east-northeast to west-southwest and 1,025 km (637 mi) north-northwest to south-southeast. Niger shares its total international boundary of 5,697 km (3,540 mi) with seven neighbors: Algeria, Mali, Burkina Faso, Benin, Nigeria, Chad, and Libya.

Four-fifths of Niger is arid desert; the remaining fifth is savanna. Vast areas in the north are character-

ized by the same relief: sandy basins, low plateaus, isolated hills and peaks, and limestone or sandstone bluffs. The Tamgak Mountains in the northwest rise 1,800 m (5,900 ft) above the Iferouane Valley. In the north-central region is the volcanic Air Massif, pierced by deep valleys called *koris*, where there is dense vegetation of acacias and doum palms. Farther east is the Tenere, a sandy and arid desert.

The lifeline of the country is the Niger River, which flows through the south for 300 km (186 mi). Niger also shares Lake Chad with Nigeria, Chad, and Cameroon.

CLIMATE AND WEATHER

Niger is one of the hottest regions on the planet, with temperatures often rising to 50°C (122°F); the intense heat makes rain evaporate before it reaches the ground. From November to February the weather is dry and relatively cool, with the temperature often dropping to 29.4°C (85°F). The rainy season lasts from June to October in the south, with maximum rainfall in August. Annual rainfall averages 500 mm (29 in) south of latitude 16° north; to the north it drops below 200 mm (8 in), and conditions become subdesert (Sahelian) and then desert (Saharan). At the town of Agadez, rainfall is no more than 100 mm (4 in) in good years.

The prevailing wind is the harmattan, a scorching wind that parches all living things during the dry months.

Climate and Weather

Temperature Range: 85°F to 122°F
 Average Rainfall

 North: 8 in
 Agadez: 4 in

FLORA AND FAUNA

Niger consists primarily of arid desert, where vegetation is extremely sparse, consisting principally of succulents. Wildlife is limited to spiders, reptiles, insects, and occasional nocturnal birds. The southern regions of the country, which receive more rain, have extensive savannas, and in the lowlands can be found forested regions with a variety of trees, including mahogany, kapok,

tamarind, and baobab. Niger's wildlife, much of which is endangered by poachers, includes giraffes, lions, antelopes, and buffalo.

ETHNIC COMPOSITION

Niger has a complex ethnic configuration, but two peoples make up about 78 percent of the population: the Hausa, inhabiting the center and south, with 56 percent, and the Djerma, in the southwest, with 22 percent. The Beri Beri (Kanouri), in the east, make up 4.3 percent of the population. Nomadic herdsmen, some of whom are of Caucasian stock, live alongside the other Negro tribes: the Fulani (or Peul) in the south, constituting about 8.5 percent of the population; the Tuareg in the north, with about 8 percent of the population; and the Tèbu (also called Tubu) in the east.

The two primarily nomadic groups, the Tuaregs and Fulani, have less access to government services, partly because their transient lifestyles make it difficult for the government to supply those services and partly because of historical animosities between the nomads and the sedentary Djerma and Hausa ethnic groups, which dominate the government. Such animosities undoubtedly contributed to slowness by some government officials in 1985 in guaranteeing that adequate quantities of food relief reached isolated Tuareg and Fulani populations.

There are small Western communities in Niamey and other major towns.

Residents of Niger are referred to as Nigeriens, borrowed from the French, rather than Nigerians, who are residents of Nigeria.

LANGUAGES

The official language of Niger is French; it is spoken, however, by only a tiny minority. All major ethnic groups have their own vernaculars, usually bearing the same name as the group, except in the case of the Tuareg, whose language is known as Tamajaq. Arabic is the preferred language in literature. The languages of the dominant ethnic groups, Djerma and Hausa, are used as lingua francas.

RELIGIONS

Niger has been almost completely Islamized, except for some 20 percent of the population who either practice some form of traditional religion or profess to be Catholics or Protestants. The dominant Muslim sect is Sunni; as in other parts of North Africa, the most powerful religious organizations are the Islamic brotherhoods, of which the three most influential are the Tijniyya, Senoussi, and Hamallists.

Christian churches are allowed to operate freely. Conversion from one religion to another is not prohibited but occurs only rarely. Foreign missionaries are permitted to live, work, and travel in Niger. There have been no reports of religious discrimination, but adherence to Islam tends to bestow advantages in all sectors of life. The government, cautious because of the Islamic fundamentalist violence that erupts periodically in northern Nigeria, monitors religious activity through the Islamic Association, which is funded by the government. Local religious leaders are subject to an informal government screening process, and Islamic services that have gone beyond strictly religious subjects have been shut down by the government. Religious groups are allowed to maintain links with coreligionists in other countries.

HISTORICAL BACKGROUND

The Kanem-Bornu Empire ruled the area that now makes up Niger from the 10th century until the 13th. By the 16th century Hausa clans were moving from Nigeria into Niger. These immigrants were followed by members of the Djerma, descendants of the Songhai people. The leaders of these clans, called sultans, were largely independent until the late 19th century. They grew rich on the trading of gold and slaves along the trade routes.

In 1898 the French invaded and began to colonize the region. The earliest French military expeditions into the territory now called Niger met fierce resistance from the

Tuareg and other tribes, but the French steadily pushed forward and by 1900 succeeded in encircling Lake Chad with military outposts. In 1901 the military district of Niger was created as part of the province of Haut-Senegal et Niger. Sporadic rebellions continued to bedevil the French until 1914, when a major German-inspired uprising took place, which was put down only with British assistance. Not until 1922 was the country fully pacified. Until 1932 Niger was administered directly from Paris through the governor-general in Dakar, Senegal. From 1932 to 1947 it was administered jointly with Upper Volta (now Burkina Faso). Niger became an autonomous state in 1958 and proclaimed its independence in 1960. Although no longer a member of the French Community of West Africa, Niger still maintains close economic and political ties with France.

Following 1960 independence the country became a one-party state led by Hamani Diori, the president and head of the Niger Progressive Party. Opposition to the regime centered on the Marxist-oriented Sawaba Party, which carried out activities from abroad. Diori and his government won overwhelming reelections in 1965 and 1970, but their failure to deal with widespread political discontent and official corruption as well as the problems caused by severe drought resulted in their overthrow in a military coup in 1974. The coup was led by Seyni Kountché and Sani Souma Sido, who installed themselves as president and vice president, respectively, of the Supreme Military Council (CMS). The following year Kountché had Sido arrested for attempting to organize another coup.

An initial period of liberalization followed the coup, and political prisoners were released. Economic conditions improved with the end of a drought in 1976 and the recovery of export commodity prices. However, sporadic opposition to the regime continued, culminating in an attempted coup in 1976; student unrest increased in the early 1980s. In an attempt to win popular support, Kountché introduced more civilians into the government in 1980 and initiated procedures to develop a more representative form of government in 1982. Local elections were held for village councils, which in turn elected local councils. These bodies elected regional councils that in turn elected the National Development Council (CND). The CND, established in 1974, was given quasi-leadership status in 1983 after the election of 150 delegates. The office of prime minister was created, and Kountché appointed Mamane Oumarou to the post; Oumarou also assumed the post of president of the CND. Following a coup attempt in October 1983, Kountché replaced Mamane with Hamid Algabid as prime minister.

The following year Kountché announced the creation of the National Charter Commission to draft a national constitution. Largely made up of members of the CND, the commission made slow progress, in part because its work was suspended for a time, as the government made

dealing with the recurring drought and economic problems priorities. At length, a draft document introduced in 1985 was adopted by the government in 1986 and approved by referendum in 1987. Nevertheless, the military remained firmly in command.

Kountché died in 1987 and was succeeded by the armed forces' chief of staff, Ali Saïbou. The civilian Al-gabid remained prime minister, but Saïbou strengthened the army's role in government by increasing army participation in the cabinet. In 1988 Saïbou announced the formation of another commission to draft guidelines for a constitution. He subsequently made clear that the army would continue to play a dominant role in government following the adoption of the constitution. In the same year he announced the lifting of the ban on all political organizations and the formation of a political party, the National Movement for Social Development, which was intended to form the core of a one-party state; Saïbou restated his opposition to a multiparty system.

In September 1989 the nation adopted a new constitution providing for the direct election of the president and the legislature. In the December elections that followed, Saïbou was confirmed as president with over 99 percent of the vote. A single list of candidates approved by the Conseil Supérieur d'Orientation National, which replaced the CMS, won endorsement to the legislature with over 99 percent of the vote, as well.

Niger's recent history has been dominated by two developments: continuing political instability and a Tuareg insurgency. A feeble attempt to restore democracy in 1991 led to the appointment of Amadou Cheiffou as prime minister. A new constitution was approved by referendum in 1992. The 1993 election, which brought in Mahamane Ousmane as Niger's first democratically elected president, did not result in the control of the assembly by any one party. In 1994 opposition legislators boycotted the assembly, and a series of short-lived governments followed. In 1995 international mediators were called in to settle the constitutional impasse. The Tuareg insurgency, meanwhile, continued in the northeast, where government troops had imposed martial law. A final peace accord was signed in 1995, granting full amnesty to all rebels. In a military coup staged in 1996, the army chief of staff Ibrahim Baré Maïnassara overthrew the civilian government, which he characterized as "absurd and irrational." In 1996 Maïnassara captured the presidency in a national election with 52 percent of the vote. Antigovernment violence continued, leading the president to respond with a crackdown on the opposition. In 1999 Maïnassara was assassinated upon his return from a trip to Mecca, reportedly by members of the presidential guard, and Major Daouda Malam Wanké, the head of the presidential guard, became head of state. He suspended the constitution and formally dissolved the government and the Supreme Court.

A military junta known as the Conseil de Réconciliation National took control of the country until presidential and parliamentary elections were held in November 1999. The National Movement for a Developing Society (MNSD) won the largest number of seats in the National Assembly, and its candidate, Mamadou Tandja, was elected president. In a strong environmental move, Niger banned hunting in early 2001 to save endangered wildlife. In 2002 military units in the east and in the capital rebelled, demanding the payment of back wages, but the rebellions were put down. In 2003 Niger found itself in the headlines when the United States and Great Britain charged that Iraq was trying to obtain uranium for nuclear weapons from the country, a charge that was later withdrawn. In 2004 Niger held its first-ever local elections, with the president's party winning most of the seats. In late 2004 Tandja was reelected as president, winning over 65 percent of the votes in second-round balloting.

LIST OF MODERN RULERS

1960–74	Hamani Diori
1974–87	Seyni Kountché
1987–93	Ali Saïbou
1993–96	Mahamane Ousmane
1996–99	Ibrahim Baré Maïnassara
1999	Daouda Malam Wanké
1999–	Mamadou Tandja

CONSTITUTION

The military government of Niger agreed to enforce the constitution of 1993 as it was modified in 1996. The constitution calls for a president and a bicameral legislature, consisting of a National Assembly and a second chamber neither named nor defined by law. The assembly, elected in a mixed electoral system, consisted at the time of 83 members, and the term of service was five years. The true power in the country rests with the president, who also serves a five-year term. He appoints the prime minister, who shares some executive responsibility. Suffrage is universal at the age of 18. In 1999, after a coup led by Major Daouda Malam Wanké, constitutional amendments were approved that absolved participants in both the 1996 and 1999 coups and restored the constitutional balance between the executive and legislative branches of the government.

PARLIAMENT

Constitutionally, Niger has a bicameral legislature. However, the second chamber is not defined by the constitution and has not been established. The existing National Assembly consists of 113 members, who are elected

through a multiround electoral system. The parliamentary elections in 1999 resulted in a freely elected democratic government; the last elections were held in 2004.

POLITICAL PARTIES

There are several political parties in Niger. Ibrahim Baré Maïnassara headed the National Union of Independents for Democratic Renewal, which won 52 percent of the vote in the 1996 elections. Shortly after Maïnassara's election, eight parties formed an opposition coalition, including the MNSD, the Democratic and Social Convention (CDS), and the Nigerien Party for Democracy and Socialism (PNDS). Maïnassara was assassinated in 1999, reportedly by members of the presidential guard. In the 2004 elections, the MNSD won 47 seats, the CDS 22, and the PNDS just one. There are numerous smaller parties that represent various ethnic groups, such as the Tuareg groups of the northern part of the country.

LOCAL GOVERNMENT

For purposes of local government, Niger is divided into seven departments and one capital district, 32 *arrondissements*, and 150 communes, or rural districts. The chief administrator in each department is the prefect, appointed by and responsible to the president.

LEGAL SYSTEM

The constitution provides for an independent judiciary. Defendants and prosecutors may appeal a verdict, first to the Court of Appeals, then to the Supreme Court. The Court of Appeals reviews questions of fact and law, while the Supreme Court reviews only the application of the law and constitutional questions. Human rights groups claim that family and business ties influence the lower courts.

There are also customary courts. Traditional chiefs can act as mediators and counselors and have authority in customary law cases as well as status under national law, wherein they are designated as auxiliaries to local officials. Customary courts, located only in large towns and cities, try cases involving divorce or inheritance. They are headed by legal practitioners with basic legal training who are advised by assessors knowledgeable in the society's traditions. The judicial actions of chiefs and customary courts are not regulated by law, and defendants may appeal a verdict to the formal court system.

HUMAN RIGHTS

Niger is beginning a process of consolidating a democratic system and a constitutional government following

the period of instability that characterized the last democratic government and coups d'état in 1996 and 1999. The April 1999 coup put in place a military-led government, which instituted a nine-month transition to a democracy. A July 1999 referendum approved a new constitution that provided for a power-sharing presidential system and granted amnesty to perpetrators of the 1996 and 1999 coups.

Regardless of elective changeovers, the government's human rights record has remained generally poor; although there have been improvements in several areas, some serious problems remain. With the 1999 election of President Tandja and the members of the National Assembly in generally free and fair elections, citizens exercised their right to change their government, and since then the president has been praised for returning some stability to the country. However, human rights groups have reported incidences of police brutality and torture by the military. Prison conditions have remained poor, and arbitrary arrest and detention have occurred. Delays in trials have resulted in long periods of pretrial confinement. The judiciary has also been subject to executive and other influence. Security forces have infringed on citizens' privacy rights, and the government has limited freedom of the press and has frequently restricted freedom of movement. Domestic violence and societal discrimination against women continue to be serious problems. Female genital mutilation persists, despite government efforts to combat it. Societal discrimination exists against the disabled and ethnic and religious minorities. There have also been reports that a traditional form of servitude is still practiced.

FOREIGN POLICY

Niger pursues a moderate line in foreign affairs and maintains friendly relations with both the East and the West. Niger maintains a special relationship with France and is amicable with neighboring states, although in 2005 there remained unresolved boundary disputes with Libya and Nigeria. Niger belongs to the United Nations and is a charter member of the African Union and the West African Monetary Union. It also belongs to the Niger River and Lake Chad Basin Commissions, the Economic Community of West African States, the Nonaligned Movement, and the Organization of the Islamic Conference.

DEFENSE

The defense structure is headed by the president, who also is chairman of the Conseil Supérieur d'Orientation National. The line of command runs through the minister of defense to the army chief of staff. There is no navy, and the air force is a purely transportational arm.

1760 Niger

The Nigerien armed forces have no offensive capability and have yet to be tested in field combat. The army has very little mobility and is deployed almost entirely in the north. In 2003 the country had 10,700 armed forces personnel.

Military manpower is obtained through conscription. The conscript service period is two years.

Until 1974 French troops were stationed in the country under bilateral defense agreements. These troops were withdrawn at the request of the Kountché regime, but defense and military assistance agreements remain in force. Niger spent an estimated 1.1 percent of gross domestic product (GDP), or about \$33 million, on military expenses in 2004.

ECONOMY

Niger is a poor, landlocked sub-Saharan nation whose economy centers on subsistence agriculture, animal husbandry, reexport trade, and increasingly less on uranium, its major export since the 1970s. The 50 percent devaluation of the CFA franc in January 1994 boosted exports of livestock, cowpeas, onions, and the products of Niger's small cotton industry.

The government relies on bilateral and multilateral aid—which was suspended following the April 1999 coup d'état—for operating expenses and public investment. In 2000 the World Bank approved a structural adjustment loan of \$35 million to help support fiscal reforms. However, reforms could prove difficult, given the government's bleak financial situation, despite ongoing help from the International Monetary Fund (IMF) and the Heavily Indebted Poor Countries initiative. Growth of 3.8 percent in 2003 came from the gold, coal, oil, and mineral sectors.

ENVIRONMENT

Many of Niger's environmental problems involve the destruction of natural habitats by deforestation and desertification. Farmers use poor techniques that have caused soil erosion and have allowed stock to overgraze certain areas. Many of Niger's wildlife populations—such as those of elephants, hippopotamuses, giraffes, and lions—are threatened because of poaching and habitat destruction. In 2001 Niger banned hunting in an effort to save its wildlife.

LIVING CONDITIONS

Living conditions in Niger are generally harsh. The country is extremely poor, with a per capita GDP of just \$900 in 2004. Although there has been some migration to cities, the country is largely rural. Rural villages generally do not have electricity, and women are forced to draw water from communal wells. The risk of drought is constant, and extended droughts lead to malnutrition. In 2003 the probability of a female child under the age of five dying was just over one in four. In rural areas most people live in adobe or concrete houses, although the more nomadic and seminomadic peoples such as the Tuareg also live in tents made of animal hides and grass. These tents are marked by gender stratification, with the woman and her belongings on the right side of the tent and the husband and his belongings on the left. In the capital, where the government finds it difficult to deliver even the most basic services, social problems are rampant, with high rates of unemployment, violent crime, drug use, alcoholism, teen prostitution, and the like.

HEALTH

The state of health care in Niger is extremely poor, as is to be expected in a country in which annual per capita

spending on health care in 2002 was just \$7. In 2004 life expectancy at birth was just 42 years. The infant mortality rate was over 120 per 1,000 live births, one of the highest rates in the world, as only 16 percent of births are attended by trained medical staff, one of the lowest rates in the world. In 2002 only 46 percent of the population had access to clean drinking water, contributing to a death rate from intestinal diseases of 36.4 percent, again one of the highest rates in the world. Malaria is common, with an estimated 1,700 cases per 100,000 population in the early 2000s. Only 64 percent of children are immunized against measles.

FOOD AND NUTRITION

Niger is a country that is unable to feed its people, over 60 percent of whom live below the poverty line. In 1995–2003, 14 percent of children under age five were severely underweight, with an additional 26 percent moderately underweight. Some 14 percent suffered from moderate to severe wasting and 40 percent suffered from moderate to severe stunting. The primary staple is millet, which is made into a porridge or paste and served variously with milk and sugar, spices, meat, and such vegetables as eggplant, pumpkin, squash, okra, and tomato sauce. The Tuareg consume dates heavily, and the Djerma often use maize rather than millet as the primary staple. Other dishes include rice or beans, couscous, cowpeas, cassava, ground peanut cakes, and grilled tripe. Mangoes are widely consumed when they are in season. Muslims do not consume pork.

STATUS OF WOMEN

Men have considerable advantages in terms of education, employment, and property rights. In case of divorce, custody of all children under eight years is given to the husband. Conscious of this situation, the government has made progress in improving the status of women by launching work on a new family code, making better employment opportunities available to women, giving them a significant role in the Development Society network of councils, and supporting the National Women's Association.

In 1985 the government undertook a major initiative to encourage Nigeriens to use birth control, but in 2002 only about 8 percent of women were doing so.

WORK

In 2002 Niger's wage labor force was about 70,000, but this figure has little meaning because so many people make their living by subsistence farming, are members of nomadic or seminomadic ethnic groups, or take part in the informal economy as street vendors and the like. About 90 percent of people are involved in agriculture, growing such crops as cowpeas, cotton, peanuts, millet, sorghum, cassava, and rice or, especially in the pastoral north, tending livestock herds. Many people supplement their income with such activities as trade, sewing, smithery, and the like. A growing problem is the availability of land, which continues to be divided into smaller and smaller plots as it is passed down to children. Just 6 percent of people are employed in commerce and industry; major industries include uranium mining, brick and cement production, textiles, food processing, and chemicals. The remaining 4 percent of the labor force is employed by the government.

Employment and Labor

Labor Force Total: 70,000

 Unemployment %: —

EDUCATION

In 2003 the national literacy rate was 17.6 percent—25.8 percent among males and a dismal 9.7 percent among fe-

males. In 2001 the average expected educational attainment was just three years, and only about 40 percent of Niger's children were enrolled in primary school, just 6 percent in secondary school.

Education is free, universal, and compulsory, in principle, for eight years, from ages seven to 15, but the number of schools is insufficient. Schooling lasts for 13 years, as divided into six years of primary school, four years of lower-cycle secondary school, and three years of upper-cycle secondary school. The curriculum, based on the French model, is being Nigerienized with the help of the UN Educational, Scientific, and Cultural Organization. There are proportionally fewer Christian schools in Niger than in other countries of West Africa. Private schools account for 4.4 percent of primary-level enrollment and 15.6 percent of secondary-level enrollment.

The school year runs from October to June. The language of instruction is French.

The school system is controlled by the Ministry of Education.

Higher education is provided at the Université de Niamey and at the Islamic University of West Africa, at Say, which opened in 1987.

SCIENCE AND TECHNOLOGY

Niger's extreme poverty prevents the development of a scientific infrastructure. The Centre National de Recherches en Sciences Humaines conducts some research in the sciences, in such fields as environmental science and agronomy, and Niger has received increasing attention from paleontologists since the early 1990s, as the remains of at least four new species of dinosaur have been discovered in the country.

CULTURE

Oral traditions dominate the culture of Niger. Storytellers and bards, called griots, pass on the nation's history and traditions at celebrations and festivals. Niger's literary tradition includes love poetry, plays, riddles, proverbs, political songs, and epic poetry. A primary form of cultural expression is arts and crafts. The Hausa and Djerma peoples, especially women, are known for their pottery. Hausa and Tuareg men are adept at leatherwork and make saddles, pouches, cushions, boots, sandals, and the like. Hausa women, too are known for their colorful handwoven blankets. Smithery and jewelry making are common among the Tuareg and Fulani. The National Museum contains exhibits of many of all of these crafts. One well-known painter is Rissa Ixa, a Tuareg who found the Association for the Promotion and Development of Traditional Arts and Cultures in Niger.

FOLKLORE AND MYTHOLOGY

Niger's folkloric traditions are dominated by the belief in spirits who control human destiny, with respect to health, fortune, crops, family disagreements, and the like. In rural regions there is a strong sense of demarcation between settlements and the "wild," where spirits dwell and which has to be controlled. Witchcraft is also thought to be a source of illness, pain, or misfortune, and amulets are often worn, especially by children, to ward off the influence of witches. The presence of these spiritual forces is explained in a Hausa myth about the first man, Adamu, and the first woman, Hawa, who had produced 50 sets of twins. When the creator told them that he wanted to see the children, Hawa hid the most beautiful of each pair, worried that the creator would want to take them for himself. The creator, however, knew of their deception and punished them by making the 50 hidden children invisible, and the descendants of these children are the spirits that plague humans.

ENTERTAINMENT AND RECREATION

The people of Niger take their recreation where they can find it. Open-air markets provide a place for people to gather and converse. Among some Fulani can be found beauty pageants—in which the men wear makeup and the women determine the most handsome entrant. Television has become more popular with those who can afford sets, and some charge admission fees to allow their neighbors to watch. Solar-powered batteries provide electricity for television sets in some rural areas. Younger people enjoy martial arts films and movies from India in open-air theaters in the cities. Many people who gather for religious festivals dance to music provided by drums and stringed instruments.

ETIQUETTE

Interpersonal relations in Niger are marked by modesty and restraint. Greetings are formal and elaborate, and it would be considered rude to approach a person for conversation without an introduction and greeting. People are expected to dress modestly and conduct themselves properly. Among Muslims, women are expected to defer to their husbands and avoid confronting them or looking

them directly in the eye, and some Muslim women have met with violence when others concluded that their dress was not modest enough. In general, it is rude to directly confront or contradict another person; disagreement or refusal to do something is expressed indirectly.

FAMILY LIFE

Most marriages are arranged. Men and women can refuse a potential partner, but neither is likely to marry someone who meets with disapproval from parents. Polygyny is allowed, but few men have the economic means to support multiple wives. Many people, especially (but not exclusively) outside the cities, live in compounds in which parents live with their sons and their wives; the Tuareg live with nuclear families, but the extended family usually lives in adjacent compounds. Young children are typically given little discipline, but early on they are schooled in such values as respect for elders and authority figures (such as Islamic scholars) and the need to share whatever possessions they may acquire with family.

PERSONAL APPEARANCE

Most people wear traditional clothing rather than modern Western-style dress, although civil servants tend to wear Westerns slacks and shirts. Dress is an important way to communicate status, ethnicity, religious beliefs, and the like. Men are likely to wear long sleeveless gowns over matching shirts and trousers. Fulani and Tuareg women tend to wear dark dyed clothing, while the Hausa and Djerma tend to wear bright, gaily colored clothing. Most women conform to Islamic law by covering their heads, with either scarves or large veils; among the Tuareg, it is the men who cover their faces.

SPORTS

Nigeriens have great affection for horses, and horse racing is a common sport, particularly among the Hausa. Also popular, especially among boys and young men, is soccer. The most popular sport is wrestling. Cities have arenas where people can attend wrestling tournaments and follow their favorite wrestlers. Wrestling events are often used as venues for spreading information about the prevention of diseases such as AIDS, polio, and malaria and for encouraging education among young people.

CHRONOLOGY

1960 Niger proclaims its independence as a republic, with Hamani Diori as president.

- 1963** A total of 80 people are arrested and scores are executed for plotting against the regime.
- 1965** Hamani Diori escapes assassination.
- 1967** Uranium deposits, the largest in sub-Saharan Africa, are discovered in the Air mountain range.
- 1968** Following a dispute between the ruling Niger Progressive Party and the graft-ridden civil service, the party is given a larger role in the national administration.
- 1973** Drought of unprecedented severity ravages Niger, decimating national herds and wrecking the economy.
- 1974** The chief of staff, Lt. Gen. Seyni Kountché, seizes power in a bloody coup. Diori is placed under house arrest, the National Assembly is suspended, and all political parties are banned.
- 1975** Vice President Sani Souma Sido is arrested for alleged conspiracy against the regime.
- 1976** Former minister of rural development Moussa Bayere leads abortive coup and is sentenced to death along with eight other conspirators.
- 1983** CND is expanded to 150 delegates and given possible role of drafting a new constitution. Mamane Oumarou is named prime minister but is later replaced by Hamid Algabid. Kountché puts down coup and arrests hundreds of dissidents. Former president Diori is released from prison.
- 1985** Tuareg dissidents attack Tchín-Taboradam but are crushed by government troops. Diori is rearrested. External debt is rescheduled as Niger initiates austerity measures.
- 1986** Preparation of draft national charter is completed.
- 1987** The government adopts a national charter, which is approved by over 99 percent of voters in a referendum. Kountché dies and is succeeded by Ali Saïbou. Diori is released from house arrest. Saïbou announces a general amnesty for all political prisoners.
- 1988** The CND is given the task of drafting a new constitution. The ban on all political parties is repealed. Saïbou announces formation of a new party, the National Movement for Social Development.
- 1990** Demonstrators are killed by police. Saïbou tries to calm the situation by announcing plans for democratization. Aliou Mahamidou is named prime minister.
- 1991** A constitutional amendment allowing for a multi-party system is adopted in April. Multiparty elections are promised for 1992.
- 1995** The Tuaregs of the Armed Resistance Organization engage in guerilla activity in the north, seeking autonomy.
- A brokered peace agreement fails to end the Tuareg conflict.
- 1996** A military coup led by Col. Ibrahim Baré Maïnassara takes control of the government. Maïnassara is elected president in a highly contested election.
- 1998** Maïnassara survives an assassination attempt.
- 1999** Maïnassara is assassinated by military dissidents. Mamadou Tandja is elected president.
- 2001** Niger bans hunting to save endangered wildlife.
- 2002** Military units in the east and in the capital rebel, demanding payment of back wages, but the rebellions are put down.
- 2003** The United States and Great Britain charge that Iraq was trying to obtain uranium for nuclear weapons from Niger, a charge that is later withdrawn.
- 2004** Niger holds its first-ever local elections, with the president's party winning most of the seats. Tandja is reelected as president, winning over 65 percent of the votes in second-round balloting.

DATE OF INDEPENDENCE

October 1, 1960

DATE OF CONSTITUTION

May 29, 1999

GEOGRAPHICAL FEATURES

Nigeria is in West Africa and has a total land area of 923,768 sq km (356,668 sq mi), extending 1,127 km (700 mi) east to west and 1,046 km (650 mi) north to south. Its coastline, on the Gulf of Guinea, stretches 853 km (530 mi). Nigeria shares its international border of 4,047 km (2,513 mi) with four neighbors: Chad, Cameroon, Benin, and Niger. In the east, Nigeria includes part of the former UN trust territory of the British Cameroons.

In terms of vegetation, altitude, and climate, there are four natural divisions from south to north: the coastal belt of mangrove swamps, about 15–95 km (10–60 mi) wide; the tropical rain forest, with undulating plains and

scattered hills, about 80–160 km (50–100 mi) wide; the high central plateau, with open woodland and savanna, about 600–1,800 m (2,000–6,000 ft) in elevation; and the semidesert in the extreme north. Lowlands predominate except in the central Jos Plateau. The northern semidesert, known as the High Plains of Hausaland, is a broad expanse of sandy plains, broken here and there by rocky dome outcrops.

The Niger River, which rises in the mountains to the northeast of Sierra Leone, enters Nigeria from the west, then runs in a southeasterly direction until it receives the waters of its principal tributary, the Benue, at Lokoja, whereupon it runs south about 547 more km (340 mi) through Nigeria to the Gulf of Guinea.

CLIMATE AND WEATHER

Nigeria lies entirely within the tropics, but there are wide climatic variations. In general, there are two seasons, dry and wet, throughout Nigeria, but near the coast the seasons are less sharply defined. Temperatures above 37.8°C (100°F) are common in the north, but coastal temperatures seldom climb over 32.2°C (90°F). The humidity at the coast, on the other hand, is higher than in the north. Inland there are two distinct seasons: a wet season from April to October and a dry season from November to March. Temperatures are highest from February to April in the south and from March to June in the north and are lowest in July and August over most of the country.

The annual average rainfall varies from 1,700 mm (70 in) on the western end of the coast to 4,310 mm (170 in) along the eastern section of the coast, to 1,270 mm (50 in) over most central areas and the Jos Plateau, and to 500 mm (20 in) in the extreme north. The length of the rainy season shows similar decreases, from 12 months in the south to under five months in the north.

The prevailing wind systems are the rain-bearing southwesterlies and the hot and dry harmattan from the northeast.

Average Rainfall

Western Coast: 70 in

Eastern Coast: 170 in

Central Areas and Jos Plateau: 50 in

North: 20 in

FLORA AND FAUNA

Along the low-lying coastal region are extensive mangrove forests, the third-largest such forests in the world. Where the water is fresh, swamp forests predominate. The tropical rain forests contain valuable hardwood

trees, including mahogany, obeche, and iroko. The open woodland and savanna of the central plateau are dominated by grasses and low shrubs. Animal species are abundant, although many are endangered; these include gorillas, hippopotamuses, elephants, and chimpanzees. A number of other species are endemic, including antelopes, squirrels, small-clawed and spotted-necked otters, mongooses, and monkeys.

ETHNIC COMPOSITION

Nigeria is a typical African country in the diversity and heterogeneity of its ethnic heritage, with an estimated 300 ethnic groups. No group enjoys an absolute numerical majority, but the four dominant groups—the Hausa and Fulani in the north, Yoruba in the west, and Ibo in the east—together constitute 68 percent of the population.

Relative to Nigeria's population, the size of the non-African community is small but fairly diverse; included are Britons, Indians, Lebanese, and Americans.

LANGUAGES

English is the official language and serves as that of administration, law, commerce, and education at all levels. It is spoken with varying degrees of fluency by some 14 million people, making Nigeria the largest English-speaking country in sub-Saharan Africa.

Of the 250 or more vernaculars spoken in the country, Hausa is used most widely as a lingua franca in the north, Yoruba in the west, and Ibo in the east. Locally

dominant languages also tend to be used officially in the various states.

RELIGIONS

Nigeria represents the southernmost outpost of the sweep of Islam across the Sahara from the ninth to the 19th centuries; the penetration of the religion was stopped before it reached the south of the country. Christianity, meanwhile, established itself firmly in the south but made little impact in the north or west. The resulting religious composition of the population closely follows geographic and ethnic lines: the southern Ibo are predominantly Christian, while the northern Hausa are almost entirely Muslim, and the western Yoruba are partly Christian and partly Muslim. About 50 percent of the nation's total population practices Islam.

Of Nigeria's approximately 51 million Christians, about 26 percent are of Protestant faiths, while 14 percent are Roman Catholic, the largest single denomination. There are three Roman Catholic archdioceses, at Kaduna, Lagos, and Onitsha. The Anglican church is under the archbishop of the Province of West Africa, whose seat is in Freetown, Sierra Leone.

Constitutional provisions of freedom of religion, religious practice, and religious education are generally observed throughout the country. Places of worship are established freely. No restrictions are placed on the number of clergy trained in Nigeria. Links with coreligionists in other countries are maintained. Religious travel, including the hajj, is permitted and officially supported. Missionaries and foreign clergy are permitted but not encouraged to enter Nigeria.

Religious Affiliations

Muslim	64,400,000
Christian	51,500,000
Indigenous Beliefs	12,900,000

HISTORICAL BACKGROUND

The first inhabitants of Nigeria were the Nok people, who all but disappeared by the 10th century. They were superseded by the Kanem Empire and the Kingdoms of Kano and Katsina, whose inhabitants were Muslim. In the 18th century Fulani religious zealots took control of the region and created a single Islamic state, the Sokoto Caliphate. This move led to intertribal fighting and civil war, a history that the country still suffers from today.

European contact began in the 14th century, when the Portuguese were establishing the spice trade; as the spice trade faltered, they began trading slaves. The Por-

tuguese were replaced by the British when the lucrative slave trade ended in 1807. The extension of British influence over Nigeria in the 19th century was gradual and, at least initially, unplanned. Official British interest in Nigeria dated from 1849, when John Beecroft was appointed consul and agent for the Bights of Benin and Biafra to gain access to the famous markets of the Sokoto Caliphate and Bornu. The trade routes through Yoruba country were secured through the conquest of Lagos in 1851 and its formal annexation in 1861. Lagos was administered from 1866 to 1874 from Freetown, Sierra Leone, and from 1874 to 1886 from Accra, Ghana (then the Gold Coast); in 1886 Lagos was made a separate territory and placed under a governor. Meanwhile, in 1879 the United African Company was formed by the four largest British firms operating on the Niger River. By 1884 the company (renamed the National African Company in 1882) had signed more than 70 treaties with local rulers on both banks of the Niger up to Lokoja. The Berlin Conference of 1884–85, at which Africa was partitioned between European imperial rivals, accepted British claims to areas controlled by the company. In 1886 the company was chartered under the title Royal Niger Company, and this territory became known as the Oil Rivers Protectorate, renamed the Niger Coast Protectorate in 1893.

Over the ensuing decade the company met with, and to some extent suppressed, strong resistance from local rulers, such as the Jojo of Opopo and the Nana of Itshekiriland. In 1899, when it became obvious that the company was unable to bring the emirates under effective rule, the British government revoked the company's charter and took over the administration of all its territories. Areas south of Idah were constituted as the Protectorate of Southern Nigeria, and those north of Idah as the Protectorate of Northern Nigeria, each under a high commissioner. In 1906 the Colony and Protectorate of Lagos was merged with the Protectorate of Southern Nigeria under one governor.

The next step was the merger in 1914 of northern and southern Nigeria into the Colony and Protectorate of Nigeria, with Sir Frederick Lugard as governor-general. This amalgamation was one of the most crucial events in Nigerian history, but it was a limited union; north and south continued with their separate administrations. Lugard introduced countrywide the system of indirect rule he had successfully established in the north. Basically, this system involved the division of power between the British government, which maintained overall responsibility for law and order, and the traditional rulers, who were left to run the day-to-day affairs of the people in accordance with traditional laws and customs. It was a policy of expediency full of contradictions, in that it discouraged social and economic change where it was needed most. The activities of Christian mission-

1770 Nigeria

aries were restricted in the north but promoted in the south; the result was the perpetuation of the economic and educational disparities between the two regions.

After World War II increasing nationalist pressures resulted in a succession of short-lived constitutions, each bringing the country closer to self-government. As pressure for independence mounted, various nationalist parties competed for influence over the final form of the constitution. The northern groups wanted a loose federal structure that would give them considerable regional autonomy, while the powerful parties in the southeast and southwest favored less autonomy for the north, although they did not oppose some measure of regional autonomy. In 1959 elections were held for a federal legislature prior to national independence. Not surprisingly, the legislature was split into three regional blocs.

Full independence was achieved on October 1, 1960, and in June 1961 part of British Cameroons was incorporated into Nigeria. Within two years of independence, regional, ethnic, and religious tensions were already putting the new constitution under strain. In January 1966 the army staged a coup, killing many leading politicians, including Prime Minister Abubakar Balewa and the regional premiers of the north and west. The coup, led by General Johnson Aguiyi-Ironsi, was seen as having been carried out in the selfish interests of the east, where huge oil reserves had recently been discovered. The new military regime was short-lived: Aguiyi-Ironsi was killed in a countercoup in July. Those who carried out the coup named General Yakubu Gowon, the army chief of staff, the new leader. Gowon had managed to stay out of the previous coup attempts.

General Gowon, a Christian from the middle belt of Nigeria, succeeded in establishing his authority in the north and west but was rejected in the east, where Nigerians followed the lead of Lieutenant Colonel Odemegwu Ojukwu in calling for greater autonomy. Attempts at reconciliation between the two sides failed, and in May 1967 Ojukwu announced the formal secession of the east, under the new name Biafra. From May 1967 until January 1970 Nigeria was plunged into a civil war in which thousands perished, before federal forces defeated the Biafran army. Gowon revived constitutional plans for the creation of 12 states out of the three regions and initiated a policy of national reconciliation.

In July 1975 Gowon was toppled in a bloodless coup and replaced by Brigadier Murtala Mohammed, who was himself murdered in an abortive coup in February 1976. The new head of the federal military government, General Olusegun Obasanjo, upheld Mohammed's plan for a return to civilian rule and established a further seven states, bringing the total to 19.

In December 1983 the army staged a coup, and Major General Muhammadu Buhari became head of a 19-member

Supreme Military Council. He was replaced by Major General Ibrahim Babangida in an internal military coup in August 1985. Babangida promised a return to civilian rule by 1992 and a civilian constitution that would satisfy the various ethnic, regional, and religious demands. In May 1989 Babangida announced the creation of two entirely new parties (the only parties allowed by his government), the Social Democratic Party and the National Republican Convention, situated respectively on the left and on the right of the political spectrum.

In April 1990 a coup attempt led by Major Gideon Orkar failed; in July, Babangida ordered the execution of Orkar and 138 participating soldiers. Prior to their executions the coup leaders publicly expressed their deep fears of north-south rivalries and the domination of Christians by Muslims, as well as of economic discontent in a country where certain groups were seen to have profited while the majority suffered from depressed living standards.

In 1993 the country came under the iron-fisted rule of General Sani Abacha, who ruled until his death in 1998. He was replaced by Major General Abdulsalami Abubakar, who promised a return to civilian rule. Abubakar kept his word, Olusegun Obasanjo, the former military leader and until 1998 a political prisoner, was elected president in 1999. Nevertheless, the situation deteriorated, as several rival groups continued to fight. In 2000 several northern states adopted Islamic law, leading to violence between Christians and Muslims that resulted in hundreds of deaths. Further, ethnic fighting broke out in 2001 between the Tiv people and several other ethnic groups in the central Nassarawa State. Some 40,000 people were reportedly displaced following the violence. That year President Obasanjo, together with the presidents of South Africa and Algeria, formed the New Partnership for African Development (NEPAD), with the goals of increasing economic development and ending civil violence in exchange for aid, foreign investment, and the elimination of trade barriers.

Ethnic violence continued, however, with clashes between the Hausa and Yoruba in Lagos. In late 2002 over 200 people were killed in rioting sparked by Muslim opposition to the planned Miss World beauty pageant, which was relocated to Great Britain. In the first legislative elections since the restoration of civilian rule in 1999, Obasanjo's People's Democratic Party won a majority, amid charges of ballot fraud. Then in April 2003, in the subsequent presidential election, Obasanjo was reelected with more than 60 percent of the vote, again amid charges of voting irregularities. Violence, meanwhile, continued, erupting in the town of Warri in 2003, as the Ijaw and Itsekiri clashed, leaving 100 dead; in the central plateau in 2004, with over 200 Muslims killed by Christian militias; and among gangs in Port Harcourt, also in 2004, leaving 500 dead.

LIST OF MODERN RULERS

- 1963–66 Benjamin Nnamdi Azikiwe (president)
 1966 Johnson Aguiyi-Ironsi (head of Federal Military Government)
 1966–75 Yakubu Gowon (head of Federal Military Government)
 1975–76 Murtala Ramat Mohammed (head of Federal Military Government)
 1976–79 Olusegun Obasanjo (head of Federal Military Government)
 1979–83 Alhaji Shehu Shagari (president)
 1983–85 Muhammadu Buhari (chairman of Supreme Military Council)
 1985–93 Ibrahim Babangida (president of Armed Forces Ruling Council)
 1993 Ernest Shonekan (interim president)
 1993–98 Sani Abacha (chairman of Provisional Ruling Council)
 1998–99 Abdulsalami Abubakar (chairman of Provisional Ruling Council)
 1999– Olusegun Obasanjo (president)

CONSTITUTION

Nigeria has seemingly made the transition from military rule to a democratically elected government. Elections were held in 1999 under the provisions of the constitution adopted in October 1979. In May 1999 a new constitution that closely resembles the previous document was adopted. Under the new constitution, the government consists of a president and a bicameral legislature. The president is elected for a four-year term by receiving a plurality of the total vote and at least one-fourth of the vote in at least two-thirds of the states. The president appoints the cabinet members and is required to reflect the country's diversity in his appointments. Suffrage is universal at age 18.

PARLIAMENT

The National Assembly is a bicameral legislature, with the Senate as the upper chamber and the House of Representatives as the lower chamber. The Senate consists of 107 seats, three from each state and one from the federal capital of Abuja. The lower house has 346 seats, apportioned on the basis of population. Elections were last held in 2003.

POLITICAL PARTIES

Political parties, suppressed by the military government, were allowed to form in July 1998. Three parties were

registered by the Provisional Ruling Council for participation in the local, state, and national elections: the People's Democratic Party, which gained 73 seats in the Senate and 213 in the House; the All Nigeria People's Party, which gained 28 seats in the Senate and 95 in the House; and the Alliance for Democracy, which gained six seats in the Senate and 31 in the House.

LOCAL GOVERNMENT

In general, the states are subdivided, in descending order, into provinces, divisions, districts, and local authority units, but arrangements vary. Subordinate to the local authorities are village, urban, or town councils, which function under one of four different kinds of executives: chief in council, chief and council, council, or appointed administrator. Some local authorities are large, such as in the states of Bornu and Kano, whose populations and resources are greater than those of some smaller states. Local authorities are supervised by the state ministry of local government, which also supplies half of the staff salaries. Urban centers with municipal status come directly under divisional or provincial control.

LEGAL SYSTEM

The Nigerian legal system is an amalgam of English common law, African customary law, and (in the north) Islamic sharia. The judicature is headed by the Federal Supreme Court, comprising a chief justice and up to 15 justices. The Federal Court of Appeal was established in 1976. There are high courts of justice in each state, which function as superior courts with unlimited jurisdiction except in matters affecting disputes between states or between a state and the federal government. The subordinate courts include magistrate's courts and native courts. Magistrate's courts have original jurisdiction in civil and criminal cases, and some have the right to hear appeals from the native courts. In the northern states with Muslim majorities, the sharia is administered through the alkali courts and courts of appeal.

HUMAN RIGHTS

Currently, human rights are still under threat in Nigeria, despite certain positive actions taken by the government.

As the transitional government was leaving office, many of the oppressive decrees that allowed it to regularly violate the rights of its citizens were repealed. General Abubakar made a concerted effort to bring the military government in line with the new constitutional provisions that gave great protection to human rights. These measures included the release of all remaining high-profile political prisoners.

President Obasanjo's government made many public commitments to respect the rule of law in Nigeria, but divisions along ethnic lines and years of distrust among various groups have hampered such efforts. Although media freedom has improved under President Obasanjo, rebroadcasts of foreign radio programs have remained banned.

FOREIGN POLICY

Nigeria is the largest, wealthiest, and most powerful country in sub-Saharan Africa outside South Africa, yet its leadership potential was blunted by the corrupt military-led governments that controlled the nation for most of the postindependence period. The election of a democratic government in 1999 opened the way for Nigeria to play a more constructive role in the troubled continent. President Obasanjo, South African president Thabo Mbeki, and Algerian President Abdelaziz Bouteflika launched the revivalist NEPAD in October 2001. Initial results seemed promising, with the Group of Eight industrialized countries announcing a fund of \$500 million to be made available to African countries committed to reform. NEPAD also called for the lifting of trade barriers that impede African exports.

Militating against such improved diplomatic and humanitarian prospects for Nigeria are its relationships with its West African neighbors, with all of whom it has one dispute or another. Nigerian troops have been co-opted as peacekeepers in civil wars in Liberia, Sierra Leone, and Chad. Benin and Cameroon have challenged Nigerian territorial claims along land borders as well as in offshore waters. A dispute with Cameroon over the valuable Bakassi Peninsula remains ongoing; in 2002 the International Court of Justice awarded the peninsula to Cameroon, but in 2003 Nigeria announced that it would not relinquish the region. In early 2004 the United Nations brokered negotiations over the disputed border, and Cameroon and Nigeria agreed to begin joint security patrols.

DEFENSE

The defense structure is headed by the president in the capacity of chairman of the Armed Forces Ruling Council; the chiefs of staff of the three services are also represented on the council. The chain of command runs through a general staff, after the British model. The armed forces consist entirely of volunteers; there is no conscription. The total strength of the armed forces was 160,500 in 2003.

The Nigerian armed forces are the largest and best trained in West Africa. The army has been completely modernized, and military expenditures have risen sharply in recent years, reflecting substantial arms purchases. In 2004 the country spent about \$545 million, or 0.8 percent of gross domestic product (GDP), on the military.

ECONOMY

The oil-rich Nigerian economy, long hobbled by political instability, corruption, and poor macroeconomic management, is undergoing substantial economic reform under the new civilian administration. Nigeria's former military rulers failed to diversify the economy away from overdependence on the capital-intensive oil sector, which provides 20 percent of GDP, 95 percent of foreign exchange earnings, and about 65 percent of budgetary revenues. The largely subsistence agricultural sector has not kept up with rapid population growth, and Nigeria, once a large net exporter of food, now imports food. Following the signing of an International Monetary Fund (IMF) standby agreement in August 2000, Nigeria received a debt-restructuring deal from the Paris Club and a \$1 billion loan from the IMF. Both were contingent on economic reforms, however, and Nigeria pulled out of the IMF agreement in 2002, as the nation lacked the ability to implement market-oriented reforms urged by the IMF. Nevertheless, increases in foreign investment and oil production combined with high world oil prices to push growth over 7 percent in 2003.

ENVIRONMENT

Irresponsible environmental policies and widespread corruption have contributed to make Nigeria one of the most polluted countries in Africa. The principal problems are soil degradation resulting from a lack of watershed protection, land overuse and unsuitable farming techniques, water contamination resulting from poor wastewater treatment and inadequate solid waste disposal, and deforestation. Every year the country loses at least 5 percent of its closed forests, and one environmental group puts the annual deforestation rate as high as 14.3 percent. Only 4.7 percent of the country's forests were protected in 1997, and even in those locations there is little protection against illegal poaching and logging.

LIVING CONDITIONS

Although Nigeria is one of the wealthier countries in Africa, living conditions are still harsh. Per capita GDP in 2004 was just \$1,000, and in 2000 an estimated 60 percent of the population was living below the poverty line. Wide income inequalities exist, with the poorest 10 percent of the population earning just 1.6 percent of the nation's income and the richest 10 percent earning 40.8 percent. While more affluent Nigerians live in Western-style homes with modern amenities and the middle class can live in modest homes with some comforts, many Nigerians live in crowded conditions and squatter areas. About 53 percent of the population lives in rural areas and village, typically without electricity. Water has to be drawn from communal wells, and people must scavenge for firewood, especially in the sparsely vegetated northern regions. The oil industry has made transportation relatively convenient; the nation has over 60,000 km (37,300 mi) of paved roads, and even 1,200 km (746 mi) of expressways.

HEALTH

The health-care system in Nigeria is generally poor. Life expectancy at birth in 2004 was under 47 years, and the infant mortality rate was nearly 100 deaths per 1,000 live births, in a country where only 42 percent of births are attended by trained medical personnel. In 2002 only about two-fifths of the population had access to adequate sanitation facilities, and under two-thirds had access to

clean drinking water. In 2002 spending on health care amounted to only \$19 per person.

AIDS has had a devastating effect on Nigeria. In 2003 an estimated 5.4 percent of adults were living with the disease, most without knowing it, and that year there were 310,000 deaths from the disease—up from 170,000 just two years earlier. In all, well over two million Nigerians are estimated to have succumbed to the disease, and experts predict that as many as 4.2 million will have died from AIDS by 2008.

FOOD AND NUTRITION

Malnutrition is a persistent problem in Nigeria. In 2001–03, 11 percent of the nation's women suffered from chronic malnutrition, while 42 percent of children under the age of five were stunted and 25 percent were underweight. The primary dietary staples in the south include sweet potatoes, yams, and maize, often pounded into a paste or dough and served with a stew that includes meats and vegetables such as okra, tomatoes, and onions. Staples in the north include maize, sorghum, and millet, which are often made into porridge and served with soup. Fish is common, but meat and chicken are eaten only if the budget allows. Most Nigerian food is spicy, and hot red peppers are used generously in sauces and relishes.

STATUS OF WOMEN

The status of women in Nigeria involves a complex of economic, legal, and social factors. Women are regarded

as inferior to men in virtually all fields. Discrimination in employment is common. There is no legal recourse in the fight against discrimination because the principle of equal treatment is not enshrined in Nigerian law.

Nevertheless, women are neither powerless nor without representation in government, business, the media, and education. Women have economic power and exert influence either through women's councils or through family connections. Women in southern Nigeria are the principal managers of the market economy in villages. Women have the greatest impact on society in education, culture, and youth affairs. Female faculty members are present in many university departments, and women fill many midlevel positions in the federal and state ministries of education. There have been dramatic increases in the number of women with university degrees and in the number who have become professionals, including teachers, lawyers, doctors, judges, senior civil servants, media figures, and business executives. The new government has named the first female vice chancellor of one of the country's universities.

Women are subject to a number of discriminatory legal provisions, which vary from state to state. Although a woman keeps and controls her own wealth after marriage, her husband is the head of the household and can, for example, prevent his wife from obtaining employment or a passport in many states. A woman may be arrested for leaving her husband. In many states a widow is prohibited from inheriting her husband's property, which in the absence of children usually reverts to the husband's family. Property acquired jointly may be taken from the wife and passed to their children or to the husband's family. Husbands are not legally responsible for their wives' debts.

The issue of gender relations made worldwide headlines in 2002 when a Muslim woman, Safiya Husseini, was sentenced to death by stoning for adultery. Her death sentence was eventually overturned by an appeals court.

WORK

Nigeria's labor force in 2003 consisted of over 55 million people, with about 70 percent employed in agriculture, 10 percent in industry, and 20 percent in services. Major agricultural products include cocoa, peanuts, palm oil, maize, rice, sorghum, millet, cassava, yams, rubber, timber, fish, and livestock, including cattle, sheep, and goats.

Major industrial products include crude oil, coal, tin, columbite, textiles, cement, food products, footwear, chemicals, fertilizer, ceramics, and steel. Most farmers engage in subsistence farming; Nigeria used to be a net exporter of food, but as more emphasis has been placed on oil at the expense of agriculture, the nation has become a net importer of food. Large numbers of people make their livings as street vendors or in small, informal retail and other types of businesses, making it difficult to calculate an unemployment rate. Still, that rate is considered to be high; in the early 1990s it was 28 percent.

EDUCATION

Nigeria introduced free, universal, and compulsory education under the third development plan, of 1975–80, for six years, from ages six to 12. Schooling lasts 13 years, as divided into six years of primary school, five years of lower secondary school, and two years of upper secondary school.

The school year runs from September to June. In primary schools the language of instruction is the local vernacular for the first two years but English thereafter.

Technical education is provided in technical institutes, trade centers, and handicraft centers. The most notable of technical education centers is the Yaba Technical Institute, which provides training in a variety of vocational subjects. In 2005 the number of Nigerian universities totaled 53, with seven private and 46 state and federal universities. Additionally, there were 250 polytechnics, colleges of education, and research institutions.

Although primary education is free throughout the country, the commitment to universal free education has been modified, with almost all states imposing some fees on secondary students. Primary and secondary education fall within the jurisdiction of the state governments, while the federal government controls the universities and is responsible for educational policy.

SCIENCE AND TECHNOLOGY

Although Nigeria's universities and polytechnics provide vocational education, most scientific research—much of it concentrated on geology and petroleum engineering—is conducted by non-Nigerians in the private sector. The Federal Ministry of Science and Technology has pledged to increase efforts to increase economic development through scientific research in such areas as health, transportation, environmental protection, manufacturing, communications, information technology, and agriculture.

MEDIA

National and regional newspapers abound in Nigeria. Traditions of energetic and critical journalism go back to the colonial days. There are 25 daily newspapers, both government and privately funded.

The national news agency is the News Agency of Nigeria, founded in 1976. Foreign news bureaus represented in Lagos include AFP, AP, Ghana News Agency, Novosti, Reuters, DPA, Jiji, and ITAR-TASS.

Domestic and foreign television is widely available in Nigeria. The government does, however, limit private television and radio broadcasting to the regional level. The government controls two of the nation's three television broadcast networks. In July 1999 the government announced plans to privatize Nitel, Nigeria's national telecom operator. As aided by a \$1 million UN Development Fund grant, the Nigerian government is working on establishing Internet access across the country.

In 2004 there were 1,142 Internet hosts and in excess of 750,000 Internet users.

CULTURE

The Nigerian government has initiated such programs as the All-Nigeria Festival of Arts to preserve and encourage indigenous art forms, many of which, such as dance and sculpture, had traditionally been used for religious purposes—sculpture, for example, was used for healing or to fend off ill luck—that in modern times have slowly disappeared. This effort, combined with demand by Western collectors and tourists, has led to a revitalization of Nigerian art. Prominent among such art forms is bronze work, a tradition that dates back to the ancient cities of Ife and Benin. Weaving, dying, wood carving, leatherwork, and textiles are also prominent art forms. Nigerian literature has a rich history, beginning with oral storytelling traditions. In the 20th century, Wole Soyinka won the 1986 Nobel Prize for literature, and the works of Ben Okri (whose *The Famished Road* won England's 1991 Booker Prize) and Chinua Achebe are well known outside Nigeria. Nigeria's most famous musical form is juju, which uses percussion instruments to accompany singing and guitar work. So-called highlife music combines jazz and American soul music with African rhythms.

FOLKLORE AND MYTHOLOGY

Nigeria has a long and fertile history of oral folklore, encompassing riddles, tales, chants, and proverbs. Once each generation the members of the Ijo village commu-

nity in Toro Arua present a saga called *Ozidi*. This saga presents the history of the people in an eight-day event that includes sacrifices to water spirits asking for their blessing. Depicting the community's heroes and enemies are dancers, singers, a drum orchestra, and a narrator. Much folklore and mythology has religious significance, including stories about a supreme being who has various names: the Efiks call the creator Abasi Ibom, or "the Great God"; the Hausa call him Ubangiji; and the Yoruba worship Olorun, or "Lord of Heaven." Shrines are built to lesser gods, who serve as intermediaries between the creator and humans.

ENTERTAINMENT AND RECREATION

For those who can afford them, television sets and sound systems provide many hours of entertainment for over 40 million Nigerians, in the estimation of the government. In the cities, movie theaters are popular, while throughout the country dance and music, including highlife, juju, and Afro-beat, are popular, especially among the younger generation. Highly popular juju artists include Shina Peters, King Sunny Ade, and Ebenezer Obey.

ETIQUETTE

As in most Islamic African countries, greetings—both in social and business settings—are likely to be formal and elaborate, entailing detailed inquiries about the welfare and health of the other person and his or her family. Because of the nation's linguistic diversity, greetings with strangers are likely to be in English. Personal space during conversation is much closer than Americans would be accustomed to. The left hand is reserved for personal hygiene, so it is considered rude to pass an object to another with the left hand, though objects from others are to be accepted with both hands, never one. In a country with a short life expectancy, elders are accorded great deference—older women and men alike are shown special respect.

FAMILY LIFE

Most marriages in Nigeria are conducted according to the couple's religious tradition, though strictly civil marriages are common. In the cities, Western-style "love" marriages are increasingly common, but in many parts of the country marriages are still arranged by the couple's families, and in some cultures the groom has to pay a bride-price—cattle, money, or other goods of value—to the bride's family. Divorce is common, and it is not uncommon for the wife and husband to live virtually independently of one another, often in separate liv-

ing quarters. Most Nigerian families are large—in 2005 the fertility rate was 5.5 children per woman—in large part because having many children is a sign of high social standing among many men. Under Islamic law, polygyny is allowed, though few men can afford multiple wives. The prominence of the extended family depends on the ethnic group; the Hausa, for example, place little emphasis on the extended family, while the Ibo tend to remain quite close to the clan of their mother.

PERSONAL APPEARANCE

Dress among Nigeria's ethnic groups formerly had great significance with respect to prestige, religious and ethnic affiliation, marital status, bloodline, and the like. While dress retains some of this significance, especially in rural areas, modern Western-style dress has been replacing traditional dress. The Ibo continue to wear the dashiki, a loose-fitting shirt. Traditional dress among women emphasizes jewelry—toe rings, bracelets, necklaces, and the like—made from a variety of materials, including stone, leather, ivory, mother-of-pearl, animal teeth, and snake vertebrae. Hairdressing was also elaborate and carried symbolic meaning. Traditional clothing made of indigenous fabrics tends to be brightly colored.

SPORTS

Nigerians play many sports, including tennis, swimming, cricket, boxing, wrestling, basketball, and soccer. Wrestling is especially popular among the Yoruba, who have different styles of wrestling with different rules and conventions. Over the years Nigerians have enjoyed some success in the Summer Olympics, beginning with a bronze medal in boxing in the 1964 Tokyo games. In 1992 the men won the four by 100 meter relay in Barcelona, and in 1996 the men's national soccer team, the Super Eagles, won the gold medal in Atlanta. A hero among many Nigerians is the retired American National Basketball Association star Hakeem Olajuwon, who was born in Nigeria.

CHRONOLOGY

- 1960** Nigeria becomes an independent member of the Commonwealth, with Sir Alhaji Abu Bakar Tafawa Balewa as prime minister.
- 1961** Northern Cameroons votes in plebiscite to join Nigeria.
Defense pact with the United Kingdom is terminated.
- 1963** Nigeria becomes a republic, with Nnamdi Azikiwe as first president.

1778 Nigeria

- A fourth region, the Midwestern, is carved out of the Western Region.
- Nation holds census, the first after independence, but census figures are disputed by Eastern and Midwestern region governments.
- 1966** Part of the army, led by Maj. Chukwuma Kaduna Nzeogwu, rises in revolt, killing Northern Region premier Alhaji Ahmadu Bello, Western Region premier S. L. Akintola, and federal Prime Minister Balewa. Troops loyal to the government foil the coup, but the Council of Ministers hands over the government to the armed forces. Maj. Gen. Johnson Aguiyi-Ironsi is invested as head of the federal military government. Political parties and legislature are suspended. General Aguiyi-Ironsi is kidnapped by Muslim soldiers at Ibadan and killed along with the military governor of the Western Province. Lt. Col. Yakubu Gowon assumes supreme power. In continuing unrest in the north, between 10,000 and 30,000 Ibo are massacred by Muslims.
- 1967** The military governor of the Eastern Region, Col. Odumegwu Ojukwu, and the Eastern Nigeria Consultative Assembly at Enugu declare the Eastern Region the independent Republic of Biafra. Fighting breaks out between 40,000 federal troops and the 25,000-strong Biafran forces. Biafrans gain early successes and occupy Benin City. The Biafran capital of Enugu falls to federal troops, followed by the port of Calabar.
- 1968** Biafran cities of Onitsha and Port Harcourt fall to federal troops. Aba, Umuahia, and Owerri fall in quick succession to federal troops, thus making the blockade of Biafra total. Tanzania, Gabon, Côte d'Ivoire, Zambia, and Haiti recognize Biafra. Efforts to achieve a negotiated settlement fail.
- 1970** Biafran resistance collapses. Ojukwu hands over power to Maj. Gen. Philip Effiong and flees to Côte d'Ivoire. Effiong signs instrument of surrender at Lagos, with the declaration "Biafra ceases to exist."
- 1975** Gowon is ousted in a bloodless coup and replaced by Brig. Murtala Ramat Mohammed. New administration launches cleanup campaign.
- 1976** Government announces plans to transfer capital to Abuja. The country is redivided into 19 states. Mohammed is assassinated in the course of an abortive coup in which General Gowon is suspected to have been involved. Lt. Gen. Olusegun Obasanjo is invested as the new head of state. New draft constitution, drafted by a committee headed by Rotimi Williams, is announced.
- 1977** Constituent Assembly is elected to discuss the draft constitution.
- 1978** State military governments are abolished, and the ban on political parties is lifted. New constitution is approved by the military government.
- 1979** New House of Representatives and Senate elections are held under the new constitution, effective in October. In a freely contested presidential election, Shehu Shagari is elected nation's first civilian president in 13 years.
- 1982** Over two million non-Nigerian Africans are expelled from the country.
- 1983** President Shagari is returned for a second term, and his party wins significant gains in gubernatorial and legislative elections. Shagari is ousted in a bloodless coup led by Maj. Gen. Muhammadu Buhari, who sets up the Supreme Military Council.
- 1984** Buhari suspends sections of the constitution dealing with civil government and liberties and curtails press freedoms. Some 500 politicians, including Shagari, are placed in detention. Relations with the United Kingdom are strained over kidnapping of a Buhari opponent in London.
- 1985** Buhari is toppled in a bloodless coup led by Ibrahim Babangida, who assumes the title of president. A counter coup by rival officers is attempted and fails. The Supreme Military Council is renamed the Armed Forces Ruling Council.
- 1986** Nigeria and Britain restore full diplomatic relations. A total of 10 leading officers of the 1985 coup attempt are executed.
- 1987** Babangida announces a timetable providing for return to civilian rule by 1992. In one of the earliest steps in reestablishing civilian rule, local elections are held in 301 electoral areas. Growing tensions between Christians and Muslims lead to clashes that leave 25 dead.
- 1988** A constituent assembly is inaugurated to debate provisions for the new draft constitution, to be modeled after the constitution of 1979. Two new states are created through the division of existing states, bringing the total number of states to 21. The appointment of a new Sultan of Sokoto sparks violence among Muslims.

- 1989** Babangida lifts ban on political parties, only to reject all ensuing applications and create two new parties, the Social Democratic Party and the National Republican Convention.
- 1990** Antigovernment demonstrations are sparked by a cabinet shakeup, in which Babangida sacks the defense minister Bali, assuming his portfolio himself.
Another coup is attempted and fails.
Later in the year, 138 soldiers convicted of participating in coup attempt are executed.
Nigeria leads a multinational African peacekeeping force into Liberia to intervene in its civil war.
- 1991** Nigeria sends troops to Sierra Leone to help that country repulse rebels from neighboring Liberia.
- 1993** Babangida voids the results of the national elections from 1992, which would have placed opposition candidate Moshood Abiola in power.
Babangida resigns, and his self-selected successor is ousted in a coup in November.
- 1994** The new government, led by former defense minister Sani Abacha, continues the previous government's practice of arresting political opponents.
- 1995** Western nations protest the arrest of political opponents and boycott the sale of arms to the country.
- 1998** After scheduling election for August, Abacha suddenly dies and is replaced by Gen. Abdulsalami Abubakar.
- 1999** Democratically elected president Olusegun Obasanjo is sworn in, as the military government is replaced.
- 2001** Ethnic fighting breaks out in the central Nasarawa State.
Nigeria, South Africa, and Algeria formally launch the New Partnership for African Development, a plan for the revival of Africa.
- 2002** Thousands are left dead by a blast at a munitions dump in Lagos.
Rioting sparked by Muslim opposition to the planned Miss World pageant leaves 200 dead.
In the first legislative elections since the restoration of civilian rule in 1999, Obasanjo's People's Democratic Party wins a majority amid charges of ballot fraud.
- 2003** In the first presidential election since the return of civilian rule, Obasanjo is reelected with more than 60 percent of the vote, again amid charges of voting irregularities.
Violence erupts in the town of Warri, as the Ijaw and Itsekiri clash, leaving 100 dead.
- 2004** Religious violence erupts in the central plateau, with over 200 Muslims killed by Christian mi-

litias. Gang violence erupts in Port Harcourt, leaving 500 dead.

OFFICIAL NAME

Kingdom of Norway (Kongeriket Norge)

ABBREVIATION

NO

CAPITAL

Oslo

HEAD OF STATE

King Harald V (from 1991)

HEAD OF GOVERNMENT

Prime Minister Jens Stoltenberg (from 2005)

NATURE OF GOVERNMENT

Constitutional monarchy with parliamentary democracy

POPULATION

4,593,041 (2005)

AREA

324,220 sq km (125,182 sq mi)

ETHNIC MAJORITY

Nordic

LANGUAGE

Norwegian

RELIGION

Evangelical Lutheran

UNIT OF CURRENCY

Krone

NATIONAL FLAG

A blue cross with an extended right horizontal outlined in white on a red field

NATIONAL EMBLEM

A gold-crowned lion on a red shield holding the silver-headed battle ax of Saint Olaf in its forepaws. The shield is crested with a gold crown bearing an orb and a plain gold cross at its peak. When shown as the royal arms, the shield is surrounded by the chain and order of Saint Olaf and displayed on a red, gold-fringed ermine pavilion with a more elaborate crown, repeating the lion and ax theme at its crest.

NATIONAL ANTHEM

“Ja, Vi Elsker Dette Lander” (Yes, We Love This Country)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), May 17 (Constitution Day), all major Christian festivals

DATE OF INDEPENDENCE

June 7, 1905

DATE OF CONSTITUTION

May 17, 1814

GEOGRAPHICAL FEATURES

Norway is in the western part of the Scandinavian peninsula, with almost one-third of the country north of the arctic circle. The total coastline is 21,925 km (13,615 mi) with the inclusion of the fjords and the greater islands. Norway’s total land area, including Svalbard and Jan Mayen, is 324,220 sq km (125,182 sq mi). Svalbard, an island group far to the north, with 62,700 sq km (24,202 sq mi), constitutes 16.2 percent of the land area. Jan Mayen, an island between Norway and Greenland, with 380 sq km (147 sq mi), has 0.1 percent of the land area.

Norway extends 1,752 km (1,089 mi) north-northeast to south-southwest. Norway’s width is as great as 430 km

(267 mi) east-southeast to west-northwest, but in places the land is less than 8 km (4.97 mi) wide, where fjords cut inland nearly to the Swedish border. Norway is bounded on the north by the Arctic Ocean, on the far northeast by Finland and Russia, on the west by the Norwegian Sea extension of the Atlantic Ocean, on the east by Sweden, on the south by the Skagerrak, and on the southwest by the North Sea. The land boundaries are 736 km (457 mi) with Finland, 196 km (122 mi) with Russia, and 1,619 km (1,005 mi) with Sweden.

Norway has a disputed claim in Antarctica (Queen Maud Land). There is also a territorial dispute between Norway and Russia regarding maritime boundaries in the Barents Sea around Svalbard. The capital is Oslo, for-

Norway

1782 Norway

merly Christiania, in the southeastern part of the country. Trondheim is the place of coronation and burial for Norwegian kings. It is also the northernmost major city, as most of Norway's population resides in the southern half of the country.

Norway is a fairly mountainous country, with average elevation exceeding 457 m (1,500 ft). Its upland character is most clearly seen in the high fells, which are barren fields. Fully 3,000 sq km (1,158 sq mi) of the fells are under ice fields, the most extensive of which is the Jostedal-breen. The ice surfaces range from 914 to 1,829 m (3,000 to 6,000 ft) in height.

Norwegian mountain ranges are roughly divided into three groups. The most northerly, the Kjölen, is by far the greatest and forms a natural barrier between Norway and Sweden, receding with decreasing height northward to the Finnish border. The Dovrefjell Range marks the division between northern and southern Norway. The Langfjell, consisting of several ranges, contains the highest peaks in the peninsula. Galdhøpiggen, in this group, is the highest peak in the country, at 2,469 m (8,098 ft).

Most of the northern end of the Norwegian Plateau is covered by ice caps, which are, on the whole, uninterrupted by peaks rising above them and are almost without crevasses. Jostedalbreen, 1,503 sq km (580 sq mi) in area and possibly 457 m (1,500 ft) thick, is the largest glacier in Europe.

Norwegian rivers are generally not navigable, but they are valuable as flumes for the timber coming down from forest districts. The only navigable rivers are the Glomma and the Dramselv. The Glomma, the largest river in Scandinavia, is 563 km (350 mi) long and rises more than 610 m (2,000 ft) above sea level at Aursunden Lake, north of Røros. Nearly one-12th of the country is under freshwater, sometimes so deep that the waterbed is far below the level of the sea. By far the greatest of these lakes is the Mjøsa, 363 sq km (140 sq mi) in area and 452 m (1,482 ft) deep.

Svalbard and Jan Mayen have complex geology in comparison to mainland Norway, with much greater ranges of rocks; they share some of the basalt features common to Iceland and the Faeroes. Ice fields cover extensive areas, and the surface is covered by permafrost. Svalbard, between latitudes 74 and 81° north, is the most northerly human settlement in Europe.

CLIMATE AND WEATHER

Considering its northerly location, Norway has a remarkably equable climate, chiefly owing to the currents of tropical air and the warm waters of the Gulf Stream. In the western coastal area the climate is mild during the winter months, from November to March. Coastal areas have the highest levels of precipitation, as clouds blown in from the west lose much of their humidity when they encounter the high mountains close to the sea. Norway is known for its "midnight sun," the period of time in the summer months when the regions north of the arctic circle receive 24 hours of sunlight owing to their proximity to the North Pole. In Tromsø, the largest city in the north, this lasts from about May 20 to July 23. Conversely, Tromsø has a period of total darkness in the winter from about November 25 to January 17.

FLORA AND FAUNA

Forests cover over one-quarter of Norway's area. These forests consist of such deciduous trees as maple, lime, elm, ash, oak, and birch, which dominate the southwestern part of the country and the coast. Conifers such as spruce and pine dominate in the eastern and central regions. In the northern, treeless section of the country, tundra vegetation is sparse and consists principally of dwarf shrubs, lichen, and moss. The tundra region provides habitat for such animals as lemmings, wolverines, wolves, arctic hares, arctic foxes, and reindeer. The southern regions are home to such species as martens, otters, elk, and red deer. Along the coastlines can be seen seals; walrus; and, in the Arctic waters, beluga whales.

ETHNIC COMPOSITION

The majority of the population (over 93 percent) are native Nordic. Norway's population now also includes some 315,000 foreign nationals.

The only other significant ethnic group in Norway comprises the roughly 20,000 people of Sami origin (formerly known as Lapps). Norwegian Sami account for about two-thirds of the global Sami population. They are usually fishers or farmers, although they also hold occupations similar to those of their non-Sami neighbors.

LANGUAGES

There are two primary Norwegian dialects in use today: Bokmål (also called Dano-Norwegian), originating from Norway's domination by Denmark, and Nynorsk (also called Landsmaal), with native Norwegian roots. The two dialects emerged over the course of Norway's history.

In 1397 Norway was united with Sweden and Denmark. As the Norwegian literary tradition declined, Danish became the only written language in use. In the late 1400s Denmark had obtained the ability to print books, while Norway had not. In addition, the only university at the time was in Copenhagen. This made Danish, eventually Dano-Norwegian, the language of the educated classes.

In 1814 the union with Denmark was dissolved. A growing community of political activists, authors, and teachers advocated the reintroduction of the original Norwegian, or Landsmaal. This movement gained many converts over the next half century. By 1885 the Storting (parliament) gave Landsmaal the same official status as Dano-Norwegian. Its place as the national language was further strengthened by the dissolution of the union with Sweden in 1905. Landsmaal continued to gain support, and in 1917–18 geographic names were changed

to reflect this. Thus, Oslo obtained its current name, as changed from the former Christiania.

The names of the two dialects were also eventually changed: Dano-Norwegian became Bokmål, while Landsmaal became Nynorsk. The language battle continued throughout the first half of the 20th century, slowed only by World War II. Today, Bokmål is substantially more prevalent than Nynorsk; the primary language of about 80 percent of schoolchildren is Bokmål.

Over 80 percent of Norwegians understand English, and almost one-third of books printed in 1997 were in English, making it the second-most-common language in Norway.

RELIGIONS

The Evangelical Lutheran Church of Norway is the state church. Although official membership figures are high (86 percent), the state church does not actually keep membership rosters; it considers most citizens members of the church. However, in the early 2000s it was estimated that only 5 percent of the population attended church with any regularity (excluding weddings, funerals, and other ceremonies), and only 8 percent of the population claim to be members of religious or philosophical groups. In 1969 laws were enacted that provided for religious freedom and granted subsidies to religions registered with the state.

Other/None	505,000

HISTORICAL BACKGROUND

Little is known about how the first Norwegians came to the region. Most scholars subscribe to the theory that people from other parts of Scandinavia and northern Europe moved northward as the polar icecaps melted and land appeared. The first evidence of modern humans there comes from 8000 B.C.E.; artifacts from this date indicate a society based largely on hunting. As the population grew, a number of settlements were founded in southern Norway by 4000 B.C.E. While farming was introduced in the southern part of the country, hunting remained the predominant means of support in the northern regions. By the 400s C.E. the first early writings, in the form of runes, appear.

As Norway's population grew, the stresses of overpopulation in an area with little arable land caused the southern Norwegians to seek food and other resources from outside the country. In the eighth and ninth cen-

turies of the Common Era, Norse Vikings embarked on plundering raids in Germany, Holland, Scotland, England, and France, carrying home rich booty. However, the Vikings did not travel merely for looting; they were also seeking additional land to settle and develop and, as a result, founding Dublin, Ireland, as well as settling in much of northern Scotland, Greenland, and Iceland. They also sailed across the Atlantic, and Bjarni Herjulfsson is credited with first seeing North America in 986, while Leif Eriksson is generally believed to be the first European to set foot on the continent, in 1000.

Norway's explorers brought home many treasures from other countries, and they also brought back the influence of Christianity. Over the centuries belief in the Nordic gods lessened, and belief in Christianity, as assisted by missions from other European countries, grew. King Olaf Haraldsson (d. 1030), also known as Olaf the Stout, died in battle for the church and became a saint. The archbishopric of Trondheim was established in 1152.

From about 1130 through 1227 Norway was rent by civil wars, which were fought over land rights and rulership. In the end the wars left control of more of the country consolidated in the hands of the monarchy. Cities and towns developed, the church gained more power, the aristocracy came under tighter rule, and farmers, who had previously owned their lands, now rented them from noblemen. In the 13th century a common legal code was adopted, and the right of succession to the Crown was fixed. In the same period Iceland and Greenland came under Norwegian rule.

While Norwegian power was consolidated under a monarchy which had gained much wealth and power over the preceding centuries, the plague weakened the young nation considerably. As the population dwindled, there were fewer people to work the land, pay taxes, and serve in armies. Norway lost its independence upon the death of Haakon V in 1319, when Magnus VII became ruler of both Norway and Sweden. After the death of Olaf V, Norway entered the Union of Kalmar with Denmark and Sweden in 1397. The economy suffered, as the German merchants of the Hanseatic League dominated Norwegian trade. Wars with Sweden, which fought with Denmark over control of the Baltic region, broke up the Union of Kalmar, but the union between Denmark and Norway was maintained.

The alliance with Denmark lasted for centuries. Although a treaty signed in 1450 stated that Denmark and Norway were to remain on equal footing, this was not true in practice, and Norway increasingly fell under Danish domination. The Lutheran Reformation was introduced in 1537, when the Danish king extended the official Protestant Church into Norway.

Norway's position changed somewhat in 1660, when a new constitution was put into effect by the new king, Frederick III. This arrangement put more power into

the hands of Norwegian officials and left less power in the hands of the king—and thus less power in Danish hands. Norwegian autonomy was furthered by “town privileges,” which stipulated that wood had to be purchased through a town's inhabitants. This system created a flourishing middle class. The long-term domination by Denmark, combined with Norway's increasing wealth, led to Norwegians' increasing desire for independence. Although Norwegians called for a separate Norwegian bank, university, and other institutions throughout the 18th century, the Danish government rejected these requests, fearing that Norwegian independence would dry up its own percentage of Norwegian wealth.

Denmark's alliance with France during the Napoleonic Wars resulted in the dissolution of its union with Norway. By the Peace of Kiel in 1814, Norway was ceded to Sweden, but Denmark retained the Faeroe Islands, Iceland, and Greenland. A new constitutional law was signed in 1814, and Christian Frederick was elected Norwegian king, but a short war resulted in his abdication and in union with Sweden in the same year. Thus began a struggle for independence which lasted for nearly a century. While Norway was hit hard by the economic fallout of the new arrangement, as the market with Denmark vanished and Britain no longer purchased Norwegian timber, it was hit equally hard by Sweden's attempts to gain more political power over Norway. In 1821 the Swedish king sent troops to surround the Norwegian parliament, the Storting, in an effort to coerce the Norwegian parliament into passing legislation that would increase Sweden's power. The Storting refused.

While Norway asserted its independence whenever it could, it also rebounded economically. By 1854, when the first rail lines were laid, the economy was solid and growing. This economic prosperity also brought intensified class conflict between Norwegian officials and noblemen on the one hand and Norwegian farmers and laborers on the other. This brought about the establishment of both the Liberal and Conservative parties in 1884.

National focus did not stay on class struggle alone. The Storting passed revised constitutions in 1874, 1879, and 1880, based on the idea that any government in Norway must be supported by the legislature to remain in power. The Swedish king refused to ratify any of the constitutional revisions. Within Norway the country was divided as to whether the king's sanction was even needed; the Conservative Party claimed that it was, while the Liberal Party claimed that it was not. Eventually, parliamentarianism and the Liberal Party won: The Conservative government was impeached in 1884 for its role in the king's refusal of the constitutional revisions.

When the Liberal Party took over the prime ministership, through the tenure of Johan Sverdrup, Norway gained the constitutional reform it had sought. Although

Sweden acquiesced to the constitutional changes, the union between the two countries proved increasingly unpopular in Norway. While Norway requested its own consulates, Sweden rejected the proposal, and Norway increased its own military strength. The union between Sweden and Norway was finally dissolved in 1905, when the Storting declared both that Norway would establish its own consulates and that the Swedish king was no longer the Norwegian monarch, since he no longer ruled Norway. Danish Prince Carl was elected king of Norway and assumed the name Haakon VII. The Swedes asked for a Norwegian referendum, which proved almost unanimously in favor of independence from Sweden. Negotiations between the two countries in August and September 1905 ensured Norway's independence.

Norway remained neutral in World War I but was invaded by the Nazis in 1940. The national resistance was led by King Haakon, who escaped to England, where he established a government in exile. Norway was liberated on May 8, 1945, and the king returned a month later.

While Norway had fought hard for independence and proudly stated its neutrality, its postwar outlook also entailed international cooperation. It provided the first secretary-general of the United Nations in 1946 and joined the North Atlantic Treaty Organisation (NATO) in 1949.

Norway's first postwar election saw the ascendancy of the Norwegian Labor Party, which continued to rule as a majority party until 1961 and as a minority party until 1965, when a coalition of nonsocialist parties took control under Per Borten of the Center Party. Labor again came to power in 1971, under Trygve Bratteli, and later, in 1976, under Odvar Nordli. In 1981 Nordli was succeeded by Gro Harlem Brundtland, the nation's first female chief executive. She was, however, dislodged from power the same year, only to return as the prime minister of a minority government in 1990. The following general elections were dominated by controversy over Norway's renewed application for membership in the European Union, which was favored by the Labor and Conservative parties but not by the smaller parties. The defeat of the Norwegian referendum on this issue led to the resignation of Brundtland in 1996. In 1997 Kjell Magne Bondevik was named prime minister, although he had the support of only 42 votes out of 165 in the Storting. After losing a no-confidence vote in the wake of an energy and environment controversy, Bondevik resigned in March 2000 and was replaced by the Labor Party leader Jens Stoltenberg. However, in elections held on September 10, 2001, the Labor Party lost 22 of its 65 seats, and Bondevik took office as prime minister for a second term. In 2005 the Labor Party regained its majority in parliament and Stoltenberg began his second term as prime minister.

2000–2001	Jens Stoltenberg
2001–05	Kjell Magne Bondevik
2005–	Jens Stoltenberg

CONSTITUTION

In the 1814 Grunnloven (constitution), executive power is vested in the monarch, whose powers, however, are nominal. According to the constitution the executive branch has the right of suspensive veto against bills passed by the Storting, but this is rarely done.

The head of government is the prime minister. The cabinet consists of 19 ministers, half of whom must be members of the state church. The entire cabinet is appointed by, and resigns with, the prime minister. Ministers are responsible individually, and the cabinet collectively, to the Storting. Cabinets may be forced to resign through a parliamentary motion of no confidence.

PARLIAMENT

The Norwegian parliament, the Storting, consists of 165 members elected by universal suffrage every four years. Once constituted, it elects one-fourth of its members to serve as an upper chamber, the Lagting, while the remainder serves as a lower chamber, the Odelsting. Each bill is sent first to the Odelsting and then to the Lagting. If both chambers agree, the bill is passed. If there is disagreement after two readings, a vote is taken among the whole Storting, with a two-thirds majority required for passage.

POLITICAL PARTIES

Political power in Norway has historically alternated between the two leading parties, the Conservative Party and

the Labor Party. Traditionally, the Center Party (formerly known as the Agrarian Party, founded in 1920) and the Christian People's Party (1933), together with the Conservative Party (1884), form the conservative wing. The Labor Party (founded in 1887), Socialist Left Party (1973), and Liberal Party (1884) together form the left wing. Because political loyalties are not clearly drawn, many coalition governments have contained units from different ends of the political spectrum. The Christian Democratic Party, the party of Prime Minister Kjell Magne Bondevik, is a centrist party that only recently became prominent. Power is fairly equally distributed among the various political parties. In the 2001 elections the distribution of seats in the Storting was as follows: Labor Party, 43; Conservative Party, 38; Progress Party, 26; Socialist Left Party, 23; Christian People's Party, 22; Center Party, 10; Liberal Party, 2; and Coastal Party, 1. In those elections the Labor Party made its worst showing in 90 years.

LOCAL GOVERNMENT

Norway is divided into 19 counties and 434 municipalities. Political and financial responsibility is vested in several popularly elected bodies: county councils, county executive committees, municipal councils, and municipal executive boards. Elections are held every four years.

LEGAL SYSTEM

In civil cases there are three levels of courts: district or city courts, the appeals courts, and the Supreme Court. Most disputes must first be brought before a conciliation board before appearing in court. If a conciliation board cannot resolve a matter, it continues through the court system up to the Supreme Court.

There are 85 district courts. In more populated areas the district courts are composed of several judges headed by a president. In less populated areas the district courts are composed of one professional judge and may include several lay judges. Beyond the district courts are the five appeals courts. At the appeals court level, cases are generally heard by three professional judges. However, parties may request two or four lay judges to participate. The highest court is the Supreme Court, which consists of a president, or chief justice, and 18 permanent justices.

HUMAN RIGHTS

Norway continually strives to ensure human rights, both within its own country and abroad. In October 1998 King Harald addressed the Sameting (the Sami minority governing body) to apologize for earlier repression. Current Norwegian law forbids discrimination on the basis of race,

sex, religion, language, and disability. Similar laws cover sexual orientation; however, no law exists barring discrimination with respect to such in private employment.

Norway's greatest challenge in human rights is to ensure those of its burgeoning immigrant population. While government surveys show clear prejudice against foreigners, they also indicate that Norwegians want their government to provide asylum when appropriate.

FOREIGN POLICY

Norway is a founding member of the United Nations, NATO, the Council of Europe, the Council of Baltic Sea States, the Barents Euro-Arctic Council, and the Organization for Economic Cooperation and Development. Regional cooperation is exercised mainly through the Nordic Council. Beginning in 2001 Norway became a member of the UN Security Council.

Norway has long resisted joining the European Union, primarily because of concerns regarding the status of its currency, the krone. Although pro-European, Norway has long maintained amicable relations with Russia, which it borders in the far north, although the two nations continue to dispute maritime boundaries and fishing rights. In 1992 Norway attracted international criticism by withdrawing from the International Whaling Commission (IWC) rather than accept the IWC ban on whaling. Nevertheless, Norway is respected in diplomatic circles as an honest broker in many international issues, as witnessed by its role in the Oslo Accord between Israel and the Palestine Liberation Organization.

DEFENSE

All males between 20 and 45 years of age can be drafted for military duty, which typically lasts 12 months. In 2003 the nation's armed forces personnel numbered almost 27,000. Military expenditures in 2003 were just over \$4 billion, about 1.9 percent of the nation's gross domestic product (GDP). Despite the country's call for arms reduction in Europe and throughout the world, Norway exported about \$156 million worth of arms in 2002 and employed about 8,000 people in arms production.

Even throughout the cold war, Norway welcomed international support but would not permit foreign troops on its bases unless under direct attack. (Such an attack never occurred.) Defense policy came to be guided by Norway's unique geographical position and by the uncertainty created by the independence of the Baltic states and sustained political turmoil in Russia. While striving to maintain stability in the region, Norway offered a warm welcome to its Baltic neighbors and has provided them with military support. In 2000 Norwegian defense personnel provided assistance in the recovery of bodies from

the sunken Russian submarine *Kursk*. The presence of the Norwegian navy has increased in the northern areas, matching the increased presence of the Russian navy.

As the end of the cold war eased regional tensions, Norway began playing a more substantial role on the world stage. The nation frequently participates in UN defense and peacekeeping exercises and has several units at NATO's disposal for immediate security threats. At the same time the Norwegian government is calling for a decrease in arms throughout Europe and the world, as well as for an increased role by European countries in their own defense.

ECONOMY

Norway is a prosperous welfare state whose economy combines free enterprise and Scandinavian-type socialism. The government controls key sectors, such as oil, and extensively subsidizes agriculture and fishing. As in other countries in northern Europe, extensive welfare programs help propel public expenditures to more than 50 percent of GDP. Norway has one of the highest tax levels in the world.

The economy is more trade than manufacturing oriented. The nation is basically an exporter of raw materials and semiprocessed goods and is also one of the world's major shipping nations. The main source of its wealth is oil—only Saudi Arabia exports more oil than Norway, and oil and natural gas revenues have made Norway one of the world's most affluent nations, with a per capita GDP of \$40,000 in 2004. Norway has no external debt and serves as a creditor nation. The development of hydroelectric power in recent decades made Norway western Europe's largest aluminum producer. On the other hand, the nation imports more than half of its food.

Growth hovered around 1 percent through the early 2000s. The government moved ahead with privatization in 2000, even proposing the sale of up to one-third of the 100 percent state-owned oil company Statoil. Despite their high per capita income and generous welfare benefits, Norwegians worry that in the next two decades oil and gas reserves will begin to run out. Accordingly, Norway has been saving its oil-boasted budget surpluses in a Government Petroleum Fund, which is invested abroad and has been valued at more than \$43 billion.

ENVIRONMENT

Water pollution and acid rain are serious issues in Norway, as they affect fish stocks and forests, respectively. The fish supply is especially vulnerable, as fertilizer runoff from farmland appears to be increasing. As the number of urban residents is rising, the country is working to maintain green spaces and limit sprawling development. The nation must also plan for the eventual exhaustion of its oil supplies, which have contributed substantially to the nation's economy since the 1960s. Sources of ongoing debate in Norway are the issues surrounding whaling, which the country resumed on a commercial basis in 1993, and plans to drill for oil in the Barents Sea.

LIVING CONDITIONS

In 2004 the United Nations Human Development Index, which considers life expectancy, income, educational attainment, and general standard of living, ranked Norway number one in the world. Life expectancy is high, health care is supported by the state, and the country has an extensive system of public transportation and highways. Most people own cars. The flip side of this high standard of living in a mixed socialist state is that the tax rate on income and wealth amounts to nearly 44 percent of GDP. The marginal tax rate on income, including social security contributions, is nearly 65 percent, although the government pledged to reduce taxes during the 2001-05 parliamentary term. Population density in the major cities is low, partly because the government provides significant services to rural communities (encouraging people to re-

main there) and partly because the cities make efforts to incorporate green spaces. Among the main social problems are alcoholism and binge drinking, and drug use has become more extensive in recent years. Crime rates are extremely low, and there is especially little violent crime.

HEALTH

Norway's health-care system is excellent. Life expectancy at birth in 2004 was over 79 years, and the infant mortality rate was a minuscule 3.7 deaths per 1,000 live births. Health-care spending per capita in 2002 was over \$4,000, third in the world (behind the United States and Switzerland). Free hospital care is funded by Norway's National Insurance Scheme, and only modest charges are levied for primary care and medications. The leading causes of death are heart disease and cancer. In 2002 Norway ranked third in the world (behind Japan and Belgium) in the proportion of daily smokers (29 percent).

Health

Number of Physicians: 15,978
 Number of Dentists: 5,627

FOOD AND NUTRITION

Obesity is a growing problem in Norway, with about 8.4 percent of men and 8.2 percent of women regarded as obese in 2004, ranking the nation ninth in the world for obesity rates. Norway has no principal dietary staple. Breakfasts are hearty, often consisting of breads, smoked fish, meats, eggs, and dairy products such as cheese and yogurt. Lunches tend to be lighter, with sandwiches and perhaps fruit. Dinners include fish or meat, often whale meat, accompanied by potatoes or rice and vegetables.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 130.5
 Amount of Fruits and Vegetables Available per person per year kg: 182.6

STATUS OF WOMEN

Women have played prominent roles in national political offices since the 1980s and continue to do so. The Equal Rights Law of 1978 forbids discrimination with respect to jobs, wages, and related issues. An equal rights ombudsman deals with complaints of sexual harassment. The percentage of female board members in public companies has risen to 12 percent. Norway maintains a tradition of including at least 40 percent women in government posts. Prime Minister Bondevik has eight women among his 19 ministers. Over 60 percent of college graduates are women.

Women

Women-headed Households %: —

WORK

Norway's labor force in 2004 consisted of 2.38 million people, with an unemployment rate of 4.7 percent. About 4 percent were employed in agriculture, forestry, and fishing; 22 percent in industry; and 74 percent in services. The distribution of income was relatively even, with the poorest 10 percent of the population earning almost one-fifth of the top 10 percent. The workweek is limited by law to 38 hours, with no more than 200 overtime hours in a year, and Norwegians enjoy a high level of job security. Agricultural products include barley, wheat, potatoes, and meat and dairy products. Major industries include petroleum and gas, food processing, shipbuilding, paper products, metals, chemicals, timber, mining, textiles, and fishing.

EDUCATION

Primary schooling is compulsory for nine years, and textbooks are provided free by the state. The state also provides free transportation, as well as free living quarters for students who live too far to commute. The school year

1790 Norway

runs from August through June. The pupil-teacher ratio is among the lowest in the world, with an estimated seven pupils per teacher at the secondary level in 2002. Postsecondary education can include attendance at one of four universities, eight specialty schools, or regional vocational colleges. In 2002 the United Nations ranked Norwegians as the most educated people in the world, with an average of 17.3 years of schooling. In 2000, tertiary enrollment amounted to 74 percent of college-age people. Through the 1990s Norway spent nearly 7 percent of GDP on education.

SCIENCE AND TECHNOLOGY

Scientific research is conducted at Norway's four major universities at Tromsø, Trondheim, Bergen, and Oslo, as well as at the Norwegian University of Science and Technology. The nation's regional institutions also carry out scientific education and research. Applied fields, including agriculture and petroleum engineering, are funded by various research institutes. The Norwegian Forum for Research in the United States was launched in 2001 to strengthen ties with scientists in the United States and Canada. Approximately 30 percent of public funds for research and development are channeled through the Research Council of Norway, established in 1993.

MEDIA

Newspapers had their heyday in the early part of the 20th century, when they were instrumental in the linguistic movements. In 1972 the government implemented subsidies to newspapers in financial trouble, which policy is continued today.

Major papers that remain in print include *Adresseavisen*, based in Trondheim, an advertising paper that has been in existence since 1767, and *Aftenposten*, established in 1860, which is among Norway's largest papers. The largest-circulation paper is the *Verdens gang*, a tabloid. Most papers are unabashed supporters of a particular political party. The average Norwegian spends about one hour each day reading magazines and newspapers.

Television and radio in Norway have not had the impact that the media have had in other countries. The national station, NRK, was the only television station for much of the 20th century. Norway's rugged terrain and geographic location limited the reception of television and radio stations from outside of the country, and by the time satellite communications were developed, the printed press had become firmly established. With the introduction of the independent stations TV2, TV3, and P4, Norwegians were exposed to television and radio commercials for the first time.

By the 1980s newspapers were feeling some competitive pressure from television and radio news, which was providing less hard news and fewer news stories but was using a more sensationalistic slant. Recent statistics indicate that Norwegians age 15–19 read much less than do their older counterparts, suggesting that a long-term decline in overall reading may not be far away.

CULTURE

Norway's cultural heritage extends back to the sagas written in Old Norse by the Vikings during the medieval period. Those written by Snorri Sturlusson (1178–1241) are regarded as among the first works of Norwegian literature. Under Danish rule in the 18th century, Norway's most famous writer was Ludvig Holberg, who wrote comedies and satires that are still performed. In the 19th century Norway's most famous author, Henrik Ibsen, wrote

plays such as *A Doll's House*, *Peer Gynt*, and *An Enemy of the People* that are still performed worldwide. In the 20th century the writer Bjørnstjerne Bjørnson won the 1903 Nobel Prize, as did Sigrid Undset in 1928. Undset's most famous work was her trilogy of novels *Kristin Lavransdatter*. Two other names in Norwegian cultural history are particularly well known throughout the world: In painting, Edvard Munch, the expressionist from the late 19th and early 20th centuries, is known for his haunting work *The Scream*, which made world headlines in August 2004 when it was stolen from the Munch Museum in Oslo in front of stunned museum patrons. In music, the 19th-century composer Edvard Grieg, who wrote *Holberg Suite* (so named in honor of the 18th-century writer Ludvig Holberg), is known for incorporating Norwegian folk music into his classical compositions.

FOLKLORE AND MYTHOLOGY

Norwegian folklore is dominated by the figure of Odin, a god who lived in the walled city of Valhalla and who went to war with nine warrior maidens called the Valkyries. The nation's folklore tradition includes a number of odd and grotesque figures, including trolls, which are the subject of numerous folktales; some trolls are friendly to humans, but others are determined to pester them. Other folkloric figures include the *nokken*, a water spirit who tempts men and boys to their deaths; the *nisse*, a little man with wooden shoes, a red cap, and a white beard; and the *fossegrimen*, a water spirit who dwells at the bottom of waterfalls and is friendly to humans.

ENTERTAINMENT AND RECREATION

Norway is a mountainous country with a long seacoast, so winter and water sports are immensely popular. In the winter Norwegians enjoy skiing and ice fishing in the mountains. Since the vast majority of the population lives within a few miles of the water, boating, sailing, fishing, swimming, and rafting are popular. Summertime trips to the fjords are a common activity for families. Hiking, too, is popular. The cities try to maintain natural forested ar-

reas within their boundaries (Norway is the least densely populated country in Europe), and people take advantage of these natural areas on the weekends. In Oslo, the commuter train runs all the way to the edge of the city, where hikers disembark and can immediately find trails into the forest.

ETIQUETTE

The forbidding environment and long, dark winters have made Norwegians a self-reliant and reserved people who avoid direct confrontation with others. Any kind of loud or boisterous behavior in public is frowned upon. Public seating in parks is arranged so that people can enjoy the public space but still maintain a sense of privacy. People respect one another's personal space and stand apart during conversation. Norwegians tend to be egalitarian and noncompetitive; a story is told about the king wondering whether Norway had been a poor host for the 1994 Winter Olympics in Lillehammer because Norway won a large number of medals, and for many years it was more acceptable to say that one "participated" in athletics than to say that one "competed." This egalitarianism extends to language, where the informal "you" is nearly universally preferred over the formal "you."

FAMILY LIFE

Families in Norway tend to be small. In 2004 the fertility rate was just 1.8 children per woman, and the country's overall birth rate that year was just under 12 births per 1,000 population. Single-parent homes are increasingly common, as the nation's divorce rate doubled between the 1970s and the 1990s. Marriages are essentially never arranged; even the king sought a spouse who was a commoner rather than a royal. Child rearing and household responsibilities tend to be fairly evenly shared between husband and wife, especially because of the country's generous family leave laws for both women and men. The nuclear family is the norm, but in rural areas it is not uncommon for grandparents to live with the family or very close by. Many children are placed in the hands of child-care centers or babysitters, and attitudes toward child rearing are generally permissive, so Norwegian children have an extended childhood and adolescence.

PERSONAL APPEARANCE

Western-style clothing is almost universal for business, casual, and formal occasions alike. Traditional costumes can sometimes be seen at festivals. For men, these include buckled shoes, hose, tight knee-length breeches, an embroidered vest, and a broad-brimmed hat. For women,

1792 Norway

traditional dress consists of ankle-length skirts, high-collared and embroidered blouses, and a lace cap.

SPORTS

While tennis is widely played, soccer is the most popular summertime sport. Above all, however, the mountains of Norway have allowed the people to excel at wintertime sports, especially skiing and ice skating. In 1952 the Winter Olympics came to Oslo, and in 1994 they were held in Lillehammer. In the early years of Winter Olympic competition, Norway, "the birthplace of skiing," fared well, but Norwegians were eclipsed by the better-trained Swedes, Germans, and Russians in the 1950s and 1960s. In 1969 the Norwegian College of Sport was established to put Olympic training on a sounder footing, and through the 1970s and 1980s its efforts bred success. Nevertheless, in the 1988 games in Calgary, Canada, Norway won a devastating five medals. A major push was made to improve the nation's competitive posture, and in the 1992, 1994, and 1998 Olympics, Norwegian athletes won a total of 71 medals, including 29 golds. They added 24 medals in Salt Lake City in 2002, including a Norwegian record of 11 golds.

CHRONOLOGY

- 1939** Norway declares its neutrality on the advent of World War II.
- 1940** Nazi forces invade Norway on April 9, taking over the country.
- 1945** With Norway freed by Allied forces, Vidkun Quisling, head of the Nazi administration of Norway, is executed.
Einar Gerhardsen is elected prime minister.
King Haakon VII returns from exile in Great Britain.
- 1946** Trygve Lie becomes first secretary-general of the newly formed United Nations.
- 1949** Spurred by the threat of Communist takeover and "Finlandization," Norway joins NATO.
- 1951** Oscar Torp of the Norwegian Labor Party succeeds Gerhardsen as prime minister.
- 1955** Gerhardsen returns to office for a second term as prime minister.
- 1957** King Haakon VII dies, and his son, Olav V, ascends the throne.
- 1960** Oil fields are discovered throughout the decade, providing a key source of wealth for the country.
- 1963** The Norwegian Labor Party yields power for a month to a Conservative Party-led coalition headed by John Lyng.
Gerhardsen heads his third government.
- 1965** Per Borten of the Center Party displaces Gerhardsen as prime minister.
- 1971** Norwegian Labor returns to office under Trygve Bratteli.
- 1972** Lars Korvald of the Christian People's Party forms a coalition government.
Norwegians reject European Community membership in a national referendum.
- 1973** Trygve Bratteli leads his second government.
- 1976** Odvar Nordli replaces Bratteli as Norwegian Labor leader and prime minister.
- 1981** Norway's first woman prime minister, Gro Harlem Brundtland, takes office as prime minister following her election as Norwegian Labor Party leader. The Brundtland government falls, and Kåre Willoch of the Conservative Party forms a coalition government.
- 1986** Willoch resigns following a no-confidence motion in the Storting, and Brundtland heads a minority government.
- 1989** Following an electoral reverse, Brundtland resigns. A Conservative-led coalition takes office under Jan P. Syse.
- 1990** Brundtland again becomes prime minister on November 3.
- 1991** King Olav V dies on January 17. His son, Harald V, becomes king.
- 1994** Norwegian voters again reject EC membership.
- 1996** On October 25 Brundtland resigns and is replaced as prime minister by Thorbjørn Jagland, head of Norway's Labor Party since 1992.
- 1997** Kjell Magne Bondevik, of the Christian Democratic Party, becomes prime minister
- 2000** Jens Stoltenberg, of the Labor Party, becomes prime minister after Bondevik loses a no-confidence vote in parliament.
- 2001** In parliamentary elections, the Labor Party loses over one-third of its seats. Bondevik becomes prime minister again, leading a center-right coalition government.
- 2003** Environmentalists and the fishing industry oppose plans to drill for oil in the Barents Sea.
- 2005** The Labor Party wins 61 seats in parliamentary elections; Stoltenberg begins a second term as prime minister.

NATIONAL EMBLEM

A belt with silver scimitars crossed beneath a ceremonial curved *kbanjar* dagger

NATIONAL ANTHEM

“God Save Our Sultan”

NATIONAL HOLIDAYS

July 22–24 (Accession of the Sultan), November 18 (National Day), November 19 (Sultan’s birthday), various Islamic festivals

DATE OF INDEPENDENCE

1650

DATE OF CONSTITUTION

None (Note: On November 6, 1996, the sultan issued a royal decree promulgating basic law that the government regards as a constitution.)

GEOGRAPHICAL FEATURES

Oman, the second-largest country on the Arabian Peninsula, is at the southeastern corner of that land mass, facing the Gulf of Oman and the Arabian Sea. Its area is estimated at 212,460 sq km (82,031 sq mi), including the island of Masirah and the tip of Musandam Peninsula, which juts into the Strait of Hormuz. Oman shares international borders with Saudi Arabia, the United Arab Emirates, and Yemen.

The country is divided topographically into several regions. The tip of the Musandam Peninsula, the Ras al-Jabal, which touches the Strait of Hormuz and is separated from the rest of the sultanate by a belt of United Arab Emirates territory, consists entirely of low mountains.

The fertile and populous coastal plain known as Batinah slopes gradually on the landward side to the foothills of the western Hajar. The Muscat Matrah coastal region is bounded almost throughout its length by cliffs.

The high tableland of central Oman is west of the coastal area. The tableland consists of two ranges: the Hajar al-Gharbi, or western Hajar, and the Hajar al-Sharqi, or eastern Hajar, divided by the Wadi Samail, which forms the traditional route between Muscat and the interior. The average elevation is 1,220 m (4,000 ft), but some peaks of a high ridge known as Jabal Shams rise to 2,980 m (9,777 ft). Beyond the Hajar Mountains is sandy desert, which eventually merges with the wastes of Rub al-Khali.

Oman

Dhofar Province is a coastal plain noted for rich vegetation and natural beauty. Some 16 km (10 mi) inland rise the Qara Mountains, which meet the Rub al-Khali 240 km (150 mi) to the north. The coastline south to Dhofar is barren and forbidding, while

the island of Masirah is virtually uninhabited and inhospitable.

A small number of surface-flowing wadis, or seasonal streams, are found in the Hajar Mountains, but none reaches the sea.

Population of Principal Cities (2003 est.)

As-Sib	223,449
Muscat	67,400

CLIMATE AND WEATHER

Oman has an arid subtropical climate. The summer months run from May to October, with a maximum average temperature of 46°C (115°F) and humidity in excess of 90 percent. The summer climate is regarded as one of the hottest in the world, and temperatures as high as 54°C (130°F) have been recorded. A west wind known as the *gharbi*, blowing from the Rub al-Khali, makes the heat more oppressive. Mean average temperatures in Muscat for January and July are 22°C (71.5°F) and 33°C (92°F), respectively.

Average rainfall is 50 to 100 mm (2 to 4 in), with wide regional variations. Some coastal areas receive no rain at all in the course of a year, while the Hajar Mountains region receives up to 250 mm (10 in) annually. An exception to the general climatic pattern is southwestern Dhofar, which receives abundant rain during the southwesterly monsoon season between June and September.

Climate and Weather

Mean Temperature
 January: 71.5°F
 July: 92°F
 Maximum Recorded: 130°F
 Average Rainfall: 2 in to 4 in
 Hajar Mountains: 10 in

FLORA AND FAUNA

Oman has about 1,200 species of plants, about 60 percent of which are found in the northern mountainous region, consisting primarily of various species of shrubs. The region is home to three species of tahr (a type of wild goat), three endemic species of geckos, hyenas, wildcats,

wolves, and 71 bird species. The desert and semidesert regions are sparsely vegetated, but along the coast can be found mangrove trees and hardy acacias. These regions provide habitat to tahrs, geckos, and over 400 species of birds, such as the kingfisher and cormorant. The coast itself is home to a large population of green turtles and other turtle species.

ETHNIC COMPOSITION

The population is estimated to be seven-eighths Arab, as divided into two principal groups: The first is known as the Yamaniyah, Azdi, Qatitani, or Hinawi, the second as the Nizari, Adani, or Ghafiri. The first predominate in the southeastern districts and the second in the northwestern ones, but members of both groups can be found in every village. This split has played an important part in Oman's civil wars and internal politics.

The small non-Arab population is concentrated in the coastal towns of Muscat and Matrah. The most significant minorities in numerical terms are Iranians, Baluchis, Indians, Pakistanis, and East Africans, most of whom serve as soldiers, civil servants, merchants, or laborers. The Baluchis were originally inhabitants of the sultan's former possession of Gwadur, which he ceded to Pakistan in 1958. The East African blacks are reminders of the days not so long ago when Muscat was the most important center of the slave trade in the East. Two aboriginal tribes of uncertain origin are the Qara and the Shihuh, who are probably descendants of aboriginal inhabitants of southern Arabia.

Foreigners were banned from the interior of the country under the former sultan, Said bin Taimur, who

was deposed in 1970. The Ibadi Omanis, a minority Muslim sect, are among the most xenophobic of Arabs, and despite recent liberalization, prejudice against Westerners persists throughout the country, except perhaps in the capital region.

LANGUAGES

The official language of Oman is Arabic. The main linguistic minorities are Iranians, who speak Farsi; Indian Khojas and Pakistanis, who speak Urdu; and Hindus, who speak a variety of Indian dialects. English is widely understood and used to some extent in government.

While there is no government policy to discourage the use of other languages in speech or print or in religious instruction in the home, the government has increasingly insisted that administrative correspondence and public and legal documents be in Arabic.

RELIGIONS

Islam is the official religion, and three-quarters of Muslims are Ibadis, fundamentalists who follow Abdullah ibn Ibad, an Iraqi Kharedjite theologian. They regard all contacts with infidels and non-Ibadi Muslims as sinful and are notorious for their unity and doctrinal rigidity. There are a number of Sunni Muslims, particularly among the Ghafiri tribes.

Non-Muslim foreigners, both Christian and Hindu, are allowed to worship at designated locations. The government of Oman has donated land for building a Christian church and a new Hindu temple. Non-Muslims are prohibited from proselytizing, however. Conversely, conversion to Islam is encouraged and publicized.

Religious Affiliations

Ibadi Muslim	2,250,000
Other	750,000

HISTORICAL BACKGROUND

Oman's history can be traced to biblical times, where it is identified with Sephar or Dhofar. The population was converted to Islam during the lifetime of Muhammad, but Oman soon became the center of the Ibadi sect of Islam, centered at Nazwa, which evolved from the egalitarianist Kharedjite movement and which has elected its own caliph since the eighth century.

The first contact with Europeans occurred in 1508, when the Portuguese overran Muscat; they remained in control until 1650, when they were driven out with

Persian help. During the next 75 years Oman became a major maritime power, conquering the East African trading ports of Mombasa and Mogadishu and the island of Zanzibar. The first sultanate was established in Muscat in 1775. It became a British protectorate in 1778. Around this time, Muscat lost control of the interior, which was not regained until 1955. In 1920 the Treaty of Sib was signed between the Sultan of Muscat and the Imam of Oman, acknowledging the latter's independence. On the death of the imam in 1954, Sultan Said bin Taimur tried unsuccessfully to succeed him. In the same year the sultan granted oil exploration rights to a British firm. By this agreement the company maintained a small army, the Muscat and Oman Field Force, with British officers. This force helped the sultan to bring all of Muscat and Oman under his control. In 1959 the last of the insurgents supporting the imam were defeated, whereupon the sultan abolished that office and terminated the Treaty of Sib.

In 1970 Said bin Taimur, who had been in power since 1930, was brought down in a bloodless palace coup led by his son Qaboos bin Said. Unlike his father, Qaboos has been a modernist influence on a very tradition-bound country. Under his rule, the government has been liberalized, and spending on development and social services has increased. He also ended his father's policy of isolationism. Under his direction Oman has joined the Arab League, the International Monetary Fund (IMF), the Gulf Cooperation Council, and the United Nations.

Oman is relatively unique in the Persian Gulf region in that it maintained ties with Egypt even after the latter signed a peace agreement with Israel in 1979; the sultan even welcomed a visit from the Israeli prime minister. In 1980 Oman signed a treaty with the United States, permitting the use of ports and air bases in the gulf in exchange for U.S. military and economic aid and a commitment of U.S. security. During the Persian Gulf crisis in 1990 and the ensuing war in 1991, Oman opened its air bases to U.S.-led UN forces and sent ground troops to Saudi Arabia to assist in its defense.

In 1996 Qaboos made some symbolic changes to his absolute rule with the issuance of the Basic Law. In 1998 the country cut its oil production, setting off a pricing battle. In the early 2000s Oman cooperated with coalition forces in the war against the Taliban in Afghanistan, conducting joint training exercises with the British in the Omani desert. In early 2005 the government arrested 100 Islamists who were reportedly forming an organization that was a threat to national security.

LIST OF MODERN RULERS

1930–70	Sultan Said bin Taimur
1970–	Sultan Qaboos bin Said al-Bu Said

CONSTITUTION

Oman is politically among the least developed nations in the world; it has never had a constitution. Nevertheless, on November 6, 1996, Sultan Qaboos issued a royal decree promulgating a new Basic Law, which, among other things, clarifies the royal succession, provides for a prime minister, bars ministers from holding interests in companies doing business with the government, establishes a bicameral legislature, and guarantees basic civil liberties for Omani citizens.

PARLIAMENT

Through the Basic Law of 1996, the sultan created a bicameral legislature consisting of an upper chamber, the Majlis ad-Dawla, which has 58 members appointed by the monarch and has advisory powers only, and a lower chamber, or Majlis ash-Shura, which has 83 members who were formerly elected by approximately 175,000 Omanis chosen by the government to vote. In 2002 the sultan issued a decree granting universal suffrage to all citizens over the age of 21. The last elections were held in 2003, although the broad extension of suffrage resulted in little change in the legislature's makeup. The upper and lower chambers have only limited powers to propose legislation; they are largely advisory boards instituted to replace the Consultative Assembly, which had been established in 1981.

POLITICAL PARTIES

Oman has no legal political parties. The main illegal opposition was, until 1975, the Popular Front for the Liberation of Oman and the Arabian Gulf. The revolt was crushed in 1975, and most of its leaders surrendered in 1976. Some remnants of the front continue to operate illegally at home and openly in radical Arab countries.

LOCAL GOVERNMENT

The sultanate is divided into five regions, three governorates, and 59 *wilayats*, each governed by a *wali*, or governor, appointed by the sultan. Dhofar Province and the capital region have comparatively more autonomy under governors. A system of rural municipalities is being gradually introduced, with limited local responsibility for land use, public health, and sanitation.

LEGAL SYSTEM

The legal system of Oman is based on English common law and Islamic sharia (religious law), which is interpreted by *qadi*, or religious judges. The 1996 Basic Law

affirms the independence of the judiciary; however, the various courts are subordinate to the sultan and subject to his influence. The sultan appoints all judges, acts as a court of final appeal, and intercedes in cases of particular interest, especially in national security cases. However, there have been no reported instances in which the sultan has overturned a decision of the magistrate courts or the commercial court.

The judiciary comprises the magistrate courts, which adjudicate misdemeanors and criminal matters; the sharia courts, which adjudicate personal status cases, such as divorce and inheritance; the commercial court; the Labor Welfare Board; and the Rent Dispute Committee, which hears tenant-landlord disputes. Since the establishment of the Basic Law in 1996, cases that fall under the purview of the sharia courts and the range of corresponding judgments have been regulated.

A State Security Court tries cases involving national security and criminal cases that the government decides require expeditious or especially sensitive handling. The sultan has exercised his powers of leniency, including in political cases.

The criminal code does not specify the rights of the accused. There are no written rules of evidence, codified procedures for entering cases into the criminal system, or legal provisions for public trial. Criminal procedures have developed through tradition and precedents set in the magistrate courts. In criminal cases, the police provide defendants with the written charges against them; defendants are presumed innocent and have the right to present evidence and confront witnesses. The prosecution and the defense question witnesses through the judge, who is usually the only person to directly question witnesses in court. There are no jury trials.

HUMAN RIGHTS

The 1996 Basic Law provides for an independent judiciary and many basic human rights, such as the freedoms of association, speech, and press. Nevertheless, the press can be censored for political or cultural reasons, and the government continues to restrict or deny other important human rights. Human rights abuses include arbitrary arrest, the mistreatment of detainees, prolonged detention without charge, and the denial of due process. The government restricts the freedoms of expression and association and does not ensure full rights for workers and women. As a practical matter, citizens do not have the right to change their government.

FOREIGN POLICY

Reversing the isolationist policy of his father, Sultan Qaboos has taken an active role in foreign policy. Oman

is a moderate Arab nation that has advocated diplomatic relations with Israel, thereby antagonizing the hard-line Arab states. In 1980 Oman granted the United States access to its air and naval facilities, and the nation has become a solid base for U.S. activities in the gulf region. In 1989 the sultanate also signed a military cooperation agreement with France. Relations with Yemen improved after the conclusion of a formal border agreement in 1997; likewise, those with the United Arab Emirates improved in 2003 when the two nations ratified a border agreement.

DEFENSE

The defense structure is headed by the sultan, who is also the defense minister. The defense forces have been commanded by British officers, but the proportion of British officers has been steadily declining; by mid-1980 there were fewer than 1,000. In addition, there are several thousand Baluchi tribesmen in the armed forces. Also, Jebalis, or mountain dwellers, are organized into home-guard units, or *firqats*, in tribal areas. Maintenance and other technical work is contracted out to a British firm. Enlistment for the armed forces is voluntary. The total strength of the armed forces was 46,100 in 2003.

The 2004 military budget was \$253 million, a full 11.4 percent of gross domestic product (GDP), among the highest percentages in the world.

The Omani army and air force are almost entirely equipped and trained by the British. Since 1945 the Omani forces have been tried in the field against the Saudis and the Dhofar insurgents; in both conflicts the Omanis were successful, although the preponderance of mercenary elements makes their viability as a national army questionable.

Military Indicators

ECONOMY

Oman's economic performance improved significantly in 2000 due largely to the upturn in oil prices, though growth in 2003 was a modest 1.1 percent with slight price deflation. The government has continued the privatization of its utilities, is developing a body of commercial law to facilitate foreign investment, and has increased budgetary outlays. Oman joined the World Trade Or-

ganization in November 2000. The nation is trying to reduce unemployment and dependence on foreign countries through "Omanization," a process of replacing foreign workers with Omanis and providing training in information technology, business management, and English. Plans for industrial development are focusing on natural gas, of which Oman has over 29 trillion cubic feet of proven reserves (it produces about 530 billion cubic feet per year).

ENVIRONMENT

Like many arid nations, Oman suffers from a lack of adequate amounts of freshwater. Additionally, the soil has increasing saline content. Pollution from oil spills and associated oil processing, especially on the coast, are also a concern. The nation has set aside protected breeding grounds for sea turtles, which are often threatened by oil spills, and has established a number of protected areas throughout the country.

LIVING CONDITIONS

Living conditions in Oman improved dramatically after the discovery of oil in the 1960s. In 1970 Omanis lived much like they had a thousand years before. The

country had no electricity, no running water, essentially no modern physicians, no newspapers or television, and, remarkably, just six miles of paved roads. Virtually no one owned cars, and people traveled by donkey or camel; it took two weeks to cross the country, which is smaller than the state of Kansas. After 1970 the new sultan rapidly modernized the country, which now has over 9,600 km (nearly 6,000 mi) of paved roads. Most people own cars, and the country can be crossed in one day. The Sultan Qaboos University is producing trained doctors. Housing has improved, and over 80 percent of Omanis own their own homes. Oil revenue has provided more health care, education, and modern communication infrastructure. Many observers, however, believe that the sultanate is an outmoded institution; the government has provided benefits in part to keep people from questioning the government, and efforts to continue to modernize the country will be impeded by the restrictive political system.

HEALTH

Major improvements have been made in the health-care system. In 1970 Oman had virtually no doctors, and many people died of infectious diseases. By 2005 life expectancy had risen to over 73 years, and the infant mortality rate was down to just under 20 deaths per 1,000 live births—in large part because at least 91 percent of births were attended by trained health professionals in the late 1990s. Modern medicine, especially through immunization—99 percent of children now receive measles vaccinations—has essentially eliminated such diseases as polio, neonatal tetanus, and diphtheria, and while malaria and trachoma remain problems, the incidence of these diseases has been reduced; in the early 2000s there were just 27 cases of malaria and five cases of tuberculosis per 100,000 population each year.

FOOD AND NUTRITION

Although about 4 percent of Omani children are regarded as severely underweight, the state of nutrition in Oman is generally fairly good. Staples include rice, fish, fruits, dates, and meat, which is often slowly cooked in a *tanour*, a hole in the ground where wrapped meat is placed in hot ashes and covered to cook for as long as 24 hours. Breakfast is generally light, consisting of leftovers, bread, and strong, dark coffee, which is often flavored with cardamom. The main meal is eaten at midday and generally consists of rice and meat (but never pork, which is forbidden by Islamic law). The evening meal is again light and often consists of just tea, bread, and fruit. The Bedouin nomads frequently eat locusts.

STATUS OF WOMEN

Though conservative, Oman has not been extreme in its attempts to impose strict adherence to Islamic precepts on women. For example, women have shared in the benefits of the social and economic growth of recent years, and schooling for girls is available to the same extent as for boys in urban areas, though less so in rural areas. By 2000 nearly 49 percent of secondary school students were girls. A few women have reached high levels in the public sector; by and large, however, occupational advances available to women are limited to the traditional spheres of teaching, secretarial work, and nursing. Oman's labor laws are protective of women, guaranteeing maternity leave and working conditions.

The gains achieved by a small minority of women are largely irrelevant to the great majority, both in the towns and in the rural areas, where women's lives are carried out within the confines of the house and the local marketplace. The previous lack of adult education facilities means that all but the youngest females in rural areas are illiterate. This problem is being addressed via adult evening classes sponsored by the government; more than half the government's 402 literacy centers are exclusively for female participants. This general lack of education, combined with communal and tribal customs that dictate a subsidiary role for women, make it difficult for most adult women to fully participate in the modern sector. The expansion of educational facilities for girls (including at the university, whose first medical school class included 28 women out of 48 graduates) will allow for some equalization of the position of women in the future, but com-

1802 Oman

munal and tribal customs will continue to militate against full participation by women in the foreseeable future.

Some further steps have been taken toward liberalization. In 1997 the sultan issued a decree that allowed women to vote for and stand for election in the Majlis ash-Shura, and two women were in fact elected. In 2004 the sultan appointed the first woman to a government ministry post.

WORK

In 2002 the labor force numbered about 920,000. The agriculture sector contributed about 3 percent to GDP, industry about 41 percent, and services about 56 percent. In 2004 about 577,000 people living in Oman were non-nationals, many of them employed. A major Omani goal is to replace foreign workers with locals, thereby reducing dependence on foreign expertise. Most people in the fertile regions, including the coastal plains, are farmers, producing dates, limes, bananas, alfalfa, and vegetables, as well as livestock. Nomadic groups herd sheep, cattle, and camels. Oman has a robust fishing industry in the Gulf of Oman and the Arabian Sea, and boat building is a craft that has been passed down through the generations. Industries include not only oil and natural gas production but also cement production and construction (in support of the nation's housing growth) and copper mining.

EDUCATION

Oman has not introduced free, universal, and compulsory education in the elementary grades. Nevertheless, attendance has recently increased. Schooling consists of 12 years, as divided into six years of primary school, three of preparatory school, and three of secondary school. Nearly 96 percent of students progress to the secondary level.

The academic year runs from September to May. The medium of instruction is Arabic, but English is

taught from the secondary grades onward. Adult education from the primary to the secondary level has received increased attention. A study-at-home program provides students with books and materials.

Schooling is under the control of the Ministry of Education.

Until the opening of the Sultan Qaboos University in late 1986 all of Oman's higher studies students had to go abroad. Only those students with the highest grades are sent to non-Arab countries; of these students, most have been accepted in the United States. Egypt, meanwhile, has been the Arab country with the most Omani university students. In 2002 tertiary enrollment equaled 7.5 percent of college-age students.

SCIENCE AND TECHNOLOGY

Most scientific research is conducted and/or funded by various government ministries and by the Sultan Qaboos University, which has departments of medicine, science, engineering, and agriculture, among others. In 2000 the university had just over 2,000 undergraduate and 900 graduate students. The university has appointed a Director of Innovation Services to boost scientific and technological research; as part of that effort the university is establishing "science parks" to promote research and development and to build the nation's scientific infrastructure in such areas as genetic research, semiconductors, environmental science, and materials engineering.

MEDIA

Four daily newspapers are published in Muscat—two in Arabic and two in English.

There are no legal guarantees that protect the freedoms of speech and press. Criticism of the sultan in any form or medium is prohibited by law. Criticism of individual officials, agencies, and their programs is tolerated but is not given media coverage. The government controls all radio and television broadcasting and all printed matter. The law imposes strict controls on, and a mechanism for prior censorship of, all information in printed form in both domestic and imported publications. The government owns two of the four daily newspapers, one in Arabic and one in English. Subsidies to the several privately owned weekly and biweekly publications provide an effective incentive to self-censorship, although there have still been arrests and closure for offensive articles. Thus, editorials and news coverage invariably reflect government views.

The national news agency is the Oman News Agency. No international news bureaus are in Muscat.

Radio Oman broadcasts in Arabic and English on FM. Radio Salalah transmits programs in Arabic and the Dhofari languages daily. The BBC has an eastern relay station on the island of Masirah. One television broadcast station, built at Qurum, outside Muscat, began transmission in 1974, and another, for Dhofar, was opened in 1975.

CULTURE

In 1976 the Ministry of National Heritage and Culture was created to preserve the nation's history and to encourage cultural development. The ministry has restored historic buildings, including houses, castles, and forts, sponsored excavations that have uncovered artifacts dating back to the third millennium B.C.E., funded the construction of libraries, museums, and cultural centers, and maintains a performance arts theater. In 1983 the Oman Center for Traditional Music was created to preserve the nation's folk music. The sultan established the Royal Oman Symphony Orchestra and a music training

school in 1985. Most graphic arts in Oman are utilitarian folk arts, including pottery, goldsmithing, and silver-smithing, camel-hair rugs, wood carving, embroidery, and basketry.

FOLKLORE AND MYTHOLOGY

Much of Oman's folklore and mythology is associated with its religious past. Prior to the arrival of Islam, the people of Oman were polytheistic, worshipping an assortment of gods and goddesses. One later legend has it that King Solomon, accompanied by his jinni, a spirit that can take the form of an animal or human, flew on a magic carpet to Oman. There, in 10 days he constructed 10,000 canals to provide water for the people.

ENTERTAINMENT AND RECREATION

Perhaps surprisingly, scouting is a popular form of recreation among Omani youth. Scouting for boys has been around since 1948, and the National Organization for Scouts and Guides was created in 1975 to encourage scouting among both boys and girls. Also popular in Oman are a variety of water sports, including diving, and walking in the country's National Protected Areas.

ETIQUETTE

Greetings in Oman are formal and elaborate, and plunging into business or even casual conversation without first offering proper greetings is regarded as rude. Common greetings in Oman include *marhaba* or *ablan*, which essentially mean "hello." It is also common to say, in Arabic, "Peace be with you," to which the other person replies, "And to you peace." Omanis maintain a small amount of personal space in conversation, and it is not uncommon to see members of the same sex holding hands. Contact between men and women in public is generally chaperoned, and many women feel that they must be accompanied by men to public events.

FAMILY LIFE

Marriage in Oman is viewed as an institution for producing children for the next generation, so most marriages are arranged by the families of the bride and groom, even among the well-educated and professional classes. Preference is given to a first cousin on the father's side of the family, but marriage to a first cousin on the mother's side is also acceptable. Islamic law allows polygyny, which some men practice, although in modern times it is more rare. Families tend to be large, with a fertility rate of 5.8 children per woman in 2004. The typical household family unit consists of three generations, with a husband and wife moving in with the husband's family, although nuclear-family households are becoming more common, especially in the cities. In the interior of the country, nomadic groups organize family life around the kin group, which occupies an area of land that is regarded as belonging to the kin group.

PERSONAL APPEARANCE

Most Omanis wear traditional dress. For men, this consists of leather sandals, a turban or skullcap, and the dishdasha, a long robe that is usually white. Many also wear a *bisht*, a black cloak with gold trim. Many carry a camel stick and a curved dagger called a *khanjar*. Women, too, wear leather sandals, and in public they wear long black robes and often veil their faces. Otherwise, colorful dresses worn over loose pants gathered at the ankles are common.

SPORTS

Camel racing and horse racing have long been popular in Oman. Field hockey was imported from India in the 19th century, which sport many younger people play. Other popular sports are soccer, rugby, and lawn tennis. In 1999 the country held its first-ever figure-skating competition. Omanis are expert marksmen, and many have done well in international shooting competitions. During the reign of Sultan Qaboos, many sports complexes have been built throughout the country. The General Organization for Sport and Cultural Youth Activities monitors the activities of some 50 sports clubs throughout the country.

CHRONOLOGY

- 1955** The imam of Oman, Muhammad ibn Abdullah, dies; his successor, Imam Ghalib ibn Ali, rebels against the sultan of Muscat and Oman, Said bin Taimur.
- 1956** With the aid of the British-led Muscat and Oman Field Force, the sultan occupies the capital of

the imamate, Nizwah. The imam's brother Talib ibn Ali escapes to Cairo and with Egyptian and Saudi help sets up an imamate-in-exile.

- 1957** The civil war intensifies as Talib returns to Oman.
- 1959** The civil war ends with the complete rout of the rebel imam.
- 1960** Muscat and Oman concludes treaty with the United States.
- 1964** Dhofar tribes revolt against the sultan. The revolt escalates into a civil war as the rebel group, known as the Popular Front for the Liberation of Oman and the Arabian Gulf, receives aid from the Soviet Union and neighboring South Yemen.
- 1970** Sultan Said bin Taimur is overthrown in a palace coup led by his son Qaboos bin Said. Tariq ibn Ali is named new prime minister.
- 1971** Tariq resigns, and the sultan additionally assumes the post of prime minister.
- 1974** First U.S. embassy opens in Muscat.
- 1975** The 11-year civil war ends as the Dhofar insurgents are crushed and their leaders surrender.
- 1979** At Persian Gulf Security Conference Oman offers a new system for routing ships through the Strait of Hormuz.
- Oman becomes the first Arab state to endorse the Israeli-Egyptian Peace Treaty.
- 1981** Oman becomes a founding member, along with six other Middle East states, of the Gulf Cooperation Council.
- 1983** Oman and South Yemen resume diplomatic relations.
- 1985** Oman establishes diplomatic relations with the Soviet Union.
- 1987** Oman establishes diplomatic relations with Syria.
- 1990** Oman opens its air bases to U.S.-led UN forces during the Persian Gulf crisis.
- 1991** Oman sends ground troops to Saudi Arabia to assist in its defense. Oman ends financial aid to Jordan because of that country's support of Iraq during the Persian Gulf War.
- 1996** In conjunction with Russia and Kazakhstan, Oman builds a 900-mile pipeline to move oil to the Black Sea.
- Qaboos decrees a new Basic Law that articulates existing government customs and basic civil liberties of Omani citizens.
- 1997** Omani elections bring two women to the Majlis ash-Shura, an advisory body.
- 1998** Oman expels illegal residents; Oman improves relations with Iran, India, Jordan, and Palestinian leadership.
- 1999** Oman and the United Arab Emirates sign an agreement defining a portion of their common border.

- 2000** Both Oman and the United Arab Emirates ratify the border treaty.
In elections held for membership in the Majlis ash-Shura, candidates with the most votes automatically win membership, forgoing the former custom of gaining the approval of the sultan.
Oman is granted membership in the World Trade Organization.
- 2001** Oman conducts joint training exercises in the Omani desert in preparation for strikes against the Taliban in Afghanistan.
- 2002** Sultan extends voting rights to all citizens over the age of 21.
- 2004** Sultan appoints first woman as government minister.
- 2005** Government states that it has arrested 100 Islamists who were forming an organization dangerous to national security.

Rupee

NATIONAL FLAG

A white crescent and star centered on a field of dark green alongside a white stripe that runs the length of the hoist side

NATIONAL EMBLEM

The emblem features a wreath of narcissus surrounding a shield, with a crescent moon and star above and a scroll below. The shield is divided into four sections, each showing a major product of the country: cotton, wheat, tea, and jute. The scroll bears the national motto in Urdu, *Iman, ittehad, tanzeem* (Faith, unity, discipline).

NATIONAL ANTHEM

“Blessed Be the Sacred Land”

NATIONAL HOLIDAYS

March 23 (Pakistan Day), May 1 (Labor Day), August 15 (Independence Day), September 6 (Defense Day), September 11 (Death Anniversary of Muhammad Ali Jinnah), November 9 (Allama Iqbal Day), December 25 (Birthday of Muhammad Ali Jinnah), various Islamic and Christian festivals

DATE OF INDEPENDENCE

August 15, 1947

DATE OF CONSTITUTION

April 10, 1973; suspended July 5, 1977; restored and amended December 30, 1985; suspended October 15, 1999; restored December 31, 2002

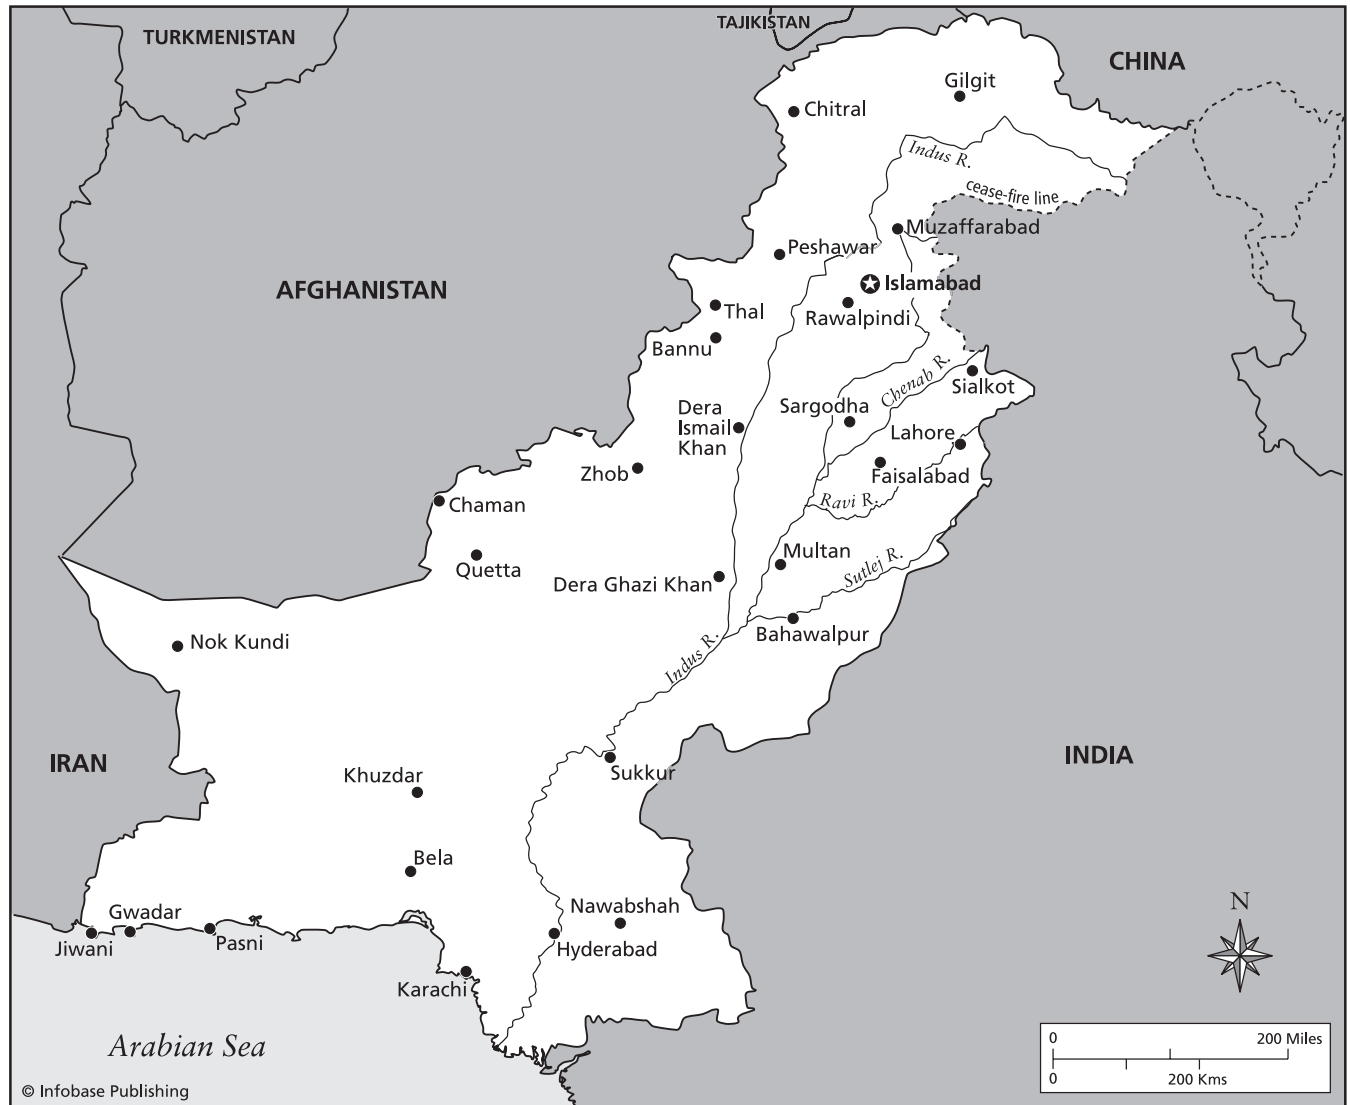

GEOGRAPHICAL FEATURES

Pakistan is in South Asia and extends from the Arabian Sea to the Hindu Kush mountain ranges. The total land area is 803,940 sq km (310,401 sq mi), excluding Azad and Pakistan-held Kashmir, Gilgit, Baltistan, Jungagadh, and Manavadar. The total length of the coastline is 1,046 km (650 mi). Pakistan shares borders with Afghanistan, China, India, and Iran.

Pakistan is divided into three main geographic regions: the northern highlands, the Indus River plain, and the Baluchistan Plateau. The northern and western borders with

Afghanistan are enclosed in the convex arc of the Hindu Kush. Most of this area is above 2,500 m (8,000 ft), with half over 4,500 m (15,000 ft), and there are 50 peaks over 6,700 m (22,000 ft), including K-2, also known as Mt. Godwin-Austen (8,611 m; 28,244 ft). South of the Khyber Pass are a series of mountain ranges: the Safed Koh Range, 4,761 m (15,620 ft); the Toba Kakar Range, 2,743 m (9,000 ft); and the Ras Koh Range, west of Quetta. The Baluchistan Plateau is an arid tableland of about 349,650 sq km (135,000 sq mi) with a number of smaller mountain ranges, such as the Central Brahui Range, the Kirthar Range, the Makran Range, and the Sulaiman Range. The Indus River plain

Pakistan

corresponds roughly to the provinces of Punjab and Sindh and contains some of the most fertile agricultural regions in the country. West of the Indus River plain are the Thal and Thar deserts.

The Indus is the principal river system; it flows through Pakistan for 1,609 km (1,000 mi) of its total length of 2,413 km (1,500 mi). Its major tributaries are the Kabul, Gumal, and Panjnad rivers, the latter of which is actually a confluence of five rivers. The principal river of Baluchistan is the Zhob.

CLIMATE AND WEATHER

Pakistan is basically a dry country, and the general climatic character is one of aridity, although differences prevail between north and south. The country has four seasons: a dry, cool winter from December to February; a dry, hot summer from March to May; a southwesterly monsoon season from June to September; and a northeasterly monsoon season in October and November. Average rainfall is less than 250 mm (10 in). Actual rainfall varies by region, from 1,520 mm (60 in) or more in the northern highlands to 127 mm (5 in) or less in Baluchistan, the Thar and Thal deserts, and the lower Indus River plain. The northern mountains and Baluchistan have cool winters and moderate summers, while the upper and lower Indus River plains have oppressive summers, with temperatures over 37.8°C (100°F). The highest temperature recorded on the Indian Subcontinent was 52.2°C (126°F), recorded at Jacobabad, in northern Sindh. The heat is made intolerable by the dry wind called the *loo* that blows in the summer.

Climate and Weather

Temperature Range: 90°F to 126°F
 Average Rainfall: 10 in
 Northern Highlands: 60 in
 Baluchistan: 5 in

FLORA AND FAUNA

Much of Pakistan is covered in lush vegetation, particularly forests of conifers and fields of wildflowers at higher elevations. The lower, drier areas have fewer plants, with some grasslands and woodlands that can survive the heat and dryness. The southern deserts are inhospitable and have very few plants or animals.

A variety of animal species live in Pakistan's multiple climatic zones. The coastal waters are full of fish, shellfish, sea turtles, and sharks. The marsh crocodile lives in the Indus delta. The mountains are home to snow leopards, jackals, bears, and deer.

ETHNIC COMPOSITION

Pakistan is a mosaic of ethnic groups held together primarily by a common religion. Each group has its own typical occupation and dress as well as geographic, linguistic, and social boundaries. The four dominant groups correspond roughly to the four provinces: Punjabis in the Punjab, Sindhi in Sindh, Baluchis in Baluchistan, and Pashtuns in the North-West Frontier Province (NWFP).

Punjabis, who form the numerical majority in Pakistan, comprise three major castes, or endogamous and functional groups: the Rajputs, the Jats, and the Arains. The Sindhi are also divided into scores of ethnic, linguistic, occupational, and caste groupings. Baluchis form an important minority in Baluchistan and Sindh; their two main divisions are eastern Baluchis, with seven tribes, and western Baluchis, with nine tribes. The Brahmins form 25 percent of the population of Baluchistan and are believed to be descendants of the original Dravidian inhabitants of the area. Pashtuns constitute the dominant ethnic group in the NWFP and a sizable minority in Baluchistan. Fiercely independent, the Pashtuns lack central organization, but each Pashtun belongs to a tribe or descent group that determines his or her home territory and code of conduct. The more important of these tribes in Pakistan are the Afridis, Yusufzais, Khattaks, Wazirs, Mohmands, Mahsuds, and Orakzais.

Ethnic minorities include the *mujabirs*, Urdu-speaking refugees from India; the Makranis of Baluchistan; and the Khos and Kafirs of Chitral. The Hindus, Parsis, and some other smaller groups are properly considered religious rather than ethnic minorities.

LANGUAGES

In the constitution of 1973 Urdu was declared the official language, although English was to remain the official medium of communication for 15 years. Though widely spoken, Urdu is the native tongue of only 8 percent of the population. More than 30 distinct languages are spoken in Pakistan, besides a number of dialects. Of these, Punjabi is the most important in terms of the number of speakers, estimated at 48 percent of the population. Sindhi is spoken by only 12 percent of the population but has important literary traditions and a separate script. Pashto is the mother tongue of all Pashtuns, some 15 percent of the population, and has been strongly identified with the Pashtun separatist movement. Like Punjabi, Pashto is not normally a written language, and the script and much of the vocabulary are borrowed from Urdu, Arabic, and Persian. Baluchi, an Iranian language like Pashto, and Brahui, a Dravidian language, are spoken by the Baluchis and Brahuīs, respectively, in Baluchistan. Speakers of Brahui and Baluchi combine to form about 4 percent of the population.

RELIGIONS

As an Islamic republic, Pakistan is a theocratic state. Islam is the official religion and is followed by 95 percent of the population. In political terms religion forms the basis of national unity for diverse linguistic and ethnic groups, and the temporal Pakistani nation and the religious Muslim community, or *umma*, are inseparably one. The constitution invokes Islamic principles and provides for the advisory Council of Islamic Ideology to evaluate legislation in terms of its congruence with the sharia (religious law). Both Sunnis and Shiites are represented in Pakistan, although Sunnis form the overwhelming majority.

The government has continued efforts to make Pakistan a fully Islamic society. The Ahmadi sect, which considers itself Muslim despite theological differences with traditional Islam, has historically been repressed. In 1974 the Zulfikar Ali Bhutto regime amended the constitution to declare the Ahmadis a non-Muslim minority. In April 1984 the government of Gen. Muhammed Zia ul-Haq banned the use of Muslim terminology and proselytizing by the Ahmadis. It established a system of *nizam-e-salaat* in which "pious men" in every locality were appointed to encourage all Muslims to pray five times a day. Ordinances established *qazi* (Islamic) courts and amended the military service acts to allow courts-martial to impose Islamic punishments.

Minority religious groups are protected, but Hindus, Christians, and Parsis do not enjoy the same legal rights as Muslims. Seats in the national and provincial legislatures are reserved for members of minority religious groups, but under the reinstated constitution of 1973 the

president and the prime minister must be Muslims. Members of minority religious groups can maintain links with coreligionists in other countries and undertake travel for religious purposes. Although conversions are permitted, the government prohibits proselytizing among Muslims and has refused to renew the residence permits of some foreign missionaries who have ignored this ban.

HISTORICAL BACKGROUND

Pakistan was part of the Indian Empire from 1857 to 1947. The territories that today constitute Pakistan were the last on the Indian Subcontinent to come under British rule. Sindh was conquered only in 1842 (15 years before the East India Company transferred its Indian territories to the Crown) by Sir Charles Napier, who wired the news of his conquest to London with a single cryptic word, *peccavi* (I have sinned). British rule over the North-West Frontier Province and Baluchistan was always tenuous and indirect. There was growing national self-awareness in British India in the late 19th century. In 1906 the Muslim League was founded through which to demand an independent Muslim state. After violence escalated between Hindus and Muslims in the mid-1940s, the British recognized that a separate Muslim state was necessary. The new viceroy, Lord Louis Mountbatten, announced that independence would come by June 1948. Pakistan became independent in 1947 under the leadership of Muhammad Ali Jinnah.

The new nation received two serious blows to its political development during its first years of independence: Jinnah died in 1948, and the prime minister, Liaquat Ali Khan, was assassinated in 1951. Only in 1956 did the nation adopt its first constitution. The constitution declared Pakistan to be an Islamic republic with a legislature composed of an equal number of representatives from East and West Pakistan. The constitution did little to provide political stability, and in 1958 President Iskander Mirza declared martial law, banned all political parties, and abrogated the constitution. Gen. Ayub Khan was initially appointed chief martial law administrator, but when Mirza was exiled, Ayub assumed the presidency.

A second constitution was adopted in 1962, establishing a presidential system based on indirect election. Parity between East and West Pakistan was preserved, but Pakistan was no longer called an Islamic republic. Although Pakistan made considerable economic progress under Ayub, political discontent, particularly in East Pakistan, grew during 1968–69, and Ayub was forced to

resign in March 1969. The nation was placed under martial law by Gen. Yahya Khan, head of the armed forces, while preparations were made for the 1970 presidential elections. The 1970 elections precipitated a crisis: The East Pakistan Awami League won a clear majority, but the reluctance of West Pakistan to accept a government dominated by the East led to civil war and the creation of an East Pakistani independent state, renamed Bangladesh, in 1971.

In December 1971 Yahya Khan relinquished the presidency to Zulfikar Ali Bhutto, the leader of the Pakistan People's Party (PPP), which had won a majority in West Pakistan in the 1970 elections. Under Bhutto's guidance Pakistan adopted a new constitution in 1973 and curtailed the power of the military. Committed to "Islamic socialism," Bhutto nationalized banking, heavy industry, and educational institutions. He also improved relations with India, the United States, and the Muslim world. Bhutto's PPP won a victory in the 1977 elections amid charges of vote rigging. These allegations and other dissatisfactions led to rioting, and in July 1977 Bhutto, then prime minister, was overthrown by Gen. Zia ul-Haq, who established martial law. Bhutto was eventually convicted of complicity in murder and hanged in 1979 despite international protests.

Zia promised that his would be a caretaker regime leading to elections and the eventual return to civilian government. However, elections were repeatedly postponed. Martial law continued in effect, and all political parties were banned while Zia moved toward establishing a "true Islamic order" in Pakistan. In 1984 he held a nationwide referendum on his policy of Islamization in which more than 60 percent of the voters were said to have favored his program. Zia used this as an excuse to remain in the presidency for another five years. Elections were held in 1985 that were boycotted by the Movement for the Restoration of Democracy, a coalition led by the former prime minister's daughter, Benazir Bhutto.

Following the elections Zia appointed Muhammad Khan Junejo prime minister and lifted martial law. Political parties were legalized in 1986. Then, in May 1988 Zia abruptly dismissed the Junejo government because of alleged corruption. He dissolved the assembly and announced elections within 90 days.

Zia was killed in a plane crash in August 1988. Elections took place in November in which Benazir Bhutto's PPP won a strong plurality. Bhutto became the first female premier of an Islamic state the following month. Faced with ethnic conflict and severe economic problems, Bhutto never established a solid base in the legislature, and in late 1989 her government narrowly survived a vote of no confidence. Her party suffered a decisive defeat in the October 1990 elections, and Nawaz Sharif, leader of the Islamic Democratic Alliance, was sworn in as prime minister in November. In

1993 Bhutto's PPP was reelected, and she once again became prime minister. However, she was dismissed three years later by President Farooq Leghari under a claim of corruption. Elections in early 1997 returned Nawaz Sharif to the prime ministry. In 1998 the Sharif government detonated five nuclear devices two weeks after India had conducted its own tests. Widespread condemnation of the tests by the international community included sanctions. In October 1999 General Pervez Musharraf staged a successful coup, citing the terrible economy as his main motivation. Musharraf tried to stabilize the government and sought international economic aid to rebuild Pakistan's economy. The Supreme Court set a deadline of October 2002 for the restoration of civilian rule.

After the terrorist attacks in the United States on September 11, 2001, Musharraf's government agreed to cooperate with the United States in its fight against international terrorism. Pakistan suspended its support for Afghanistan's Taliban regime, which assisted Osama bin Laden, the mastermind behind the terrorist attacks. The United States in turn lifted economic sanctions imposed on Pakistan in 1998. After an attack on the Indian parliament in 2001, which India blamed on Kashmiri militants, relations between the two countries deteriorated, and both began to build up troops along the common border. President Musharraf then cracked down on militant Islamic groups within Pakistan and took steps to curb religious extremism. In early 2002 he promised a return to a democratically elected government in October, but in a national referendum in May voters extended his rule for five years. The following month Musharraf chose a civilian prime minister, the first civilian premier since the 1999 military takeover.

In 2003 Pakistan and India declared a cease-fire in Kashmir, also resuming direct air links between the two countries and allowing flyovers by each other's airplanes, after a two-year ban on aviation freedom. Meanwhile, that December, Musharraf survived two assassination attempts. The following year the parliament created a military-led National Security Council, which made the role of the military in civilian life more formal and permanent. Late in 2004 Musharraf announced that he would not, after all, step down as head of the military, which he had earlier promised to do. Throughout the early 2000s Pakistan was troubled by factional and religious violence and unrest.

LIST OF MODERN RULERS

President	
1956–58	Iskander Mirza
1958–69	Muhammad Ayub Khan
1969–71	Yahya Khan
1971–73	Zulfikar Ali Bhutto

1990–93	Nawaz Sharif
1993–96	Benazir Bhutto
1996–97	Miraj Khalid
1997–99	Nawaz Sharif
1999–2002	—
2002–04	Zafarullah Khan Jamali
2004–	Shaukat Aziz

CONSTITUTION

Pakistan's constitution dates from 1973. Zia's administration amended the document heavily in 1985; Musharraf suspended the constitution in October 1999, but it was restored at the end of 2002. Musharraf added changes to the constitution while it was suspended that are contested by the opposition.

As the constitution currently stands, the president is elected to a five-year term by parliament. The National Assembly selects the prime minister, who has a four-year term. Suffrage is universal for all citizens age 18 and over. Legislation is in the hands of a bicameral parliament. The president chooses the members of his cabinet and the governors and cabinets of the nation's four provinces.

PARLIAMENT

The federal parliament, the Majlis-i-Shura, is a bicameral body consisting of the Senate and the National Assembly. The National Assembly comprises 342 members elected directly by popular vote to four-year terms. A total of 60

seats are reserved for women, 10 for minorities. The Senate consists of 100 members elected indirectly by provincial assemblies to four-year terms. The Senate performs an advisory role in matters relating to almost all subjects. Money bills and legislation relating to national defense, foreign affairs, the civil service, and certain other areas can originate only in the National Assembly. The Senate has the right to send legislation back to the National Assembly for reconsideration only once. On certain subjects, a joint session may be held to decide a matter by simple majority.

POLITICAL PARTIES

Political parties have functioned only intermittently in Pakistan. They were banned from 1958 to 1962 and from 1979 to 1985, when they were again permitted to operate under highly controlled circumstances. Parties continued to operate between 1999 and 2002.

As of 2005, the main national parties were the Pakistan Muslim League and the PPP. The Muttahida Majlis-e-Amal, a coalition of six religious parties, including the Jamaat-e-Islami, gained power in the 2002 elections. The Muttahida Qaumi Mahaz also has a strong religious base. Pakistan has numerous other parties, but most are too small and too fragmented to gain much influence.

LOCAL GOVERNMENT

Pakistan is divided into four provinces and the Islamabad Capital Area plus agencies and tribal areas, for purposes of regional administration. The governor of each province is appointed by the president, while the chief minister is elected by the provincial assembly. Provincial assemblies are unicameral bodies elected for five-year terms on the basis of universal suffrage. The size of the assembly is 40 in Baluchistan, 80 in the NWFP, 240 in Punjab, and 100 in Sindh. The provincial capitals are Karachi (Sindh), Lahore (Punjab), Quetta (Baluchistan), and Peshawar (NWFP).

There are 12 provincially administered tribal areas and 10 federally administered ones, known as agencies, each under a political agent. Tribal areas are granted varying degrees of autonomy, especially in the administration of justice. The Northern Areas (72,520 sq km; 28,000 sq mi), consisting of the Diamir, Gilgit, and Baltistan agencies, are governed by the Ministry of the Interior, States, Frontier Regions, and Kashmir Affairs. Pakistan-held Jammu and Kashmir, known as Azad Kashmir (11,639 sq km; 4,494 sq mi), consists of four districts under its own president and prime minister, with the seat of government at Muzaffarabad.

LEGAL SYSTEM

The legal system is based on English common law. The central judiciary consists of the Supreme Court of Pakistan, four provincial high courts for each of the four provinces, district and session courts at the district level, and conciliation courts at the village level. The Supreme Court has original, appellate, and advisory jurisdiction, including jurisdiction over disputes between the federal and provincial governments and between provincial governments. The constitution of 1973 provides for the separation of the judiciary and the executive. As the guardian of the independence and integrity of the judiciary, the Supreme Judicial Council can discipline judges and monitor the judicial system in general. The council is composed of the chief justice, the two most senior justices of the Supreme Court, and chief justices of the provincial high courts.

Sharia (religious law) benches try offenses under the Haddud Ordinances but otherwise operate similarly to ordinary civilian courts. Cases referred to the sharia benches are heard by judges from the civilian court system who, in practice, apply ordinary criminal procedures in most cases. The appellate benches are also staffed with ordinary judges from the provincial higher courts. The government's 1979 Haddud Ordinances prescribe traditional Islamic punishments for theft, adultery, and the consumption of alcohol; penalties include flogging, stoning, and amputation. There are occasional floggings, but because of the strict Islamic rules of evidence and the reluctance of officials to carry out penalties, no stonings or amputations have been reported outside of tribal areas.

HUMAN RIGHTS

Pakistan's human rights record is poor. The police are known to abuse, rape, and kill citizens, though the situation has improved somewhat in recent years, as the government has begun a program of police training specifically meant to confront such abuses. Prison conditions are life threatening. The government has been cracking down on religious extremism and has arrested several religious leaders. Religious minorities remain victims of discrimination. The judicial system is inefficient, and there are long waits for trials. Though the national government does not systematically harass journalists, provincial and local governments do. Violence against women, prostitution, and child abuse are serious problems. Mob violence and terrorism are prevalent.

FOREIGN POLICY

Hostility to India is the central determinant of Pakistani foreign policy, based on centuries-old mutual suspicion between Hindus and Muslims. The rivalry found its

sharpest expression in the conflict over Kashmir, which began in 1947 and has led to three wars, in 1947, 1965, and 1971. After 1971 the so-called Simla Process (named after the Indian hill station where the talks were held) produced some improvement in relations until 1990, when Kashmir became the scene of escalating violence on the part of Muslim separatists. Tensions increased after the assassination of the senior Kashmiri Muslim cleric Maulvi Mohammad Farooq.

Following intermittent skirmishes, both diplomatic and military, Pakistan test-fired its first domestically produced medium-range surface-to-surface missile in 1998, which was followed by India's explosion of five nuclear weapons in underground testing and a further six nuclear tests by Pakistan in the Baluchistan Desert. The international community quickly condemned the tests, and the United States imposed economic sanctions against both countries. Relations between the two South Asian countries deteriorated further after an attack on the Indian parliament in New Delhi in 2001 that India blamed on Pakistan-backed Kashmiri militants; both countries began to mass troops along the common border. Relations improved somewhat in January 2004, when Musharraf met with India's Prime Minister Atal Behari Vajpayee during a summit of the South Asian Association for Regional Cooperation.

Pakistan's relations with Bangladesh improved in the 1980s and 1990s, although no formula has been produced for relocating the 230,000 Biharis stranded in the former East Pakistan following the 1970s breakup. Mutual hostility to India brought China and Pakistan together in the 1960s, and this alliance between a hard-line Muslim nation and a Communist power has grown stronger over the years. China has been one of the most generous providers of loans to Pakistan and has also shared nuclear know-how and material. The two countries are linked through the Karakorum Highway, built by Chinese engineers.

Pakistan was a supporter of the Taliban regime in Afghanistan, supplying both arms and trained personnel. This policy changed after September 11, 2001, when terrorist attacks in the United States, directed by Osama bin Laden and his al-Qaeda organization in Afghanistan, killed thousands of people. Pakistan offered to fully cooperate with the United States and allowed U.S. forces to utilize its airspace in the military campaign against the Taliban. Since 2001, Pakistan has remained an active participant in the U.S. war on terror, which has improved relations between the two countries.

DEFENSE

Pakistan has the eighth-largest armed forces in the world. The soldiers are well trained, although the nation has recently lacked the money and time to maintain its normal

training schedule. Military equipment is aging, and the government does not have the money to modernize it. The defense structure is headed by the president; under him are the commanders of the three separate armed services and the paramilitary forces. Military service is voluntary and lasts for two years.

The United States provided military aid to Pakistan until 1990, ending that aid when it was discovered that the country was developing nuclear weapons. Sanctions were waived after 2001, when Pakistan demonstrated willingness to aid the U.S. fight against terrorism. In 2003 President Bush promised Pakistan \$3 billion in military and economic aid over the following three years.

ECONOMY

Pakistan is impoverished, underdeveloped, and heavily populated and has suffered from several decades of political turmoil. The fairly high rate of population growth (over 2 percent) contributes to the nation's difficulties, as social services cannot be maintained at a sufficient rate. Very little money goes to infrastructure development.

The Pakistani government has worked to improve the economic situation, putting a stop to fiscal mismanagement and accepting international assistance from the United States, to be used to improve education, health care, and general economic well-being. The nation has been removing barriers to foreign trade and investment and has been privatizing state-owned businesses. Foreign investors remain hesitant about the country's dubious security and political instability, as well as its apparently unreliable judicial system. The United States, in particular, wants to see Pakistan's economy grow stronger.

Pakistan has extensive natural gas reserves and plenty of arable land and water. Though agriculture exports account for nearly one-quarter of gross domestic product (GDP), Pakistan still imports more food than it exports. The country has been slow to exploit its energy resources and will not be able to fully do so until tensions with India are resolved.

ENVIRONMENT

Pakistan suffers from a number of environmental concerns, including water pollution from raw sewage, industrial wastes, and agricultural runoff. This pollution has further limited the country's natural freshwater resources. There is growing desertification as a result of deforestation and accompanying soil erosion.

Environment

Forest Area % of total land area: 3.1

LIVING CONDITIONS

Pakistan is a poor country, with 35 percent of its people living below the poverty line. Public transportation is plentiful and cheap, but it can be crowded, slow, and dangerous. Wealthier people live in large apartments or houses, often employing servants; poorer people live in small houses or apartments with only two or three rooms. Those in rural areas use kerosene stoves for cooking and get their water from rivers or wells.

HEALTH

Though the government provides health care to all citizens, facilities are not always adequate, and the population is rapidly outgrowing them. Many people choose to pay for private health care instead of using government services; people also treat their ailments with herbal medicines. The public health program concentrates on primary health care, immunization, and disease prevention, particularly the reduction of malaria. Fertility is high, at 4.1 children per woman in 2004. Life expectancy is much

higher than it was 50 years ago but is still relatively low at 63 years. Endemic diseases include malaria, dengue fever, hepatitis, and Japanese B encephalitis.

FOOD AND NUTRITION

Pakistani cuisine resembles that of northern India, with some Middle Eastern influences. The typical starches are breads such as roti and naan, as well as chapati and *paratha*. People also eat a great deal of rice. With these starches people eat many vegetables, such as spinach, cabbage, peas, and lentils. Meats are served in curries, roasted, grilled, or cooked in a tandoor oven. Muslims do not eat pork, so the common meats are chicken, goat, and beef. Pakistanis make many desserts and sweets, using milk, sugar syrup, and flavorings such as cardamom. A typical after-dinner snack is *paan*, a mix of spices, betel nut, and tobacco spread on a betel leaf. People drink copious amounts of *chai*, or sweetened milk tea, and also like to drink *lassis*, or yogurt drinks. Most people do not drink alcohol, though beer and liquor is locally produced and can be purchased in some bars and hotels.

 Amount of Fruits and Vegetables Available per person per year kg: 65.5

STATUS OF WOMEN

Pakistani society is traditional and Islamic, leaving women subordinate roles in terms of civil, political, and individual rights. Many Pakistani Muslims interpret the Koran's injunction on modesty to mean that women should remain in *purdah*, or concealment, either at home or behind the

veil. These attitudes have contributed to an adult female literacy rate approximately half that of men. Eight times as many men as women work outside the home, and those women who work or attend school usually do so in separate facilities. Few women hold political office, with the notable exception of Benazir Bhutto.

Urban women are represented in the universities, but postgraduate employment opportunities remain largely limited to teaching, medical services, and the law, with a small number of women entering the commercial and public sectors. The government's policy of full Islamization has reversed some of the social and legal gains made by women in past years.

Violence against women is an extremely serious problem. Wives are considered the property of their husbands' families, and these families feel free to abuse or kill wives; women who fail to produce sons are in particular danger, though any wife can be subject to burning, beating, or other mistreatment. Women are often expected to bear children until they produce one of the proper sex, though they have no power to control their fertility. Female children receive less food and health care than males. "Honor killings," in which a woman's family kills her if she is the victim of rape or some other form of "dishonor," are still prevalent, and though the government has said that such practices are not acceptable it has taken no concrete steps to stop them.

 Seats Held in Parliament by Women %: 21
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 0.64
 Women's Share of Wage Employment Non-agricultural %: 8.7

WORK

Almost half of Pakistan's population is engaged in agriculture, many of them in subsistence agriculture, growing food for their own families. Some agricultural workers are employed by commercial growers who produce cotton, rice, wheat, sugarcane, and jute for export. Some 20 percent of the workforce is engaged in industry, working in factories to produce steel, sugar, cement, paper, textiles and clothing, automobiles, and electronics. Textiles are a major industry; cotton cloth and garments account for 64 percent of the country's exports. Pakistan is especially known for its handmade carpets, embroidery, and silk cloth.

Most of Pakistan's people are quite poor; although per capita GDP was a relatively decent \$2,200 in 2004, income disparity is extreme, and most of the nation's wealth is concentrated among a small portion of its population. Many young children work instead of going to school.

1816 Pakistan

As a result, many Pakistanis have no education and must work as unskilled laborers.

Employment and Labor

Female Participation Rate %: 30.3
Labor by Sector %:
Agriculture: 42
Industry: 20
Services: 38
Unemployment %: 8.3

EDUCATION

Pakistan has a low literacy rate of 46 percent (60 percent for males and 31 percent for females in 2003). School is not compulsory, and many children never attend at all. The principle of universal, free education was accepted as official policy by the Zulfikar Ali Bhutto government, but as yet the government has not managed to build enough schools to cover all the country's children. The educational ladder consists of 12 years of schooling: five years in primary school, three in middle school, and four in high school. The tertiary level is of up to seven years' duration, including two-year intermediate, two-year undergraduate, and three-year postgraduate courses. Passage between levels is monitored by standard government-controlled examinations.

The school year runs from July to June in the Karachi region and from April to March in other areas. The medium of instruction is English at all levels of private school and from the secondary level onward in public schools. Adult education is an important concern, and a National Literacy Corps is planned to undertake a massive program in this field.

Private and elite schools have played a significant role in Pakistan and enjoy greater prestige than public schools. Private schools and some public schools teach Islamic history and tenets.

After secondary school, students can attend vocational programs or universities, where they can study law, engineering, agriculture, and other subjects. Most colleges and universities admit both men and women.

SCIENCE AND TECHNOLOGY

The government has been working to improve Pakistan's telecommunications system, adding lines and modernizing technology. About 1.5 million Pakistanis were using the Internet in 2002. The United States has given the country several million dollars to improve education and create technical links between the two nations as part of the Pakistan Science and Technology Agreement. Proposed projects include adding scientific journal content to the national university digital library system, introducing telemedicine to rural areas, and improving the nation's water quality.

MEDIA

Since Musharraf came to power, both print and broadcast media have experienced unprecedented levels of freedom. The state had a virtual monopoly on radio and television broadcasting for many years, but recently private stations have been appearing. In the early 2000s the government issued licenses for over 20 private satellite television stations and over 50 private radio stations. Private radio stations may only broadcast music and entertainment, not news. International satellite stations are also available; Pakistanis especially like to watch Indian channels, which are not censored as heavily as Pakistani ones.

The print media is still subject to many restrictions, such as blasphemy laws, but Pakistan's newspapers are nevertheless some of the most outspoken in the region. Major newspapers include the Karachi-based *Daily Jang*, in Urdu, and *Dawn*, in English; the *Daily Ausaf*, published in Urdu in Islamabad; and the English *Frontier Post*, published in Peshawar.

CULTURE

Pakistan has a rich culture that stems from a combination of Buddhist, Hindu, and Muslim influences. Sculpture has both Greek and Buddhist motifs. Craftsmen make excellent pottery, jewelry, rugs, embroidered textiles, engraved woodwork, and metal objects. Traditional art employs complex geometric patterns, which appear on both formal works of art and on such unconventional canvases as city buses. Writing is a major art form, and calligraphy from the Koran decorates many homes and other buildings. Poetry and traditional singing are still important parts of Pakistani culture. Lahore, the capital of Punjab, is considered the nation's cultural and artistic center; the city is home to some of the country's best museums, mosques, mausoleums, and architecture.

FOLKLORE AND MYTHOLOGY

The Indus River valley was one of the earliest places inhabited by humans and has long attracted people from different regions. The people of the Harappan culture lived there around 2500 B.C.E. and left behind the remains of urban centers, writing, and a complex society. This culture might have been a predecessor of Hinduism. As the centuries passed, Buddhism arrived, as did the doctrines of Vedic Hinduism. Alexander the Great passed through the region in the fourth century B.C.E.

ENTERTAINMENT AND RECREATION

Karachi has many recreational possibilities, ranging from museums to zoos to beach resorts, though the city does not have anything that Westerners would consider nightlife. In general, people enjoy going to city centers to shop

in marketplaces, where one can purchase nearly anything and eat cheaply at local food stalls and restaurants. The coast offers various water sports, including sailing and deep-sea fishing. Tourists come from all over the world to climb Pakistan's mountains, raft down the Indus River, trek from peak to peak, and ski in the winter.

ETIQUETTE

Most business interactions in Pakistan are made easier by the payment of *baksheesh*, or tips. Bargaining is proper protocol whenever a purchase is contemplated; Pakistanis look on bargaining as a form of recreation. When someone wants to buy something, the seller will usually invite them in for tea and conversation, after which the bargaining may begin, always with smiles and good humor.

FAMILY LIFE

Most Pakistani families are quite large; couples like to have many children, considering them gifts from Allah, and several generations of relatives often live in the same home. Parents take their children with them to social events, and all family landmarks are celebrated with relatives. Most marriages are arranged. The birth of a son is an occasion of great celebration. Male babies are circumcised when they are seven days old, and the family holds a party.

PERSONAL APPEARANCE

Both men and women wear the national dress, the *shalwar-kameez*, which consists of a long shirt worn over loose pants. Women's clothing is usually more colorful than men's, and they usually add a long scarf or shawl called a chador. Some men in the cities wear Western-style clothing.

SPORTS

Pakistanis love to play and watch sports, often as a family. Cricket is the most popular sport, and field hockey, squash, polo, and soccer are also popular; Pakistan has produced many world-class soccer players. Some people play a traditional sport called *kabaddi*, which involves wrestling and capturing members of an opposing team while chanting "kabaddi" as evidence of not breathing in.

CHRONOLOGY

1947 Pakistan is established as an independent dominion consisting of the former provinces of Sindh and NWFP, Baluchistan, and parts of Punjab and Bengal.

1818 Pakistan

- Muhammad Ali Jinnah becomes governor-general.
Karachi is made the capital; Pakistan joins United Nations; Liaquat Ali Khan becomes prime minister.
- 1948** Jinnah dies and is succeeded as governor-general by Khawaja Nazimuddin.
Dispute with India breaks out over Kashmir.
- 1951** Military coup attempt by Gen. Muhammad Akbar Khan fails.
Liaquat Ali Khan is slain.
Khawaja Nazimuddin becomes prime minister and Ghulam Muhammad governor-general.
- 1953** Anti-Ahmadiya riots occur in Punjab and Sindh.
Muhammad Ali Bogra becomes the new prime minister, replacing Nazimuddin.
- 1954** Chief Minister Khan Sahib is assassinated.
- 1955** Ghulam Muhammad dismisses the Majlis-i-Shura; second Majlis-i-Shura meets.
Ghulam Muhammad leaves office.
Dominion status is ended.
Iskander Mirza becomes new governor-general.
Rupee is devalued.
- 1956** Sindh, Punjab, Baluchistan, and NWFP merge to form West Pakistan.
Huseyn Shaheed Suhrawardy becomes prime minister.
Constitution is adopted; Pakistan is proclaimed an Islamic republic, with Mirza as first president. It remains in the Commonwealth.
- 1957** Ibrahim Ismail Chundrigar succeeds Suhrawardy as prime minister.
- 1958** Feroz Khan Noon is elected prime minister.
The Majlis-i-Shura is dissolved, and the cabinet ousted in a military coup. Mirza heads the government briefly but later yields to Muhammad Ayub Khan as president.
- 1959** Military government decides to shift national capital from Karachi to Rawalpindi.
Basic democracy and tiered system of popular representation is introduced.
- 1960** Canal Waters Treaty is concluded with India.
- 1961** Ties with Afghanistan are cut over Afghan support for Pashtun separatist movement.
- 1962** Martial law is ended; new constitution is adopted.
- 1963** Zulfikar Ali Bhutto becomes foreign minister and initiates new Rawalpindi-Beijing axis.
- 1964** Television is introduced.
- 1965** Muhammad Ayub Khan is elected president, defeating Fatima Jinnah.
- 1966** War with India ends without a clear victory for either nation; Tashkent peace accord ends the war.
- 1967** Metric system is introduced.
- 1968** Border agreement with India over disputed areas in the Rann of Kutch is concluded.
- 1969** Muhammad Ayub Khan steps down as president and hands power over to Muhammad Yahya Khan.
- 1970** In national direct elections the Awami League of East Pakistan, led by Mujibur Rahman, wins a clear majority.
West Pakistan is redivided into four provinces.
Islamabad becomes the nation's new capital.
- 1971** In a disastrous effort to stem the tide of separatism in East Pakistan, the army jails Mujibur Rahman and unleashes a reign of terror.
Indian intervention in East Pakistan leads to war. The Pakistani army, which had invaded East Pakistan, is overwhelmed and forced to surrender.
East Pakistan proclaims itself the independent state of Bangladesh. Yahya Khan steps down in disgrace.
Zulfikar Ali Bhutto forms a new government as president.
Pakistan leaves the Commonwealth.
Yahya Khan is jailed.
- 1972** Bhutto attends a summit meeting with Indira Gandhi at Simla. More than 90,000 prisoners of the 1971 war are returned under an accord reached by the two leaders.
Land and educational reforms are announced.
- 1973** New constitution, Pakistan's second, is ratified by the National Assembly, establishing a federal republic with a largely ceremonial president and a strong prime minister as chief executive.
Zulfikar Ali Bhutto assumes office as prime minister.
- 1974** Banks and heavy industries are nationalized.
Trade and communications links with India are resumed.
Pakistan recognizes Bangladesh.
- 1977** In first elections under new constitution, Bhutto's PPP wins a landslide victory; widespread disturbances occur in Baluchistan and the NWFP; martial law is imposed in three cities; Bhutto forms a new cabinet.
Bhutto is overthrown in a coup led by army commander in chief Muhammad Zia ul-Haq; new martial law is proclaimed.
Bhutto is arrested on murder charges; chief justice orders hearing on Bhutto arrest but is himself dismissed.
- 1978** Zia announces creation of an advisory council.
Opposition papers belonging to Bhutto's party are suspended. Lahore High Court sentences Zulfikar Ali Bhutto to death for conspiracy to murder a political opponent.
- 1979** Bhutto is executed despite appeals for clemency from many nations; Pakistan National Alliance quits the government; U.S. embassy in Islam-

- abad is stormed and burned by angry mobs heeding the call of Ayatollah Khomeini; Zia turns down U.S. offer of \$200 million in military credits.
- 1980** Local elections are held, but national elections are postponed indefinitely; the government announces plans to Islamize the economy by abolishing interest, limited liability, and incorporation.
- 1984** Khunjerab Pass on the Karakorum Highway is opened.
First U.S. F-16 fighters are delivered to Pakistan.
- 1985** In a cautious return to democracy, Zia relinquishes some authority to a civilian prime minister, Muhammad Khan Junejo, leader of the Muslim League.
- 1988** President Zia is killed in a plane explosion in August. After elections in November, Benazir Bhutto, daughter of Zulfikar Ali Bhutto, is named prime minister, the first female leader of a modern Muslim country. Ishaq Khan becomes president.
- 1990** Prime Minister Benazir Bhutto is dismissed August 6 by President Ishaq Khan; Ghulam Mustafa Jatoi is named to head interim government pending national elections scheduled for October 24, 1990. Nawaz Sharif is elected prime minister.
- 1991** Pakistan contributes 10,000 troops to the international coalition against Iraq in the Persian Gulf War. Opinion polls show overwhelming support for Saddam Hussein. Prime Minister Nawaz Sharif submits to parliament legislation to adopt Islamic law in place of the secular code.
- 1993** President Ishaq Khan dismisses government of Prime Minister Nawaz Sharif, citing corruption.
Benazir Bhutto's PPP wins slim margin in national elections and builds coalition government.
- 1996** Bhutto's government is dismissed under charges of corruption.
- 1997** Former prime minister Nawaz Sharif is elected prime minister.
Political tensions between India and Pakistan on the issue of Kashmir increase.
- 1998** Pakistan tests a nuclear weapon in response to an earlier Indian test.
- 1999** General Musharraf leads a successful military coup, taking control of the government.
- 2000** The Commonwealth of Nations suspends Pakistan's membership as a result of the coup. Sharif is convicted of abuse of power and allowed to immigrate to Saudi Arabia. The Supreme Court sets a deadline of October 2002 for the restoration of civilian rule.
- 2001** After the terrorist attacks in the United States on September 11, 2001, that killed thousands of people, Pakistan agrees to cooperate in the U.S. fight against international terrorism. The United States lifts economic sanctions imposed on Pakistan in 1998.
After an attack on the Indian parliament in 2001, relations between Pakistan and India further deteriorate, and both countries mass troops along their common border. President Musharraf bans two militant Islamic groups within Pakistan and takes steps to curb religious extremism.
- 2002** Amid widespread allegations of fraud, Musharraf garners a landslide victory in a national referendum to extend his presidency for five years. Pakistan test fires three missiles to demonstrate the nation's ability to defend itself from attack.
- 2003** Pakistan declares a cease-fire in Kashmir. Pakistan and India resume air links.
- 2004** Nuclear scientist Abdul Qadeer Khan admits to having leaked nuclear weapons secrets to Libya, North Korea, and Iran. Parliament creates a military-led National Security Council. Musharraf reneges on his earlier promise to step down as head of the army and stays on in that role.
- 2005** Militants in Baluchistan attack Pakistan's largest natural gas field, forcing it to close.
Tens of thousands die in an earthquake with its epicenter in Kashmir.

PALAU

Basic Fact Sheet

OFFICIAL NAME

Republic of Palau (Beluu er a Belau)

ABBREVIATION

PW

CAPITAL

Koror

HEAD OF STATE & HEAD OF GOVERNMENT

President Tommy Remengesau (from 2001)

NATURE OF GOVERNMENT

Republic in free association with the United States

POPULATION

20,303 (2005)

AREA

458 sq km (177 sq mi)

MAJOR ETHNIC GROUPS

Palauan, Asian

LANGUAGES

English (official), Palauan, Japanese, Sonsoralese, Tobi, Angaur

RELIGIONS

Christianity, Modekngei

UNIT OF CURRENCY

U.S. dollar

NATIONAL FLAG

Light blue with a large yellow disk (representing the moon) shifted slightly to the hoist side

NATIONAL EMBLEM

Palau has no coat of arms, only a seal. The seal shows a traditional Palauan triangular hut, surrounded by the title of the state, with the date of adoption below.

NATIONAL ANTHEM

"Palau Is Coming Forth with Strength and Power"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 15 (Youth Day), May 5 (Senior Citizens' Day), June 1 (President's Day), July 9 (Constitution Day), first Monday in September (Labor Day), October 1 (Independence Day), last Thursday in November (Thanksgiving Day), December 25 (Christmas)

DATE OF INDEPENDENCE

October 1, 1994

DATE OF CONSTITUTION

January 1, 1981

GEOGRAPHICAL FEATURES

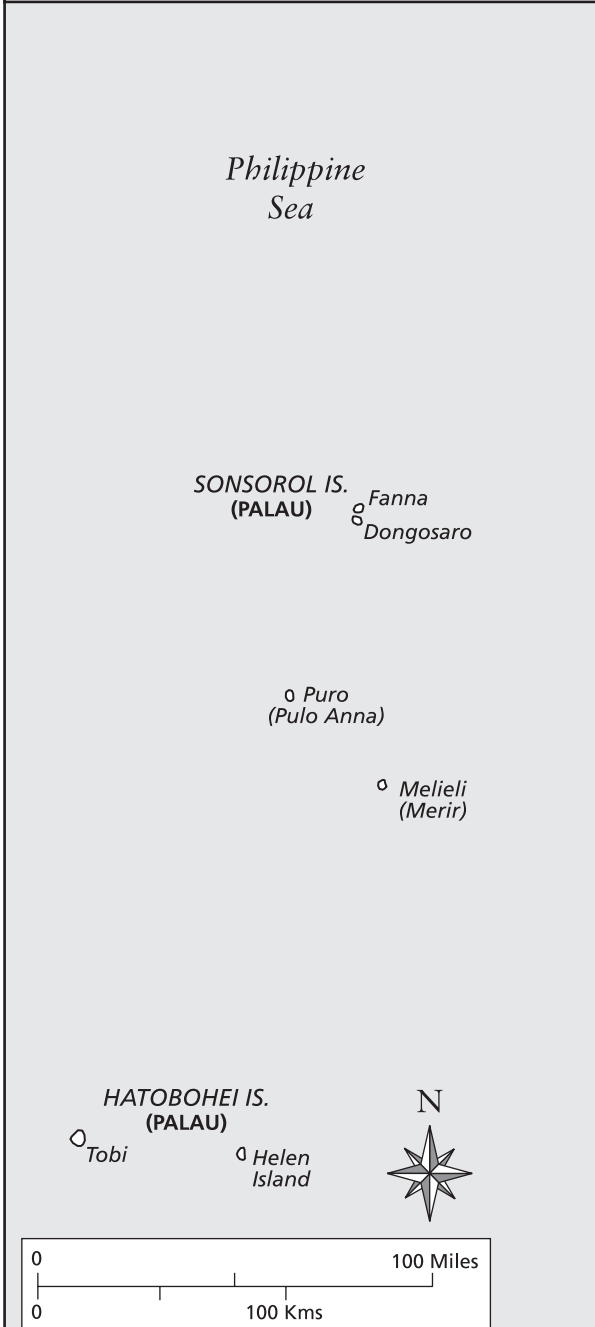

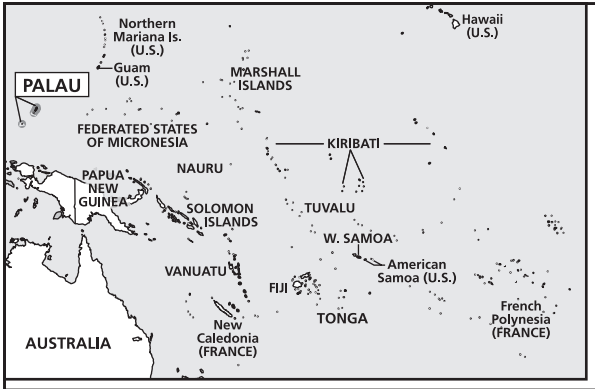

Palau consists of the Palau (or Belau) group of islands in the western Caroline Islands in the western Pacific. The country consists of more than 200 islands, of which Babeldaob is the largest. The other main islands are Koror, containing the capital of the same name; Oreor, where the main airport is located; Ngerekbesang; Ngemelachel; Peleliu; Angaur; Sonsorol; and Hatohebei. Kayangel is a coral atoll. A new capital is being built on Babeldaob. The islands include four types of topographical formation: volcanic, limestone, low platform, and coral atoll. The Palau Barrier Reef encircles the Palau group, except Angaur Island and Kayangel Atoll. The reef encloses another reef on the western side containing a large number of small islets known as the Rock Islands. Babeldaob and

Koror are of the limestone and volcanic type. Arkabesan, Malakal, and other northern islands are also volcanic. Peleliu and Angaur are low platform reef islands.

CLIMATE AND WEATHER

Since Palau is located near the equator, it has a maritime tropical climate with little seasonal or diurnal variation. The annual mean temperature is 29.4°C (82°F), with high levels of humidity. There is heavy precipitation throughout the year, with up to 3,800 mm (150 in) of rain, augmented by typhoons and tropical storms from July through November. The heaviest rainfall occurs between May and January.

Climate and Weather

Mean Temperature: 82°F

Average Rainfall: 150 in

Humidity: 82 percent

FLORA AND FAUNA

Most of the islands are covered in tropical forests; the main trees are coconut, breadfruit, ironwood, pandanus, and ironwood. There are also some grasslands and mangroves. Terrestrial animals include fruit bats, birds, monkeys, lizards, nonpoisonous snakes, crocodiles, and monitor lizards.

Palau is world famous for its marine life. The waters surrounding the islands are home to more than 1,500 fish species and 700 species of invertebrates such as coral. Divers flock to Palau to see sharks, manatees, manta rays, giant clams, sea turtles, sea snakes, and chambered nautilus.

POPULATION

ETHNIC COMPOSITION

About 70 percent of Palauans are Micronesians with admixtures of Melanesian and Malayan genetic stock. Another 28 percent of the population is Asian, mainly Filipinos, with a few Chinese, Taiwanese, and Vietnamese. The remaining inhabitants are white.

LANGUAGES

English is an official language throughout the nation, and nearly all people speak it. Palauan is an official language in most of the states; Palauan is a Malay-Polynesian language related to Indonesian. Palauan is not an official language in Sonsoral, where Sonsoralese takes its place; in Hatobohei, where Tobi is instead official; and in Angaur, where Angaur and Japanese are additional official languages.

RELIGIONS

About 70 percent of Palauans are to some extent Christian and about 9 percent of the population practices the indigenous Modekngai religion, many combining it with Christianity. Of the Christians, 60 percent are Catholic and 40 percent Protestant. The first Catholic missionaries arrived in 1891 and the first Protestant missionaries in 1929, from Liebenzell Mission. The New Testament had been translated into Palauan by 1950, and the United Bible Societies completed the translation of the Old Testament in 1985.

Religious Affiliation

Roman Catholic	8,446
Protestant	4,731
Modekngai	1,787
Other	5,340

HISTORICAL BACKGROUND

The first inhabitants of Palau were probably immigrants from Southeast Asia who settled the islands about 3,000 to 4,000 years ago. The earliest European explorer to reach Palau was the Spanish sailor Francisco Lezcano, who named the group of islands the Carolines after King Charles II of Spain. Spanish sovereignty was established in 1885. In 1899, after Spain's defeat in the 1898 Spanish-American War, Palau and the rest of the Carolines were sold to Germany. At the outbreak of World War I in 1914, the islands were seized by the Japanese, who were later given a mandate over Palau by the League of Nations. During the interwar years, the islands were the administrative center of Japanese possessions in the North

Pacific. In 1947, following Japan's defeat in World War II, Palau became a part of the UN Trust Territory of the Pacific Islands, administered by the United States. Palau became a self-governing republic in 1981.

In the 1980s Palau experienced troubled political times, as marked by the assassination of one president, Haruo Remeliik, in 1985, and the suicide of another, Lazarus E. Sali, in 1988. In 1994 Palau became an independent nation in free association with the United States, which is responsible for its defense.

Tommy Remengesau was elected president in 2001 and reelected in 2004. His stated goals have included protecting the environment, encouraging economy growth, improving infrastructure to allow the nation to cope with an increased influx of tourists, and making the country less dependent on financial aid from the United States.

LIST OF MODERN RULERS

1981–85	Haruo Remeliik
1985–88	Lazarus Sali
1989–93	Ngiratkel Etpison
1993–2001	Kuniwo Nakamura
2001–	Tommy Remengesau

CONSTITUTION

The Palauan constitution, which is based on the U.S. model, provides for three branches of government. The executive branch is headed by the president, who is elected by popular vote for no more than two terms of four years each. The president is assisted by a cabinet of ministers, one of whom is the vice president, also elected by popular vote. The president and vice president are elected on separate tickets. A council of chiefs, drawn from the principal clans, advises the president on matters of tradition and custom. In 2004 the islanders approved a referendum on constitutional changes that would allow the president and vice president to run as a team, limit congressmen to three terms in office, and permit dual citizenship.

PARLIAMENT

The legislature, known as the Olbiil Era Kelulau, or National Congress, is a bicameral body consisting of nine senators and 16 delegates. The senators, elected for four-year terms, are elected by popular vote on the basis of both population and ethnic groups. Delegates are elected by popular vote from each of the 16 states, also for four-year terms.

POLITICAL PARTIES

There are no formal political parties in Palau.

LOCAL GOVERNMENT

Palau has 16 states, each state consisting of one or more islands. The states are Aimeliik, Airai, Angaur, Hatoho-bei, Kayangel, Koror, Melekeok, Ngaraard, Ngarchelong, Ngardmau, Ngatpang, Ngchesar, Ngeremlengui, Ngiwal, Peleliu, and Sonsorol. Each state is headed by a governor, who is popularly elected for a four-year term. Each state has a legislature whose members are popularly elected for four- or two-year terms. The states have limited legislative powers.

LEGAL SYSTEM

Palau has a three-tier judicial system with the Supreme Court at the apex and the National Court, Court of Common Pleas, and Land Court as subordinate courts. The Supreme Court, led by a chief justice, hears appeals and some original matters. The legal system is based on Trust Territory laws, as supplemented by customary local laws, municipal laws, common law, and acts of the legislature.

HUMAN RIGHTS

The influence of the United States on the Palauan political system is reflected in the islands' strong guarantees of human rights. However, nearly 30 percent of the population and 73 percent of the workforce are foreign, and these aliens suffer occasional acts of discrimination. There have been some reports of human trafficking from China, the Philippines, and Taiwan. Domestic violence and child neglect are persistent problems.

FOREIGN POLICY

Palau is the 185th member of the United Nations and has joined several other international organizations since independence. It maintains diplomatic relations with the United States, Japan, and a number of other nations, particularly those in the Pacific.

DEFENSE

Defense is the responsibility of the United States until 2044. Palau has a national police force and a Marine Law Enforcement Division that patrols its borders with assistance from Australia.

ECONOMY

The economy consists primarily of subsistence agriculture and fishing, though the importance of these sectors is diminishing as people move to the city. The govern-

ment is the major employer, accounting for 29 percent of the workforce in 2000. A large part of the budget is subsidized by the United States; as a result, Palauans enjoy a higher standard of living and a higher per capita income than their neighbors. Palau is a major hub along Pacific air routes, and as such, long-term prospects for the tourist sector appear extremely good. Tourism already accounts for a large portion of Palau's gross domestic product (GDP); scuba diving and snorkeling are the main attractions to the thousands of visitors who come from Japan, Taiwan, and the United States.

ENVIRONMENT

Palau's natural environment is fragile, as with all reef islands. Issues of concern include illegal fishing with the use of dynamite, inadequate facilities for the disposal of solid waste in Koror, and extensive sand and coral dredging in the Palau Lagoon. Like other island nations, the possible rise in sea levels as a result of global warming is a substantial threat. Low-lying areas are subject to coastal flooding. The government has set aside some of the uninhabited Rock Islands as a marine reserve to protect sea turtles and seabirds.

LIVING CONDITIONS

Living conditions in Palau are good for a Pacific island state, due in large part to tourism income and foreign aid. Increasing numbers of people are moving from the country-

side to the capital city, which has become the nation's commercial center. Palauans typically use speedboats to travel between the capital and their homes on other islands. The only feasible way to enter or leave the country as a whole is by air, either through Guam or Taiwan. Traditional houses are built of wood and thatch, and most villages once had a building called a *bai* that served as a communal meeting center, but traditional buildings have been disappearing as the nation has modernized. As of 2002, about 16 percent of Palauans still lacked access to safe water.

HEALTH

Palau has a high life expectancy—over 70 years in 2005—and a low infant mortality rate. Fertility is moderate, with each woman bearing an average of 2.5 children in 2004. There are some tropical diseases endemic to the region, including dengue fever, typhoid, and filariasis. Jellyfish present a risk to divers. Health care is adequate, but due to the long distances between islands, some 20 percent of the population does not have access to health services.

FOOD AND NUTRITION

The traditional Palauan diet was built around coconut, cassava, sweet potatoes, and seafood. Today, many people eat Japanese and American food. A popular activity among locals, especially older people, is chewing betel nut mixed with lime powder, which stains teeth red if chewed over many years.

Food and Nutrition

STATUS OF WOMEN

There are occasional acts of violence against women; alcohol and drug abuse contribute to this problem. The inheritance of property and traditional rank are matrilineal, with women occupying positions of influence in the traditional system. An annual women's conference is held. The former senator Sandra S. Pierantozzi became the first female vice president in 2000.

WORK

The vast majority of Palauans work in the service sector. Perhaps one-quarter of workers are employed by the government, and many others employed in services work in tourism. Some workers are employed in construction or in making traditional crafts for sale to tourists. One-fifth of the people work in agriculture, most of them at a subsistence level. There are also a number of Chinese immigrants who grow vegetables in Palau, competing with the native farmers.

Employment and Labor

Labor Force Total: 9,845
 Female Participation Rate %: —

 Unemployment %: 2.3

EDUCATION

Public education is free and compulsory from ages six to 14, and the literacy rate is a fairly high 92 percent. There is only one public high school, but there are five private schools run by religious bodies. The Ministry of Education shares public funding with the private schools, and there is a close working relationship between public and private institutions. Postsecondary education is offered at the Palau Community College, in Koror. U.S. funds pay for Head Start preschool programs for the children of economically disadvantaged families. Some of the private schools offer kindergarten, but none of the public schools do.

MEDIA

Palau's media are sparse. There are no television stations broadcasting from Palau, although most houses have cable television, which allows them to watch American programming. There are three major radio stations, including the government station T8AA Eco Paradise. *Roureur Belau* is a Palauan-language weekly newspaper. *Tia Belau* and *Palau Horizon* are both published weekly in English.

CULTURE

Palauans practice a number of native crafts, including making beads, carving money from shells, weaving baskets and bags from the pandanus leaf, carving wooden storyboards depicting local myths, and constructing buildings that require great woodworking and thatching skills. The islands were inhabited at least 1,000 years ago, and the prehistoric inhabitants left behind hill terraces, pyramids formed on the hillsides, and monoliths that were supposedly erected to support the roof of an enormous *bai* meeting house.

FOLKLORE AND MYTHOLOGY

The traditional story of the founding of Palau states that a giant tripped and fell in the ocean, and people crawled out of his body. A number of Palauans still practice the indigenous Modekngai religion, which has been revived and is becoming increasingly popular. People continue to engage in traditional rites, such as conducting rituals over firstborn children or leaving lights on at night to keep away ghosts.

ENTERTAINMENT AND RECREATION

Scuba diving, snorkeling, and lying on beaches are the activities that attract tourists to Palau. Fishing is popular with both tourists and locals, who gather every spring to participate in the annual fishing derby. The Belau Arts Festival takes place in July.

ETIQUETTE

Most Palauans take off their shoes when entering a house or public building. Tipping is not customary in hotels or restaurants.

FAMILY LIFE

Traditionally, everyone belonged to an extended family called a clan, led by a chief. A village would consist of

seven to ten clans. Women farmed taro while men fished, and both sexes had time to spend on projects such as constructing *bai* meeting houses. The society was matriarchal and matrilineal, with women holding clan property; even today women are usually in charge of family finances, dispensing funds to their men as needed. Family and kinship ties remain strong, and chiefs continue to command high respect.

PERSONAL APPEARANCE

The people of Palau are quite westernized and typically wear American-style clothing with accessories such as baseball caps. Most people disapprove of skimpy clothing and do not like to see people dressed in bathing suits away from the beach. In some areas, people should not even swim in bathing suits uncovered by shirts and shorts.

SPORTS

A variety of sports are available on Palau. The islands hold triathlons, sportfishing tournaments, and canoe races. The Palau National Olympic Committee is actively working to promote sports and healthy lifestyles throughout the islands and to develop athletes who can compete in the Olympics. Palau hosted the 2005 South Pacific Mini Games.

CHRONOLOGY

- 1947** The islands become part of the UN Trust Territory of the Pacific Islands, administered by the United States, which also includes Yap, Chuuk (Truk), Pohnpei, Saipan, and the Marshall Islands.
- 1959** UN missions to Palau criticize U.S. administration of the islands, citing neglect and underfunding.
- 1961** U.S. president John F. Kennedy authorizes Peace Corps programs in Palau and increased spending on the nation's infrastructure.
- 1965** The six territories under the U.S. Pacific Islands Trust form the Congress of Micronesia, a bicameral body whose purpose is to determine the future political status of the territories; representatives to the congress are elected by universal suffrage.
- 1972** The Congress of Micronesia begins to fragment, as Saipan secedes to negotiate its political status directly with the United States.
- 1978** Palau secedes from the Congress of Micronesia.
- 1979** On April 2 Palau's constitutional convention produces the world's first nuclear-free constitution,

- which bans biological weapons as well; despite U.S. opposition to its antinuclear provisions, the constitution is ratified by a large margin in a UN-supervised referendum.
- 1981** The islands acquire autonomy as the Republic of Palau.
- 1982** Palau signs the Compact of Free Association (CFA) with the United States, providing for the U.S. right to maintain military bases, including nuclear materials, for 50 years in return for up to \$700 million in economic aid over 15 years. The compact, however, is not ratified.
- 1983** A referendum for the CFA fails to secure the three-quarters majority required by the constitution to permit nuclear materials, as do six later CFA referenda.
- 1985** President Haruo Remeliik is assassinated.
- 1988** President Lazarus E. Salii commits suicide.
- 1992** The constitution is amended to permit voter approval of nuclear materials in Palau by a simple majority; President Kuniwo Nakamura is elected president.
- 1993** An eighth public referendum on the CFA approves the compact with a 68 percent majority.
- 1994** Palau becomes a sovereign independent nation on October 1. On December 15 Palau becomes a member of the United Nations.
- 1996** President Nakamura is reelected.
- 2000** Tommy Remengesau is elected president.
- 2003** Palau signs the Comprehensive Test Ban Treaty.
- 2004** Remengesau is reelected.

NATIONAL FLAG

Four rectangles: The lower left is blue, the upper right red, the upper left white with a blue star in the center, and the lower right white with a red star in center.

NATIONAL EMBLEM

A shield is divided into five sections; the central one, running the width of the escutcheon, portrays a canal linking the blue Pacific and the Atlantic, dividing the red isthmus. In the background are an orange sun and a yellow moon, both rising from the sea. In the two upper sections are a gold sword and brown musket to the left and crossed silver and gold tools to the right. In the two lower sections are a winged gold wheel to the right and an overflowing gold cornucopia to the left. A brown eagle perched atop the shield, with wings outstretched, carries in its beak a blue ribbon bearing the nation's motto, *Pro mundi beneficio* (For the benefit of the world). Nine gold stars are placed in a line above the eagle. The device is framed by four national flags, two on each side.

NATIONAL ANTHEM

"Victory Is Ours at Last"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 9 (Martyrs' Day), March 1 (Constitution Day), May 1 (Labor Day), October 11 (Anniversary of the Revolution), October 12 (Columbus Day), November 3 (Independence from Colombia Day), November 28 (Independence from Spain Day), December 8 (Mother's Day), December 25 (Christmas), various Christian festivals

DATE OF INDEPENDENCE

November 3, 1903

DATE OF CONSTITUTION

October 11, 1972; amended in 1978, 1983, 1994, 2004

GEOGRAPHICAL FEATURES

Panama is on the Isthmus of Panama in Central America and has a total land area of 30,193 sq mi (78,200 sq km), including the Canal Zone, which was officially restored to Panama in the year 2000. The country's total coastline stretches 1,547 mi (2,490 km), with the coastline on the Pacific approximately twice the length of that on the Caribbean. Panama shares its land borders of 344 mi (555 km) with two neighbors: Colombia to the southeast and Costa Rica to the northwest.

The capital is Panama City. The other major urban centers are San Miguelito, Colón, David, and Barú.

The country is divided on the basis of natural features into five regions. The fan-shaped Darién Highlands extend eastward from the hinterlands of Panama City to the Colombian border and make up more than one-third of the national territory, mostly underdeveloped and underpopulated. The central isthmus is the low saddle of land that bisects the country at the Canal Zone. Central Panama lies to the southwest of the Canal Zone between the Continental Divide and the Pacific. Chiriquí is sepa-

1832 Panama

rated from central Panama by the hills of the Las Palmas Peninsula and occupies the Pacific side of the Cordillera Central, adjacent to the Costa Rican border. Atlantic Panama lies to the west of the central isthmus on the Atlantic side of the continental divide.

The main mountain range is the Cordillera Central. Near Panama City this range rises toward Cordillera San Blas, which crosses the isthmus at an angle close to the Atlantic coastline, eventually reaching the Colombian frontier. On the Pacific side of the isthmus the Cordillera Occidental covers most of the Azuero Peninsula. Nearer the northwestern border the Serranía de Tabasara extends from Costa Rica into the Canal Zone. The highest elevation in Panama is the Volcán de Chiriquí, inactive for thousands of years, which rises to 11,467 ft (3,475 m).

Panama has more than 500 rivers, of which nearly 300 empty into the Pacific. The longest is the Tuira, which is also the only navigable river in the country.

CLIMATE AND WEATHER

Panama is located entirely in the humid Torrid Zone. Its temperatures are uniformly high, and there is no seasonal variation. The average annual temperatures are 80°F (27°C) on both coasts and between 50 and 66°F (10 and 19°C) in the mountains.

The rainy season, described as winter by Panamanians, occurs between April and December. No month is entirely free from rain, although winter precipitation is 15 to 20 times greater than that of March. Most of the rain is torrential and, in general, much heavier on the Atlantic than on the Pacific side. On the Pacific side, precipitation ranges from 70 to 100 in (1,780 to 2,540 mm), while the Atlantic side receives more than 100 in (2,540 mm). The

least rainfall is received on the Azuero Peninsula: about 50 in (1,270 mm). Humidity is high throughout the country, averaging 80 percent.

The prevailing winds are northerly and northeasterly during most of the year and southwesterly during autumn.

Climate and Weather

Mean Temperature
Coastal Regions: 80°F
Mountains: 50°F to 66°F
Average Rainfall
Pacific Coast: 70 in to 100 in
Atlantic Coast: 100 in

FLORA AND FAUNA

Most of Panama is covered in rain forest, where can be found incredible biodiversity, with plant and animal species from both North and South America. There are more than 10,000 plant species, within mangroves, broadleaf forests, riparian forests, and cloud forests. There are over 1,000 species of orchids alone.

Panama has about 900 species of birds, including rare quetzals, macaws, harpy eagles, parrots, parakeets, hummingbirds, umbrella birds, and motmots. Mammals include sloths, marmosets, monkeys, giant anteaters, capybaras, and bush dogs. There are numerous fish species, in both fresh- and saltwater.

Scientists have monitored Panama's wildlife from the research station on Lake Gatun since 1914; the station is currently run by the Smithsonian Institution.

ETHNIC COMPOSITION

Panama has a racially mixed population in which the Spanish-speaking mestizos (of mixed Amerindian and white ancestry), called Panameños, form the majority, constituting 70 percent of the population. Antillean blacks, or people who immigrated to Panama from the Caribbean islands, many as laborers recruited to dig the Panama Canal, constitute 14 percent of the population. Whites, largely of European descent, constitute 10 percent of the population. Amerindians, the descendants of the native peoples of the region, constitute 6 percent of the population.

Minor groups of ethnic aliens include Chinese, East Indians, Jews, and Middle Easterners. U.S. citizens, most of whom reside in the Canal Zone, occupy a special category because of their political status.

The Panameños component of the population has been steadily increasing, reflecting the growing acculturation of both Amerindians and Antillean blacks. Mestizos are concentrated in Cocle, Herrera, and Veraguas provinces, while whites are heavily represented in Panama, Colón, Chiriquí, and Los Santos provinces.

The traditional monopoly of power by persons of European descent effectively ended with the expulsion of the civilian president by the National Guard in 1968. Since then mestizos and Asians have become more active politically; they are well represented at the senior levels of government and play roles in Panama's urban economy well out of proportion to their numbers. These groups and whites tend to be better off economically and to hold higher positions in government than blacks and Amerindians.

Amerindian tribes receive special government assistance in public health and welfare. They are not restricted to their tribal areas, but most remain there by choice, reflecting long-standing resistance to assimilation. Panama's Kuna Indians mostly reside in a self-governing, semiautonomous district established in 1953. The Embera, or Choco, Indians, who live in Darién Province, gained government approval of their own homeland in 1983.

LANGUAGES

Spanish is the official language and is spoken by virtually all Panamanians. English is spoken by 14 percent of the people as their native tongue and is gaining popularity. Most of the Amerindian languages and dialects are dying out.

RELIGIONS

Roman Catholicism is the country's leading religion, and there is a provision for instruction in the Catholic faith in public schools. Roman Catholics compose 85 percent of the population, Protestants 15 percent. The figures do

not include Amerindians, most of whom have not been converted to Christianity.

The Roman Catholic hierarchy is headed by the archbishop of Panama. The country's parishes are manned by priests, with one of the lowest priest-to-laity ratios in Latin America. The Catholic educational system comprises one university and about 50 schools.

Protestantism is the other major religious force in the country and is heavily represented among Antillean blacks. Jews, Hindus, and Buddhists represent tiny religious minorities.

Religious Affiliations

Roman Catholic	2,580,000
Protestant	460,000

HISTORICAL BACKGROUND

Some of the first inhabitants of the region were probably Amerindian tribes such as the Kuna and Guaymí. Panama was under Spanish rule from 1501, when Rodrigo de Bastidas arrived, until 1821, when it became part of Gran Colombia after declaring independence from Spain. Panama is one of the few countries that became independent twice. In 1903 a revolutionary junta, backed by U.S. naval forces, declared independence after Colombia rejected the Hay-Herran Treaty, the agreement that then granted the United States the concession to build, operate, and control a canal through Panama with a lease of 100 years.

Two factors have dominated Panama's political history: government instability and the country's relationship with the United States. Elected presidents were overthrown in 1941, 1949, 1951, and 1968, and although civilians technically held power afterward, the nation was in fact controlled by the armed forces from 1968 to 1990.

The Hay-Herran Treaty, granting the United States the right to build the Panama Canal, also assigned the rights to intervene to protect Panamanian independence, to defend the canal, and to maintain order in Panama City, Colón, and the Canal Zone. The United States indeed intervened in 1908, 1917, and 1918 and supervised all elections between 1903 and 1928. Increased opposition to U.S. influence caused the treaty to be revised to revoke the right to such intervention, and anti-American sentiment grew, culminating in riots in 1959. In 1977 the United States and Panama signed a new canal treaty that made the Canal Zone an integral part of Panamanian territory and would give Panama full control of the canal in 2000.

In 1968 Col. Omar Torrijos ousted the newly elected president, banned all political parties, and effectively held power over a succession of presidents until his death in 1984. Gen. Manuel Noriega—who had been on the payroll of the American Central Intelligence Agency since the 1970s—then did likewise, holding effective rule through the

military over several presidents until being ousted in 1989 by American forces, who invaded Panama to detain him for drug smuggling, arms trading, and electoral fraud. Noriega's successor, Guillermo Endara, remained in power until 1994, when Ernesto Pérez Balladares was elected president. Pérez Balladares worked to improve the country's economy, loosening trade barriers and undertaking free-market reforms. He also helped Panama take over control of the canal in 1999. In May 1999 Mireya Moscoso was elected president, becoming Panama's first woman head of state.

Moscoso immediately created commissions to investigate both crimes committed by the military governments between 1968 and 1989 and general governmental corruption. Her regime saw a number of street protests and strikes related to accusations of corruption and the poor management of the social security fund.

In May 2004 Martin Torrijos, son of the former dictator Omar Torrijos, won the presidential election. He promised to end corruption, investigate human rights violations committed during his father's regime, finalize a free-trade agreement with the United States, and modernize the Panama Canal.

LIST OF MODERN RULERS

1941–45	Ricardo Adolfo de la Guardia Arango
1945–48	Enrique Adolfo Jiménez Brin
1948–49	Domingo Díaz Arosemena
1949	Daniel Chanis Pinzón
1949–51	Arnulfo Arias Madrid
1951–52	Alcibíades Arosemena
1952–55	José Antonio Remón Cantera
1955–56	Ricardo Arias Espinosa
1956–60	Ernesto de la Guardia Navarro
1960–64	Roberto Francisco Chiari Remón
1964–68	Marco Aurelio Robles Méndez
1968–69	José María Pinilla Fábrega
1969–78	Demetrio Lakas Bahas
1978–82	Aristides Royo
1982–84	Ricardo de la Espriella
1984	Jorge Illueca
1984–85	Nicolás Ardito Barletta Vallarino
1985–88	Eric Arturo Delvalle
1988–89	Manuel Solís Palma
1989–94	Guillermo Endara
1994–99	Ernesto Pérez Balladares
1999–2004	Mireya Moscoso
2004–	Martín Torrijos

CONSTITUTION

Panama is governed by the constitution of 1972, which established a republic with a presidential form of government. Suffrage is universal and compulsory for all persons

18 years and older, though those who do not vote are usually not penalized. Executive power is held by a president directly elected for a term of five years; the president is assisted by two vice presidents elected on the same ticket. Starting in 2009, there will be only one vice president. An autonomous Electoral Tribunal supervises the voter registration and election processes. Legislative power is vested in a unicameral legislative assembly, whose 78 members are elected for five-year terms. Judicial power is headed by the Supreme Court of Justice, with five superior courts and three courts of appeal.

PARLIAMENT

The national legislature is the National Assembly, formerly the Legislative Assembly, a unicameral body of 78 members elected for five-year terms. Legislators in urban areas are elected through a proportion-based formula, while legislators from rural areas are chosen on a plurality basis.

POLITICAL PARTIES

Political parties in Panama tend to be based on personality rather than ideology. Parties were banned from 1968 to 1978, when democracy was restored to Panama. As of 2004 the ruling party was the Democratic Revolutionary Party, which had 40 seats in the National Assembly. The Panamenista Party, formerly the Arnulfista Party, had 17 seats. Other parties include Democratic Change, the National Liberal Party, the Nationalist Republican Liberal Movement, the Popular Party (formerly the Christian Democratic Party), and the Solidarity Party.

LOCAL GOVERNMENT

Panama is divided into nine provinces, each under a governor appointed by the president, and five indigenous territories. The provinces (with their capitals in parentheses) are as follows: Bocas del Toro (Bocas del Toro), Chiriquí (David), Coclé (Penonomé), Colón (Colón), Los Santos (Las Tablas), Herrera (Chitré), Darién (La Palma), Panamá (Panama City), and Veraguas (Santiago). The territories are Emberá (Cirilo Guainora), Kuna de Madugandí, Kuna de Wargandí, Kuna Yala (El Porvenir), and Ngöbe-Buglé (Chichica).

LEGAL SYSTEM

Panama's legal system is based on Spanish civil law. The judiciary comprises a Supreme Court, which has nine magistrates appointed by the president to 10-year terms and is charged with upholding the constitution and laws, as well as superior courts and circuit courts.

Persons charged with crimes are presumed innocent until proven guilty and have the right to counsel. Arrested persons are not to be detained for more than 24 hours without being charged. These rights, however, are not universally respected. Panama has no death penalty.

HUMAN RIGHTS

Since the restoration of civilian rule in 1990, the government has generally respected the human rights of its citizens. However, several areas of abuse remain. The extended pretrial detention of arrested persons is a serious problem. The criminal justice system is inefficient and often corrupt, and prison conditions are generally poor. The government has continued to prosecute officials responsible for abuses during the years of military rule from 1968 to 1989. There has been some discrimination against ethnic minorities and indigenous people, as well as against women. Child labor and human trafficking are problems.

FOREIGN POLICY

Panama is a member of the United Nations and participates in international financial organizations such as the World Bank, the International Monetary Fund, and the Inter-American Development Bank. The nation is also a member of the Organization of American States. Panama has also played an active role in regional affairs, aiding the multinational force that restored Haiti's elected government to power in 1994.

The Panama Canal Treaties of 1977 became the basis for close ties with the United States after President Noriega's expulsion and arrest. President Pérez Balladares worked with American officials to facilitate the transfer of the canal and the U.S. military bases in the Canal Zone to Panama in 2000.

DEFENSE

A 1994 amendment to the constitution abolished Panama's military forces, after the long period of military rule from 1968 to 1989. The former National Defense Forces and an even larger paramilitary force were disbanded and converted into security forces called the Panamanian Public Forces (PPF), which include the national police, maritime, and air services. All security and police forces are under civilian control.

ECONOMY

Panama has a free-market economy that is based primarily on services, largely banking, commerce, and tourism. Other sources of income include container ports, flagship registry, the Colón Free Zone, and the Panama Canal. Most of the population is engaged in subsistence agriculture; export crops include bananas and coffee, with trade often adversely affected by changes in world commodity prices.

President Pérez Balladares launched a program of economic reforms in 1994 intended to reduce trade rates, attract foreign investments, privatize state-owned enterprises, and encourage greater job opportunities. The government approved the sale of the national electric company and railroad. These reforms began to produce effects in the late 1990s, when Panama's gross domestic product (GDP) grew at an annual rate of nearly 4 percent. The general assembly passed a banking reform law in 1998 and voted to have Panama join the World Trade Organization.

Economic growth slowed to 2.5 percent in 2000; the government planned public-works programs, tax reforms, and regional trade agreements in order to stimulate growth in 2001. Growth remained slow through 2003, however, as the global economy remained sluggish and the United States withdrew its military forces. As of 2005 unemployment remained unacceptably high, at close to 13 percent, and nearly 40 percent of the population remained below the poverty line. A few families, mostly of European descent, have historically controlled the vast majority of the country's wealth.

Major aspects of the country's economy are the maintenance and operation of the Panama Canal and the shipping profits the canal has traditionally generated. The nation is contemplating widening the canal to allow larger vessels to pass through. In 2004 the canal earned an unprecedented \$1 billion.

ENVIRONMENT

Soil erosion and deforestation are growing environmental dangers in Panama. Much of the country's southern watershed has been stripped of trees to clear land for farming and cattle. The Darién jungle, the richest rain forest outside the Amazon Basin, is being threatened by the influx of new settlers and by logging companies. In the Chagras River basin, 25,000 families have resettled and are clearing land for subsistence farming. These migrations have caused major soil runoff into rivers and into the Panama Canal, requiring increased dredging operations.

The Chagras National Park has been established to protect fragile land near that river's headwaters, and the Soberania National Park now protects certain areas on the east bank of the canal. Although public awareness of environmental issues is increasing, government initiatives have had only modest success.

 CO2 Emissions per capita ton: 2.22

LIVING CONDITIONS

The population of Panama City nearly doubled between 1980 and 1996, which strained the city's ability to provide services. The city has some elegant older homes and modern houses and apartments, but a number of poorer Panamanians live in shantytowns or in government-subsidized housing. For the most part, the capital is a thriving modern city. The cost of living is slightly higher than in neighboring countries. Public bus transportation is inexpensive and efficient. Some people travel by boat, but this can be dangerous because boats are often overloaded and are occasionally used to transport narcotics as well as people.

HEALTH

Panama is a healthy country for the most part, though tropical diseases such as malaria, dengue fever, yellow fever, and rabies still occur with some frequency. Life expectancy in 2005 was almost 72 years. Fertility is relatively high, with 2.5 children born per woman in 2004. HIV/AIDS is beginning to be a problem; 0.9 percent of the population was infected in 2003. The water supply is generally good, though in some areas it is contaminated by sewage.

FOOD AND NUTRITION

Panamanian food features various meats and vegetables, often cooked with spices. The most common dish is *arroz con pollo*, or chicken with rice. The national dish is a stew of chicken, yucca, and avocado called *sancocho*. People eat a great deal of seafood, especially on the islands; red snapper and sea bass are especially popular. A wide variety of tropical fruit is available. Panama City has many restaurants serving both local and international cuisine.

Food and Nutrition

Undernourished % of total population: 26.4
 Daily Available Calories per capita kcal: 2,410
 Amount of Cereal Available per person per year kg: 101.6
 Amount of Fruits and Vegetables Available per person per year kg: 112.8

STATUS OF WOMEN

Panama's constitution accords equality to women, guaranteeing them equal rights. In recent years women have played an active role in political parties and government offices. Women have served as party leaders, as president, and as chief justice of the Supreme Court of Justice. Several women's organizations have actively campaigned to raise the national conscience regarding women's rights.

However, traditional biases against women often persist both at home and in the workplace. Women compose a little more than one-third of the workforce but often toil in low-paying jobs created by government welfare programs, and women generally receive 20 percent lower salaries than men for the same jobs. Sexual harassment in the workplace is another ongoing concern.

Domestic violence is a serious problem. The Center for Women's Development estimates that no more than 20 percent of sexual assaults are reported to the police; most of the nonreported cases involve spouses or relatives. Trafficking in women and children as sex slaves is a problem; most trafficked women are not Panamanian, but traffickers use Panama as a transit point for moving sex workers from other Central American countries to the United States.

Women

 Women's Share of Wage Employment Non-agricultural %: 44.0

WORK

Unemployment was a major problem in Panama in the early 2000s and the unemployment rate was almost 13 percent in 2004. Part of the problem is that Panama has a superabundance of unskilled workers and does not have jobs for them all; at the same time, the nation suffers a shortage of skilled workers. Most employed people work in services, including banking, insurance, medicine, education, and in the Panama Canal and Colón Free Zone. Some work in the tourism industry, which the government is trying to increase. About one-fifth of the workforce is employed in agriculture, another fifth in industry. The banana business employs many agricultural workers.

Employment and Labor

EDUCATION

Education is universal and compulsory for nine years, between ages six and 15, and is free up to the university

level. Schooling lasts for 12 years, as divided into six years of primary school, three years of lower secondary school, and three years of upper secondary school. Completion of the 12th grade makes students eligible for admission to a university.

In 2004 Panama had 14 institutions of higher education, including the University of Panama (which has 65,000 students), the private Catholic University of Santa María La Antigua, the Technological University, and several smaller colleges.

SCIENCE AND TECHNOLOGY

As of 2003 Panama had about 387,000 telephone lines and 834,000 cellular telephones. Domestic and international calling facilities are well developed and functional. In 2002 only 120,000 Panamanians were using the Internet. The nation has built a high-tech research park in the Canal Zone with assistance from the Inter-American Development Bank. This park, called the City of Knowledge, rents space to international technological and research companies.

MEDIA

Panama's press is fairly free to report news and present commentary, but it is not allowed to "insult" the government, and as a result Panamanian journalists exercise

a great deal of restraint in what they publish. A journalist convicted of defamation can go to prison for up to two years.

Panama has several daily newspapers and tabloids. The principal dailies are *La prensa*, *Crítica libre*, *El siglo*, *El Panamá América*, *La estrella de Panamá*, and the English-language *Panama News*. Most radio and television stations are commercially run and privately owned. There are about 100 radio stations and numerous television stations, including the educational channel FETV. Corporación Medcom runs the two most popular television stations.

CULTURE

Panama's culture combines Spanish and Caribbean influences. Salsa is the most popular musical genre, combining rhythm and blues, jazz, rock, and popular Latin American musical styles to create a uniquely Panamanian sound. Ruben Blades is a famous salsa musician.

The visual arts are influenced by Amerindian arts and crafts; the Kuna textiles called *molos* are famous, as are ceramics, masks, and wood carvings. The painter Roberto Lewis decorated the Presidential Palace with murals and restored the National Theater.

FOLKLORE AND MYTHOLOGY

Folk traditions are still a visible part of Panamanian culture. People like to dress in brightly colored traditional clothing for festivals and during the carnival season, when a popular activity is folk dancing.

ENTERTAINMENT AND RECREATION

Panama City is a modern city with a variety of entertainment possibilities, including restaurants, bars, discos, and shopping. Dancing salsa is especially popular. Panamanians celebrate many annual festivals, including Carnaval before Lent, Easter, and the Festival of the Black Christ; these festivals feature parades, dancing, music, and pilgrims.

Panama has a number of options for outdoor recreation. Swimming, surfing, scuba diving, and snorkeling attract both locals and tourists. The Panama Canal is an interesting dive site. Deep-sea fishing is also popular. Some people enjoy hiking in the Parque Nacional Darién, especially to spot tropical birds. Urban dwellers sometimes make day trips to Isla Taboga to escape from the city.

ETIQUETTE

Panamanians are extremely conscious of social rank and of their status relative to others. They address one another by title and surname unless they are very close friends. People shake hands upon meeting one another, and close friends and relatives may also embrace or kiss. At restaurants the host usually sits at one end of the table and places the guest of honor at the other end. It is customary to tip 10 percent in restaurants.

FAMILY LIFE

The extended family is very important in Panamanian culture, and Panamanians consider their first loyalty to be due to the family. Especially among the upper classes the same families tend to intermarry, and so many people are related in some way to almost everyone they know. Most Panamanians have two surnames; their father's name is listed first, followed by their mother's name. The father's name is the one used when addressing a person.

Women traditionally care for the home and children, and the bonds between mother and child can be very strong. In modern times more women are working outside the home, but there is still social pressure on women to be subservient to their husbands. Men spend their time at work or socializing with friends. Some men maintain the tradition of keeping a mistress in addition to their wives; women, however, are expected to show total marital fidelity.

PERSONAL APPEARANCE

Panamanians tend to dress conservatively and in a way that displays their social rank. High-ranking businessmen

wear suits. Other male workers wear open-necked shirts called *camisillas*. Women wear dresses or skirts.

SPORTS

Soccer and baseball are the most popular sports in Panama, which has several national teams for men and one women's national team. The Panamanian baseball player Mariano Rivera has been a star relief pitcher for the New York Yankees. The nation has sent many athletes to the Olympics and Pan-American Games in sports such as boxing, fencing, and swimming. Another popular sport is *cayuco* racing, a kind of team canoe racing done in the Panama Canal.

CHRONOLOGY

- 1939** Panama's status as a U.S. protectorate is ended by mutual agreement.
- 1964** Riots break out in Panama over U.S. failure to fly the Panamanian flag. Panama suspends relations with the United States and demands revision of the Canal Zone Treaty.
- 1968** President Arnulfo Arias is overthrown in a military coup led by Brig. Gen. Omar Torrijos Herrera. The national assembly is dissolved.
- 1972** Torrijos is installed as the supreme leader of the Panamanian revolution. New constitution makes the presidency purely ceremonial.
- 1974** Joint U.S.-Panamanian declaration restores Canal Zone to Panama.
- 1977** New U.S. Panama treaty transfers the Canal to Panama (effective 2000), with the United States guaranteeing protection and annual payment.
- 1984** Nicolás Ardito Barletta, of the right-wing Democratic Revolutionary Party, is elected president.
- 1985** Barletta is forced to resign. Gen. Manuel Noriega, head of the National Guard, seizes power.
- 1988** President Manuel Solís Palma fails to dismiss Noriega, who declares a state of emergency and assumes full powers.
- 1989** Noriega nullifies election results, which favor Guillermo Endara for president. The United States charges Noriega with smuggling drugs and launches an invasion, code-named Operation Just Cause, to arrest him. Nearly 4,000 Panamanians die in the fighting, but Noriega is captured. Guillermo Endara is installed as president.
- 1991** The United States provides nearly \$1 billion in aid; an attempted antigovernment coup is foiled; the assembly approves constitutional reforms, including the abolition of the standing army.
- 1992** Noriega is found guilty of drug offenses in the United States and is given a 40-year prison sentence.
- 1994** Ernesto Pérez Balladares is elected president.
- 1998** Voters reject a proposed constitutional amendment that would have allowed the president to run for a second term.
- 1999** In new national elections Mireya Moscoso, the leader of the opposition Arnulfista Party and widow of former president Arnulfo Arias, becomes Panama's first female president; on December 31 Panama formally takes sovereign control of the Canal Zone.
- 2000** President Moscoso announces the creation of a panel to investigate crimes committed under the military regimes between 1968 and 1989.
- 2002** Moscoso creates a panel to investigate governmental corruption following accusations and street protests alleging political graft. Panama promises to make its taxation system more transparent and is removed from the Organization for Economic Cooperation and Development's list of uncooperative tax havens.
- 2003** Public service workers go on strike to protest management of the national social security fund.
- 2004** Martín Torrijos, the son of Omar Torrijos, wins the presidency. Before leaving office, Moscoso pardons four Cuban exiles accused of plotting to kill Fidel Castro, and Cuba breaks off diplomatic relations with Panama. Torrijos persuades Cuba to restore relations. The Panama Canal earns \$1 billion.

PAPUA NEW GUINEA

Basic Fact Sheet

OFFICIAL NAME

Papua New Guinea (Papua Niu Gini)

ABBREVIATION

PG

CAPITAL

Port Moresby

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Sir Paulus Matane (from 2004)

HEAD OF GOVERNMENT

Prime Minister Sir Michael Somare (from 2002)

NATURE OF GOVERNMENT

Constitutional monarchy with parliamentary democracy

POPULATION

5,545,268 (2005)

AREA

462,840 sq km (178,704 sq mi)

MAJOR ETHNIC GROUPS

Melanesian, Papuan, Negrito, Micronesian, Polynesian

LANGUAGES

Tok Pisin, Hiri Motu, English

RELIGIONS

Christianity, animism

UNIT OF CURRENCY

Kina

NATIONAL FLAG

A rectangle divided diagonally from the upper-left to lower-right corners, with the upper section red and the lower black. A golden silhouette of a bird of paradise appears in the center of the red field, the five stars of the Southern Cross in the center of the black field.

NATIONAL EMBLEM

A stylized bird of paradise perched on a native drum with indigenous weapons. The name Papua New Guinea appears beneath the device.

NATIONAL ANTHEM

"O Arise All You Sons of This Land"

NATIONAL HOLIDAYS

January 1 (New Year's Day), September 16 (National Day, Independence Day), Christmas, Boxing Day, various Christian festivals

DATE OF INDEPENDENCE

September 16, 1975

DATE OF CONSTITUTION

September 16, 1975

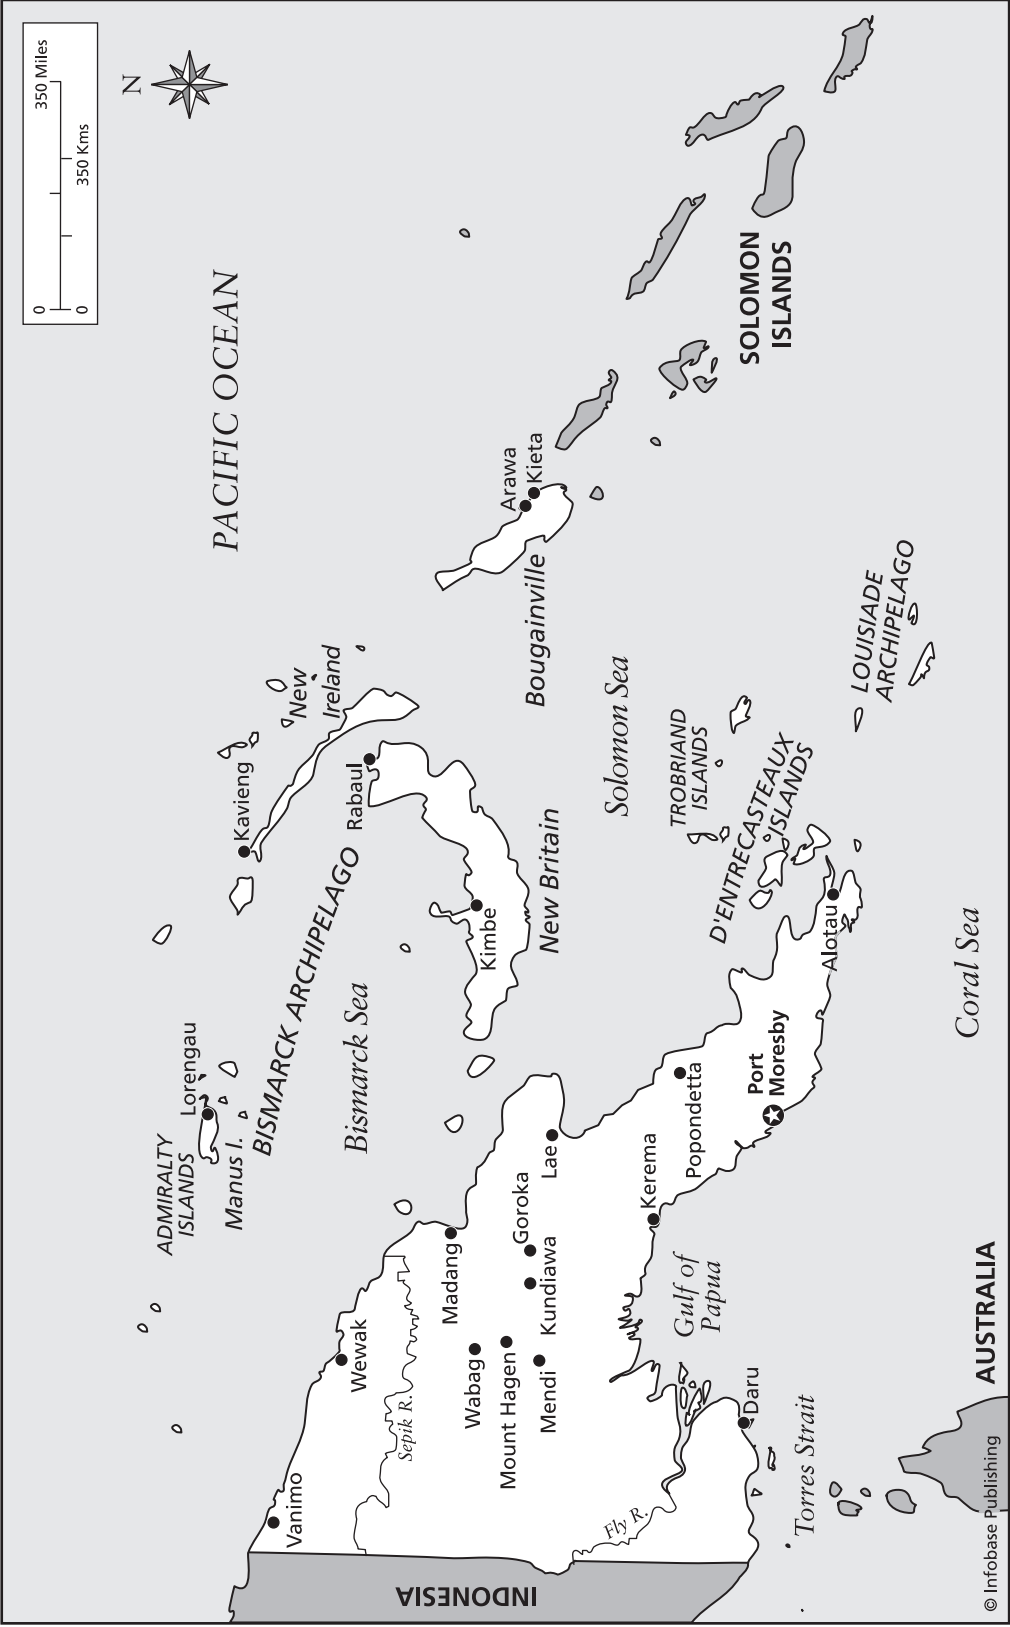

GEOGRAPHICAL FEATURES

Papua New Guinea, in the southwestern Pacific about 160 km (100 mi) northeast of Australia, includes the former Trust Territory of New Guinea, comprising the Admiralty Islands (Manus, Purdy, Sabben, and Western), the Bismarck Archipelago (Mussau, New Britain, New Hanover, and New Ireland), Karkar, Long, Northeast New Guinea, the northern Solomon Islands (Bougainville and Buka), Umboi, and the former Territory of Papua, comprising the D'Entrecasteaux Group (Dobu, Ferguson, Goodenough, Normanby, and Sanaroa), the Louisiade Group (Missina, Rossel, and Tagula), Southeast New Guinea, the Trobriand Group (Kaileuna, Kiriwina,

Kitava, and Vakuta), and the Woodlark Group (Madau and Murua). The country occupies a total land area of 462,840 sq km (178,704 sq mi).

The main island, making up about 85 percent of the land area, has a central mountain core that is not a single chain but a complex of ranges rising to 4,500 m (14,700 ft), interspersed by broad upland valleys at elevations of over 1,524 m (5,000 ft). The main mountain range contains the nation's highest peak, Mt. Wilhelm (4,509 m; 14,793 ft). A second mountain chain fringes the northern coast, and active volcanoes dot the landscape. Swamps cover large areas of the country, and on the southwestern littoral the great delta plain of the Daru coast forms one of the most extensive swamps in the world.

Papua New Guinea

1844 Papua New Guinea

The other islands are characterized by the same pattern of mountain ranges fringed by coastal plains and swamps or extensively developed barrier coral reefs. Many of the 22 islands making up the Trobriand Group are low, coral types. Bougainville and New Britain are among the most active volcanic regions in Melanesia.

The largest rivers are the Fly, Purari, and Kikori, which flow south into the Gulf of Papua, and the Sepik and the Ramu, which flow north into the Pacific. The Fly, more than 1,126 km (700 mi) long, is navigable for 805 km (500 mi) by shallow-draft vessels.

CLIMATE AND WEATHER

Papua New Guinea lies within the tropics and has a monsoonal climate. The northwesterly monsoon season extends from December to March, the southwesterly monsoon season from May to October. Temperatures are not extreme for a tropical climate; the lowland, island, and coastal areas have a mean temperature of 27.2°C (81°F). Seasonal variations rarely exceed 2.8°C (5°F). In the highlands temperatures vary with altitude. At 1,800 m (6,000 ft) the mean temperature is about 16.1°C (61°F), with daytime temperatures rising to 32.2°C (90°F) and night temperatures falling to 4.4°C (40°F).

Rainfall is quite heavy in the highlands all year long. Many areas have an average annual rainfall of 5,030 to 7,620 mm (200 to 300 in), the only exception being Port Moresby, which, lying in a rain shadow, receives only 1,010 mm (40 in) annually.

Papua New Guinea is not within a hurricane belt and generally does not suffer storm damage.

Climate and Weather

Mean Temperature
Lowland and Coastal Areas: 81°F
Highlands: 61°F

Average Rainfall: 200 to 300 in
Port Moresby: 40 in

FLORA AND FAUNA

Papua New Guinea has extremely rich biodiversity. It is home to approximately 9,000 species of plants, 250 species of mammals, 700 species of birds, and a great profusion of reptiles, amphibians, and insects. The seas surrounding the nation have some of the world's most beautiful coral reefs and large numbers of fishes and other aquatic life forms. Notable species include marsupials such as the tree kangaroo, echidnas, parrots, kingfishers, cassowaries, hornbills, cockatoos, scarab beetles, and the Queen Alexandra birdwing, a butterfly large enough to be killed with a shotgun. The nation has created four national parks and wants to form more in an effort to protect the natural resources from logging and the pollution from copper mines.

ETHNIC COMPOSITION

Papua New Guinea has one of the most heterogeneous populations in the Pacific region. There are hundreds of separate communities, some of them with only a few hundred members, broadly classified into two groups: Papuan and Melanesian. Papuans are generally concentrated in the interiors of the mainland and the larger islands, while the Melanesians are concentrated in the coastal areas. Papuans are dark, woolly-haired people of medium stature and displaying both Negritoid and Australoid physical characteristics; the Australoid elements predominate in the southeast, Negritoid elements in the interior. The

people of the Admiralty Group and the Bismarck Archipelago are described as of mixed Melanesian and Micronesian ancestry, with the Micronesian strain appearing dominant in the former and the Melanesian element in the latter. There is little evidence of Polynesian penetration into the nation's territory.

LANGUAGES

More than 850 languages are spoken in Papua New Guinea, most of which are wholly different from and unrelated to the others. Only a few are spoken by more than 1,000 persons; the isolation of each island community for thousands of years has made these languages mutually unintelligible, even though they are based on the same ancestral language. The two language families in Papua New Guinea are Melanesian and Papuan. Melanesian is a hybrid language that was formed through the grafting of Papuan vocabulary and speech forms onto the Austronesian root languages brought into the area by non-Papuan migrants. Papuan languages are unaffiliated, and their origins have not been established.

Faced with hundreds of mutually unintelligible indigenous languages, Australian administrators tried to create a lingua franca. Their first choice was a pidgin of the Papuan language Motu called Hiri Motu, which was designated as the official language immediately after World War I. Although Hiri Motu is spoken by some 150,000 people, it has not made much recent progress in gaining wider acceptance. The Australians also attempted to legitimize the use of Tok Pisin, a creole language with English, German, and Malay words adapted to indigenous speech patterns. The word *pidgin*, itself a Chinese corruption of the English word *business*, is used widely to designate all creolized versions of the English language; Tok Pisin literally means "pidgin talk." Since 1964 official business in the Papua New Guinea House of Assembly may be transacted in Tok Pisin; the language also is taught in schools and is used in the press and on the radio.

Despite being the third official language, English is spoken only by the relatively small minority of educated people, estimated at no more than 3 percent of the population, and only 0.1 percent are estimated to be proficient enough to both speak and write it. However, in the absence of rival languages its future in the country seems assured. Official policy favors the eventual acceptance of English as the national language.

RELIGIONS

As a result of extensive missionary work, more than half the population has been converted to Christianity. The Catholics form the largest single group, with 22 percent of the population, followed by Lutherans, with 16 percent of the population. The non-Christian portions of the population

adhere to traditional indigenous religions that vary widely vary in ritual and belief but always incorporate some elements of magic and ancestor and spirit worship.

A religious development peculiar to Oceania is known as the cargo cult. Many Pacific Islanders believed that Western material goods (*cargo* in Tok Pisin) would arrive in abundance as a result of their conversion to Christianity. When these goods did not arrive, various self-styled prophets organized cargo cults to invoke divine aid in achieving Western-style material prosperity. The cultists allege that Westerners had secret formulas and rituals for persuading God to bestow material abundance on them.

HISTORICAL BACKGROUND

Papua New Guinea appears to have been settled before 8000 B.C.E., through migrations first of hunters and later of agriculturists coming from Asia by way of Indonesia. The main island was sighted by the Spaniards and Portuguese in the 16th century and christened "Isla del Oro" (Island of Gold). The western part of the island was claimed by Spain in 1545 and named New Guinea, because to the Spaniards the inhabitants looked like those of Guinea, in Africa. The region passed into the hands of the Dutch in 1828. By the Anglo-German Agreement of 1885, Germany took control of the northeastern portion of New Guinea along with New Britain, New Ireland, and Bougainville, while Britain took possession of the southern portion and the adjacent islands. British New Guinea passed into Australian control in 1901 and was renamed the Territory of Papua in 1906. At the outbreak of World War I in 1914, German New Guinea was seized by Australian forces. In 1921 that territory was placed under a League of Nations mandate administered by Australia, and in 1947 it became the Trust Territory of New Guinea, subject to the UN Trusteeship Council. Both these territories were administered jointly by Australia but retained their separate status.

The territory was renamed Papua New Guinea in 1972 and was granted self-government in 1973 and full independence in 1975. During the first three years of independence national unity was threatened by a secessionist movement on the island of Bougainville, where the country's vast copper reserves are located. In 1975 Bougainville declared unilateral independence as the Republic

of North Solomons, although this was never recognized by international bodies such as the United Nations. Subsequently, Papua New Guinea was assured by Australia that no support would be extended to any group trying to undermine Papua New Guinean unity.

Since independence the country has been ruled by a series of unstable coalition governments of political parties based on patronage rather than political ideology. Michael Somare, the leader of the Pangu Party, headed the first coalition government following independence. He was ousted in 1980 following a parliamentary vote of no confidence and replaced by Julius Chan, the head of the People's Progress Party. Somare was returned to power in the election of 1982 but was ousted once again following a vote of no confidence in 1985; Pias Wingti, Somare's deputy premier, who broke away from the Pangu to found his own People's Democratic Movement, replaced him. In 1988 Wingti's coalition was toppled following allegations of governmental corruption. Rabbie Namaliu, who had replaced Somare as Pangu leader, assumed the office of prime minister.

In the late 1980s separatist ideology among the Bougainvilleans boiled over; in 1989, they formed the Bougainville Revolutionary Army (BRA) and forced the closure of the Australian-owned Panguna copper mine. After much internecine fighting, including the St. Valentine's Day Massacre of 1990, when Australian-supplied warships were employed by the federal government, peace talks were held. However, in 1992 Prime Minister Wingti renewed the fighting. His successor, Sir Julius Chan, was forced to resign when South African mercenaries were sent home instead of being used to take full control of the island. Separatist forces on the island of Bougainville continued to agitate for independence throughout the mid-1990s. In 1997 Bill Skate was elected prime minister; the following year the civil war officially came to an end. After 10 years of fighting more than 40,000 Bougainville islanders were refugees, and some 20,000 had been killed. In 2001 the government signed an agreement with the island's leaders, promising to help create an autonomous government there in the future. Meanwhile, the country as a whole was wracked by weather disasters, including drought and, in July 1998, three giant tsunamis. In 1999 Mekere Morauta was elected prime minister.

Sir Michael Somare, the nation's first prime minister, won the office for a third time in 2002. He immediately halted the privatization programs his predecessor had attempted to implement and pledged to improve the economy and reduce crime. Somare has been widely considered honest, in contrast to the many corrupt politicians that have plagued the nation. Much of Somare's optimism has come from Papua New Guinea's close ties with Australia, which has provided a substantial aid program for many years. Australia, on the other hand, has not been as hopeful; a 2004 study predicted that Papua New Guinea

was at imminent risk of complete economic and political collapse and was a prime target for international crime, and as such the study recommended that Australia consider intervening and running customs and border controls until the resolution of the situation.

1997–99	Bill Skate
1999–2002	Mekere Morauta
2002–	Michael Somare

CONSTITUTION

Papua New Guinea is a constitutional monarchy within the Commonwealth. The British monarch is the head of state, as represented by a governor-general, invariably an indigenous Papua New Guinean appointed on the advice of the National Executive Council in accordance with the decision of the House of Assembly by a simple majority vote. The governor-general is eligible for reappointment if the House of Assembly so approves by a two-thirds majority, but he is never eligible for a third term. The normal term of office is six years, but the governor-general may be dismissed earlier on the proposal of the National Executive Council in accordance with the decision of the House of Assembly. The prime minister is the head of government; the governor-general usually appoints the leader of the majority party in parliament to this position. Executive authority is vested in the National Executive Council, composed of the prime minister, the head of government, not fewer than six other ministers, and not more than one-fourth of the House of Assembly. Council members are appointed or dismissed by the head of state on the proposal of the House of Assembly.

The constitution of 1975 established four state services: the National Public Service, the Police Force, the Papua New Guinea Defense Force, and the Parliamentary Service. There are provisions for an ombudsman commission and for the declaration of a state of national emergency under extraordinary circumstances.

The government is responsible to the unicameral parliament, the House of Assembly, whose 109 members are elected for five-year terms by universal suffrage.

The judiciary is composed of the Supreme Court, the National Court, and a series of district and local courts.

PARLIAMENT

Under the constitution of 1975 the national legislature is the unicameral House of Assembly, consisting of 109 members elected for five-year terms. Of the total membership, 91 represent open electorates, the rest regional electorates. There is a provision for nominated members, but none has been appointed.

Suffrage is universal at age 18, with enrollment compulsory but voting voluntary. Elections are done through limited preferential voting intended to make politicians form alliances with one another and pay attention to the needs of their constituents. This system replaced the old system of preferential voting in 2003, which produced ever-shifting party loyalties and unstable governments. Illiterate voters are permitted to use “whispering ballots,” whereby they whisper their choice in the ear of the presiding officer, who then records it on the ballot papers. There are two types of electorates—open and regional—and each voter votes twice in his open electorate and once in his regional electorate.

Papua New Guinea’s governments have been plagued by votes of no confidence from within parliament. New governments are protected from votes of no confidence for their first 18 months, and no votes of no confidence may be made in the 12 months preceding a national election. In an effort to increase stability by ending no-confidence votes, in 1999 the government passed the Integrity of Political Parties Act, which forbids members of one party in parliament from shifting their loyalty to another party.

POLITICAL PARTIES

Most political alignments are formed along ethnic lines or for personal reasons rather than party affiliation. Party allegiances are not strong and party structures are weak. Most parliamentarians do not retain their seats from one election to the next, and so no party has yet managed to achieve enough dominance to run the government.

Somare is the leader of the National Alliance, a coalition of several parties formed in 2002. Among numerous other parties are the Melanesian Alliance, Christian Democratic, National, Papua and Niugini Union, Papua New Guinea First, Papua New Guinea Labor, Papua New Guinea, People’s Action, People’s Labor, People’s Progressive, Pipol First, Rural People’s, United, and United Resources parties and the People’s National Congress.

LOCAL GOVERNMENT

For purposes of local government Papua New Guinea is divided into 20 provinces: Bougainville, Central, Chimbu, Eastern Highlands, East New Britain, East Sepik, Enga,

Gulf, Madang, Manus, Milne Bay, Morobe, National Capital, New Ireland, Northern, Sandaun, Southern Highlands, Western, Western Highlands, and West New Britain. Each province has its own government headed by a premier.

Popular government at the local-government level consists of district advisory councils, town advisory councils, and village councils. Each district advisory council has a membership of 15 to 20, including the district commissioner. Members of the House of Assembly are entitled to attend council meetings. The membership of town advisory councils consists of private citizens and administration officials appointed for two-year terms. Local government councils have broad powers and functions but are subject to the commissioner for local government.

LEGAL SYSTEM

The Papua New Guinean legal system is based on English common law.

The highest court in the land is the Supreme Court, to which appeals come from the National Court. District courts deal with summary and nonindictable offenses. Local courts deal with minor offenses, including matters regulated by indigenous custom. Wardens’ courts have jurisdiction over civil cases dealing with mining rights. Cases involving land are heard by the Land Titles Commission. The governor-general appoints the chief justice of the Supreme Court, and the Judicial and Legal Services Commission appoints other judges.

The right to a fair, public trial is strictly observed. Defendants are represented by counsel. A high crime rate coupled with shortages of funds, police, and judicial personnel have caused the time spent awaiting trial for serious offenses to increase in recent years. The right of habeas corpus, however, limits the holding of persons without trial to a maximum of six months. The courts are free from executive, political, or military interference. There are no political prisoners. Warrants are required for arrests. Suspects have free access to lawyers of their choice, and in serious cases counsel is provided at state expense. Suspects and their counsel are informed of charges and have the right to judicial review of detention. Reasonable bail is allowed, except when a judge rules that the risk of flight or further crime warrants detention.

HUMAN RIGHTS

In terms of political and civil rights Papua New Guinea is classified as a free country.

Papua New Guinea is not only the largest independent state in the South Pacific but also among the freest. Despite unindustrialized conditions, ethnic and linguistic heterogeneity, and natural difficulties in communication,

1848 Papua New Guinea

the citizens enjoy in practice all the liberties and rights granted by the constitution. Anglo-Saxon traditions prevail in the law courts and in the government.

Despite the surface placidity at the higher levels of government, there are periodic outbreaks of violence and lawlessness that are more sociological than political in character. Tribal fighting is part of Papua New Guinea's history; under the Australians it was held in check by *ki-aps* (patrol officers), but since independence fighting and crime in the streets have become common. The scale of such violence prompted the government to declare a state of emergency in the highlands region (the five districts of Eastern Highlands, Western Highlands, Southern Highlands, Chimbu, and Enga). Despite provocations, the nation has not introduced capital punishment, and torture and similar inhumane and degrading punishments are neither practiced nor condoned.

Nevertheless, according to human rights reports, members of the police force continued to commit serious human rights abuses even after a peace agreement was signed in 1998 that officially ended the war between Bougainville and the government. Police committed extrajudicial killings, beat suspects, and engaged in excessively punitive and violent raids. On occasion the government has investigated allegations of abuse and prosecuted those believed responsible.

The government has been known to infringe on citizens' right to privacy and freedom of assembly. Violence against women and children has been a growing problem.

FOREIGN POLICY

The two dominant issues in Papua New Guinea foreign policy have been relations with Indonesia, particularly stemming from the status of Irian Jaya, and a dispute with Australia regarding the demarcation of a maritime boundary through the Torres Strait. More than 10,000 refugees have entered Papua New Guinea from Irian Jaya, where a secessionist struggle has raged. Jakarta has denounced the maintenance of two large border refugee camps by Port Moresby, citing the settlements as sources of aid for rebels belonging to the Free Papua Organization. In regard to the Torres Strait, the Papua position is that the boundary should be equidistant from its shore and that of Australia, but that arrangement was deemed unacceptable by Australia because it would have created problems for the citizens of the Torres Strait Islands, part of Australia. A compromise agreement was signed in 1978, but there is pressure in Papua New Guinea to renegotiate. Relations with the Solomon Islands became tense on the outbreak of the uprising in Bougainville (which once attempted to become a part of the Solomon Islands), especially after a number of Papua New Guinean search-and-destroy teams attacked rebel strongholds in that neighbor's territory.

Papua New Guinea has been cultivating relations with neighboring South Asian nations as well as with the rest of the world. It is a member of the South Pacific Forum, the Asia Pacific Economic Conference, the Association of Southeast Asian Nations, the South Pacific Commission, and the South Pacific Regional Environmental Program. The United States and Papua New Guinea have maintained diplomatic relations since 1975, the former providing large amounts of humanitarian assistance over the years and supporting efforts to protect biodiversity, in addition to granting the country \$18 million per year to provide fishing access to U.S. vessels. The Peace Corps ceased operations in Papua New Guinea in 2001 due to security concerns, but the U.S. military still provides some training and education to national security officials.

DEFENSE

The defense structure is headed by Queen Elizabeth II as head of state, but political control rests with the prime minister and the National Executive Council. Operational control rests with the minister of defense and the commander of the defense forces.

The army, known as the Papua New Guinea Defense Force, consists of four territorial commands: 1st Division, Papua; 2nd Division, New Guinea highlands; 3rd Division, New Guinea coastal areas; and 4th Division, island territories. Military manpower is provided by voluntary enlistment. There is no conscription.

The defense force is still partly officered by Australians, and Australia contributes to the upkeep of the armed forces through annual grants. The Papua New Guinean armed forces are essentially token forces designed for internal peacekeeping. In the event of a conflict with its neighbor Indonesia, Papua New Guinea may seek Australian intervention.

ECONOMY

Papua New Guinea is a very poor and undeveloped nation. It is richly endowed with natural resources, but exploitation has been hampered by the rugged terrain and the high cost of developing infrastructure. Most of the population lives off subsistence agriculture. There is some

commercial agriculture and forestry, but most exporting is done by foreign corporations. The government has put a moratorium on logging, but trade in lumber continues illegally at an unsustainable rate. The main agricultural exports are cocoa, coffee, oil, rubber, sugar, tea, and copra. The tuna industry is vigorous, but most of the fishing is done by foreign vessels. Mineral deposits, including oil, copper, and gold, accounted for 25 percent of GDP in 2001, but mineral resources will run out in the future. The nation has limited manufacturing and must import most of its manufactured goods.

Prices are high for most commodities, and the government has been notoriously corrupt. A general lack of law and order, political interference, and questions regarding land tenure have hampered economic growth. Budgetary support from Australia and development aid under World Bank auspices have helped sustain the economy. Other donors include Japan, the European Union, China, Taiwan, the United Nations, the Asian Development Bank, the International Monetary Fund, and the World Bank, as well as volunteers and missionaries who donate labor as teachers and medical professionals and in other areas.

ENVIRONMENT

The country's largest environmental concern is the deforestation of the rain forest, caused by the growing commercial demand for tropical timber. The country also suffers from pollution from mining projects and severe drought.

LIVING CONDITIONS

Living conditions are extremely basic in much of Papua New Guinea; in some areas tribal people live much the way their ancestors did centuries ago. Most of the country has no running water or electricity, and transportation within the interior is difficult; the rainy season makes travel even more problematic. Lawlessness and crime are major problems, especially in Port Moresby, and outbreaks of ethnic violence occur with some regularity. Port Moresby has actually been ranked the world's most unlivable city, due largely to its violence, as well as to its unreliable electric and water supplies. Flying is often the only way to get from one point to another. Most rural areas do not have anything resembling consumer economies, and, regardless, there are no items to buy. All consumer goods and forms of transportation are quite expensive for the region.

HEALTH

Though the nation suffers from a severe lack of medical professionals and supplies, life expectancy is a moderately high 65 years. Fertility is also somewhat high, at almost four children per woman in 2004. Tropical diseases, including malaria, dengue fever, and diarrhea, are common. The incidence of HIV/AIDS has been increasing, especially among women.

FOOD AND NUTRITION

Most people in Papua New Guinea live on a subsistence diet composed of crops they grow for themselves and items they gather or hunt. Yams, sago palm pith, rice, fruit, and locally gathered vegetables are the staples of most peoples' diets. Pigs are an important source of meat, and feasts often involve a roasted pig; local feasts are called

mumu. On the coast people eat fish, and crocodile is also a common meat. The larger cities have some international restaurants serving American and Chinese food. Canned food imported from overseas has become an important part of many peoples' diets, though it is expensive.

STATUS OF WOMEN

Women have equal rights before the law, and their status is gradually improving, but they still face difficulties. The domestic abuse of women is said to be widespread, but it is rarely brought to the attention of authorities. In urban areas, alongside other violent crimes, rape is a problem of increasing severity. In villages, women play prominent roles in intertribal conflict; they are sometimes exchanged as a means of resolving wars between clans. When a man acquires a wife, he must pay a bride-price to her family (often in pigs), reinforcing the perception of women as property. In areas where men have multiple wives, many women go to prison after attacking their rival wives.

Against the background of traditional male dominance, the achievements of women in Papua New Guinea are significant. Some have become doctors, lawyers, or office directors, and some have held prominent political office. Nevertheless, even in the cities many women are effectively second-class citizens.

WORK

The majority of people in Papua New Guinea are subsistence farmers, raising food, hunting, and otherwise providing for all their own needs. They have virtually no income and they purchase very little.

Of the official labor force of 3.3 million, a full 85 percent are employed in agriculture, producing both subsistence and cash crops, with the remainder employed in industry or services. Unemployment is a major problem in urban areas. There are some cases of children who are "adopted" by wealthy families but are essentially forced to work as unpaid servants.

EDUCATION

In 2002 the national literacy rate was estimated to be 65 percent—71 percent for males and 58 percent for females.

Education is neither free nor compulsory. Schooling lasts for 12 years, as divided into six years of primary school, four years of middle school, and two years of upper secondary school. The academic year is the calendar year. The language of instruction is Tok Pisin in most schools, although some mission schools use English. Missions have played a dominant role in Papua New Guinean education, operating six times as many schools and teaching more than twice as many children as government schools. There are not nearly enough schools to service the population of potential students; every year some 50,000 students, a majority of them girls, drop out after elementary school simply because there are no secondary schools for them to attend. The government has indeed delineated the need for foreign investment in educational infrastructure and particularly wants to improve educational opportunities for girls.

Higher education is provided at numerous institutions, including the University of Papua New Guinea, at Port Moresby; the University of Technology, at Lae; the Papua New Guinea Maritime College; the University of Goroka; and the Catholic-run Divine Word University.

SCIENCE AND TECHNOLOGY

Papua New Guinea does not have much technological infrastructure. In 2002 there were only about 62,000 telephone lines and 15,000 cellular telephones in the country, and only about 75,000 people were using the Internet. Most communication within the country is done by radiotelephone, telegraph, coastal radio, aeronautical radio, and international radio.

MEDIA

Papua New Guinea's daily newspapers include the *Papua New Guinea Post-Courier*, the *National*, and *Niu Gini nius*, and there are several weeklies and monthlies. The press is free of official censorship, and private publications criticize the government regularly, reporting on corruption and other sensitive topics. There is no national news agency or book-publishing industry.

Radio is the most important medium in the nation, due to the geographic isolation of most of the population and widespread illiteracy. Radio broadcasting is operated by the National Broadcasting Commission of Papua New Guinea, which operates a network of transmitters. The programs are presented in the three official languages—English, Hiri Motu, and Tok Pisin—and in 15 vernaculars. About 95 percent of the population is potentially covered by radio services, though a lack of funding results in broadcasts frequently being taken off the air. The BBC World Service broadcasts in Port Moresby.

Television service was introduced in 1970. The only station is the commercial EMTV Television, for which the signal is available only in Port Moresby and in provincial capitals.

CULTURE

The people of Papua New Guinea are divided into four main cultural and political groups: Papuans in the south, Highlanders in the hills, New Guineans from the north, and islanders. Many of these groups have had very little contact with outside influences, and they have thus maintained a huge variety of individual cultures, made more distinct by linguistic differences; Papua New Guinea is home to about one-third of the world's indigenous languages.

The most typical expression of native culture is a feast called a *sing sing*. During these feasts men and women sing songs about battles, healing, love, sharks, death, the weather, and other topics. Instruments include many types of drums and bamboo flutes.

FOLKLORE AND MYTHOLOGY

Papua New Guinean culture encompasses a great number of mythologies, many of them unique to particular ethnic groups. Pantheistic rituals are widespread; people conduct rituals to improve the weather, celebrate the harvest, or placate dangerous crocodiles. The spirits of ancestors are considered very important and powerful; people believe they must give spirits offerings or otherwise make them happy in order to prevent them from harming the living. Witchcraft and sorcery are commonplace. Some rural people practiced cannibalism until quite recently, eating the flesh either of their enemies or of loved ones.

ENTERTAINMENT AND RECREATION

Papua New Guinea's recreational offerings are found almost entirely outdoors. There is good walking and hiking; the best-known walking route is the Kokoda Trail. There are thousands of birds to watch. There is exceptional diving and snorkeling, and the swimming is excellent at many beaches. Rabaul has many volcanoes, which are interesting to climb. Some tour operators offer rafting trips.

ETIQUETTE

Tribal customs still prevail in many areas, including practices such as killing people as revenge for past wrongs. Papua New Guineans do not have a tradition of bargaining for purchases, so haggling in the marketplace is not done. Tipping is not customary anywhere. People are generally hospitable, sharing what they have.

FAMILY LIFE

In rural areas, family life has not changed much in centuries. The clan is the most important social unit. Women tend gardens, where they grow sweet potatoes, care for the family pigs, and raise children; men hunt. Traditionally, women married at puberty, and men married when they were old enough to build a house and hunt to provide for a family; as a result, many rural people marry at 14 or 15, even though this violates the nation's marriage laws, which prohibit marriage before 16 for women and 18 for men. When a man marries, he pays his bride's family a bride-price of money, property, or other items; pigs are often used for this purpose.

PERSONAL APPEARANCE

Though increasing numbers of Papua New Guineans are dressing in Western clothing, many still wear traditional homemade garments made from locally foraged materials. These include skirts made from leaves and grass and decorations made from shells, pig tails, flowers, or dog teeth, as well as wigs made from human hair. Most rural people never wear shoes. People often decorate their faces with colored clay or yellow ochre.

SPORTS

Though Papua New Guinea does not have a long history of excellence in organized sports, the nation is making an effort to develop athletes. The National Olympic Committee prepares the Papuan contingent for competition; the nation has some good swimmers and kickboxers.

CHRONOLOGY

1975 Papua New Guinea achieves full independence as a dominion within the Commonwealth; Bougainville unilaterally declares its independence as the Republic of the North Solomons, presided over by Josephine Abaijah, but the secessionist movement is suppressed. The kina is introduced as the national currency, replacing the Australian dollar.

- 1976** The kina is revalued.
- 1977** In the nation's first general elections, Prime Minister Michael Somare's Pangu Party and its coalition partner, the People's Progress Party, win at least 60 of 109 seats in the House of Assembly. Sir John Guise steps down as governor-general and is replaced by Sir Tore Lokoloko.
- 1978** Rival tribes riot.
- 1980** The Somare government falls. Julius Chan is named prime minister. Papua New Guinea sends troops to Vanuatu to quell a revolt.
- 1982** Following general elections, Somare returns as prime minister.
- 1984** Somare survives a no-confidence motion following the exit of Deputy Prime Minister Pias Wingti and forms a new coalition with the Melanesian Alliance and National parties.
- 1988** Rabbie Namaliu becomes prime minister; the secessionist BRA fights for the independence of the island of Bougainville.
- 1994** Fighting between the secessionist BRA and the government ends when the parties sign a peace agreement. Pacific peacekeepers from Fiji, Tonga, and Vanuatu, with Australian support, occupy four neutral zones.
- 1995** The cease-fire ends.
- 1996** The leader of the provisional government is assassinated.
- 1997** Parliamentary elections are held, and Bill Skate becomes prime minister; the government begins to employ foreign mercenaries to fight the rebel BRA; the El Niño weather pattern spurs a severe drought in Papua New Guinea, devastating the nation's subsistence and export crops; Prime Minister Skate is accused of corruption.
- 1998** International aid for the 500,000 facing drought-related food shortages is suspended due to looting; the BRA and the government sign a peace agreement ending their conflict, in which 20,000 were killed; the country is hit by three gigantic tsunamis.
- 1999** Economic crisis sets in, with inflation at 20 percent; Prime Minister Skate extends recognition to Taiwan and consequently breaks off relations with China, reportedly in exchange for \$2.35 billion in loans; two days later Skate resigns; Mekere Morauta becomes prime minister.
- 2000** The government announces that the inhabitants of the Duke of York atoll will have to move because the island is "sinking" as a result of global warming.
- 2001** The government signs the Bougainville Peace Agreement, promising to hold a referendum on Bougainville's political status in 10 to 15 years.

1854 Papua New Guinea

- 2002** Michael Somare becomes prime minister for the third time.
- 2004** Australia sends police to Papua New Guinea to help fight rising crime.
- 2005** Australia withdraws its police force after the supreme court of Papua New Guinea rules their presence unconstitutional.

DATE OF INDEPENDENCE

May 14, 1811

DATE OF CONSTITUTION

June 20, 1992

GEOGRAPHICAL FEATURES

Paraguay, a landlocked country in the heart of South America, has a total land area of 406,750 sq km (157,046 sq mi), extending 992 km (616 mi) south-southeast to north-northwest and 491 km (305 mi) east-northeast to west-southwest. It shares its total land boundary of 3,920 km (2,436 mi) with three neighbors: Brazil (1,290 km; 801 mi), Argentina (1,880 km; 1,167 mi), and Bolivia (750 km; 466 mi).

The capital is Asunción. Other major urban centers are Ciudad del Este, Pedro Juan Caballero, Encarnación, Coronel Oviedo, and Villarrica.

The Paraguay River divides the country into two sharply contrasting regions. Three-fifths of the land west

and north of the river is a waterless prairie known as the Chaco.

Eastern Paraguay is a region of spacious plains, broad valleys, and rolling hills. It is divided into five subregions: the Paraná Plateau to the east; the northern upland from the Aquidabán River to the Apa River; the central hill belt; the central lowland; and the Ñeembucú Plain, a swampy lowland.

Rivers are the dominant natural features of Paraguay. Three major rivers—the Paraguay, the Paraná, and the Pilcomayo—are transportation arteries. The Paraguay River rises in Mato Grosso in Brazil and passes through Paraguay for 1,125 km (700 mi). The Paraná rises in Brazil and is known as Alta Paraná after the Guaira Falls.

Paraguay

The Pilcomayo is a tributary of the Paraguay and forms the southwestern border with Argentina. Smaller rivers include the Tobicuary, the Apa, and the Aquidabán.

The largest lakes are Lake Ypoá in the Ñeembucú Plain and Lake Ypacaraí in the central hill belt.

CLIMATE AND WEATHER

Two-thirds of Paraguay lies within the temperate zone and has a mild climate, while one-third lies within the tropical zone and has a hot and humid climate. During the autumn and winter months (April through September), temperatures range from 10°C to 21°C (50°F to 70°F). During spring and summer (October through March), temperatures range from about 26°C to 37°C (78.8°F to 98.6°F), with daytime temperatures often exceeding 37.8°C (100°F). It is not uncommon for temperatures to drop by about 17°C (30°F) within half an hour.

Eastern Paraguay receives fairly evenly distributed rainfall. The annual average is about 2,030 mm (80 in) along the eastern border with Brazil, with precipitation gradually diminishing toward the west, to averages of 1,190 mm (47 in) along the Paraguay River and 810 mm (32 in) in the Chaco.

In the summer the prevailing wind is the hot sirocco, blowing out of the northeast, while in the winter there is the cold pampero, blowing across the South Atlantic.

Asunción: 50 in
Paraná Plateau: 31 in to 131 in

FLORA AND FAUNA

The eastern part of Paraguay is covered with grasses and patches of subtropical forest. The Chaco, west of the Río Paraguay, is dry and infertile. The country harbors a diverse assortment of animals, including giant anteaters, jaguars, Brazilian tapirs, maned wolves, Chacoan peccaries, caimans, anacondas, boa constrictors, and various birds, such as parrots, parakeets, hyacinth macaws, and wood storks. Human development is pushing out larger animals in the east; the Chacoan peccary was once thought to be extinct, and its numbers remain quite small.

ETHNIC COMPOSITION

Paraguay is one of the few Latin American countries where the indigenous Amerindian population assimilated its conquerors rather than the reverse, with the resulting fusion showing more Amerindian than Spanish characteristics. Assimilation has been so complete that less than 5 percent of the population is clearly identifiable as either white or Amerindian.

The government's National Indigenous Institute (INDI) estimates the unassimilated Amerindian population to be 128,370. Therein are six linguistic groups, five in the Chaco and one in the east. The 17 ethnically distinct Amerindian groups include the Pai-Tavyterá, Mbya, Aché, and Chiripá in the east and the Toba, Mascoy, Lengua, Chulupí, Tapieté, Ayoreo, and Chamacoco in the Chaco. Some of these peoples are threatened with extinction as a result of the destruction of their traditional habitats. The welfare of Amerindians is the official responsibility of INDI, which can purchase land on their behalf and expropriate private property to establish tribal homelands.

African blacks have contributed modestly to the ethnic melting pot, with 13,000 counted in the latest census.

The two main ethnic alien groups are the Japanese and the German Mennonites. The largest foreign community in Paraguay is from the United States.

LANGUAGES

Paraguay's constitution recognizes two official languages: Spanish and Guarani. Spanish is the medium of instruction in schools and is spoken by about 75 percent of the people. A greater percentage—estimated at more than 90 percent—understand Guarani, the vernacular of the country's original inhabitants. Guarani is a member of the Tupí-Guarani group of languages; it is a melodi-

ous language in which all words end in a vowel. It is the primary language in rural areas and the medium of ordinary communication in urban areas. A number of Guarani words and idioms have found their way into Paraguayan Spanish.

RELIGIONS

An estimated 90 percent of the population is Roman Catholic. The constitution guarantees full religious freedom, and the country's small religious minorities, Protestants and Jews, experience no discrimination. Traditional Amerindian religions have virtually disappeared.

Ecclesiastically, the country is divided into one archdiocese (Asunción), four dioceses (Villarrica, Pilar, Concepción, and the Chaco), four prelatures (Coronel Oviedo, Encarnación, Alto Paraná, and Caacupé), and two apostolic vicariates (Chaco and Pilcomayo).

Protestants do not constitute a major religious force in the country. A sizable percentage of Protestants are members of the Mennonite sect.

Religious Affiliations

Roman Catholic	5,700,000
Mennonite and Other Protestant	650,000

HISTORICAL BACKGROUND

Paraguay is the only state in the world that was established by a religious order. The nation was conceived as a result of the efforts of the Jesuits (Society of Jesus) to protect Amerindians from Portuguese slave traders and Spanish colonists. Soon after the founding of Asunción in 1537, Jesuits gathered Guarani families into reductions, or mission villages, where Amerindians owned land in common and were taught trades, better methods of cultivation, and the fine arts, along with religious instruction. Spanish colonists were not allowed to enter the reductions. Eventually, the number of reductions grew to more than 30, with 100,000 members, but in the process the Jesuits incurred the enmity of the colonists, who convinced the Spanish king that the religious order was trying to set up a private kingdom in rivalry with the Spanish realm. In 1767 the king banned the Jesuits; the reductions were plundered by the colonists and then abandoned.

When the Viceroyalty of La Plata was created in 1776, Paraguay became an outpost of Buenos Aires, which thereafter dominated the Río de la Plata. In 1810 Paraguay followed the lead of Buenos Aires in declaring independence from Spain. In 1811 the nation defeated an Argentine expedition to conquer it and became completely independent.

Since independence Paraguay has been dominated by dictators, some of them benevolent, such as the nation's founding father, José Gaspar Rodríguez de Francia, also known as "El Supremo." Assuming power in 1811, he cut off Paraguay from all contact with the outside world, suspended external commerce, broke relations with the Vatican, and began an anticlerical regime that lasted until his death in 1840. He was followed by Carlos Antonio López and his son, who together ruled until 1870. The elder López reversed the anticlerical policies of Francia and reestablished trade and communications with the outside world. The younger López presided over the War of the Triple Alliance (1865–70), fought with Brazil, Argentina, and Uruguay, the bloodiest war in Latin American history, in which Paraguay lost half of its population. In 1932 a long-smoldering feud with Bolivia, over the ownership of a desolate area to the north of the Chaco known as the Green Hell, broke into open warfare. Although outnumbered by the Bolivians three to one, the Paraguayans prevailed and conquered three-fourths of the disputed territory, which they retained following the peace settlement of 1938. A number of short-lived dictators followed the coup d'état of Col. Rafael Franco in 1939; among them were Gen. José Félix Estigarribia, Gen. Higinio Moríñigo, Juan Natalicio González, Gen. Raimundo Rolón, and Federico Chávez. This period of instability came to an end in 1954 with the rise of Gen. Alfredo Stroessner Matiauda. Stroessner remained in power for 35 years, until 1989, when he was ousted by Gen. Andrés Rodríguez with the support of the Colorado Party. In 1992 a new constitution was adopted, following which the Colorado candidate, Juan Carlos Wasmosy Monti, won the first free presidential election in Paraguayan history with 40.29 percent of the vote. The party, however, failed to win a majority in either house of Congress.

In 1995 a rift developed between Wasmosy and the military strongman Gen. Lino César Oviedo. In 1996 Oviedo mounted an unsuccessful attempt to force Wasmosy's resignation and was, in turn, obliged to resign from the army. Later Oviedo was arrested on charges of insurrection and insubordination, and Wasmosy initiated a purge of officers loyal to Oviedo. In 1997 Oviedo, now released by an appeals court, declared his candidacy for the presidency and outpaced all his competitors in national polls, including Colorado Party president Luís María Argaña. Thereafter, in a remarkable series of events, Oviedo tried to get Wasmosy impeached while the president ordered Oviedo's arrest. When the Supreme Court upheld Oviedo's imprisonment, his vice presidential running mate, Raúl Cubas Grau, was appointed as the party's leader and went on to win the presidency in 1998. Following the election, Cubas commuted the sentence on Oviedo in defiance of the Supreme Court. Opposition to the new president developed in the party and in the legislature among the Argaña faction, which joined the

opposition against the government. The political landscape was again altered when Lu s Mar a Araga a, himself the vice president, was shot to death in Asunci n by men in military uniforms, and Oviedo and Cubas were implicated in the assassination. Demonstrators poured into the streets of the capital to demand the president's resignation, and several days of battles ensued between the *arga istas* and *oviedistas*. Under intense pressure Cubas resigned the presidency in 1999 only hours before the Senate was to vote on his removal. He was succeeded by Luis  ngel Gonz lez Macchi, an *arga ista*. Meanwhile, Oviedo fled to Argentina, Cubas to Brazil.

Turmoil continued for the next five years. In 2001 the head of the central bank resigned after being accused of transferring several million dollars to a U.S. bank account. The following year prosecutors implicated Gonz lez in an investment scandal. This allegation sparked violent protests in the street, with people demanding the president's resignation and an ed to free-market policies. Congress impeached Gonz lez but ultimately did not vote him out of office.

In the summer of 2003 Nicanor Duarte Frutos of the Colorado Party replaced Gonz lez as president, and his administration put Gonz lez on trial for corruption. The following year, Oviedo returned to Paraguay and was immediately arrested. In 2005 the daughter of former president Cubas was kidnapped and murdered, and Duarte promised to crack down on organized crime.

LIST OF MODERN RULERS

1954–89	Alfredo Stroessner Matiauda
1989–93	Andr�s Rodr�guez
1993–98	Juan Carlos Wamosy Monti
1998–99	Ra�l Cubas Grau
1999–2003	Luis �ngel Gonz�lez Macchi
2003–	Nicanor Duarte Frutos

CONSTITUTION

The 1992 constitution states that Paraguay is a representative and pluralist democracy and that government is exercised by the separate powers of the legislature, executive, and judiciary. The president is the head of state and head of government. The president is elected by a simple majority of votes for a five-year term and cannot run for reelection. He must be a Paraguayan by birth and over 35 years of age. The president is authorized to appoint and remove commanders of the army and police. The president appoints a council of ministers. A state of exception can be declared, by the executive or the Congress, only in cases of international armed conflict or serious internal unrest threatening the rule of the constitution. The 1992 constitution created the post of vice president, who

is elected concurrently with the president, running on the same ticket.

PARLIAMENT

The Congress (Congreso) is a bicameral body consisting of the Senate and the Chamber of Deputies, both elected by popular vote concurrently with the president for five-year terms. Deputies are elected by department, senators nationwide. Voting is compulsory for all Paraguayans from age 18 onward.

The Senate consists of 45 members. It has the exclusive rights to initiate bills relating to national defense, ratify international treaties, and consent to the appointment of the attorney general, ambassadors, and members of the Supreme Court of Justice.

The Chamber of Deputies comprises 80 members and has the exclusive power to initiate bills relating to taxation, monetary and banking systems, budgets, and electoral and municipal legislation. Any other bill may originate in either chamber of Congress.

All bills submitted to Congress by the executive are acted on in the same session. If a bill or part of a bill objected to by the executive branch and returned to the chamber of origin is passed again by both chambers by an absolute majority vote, the executive branch must promulgate it. Any bill vetoed by the president may be considered again during the same session of Congress only by an affirmative vote of a two-thirds majority of both chambers.

The two houses of Congress meet in regular sessions every year from April 1 to December 20. The president may convene special sessions or extend the regular sessions.

POLITICAL PARTIES

The National Republican Association (Colorado Party) is Paraguay's oldest party. It dominated the country's politics under Gen. Stroessner and still controls the Chamber of Deputies. It is generally conservative in outlook but is subject to factionalism. There are several other parties, including the Patria Querida (PQ), the Union Nacional de Ciudadanos  ticos (UNACE), the Partido Encuentro Nacional (PEN), the Partido Liberal Radical Autentico (PLRA), and the Partido Pais Solidario (PPS). There are also several political pressure groups.

LOCAL GOVERNMENT

For administrative purposes the Paraguayan territory is divided into 17 departments: 14 in the eastern region and three in the Chaco, in the west. The capital city forms another unit of local government.

1860 Paraguay

Each department is headed by a *delegado de gobierno*, or governor, elected for a five-year term by direct vote. The departments are divided into districts that are subdivided into municipalities, each of which has a population of over 3,000. Each municipality is governed by a board, which is elected by the local residents. Resident aliens are allowed to vote in municipal elections.

LEGAL SYSTEM

Paraguay's legal system is based on the Argentine code, the French codes, and Roman law.

The judiciary is headed by the Supreme Court of Justice, consisting of nine judges chosen by the executive and Senate on the proposal of the Council of Magistrates. The members of the Supreme Court, as well as the lower courts, are appointed for five-year terms. The Supreme Court has authority in jurisdictional disputes between branches of government, the power to supervise the judicial establishment, and the power to declare laws unconstitutional. There is also an ombudsman and an attorney general appointed by the executive.

Below the Supreme Court are courts of appeal for civil, commercial, and criminal cases; courts of first instance; and justice-of-the-peace courts. The courts of first instance are in Asunción, but each large city has a judicial officer known as a proceedings judge, who gathers evidence and obtains testimony prior to a trial. The Supreme Court appoints judges of lower courts and magistrates.

Paraguay does not have trial by jury. Trials are generally conducted through the presentation of written documents to a judge, who then renders a decision. An appellate-level judge automatically reviews all judgments, and the Supreme Court may hear appeals. Part of the trial process is open to the public, and trials are routinely reported in the press.

Judicial reform began in 1992. A new penal code, establishing the protection of fundamental human rights, entered into force in November 1998, replacing the antiquated 1914 code. In July 1999 the Criminal Procedures Code went into effect, providing for procedures for an oral and accusatorial system as well as a faster and more transparent criminal trial process.

The national penitentiary is in Asunción. Another prison is in Tacumbú, and the Sisters of the Good Shepherd run a Women's Correctional Institute. There are smaller prisons in each of the departmental capitals.

HUMAN RIGHTS

Though Paraguay's government generally respects the rights of its citizens, the country has some serious hu-

man rights problems. The military and police are known to arrest, torture, and kill prisoners without observing due process. Prisons are overcrowded, and prisoners often commit violent acts against one another. The military conscripts minors illegally. Violence against women and child abuse have occurred with some regularity, as have trafficking in children and women as sex slaves.

FOREIGN POLICY

Paraguay is a member of the United Nations, the Southern Cone Common Market (Mercosur), the Organization of American States (OAS), the Rio Group, the Latin American Integration Association (ALADI), and Interpol. The nation supports the creation of a free-trade area in the Americas. The United States and Paraguay cooperate on various enterprises, including efforts to stop drug and human trafficking, end money laundering, and preserve rain forests. The U.S. government has helped Paraguay resolve its various political crises. Paraguay imported over \$483 million in goods from the United States in 2003, and many U.S. businesses have subsidiaries in Paraguay.

DEFENSE

As commander in chief, the president heads the defense structure. There is a minister of national defense, who is not in the direct chain of command. The direct subordinate of the commander in chief is the chief of the armed forces general staff, always an army officer, and below him are the commanders of the army, navy, and air force. For the purpose of national defense the country is divided into six geographical areas known as divisions. The 1992 constitution bans all military personnel in active service from belonging to political parties or engaging in any political activity.

The military consists of an army, an air force, and a navy that includes a naval air force and marines. Military service is compulsory for all Paraguayan males between 18 and 20; all conscripts must serve one year in the army or two years in the navy. Conscientious objection is allowed.

ECONOMY

Paraguay is considered a lower-middle-income country. It has failed to make any real economic progress in recent years, and income levels essentially remain at the levels they were in 1980. Observers blame poor performance on political corruption, the failure of structural reform, inadequate infrastructure, and large internal and external debts. The nation has a free-market economy with a large informal sector. By some estimates, unregistered trade—the reexport of consumer goods into Brazil and Argentina, along with the activities of thousands of urban street vendors and microenterprises—exceeds the official gross domestic product (GDP). Paraguay's formal economy is dominated by services. Agriculture commodities (particularly soybeans, cotton, lumber, and cattle) are the most important export items, and farming accounts for about 25 percent of GDP and employs about 45 percent of the labor force. The country has vast hydroelectric resources, which it has exploited to export electricity to its neighbors, but lacks significant mineral or petroleum resources. Paraguay's principal industries are related to cattle, such as cold storage plants, tanneries, and the manufacture of leather goods; secondary industries include the production of textiles, vegetable oils, construction materials, tobacco, and sugar.

After Stroessner's dismissal in 1989, the Rodríguez and Wasmosy governments introduced a number of economic reforms with a view to liberalizing the protected Paraguayan economy. These reforms included the establishment of a unified, fluctuating exchange rate for the currency, tax exemptions for newly established foreign businesses, the elimination of export taxes, and the privatization of public-sector enterprises. The Cubas administration attempted to reduce the rising government deficit by cutting spending and cracking down on rampant tax evasion. The top priority for President Luís González was resuscitating an official economy that had languished in the wake of a thriving illegal one. The economy grew by an average of about 3 percent annually in 1995–1997, but GDP declined slightly between 1998 and 2000. On a per capita basis, real income has stagnated at 1980 levels. Growth rebounded slightly in 2001 but fell again in 2002.

In January 1995 Paraguay joined Brazil, Argentina, and Uruguay in creating Mercosur, a four-country free-trade zone. The nation is also a member of the Inter-American Development Bank (IDB) and the Latin American Economic System (SELA).

ENVIRONMENT

Paraguay's most pressing environmental problem is deforestation, which is driven by the demand for agricultural land as well as the exploitation of timber. More than half of Paraguay is forested, but an estimated 3,266 sq km (1,261 sq mi) of forestlands were cleared per year from 1990 to 1995, mostly in the eastern frontier. Reforestation has been minimal, such that Paraguay is in danger of losing virtually all of its forests by the middle of the 21st century.

Also of concern is the environmental damage caused by the Yacyretá Dam, which runs 42 miles along the Paraná River and was built to export hydroelectric power to Argentina. The dam, which went into operation in the early 1990s, has flooded several islands, has dried up branches of the Paraná upon which a nearby city depends for water, and has created an ecological and economic disaster for the families living in the reservoir area. Moreover, 100,000 hectares (250,000 acres) of indigenous land have been lost, 1,000 families have been displaced or otherwise adversely affected, and ecosystems with unique life forms have been destroyed.

The country has several other environmental problems. Wetlands are disappearing or becoming damaged, and much of the nation's water is becoming polluted. Many animal species are at risk of extinction as humans encroach on their territory. The cities do not have adequate means of waste disposal, presenting health risks for urban dwellers.

CO2 Emissions per capita ton: 0.69

LIVING CONDITIONS

Paraguay's living conditions show the effects of its years of economic stagnation. Housing for most people is ru-

dimentary. Frequent floods destroy houses in areas near rivers. Water supplies are unreliable; safe water is much more readily available in cities than in rural areas. The urban waste disposal systems do not work, and waste contaminates local water supplies, spreading disease. Bus transportation is good, but the train system still uses wood-burning engines. Motor vehicles share roads with livestock and oxcarts. Driving can be dangerous. About half of the country's roads are unpaved.

HEALTH

The health of Paraguay's people improved a great deal during the late 20th century as a result of the government's efforts to increase vaccination, expand health education, and provide health services to more people. Life expectancy is high, at almost 75 years. Fertility is also high; each woman has an average of nearly four children. In 2004 the population grew at a rate of 2.5 percent.

Nevertheless, the country suffers from many health problems. Poor water and sanitation lead to many diseases, as do unpasteurized milk and improper food processing. Health care is unavailable in many rural areas, and malnutrition remains a problem for many people. Diseases such as tuberculosis, typhoid fever, cholera, dengue fever, malaria, and hepatitis are still common.

FOOD AND NUTRITION

Meat, corn, and manioc are the mainstays of the Paraguayan diet, which is rounded out with eggs, milk, cheese, and tropical and subtropical fruits and vegetables. Beef is a common meat. Corn appears in puddings, stews, mush, soup, and even dessert. A popular dessert called *mbaipy be-é* mixes milk, molasses, and corn. A snack called *chipas* is made from manioc, eggs, and cheese. People drink tea or maté at nearly every meal

as well as between meals. Sugarcane is the basis of alcoholic beverages such as *mosto* and *caña*.

STATUS OF WOMEN

The constitution of 1992 guarantees "the equality of civil, political, social, economic and cultural rights" of women and charges the state with eliminating obstacles to women's full participation in "all dimensions of national life." The recently enacted Electoral Code requires that, in their internal primaries, 20 percent of each party's candidates for elective office be women.

While there are no legal impediments to women's participation in government and politics, in practice they are underrepresented. In May 1998 voters elected 10 women to Congress (eight of 45 senators and two of 80 national deputies), and there were three women in the cabinet. Women are well represented in the judicial system as judges and prosecutors.

Maternal mortality rates are high, and as many as 65 percent of such deaths are related to poor medical care. Domestic violence, particularly by husbands against wives, is extremely common, though women are becoming more willing to report cases of abuse. Prostitution is common, and many women become the victims of human traffickers, who send them to other countries to work in the sex industry.

Several groups work to improve conditions for women. One is Women for Democracy, which is active in civic and electoral education. Other groups include Sumando, a non-governmental organization promoting educational reform and voter participation in elections; Sefem, which addresses such issues as women and public policy; and the Women's November 25th Collective, which sponsors a home for battered women and coordinates legal assistance.

WORK

In 2004 the official unemployment rate was 15.1 percent, while 35 percent of the population lived below the poverty

line. There is tremendous income disparity, with most of the country's money concentrated in the hands of a few families. Some 45 percent of the workforce is occupied in agriculture; about 200,000 families are subsistence farmers, providing for their own needs but earning no real income. Many people in the cities work as street vendors, selling items on a small scale. A large number of Paraguayans are involved in the underground economy, selling illegal imported goods such as computers, electronics, cigarettes and liquor to people in Brazil and Argentina.

Most working Paraguayans go home at lunchtime and eat with their families.

 Unemployment %: 15.1

EDUCATION

Primary education is free and, where possible, compulsory for children between the ages of seven and 13. Schooling is divided into six years of primary school, three years of secondary school (*liceo*), and three years of a specialized upper cycle of secondary school (*colegio*). The school year runs from March through November. The language of instruction is Spanish.

Although primary enrollment figures are high (about 92 percent in 2001 for primary schools), the subsequent dropout rate is also relatively high (50 percent enrolled for secondary school in the same year). A number of factors contribute to the high rates of attrition: the dispersion of the rural population, which makes it necessary for children to walk great distances to attend school, especially secondary school; the emphasis on Spanish in areas where Guaraní is spoken; the high costs of textbooks, school uniforms, and examination fees; and deficiencies in teaching methods. Almost all of the secondary schools are in urban areas; nearly 50 percent are concentrated in Asunción.

Private schools, operated by both religious and ethnic groups, form an important part of the educational system and generally enjoy greater prestige than public schools. Attrition and dropout rates are far lower in private schools.

Paraguay's two universities, the National University and Our Lady of the Assumption Catholic University, are located in Asunción; attendance is free at the National University. Paraguay also has schools of agriculture and veterinary science. Half of all university graduates are women.

SCIENCE AND TECHNOLOGY

Paraguay is working with Mercosur and the International Development Research Center to improve its technological infrastructure, usually along with neighboring countries. Paraguay has introduced computers connected to the Internet into schools, has implemented measures to improve health care by focusing more on chronic diseases than communicable ones, and has worked to use technology to increase economic integration in the region. Despite these efforts, as of 2003 the country's technological infrastructure was inadequate for the needs of a modern nation. There were fewer than 275,000 telephone lines, most of them located in Asunción, though nearly two million people had cellular telephones. In all, only 120,000 people were using the Internet.

MEDIA

The constitution provides for the freedom of the press, and the government generally respects this freedom, though journalists who dare investigate corruption or protests against the government are sometimes threatened by police. Owners of print and electronic media are sometimes harassed by the police or receive threats. Nevertheless, both print and broadcast media express various viewpoints, and the opposition is given a portion of coverage. The print and electronic media are independently owned.

There are several daily newspapers and other publications; daily newspapers include *ABC color*, *La nación*, and *Última hora*. The Colorado Party publishes the periodical *Patria*, the Roman Catholic Church the weekly *Sendero*.

The three main television stations are all privately owned commercial enterprises. The nation has a number of radio stations, including many unlicensed stations in the triborder area, where Paraguay, Argentina, and Brazil come together. Radio Nacional del Paraguay is the state-run radio station; other stations are commercially operated and privately owned.

CULTURE

Paraguayans love live theater and often attend performances in Spanish and Guaraní. Popular dances include the polka and the bottle dance, which dancers perform with jars balanced on their heads. Music is entirely based on European styles, with no African or native influences; the harp and the guitar are common instruments. Agustín Barríos was one of the nation's most famous guitarists in the early 20th century; he often performed in full Guaraní costume. The poet Augusto Roa Bastos is Paraguay's most famous author. The capital has many art galleries that display the unconventional work of local artists. One famous local art form is spiderweb lace called *ñanduti*, made in the city of Itaguá.

FOLKLORE AND MYTHOLOGY

The indigenous Guaraní people have an elaborate set of mythological beliefs; many of their mythical creatures re-

semble animals of the local forest. One folkloric creature is the *luison*, something like a werewolf; it has red, glowing eyes and razor sharp teeth at night when the moon is full but appears human during the day. The *luison* digs dead bodies from graves and eats them and then may go after the living. Scholars believe that this myth gained strength during the Chaco War, of the 1930s, when soldiers could not bury their dead or dying and many bodies were consumed by wild dogs.

ENTERTAINMENT AND RECREATION

Paraguay's cities offer restaurants, bars, discos, and shopping malls. People love to have late dinners under the stars; it is not uncommon for people to stay out long after midnight. People enjoy swimming and engaging in other water sports at Lago Ypacarí; the waters of the lake are believed to cure illnesses. Hiking, camping, and fishing are all popular activities; people go to Villa Florida, the Parque Nacional Cerro Corá, or the Chaco wilderness to experience the outdoor lifestyle.

ETIQUETTE

Paraguayans generally follow Western rules of etiquette. Dinner is usually served quite late, after 9 p.m. It is impolite to discuss business during a meal. When attending a party, it is important to greet everyone there when either arriving or departing; a handshake is polite, though friends and relatives also kiss one another. Men are expected to be respectful of women and to avoid confronting or offending them.

FAMILY LIFE

Most Paraguayans consider their primary loyalties to be to their family. Extended family is important, and Paraguayans consider cousins, aunts, uncles, and godparents to be close relatives. Most people live in nuclear family units; children usually stay with their parents until they marry. It is uncommon for single people to live alone. In couples, women usually handle household matters and care for children, while men spend their time at work or socializing away from home. Illegitimacy carries a stigma, and many poor people suffer from the lack of a paternal family name.

PERSONAL APPEARANCE

Paraguayans tend to dress conservatively. Grooming and neatness are quite important, and even the poorest people

always try to look presentable. In formal settings, men wear dark suits and ties, and women wear suits or dresses.

SPORTS

Paraguayans are passionate about soccer, following the fortunes of their national team with zeal. Some people also play rugby and golf.

CHRONOLOGY

- 1954** On May 5 General Alfredo Stroessner, who is commander in chief of the military and head of the Colorado Party, overthrows the government of President Federico Chávez in a bloody coup; two months later voters confirm Stroessner as president in a single-candidate election; Stroessner declares a state of siege in both Asunción and the interior, which remains in place for most of his 32-year tenure as president.
- 1956** President Stroessner forces into exile Epifanio Méndez Fleitas, his rival in the Colorado Party, and purges the military of Méndez's supporters; leaders of Paraguay's opposition parties flee the country; Paraguay signs an agreement whereby Brazil will finance a \$19 billion hydroelectric dam on the Paraná River between the two countries in exchange for favorable energy rates after the dam's completion.
- 1958** Stroessner is reelected to a five-year term; guerrilla insurgents terrorize the countryside, as financed by Cuba and Venezuela.
- 1959** After a two-month period of attempted liberalization, Stroessner reinvokes the state of siege and dissolves the legislature.
- 1960** In legislative elections Stroessner supporters in the Colorado Party obtain all 60 seats; Paraguay closes diplomatic relations with Cuba.
- 1963** A faction of the ousted Liberal Party participates in elections with Stroessner's consent and gains 20 seats; Stroessner is reelected president.
- 1964** The Febrerista Party is legalized.
- 1966** In the wake of a police scandal, Stroessner dismisses Minister of Interior Edgar Ynsfrán.
- 1967** President Stroessner has the constitution altered to expand the legislature to two houses and to permit him to run for two more terms.
- 1968** Paraguay signs the La Plata Basin Pact, an agreement among Argentina, Bolivia, Brazil, Paraguay, and Uruguay on the joint development of the La Plata basin; Stroessner is reelected.
- 1970** President Stroessner lifts the state of siege in the interior.
- 1973** Stroessner is reelected; construction begins on the Itaipú Dam between Brazil and Paraguay, boosting Paraguay's economy but also spurring heavy Brazilian immigration.
- 1977** Domingo Laíno, a leader of the dissident faction of the Liberal Party, renames his group the Authentic Radical Liberal Party (PLRA) and begins to publicly accuse Stroessner of corruption, human rights violations, and mismanagement of Itaipú Dam finances; in response to reports of human rights violations, the United States drastically decreases military assistance to Paraguay, in place since 1947.
- 1978** Having amended the constitution again to permit himself to run, Stroessner is reelected.
- 1979** The legal Febrerista Party joins the illegal Authentic Radical Liberal Party (PLRA), Christian Democratic Party (PDC), and Mopoco Party in the National Accord, an agreement to coordinate the strategy of opposition parties.
- 1980** The OAS condemns human rights violations in Paraguay.
- 1982** Laíno is forced into exile; construction of the Itaipú Dam is completed, and the economy slows drastically.
- 1983** Stroessner is reelected.
- 1987** Stroessner lifts the state of siege in Asunción.
- 1988** Stroessner is reelected to his eighth term as president.
- 1989** General Andrés Rodríguez leads a coup ousting Stroessner; Rodríguez is elected president.
- 1992** A new constitution is promulgated on June 20, but the ceremony is boycotted by President Rodríguez, senior army officials, and members of the Supreme Court.
- 1993** Colorado Party candidate Juan Carlos Wasmosy wins the presidency with 40 percent of vote, becoming the first civilian president since 1954; the Colorados fail to gain a majority in either house.
- 1994** Peasants demanding price subsidies for cotton clash with police; unions and peasant organizations stage a general strike to demand pay hikes and land reform and to protest planned privatizations. Congress approves a law banning members of the armed forces from joining political parties; the government and military high command initiate proceedings to have the law declared unconstitutional.
- 1995** President Wasmosy reshuffles the military high command, forcibly retiring two senior officials who questioned his authority; Colorado and opposition parties agree on legislation to break the Colorado Party's link with the armed forces.
- 1996** President Wasmosy dismisses General Lino César Oviedo for participating in political activity; Oviedo refuses dismissal amid speculation of a coup and is arrested for insurrection.

- 1997** General Oviedo wins the Colorado nomination for president over party president Luís María Argaña and former finance minister Carlos Facetti; a liquidity crisis forces the central bank to close three banks and place nine more “under observation.”
- 1998** A military tribunal sentences Oviedo to 10 years in prison for his coup attempt; Oviedo’s running mate, Raúl Cubas Grau, is named the Colorado candidate for president; upon being elected president, Cubas pardons Oviedo. As the banking crisis intensifies, eight financial institutions are closed; Transparency International ranks Paraguay the second-most corrupt nation of 85 covered.
- 1999** Vice President Argaña is assassinated; Congress impeaches Cubas, who resigns and flees the country with Oviedo; Senate president Luís Ángel González Macchi of the Colorado Party is sworn in to serve the remainder of Cubas’s five-year presidential term.
- 2000** Julio César Franco of the Liberal Party is elected vice president, breaking through the Colorados’ 50-year hold on power in Paraguay; Oviedo and two others are convicted in absentia for the murder of Vice President Argaña.
- 2001** The head of the central bank is accused of fraudulently transferring \$16 million to a U.S. bank account and resigns.
- 2002** President González is accused of corruption; street protesters demand his resignation. Congress votes to impeach González, but he is not voted out of office.
- 2003** Nicanor Duarte Frutos, of the Colorado Party, wins the presidential election. González is put on trial for corruption and forbidden to leave the country.
- 2004** Peasants protest the loss of their land and demand that land be redistributed. Oviedo is arrested at the airport upon arriving in Paraguay, returning from exile in Brazil.
- 2005** Duarte promises to crack down on organized crime.

PE

CAPITAL

Lima

HEAD OF STATE

President Alejandro Toledo Manrique (from 2001)

HEAD OF GOVERNMENT

Prime Minister Pedro Pablo Kuczynski (from 2005)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

27,925,628 (2005)

AREA

1,285,220 sq km (496,223 sq mi)

MAJOR ETHNIC GROUPS

Mestizo, Amerindian

LANGUAGES

Spanish (official), Quechua

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Nuevo sol

NATIONAL FLAG

Tricolor of red, white, and red vertical stripes

NATIONAL EMBLEM

A gold-rimmed shield divided horizontally into two parts. The red lower portion is occupied by a golden cornucopia spilling out gold coins. The upper portion is divided into two halves, with a golden llama on the left and a leafy green cinchona tree on the right. The shield is flanked by crossed national flags. The design is crested by branches of palm and laurel tied with a red ribbon.

NATIONAL ANTHEM

“We Are Free, Let Us Remain So Forever”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), May 1 (Labor Day), June 24 (Day of the Peasant), July 28 and 29 (Independence Days), August 30 (Santa Rosa de Lima Day), October 8 (Battle of Angamos), November 2 (All Soul’s Day), November 5 (Puno Day), December 9 (Battle of Ayacucho Day), Christian festivals of Epiphany, St. Joseph’s Day, St. Peter and St. Paul Day, Assumption, Our Lady of Mercy Day, All Saints’ Day, Immaculate Conception, Christmas, Holy Thursday, Carnival (three days in March), Good Friday, Ascension, and Corpus Christi

DATE OF INDEPENDENCE

July 28, 1821

DATE OF CONSTITUTION

December 31, 1993

GEOGRAPHICAL FEATURES

Located in western South America, Peru occupies an area of 1,285,220 sq km (496,223 sq mi), extending 1,287 km (800 mi) southeast to northwest and 563 km (350 mi) northeast to southwest. Its long Pacific coastline stretches 2,414 km (1,500 mi).

Peru shares its border of 5,536 km (3,440 mi) with Ecuador, Colombia, Brazil, Bolivia, and Chile. The capital is Lima. Other major urban centers are Arequipa, Trujillo, Chiclayo, Iquitos, Piura, Chimbote, Huancayo, and Cuzco.

The country is vertically divided into three well-defined topographic regions: the *costa*, the *sierra*, and the *selva*.

The *costa* is defined as the littoral and the foothills of the Andes, 16 to 160 km (10 to 100 mi) wide, crossed by some 50 rivers. It is broadest in the north where it merges with the Sechura Desert. The dry flat plains near the coast are known as the Low Costa, the dry Andean foothills as the High Costa. The *costa* makes up some 11 percent of the national territory.

The *sierra* runs parallel to the coast and forms the continental divide in Peru. The Cordillera Central and the

Peru

Cordillera Oriental merge in central Peru with the Cordillera Occidental. The highest section of the Cordillera Occidental, called the Cordillera Blanca, has a number of snow-capped peaks, of which the tallest, Mount Huascarán, is 6,768 m (22,205 ft) high. The Cordillera Central, run-

ning south from the Ecuadorian border, culminates in the Cordillera Vilcabamba, Cordillera Vilcanota, and Cordillera Carabaya and ultimately forms the eastern rim of the Lake Titicaca basin. The sierra makes up about 26 percent of the national territory and is the home of the Amerindians.

1870 Peru

The *selva*, constituting 63 percent of the national territory, is divided into two zones: the mountain slopes and valleys, or High Selva, and the rain forest, or Low Selva.

The country has two drainage systems: rivers flowing into the Pacific and those flowing into the Amazon basin. About 50 rivers flow west into the Pacific. The more complex system of rivers flowing east includes the Marañon, which originates in Lake Lauricocha, often cited as the source of the Amazon. Other east-flowing rivers include the Huallaga, the Apurímac, and the Urubamba.

The country's best-known lake is Lake Titicaca, which it shares with Bolivia. Titicaca is the highest lake of its size in the world, with a length of 222 km (138 mi), an average width of 60 km (37 mi), an area of 8,288 sq km (3,200 sq mi), and a maximum depth of 366 m (1,200 ft). The Andes region is noted for its numerous thermal springs.

CLIMATE AND WEATHER

Although Peru is within the tropical zone, its climate is influenced by the cold Humboldt Current. The average temperature in the coastal region is 12°C to 32°C (54°F to 90°F). The *costa* is highly vulnerable to the weather phenomenon known as El Niño, whose effects include elevated oceanic temperatures and increased rainfall.

Lima has an average annual temperature of 19.4°C (67°F), with no extreme variations. The prevailing coastal

winds from the southwest warm as they blow across the land to produce a low-hanging fog known as *garúa*. The sierra experiences little seasonal variation in local temperatures but great changes between day and night. Temperatures can drop from 23.9°C (75°F) to freezing within hours. In the eastern jungle temperatures range from 24°C to 35°C (75°F to 95°F).

The rainy season in the Andes extends from October to April. The region between the Western and Central cordilleras receives scant rain, while the region between the Central and Eastern cordilleras receives heavy rainfall, especially from January to March. Precipitation increases toward the east, with the High Selva averaging 396 cm (156 in) and the Low Selva 254 cm (100 in). There is no dry season, and rain falls at least 200 days during the year. At higher altitudes snow falls during the southern winter.

The prevailing winds are from the east and the southwest.

FLORA AND FAUNA

Peru is home to a wide variety of plants and animals that have adapted to its varied climates and landscapes. Peru's Amazon basin is one of the top ten biodiversity areas in the world. Many of Peru's plants are unique to the country, such as the hardy *Polylepis* trees, which grow at high elevations. Some areas have been deforested.

Coastal animals include sea lions, pelicans, terns, flamingos, penguins, and the brown booby. In the highlands there are llama, alpaca, vicuña, and alpaca, as well as hummingbirds, puna ibis, and the Andean condor. The Andes are also home to tapirs, capybaras, spectacled bears, monkeys, and jaguars. A total of 16 percent of the country is designated as national parks and wildlife preserves, where animals are protected.

ETHNIC COMPOSITION

The population is estimated to be 45 percent Amerindian, 37 percent mestizo (of mixed Amerindian and white ancestry), 15 percent white, and 3 percent other, including black, Japanese, and Chinese.

The sierra is the home of the Amerindians, particularly the Aymara and the Quechua. An estimated 120,000 peasant families have left their homelands in the central Andes and Amazon regions to seek shelter in the cities since 1980. Outside mainstream Amerindian life is the *cholo*, a term traditionally applied to acculturated, Spanish-speaking Amerindians. With the spread of education and the migration of Amerindian labor into the cities, the number of *cholos* has increased significantly. President Alejandro Toledo is of Quechua origin, making him the first president to come from Peru's native ethnic group.

Some 100,000 Amerindians live in Peru's lowland forest, mostly members of the Campa, Chunchu, Zaparo, and Jívaro, the last group noted for its isolation and practice of headhunting.

Foreign communities are recent arrivals, and few constitute sizable groups. There are resident nationals from Chile, Bolivia, and Ecuador as well as other resident aliens, such as Levantine Arabs, eastern European Jews, Chinese, and Japanese, the most notable of whom is the former president Alberto Fujimori.

LANGUAGES

The official language of the nation is Spanish, with Quechua, Aymará, and other languages denoted as official on regional bases. Spanish remains the working language of government, the media, education, and commerce and is spoken and understood by all educated Peruvians.

Quechua, outlawed following the Amerindian revolt of 1870 but restored as an official language in 1975, is the national lingua franca of the Amerindians and has largely displaced Aymará, an older rival once spoken widely

throughout the sierra. Linguists have identified 28 Quechua dialects.

Hundreds of local tribal languages are spoken in the *selva*. These include Zapara, Cahuapana, Quechumara, and Jívara, belonging to the Andean language family; Panoa and Witoto, belonging to the Equatorial stock; and Campa, Piro, and Masco, belonging to the Arawak stock.

RELIGIONS

Roman Catholicism is the official religion, followed by about 90 percent of the population. Mormonism, Protestantism, Jehovah's Witnesses, and other evangelical faiths claim an estimated 6 percent of the population, mostly in rural areas. The constitution guarantees religious freedom.

The Roman Catholic Church has supported social reforms since 1968. The clergy is deeply concerned with the growth of the urban poor and has supported land protests among peasants in southern areas such as Puno. The Catholic Church remains staunchly opposed to birth control and has clashed with the government over efforts to control population growth.

Ecclesiastically, the country is divided into seven archdioceses (Lima is the seat of the prelate of Peru), 18 dioceses, eight apostolic vicariates, and 11 prelatures. The Catholic Church is faced with a serious shortage of priests; many bishops and priests are non-Peruvians. There are also parish schools and lay organizations, mostly societies or brotherhoods, which operate as mutual aid societies.

HISTORICAL BACKGROUND

Peru was founded in the 13th century by the Quechua emperor Sapa Inca, traditionally held to be the son of the sun god. Over the next three centuries the Inca Empire spread into modern-day Ecuador to the north and modern-day Chile to the south. The empire was maintained through an elaborate network of highways, with the help of a small Cuzco hierarchy of priests who looked after the economic and spiritual interests of nearly 12 million people. The end of the empire began when Francisco Pizarro's small band of conquistadores arrived in 1532; the civil war between the two Inca brothers Atahualpa and Huascar enabled the Spaniards to seize the empire within a year. Lima was established in 1535 and soon became the capital of the Spanish viceroyalty of South America (outside Venezuela). Peru was literally a gold

mine for the Spaniards. Its mines and *encomiendas* (serfs) were the backbone of the imperial economy. The Spanish hold on the empire was never seriously challenged, outside of the 1780 revolt of the legendary Inca rebel Tupac Amaru, which was quelled easily.

In 1820 Simón Bolívar and José de San Martín issued the call for the continent's liberation from Spain; San Martín landed on Peruvian shores in 1820 and on July 28, 1821, proclaimed Peru's independence. Royalist resistance did not end until Bolívar, at Junín, and Antonio José de Sucre, at Ayacucho, defeated the Spaniards in 1824. In 1866 a Spanish attempt to retake Peru was frustrated off Callao. Spain recognized Peru's independence in 1879.

Independence was immediately followed by the War of the Pacific (1879–85), in which Chile defeated Peru and Bolivia and forced Peru to cede the nitrate provinces of Tarapaca and Arica. The late-19th-century Peruvian governments were military or autocratic, or both, yet some of them were progressive and abolished Amerindian tributes and other harsh features of the colonial regime. Peru entered the 20th century with a democratic regime in place, but the period of reform ended in 1919 when Augusto Leguía took power in a military coup. Under his leadership Peru became heavily dependent on the United States, which received extensive rights to exploit mineral and oil deposits. In opposition to Leguía, Victor Raul Haya de la Torre founded the American Revolutionary Popular Alliance (APRA), which played a significant role in Peruvian politics for the remainder of the 20th century. Leguía was overthrown in a military coup in 1930.

Between 1930 and 1990 Peru experienced scores of subsequent military coups. In between, a number of popular presidents held sway, including Manuel Prado, José Luís Bustamante, and Fernando Belaúnde Terry. In 1985 the APRA candidate Alan García Pérez won the presidential election by a large margin. He was succeeded in 1990 by Alberto Fujimori. In late 1999 Fujimori, who had been elected to two consecutive terms, announced his decision to seek a third term despite a constitutional ban. In early 2000 he forced a favorable ruling on the matter from the constitutional court. In the election he won a disputed victory over Alejandro Toledo amid allegations of widespread fraud. Within two months the administration was rocked by two scandals, both involving Vladimiro Montesinos, the head of Peru's intelligence service. In the wake of these scandals, Montesinos fled the country and Fujimori announced from Japan that he was resigning as president and would not return to Peru. In his absence Valentín Paniagua Corazao was named interim president until new elections could be held in 2001. In 2001 Alejandro Toledo was elected president. Meanwhile, Montesinos was extradited from Venezuela to face trial.

Toledo's first three years of office saw substantial economic growth tempered by political turmoil. His efforts to privatize two state power companies came to naught

after violent protests. Elsewhere, the parliament accused Fujimori of treason, and Montesinos was convicted of corruption, abuse of power, conspiracy, and embezzlement and sentenced to jail for several years. The Truth and Reconciliation Commission investigating atrocities committed by terrorist insurgent groups as well as the federal government through the 1980s and 1990s determined that nearly 70,000 people were killed. By 2004 Toledo's popularity had plummeted.

LIST OF MODERN RULERS

1930–31	Luis Miguel Sánchez Cerro
1931	David Samanez Ocampo
1931–33	Luis Miguel Sánchez Cerro
1933–39	Oscar R. Benavides
1939–45	Manuel Prado Ugarteche
1945–48	José Luis Bustamante y Rivero
1948–56	Manuel A. Odría
1956–62	Manuel Prado Ugarteche
1962–63	Ricardo Pío Pérez Godoy
1963	Nicolás Lindley
1963–68	Fernando Belaúnde Terry
1968–75	Juan Velasco Alvarado
1975–80	Francisco Morales Bermúdez Cerruti
1980–85	Fernando Belaúnde Terry
1985–90	Alan García Pérez
1990–2000	Alberto Ken'ya Fujimori
2000–01	Valentín Paniagua Corazao
2001–	Alejandro Toledo Manrique

CONSTITUTION

According to the constitution of 1993, executive power is vested in the president, who is elected by an absolute majority for a five-year term with the possibility of one consecutive reelection. In 1996 the Congress reinterpreted the term limits, allowing President Fujimori to seek a third term in 2000. Two vice presidents are also popularly elected but have no constitutional functions unless the president is unable to discharge his duties. The president has the power to submit draft bills, review laws drafted by Congress and, if delegated by Congress, enact laws himself. He can dissolve the Congress in certain circumstances.

The principal executive body is the Council of Ministers, headed by a prime minister and appointed by the president. The prime minister does not exercise executive power. All presidential decree laws or draft bills sent to Congress must be approved by the Council of Ministers.

Voting is by secret ballot and compulsory for all citizens from 18 to 70. Members of the military may not vote.

PARLIAMENT

The legislative branch consists of the unicameral Democratic Constituent Congress (Congreso Constituyente Democrático), which has 120 members elected for five-year terms from lists of candidates supplied by the national parties. In addition to passing laws, Congress is responsible for passing the budget, approving loans and international treaties, and drafting and passing bills. The president can block legislation with which the executive branch does not agree. Congress convenes every year on July 28 and continues its sessions for 120 days.

POLITICAL PARTIES

Peru has numerous political parties. Alianza Popular Revolucionaria Americana (APRA) is a left-wing populist party; it has been the vehicle for radical dissent since 1924 and is also called the Peruvian Aprista Party (PAP). The Independent Moralizing Front (Frente Independiente Moralizador, FIM) is an organization of independent candidates formed in reaction to the exposure of ongoing government corruption. National Unity is a center-right party headed by Lourdes Flores. Perú Posible (PP) is a movement that was founded in 1995 to support the presidential candidacy of Alejandro Toledo. Popular Action (AP) is a liberal, pro-U.S. party founded as an alternative to the APRA. The Union for Peru (UPP) is a centrist party. Other parties include Solución Popular and Somos Peru.

LOCAL GOVERNMENT

For the purposes of local government, Peru is divided into 24 departments, 12 regions, and the constitutional province of Callao. Departments are further divided into 148 provinces and 1,662 districts.

Each department is headed by a prefect, each province by a subprefect, and each district by a governor. All territorial units are administrative subdivisions and have no local popular government. A reorganization law was promulgated in March 1987, under which Peru's 24 departments and one province were to be replaced by regions, with each given economic and administrative autonomy as part of an effort to decentralize government. In 2002 Peruvians voted for new regional presidents and other leaders. As of 2004 the authority that would be exercised by regional governments had not yet been clearly defined, but the national government had plans to give more powers to the regions over several years.

Amerindian communities have autonomous self-governing institutions with legal status but limited powers. There are about 5,000 such communities, all of which are entitled to elect and remove their own officials.

LEGAL SYSTEM

Peru's justice system is generally based on the Napoleonic Code. At the top is the Supreme Court, whose 16 members are appointed by the National Council of the Judiciary for permanent terms that end at age 70. The Constitutional Tribunal interprets the constitution on matters of individual rights. Superior courts in departmental capitals review appeals of decisions by lower courts. Courts of first instance are located in provincial capitals and are divided into civil, penal, and special chambers. The judiciary has created several temporary specialized courts to reduce the large backlog of cases pending final court action.

Civil crimes are tried in civilian courts, although military courts have broad powers over cases involving treason, terrorism, and narcotics trafficking. A system of public defenders exists but is inadequately supported. In accordance with the constitution, arrested persons are presumed innocent. Nevertheless, jails are clogged with large numbers of untried prisoners whose cases have not been adjudicated. A trial review system provides for closed judicial hearings, followed by public trials in superior court, for those held for probable cause at lower levels. The Supreme Court hears final appeals.

The constitution requires that persons arrested be arraigned within 24 hours, except in cases involving drug trafficking, terrorism, or espionage, for which the limit is 15 days. Arrested persons are entitled to have an attorney present when they make statements to the police. Habeas corpus is supported by the constitution and respected in practice; however, authorities can detain individuals indefinitely in areas where states of emergency are in effect.

The largest prisons are the centers of rehabilitation at Lurigancho and Callao; both facilities are severely overcrowded. The most dangerous criminals are sent to the penal island of El Fronton or the jungle prison of El Sepa. Female prisoners are confined at the women's prison in Chorrillos.

HUMAN RIGHTS

Peru's government generally respects the human rights of its citizens, but there are some serious violations. Police have been known to arrest and detain people arbitrarily, and torture and beatings occur with some regularity. Security forces occasionally harass witnesses to prevent them from filing charges. Prisoners suffer terrible conditions in jails, and there are often long delays in scheduling trials. The judicial system is notoriously inefficient. Though the government still occasionally threatens journalists, for the most part the press is free. There has been widespread violence against women and children, and both child labor and human trafficking are major problems.

FOREIGN POLICY

President Fujimori's top priority in foreign relations was repairing Peru's standing in the world financial community following the fiscal mismanagement and expropriation of foreign-owned assets by previous administrations. That task was set back with his self-coup, which entailed the dissolution of Congress, on April 5, 1992, which met with vigorous condemnation: The United States suspended most financial aid, as did Germany and Spain; Venezuela broke off diplomatic relations, and Argentina recalled its ambassador.

Fujimori worked to strengthen Peru's ties to Japan and other Asian nations. In 1996 the prime minister of Japan and the president of South Korea visited Peru. In the wake of the December 1996 siege by Tupac Amaru terrorists of the Japanese ambassador's residence in Lima, the Japanese and Peruvian governments consulted closely with regard to means of resolving the crisis. The Japanese prime minister Ryutaro Hashimoto visited Lima in April 1997 to express gratitude for the rescue operation eventually conducted by Peruvian security personnel.

Foreign relations improved as the government returned to democratic processes. Closer cooperation with the United States in fighting the war on drugs won Peru badly needed sponsorship in reintegrating itself into the world financial community: A program to encourage the growth of alternative crops reduced the coca acreage under cultivation by 40 percent from 1997 to 1999, and the military stepped up efforts to interdict narcotics trafficking. President Alejandro Toledo has given high priority to good relations with the United States, seeking support for efforts to encourage investment and reduce Peru's debt burden. In March 2002 President George W. Bush became the first sitting U.S. president to visit Peru.

Peru resolved a long-standing border dispute with Ecuador in 1998, signing a peace agreement that set a definitive border demarcation. As part of the agreement Peru ceded a small area, Tiwinza, to Ecuador. In 1999 Peru signed an agreement that ended a long-standing border dispute with Chile.

Peru is a member of the United Nations, the World Trade Organization, and the Asia Pacific Economic Conference and has participated in negotiations to create a free-trade area of the Americas. The United States and Peru have long had close relations and most recently have been collaborating on programs to stop drug trafficking.

DEFENSE

The defense structure is headed by the president. The line of command runs through the commanders of the three branches of the armed forces: the Ejército Peruano (army), Marina de Guerra (navy, naval air, marines, and coast guard), and Fuerza Aerea (air force). The Armed

Forces Joint Command is a planning body, the presidency of which rotates among the three services every year. Each branch of the armed forces has a chief of the general staff. The country is divided into five military regions, with headquarters at Piura, Lima, Arequipa, Puno, and Loreto. The navy is divided into a Pacific Fleet and an Amazon River Force. Internal security is supplied by both the military and the Peruvian National Police.

Military manpower is obtained through the conscription of all able-bodied males over the age of 18. The period of service is two years.

ECONOMY

After several years of rapid growth and economic reforms in the 1990s, Peru's economy stagnated between 1998 and 2001. The economy recovered in 2002 under President Toledo and remained strong through 2004. Inflation and the deficit were under control, and foreign reserves grew.

The nation has been working to attract foreign and domestic investment, lowering trade barriers and eliminating restrictions on capital; Peru currently has one of the most open investment regimes in the world. Peru's main trading partners are the United States, Spain, the United Kingdom, Switzerland, China, Chile, Colombia, and Brazil. The country exports fish, copper, zinc, gold, petroleum, coffee, and clothing and imports machinery, vehicles, processed food, petroleum, and steel.

The government still needs a great deal of foreign investment to modernize the nation's economy. Unemployment is relatively high, and poverty is a major problem, and the state lacks revenues to invest in social services.

Among Peru's most lucrative products are cocaine base and high-purity cocaine. Though the government claims to have reduced coca cultivation by 70 percent since 1995, some 30,000 hectares are still devoted to growing the crop, and about 200,000 Peruvians work in the industry. No one knows exactly how much the cocaine industry is worth, but estimates range from \$300 to \$600 million a year.

ENVIRONMENT

Peru's greatest ecological challenge is the quality of its soil, which is poor outside of the fertile *montaña*. The rugged sierra supports relatively sparse plant life, and the dry, sandy reaches of the coastal plain support mainly desert vegetation. Both regions are periodically ravaged by El Niño, a reversal of atmospheric conditions occurring approximately every 10 years around Christmas time in which heavy rains flood the coastal desert and drought parches the sierra. Desertification is aggravated by agricultural inefficiency: In most smallholdings, crop rotation and fallowing are the only forms of conservation practiced, and overgrazing in the *costa* slopes has led to considerable soil erosion.

The need to sustain a growing population and garner export dollars has resulted in the largely uncontrolled exploitation of the Amazon region. Deforestation, some of it the result of illegal logging, is a growing problem. Colonists, miners, and multinational oil firms cleared an average 2,168 sq km (837 sq mi) of rain forest per year from 1990 to 1995. Oil and mineral extraction have also contaminated the Río Tigre and other rivers.

Also of concern is glacial melting in the Peruvian Andes. From 1972 to 1999 global warming melted some 12 billion cubic meters of snow, severely threatening future access to freshwater for drinking and irrigation.

Pollution is increasing, both in the air, especially in Lima, and in rivers and coastal waters, as a result of runoff from mining and from the poor management of municipal wastewater.

LIVING CONDITIONS

The water supply is unreliable and contaminated in many places; one-quarter of urban residents and as many as half of rural people lack both clean water and secure sewage systems. Though the wealthy live in modern homes with many amenities, many people live in shacks on the outskirts of cities or in structures made of wood and woven mats in the country. Public transportation is plentiful and cheap, but it is not always rapid or safe; armed robberies are known to occur on buses and trains.

HEALTH

The health of Peru's people has improved tremendously since the early 1990s, thanks in part to U.S. Agency for International Development (AID) programs designed to improve the economy by improving health. Since 1991, life expectancy has increased, and infant mortality has been cut in half. Almost all children under the age of one receive important vaccines; however, diseases such as cholera, hepatitis, malaria, rabies, and yellow fever still occur frequently. Most health-care facilities are located in urban areas; there are few clinics or medicines in rural areas. Poor people usually cannot afford to pay for medical care.

FOOD AND NUTRITION

Peru has a variety of regional cuisines. Potatoes are a common ingredient, as are vegetables such as onions and tomatoes. Coastal people eat a good deal of seafood, including shrimp, squid, octopus, and mussels; *cebiche*, which is raw fish marinated in lemon juice, cilantro, chili, and onions, is a local specialty. Beef and chicken are common meats everywhere. People in the mountains still eat roast guinea pig, an Inca delicacy. *Sopa a la criolla* is a spicy

noodle soup with vegetables, beef, egg, and milk. People in the mountains eat mostly potatoes, beans, squash, corn, barley, and wheat, supplemented with wild fruits and nuts and animals they hunt.

Half of Peru's population is quite poor and subject to malnutrition and even starvation. Still, most Peruvians like to show hospitality to guests by serving them food.

STATUS OF WOMEN

Peru's constitution provides for equality between the sexes, and the 1995 amendments to the Employment Promotion Law, as well as other laws pertaining to marriage, divorce, and property rights, prohibit discrimination against women. In 1997 Congress passed a law mandating that all party candidate lists for congressional and municipal elections include at least 25 percent women.

The government actively promotes women's advancement. In 1993 the state created the Permanent Commission of the Rights of Women to confront domestic violence and other issues, and in 1995 Congress approved the creation of the Special Commission of Women, aimed at encouraging the participation of women in government and politics. Women's organizations have undertaken similar programs to identify female candidates, increase the number of female voters, prepare a women's political agenda, and train women elected to office. The government-supported Mibanco program provides credit to small businesses started by enterprising women.

Traditional assumptions and misconceptions still impede access by women to leadership roles in both the public and private sectors. Historically, women have suffered disproportionately from the country's pervasive poverty and unemployment; in the Americas, only Haiti and Bolivia have higher rates of maternal mortality, and one-fifth of the country's women have never attended school, three times the proportion of men. The government, with U.S. AID assistance, has established a National Network for Girls' Education in Peru, with the intent of convincing people that female education is important.

WORK

The unemployment rate in metropolitan Lima in 2004 was a fair 9.6 percent, but there was widespread underemployment. Many poor rural people move to cities in the hope of finding paid employment. Child labor is a serious problem. Both children and adults live as scavengers, trying to make a living on the streets or by selling drugs, which is attractively lucrative; the coca industry employs a large number of Peruvians. Many people work in factories, making clothing for the U.S. market, or in industries such as petroleum refining. Commercial crops include coffee, cotton, and sugarcane; agricultural laborers often travel far from their homes to work on large commercial farms. Many rural people live as subsistence farmers, growing food, cutting firewood, weaving cloth, and raising animals to support their families.

EDUCATION

Education is free, universal, and compulsory for nine years, between the ages of six and 15, though in practice many children never attend school. The school year runs from March to December. The language of instruction is Spanish throughout. Schooling lasts for 11 years, as divided into six years of primary school, a basic or lower-secondary cycle of three years, and a specialized or upper-secondary cycle of two years. The primary curriculum emphasizes language, mathematics, health, nature, and social studies. Nearly all secondary schools are in urban localities. The basic cycle curriculum stresses literature, language, mathematics, fine arts, and physical education; students in the specialized cycle's humanities track study Peruvian history, political economy, and social science; those in the science track study biology, physics, chemistry, geometry, and trigonometry.

To enter a university a student must pass an entrance examination; most students who attempt these examinations do not pass. There are few spots for students, and competition is fierce. Wealthy families prefer to send their children to private universities, which have extremely high tuition. Lima's University of San Marcos was founded in 1551, making it the oldest university in South America.

Poor rural people like the idea of education, seeing it as a means for their children to improve their lives. As such, teachers are highly respected. In rural areas the

1878 Peru

local teacher may additionally function as a community leader. Most teachers are women.

SCIENCE AND TECHNOLOGY

Although Peru's technological infrastructure is primitive, the telephone system is adequate, and the number of Internet users is rapidly increasing; almost three million people were using the Internet in 2003. The government wants to increase Peru's scientific and technological expertise as a means of reducing poverty, creating jobs, and strengthening democracy. In 2004 Peru hosted the first meeting of Ministers and High Authorities of Science and Technology, to which all members of the Organization of American States (OAS) were invited. The meeting emphasized the importance of scientific education for the entire region.

MEDIA

The freedom of the press improved noticeably after President Fujimori was ousted. Fujimori insisted that journalists share the government's opinion and imprisoned journalists who disagreed with him. He also shut down radio programs that insulted the government. He bribed the owners of two major television stations to give him on-air support, the discovery of which added ammunition to the charges of those who wanted to end his regime.

Most of Peru's broadcasters and newspapers are privately owned. The state runs Televisión Nacional de Peru and Radio Nacional. There are many radio and television stations in Lima, and radio and regional newspapers are available in the countryside. Lima has many daily newspapers, including *Ojo*, *Gestión*, *El comercio*, and *La república*.

CULTURE

Quechua music is still popular in Peru; it is usually performed on panpipes, flutes, drums, rattles, and harps. Mestizo musicians add horns, violins, and guitars to the native ensemble. Pre-Columbian art consisted entirely of pottery, weaving, metalwork, and stone carving. After the Spanish arrived, artists began painting, developing a unique style that emphasized folklore. Peru has produced many well-known writers, including Mario Vargas Llosa, Sergio Bambarén, and César Vallejo. Peru's architecture shows a combination of Spanish style mixed with native Amerindian influences.

FOLKLORE AND MYTHOLOGY

The Inca people lived in Peru in the 1400s and 1500s. They founded an empire centered in Cuzco stretching 2,500 miles down the Andes Mountains. They believed that particular places were spiritual centers; the tops of mountains were especially important to them, and they would leave small offerings to local deities while traveling. They worshipped the sun god Inti and built an elaborate gilded temple to the sun in Cuzco. They also practiced human sacrifice, selecting children they thought would

please the gods and killing them by strangulation or by hitting them on the head. These children were then left on the mountainside.

ENTERTAINMENT AND RECREATION

Peruvians love to listen to music and dance. Native music is popular, and large crowds attend performances of native music in cities and towns. Cities offer an array of urban activities, including cafés, nightclubs, discos, restaurants, and shopping areas. Many people like to go to movies. Religious and secular festivals are common events that involve all members of the community. One of the things Peruvians like best is simply spending time with friends and family, eating, drinking, and talking late into the night.

ETIQUETTE

Normal Western etiquette practices are standard in Peru. Tipping is customary in restaurants but not necessarily in taxis. Though Peruvian people are not always punctual, they do expect visitors to arrive on time. Peruvians consider it polite to offer a guest an item that he or she admires, and they may take offense if the guest refuses to accept the impromptu gift.

FAMILY LIFE

Peruvian households are typically large, including immediate family, grandparents, other relatives, and domestic servants. All families care for their own elderly and disabled members. Mestizo households are the largest and are often headed by women who organize family life and supervise servants. Quechua households are usually smaller, with a stronger emphasis on male dominance.

PERSONAL APPEARANCE

Most urban Peruvians dress in typical Western clothing. In the summer, many men wear open-necked shirts called *guayaberas*. Some Quechua still wear traditional handwoven clothes, though youth usually choose modern clothing instead.

SPORTS

Soccer and volleyball are the most popular sports in Peru, though people are beginning to play basketball and tennis, too. Horse racing, cockfighting, and bullfighting are popular spectator sports.

CHRONOLOGY

- 1945** Peru declares war on Axis powers; Peru becomes a charter member of the United Nations; José Luis Bustamante y Rivero of the National Democratic Front (NDF) coalition is elected president and NDF candidates sweep legislative elections.
- 1948** Bustamante is ousted in a right-wing military coup led by Manuel Odría; Odría outlaws opposition parties, dissolves labor unions, and imposes censorship.
- 1950** Odría is confirmed as president in an election in which his is the only name on the ballot.
- 1956** Opposition parties are legalized; in the first free election since 1948, former president Manuel Prado of the American Popular Revolutionary Alliance (APRA) becomes president; President Prado initiates numerous liberal reforms that, due to Peru's ongoing economic instability, are greeted with strikes and riots.
- 1960** Peru begins to nationalize its oil industry.
- 1962** In elections, none of the three major candidates wins enough votes, sending the choice of president to Congress; a military junta takes control of the government and installs General Ricardo Pío Pérez Godoy as president.
- 1963** The junta allows an election, which grants the presidency to former president Fernando Belaúnde Terry of the Popular Action Party; the APRA gains control of Congress.
- 1968** The government reaches a compensation agreement with the International Petroleum Company (IPC), a U.S. firm.
- 1969** Led by General Juan Velasco Alvarado, the military assumes control of government and suspends the constitution; Velasco's junta authorizes a program of land reform and seizes the assets of IPC, damaging Peru's relations with the United States.
- 1970** A major earthquake rocks northern Peru, killing 67,000 and leaving 600,000 homeless; the junta authorizes the nationalization of mines and private industries.
- 1972** An El Niño year seriously depletes anchovy supplies, crippling the fishing industry and hurting the national economy.
- 1973** Peru receives loans of \$470 million from the World Bank and \$30 million from the Inter-American Development Bank.
- 1975** Velasco is deposed in another military coup, led by General Francisco Morales Bermúdez; Morales schedules elections for 1980.
- 1978** Peru receives an International Monetary Fund (IMF) loan and institutes fiscal austerity measures; Morales summons the popularly elected

- Constituent Assembly to draft a new constitution and takes steps to encourage privatization and foreign investment.
- 1980** Former president Belaúnde wins the presidential election; the new constitution takes effect; Shining Path (Sendero Luminoso) and the Tupac Amaru Revolutionary Movement (MRTA), two extremist left-wing guerrilla groups, gain strength as the government cracks down on narcotics trafficking.
- 1985** In the midst of a severe economic and political crisis, voters oust President Belaúnde, electing Alan García Pérez of the APRA; García shocks the world financial community by announcing that Peru will spend no more than 10 percent of its export earnings to pay down its prodigious foreign debt.
- 1987** International groups refuse to provide additional financing to Peru.
- 1990** The annual rate of inflation reaches 3,000 percent; Alberto Fujimori of the Change 90 Movement is elected president.
- 1992** Shining Path leader Abimael Guzmán is captured; Fujimori dissolves Congress and sacks Supreme Court justices in a self-coup.
- 1993** A public referendum approves a new constitution expanding the powers of the president; the IMF restores Peru's borrowing rights; Shining Path car-bombs the U.S. embassy in Lima in July and kills 55 Ashaninka Indians in the Junín department in August.
- 1994** Fujimori's estranged wife, Susana Higuchi, announces she will run for president; Peruvians are allowed to invest in newly privatized state enterprises.
- 1995** President Fujimori wins a second term; fighting breaks out along an undemarcated area of the Ecuador-Peru frontier; Fujimori signs a blanket amnesty for all human rights abuses that may have been perpetrated by military and police members since 1980, provoking censure at home and abroad.
- 1996** In December, 14 MRTA rebels invade the Japanese ambassador's residence in Lima, taking hundreds of hostages.
- 1997** In April a commando attack ends the four-month embassy siege, rescuing 72 remaining hostages and killing all MRTA rebels; Congress passes legislation allowing Fujimori to run for a third term; after he dismisses three judges who rule the change unconstitutional, Fujimori's approval ratings drop to 20 percent.
- 1998** A return of the El Niño weather anomaly leaves 200 dead and 80,000 homeless and wreaks damages of \$700 million.
- 1999** Presidents Fujimori and Jamil Mahuad of Ecuador sign an agreement fixing a new border; the first strike since 1990 protests the government's failure to improve living standards; the last remaining commander of Shining Path, Oscar Ramírez Duránd, is captured in July.
- 2000** Fujimori is elected to a third term as president; a scandal erupts involving chief of intelligence Vladimiro Montesinos, and he is dismissed along with his alleged supporters in the military; while Fujimori is in Japan, opposition parties take control of Congress; Fujimori resigns as president, and elections are scheduled for 2001.
- 2001** Alejandro Toledo is elected president. Vladimiro Montesinos is arrested in Venezuela and extradited to Peru.
- 2002** President George W. Bush becomes the first sitting U.S. president to visit Peru. The Truth and Reconciliation Commission begins investigating atrocities supposedly committed during the 1980s and 1990s. Toledo attempts to privatize two state power companies but backs down after protests.
- 2003** The Truth and Reconciliation Commission determines that nearly 70,000 people were killed in clashes that took place during the 1980s and 1990s.
- 2004** Toledo's popularity declines. Construction begins on a gas pipeline between a jungle gas field and Lima.
- 2005** Nationalist army reservists attempt an uprising in the south of the country. Toledo declares a state of emergency in six central provinces after eight police officers are killed by Shinning Path guerrillas. Former President Fujimori is arrested in Chile.

NATIONAL FLAG

A white equilateral triangle at the hoist, with a blue stripe extending from the upper side and a red stripe from the lower

side. In the middle of the triangle is a bright yellow sunburst with eight rays (representing the eight provinces that rose in revolt against Spain in 1896). There is a star on each corner of the triangle, representing Luzon, Visayas, and Mindanao.

NATIONAL EMBLEM

A shield with a central oval (or cartouche) on which appears the eight-rayed sunburst found also on the national flag. The shield outside the cartouche is divided into three sections: three gold stars appear on a white background in the upper segment; a gold lion on a red field and a gold eagle on a blue field appear on the lower-right and lower-left segments, respectively. Below the shield is the name of the republic in Filipino on a white banner.

NATIONAL ANTHEM

"Land of the Morning"

DATE OF INDEPENDENCE

June 12, 1898 (from Spain); July 4, 1946 (from United States)

DATE OF CONSTITUTION

February 2, 1987

GEOGRAPHICAL FEATURES

The Philippine archipelago is located along the southeastern rim of Asia, forming a land chain between the Pacific Ocean on the east and the South China Sea on the west. The archipelago consists of some 7,100 islands and islets, of which only 700 are inhabited; 154 have areas exceeding 13 sq km (5 sq mi), and 11 have areas exceeding 2,590 sq km (1,000 sq mi). The 11 largest islands are Luzon (105,708 sq km; 40,814 sq mi); Mindanao (95,586 sq km; 36,906 sq

mi); Samar (13,079 sq km; 5,050 sq mi); Negros (12,704 sq km; 4,905 sq mi); Palawan (11,784 sq km; 4,550 sq mi); Panay (11,515 sq km; 4,446 sq mi); Mindoro (9,736 sq km; 3,759 sq mi); Leyte (7,213 sq km; 2,785 sq mi); Cebu (4,411 sq km; 1,703 sq mi); Bohol (3,864 sq km; 1,492 sq mi); and Masbate (3,269 sq km; 1,262 sq mi). These islands account for 95 percent of the land area, and Luzon and Mindanao together account for 65 percent.

Except for Luzon and Mindanao, the islands of the archipelago are the crests of submerged mountain ranges

Philippines

1884 Philippines

separated by shallow waters, except for the deeper Sulu Sea. Most of the islands have a simple north-to-south structural alignment. Another feature of the topography is its volcanism. The country has more than 47 volcanoes, of which a dozen are still active. The highest, Mount Apo (2,954 m; 9,690 ft), has three peaks, and Mount Mayon, the most famous, has a perfect cone rising 2,421 m (7,943 ft) above the Albay Gulf in southern Luzon; it has erupted 30 times since 1615. The mountain range culminates in Mount Polog (2,931 m; 9,613 ft) in northern Luzon. Mount Pinatubo, dormant since 1380, began erupting in the spring of 1991.

Luzon, Mindanao, and the Visayan Islands are generally considered as three separate geographical regions. Luzon, like Mindanao, is a series of peninsulas joined together by plateaus and lowland strips. It accounts for more than one-third of the national territory and is 400 km (250 mi) in length and between 120 and 160 km (75 and 100 mi) in width, being 222 km (138 mi) at its widest. The island has three north-to-south mountain ranges: the Sierra Madre, running close to the eastern shore; the Cordillera Central; and the Zambales Mountains. Between the Sierra Madre and the Cordillera Central is the Cagayan Valley, a rich agricultural region. West of the Cordillera Central lies the Central Luzon Plain, the country's largest single stretch of lowland. Mindanao has five major mountain systems and three great alluvial plains: the Agusan, Davao, and Cotabato valleys. The Cotabato lowlands, the scene of bloody conflicts between Moros and government forces, has extensive marshlands. The central mountain complex in Mindanao terminates in the northwest in the Bukidnon-Lanao highlands.

CLIMATE AND WEATHER

The Philippine archipelago lies entirely in the tropical zone. Most of the country, except along the east coast, has a summer season during April, May, and June and a season of heavy rains from June to October, although September and October are essentially transition months. The hottest months are April and May, but the seasonal variation between the hottest and coolest months is only 4.4°C (8°F). Temperatures are exceptionally uniform, with the annual average ranging from about 26°C to 28°C (79°F to 82°F). The only significant temperature variations are those that result from differences in altitude.

On the other hand, rainfall varies markedly as a result of differing exposure to the two major wind systems: the northeast monsoon in the winter and the southwest monsoon in the summer. The western sections of the country are generally the wettest, receiving from 2,030 to 3,550 mm (80 to 140 in) in the summer, while the east coast may receive up to 3,050 mm (120 in). Less rain, between 1,020 and 2,030 mm (40 and 80 in), is received in the Cagayan Valley in northern Luzon, the Cotabato and the Davao-Agusan valleys on Mindanao, and the central Visayan Islands.

The Philippines lies in the world's worst tropical cyclone belt. From 1900 until 1972 the Manila Weather Bureau recorded 1,533 typhoons, an average of 21 per year. They generally occur between June and November, although they have been reported during every month of the year.

Eastern section: 120 in

Cagayan Valley: 40 in to 80 in

FLORA AND FAUNA

The Philippines is home to lush vegetation and a profusion of animals. The most common trees are bamboo, mangrove, and palms, but there are over 10,000 plant species on the islands, including tropical hardwoods such as mahogany and many kinds of orchids and bougainvillea. Nearly half of the nation is still covered with native forests; much of the rest has been cut down by people practicing slash and burn agriculture or for timber. There are over 1,000 species of mammals, birds, and reptiles and a vast number of insect species. Notable animals include crocodiles, lizards, pythons, cobras and other snakes, peacocks, parrots, eagles, dwarf buffalo (tamaraw), and mouse deer. The oceans surrounding the islands are full of tropical fish, shellfish, sharks, swordfish, and dolphins.

ETHNIC COMPOSITION

The Philippines, in one sense, is a deeply fractionated and pluralistic society, with more than 50 ethnic groups; yet, in a more profound sense, Filipinos are imbued with a strong sense of national unity, stemming from a common cultural and racial history, a common religious faith, and a common language. The result has been cultural variety amidst national homogeneity. Although each group has a recognized core region, there is a fair amount of inter-spersion as a result of internal migrations. Furthermore, there are no exclusive ethnic neighborhoods, and there is readiness to adapt to prevailing local languages and social patterns. Inter-marriages among groups are frequent and unremarkable.

The racial homogeneity of the islands is rooted in the descent of the Filipinos from a small group of migrants from Southeast Asia, both Proto-Malay (Indonesian) and Deutero-Malay (southern Mongoloid), who pushed out earlier Negrito settlers who had found their way into the archipelago across the Borneo land bridge. Later, Indonesian, Chinese, Arab, and Spanish colonists added some variety to the racial stock but did not basically alter its composition. Today, ethnic Filipinos constitute 95 percent of the population (Christian Malays 91 percent and Muslim Malays 4 percent). Ethnic minorities make up only 5 percent of the population, of which the Chinese, the largest minority group, constitute one-third.

The Chinese are considered to be aliens, and they occupy an ambivalent position in society. While assimilated Chinese who have intermarried with Filipinos have been culturally accepted, ethnic Chinese without Philippine citizenship have been subjected to discrimination and restrictive legislation. Numbering 114,185 in 1973—only slightly greater than the estimated Chinese population of Manila in 1896—the Chinese community's cultural isolation and conspicuous economic success are resented by the majority. A 1974 presidential decree requiring the registration of all aliens was directed against the Chinese; by 1975 nearly 19,000 of them had filed applications for citizenship. In the early 2000s the Chinese population was estimated at one million, of which about 52 percent lived in Manila.

Americans form the second-largest foreign community. Other foreign groups are Spanish, Indian, British, and German.

LANGUAGES

The official languages of the Philippines are Filipino and English. There are also eight major dialects: Tagalog, Cebuano, Ilocan, Hiligaynon (Ilonggo), Bicolano, Waray-Waray, Kapampangan, and Pangasinan. English, introduced by the U.S. administration (against the wishes of President William McKinley), is the universal

language of government, mass communication, commerce, and higher education. For all practical purposes, the Philippines can be considered as an English-speaking country, with close to 52 percent of the population literate in that language. In several provinces the number of English speakers exceeds the number of Filipino speakers. Debates in Congress are usually conducted in English and are only later translated into Filipino by the Institute of National Language. Most of the Manila daily newspapers are published in English or in English and another language.

RELIGIONS

The Philippines is the only Asian country with a predominantly Christian population. In 1998, 83 percent of the population declared themselves Roman Catholics; other Christians numbered over five million, including almost two million Protestants. The largest religious minority, the Muslims, constituted about 5 percent of the population, with 3.4 million adherents. Animists, generally described as pagans, constitute about 0.7 percent of the population, Buddhists less than 1 percent.

Roman Catholicism, introduced in the 17th century, was accepted by the Filipinos with remarkable rapidity and soon became the national faith and an important element in the cohesiveness, continuity, and unity of Filipino culture. However, Roman Catholicism suffered a brief decline in the late 19th and early 20th centuries because of its association with Spanish colonial rule; the faith was forced to retreat further as it faced the onslaught of the nationalist Aglipayan movement and Protestant missions following the disestablishment of the church by the U.S. administration in 1902. By the 1930s, through a process of internal renewal, the Roman Catholic Church had regained most of its organizational strength and membership. Roman Catholicism also became identified with Filipino nationalism against both the United States and Japan. The church continues to exert a strong social and political influence. Although the separation of church and state was reaffirmed in the 1987 constitution, religious instruction in public schools is permitted.

Islam was introduced in the southern Philippines in the 14th century as a result of the expansion of Arab trade in Southeast Asia. Islam is practiced by some 14 different ethnic groups in the Philippines. The predominantly Muslim provinces are Mindanao and the Sulu and Tawi Tawi archipelagoes in the south. There are also 10 other provinces with sizable Muslim populations, each with its own imam. There are close to half a million Muslims residing in and around Manila.

Philippine Muslims, particularly the Tawsugs, are devoted to Islam to the point of fanaticism. The focal point of their faith is hostility to Christians, and they believe that anyone who kills a Christian will enter "heaven."

The reported Moro trait of running amok with the purpose of killing Christians is called *juramentado*.

HISTORICAL BACKGROUND

The first inhabitants of the Philippines probably arrived more than 300,000 years ago from Asia. Wave after wave of immigrants came to the islands, including Negritos, Malayans, and Indonesians. In 1380 Islam was introduced to the islands by a noted Arabian judge named Makdum. The first European contact came in 1521 when Ferdinand Magellan claimed the islands for Spain. Since that time the Philippines came under three colonial rulers: the Spanish, from the 1570s to the end of the Spanish-American War in 1898; the Americans, from 1898 to 1942 and from 1945 to 1946; and the Japanese, from 1942 to 1945. The islands were also briefly under British rule from 1762 to 1763.

Spanish rule was the longest and produced the most changes. The success the Spanish achieved in Hispanizing Filipino society was paralleled only by the rapidity with which Filipinos were converted to the Christian faith. Among the most significant and enduring results of Spanish rule were the introduction of the concept of private property (replacing the traditional communal ownership of land), the creation of a judicial organization and legal processes based on Spanish law, and the establishment of an administrative organization that retained traditional units at the local level. U.S. colonial policy, on the other hand, recognized the need to prepare Filipinos for self-government and therefore addressed a wide range of political, administrative, social, and economic reforms. Some 440 laws were adopted to initiate and hasten the process of modernizing the country. The temporal power of the Roman Catholic Church was greatly reduced, and the Philippines became a secular state. Government administration was strengthened and centralized, roads and public services were improved, educational facilities were expanded, the judicial system was reorganized (although Spanish civil law was retained), a constabulary was created as the national law enforcement agency, English was introduced as the language of education and administration, and Filipino participation was secured in the political and legislative process through the authorization of an elected assembly. The stability and durability of these reforms resulted partly from the favorable response of Filipinos to these innovations, as aided by an acute awareness of their own self-interest.

Nevertheless, the nationalist movement continued to press for full independence. As a transitional stage prior to the total independence that would come 10 years later, the Commonwealth of the Philippines was established under President Manuel Quezon in 1935. However, Japan conquered the islands in late 1941 and remained in control until October 1944. When Manila fell to U.S. forces in February 1945, the Philippine government-in-exile headed by Sergio Osmena (who succeeded President Quezon on his death) was reinstated. Osmena was subsequently defeated by the Liberal Party candidate Manuel Roxas in an election. On July 4, 1946, the Republic of the Philippines was proclaimed as an independent sovereign state, with Roxas as its first president.

During the first 20 years of independence the nation was led by a series of one-term presidents from either the Liberal or Nationalist parties. Political parties were based on patronage rather than ideology. Ferdinand Marcos defeated the reformist president Diosdado Macapagal in the 1965 elections. From that date until his ouster in 1986, Marcos dominated Philippine politics, ruling as a virtual dictator. In an attempt to crush his opponents, he declared martial law in 1972 and had them arrested. Martial law was lifted in most of the Philippines in 1981. That year Marcos was elected to a new six-year term in an election boycotted by the opposition and marred by massive fraud.

During the 1980s Marcos began relaxing his grip on the political process. The opposition was able to unify, and the leading dissident, Benigno Aquino, returned from exile in 1983. However, he was immediately assassinated; the crime generated a political crisis and served as a focal point in the opposition's launching a campaign to oust Marcos. Strikes and demonstrations followed the assassination, and demands increased for Marcos's resignation. At the same time, the economy began to collapse, and foreign capital began to flee the country. Under pressure from the United States, Marcos moved up the next presidential election from 1987 to 1986. The opposition united behind Corazon Aquino, the widow of Benigno Aquino. Amid allegations of massive fraud, Marcos declared himself the winner. Aquino then launched a campaign of civil disobedience, which, backed by the army, led to Marcos's downfall in February 1986. Aquino was sworn in as president, and the following year the nation approved a new, liberal constitution.

Aquino survived several attempted military coups, the most serious occurring in 1989, when members of two elite military units in collusion with officers loyal to Marcos attempted to overthrow her government. She was able to reintroduce an element of constitutionality into the political process but was unable to solve many of the nation's serious problems, including an armed rebellion waged by Communist and Muslim secessionist guerrillas. Aquino failed to develop an adequate land reform pro-

gram and was unable to induce foreign capital to return to the Philippines.

The volcanic explosion of Mt. Pinatubo, which destroyed the United States' Clark Air Base, brought an end to strong U.S. ties in 1991; around that time the Philippine Senate refused to extend the lease on the Subic Bay Naval Station. The following year, Defense Minister Fidel Ramos succeeded Aquino as president. In 1996 the government signed a peace accord with the Moro National Liberation Front, ending more than 24 years of fighting. The government agreed to autonomy on many issues, but still conducts military operations in the area. In 1998 Ramos was replaced by Joseph Estrada. In 2000 Estrada was impeached by the House of Representatives and convicted in the Senate of bribery, corruption, the betrayal of public trust, and the violation of the constitution. Following tumultuous demonstrations for and against Estrada, he was arrested, and Vice President Gloria Macapagal-Arroyo was installed as president.

Early in her presidency, Macapagal-Arroyo suspended military operations against the Moro Islamic Liberation Front (MILF) and pursued a policy of reconciliation with the group. The MILF was seeking an expansion of the Muslim autonomous area. In August 2001 the two sides signed a cease-fire agreement, and peace negotiations continued, with Malaysia acting as intermediary. Meanwhile, the government continued its military crackdown on the more radical Abu Sayyaf group, which was seeking an independent Islamic state and was linked to terrorist activities such as kidnappings and bombings. In the 2001 elections the People Power Coalition, supported by Macapagal-Arroyo, won 12 out of 24 seats in the Senate.

Macapagal-Arroyo was reelected in 2004. The main concerns of her administration were alleviating poverty and reducing the nation's debt, as well as fighting crime; she lifted a moratorium on the death penalty in 2004. She supported U.S. President George W. Bush's war on terror in the Middle East and Afghanistan. Within the Philippines, a conflict with Muslim separatists on the island of Mindanao continued, as did the government's efforts to eradicate the Abu Sayyaf group on Jolo.

1998–2001	Joseph Ejercito Estrada
2001–	Gloria Macapagal-Arroyo

CONSTITUTION

The political and governmental system of the Philippines entered a new era with the ouster of Ferdinand Marcos and the inauguration of Corazon Aquino as president in February 1986. Within a month, Aquino abolished the National Assembly, which had been dominated by Marcos supporters, abrogated the 1973 constitution, and claimed all legislative powers for herself. She announced a new “freedom constitution,” under which she would hold power until a new charter was written and submitted to a referendum and legislative elections were held. Under the proclamation, the government’s aims were described as reorganizing the government, restoring democracy, reviving the economy, recovering the ill-gotten wealth of Marcos and his allies, protecting basic rights, wiping out corruption, restoring peace and order, and affirming civilian supremacy over the military. The proclamation retained most of the provisions of the 1973 constitution, including the bill of rights. Aquino also abolished the post of prime minister.

The new constitution, ratified by national referendum on February 2, 1987, supplanted the freedom constitution. It provides for a directly elected president, serving a single six-year term, who is head of state, chief executive of the republic, and commander in chief of the armed forces. The president has the power to veto legislative bills but must sign them if two-thirds of Congress has approved them.

The vice president may be a member of the cabinet and succeeds to the presidency in the event of a death or resignation.

Legislative power is vested in the bicameral Congress, consisting of a Senate and House of Representatives. The former is composed of 24 members who are directly elected for six years and may not serve more than two consecutive terms. The House has a maximum of 250 members, of whom 200 are directly elected and 50 are nominated by the president from among the urban poor, peasantry, women, and youth. Members cannot serve more than three consecutive terms.

The Supreme Court is composed of a chief justice and 14 associate justices. They are appointed by the president with the consent of the Commission on Appointments for terms of four years. The president is specifically prevented from imposing martial law for a period greater than 60 days without the approval of Congress. The constitution guarantees social justice and human rights, renounces war as an instrument of national policy, and reasserts civilian authority over the military. Other provisions include the abolition of the death penalty, the prohibition of abortion, the authorization of local autonomy for Muslim-dominated areas, a “nuclear-free” policy, and legislative concurrence for the leasing of Philippine territory to foreign powers.

Suffrage is universal. The voting age under the 1987 constitution is 18 (as compared to 21 under the 1935

constitution), but the proclamation establishing the *barangays*, or local citizens’ assemblies, lowered the voting age to 15. Voting is compulsory, and absence from the polling place is a punishable offense.

PARLIAMENT

The national legislature is the bicameral Congress of the Philippines, consisting of the upper Senate and the lower House of Representatives on the U.S. model. The upper house consists of 24 at-large members who serve no more than two six-year terms, half of the body being elected every three years. The lower house consists of 207 members directly elected from legislative districts, plus a maximum of 43 members elected through a party-list system incorporating registered national, regional, and sectoral parties or organizations. In 2004 there were 24 sectoral-party representatives elected in addition to the 207 district representatives. The constitution limits the lower house to 250 members. Each voter casts a ballot for both a district representative and a party-list group. All representatives serve for three years, with a two-term limit.

POLITICAL PARTIES

Before 1972 the Philippine political system was dominated by two political parties: the Nationalists and the Liberals. Both were mass parties, virtually identical in ideologies and modes of operation. There were a number of minor parties, all of them short-lived. Both major parties were essentially patronage parties—less instruments of sociopolitical change than vehicles through which maximum personal benefits could be obtained. They functioned as mutual aid groups cemented by patron-client relationships at every level and expectations of pork-barrel benefits. Both leaders and followers readily switched from one party to another, and no stigma was attached to turncoats.

The Nationalist Party, to which President Marcos belonged at the time of his election, represented the right-wing element and the Liberal Party the left-wing element of the former Partido Nacionalista. In 1978 Marcos’s party was renamed the New Society Movement, the opposition coalition the People’s Force Party. A cautious return to politics was permitted during the 1978 legislative elections and also after the end of martial law in 1981. In February 1980 representatives of eight opposition groups formed a loose coalition, the United Democratic Organization (UNIDO), which was reorganized in April 1982 as the United Nationalist Democratic Organization, a 12-party alignment that retained the former acronym. With the murder of the opposition leader Benigno Aquino, anti-Marcos forces began to coalesce under the UNIDO banner.

President Macapagal-Arroyo is the head of the National Union of Christian Democrats (Lakas ng EDSA, or Lakas), which led the People Power Coalition to victory in the 2001 elections. As of 2004 Lakas led the Sunshine Coalition, which included the Nationalist People's Coalition, the Liberal Party, and several other major and minor parties. The Struggle of Filipino Democrats (Laban ng Demokratikong Pilipino, LDP) party led the opposition bloc.

LOCAL GOVERNMENT

For purposes of local government, the Philippines is divided into 79 provinces and 116 chartered cities. Provinces are governed by appointed officials known as governors. Chartered cities, each headed by a mayor, are independent of provincial governments.

Municipalities, also administered by mayors, have less autonomy than chartered cities and are under the control of the provincial government. Municipal districts are territorial units in areas inhabited by non-Christians. The lowest and the most numerous territorial units are the *barangays*, also known as barrios until 1974. *Barangays* are located in wards and divisions of cities, municipalities, municipal districts, and chartered cities. Each *barangay* is run by a council headed by a captain.

LEGAL SYSTEM

The legal system is based on Spanish law as modified by Anglo-American law. The judiciary is headed by the Supreme Court, comprising a chief justice and 14 associates. It can declare a law or treaty unconstitutional by the concurrent votes of the majority sitting. There is an intermediate appellate court consisting of a presiding justice and 49 associate justices.

Below the court of appeals, the country is divided into regional trial courts, each with a presiding regional trial judge. There is a municipal court for each city and a justice of the peace for each municipality. The Supreme Court may designate certain branches of the regional trial courts to handle certain cases that do not fall under the jurisdiction of quasi-judicial bodies and agencies.

If a defendant cannot afford counsel, the court will appoint a lawyer. Private and government legal assistance is available to indigents, and there are lawyers' organizations that provide assistance to alleged national security offenders. Because of case backlogs, a shortage of judges, and the practice of hearing cases concurrently, trials in civilian courts often take two or three years; subversion and rebellion trials have frequently lasted longer. Trial by jury is not a part of Philippine jurisprudence. Questions of law and fact, including determinations of guilt or innocence, are all resolved by the presiding judge.

In July 1985 Islamic sharia courts were established in the southern Philippines under a February 1977 presidential decree. They are presided over by three district magistrates and six circuit judges.

HUMAN RIGHTS

In terms of political and civil rights, the Philippines is classified as a free country.

With the fall of Marcos, the Philippines entered a period of restoring human rights. Habeas corpus was restored by Aquino in one of her first acts, and all political detainees were released despite objections from the military. There are no reports of Marcos's supporters being muzzled or of any large-scale reprisals against the "New Society" power bases.

The 1987 constitution guarantees the rights to life, liberty, and property, the rights of assembly in public places and of access to official information on public matters, and the freedoms of speech, abode, and travel. The freedoms of the press and of petition to the government are guaranteed, as is the right to form trade unions. Free access to the courts is also guaranteed by the constitution, which empowers the Commission on Human Rights to use legal measures to protect the rights of people and to investigate allegations of violations of human rights. The commission may also advise Congress on measures to promote human rights.

Despite these guarantees, the Philippines has suffered from many human rights problems. The police forces have been known to arrest people arbitrarily and to torture or kill suspects without trial. Prison conditions are harsh, and there are long delays before trials. The court system is notoriously corrupt. The government does not allow absentee voting, so expatriates are effectively disenfranchised. Discrimination against ethnic minorities and women, child abuse and child labor, and trafficking in women and children as sex slaves are serious problems.

FOREIGN POLICY

Filipino foreign policy is essentially low-key, and while supporting and following the United States in broad policy areas, the nation has never been embroiled in serious disputes with any country. However, uncertainty about the U.S. role in Southeast Asia after the Vietnam War spurred the Philippines to greater independence. The 1947 treaty with the United States provided for the U.S. use of six military installations, including Clark Air Base and the Subic Bay Naval Station, but all bases have since been closed. In 1998 a new treaty, called the Visiting Forces Agreement, was signed, permitting the U.S. military certain rights. In 2002 U.S. and Filipino military forces launched joint exercises as part of the war on

1890 Philippines

international terrorism. President Macapagal-Arroyo has maintained close relations with the United States and wants to strengthen bilateral ties between the two nations. In 2002–03 the United States launched a major military effort to eliminate terrorism from the Philippines and improve the Filipino military.

Within Asia, the Philippines has maintained amicable relations with most of its neighbors. It belongs to the Association of Southeast Asian Nations (ASEAN), the ASEAN Regional Forum, and the Asia Pacific Economic Conference. In 1995 the Philippines and Vietnam signed an agreement for the orderly repatriation of Vietnamese refugees who did not qualify to seek asylum. There are periodic tensions with the China over the Spratly Islands, but in 1999 both countries agreed to exercise restraint.

DEFENSE

The Department of National Defense directs the Armed Forces of the Philippines. The Department of the Interior and Local Government directs the civilian Philippine National Police. The defense structure is headed by the president as the commander in chief of the armed forces. The chain of command runs through the minister of national defense to the chief of staff, who presides over the General Military Council. The bulk of the army is deployed in two recently established commands, CENCOM (Cotabato and Lanao provinces, in Mindanao) and SOWESCOM (Zamboanga Province, on Mindanao, and Sulu).

Military manpower is obtained through voluntary enlistment. All Filipino males are required to register for conscription upon reaching the age of 18. Certain inducted men are mobilized in special units called Kamagong (after a native hardwood), which are available for active service on short notice.

ECONOMY

The Philippines has seen tremendous economic progress since the end of the Second World War. The country was quite wealthy during the 1960s and 1970s but suffered a recession in the 1980s, which was made worse by political instability during the Aquino administration. President

Ramos introduced numerous economic reforms during the 1990s that increased foreign investment and business growth, but the Asian financial crisis slowed development in 1997 and 1998.

Growth was strong between 1999 and 2004. President Arroyo's skilled economic team liberalized the rules regulating foreign businesses, improved the regulation of banking and securities, and promoted electronic commerce. The nation does still suffer from some fiscal problems; the peso weakened against the dollar in 2003, and unemployment was relatively high. Government debt is high, and the collection of taxes has fallen, harming the nation's ability to face crises.

The most important industries are agriculture, industry, cloth and clothing manufacture, and the manufacture of electronics and automobile parts. The Philippines also has good mineral resources and natural gas reserves, but as of the early 2000s these were not a major source of income. Agriculture is a weak economic sector, with low returns and poor efficiency. Forestry is suffering from the effects of years of uncontrolled logging and slash-and-burn agriculture. Destructive fishing measures have harmed fisheries. Industry is concentrated in urban areas and does not benefit rural areas.

ENVIRONMENT

The Philippines faces a number of environmental problems that have been brought on by economic development and a growing population. Uncontrolled deforestation in watershed areas is caused by clearing for development and the use of the forest to promote economic growth; this clearing has led to soil erosion. In the urban area of Manila, the air and water quality are poor. Increased emissions and a growing urban population are further taxing a

1892 Philippines

system that wasn't able to handle its previous population base. Along the coast, increased settlement in mangrove swamps is threatening important fish breeding grounds and coral reefs.

Environment

LIVING CONDITIONS

The Philippines is a very crowded nation and is growing more so; population growth there is the fastest in Asia, and the population may double between 2000 and 2030. Most Filipino homes are fairly simple and small. Only wealthy people can afford large Western-style homes with modern amenities. Public transportation is cheap, and much of it is provided by jeepneys, small trucks decorated with paintings, flowers, and other items. Some taxis are actually small motorcycles with sidecars. In some remote areas the main means of transportation are horse-drawn carts, bicycles, and feet.

HEALTH

Although the state does provide some health services, the majority of health facilities are private and are thus limited to those who can pay for them. Most Filipinos see doctors only as a last resort and use traditional remedies as alternatives. The government has implemented childhood vaccination programs and provides nutritional supplements for small children and nursing mothers. The incidence of tropical diseases such as malaria, typhoid, and dengue fever has fallen, though they still occur. Gastrointestinal diseases are fairly common. Life expectancy is slightly below 70 years.

FOOD AND NUTRITION

Malnutrition is a serious health problem, particularly in more remote areas. Even where people have enough calories, they do not always get enough varied nutrients in their diets.

Filipino cuisine blends Malay, Spanish, Chinese, American, and Arab culinary traditions. Rice is the ubiquitous staple food and appears at all meals and in desserts. People supplement rice with vegetables, meat, and salted or smoked fish. Seasonings include garlic, vinegar, coconut milk, ginger, chili peppers, and soy sauce. Chinese noodles are popular, as are snacks such as spring rolls. People like to eat snacks in the morning and afternoon; common snacks include ice cream, rice cakes, coconut, *halo-halo* (a combination of shaved ice, gelatin, custard, fruit, and coconut milk), and *gina-taan* (fruit cooked with coconut milk). Fruit juices and fruit shakes are common drinks, as are drinks made with green lemons. Many people like to have alcoholic drinks with their afternoon snacks.

STATUS OF WOMEN

In the Philippines, women enjoy full voting privileges and have the right to own and inherit property. They are prominent in society and represented in large numbers in business and in professions such as law, medicine, education, and journalism. They are also active in politics and are well represented in both national and local governments as well as within the political opposition. In addition to the presidency, numerous posts within the judicial and executive branches of the government are held by women. Nevertheless, many women are still second-class citizens because of cultural limitations and the relations between husbands and wives. Women's occupations are generally limited to health care, education, food processing, garment manufacture, and the pharmaceutical industry.

The Catholic Church is extremely powerful in the Philippines and categorically opposes birth control, one

of the reasons the birth rate is so high. The government does not want to antagonize the church and so has taken no steps to reduce fertility.

WORK

Over one-third of the labor force is employed in agriculture, including fishing and forestry. Many people engage in subsistence agriculture, either exclusively or in addition to producing cash crops such as coconut; coconut oil is a major export. Another 16 percent of the workforce is occupied in industry, especially in the manufacture of textiles, clothing, and electronics, while nearly half work in services. The government provides all workers a retirement pension starting at age 60.

EDUCATION

Schooling is free, universal, and compulsory for six years, from the ages of seven to 13. Attendance at primary school is 93 percent. People value education highly, and families will often do whatever it takes to pay for school for their children. Instruction begins in the local language, then gradually shifts to Filipino and English. Most Islamic children get religious education at madrassa schools, where they study the Koran.

Most secondary schools are private, usually run by religious groups. About three-quarters of Filipino children begin secondary school, though many drop out before graduation. Secondary school lasts up to four years, depending on whether or not students want to attend university or a vocational college.

In order to enter university, students must pass the National College Entrance Examination. Most universities and colleges are private. About one-quarter of Filipinos attain higher education. Most university students

are female, and women earn the majority of advanced degrees. There are also adult-education classes in literacy, health, agriculture, and occupational skills.

SCIENCE AND TECHNOLOGY

The Philippines has a good, modern telephone system and millions of cellular telephones. In 2002 some 3.5 million people were using the Internet. The government's Department of Science and Technology sponsors research and education in an effort to improve the nation's technological expertise. Weather forecasting and improving the living conditions of the poor are key projects.

MEDIA

Journalists and broadcasters in the Philippines enjoy freedom of expression, as guaranteed by the 1987 constitution. There are numerous newspapers and magazines published in the country. Television is a popular form of entertainment, and many households have cable television. Television broadcasting is dominated by a few large networks, including the private ABS-CBN and GMA Network and the state-owned IBC. Many networks broadcast programming in local languages. There are numerous radio stations throughout the nation. The Philippine Broadcasting Service (PBS) runs 31 stations emphasizing news. The commercial Radio Mindanao Network oper-

1894 Philippines

ates about 40 stations. Most media outlets are controlled by a few large companies and wealthy families.

CULTURE

Filipino culture blends the practices of some 60 ethnic groups with Spanish, Muslim, and American influences. Artists have long created objects from bamboo, coconut, or pineapple leaves, rattan, abaca fiber, and cotton; baskets, wood carvings, and clay pottery are all typical items. The Ifugao tribe are especially skilled at making jewelry, and Muslims make excellent bronze and brass items.

The nation is home to a wide variety of musical styles from its many different ethnic groups. Traditional instruments include bamboo nose flutes, gongs, violins strung with human hair, lutes, and xylophones. Most children study music; the violin and the piano are popular instruments.

The Philippines have produced a number of writers who have worked in English and Tagalog. Nick Joaquin and José Garcia Villa are well-known modern poets. Popular theatre forms include puppet shows and *zarzuela*, a kind of satire originally aimed at the Spanish occupation.

FOLKLORE AND MYTHOLOGY

The Philippines has a long tradition of myths, folk tales, and epic poems. The nation's many ethnic groups have retained their native practices and beliefs, many of which are related to human relationships with nature and the seasons. Recently, Filipinos have been reviving traditional theatre, literature, and love songs. Folk dancing is still quite popular, and folk dance groups have recently revived

traditional forms. The *tinikling* is a dance that depicts the behavior of birds in the rice fields. The migration of birds and the harvest are common subjects of dances and folktales. The Kalinga people of Bontoc were traditionally headhunters, but they no longer practice that art.

ENTERTAINMENT AND RECREATION

Filipinos love to spend time with family and friends. Teenagers belong to groups of friends called *barkadas* and conduct all their social activities with one another; they even invent individual slang dialects. Many people enjoy playing tabletop games such as chess, checkers, dominoes, and mah-jongg. Within the cities there are bars, restaurants, discos, and shopping areas.

Outdoor recreation is extremely popular. People go swimming in pools or at the beach. Diving and snorkeling are excellent. There are places to go hiking, trekking, and spelunking, and climbing Mt. Pinatubo is a popular activity for tourists.

ETIQUETTE

Filipinos always use a formal form of address with new acquaintances and do not use first names until they have known someone for a long time. Titles such as "doctor" or "attorney" are very important. Many people have multiple first names and nicknames, and it is important to ask someone how they would like to be addressed. Though punctuality is important in business matters, at social occasions people are expected to arrive late.

FAMILY LIFE

The extended family is extremely important in the Philippines, and people extend family ties further through the creation of godparents. Relatives usually live near one another, and children usually stay with their parents until they marry. When a couple marries, it is not unusual for some of their single brothers and sisters to move in with them. The father is considered the head of the household, though the mother takes care of all practical organization and financial arrangements. Women keep their own property after marriage and often earn money through jobs outside the home. Children are expected to help take care of the home at a young age.

PERSONAL APPEARANCE

Most people dress in typical Western attire, wearing light casual clothing at all times because of the hot weather.

Long pants and skirts are appropriate for business occasions. Men sometimes wear an embroidered shirt called a *barong tagalog* instead of jacket and tie.

SPORTS

Basketball is the most popular sport, particularly among men and boys. Games at the Aranet Coliseum in Quezon City attract huge crowds of spectators. Boxing is also popular. Many people like to play jai alai, which is similar to lacrosse, and *sipa*, a version of volleyball played with a rattan ball. Cockfighting is extremely popular among men, who gamble on it every weekend. *Kali* is an indigenous martial art that involves the use of sticks and knives.

CHRONOLOGY

- 1946 The Philippines becomes an independent republic, with Manuel Roxas as president.
- 1947 The Philippines signs the Military Bases Agreement with the United States.
- 1948 President Roxas dies and is succeeded in office by Elpidio Quirino.
- 1950 The communist Hukbalahap movement collapses, as its leadership is captured.
- 1953 Ramon Magsaysay is elected to the presidency on the Nationalist Party ticket.
- 1954 The Philippines joins the Southeast Asia Treaty Organization (SEATO).
- 1955 The Laurel-Langley Agreement is signed with the United States, providing for certain tariff preferences.
- 1957 Magsaysay dies in an air crash and is succeeded in office by Vice President Carlos P. Garcia.
- 1961 Diosdado Macapagal is elected president over the incumbent Garcia.
- 1965 Ferdinand E. Marcos is elected president, defeating the incumbent Macapagal.
- 1969 Marcos is reelected president and becomes the first Philippine president to be sworn in for a second time. The rebel group New People's Army (NPA) is founded.
- 1972 Marcos imposes martial law, citing both internal and external dangers; all opposition leaders are arrested; the media are shut down; the constitution is suspended, and the Congress is dissolved.
- 1973 A new constitution is approved in a national referendum proposing a return to a parliamentary form of government. President Marcos assumes the additional post of prime minister. Moro insurgency in the south intensifies.
- 1976 President Marcos announces the suspension of operations against the MILF. Pact is signed with Libya granting partial autonomy to southern areas with Moro majorities.
- 1977 The Philippines drops its claim on Sabah. A proposal for the establishment of an autonomous Muslim region in the south is defeated, as most Muslims boycott the polls.
- 1978 In national elections Marcos's New Society Movement claims to have won all 200 seats in the interim National Assembly, while the opposition People's Force Party charges electoral fraud. The Philippines occupies Spratly Islands. Marcos is sworn in as prime minister as the new Congress convenes.
- 1979 In a partial relaxation of martial law, 1,602 prisoners are released, and the power of military courts is curtailed.
- 1980 Marcos's party wins local elections, but the results are clouded by charges of fraud, some of them acknowledged by Marcos; Benigno Aquino, the government's principal opponent, is released from prison; government attempts to patch up differences with the Catholic clergy. The government orders the arrest of 30 opposition figures, including the exiled Aquino, following a series of terrorist attacks.
- 1981 Marcos lifts martial law but retains martial law decrees. Marcos is reelected to another six years in office. Finance Minister Cesar Virata is appointed prime minister.
- 1982 Opposition parties merge into the United National Democratic Organization (UNIDO) under Salvador Laurel.
- 1983 Opposition leader Benigno Aquino is shot dead at Manila Airport on return from exile in the United States, and his assassin is shot dead by the military. Commission of inquiry concludes that the assassination was masterminded by the army. Chief of Staff Gen. Fabian Ver is relieved of his position and is indicted for the crime. United States and Philippines sign accord renewing U.S. rights to naval bases until 1988.
- 1984 In parliamentary elections, opposition parties win 59 out of 183 elective seats. Over 100 people are believed to have been killed in election-related clashes. Post of vice president is restored following referendum.
- 1985 Growing domestic unrest and international pressure force Marcos to call an early presidential election in 1986. Supreme Court acquits the 26 accused in the killing of Benigno Aquino's assassin. General Ver is reinstated as chief of staff.
- 1986 In presidential elections, marred by fraud and violence, President Marcos declares himself winner, and Congress ratifies his election. Opposition presidential candidate Corazon Aquino contests

the decision and declares herself winner. The defense minister and long-time ally Juan Ponce Enrile and the chief of staff Fidel Ramos defect to the Aquino forces. International and domestic outrage over election fraud force Marcos to flee to the United States hours after his formal inauguration. Aquino is sworn in as president with Salvador Laurel, her running mate, as vice president. President Aquino dissolves Congress and the constitution until a new constitution is drafted and ratified. Philippine government launches effort to uncover and reclaim hidden Marcos millions abroad. A 50-member constitutional commission is appointed to draft a new constitution. Aquino fires Defense Minister Enrile. Twice in two weeks the army chief of staff Gen. Fidel Ramos prevents Enrile loyalists from carrying out a planned coup.

- 1987** The electorate approves a new constitution. Aquino supporters capture 80 percent of the seats in the House of Representatives. An attempted coup led by Col. Gregorio Honasan is foiled by troops loyal to Aquino.
- 1988** Candidates supporting President Aquino capture a majority of seats in provincial and local balloting.
- 1989** Members of two elite army units, in collusion with Marcos loyalists, stage a coup, which is suppressed after six days.
- 1990** Aquino survives a coup by dissident soldiers on Mindanao.
- 1991** Mount Pinatubo erupts after being dormant since 1380. The United States evacuates military personnel from nearby Clark Air Force Base.
- 1992** Aquino decides against reelection. Fidel Ramos is elected president in a strong field that includes Imelda Marcos.
- 1994** Parliamentary elections give President Ramos governing control. Ramos declares a cease-fire and amnesty for insurgents.
- 1997** The Philippine economy is weakened by the Asian economic crisis.
- 1998** President Ramos decides against reelection. Joseph Estrada, a popular actor, is elected president.
- 2001** Joseph Estrada is ousted from government under allegations of corruption. Vice President Gloria Macapagal-Arroyo is sworn in as president. The Moro Islamic Liberation Front says that it is ready to hold talks with the government and declares a cease-fire. Estrada is charged with plundering more than \$80 million from state funds while in office. He is arrested.
- 2002** U.S. and Filipino military forces launch joint exercises close to the stronghold of the rebel Abu

Sayyaf, which the United States believes has links to Osama bin Laden. Islamic militants are blamed for several bomb blasts in Manila and Zamboanga.

- 2003** The government signs a cease-fire with the Moro Islamic Liberation Front. Soldiers from the national army stage a mutiny in Manila.
- 2004** Arroyo is reelected as president. The country withdraws troops from Iraq. Hundreds of people die in a typhoon.
- 2005** Government troops and the Moro Islamic Liberation Front engage in fighting, breaking the 2003 cease-fire.

DATE OF CONSTITUTION

October 17, 1997

GEOGRAPHICAL FEATURES

Poland, in eastern Europe, is bounded on the north by the Baltic Sea and Russia (Kaliningrad), on the east by Lithuania, Belarus, and Ukraine, on the south by Slovakia and the Czech Republic, and on the west by Germany. Poland has a total area of 312,685 sq km (120,728 sq mi), extending 689 km (428 mi) east to west and 649 km (403 mi) north to south. Its total land boundary length is 2,897 km (1,797 mi) in length, while the coastline is 788 km (489 mi).

The capital is Warsaw, situated on both banks of the Vistula (Wisła) River, south of the influx of the Narew River.

On the map, Poland appears as an unbroken plain between the Baltic Sea in the north and the Carpathian Mountains in the south. However, the land shows great

complexity and variety, especially in east-to-west bands, accounting for wide variations in land utilization and population density. The southern foothills and mountains contain most of the country's fertile soils and thus have the greatest population density. The fertility of the soils and the density of population proportionately decline toward the north.

Most of Poland lies in the northern European plain, which extends from the North Sea coast of the Netherlands to the Ural Mountains, separating Europe from Asia. The only highlands are in the far south and southwest, where Poland shares the Carpathian and the Sudeten mountains with the Czech Republic and Slovakia. The average elevation is 173 m (567 ft). More than 90 percent of the national territory lies below 300 m (984 ft) and only 3 percent, chiefly in the south, rises above 500 m (1,640 ft). Rysy, the highest peak at 2,499 m (8,197 ft), is

Poland

on the Slovak border in the Tatra Range of the Carpathians. Six other peaks on the Polish side exceed 1,900 m (6,232 ft). The Sudeten Mountains are lower, with only one peak over 1,600 m (5,248 ft). The lowest land in the country is just south of the Gulf of Gdańsk, where some 60 sq km (23 sq mi) lie below sea level.

CLIMATE AND WEATHER

For much of the year the climate is continental, as dominated by high-pressure polar air masses, with a moderating influence of maritime weather from western Europe. These air masses are stronger in winter than in summer. There are long periods of fog, frequent precipitation, and high humidity. It is less humid when the polar high-pressure systems dominate, when it can be extremely cold.

Summer, from June through August, has frequent showers and thunderstorms, although humidity is generally lower than in winter; it is warm and dry when south and southeast winds dominate. Weather varies widely during spring and autumn. Winter cold may linger until early April. Early autumn is usually bright, clear, and crisp, although by November weather may turn unpleasant, rainy, and cold. Winters are usually snowy, but times of first and last snows, as well as the season's duration, vary from year to year.

Mean temperatures range between 8°C and 19°C, with marked seasonal variations among regions. The Baltic coastal areas have warmer winters and cooler summers than interior regions. The greatest differences between average winter and summer temperatures occur in the southeast, near the Ukrainian border. The growing season is approximately 40 days longer in the southwest than in the northwest.

Precipitation averages 500 to 650 mm (20 to 25 in) annually over most of the plains, a little higher in the southern uplands, and up to 1,300 mm (50 in) at isolated places in the mountains. Only small areas receive less than the national average, the largest of these being the city of Szczecin, the Ukrainian border, and a corridor along the Vistula from Warsaw to the sea. Throughout the country, summer precipitation is double that of winter.

FLORA AND FAUNA

The majority of Poland's land has been used for agriculture for centuries. Almost one-third of the land is covered with forests, much of it protected in national parks. Mushrooms grow wild in some forests, and people pick them to eat or sell. The Białowieza Forest in the eastern part of the country contains many old trees and is home to numerous woodland creatures, including moose, red deer, elk, brown bears, wild cats, hares, and the only remaining herd of European bison. Lynx and marmot live in the mountains in the southern part of the country. Numerous bird species thrive in Poland, including the beloved stork.

ETHNIC COMPOSITION

Poland emerged from World War II as an ethnically homogenous nation; as of 2002 ethnic Poles constituted nearly 97 percent of the population. Poles are descended from various Slavic tribes who settled in and around the area of present-day Poland well before the eighth century. Regional distinctions among Polish peasants in dialect, dress, manner, and custom very roughly follow old tribal traditions. Many old tribal names persist in modified form.

Between the two world wars ethnic minorities made up 30 percent of the population. They included Germans, Jews, Ukrainians, Belarusians, and Lithuanians, few of whom shared the national faith of Roman Catholicism or spoke the Polish language as their mother tongue. The number of Germans was variously estimated at 741,000 (according to Poles) and 1.7 million (according to Germans). After World War II the majority of the German population inhabiting areas incorporated into Poland immigrated to Germany. Those who did not were objects of discrimination in the years following the war. During Communist rule many Poles living in the Silesia region claimed their German heritage in order to leave Poland for Germany.

After the eastern provinces were acquired by the Soviet Union in 1945, about 300,000 Belarusians lived in Poland. Never as nationalistic as Ukrainians, they showed less dissatisfaction with their minority status, although they became much more conscious of it following the creation of independent Belarus.

The largest minority group in interwar Poland, the Ukrainians, were found chiefly in the southeastern provinces, where they constituted a majority in the rural areas, although major cities such as L'viv were predominantly Polish. In 1945 the number of Ukrainians dropped to some 100,000 as a result of border changes.

There were more than 3.5 million Jews in Poland before World War II; they constituted more than 10 percent of the national population and had been an important social element in Poland since medieval times. For centuries they found Poland a refuge from the persecutions inflicted on them in western Europe. They were granted full rights, but anti-Semitism existed and was harsh at times.

The whole Jewish community faced extermination during World War II and Nazi occupation. Only individuals survived ghettos, forced labor, and concentration camps. Poland was where the Nazis first introduced their policy of racist extermination.

By the end of World War II the number of Jews in Poland had dropped dramatically, and those who had survived often chose to emigrate to Israel or to the United States. The last huge wave of emigration was spurred in 1968 by the anti-Semitic policies of the Communist government.

An estimated 30,000 Roma live in Poland. Other small minorities include scatterings of Lithuanians, Russians, Belarusians, Czechs, Slovaks, and Muslims of Tatar origin.

LANGUAGES

The Polish language belongs to the western branch of the Slavic language group, in which it is the third-most spoken, after Russian and Ukrainian. Although it is related to all Slavic languages, it is not well understood by other Slavic peoples, including Czechs and Slovaks. Poles use the Latin alphabet, a result of early conversion to Roman Catholicism.

Standard literary Polish had its origin in the speech of the upper classes of the 16th century. At the time of the Reformation the first written Polish literature came about, and there was a flowering of literary and secular language at that time. When Poland ceased to exist as an independent state in the 19th century, language became one of the hallmarks of Polish national identity, along with the Roman Catholic religion.

Polish has several dialects. The most divergent from the standard is Kashubian; the other five dialects are Great Polish, Kuyavian, Little Polish, Silesian, and Mazovian. Minority languages are rarely employed in public.

In 1999 the Polish parliament issued a law regarding the protection of the Polish language in reaction to the dynamic "McDonaldization" of the Polish language, as connected with the massive inflow of Western popular culture and new technology.

RELIGIONS

In terms of its influence on national life, Poland is perhaps the most Catholic country in the world, surpassing Ireland, Italy, and Spain. Polish Catholics loved having their native son Pope John Paul II in the Vatican. Poles have been predominantly Roman Catholic since the 10th century, and the Catholic Church dominated Poland's political and cultural scene over the following millennium; even the spread of the Reformation and the toleration of Protestants in the 16th and 17th centuries did not endanger its position. In the 19th century, when Poland was divided between Russia, Prussia, and Austria, the Catholic religion became a tool and a symbol of resistance against the first two occupants. Thereafter the church remained a guardian of the national flame. Catholic faith and ritual are not merely theological traditions but also a part of the national heritage. When Poland regained its independence after World War I, the church regained its place of honor in the political system as well.

After World War II the new Communist leaders initially pursued a moderate and conciliatory policy. How-

ever, in 1948, feeling secure and in control, Communists staged an unprecedented attack on the church. In 1950 a church-state agreement was signed: In return for the Vatican's recognition of the new Polish borders and the church hierarchy's submitting to the new state laws, the government agreed not to interfere with public worship, Catholic associations, and newspapers. This situation lasted for three years, at which point authorities staged new attacks on the church's dominance. The situation improved with the end of the Stalinist regime and the so-called thaw of 1956, but the Communist authorities never granted full freedom of worship. Catholics were limited in their practices, and those who held high positions in the government, the party, the army, or police were prosecuted. Many had to hide their religious beliefs.

With the election of Cardinal Karol Wojtyła to the papal throne, Polish Catholicism gained strength and experienced a renaissance. The modern-day proportion of practicing Catholics among the population is greater in Poland than in any other European country. With 95 percent of Poles baptized, an estimated 75 percent of the population are practicing. In all, there are more than 20,000 priests, 4,500 members of religious orders, and 80 bishops serving 36 million adherents. Also, there are 46 priest seminaries enrolling close to 5,000 students.

In Poland the pressures of secularization, urbanization, and the spread of secular education were offset by the attachment to the church as the embodiment of the nation and as a bulwark against all kinds of repression. In fact, the cumulative frustrations of life under the Communist regime reinforced adherence to the church. Paradoxically, the freedom Poland has enjoyed since 1989 has led to the weakening of the national position of the church and the strengthening of secularization processes.

Catholicism in Poland is less rooted among the intelligentsia and white-collar professionals. Historically, the religion has tended to be more mystical than intellectual, and its chief feature is the cult of Mary, whose shrine in Czstochowa is the spiritual center of Poland, reflecting the simple, direct, and uncomplicated faith of the people. Present-day church-state relations are very good and are regulated by laws and a concordat with the Vatican. In 1990 religion returned to schools after being banned from the classroom. Parents and older children have the right to decide whether they will attend religion or ethics classes.

The autocephalous Orthodox Church of Poland traces its origin to the 10th century. By the 2000s it was reduced to 10 percent of its former size due to the border changes implemented after World War II. Of the various Protestant denominations, only about one-third are recognized as churches, with the others considered "religious organizations." Upper Silesia is the most Protestant part of the country. The largest Protestant body is the Lutheran Church, followed by the Reformed Church and the United Evangelical Church. There are several

non-Roman Catholic churches, the largest being the Old Catholic Mariavite Church, founded in 1906. Of the non-Christian religions, Judaism is the most important. In all, non-Roman Catholics constitute only 5 percent of Poland's population. Religious toleration is granted by the Polish constitution.

HISTORICAL BACKGROUND

The ancestors of modern Poles were the West Slavs who lived in the Oder and Vistula valleys. In the seventh century these tribes coalesced. The Polanie tribe led by Duke Mieszko (r. 960–92) united several other Slavic groups to form the nucleus of the Polish state. Responding to the challenge from Germans, Mieszko sealed an alliance with neighboring Bohemia and accepted Catholicism. This event linked the destiny of Poland with that of western Europe rather than with that of the Orthodox east. Mieszko's policies were upheld by his son, Bolesław the Brave (992–1025), who in 1000 concluded an agreement with Holy Roman Emperor Otto III, organizing Polish dioceses under the jurisdiction of an archiepiscopal see at Gniezno, thus removing Poland from the orbit of Catholic German expansion. Bolesław, who in 1025 took the title of king, deeded his country to the pope.

The chieftains of the more powerful clans formed the nucleus of Poland's knightly estate, which gradually emerged at the end of the 15th century as a noble class, the *szlachta*. Among the *szlachta*, the wealthier families qualified in the 17th and 18th centuries as magnates. The nobility in Poland grew in numbers, by the end of the 15th century composing 10 percent of the population. The nobles from the 16th to the 18th centuries constituted the "nation" proper, and only they enjoyed political rights.

The descendants of Bolesław III (1102–38) were locked in a fratricidal struggle that enabled the Germans to seize Polish lands with impunity and the pagan Prussians to threaten Mazovia. In 1228 Mazovia's Duke Konrad called for aid from the Teutonic Knights, who thereupon established an autonomous state on Prussian lands. Meanwhile the Tatars, swarming across Russia and Kiev, menaced Poland but were stopped in 1241 at the battle of Legnica. This chapter of troubles ended with the unification of Poland under Kazimierz III, "the Great" (1333–70). A brilliant administrator, he fostered trade, reformed the currency, protected the Jews, codified the law, and founded the university of Kraków.

In its struggle against the Teutonic Knights, who controlled most of the southeastern shores of the Baltic Sea,

1902 Poland

Poland found an ally in Lithuania. To cement this alliance, the ruler of Poland, Jadwiga, was married to Grand Duke Jagiello of Lithuania, and the latter was baptized, taking the name of Władysław II (1386–1434). The union of Poland and Lithuania bore fruit when their combined armies defeated the Teutonic Knights at the battle of Grunwald in 1410. The Thirteen Years' War ended with the Treaty of Toruń of 1466, dividing Prussian territory between royal Prussia (Polish) and ducal Prussia.

The Polish monarchy emerged from the war against the Teutonic Knights much debilitated. To secure the military aid of the nobles, King Kazimierz IV (1447–92) had to agree to the Statutes of Nieszawa (1454), regarded as Poland's Magna Carta, in which he pledged to make no laws or binding decisions without the nobles' consent. With the privileges granted to the nobility earlier, which gave them personal and property immunity and tax and economic privileges, the nobles gained a status theretofore unknown in western Europe.

The late 15th and 16th centuries have been called Poland's golden age, as associated with the developments of culture, science, and political freedom. The first Sejm, or Diet, was convened in 1493. According to the *nihil novi* constitution adopted by the Sejm in 1505, all legislation thereafter required parliamentary assent. Political freedom was paralleled by religious tolerance also unequaled in Europe. While fierce persecutions and religious wars were waged elsewhere, Poland was "a state without stakes" and a recognized "heaven for heretics." Protestantism was an aristocratic and urban phenomenon in Poland and never touched the life of the masses. By the mid-17th century the nobility, with very few exceptions, had returned to Roman Catholicism.

Religious toleration was extended to Jews as well. The great influx of Jews had begun in the 14th century, when persecution drove thousands from western Europe (especially Germany). Local princes granted Jews privileges starting in 1274. King Kazimierz III extended these privileges to all Jews of Poland, granting them the status of "servants of the Treasury." Jews were granted charters of self-government among their own communities under the protection of the Crown. Their number grew from about 50,000 in 1500 to about 1.5 million in 1650.

Various threats posed to the Baltic states and to Ruthenia persuaded Lithuania and Poland to seek closer ties. The Protocol of Lublin in 1569 established the formal union of Poland and Lithuania under the Polish Crown. The union had a common diet and common foreign policy but separate civil and military administrations.

Since the death of the last king of the Jagiellon dynasty, Polish kings were chosen in popular elections. The first elected kings were all nonnative: Henryk Walezy, French (1573–74); Stefan Batory, Transylvanian (1575–1632); and Zygmunt III Waza (1587–1632). Waza moved the capital of Poland from Kraków northeastward

to Warsaw to improve his line of communications with Lithuania and Sweden. His continuous efforts to recover the Swedish Crown drew Poland into a disastrous conflict with the rising power of Sweden. After an invasion in 1655, Swedish troops occupied half of the kingdom; the war ended in 1660.

For three centuries the Polish-Lithuanian Commonwealth and Muscovy had been in direct conflict. Beset by the Swedish invasion of Poland in 1655, the Commonwealth struck a compromise with Muscovy, to which it lost Ukraine in the 17th century. In addition to the loss of prestige and territory, Poland was left prostrate by the wars, with its best farmland devastated and its grain trade ruined. The election of Jan III Sobieski (1674–96) seemed to augur a revival in Poland's fortunes, but only briefly. The power of the nobles rendered the "royal republic" weak, relative to the rise of the autocratic kingdoms of Russia, Prussia, and Austria. The weakness of the political system made Poland vulnerable to foreign intervention. Bribery and corruption were rampant, and the country as a whole was without fiscal management.

Jan III Sobieski's successor, a Saxon prince named August II, got Poland involved in a war against Sweden, wherein most military action took place on Polish territory. After the death of August II, the late king's heir, August III (1733–63), was elected king with Russian help. The Russian invasion of Poland touched off a general European conflict, often referred to as the War of the Polish Succession (1733–35). Peace left August III on the throne but was otherwise advantageous to the Bourbons. During the reign of the Saxon kings there was virtually no central government, and the magnates, abetted by the foreign powers, ruled their small fiefdoms much as they willed. Shifting political alliances were managed by powerful families of magnates: Potockis, Radziwills, and "the Familia" (Czartoryskis).

By the time of the death of Peter the Great in 1762, Poland was virtually a Russian satellite state. Catherine II of Russia and Frederick II of Prussia agreed on the election of Stanisław II (1764–95). Before his ascent, an attempt was made to introduce reforms that would limit the *liberum veto* and introduce a ministerial government appointed by the Crown. The opposition nobles, fearing a strong central government, appealed for Russian intervention to protect their liberties; Russia was happy to do so. The patriotic nobles then joined together in the Confederation of Bar to mount an armed resistance to Russian occupation. The rising was suppressed after four years, when Frederick II proposed a partition of Poland among Austria, Prussia, and Russia that would put an end to Poland's anarchy.

In the first partition of 1772 Poland was compelled to give up nearly one-third of its territory and one-half of its resources and population. The partitioning powers also imposed on Poland a new constitution, which vested

executive authority in the council of the Sejm, elected by the delegates. The shock of the partition galvanized the Poles into a series of reforms embodied in the constitution of May 3, 1791. That document converted Poland into a hereditary monarchy with a cabinet of ministers responsible to the Sejm, nullified the anarchic *liberum veto*, and introduced the principle of majority rule. Serfdom was limited, as the first step toward its abolition. Cities once again became self-governing, and townsmen were enfranchised. State finances were reorganized, and the royal army was modernized. A modern secular school system was introduced.

The possibility of a resurgent Poland threatened Catherine II, and she found an opportunity to strike again when a group of reactionary magnates opposed to the progressive reforms formed the Confederation of Targowica and petitioned her for aid. With this semblance of legality, Catherine ordered 100,000 of her troops to march into Poland in May 1792. Joined by Prussia, they executed the second partition of Poland. The combined armies of Prussia and Russia crushed a popular uprising led by Tadeusz Kościuszko (1794). The failure of the insurrection was followed by the third partition of Poland in 1795, which erased Poland from the map of Europe, and the abdication of Stanisław II a year later. The once-proud Commonwealth ceased to exist.

At the time of Poland's disappearing from the map, the star of Napoleon was rising in France. The Polish Legion followed Napoleon in his campaigns in Italy, Spain, Egypt, and Haiti—as well as when his army entered Polish lands in 1806. A part of the Treaty of Tilsit agreed to the creation of an independent Polish state, designated the Duchy of Warsaw. The duchy fielded an army of 100,000 Poles for the ill-fated Russian campaign, of whom three-fourths perished.

After Napoleon's defeat at Waterloo, the Duchy of Warsaw was swept away at the Congress of Vienna, which confirmed the partition of Poland. Out of the remnants of the duchy, Czar Alexander I created the small Kingdom of Poland (Congress Kingdom) and made the city of Kraków and its environs a free republic. Poles were not appeased by such token acts of benevolence and wanted nothing short of the expulsion of the Russians. In November 1830 a military insurrection led by junior officers broke out in Warsaw and quickly spread to other garrisons. It ended in utter defeat.

Ruthless Russification followed. The Congress Kingdom was made an integral part of the Russian Empire and was ruled directly by a government department in St. Petersburg. Martial law was imposed, the use of Polish in schools was prohibited, the Polish universities were closed, civil rights were curtailed, Polish units were integrated into the Russian army, and the Catholic Church was singled out for harsh treatment. Defeat and oppression combined to set off the so-called Great Emigra-

tion, in which more than 10,000 Poles, the flower of the country's intelligentsia, departed. Official Russian policy softened after the accession of Alexander II in 1855, but the proposed conscription of Poles into the Russian army in January 1863 set off a new insurrection. Lacking the army that had defied the Russians in 1830, the insurrection consisted of a series of small-scale guerrilla activities that were doomed from the start. It was the last Polish attempt at armed opposition until 1914.

For the next half century the national mood was one of silent resignation to and acceptance of the Russian yoke. Many sought an outlet for their creative energies in "organic labor"—support of internal economic and social reconstruction. Changes in the moral and intellectual climate were promoted by the rapid industrial development of Russian Poland. When Poland was included in the Russian tariff system in 1851, its industry gained favored access to a huge market. Poland became the most important industrial region in the Russian Empire.

Austrian Poland, or Galicia, was economically the most backward of all Polish lands. Yet, despite limited economic progress, the Austrian Poles won important political privileges. After a defeat by Prussia in 1866, the Austrian government needed to secure greater political support from its Slavic subjects. Poles were introduced into the political administration, and a provision was made for seating local assemblies after the establishment of the Dual Monarchy of Austria-Hungary in 1867. Polish delegates exercised a key role in the Vienna parliament, where no party had an absolute majority. Galicia became an important artistic and cultural region centered in Kraków and L'viv.

Prussian Poland experienced the most oppressive rule of all. Eastern Pomerania was incorporated directly into the Kingdom of Prussia in 1815 as a province of West Prussia, but Posnania was recognized as a semiautonomous grand duchy under Prussian sovereignty. This limited autonomy was curtailed after 1827, and in 1848 the grand duchy was abolished and became a Prussian province. A Germanization campaign was launched as part of Bismarck's effort to rid Germany of all un-German elements, particularly Slavs. Courts and schools were conducted exclusively in German. Poles were subject to legal discrimination and economic pressures.

Polish Catholics responded by redoubling their religious and national zeal. Turning their energy to the economy, they achieved commanding positions in the industrial and agricultural sectors. The Poznań area became the richest and economically the most highly developed of all Polish lands. German efforts to colonize their Polish dominions failed because of Polish resistance.

At the outbreak of World War I, Poland was a major battleground. Warsaw was under German occupation between 1914 and 1915; both Austrian and Russian armies carried out scorched-earth strategies during their

1904 Poland

withdrawals. By 1916 a total of two million Poles were fighting on both sides, and Polish war casualties exceeded 450,000. After Russia signed the Treaty of Brest-Litovsk with Germany in 1918, ending its participation in the war, Poles turned to the Allies for support. In 1917 Polish exile leaders formed a National Committee in Paris. In 1918 the U.S. president Woodrow Wilson, prompted by his friend pianist Ignacy Jan Paderewski, proclaimed his Fourteen Points, the 13th of which stated that an independent Poland should be erected with access to the sea and political independence.

Inside Poland an anti-Russian independence movement took shape under Józef Piłsudski, which movement, with the collapse of the Central Powers, quickly organized a Polish government at Warsaw. Poland declared independence on November 11, 1918. The first order of the day was the demarcation of boundaries, but these were not settled until 1923, after several uprisings, military campaigns, and plebiscites. Poland adopted a democratic constitution in March 1921. Based on the French model, the nation installed a parliamentary system in which executive authority was vested in a government responsible to a bicameral legislature comprising the Sejm and the Senate. The presidency was weak and mainly ceremonial, in an apparent move to curb Piłsudski's power.

The parliamentary electoral system encouraged a multiplicity of parties. About 30 parties contested elections in 1920, and about 15 regularly won parliamentary seats. Changes of government were frequent. There were 15 short-lived cabinets between 1918 and 1926. From 1921 to 1926 the country was plagued by economic problems, including massive unemployment, inflation of food items approaching 1,200 percent, and the plummeting value of the Polish mark. Efforts to foster a recovery were dealt a death blow by the tariff war with Germany that erupted in 1925, affecting one-quarter of all Polish trade. A financial panic ensued.

The breakdown of the economy and the parliamentary process prompted Piłsudski to leave the sidelines and mount a coup d'état in 1926. He seized control after several days of street fighting and forced the resignation of both the prime minister and the president. Piłsudski refused the presidency, instead establishing himself as a virtual dictator. His authoritarian government operated under the facade of a democratic government, and he retained the post of a minister of war in successive cabinets. Piłsudski refused to consider one-party rule and relied for organizational support in legislation on the political alliance called the Nonparty Bloc for Cooperation with the Government (BBWR). His regime was supported by the army, the political left, and trade unions. However, he offered no political program beyond cleansing (*sanacja*) and the introduction of better public administration. With the help of a large group of technocrats, the Piłsudski regime carried out a modest economic recovery. The

government took an active role in stimulating economic growth through public investment, central planning, and state participation in vital industries and services.

BBWR members introduced legislation that led to the promulgation of a new constitution in 1935. The main feature of the 1935 constitution was the shift of executive authority from the legislature to the presidency. The army came directly under the command of the president and was independent of civilian control. The office was designed with Piłsudski in mind, but he died in 1935, and there was no potential successor of equal stature to replace him.

Poland had followed a conciliatory policy toward Germany during the early 1930s. As the threat of German expansion increased, the nation shifted to an independent policy, trying to maintain a balance between its two historic enemies, the Soviet Union and Germany. The German absorption of Czech lands foreshadowed Poland's destruction. In 1939 Poland accepted a British guarantee of its independence and forged a military alliance with Great Britain. Adolf Hitler believed that this pact was a bluff and countered it with a secret pact with Joseph Stalin calling for the dismemberment of Poland.

On the morning of September 1, 1939, Germany attacked Poland. Britain and France lived up to their treaties, declaring war against Germany on September 2, but did not react in the field. Soviet forces invading Poland on September 17 met hardly more than token resistance. Germany and the Soviet Union then partitioned Poland.

The period from 1939 to 1945 was the most tragic in the history of Poland. In those years more than six million Poles died, or about 15 percent of the prewar population. Of those six million, about 700,000 died in war-related actions and reprisals, and tens of thousands perished from starvation and other hardships. From the beginning the Nazis pursued a ruthless policy of genocide. For Hitler, Poland was a reservation, a vast labor camp. About one million Poles were deported, and another 2.5 million were sent to labor camps in Germany. The Russians were equally brutal; they deported some 1.5 million Poles to labor camps in Siberia, and about 4,250 Polish officers were executed and buried in a mass grave in the Katyn Forest near Smolensk.

A Polish government-in-exile was set up in 1939, with General Władysław Sikorski as prime minister. By 1945 Poles constituted the fourth-largest Allied contingent in Europe. Polish cryptanalysts were responsible for breaking the German code "Enigma," thus enabling the Allies to read the orders sent by Hitler to his field commanders. On the eastern front, the Kremlin had formed a front group, the Union of Polish Patriots, which grew by 1944 to field-army strength under the command of Gen. Zygmunt Berling. In Poland two underground armies, the Home Army and the People's Army, constantly harassed the Germans and on the eve of the liberation of Warsaw

led the ill-fated Warsaw Uprising. Following the liberation of Poland by the Red Army, the Communist-backed Polish Committee of National Liberation (PKWN) proclaimed itself as the sole legal authority in liberated areas, as led by two longtime Communists, Władysław Gomułka and Bolesław Bierut.

The Poland that emerged from the war was a different country. As per decisions made by the Allies at Yalta and Potsdam, Poland's new western frontier lay along the Oder and Neisse rivers, adding more than 100,000 sq km of German territory, including Silesia and Pomerania and the southern portion of East Prussia. At the same time Poland was forced to cede to the Soviet Union 180,000 sq km, including Vilnius and L'viv, and to Czechoslovakia the part of Cieszyn Silesia seized in 1938. As a result of these territorial adjustments, Poland's physical center moved westward, as accompanied by a large-scale transfer of population.

According to the Yalta agreement Poles were to hold democratic elections with the participation of politicians from both Poland and the Polish government-in-exile in London. Yet it was the Red Army, together with the Soviet secret police, that dictated the rules. In 1946 a referendum concerning nationalization, land reform, and the structure of legislative power was held. Communist politicians, along with their mentors in Moscow, wondered how far they could go in manipulating voting results; the referendum, by and large falsified and forged, proved a success for the new regime. By 1947 the Polish Workers' Party (Polish Communist Party) could stage elections to the parliament, and the leftist alliance won by a great majority. Full power was in Communist hands, backed by the Soviet secret police and Soviet and Polish armies.

The following years saw a great effort by the Polish people to rebuild their nation after the disaster of the Second World War. Warsaw, which had almost been wiped off the earth by the Nazis, became a symbol of new times and the rebuilding of the state. The economic situation was harsh, but people worked with enthusiasm. At the same time Poland, like other countries in the Soviet bloc and under Moscow's pressure, refused any assistance from the "imperialist" world (i.e., rejected the Marshall Plan). Politically, a hard, totalitarian line was established. With the Communist Party leading every domain of life, most other parties were abolished (with the exception of two functioning under Communist leadership), opposition politicians were sent to jail, and public trials were held in which Polish patriots were accused of collaborating with the Nazis as well as with the CIA, MI6, and the like. Thousands were imprisoned, many receiving death sentences.

Polish life did not improve with Stalin's death in 1953; only in 1956, following changes in the Soviet Union, did the situation start to change. After several demonstrations, and at the time of the Hungarian uprising, Polish

Communists were allowed to politically and socially liberate their country. Władysław Gomułka, the prominent Communist leader who had been arrested in the 1940s by his colleagues, left prison to become the first secretary of the Communist Party. The liberalization of political terror became known as the 1956 thaw.

Gomułka's policies did not seriously alter the state of affairs in Poland. He was faithful to Moscow and afraid of any radical economic reform. Although Stalinist terror was gone, the nation was still under the strict control of the Communist Party. The years 1968 and 1970 saw dramatic demonstrations against the Communist regime in Poland: In March 1968 students protested; many of them were thrown out of universities, along with their professors. Anti-Semitic hysteria followed, resulting in thousands of Jews being forced to leave Poland. In December 1970, when workers in Gdańsk protested, the party employed the police and the army. Many people were arrested, while others were killed, and Gomułka was forced to give up his seat to Edward Gierek.

Gierek introduced considerable changes in state (and party) policy. Poland was opened up to foreigners, and many Poles were allowed to travel abroad. Economically, Gierek encouraged the growth of consumption, finding funds with which to do so in foreign banks. Shops filled up with hitherto unavailable jeans, clothes, tape recorders, and other luxury goods. Poland started to produce large numbers of small cars for working-class people. All this was done, however, without the necessary economic calculus and mechanisms. In the mid-1970s the welfare myth collapsed, as Poland had to start paying back its debts. The government announced price rises in 1976, and strikes followed. Once more, riot police were called in, and workers were beaten up and arrested. No major changes followed.

The same pattern repeated itself in the summer of 1980: rises in food prices, demonstrations, and strikes. Following long negotiations with the party, strikers were allowed to form independent labor unions, with the appropriate agreements signed in August 1980. In effect, a huge labor union—"Solidarity"—was called to life. The leader of the strike in the Gdańsk shipyard, Lech Wałęsa, became its president, and Solidarity soon boasted almost 10 million members. The party appeared to have lost all its power, yet on December 13, 1981, the first secretary of the party and prime minister General Wojciech Jaruzelski introduced martial law. Solidarity was illegalized and its leaders arrested; almost 10,000 people were imprisoned.

The following years showed that neither the party nor the illegal Solidarity had enough force to take full control, and in 1989 both sides decided to start a dialogue. A roundtable discussion took place wherein all vital issues were discussed by the members of the government, the party, and the opposition. In June semifree parliamentary elections took place. The elections were an unquestioned

1906 Poland

success for Solidarity, revealing that the Communist Party had very limited backing in Poland. While Gen. Jaruzelski was elected president, in the summer Tadeusz Mazowiecki became the first non-Communist prime minister in central Europe after 1945. In January 1990 “shock therapy” economic reform was implemented, introducing a market economy in Poland. One month later the Polish United Workers’ Party (Poland’s Communist Party) dissolved itself, thus ending the Communist era in Polish history. At the end of 1990 the first free and democratic elections in postwar Poland took place, and Lech Wałęsa was elected president.

The 1990s saw steady growth and economic improvement. In 1997 Poland’s gross domestic product (GDP) surpassed the 1989 figure, and macroeconomic indicators remained promising. Growth was not always reflected in peoples’ individual situations, however, especially with the slow rise in salaries and very high unemployment. The former Communists established a new party, the Democratic Left Alliance (SLD), which became the country’s ruling party. Both President Alexander Kwaśniewski, elected president for the second time in 2000, and Marek Belka, who became prime minister in 2004, are members of the SLD.

In the early 2000s Poland was struggling to maintain its market economy and to improve the standard of living of its people. It joined the European Union in 2004 but faced massive modernization efforts in bringing itself in line with EU standards, particularly in the areas of agricultural subsidies and governmental corruption. The Roman Catholic Church was deeply involved in political discourse, raising concerns about the corruption of moral values due to the nature of modern life.

The SLD was defeated in parliamentary elections in 2005 by the conservative Law and Justice (PiS) and the PiS candidate Lech Kaczyński won presidential elections.

LIST OF MODERN RULERS

President

1989–90	Wojciech Jaruzelski
1990–95	Lech Wałęsa
1995–2005	Aleksander Kwaśniewski
2005–	Lech Kaczyński

CONSTITUTION

Poland has a proud tradition of parliamentary governance. Poles cite 1493 as the year of the conception of their Sejm (parliament). Efforts were undertaken in the 18th century to reform and strengthen the Sejm, but the modern government act—the Constitution of May 3, 1791—never really had a chance at life due to the partitions of Poland. After World War II Poland found itself

under the full control of the Soviet Union, which instituted the Soviet model.

Dramatic changes took place after 1989, and a political contract was reached at a roundtable discussion. The National Assembly’s lower, legislative chamber (the Sejm) and upper, advisory chamber (the Senate) were organized. Also, the office of the president of Poland was established. These changes were confirmed in the 1997 constitution.

Poland is a democratic state. The National Assembly designates the prime minister, who is nominated by the president. The council of ministers reports to the Sejm, at the same time directing the work of various ministries and branches of state administration.

The president of Poland is elected in general elections for a five-year term. The president has legislative initiative and the power of a suspending veto toward laws issued by the National Assembly. The president also nominates ministers recommended by the prime minister. The president can, under specific circumstances, dismiss the parliament and order new elections (as Wałęsa did in 1993). He is the commander in chief of the army, nominates the government, and may declare a state of emergency.

The voting age is 18. Suffrage is universal.

PARLIAMENT

Poland’s National Assembly consists of two chambers whose members are elected for four-year terms through universal, equal suffrage and secret ballot. The lower Sejm is the main legislative body, comprising 460 deputies. The upper Senate consists of 100 deputies. The Sejm is the supreme organ of state power; it legislates law, adopts resolutions, and exercises control over executive and administrative bodies. The Sejm elects from among its members the speaker, deputy speakers, and committees. The Sejm’s deliberations are public. The Senate reviews the legislative work of the Sejm and may propose changes. It also has legislative initiative.

POLITICAL PARTIES

Changes in 1989 enabled the forming and registering of political parties, which was theretofore impossible. The new, temporary law made it so easy to register a party that the register in the Warsaw court soon counted over 350 political parties. Regulations of 1998–99 greatly reduced the number of significant parties represented in the National Assembly. In the 2005 elections only parties that won at least 5 percent of the total vote could enter parliament.

The Democratic Left Alliance (Sojusz Lewicy Demokratycznej, SLD) was founded by activists from the former Communist Party; it was the ruling party up to 2005, when it was soundly defeated in elections by Law and Justice (PiS), a center-right party. Other parties with

representation in parliament are the Citizen's Platform (PO), Self-Defense (SO), the Polish Peasant Party (PSL), the Polish Social Democratic Party (SDPL), the League of Polish Families (LPR), and the Labor Union (UP).

LOCAL GOVERNMENT

Poland is divided into 16 *województwa*, or provinces: Dolnoslaskie, Kujawsko-Pomorskie, Lodzkie, Lubelskie, Lubuskie, Malopolskie, Mazowieckie, Opolskie, Podkarpackie, Podlaskie, Pomorskie, Slaskie, Swietokrzyskie, Warminsko-Mazurskie, Wielkopolskie, and Zachodniopomorskie. The country is further divided into *powlats* and communes, each with their own locally elected officials.

LEGAL SYSTEM

Polish law is based on a mixture of continental (Napoleonic) civil law and Marxist legal theory. The government is gradually phasing out the old Communist laws as it increases democracy. Laws are systematized in various codes. Judicial decisions are not regarded as a source of law, although Supreme Court decisions do influence lower court decisions.

Justice is administered by a hierarchy of independent courts consisting of district courts, provincial courts, and the Supreme Court. The courts have limited judicial review of legislative acts, although the Constitutional Tribunal's rulings on laws are final. Parties may appeal the decisions of Polish courts to the European Court of Justice in Strasbourg. The judiciary is independent, though it is also inefficient.

HUMAN RIGHTS

Poland has seen tremendous changes in the exercise of human rights and freedom since 1989. Amnesty International lists Poland as among the countries where human rights are fully observed and there is political and economic freedom.

Censorship has ended. There is no monitoring of mass media as a state policy. Mail and telephones may be monitored only with the special permission of the public prosecutor's office. There is freedom of speech, although one is not allowed to propagate fascism or racism.

There is freedom of association and assembly, and it is possible to organize and register various organizations and societies as well as political parties. Permits are required to hold public meetings, but in most cases they are granted if they do not interfere with everyday life. Freedom of religion is actively enjoyed by Poles in both theory and practice. There are no legal restrictions on

travel within Poland and abroad, although housing problems often make travel difficult.

The office of ombudsman was created in 1987. The ombudsman is the highest authority in the state representing citizens and acting on behalf of their constitutional rights before all state offices and agencies. Anyone may appeal to the ombudsman's office if he believes his citizen's rights were broken. The ombudsman is elected to the office by the National Assembly for a four-year term.

In 2001 Poland began permitting citizens to apply to see the files kept on them by the secret police during the Communist era.

FOREIGN POLICY

The most important feature of Poland's foreign policy after 1989 has been its independence of other states and governments. Following its breakaway from the dissolving Soviet bloc (including from the Warsaw Pact and the Council for Mutual Economic Assistance, or COMECON), Poland's foreign policy became oriented around sustaining good relations with neighbors, both old and new, and establishing strong ties with the North Atlantic Treaty Organisation (NATO) and the European Union. Under the leadership of Minister of Foreign Affairs Krzysztof Skubiszewski and his successors, Poland managed to cast off its image as a Soviet agent. In modern times, the nation is active in all international organizations and bodies. Poland's military cooperation with western Europe and the United States was strengthened with its accession to NATO in 1999 and its active cooperation with the pact during the war in Yugoslavia. Poland joined the European Union in May 2004. It is also a member of the Organization for Economic Cooperation and Development.

Poland has very good relations with the Czech, Slovak, and Hungarian republics; after some minor problems, good relations were established with Lithuania. Relations with Belarus, on the other hand, are tense due to Belarusian domestic policy, in particular the lack of freedom of speech, the lack of democratic elections, and the prosecution of opposition. After the economic crisis in Russia and minor setbacks in mutual relations, both countries appear to be working toward better and closer cooperation.

The United States and Poland have had amicable relations since 1989. Poland supports the American military presence in Europe and has supported various U.S. operations in the Middle East. In 2003 Poland took over the leadership of about 9,000 troops in south-central Iraq; the government intended to withdraw those troops in 2005.

DEFENSE

Poland has a large military; the armed forces claimed almost 185,000 members in 2003. All males must serve a

1908 Poland

12-month period in the military. The nation is working to modernize equipment and restructure organization to conform to NATO standards, but it is hampered by budget constraints. Poland's top national security goal is to integrate its military with the forces of other EU and NATO nations.

ECONOMY

The Polish economy has undergone tremendous change since 1990, when what had been a centrally administered socialist economy was converted to a market economy. The United States and other Western nations supported Poland's efforts to cultivate free enterprise by lowering trade barriers, providing aid, and reducing debt. The economy grew rapidly in the 1990s, and Poland was taken off U.S. Agency for International Development assistance in 2000. Growth was slower in the early 2000s, and the nation suffered severe unemployment (20 percent in 2003). Still, the government has kept inflation at bay with tight monetary policy, and improved productivity in the private sector has helped. The state has privatized more than half of the formerly state-run industries. Foreign investors consider Poland a good business prospect because of its growth potential, its large domestic market, its EU membership, and its political stability.

Industry accounted for 31 percent of GDP in 2003, services for 66 percent. The main industries are iron and steel, coal mining, machine building, shipbuilding, food and beverage processing, textiles, and glass. One-third of Poland's exports go to Germany.

As of 2005 agriculture employed 16 percent of the workforce but brought in only 3 percent of GDP; the majority of farming households did not produce any commercial crops. The nation must face the necessity of withdrawing subsidies from unproductive farms, as the European Union is unwilling to pay for them.

ENVIRONMENT

Due to the lack of environmental policy prior to 1989 and the outdated and run-down industrial equipment still in use, the Polish environment is devastated. Though conditions have improved somewhat since the days of the Communists, major problems persist. Coal-fired power plants produce significant sulfur dioxide emissions, which cause acid rain, which in turn damages the forests. The water supply is polluted with industrial and municipal wastes. The country does not have a good system of disposing of hazardous wastes.

The country has passed strict laws regulating air, water, and soil pollution, but these often go ignored; government officials are reluctant to fine polluting factories because they are producing goods that the economy badly needs. Polish people are generally not well educated on the topic of the environment, and there is no arguing with the fact that stemming pollution will be expensive. Nevertheless, Poland will have no choice but to bring facilities up to EU standards, which will decrease future pollution.

LIVING CONDITIONS

Poland has a moderately high standard of living, though not as high as in western European nations; many poverty-stricken Poles wish their personal living standards were higher. Cities are fairly modern, though they are also polluted. The cost of living has gone up in recent years but is still low compared to Germany and other Western neighbors. Businesses are beginning to accept

1910 Poland

credit cards. Housing is in short supply, and many people live in fairly crowded conditions. Public transportation is widely available and inexpensive. More people are driving their own automobiles, though gasoline supplies and spare parts are not always available and cars are vulnerable to theft.

HEALTH

The government has been reforming the national health-care system, which has resulted in significant financial pressures. Despite such difficulties, Poles still have a good system of nationalized health care and are generally quite healthy. Life expectancy was over 74 years in 2004; infant mortality was low. Population growth has stabilized, with births and deaths nearly equal. Alcoholism is a problem.

FOOD AND NUTRITION

Polish food is filling, as based on potatoes, dumplings, and meat. The main vegetables are cabbage and sauerkraut, beets, and wild mushrooms. Typical spices include caraway seeds, dill, and marjoram. Most people eat three meals: breakfast (followed by a midmorning snack), a large lunch after work, and a small supper in the evening. People drink tea with nearly every meal. Vodka is a popular alcoholic beverage, as is beer.

STATUS OF WOMEN

Polish women do not as yet play an active role in public life, reflecting history rather than ideology. They enjoy full citizen rights and in the eyes of the law are equal with men. Due to the nation's Communist heritage, the majority of women have to work, as one parent's wages are not sufficient to support a family. In reality, the social, professional, and work status of women is lower than that of men. It is harder for women to find jobs, and their wages are usually lower than those of men in equal positions. Unemployment is also higher among women. There are far fewer women than men among managers of private and state companies and in politics. Gender studies are only now being introduced to universities, and very slowly. Feminist movements are very small and not visible.

Poland has liberal maternity and child-care leave policies. Abortion is illegal, except when pregnancy is caused by rape or endangers a woman's life.

WORK

Poland's people had some difficulty adjusting to the market economy, losing their guaranteed jobs and pensions. One-fifth of citizens of working age can find no employment. About 16 percent of Poles work as subsistence farmers, growing food for their personal consumption. Many of these farmers will be forced to do something else in the near future, as the government's restructuring the agricultural sector to conform to EU expectations will probably end the family farm as the basis for traditional society. Younger people tend to move to the cities to look for work, further abandoning the country's agricultural roots. Some 29 percent of Poles worked in industry in 2002, while over half worked in services, including government, education, and medicine.

EDUCATION

In September 1999 Poland initiated educational reform. The eight-four system (eight years of primary school and four of secondary) was discarded in favor of a six-three-three system (six years of primary school, three of middle school, and three of high school). Primary school consists of six classes. The first three teach general knowledge, while the following three teach subjects grouped in discipline blocks. After graduation from primary school, all children study in a three-year gymnasium. The final stage of school education is carried out in three-year general or professional high schools.

The formal introduction of the new system will end in 2006, when the students who started the first gymnasium study in 1999–2000 will graduate from high school. After graduating from high school, students may continue education in one of over 90 state universities (including all types of schools) or in one of over 200 private universities.

Children start school at age seven, although they do have a year of introductory class when six.

MEDIA

The Polish press is free and diverse, and Poland has the largest broadcasting market in eastern Europe. The two state-owned television stations, Telewizja Polska (TVP) and TV Polonia, command the largest audiences, but there are also several commercial channels and a digital pay-TV station, Cyfra+. Cable and satellite television make foreign programming available to Poles. Radio has become less important in recent years, but there are still about 200 stations in the country, and more than half the population listen to the state-owned station Polish Radio.

Over 300 newspapers are published in Poland, although fewer than 30 percent of Poles read them. Most newspapers are privately owned, many of them by foreign companies. The *Fakt* tabloid was the biggest seller as of 2004.

CULTURE

For most of the 20th century Polish culture was dominated by Communism and Socialist Realism. Realism informed all art forms, including painting, architecture, music, and literature; the Jewish author Isaac Bashevis Singer is one of the best-known artists of this period.

Following the fall of Communism, artists created new cultural sensibilities. Modern artists include the composer Henryk Górecki and the writer Ryszard Kapuściński. Music is increasingly popular, and the major cities host various musical festivals every year, such as the Music in Old Krakow Festival and the Wroclaw Cantans oratorio festival in Wrocław. Warsaw has a thriving music and theater scene, and the town of Gdynia holds an annual film festival.

Roman Catholic celebrations are extremely important in Polish culture. Christmas and Easter are the biggest celebrations, although every Sunday is an event.

FOLKLORE AND MYTHOLOGY

Poles have kept many of their folk traditions despite years of Communist suppression of native culture. Individual towns have their own folklore and folk dances, which are often the bases for local festivals. Many folk customs revolve around Christmas Eve, when it is said that animals can talk and people can see into the future. Grinding poppy seeds on Christmas Eve is said to help a girl marry quickly, and eating a large dinner could ensure a happy future.

ENTERTAINMENT AND RECREATION

Polish people enjoy going out in the evening to eat, drink, and be entertained; concerts, plays, and movies are all popular forms of entertainment. Local festivals occur throughout the year, particularly in the early summer and early fall. People love to go hiking, especially on marked routes in the mountains. In the summer, sailing on the Masurian lakes is extremely popular. In the winter, Poles enjoy skiing in the Carpathians.

ETIQUETTE

Poles expect punctuality. They generally address one another by title and surname unless they are very familiar. When entering a business meeting, it is appropriate to give business cards to and shake hand with everyone present; men sometimes kiss the hands of women. Guests often bring flowers when visiting friends; it is rude to bring an odd number of flowers.

FAMILY LIFE

Most Polish families are small; the average woman had 1.4 children in 2004. Traditional family patterns were broken up by Communist rule as well as by the current tendency for young people to leave the countryside and move to the city. Couples are required to attend premarital counseling before marrying. Divorce is difficult; courts do not allow

people to divorce without serious attempts to save the marriage, and the church does not allow divorced people to participate in sacraments. Due to crowded living conditions and economic constraints, divorced couples occasionally find it impossible to obtain separate living quarters and must remain in the same apartment.

PERSONAL APPEARANCE

Poles wear typical Western clothing. Work clothing is fairly formal—dresses or skirts for women and suits and ties for men.

SPORTS

Poles engage in a variety of sports. Soccer is the most popular spectator sport, and people also play basketball, sail, fish, play golf, and participate in other activities, such as martial arts. Poland has always sent teams of athletes to the Olympics; historically, Polish athletes have performed quite well, especially in boxing, fencing, weightlifting, and track and field. The country typically performs best in the Summer Olympics.

CHRONOLOGY

- 1945** Provisional Government of National Unity is installed.
- 1947** In forged elections, held under strict police and army control and terror, Communist regime wins 80 percent of the vote; Bolesław Bierut is named president and Józef Cyrankiewicz prime minister. The Constitutional Act is passed as an interim constitution. Władysław Gomułka is demoted.
- 1948** Polish Workers' Party merges with Polish Socialist Party to form Polish United Workers' Party (Communist Party).
- 1949** Poland joins COMECON. The Sovietization of every domain of life takes place. Numerous opposition activists are arrested and often sentenced to death. Church-state conflict erupts as the Vatican excommunicates Communist activists.
- 1952** New constitution is promulgated.
- 1953** Stefan Cardinal Wyszyński, Poland's primate, is jailed.
- 1956** Bierut dies. Riots break out in Poznań in June. Gomułka is restored as first secretary in fall. Soviet troops stop outside Warsaw and do not interfere. The liberalization of life is referred to as the "thaw of 1956."
- 1968** Student and university demonstrations and riots occur. Government anti-Semitic campaign

- drives thousands of Jews to emigrate. Polish army joins Warsaw Pact invasion of Czechoslovakia.
- 1970** Bloody riots in Gdańsk bring Gomułka down. Gierek, who replaces Gomułka, launches crash programs to industrialize the country through massive borrowing from the West.
- 1976** Food crisis triggers new riots. Forming of the first “formal” opposition groups (Komitet Obrony Robotników, KOR).
- 1980** Unrest sparked by rising prices and falling wages leads to wave of strikes, in particular at the Lenin Shipyard in Gdańsk. Gierek concedes to workers’ demands enumerated in the Gdańsk Agreement. Workers form a decentralized independent trade union, Solidarity, led by a 38-year-old electrician, Lech Wałęsa. Gierek is replaced by Stanisław Kania.
- 1981** As the political and economic crisis deepens, Gen. Wojciech Jaruzelski (first secretary of the party, prime minister, and minister of war) proclaims martial law. Solidarity is outlawed, and thousands of activists are interned. Military Council for National Salvation takes over the government.
- 1985** Jaruzelski resigns as prime minister to become chairman of Council of State. Zbigniew Messner is named prime minister.
- 1987** Government fails to win national referendum on political and economic reform.
- 1988** Messner is forced to resign and is replaced by Mieczysław F. Rakowski.
- 1989** A roundtable discussion between Communists and opposition leaders brings about a political contract, and Solidarity is effectively legalized. In first semifree parliamentary elections in 40 years Solidarity sweeps the polls, winning 99 of 100 seats in the Senate and all 161 (out of 460) open seats in the Sejm. Jaruzelski is elected president, but his nominee fails to form the government. Tadeusz Mazowiecki, from Solidarity, is elected prime minister, the first non-Communist prime minister in eastern Europe since the end of World War II.
- 1990** Polish United Workers’ Party is dissolved and replaced by Social Democracy of the Polish Republic. Solidarity is split into pro-Wałęsa and pro-Mazowiecki factions. Wałęsa wins the first general presidential election. Mazowiecki resigns as prime minister.
- 1991** First free parliamentary elections since World War II take place. Over 30 parties make it to the parliament.
- 1993** Hanna Suchocka’s government, coformed by Solidarity, is brought down by Solidarity deputies. Wałęsa dissolves the National Assembly, and the ensuing elections are won by Social Democrats and the Peasant Party. Some 30 percent of votes are cast for parties that fail to pass the necessary threshold. Social Democrats (former Communists) form the government with the Peasant Party. Solidarity finds itself a nonparliamentary opposition.
- 1995** Presidential elections are won by the leader of Social Democrats, Aleksander Kwaśniewski, who defeats Lech Wałęsa by fewer than 600,000 votes.
- 1997** Parliament promulgates new constitution. Parliamentary elections produce a major victory for the Solidarity-formed party Electoral Action Solidarity (Akcja Wyborcza Solidarnosc, AWS). AWS, together with Freedom Union (Unia Wolności, UW), forms a new government under Jerzy Buzek as prime minister.
- 1999** The government introduces four major reforms: to the administrative system, social security, health, and education. Poland joins NATO.
- 2000** The ruling AWS-UW coalition breaks up as Poland prepares for presidential elections. Kwaśniewski wins presidential elections, garnering 53 percent of valid votes cast in the first round of elections.
- 2001** The Democratic Left Alliance (SLD) emerges as the largest party in national elections. It forms a coalition government with the Polish Peasant Party, and SLD leader Leszek Miller becomes prime minister.
- 2002** The European Union invites Poland to become a member in 2004.
- 2003** The SLD ejects the Polish Peasant Party from its coalition after the latter fails to vote with the government on a tax issue. Poles vote in favor of EU membership.
- 2004** Poland joins the European Union. Miller resigns as prime minister; Marek Belka succeeds him.
- 2005** The conservative Law and Justice (PiS) party wins parliamentary elections; PiS candidate Lech Kaczyński wins presidential elections.

CAPITAL

Lisbon

HEAD OF STATE

President Jorge Sampaio (from 1996)

HEAD OF GOVERNMENT

Prime Minister José Sócrates (from 2005)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

10,566,212 (2005)

AREA

92,391 sq km (35,672 sq mi)

ETHNIC MAJORITY

Portuguese

LANGUAGE

Portuguese

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Euro

NATIONAL FLAG

A green field at the hoist and a red field at the fly, with the red area two-thirds as wide as the green area. At the junction of the two is the national coat of arms in yellow, red, blue, and white.

NATIONAL EMBLEM

An armillary sphere, an ancient navigation instrument rendered in gold, is the background. On the white central escutcheon is the Cross of Redemption, made up of five small blue shields, each displaying a pattern of five white dots, or roundels, representing the wounds of Christ. The red border around the central escutcheon is decorated with seven gold castles.

NATIONAL ANTHEM

“A Portuguesa” (The Portuguese)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), April 25 (Freedom Day), May 1 (Labor Day), June 10 (Portugal Day), October 5 (Implantation of the Republic), December 1 (Restoration of Independence), all major Christian festivals

DATE OF INDEPENDENCE

1143

DATE OF CONSTITUTION

April 25, 1976; revised 1982, 1989, 1992, 1997, 2001, and 2004

GEOGRAPHICAL FEATURES

Portugal is one of the smallest countries in Europe as well as the most westerly country of continental Europe, occupying the greater portion of the western littoral of the Iberian Peninsula. Its total land area is 92,391 sq km (35,672 sq mi), including the Azorean archipelago of nine islands, 1,287 km (800 mi) west of Portugal with an area of 2,300 sq km (888 sq mi), and Madeira and Porto Santo, 966 km (600 mi) southwest of Portugal with an area of 798 sq km (308 sq mi). Portugal proper extends 561 km (349 mi) north to south and 218 km (135 mi)

east to west. Its total land boundary is 1,214 km (754 mi), shared with Spain, and there are 1,793 km (1,114 mi) of Atlantic coastline.

The capital is Lisbon (Lisboa), on the estuary of the Tejo. It is the country’s largest port and largest city; Greater Lisbon accounts for more than 20 percent of the national population. The second-largest city, Porto, has the distinction of having given its name to the whole country.

For a small country Portugal has a variety of topographical features and soils. The most striking differences are between the north and south, with the Rio Tejo, Por-

Portugal

tugal's largest river, forming a convenient dividing line between the hilly to mountainous regions of the north and the rolling plains of the south. The major geographic regions correspond to the six provinces that existed from the Middle Ages to the 19th century.

The Minho is the historic cradle of Portugal. The beautiful river valleys of the Lima, Cavado, and Tamega cross the Minho from northeast to southwest, providing some of the finest scenery in Europe. The Serra do Geres area is known as Portuguese Switzerland. Although the soil is not very fertile, the high rainfall allows intensive cultivation.

Tras-os-Montes (literally, "across the mountains") is the northeasternmost area of Portugal. The region may be divided into two distinct climatic and geographic parts: the northern *terra fria* (cold land), an extension of the Castilian Plateau, with low rainfall and rocky terrain; and the *terra quente* (hot land), which has a more temperate and Mediterranean climate.

The central area south of the Douro, the second-largest river, and north of the Tejo is the Beira. It is dominated by Coimbra, an ancient town on the Rio Mondego. The northern part of Beira Baixa is a dry and windswept region. The Serra da Estrela (the Mountain Range of the Star), rising to 1,981 m (6,500 ft), splits the region in two. Coastal Beira (Beira Litoral) is one of the most fertile regions in the country.

The region of Estremadura includes the Tejo estuary, the capital city of Lisbon, and the important Tejo valley area known as Ribatejo. To the northwest of Lisbon and behind the Costa do Sol lies the Serra de Sintra, an area of considerable natural beauty celebrated by Shelley and Byron.

The Alentejo (literally, the land across the Tejo) is a vast area of gently rolling hills, generally rising to about 183 m (600 ft). It is a poor and sparsely populated region with low rainfall, virtually no natural vegetation, and infertile soils made more desolate by long, hot summers.

The Algarve, the southernmost region, was the last area to be recaptured from the Moors and retains a distinct flavor and identity. It is separated from the Alentejo by two mountain ranges: the Serra de Monchique in the west and the Serra de Caldeirao in the east. Its California-like weather permits sea bathing from March through September and accounts for its popularity with tourists.

The Madeiran archipelago consists of Madeira, 55 km (34 mi) long and 23 km (14 mi) wide, as well as the island of Porto Santo and the uninhabited Desertas and Selvagens. On the main island the land rises sharply from the coast to a height of 1,861 m (6,106 ft) at Pico Ruivo.

The Azorean archipelago is a volcanic mountain chain of nine islands divided into three groups: São Miguel and Santa Maria to the east; Terceira, Pico, Faial, São Jorge, and Graciosa in the center; and Flores and Corvo to the northwest. Thermal springs are features on the largest

island, São Miguel, on which the capital, Ponta Delgada, is located.

There are several zones of intense seismic activity as well as major geological faults in Portugal. The largest zones are concentrated in the Algarve, the greater Lisbon area, and the Rio Tejo estuary as far as Benavente. A disastrous earthquake on November 1, 1755, killed an estimated 20,000 people and caused extensive damage in Lisbon, Setúbal, Lagos, Portimão, and Faro. Severe earthquakes have also occurred in the Azores.

Vila Nova de Gaia	287,597

CLIMATE AND WEATHER

Portugal has two climatic zones: the northern and the southern, with the Tejo River as the boundary. Within these two zones are climatic subregions. The northern climatic zone has an average annual rainfall of 1,000 mm (39 in), varying from 1,000 to 1,800 mm (39 to 70 in) in Braga to 500 to 1,000 mm (20 to 39 in) in coastal Coimbra. Its temperatures are considerably lower than those in the south. Winter snowfall is common in the Serra da Estrela and the Serra do Gerez, but warm and humid Atlantic air currents tend to temper the cold along the northern coast. Mean temperatures at Braga (191 m; 627 ft) range from 9°C (48°F) in February to 18°C (65°F) in August. Viana do Castelo, on the coast, has virtually the same temperature range.

The northern interior is shielded from Atlantic influences by the mountains. The plateau of Braganca is bleak and windswept, while Vila Real, the center of the port wine region, has summer temperatures exceeding 38°C (100°F). Normal precipitation in the northern interior at Mirandela is barely 25 mm (1 in) in July and little more than 75 mm (3 in) in January. The usual temperature range, between 4°C (39°F) in January and 24°C (75°F) in August, contrib-

1918 Portugal

utes less to the harshness of life in the region than do the constant winds and lack of rainfall. The winter winds are southerly or easterly, and in the summer they bring the dust of the Spanish *meseta* and North Africa.

Southern Portugal has a Mediterranean climate, with low annual rainfall and mainly sunny days. The Algarve receives rain only in the late fall and winter, while the summer drought reflects the influence of the Azorean high-pressure system. At Caldas de Monchique (203 m; 666 ft) the temperature is 10°C (50°F) in January and the rainfall 200 mm (8 in), but in July the temperature is 24°C (75°F) and the rainfall 2.5 mm (0.1 in).

The climate of the Azores is moderate, but the winter months can be rainy and unpleasant, with gale-force winds. There are considerable variations in annual rainfall between the eastern and western islands of the archipelago. Flores averages 1,500 mm (60 in) of rainfall annually, whereas São Miguel registers only 750 mm (29 in).

Madeira has a mild, semitropical climate.

Climate and Weather

Mean Temperature

Northern Coastal Region from Porto to Lisbon: 48°F to 65°F
Northern Interior: 40°F in January to 75°F in August
Southern Portugal: 50°F to 75°F
Azores: 50°F to 80°F

Average Rainfall

Northern Coastal Region: 39 in
Braga: 12 in
Viana de Castelo: 9 in
Northern Interior: 1 in to 3 in
Southern Portugal: 0.1 in to 8 in
Azores: 29 in to 60 in

FLORA AND FAUNA

Portugal has lush vegetation. The northern portion is covered with forests and has long been used to grow grapes, potatoes, rye, and corn. The central and southern regions are drier but also support a number of trees, including almond, fig, olive, orange, and cork trees, and grape vines. The valley of the Douro River is especially known for its fine grapes. Most animals are domesticated, including sheep and cattle, especially bulls raised for bullfighting. The Azores and Madeira are well known for their bird life. Whales live in the waters around the Azores.

Average Size of Households: 3.1

Induced Abortions: —

ETHNIC COMPOSITION

The Portuguese are among the most homogeneous populations in Europe, with no national minorities. Racially, the Portuguese are descended from a historical mixture of ethnic groups, including Celts, Phoenicians, Greeks, Carthaginians, Romans, Vandals, Arabs, and Berbers.

There are an estimated 100,000 persons of mixed race among the refugees from African colonies, including 20,000 from Cape Verde. No racial problems have been reported between these immigrants and other residents in recent years. About 100,000 gypsies also live there, maintaining their own subculture.

LANGUAGES

The national language of Portugal is Portuguese. Mirandese is also an official language, spoken locally. Portuguese is one of the major languages of the world, spoken by more than 180 million people on four continents, including 163 million in Brazil. The Portuguese language arose in the 12th century as a synthesis of the Galego-Portuguese of the Christian north and the Morabic-Lusitanian of the Muslim south. Within modern Portuguese there are four principal dialects: the northern, or Interamense, in the Minho and Tras-os-Montes; the central, or Beirão, in the Beiras; the southern in the rest of the mainland, including Lisbon; and the insular in Madeira, the Azores, and Brazil. Portuguese is a distinct Romance language, also containing 500 words of Arabic origin. While Portuguese is spoken in Europe only by Portuguese nationals, another two million people north of the border, in Spain, speak Galego, a dialect of Portuguese.

RELIGIONS

The history of Portugal is bound with that of the Roman Catholic Church, and there are scarcely any historical events or movements lacking some religious content.

Missionaries accompanied Portuguese explorers on their voyages of discovery and played a crucial role in securing colonial lands. The state repaid this support by sharing wealth and, to some extent, political power with the church hierarchy. This beneficial symbiosis persisted well into the mid-18th century. Strong anticlerical sentiments surfaced in the late 1700s, however, and persisted through the second decade of the 20th century, challenging and debilitating church authority. Anticlericalism reached its acme during the early decades of the 20th century. Yet extreme measures eventually antagonized an essentially conservative people and led to popular reaction, and during the Salazar years, from 1932 to 1968, the church was restored to its former status.

On the basis of census figures and baptismal records, Portugal is an overwhelmingly Catholic country. The proportion of Catholics is among the highest in Europe, around 94 percent. The pervasive influence of the church is attested to by the physical layout of almost every village and town, with churches located in town centers or on hilltops in proximity to and in full view of villages.

Just as there are no ethnic minorities, there are no religious minorities of any size or consequence. Protestants constitute less than 0.8 percent of the population. The number of Jews—remnants of a once-flourishing Jewish community from pre-Inquisition times—is only a few hundred at most. Portuguese without religion constitute the largest non-Catholic minority, limited almost entirely to the south.

Religious Affiliations

Roman Catholic	9,900,000
Protestant and Other	630,000

HISTORICAL BACKGROUND

The history of Portugal, known as Lusitania to the ancients, began in 1139, when the independent kingdom of Portugal was founded by Afonso I, with the capital at Porto, from which the name of the country is derived. In previous centuries, the Lusitanians had been successively overrun by the Celts, Romans, Visigoths, and Moors. Within 50 years of the Moorish conquest early in the eighth century, the Christian kings of Asturias-León had retaken Braga, Porto, Viseu, and Guimarães in the Douro-Minho region. For the next 200 years this region became the buffer zone between the Moors and the Christians. As the Christians extended their reconquest, or Reconquista, this buffer zone was organized as the *Provincia Portucalense* (province of Portugal), a term first recorded in 883 to designate the Douro-Minho region. In 1096 King Alfonso VI of Castile-León gave hereditary titles to the counties of Portugal and Coim-

bra as a dowry to the crusader Henry of Burgundy on his marriage to the king's favorite but illegitimate daughter, Teresa. Their son Afonso Henriques (1128–85) made war on the Moors and defeated them at Ourique (ca. 1139), an event celebrated in Portuguese history and legend. During the next 150 years the dynasty that Afonso Henriques founded built a firm foundation for a strong kingdom. With the aid of foreign mercenaries, in 1147 Afonso Henriques captured Lisbon, which in 1298 became the royal capital. The Algarve fell in 1249 to Afonso III (1246–79), completing the Portuguese phase of the Reconquista. King Diniz (1279–1325) introduced Portuguese as the official language in place of Latin and imposed the use of Portuguese on the south. Portugal's borders with Castile were stabilized after 1295, although the threat of war with the stronger Spanish kingdom was a constant concern for Portuguese kings.

An alliance with the English, sealed by the Treaty of Windsor of 1386, was the cornerstone of Portuguese foreign policy for the next 500 years. The alliance was strengthened through the marriage of Philippa, daughter of John of Gaunt, to King João I. Philippa became the mother of an extraordinary line of royal princes who led Portugal into its golden age: King Duarte; Pedro the regent; Antonio the Crusader; João II; and Dom Henrique, better known as Henry the Navigator.

Overseas expansion was an extension of the Reconquista and its crusading impulses; Portugal became the first European nation to extend its territory outside the Continent. The campaign put the Portuguese in control of most of Morocco's western coastline by the end of the 15th century. Prince Henry the Navigator (1394–1460), who masterminded the early explorations, prodded his mariners to explore beyond Cape Bojador on the western coast of Africa, then thought to be the outer boundary of the knowable world. Portuguese sailors reached Madeira in 1420 and the Azores by 1427. In 1434 Gil Eanes rounded Cape Bojador and on succeeding voyages explored the mouth of the Gambia River and reached the Cape Verde Islands. Under João II (1481–95), exploration and trade became the dominant themes of Portuguese efforts. In 1484 the Portuguese rejected Christopher Columbus's recommendation for a westward approach to the Indies and committed themselves to an eastern route by rounding Africa. Between 1482 and 1484 Diego Cão explored the mouth of the Congo and the coast of Angola. Bartholomeu Dias rounded the Cape of Good Hope in 1487. The crowning achievement came in 1497 when Vasco da Gama rounded the Cape of Good Hope and sailed up the coast of Mozambique to Mombasa, in modern-day Kenya, and from there across the Indian Ocean to the Malabar coast of India. On his third voyage to India, in 1503, da Gama broke Arab power in the East with a telling defeat and confirmed Portugal as the dominant power in the Indian Ocean in the early 16th century.

1920 Portugal

In 1494 the Treaty of Tordesillas divided the New World between Portugal and Spain, Spain laying claim to regions to the west of a specified longitudinal line and Portugal to the east of it. In 1500 the fleet of Pedro Álvares de Cabral, bound for India, was blown off course and made landfall in Brazil—which lay on the Portuguese side of the line. He took possession of the new country, Portugal's only territory in the New World.

The task of creating the Portuguese Empire in the East fell to Afonso d'Albuquerque, viceroy of the East from 1509 until his death in battle in 1515. He was perhaps the single greatest strategic planner in the history of European imperialism. With his center of operations in Goa, India, which was captured in 1510, he constructed a string of military and commercial bases. In quick succession his forces seized Ormuz and Muscat to control the mouth of the Persian Gulf and established bases at Malacca, Sumatra, Timor, the Moluccas, and Ceylon. In 1513 the Portuguese were present in Canton and obtained commercial rights and later sovereignty in the enclave of Macao.

The first half of the 16th century saw the zenith of Portugal's seaborne empire under Manuel I (1495–1521) and his successors. In addition to power, the spice trade brought enormous profits to the court and the nobility. Rather than stimulate the domestic economy, however, overseas trade tended to depress it, as far cheaper colonial goods were imported into the country. Profits from the trade in sugar and spices dropped sharply after the middle of the 16th century. The quality of Portuguese technology eroded, and Portugal could not build ships fast enough to replace the ones lost at sea and to meet the needs of increased competition.

The final blow came when King Sebastião (1557–78) was defeated and killed by the Moors at Alcazarquivir. The royal house of Aviz survived him by only two years. For the next 60 years Portugal was under the Hapsburgs, beginning with Philip II of Spain.

There was considerable popular resistance to Hapsburg rule. Catalonia rebelled in 1640, and Portugal followed suit when required to assist Philip IV against the Catalans. The Duke of Bragança, the nominal commander of the Portuguese forces, was elevated by the nobles as João IV, and the union with Spain was effectively ended. The House of Bragança ruled the country during the 17th and 18th centuries as absolute monarchs after the manner of Louis XIV of France.

Despite the loss of much territory under Hapsburg rule, at the end of the 17th century Portugal was the pivot of three large empires: in Asia, where it retained Goa, Macao, and Timor; in Africa, where Mozambique and Angola had developed from small trading stations into large provinces, and where Cape Verde and Guinea-Bissau were under Portuguese rule; and in South America, where Brazil was the jewel of the Portuguese Crown. The discovery of gold in Brazil in 1687 financed Portugal's baroque flowering in the early 18th century.

Under José the Reformer (1750–77) the direction of government was vested in the hands of the remarkable Sebastião José de Carvalho e Melo (1699–1782), later the marquis de Pombal. Pombal became the veritable dictator of Portugal, running the most authoritarian regime known in 18th-century Europe. Pombal's dominance was reinforced by his rebuilding of Lisbon after the disastrous earthquake of November 1, 1755, in which 60,000 Portuguese died and the city was almost razed to the ground. Pombal also undertook restructuring of the state administration and economy. He launched the first official move in Portuguese history against the church, which had opposed his reforms. The Jesuits were expelled, and most church property was confiscated.

During the Napoleonic Wars the royal family—Maria I (1777–1816) and her son João VI (1816–34)—took refuge in Brazil, where a government-in-exile was established under British protection. After the British had liberated Portugal from the French, the royal family continued to live in Brazil as the head of the United Kingdom of Portugal, Brazil, and the Algarve. Discontent with this arrangement in Portugal led to the constitution of 1822, calling for a limited monarchy and a strong central government. João VI returned from Brazil, leaving his heir Dom Pedro behind. Dom Pedro, with British support, declared Brazil an independent state and took the title of emperor. On the death of João VI in 1826, Portuguese traditionalists supported the claims of Dom Miguel, the younger son of João VI. Pedro thereupon returned to Lisbon, where, backed by the army, he replaced the 1822 constitution with the Charter of 1826, which returned executive authority to the king. After the charter was adopted, Pedro returned to Brazil, setting off a fresh series of succession struggles that eventually ushered in Portugal's second anticlerical period.

The Bragança dynasty ended in 1910 with a revolution led by republicans. Manuel II (1908–10) fled with his royal family to England. The constitution of 1911, which formally inaugurated the Republic of Portugal, abolished the monarchy and provided for a parliamentary system of government, with executive authority vested in a cabinet and a president. The dominant party in the new Cortes, the representative assembly, was the Democratic Party, led by Afonso Costa, an uncompromising anticlericalist and radical. Catholic opposition, fueled by the apparitions of the Virgin Mary at Fátima in 1917, high inflation, poor harvests, and the economic strain of World War I bedeviled the government and destabilized the country. A wave of terrorism swept the cities, and between 1910 and 1926 there were 45 governments and 18 military coups.

In 1926 a military coup in Braga brought in Antonio de Oliveira Salazar, an economics professor and former seminarian, first as finance minister and later as prime minister. The period of military rule was brought to an end by the adoption of a new constitution establishing the New State (*Estado Novo*), in theory a corporate state

representing interest groups rather than individuals. Salazar's was a low-keyed, personalist rule without party or extensive ideology. A devout Catholic, Salazar also brought Portugal back into the Catholic fold and healed the divisions caused within Portuguese society by generations of anticlericalism.

Portugal remained neutral during World War II but extended moral and material support to the Allies. The taint of the Salazar regime's association with Fascism nonetheless kept the country from being admitted to the United Nations until 1955. On the other hand, North Atlantic Treaty Organisation (NATO) membership was extended from the beginning of the Atlantic Alliance in 1949. Portugal held on to its overseas colonies even as other European powers relinquished theirs, but in 1961 India successfully invaded Goa and incorporated Portugal's several Indian enclaves. The early 1960s witnessed popular uprisings against Portuguese rule in its three mainland African territories: Angola, Mozambique, and Portuguese Guinea.

Ill health forced Salazar to step aside in 1968 in favor of Marcello Caetano. However, popular weariness with the fighting necessary to contain the wars of liberation in Africa—and their debilitating effect on the Portuguese economy—prompted the military to depose Caetano in a nonviolent coup on April 25, 1974. The right of the overseas colonies to self-determination was recognized, and between 1974 and 1976 all were granted independence except Portuguese Timor, which was overrun by Indonesia, and Macao, which Portugal retained; in 1976 Madeira and the Azores were granted autonomous status. After two more years and a number of further coup attempts, a new, more democratic Portuguese constitution entered into force. The army chief of staff, António Ramalho Eanes, ran successfully for president, and a government led by the Socialist Party (PSP), under Mário Soares, took the reins of government.

Following the adoption of a revised constitution in 1982, the military's role in overseeing governmental affairs ended with the abolition of the Council of the Revolution. A grand coalition of the PSP and Social Democratic Party (PSD), formed under Soares in 1983, came to an end when the PSD, under its new leader, Aníbal Cavaco Silva, succeeded in setting up a minority government in 1985. Cavaco Silva guided Portugal into the European Community in 1986, privatized some state industries, and attempted a controversial revision of labor laws in the name of improving the business climate. In 1995, following several years of economic stagnation, the PSP won elections under António Guterres, a moderate Socialist. Guterres prepared the country to take part in the European Union's Economic and Monetary Union (EMU), primarily by shrinking its perennial budget deficits; Portugal joined the first stage of EMU in 1999. Toward the end of 1999, Portugal ceded its last overseas territory, Macao, to China; that same year the United Nations se-

cured the independence of East (formerly Portuguese) Timor from Indonesia.

In 2001 Prime Minister Guterres resigned after his Socialist Party suffered unexpectedly heavy losses in local council elections. Following general elections in March 2002, Social Democrat leader José Manuel Durão Barroso formed a center-right coalition government, promising cuts in corporate taxes and public spending. Barroso resigned on July 5, 2004, to take over the presidency of the European Commission, and the center-right Social Democrat Pedro Santana Lopes took over as prime minister. Lopes and his administration resigned on December 11, 2004, but stayed on to maintain the government until the February 2005 elections. Those elections resulted in the election of the Socialist candidate José Sócrates. Sócrates took office planning to bring the budget deficit under control and stem unemployment while simultaneously increasing economic growth.

LIST OF MODERN RULERS

1983–85	Mário Soares
1985–95	Aníbal Cavaco Silva
1995–2002	António Guterres
2002–04	José Manuel Durão Barroso
2004–05	Pedro Santana Lopes
2005–	José Sócrates

CONSTITUTION

Portugal is governed by the constitution of 1976 as amended multiple times, most recently in 2004. Amendments have placed the military under civilian control, reduced the president's power, privatized national firms and the media, and laid the foundation for creating a liberal democracy.

The government has four branches: the president, the government (the prime minister and Council of Ministers), the parliament (the Assembly of the Republic), and the judiciary. The president is elected to a five-year term by direct, universal suffrage; the voting age is 18. The president can confirm or dismiss the prime minister, confirm the Council of Ministers, veto legislation, and declare war. The president is also commander in chief of the armed forces.

The prime minister heads the government. The assembly nominates the prime minister, who must be confirmed by the president. The prime minister then selects the Council of Ministers, which is composed of six civilian officers, former presidents, five members chosen by the president, and five members chosen by the Assembly of the Republic. The Council of Ministers advises the president and creates a governing platform, which must be approved by the Assembly.

1922 Portugal

The Azores and Madeira are constitutionally autonomous.

PARLIAMENT

The national legislature is the unicameral Assembly of the Republic (*Assembleia da República*), consisting of up to 230 members elected to four-year terms by popular vote. The president is allowed to dissolve the Assembly and call for new elections.

POLITICAL PARTIES

The Portuguese Socialist Party (*Partido Socialista Português*, PSP) is the descendant of Socialist Action, founded in 1964 by exiled Socialist militants led by Mário Soares. The PSP is the best-organized and the most highly structured of the larger parties. Formerly similar to the left wings of most western European social democratic parties, in 1992 the PSP took a centrist approach, stressing markets and privatization as well as social equity. The party draws wide support from the working class, the urban middle class, and many professionals but has never been able to make much headway into the Catholic north. The Socialists have held the presidency since 1986, first under Soares and then under Sampaio.

The Social Democratic Party (*Partido Social Democrático*, PSD) is the largest of the opposition parties. Originally known as the Popular Democratic Party, it originally favored the nationalization of critical industries but had moved decidedly rightward by 1976. The PSD is a conservative party representing mostly the heavily Catholic northern region. Like other European liberal parties, the PSD generally favors private enterprise. In foreign affairs, it is pro-West and anglophile.

The Portuguese Communist Party (*Partido Comunista Português*) consistently drew 10 to 15 percent of the votes in every election from 1974 to the late 1980s, whereupon it began to slip and sought allies. In 1987 the Communists formed an electoral alliance with the Greens and the Democratic Intervention called the Unified Democratic Coalition. The Communists have cooperated to some degree with the current Socialist government.

The People's Party (*Partido Popular*), the main Christian Democratic party of Portugal, was formed under the rubric Social Democratic Center after the 1974 coup by officials in the precoup regime. Its political policies are based on the social doctrines of the Catholic Church. It has been in and out of governments since 1975 and in recent years has been marked by opposition to further integration into the European Union.

Minor parties include the Popular Monarchist Party, the pensioners' National Solidarity Party, the Green Ecologist Party, and the rightist Christian Democratic

Party. Three parties on the far left, the (Marxist) Popular Democratic Union, the Revolutionary Socialist Party, and Politics XXI formed a coalition called the Left Bloc, winning three parliamentary seats in 2002.

LOCAL GOVERNMENT

Portugal has a strong national government, and regional and local governments do not have much autonomous power. The three principal levels of local administration are districts (*distritos*), municipalities (*concelhos*), and parishes (*freguesias*). Additional administrative units known as wards (*barrios*) are placed between parishes and municipalities in Lisbon and Porto. There are 18 districts, each headed by a governor, a district council, and a district committee.

The Azores and Madeira have the status of autonomous regions, and each has its own popularly elected regional assembly and its own regional government.

LEGAL SYSTEM

The Portuguese legal and judicial system is based on Roman civil law as influenced by the French model. The system distinguishes between civil (commercial), criminal, military, labor, administrative, and fiscal law. There are two parallel court systems: the courts of justice system, with trial and appellate jurisdiction over civil and criminal cases, and the special courts system, which is outside the formal court system, with equivalent jurisdiction over military, labor, administrative, fiscal, and other cases.

The constitution guarantees judicial independence in stipulating that judges cannot be removed by the government. Matters of constitutionality are determined by a constitutional tribunal whose members are chosen by the Assembly of the Republic. Judges are appointed by the Higher Council of Judicature, a body comprising the president of the Supreme Court of Justice and the presidents of the appeals courts.

The court system is multitiered. Justices of the peace and municipal courts are at the lowest level. Above are the district courts in each of the 171 judicial districts. They have original jurisdiction in both criminal and civil cases and appellate jurisdiction over municipal court decisions. The appeals courts occupy an intermediate position between the district courts and the Supreme Court of Justice. The appeals court may sit in full or be divided in sections. The highest court is the Supreme Court of Justice, in Lisbon. Its jurisdiction is confined to matters of law in both civil and criminal cases. It is headed by a chief justice or president. The court can function either as a single body or in three chambers, each with five judges. Its members are appointed with lifetime tenure.

The special courts system covers military, labor, administrative, and fiscal justice, as well as traffic offenses and violations of food and drug regulations.

HUMAN RIGHTS

The human rights situation in Portugal has been stable since 1976, when the new constitution came into force. An ombudsman, elected by the assembly to serve a five-year term, is Portugal's chief human rights officer. Any citizen may apply to him or her for relief. The majority of the more than 3,500 complaints received annually deal with alleged bureaucratic lapses.

No person may be detained in jail for more than 48 hours after arrest unless a prosecuting judge orders preventive detention, which is limited to a maximum of four months for each crime. However, because of backlogs in the judicial system, detention beyond four months is not unusual. Portugal holds no political prisoners; nevertheless, radical leftists claim that certain persons imprisoned for participation in terrorist organizations have been political prisoners, including the 64 found guilty of membership in FP-25 (the Popular Front of April 25) and sentenced to prison terms in 1987. Human rights organizations have taken a dim view of Portugal's generally inhumane prison conditions and beatings of prisoners or those detained.

The freedoms of speech and the press are guaranteed by the constitution and monitored by the Council of Social Communication, which serves as a watchdog to protect the media from government interference. Fascist organizations are prohibited by law.

Workers are free to strike and to organize unions; they have protested against the alleged use of child labor in factories in the north.

The civil code provides for full legal equality for women. Some human trafficking in women and foreign laborers has been a problem.

FOREIGN POLICY

With the December 1999 handover of Macao to Chinese sovereignty, Portugal completely liquidated its former empire, once the third largest in the world, after those of Great Britain and France. Since the maintenance of the empire was one of the key tenets of the Salazar regime, its abandonment represented a 180-degree turn for Portuguese policy and helped Portugal to emerge from its isolation and reestablish healthy relations with both the Third World (including former colonies) and Western allies. Also in 1999, Portugal won a hard-fought foreign policy victory when, following years of bloody repression, Indonesia gave up its claim to the former Portuguese colony of East Timor and withdrew its army, paving the way

for the territory's eventual independence. There are a few residual problems with former colonies, notably the unending Angolan civil war and Portugal's inability to mediate a lasting settlement there. One of the stated purposes of Portuguese foreign policy is to "serve as a kind of a bridge between the industrialized powers and the Third World," a role for which it is uniquely equipped because of both history and geography. Portugal maintains ties to its former colonies through the Community of Portuguese-Speaking Peoples.

Like Brazil, Spain is often referred to as a sister nation by the Portuguese because of strong historical, religious, and cultural ties. Nonetheless, a desire to maintain separateness from Spain has traditionally led Portugal to look to Britain for political support and to France for cultural inspiration. After the restoration of democracy in both Iberian countries by the late 1970s, new ties had to be forged by the pair, which were both struggling to disentangle themselves from Fascist pasts. Most significant, Spain and Portugal gained accession to the European Community simultaneously, in 1986; subsequently, their interests within the European Union have frequently aligned regarding Middle Eastern or African policy.

Portugal remains a firm supporter of NATO and has participated in peacekeeping activities in the Balkans. It has a close relationship with the United States. By treaty, the United States enjoys refueling rights at Lajes Air Base in the Azores.

Portugal is keenly interested in European integration. The nation has held the presidency of the European Union twice.

DEFENSE

In numbers the military shrunk from 230,000 at the start of the 1970s to about 60,000 in 1999. Its role has been transformed from that of defending a far-flung empire to one only slightly removed from that of the police.

The constitution of 1976, as modified in 1982, depoliticized the army and placed it under the Supreme Council of National Defense. The president, however, remains the commander in chief.

The organizational basis of the army is territorial. There are four military regions in continental Portugal and independent territorial commands in the Azores and Madeira. Commanders of military regions are usually brigadier generals or senior colonels directly responsible to the chief of staff.

The navy was reorganized after 1974: It was given a new command structure, placing the chief of staff over 24 tactical and support commands. A separate air force was not established until 1952.

Portugal was an early partner in NATO. Its main contribution to the alliance has been the grant of the Azores base at Lajes, which has proved invaluable to the

1924 Portugal

United States. In the early years of the coup, relations between Portugal and its allies were uneasy. Portugal was for a time excluded from NATO intelligence reports and absented itself from the NATO Nuclear Planning Group. After 1977 Portugal gradually reestablished links and created a NATO brigade in 1978. In 1980 the army again participated in NATO exercises and was readmitted to the Nuclear Planning Group. NATO has Atlantic naval command bases in both Lisbon and Madeira, and Germany has an air force training base at Beja. Since Portugal's primary defense role today is giving support to NATO and the defense arm of the European Union through maritime and antisubmarine patrol and airbase facilities, modernization efforts have focused on the navy and the air force.

Recruitment is by selective conscription, the current term being 16 months in the army or up to 24 months in the navy or air force. Women serve as enlistees and attend the army, navy, and air force academies. Compulsory military service was ended in September 2004.

ECONOMY

Portugal has made a great deal of economic progress since the end of authoritarian rule in 1974, when the nation was decidedly underdeveloped. At that time the government implemented an income equalization program and nationalized major sectors of the economy, in attempts to end family monopolies. The economy had grown tremendously by 1986, when Portugal joined the European Community. Most of the state-owned industries were once again privatized in 1989, and the nation deregulated the energy, telecommunications, and financial industries.

Growth was strong through most of the 1990s, as assisted by foreign investments creating new industries—such as in automobiles and their components, machinery, and electrical goods—as well as boosting certain customary trades, like glass, ceramics, and food processing. Growth fell in the early 2000s, and as of 2002 Portugal's gross domestic product (GDP) was still only 70 percent of that of the leading nations of the European Union. Some of its industries, such as the manufacture of clothing and shoes, are suffering from competition from developing nations. The poor educational system has not helped Portugal's quest for growth.

ENVIRONMENT

Portugal's primary environmental battles are fought over the effects of soil erosion, air pollution resulting from automobile exhaust and industrial/power plant emissions, and the fouling of coasts by marine contamination. The conservation of maritime resources is a vital concern to a nation heavily dependent on its fisheries. Three of Portugal's fish species have been listed as endangered, as have several species of birds and mammals.

Air pollution and acidification are particular problems in the populated coastal plain stretching from Lisbon to Braga, which also has the greatest concentration of industry. The largest sources of water pollution are the food-processing industry, the paper industry, chemicals, textiles, and cattle ranching. Soil degradation has been caused by the alteration of natural drainage systems; the Alentejo region is the most affected. Portugal is especially vulnerable in this respect because so little of its soil is conducive to cultivation to begin with.

LIVING CONDITIONS

For the most part, Portuguese living conditions are modern and comfortable. On the negative side, air pollution in urban areas is a problem. Although the bus system is efficient and inexpensive, the train system is slow. Gasoline is expensive. On the whole, the cost of living in Portugal is lower than that in neighboring European countries.

HEALTH

For the most part, Portuguese people enjoy good health. Life expectancy is 77.5 years. The government has provided basic health care for all citizens since 1990. All citizens are guaranteed paid leave for illness or maternity, and the state provides old-age pensions and family allowances. In addition to public clinics and hospitals, there are many private health-care providers for those who can pay for their care.

FOOD AND NUTRITION

The Portuguese eat a great deal of seafood. Popular fish dishes include *pasties de bacalhau* (dried cod cakes), *sardinhas assadas* (sardines grilled over charcoal), *bife de atum* (tuna steak), and *linguado grelhado* (grilled sole). Common vegetables include cabbage, kale, and potatoes, sometimes cooked together in a soup called *caldo verde*. People often finish a meal with sweet custard tarts called *pasties de nata*. Portugal has many good wines, but it is best known for the sweet, fortified wine called port.

STATUS OF WOMEN

Women's emancipation in Portugal happened piecemeal over the course of the 20th century, except during the long period of dictatorship, which stalled all such progress. Even the dictatorial regime could not entirely hold back the waves of social change sweeping through Europe in the 1960s, however, and in 1968 women were

granted political rights on par with those of men except at the local level. Full equality under law was granted in the democratic constitution of 1975, which bars discrimination and protects women's rights to job opportunities and career advancement. In order to vitalize these guarantees in everyday affairs, Maria de Lurdes Pintassilgo, who became the country's first female prime minister, founded the Commission on the Status of Women; in 1977 this commission was upgraded to a government department. Its activity contributed to the passage of further legislation, in 1978 spelling out a woman's equal conjugal rights and authority, in 1979 further defining workplace rights, and in 1984 permitting abortion under certain conditions for the first time.

By the early 1990s slightly more than half those enrolled in higher education were female, and women participated in a number of professions, among them teaching and research at universities, law, and medicine. The economic growth the country enjoyed from the late 1980s onward boosted the fortunes of working-class women. Women represented 54.7 percent of the non-agricultural labor force in official statistics in 2004 and had garnered 19 percent of the seats in the Assembly.

Women can now receive integrated family-planning services at public health centers, and the government is under obligation to promote information on such services. Contraceptives are readily obtained, and abortion is now legal during the first trimester. Fertility, historically much slower to decline in Portugal than in other parts of Europe, has fallen steeply in recent times, from 2.2 children per woman in 1980 to just 1.5 in 2004.

WORK

Many Portuguese people work in factories, producing textiles or clothing, paper products, cement, cork products, fertilizer, and other items. Many people on the coasts are employed by the tourism industry or in fishing; tourism is also important in the major cities. About 10 percent of the workforce is employed in agriculture, especially in the production of grapes and wine. Over half of the workforce belongs to labor unions.

 Unemployment %: 6.5

EDUCATION

Portugal's educational system is adequate but has yet to become as good as it needs to be to help the nation take its place among the top-earning countries of Europe. Education is free for all children and mandatory between the ages of six and 15. Preschool is free for all children ages three to six, but preschools are scarce in some areas. The Ministry of Education formulates curricula for elementary and secondary schools. Instruction is in Portuguese, and students begin studying either English or French around the age of 10. There are both vocational and general secondary schools; students who want to go to university choose the general course. Students who choose vocational studies often leave school at 15 to go work.

Private schools are common, especially those run by the Catholic Church. The state provides subsidies to private schools. Private schools may teach religion, but public schools may not.

Portugal has several state-owned and private universities, as well as many regional polytechnic institutes, where students can prepare for specific jobs.

MEDIA

Most of Portugal's newspapers are published in Lisbon and Porto. *Diário de notícias*, Lisbon's oldest newspaper, was founded in 1864. Most newspapers are privately owned. There are a number of newspapers and magazines published by the Catholic Church and by political parties. The most important news agency is Agência Lusa de Informação. Two other local bureaus are Agências Europeias de Imprensa and Agência de Representações Dias da Silva. Various foreign agencies have Lisbon desks as well.

Most radio and television stations are privately owned, and many people watch international channels via cable and satellite. Public broadcasting has been the subject of some debate; as of 2005 it still existed. Public television is run by RTP-Radiotelevisão Portuguesa, public radio by RDP-Rádiodifusão Portuguesa. The Catholic Church runs the popular Radio Renascença.

CULTURE

Portugal's culture combines Catholic and Moorish influences, most of which combined during the 16th century. Festivals honoring saints' days are extremely important to many people. Local architecture is covered with Moorish motifs, with the occasional surrealist twist; elaborate spirals, turns, and interwoven twists decorate many buildings, along with nautical images reflecting the country's seafaring past. The Portuguese tiles called *azulejos* are created using a technique learned from the Moors.

Portugal also has strong literary and musical traditions. The musical form known as fado is characterized by sad songs of the sort that would have been sung by 16th century sailors far from home. Portuguese literature also dates from that time. Gil Vicente and Luís de Camões were major poets from the 1500s, while Fernando Pessoa

1928 Portugal

is considered by many to be the most important Portuguese literary figure of the 20th century.

FOLKLORE AND MYTHOLOGY

Folk culture plays an important role in the lives of Portuguese people, especially those in rural areas, but also urban dwellers. Folk music and recreational practices are still common in the countryside, and rural people especially enjoy folk dancing. The festivals honoring saints have combined Catholic beliefs with pagan customs, such as the practice of giving away lupine seeds at the festival of Amarante, which was originally part of a pagan festival and is now part of the festival honoring the saint who helps single women find husbands. There are many shrines to saints in the countryside; the shrine at Fatima is one of the most important, commemorating the site where three shepherd children saw a vision of the Virgin Mary.

ENTERTAINMENT AND RECREATION

Portuguese people spend a great deal of time in cafés, meeting friends and spending time with relatives while drinking coffee, wine, and other drinks and eating snacks. Dance clubs are extremely popular; discos usually open at midnight and close at dawn. People also enjoy going to movies. In the summer, the beaches offer swimming, surfing, and sailing.

ETIQUETTE

Social hierarchy is very important in Portugal, both within the family and in society. People respect authority and always treat those senior to them with respect. Generally, one person in a group will make all decisions with little regard for the opinions of other group members. People do not address one another by their first names until they have been invited to do so; otherwise, they use the titles *senhor*, *senhora*, or *doutour* for anyone with a university degree. Close friends and relatives

greet one another with hugs or kisses. Dinner manners are fairly formal, and it is customary to bring a gift for the hostess when dining in someone's home; if the guest does not bring a gift that night, it is proper to send the hostess flowers the next day.

FAMILY LIFE

The Portuguese are still quite traditional in their attitudes toward family. Children typically live with their parents until they marry. Extended family ties are still important to the Portuguese, and it is common for grandparents, aunts, and uncles to participate in the raising of children. Women care for their aging parents, and it is rare for anyone to place an elderly relative in a nursing home. Divorce became legal for all in 1974. Traditional gender roles have been changing as more women enter the workforce, and children are feeling less bound by family pressure.

PERSONAL APPEARANCE

Most Portuguese people dress in typical Western clothing. A few people in the countryside still wear traditional garb: Men wear baggy pants and shirts with berets, and women wear long dresses with shawls. Some rural people wear dark clothing every day, saving their brightly colored costumes for festivals and weddings.

SPORTS

Soccer is the most popular sport; people like to watch it both live and on television. Track and field, roller hockey, and automobile racing are also common spectator sports. Tourists especially like Portugal's many excellent golf courses. Some people enjoy hunting for game birds.

There is bullfighting in Portugal; unlike in Spain, it is illegal for bullfighters to kill the bulls.

CHRONOLOGY

- 1940** A concordat with the Vatican reestablishes state aid to religious education.
- 1949** Portugal becomes a charter member of NATO.
- 1951** Angola, Mozambique, and Guinea are made provinces of Portugal.
- 1961** Indian government troops seize Goa; a rebellion against Portuguese rule arises in Angola, to be followed by uprisings in Mozambique and Guinea.
- 1970** Salazar dies and is replaced by Marcello José das Neves Caetano.

- 1974 The Armed Forces Movement removes Caetano from office and sets up a pro-republican junta under António de Spínola; Portuguese Guinea gains independence as Guinea-Bissau.
- 1975 Mozambique and Angola declare independence; Portugal abandons Timor, which is invaded by Indonesia a year later; Spínola is replaced by Francisco da Costa Gomes, who appoints as prime minister Vasco Gonçalves with his Marxist government program.
- 1976 General António Ramalho Eanes is elected president; the Socialists (PSP), led by Mário Soares, win a plurality in the Assembly.
- 1978 Soares resigns as his coalition government collapses.
- 1979 Francisco Sá Carneiro of the conservative Social Democrats (PSD) becomes prime minister.
- 1980 Sá Carneiro and his minister of defense are killed in a plane crash.
- 1982 A new constitution abolishes the military Council of the Revolution, completing the transition to civilian government.
- 1983 Soares returns as prime minister at the head of a grand coalition with the Social Democrats.
- 1984 The radical group Forças Populares de 25 Abril undertakes numerous terrorist activities; more than 40 are arrested, including Lieutenant Colonel Otelo Saraiva de Carvalho.
- 1985 The PSP/PSD coalition falls apart; after new elections, the Social Democrats form a coalition led by Aníbal Cavaco Silva.
- 1986 Soares is elected president, succeeding Eanes; Portugal joins the European Community.
- 1987 Cavaco Silva and the PSD gain an absolute majority in elections.
- 1989 Fire destroys the old Chiado district in Lisbon; amendments to constitution remove vestiges of Marxist ideology.
- 1991 Soares is reelected president in spite of accusations of corruption against his party; the PSD retains its absolute majority in parliamentary elections.
- 1995 Cavaco Silva resigns as prime minister; his successor also resigns in a dispute with Soares; legislative elections install the Socialist Party (PS) as a minority government; the new Socialist premier, António Guterres, presents budgetary cuts designed to align Portugal with the EU's Economic and Monetary Union criteria.
- 1996 Jorge Sampaio, a Socialist, wins the presidency.
- 1999 Portugal enters the first stage of the EMU.
- 2001 Jorge Sampaio is reelected president. After the Socialist Party suffers heavy losses in local council elections, Prime Minister Guterres resigns, and the parliament is dissolved.
- 2002 After general elections, Social Democrat leader José Manuel Durão Barroso forms a center-right coalition government. The euro becomes Portugal's currency.
- 2003 Forest fires destroy large areas of woodlands.
- 2004 Barroso resigns as prime minister and is replaced by Pedro Santana Lopes. Lopes resigns in December.
- 2005 The Socialists win the general elections in February. José Sócrates becomes prime minister.

QATAR

Basic Fact Sheet

OFFICIAL NAME

State of Qatar (Dawlat Qatar)

ABBREVIATION

QA

CAPITAL

Doha

HEAD OF STATE & HEAD OF GOVERNMENT

Emir Sheikh Hamad bin Khalifa al-Thani (from 1995)

NATURE OF GOVERNMENT

Absolute monarchy; constitutional emirate

POPULATION

863,051 (2005)

AREA

11,437 sq km (4,416 sq mi)

MAJOR ETHNIC GROUPS

Arab, Pakistani, Indian, Iranian

LANGUAGES

Arabic (official), English, Farsi

RELIGION

Islam

UNIT OF CURRENCY

Qatari rial

NATIONAL FLAG

Maroon field covering about three-fourths of the flag, separated by a vertical serrated line from a white vertical stripe at the hoist.

NATIONAL EMBLEM

A local sailing boat and coastal scene flanked by two crossed swords are shown within a circular border, white at the top and maroon at the bottom. The name of the state appears in Arabic in the white portion.

NATIONAL ANTHEM

“Qatar National Anthem”

NATIONAL HOLIDAYS

February 22 (Emir’s Succession Day), September 3 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

September 3, 1971

DATE OF CONSTITUTION

June 8, 2004

GEOGRAPHICAL FEATURES

Qatar, on a peninsula projecting northward into the Persian Gulf from the Arabian mainland, covers an area of 11,437 sq km (4,416 sq mi), extending 161 km (100 mi) north to south and 89 km (55 mi) east to west. It shares its land border with Saudi Arabia. The total length of the Persian Gulf coastline is 563 km (349 mi). The state also has sovereignty over a number of islands, of which Hawar and Halul are the most important.

The terrain is flat, barren, stony, and sandy. The land rises from the east to a low plateau to the center and north, pitted with scores of shallow depressions. The southern base of the peninsula is covered by extensive salt flats.

Geography

CLIMATE AND WEATHER

Temperatures range from 6°C (42.8°F) in January to 48°C (118.4°F) in July. Humidity is oppressive along the coast. Annual rainfall ranges between 25 mm (1 in) and 210 mm (8.5 in).

Climate and Weather

Temperature Range
 January: 42.8°F
 July: 118.4°F
 Average Rainfall: 1 in to 8.5 in

FLORA AND FAUNA

Almost no plants grow in Qatar, which is mostly desert. A few camels live there, but the majority of animals are desert birds such as the houbara and small desert creatures such as scorpions, crickets, lizards, geckos, grasshoppers, sand cats, and bats. Herds of Arabian oryx once lived on the peninsula, but they are now gone; the government has implemented a program to breed new oryx.

Induced Abortions:	—

ETHNIC COMPOSITION

Only one-fifth of the people living in Qatar are actual natives; some 80 percent of residents are guest workers from other nations. While 40 percent of the population is Arab, only half of these are native Qataris; the rest are Arabs from Egypt, Palestine, Iraq, Oman, and Jordan. Some 36 percent of the population is South Asian, evenly divided between Indians and Pakistanis. About 10 percent is Iranian. In 2001 about 6,000 U.S. citizens lived in Qatar.

As strict Wahhabis, Qataris are more conservative than neighboring Bahrainis or Abu Dhabians, and Qatari attitudes toward foreigners are, accordingly, molded by traditional attitudes of distrust. Economic recession in the 1980s prompted a resurgence of negative sentiment against foreigners.

LANGUAGES

The official language is Arabic, and the spoken dialect is Gulf Arabic as influenced by Farsi.

English is widely understood, especially in the business community and among the bureaucrats. It is taught as a second language in secondary schools.

RELIGIONS

Islam is the official religion, and most Qataris belong to the puritanical Sunni Wahhabi sect. The smaller Shia community is of Iranian origin. Christians are tolerated, and private Christian worship is permitted. Public worship of non-Islamic faiths, however, is prohibited, as is proselytizing by non-Muslims.

Religious Affiliations

Muslim	820,000
Other	40,000

HISTORICAL BACKGROUND

While the Qatar peninsula was inhabited during the Stone Age, there is little archaeological evidence that there were any permanent inhabitants from ancient to modern times. The nation is the only one in the region that shows no Portuguese influence, which is remarkable since the Portuguese were active in most of the Middle East in the 16th century.

Once dominated by Bahrain, Qatar became part of the Ottoman Empire in 1872. Turkish occupation ended at the beginning of World War I, and in 1916 Qatar signed an agreement with Great Britain under which Britain would furnish protection in return for control over Qatari foreign affairs. In 1971 the relationship between Britain and Qatar ended by mutual agreement following the British decision to withdraw its forces from the Persian Gulf states. Qatar declared independence in September 1981.

The following year, Sheikh Khalifa bin Hamad al-Thani, the prime minister and heir apparent, deposed his cousin, Sheikh Ahmad bin Ali, in a bloodless coup approved by the royal family. He ruled the country until June 1995, when he was unexpectedly deposed by his son Hamad, until then the crown prince and defense minister, in another bloodless coup. Sheikh Hamad has earned the respect of foreign leaders for his reforms of Qatari society, including the lifting of censorship and the returning of funds his father was thought to have appropriated from petroleum revenues.

In March 1999 the country held its first elections to the Central Municipal Council, which has consultative powers aimed at improving municipal services. The historic event had low voter turnout, but did include women in the voting. That same year the emir had a committee begin drafting a permanent constitu-

tion, which Qatari voters approved nearly unanimously in 2003. The 2003 elections for the Central Municipal Council were notable in that they resulted in the election of a female candidate. In August 2003 the emir surprised his subjects by removing the rank of crown prince from his older son, Prince Jassim, and bestowing it on his younger son, Prince Tamim.

Qatar's new constitution was issued in June 2004. It was expected to gradually come into effect in 2005, along with the first real parliamentary elections to be held in the country.

LIST OF MODERN RULERS

Emir

1960–72 Ahmad ibn 'Ali al-Thani
1972–95 Khalifa bin Hamad al-Thani
1995– Hamad bin Khalifa al-Thani

CONSTITUTION

Qatar is an absolute emirate in the medieval sense of the term. An effort to clothe this absolutism in constitutional form was made through the Basic Law of 1970, which created for the first time a Council of Ministers and the Majlis ash-Shura (National Advisory Council). The emir, the head of state and head of government, also holds the portfolios of prime minister and defense minister and dominates the cabinet, which merely carries out his decrees. Of the 14 members of the cabinet, eight belong to the ruling al-Thani family.

Qatar's political institutions blend the characteristics of a traditional Bedouin tribal state and of a modern bureaucracy. There are no political parties or organized opposition to the government, and the emir exercises all executive and legislative powers. His autocratic rule, however, is checked to some extent by entrenched local customs. Interlocking family networks and the recognized right of citizens to submit appeals or petitions personally to the emir provide effective if informal avenues for the redress of grievances and also serve to limit abuses. The custom of rule by consensus leads to extensive consultations among the emir, leading merchants, religious leaders, and other notables on important policies. For the most part, women play no role in public life. However, women had the right to vote in the country's first elections to the Central Municipal Council.

Under Qatar's Basic Law of 1970 the emir must be chosen from among and by the adult males of the al-Thani family. This takes place with the consent of notables and religious leaders, according to established custom. There are no serious challenges to this arrangement, and in the foreseeable future effective political power will remain in the hands of the emir, his family, and the local notables.

Qatar's political situation is gradually changing. In 1999 Emir Hamad issued a decree forming a committee to draft a permanent constitution. A total of 96.6 percent of Qatari voters approved the new constitution in 2003, which came into force on June 8, 2004.

PARLIAMENT

The Qatari legislature is the Majlis ash-Shura, or National Advisory Council, with 35 members. The last legislative election for this body, which has little power or influence, was held in 1970; since that time, members of the Council have had their terms extended every four years. The National Advisory Council has little effective power or influence. The 2004 constitution provides for a new body, a 45-member Consultative Council. The public will elect two-thirds of its members, and the emir will appoint the rest.

POLITICAL PARTIES

Political parties are not permitted to operate legally in Qatar.

LOCAL GOVERNMENT

Local government is the responsibility of the Ministry of Municipal Affairs, which has divided the country into ten municipalities: Ad Dawhah, Al Ghuwayriyah, Al Jumayliyah, Al Khawr, Al Wakrah, Ar Rayyan, Jarayan al-Batinah, Madinat ash-Shamal, Umm Sa'id, and Umm Salal.

In 1999 the nation introduced a Central Municipal Council, which consults with officials providing municipal services. In the 2003 elections, one of the elected candidates was a woman.

LEGAL SYSTEM

The foundations of the legal system are the sharia (traditional Islamic law) and the Basic Law of 1970. The latter provides for an independent judiciary with five secular courts—two criminal courts, one civil court, one labor court, and one appeals court—and religious courts. Except for security cases, most disputes are judged before either a civil court or a sharia court. Most commercial litigation involving expatriates takes place before a civil court. The sharia courts administer criminal and family law and may, if one party requests, take jurisdiction in business cases. Although the judiciary is nominally independent, most judges are expatriates holding residence permits granted by the civil authorities and thus hold their positions at the government's pleasure. A new judiciary law issued in 2003 creates a single court of appeals,

the Court of Cassation, that hears appeals from both the civil and Islamic court systems.

HUMAN RIGHTS

In terms of civil and political rights Qatar is classified as a partly free country. It is difficult to apply modern standards of human rights to a traditional and authoritarian emirate such as Qatar, where political and social values are still bound by historic paternalism. There is an absence of freedom in all areas of public life, and citizens have no power to change their government, yet the lack of freedom does not create a climate of oppression, nor do the people yearn for a different social order; because the whole political and tribal structure is sanctioned by Islam, there is an immutability about it. Indeed, within the context of Arab culture, authority seems to flow smoothly through the traditional channels, and democratic concepts such as elections, constitution, and suffrage seem foreign and irrelevant. Within the limitations of a conservative society, people enjoy many of the freedoms associated with constitutional democracies.

The courts provide free and public trials. There is no prepublication censorship, and the few publications that exist accept government guidelines voluntarily. On the other hand, there have been sketchy reports of torture in security-related cases in the past, and many expatriate detainees complain of abuse. There is no organized labor movement, and strikes are not permitted. The predominant alien community is excluded from all political rights. There have been documented cases of the government restricting the freedoms of speech, assembly, association, and religion, though the government has been working to ease restrictions on the practice of religion. Women's rights remain seriously restricted. The abuse of domestic servants is a problem.

FOREIGN POLICY

In 1981 Qatar joined Bahrain, Kuwait, Oman, Saudi Arabia, and the United Arab Emirates in establishing the Gulf Cooperation Council (GCC) for joint action in military and economic matters. However, GCC unity has been periodically threatened by territorial disputes between Qatar and Bahrain and between Qatar and Saudi Arabia. The dispute with Bahrain concerns a small uninhabited island, Fasht al-Dibal, in the Persian Gulf. Tensions escalated in 1996 to the point where observers suggested that military action was possible. The dispute was concluded in 2001 by a ruling from The Hague, stating that Bahrain would keep the main Hawar Island and drop other territorial claims, while Qatar would keep specific maritime areas.

A dispute with Saudi Arabia over border demarcation simmered from 1992 to 1999, during which Qatar boycotted several GCC meetings, but since 1999 relations between the two countries have been amicable. Qatar, along with other GCC members, denounced the 1991 Iraqi invasion of Kuwait and participated in allied air and ground military actions. Qatar also called for improved relations with Iran as a means of promoting regional stability. However, the nation later adopted a more lenient stance toward Iraq, calling for the lifting of UN sanctions for humanitarian reasons.

Qatar and the United States have had close relations since the early 1970s. The two nations coordinate diplomatic initiatives, work to increase security in the Persian Gulf, and enjoy close economic ties. Many of Qatar's young people go to the United States to study.

DEFENSE

The defense structure is headed by the emir, who is also the defense minister. The defense establishment is commanded almost exclusively by the members of the al-Thani royal family. As the supreme commander, the emir is assisted by the Defense Council and the commander of the Internal Security Organization. The total strength of the armed forces, staffed through voluntary enlistment, is 7,000.

Qatar has defense pacts with the United States, the United Kingdom, and France. By treaty obligations, Britain has been the traditional supplier of military hardware to Qatar. British supplies include combat aircraft and coastal patrol boats. Qatar has been actively involved in the collective defense of the Gulf Cooperation Council and collaborated with the United States during both wars with Iraq. The nation is host to the U.S. Central Command Forward Headquarters.

ECONOMY

The oil industry was responsible for Qatar's transformation from one of the world's poorest countries in 1973 to one of the richest in 2004. Oil has given Qatar a per capita GDP three-fourths that of the leading western European industrial countries. Oil accounts for more than 30 percent of gross domestic product (GDP), roughly

80 percent of export earnings, and 70 percent of government revenues. Proved oil reserves of over 15 billion barrels should ensure continued output at current levels until 2023, and Qatar's proved reserves of natural gas exceed 900 trillion cubic feet, more than 5 percent of the world total and the third-largest supply in the world. The production and export of natural gas are becoming increasingly important. Long-term goals feature the extraction of off-shore petroleum and the diversification of the economy. Qatar has a large refinery, a fertilizer plant, a steel plant, and a petrochemical plant.

The United States is closely aligned with Qatar's oil industry, supplying most of the nation's equipment and helping develop infrastructure in the North Field. European and Japanese firms are also co-owners of many petroleum projects.

ENVIRONMENT

Qatar's greatest environmental problems are limited freshwater resources and dependency on desalination for potable water. Sandstorms and rainstorms are both problems; winter rainstorms in particular force many roads to close.

LIVING CONDITIONS

The citizens of Qatar enjoy one of the highest standards of living in the world. The vast majority of Qataris live in Doha, the capital city, a safe and modern place. Most families live in their own homes. The government provides housing for all citizens as well as for foreign workers. Many people have their own cars; women are permitted to drive. Traffic conditions can be alarming at times. A few people still live a nomadic existence in the desert, moving their tents from place to place. One of the biggest impediments to perfect living conditions is the climate; during the summer, temperatures can be as high as 122 degrees, with 90 percent humidity.

HEALTH

Qatar's people are very healthy. The Ministry of Health provides health and dental care to all citizens and residents; while care is free for citizens, foreigners must pay for some procedures. Private health care is also available to those who choose to pay for it. Most medical professionals are foreigners, though Qataris are beginning to fill such positions themselves. Fertility is relatively high, at almost three children per women in 2004, and as a result Qatar's population is quite young.

Health

Number of Physicians: 1,310

FOOD AND NUTRITION

The staples of the Qatari diet are rice, bulgur, flat bread, olives, cheese, yogurt, dates, and the meat of lambs, sheep, and camels. Many kinds of seafood are available in Doha, and there are a number of foreign restaurants, including Western fast food and Indian and Pakistani restaurants. Spiced Turkish coffee is ubiquitous. As Qatar does not forbid alcohol, some people drink it, though devout Muslims do not.

Breakfast is usually quite early, served around dawn. Lunch is the largest meal of the day. Dinner is served late and is usually a small, light meal. Most Qataris eat with their hands, holding a piece of bread in the right hand and using it to scoop up food.

STATUS OF WOMEN

In conservative Qatari society, women remain in a subordinate position; they are largely relegated to roles as mothers and homemakers, although some are now finding jobs in education, medicine, and the news media. Their activities are still bound by a number of social customs and quasi-legal restrictions, such as veiling, and they continue to face widespread discrimination. For example, women do not regularly receive the overseas university scholarships available to males, and their employment, while tolerated, is discouraged beyond such fields as nursing, teaching, and home economics. Public life is a male sphere for the most part. Expatriate women find it easier to obtain jobs or to own and manage a business than do their Qatari counterparts.

On the other hand, mandatory schooling for girls and the opening of employment opportunities for women in medicine and education represent shifts in attitude, as does the fact that a slowly expanding number of women are allowed to go abroad for university studies. There are signs that as more Qatari women receive education, they will press for the relaxation of some of the restrictions from their country's tribal past. Women are allowed to drive automobiles. A female candidate was elected to the Central Municipal Council in 2003.

WORK

Most of Qatar's work is performed by foreign nationals, who work as doctors, nurses, teachers, and domestic servants; in the oil industry; and in any other capacity that Qataris cannot fill themselves. The government has

instituted a program of "Qatarization," which requires joint ventures and government employers to put Qataris in positions of authority whenever possible. Increasing numbers of Qataris are being educated abroad and return home to take important jobs formerly held by foreign residents.

The Qatari workday revolves around the heat. Work begins early in the morning. Most people take a break after lunch before returning to work in the late afternoon, when the heat lessens.

EDUCATION

Schooling is free but neither universal nor compulsory. The state provides students with free books, stationery, clothing, food, pocket money, and transportation.

Schooling consists of six years of primary school, three years of intermediate school, and three years of secondary school, for a total of 12 years. Boys and girls have separate facilities. The academic year runs from September to June. The medium of instruction is Arabic, but English is taught as a second language in secondary grades. Increasing attention is being paid to training teachers.

All of the children at the preprimary level and 7 percent of the children at the primary level are enrolled in private schools, including *kuttabs*, or traditional Muslim schools. Curricula in public and private schools conform to Arab League standards. The UN Development Programme Regional Training Center at Doha has 500 artisan and technical students.

In 1976 the teacher-training college established with the help of the UN Educational, Scientific, and Cultural Organization was upgraded, becoming the University of the Lower Gulf, with additional faculties for civil aviation, science, engineering, and administration. The university is divided into male and female campuses, each with its own facilities; as of 2004 there were more female students than male. All Qatari students who qualify are provided with state scholarships for higher education abroad.

SCIENCE AND TECHNOLOGY

Qatar's government has been encouraging the development of science and technology, with enthusiastic support from the United States and other Western nations interested in the nation's vast oil reserves. In 2003 and 2004 the state built the Qatar Science and Technology Park, which had offices for Microsoft, Shell Oil, ExxonMobil, and other large high-tech companies. The nation has a modern telephone system and increasing Internet use; 126,000 Qataris were using the Internet in 2003.

MEDIA

Al-Jazeera, the pan-Arab satellite television station, broadcasts from Qatar. Launched in 1997, it has become well-known around the world as the most outspoken channel in the Arab world, as well as for its thorough coverage of the Iraq conflict that began in 2003. The station is careful not to criticize the Qatari royal family or government and is also known to treat Saudi Arabia with some deference.

Qatar's government ended media censorship in 1995, and the local press generally operates free from government interference. *Al-Watan* is the main Arabic daily newspaper. *Gulf Times* and the *Peninsula* are both printed in English. The main radio station is the state-run Qatar Broadcasting Service.

CULTURE

Qatar's culture is based on Bedouin nomadic traditions. Poetry and singing are the most developed art forms, partly because nomads did not have to carry them. Bedouin weaving is excellent, and Qatar artisans are known for their rugs, cushions, tents, and saddlebags. Qatar's cloth was once held to be the best in the Arab world; tradition says that Mohammed likes garments made from Qatari cloth. Qatar is also famous for its embroidery and its elaborate gold jewelry, including giant bracelets and necklaces.

FOLKLORE AND MYTHOLOGY

Qatar's folkloric tradition comes from the Bedouin culture. Folk singers and storytellers are popular entertainers at weddings and other festivals, performing ancient songs and reciting old stories. On Friday afternoons in Doha people go to watch traditional dances, such as the *ayyala*, a depiction of a battle performed to drums, tambourines, and cymbals.

ENTERTAINMENT AND RECREATION

Doha is a fairly quiet city, without much in the way of recreation. The waterfront area, called the Corniche, is a pleasant place to walk or picnic while watching the water; boat races are held there. The city has a popular amusement park called Aladdin's Kingdom. Wealthy Qataris sometimes drive to oases to camp in tents for the weekend, reliving the nomadic lifestyle.

ETIQUETTE

Hospitality is one of the most important virtues to Arabs, and Qataris are known for welcoming visitors enthusiastically. Male guests are received by male family members in the *majlis*, or reception area; female guests go to a different part of the house to visit the women of the family. This sexual segregation extends to all areas of life, including mosques, office buildings, shops, and elevators.

FAMILY LIFE

Though Qataris now usually live in individual houses that contain only immediate family, most people still think of themselves first and foremost as members of a clan and a larger tribe. People usually marry within their tribe, and most marriages are arranged. The groom's family must pay a bride-price to the bride's family before the wedding. Weddings are elaborate many-day affairs, with separate festivities for men and women. Family members are loyal to one another, and it is considered proper for children to care for their aging parents rather than allow them to be cared for by the government.

PERSONAL APPEARANCE

Most Qatari adults are covered with cloth from head to foot. Women wear a long black coat called a *darraa*, and on their heads and faces they wear a *hejab*, which exposes only the eyes, nose, and mouth; they often wear Western clothes underneath those garments. Girls veil themselves starting at age seven. Men wear a long white coat called a *thobe*, with loose trousers underneath and a headdress called a *gutra*, tied on with a length of black rope.

SPORTS

Falconry is a traditional sport popular among nomads and the wealthy. People also like participating in or watching boat, horse, and camel racing. Soccer is extremely popular, and Doha has 14 soccer stadiums. International sporting events hosted by Qatar include car races, golf and tennis tournaments, and the Qatar International Desert Marathon.

CHRONOLOGY

1971 Qatar declares independence as the United Kingdom withdraws from the Persian Gulf region, ending treaty obligations to Trucial Oman; an Anglo-Qatari treaty of friendship and cooperation is signed; Qatar becomes a member of the United Nations.

- 1972** In a bloodless coup, Emir Sheikh Ahmad ibn 'Ali al-Thani is overthrown by his cousin and prime minister, Sheikh Khalifa bin Hamad al-Thani.
- 1973** The Qatar riyal replaces the Qatar/Dubai riyal as the national currency; the Qatar Monetary Agency is established as the central bank.
- 1974** In line with Organization of Petroleum Exporting Countries (OPEC) policy, Qatar acquires 60 percent of the assets of Qatar Petroleum Company and Shell Company of Qatar.
- 1975** Qatar begins negotiations for total takeover of Qatar Petroleum Company and Shell Company of Qatar, in line with OPEC policy.
- 1976** Qatar joins fund to aid Egypt, following visit by President Anwar Sadat.
- 1978** Qatar's economic development plans are reported to be slowing down as a result of shortages of skilled manpower and transportation bottlenecks.
- 1979** Qatar breaks with Egypt over the latter's peace treaty with Israel.
- 1981** Qatar joins the Gulf Cooperation Council.
- 1986** A territorial dispute with Bahrain nearly escalates to war.
- 1987** A Qatari freighter is damaged by Iranian forces. Diplomatic relations with Egypt are reestablished.
- 1988** Qatar establishes diplomatic relations with China and the Soviet Union.
- 1990** Emir agrees to the deployment of Arab and Western forces on Qatar soil following the Iraqi invasion of Kuwait.
- 1991** Qatar sends ground troops to Saudi Arabia to back U.S.-led UN forces during the Persian Gulf War; Qatar and Bahrain submit their territorial dispute to the International Court of Justice (ICJ).
- 1995** Sheikh Hamad deposes his father, Sheikh Khalifa.
- 1996** An attempted coup is suppressed.
- 1997** Sheikh Hamad endorses legislation granting both men and women the right to vote for and stand for election to the Central Municipal Council, whose role will be to advise the sheikh.
- 1999** Elections are held for the Central Municipal Council; Sheikh Hamad appoints a committee to draft a constitution providing for an elected parliament.
- 2001** The ICJ settles the territorial dispute between Qatar and Bahrain.
- 2002** The United States develops its al-Udeid air base in preparation for war with Iraq.
- 2003** The U.S. Central Command base in Qatar coordinates the U.S. campaign in Iraq. Voters approve a new constitution. The emir names his younger son, Prince Tamim, as crown prince.

1940 Qatar

2004 Former Chechen president Zelimkhan Yanderbiyev dies in an explosion in Doha, resulting in deteriorating relations between Russia and Qatar. Qatar's first constitution is made official.

GEOGRAPHICAL FEATURES

Located in southeastern Europe, Romania has a total land area of 237,500 sq km (91,699 sq mi) and borders the Black Sea, between Bulgaria and Ukraine. With a total of 2,508 km (1,558 mi) of land boundaries, Romania is bordered by Bulgaria, Hungary, Moldova, Serbia and Montenegro, and Ukraine. Romania controls the most traversable land routes between the Balkans, Ukraine, and Moldova.

Romania has 225 km of coastline. The terrain is composed of several topographical features: the Transylvanian Basin, which is separated from the Plain of Moldova, to the east, by the Carpathian Mountains and from the Walachian Plain, to the south, by the Transylvanian Alps.

The highest elevation is found at Moldoveanu, at 2,544 m (8,344 ft). All of Romania's rivers drain into the Black Sea, with almost all first joining the Danube. Romania has more than 2,500 lakes, but most are small, and in sum they occupy a mere 1 percent of the surface area.

CLIMATE AND WEATHER

Romania has a continental climate characterized by cold winters and hot summers. Weather and rainfall are dictated by the high-pressure systems that predominate over Russia and north-central Asia; only infrequently and briefly does Mediterranean weather prevail in the area. Winters are long and cold, with frequent fog and snow. Summers tend to be sunny and hot with comfortable levels of humidity, as the Carpathians confine humid air masses from the Atlantic to the western parts of the country. The mountains also prevent the movement into Transylvania and the western regions of both hot air masses in the summer, from the south, and cold, dry air masses in the winter, from the east. Consequently, precipitation is much higher, on average, on the Transylvanian Plateau and in the mountains than on the plateaus and plains to the east and south of the Carpathians. The Carpathian barrier also affects the distribution of temperatures, moderating the continental climate in the western regions. The Transylvanian Plateau rarely experiences the extremes of heat that occur on the Walachian Plain. Bucharest, inland on the southern lowland, is one of the warmest places in summer. In the eastern lowlands and along the Black Sea the moderating effects of sea winds make for slightly warmer winters. There are no places where summer temperatures are oppressively high or winter temperatures intolerably low.

As in many other areas in the Balkans, weather conditions are modified by local winds, such as the *crivat*, an easterly cold wind, and the *austru*, which brings dry air from the Mediterranean to the southwest in the summer.

FLORA AND FAUNA

Because of its geography, Romania has a high degree of biodiversity and a number of relatively intact ecosystems, including forests, steppe grasslands, wetlands, and alpine and subalpine regions. The nation has about 3,700 species of higher plants, 4 percent of which are endemic. The alpine and subalpine forests consist primarily of conifer, while the forests at lower elevations consist primarily of broad-leafed species, including spruce, fir, oak, common ash, maple, poplar, and willow. The most important mammal species include brown bear, lynx, and wolf; Romania is home to 40 percent of Europe's wolf population and 60 percent of its brown bear population. There are nearly 34,000 animal species in Romania.

ETHNIC COMPOSITION

While Romanians compose 89 percent of the population, virtually every ethnic group in Eastern Europe is represented in the country. The largest minorities are Hungarians (Magyars), at 6.6 percent; Gypsies (Roma), at 2.5 percent;

1944 Romania

and Germans and Ukrainians, at 0.3 percent each, followed by Russians, Bulgarians, Czechs, Slovenes, Slovaks, Serbs, Croats, Tatars, Turks, and Jews; taken together, these groups represent less than 2 percent of the population.

The origin of the Romanians is subject to two differing interpretations. The Romanians contend that they are descended from the Dacians, a people possibly related to the Vlachs, who lived in the area before the Common Era. Conquered by the Romans, they were gradually integrated into Roman culture, preserving their language until the 10th century.

The second interpretation, developed by Hungarian historians, denies that the Dacians ever returned to Transylvania and the other regions that today make up Romania. This theory holds that after the Dacians left in the third century, the region was not settled by any group until the 10th century, when the Magyars moved in from the west.

LANGUAGES

The national language is Romanian, a Romance language derived from Latin; between 85 and 90 percent of the modern Romanian vocabulary is composed of Latin word elements. Romanian has also been influenced by contact with other languages, including Albanian, Slavonic, Hungarian, Greek, and Turkish. Slavonic is the most-used language for loan words. Hungarian is the principal minority language.

RELIGIONS

Romania is a predominantly Eastern Orthodox country. Adherents constitute 87 percent of the total population, followed distantly by Protestants, at 6.8 percent, and Catholics, at 5.6 percent.

Tradition holds that Christianity was introduced to Romania by the apostle Andrew and by the beginning of the third century had firmly established itself. Romanians were certainly among those martyred as part of the persecutions ordered by Emperor Diocletian.

Eastern Orthodox	19,430,000
Protestant	1,520,000
Catholic	1,250,000
Other	89,300
Unaffiliated	44,700

HISTORICAL BACKGROUND

Romania emerges in recorded history as a region occupied by a tribe called the Dacians, whose expansionist

tendencies brought them into contact with the conquering Romans early in the Common Era.

Dacia flourished under the Romans, but under the steady predations of barbaric tribes from the east. Emperor Aurelian abandoned the region in 270 C.E., essentially leaving it to its own devices. Very little is known of the events that took place during the next 700 years, other than the fact that a Latin-speaking tribe known as the Vlachs occupied the area. Under their tutelage, the land was divided into Walachia and Moldavia, which became two separate principalities.

In the 15th and 16th centuries Walachia and then Moldavia were forced to yield sovereignty to the Turks, then sweeping across eastern Europe. For the next 300 years Romania became another vassal state of the Ottoman Empire.

Following the 1826–28 Russo-Turkish War, Russian armies occupied Walachia and Moldavia and began a period of enlightened rule that helped to lay the foundations of the modern Romanian state. In 1878 the country's full independence was recognized in the Treaty of Berlin, and three years later the Kingdom of Romania was formally proclaimed, with Prince Charles of Hohenzollern-Sigmaringen acceding to the throne as King Carol I.

Romania entered World War I on the Allied side. After a series of reverses of fortune at the hands of the Central Powers, the nation was forced to sign an armistice and surrender territory. When the victorious Allies and the Central Powers concluded an armistice in 1918, Romania's prewar borders were restored.

The years leading up to World War II were marked by intense political instability. King Carol II first assumed the throne then vacated it, only to resume rule against a backdrop of increasingly Fascist activity, which culminated in the appearance of the quasi-military Iron Guard and its leader, a fanatical nationalist named Cornelius Codreanu. There followed an almost unending series of attempted coups and countercoups, palace intrigue, street demonstrations, and provocative acts of violence. Amid this political turmoil and social chaos, an attempt was made to suppress the Iron Guard, and Codreanu was shot.

Hitler's ascendancy in Germany as well as the Soviet Union's expansionist policies created a maelstrom of political instability in Romania, and Fascist, nationalist, and other conservative forces induced the country to form a close political, economic, and military partnership with Germany; Romanian gasoline fueled German tanks, while Romanian combat troops fought alongside German soldiers in the Soviet Union.

With the defeats and protracted retreats of the German, Italian, and Romanian armies in the Soviet Union between 1943 and 1945, the Soviet armies swept into Romania and demanded its surrender. The Romanians were forced to reenter the war on the side of the Allies and accepted the occupation of their country until a peace treaty

could be signed. At this time the Romanian Communist Party asserted itself and began the process of taking over the reins of power.

In 1965 Nicolae Ceaușescu assumed power. His years of rule were marked by patterns of brutality and corruption unmatched anywhere in the Soviet sphere of influence. In 1989, as Communist governments were toppling across Europe, Romania, too, found itself unable to hold back growing domestic pressure for reform. A difference, however, lay in Romania's power structure. Unable or unwilling to view the changes sweeping across eastern Europe as inevitable, Ceaușescu embarked on a policy of repression, culminating in an order to fire on unarmed students in a street demonstration in the winter of 1989. News of the killing of hundreds of protesters enraged the nation and catalyzed dissent on a massive scale. Widespread opposition became apparent when a progovernment demonstration held in the capital as ordered by Ceaușescu turned into a loudly anti-Ceaușescu protest.

Ceaușescu and his wife subsequently fled the city, only to be captured by soldiers loyal to the revolutionary movement taking hold in Romania. A quick trial followed, and Ceaușescu and his wife were found guilty of corruption and were immediately executed. Ion Iliescu became the interim president, and a new constitution was adopted in 1991. A period of turmoil followed, and in September 1992 general elections were held.

In 1992 President Iliescu was reelected, but his popularity eroded as a result of deepening economic woes. Emil Constantinescu won a decisive 53.5 percent victory in the 1996 presidential election. In the legislative balloting, the Democratic Convention won a plurality in both the Senate and Chamber of Deputies. Victor Ciorbea then headed a new coalition government as prime minister until 1998, when Radu Vasile replaced him. In 1997 the former king Mikhail returned to Romania, with his citizenship reinstated by the Ciorbea government. In 2000 Iliescu was returned to power, winning 67 percent of the votes cast in runoff elections. In 2004 Romania was admitted to the North Atlantic Treaty Organisation (NATO), and that same year the nation's leadership formally admitted Romanian complicity in the Nazi holocaust of World War II. Late in the year centrist Traian Băsescu was elected president, and the European Union signed a treaty paving the way for Romanian admission to the European Union in 2007.

LIST OF MODERN RULERS

1965–89	Nicolae Ceaușescu
1990–96	Ion Iliescu
1996–2000	Emil Constantinescu
2000–04	Ion Iliescu
2004–	Traian Băsescu

CONSTITUTION

The most recent Romanian constitution was ratified on October 29, 2003. Romania is a multiparty republic. The principal institutions of the central government are the parliament, the State Council, the office of president of the republic, the Council of Ministers, and the court system. The president was originally elected by popular vote for a four-year period; the term has been increased to five years.

The president designates the leader of the majority party in the parliament to become prime minister. The prime minister in turn appoints a council of ministers. The choices of prime minister and the council of ministers must be voted on by parliament.

PARLIAMENT

Romania is a parliamentary democracy with a bicameral parliament composed of an upper house, the Senate, and a lower house, the Chamber of Deputies. The Senate has 137 seats, the Chamber of Deputies 332, both with members elected by direct popular vote through proportional representation to serve four-year terms.

POLITICAL PARTIES

There are over 200 political parties in Romania. Between 1996 and 1999 the principal government body was an eight-party coalition called the Democratic Convention, which included the Christian and Democratic National Peasants' Party, the National Liberal Party, the Romanian Ecologist Party, the Romanian Ecologist Movement, and the Hungarian Democratic Union. In 2000 parliamentary elections the Social Democratic Party of Romania, composed of conservative Communists who had supported the revolt against Ceaușescu, won the greatest number of seats, though not a majority. Its leader, Ion Iliescu, became president and formed a minority government. In 2004 the greatest number of seats were won by a coalition between the Social Democrats and the Humanist Party and by a similar coalition between the National Liberal and Democratic parties. Major opposition parties currently include the Greater Romania Party and the Democratic Union of Hungarians in Romania. The Communist Party remains proscribed.

LOCAL GOVERNMENT

Under 1968 reorganization law, Romania is divided into 41 *judets*, or counties, and 263 independent municipal administrations. Local councils function in all smaller towns, and there are approximately 2,685 communes in rural areas. Deputies to the councils are elected for four-

year terms, except for in communes, where the term is two years. Each council delegates its administrative powers to an executive committee and a number of permanent committees. The chairman of the executive committee is the equivalent of a mayor. Since executive committees meet only once a month, day-to-day affairs are conducted by even smaller bodies, standing bureaus.

LEGAL SYSTEM

Like most continental countries, Romania follows the civil law system. The judiciary and the legal system are governed by the 1991 constitution as well as the 1968 Law on the Organization of the Court System, which assigned overall responsibility to the Ministry of Justice and its six directorates. Under the constitution, the Supreme Court is subordinate to the parliament, which appoints justices for four-year terms. The Supreme Court functions principally as an appeals court, but, in certain matters specified by law, it may act as a court of first instance. It may also issue directives on legal and constitutional issues for the guidance of lower courts and administrative agencies. Subordinate courts include *judet* courts and the municipal court of Bucharest. Each court is presided over by a panel of two judges and three lay jurors known as people's assessors, and decisions are made by majority vote. At the bottom tier are the lower courts, presided over by panels composed of one judge and two people's assessors. General supervision over the application of the law and the initiation of criminal proceedings is exercised by the office of the prosecutor general, who is elected by parliament for four-year terms. Subunits of the office of prosecutor general exist in every judicial district.

HUMAN RIGHTS

The 1991 Romanian constitution incorporates the UN's Declaration of Human Rights as the central tenet regarding the rights and freedoms of the nation's citizens. Thus, the constitution proclaims the rights to life and personal privacy and the freedoms to associate, of expression and conscience, of movement, and from torture and arbitrary arrest and imprisonment.

In practice, following the years of secret police brutality under Nicolae Ceaușescu, there has been profound improvement in the administration of justice and internal security and in the handling of such issues as political expression and dissent.

FOREIGN POLICY

Romania's current foreign policy concerns essentially revolve around four principal themes: membership in

NATO, future accession into the European Union, various multilateral cooperation agreements (with Ukraine, Moldova, Hungary, Austria, Greece, and Turkey), and involvement in developing economic and political structures in southeastern Europe.

The only significant international dispute currently involving Romania is with Ukraine and concerns the continental shelf of the Black Sea, under which significant gas and oil deposits may exist. The two nations agreed in 1997 to undergo a two-year negotiating period, after which either party could refer the dispute to the International Court of Justice. That dispute had not been resolved by 2005.

DEFENSE

The Romanian military is composed of the army, navy, air and air defense forces, paramilitary forces, and civil defense. Some 200,000 annually reach the military age of 20. Estimates in 2005 held that just over five million males ages 15 to 49 were available, while just over five million were fit for military service.

Military expenditures were \$985 million, or 2.5 percent of gross domestic product (GDP), in 2002.

ECONOMY

Romania, one of the poorer countries in the Balkans, is still continuing a difficult transition to a market-based economy. The country's principal industries include mining, timber, construction materials, metallurgy, chemicals, machine building, food processing, and petroleum production and refining. After the collapse of the Soviet bloc in 1989–91, Romania was left with an obsolete industrial base and a pattern of industrial capacity wholly unsuited to its needs. For the next few years the country lagged behind most of its neighbors in the pace of restructuring.

In 1997 Romania embarked on a comprehensive economic reform program. As a result, the private-sector share of GDP rose to an estimated 58 percent and inflation fell from 151 percent to 45 percent. Nevertheless, GDP fell by 6.6 percent, and the unemployment rate hovered at 8.8 percent. In 1998 GDP shrank further, by 7.3 percent.

Romania edged closer and closer to defaulting on its international debts, the nation's foreign exchange reserves dwindled sharply, and the leu lost more than half its value against the dollar.

In the summer of 1999 Romania claimed that the war over Kosovo was costing the nation \$50 million weekly because of lost trade and higher transportation charges. To try to attract foreign aid and investment, Romania passed strong banking-reform and economic restructuring laws. The country sought a moratorium on international debts similar to those offered to other Balkan states, including Albania and Macedonia. A persisting problem was Romania's unenviable record for failing to implement promised reforms. Without such reforms, Romania appeared to be forced to forgo hundreds of millions of dollars in international loans and billions in private investment, all of which could have dramatically transformed the economy.

The European Union ranks Romania last among enlargement candidates, and the European Bank for Reconstruction and Development rates Romania's transition progress as the region's worst. Still, in 2000 the country emerged from a punishing three-year recession thanks to strong demand in EU export markets, and the government elected that year promised to promote economic reform; Bucharest hoped to receive financial and technical assistance from international financial institutions as well as Western governments. The government elected in 2004 promised to further speed the pace of economic reforms. Growth since 2001 has held above 4 percent, and reforms led the International Monetary Fund (IMF) to approve standby credit that the nation hopes it will not have to use. Meanwhile, the European Union agreed in principle to admit Romania by 2007. Currently, the poverty rate, inflation, and unemployment remain high.

ENVIRONMENT

The issue of greatest environmental concern in 1999 was the potentially lethal regional impact of NATO's bombing of Serbia. A team of United Nations chemical and biological experts were dispatched to the Danube River to intensively investigate the toxic effects of industrial runoff from damaged plants. The investigation aimed to ascertain the range of damage across the whole Balkan region, including Romania.

Romania has also been concerned with the potential decline of Danube delta biodiversity and has received international financial aid to measure and then find ways to reduce airborne chemical pollutants in industrial emissions.

LIVING CONDITIONS

Analyses of the living conditions in Romania paint a contradictory picture: On the one hand, the country is blessed with a wealth of natural resources, including timber, minerals, and metals; on the other, it has lacked the capital to exploit those resources. The country has great natural beauty, with forests, mountains, quaint towns, historic architecture, seaside resorts, and the like, but the country was environmentally ravaged under Communism, and the mass migration of people from villages to cities led to the creation of enormous rings of bland, soulless apartment buildings with few amenities. Romanians place a great deal of emphasis on the family, but widespread poverty has led to large numbers of abandoned children living in orphanages, many with AIDS. The nation has a literacy rate of over 98 percent, but it remains one of the poorest European nations. While Romania has had a turbulent and even tragic history since World War II, many observers note the sense of resolve and optimism with which Romanians look forward to a future of democracy and economic prosperity.

HEALTH

Romania's health-care system ranks in the middle of the world's nations. Life expectancy in 2003 was just over 70 years, ranking 115th in the world; the infant mortality rate in 2001 was just under 19 deaths per 1,000 live births, ranking 129th, but had risen to over 26 deaths per 1,000

live births by 2005. Annual spending per person on health care in 2002 was estimated at \$128, ranking 74th. While medical care improved after the fall of Communism, doctors and up-to-date facilities and equipment remain in short supply, and many doctors trained in Romanian medical schools leave for better pay and facilities in other countries.

FOOD AND NUTRITION

Only about 1 percent of Romanian children under the age of five are underweight, according to a 2000 UN Children's Fund report, ranking the nation among the healthiest in the world in that respect.

Romanian cooking is a blend of Turkish, Russian, Serbian, Hungarian, and western European influences. The primary staple is *mamaliga*, a cornmeal mush served in many different ways, usually as a side dish. The primary meat consumed is pork; most villagers raise several pigs for their own consumption. Another popular meat dish is *mititei*: small broiled sausages. In general, Romanians enjoy a wide variety of dishes and desserts, especially at the main midday meal.

STATUS OF WOMEN

The socialist plan for the emancipation of women aimed to eliminate the "barbarously unproductive, petty, nerve-racking drudgery" of their lives. The subservience of women was to be ended through the establishment of the

complete equality of the sexes before the law, and women were to become economically independent through employment outside the home. However, despite the theoretical commitment of socialism to eradicating sexual inequality, working women continued to bear the burdens of caring for children, home, and husband. Romanian men, in rural and urban settings alike, have continued to insist on women performing the roles traditionally associated with being wife and mother.

Despite such gendered resistance, by the 1980s illiteracy among females was virtually eliminated. With government encouragement, female enrollment in primary education became proportionate to their numbers, and women's access to higher education also increased considerably.

Following a commitment assumed at the United Nations Beijing Conference, in 1995 the Romanian government set up a department for the advancement of women, with the main priorities of empowering women and ensuring their equal participation in political, economic, and social decision-making structures. The agency dedicated itself to improving women's economic situations and access to the labor market; combating violence against women; and bettering their state of health. The agency has strongly advocated introducing and integrating gendered perspectives as permanent indicators in designing, implementing, and evaluating policies and programs.

WORK

In 2004 the Romanian labor force numbered 9.7 million, with agriculture employing 31.6 percent, industry 30.7 percent, and services 37.7 percent. Unemployment has remained relatively high, currently at 6.3 percent. Per capita GDP in 2004 was closing in on \$8,000, but 44.5 percent of the population lived below the poverty line. Although two out of five Romanians are agricultural workers, they contribute only about 13 percent to GDP, suggesting that the sector is inefficient; the government has made efforts to return the nation to its former status as a breadbasket for Europe. Major crops include wheat, corn, barley, sugar beets, sunflower seeds, potatoes, grapes, eggs, and sheep. Major industries include textiles, footwear, light machinery, auto assembly, mining, timber, construction materials, metallurgy, chemicals, food processing, and oil refining.

EDUCATION

The oldest school in Romania, the school at the monastery at Cenadul Vechi, dates from the 11th century. The first school to give instruction in Romanian was founded in 1522 at Cimpulung, in Walachia. By the 18th century schools were under the administration of local communities rather than churches. The Proclamation of 1838 at Islaz declared that education was to be equal for both boys and girls. The University of Bucharest opened with three faculties in 1860. Legislation in 1864 made four-year primary education free and compulsory and determined that secondary and higher education would last for seven and three years, respectively.

The 10-year compulsory education program begun in 1978 comprises three levels: a primary four-year program, a four-year gymnasium program, and a two-year program constituting the first cycle of the lyceum. Graduates then proceed to the two-year second cycle of the lyceum before enrolling in institutions of higher education. Children begin preschool or kindergarten at age three and the first grade at age six. Most students complete school at 18. The academic year runs from September through July. Vocational schools offer *maistri* (apprentice) education in courses lasting from a year to a year and a half in day schools or two years in night schools. Higher education has expanded greatly since the fall of Communism. In 1989 there were 30 higher-education institutions; by the turn of the century there were 49 public and 89 private higher-education institutions. The academic year is divided into two semesters, and attendance is mandatory. Overall responsibility for education at all levels is vested in the Ministry of Education and Instruction, as assisted by a number of committees and councils, such as the Congress of Education and Instruction.

SCIENCE AND TECHNOLOGY

Two major institutions sponsor and fund scientific and technological research in Romania. One is the Romanian Academy, the nation's center for academic research, with a library of over seven million volumes. The other is the Romanian Research and Education Ministry. The nation has at least 25 other agencies that fund research in various areas, from agriculture and fisheries to chemistry, medicine, communications, the environment, and the like.

MEDIA

Although the constitution provides for the freedom of expression and prohibits censorship, it limits the bounds of free expression by prohibiting "defamation of the country" and "offense to authority." The amended 1996 Penal Code rectified many of the shortcomings of the former Communist code. However, the recent code retained jail terms for libel, and many suits are brought against journalists under these provisions. The prohibition of "defamation of the nation" and "of public officials" is used to harass and punish journalists who seek to root out corruption in high places. Independent media have continued to grow in the post-Communist era; in the early 2000s, more than 100 private television stations and more than 100 private radio stations were broadcasting nationwide. Independent stations have enlarged their coverage through over-the-air, cable, and satellite transmissions.

CULTURE

The earliest Romanian literature consisted of ballads and folklore; the legend of Dracula is perhaps the most famous element of the country's folkloric tradition. With the official introduction of the Roman alphabet in the 19th century, the nation underwent a renaissance of literary output. The most famous writer of Romanian heritage, although he lived in France, was Eugene Ionescu (1912–1994), best known for such absurdist dramas as *The Bald Soprano* and *The Rhinoceros*. The nation's most famous modern artist is Constantin Brancusi (1876–1957), who created abstract sculptures in wood and metal. In the performance arts, Romania is best known for its folk music and folk dancing. The national dance is the *hora*, a circle dance performed on special occasions such as festivals, and there are many other regional folk dances.

Under Communism the state provided support for artists, but they were heavily censored and often had to disguise political themes in their work. Since the fall of Communism government funding for the arts has declined, but artists have gained considerably more artistic freedom.

FOLKLORE AND MYTHOLOGY

In Romanian mythology the god Dionysius was born in Romania, and Jason searched for the Golden Fleece in the region. Dacian mythology included a number of gods, such as Gebeleizis, the ultimate heavenly god; Bendis, the goddess of the moon; and Vesta, the god of flames. The Dacians' mythical holy place was the mountain Kogaion. More familiar internationally are folkloric traditions surrounding vampires; one tradition has that a clan of vampires descended from Judas Iscariot, the biblical betrayer of Jesus Christ. The most famous of the vampires is Dracula, thought by some to have been King Vlad III, "the Impaler," believed to have been responsible for 100,000 deaths. In Romania a version of the legend of "Little Red Riding Hood" was a prominent story about werewolves. According to priests, the color red referred to the girl's blood, shed when the wolves attacked her; the legend accounts for the redness of the moon during a lunar eclipse, God's signal that people should repent from evil.

ENTERTAINMENT AND RECREATION

One popular form of entertainment is the "promenade"; villagers stroll up and down the streets on Saturday or Sunday afternoons, chatting with acquaintances, shopping, and enjoying coffee and dessert at open-air restaurants. With the spread of television, many people enjoy Western programming. Major forms of entertainment for many Romanians involve the nation's rich folk heritage, including dancing and music, textile work, wood carving, and whittling. Nearly every village has a musical group that performs at festivals, weddings, and the like.

ETIQUETTE

Visitors to Romania are struck by the warmth and hospitality of the people. Greetings tend to be formal but warm, and younger people are respectful of elders. Men continue to treat women in traditional ways, tipping hats, giving up seats, and kissing their hands.

FAMILY LIFE

Family life in Romania has traditionally centered around the church. In the past, marriages were arranged, and the bride's family was expected to provide a substantial dowry. Weddings were formal and highly elaborate affairs. Under Communism, state efforts to reduce the influence of the church included the requirement that weddings take place in civil ceremonies in order to be legal. On the other hand, abortion and birth control were outlawed, and women were encouraged to have five or more children. In recent years, certain traditions have become less prevalent, though weddings remain elaborate. Housing shortages have made multigenerational families living under one roof the norm. As such, the size of families has reduced in recent years; in 2004 the fertility rate was just 1.36 children per woman.

PERSONAL APPEARANCE

While most Romanians have adopted Western-style dress, traditional dress can still be seen. Among women, elaborately embroidered blouses are common. Traditional dress among men includes white pants, long white shirts, leather belts, leather moccasins, and rounded, narrow-brimmed hats.

SPORTS

As in much of Europe, soccer is the most popular sport, for both spectators and participants. Also popular are

1952 Romania

tennis, volleyball, rugby, boxing, and basketball. The two most famous names in Romanian athletics are the tennis champion Ilie “Nasty” Năstase, who was known for his volatile temper and irreverence, and the gymnast Nadia Comaneci, who received seven perfect 10s—the first ever perfect score in women’s Olympic gymnastic competition—in the 1976 Summer Olympics. The nation’s best Olympic performance came in 1984 in Los Angeles, when Romania won 20 gold and 12 silver and bronze medals. A traditional game played in Romania is oina, which is similar to baseball.

CHRONOLOGY

- 1940** Romania loses Bessarabia and northern Bukovina to the Soviet Union, northern Transylvania to Hungary, and southern Dobruja to Bulgaria; General Ion Antonescu forces King Carol II to abdicate and assumes power, crushing the Fascist Iron Guard.
- 1941** An ally of Germany, Romania declares war on the Soviet Union; thousands of Jews are massacred.
- 1942** Romania suffers heavy losses in the Battle of Stalingrad.
- 1944** Soviet troops storm Romania; Carol II’s son King Michael dismisses Antonescu; Romania surrenders to the Soviet Union and declares war on Germany.
- 1945** The Soviet Union begins its postwar occupation of Romania and installs a Communist government under Petru Groza.
- 1946** Elections controlled by the Communist Party produce large majorities for Communist candidates; opposition is suppressed, and opposition leaders are imprisoned.
- 1947** Under the Paris Peace Treaty, Transylvania is the only lost territory Romania reclaims; King Michael abdicates, and a People’s Republic is proclaimed.
- 1948** A Soviet-style constitution is promulgated; Romania joins the Council for Mutual Economic Assistance (COMECON), a Soviet trade group.
- 1949** Forced collectivization of agriculture is begun.
- 1950** The United Nations General Assembly charges Romania with systematically violating the human rights provisions of the Paris Peace Treaty.
- 1952** A new constitution is proclaimed; Communist Party leader Gheorghe Gheorghiu-Dej becomes prime minister.
- 1953** Soviet leader Joseph Stalin dies, and Soviet-Romanian relations begin to cool.
- 1955** Romania joins the Warsaw Pact, an Eastern Bloc foil to NATO.
- 1958** Soviet occupation forces withdraw.
- 1962** The government announces the successful absorption of the nation’s arable land.
- 1963** Romania rejects COMECON’s economic integration plan, which had cast Romania as merely the association’s supplier of raw materials.
- 1965** Gheorghiu-Dej dies, and Nicolae Ceaușescu replaces him as Communist Party leader; a new constitution is proclaimed asserting Romania’s independence from Soviet authority.
- 1968** Ceaușescu denounces the Soviet invasion of Czechoslovakia.
- 1969** A visit from President Richard Nixon cements friendly relations with the United States.
- 1970** Romania signs a treaty of friendship with Hungary.
- 1971** Ceaușescu visits China, opening trade with that country; Ceaușescu begins a strict campaign to enforce Communist Party orthodoxy.
- 1972** Romania joins the IMF and the World Bank.
- 1975** Ceaușescu becomes president.
- 1976** Romania and the United States sign a 10-year economic pact; Romania signs a trade agreement with the European Economic Community; Yugoslavia and Romania sign a hydroelectric agreement.
- 1977** Bulgaria and Romania sign a hydroelectric agreement; Ceaușescu reorganizes the government and the Communist Party.
- 1980** Romania denounces the Soviet invasion of Afghanistan.
- 1985** Ceaușescu establishes severe austerity measures, which cause widespread food shortages and power cuts; antigovernment sentiments escalate.
- 1987** Antigovernment demonstrations in Brasov are brutally suppressed.
- 1988** The government announces a forced resettlement program that calls for the elimination of 8,000 villages.
- 1989** Ceaușescu is overthrown in Christmas Revolution and is executed along with his wife Elena; Ion Iliescu heads a caretaker government.
- 1990** Multiparty elections in May confirm Iliescu as president, and his National Salvation Front (NSF) wins the most seats in parliament, with Peter Roman as prime minister; antigovernment demonstrations continue; Roman’s government dissolves; Theodor Stolojan forms a new NSF coalition and imposes economic austerity measures; the pro-market economy faction of the NSF breaks off to form the Democratic National Salvation Front (DNSF).
- 1991** COMECON collapses, as the Soviet Union dissolves; in the wake of attacks, thousands of ethnic Roma (Gypsies) flee to Germany; in a national

- referendum, voters approve a new democratic constitution.
- 1992** DNSF candidates win the most seats in parliament, and Nicolae Vacaroiu becomes prime minister; Iliescu is reelected president; Germany repatriates 43,000 refugees to Romania.
- 1993** Clashes between ethnic Romanians and ethnic Germans and Hungarians break out in Transylvania; Romania becomes an associate member of the European Union.
- 1994** Romania joins NATO's Partnership for Peace.
- 1996** In legislative elections a coalition of opposition parties, including the Democratic Convention of Romania (DCR) and the Social Democratic Union (SDU), defeats the ruling Party of Social Democracy of Romania (PSDR; formerly the DNSF), prompting the first peaceful transfer of power under the 1991 constitution; the DCR's Victor Ciorbea becomes prime minister; Emil Constantinescu, of the DCR, is elected president.
- 1997** Romania improves historically tense relations with Hungary and resolves a territorial dispute with Ukraine; as the economy stagnates, the planned privatization of state-run facilities stalls.
- 1998** Radu Vasile, of the DCR, forms a new government coalition; the government announces plans to close more than 150 unprofitable state businesses; 10,000 striking miners march on Bucharest in protest; Vasile resigns, and National Bank governor Mugur Isarescu is named prime minister.
- 1999** Romania backs NATO action against Serbia.
- 2000** Elections return the PSDR's Iliescu to the office of president; the PSDR forms a minority government under Adrian Nastase.
- 2001** A law aimed at returning property that was nationalized during the Communist era is approved by parliament.
- 2004** Romania is admitted to NATO; Iliescu formally admits Romanian complicity in the Nazi holocaust of World War II; Traian Băsescu is elected president, surprisingly defeating the incumbent prime minister Nastase; European Union agrees in principle to admit Romania in 2007.

RUSSIA

Basic Fact Sheet

OFFICIAL NAME

Russian Federation (Rossiyskaya Federatsiya)

ABBREVIATION

RU

CAPITAL

Moscow

HEAD OF STATE

President Vladimir Putin (from 2000)

HEAD OF GOVERNMENT

Prime Minister Mikhail Fradkov (from 2004)

NATURE OF GOVERNMENT

Constitutional democracy

POPULATION

143,420,309 (2005)

AREA

17,075,200 sq km (6,592,734 sq mi)

ETHNIC MAJORITY

Russian

LANGUAGE

Russian

RELIGION

Orthodox Christianity

UNIT OF CURRENCY

Ruble

NATIONAL FLAG

Three horizontal bands of white (top), blue, and red

NATIONAL EMBLEM

A golden double eagle on a red heraldic shield. The eagle holds a scepter and an orb in its talons. On the eagle's chest is a smaller red shield with the image of a horseman thrusting a dragon with a spear.

NATIONAL ANTHEM

"Russia, Our Sacred Power" (Hymn of the Russian Federation)

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 7 (Russian Orthodox Christmas Day), February 23 (Defenders of the Motherland Day), March 8 (International Women's Day), May 1–2 (Labor Day), May 9 (Victory Day), June 12 (Russia Day), November 7 (Day of Accord and Reconciliation), December 12 (Constitution Day)

DATE OF INDEPENDENCE

August 24, 1991

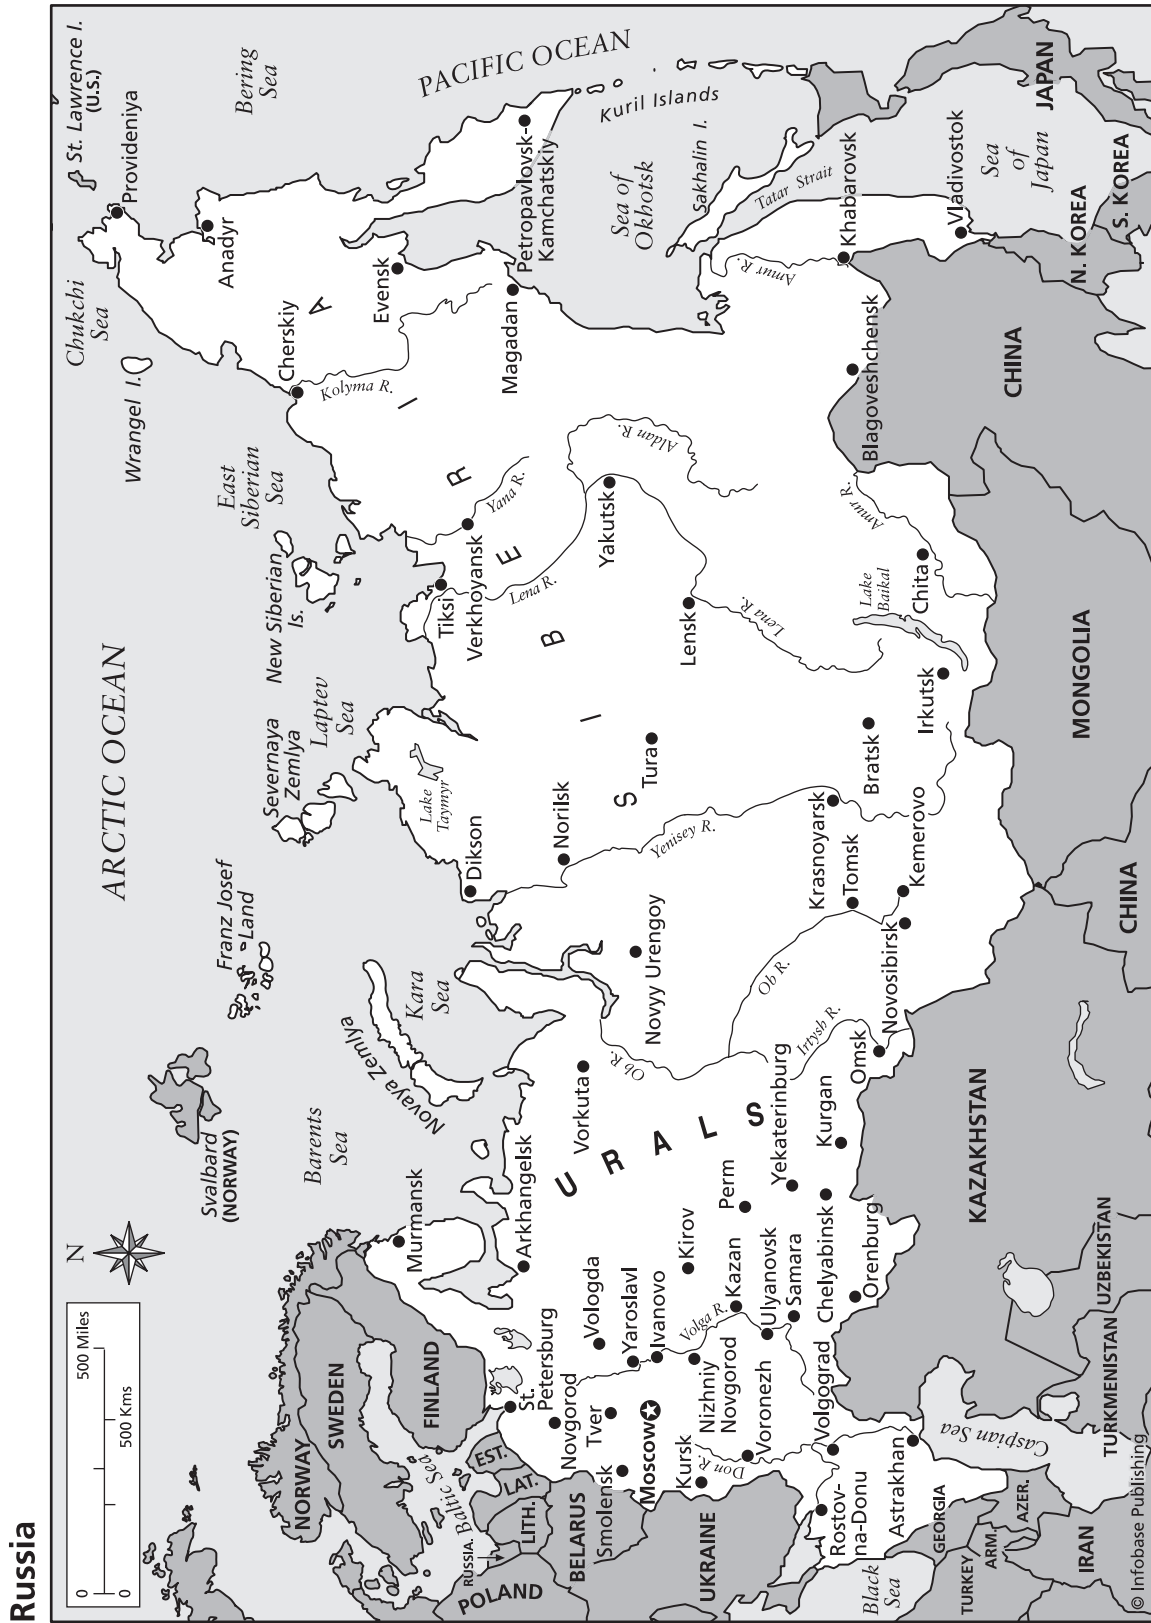

DATE OF CONSTITUTION

December 12, 1993

GEOGRAPHICAL FEATURES

Russia is the largest nation in the world in geographic terms, containing about one-eighth of the world's total inhabited land area. Russia spans two continents, Europe and Asia, and borders three oceans, the Arctic, Atlantic, and Pacific. Russia is a northern country, with most of its land closer to the North Pole than to the equator. The terrain varies from rolling hills and plains to rugged mountains and arctic tundra. Many areas remain isolated and unsettled, especially in eastern Siberia. Much of the population, industry, and agriculture are concentrated in the western, European areas.

In total, Russia covers some 17,075,200 sq km (6,592,734 sq mi). It has the world's longest land borders, which extend 20,017 km (12,438 mi). Russia borders Azerbaijan, Belarus, China, Estonia, Finland, Georgia, Kazakhstan, Latvia, Lithuania, Mongolia, North Korea, Norway, Poland, and Ukraine. The nation has 37,653 km (14,538 mi) of coastline, bordering 13 seas along with the three oceans. Russia is separated from the United States by the 86 km (54 mi) of the Bering Strait. The westernmost piece of Russian territory is the Kaliningrad enclave, which is isolated from the rest of the federation by the independent Baltic states; the easternmost point is Ratmanova Island, in the Bering Strait. Some 9,000 km

(5,625 mi) separate the two points. From north to south, some 3,800 km (2,375 mi) separate Novaya Zemlya, in the arctic circle, from the Caspian Sea. The highest point in the nation is Mt. El'brus, with an elevation of 5,633 m (18,469 ft). The lowest point is the Caspian Sea, at 28 m (92 ft) below sea level.

There are extensive plains and low hills west of the Ural Mountains region in the western part of Russia. The Urals serve to separate west and east, and on the eastern side of the mountains the terrain becomes host to large coniferous forests and tundra in the Siberian region. The Urals extend 2,200 km (1,375 mi) from north to south, and the continental divide continues for another 1,375 km (860 mi). The southern area in the west is marked by the uplands, steppes, and mountains of the Caucasus region. Almost the entire coast is above the arctic circle, and only the port of Murmansk, which is influenced by the waters of the Gulf Stream, remains ice free year-round.

The nation has thousands of lakes and rivers, and some 79,400 sq km (30,656 sq mi) of Russia's total surface area is water. Of these water systems, 84 percent are located east of the Urals. Some 40 rivers whose length exceeds 1,000 km (625 mi) are in the east. The three main rivers that drain Siberia to the north are the Irtysh-Ob, Yenisey, and Lena. Other major river systems in the region include the Pechora, North Dvina, and Amur. Three major systems drain European Russia: The Dnieper originates near Moscow and flows through Belarus and Ukraine. The Don starts in central Russia and flows past Moscow to the Sea of Azov and the Black Sea. The Volga, the largest of Europe's river systems, travels southward to the Caspian Sea. The largest lakes in European Russia are Ladoga, Onega, Peipus, and Rybinsk. The largest freshwater lake in the nation is Lake Baikal, which is also the world's deepest freshwater lake, with a depth of 1,713 m (5,616 ft).

Russia possesses an enormous quantity and quality of natural resources. The nation produces almost 20 percent of the world's oil and natural gas and has the largest natural gas reserves. The federation also has immense reserves of iron ore, chromium, tin, nickel, copper, lead, tungsten, diamonds, phosphates, and gold. In addition, the conifers of Siberia account for one-fifth of the world's timber. However, the climate and poor soil of much of the nation make it unsuitable for agriculture, and 10 percent of the total area is essentially swampland.

Russia is in the midst of a number of territorial disputes. There are boundary disagreements with each of the Baltic republics. Japan disputes Russian control over a number of islands occupied by the Soviet Union at the end of World War II. The Caspian Sea boundaries and maritime claims between Russia and Azerbaijan, Iran, Kazakhstan, and Turkmenistan remain unresolved. Finally, Russia and Norway are engaged in a dispute over maritime rights in the Barents Sea.

CLIMATE AND WEATHER

The climate in Russia ranges from temperate to arctic. There are really only two seasons: a short summer and a long, harsh winter. Seasonal change is usually abrupt. In the south along the Black Sea, winters are of short duration and summers are warm. In Siberia the winters are frigid, and permafrost covers the land; in some regions the per-

mafrost is 610 m (2,000 ft) deep. Summers in the region are cool at best. In general, snow covers much of the nation for at least half the year. While the climate is continental, the mountain ranges in the south and east block the moderating influences of the Indian and Pacific oceans, and the north is exposed to the harsh impact of arctic systems. In the winter, powerful high-pressure systems cause winds to blow from Siberia, bringing cold air streams. In the summer, low-pressure systems bring northerly winds.

Some areas in Russia have more temperate climates. The enclave of Kaliningrad on the Baltic Sea has a more moderate climate similar to that of northern European nations. In the Far East the climate is monsoonal, while the southern band of territory around the Black Sea has a subtropical climate. Temperatures in Russia range from highs of up to 38°C (100°F) in the south in summer to -43°C (-45.4°F) in Siberia in winter. The average temperature in the more populous west is 0°C (32°F).

Precipitation is fairly constant across the nation. The main differences are between the monsoonal areas of the Far East, which receive 1,000 mm (40 in) annually, and the southern regions, which receive between 200 and 400 mm (8 and 16 in).

Climate and Weather

Mean Temperatures: January

Batumi: 32°F
 Moscow: 9°F to 21°F
 Arkhangelsk: 2°F to 9°F
 Verkhoyansk (Siberia): -90°F
 Yakutsk: -95°F to -90°F

Mean Temperatures: July

Arctic Coast: 32°F
 Moscow: 55°F to 76°F
 Arkhangelsk: 51°F to 64°F

Average Rainfall

Moscow: 21 in
 Eastern Siberia: 8 in to 10 in
 Western Russia: 25 to 30 in

FLORA AND FAUNA

There are four major vegetation zones in Russia: One is the treeless tundra of the arctic, where biodiversity is low. Noteworthy animals include polar bears, caribou, lemmings, and musk ox. The second is the taiga region just south of the Arctic Ocean, which contains the great conifer forest and 3,000 known species of vascular plants. Additionally, the taiga region is home to Amur tigers, Amur leopards, musk deer, Himalayan bears, and brown bears. The steppes of European Russia consist principally of grassland, with some forest. Wildlife includes sheep, bears, ibexes, gazelles, wolves, furry marmots, lynx, elk, deer, and moose. Finally, the steppes and deserts of central Asia are arid. In all, Russia is home to

about 11,000 species of vascular plants, 320 mammals, 730 birds, 75 reptiles, 30 amphibians, 400 sea fish, and 270 freshwater fish.

POPULATION

Population Indicators

Total Population 2005: 143,420,309

World Rank: 8th

Density per sq km: 8.5

% of annual growth (1999-2003): -0.5

Divorce Rate per 1,000: 5.3

Average Size of Households: 3.2

Induced Abortions: 2,766,362

ETHNIC COMPOSITION

Ethnic Russians make up the overwhelming majority of the total population, at around 80 percent. The primary ethnic minorities are Tatars (3.8 percent), Ukrainians (2 percent), Bashkirs (1.2 percent), Chuvash (1.1 percent), Chechens (0.9 percent), and Armenians (0.8 percent). Other minor groups include Avars, Belarusians, Germans, Jews, Kazakhs, Mari, Moldavians, and Udmurts. Except in the northern Caucasus and some areas of the Volga basin, Russians form the largest population in all regions.

Ethnic Russians are descended from the East Slavs, one of three groups that formed from the original Slavic people in the seventh century. The other groups were the West Slavs, who became Poles, Czechs, and Slovaks, and the South Slavs, who are modern-day Bulgarians, Croats, Serbs, and Slovenes. Besides the Slavic peoples (Russians, Ukrainians, and Belarusians), there are three main ethnic groups in Russia: the Altaic group, who speak Turkic languages and are represented by the Balkars, Bashkirs, Buryats, Chuvash, Evenks, and Yakuts; the Finnic peoples, or Uralics, who include the Karelians, Komi, Mari, Moldavians, and Udmurts; and the Caucasus, comprising over 30 subgroups, of which the largest are the Adyghs, Chechens, Cherkess, Ingush, and Dagestani.

In addition to the Russians, there are more than 100 ethnic minorities in the federation. There are 21 ethnic

republics within the federation, with each of these bodies designated for a minority group. The total population among the republics is 24 million. However, even within these territories ethnic Russians have a large presence. Russians constitute the largest single body in all but eight republics, and they account for more than half the populace in nine of the territories. There are also 10 autonomous regions whose existence is based on the presence of at least one ethnic group. These include a Jewish autonomous province and provinces for small, indigenous minority groups such as the Buryats and Permyaks. Soviet efforts to collectivize indigenous people led several tribal groups, including the Evenks, to the verge of extinction.

Following the dissolution of the Soviet Union, many ethnic groups endeavored to gain increased autonomy and even independence. Chechnya's efforts to gain full independence provide one example of this trend; other groups, such as the Tuva, Chuvash, and Tatars, have made unilateral moves to increase local control. Many ethnic groups face discrimination from Russians, especially Muslims.

LANGUAGES

Russian is the dominant language in the federation and is spoken by three-quarters of the population. Russian is Slavic, as are other languages spoken in the nation, such as Ukrainian and Belarusian. Other language groups include Turkic, Caucasian, Finno-Ugric, Eskimo, Yiddish, and Iranian. Some 12 percent of the population use a language other than Russian as their primary means of communication (80 percent of whom are non-Slavic citizens of the federation).

For centuries the Russians have attempted to use language as a unifying factor, within first the czarist empire and later the Soviet Union. During Communist rule, territories within the Soviet Union were forced to adopt Russian as the language of education, government, and industry. Nonetheless, especially in remote regions of the nation, minority groups continued to use their own languages alongside Russian. In many areas proficiency in Russian remained low in spite of decades of official policy.

After the demise of Communism, Russian remained the sole language of public administration, the military, and the scientific and technical community. Higher education is also conducted in Russian. Only two school systems are permitted to use non-Russian curriculums: those of the Bashkirs and the Tatars.

The constitution grants citizens the right to choose their language for communication and education. While these guarantees have little significance in areas dominated by ethnic Russians, minority groups' movements to increase local autonomy have led to the revival of many languages, with ethnic republics declaring their native

tongues equal in status to Russian. As such, the use of local language has become a symbol of autonomy from Moscow.

RELIGIONS

Eastern Orthodox Christianity is the primary religion in Russia. Under czarist rule, Orthodoxy was one of the pillars of the state. Later, despite the facts that under Communism atheism was promoted and the government attempted to erode church power, one-third of Russians still held allegiance to some form of religion. Following the end of Communist rule, the state took steps to reinforce the primacy of the church in the face of competition from other faiths. In particular, Russia's religious laws have elevated Orthodoxy, Judaism, Islam, and Catholicism over other faiths. By 1996, 18 regions of the federation had enacted legislation to restrict the activities of non-Orthodox religious groups in their territory; however, the constitution does guarantee freedom of religion. Since the end of Communist rule, thousands of churches, synagogues, mosques, and other religious buildings have been reopened or restored for use.

Islam is the second-most prevalent religion, and 10 percent of the population are Muslim. Concerned over the potential spread of radical Islam, Russian leaders have supported secular leaders in the former states of the Soviet Union and have taken steps to minimize the power of religious leaders within Russian republics with large Muslim communities.

Russia has also supported Orthodox nations abroad. While the promotion of Orthodoxy is not an official component of the nation's foreign policy, Russia's championing of Orthodox states such as Serbia and Armenia has led it to oppose international efforts to mediate conflicts and impose sanctions on those states for violations of international norms.

Judaism is in decline in the federation as a result of emigration, while many Protestant denominations have expanded their numbers.

HISTORICAL BACKGROUND

In 862 the East Slavs came under the protection of a Viking group known as the Varangians whose king, Rurik, founded the first recorded dynasty in Russian history. This dynasty ruled the region for 700 years. A capital was established in Kiev, and the kingdom expanded and built numerous trading centers. In the 10th century the Kievan prince Vladimir accepted the Orthodox faith, and Kiev became Christian.

The Kievan state went into decline as successive invasions from Asia battered the kingdom. In 1240 the Mongol Golden Horde destroyed Kiev and established

sovereignty over most of Russia. Although the Mongols initially laid waste to much of the land, they later established a system of indirect rule that lasted for some 200 years. Under Mongol rule, the Russian territories were principalities ruled by native Russians who held allegiance to the Mongols. In 1325 the prince of Moscow, Ivan I, convinced the khan to name him a grand prince. This marked the emergence of Moscow as the seat of power in Russia. Moscow also became the seat of the metropolitan of the Russian Orthodox Church, and Ivan's son acquired the title of Prince of All the Russias. In 1380 the Mongols suffered a major defeat at the battle of Kulikovo by a Russian army led by the prince of Moscow.

In 1462 Ivan III, "the Great," came to power, and during his 43-year reign he greatly expanded the size of Muscovy and ended Mongol suzerainty. Ivan III was the first to use the title of czar. Ivan's grandson, Ivan IV, "the Terrible," came to the throne when he was three and dominated Russian history throughout the 16th century. He curbed the power of the gentry, or boyar class, and reformed the legal and religious codes of the country. Ivan later went insane and unleashed a reign of terror on Russia. He annihilated entire cities suspected of disloyalty and killed one of his sons. His surviving son, Fyodor, died without his own heir; this ended the Rurik dynasty and initiated a struggle for the Crown that became known as the Time of Troubles (1605–13). During this period Polish forces conquered Moscow, but the interregnum was ended in 1613 when Mikhail Romanov was elected czar, beginning the 300-year rule of the Romanovs.

While the early Romanovs were weak leaders, Peter I, "the Great," greatly expanded the power of the throne and instituted reforms that brought Russia closer to the West. Peter came to power in 1682, and for 40 of the 42 years that he reigned Russia was at war. He ended Sweden's hegemony over northern Europe and conquered areas of the Ottoman Empire. The reform-minded czar moved the capital to St. Petersburg in order to be closer to the West and revised the calendar and alphabet.

Following Peter the Great, Catherine the Great, a German princess who had married Peter's grandson, emerged as the next distinguished ruler of Russia. Under her reign, the empire acquired Ukraine, Belorussia, and the Crimea. Her son Paul was murdered in a palace revolt, and his son, Alexander I, became czar. Alexander sponsored a number of liberal reforms and led Russia in its defeat of Napoleon. After his death, a liberal rebellion known as the Decembrist Uprising became a symbol for later revolutionaries. The next czar, Nicholas I, endeavored to suppress liberal ideas and launched the disastrous Crimean War, which ended in a defeat for Russia in 1855. His successor, Alexander II, attempted to initiate pragmatic reforms, including the abolition of serfdom in 1861. He continued the expansion of Russia and adopted other reforms to the judicial system and the military. Alexander II was assassinated in 1881.

The last two czars, Alexander III and Nicholas II, were reactionary and sought to preserve imperial power in the face of growing industrialization and calls for democratization. A major revolution in 1905 was sparked when imperial troops opened fire on unarmed demonstrators in a massacre known as Bloody Sunday. The uprising was also fueled by Russia's major defeat in the Russo-Japanese War, which ended in 1904. Although the rebellion was put down, Nicholas agreed to the establishment of a legislature known as the Duma. Limited reforms were instituted, but imperial power remained supreme, and in 1914 the nation was drawn into World War I.

Russian troops won significant victories against the Austrians and Turks, but as the war dragged on the Germans inflicted crushing defeats on the Russians. Meanwhile, the monarchy lost support as a result of the war and the influence of Grigori Rasputin on the royal family. A new revolution broke out in 1917, and the czar was forced to abdicate. A provisional, democratic government was formed, but it was immediately opposed by the Communist Soviet Council of Workers and Soldiers' Deputies. The Germans secretly transported the prominent Communist revolutionary Vladimir Lenin into Russia, and in November 1917 the Bolsheviks, a minority Communist group led by Lenin, were able to seize power from the provisional government.

Lenin consolidated power by dissolving the Constituent Assembly, which had been elected to draft a new constitution, and initiating a revolutionary purge of the elements of both the old regime and the prodemocracy groups. Lenin ended Russian participation in World War I through the Treaty of Brest-Litovsk, in which Russia surrendered one-third of its territory and one-quarter of its population. There followed a period of civil war as "White" anti-Communist revolutionaries fought against the Bolsheviks. Not until 1922 did the Bolsheviks formally establish the Union of Soviet Socialist Republics (USSR). All political parties other than the Communist Party were outlawed, and so-called enemies of the state were purged.

Lenin died unexpectedly from a stroke in 1922. He was succeeded by Josef Stalin, who seized power from Lenin's heir-apparent, Leon Trotsky. Stalin had Trotsky murdered in Mexico in 1940. Stalin's administration of the Soviet Union was marked by extreme tyranny, and he unleashed the bloodiest reign of terror in Russian history. In the 1920s and 1930s millions of kulaks, or wealthier farmers, who opposed agricultural collectivization were killed, as were any officials whom Stalin perceived as threatening. Many of the original Bolsheviks and military officers from the revolution were purged. During Stalin's reign, some 15 to 20 million Russians and eastern Europeans were executed or died in labor camps in Siberia.

In 1939 Stalin signed a nonaggression pact with Adolf Hitler, dividing Poland and eastern Europe between the two nations. However, Hitler invaded Russia in 1941

in the bloodiest campaign of World War II. Although the Germans drove deep into the USSR, they were unable to capture Moscow as the Russian winter set in. Military support from the United States and Great Britain, Russia's enormous population, and Stalin's willingness to absorb casualties reversed the German advances, and in 1943 the Russians inflicted a major defeat upon the invaders at Stalingrad. By 1945 the Soviets had conquered many of the eastern European nations and had advanced into Berlin. Stalin was then able to gain concessions from the Allies allowing him to retain most of Eastern Europe as satellite states following the war. By the end of World War II, the Russians counted some 20 million dead.

Stalin's antidemocratic efforts in Eastern Europe led to the promulgation of the Truman Doctrine, while specific events such as the Berlin Blockade prompted the formation of the North Atlantic Treaty Organisation (NATO) by the United States and the nations of western Europe in 1949. That same year the Soviets tested their first atomic weapon. With the advent of the Korean War in 1950, the cold war patterns of hostility between the United States and the USSR had become entrenched.

Stalin's death in 1953 led to a relaxation of the harshness of Soviet rule and a brief thaw in relations with the West. Nikita Khrushchev became the Soviet leader and initiated a de-Stalinization program in 1956. However, the formation of the Warsaw Pact in 1955, along with the Soviet invasion of Hungary to crush that nation's liberal revolution, revealed the limits of Soviet openness. Relations with China deteriorated during the 1960s, and there was open fighting along the Sino-Soviet border.

Khrushchev's greatest test came in 1962 with the Cuban Missile Crisis. A Soviet effort to station missiles in Cuba was blocked by the United States, and for a period of days the world stood at the brink of nuclear war. Khrushchev ultimately backed down, and his perceived "weakness" led to his forced retirement in 1964. He was replaced by Leonid Brezhnev.

Brezhnev adopted a hard-line stance, reinvigorating the cold war rivalry. In 1968 the Soviet Union intervened in Czechoslovakia to overthrow a liberal government. However, in 1972, Brezhnev accepted U.S. president Richard M. Nixon's overtures regarding Strategic Arms Limitation Talks (SALT), and a period of detente was initiated. In 1977 a new constitution was promulgated, and Brezhnev became the head of state. The SALT II Treaty was signed in 1979, but the period of detente ended when the Soviets invaded Afghanistan. In response, the United States boycotted the 1980 Moscow Olympics. A year later Polish shipbuilders began protests aimed at increasing basic freedoms.

Brezhnev died in 1982, and Yuri Andropov assumed power. Just two years later Andropov was dead; he was replaced by Konstantin Chernenko. Chernenko died in 1985 and was replaced by the younger, reform-minded politician Mikhail Gorbachev. Gorbachev initiated a se-

ries of reforms known as glasnost and perestroika that were designed to ease tensions in foreign affairs and to reorient the Soviet economy by promoting openness. In 1989 the Soviets withdrew from Afghanistan, and Gorbachev met with the pope. The following year independence movements in the Baltic republics led to the deployment of troops, although Soviet forces were being withdrawn from other Soviet satellite nations.

In 1991, after a failed coup attempt, Gorbachev lost power, as the Soviet Union disintegrated. Boris Yeltsin, who was elected president of Russia in 1991, banned the Communist Party, and the Commonwealth of Independent States (CIS) was formed as a means to preserve ties among the former Soviet states.

A new constitution was promulgated in 1993, and Russia's first free parliamentary elections were held on December 12. Yeltsin was reelected president in 1996, but a severe economic crisis and a rebellion in Chechnya seriously eroded his popularity. In 2000 Vladimir Putin became Russia's second democratically elected president. Putin moved to strengthen ties with the West by, for example, agreeing with the United States to a new round of sharp nuclear arms cuts in 2002 and also agreeing to forge closer ties with NATO.

Putin's principal problems in the early 2000s were the terrorism and unrest prevalent in portions of the federation. In October 2002 Chechen rebels seized a movie theater in Moscow and held 800 people hostage, and in December that year terrorists attacked the headquarters of the Moscow-backed Chechen government. A number of suicide bombings took place in 2003, with such attacks continuing through 2005, the most serious of which was a hostage massacre at a school in Beslan. In March 2005 Russia announced that Russian forces had killed Chechen rebel leader Aslan Maskhadov.

Following Putin's reelection as president in 2004, the United States and other western democracies began to voice concerns about a number of antidemocratic moves by Putin. Among these was his imprisonment of the billionaire oligarch Mikhail Khodorkovsky on charges of tax evasion. Critics charged that Putin's actions against Khodorkovsky were motivated primarily by the latter's support for opposition political groups.

LIST OF MODERN RULERS

1917–22	Vladimir Lenin
1922–53	Josef Stalin
1953–64	Nikita Khrushchev
1964–82	Leonid Brezhnev
1982–84	Yuri Andropov
1984–85	Konstantin Chernenko
1985–91	Mikhail Gorbachev
1991–2000	Boris Yeltsin
2000–	Vladimir Putin

CONSTITUTION

The current Russian constitution was adopted in 1993. It established a democratic, federative form of government. In addition to the national government, regional governments have varying degrees of autonomy, ranging from autonomous republics and independent cities to provinces and territories essentially controlled by Moscow.

The federal government is divided into three branches: executive, legislative, and judicial. The head of the executive is the president, who is elected for a four-year term. Despite the democratic nature of the regime, patronage and favored political relationships remain prevalent. The nation's first president was Boris Yeltsin, who was elected in 1991. The head of the government is the prime minister. Under Russian law the president has extensive power. He appoints the prime minister and other government ministers and can dissolve parliament and issue decrees, which carry the weight of law. The president is also nominally in charge of both foreign and domestic policy, although the prime minister actually oversees policy implementation. While in office, Yeltsin expanded the power of the presidency and weakened the office of the prime minister. This trend has continued under Yeltsin's successor, Vladimir Putin. Working for the president is the Presidential Administration, which drafts decrees and serves as the staff for both the president and government. There is also the Security Council, which controls most aspects of foreign and defense policy. There is no vice president or equivalent. Should the sitting president die in office or become incapacitated, then the prime minister becomes acting president until a new leader can be chosen, which must occur within three months. In addition to the prime minister, 40 cabinet members make up the government.

The parliament is a bicameral legislature that contains an upper house, the Federation Council, and a lower house, the Duma. Members of the Federation Council are appointed by regional governments to serve four-year terms. There are two members for each of the 89 regional governments. In the Duma, members are elected to serve four-year terms through a mix of direct and proportional voting.

The judicial branch has the power of judicial review, and the highest courts are the Constitutional Court, the Supreme Court, and the Superior Court of Arbitration. All judges are appointed by the president, as subject to confirmation by the legislature.

PARLIAMENT

Russia is a federation with a legislative assembly and strong presidential system. The parliament is a bicameral chamber known as the *Federalnoye Sobraniye*, or Federal Assembly. The substantive powers of the president mean that the role

of the legislature is somewhat curtailed. For instance, the president can disregard votes of no confidence in the government. The upper house of the parliament is the Federation Council. The council has 178 members, two for each regional government in the federation. The members of the council are the top executive and legislative officials of the regional governments and serve four-year terms. The Federation Council has a number of duties, including confirming presidential appointees for certain positions, such as federal judges or members of the Supreme Court, and the approval of treaties. However, it has considerably less power than the lower house. Council bills must be approved by the lower house, which can bypass the council with a two-thirds vote.

The lower house is known as the State Duma, or simply the Duma. It has 450 members chosen through a combination of direct election and proportional voting to serve four-year terms. Half of the deputies are elected from single-member districts, while the remainder are chosen by party lists. Parties must gain at least 5 percent of the vote in order to be represented on the national lists. The Duma is responsible for initiating laws and approving the budget. The president may suspend the Duma, while the body must approve the president's nominees for prime minister before they can take office. Unlike politics in most of the West, party politics are weak in the Duma, with many members remaining outside formal parties. For instance, following the 2003 legislative elections there were 65 independents in the Duma. Politics are often marked by shifting alliances, and many members of the Duma avoid party affiliation out of the concern that it would prevent them from serving in future governments by identifying them too strongly with one faction. Personal loyalty and interaction remain key components of Russian legislative politics.

POLITICAL PARTIES

There are a total of 269 registered political parties in the federation. However, in 1999 only 11 parties met the threshold of 5 percent required for representation in the Duma, and in 2003 just four parties met the threshold. These included the centrist United Russia Party; the Communist Party of the Russian Federation, the nationalist successor to the Russian Communist Party; the Liberal Democratic Party of Russia, a hard-line, ultranationalist, antireform party; and the new Motherland Bloc, or *Rodina*, which combines nationalism with leftist economics.

LOCAL GOVERNMENT

The Russian Federation grants varying degrees of autonomy to the different regional and local governments. There are 89 different administrative territories. Within

the federation, there are 21 autonomous republics, 49 oblasts (provinces), six *kraya* (territories), 10 *okruga* (autonomous regions), and one autonomous oblast. In addition, the cities of Moscow and St. Petersburg have the same status as oblasts. These classifications underwent little change in the transition away from Communism, although the autonomous republic of Chechnya-Inghushetiya was split into the two republics of Chechnya and Inghushetiya.

Population and location are the main determinants of a region's designation. In some instances, efforts have been made to give ethnically distinct peoples their own regional governments. The largest geographic bodies are in Siberia, the single greatest body being the Republic of Yakutia. The smallest territory is the Kaliningrad Oblast, located in northeastern Europe and separated from Russia by Poland and the Baltic states. The most populous area is the Moscow Oblast. The smallest unit of government in Russia is the rayon, which is roughly the same as a county.

Many regional governments have had considerable success in negotiating bilateral treaties between themselves and the federal government and thereby increasing their local power. Moscow has signed such treaties with oblasts, republics, and territories, including Tatarstan, Kaliningrad, Krasnodar, Sverdlovsk, and Orenburg. These agreements cover areas such as the budget and control over natural resources.

LEGAL SYSTEM

The constitution established an independent judiciary that has review of legislative acts. The judiciary is divided into three court systems: general, arbitral, and constitutional. General courts cover most areas of jurisprudence. Civil and criminal cases are tried by primary courts, while appeals are handled by regional and high courts. The general court system's lowest level is the municipal court; these courts serve both cities and regional bodies and try some 90 percent of cases. Regional courts are the main appellate courts, with the Supreme Court as the highest body regarding general law. Lower-court decisions may be immediately appealed. Business and commercial issues are subject to the arbitral courts, where the right of appeal also exists. The highest court in this system is the High Court of Arbitration. Constitutional matters are overseen by the Constitutional Court.

Judges are appointed by the president, as subject to confirmation by the Federal Council. Although the judiciary is nominally independent, judges face pressure and coercion from local governments and law enforcement officials. In an effort to overcome this situation, in 1996 general courts were separated from the Ministry of Justice, which also oversees the police, and placed under the auspices of the Judicial Department, which is supervised by the Supreme Court. Federal budget cuts have also affected the ability of the courts to function.

Under Russian law the accused have the right to trial and legal counsel. The court is supposed to appoint a lawyer if the defendant cannot afford one; however, limited resources have curtailed this right. Legislation passed in 1993 and 1994 also established the right to trial by jury in certain cases, but only nine of the federation's 89 regional governments have adopted the practice.

HUMAN RIGHTS

The 1993 constitution grants Russian citizens a variety of civil rights and liberties. Russians are guaranteed the freedoms of speech, the press, religion, and assembly and freedom from discrimination based on ethnicity or gender. The constitution also provides for an independent judiciary. In 1997 the Duma created the position of human rights ombudsman to overview human rights issues and review complaints against the government.

In general, the human rights record of the federal government has been uneven. Moscow has acknowledged that police and prison officials have beaten and tortured prisoners, and the number of prisoners killed by these illegal activities ranges from 10,000 to 20,000 annually. Hazing, or *dedovshchina*, in the military is also a significant problem that has caused accidental deaths and a high suicide rate among soldiers. The president and government have supported human rights initiatives in theory but have not implemented notable reforms to correct problems. There is also a disconnect between the federal government, which is more supportive of civil rights and liberties, and regional and local governments, which tend to be far more repressive.

While Russian citizens are guaranteed freedom of movement within the federation, a number of republics and other regional governments have instituted pass laws restricting freedom of travel. Many local governments also require citizens to register to work within seven days of moving to an area. On the national level, the government has denied travel visas to citizens who have had access to state secrets.

Regional governments have also enacted laws severely curtailing the freedoms of religion and the press. Certain ethnic minorities, especially Muslims, face a variety of discriminatory practices. This problem has been compounded by terrorist activities related to the civil war in Chechnya. Many ethnic Chechens and related ethnic groups have been subject to police harassment and employment-related discrimination in the European areas of Russia.

FOREIGN POLICY

In the immediate post-Communist era, Russian foreign policy was pro-Western. Moscow endeavored to join

many Western institutions and to recast others, such as the Conference on Security and Cooperation in Europe (CSCE), in order to play a more pivotal role in these bodies. These strategies were essentially successful, as Russia joined the G8 group of industrial nations, became a member of the Council of Europe, and became a part of NATO's Partnership for Peace program. Russia supported the West during the Gulf War and was generally supportive in the Balkan crisis. In the aftermath of the cold war, Russia worked closely with the United States to cut nuclear weapons stores and improve security at nuclear facilities. Freed from ideological constraints, Russia has been able to develop relations with cold-war adversaries such as Japan, Taiwan, and South Korea.

One benefit of generally pro-Western policy has been substantial foreign aid from Western states, although many policy makers in Moscow assert that the West has not done its share to aid Russia in its economic and political transformation. Nonetheless, the West has given Russia some \$125 billion in economic loans and direct aid, including a \$4.5 billion aid program instituted in 1999. Western aid has come with strings attached, forcing the Russian government to enact unpopular economic reforms and creating a backlash against Moscow's reliance on assistance. Many in Russia opposed Moscow's Western orientation during the Yeltsin era and have called for a more Eurasianist foreign policy, which would balance the federation's interests in Europe with those in Asia. One offshoot of such lobbying was the effort by the Yeltsin government to improve relations between Russia and China.

One goal of Russian policy has been to maintain influence in regions traditionally controlled by Moscow, including the so-called near and abroad areas on Russia's borders, in which 25 million ethnic Russians still reside. The most significant of these regions are eastern Europe and central Asia. The first attempt to maintain influence, the formation of the Commonwealth of Independent States (CIS), failed to live up to expectations, as many former Soviet states either refused to join the CIS or simply pursued relations with other centers of power. Nonetheless, Russia still gives extensive support to pro-Moscow governments on its borders—even stationing troops in several independent states. Moscow has worked specifically to reintegrate states such as Ukraine and Belarus into its sphere of influence.

There is also much support for more assertive foreign policy in regions such as the Balkans. Russian support for Serbia, the prime manifestation of this stance, led to disagreements with the West over NATO action in Kosovo in the spring of 1999. Russia has also pursued its own policy toward states such as the Islamic Republic of Iran and continued to sell nuclear technology to that nation in the face of substantial U.S. criticism. Because of its need for foreign currency, Russia has also aggressively sold arms to developing nations.

Efforts by Chechens and other groups within Russia to gain independence have led to sharp disagreements with the West over regional military action. Moscow has utilized Western institutions in efforts to resolve the Chechen conflict while vigorously condemning Western criticism of its military campaigns. Russia has continued to oppose NATO expansion to the states of the former Warsaw Pact.

Since becoming president of Russia in March 2000, Vladimir Putin has focused on enhancing Russia's international status, such as by strengthening Russia's influence with its immediate neighbors, the Middle East, and the European Union. Russia has firmly supported the United States throughout the war on international terrorism but was one of the most vocal opponents of the U.S.-led war in Iraq in 2003.

DEFENSE

Following the end of the cold war, the Russian military underwent extensive downsizing and reform. Present reform plans call for the reduction of the manpower of the armed forces by one-third and the reorganization of units to improve mobility. The federation has one of the largest armies in the world, with over 1.3 million personnel. Conscription is mandatory for males age 18 and older, but many Russians are able to avoid service through a variety of exemptions. Women who have special skills, including medical, may volunteer for service. The length of service is two years. All males are liable for military service until age 50; as such, the reserves number 20 million. The military is divided into the army, navy, air force, air defense force, and strategic rocket command. The army numbers some 670,000; the navy, 200,000; the air force, 130,000; the air defense force, 200,000; and the strategic rocket force, 100,000.

Besides being large, the Russian military is also technologically powerful. Russia possesses the world's second-most powerful nuclear force, behind the United States. The air force has more than 2,100 combat aircraft, and the navy has 150 surface craft and 183 submarines, including those equipped with submarine-launched ballistic missiles. The army is deployed in eight military districts and 14 army commands. The major naval forces include the Northern Fleet, headquartered at Severomorsk; the Baltic Fleet, based in Kaliningrad; the Black Sea Fleet, which is jointly controlled by Russia and Ukraine; the Caspian Flotilla, which is under Russian command but includes forces from Kazakhstan and Turkmenistan; and the powerful Pacific Fleet, which is headquartered at Vladivostok but also includes forces stationed in the Indian Ocean.

Deep military cutbacks have significantly eroded the effectiveness of the Russian military. Salaries are extremely low, prompting many soldiers and sailors to seek second jobs or to sell military equipment. Housing and

medical benefits have been curtailed to the point that as many as one-third of the military do not have housing. In addition, almost half of the military units are understaffed or are staffed by personnel untrained in their current assignments. During the Chechen conflict of 1994–96, the poor performance of the army exposed many of the nation's military problems.

Russia maintains significant deployments of troops outside of the federation, including in Armenia, Georgia, Moldova, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. There are also small deployments in Vietnam, Cuba, Syria, and Mongolia. In addition, Russia has provided troops for a variety of UN peacekeeping missions, including those in Angola, Bosnia, Croatia, Haiti, Kuwait, Rwanda, and Macedonia.

ECONOMY

Russia had a difficult transition from a command to a free-market economy, and numerous reforms are still necessary for the nation to become truly capitalist. The transition has been marked by double-digit declines in gross domestic product (GDP) and double-digit unemployment and inflation. Efforts at privatization have been marred by corruption and popular resistance to job losses. A thriving underground economy persists and keeps significant economic activity outside of the mainstream. The nation's economy is dependent on foreign investment and loans from international agencies. However, this dependency has been beneficial in that it has promoted the implementation of tariff reform and trade liberalization. Military exports continue to be a major source of trade revenues.

Services now account for over 60 percent of the federation's economy, and tourism in particular has become an important source of foreign currency. Manufacturing occupies one-third of the economy; the main industries are machine tools, aircraft, mining, road and rail transport, communications and electronic equipment, farm and transportation equipment, and energy production. Russia's main exports are petroleum, natural gas, wood, metals, chemicals, and both military and civilian manufactured goods. Major imports include machinery and equipment, consumer goods, medicine, foodstuffs, and metal products. The federation's main trade partners are the EU nations, the United States, Japan, Ukraine, China, and many states of the former Soviet Union. The

end of collectivized agriculture initiated a miniboom in that sector, as farms returned to private ownership and became much more efficient and profitable.

The Russian economy had rebounded by 1999 and in 2003 had its fifth consecutive year of growth, averaging 6.7 percent per year, as buoyed by competitive boosts from the weak ruble and a surging trade surplus fueled by rising world oil prices. Real fixed-capital investment has risen 10 percent per year, and personal incomes have risen 12 percent per year, while foreign debt has declined from 90 percent of GDP to just 28 percent. These improvements have raised business and investor confidence over Russia's prospects in its second decade of transition.

Still, serious problems persist. Russia remains heavily dependent on exports of commodities, particularly oil, natural gas, metals, and timber, which account for more than 80 percent of exports, leaving the country vulnerable to swings in world prices. Russia's agricultural sector remains beset by uncertainty over landownership rights, which has discouraged needed investment and restructuring. Other threats are negative demographic trends, as fueled by low birthrates and a deteriorating health situation—including an alarming rise in AIDS cases—that have contributed to a nearly 2 percent drop in the population since 1992. Russia's industrial base is increasingly dilapidated and must be replaced or modernized if the country is to achieve sustainable economic growth. Other problems include widespread corruption, capital flight, and brain drain.

ENVIRONMENT

With the breakup of the Soviet Union, Russia was able to avoid responsibility for many of the environmental problems caused by Soviet policies and the presence of Soviet troops in the nations of eastern and central Europe.

These problems ranged from the cleanup associated with the Chernobyl disaster to groundwater and soil pollution caused by discharges at Soviet military facilities. Russia itself faces enormous ecological problems as a result of 70 years of Communist-enforced industrialization and collectivization.

Moscow has classified some 40 percent of Russian territory as being under ecological stress. Even excluding areas contaminated by radioactive waste, there are 56 areas identified as environmentally degraded. The nation continues to be impacted by acid rain and smog produced by inefficient, coal-burning electric plants. Other older industrial plants further add to air pollution. Numerous areas around the federation have contaminated soil and water from overfertilization and the use of dangerous pesticides. Soil erosion is also a problem in agricultural regions. Many of the nation's waterways are essentially environmentally "dead," as heavy pollution and industrial discharge have destroyed most plant and animal life. Radioactive waste contaminates many sites, and radioactive materials and toxic chemicals have caused numerous health problems for those exposed. Following the Chernobyl disaster, 37 million Soviets were exposed to radioactive fallout. The Soviet Union was also responsible for dumping two-thirds of all radioactive materials ever dumped into the sea; only in 1994 did Russia agree to stop dumping nuclear waste into the Sea of Japan. Russia's problems are exacerbated by the remoteness of many contaminated areas and efforts by the Soviet government to hide areas impacted by ecocide.

LIVING CONDITIONS

The collapse of Communism left behind a legacy of corruption, inefficiency, environmental depredation, and nepotism. A common saying during the Communist regime was "We pretend to work and they pretend to pay us." The transition to a freer society and more market-based economy proved difficult. The withdrawal of state-funded benefits and guaranteed employment left many Russians poor; in 2004 the poverty rate was 25 percent and the unemployment rate was 8.3 percent, with considerable underemployment. Health care remains relatively poor, and the nation has lacked to funds to repair its crumbling infrastructure, including roads and bridges. Wages in the military average

about \$3.50 a month. The nation is torn by ethnic tensions and terrorist violence, especially in the Caucasus Mountain region. Alcoholism continues to be a major social problem, and crime, including rampant prostitution, has been on the rise.

HEALTH

The quality of health care in Russia is uneven. Life expectancy at birth is about 67 years. The infant mortality rate is just over 15 deaths per 1,000 live births. AIDS has become a growing problem; in 2001, 1.1 percent of the adult population had the disease, but that figure is likely to have increased in subsequent years. There are enormous discrepancies between the health status of men and that of women. While the life expectancy for women is over 73 years, that for men is less than 63 years; 77 percent of women reach age 65, but only 46.4 percent of men do. Poverty, poor living conditions, inadequate sanitation, and environmental damage have variously led to rising rates of tuberculosis, hepatitis, and sexually transmitted diseases, especially among those who cannot afford medical care.

Health

FOOD AND NUTRITION

Nutrition in Russia is generally good. Only about 1 percent of Russian children under the age of five are underweight, making Russia one of the leading nations in the world in that respect. The main staples are bread and potatoes, and Russians consume large quantities of carrots, cabbage, beets, onions, and garlic. Meats of various kinds are also important; there is a saying that starvation means having no bread, while poverty means having no *kolbasa*, a hard sausage. Dairy products are also important, as are fruits and desserts. The most common beverage is hot tea, along with vodka.

Food and Nutrition

Undernourished % of total population: 3.6

 Amount of Cereal Available per person per year kg: 155.0
 Amount of Fruits and Vegetables Available per person per year kg:
 137.7

STATUS OF WOMEN

Women in Russia continue to face a variety of obstacles and discrimination; Russian society remains strongly traditional. Many of the Soviet social programs that benefited women were maintained under the Russian government, but funding shortages curtailed their effectiveness. Women are represented in a variety of fields, including medicine, education, and economics, but they are underrepresented in the upper management of these fields. In general, most women are employed in low-paying service jobs. Women also face disparities in income.

The overall decline in the family has also affected the status of women in the country. The divorce rate has dramatically increased since the breakup of the Soviet Union, leaving many women destitute and dependent on minimal child allowances. Various crimes against women have also increased.

WORK

In 2003 the Russian labor force numbered nearly 72 million, with an unemployment rate of about 8.3 percent. About 12.3 percent were employed in agriculture (contributing just 4.9 percent to GDP, suggesting the inefficiency of the agricultural sector), 22.7 percent in industry (as marked by a 6.4 percent industrial growth rate in 2004), and 65 percent in services. Per capita GDP in 2004 was just under \$10,000. Major agricultural crops include grain, sugar beets, sunflower seeds, vegetables, fruits, beef, and milk. As a large and populous country, Russia supports a wide range of industries; major industries include petroleum and mining.

EDUCATION

Under Soviet rule, conformity was the rule in education. In 1992, after the demise of the Soviet Union, a new education law was enacted, the basis of which was the removal of central control over education. This meant that ethnic republics were able to develop new curricula emphasizing local culture and history. In addition, a basic change in teaching philosophy was envisioned whereby students would be taught objectively and exposed to alternative worldviews. Efforts were undertaken to establish adult education and worker-retraining programs.

Preschools are widespread in Russia, and approximately 70 percent of children attend some 60,000 of them. In addition there are over 70,000 primary and secondary schools. Including the nation's institutions of higher learning, Russia's educational system encompasses 27 million students. The system suffers from a number of problems, including overcrowding, teacher shortages, and antiquated facilities. As a result, many local systems have adopted schedules that allow for two or three shifts of students per day.

Students may attend preschool until age seven then attend elementary school. A 1994 education law lowered the terminal age of compulsory education from 17 to 15. Secondary schools offer a variety of curricula, including those designed to prepare students for university and those designed to prepare students for specific career paths. Many of the federation's universities and institutions of higher learning are located in urban areas. There are 569 postsecondary schools, including 333 universities. In addition to universities, institutes offer students training in specific careers such as law or medicine. Meanwhile, polytechnics offer a variety of programs, but without the concentration of the institutes.

State education is free, but a number of private schools have been established. There are approximately 300 private schools serving 20,000 students. These schools cater to the more affluent, Western-oriented families.

SCIENCE AND TECHNOLOGY

Russia has approximately 1,000 research labs and 700 engineering centers. These organizations employ about 400,000 scientists and teachers. Scientific research, much of it for military applications, was heavily funded during the Soviet era, but after the fall of Communism funding dried up, and scientists now rely on funding from private and foundation sources. Meanwhile, many research facilities in such areas as physics, chemistry, and mathematics went out of business due to lack of funds.

MEDIA

Following the demise of the Soviet Union, the press in Russia gained considerable freedom. Government officials and public figures became the frequent targets of a vocal and reformist press. However, many media outlets are still dependent upon state support and are therefore subject to pressure from the government. The media has also been criticized for failing to adopt the objective styles of Western journalism and blurring the line between reporting and editorializing. In 1999 there were estimated to be over 300 daily newspapers and over 10,000 periodicals in Russia. The most significant of these include *Pravda*, *Nezavisimaya gazeta*, and the weekly *Argumenty i fakty*. Several government organs also have high circulations.

Some 50 million Russians listen to regular radio broadcasts. Two state-controlled broadcast systems, the Federal Television and Radio Service and the All-Russian Television and Radio Company, provide almost all domestic radio programming. The main foreign language service is the Voice of Russia, which provides programming in 30 languages, ranging from English to Japanese to Farsi. In 2003 one of the main television station, TV-6, closed, officially for financial reasons.

Television programming has grown increasingly diversified. The medium has also grown in popularity and has become the chief news source for most Russians. Unlike radio, television stations have been privatized, although the state still owns a significant percentage of the companies. There are four major networks and some 400 regional stations.

Russian culture continues to be drawn in two opposing directions: westward and eastward. Western popular culture, including music, literature, and cinema, remain popular among more affluent groups. However, traditionalists and many in the poorer classes still favor traditional elements of Slavic culture, and the notion of Pan-Slavism remains strong.

CULTURE

Under Communism artists were supported by the state, but they had little creative freedom, as the state saw art as a way to convey political messages. With the fall of Communism, financial support for artists greatly diminished, but artists gained considerably more artistic freedom.

The 19th century is generally regarded as the high point of Russian art, especially literature. Beginning with the poet Alexander Pushkin, the author of *Eugene Onegin*, and continuing with fiction writers such as Michael Lermontov, Nikolai Gogol, Ivan Turgenev, Fyodor Dostoevsky, and Leo Tolstoy, as well as the playwright Anton Chekhov, Russians produced some of the world's great classic literature. In the 20th century the best-known writer was Alexander Solzhenitsyn, who opposed the Communist state. In the graphic arts Russia is best known for its elaborate religious art, much of it dating back to the 10th century. In the performance arts Russians have been world leaders, especially such names as Pyotr Tchaikovsky, Modest Mussorgsky, Nikolai Rimsky-Korsakov, Sergei Rachmaninoff, Sergei Prokofiev, Igor Stravinsky, and Dmitri Shostakovich in classical music and Sergei Diaghilev, Vaslav Nijinsky, Anna Pavlova, Rudolph Nurieyev, and Mikhail Baryshnikov in ballet.

FOLKLORE AND MYTHOLOGY

Russia's epic songs, known as *byliny*, date back to the 15th century and earlier. These songs feature characters such as Svyatogor the giant and Volkh Vseslavich, a character who can change himself into an animal. Folktales feature such evil characters as the witch Baba Yaga and the dragon Koshchey the Immortal.

Russia originated a major Christmas tradition in St. Nicholas, named for St. Nicholas of Myra, the nation's patron saint. The legend holds that in the 10th century, when Prince Vladimir proclaimed Christianity the official religion, he named St. Nicholas the protector of the poor and oppressed. The fame of St. Nicholas spread, and in time people honored him in the church on Christmas Eve. The tradition of gift giving, however, is traced back to Babushka, meaning "grandmother," who gave gifts to children at Christmas. The legend has that Babushka gave wrong directions to the magi who were on their way to Bethlehem to see the Christ child. Babushka then set out to find the magi, but, failing to do so, traveled about giving gifts to children.

ENTERTAINMENT AND RECREATION

Rather than succumbing to the cold that locks in the country much of the year, Russians embrace the climate and have become outdoor enthusiasts. Many people can be found playing chess or musical instruments in public parks even during the coldest weather. Russians are also sports enthusiasts, with as many as one-fourth of Russians taking part in some sort of organized sports activity, including tennis, skiing, ice skating, gymnastics, and acrobatics. Chess is almost a national pastime, and the nation's chess masters occupy a high place in Russian society. Thousands of Russian children have attained the International Chess Federation's rank of chess master. Russians are very proud of their high culture, and such activities as attending the ballet are commonplace, even among ordinary people, in a nation where the word *uncultured* has long been an insult.

ETIQUETTE

One of the most common standards of etiquette has to do with how to address others. Russians use a formal second-person plural form of *you* to address elders (except for their grandparents and parents), as well as persons of higher social status, casual acquaintances, and strangers; they use an informal second-person singular to address family members, close friends, and colleagues of equal status. Also, it is expected that one address a stranger or casual acquaintance with the full name and patronymic, a kind of "middle name" formed from the person's father's first name. Thus, a man named Sergei who is the son of Pavel would be addressed as Sergei Pavlovich; a woman named Anna who is the daughter of Pavel would be addressed as Anna Pavlovna.

Because Russians lived for so long under authoritarian rulers, they make wide distinctions between public and private behavior. In public, Russians tend to be reserved and formal; in private, they are much warmer and more cordial.

War veterans, especially those who fought in the Second World War, are accorded special status and often wear their medals on public occasions. Along with pregnant women and the handicapped, they are given preferential seating on public transportation.

FAMILY LIFE

Most Russians choose their own marriage partners. Weddings are often elaborate affairs conducted in Eastern Orthodox churches, although the Soviet regime encouraged civil marriages. Because of housing shortages, many young married couples live with parents, especially the widowed parents of one spouse. In multigenerational homes, grandmothers are often the primary child-care givers. While the Soviet regime rewarded women for bearing many children, and families were often quite large, in more recent years the birthrate has fallen; in 2004 it was 1.3 children per woman, and with an overall birthrate of 10 per 1,000 population, combined with a death rate of 15 per 1,000 population, Russia experienced a population decline of 0.45 percent in 2004.

PERSONAL APPEARANCE

Russians place great emphasis on appearing in public well groomed and in neat clothing. Russians typically do not have extensive wardrobes, preferring instead a few articles of clothing of high quality. Most Russians dress in Western style, although traditional clothing can be seen in the countryside or on special occasions. Many people wear fur during the harsh winters, not out of fashion considerations but to stay warm; most wear the *shapka*, a fur

1970 Russia

hat with ear flaps. A common article of clothing worn by women is the babushka (Russian for “grandmother”), a large scarf or kerchief worn on the head and tied under the chin.

SPORTS

Russians are avid sports participants. Sports are part of the curriculum at elementary schools, and students who show promise are often sent to sports-oriented schools around age 10 or 11, where they undergo rigorous scientific training. As a result, Russians have excelled in a wide variety of sports, including gymnastics, figure skating, basketball, ice hockey, and many others, and regularly place near the top of the medals list in Olympic competition; under the Soviet regime, when the Soviet Union included not only Russia but what are now other nations, they consistently outperformed every other nation in the world. Russians have been particularly strong in ice dancing and pairs ice skating in world competition, regularly taking gold medals.

CHRONOLOGY

- 1945** Germany is defeated by an Allied coalition that includes the Soviet Union, United States, and Great Britain; Soviets seize control of most of eastern and central Europe.
 - 1947** The Communist Information Bureau is founded in response to the Truman Doctrine.
 - 1948** Stalin breaks with Josip Broz Tito, of Yugoslavia, and blockades Berlin.
 - 1949** Soviets test atomic bomb; Council for Mutual Economic Assistance is founded.
 - 1950** Korean War begins.
 - 1953** Stalin dies; Nikita Khrushchev becomes head of party; test of hydrogen bomb takes place.
 - 1955** Warsaw Pact is formed.
 - 1956** De-Stalinization begins; Soviet Union invades Hungary to crush liberal revolution.
 - 1960** Sino-Soviet conflict flares into open.
 - 1962** Cuban Missile Crisis occurs.
 - 1964** Khrushchev is forced to retire; Leonid Brezhnev assumes power.
 - 1968** Warsaw Pact intervenes in Czechoslovakia to restore hard-line Communist rule.
 - 1972** U.S. president Richard M. Nixon visits Moscow; Strategic Arms Limitation Talks are held.
 - 1977** New constitution is promulgated; Brezhnev becomes head of state.
 - 1979** SALT II is signed; Soviet troops invade Afghanistan.
 - 1980** The United States leads a boycott of the Moscow Olympics.
 - 1981** Polish crisis begins.
 - 1982** Brezhnev dies; Yuri Andropov assumes power.
 - 1984** Andropov dies; Konstantin Chernenko becomes leader of USSR.
 - 1985** Chernenko dies and is replaced by Mikhail Gorbachev.
 - 1986** Gorbachev initiates glasnost and perestroika reform efforts.
 - 1989** Soviet forces withdraw from Afghanistan; Gorbachev meets with Pope John Paul II in first-ever visit by Soviet leader to the Vatican.
 - 1990** Lithuania declares independence but is blocked by Moscow; Soviet troops begin withdrawal from Eastern Europe; private property is legalized.
 - 1991** Attempted coup against Gorbachev fails; Soviet Union breaks apart as republics declare their independence; Boris Yeltsin, leader of reform movement, is elected president of Russia on June 12, 1991. Yeltsin bans the Russian Communist Party; the Commonwealth of Independent States (CIS) is created as a means to maintain ties between states of the former Soviet Union.
 - 1993** New constitution is promulgated; first free parliamentary elections take place.
 - 1996** Yeltsin is reelected president of Russia.
 - 1998** Soviet troops invade Chechnya in an effort to end independence; the campaign results in heavy losses and international condemnation for human rights abuses.
 - 1999** Severe economic crisis cripples Russia's economy.
 - 2000** Vladimir Putin is elected president.
 - 2001** Putin supports the United States in its military campaign against the Taliban and al-Qaeda, the organization that led the terrorist attacks against the United States on September 11, 2001, leading to closer cooperation between Russia and the West.
 - 2002** Rome Declaration creates NATO-Russia Council, with Russia to play a limited role in NATO. Chechen terrorists seize a Moscow movie theater and hold 800 patrons hostage.
 - 2005** Terrorists seize control of a school in Beslan, holding 1,200 students and teachers hostage. In a bloody resolution to the situation, approximately 330 people are killed, half of them children.
- Russia announces that Russian forces killed the Chechen rebel leader Aslan Maskhadov in a military operation.

Basic Fact Sheet

OFFICIAL NAME

Republic of Rwanda (République Rwandaise; Repubulika y'u Rwanda)

ABBREVIATION

RW

CAPITAL

Kigali

HEAD OF STATE

President Paul Kagame (from 2000)

HEAD OF GOVERNMENT

Prime Minister Bernard Makuza (from 2000)

NATURE OF GOVERNMENT

Republic

POPULATION

8,440,820 (2005)

AREA

26,338 sq km (10,169 sq mi)

MAJOR ETHNIC GROUPS

Hutu, Tutsi

LANGUAGES

French, English, Kinyarwanda, Kiswahili

RELIGIONS

Animism, Christianity

UNIT OF CURRENCY

Rwandan franc

NATIONAL FLAG

The top half is blue, with a golden sun with 24 rays in the top right-hand corner; the bottom half is divided into a top yellow horizontal stripe and a bottom green stripe.

NATIONAL EMBLEM

A green ring with a knot tied at the lower end of the ring. On the top is the inscription "Repubulika y'u Rwanda," and below is the motto *Ubumwe, unurimo, gukunda igibugu* (Unity, Work, Patriotism). Inside the ring are arranged the Sun, sorghum and coffee, a basket, a cog wheel, and two shields.

NATIONAL ANTHEM

"Rwanda Nziza" (Our Rwanda)

NATIONAL HOLIDAYS

January 28 (Proclamation of the Republic), May 1 (Labor Day), July 1 (Independence Day), July 4 (Liberation Day), August 15 (National Peace and Unity Day), September 25 (Kamparampaka Day), October 26 (Armed Forces Day), December 10 (Human Rights Day), various Christian festivals, including All Saints' Day, Christmas, Whitmonday, Assumption, Ascension, Pentecost Monday

DATE OF INDEPENDENCE

July 1, 1962

DATE OF CONSTITUTION

May 26, 2003

GEOGRAPHICAL FEATURES

Rwanda, a landlocked country in east-central Africa, has an area of 26,338 sq km (10,169 sq mi), extending 248 km (154 mi) northeast to southwest and 166 km (103 mi) southeast to northwest. The total length of the international boundary is 893 km (555 mi), shared with four countries: Uganda, Tanzania, Burundi, and the Democratic Republic of the Congo (DRC).

Rwanda is divided into six topographical regions, from west to east: the narrow Great Rift Valley, sloping

sharply to Lake Kivu; the volcanic Virunga Mountains, with their highest peak, snowcapped Mount Karisimbi (4,519 m; 14,826 ft), towering over the high lava plains of northwestern Rwanda; the steep north-south slopes of the Congo-Nile divide, averaging 40 km (25 mi) in width; the ridgeline of the Congo-Nile divide, with an average elevation of 2,750 m (9,000 ft); the central plateau east of the mountains, covered by rolling hills; and the savannas and swamps of the eastern and southeastern border areas, including the vast Kagera National Park, which covers one-tenth of the nation's land area. Most

Rwanda

of Rwanda is 900 m (3,000 ft) above sea level; the central plains have an average elevation of 1,932 m (4,700 ft).

Kigali	603,049

CLIMATE AND WEATHER

Although only two degrees south of the equator, Rwanda has a relatively pleasant tropical climate. The country has two dry seasons: the short, in January and February, and the long, lasting from June through September. There are two wet seasons: from October to December and from March through May. The capital, Kigali, has an average temperature of 19°C (66°F) during the wet months, with slightly higher averages during the dry months. Westward, toward Lake Kivu, the weather is much cooler, with night temperatures dropping to freezing at higher elevations. Eastward, temperatures increase to an average of 32.2°C (90°F).

The highest rainfall, over 1,750 mm (70 in), is received in the west, decreasing to 1,000 to 1,400 mm (40 to 55 in) in the central uplands and 750 mm (30 in) in the northeast and east.

Climate and Weather

Mean Temperature: 66°F to 90°F

Average Rainfall

West: 70 in

Central Uplands: 40 in to 55 in

Northeast and East: 30 in

FLORA AND FAUNA

Rwanda used to be covered with extensive forests, but woodlands are now concentrated primarily in the western mountains, especially in the area surrounding Lake Kivu. The principal tree species found in these forests are oil palms, acacia, and eucalyptus. Kagera National Park is home to lemurs, antelopes, leopards, wild boars, crocodiles, hippopotamuses, and elephants. In northern Rwanda, around the Virunga Mountains, can be found approximately half of the world's surviving mountain gorillas.

ETHNIC COMPOSITION

The African population of Rwanda is relatively homogeneous, with the Hutu composing about 84 percent of the population. The only other major ethnic group is the Tutsi, whose numbers have markedly declined since the massacres of 1994, during which some one million people, mainly Tutsi, were killed. Today, the Tutsi are believed to constitute 15 percent of the population. The Twa, a tribe of pygmy hunters and perhaps descendants of the earliest-known inhabitants of the region, account for most of the remainder of the population.

Though differing markedly in physical features, the Hutu and Tutsi share the same language, kinship and clan systems, and religious values. Until independence in 1962, the Tutsi were the feudal masters of the country, organized under a *mwami* (king). Racially, the Hutu belong to the Bantu family. Approximately 45 percent of all Tutsi reside in the central region of the country near Nyanza, the former capital of the Tutsi kings.

Ethnic aliens include some 3,000 Asians, of whom Indians, Pakistanis, and Arabs form the major groups. Almost all aliens are engaged exclusively in trade; in general they have not suffered from the kind of discrimination that Asians have been subjected to in other African countries. The European population has not numbered more than 2,000 in recent years; Belgians constitute 60 percent of this number.

LANGUAGES

The official languages of Rwanda are French, English, and Kinyarwanda. The latter is a Bantu language spoken by all Rwandans. French is spoken by an increasing number of educated Rwandans; the country's major periodicals are published in French, and the main language of broadcasting is French. Kiswahili is also widely spoken, particularly in commercial areas.

RELIGIONS

The majority of Rwandans follow traditional religions built around the concept of a supreme spirit called Imana. Christianity, introduced by Catholic missionaries in the 19th century, spread rapidly and now claims

93 percent of the population. Though Christianity was accepted with relative ease, adherence to church dogma is flexible and in some cases is combined with elements of traditional practice. According to official figures, Catholics constitute 56.5 percent of the population, as organized into one archdiocese and four dioceses. The Protestant population is estimated at 37 percent, as divided among a number of denominations. Protestant influence and activities have never been significant and during recent years have declined.

Religious Affiliations

Roman Catholic	4,770,000
Protestant	2,190,000
Adventist	940,000
Muslim	390,000
Indigenous Beliefs	10,000

HISTORICAL BACKGROUND

Precolonial Rwanda was a highly centralized kingdom presided over by Tutsi kings who hailed from one ruling clan. The king ruled through three categories of chiefs: cattle chiefs, land chiefs, and military chiefs. The chiefs were predominantly, but not exclusively, Tutsi, especially the cattle and military chiefs. While the relationship between the king and the rest of the population was unequal, the relationship among the ordinary Hutu, Tutsi, and Twa was one of mutual benefit mainly through the exchange of labor. A clientele system called *ubuhake* permeated the entire society.

Rwanda, together with Urundi (now Burundi), became a German colony in 1885, when it was designated as a German sphere of interest at the Congress of Berlin. But not until nine years after the conference did the first European official reach Rwanda—Count G. A. von Gotzen, who later became governor of German East Africa; Rwanda was in fact one of the last regions of Africa to be penetrated by Europeans. German rule was indirect, exercised through the *mwami*, or Tutsi king, who in turn used the German presence to strengthen his own authority and extend it throughout the territory. At its height, the German administration consisted of only five officials and about 166 soldiers.

Rwanda fell to Belgian troops in 1916 and in 1923 became a mandated territory of the League of Nations under Belgian supervision. Belgian administration followed the German pattern of relying on the *mwami* and the Tutsi aristocracy. In 1925 Rwanda and Burundi, as Ruanda-Urundi, were joined in an administrative union with the Belgian Congo. In 1946 Rwanda-Burundi was made a Trust Territory under the United Nations. Under pressure from the UN Trusteeship Council, the first

popular representative institutions were introduced in the country in 1952.

During the 1950s Hutu resistance to the monarchy increased, culminating in 1959 in a revolt that ended the monarchy and forced many Tutsi to flee. The Party for Hutu Emancipation (Parmehutu), led by Grégoire Kayibanda, won electoral victories in 1959 and proclaimed a republic in January 1961. Because the United Nations did not recognize the 1959 elections, new ones took place in September 1961. Parmehutu again won an overwhelming victory, and Kayibanda was designated president.

The main legacy of Belgian rule was the restoration of the Hutu majority to its rightful role in national life. The administrative, educational, and legal machinery survived the transfer of power almost intact, and French remained the official language of Rwanda, along with Kinyarwanda.

Racial tension continued after independence, with serious tribal warfare breaking out in 1963. Parmehutu consolidated its position during the decade, and in 1973 the existing constitution, which barred Kayibanda from seeking another term, was altered to permit the continuation of his regime. The move increased tribal hostilities. With the prospect of civil war looming, a bloodless coup took place in July 1973.

The new government, led by Maj. Gen. Juvénal Habyarimana, suspended portions of the constitution, dissolved the legislature, and installed a civilian-military government with a centralized system of administration. Three years later the regime formed the National Revolutionary Movement for Development (MRND), the country's sole legal power. Its goal was to eradicate ethnic conflict and promote national unity. A new constitution was adopted by referendum in 1978, and Habyarimana was confirmed president for another term. Single-party legislative elections were held in 1981, 1983, and 1988. Habyarimana won a fourth term as president in 1988.

Despite MRND assertions regarding the promotion of national unity, a policy of discrimination against Tutsi continued, and in September 1990 Rwanda once again faced a Hutu-Tutsi confrontation. Between 5,000 and 10,000 long-exiled Tutsi, calling themselves the Rwandese Patriotic Front (RPF), crossed the border from Uganda in an effort to topple Habyarimana's government. In October the rebels agreed to a cease-fire and an offer from Habyarimana to start talks.

On June 8, 1991, the president signed a new constitution that provided for multiparty politics. After a long period of negotiations between the government of Rwanda and the RPF that took place in Arusha, Tanzania, the Arusha Peace Agreement was signed on August 4, 1993. The agreement called for UN peace-keeping forces to be stationed in Rwanda. In April 1994 President Habyarimana and Burundian president Cyprien Ntaryamira were killed when their plane was

shot down near Kigali; responsibility for the attack was never established. In the three months following the assassinations, between 500,000 and one million Rwandans, mainly Tutsi, were killed in what UN Secretary General Boutros Boutros-Ghali eventually called genocide against the Tutsi by the Hutu-dominated Rwandan Army. The United Nations peacekeeping force, lacking a mandate to protect civilians, abandoned Kigali, the capital, prompting the RPF to renew their military campaign. Attempts to mediate a cease-fire failed as the RPF captured Kigali on July 4, 1994. Retaliatory violence by Tutsi claimed several thousand lives, including that of the Roman Catholic archbishop of Kigali. Meanwhile, over three million refugees fled to Tanzania and the Democratic Republic of the Congo.

A cease-fire was finally declared in July, and on July 19 an RPF-backed government was established. Members of the National Assembly were nominated by the RPF and seven other political parties, including the Liberal, Social Democratic, and Christian Democratic parties and the Republican Democratic Movement. Pasteur Bizimungu, a moderate Hutu, became president and another Hutu, Faustin Twagiramungu, prime minister. But the real power lay in the hands of the Tutsi defense minister, Maj. Gen. Paul Kagame.

On November 8, 1994, the UN Security Council established an international criminal tribunal to prosecute those responsible for genocide. In 1995 Tutsi troops massacred 2,000 Hutu at the Kibeho refugee camp. This action, universally condemned, slowed the voluntary return of Hutu from the DRC and led to the resignation of Prime Minister Twagiramungu; he was replaced by Pierre-Celestin Rwigema in a new cabinet in which Tutsi occupied all important positions. Prosecution for crimes during the civil war continued in 1999 both within Rwanda and at the UN-sponsored tribunal in Arusha. In an act that strained relations with the Vatican, the Rwandan police arrested Roman Catholic bishop Augustin Misago for alleged complicity in the killing of 20,000 people. In 1999 Rwanda opened its first official genocide memorial. The government also announced plans to change several national symbols, including the flag and the national anthem, widely associated with extremist Hutu nationalism. The new national symbols were introduced on January 1, 2002. In 2000 the Tutsi takeover of Rwanda was completed when General Kagame succeeded Bizimungu, who had served as a figurehead in the administration, as president.

In 2003 the voters approved a new constitution, whose primary purpose was to prevent another genocide by banning the incitement of racial hatred. That year, too, Paul Kagame won the first presidential election since 1994, and his party won an absolute majority in parliament. In 2005 the major Hutu rebel group announced that it was ending its armed struggle.

LIST OF MODERN RULERS

1962–73	Grégoire Kayibanda
1973–94	Juvénal Habyarimana
1994	Théodore Sindikubwabo
1994–2000	Pasteur Bizimungu
2000–	Paul Kagame

CONSTITUTION

On May 5, 1995, the Transitional National Assembly adopted a constitution that included elements of the constitution of June 18, 1991, as well as provisions of the 1993 Arusha peace accord and the November 1994 multiparty protocol of understanding. The document created the post of prime minister, limits the president to two five-year terms in office, and provides for multiparty politics, freedom of the press, and separate executive, judicial, and legislative branches.

In 2003 voters overwhelmingly approved a new constitution that gave primacy to human rights, eliminated references to ethnicity, and included specific provisions to prevent genocide. Additionally, the document provides for a bicameral legislature, codifies a system of checks and balances, and, in an effort to distribute power, requires that the prime minister and president be members of different political parties. It also offers specific provisions for parliamentary and presidential elections.

PARLIAMENT

Before the constitution of 1991 the national legislature was the unicameral National Development Council (Conseil pour le Développement National), elected for five-year terms by universal suffrage. It had a membership of 70, elected by voters from among 140 candidates nominated by the MRND. The National Development Council showed keen interest in financial questions, suggested modifications to some proposed legislation, and developed specialized committees to facilitate its work but did not venture to initiate legislation on its own.

In 1994 a transitional legislative body was formed pending the permanent resolution of the Hutu-Tutsi conflict. Called the Transitional National Assembly, it had 70 members filling predetermined shares of seats: The Rwandese Patriotic Front, Republican Democratic Movement, Liberal Party, and Social Democratic Party had 13 seats each; the Christian Democratic Party and Rwandan Patriotic Army six seats each; and the Rwandan People's Democratic Union, Rwandan Socialist Party, and Islamic Democratic Party two seats each. Although the 2003 constitution called for a bicameral parliament, the National Assembly, with 80 seats in 2005, has remained the nation's legislative body.

POLITICAL PARTIES

The original distribution of the nation's parliamentary seats was determined by the peace accords and did not reflect the voter strength of the nation's multiple parties. In 2003, however, elections reflected voter preferences. The parties represented in parliament include the Rwandese Patriotic Front (RPF), the Social Democratic Party (PSD), and the Liberal Party (PL). Other parties include the Christian Democratic Party (PDC), the Islamic Democratic Party (PDI), and two parties that are officially banned: the Democratic Republican Movement (MDR) and the Party for Democratic Renewal.

LOCAL GOVERNMENT

For purposes of local government Rwanda is divided into 12 provinces. Each province is headed by a prefect appointed by the president. The former tribal divisions are organized into subunits called districts, which are further divided into municipalities, made up of sectors, which in turn are made up of cells. Districts function as the basic political and administrative units; each is administered by an elected communal council and an elected mayor.

LEGAL SYSTEM

Rwandan jurisprudence is based on Belgian procedures and precedents and is largely codified. Uncodified customary law is administered in certain jurisdictions.

The judicial structure is headed by the Supreme Court, with a president and six justices, which serves as both a constitutional court and an appellate court. The Supreme Court's Department of Courts and Tribunals supervises the work of all lower courts, while the Court of Accounts acts as an audit review and accounting office. The Supreme Court sits in the ancient Tutsi capital of Nyabisindu.

The three lower jurisdictions are 10 courts of first instance (one in each prefecture); courts of appeal in Kigali, Nyabisindu, and Ruhengeri; and cantonal, or communal, courts, which dispense justice according to traditional law. In addition, there are a number of police courts. Both cantonal and police courts try only minor cases and do not maintain records of cases tried.

The judiciary is statutorily independent and expected to apply the penal code impartially, but the president names and dismisses magistrates.

HUMAN RIGHTS

In terms of civil and political rights Rwanda is classified as an unfree country, with a rating of six in political rights

and five in civil rights, on a scale in which one is the highest and seven the lowest.

Rwandans are subject to some interference in their private lives, following practices inherited from the former monarchy, which ruled the country for several hundred years. Police are normally required to have warrants before entering private residences. Using the pretext of checking required documentation, however, police authorities can gain unwarranted entry into homes. A person can move out of his home commune only with the permission of the mayor of the commune into which he wishes to move. The government can bar a person from specific employment, though not all employment. People must carry identification cards.

There are few channels of public expression, but limited criticism is tolerated and sometimes even encouraged. Freedom of religion and assembly also are generally respected as long as they are exercised cautiously so as to avoid government disapproval. Internal freedom of movement is restricted to discourage rural migration and the right to vote.

The right to unionize and the right to strike are granted in the constitution, but there is no national union, and no strikes have been reported.

The aftermath of the 1994 civil war continued to take its toll on the Rwandan peoples, especially the Hutu, through the early 2000s, with the theater of operations extended to include the Democratic Republic of the Congo, whence Rwandan troops were not withdrawn until 2004. Through a reign of terror the postwar Tutsi government succeeded in suppressing the Hutu insurgency in the northeast by pushing the rebels into the Congo. The security forces responsible for killings were the Rwandan Patriotic Army (RPA) and the Gendarmerie, made up largely of RPA recruits. The torture of prisoners is common and widespread and prison conditions are harsh. The prison population is reported to be about 120,000, and nearly 5,000 new prisoners are added to the rolls annually. Over 15,000 prisoners made forced confessions in order to obtain reduced sentences. The International Criminal Tribunal for Rwanda (ICTR) established in Arusha, Tanzania, to try those responsible for the 1994 genocide, convicted a number of former Hutu ministers and military leaders, including Eliezer Niyitegeka, Casimir Bizimungu, Omar Serusagho, Ignace Bagilishema, Kibuye Clement Kayishema, Georges Rutaganda, and Pauline Nyiramasuhuko.

FOREIGN POLICY

The Tutsi government of Rwanda has carried the war against the Hutu beyond national borders. At first the administration supported the government of the DRC, hoping that a federal victory there would enable Rwanda to close the rear bases of Hutu guerrillas as well as the

1978 Rwanda

camps where they sought refuge. However, relations between Kigali and Kinshasa deteriorated as the DRC president Laurent-Désiré Kabila distanced himself from Tutsi influence. Thereupon the Tutsi turned on Kabila and joined rebels against his regime. Meanwhile, the Banyamulenge Tutsi carved up large portions of eastern DRC in order to destabilize the Kabila regime and also create a greater Rwanda. To the north, relations with Uganda deteriorated as Tutsi made military inroads there. In 2004 Rwanda withdrew its forces from the DRC; however, despite the presence of UN peacekeepers in Rwanda, localized violence continued to spill over the borders into the DRC, Burundi, and Uganda.

DEFENSE

The Rwandan defense structure is headed by the president, who also is the defense minister and the commander in chief. Military manpower is provided by voluntary enlistment. The total strength of the armed forces in 2003 was 61,000; there are 1,200 paramilitary forces.

Although the army is staffed almost entirely with Rwandans, Belgian advisers are attached to most units. The deterrent capability of the armed forces is undermined by a number of factors, including the country's landlocked position and faltering economy.

Apart from military equipment and training, Belgian military aid continues at the rate of about \$250,000 annually. In 2003 the country spent \$50 million, or 3.2 percent of gross domestic product (GDP), on the military.

ECONOMY

Rwanda is a rural country with about 90 percent of the population engaged in (mainly subsistence) agriculture. It is the most densely populated country in Africa, is landlocked, and has few natural resources and minimal industry. The primary exports are coffee and tea. The 1994 genocide decimated Rwanda's fragile economic base, severely impoverishing the population—particularly women—and eroding the country's ability to attract private and external investment. However, Rwanda has made significant progress in stabilizing and rehabilitating its economy. GDP has rebounded, and inflation has been curbed. In 1998 Rwanda signed an Enhanced Struc-

tural Adjustment Facility agreement with the IMF, and in 2000 it was approved for IMF–World Bank Heavily Indebted Poor Country debt relief. Rwanda has also embarked upon an ambitious privatization program with the World Bank. Continued growth depends on the maintenance of international aid levels and the strengthening of world prices of coffee and tea, but high military expenditures cause tension with international donors and lending agencies.

LIVING CONDITIONS

Living conditions in Rwanda are generally difficult, with 60 percent of the population living below the poverty line in 2001 and per capita GDP amounting to just \$1,300. Even these numbers hide wide gaps between rich and poor. Wealthier Rwandans in the cities enjoy modern, Western-style houses with running water, electricity, and other amenities. In contrast, poorer rural

1980 Rwanda

people live in mud-walled houses without utilities and often walk long distances to obtain water from springs or streams. The nation has only 996 km (619 m) of paved roads in an area about the size of Massachusetts. Ethnic violence continues to be a major social problem. Although the government has taken major steps to curb such violence, tension between Tutsi and Hutu still exists, and most Hutu do not trust the Tutsi-dominated government. Many young people are drawn from the villages to the cities, where they cannot find employment and gravitate to hate groups.

HEALTH

The quality of health care in Rwanda is extremely low, which is not surprising in a nation where annual per capita health expenditures are just \$11. Life expectancy at birth was under 47 years in 2005. The infant mortality rate was a very high 91 deaths per 1,000 live births, and only 31 percent of births are attended by trained medical personnel. AIDS is a major problem, with over 5 percent of the adult population living with the disease and 22,000 deaths from it in 2003. Other major health problems are high mortality rates from intestinal diseases (which caused over 36 percent of deaths in the late 1990s) and malaria, with over 6,500 new cases per year.

FOOD AND NUTRITION

The state of nutrition in Rwanda is generally poor. Between 1998 and 2003 the United Nations estimated that 7 percent of children under the age of five were severely underweight. The Rwandan diet is high in starches; staples include beans, plantains, and sorghum, along with potatoes, sweet potatoes, corn, and manioc. Vegetables include carrots and cabbage, and pineapples, mangoes, and avocados are occasionally consumed. Most Rwan-

dans eat little meat. The meat that is consumed is primarily goat, especially in rural areas; in the cities, beef is somewhat more common, and throughout the country mutton has gained in popularity. Fish, especially tilapia and catfish, are also more commonly eaten than they were in the past. Traditionally, Rwandans did not eat in public except on ceremonial occasions, but this taboo has been disappearing, and restaurants have become more common.

STATUS OF WOMEN

Women perform most of the nation's agricultural labor and have benefited less than men from social development. Despite the language in the constitution, women's rights to property are limited, and women are not treated equally in divorce proceedings. Moreover, women have fewer chances for education, employment, and promotion, often because men prefer them to remain in uneducated, traditional roles at home. Family planning services remain inadequate—only about 13 percent of Rwandan women use birth control—but are improving. There are virtually no day-care services for children of mothers who wish to work. Few organizations promote women's interests. Women play a marginal role in political life.

WORK

The Rwandan labor force consisted of about 4.6 million people in 2000. About 90 percent were employed in agriculture, mostly subsistence agriculture, with the sector contributing only about 41 percent of GDP. The most common crops are coffee and tea, followed by bananas, beans, sorghum, potatoes, and livestock. Rwandans also make pyrethrum, an insecticide made from chrysanthemums. The small industrial sector makes cement, agricultural products, beverages, soap, furniture, shoes, plastics, textiles, and cigarettes.

EDUCATION

The national literacy rate is just over 70 percent (76 percent for males and 65 percent for females). These numbers have been steadily improving in recent years.

In principle, education is free, universal, and compulsory for eight years, from ages seven to 15. Only about one-fifth of all primary schools and a few secondary schools belong to the public school system; the rest are government-approved Roman Catholic or Protestant mission schools.

Schooling consists of 14 years, as divided into eight years of primary school and six years of secondary school. Primary education is divided into two cycles: a *premier* cycle of four years, known as the literacy cycle, in which subjects are taught in Kinyarwanda, and the *deuxième* cycle of two years, in which subjects are taught in French. Attrition is heavy at the primary level, and only 25 percent of students advance as far as the fourth grade. Fewer still reach the secondary system, which is divided into two cycles: a three-year *tronc commun d'orientation*, structured as a general orientation course, and three-year *moyennes générales*, leading to the university level. Some 30 percent of all boys study in private religious institutions, known as seminaries, where the courses revolve around Greek and Latin.

The academic year runs from September to July. The medium of instruction, except in the first cycle of primary school, is French. The curricula are derived from the National Catholic Federation of Intermediate Education of Belgium, though some Africanization of school texts has occurred.

Almost 63 percent of primary-school teachers are insufficiently qualified and in fact have no educational training. At the secondary level the country relies heavily on Belgian, Canadian, and French teachers. There are three types of teacher-training institutions: *écoles des moniteurs auxiliaires* for boys and *écoles de monitrices auxiliaires* for girls, both offering two-year courses; *écoles normales inférieures*, which offers five-year courses; and *écoles normales moyennes*, which offer seven-year courses. Teacher trainees account for 38 percent of secondary-school enrollment.

Technical and vocational students account for about 59 percent of upper-secondary-school enrollment. Two-year and four-year programs are offered in technical and vocational subjects at the postprimary level.

The educational system is under the control of the Ministry of National Education.

The National University of Rwanda at Butare was established in 1963 by the government and the Roman Catholic Dominican Order of Canada as an autonomous, public institution. About two-thirds of the university staff are Belgian or Canadian.

MEDIA

One daily newspaper is published in the country, and there are 8 nondaily newspapers and periodicals. The major newspapers include the *New Times*, a private, progovernment paper published in English; the *Rwanda Herald*, also private and published in English; *Rwanda Newslines*, in English; and *Umesesco*, published in Kinyarwanda. *Kinyarwamanteka* is a biweekly business magazine. The Ministry of Information publishes *La relève*, a French monthly

1982 Rwanda

focusing on politics, economics, and culture. Censorship is generally informal and light and is exercised through the Ministry of Information. The national news agency is Agence Rwandaise de Presse (ARP); Reuters is represented in the capital.

The state-controlled Radio Rwanda is operated by Radiodiffusion de la République Rwandaise. Additionally, there are two private radio stations. Rwanda's only television station is government owned. The British Broadcasting Corporation broadcasts from Kigali.

CULTURE

As a poor nation, Rwanda provides little funding for the arts. The only nationally supported organization is a dance troupe based in Nyanza. The nation has little in the way of a modern literary tradition, and its graphic arts consist primarily of decorative arts such as pottery and basket making. Dance and music, however, have a rich tradition. In the royal court, young Tutsi men were trained in a type of dance called *intore*, and schools and national dance companies have preserved the tradition in modern times. The Twa people, especially, have a respected tradition of music played on indigenous musical instruments.

FOLKLORE AND MYTHOLOGY

Rwanda has an oral tradition rich with legends, poetry, and stories. Historically and through the early 20th century the king was regarded as sacred and was said to have special powers. Associated with the king were specialists who preserved the nation's oral culture, rituals, and his-

tory. After the Belgians deposed the non-Christian king and replaced him with his Christian son, it became feared in the following years and decades that traditions would die out, mainly because there were no more royal specialists to preserve them. Accordingly, scholars in Europe and in Rwanda began to record historical and sacred texts. Many of these have to do with rituals employed for making rain, stopping rain during floods, ensuring that cattle reproduce and bees produce honey, and winning battles.

ENTERTAINMENT AND RECREATION

Nearly every Rwandan has a radio, and television ownership has increased, though it remains marginal. Rwandans enjoy listening to music, especially American rock, reggae, and pop music from Kenya and the DRC. More affluent Rwandans can afford VCRs, and video rental stores have popped up in urban areas. Another popular form of entertainment is participation in ritual occasions, such as weddings, where celebrations will include both traditional and contemporary forms of music and dance.

ETIQUETTE

Traditionally, Rwandan culture was very hierarchical, and the nation's etiquette reflects this. Greetings are required, particularly in rural areas. A common form of greeting between close friends or persons of equal status involves placing the left hand on the other's hip and the right hand on the other's shoulder in a kind of embrace while brushing the heads together, first on one side, then on the other. Shaking hands is also common, and when shaking hands with someone of higher status or rank, it is customary to place the left hand on one's own right arm as a mark of deference. Visiting friends and relatives is an important sign of respect, and those who fail to do so are regarded as suspicious.

FAMILY LIFE

Traditionally, marriages were arranged by the prospective groom's and bride's fathers, who would meet, often several times, to discuss the matter, with the groom's father bearing gifts (usually beer). This tradition has largely disappeared, although gaining family approval is still regarded as important. Rwandans place great value on children, so families tend to be large. The nation's birth rate per 1,000 population in 2004 was over 40, and the fertility rate that year was 5.5 children per woman. Typically, the chief domestic unit is the nuclear family, although it is not uncommon for other relatives to reside together. Rwandan society is very much patrilineal,

and those who can trace ancestry back five or six generations through the male line form kinship units called *umuryango*, in which the eldest male wields considerable influence.

PERSONAL APPEARANCE

During colonial times Rwandans stopped wearing traditional clothing made of animal skins and pounded bark cloth and adopted Western clothing. Tailors in Rwanda can provide new clothing for the elite, but most Rwandans wear imported secondhand clothing.

SPORTS

As in most African nations, soccer is the most popular sport. Soccer leagues exist throughout the country, including one for women in the capital, and from a very young age children play soccer with balls made up of rolled-up banana leaves. In 1997 the Rwandan national team won the championship of the Confederation of East and Central African Football Associations, the first tournament held in Rwanda after the 1994 civil war. Also popular are running and wrestling. Rwanda's first sports publication, *Rwand champions*, appeared in 2004.

CHRONOLOGY

- 1962 Rwanda becomes independent, with Grégoire Kayibanda, leader of Parmehutu, as president. New constitution is promulgated.
- 1963 Tutsi malcontents launch an invasion of Rwanda but are repelled; in retaliation, over 12,000 Tutsi are massacred by Hutu, while uncounted Tutsi flee the country.
- 1964 The economic union of Rwanda and Burundi is terminated; Rwanda introduces its own national unit of currency, the Rwandan franc.
- 1969 Kayibanda is reelected to a second four-year term.
- 1973 As a fresh wave of Hutu-Tutsi conflict threatens to engulf the country, Kayibanda is toppled in a swift bloodless coup led by Maj. Gen. Juvénal Habyarimana; the constitution of 1962 is partially suspended, and the National Assembly is dissolved.
- 1974 At the Bujumbura Conference the heads of Zaïre, Burundi, and Rwanda agree to concerted action in defense and economic affairs.
- 1975 Habyarimana launches Mouvement Révolutionnaire National pour le Développement (MRND) as the sole political party.
- 1979 Rwanda hosts Franco-African summit meeting.
- 1982 Uganda expels over 45,000 Rwandan Tutsi.
- 1983 The National Development Council is established as the national legislature, with limited powers. Habyarimana is reelected to another term as president.
- 1988 Single-party legislative balloting is conducted. Habyarimana is reelected president.
- 1990 Between 5,000 and 10,000 rebel Tutsi invade Rwanda from neighboring Uganda; Habyarimana and the rebels agree to a cease-fire.
- 1991 The president signs a new constitution that permits multiparty politics; Habyarimana promises to discuss a timetable for elections.
- 1994 An estimated one million Rwandans are killed in Hutu-orchestrated genocide.
- 1996 UN forces leave Rwanda.
- 1997 Over 300 Tutsi are killed in a refugee camp as ethnic conflict continues.
- 1998 Rwanda gets involved in the second DRC war to deal with insecurity caused by Hutu militia groups, the Interahamwe, with the DRC government supporting the Interahamwe.
- 1999 The Lusaka Cease-Fire Agreement, to end the second DRC war, is signed.
- 2000 President Pasteur Bizimungu resigns, and Major General Paul Kagame is sworn in as the fifth president of Rwanda.
- 2003 Voters approve a new constitution. Paul Kagame wins the first presidential election since 1994; his party wins an absolute majority in parliament.
- 2005 The major Hutu rebel group announces that it is ending its armed struggle.

September 19, 1983

GEOGRAPHICAL FEATURES

Roughly shaped like an exclamation mark, Saint Kitts and Nevis lies in the northern part of the Leeward Islands in the eastern Caribbean, with Saba and St. Eustatius to the northwest, Barbuda to the northeast, and Antigua to the southeast. Saint Kitts and Nevis are volcanic islands separated by a channel known as the Narrows, some 3.2 km (2.0 mi) wide. Saint Kitts is roughly oval, some 37 km (23 mi) long and 168 sq km (65 sq mi) in area. It is centered on a mountain range, the highest point of which is Mount Liamuiga (1,156 m; 3,792 ft). Nevis is 93 sq km (36 sq mi) in area.

Saint Kitts and Nevis

CLIMATE AND WEATHER

Because the islands are set in the path of the northeasterly trade winds, the climate is remarkably equable even by Caribbean standards. There is a steady cooling breeze

most of the year. The highest recorded temperature in the 20th century was 92°F (33.3°C); the lowest, 62°F (16.7°C). Humidity is low; there is no rainy season as such, the average annual rainfall being 1,400 mm (55 in) on Saint Kitts and 1,200 mm (48 in) on Nevis.

Climate and Weather

Temperature Range: 62°F to 92°F
 Average Rainfall
 Saint Kitts: 55 in
 Nevis: 48 in

FLORA AND FAUNA

About 11 percent of Saint Kitts and Nevis is covered by forest, nearly equally divided between rain forest, moist forest, and dry forest. Small wetlands areas can be found on both islands, and both have unspoiled beaches and coral reefs. Various species of palms are the principal species of trees, especially in the moist forests. Cedars are common at lower elevations. Lizards, geckos, and bats are the most common endemic mammal species; most high mammals, such as deer, mongoose, and rats, were introduced to the islands by colonists.

ETHNIC COMPOSITION

The population is almost entirely of black African descent, with small populations of British, Portuguese, and Lebanese.

LANGUAGES

English is the official language.

RELIGIONS

The bulk of the population belongs to the Anglican community, with six other Protestant denominations and the Roman Catholic Church also represented.

Religious Affiliation

Anglican	19,799
Roman Catholic	3,560

HISTORICAL BACKGROUND

The original inhabitants of the islands of Saint Kitts and Nevis were Arawak and Carib Indians. Saint Kitts (the Carib name of which was Liamuiga, "Fertile Isle") was the first of the West Indian islands to be settled by the British. Sir Thomas Warner and his followers landed at the Old Roadstead in 1623; in the course of time they sent expeditions to nearby islands. Thus Saint Kitts acquired the title "Mother Colony of the West Indies." At one time there were French settlements at the two ends of the island, but the whole island was ceded to Great Britain by the Treaty of Versailles in 1783. Nevis was settled by the British in 1628, and although it came under French and Spanish attack in the 17th and 18th centuries, it remained one of the most prosperous islands in the Antilles until the mid-19th century. In 1816 St. Christopher (as Saint Kitts was called at the time), Nevis, Anguilla, and the British Virgin Islands were united under the administration of a captain-general and a governor in chief. The first three territories formed the Leeward Islands Federation in 1871 and became a member of the West Indies Federation in 1958, remaining so until the federation's dissolution in 1962. In 1960 each member of the British Leeward Islands Federation received a new constitution. Following the abortive East Caribbean Federation, St. Christopher-Nevis-Anguilla attained associated statehood in 1967. The legislative council was replaced by the House of Assembly; the administrator became the governor; and the chief minister and leader of the Labour Party, Robert Bradshaw, became the first premier.

Anguilla rebelled against the arrangement and was formally separated from the group in 1980. The nearly 30-year rule of the Labour Party was broken in 1980 when the People's Action Movement (PAM) and the Nevis Reformation Party (NRP) formed a coalition government after winning five of nine seats in the House of Assembly. The coalition government under Kennedy Alphonse Simmonds, the PAM leader, led the nation to independence under a federal constitution on September 19, 1983. The following year the PAM/NRP coalition increased its majority in the House of Assembly, winning six of eight seats on Saint Kitts and all three seats on Nevis. It lost one seat on Nevis in 1989.

The election of 1993 yielded four seats each to PAM and the Saint Kitts-Nevis Labour Party (SKNLP), even

1988 Saint Kitts and Nevis

though the SKNLP won 54 percent of the vote, while PAM received only 41 percent. In the 1995 election the SKNLP won seven out of 11 seats in the National Assembly, ending 15 years of government by the PAM. Labour leader Denzil Douglas was installed as the head of the new government. In 1997 Nevis legislators launched a referendum on secession from Saint Kitts, but in 1998 they failed to achieve the necessary majority. In the 2000 parliamentary elections the SKNLP was able to gain one additional seat, then holding eight out of 11 parliamentary seats. In 2004 Douglas won a third term as prime minister. In legislative elections that year, the SKNLP won seven seats.

1979–80 Lee Moore

1980–95 Kennedy A. Simmonds

1995– Denzil L. Douglas

CONSTITUTION

Saint Kitts and Nevis is a constitutional federation, with the British monarch represented by a governor-general serving as the head of state and a prime minister serving as the head of government and of the cabinet of ministers. Nevis has a deputy governor-general. The constitution also accords Nevis the right of secession from Saint Kitts if a bill to that effect is approved by two-thirds of the elected legislators and endorsed by two-thirds of the voters in a national referendum. Saint Kitts has a premier and deputy premier in the cabinet.

Constitutional changes require the approval of a two-thirds majority of elected representatives, while certain other entrenched provisions must receive approval of two-thirds of the valid votes in a national referendum in order to be changed.

PARLIAMENT

The unicameral House of Assembly consists of 11 elected representatives (eight from Saint Kitts and three from Nevis), plus three appointed members, dubbed senators. Members serve five-year terms.

Suffrage is universal over age 18.

POLITICAL PARTIES

Of the more than half dozen political parties in Saint Kitts and Nevis, the largest is the Labour Party (SKNLP). The second largest party in terms of seats in the current legis-

lature is a coalition called the Concerned Citizens' Movement. Additional parties include the Nevis Reformation Party and the People's Action Movement (PAM).

LOCAL GOVERNMENT

For purposes of local administration Saint Kitts is divided into nine parishes, Nevis into five parishes. The Saint Kitts parishes are Christ Church Nichola Town, St. Anne Sandy Point, St. George Basseterre, St. John Capisterre, St. Mary Cayon, St. Paul Capisterre, St. Peter Basseterre, St. Thomas Middle Island, and Trinity Palmetto Point. The Nevis parishes are St. Thomas Lowland, St. George Gingerland, St. James Windward, St. John Figtree, and St. Paul Charlestown.

Nevis has an assembly consisting of five elected and three nominated members. In addition, the governor-general appoints a premier and two other members of the Nevis assembly to serve as the Nevis administration.

LEGAL SYSTEM

Justice is administered by the Eastern Caribbean Supreme Court, based in St. Lucia. This court consists of the Court of Appeal and the High Court. One of the seven puisne judges of the High Court presides over the Court of Summary Jurisdiction in Saint Kitts. District magistrate courts deal with petty offenses and minor civil actions. Certain types of appeal can be brought before the British Privy Council. The judiciary is highly regarded, and trials are fair, speedy, and efficient.

HUMAN RIGHTS

Saint Kitts and Nevis has a good human rights record. British legacies in law, freedom of speech, religion, and the exercise of political rights are carefully maintained.

FOREIGN POLICY

Saint Kitts and Nevis is a member of the Commonwealth, the Organization of American States, the Association of Caribbean States, the Caribbean Community and Common Market, and the Organization of Eastern Caribbean States. The nation receives special aid from the United Kingdom and the United States. Its only dispute is one over maritime boundaries with Venezuela.

DEFENSE

A small army was disbanded by the government in 1981. The army's functions were absorbed by the Volunteer

Defense Force and a special tactical unit of the Royal Saint Kitts and Nevis Police Force.

ECONOMY

The economy of Saint Kitts and Nevis is in a transitional stage. The nation has traditionally depended on the growing and processing of sugarcane; decreasing world prices hurt the industry in the early 2000s. Tourism, export-oriented manufacturing, and offshore banking activity have since assumed larger roles. Most food is imported. The government has undertaken a program designed to revitalize the faltering sugar sector. It is also working to improve revenue collection in order to better fund social programs.

In 1997 some leaders in Nevis were urging separation from Saint Kitts on the basis that Nevis was paying far more in taxes than it was receiving in government services, but the vote on secession failed in August 1998. In late September 1998 Hurricane Georges caused approximately \$445 million in damages and limited gross domestic product (GDP) growth for the year. Further, the terrorist attacks on the United States in 2001 slowed travel and cut government revenues. In 2003 the opening of a 1,000-bed hotel began to bring in much-needed revenue. After a particularly bad harvest in 2005 the government decided to close the sugar industry.

ENVIRONMENT

Saint Kitts and Nevis shares many environmental concerns with other small, developing nations. Chief among these concerns are deforestation and soil erosion. Additionally, as an island nation the country is particularly concerned with the adverse impact of development on beaches and reefs. Finally, the disposal of increasing amounts of sew-

age and solid waste is a growing concern. The nation has protected 10 percent of its land as wildlife refuge.

Environment

Nationally Protected Areas % of total land area: 10
Emissions of Organic Water Pollutants kg per day: —
CO2 Emissions per capita ton: 2.43

LIVING CONDITIONS

Living conditions are generally good. The islands enjoy spectacular weather year-round. Tropical diseases have been largely eradicated. Nearly the entire population has access to clean drinking water and sanitation facilities. The islands have a good road network, though drainage ditches called *ghauts* can be problematic for motorists. Most homes are made of concrete block and wood, and most islanders own the land they live on. The islands' dependence on the sugar trade cause ups and downs in the economy. The nation is vulnerable to drug smugglers who use the islands as transshipment points.

HEALTH

Health conditions are generally good. Life expectancy at birth in 2004 was over 72 years. The infant mortality rate, once disturbingly high, has fallen to below 15 deaths per 1,000 live births, and virtually 100 percent of births are attended by trained medical personnel. There are three hospitals on Saint Kitts and one on Nevis, both staffed primarily by British and Canadian doctors. In 2002 the country spent about \$467 per person on health care, ranking a respectable 34th in the world on health-care expenditures.

FOOD AND NUTRITION

In the early 1990s the islands suffered from high rates of malnutrition, but conditions have since improved markedly. Rice, peas, plantains, and yams are dietary staples, and soups made with beans, pumpkin, or fish are common. For seasoning, lime juice and hot pepper sauces are commonly used. Fried chicken is popular, and while the islanders do consume fish, goat and mutton are the most common animal proteins. The most popular beverage is the beer made at the islands' own brewery, though rum and soft drinks are also favored.

 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 80.4
 Amount of Fruits and Vegetables Available per person per year kg: 142.8

STATUS OF WOMEN

Like most former British colonies, women hold equal status with men under the law. They participate in all sectors of the economy and are active in politics. The Bureau of Women's Affairs monitors women's rights and problems and is active in programs that promote positive change in the status of women. On the other hand, there is no domestic violence legislation, and violence against women is a widespread problem.

WORK

In 1995 the labor force consisted of just over 18,000 people. In 2002 per capita GDP was \$8,800. In 1997 the country estimated unemployment to be 4.5 percent, but others estimate the rate to be much higher, perhaps over 20 percent. Roughly one-third of the population is engaged in agricultural work, primarily in the sugar industry. Wages are low, and the country has often had to import workers from other countries to work in the cane fields, where the labor is grueling. Many people have two or more sources of income, working for wages in the tourist or sugarcane industries while fishing or selling produce from garden plots. An ongoing problem is that many young people look forward to leaving the islands to

gain an education and work in white-collar jobs abroad, usually in the United States, Canada, or England, resulting in a brain drain.

Employment and Labor

Labor Force Total: 18,170
 Female Participation Rate %: —

EDUCATION

Education is free, universal, and compulsory for nine years, between ages five and 14. Schooling lasts for 13 years, as divided into seven years of primary school, four years of lower-secondary school, and two years of upper-secondary school. During the 1980s the government stressed vocational training at all levels in an effort to meet the needs of a growing service-oriented economy.

SCIENCE AND TECHNOLOGY

Saint Kitts and Nevis supports little scientific research on its own. Most research is in the field of agriculture and conservation and is supported by Caribbean-wide organizations that maintain research stations on the islands. Some of these organizations include the Caribbean Agricultural Information Service, the Caribbean Agricultural Research and Development Institute, the Caribbean Agricultural and Science Technology Networking System, the Inter-American Institute for Cooperation on Agriculture, and the Caribbean Conservation Association.

MEDIA

The only daily newspaper is the *Sun Saint Kitts/Nevis*. Additionally, the major political parties and labor unions publish weekly or biweekly newspapers. The largest of these is the *Labour Spokesman*, published by the Saint Kitts and Nevis Trades and Labour Union. The *Democrat* is the People's Action Movement opposition weekly.

There are commercial radio and television stations and a privately operated religious radio station. The government owns and operates a television station.

There are two libraries.

CULTURE

Saint Kitts has a theater group, and on Nevis the Drama and Cultural Society presents plays and other events at a theater in Charlestown. In 1996 the country held its first annual Saint Kitts Music Festival, which featured gospel music and reggae and was attended by 15,000 people. Nevis has produced one famous artist, Dame Eva Wilkin, whose work—primarily depictions of flowers, landscapes, and island people—is displayed at the Eva Wilkin Gallery on Nevis and is known throughout the world.

FOLKLORE AND MYTHOLOGY

Folkloric traditions on the islands derive primarily from African traditions. Although most of the people are Protestants, there remains an undercurrent of belief in obeah, an African-influenced form of witchcraft.

ENTERTAINMENT AND RECREATION

A large segment of the population takes an intense interest in cricket matches, especially when local teams play teams from other Caribbean nations. Music is an important form of recreation, with reggae, string-band, dance, and steel-drum music all immensely popular. Other forms of recreation involve folk arts and crafts, including traditional dances, the production of wall hangings and batik clothing, and pottery.

ETIQUETTE

Saint Kitts and Nevis has a relaxed, informal culture. People often greet each other by “bumping,” meaning that they bump together closed fists. At the same time, British models of decorum and respectability are important on the islands, a feature that is reflected in the dress of the people.

FAMILY LIFE

Marriages on the islands are typically not arranged, so spouses are freely chosen. Because so many islanders leave to live and work in the United States, Canada, and England, only later returning to the islands, mixed marriages have become more and more common. After marriage, a couple generally resides with the parents of one of the spouses, but the goal is to quickly find a separate residence. Family ties are generally strong, even between those who remain on the islands and those who live abroad. Educated people who earn decent salaries abroad typically send money home, and some observers note that it is likely that more money is sent in than is actually earned on the islands. Family ties remain close through frequent visiting.

PERSONAL APPEARANCE

The people of Saint Kitts and Nevis take enormous pride in their personal appearance. It is unthinkable to go out without clean and well-pressed clothing, even for casual occasions; in fact, dress tends to be even more formal on the weekends than during the workweek. Children wear

uniforms to school, men wear dress shirts with ties, and women wear dresses and only rarely slacks.

SPORTS

Cricket is the national game of Saint Kitts and Nevis, and it has been said that the country virtually shuts down when local teams take part in important matches with Caribbean neighbors. The islands have produced world-class cricket players, including Luther Kelly, Derrick Parry, and Elquemendo Willet. Also popular are soccer and horse racing, and major racing events are held on most major holidays.

CHRONOLOGY

- 1983** The nation's first constitution proclaims the Federation of St. Christopher and Nevis; St. Christopher and Nevis becomes a member of the Commonwealth, with a local governor-general representing the British monarch.
- 1984** St. Christopher and Nevis becomes a member of the Organization of American States; in House of Assembly elections, the ruling coalition of the People's Action Movement (PAM) and the Nevis Reformation Party (NRP) is returned to power with a decisive victory; Kennedy Simmonds of PAM is named prime minister.
- 1988** The country is officially renamed the Federation of Saint Kitts and Nevis.
- 1989** The ruling PAM-NRP coalition returns to power after losing one seat in House of Assembly elections; Kennedy Simmonds is reelected prime minister; Hurricane Hugo strikes the islands.
- 1990** The economy of Saint Kitts and Nevis continues to recover from the damage caused by Hugo.
- 1995** Reports that drug smuggling activity is taking place on the islands raises scandal; the government calls early elections; the Labour Party gains control of the government, taking seven of the 11 seats in the assembly, Labour Party leader Denzil Douglas becomes prime minister.
- 1996** Cuthbert Sebastian is appointed governor-general.
- 1997** Political leaders from Nevis sponsor a bill to secede from the federation, charging that the federal government neglects Nevis's economy and infrastructure.
- 1998** A popular referendum proposing the secession of Nevis fails to gain the required two-thirds majority, leaving the federation intact; Hurricane Georges strikes Saint Kitts and Nevis, destroying 85 percent of buildings and causing \$445 million in damage.
- 2000** The Labour Party wins a majority of seats in the National Assembly; Denzil Douglas begins a second term as prime minister; the G8 club of industrialized nations names Saint Kitts and Nevis as one of 15 countries permitting money laundering.
- 2004** Douglas wins third term as prime minister. Efforts on Nevis to secede from Saint Kitts continue.

GEOGRAPHICAL FEATURES

Saint Lucia lies in the Windward Islands group in the Caribbean, between Martinique and St. Vincent. The land area is 616 sq km (238 sq mi), extending 43 km (27 mi) north to south and 22 km (15 mi) east to west. The total length of the coastline is 158 km (98 mi).

The island is of volcanic formation and is relatively hilly, the highest peak, Morne Gimie, being 950 m (3,116 ft). The Pitons, two conical mountains, rising 798 m (2,619 ft) and 750 m (2,461 ft), are prominent landmarks. They were declared a UN Educational, Sci-

entific, and Cultural Organization world heritage site in 2004.

A number of small rivers flow outward from the central highlands, the principal ones being Dennery Fond, Piaye, Doree, Canaries, and Roseau and Marquis.

CLIMATE AND WEATHER

Saint Lucia has a tropical climate tempered by sea winds. The mean temperature is 28°C (79°F), with a dry season lasting from January to April and a rainy season from May to August. Annual rainfall is 1,500 to 3,500 mm (60 to 138 in), depending on altitude.

Climate and Weather

Mean Temperature: 79°F
Average Rainfall: 60 in to 138 in

FLORA AND FAUNA

Saint Lucia was originally covered with rain forest, but the British colonial administration cut down most of the trees for timber. Now only about 15 percent of the island is forested, most of it in nature reserves. Rain-forest trees include the *chatagnier* and *gommier* (gum tree). Other common plants include cacti, hibiscus, orchids, bromeliads, lianas, and heliconia.

The island has no large mammals. The native agouti, a rodent, and introduced mongoose are abundant. Other animals include bats, lizards, tree frogs, the Saint Lucia parrot, the Saint Lucian oriole, the purple-throated Carib hummingbird, and several kinds of snakes, such as boa constrictors and the poisonous fer-de-lance. The island is surrounded by marine reserves that protect coral and marine animals; it is illegal to remove any creature from these reserves.

ETHNIC COMPOSITION

Saint Lucians are mainly of black African descent; 90 percent of the population is black. Few Caribs, the original inhabitants of the island, have survived. About 6 percent of Saint Lucians are of mixed race, while 3 percent are East Indian. Less than 1 percent of the population is of European descent.

LANGUAGES

The official language is English. However, a large proportion of the population speak a French-based patois.

RELIGIONS

Saint Lucia is predominantly Roman Catholic. Castries is an archbishopric with a native Saint Lucian as archbishop. The government gives annual grants to the three leading denominations: Catholic, Anglican, and Methodist.

Religious Affiliations

Roman Catholic	150,000
Anglican	5,000
Protestant	12,000

HISTORICAL BACKGROUND

The first inhabitants of Saint Lucia were the Arawak Indians, who probably arrived in order to escape their enemies the Carib Indians. Some vestiges of their agricultural traditions and industry have been found; however, little is known of their history on the island.

The first known European settlement of Saint Lucia was by 67 Englishmen in 1624, an attempt believed to have failed. In 1639 Sir Thomas Warner was granted a commission for the colonization of the island, but the entire colony of some 400 people was wiped out in 1640. The French established a colony in 1651; their occupancy was not seriously challenged until 1664, when 1,000 Barbadians and Caribs invaded the island and took it without any resistance. This event marked the beginning of a struggle between the French and the British for possession of the island that lasted for over a century, with the British eventually gaining control.

Representative government was introduced in the dependency in 1924. Until 1959 the colony was a mem-

ber of the Windward Islands. It joined the West Indies Federation in 1958 and remained a member until the dissolution of the federation in 1962. In 1967 Saint Lucia became one of the West Indies Associated States, with a governor, prime minister, and House of Assembly replacing the administrator, chief minister, and Legislative Council, respectively. In 1975 the Associated States agreed that they would seek independence individually. Following a constitutional conference held in London in 1978, Saint Lucia proclaimed its independence in 1979.

The years immediately following independence were marked by political instability and civil unrest as the two predominant parties—the United Workers' Party (UWP) and the Saint Lucia Labour Party (SLP)—vied for power. Upon independence in February 1979, John Compton, head of the long-dominant UWP, assumed the office of prime minister. He was succeeded by Allan Louisy, whose SLP won a landslide victory in the July election. As a result of conflict with a radical faction of his party, Louisy resigned in 1981 in favor of the centrist Winston Cenac. He, in turn, was forced to step down in 1982, and the governor-general appointed Michael Pilgrim to head an all-party administration prior to general elections in which Compton's UWP won a decisive victory. Compton won reelection in 1987 and again in 1992. He retired in 1996 and was succeeded by Vaughan Lewis. In 1997 elections the SLP returned to power under Kenny Anthony.

Anthony won a second term in 2001, with the SLP taking 14 of the 17 contested parliamentary seats; the UWP took the remaining seats. Anthony's administration has faced rising crime and high unemployment in Saint Lucia, as well as economic pressure due to the European Union's ending preferential treatment for former colonies in the banana market. The nation has been diversifying its economy but is still heavily dependent on agriculture. The banana market was severely harmed by Tropical Storm Lili in 2002. In 2003 the parliament passed controversial new legislation legalizing abortion in some cases and making the spread of "false news" a criminal act punishable by imprisonment. It also amended the constitution to introduce a pledge of loyalty to the nation in place of the former oath of allegiance to the British monarch.

LIST OF MODERN RULERS

Prime Minister

1979	John Compton
1979–81	Allan Louisy
1981–82	Winston Cenac
1982–96	John Compton
1996–97	Vaughan Lewis
1997–	Kenny Anthony

CONSTITUTION

Under the constitution of 1979, Saint Lucia is a parliamentary democracy with the Queen of England as the titular head of state, as represented locally by a governor-general. The governor-general is appointed by the Queen on the advice of the prime minister. The governor-general, in turn, can appoint the prime minister, deputy prime minister, and other ministers. The prime minister is usually the leader of the majority party in parliament. The governor-general may remove a prime minister from office if a resolution of no confidence is passed in the House of Assembly and the prime minister does not resign within three days or advise the dissolution of the national legislature. The cabinet consists of the prime minister, other ministers, and the attorney general as an *ex officio* member.

The voting age is 18. Suffrage is universal.

PARLIAMENT

The bicameral national legislature consists of an appointed Senate and an elected House of Assembly, both with a normal term of five years, subject to dissolution.

The Senate comprises 11 members: six appointed on the advice of the prime minister, three on the advice of the leader of the opposition, and two after consultation with religious, economic, and social groups.

The House of Assembly consists of 17 members. Its members are elected to five-year terms by popular vote from single-member constituencies. Only the House of Assembly may introduce money bills, and the power of the Senate to delay legislation is restricted.

The leader of the opposition is appointed by the governor-general. Appointments to various public bodies (such as the Public Service Commission, the Integrity Commission, and the Teaching Commission), as well as the designation of a parliamentary ombudsman, require consultation with the leader of the opposition.

POLITICAL PARTIES

The ruling Saint Lucia Labour Party (SLP) is a socialist party founded in 1946. The United Workers' Party (UWP) is a right-wing party; it won three seats in the 2001 elections. Parties without parliamentary representation include the National Alliance (NA), the Saint Lucia Freedom Party (SFP), and Sou Tou Apwe Fete Fini (STAFF).

LOCAL GOVERNMENT

Saint Lucia is divided into 11 administrative districts, or quarters: Anse-la-Raye, Castries, Choiseul, Dauphin,

1998 Saint Lucia

Dennery, Gros-Islet, Laborie, Micoud, Praslin, Soufriere, and Vieux-Fort. Additionally, there are 20 rural community councils. The Castries Town Council, raised to the status of a mayoralty in 1966, enjoys almost full autonomy.

With the exception of the Castries Town Council, which has been a wholly elected body since 1836, all local government bodies have both elected and nominated members. Elected members serve for three-year terms, while nominated members are appointed by the governor-general on the advice of the minister of community development.

LEGAL SYSTEM

The judiciary is composed of multiple district courts and a high court. Appeals go to the Eastern Caribbean Court of Appeals, which has jurisdiction over several Caribbean islands, and ultimately to the Privy Council in London.

HUMAN RIGHTS

Saint Lucia's human rights situation is good. The constitutional guarantees of rights are effectively safeguarded by the fact that the West Indies Court of Appeals has a reputation for impartiality. There is no censorship, and the rights of speech, assembly, and press are unrestricted. Long years of experience with English common law left an open political system that permits change and voter participation in the political process. Nevertheless, there have been a few problems, including long delays in trials and sentencing, police brutality, and violence against women and children.

FOREIGN POLICY

Saint Lucia's primary goal in foreign policy is to encourage other nations to help its economy develop. It is a member of the Organisation of Eastern Caribbean States (OECS) and the Caribbean Community as well as the Organization of American States, the United Nations, and the Commonwealth. Saint Lucia backed U.S. efforts to restore democracy in Haiti and has worked with neighboring islands and the United States on policies to end drug trafficking.

Saint Lucia especially wants to strengthen ties with the United States in order to expand its economic base. The United States has been providing economic assistance through the U.S. Agency for International Development, the World Bank, and the Caribbean Development Bank. About 30 Peace Corps volunteers work in Saint Lucia. American soldiers have helped the island develop its security forces and coast guard.

DEFENSE

Saint Lucia has no internal defense force, as it receives the protection of U.K. military guarantees. A regional defense pact with eight other Caribbean nations provides for joint coast guard operations, military operations, and disaster contingency plans. The Saint Lucia Police provide internal security.

ECONOMY

Saint Lucia's economy has traditionally been tied to agriculture, principally the production of bananas, which has made it quite vulnerable to price fluctuations and natural disasters. Tropical Storm Lili devastated the banana industry in 2002, destroying half the crop and obliterating entire plantations. The European Union's decision to eliminate preferences for crops from former colonies has also hurt the banana market.

The island has been attempting to diversify its economy to earn money from enterprises other than bananas. It has attracted foreign investment and businesses; offshore banking has been especially successful. Tourism has also been quite successful, with some 650,000 tourists visiting the island in 2002. Saint Lucia has the most diverse manufacturing sector in the eastern Caribbean, producing clothing, electronics, corrugated cardboard, beverages, and processed limes and coconuts.

ENVIRONMENT

Saint Lucia suffers from growing deforestation and soil erosion in the northern region. In addition, inadequate solid- and liquid-waste management systems threaten water supplies. The island has several designated nature preserves, both on land and in the sea. The Ministry of Agriculture, Forestry, and Fisheries oversees a national biodiversity program.

Environment

Nationally Protected Areas % of total land area: 2
Emissions of Organic Water Pollutants kg per day: —
CO2 Emissions per capita ton: 2.1

LIVING CONDITIONS

Saint Lucians are relatively poor. Houses are typically small and prone to destruction by hurricanes. Very few of the island's roads are paved; urban traffic is bad, and the road structure is poorly organized. Most people get around on public transportation, which consists mainly of minivan buses. Travel on and off the island is accomplished by airplane or boat; there are frequent flights to and from New York, Miami, Toronto, and London.

The nation has recently improved its infrastructure with regard to sewage, communications, water supply, and port facilities.

HEALTH

Health conditions are good. Life expectancy in 2004 was over 73 years. Fertility is a moderate 2.2 children per woman. Infant mortality is low. The islanders do not generally suffer from tropical diseases, though schistosomiasis (bilharzia) is a problem, affecting people who swim or wade in contaminated freshwater.

FOOD AND NUTRITION

Saint Lucians eat a great deal of seafood, including conch, lobster, shrimp, and various locally caught fish. Salted fish is also common. Fresh fruits and vegetables

include bananas, breadfruit, coconuts, guavas, mangoes, papayas, passion fruit, pineapples, cassava, and sweet potatoes. Many dishes are spiced with an extremely hot sauce made from the scotch bonnet pepper. People use this sauce on melons, sweet potatoes, fish, fried plantain, callaloo stew, breadfruit, and nearly any other food. Local rum is a popular drink, and beer is brewed locally. The island has many restaurants and fast-food establishments.

Food and Nutrition

Undernourished % of total population: —
Daily Available Calories per capita kcal: —
Amount of Cereal Available per person per year kg: 107.6
Amount of Fruits and Vegetables Available per person per year kg: 287.7

STATUS OF WOMEN

There are no legal restrictions on the role of women in Saint Lucia. Although the more traditional household role is the predominant one for the nation's women, they are well represented in government and the professions. As more women take advantage of public schooling and other government programs, the participation of women in other sectors of society is expected to increase.

Women

Seats Held in Parliament by Women %: 11
Female Administrators and Managers %: —
Ratio of Literate Women to Men Age 15 to 24: —
Women's Share of Wage Employment Non-agricultural %: 48.5

WORK

Unemployment is fairly high, at 20 percent in 2003. More than one-fifth of the workforce is employed in agriculture, particularly in the banana business, though people also grow coconuts, vegetables, citrus fruits, root crops, and cocoa. Many families have plots of land that they use for subsistence agriculture, growing food for themselves and raising livestock. Many people work in fishing. About one-quarter of the workforce is employed in industry, especially in factories producing clothing and other products. Services employ slightly more than half of the workforce; tourism is an especially important source of employment. Foreign companies are also important employers; companies locate in Saint Lucia because the workforce is fairly well educated and can handle jobs in banking and other areas.

Employment and Labor

 Unemployment %: 20

EDUCATION

Primary education is free and compulsory for 10 years, from ages five to 15, and is provided in over 90 state-aided schools. Schooling lasts for 12 years, as divided into seven years of primary school, three years of the first secondary cycle, and two years of the second secondary cycle. An educational complex at Morne Fortune provides industrial, technical, and teacher training while also serving as a branch of the University of the West Indies.

Although the government has been emphasizing education in recent years, the system does not yet meet the nation's needs. The adult literacy rate is only 67 percent. About 80 percent of urban children and 75 percent of rural ones attend some school, but dropouts are common. Nevertheless, a sizable portion of the population is reasonably well educated and can perform skilled jobs.

SCIENCE AND TECHNOLOGY

Saint Lucia is the headquarters of the Eastern Caribbean Telecommunications authority, which has worked to liberalize telecommunications in the Caribbean. The local telephone system is adequate, and there is international service by Intelsat from Martinique. In 2002 there were about 51,000 telephone lines and 14,300 cellular tele-

phones in the country. About 13,000 people were using the Internet.

MEDIA

Saint Lucia has good press freedom, and the media publishes a variety of viewpoints, though some fear that a 2003 law making the publication of "false news" a crime may hamper media freedom. The island has two newspapers that appear three times a week—the *Voice* and the *Star*—and several weekly papers. The government-run radio station is Radio Saint Lucia (RSL), which broadcasts in English, French, and the French patois. Radio Caribbean International is a private station owned by the French CIRTES; it broadcasts in English and the French patois. Other commercial stations include Radio 100, which broadcasts news and entertainment, and Hot FM, which plays music and broadcasts news; the latter is affiliated with Helen Television Systems, one of the nation's private television stations. There are two other major television stations, and many households also have cable service.

There is a free public library, administered by the Central Library at Castries.

CULTURE

Saint Lucian culture combines African, West Indian, French, and British influences. Most people love music, especially Caribbean styles such as calypso. The poet Derek Walcott won the 1992 Nobel Prize in Literature.

Saint Lucians celebrate many festivals throughout the year. Carnival, just before Ash Wednesday, is one of the most important, featuring costumes, parades, and band competitions. The Saint Lucian Jazz Festival attracts musicians from all over the world. The Atlantic Rally for

2002 Saint Lucia

Cruisers is a yacht race that starts in the Canary Islands and finishes in Saint Lucia in December.

FOLKLORE AND MYTHOLOGY

Folk dancing is quite popular, and there are regular folk dancing competitions featuring participants dressed in traditional national costumes. African traditions are still a major element of Saint Lucian culture, and African folktales, often with local twists, are still told.

ENTERTAINMENT AND RECREATION

Saint Lucia offers a variety of outdoor recreational possibilities. All beaches are public, so locals can visit them along with international tourists. Swimming, windsurfing, snorkeling, diving, and sailing are all popular water sports. There are pleasant hikes in the interior of the island, especially on public lands. People enjoy going out dancing, listening to music, and drinking rum. There is good shopping in the markets in Castries.

ETIQUETTE

Tipping is not customary; a service charge is usually added to the bills at hotels and restaurants. Some visitors complain that employees in stores and other businesses are rude.

FAMILY LIFE

Many Saint Lucian women have children without being married, and it is not uncommon for both men and women to have several children with different partners. Female-headed households are common. Even in homes with two adults, married or not, the two adults may not both be the biological parents of all the children in the house. Relatives often help mothers raise their children and perform other household tasks. Domestic violence is fairly common. The government has been trying to en-

courage family planning and the sensible consumption of alcohol in an effort to improve family conditions.

PERSONAL APPEARANCE

Most people wear casual clothing made of light fabrics such as cotton. People are relatively conservative in their dress and do not wear swimsuits or revealing attire away from the beach. Some tourist resorts have more formal dress codes.

SPORTS

The government has invested a good deal of public money in sporting facilities as part of an effort to improve the foreign investment climate. The Saint Lucia Tourist Board has been encouraging athletes to visit and arranged for a rugby festival to be held there in 2005. Cricket is extremely popular, as is soccer.

CHRONOLOGY

- 1979** Saint Lucia becomes an independent member of the Commonwealth, with John Compton as prime minister. In general elections the Saint Lucia Labour Party (SLP) wins an upset victory; Allan Louisy is named prime minister.
- 1981** Prime Minister Louisy is forced to resign when George Odlum and 12 other SLP members vote against the government. Winston Cenac, the attorney general, is named prime minister with a parliamentary majority of one. Odlum and two others form a new party, the Progressive Labour Party (PLP).
- 1982** Cenac resigns, and Michael Pilgrim of the PLP forms an all-party caretaker government pending elections. In general elections the United Workers' Party (UWP) wins 14 of 17 seats in the House of Assembly. John Compton takes office as prime minister. Sir Allen Lewis is appointed governor-general following the dismissal of Boswell Williams.
- 1983** Saint Lucia, as a member of the OECS, participates in the U.S.-led invasion of Grenada.
- 1984** Prime Minister Compton leads a trade mission to the Far East.
- 1987** John Compton is reelected prime minister. Governor-General Lewis retires and is succeeded by Vincent Floissac.
- 1989** Floissac is succeeded by Sir Stanislaus A. James as governor-general.
- 1990** Tropical Storm Klaus hits, causing extensive damage to the banana crop, the country's principal industry.

- 1997** Kenny Anthony is elected prime minister, ending 15 years of government leadership by Compton and the UWP. Perlette Louisy is selected as governor-general.
- 2001** Anthony wins second term as prime minister.
- 2002** Tropical Storm Lili strikes the island, destroying half the banana crop and many banana plantations.
- 2003** Parliament replaces the oath of allegiance to the British monarch with a pledge of loyalty to Saint Lucia. Parliament passes new criminal laws legalizing abortion in some circumstances and proscribing the spread of false news.
- 2004** Anthony announces that he will run for prime minister for a third time in the next general election.

NATIONAL FLAG

Three vertical bands of blue (left), gold, and green with three green diamonds arranged in a V in the gold band, which is twice the width of each of the other bands

NATIONAL EMBLEM

A base of green with a fire burning on an ancient altar between the figures of Peace and Justice dressed in azure, the figure on the left holding an olive branch and the figure on the right kneeling on the right knee to make sacrifices on the altar. On the crest is a sprig of the cotton plant, and on a scroll at the bottom is the national motto, *Pax et justitia* (Peace and justice).

DATE OF INDEPENDENCE

October 27, 1979

DATE OF CONSTITUTION

October 27, 1979

GEOGRAPHICAL FEATURES

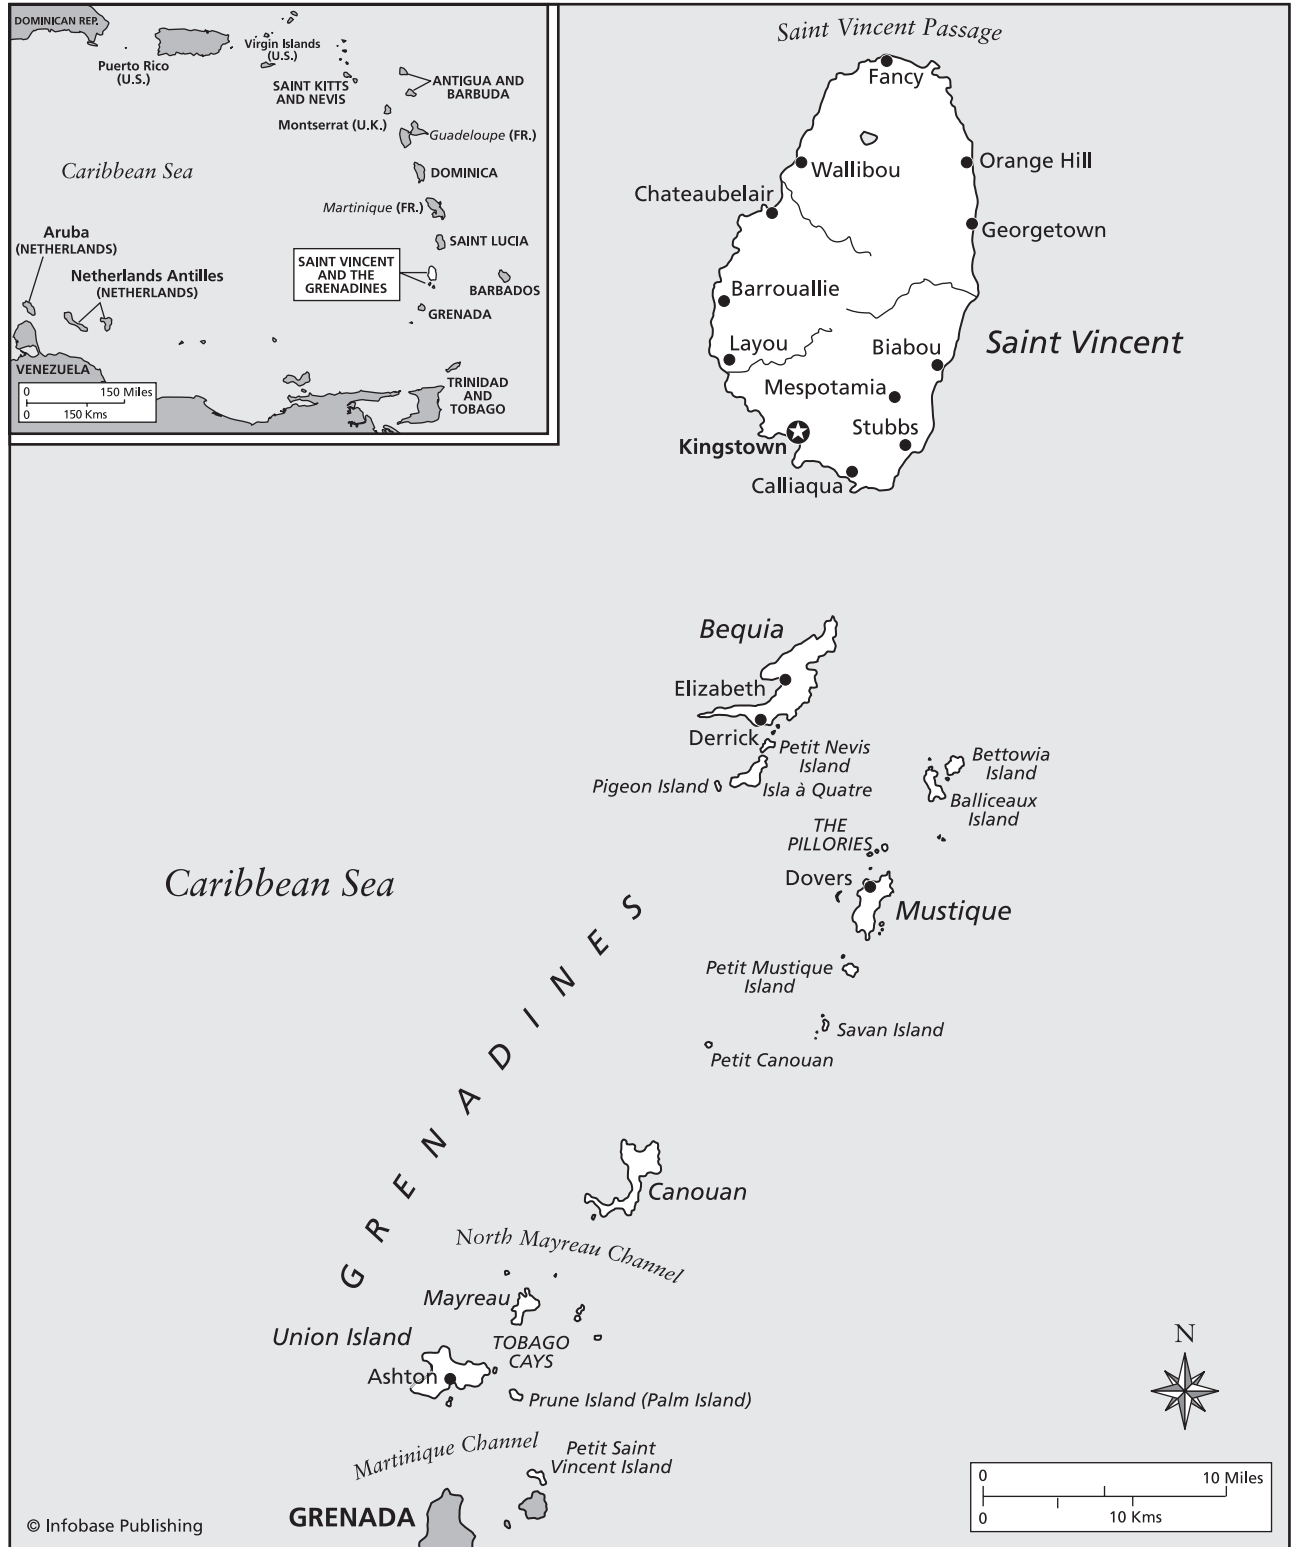

Saint Vincent and the Grenadines lies in the Lesser Antilles at the lower end of the Caribbean chain of Windward Islands, some 98 km (60 mi) north of Grenada and 160 km (100 mi) west of Barbados.

Saint Vincent is a small, green island, only 29 km (18 mi) long and 18 km (11 mi) wide, with a total land area of 347 sq km (134 sq mi). The length of the coastline is 84 km (52 mi). Down its whole length the island is dominated

by a volcanic range of mountains, with four peaks almost equidistant from one another: Soufrière, Richmond, Grand Bonhomme, and St. Andrew. The land slopes gently to the coast on the east, in contrast to the rugged terrain on the west. There are many fast-flowing rivers.

The Grenadines are a chain of islets between St. Vincent and Grenada. All of them have white beaches noted for their intense beauty and coral reefs, with enclosed bays that are ideal for underwater sports. The larger of the Grenadines are Bequia, Canouan, Mustique, and

Saint Vincent and the Grenadines

Union, while among the smaller are Mayreau, Palm (or Prune), Baliceaux, Bettowia, and Isle à Quatre. Many of the islets are privately owned, and most of them are unin-

habited; only twelve or so serve as permanent homes for humans. The total land area of the country is 389 sq km (150 sq mi).

CLIMATE AND WEATHER

The climate is tropical, with average temperatures of 18 to 32°C (64 to 90°F). From January to June the northeasterly trade winds predominate, and temperatures are equable. The rainy season is from May to November, when the rainfall ranges from 1,500 mm (60 in) to 3,750 mm (150 in). The central mountains experience the heaviest rainfall. Saint Vincent lies just inside the Caribbean hurricane belt but has seldom suffered much damage.

Climate and Weather

Temperature Range: 64°F to 90°F
Average Rainfall: 150 in

FLORA AND FAUNA

Saint Vincent is heavily forested with domestic banana trees, coconut palms, arrowroot, and indigenous rain-forest flora. Most of the Grenadines are dry and have only scrubby vegetation.

The national bird is the Saint Vincent parrot, which is endangered. Many other species of tropical birds, such as the whistling warbler, also live in the rain forest. Mammals include the manicoú, a kind of opossum, and agouti. There are three species of snakes, all nonvenomous. Sea-birds such as boobies, frigate birds, ospreys, and pelicans visit the islands. Within the sea is a variety of tropical fauna, including sea urchins, turtles, and tropical fish.

POPULATION

Population Indicators

Total Population 2005: 117,534
World Rank: 175th

ETHNIC COMPOSITION

The original inhabitants of the island were the Caribs, who have disappeared as a distinct group through natural disasters, forced expulsion, and intermarriage with blacks; Caribs now make up only 2 percent of the population. The first foreigners to successfully settle on the island were African slaves who survived a shipwreck in 1675; they mixed with Carib society and produced mixed-race descendants known as Black Caribs. Subsequent ships added to the black population, and now the majority of the population is either black (66 percent) or mixed (19 percent). After the abolition of slavery in 1838, Portuguese workers from Madeira and indentured laborers from India were imported, adding further variety to the ethnic composition; about 6 percent of the population is East Indian. A small portion of the population is white; many of these whites are wealthy foreigners who have purchased individual islands or who live on their yachts, in contrast to the generally poor native population.

LANGUAGES

The official language is English, which is spoken with varying levels of fluency by almost all Vincentians. A French patois, which mingles French, Spanish, and African languages, is used on some Grenadine islands.

RELIGIONS

The Anglican, Methodist, Roman Catholic, and Seventh-Day Adventist churches are all represented on the island, in addition to a host of smaller groups and cults. The Anglican bishop of the Windward Islands resides in St. Vincent.

Anglican	55,200
Methodist	32,900
Roman Catholic	15,300
Other	14,100

HISTORICAL BACKGROUND

Saint Vincent was settled around 5000 B.C.E. by the peace-loving Ciboney Indians. The Arawaks also settled there and were dominant when the war-like Caribs took control of the island. Saint Vincent was discovered by Columbus in 1498 but remained in the possession of the Carib Indians until 1627, when the King of England granted the island to the earl of Carlisle, who did not occupy it and allowed the grant to lapse. In 1675 a Dutch slave ship, wrecked off Bequia, brought the first Africans, who intermarried to foster the Black Caribs, whose descendants live there today.

In 1779 Saint Vincent was captured by the French, but the island was restored to Great Britain under the terms of the Treaty of Versailles in 1783. For the next 13 years the French and their Carib allies tried to wrest possession from the British, without success, although in 1795 the French and Caribs overran the island and murdered all the British colonists. In 1797 the Caribs were expelled to the island of Roatan, near the Gulf of Honduras. Along with other nearby British territories, St. Vincent was administered by the governor of the Windward Islands until 1959. From 1958 to 1962 it was a member of the West Indian Federation. Upon the failure of negotiations to form the East Caribbean Federation, St. Vincent, along with other British colonies in the region, became one of the West Indies Associated States, with full internal self-government, in 1967. The Legislative Council was renamed the House of Assembly, the administrator became the governor, and the chief minister was restyled the premier.

Following the constitutional conference of 1978, the country was granted full independence as St. Vincent and the Grenadines on October 27, 1979. As a result of the transition, the former governor, Sir Sydney Gun-Munro, became governor-general, and the premier, Milton Cato, became prime minister. Cato remained in office following the victory of his Saint Vincent Labour Party (SVLP) in December elections. That month the government quelled an uprising on Union Island by Rastafarians attempting to secede. The SVLP was defeated in the 1984 elections by the New Democratic Party (NDP), led by James F. Mitchell, who became prime minister. The NDP, which won elections again in 1989, remained in office by winning 12 of 15 elective seats in 1994 but saw its majority dwindle to eight in 1998. In 2001 the NDP gained only three parliamentary seats, while the Unity Labour Party (ULP), successor to the SVLP, won 12. Ralph Gonsalves became prime minister. He was reelected in 2005.

The nation spent the early 2000s trying to diversify its economy in the wake of the European Union's decision to phase out preferential treatment for banana growers in former colonies. The government has been working to end drug trafficking and money laundering. Gonsalves wants to end customs and immigrations restrictions in the region and supports a political union of Caribbean nations.

1984–2000	James Fitz-Allen Mitchell
2000–01	Arnhim Eustace
2001–	Ralph Gonsalves

CONSTITUTION

Saint Vincent is a parliamentary democracy within the Commonwealth, with the Queen of England as head of state, as represented on the island by a governor-general appointed by the monarch. The prime minister is the head of government; the governor-general appoints the prime minister, historically selecting the leader of the majority party in parliament. The governor-general also appoints a deputy prime minister, following the advice of the prime minister. In the tradition of countries following the Westminster system, the governor-general can remove the prime minister from office if a resolution of no confidence is passed by the House of Assembly and the prime minister does not resign within three days or advise the governor-general to dissolve the house. The cabinet consists of the prime minister, six other ministers, and the attorney general as an ex officio member.

Suffrage is universal for all citizens 18 years of age and older.

PARLIAMENT

The national legislature is the 21-member unicameral House of Assembly, consisting of 15 representatives and six senators. The senators are appointed by the governor-general—four on the advice of the prime minister and two on the advice of the leader of the opposition. The term of the House is five years. The representatives are elected to five-year terms through popular vote from single-member constituencies. The prime minister is allowed to call elections at any time, regardless of whether a five-year term is up.

2008 Saint Vincent and the Grenadines

The leader of the opposition is appointed by the governor-general; the former's position and responsibilities are set forth in the constitution.

POLITICAL PARTIES

The current ruling party is the Unity Labour Party (ULP), a moderate social democratic party that was founded in 1994 by the merger of the Movement for National Unity and the St. Vincent Labour Party. The New Democratic Party (NDP) also has representation in parliament. Other parties include the National Reform Party (NRP), People's Progressive Movement (PPM), Progressive Labor Party (PLP), and United People's Movement (UPM).

LOCAL GOVERNMENT

For purposes of local government the island of Saint Vincent is divided into five local parishes: Charlotte, St. George, St. Andrew, St. David, and St. Patrick. The Grenadines make up a sixth parish under the control of the prime minister's office.

LEGAL SYSTEM

The legal system is based on British common law. The system is headed by the Eastern Caribbean Supreme Court (locally called the Saint Vincent and the Grenadines Supreme Court), which includes the Court of Appeals and the High Court, one of whose judges is resident on Saint Vincent and presides over a court of summary jurisdiction. The islands are divided into three magisterial districts: The first is at Kingstown; the second covers Georgetown, Biabou, Mesopotamia, and Colonarie; and the third covers Layou, Chateaubelair, Calliaqua, and the Grenadines. The court of last resort is in London, at the judicial committee of Her Majesty's Privy Council.

HUMAN RIGHTS

The human rights situation in Saint Vincent and the Grenadines is good. British rule left a deep impression on the political and legal systems, which specifically respect the integrity of the person and guarantee fair trial, due process, freedom from arbitrary arrest, and other civil practices. Although there is unfettered participation in the political processes, political parties function actively only during elections; at other times the government tends to neglect opposition viewpoints. There is no form of censorship or government interference in media activities. There have been some reports of police vio-

lence and poor prison conditions, and the court system is overburdened. There is some violence against women and children.

FOREIGN POLICY

Saint Vincent and the Grenadines has close ties with its neighbors, including the United States and other Caribbean nations. It is also friendly with Canada and the United Kingdom. It is a member of the Organisation of Eastern Caribbean States (OECS) and the Caribbean Community as well as the United Nations, the Association of Caribbean States, the Organization of American States, and the Commonwealth of Nations. It supported UN efforts to restore Haiti's democratically elected government and has also maintained close ties with Cuba, which provides health-care aid and scholarships to Vincentians.

The United States has supported Vincentian efforts to improve the nation's economy and has provided military assistance for construction and humanitarian projects. The two nations have been working to stop the cultivation and shipment of marijuana.

DEFENSE

Saint Vincent has no standing army. A regional defense pact with eight other Caribbean nations provides for joint coast guard operations, military exercises, and disaster contingency plans. The only security force is the Saint Vincent Police, which includes a small coast guard and a small paramilitary special forces unit.

ECONOMY

Saint Vincent is a lower-middle-income country, with a free-market economy in which the private sector is dominant. The government is trying to diversify the economy in order to make the nation less dependent on the world banana market.

Agriculture is the dominant sector of the economy, with bananas and arrowroot serving as the primary cash crops. Bananas are by far the most important crop, employing 60 percent of the workforce and producing half of export income. Agriculture is vulnerable to weather and seasonal price fluctuations; tropical storms periodically wipe out large portions of crops. The service sector is next in importance, as based primarily on a growing tourist industry that suffered from low numbers of arrivals following the terrorist attacks of September 11, 2001, in the United States. There is a small manufacturing sector, principally consisting of food processors and factories producing cement, furniture, clothing, and starch. The nation has a small offshore banking sector, which

has recently adopted international regulatory standards; in 2003 Saint Vincent and the Grenadines was removed from a list of nations believed to be accommodating money launderers.

Marijuana is Saint Vincent's most lucrative illegal crop. The islands are commonly used as a transshipment point for illegal drugs being moved from South America to the United States and other markets. The government is trying to eliminate this sector of the economy.

ENVIRONMENT

The biggest environmental problem in Saint Vincent and the Grenadines is the pollution of shorelines and coastal waters by waste from pleasure boats and land facilities. In some areas pollution is so bad that swimming is impossible. As tourism continues to play a critical role in the development of the nation, the country must address its impact on coasts and manage its increased disposal needs.

LIVING CONDITIONS

Most families live in houses they have built themselves; the houses are usually small, sometimes with only two rooms. Almost all houses have running water and electricity, which is a recent development. Freshwater has historically been in short supply, and most homes still collect rainwater in barrels and buckets. Despite the polluted

condition of the oceans around the islands, the freshwater is safe to drink in most areas.

Saint Vincent has numerous buses, which are inexpensive and efficient. Bequia also has public buses and trucks. The only way to travel between most islands is by boat.

HEALTH

The nation has a thorough system of health care provided by the government at hospitals and community health centers. Health care for children, prenatal and postnatal care, and family-planning services are all provided free of charge. People must pay small fees for other services; fees are set on a sliding scale based on income. The government also provides some dental care, and immunizations are part of the public health program. Life expectancy in 2004 was over 73 years. On average, each woman has 1.85 children; this low fertility rate is the result of a family planning program implemented by the government in 1974. The government is concerned about the spread of HIV/AIDS due to high rates of sexual activity among young people.

FOOD AND NUTRITION

People in Saint Vincent and the Grenadines eat a great deal of locally caught seafood, including conch, lobster, whelk, shrimp, and various fish; salted fish is quite popular. There are many fresh fruits and vegetables, especially breadfruit, sweet potatoes, pumpkins, bananas, coconuts, and Saint Vincent oranges. (Breadfruit has been grown on the island since 1793, when Captain Bligh, later of *Bounty* fame, brought it back from Tahiti.) The national dish is breadfruit and fried jackfish. Other typical dishes include pumpkin soup, a stew called callaloo, and pig-foot souse. People also eat some East Indian dishes, such as roti. Arrowroot is used as a thickener in desserts. Common drinks

include tea, coffee, hot chocolate, fish-broth tea, and cocoa tea. Rum is the most popular alcoholic beverage.

Food and Nutrition

 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 111.8
 Amount of Fruits and Vegetables Available per person per year kg: 124.7

STATUS OF WOMEN

The role of women in society is not restricted by law, but custom dictates that most Vincentian women center their lives around the home. Many observers expect that as women take greater advantage of public education programs, health facilities, and family planning, they will participate in larger numbers in the nation's economic, professional, and political life.

Violence against women has been a problem. Minibus drivers are notorious for harassing young female passengers. In 2005 the government called for an end to violence against women.

WORK

A substantial portion of the Vincentian workforce grows bananas. Most families own a plot of land and use it for subsistence farming, growing their own crops and raising livestock; they may also grow bananas and sell them in Kingstown. Fishing is an important local industry, and some people work in tourism. Unemployment is a serious problem; the rate was 15 percent in 2001. Women and teenagers have particular difficulty finding work for pay. Poor levels of education make the problem of unemployment particularly difficult to solve, as the workforce on the whole lacks the skills to do many jobs.

Employment and Labor

Labor Force Total: 67,000
 Female Participation Rate %: —
 Labor by Sector %:

EDUCATION

Primary education is free but not compulsory. The duration of schooling is 14 years, as divided into seven years of primary school, five years of lower secondary school, and two years of upper secondary school. The school year runs from September through July. The medium of instruction is English throughout. Parents must buy uniforms and books for their children, and textbooks and sporting equipment are sometimes hard to find. Overcrowding is a problem. About 25 percent of children leave school before finishing primary school because they must work to support their families.

Fewer than 60 percent of the nation's children attend any kind of secondary school. Facilities include a technical college, a nursing school, and a teacher-training college. The government offers advanced training in agriculture and vocations. Students who want a university education must go abroad. Cuba offers university scholarships to some Vincentian students; others go to Canada, the United States, or the United Kingdom.

SCIENCE AND TECHNOLOGY

The telephone system on Saint Vincent is adequate. There is VHF/UHF radiotelephone service between Saint Vincent and the Grenadines. The country recently added SHF radiotelephone service to Grenada and St. Lucia, and there is access to the INTELSAT earth station in Martinique through St. Lucia. In 2002 the nation had nearly 30,000 telephone lines and about 10,000 cellular telephones. About 7,000 people were using the Internet. Technological development is somewhat hampered by the low level of education that prevails throughout the islands.

MEDIA

The constitution guarantees freedom of the press, and Vincentian publications openly criticize the government. All print publications are privately owned. The *Herald* is a daily newspaper. There are several weekly publications, including the *News*, *Searchlight*, and the *Vincentian*, which is published by the Vincentian Publishing Company. The national radio station is the National Broadcasting Corporation of Saint Vincent and the Grenadines, which provides local programming in addition to transmitting BBC news; it is partly funded by the government. There are several private radio stations. The only television station is SVG Television, operated by the Saint Vincent and the Grenadines Broadcasting Corporation.

CULTURE

Local culture mixes the cultures of the Black Caribs, West Africa, France, and Britain. Many islanders are expert boat-builders, constructing full-size and miniature boats as an art form. Music is extremely important, and no social occasion is complete without live music. Musical styles include calypso, reggae, steel band, soca, and big drum. Big-drum music is played on large drums that were originally carved from trees but are now usually made from rum kegs. Big-drum singers are usually women who wear full skirts and headdresses and sing songs that are full of satire and social commentary. The island's most famous musician is the poet and trumpeter Shake Ellsworth Keane.

The islands are known for attracting the world's rich and famous people. The island of Mustique is particularly famous for its celebrity visitors and property owners.

Cultural Indicators

Public Libraries Number: 1
Volumes: 280,000
Registered borrowers: —

FOLKLORE AND MYTHOLOGY

Telling folktales and local myths is local tradition and an important part of community life. People admire skilled storytellers. Many folktales, such as Anansi tales, come from Africa and feature trickster animals that constantly outwit one another. Local versions of these tales add local details to the old stories.

ENTERTAINMENT AND RECREATION

Kingstown is the biggest urban center and attracts many visitors on weekends. People go to the markets to sell produce, shop, and meet friends. Discos are very popular, especially with young people. Men gather at local rum shops to drink, socialize, and play dominoes.

Water sports are popular with both locals and tourists. Swimming, windsurfing, snorkeling, and scuba diving are all excellent, though water pollution is increasingly a problem. The islands attract yacht owners from all over the world. Hiking on the islands is also pleasant.

ETIQUETTE

People follow typical Western rules of behavior. Vincenians are quite friendly and outgoing. It is considered acceptable for merchants to approach potential buyers to offer them their wares; the prospective buyer is expected to politely decline the goods if he or she does not want them.

FAMILY LIFE

Family arrangements are typically loose. Though some people marry, many do not, and it is not uncommon for men and women to live in separate houses. People may have children with multiple partners. Women have traditionally been the mainstays of households; almost 40 percent of families are headed exclusively by women, and even when a man is present, the mother of the family is still quite important. Women raise children, tend the family garden, do household chores, and care for elders. Older children and relatives are expected to help with household work, especially looking after babies and young children. Teenage pregnancy is not as common as

it was in the 1970s, but it is still not unusual for teenage girls to have children.

PERSONAL APPEARANCE

Most people wear casual Western clothing. The climate is hot, so people usually dress in light cotton garments. It is considered improper to wear bathing suits away from the beach. Some establishments catering to tourists have more formal dress codes.

SPORTS

Cricket and soccer are the most popular sports with people of all ages, both as participants and as spectators. Vincentian cricket players are often chosen to play on the West Indian team. Other popular sports include basketball, volleyball, karate, tae kwon do, and table tennis. The government's Ministry of Sports has been trying to develop the nation's sporting facilities and to encourage people to participate in sports.

CHRONOLOGY

- 1979** Saint Vincent and the Grenadines becomes fully independent as a special member of the Commonwealth. In House of Assembly elections Prime Minister Milton Cato's Saint Vincent Labour Party (SVLP) wins 11 of 13 seats. The government quells an uprising on Union Island organized by the Rastafarian cult, which, among other things, worships the former emperor Haile Selassie of Ethiopia.
- 1984** In general elections the New Democratic Party (NDP), led by James F. Mitchell, wins nine of 13 House of Assembly seats while the SVLP wins only four. Cato steps down, and James F. Mitchell takes office as prime minister.
- 1989** The NDP takes all elective seats in the House of Assembly. James Mitchell retains the prime ministership.
- 1990** Work begins on an airport on Bequia that, when completed in 1992, will make the island accessible by air for the first time.
- 1994** The NDP holds onto 12 seats in the House, and Mitchell is again selected as prime minister.
- 1997** Charles Antrobus is appointed governor-general.

- 1998** The NDP, headed by James Mitchell, narrowly wins a fourth term.
- 2001** The Unity Labour Party, successor to the SVLP, wins 12 seats in the House of Assembly, and Ralph Gonsalves becomes prime minister.
- 2002** Governor-general Charles Antrobus dies.
- 2003** Saint Vincent and the Grenadines joins the Non-Aligned Movement of developing nations and is removed from the list of nations facilitating money laundering.
- 2005** Ralph Gonsalves wins a second term as prime minister.

NATIONAL FLAG

Red field with a blue quarter on the hoist bearing the five white stars of the Southern Cross

NATIONAL EMBLEM

A shield displaying the constellation of the Southern Cross on a blue field, from which sprouts a brown palm tree with green fronds against a white background broken by wavy green lines. The device is encircled by a stylized wreath and is crested by a cross. On a scroll at the bottom is the national motto, *Fa'avae i le Atua Samoa* (May God be the foundation of Samoa).

NATIONAL ANTHEM

"The Flag of Freedom"

NATIONAL HOLIDAYS

January 1 (National Day), April 25 (ANZAC Day), June 3, 4, and 5 (Independence Days), December 26 (Boxing Day), various Christian and Western festivals, including Good Friday, Easter Monday, Whitmonday, Christmas

DATE OF INDEPENDENCE

January 1, 1962

DATE OF CONSTITUTION

January 1, 1962

GEOGRAPHICAL FEATURES

Samoa lies in the Pacific Ocean 2,574 km (1,600 mi) northeast of Auckland, New Zealand, and consists of two large islands, Upolu and Savai'i, and the smaller islands of Apolima, Fanuatapu, Manono, Namua, Nuusafee, and Nuutele. Only the two large islands of Upolu and Savai'i, separated by 18 km (11 mi), are inhabited. The total land area is 2,944 sq km (1,137 sq mi), extending 150 km (93 mi) east-southeast to west-northwest and 39 km (24 mi) north-northeast to south-southwest. The nation's total coastline is 403 km (250 mi).

The islands are of volcanic origin, and the coasts are surrounded by coral reefs. There are many dormant volcanoes; the most recent period of volcanic activity was be-

tween 1905 and 1911. Rugged mountain ranges form the core of both Savai'i (1,709 sq km; 660 sq mi) and Upolu (1,113 sq km; 430 sq mi). The highest elevations are 1,857 m (6,094 ft) on Savai'i and 1,099 m (3,608 ft) on Upolu. Because of large areas laid waste by lava flows on Savai'i, that island supports fewer people than the smaller Upolu.

CLIMATE AND WEATHER

Samoa has a tropical climate with two seasons: dry from May to October and wet from November to April. The hottest month is December, the coldest July. The mean daily temperature is 27°C (80°F). The average rainfall is 2,870 mm (113 in) per year, of which two-thirds falls during the wet season. Although Samoa lies outside the normal track of hurricanes, there are occasional severe storms.

Climate and Weather

Mean Temperature: 80°F

Average Rainfall: 113 in

FLORA AND FAUNA

The flora of Samoa consists of tropical rain forest in three broad types: lowland forest (the most extensive), montane forest, and cloud forest. Samoa has 536 species of flowering plants, 28 percent of them endemic. There are also 228 species of fern. Samoa has 37 native species of land birds, only four of which were introduced. There are various species of pigeons, rails, ducks, swamp hens, thrushes, and doves, as well as the Samoan flying fox. There are also nine species of reptiles, including geckos, skinks, and boas.

ETHNIC COMPOSITION

Samoans constitute nearly 93 percent of the population; the remaining 7 percent consist of mixed whites and Polynesians and fewer than 1,000 Europeans.

The Samoans belong to the Polynesian race, which came to the islands in migratory waves over 2,000 years ago. Samoans are the second-largest branch of the Polynesian race, after the Maori, of New Zealand.

LANGUAGES

The official languages are Samoan and English. Samoan, a Polynesian dialect, is spoken universally. It is a vowel language, containing 10 distinct vowel sounds but only a few consonants. In some words the vowel sounds are doubled or even tripled, resulting in *aaa's* and *eee's* in the same word. English is taught in schools and is used in administration and commerce; most Samoans are familiar with English.

RELIGIONS

As in race and language, there is considerable homogeneity in the religious backgrounds of Samoans. Nearly 99.7 percent are Christians, and 50 percent belong to the London Missionary Society, now known there as the Congregational Christian Church of Samoa. The Roman Catholic and Methodist churches each have about 20 percent membership. Religious observance is strong among all groups.

HISTORICAL BACKGROUND

The most likely origins of the Samoan people, like other Polynesians, is that they migrated from the East Indies, the Malay Peninsula, or the Philippines. Samoans in fact believe that they are the cradle of Polynesian culture, a

race of people created by the god Tagaloa while he was conceiving the world. Trading ships often stopped on the islands as they were sailing the spice route. Much early contact was bloody, as the Samoans wanted to keep foreigners out.

More permanent contacts between Samoa and the West came through the London Missionary Society, a branch of which was established in Apia in 1832. Between 1847 and 1861 representatives of Germany, the United Kingdom, and the United States were stationed in Apia, where they became actively involved in intrigues and civil wars among the various paramount tribal chiefs. By a series of conventions signed in 1900, Samoa became a German protectorate. On the outbreak of World War I in 1914, New Zealand occupied the islands, administering them from 1919 to 1946 as a mandate of the League of Nations. From 1927 to 1936 the New Zealand administration faced a serious challenge from a nationalistic organization known as Nau, which orchestrated a movement for civil independence.

In 1946 the League of Nations mandate was converted into a trusteeship agreement, under which New Zealand was committed to the promotion of Samoan self-government. An indigenous cabinet was introduced in 1959, and in 1960 the constitution of the Independent State of Western Samoa was adopted. In a plebiscite held under UN supervision in 1961, an overwhelming majority approved full independence, which was granted in 1962.

At independence Fiamē Mata'afa Mulinu'u became prime minister. His government lasted until 1970, when it was replaced by one led by Tupua Tāmasese Lealofi. Mata'afa regained power in 1973 and served until his death in 1975, when he was again replaced by Tāmasese. The following year Tāmasese lost the general election to Tupuola Tāisi Efi, the first prime minister not to come from one of the four leading families. Efi retained power following the 1979 general election.

Until 1979 there were no political parties in Western Samoa. In that year Va'ai Kolone organized the kingdom's first political party, the Human Rights Protection Party (HRPP), which won 22 of 47 seats in the Legislative Assembly in the 1982 elections. Following legal wrangles, Kolone turned over party leadership to Tofilau Eti Alesana, who led the HRPP to a landslide 31–16 victory in the 1985 elections. Meanwhile, the pro-private enterprise Labor Party was formed in 1981, while former prime minister Tupuola Efi organized the Christian Democratic Party (CDP). HRPP dissidents and the CDP toppled the government of Alesana in December 1985 and reinstated Va'ai Kolone as prime minister. In 1988 Alesana became prime minister once again.

In a popular referendum held in 1991 universal suffrage was adopted for all persons over 21, although only chiefs were eligible as candidates. In 1997 the name of the country was changed from Western Samoa to Samoa.

The next year Prime Minister Tofilau Eti, who had held office from 1982, resigned in favor of his deputy, Sailele Malielegaoi Tuila'epa. In 2001 Tuila'epa was elected to a second term in a close election, and the HRPP won 28 seats in the 49-seat parliament. In 2002 New Zealand formally apologized to Samoa for its poor treatment of Samoans during colonial times.

CONSTITUTION

The constitution of 1962 established a British or Westminster-style parliamentary democracy. It provides for a head of state, known as *ao o le malo*. The present head of state is the scion of an old royal line and holds the position for life, but future heads of state will be elected by the Legislative Assembly for five-year terms. Although the constitution does not make it mandatory, future heads of state will be selected from among the holders of the four paramount titles. The cabinet, introduced in 1959, is headed by a prime minister, who is the head of government and is appointed by the head of state; the cabinet includes nine ministers collectively responsible to the Legislative Assembly. The prime minister requires the confidence of the assembly, although he and the cabinet are not necessarily dismissed when he loses that confidence, as there is no conventional party structure and such a dismissal would be contrary to traditional Samoan concepts of government. Decisions of the cabinet are subject to review by the Executive Council, a joint body composed of the head of state, the prime minister, and the cabinet. The council does not formulate policy but issues regulations and makes important appointments. Suffrage is universal for Samoan citizens at the age of 21.

The main element of Samoan stability is the conservative character of the political system, which is moderately representative while preserving older traditions. Decision making at the political level is dominated by the concept of consensus, described as essential to the *fa'a Samoa* (Samoan way). The Samoan political and social systems interact at every level. Samoan society is composed of a number of extended families (*aiga*),

whose heads bear the official title of *matai*. The number of such patriarchs is not fixed because as new extended families are formed, new titleholders are created. This exclusive *matai* group functions as the reservoir from which Samoan political leadership is always drawn. Traditionally, *matai* have the authority to impose their views on other members of the extended family. However, they also have well-defined responsibilities, and they may be removed if they do not meet these responsibilities. Apart from *fa'a Samoa*, there are no other political ideologies strong enough to influence voters. There have been moves toward universal suffrage and a reduction of *matai* powers. In 1985 the number of *matai* was increased by one-third to 16,000. Currently, two special representatives are chosen through universal adult suffrage by persons, principally Europeans, outside the *matai* system.

PARLIAMENT

The unicameral Legislative Assembly (Fono) is elected for five-year terms and consists of 49 members, of whom 47 are elected from territorial constituencies by the *matai*; the remaining two members are elected by universal suffrage by persons outside the *matai* system, such as persons of mixed white and Polynesian descent and Europeans with Samoan citizenship.

POLITICAL PARTIES

There are two major political parties and several smaller parties in Samoa. The largest is the Human Rights Protection Party (HRPP), which was the country's first political party in 1979. The other large party is the Samoa National Development Party, formed in 1988 as a coalition of several independent groups and the Christian Democrats. These two parties controlled 30 and 13 seats, respectively, after the 2001 general election.

LOCAL GOVERNMENT

There is no formal system of local government; apart from an administrative officer on Savai'i, there is no administrative corps at the district level. Administrative districts drawn up in 1956 are used mainly as units for the operation of health, agriculture, police, and educational services. There are 11 such districts.

The basic territorial units are the *nu'u* (village) and *pitonu'u* (subvillage). The governing body of the *nu'u* is the *fono*, or *fono a faipule*, whose members are the *matai*. The chief of the *fono* is the *ali'i*, while the executive agent is the *tulafale* (orator). The frequency of meetings of the *fono* may vary from weekly to a few times a year.

LEGAL SYSTEM

The legal system is based on English common law, with elements of Samoan customary law.

The judiciary is headed by the Supreme Court, consisting of a chief justice and a junior judge appointed by the head of state, who acts on the advice of the prime minister. Appeals from the Supreme Court lie with the Court of Appeal, consisting of the chief justice and three other justices. The subordinate courts are the magistrate's courts. The highest magistrate's court consists of a magistrate and two senior judges assisted by seven junior judges. The Land and Titles Court has jurisdiction in disputes over land and succession to Samoan titles.

The Judicial Service Commission is composed of the chief justice, the attorney general, and some other person nominated by the minister of justice. The commission advises the head of state on the appointment, promotion, and transfer of judges (except the chief justice).

The corrections system consists of two penal institutions: a conventional prison at Tafa'igata, near Apia, and a prison farm at Vaia'ata, on Savai'i. The average prison population is 200.

HUMAN RIGHTS

Although Samoa is described as only a partly free country, human rights there are well secured, both by constitution and by custom. The political system is traditionally elitist, but this has not polarized society, and there are no deep divisions between the power holders and the powerless. The judiciary is independent, and the legislature is not entirely a rubber stamp of the executive.

FOREIGN POLICY

Samoa has diplomatic relations with two dozen countries, but most embassies servicing the nation are located in New Zealand. Indeed, the country's nearest important neighbor is New Zealand, with which relations have been cordial, although the legal status of Samoans living in New Zealand has sometimes been a thorny issue.

DEFENSE

Samoa has no defense forces. New Zealand is responsible for the country's defense under the 1962 Treaty of Friendship. In 2004 Australia announced that it would contribute \$7 million to help train Samoan security forces.

ECONOMY

The economy of Samoa has traditionally been dependent on development aid, private family remittances from overseas, and agricultural exports. The country is vulnerable to devastating storms. Agriculture furnishes a substantial portion of exports, including coconut cream, coconut oil, and copra. Outside of a large automotive wire harness factory, the manufacturing sector mainly processes agricultural products. Tourism is an expanding sector, accounting for 15 percent of gross domestic product (GDP) in 2000; about 92,000 tourists visited the islands in 2003. The Samoan government has called for the deregulation of the financial sector, the encouragement of investment, and continued fiscal discipline. Observers point to the flexibility of the labor market as a basic strength for future economic advances. Foreign reserves are in a relatively healthy state, external debt is stable, and inflation is low. Real growth in 2002 was 5 percent.

ENVIRONMENT

Deforestation is the greatest environmental challenge faced by Samoa; the country has lost about 80 percent of its lowland rain forest during the 3,000 years in which humans have inhabited the islands, and environmental watchdog groups predict that at the current rate, all lowland forests could be gone in the early 21st century. The country also suffers from growing problems regarding sewage disposal in urban areas. Increased agricultural activity has led to increased soil erosion as well as the pollution of water resources by runoff from fertilizer and pesticides. A further problem has been the decline of the fish population in surrounding waters. The government has been active in trying to address these concerns before they become crises.

LIVING CONDITIONS

Living conditions in Samoa are difficult to describe. On the one hand, the nation would seem to be somewhat poor, with a per capita GDP of \$5,600 in 2002. Sources of income are limited, and the country depends heavily on foreign aid and money sent by Samoans living and working overseas. Still, Samoans have ample food supplies, and the way of life is relaxed and easygoing. Housing is comfortable, with a blend of European-style homes and traditional thatched-roof, open-air homes built on volcanic boulder formations. The social order is maintained through strong village politics. The major social problem is out-migration by those seeking better economic opportunities in American Samoa and in the United States. The net migration rate is nearly -12 per 1,000 population.

HEALTH

The state of health care in Samoa is reasonably good. In 2005 life expectancy at birth was 70.7 years. The infant mortality rate was nearly 28 deaths per 1,000 live births. Samoans follow parallel health-care systems: They believe that certain illnesses can be identified as *ma'i Samoa*, or Samoan illnesses that are best treated by traditional practitioners. Other illnesses are *ma'i papalagi*, or European illnesses best treated by modern Western practitioners and methods.

FOOD AND NUTRITION

The state of nutrition in Samoa is generally good. In 2002 an estimated 4.2 percent of infants were of low birth weight. In 1999 the prevalence of underweight children under five was just 1.9 percent; of stunting, 4.2 percent; and of wasting, 0.9 percent. Indeed, overweight and obesity are bigger problems; that same year about 3.8 percent of children were overweight, and 2.8 percent were regarded as obese. Staples in the Samoan diet are many and varied. Animal protein sources include pork, chicken, crab, lobster, and fish. Vegetables include cabbage and lettuce as well as root vegetables such as yams and taro. Samoans consume large amounts of bananas and breadfruit, and coconut is used to make a sauce used as a condiment. Samoans perceive the eating of coconut meat as a sign of poverty, so they avoid it.

Food and Nutrition

Undernourished % of total population: —
 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: 75.8
 Amount of Fruits and Vegetables Available per person per year kg: 193.3

STATUS OF WOMEN

The Ministry of Women's Affairs oversees and helps ensure the rights of women. As in much of the world, women are underrepresented in government. The 12-member cabinet has one female member, and women hold three of 49 seats in the Legislative Assembly, primarily because only *matai* can run, and traditionally most *matai*—about 95 percent—have been men. The first female attorney general was appointed in 1997. While the law generally prohibits the abuse of women, social custom permits their physical abuse within the home. In some cases, "extreme abuse" and domestic violence are punished by village councils. Tradition and custom also discourage the reporting of rapes, but rape cases that reach the courts are punished severely, and convicted offenders are given stiff sentences.

WORK

In 2000 the Samoan labor force was estimated at 90,000. Estimates hold that about 70 percent of the labor force

works in agriculture and industry, while the remaining 30 percent are employed in services. Agriculture contributes about 14 percent to GDP, industry 23 percent, and services 63 percent. Major agricultural products include coconuts, bananas, taro, yams, coffee, and cocoa. Major industrial products include processed food, building materials, and automotive parts. There is substantial underemployment in Samoa, prompting many younger persons to leave the nation to seek better economic opportunities overseas.

Employment and Labor

Labor Force Total: 90,000
 Female Participation Rate %: —

EDUCATION

Samoa has not introduced universal, free, compulsory education. Nevertheless, the literacy rate is nearly 100 percent. Schooling lasts for 14 years, as divided into seven years of primary school, four years of lower secondary/middle school, and three years of upper secondary school. However, village schools provide only four years of primary schooling. The curriculum and textbooks are similar to those used in New Zealand.

The Samoan school year is the calendar year. The language of instruction is Samoan in primary schools and English in secondary schools; as such, most Samoan children are bilingual. Almost all Samoan teachers in the public school system hold teacher's certificates. There are 205 schools in Samoa; 166 of these—141 primary and 25 secondary schools—are operated by the government, and the rest are mission schools.

In 1988 Samoa opened a national university, with a total of 325 students. As of 2001 there were about 2,000 students, while more than 200 Samoan students were enrolled in foreign universities, primarily in the United States, Australia, and New Zealand.

SCIENCE AND TECHNOLOGY

Samoa conducts little scientific and technological research. The Samoa Science Foundation is a private, nonprofit organization that solicits donations from Samoans and from overseas to promote the teaching of science in the schools. Major efforts have been undertaken to develop computer capabilities in schools. The Global Volcanism Project operates throughout the region to study volcanic activity. The Ministry of Agriculture, Forestry, Fisheries, and Meteorology supervises limited research in these areas, and the University of South Pacific's Department of Agriculture operates extension services in Samoa.

MEDIA

The merger of the *Samoa News* with the *Samoa Times* in 1994 led to the formation of the country's first daily paper. A second daily is the *Samoa Observer*. All papers are published in English and Samoan.

There is no domestic news agency. Overseas news is obtained through the New Zealand Press Association, which has a part-time correspondent in Apia.

The government-controlled Samoan Broadcasting Service operates a medium-wave transmitter in Apia. Programs are provided in Samoan and English. There are three private radio stations, providing popular and "easy listening" music. Local television service is provided by the state-run Televisi Samoa. Some 60 percent of the population is within range of transmitters in American Samoa.

The Nelson Memorial Library in Apia has some 61,000 volumes.

CULTURE

Samoa, formerly called Western Samoa, differs from American Samoa in that the latter has adopted many features of American popular culture, such as music, while in Samoa traditional songs, which tell stories about Samoan history and traditions, have retained their popularity. Another important aspect of Samoan cultural heritage is the love of traditional Polynesian dancing. Among women, dance movements are intended to tell stories. Men engage in traditional fire dancing and knife dancing, which take great acrobatic skill. The arts of oratory are also emphasized, largely because of the political structure of the nation and its emphasis on the negotiation skills of senior village leaders. These leaders speak a special *matai* language used on ceremonial occasions. The art of tattooing is highly developed, and many Samoans have elaborate tattoos.

FOLKLORE AND MYTHOLOGY

Although Samoa is overwhelmingly Christian, the *matai* are regarded as responsible for preserving Samoan folklore and history. Perhaps one reason that Samoans so readily adopted Christianity is that the traditional Samoan creation myth, involving the creator god Tagaloa, is similar to that of Christianity. One traditional story told throughout Samoa is that of a "wild man" named Malua. Malua was likely an indentured worker who escaped and is said to haunt the islands, stealing cattle and kidnapping children. One figure who has achieved near-folkloric status is the Scottish writer Robert Louis Stevenson, who lived in Samoa at the end of his life and is buried there.

ENTERTAINMENT AND RECREATION

Traditional dancing and music are important forms of recreation in Samoa. Women act out impromptu stories with their hands in a kind of dance called the *siva*, and men and women dance the *sa sa* to the beating of a wooden mallet. A favorite pastime is dominoes. Folk arts and crafts are also forms of recreation. Women weave ornaments, fans, baskets, and mats and produce tapa cloth from the bark of mulberry trees, decorating it with unique geometrical designs. Men are known for wood carving, especially the carving of animals and of bowls for drinking kava, an intoxicating root beverage.

ETIQUETTE

Although Samoans are friendly to outsiders, the nation's cultural traditions, especially as they impact social relations, can be perplexing. The nation is steeped in its traditions, and the social order is very hierarchical. Thus, numerous customs dictate behavior in politics, religion, and social interactions. The chief, or *matai*, is the head of an extended family called an *aiga*, and each member of this clan is expected to maintain a sense of honor and social standing. The *matai* ensures that people follow customs. The everyday greeting in Samoa is "*Talofa*," but greetings on more formal occasions are elaborate.

FAMILY LIFE

Young, unmarried women are frequently chaperoned, and it is extremely difficult to arrange a sexual liaison with an unmarried woman. This has given rise to a custom called "sleep crawling," by which a man waits until his love interest's family has gone to sleep, then crawls on all fours into her house, where the woman might either ask him to leave or welcome his advances.

Family life revolves around the extended family, which forms a kind of clan (*aiga*) ruled by a (usually) male elder. These clans are typically associated with rights in land, which Samoans inherit from their parents' clan. Each person may choose to live with a particular *aiga*, depending on its status and resources. These clans further consist of resident and nonresident members. Resident members live in groups of households and are responsible for working the land. They have full rights in the *aiga*. Nonresident members may work in one of the cities and return to the village for certain occasions. These members have rights, but not full rights, in *aiga* activities.

PERSONAL APPEARANCE

Large numbers of Samoans have elaborate tattoos, considered an important traditional art form. While dress has some Western characteristics, Samoans have adapted such dress to their needs. Women typically wear skirts with long blouses that match, or dresses called *puletasi*. Men and children wear a wraparound skirt called a lavalava. It is not uncommon to see a man wearing a lavalava with a Western-style sport shirt. Civil servants wear dark uniforms.

SPORTS

The most popular game in Samoa is cricket. However, as the Samoans have done with so many Western institutions and cultural traditions, they have adapted cricket to their interests, playing not with a flat bat but with a three-sided bat that looks somewhat like a war club. Also, teams are larger, consisting of from 30 to 40 players per side. Wrestling, boxing, and rugby are also popular. American football has gained in popularity, and Samoan high schools have become prime recruiting grounds for U.S. university football programs because of the size, strength, and single-minded dedication of Samoan football players.

CHRONOLOGY

- 1962** Following a UN-supervised plebiscite in which Samoans vote in favor of full independence, Western Samoa becomes the first Pacific island trust territory to achieve nationhood.
- 1963** The joint *ao o le malo* Tupua Tamasese Meaoli dies, and Malietoa Tanumafili becomes sole head of state.
- 1970** Western Samoa joins the Commonwealth. Following legislative assembly elections, Tupua Tamasese Lealofi is elected prime minister, replacing Fiame Mata'afa.
- 1973** Fiame Mata'afa returns as prime minister.
- 1975** Fiame Mata'afa dies, and Lealofi is chosen to serve as prime minister for the remaining months of Mata'afa's term. Western Samoa signs the Lomé Convention.
- 1976** Tupuola Taisi Efi becomes the nation's first commoner to be elected prime minister. Western Samoa joins the United Nations. Diplomatic ties are established with the Soviet Union.
- 1977** Western Samoa receives a development loan from the World Bank.
- 1982** The islands' first political party, the Human Rights Protection Party (HRPP), is formed and

2024 Samoa

- wins a plurality of 22 seats in the legislative assembly. HRPP leader Tofilau Eti Alesana forms a government.
- 1985** HRPP captures 31 of 47 legislative assembly seats in general elections. In December Va'ai Kolone, with the backing of HRPP dissidents and the Christian Democratic Party, recaptures the leadership of the HRPP, ousting Tofilau Eti, and is installed as prime minister.
- 1988** Tofilau Eti Alesana becomes prime minister once again.
- 1990** Cyclone Ofa hits, destroying houses and crops and disrupting transport, power, and water services.
- 1991** Universal suffrage replaces election by family heads.
- 1996** The HRPP captures 24 of 49 assembly seats and retains its plurality majority.
- 1997** The country is renamed the Independent State of Samoa.
- 1998** Prime Minister Tofilau Eti Alesana resigns due to poor health, and Sailele Malielegaoi Tuila'epa is named prime minister.
- 2000** Two former cabinet ministers are sentenced to death for assassinating a fellow minister; however, the death sentences are commuted.
- 2001** Prime Minister Tuila'epa is reelected.
- 2002** The prime minister of New Zealand formally apologizes to Samoans for mistreatment during the colonial era on the 40th anniversary of Samoan independence.

GEOGRAPHICAL FEATURES

San Marino is the third-smallest country in Europe, with an area of 61.2 sq km (23.6 sq mi), extending 13.1 km (8.1 mi) northeast to southwest and 9.1 km (5.7 mi) southeast to northwest. It is a landlocked state completely surrounded by Italy, with a total boundary length of 39 km (24 mi). San Marino is about 24 km (15 mi) southwest of Rimini, between the province of Emilia-Romagna and the region of the Marches.

The capital is San Marino, which rests just below the summit of Mount Titano (755 m; 2,476 ft). Commer-

cial activity is centered on Borgo Maggiore, some 183 m (600 ft) below San Marino and connected to it by a 2.4 km (1.5 mi) winding road. Serravalle/Dogano is the only other substantial town.

The republic is topographically coextensive with Mount Titano, which has three pinnacles, each crowned by old fortifications, one on the north by a castle and the other two by towers. The summit of Mount Titano commands a panoramic view of the Adriatic, only 19 km (12 mi) away. The only agricultural land is at the base of the mountain.

CLIMATE AND WEATHER

In common with northeastern Italy, San Marino has a mild climate, although the temperatures in winter may drop below freezing and in summer may go up to a maximum of 26°C (79°F). Annual rainfall averages 760 mm (30 in).

Climate and Weather

Mean Temperature
 Summer: 79°F
 Winter: 32°F
 Average Rainfall 30 in

FLORA AND FAUNA

As a very small country that has been settled for centuries, San Marino has little in the way of natural ecosystems. The mountain slopes are covered with hardwood forests consisting primarily of elms, maples, pines, oaks, and olive trees, as well as lavender, strawberries, myrtle, and evergreen shrubs. Common fauna include foxes, hares, hedgehogs, martens, deer, and weasels. Commonly seen birds include falcons, nightingales, orioles, goldfinches, and linnets.

ETHNIC COMPOSITION

The Sammarinese are a composite of Mediterranean, Alpine, Adriatic, and Nordic ethnic types. They resent being called Italians, who are considered foreigners. Physically, however, they are indistinguishable from the average Italian.

LANGUAGES

The official language is Italian. Nearly every Sammarinese speaks at least one other language.

RELIGIONS

San Marino is believed to have been founded by a Christian stonecutter named Marinus in the fourth century as a haven for persecuted Christians. The population is almost entirely Catholic, with 12 parishes: eight in the diocese of Montefeltro and four in the diocese of Rimini. There is no specific treaty between San Marino and the Holy See, and relations between church and state are governed by tradition.

Religious Affiliations

Roman Catholic	28,000
----------------	--------

HISTORICAL BACKGROUND

San Marino is the oldest republic in the world, having been founded, according to tradition, in the fourth century by St. Marinus. Its recorded history begins in the ninth century, when the famous monastery was built. A small community gathered around the monastic house and soon acquired the institutional characteristics of a state. Because of the poverty of the region and the difficult terrain, it remained undisturbed by the swirling storms of war and civil unrest that raged all around throughout the Middle Ages. Its independence was confirmed by Pope Paul II in 1549 and by Pope Clement II in 1740. Napoleon allowed San Marino to retain its liberty; the Sammarinese are believed to have declined his offer to augment their territory on the ground that only their smallness and poverty helped to preserve their independence. San Marino and Italy entered into a customs union in 1862. A treaty of friendship, first concluded in 1897, has been renewed periodically since then.

During Mussolini's rule in Italy between 1922 and 1943, San Marino adopted a Fascist government. Despite its claim of neutrality, it was bombed by Allied planes in 1944. The Communists and left-wing Socialists were in power from 1954 to 1973, when they were displaced by a centrist coalition. In the 1990s, after a series of permutations and combinations, the Christian Democrats and Socialists managed to gain a working majority in the Grand and General Council. In 2000 the Socialists withdrew from the coalition, and a new multiparty coalition led by the Christian Democrats assumed power. In 2003 the three main political parties formed a coalition and called for reforms in electoral law.

LIST OF MODERN RULERS

Two captains regent are reappointed every six months.

CONSTITUTION

San Marino has an unusual form of government, which dates from the 11th century. Executive authority is exercised by the 11-member Congress of State (Congresso di Stato), which is composed of nine members chosen by the members of the Grand and General Council and two heads of state known as captains regent (*capitani reggenti*), one of whom represents the city of San Marino and the other the countryside. These officials are elected for six-month periods of office, beginning April 1 and October 1 of every year. Their functions are largely honorary, although they preside over the meetings of the Council and the Congress. They can propose legislation and represent the republic in foreign relations. The captains regent are assisted by two secretaries of state (of foreign affairs and internal affairs) and additional secretaries with specific portfolios. The secretary of state for foreign affairs has come to assume the status of a prime minister.

PARLIAMENT

The legislature is the Grand and General Council (Consiglio Grande e Generale), a unicameral body of 60 members elected for a five-year term by direct popular vote. The captains regent serve as the presiding officers.

The Council is elected by universal adult (age 18) suffrage under a system of proportional representation. Only since 1960 have women been allowed to vote, and only since 1974 have they been able to run for office. Legislation may be contested through referenda.

POLITICAL PARTIES

Six political parties won seats in the 2001 elections. The largest of these is the San Marino Christian Democratic Party (PDCS), with more than 2,000 members, founded in 1948; the PDCS won 25 of the 60 seats in the legislature in 2001. The next-largest party, occupying 15 seats, is the San Marino Socialist Party (PSS), which merged with the United Socialist Party in 1990. The third-largest party is the Party of Democrats, a social-democratic party that won 12 seats in 2001. The fourth-largest party, occupying five seats, is the Popular Alliance of San Marino Democrats (APDS), which seeks constitutional and social reforms. The other parties to win seats were the San Marino Communist Refoundation Party and the San Marino National Alliance.

LOCAL GOVERNMENT

For purposes of local administration San Marino is divided into nine castles, corresponding to the original parishes.

Each castle is governed by a castle captain, who holds office for two years, and an Auxiliary Council, which holds office for five years.

LEGAL SYSTEM

The judicial system consists of civil and criminal courts and a superior court, but most criminal cases are tried before Italian magistrates. The highest appellate court is the Council of Twelve, chosen for six-year terms from members of the Grand and General Council. San Marino was the first country to abolish capital punishment, in 1847.

HUMAN RIGHTS

All basic human rights are legally guaranteed and respected in practice. The international watchdog group Freedom House gives San Marino a rating of one (the highest rating on a scale from one to seven) for both civil and human rights.

FOREIGN POLICY

San Marino has been a member of the United Nations since 1992. Its relations with Italy, raised to an ambassadorial level in 1979, are governed by a series of treaties and conventions, including a customs union. Although proudly independent, San Marino is generally viewed as an appendage of the Italian Republic. San Marino is a strong ally of the United States and has generally been supportive of U.S. policies, though the country is officially neutral and has not gone to war since the 15th century.

DEFENSE

Although there is no compulsory military service, the San Marino militia technically consists of all able-bodied citizens between ages 16 and 55, with the exception of students and teachers. The militia is maintained mainly for ceremonial display and limited police assistance. In 2000–01 the country spent \$700,000 on the Volunteer Military Force.

ECONOMY

The gross domestic product (GDP) of San Marino in 2001 was estimated at \$940 million, or \$34,600 per capita. National accounts are not maintained, and estimates are available only irregularly. The principal sources of national income, apart from farming, are tourism, the sale of postage stamps, and remittances from Sammarinese living abroad. Italy pays the republic a small subsidy. Real growth in 2001 was estimated at 7.5 percent. Unemployment is low, and the country has essentially no external debt.

ENVIRONMENT

San Marino has few environmental issues of its own making. Its environmental concerns are of an international nature, and the republic has signed various agreements regarding desertification, air pollution, and climate change. The country has one of the oldest laws, dating to 1245, for the preservation of forested areas.

 CO2 Emissions per capita ton: —

LIVING CONDITIONS

Living conditions in San Marino are of high quality, and the country has few of the social problems that beset larger, more complex nations. The nation provides comprehensive health care, the literacy rate is 96 percent, the government maintains full-employment policies, and incomes are high. Further, income is relatively evenly distributed, so there is little sense of class in San Marinese society. The nation consists primarily of small mountain towns and villages, with housing made of tile, brick, and stone, all centered around central town piazzas.

HEALTH

The state of health care in San Marino is very good. Life expectancy at birth in 2005 was 81.6 years; for females, it is over 85 years. The infant mortality rate was just 5.7 deaths per 1,000 live births in 2005. The state provides health care for all citizens at private clinics and a public hospital, although for certain conditions, patients must seek health care outside the nation's borders.

FOOD AND NUTRITION

San Marinese cuisine is Mediterranean and resembles that of surrounding Italy, especially the nearby Romagna region. A staple is homemade pasta. Typical national dishes include *nidi di rondine* (literally, "swallow's nest"), which is beef, cheese, ham, and tomato sauce served on pasta. Other popular dishes include *pasta e cece*, a soup made with chickpeas and flavored with rosemary and garlic, and *faggioli con le cotiche*, a bean soup made with bacon rind traditionally served at Christmastime. Rabbit is also commonly eaten. San Marino is known for two types of wine: a hearty red called Sangiovese and a dry white called Biancale.

 Women's Share of Wage Employment Non-agricultural %: 41.9

WORK

In 1999 the labor force of San Marino numbered about 18,500. About 1 percent were employed in agriculture, producing such commodities as wheat, corn, grapes, olives, beef, pork, and cheese. About 42 percent of the labor force was employed in industry, producing textiles, leather goods, ceramics, electronics, cement, and wine. The remainder, 57 percent, were employed in services, primarily banking and tourism. Unemployment is low—just 2.6 percent in 2001—because the government adopts policies designed to ensure that anyone who wants a job can obtain one. A major portion of San Marino's revenue comes from the sale of collectible postage stamps and coins.

EDUCATION

Primary education is compulsory for all children up to age 14, with the pattern of instruction following the Italian curriculum. Primary education lasts for five years. Secondary education lasts for eight years, as divided into cycles of three and five years. Students who wish to pursue higher education do so outside of San Marino, primarily in Italy.

MEDIA

The republic had three daily newspapers in 1998; most publishing efforts are undertaken by major political parties.

Radio Titano, a private broadcaster, is the nation's only radio station. San Marino RTV is government run and operates both a radio and a television station. Televisione Italiana broadcasts a daily information bulletin about the republic under the title *Notizei di San Marino*.

CULTURE

The Sammarinese are proud of their cultural heritage, particularly in being the world's oldest republic and in having what is probably the world's oldest national anthem. The nation has a rich tradition in the visual arts. It

supports a number of museums that house paintings dating from the baroque period and the Renaissance by artists such as Guercino and Bernardo Strozzi. The Church of St. Francis dates to the 14th century and is itself a kind of museum that houses significant artwork. Additionally, the country takes pride in its public monuments and outdoor sculptures. The tourist industry has created a large market for San Marino's ceramics, sandstone carving, jewelry, leather goods, textiles, tile work, and other arts and crafts. Many collectors regard San Marino's stamps and coins as works of art.

FOLKLORE AND MYTHOLOGY

Because of its close historic ties with Italy, the nation's folklore and mythology is largely of Italian origin. One mythological element unique to San Marino regards Mount Titano, which is named after the Titans: The Titans were figures from Roman mythology who attempted to dethrone the god Jupiter by stacking mountains one atop the other to reach the heavens.

ENTERTAINMENT AND RECREATION

The Sammarinese enjoy the Italian game of boccie, a type of lawn bowling that can be played on any flat surface. They also enjoy visiting museums as well as attending plays, movies, and concerts. A popular form of entertainment is simply strolling the streets and enjoying the country's many outdoor cafés.

ETIQUETTE

The Sammarinese are little different from Italians in standards of etiquette. In large part because of the tourist trade, they are accustomed to foreign visitors and are extremely open and friendly with them; they are animated in conversation and warm and hospitable in offering greetings. From an early age Sammarinese children are taught to maintain great respect for the elderly.

FAMILY LIFE

The extended family played a more prominent role in earlier years, when the economy of San Marino was more agricultural, than after the Second World War, when the country became more industrialized. In modern times the primary domestic unit is the nuclear family, although elderly parents who can no longer care for themselves often move in with their adult children, and younger people typically continue to live with their parents until they complete higher education and form families of their own. Publicly supported child care is available for any child under the age of five. The divorce rate in San Marino is low. In 2001 there were 7.2 marriages and just 1.4 divorces per 1,000 population. The average household size that year was 2.6 people.

PERSONAL APPEARANCE

The Sammarinese wear modern Western-style clothing, although traditional clothing can be seen on ceremonial occasions. Part of the nation's ceremonial tradition is a corps of flag bearers that wear black boots, brightly colored tights, and loose-fitting, colored shirts.

SPORTS

Traditionally, the Sammarinese have excelled at marksmanship of various kinds, including archery and pistol and rifle shooting. Other common sports include swimming and deep-sea diving in the Adriatic Sea, tennis, basketball, and soccer. While soccer is very popular, San Marino has not competed well against European opponents. In 2004 the country's national team recorded its first-ever international soccer victory, beating Liechtenstein 1–0. The San Marino Grand Prix, a Formula One auto race, is held in Italy because San Marino does not have a suitable racetrack.

CHRONOLOGY

- 1945** Communist-Socialist coalition begins 12-year rule.
- 1957** Defections from the Communist Party bring a Christian Democrat–Socialist coalition to power for 21 years.
- 1978** Communist-Socialist coalition is formed again, as Christian Democrats leave office.
- 1982** Franchise is extended to Sammarinese women who marry foreigners and to foreign nationals resident in San Marino for over 30 years.
- 1986** Following financial scandals involving Socialists, the Christian Democrats and Communists form their first political coalition.

- 1992 San Marino joins the United Nations. A coalition of Christian Democrats and Socialists gains power.
- 2000 Socialists withdraw from the government.
- 2001 A coalition led by Christian Democrats assumes power.
- 2003 The three main political parties form a coalition and call for reforms in electoral law.

LANGUAGE

Portuguese

RELIGION

Roman Catholicism

UNIT OF CURRENCY

Dobra

NATIONAL FLAG

A red isosceles triangle, with the base at the hoist, from which horizontal stripes of green, yellow, and green run to the fly. On the larger yellow middle stripe are two black stars.

NATIONAL EMBLEM

Two parrots holding a teardrop-shaped orange shield, on which appears a cocoa tree; the shield is surmounted by a blue star. A yellow banner with the name of the republic appears at the top, and one with the national motto, *Unidade, disciplina, trabalho* (Unity, discipline, work), appears at the bottom.

NATIONAL ANTHEM

“Independência Total”

NATIONAL HOLIDAYS

February 3 (Martyrs’ Day), May 1 (Labour Day), July 12 (Independence Day), September 6 (Armed Forces Day), September 30 (Agricultural Reform Day), various Christian festivals

DATE OF INDEPENDENCE

July 12, 1975

DATE OF CONSTITUTION

September 10, 1990

GEOGRAPHICAL FEATURES

São Tomé and Príncipe, in the Gulf of Guinea off the coast of Gabon, has an area of 1,001 sq km (387 sq mi), of which around 85 percent is on São Tomé. In addition to the main islands, there are two small islets: Rolas, crossed by the equator, and Pedras Tinhosas. The total coastline of the nation is 209 km (130 mi).

Both main islands are active volcanoes and have many craters and lava flows. The highest point on São Tomé rises 2,024 m (6,640 ft); there are 10 peaks over 1,067 m (3,500 ft). Príncipe, with a larger plateau area than São Tomé, rises 948 m (3,110 ft).

CLIMATE AND WEATHER

The islands have a tropical climate moderated by altitude and the cold Benguela Current. The dry season lasts from June to September, the wet season from October to May. There are four climatic zones on both islands: the hot and humid northeastern lowlands, with about 1,000 mm (40 in) annual rainfall; the plateau above 400 m (1,300 ft), where the temperature is lower and the annual rainfall ranges from 3,800 to 5,000 mm (150 to 200 in); regions over 600 m (2,000 ft), where the temperature is still lower and the nights are cold and mist is common; and the southeastern lowlands, where there is no dry season. Temperatures average 26.6°C (80°F) on the coast and 20°C (68°F) on the plateau.

Climate and Weather

Mean Temperature

Coastal Areas: 80°F

Plateau: 68°F

Average Rainfall

Northeastern Lowlands: 40 in

Plateau: 150 in to 200 in

FLORA AND FAUNA

A wide variety of plants and animals flourish in São Tomé's tropical climate. Trees include rosewood, mahogany, teak, walnut, oak, and okoume; there are also many species of orchids and ferns. Over 75 percent of the terrain is still covered with native forest, and the nation has resisted the temptation to export its tropical hardwoods.

The forests are home to many animal species, including several species endemic to the islands, their uniqueness a result of the nation's remoteness. Bird life is especially notable; São Tomé itself is home to 16 endemic bird species, including the giant sunbird and dwarf olive ibis. The island also harbors the endemic *Thyrophorella thomensis* snail. Mammals include the African civet, the black rat, and the mona monkey; these animals were introduced by colonists and now threaten native bird species. Whales, dolphins, and sea turtles inhabit the nearby oceans.

ETHNIC COMPOSITION

The Santomean population is predominantly African, although there are scattered traces of racial admixture. The islands were probably inhabited by fishermen from West Africa long before the first Europeans landed, in the second half of the 15th century. Genoese, Spanish, and French immigrants settled on the islands around 1485, and in the late 15th century the Portuguese settled convicted and exiled Jews there. There are several ethnic categories within the black population. Along the southeastern coast of São Tomé lives a group called Angolares, believed to be descendants of Angolan slaves. There are also *mestiços* (of mixed white and African ancestry), *forros* (descendants of freed slaves), *serviçals* (contract workers from Cape Verde, Mozambique, and Angola), and *tongas* (children of *serviçals* born in São Tomé and Príncipe). There are also a few Europeans, mainly of Portuguese origin.

LANGUAGES

The official language is Portuguese.

RELIGIONS

The country is almost 100 percent Christian. The dominant religion is Roman Catholicism. São Tomé is the seat of a suffrage see under the archdiocese of Luanda in Angola. In addition to Roman Catholicism, the two other large sects are Evangelical Protestants and Seventh-Day Adventists.

Religious Affiliations

Christian	150,000
Other	37,500

HISTORICAL BACKGROUND

Portuguese explorers discovered the islands in 1470–71 and claimed that they were uninhabited. São Tomé and Príncipe's colonial history begins in 1485, with the islands claimed as a concession, or *donatario*, by the Portuguese adventurer João de Paiva. For many years the islands served as slave stations between Congo and Portugal. By the 16th century flourishing sugarcane plantations had been established on the islands with the help of plantation slaves "recruited" from other Portuguese colonies. By the early 1900s São Tomé had become the largest producer of cocoa in Africa, but not until 1906, when Henry Nevins described the inhumane conditions on the cocoa plantations in *A Modern Slavery*, was there a call for reform. Despite these oppressive conditions, São Tomé and Príncipe did not witness a guerrilla struggle against the Portuguese on the scale of other African colonies.

Negotiations toward independence were carried out between Lisbon and the Movement for the Liberation of São Tomé and Príncipe (Movimiento de Libertação de São Tomé e Príncipe, MLSTP), the members of which the Portuguese government recognized as the only official spokespeople for the colony. At independence in 1975, Manuel Pinto da Costa, the head of the MLSTP, became the nation's first president. He quickly consolidated power around the office of president, abolishing the prime ministership in 1978. Initially, da Costa's government had a Marxist orientation, but by the mid-1980s it began moving toward the denationalization of industry and the establishment of free enterprise. Da Costa survived two coup attempts: In March 1978 foreign mercenaries organized from Gabon attempted to overthrow the government, and another attempt was made in 1988 when Cape Verdeans and Angolans trained in South Africa unsuccessfully attempted to seize police headquarters.

In 1987 da Costa announced major constitutional changes providing for the direct election of the president and the National Assembly. Three years later the nation approved a new constitution, as proposed by the MLSTP central committee, that provided for the establishment of a multiparty system, limited the president's tenure in office, and permitted independents to participate in elections to the legislature; the January 1991 multiparty elections were the first held in São Tomé since it gained independence from Portugal in 1975. The ruling MLSTP won only 21 seats, while the main opposition, the Democratic Convergence Party, won 33, seizing the majority. The Democratic Coalition won the remaining seat.

Miguel Trovoada, an ex-premier as well as a former political exile, won the first free presidential elections, held in March 1991. He ran unopposed: In the week before the vote, da Costa and a third candidate withdrew from the campaign. In 1995 a group of Cuban-trained rebel soldiers stormed the presidential palace and took

President Trovoada prisoner, later releasing him after they were granted amnesty. Trovoada was reelected for a second term in 1996. In 2001 Fradique de Menezes, a wealthy cocoa exporter and the leader of the centrist Independent Democratic Action Party, won the presidential election. Legislative elections held in March 2002 were inconclusive, with no party winning a parliamentary majority.

Menezes's regime suffered a great deal of turmoil in the early 2000s. He went through several prime ministers and cabinet members, and his government was briefly toppled by a military coup in July 2003. His main concerns have been to reduce the nation's isolation and spur economic growth. The nation's hopes have been pinned primarily on the oil industry; Menezes invited the United States to open a naval base in the country in order to protect oil interests, and in 2005 São Tomé and Príncipe signed an offshore oil exploration and production agreement with Nigeria and international oil companies.

LIST OF MODERN RULERS

President	
1975–91	Manuel Pinto da Costa
1991–2001	Miguel Trovoada
2001–	Fradique de Menezes

CONSTITUTION

Under the constitution, which came into force in September 1990, executive power is vested in a president who is elected directly for a five-year term through universal suffrage. The president, who is limited to two successive terms, is accountable to the National Assembly. The president appoints a prime minister, who is head of government.

Legislative power is vested in the National Assembly, whose 55 members are directly elected for four-year terms through universal suffrage.

The judiciary is headed by a Supreme Court staffed by judges appointed by the National Assembly.

The voting age is 18. Suffrage is universal.

PARLIAMENT

The national legislature is the unicameral National Assembly, consisting of 55 members elected for four-year terms. The 1990 constitution provides for the direct popular election of members. The Assembly meets in ordinary sessions twice a year. Among its powers are the election or the dismissal of the president of the republic. The Assembly may delegate some of its legislative powers to the Council of Ministers. Between the ordinary ses-

2038 São Tomé and Príncipe

sions of the Assembly, its powers and functions are assumed by the 11-member Permanent Commission. The president of the Assembly is the second-ranking officer in the country and takes over upon the incapacity or death of the president.

POLITICAL PARTIES

The nation's two ruling parties are the Movement for the Liberation of São Tomé and Príncipe–Social Democratic Party (MLSTP-PSD), which won 24 seats in the 2002 parliamentary elections, and the Force for Change Democratic Movement, which won 23 seats. The Ue-Kedadji Coalition holds 8 seats, and there are several other smaller parties.

LOCAL GOVERNMENT

The country is made up of seven municipal districts, six on São Tomé and one encompassing Príncipe. Each district has a governing council that has some autonomous decision-making power. Regional elections occur every five years.

LEGAL SYSTEM

The legal system is based on Portuguese and customary law. The judiciary is headed by the Supreme Court, whose members are appointed by the National Assembly. The judiciary was formerly answerable to the National Assembly but became independent under the 1990 constitution.

The constitution does not address the right to a public trial, but there have been instances of public trials of persons accused of common crimes in recent years. Criminal trials are occasionally reported on by the local media. In most cases, however, common criminals are simply given hearings and sentenced by judges.

HUMAN RIGHTS

São Tomé and Príncipe is a multiparty democracy where basic human rights are generally respected. Elections are fair, and voter participation exceeds 80 percent on average. The principal human rights problems arise from the inefficient judicial system, harsh prison conditions, and limited worker rights. Judges are poorly paid and sometimes accept bribes. The shortage of judges and lawyers causes long delays in bringing cases to trial and hinders the investigation of criminal cases.

There have been some cases of domestic violence and child abuse. Child labor has been widespread, and working conditions on some plantations have been harsh.

FOREIGN POLICY

Relations with Portugal and Portuguese-speaking colonies in Africa dominate the foreign policy of São Tomé and Príncipe. After a many-year rift with Portugal, a bilateral cooperation agreement was signed, followed by a fishing pact with the European Union. Portugal and the Netherlands are the country's leading trade partners in imports and exports, respectively. Relations with African neighbors, such as Gabon, Angola, and the Republic of the Congo, are amicable.

The nation has recently been strengthening ties with both Europe and the United States. The United States has provided São Tomé and Príncipe with various assistance programs, such as one establishing a radio transmitter station on São Tomé allowing the island to broadcast to much of the African continent.

DEFENSE

São Tomé and Príncipe has a small army, coast guard, presidential guard, and national guard. The minister of national defense and internal affairs supervises the military and the police as well as immigration matters. International donors furnish money to pay soldiers and improve their living conditions.

ECONOMY

São Tomé and Príncipe is a poor country, with a per capita gross domestic product (GDP) of \$1,200. The nation has historically emphasized the production of cash crops; as a result, the country imports 90 percent of its food. Cocoa was the major crop during São Tomé and Príncipe's colonial period and remains the mainstay of the economy. Since independence, the production of the crop has deteriorated as a result of drought, disease, soil depletion, and poor management. Cocoa prices rose in 2003 and brought the nation some welcome export earnings. The nation has virtually no manufacturing or fuel resources and is of no strategic importance.

Over the years, São Tomé and Príncipe has been unable to service its external debt and has had to depend on concessional aid and debt rescheduling. The nation benefited from \$200 million in debt relief ex-

tended in December 2000 under the Heavily Indebted Poor Countries program.

The government is attempting to increase revenues by developing the tourist industry and offshore oil production. The island has wonderful natural attractions, but tourists have so far hesitated to visit due to the lack of infrastructure and fears of malaria. In 2005 the nation signed an agreement with Nigeria and various oil companies to explore oil resources in the Gulf of Guinea and produce petroleum if possible. Oil has the potential to bring the country millions of dollars in revenues.

ENVIRONMENT

Until recently, the government of São Tomé and Príncipe paid little attention to its environmental policies. Despite this neglect, the country's resources are relatively well preserved, though deforestation and soil erosion are both problems. The government has established policies to create some protected national lands and to locate fuels other than wood.

LIVING CONDITIONS

Costs are low. Many people use U.S. dollars as currency in addition to the local dobra. Most of the year is uncomfortably hot and humid. The electrical supply is unreliable. Roads on the islands are about two-thirds paved but in bad condition, which makes driving slow.

São Tomé has ample public transportation in the form of shared taxis and some buses. Príncipe is much smaller, so its only public transportation is a minibus; most people get around the island by walking. Connections between the two islands are infrequent, though there are daily flights between São Tomé and the mainland. Most consumer goods must be imported, and supplies are sometimes low.

HEALTH

Health care in São Tomé and Príncipe has some room for improvement. Life expectancy is 67 years, and the infant mortality rate is relatively high, at 43 deaths per 1,000 births in 2005. Fertility is very high, at 5.7 children per woman in 2005. The nation does immunize most of its children against major diseases. Malaria, schistosomiasis, and hepatitis occur with some frequency. Malaria is a particularly bad problem; most people do not have access to treated mosquito nets or antimalarial drugs. The water supply is contaminated in some areas, though most of the population now has access to clean water. Most people do not have access to adequate sanitation facilities.

FOOD AND NUTRITION

São Tomé and Príncipe has its own culinary traditions, and locals have been reluctant to embrace Western food, especially fast food. Islanders eat a great deal of fish and tropical fruit, including bananas, pineapples, and avocados. Bread from local bakeries is eaten with many meals. Canned food imported from Portugal rounds out many diets; the nation has devoted so much of its land to cocoa production that it cannot feed itself and must import a large percentage of its food.

 Amount of Fruits and Vegetables Available per person per year kg: 190.7

STATUS OF WOMEN

Violence against women is common. Although women have legal recourse against abuse, many are reluctant to bring legal action against their spouses and are unwilling to take domestic disputes outside the family. Women suffer societal discrimination in education and the professions. The female literacy rate is only 62 percent, as compared to 85 percent for males. In 2002, the nation saw the appointment of its first female prime minister, Maria das Neves.

WORK

Most islanders work in subsistence agriculture and fishing. The nation suffers a shortage of skilled workers. Some agricultural workers are employed on plantations, growing cocoa, bananas, coconuts, cinnamon, coffee, and other products; working conditions and pay are often deplorable. The nation has a small manufacturing sector that produces textiles, soap, beer, and timber as well as processed fish products. About 14 percent of children between five and 14 work.

EDUCATION

São Tomé and Príncipe does not have a strong educational system, which impedes its efforts to develop economically. The literacy rate is an estimated 79.3 percent. Schooling is universal, free, and compulsory in principle for six years, between ages six and 12. Schooling lasts for 11 years total, as divided into four years of primary school, two years of lower secondary school, and five years of upper secondary school.

SCIENCE AND TECHNOLOGY

The nation has minimally adequate telephone facilities; in 2003 there were about 7,000 telephone lines and 4,800 cellular telephones in use on the islands. About 15,000 people were using the Internet. The sporadic supply of electricity impairs the introduction and use of technology.

MEDIA

The constitution guarantees the freedom of the press, and the news media has generally found this to be provided in practice. Opposition parties are given free air-time on radio and television, and journalists regularly criticize the government. *Diário de república* is the main Portuguese-language daily in São Tomé; there are three other newspapers.

The government controls the nation's only radio and television stations, Radio Nacional de São Tomé e Príncipe and Televisão Santomense. Private broadcasting is legal, but as of 2004 there were no private broadcasters. Closed-circuit television is available in limited areas.

In 1985 the Angola News Agency joined with Radio Nacional de São Tomé e Príncipe to form a national news agency, STP/Press. No books are published locally. The largest library is the Henriques da Silva Municipal Library, with over 4,000 volumes.

CULTURE

Culture combines Portuguese and African influences. Music blends African and Latin rhythms and styles. Gilberto Gil Umbelina is the most famous musician. The capital city has several theatre companies. Architecture in the capital has many examples of colonial style buildings, with high ceilings and wooden adornments, and of traditional wooden houses built on stilts.

FOLKLORE AND MYTHOLOGY

Santomeans have maintained their folkloric traditions for generations, memorizing stories and spending hours spinning them out in “slow shows.” Stories come from Africa and have local twists to them. Saints’ festivals are a unique form of folk culture, featuring traditional dances such as the *danço congo*.

ENTERTAINMENT AND RECREATION

Though there is not a great deal of nightlife, people enjoy watching plays and theatrical performances or listening to live music. Shopping is available at local markets, where people go to visit friends as well as buy and sell goods. Possibilities for outdoor recreation include diving, snorkeling, and deep-sea fishing. Hiking and bird-watching are popular terrestrial activities.

ETIQUETTE

Locals take life slow, and they do not like to be told to hurry. People are generally friendly and calm. Residents

expect tips from visitors; 10 to 15 percent is standard. People bargain about most prices, especially in local markets.

FAMILY LIFE

Most families have large numbers of children, some of whom are obliged to work to help support their parents and siblings. Only about 70 percent of all births are registered with the government. Many men must leave the country to find work, so about 35 percent of mothers are virtually single. The government helps single mothers send their children to school; children who lose both parents typically move in with relatives, so there is a low incidence of orphans without responsible adults.

PERSONAL APPEARANCE

Most people wear light, casual clothing. Local children often swim naked, but adult visitors are expected to wear swimsuits on the beach.

SPORTS

São Tomé and Príncipe has had a national soccer team since 1975, affiliated with the international governing body FIFA since 1986.

CHRONOLOGY

- 1975** São Tomé and Príncipe achieves full independence, with Manuel Pinto da Costa as president. The National Assembly approves new constitution.
- 1978** The government puts down a coup staged by former health minister Carlos da Graça.
- 1979** Angolan troops are called in to support the government against agitators; Prime Minister Miguel Trovoada is arrested for backing coups.
- 1982** Defense Minister Danial Daio is arrested. President takes over defense portfolio.
- 1984** Da Costa declares São Tomé and Príncipe to be nonaligned.
- 1986** Two opposition groups, the União Democrática Independente de São Tomé e Príncipe and the Frente de Resistência Nacional de São Tomé e Príncipe, form a coalition and demand democratic elections.
- 1987** The MLSTP central committee announces major constitutional changes, providing for the direct election of the president and the legislature.
- 1990** São Tomé and Príncipe adopts a new constitution, providing for the establishment of a multiparty system.

- 1991** The ruling MLSTP is defeated in multiparty legislative elections. Da Costa announces his retirement. Miguel Trovoada is elected president in the nation's first free presidential elections.
- 1994** The MLSTP/Social Democratic Party coalition wins 27 of 55 seats in the National Assembly.
- 1996** President Trovoada is reelected to a second term.
- 2001** Fradique de Menezes, leader of the centrist Independent Democratic Action Party, is elected president.
- 2002** In legislative elections, no single party wins an absolute majority. President Menezes appoints Gabriel da Costa prime minister, then replaces him with Maria das Neves. Menezes announces that the United States will open a naval base in São Tomé to protect the nation's oil interests.
- 2003** A military coup topples the government; Menezes comes to an agreement with the coup leaders and grants them amnesty. Oil companies bid on ocean areas controlled by São Tomé, spawning hopes for millions of dollars in license fees.
- 2004** The president and prime minister argue about control of the oil deals. Menezes fires das Neves and replaces her with Damião Vaz d'Almeida.
- 2005** São Tomé and Príncipe formalizes an oil exploration agreement with Nigeria and international oil firms. The government and prime minister resign; Maria do Carmo Silveira becomes the new prime minister.

RELIGION

Sunni Islam

UNIT OF CURRENCY

Saudi riyal

NATIONAL FLAG

A green field, with the creed of Islam, “There is no god but Allah; Muhammad is the messenger of Allah,” in white Arabic script in the upper center; beneath the script is a white saber.

NATIONAL EMBLEM

Two stylized gold scimitars crossed below the base of a tall palm tree

NATIONAL ANTHEM

“Aash al-Maleek” (Long live our beloved king)

NATIONAL HOLIDAYS

September 23 (National Day, Unification of the Kingdom Day), various Islamic festivals

DATE OF INDEPENDENCE

September 23, 1932

DATE OF CONSTITUTION

None; 1993 Basic Law outlines government’s rights and responsibilities

GEOGRAPHICAL FEATURES

Saudi Arabia occupies about four-fifths of the Arabian Peninsula, covering an area of 1,960,582 sq km (756,985 sq mi). The total length of the coastline is 2,640 km (1,640 mi). Saudi Arabia shares 4,431 km (2,753 mi) of international borders, with Iraq, Jordan, Kuwait, Oman, Qatar, the United Arab Emirates, and Yemen.

There are five main geographic regions: The Red Sea escarpment consists of Hejaz to the north and Asir to the south. The central plateau, the Nejd, extends to the Tuwaiq Mountains and beyond. The sand desert of Dahana separates the Nejd from eastern Arabia, and the sand desert of Nefud separates the Nejd from northern Arabia. South of the Nejd is the largest purely sand desert in the world, the forbidding Rub al-Khali.

Saudi Arabia has no permanent rivers or bodies of water.

fied with the power of the House of Saud. Declaration of oneself as a Muslim is a prerequisite for citizenship.

A number of Shiite Muslims, estimated at around 25 percent of the population, constitute a religious minority subject to social and economic discrimination; in the wake of the Iranian revolution they have been periodically subjected to surveillance and limitations on travel abroad. Some of the sect's members have been arrested without charge and detained, occasionally for many months. For security reasons the government does not permit Shia public processions marking Ashura, the holiest of the exclusively Shia holidays. The Shiites are free to adjudicate exclusively intra-Shiite disputes within their own legal tradition, but Shiite judges receive no stipends or salaries from the government. Likewise, the government provides no financial support for the Shia religious establishment and does not permit the construction of Shia mosques. In recent years authorities have made efforts to redress Shiites' complaints about economic underdevelopment in their areas. Nevertheless, most Shiites continue to live under conditions notably poorer than those of their Sunni compatriots.

Non-Muslim religious services are not permitted. Saudi customs officials prevent the importation of non-Islamic religious materials. Foreign nationals practice their religions only in discreet, private gatherings, as large gatherings or elaborate organizational structures are likely to attract official attention and may lead to the deportation of leaders. Islam exercises a pervasive influence on the lives of all Saudi Arabians: All public and private acts are judged in terms of their appropriateness or inappropriateness in light of Islamic precepts. Islam also colors all national policies; Prince Faisal declared in 1962 that the government would adopt every means necessary to spread, strengthen, and promote Islam by word and by deed.

HISTORICAL BACKGROUND

The Saudis, and many other Arabs and Muslims as well, trace much of their heritage to the birth of the prophet Muhammad in 570 c.e. The time before Islam is generally referred to as "the time of ignorance," reflecting the belief that God had not yet sent the Arabs a prophet.

Muhammad was born in Mecca at a time when the city was establishing itself as a trading center; the city was also an important religious center and place of pilgrimage for Arab sects even before the rise of Muhammad. For the residents of Mecca, tribal connections were the most important part of the social structure. Muhammad was

born into the Quraysh, which had become the city's leading tribe because of its involvement with water rights for pilgrimages. By the time of Muhammad, the Quraysh had become active traders as well, having established alliances with tribes all over the peninsula, permitting them to send their caravans to Yemen and Syria. Accordingly, in many ways the Quraysh represented the facilitators and power brokers for the new status quo in Arabian society.

By his death in 632, Muhammad enjoyed the loyalty of almost all of Arabia. The peninsula's tribes had tied themselves to the Prophet with various treaties, though not necessarily becoming Muslim. The Prophet expected certain others, particularly pagans, to submit to Islam but allowed Christians and Jews to keep their faith provided they paid special taxes as a penalty.

Within the following century Arabs conquered most of the southern Mediterranean countries as well as Mesopotamia and Persia. However, as Islam expanded beyond Arabia's borders, the peninsula itself declined in importance and for many centuries became no more than a province of caliphates located in Damascus, Baghdad, Cairo, and Constantinople. Nevertheless, Arabia was considered the homeland of the Arabs because Islam's two holiest cities were located there, and an annual pilgrimage, or hajj, to Mecca was an imperative for the devout Muslim. During the various struggles for religio-political supremacy in Damascus and later in Baghdad, Mecca and Medina became contested sites, and both cities were virtually destroyed in the tumult that ensued.

Al-Saud originated in Ad-Diriyah, in the center of the Nejd, close to the modern capital of Riyadh. Around 1500 ancestors of Saud ibn Muhammad took over a number of date groves, one of the few forms of agriculture the region could support, and settled there. Over time the area developed into a small town, and the clan that would become al-Saud came to be recognized as its leaders. The rise of al-Saud is closely linked with Muhammad ibn Abd al-Wahhab (d. 1792), a Muslim scholar whose ideas form the basis of the Wahhabi movement. He grew up in Uyaynah, an oasis in the southern Nejd, where with his grandfather he studied Hanbali Islamic law, one of the strictest Muslim legal schools.

When Muhammad ibn Abd al-Wahhab arrived in Ad-Diriyah, al-Saud was ready to support him. In 1744 Muhammad ibn Saud and Muhammad ibn Abd al-Wahhab swore a traditional Muslim oath in which they promised to work together to establish a state run according to Islamic principles. Until that time al-Saud had been accepted as conventional tribal leaders whose rule was based on long-standing but vaguely defined authority. Muhammad ibn Abd al-Wahhab offered the Saudi clan a clearly defined religious mission to which to contribute their leadership and upon which they might base their political authority.

The puritanical Wahhabi movement was launched in the Nejd region of central Arabia in the 18th century. By

1765 most of the Nejd had been conquered, as followed by Riyadh and the Rub al-Khali in 1792, the Burayami Oasis in 1803, Mecca in 1801, and Medina in 1805. The Ottoman government asked its viceroy in Cairo, the formidable Muhammad Ali, to put down the Saudi insurrection, which he did with typical thoroughness. When Muhammad Ali withdrew his occupation forces in 1840, the Saudis embarked on a reconquest of their possessions. Under Faysal (1843–67), Saudi control was reasserted over the Nejd, Al-Hasa, and Oman, with Riyadh as their capital. Throughout the remainder of the 19th century the Saudi forces were on the retreat, and internal intra-family squabbles opened the door for a rival clan, the Ibn Rashids, to gain control of the Nejd and conquer Riyadh. The Saudi family fled to Kuwait in 1891. In 1902 Abdul Aziz, a grandson of Faysal, known to history as Ibn Saud, drove Ibn Rashid out of Riyadh after a decisive battle. By 1913 Al-Hasa was again under Saudi control. In 1915 Ibn Saud signed a treaty with the British placing his external relations under British control in return for a subsidy. In 1919, at the end of World War I, warfare broke out between the Saudis and Husayn, the sharif of Mecca. Husayn was defeated, and Ibn Saud annexed Asir, but in 1924 Husayn proclaimed himself caliph and again challenged the Saudis. In response, the Saudis captured Al-Taif, Mecca, and Medina, and in 1925 Ibn Saud entered Jidda. Through a new treaty with the British, the 1915 treaty was annulled, and the independence of Saudi possessions was recognized. In 1932 the various possessions of Ibn Saud were consolidated into the kingdom of Saudi Arabia. With the discovery of oil in the 1930s, Saudi Arabia became the wealthiest Arab nation in the world.

Ibn Saud remained in power until his death in 1953. All subsequent rulers of Saudi Arabia have been sons of Ibn Saud. The kingdom has remained an absolute monarchy, with no legislature or political parties. In March 1975 King Faisal ibn Abdul Aziz (a son of Ibn Saud) was assassinated by one of his nephews and was immediately succeeded by Khalid, hitherto the crown prince. King Khalid died in June 1982 and was succeeded by King Fahd.

The Iraqi invasion of Kuwait in 1990 thrust Saudi Arabia into its gravest crisis since Ibn Saud united the kingdom in 1932. The exiled emir of Kuwait, along with hundreds of thousands of Kuwaitis, took refuge in Saudi Arabia. With Iraqi troops on the Saudi border, King Fahd, in an unprecedented move, invited both Western and Arab forces to deploy in the kingdom in support of Saudi defense forces; Saudi Arabia was also quick to help foreign governments cover the cost of sending troops to the kingdom. After six weeks of fighting in early 1991, Iraq was defeated.

The Persian Gulf War stimulated some pressure for political change within the kingdom, including demands for greater freedom for women. Toward the end of 1990 King Fahd had promised to revive long-delayed plans for radical reform of the political system; in 1992 King Fahd

issued royal decrees creating the country's first written rules of governance and providing for the formation of national and provincial consultative councils. In 1995, in the most sweeping ministerial shakeup in two decades, the king appointed young Western-educated technocrats to replace aging family members. In 1997 the membership of the Consultative Council was expanded from 60 to 90 members. The role of the council has gradually expanded as it has gained experience.

The terrorist attacks on the United States on September 11, 2001, complicated U.S.-Saudi relations because 15 of the 19 hijackers were Saudis and because Osama bin Laden himself, the leader of the terrorist group that carried out the attacks, is also a Saudi. In the years that followed Saudi Arabia was the site of numerous terrorist attacks, as the nation tried to take an active role in the international war on terrorism. On the other hand, the nation refused to allow the United States to use its bases in the 2003 war in Iraq. In 2005 Saudi Arabia held its first-ever municipal elections.

LIST OF MODERN RULERS

1932–53	Abdul Aziz ibn Saud
1953–64	Saud bin Abdul Aziz al-Saud
1964–75	Faisal bin Abdul Aziz al-Saud
1975–82	Khalid bin Abdul Aziz al-Saud
1982–2005	Fahd bin Abdul Aziz al-Saud
2005–	Abdullah bin Abdul Aziz al-Saud

CONSTITUTION

Saudi Arabia has no formal constitution. However, in early 1992 King Fahd became the first Saudi monarch to compile various regulations into a single document called the main code (*nizam*), or Basic Law. Promulgated as a royal decree, this document codified bureaucratic procedures and prohibits government agencies from arbitrarily arresting citizens or violating their privacy. Although the Basic Law is not a formal constitution, it fulfills some of the same purposes of such a document. However, the Basic Law lacks any explicit clause guaranteeing the basic rights of citizens to freedom of belief, expression, assembly, or political participation. Therefore, law remains the expression of the will of the monarch as limited by tribal customs and Islamic laws, which are embodied in the sharia. All power is vested in the king, the head of state, who combines religious and political powers as both imam and king and tribal and military powers as both sheikh of sheikhs and commander in chief. This power is modified only by the requirement that his acts conform to the sharia and that he retain the consensus of the royal family, the ulema (religious council), and the sheikhs. Legislation is by royal decree or, in minor mat-

ters, by ministerial regulation. The chief mufti and the other muftis, interpreters of religious laws, are constantly consulted on all political and social issues and have power to impose a number of restrictions. Certain noble families—such as the Jiluwis—also wield considerable influence on the government.
