ENVIRONMENT

Haiti has terrible environmental problems. It suffers from growing deforestation, caused by clear-cutting for agricultural purposes, construction, and fuel. In the early 2000s almost all of Haiti's forests were gone. The deforestation causes soil erosion and mudslides when rainfall is heavy, and without topsoil, agriculture and reforestation are impossible. The country also suffers from a lack of sufficient supplies of potable water. Rivers are terribly polluted because people use them as garbage dumps. The ocean surrounding Haiti is also polluted, and the waters have been severely overfished. The last vestiges of Haiti's original environment can be seen at Parc National la Visite and Parc National Macaya.

 CO2 Emissions per capita ton: 0.18

LIVING CONDITIONS

Haiti is a very poor country, and living conditions are not good for the majority of people. The nation is very densely populated, with over 250 people per square kilometer. Some 75 percent of the population lives in rural areas. Most people live in one- or two-bedroom houses with no running water or electricity; they burn charcoal to cook their food. The infrastructure is woefully inad-

quate; sewage sits in ditches, roads are unpaved, and law and order is virtually nonexistent. The exceptions to this are the gated communities where Haiti's few wealthy people live, which are surrounded by shopping malls and restaurants.

HEALTH

Haitian health conditions are poor. There are fewer than 2,000 doctors to serve the entire country, most of them in Port-au-Prince, and there are very few medical clinics, especially in the countryside. Rural people rely on local midwives and Vodou practitioners with herbal remedies for their medical needs. Sanitation is poor, water is contaminated, and infectious diseases are rife, as is malnutrition. The infant mortality rate is extremely high; 15 percent of children die before they turn five years old. Fertility is high; each woman gives birth to nearly five children. The population is growing steadily despite a low life expectancy, though the prevalence of AIDS has slowed this growth somewhat.

FOOD AND NUTRITION

Food is expensive in Haiti because the land is not large enough or fertile enough to support its growing human population. Poor people in the country do not get enough to eat, and rarely consume eggs, fish, or meat. Most people subsist on rice, cassava, corn, millet, and fruit, including coconuts, pineapples, oranges, grapefruit, and mangoes.

For those who can afford it, Haitian cuisine is excellent, combining French, African, and native cooking techniques and spices. Local specialties include *lambi*, or grilled or boiled conch meat, and *grillot*, fried marinated pork with a spicy sauce made from citrus juice and hot peppers. People drink many concoctions featuring condensed milk and local fruit juices, often mixed with rum.

STATUS OF WOMEN

The role of women in Haitian society is limited by the nation's traditionalism. Since 1982 there has been no legal discrimination against women as compared to men. Women enjoy full rights to education and property ownership and such social rights as divorce. A total of 43 percent of the workforce is female.

Nevertheless, especially among the peasantry, women are generally limited to traditional domestic occupations. Middle-class women quite often work but out of economic necessity. Secretarial, teaching, and nursing positions are dominated by women. Few women rise to prominent positions in the Haitian business world. As a rule, greater opportunities are available to women in the civilian government bureaucracy. Women constitute a large part of the assembly membership. Women are not permitted in the armed forces, except as nurses. Violence against women is very common.

WORK

Most Haitians work in subsistence agriculture, growing beans, sweet potatoes, rice, and other food for their families. They may make small incomes selling vegetables or crafts in the markets. Some agricultural laborers work for plantations growing cash crops such as coffee, sugarcane, cocoa, cotton, and sisal. About 5 percent of the workforce is employed in factories in Port-au-Prince, manufacturing clothing, baseballs, and electronics. Haiti's minimum wage is slightly higher than that of neighboring countries, which has caused manufacturing to decrease somewhat. About 65 percent of the workforce is estimated to be unemployed or underemployed. There is very little welfare, and most people rely on family members for help. Some parents send their children to work as servants in wealth homes.

Employment and Labor

Labor Force Total: 3,600,000
 Female Participation Rate %: 43.4

EDUCATION

Technically, education is free, universal, and compulsory for six years, from ages six to 12. Schooling lasts for 12 years, as divided into six years of primary school and six years of secondary school. Primary schooling is divided into three cycles—preparatory, elementary, and intermediate—and secondary schooling is divided into two cycles of three and four years, known as basic and upper, respectively. Secondary schools are almost entirely in urban areas. Students who complete the first six years receive a certificate, those who complete nine years receive a brevet, and those who complete 13 years receive the baccalaureate. The academic year runs from October through July. The medium of instruction is either French or Creole, but the study of English is required at the last grade of the upper cycle of secondary school.

In truth, Haiti's public school system is woefully inadequate. There are not nearly enough schools to serve all the children in rural areas. Dropout rates are high. Fewer than two-thirds of those who begin primary school ever graduate. Only about half of Haiti's adult population is literate.

Private schools play an important role in the school system. Over half of primary-school enrollment and 75 percent of secondary-school enrollment are in private schools. Private schools are of two types: those supported by the state and those supported by tuition charges and contributions. The bulk of the schools in both categories are affiliated with either Roman Catholic orders or Protestant missions.

The principal adult education agency is the Office National d'Alphabetisation et d'Action Communautaire (ONAAC), which has taught over 200,000 Haitians to read and write. Vocational training is provided in three-year professional schools known as *écoles professionnelles*. These schools are all public, whereas most commercial schools are private. There is one university in Port-au-Prince, the State University of Haiti. The children of wealthy parents often go abroad for higher education.

SCIENCE AND TECHNOLOGY

Haiti is not in a position to make many contributions to global science and technology. The technological infrastructure there is substandard, with an unpredictable supply of electricity and a largely illiterate populace. In 2002 there were about 80,000 Internet users in the country. The telephone system is also unreliable.

MEDIA

Most Haitians, many of whom cannot read, receive their news by radio. There are over 250 private radio stations, broadcasting in French and Haitian Creole and expressing a range of political views, though journalists usually try to avoid offending politicians or sponsors. There are several television stations that broadcast in French, Creole, and Spanish. A few newspapers are published in Port-au-Prince.

Aristide's government was notorious for restricting free expression by the media. Freedom of the press improved after the departure of Aristide in early 2004. The gang violence that surrounded his departure was costly to broadcast stations, many of which suffered damage done by members of both political camps.

CULTURE

Haitian's Creole culture combines French and African influences, which appear in a variety of art forms. Haiti has produced excellent painters since its earliest days, when Vodou practitioners decorated the walls of their temples with depictions of the spirit world. The nation established several art schools in the early 1800s. Modern Haitian artists such as Jacques Gourgues and Hector Hyppolite are famous around the world. Port-au-Prince has many museums that display the work of Haitian artists.

Haitian music is an integral part of daily life. The national dance is the *meringue*; people also dance salsa and *compas direct*. Haitian authors have traditionally written in French, but there have been recent efforts to promote the use of Creole in literature. Famous Haitian authors include Jean Price-Mars and Jacques Roumain.

FOLKLORE AND MYTHOLOGY

Nearly all Haitians practice Vodou, which evolved from a synthesis of various west African animist beliefs. The government has outlawed Vodou many times, but the religion has persisted and is now protected. Vodou practitioners use Catholic saints to symbolize spirits in their pantheon. There is an elaborate hierarchy of practitioners and a variety of ceremonies for different purposes. During a Vodou ceremony, the officiant will summon a spirit to possess a human body after opening the gates to the spirit world and greeting the snake god. Each of the different spirits receives different offerings during ceremonies. Vodou dolls serve as messengers to the spirit world.

ENTERTAINMENT AND RECREATION

Haitian recreation often consists of visiting friends and family to eat and drink. People like to go dancing; salsa and *bachata* are popular dances. Sometimes a family will hold a *combite*, a kind of working party in which the guests help with some large work project and then drink alcohol

and dance late into the night. Haitians enjoy visiting the beach and camping and hiking in the countryside.

ETIQUETTE

Haitians tend to be very exuberant in their social interactions and consider it important to greet everyone they see. Teasing is common and innocuous. Begging on the street is extremely common. Sometimes people will look at a visitor and make a throat-slitting gesture; this is only a request for food or money and not a murder threat. It is impolite to enter a Vodou ceremony without being invited; if invited, it is proper to bring a gift for the leader.

FAMILY LIFE

Most Haitian families today consist only of parents and children, a departure from the large extended families that were common until recently. For the most part, couples do not marry but instead live together in an informal arrangement called *plasai*. They agree on how to share finances and work but do not receive any official recognition by the government. Men typically do heavy agricultural labor; women care for the house and children and also grow and harvest vegetables and fruit to sell in the markets. Haitian women are more involved in the labor force than many women in the Caribbean.

Wealthy people are more likely to marry formally. Though traditionally wealthy women did not work outside the home and employed servants to do housework, that is changing. Divorce has become more acceptable than it once was, and married women's legal and property rights have expanded.

PERSONAL APPEARANCE

Haiti's heat and poverty lead to most people dressing casually. People still like to look nice, however, and tend to be somewhat conservative in their dress. Women typically wear skirts at or below the knee and do not appear in public in shorts.

SPORTS

Soccer is Haiti's national sport. Boys and girls play, and there are both men's and women's national soccer teams. Professional matches at the Sylvio Cator Stadium in Port-au-Prince attract huge crowds of spectators. Haiti also has national karate and volleyball teams. People with the money to afford leisure sports play golf, tennis, and go sailing or scuba diving. Most Haitians cannot afford such

recreational activities; instead, they might play miniature football on the streets or go to cockfights to gamble and drink while roosters peck at one another.

CHRONOLOGY

- 1946** With the backing of the Haitian Guard, Dumarsis Estimé is elected president.
- 1950** The army deposes Estimé, forestalling his attempt to amend the constitution to enable him to run for another term. Col. Paul E. Magloire becomes president, supported by both mulattoes and blacks.
- 1956** Magloire is reinstated at the end of his constitutional term.
Nationwide strike forces Magloire to step down. Joseph Nemours Pierre Louis is named interim president.
- 1957** Franck Sylvain is elected president.
After 53 days Sylvain is arrested and replaced by an Executive Council.
Riots erupt nationwide, and civil liberties are suspended.
Army commander Léon Cantave takes over.
Following a near-civil war, Daniel Figiolé is inaugurated as president.
The army arrests and deports Figiolé.
The army revolts under Antoine Kébreau.
In nationwide elections under Kébreau's auspices, François Duvalier, a black physician, is elected president.
- 1960** Clément Barbot, the chief of the security services, is arrested.
Roman Catholic Archbishop François Poirier is exiled.
- 1961** Duvalier has himself elected for another six years by an electoral ruse.
- 1964** Duvalier sponsors new constitution, under which he is made president-for-life.
- 1971** In failing health Duvalier has constitution amended to enable him to name successor and to lower the age of induction to the presidency to 18. Duvalier names his son Jean-Claude as successor.
Duvalier dies and is succeeded by 19-year-old Jean-Claude.
- 1972** Duvalier succeeds in dismissing strongman Luckner Cambronne, head of the Tontons Macoutes.
- 1977** Following the Carter administration's criticism of Haiti's violations of human rights, Duvalier releases a few political prisoners.
- 1978** Gen. Roger St. Albin named chief of staff, and Jean Valme chief of police, in a major government reshuffle.

- 1980** Mass exodus of Haitian refugees is reported. Hurricane Allen kills over 200 and destroys the nation's coffee crop. Duvalier reshuffles cabinet for the fifth time in two years in an effort to consolidate his power vis-à-vis his mother, Simone Duvalier.
- 1981** United States and Haiti reach agreement on forcible repatriation of Haitian immigrants to Haiti.
- 1986** President-for-Life Jean-Claude Duvalier flees Haiti, leaving the government in the hands of a clique of old Duvalier cronies, with Chief of Staff Henri Namphy as provisional head.
- 1987** A new constitution is approved by 88 percent of the voters. Two presidential candidates are murdered and 12 barred from running because of their connections to Duvalier. Presidential elections are cancelled three hours after voting begins because of violence.
- 1988** Leslie Manigat wins the January presidential elections. Manigat's government is overthrown by Gen. Henri Namphy and disaffected members of the army. Namphy dissolves the legislature and formally abrogates the constitution of 1987. Gen. Namphy is ousted in a coup led by Gen. Prosper Avril. Duvalier's supporters within the armed forces are purged.
- 1989** Avril partially restores the constitution. The government survives two coup attempts by the Leopard Corps and the Dessalines battalion. General strikes occur during the fall to protest tax increases.
- 1990** Avril resigns and is replaced by Ertha Pascal-Trouillot as interim president. Jean-Bertrand Aristide wins the December presidential elections.
- 1991** Roger Lafontant, former head of Duvalier's private militia, leads an unsuccessful coup against Pascal-Trouillot. Aristide is inaugurated in February. The military overthrows Aristide in September.
- 1993** Under diplomatic pressure the military junta initially agrees to the reinstatement of Aristide. However, the military prevents UN forces from landing in October. The result is a naval blockade of Haiti by the United States and the United Nation.
- 1994** Former U.S. president Jimmy Carter leads a delegation that negotiates the landing of some 20,000 U.S. troops and the return to power of Aristide.
- 1995** A UN peacekeeping force takes over for U.S. troops. In December, Lavalas candidate René Préval wins 88 percent of the presidential vote.
- 1997** Internal fighting in the government leads to the resignation of Prime Minister Rosny Smarth, and Lavalas prevents Préval from appointing another. UN peacekeepers leave the country.
- 1999** Préval begins ruling by decree, asserting that parliament has no authority because its term has expired.
- 2000** Aristide is elected president in elections soured by accusations of fraud. Opposition members of parliament refuse to recognize Aristide's government.
- 2001** Armed assailants break into the presidential palace, sparking fears of a coup, which does not occur.
- 2002** Haiti becomes a full member of CariCom.
- 2003** Haiti recognizes Vodou as a religion.
- 2004** Aristide is forced into exile in February after rebels launch riots during bicentennial celebrations. An interim government takes over. Flooding devastates the countryside in May. In September, Tropical Storm Jeanne kills 3,000. Violence increases in the capital.
- 2006** René Préval is again elected president.

NATIONAL FLAG

Tricolor consisting of a white horizontal stripe between two blue horizontal stripes, with five blue stars on the white stripe

NATIONAL EMBLEM

The central feature of the emblem is an oval shield with a massive stone pyramid surrounded by blue skies and a blue sea. The shield is bordered with a white band inscribed with the name of the country, “Rep’ca de Honduras,” the date of independence from Spain, “15 de Septiembre 1821,” and the national motto, *Libre, soberana e independiente* (Free, sovereign and independent). The oval shield is embraced by two cornucopias spilling roses, with a quiver of arrows at the crest. The emblem rests on a brown mound, on which are shown a farmhouse, farm tools, and trees.

NATIONAL ANTHEM

“Thy Flag Is a Floating Heavenly Light”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), April 14 (Pan American Day), May 1 (Labor Day), September 15 (Independence Day, National Day), October 3 (Birthday of Francisco Morazan), October 12 (Columbus Day), October 21 (Army Day), December 18 (King Alfonso’s Decision Day), all major Roman Catholic festivals

DATE OF INDEPENDENCE

September 15, 1821

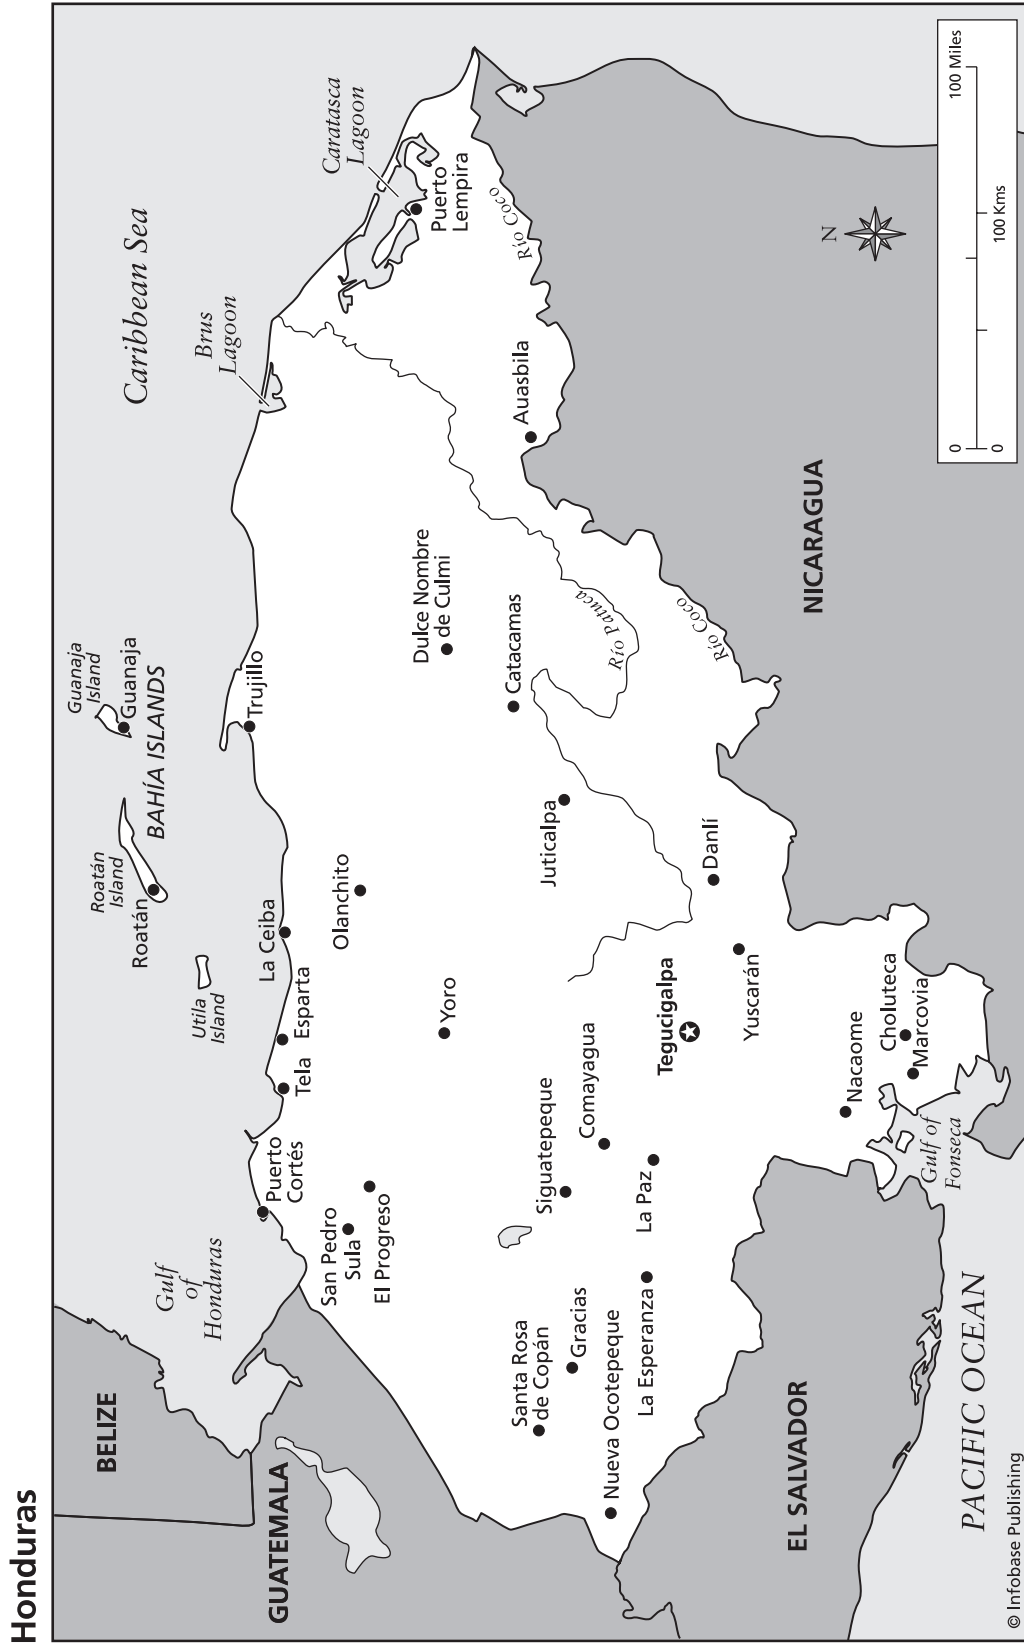

DATE OF CONSTITUTION

January 1982; amended 1995

GEOGRAPHICAL FEATURES

Honduras is in the Central American isthmus and occupies a land area of 112,090 sq km (43,278 sq mi). It extends 663 km (412 mi) east-northeast to west-northwest and 317 km (197 mi) north-northwest to south-southeast. The coastlines on the Gulf of Fonseca, in the southwest, and the Caribbean run a total of 820 km (510 mi). Honduras borders Guatemala to the northwest, El Salvador to the southwest, and Nicaragua to the southeast.

Honduras’s rights to the Gulf of Fonseca, on the Pacific Ocean, are currently in dispute with Nicaragua and El Salvador. The border with El Salvador, defined by the International Court of Justice in 1992, has not yet been marked. Honduras is also in dispute with Nicaragua over maritime boundaries. A treaty concerning several islands and maritime rights was signed with Colombia and ratified in late 1999. This caused Nicaragua to close its country to Honduran goods. Offshore territories include the Islas de la Bahía (Bay Islands) and the Swan Islands, both in the Caribbean,

and three islands in the Pacific: Tigre, Grand Zacate, and Gueguensi.

Honduras is generally a mountainous country, with mountains covering 63 percent of its area. The remaining 37 percent consists of lowlands and valleys. Two ranges, the Central American Cordillera and the Volcanic Highlands, divide the country in half. Major bodies of water include Lake Yojoa in the west and Caratasca Lagoon in the northeast.

The country is drained by an extensive river system. In the north, from west to east, are the Chamelecón, Ulúa, Aguán, Sico, Paulaya, Sicre, Patuca, and Coco (Segovia) rivers. In the south, from west to east, are the Lempa, Sumpul, Goascoran, Nacaome, and Choluteca rivers, all flowing into the Gulf of Fonseca. The country is heavily forested, with a combination of tropical forests covering more than one-half of the country.

CLIMATE AND WEATHER

The coastal regions have a wet, tropical climate, and the interior has a dry, cool climate. Both areas have a wet season from April to October and a dry season from November to March. In the coastal lowlands the annual temperature averages 31°C (87.8°F), the intermontane valleys average 29.4°C (85.0°F), and the higher elevations average 23°C (73.4°F). From October to April the country receives a moderately cold northerly wind that tempers the heat. Hurricanes are common.

Climate and Weather

Mean Temperature
Coastal Lowlands: 88°F
Intermontane Valleys: 85°F
Higher Elevations: 73°F

Average Rainfall

Northern Coastal Region: 70 in to 100 in
Pacific Coastal Plain: 60 in to 80 in
Tegucigalpa: 33 in

FLORA AND FAUNA

Much of Honduras is covered with thick rain forest, making travel difficult, though deforestation progresses at a rate of 3,000 square miles per year; there is a very real danger that Honduras could soon lose all its trees. The north coast is covered with banana and sugar plantations. The Bay Islands are located in the midst of a barrier reef; their flora includes coconut palms and more rain forest. The Mosquitia region has the best untouched rain forest.

Many animals live in Honduras, though the ones who make their home in the rain forest are endangered by habitat loss. There are many birds, including quetzals, kingfishers, herons, and toucans. Mammals include monkeys, pigs, jaguars, ocelots, tapirs, pumas, and armadillos. There are many alligators and snakes and numerous amphibians and insects, especially butterflies. The coastal waters are home to myriad aquatic species, including sharks and whales. La Tigra National Park, near Tegucigalpa, is home to a wide variety of plant and animal species.

ETHNIC COMPOSITION

Mestizos, of mixed European and indigenous ancestry, constitute 90 percent of the population, indigenous

peoples about 7 percent. Caribbean blacks—referred to as Black Caribs or Garifuna, the descendants of a group of people of mixed African and Carib race transported by the British from St. Vincent Island in 1797—account for 2 percent of the population, and those of strictly European ancestry account for the remaining 1 percent.

The indigenous peoples are the remnants of the various tribes that originally inhabited the country, dating back to at least 1500 B.C.E. There are six major indigenous groups that exist in Honduras today: Tolupán or Xicaque (numbering over 60,000), Miskitos (about 35,000), Lenkas (80,000), Chortis (2,000), Tawahkas (2,000), and Pech (4,000). Each of the indigenous groups is centered in a specific area. Miskitos are mostly located in the north, especially the department of Gracias a Dios, as are the Tawahkas, who are also prominent in Copán. The Lenkas live primarily in the departments of Lempira, Intibucá, La Paz, Comayagua, and parts of Cortés, Valle, and Francisco Morazán. The Pech are centered in Olancho, whereas the Chortis are centered in Ocotepeque and Gracias a Dios. The Garifuna are most prominent along the northern coast.

LANGUAGES

The official language, Spanish, is spoken by most of the population. English is spoken chiefly in the Islas de la Bahía. The Black Carib population speaks its own language, called Garifuna. There are five indigenous languages spoken by small sections of the population, the most common of which are Miskito and Lenca.

RELIGIONS

The main religions are Roman Catholicism, Protestantism, and traditional Mayan religions. Current estimates put the Catholic population at about 97 percent, but this includes practitioners who combine Mayan and Catholic religions. Little is known about indigenous religions outside of some generalities: They are similar to native religions in the United States; tobacco is used in a number of healing and other spiritual rituals; and some indigenous religions make use of a *santero*, or spiritual leader who assists in healing and related matters. The *santero*, however, is likely an import from Honduras's Caribbean neighbors and is more prominent in the Garifuna religions found along the north coast.

Religious Affiliations

Roman Catholic	6,766,000
Other (Mostly Protestant)	209,000

HISTORICAL BACKGROUND

Long before Spanish settlers came to what is now Honduras, an indigenous culture flourished. Most notable is the Mayan culture, which goes back to at least 1500 B.C.E. Although that culture all but vanished, many other indigenous cultures flourished until the Spanish arrival and conquest in the 1500s. In 1538 the chief of the Lenca tribe, Lempira, led a revolt against Spanish rule. He was murdered by the Spanish representatives, who met him under the guise of beginning peace negotiations. Although the revolt was crushed shortly thereafter, he is a national hero who symbolizes indigenous culture and heritage. Honduran currency is named after the chief, as is one of the departments.

Spanish rule continued for three centuries. Honduras joined other provinces of Central America in declaring its independence from Spain in 1821. It was part of the Mexican empire of Agustín de Iturbide from 1822 to 1823, then a member of the United Provinces of Central America from 1824 to 1838. Honduras declared its independence later that year, although its initial 1821 declaration of independence from Spain is the date that is celebrated.

Honduras has a long history of political instability, revolution, and military rule, caused by the nation's chronically troubled economy, its overt favoritism to fruit companies (which leave wealth in a few, largely foreign hands), and its involvement with both Central American neighbors and the United States in various disputes. By the mid-1980s the nation had had 16 constitutions, 126 governments, and more than 380 armed rebellions. Between 1855 and 1932 Honduras had 67 different heads of state, as power swung between relatively weak conservative and liberal governments. The greatest political influence, in fact, was in the hands of foreign fruit companies, particularly the United Fruit Company.

A measure of internal stability was achieved under the presidencies of Gen. Tiburcio Carías Andino and his successor, Juan Manuel Gálvez (1932–54). The election of Andino marked the political ascendancy of the military, which he used to maintain power. From 1954 to 1982 the army held political power through a series of military coups, in 1956, 1963, 1972, and 1978. Under pressure from the United States the military returned the government to civilian hands in 1982 with the election of Roberto Suazo Córdova. However, the commander in chief of the army, Gen. Gustavo Adolfo Álvarez Martínez, maintained considerable power until his removal in 1985.

In November 1985 José Azcona Hoyo was elected president, and he assumed office the following January. His inauguration marked the first time an elected government was peacefully succeeded by another since 1929. During the 1980s he refused to allow the United States to use Honduras as a “base camp” for various military operations in El Salvador and Nicaragua. This had the effect of stabilizing the country somewhat politically but removing much of its funding. However, both funding

and U.S. involvement returned in 1986, when Honduras began clashing with Nicaragua over Nicaraguan contras in Honduran territory. Honduras requested troops from the United States in 1988 because of the invasion of Nicaraguan troops along its border.

In 1989 Central American countries met again to negotiate the disbanding of contra troops in Honduras. Further demilitarization came when the police were separated from the military in 1997 and both put under civilian leadership in 1999. With the interference of other countries subsiding somewhat, labor and indigenous groups are continuing to call attention to police abuse, labor rights issues, and freedom of the press. In a vote held on November 25, 2001, Ricardo Madura was elected president; he was inaugurated in January, 2002.

Madura's first act as president was to crack down on street gangs, which have been a growing problem in the country. Many people were dismayed at this announcement because the police and military have historically abused their power when confronting street children; in 2000 more than 1,000 children were killed by police and death squads.

Honduras has been attempting to establish a firmer position in the modern world, sending troops to Iraq and entering a free-trade agreement with Guatemala, El Salvador, Nicaragua, and the United States in 2003. Gang violence continued to be a problem in 2004, with over 100 inmates dying in a prison fire and a gang attack on a bus in Chamalecon. Liberal Party leader Manuel Zelaya Rosales was elected president in December 2005.

LIST OF MODERN RULERS

1933–49	Tiburcio Carías Andino
1949–54	Juan Manuel Gálvez
1954–56	Julio Lozano Díaz
1956–57	Military Government Council
1957–63	Ramón Villeda Morales
1963–71	Oswaldo López Arellano
1971–72	Ramón Ernesto Cruz Uclés
1972–75	Oswaldo López Arellano
1975–78	Juan Alberto Melgar Castro
1978–82	Policarpo Paz García
1982–86	Roberto Suazo Córdova
1986–90	José Azcona Hoyo
1990–94	Rafael Leonardo Callejas
1994–98	Carlos Roberto Reina Idiáquez
1998–2002	Carlos Roberto Flores Facussé
2002–05	Ricardo Maduro
2005	Manuel Zelaya Rosales

CONSTITUTION

The 1982 constitution established a unitary and democratic republic, with a president elected for a four-year

term by popular vote. The president may not succeed himself in office. The constitution also provides for a unicameral legislature, whose members serve four-year terms concurrent with that of the chief executive.

PARLIAMENT

The national legislative body is the Asamblea Nacional (National Assembly), whose 128 representatives, from all of the 18 provinces, meet annually for a 100-day session. Although the Assembly possesses broad constitutional powers designed to prevent absolute presidential rule, in practice it is a tame appendage of the presidency. Beginning in 1997 voters were allowed to elect the president, National Assembly, and local leaders separately, in an effort to make elected officials at all levels more accountable.

POLITICAL PARTIES

The National Party of Honduras (PNH) is the country's major conservative party. The Honduran Liberal Party (PLH) is the major liberal party of Honduras; the two most recent presidents have been affiliated with this party.

Other prominent parties include Partido de Innovación y Unidad (PINU), an offshoot of the PNH; the centrist Partido Demócrata Cristiano (PDC), or Christian Democrats; the Partido Unión Democrática (PUD), the Democratic Unification Party; and the Partido Nacional, the National Party of Honduras.

LOCAL GOVERNMENT

The country is divided into 18 departments, each headed by a governor appointed by the president to serve a four-year term. The 18 departments are divided into 282 municipalities, of which 63 are urban centers. Municipalities are further subdivided into units called *aldeas*, which are villages or hamlets. Settlements smaller than *aldeas* are known as *caseríos*.

LEGAL SYSTEM

The Honduran legal system is based on Roman and Spanish civil law as influenced by English common law. The courts have recently abandoned the Napoleonic Code and replaced it with oral advocacy. The judicial system consists of the Supreme Court, five courts of appeal, and several courts of original jurisdiction, including specialty courts for tax, labor, and criminal matters. The Supreme Court consists of seven judges, appointed since 1972 by the president. The constitution grants the Supreme Court the right to appoint lower court judges, to

declare laws unconstitutional, and to censure ministers, but these powers are rarely exercised. The five courts of appeal are composed of three judges each. Two are in Tegucigalpa, one each in San Pedro Sula, Comayagua, and Santa Bárbara. Original jurisdiction in criminal cases lies with the courts of first instance, each presided over by a single judge.

Although slow and at times cumbersome, the judicial system does allow for fair trials. There are no secret tribunals. There are delays resulting from administrative inefficiency, however, and adequate access to the legal process is not always available to those at the lower end of the social and economic scale. The constitution provides for judicial independence.

HUMAN RIGHTS

Although discrimination based on sex, race, class, or “in any form that harms human dignity” is prohibited by the constitution, discrimination and violence against indigenous people, homosexuals, and women are widespread. The government has drawn much criticism from international human rights groups for not investigating or taking action with regard to human rights abuses, including many alleged abuses by the police and military. Investigations continue into the “disappearances” of leftist activists in the 1980s, which were caused by paramilitary groups supported by both the Honduran and the Nicaraguan governments, but little progress has been made. Although the most recent president is also a co-owner of a newspaper, *La tribuna*, human rights groups have continued to report the harassment, arrest, censorship, and torture of journalists. The World Bank has estimated that one in five Hondurans is the victim of corruption. President Maduro’s harsh antigang laws have resulted in the imprisonment or extrajudicial execution of thousands of minors. As of 1999 over 10,000 people were held in prison, most of them still awaiting trial; many had already served longer than their maximum possible sentence if convicted. Various human rights and environmental activists have been killed. Violence against women, child labor, and human trafficking in sex slaves were all problems.

FOREIGN POLICY

Honduras’s key aims in foreign policy are to ease tensions with other Central American countries and improve economic conditions via foreign investment. The nation has been relatively successful with respect to both. It has entered an agreement to reduce restrictions to trade with Guatemala, Nicaragua, and El Salvador. Although the United States was out of favor in the 1980s because of its contributions to unrest (through involvement in El Salvador and most particularly Nicaragua), relations have

improved, and the United States is one of many countries providing the country with direct aid, investment, or loans. Nicaragua protested and cut off Honduran trade when it ratified a 1986 treaty with Colombia, but Honduras’s relations with its other Central American neighbors are significantly better.

DEFENSE

In 1999 control of the armed forces was moved to a civilian minister of defense and out of the direct control of the president. Before this change in the law the Honduran Armed Forces (HOAF) had much freedom in carrying out duties and were reported to engage in human rights violations with impunity. Because of such problems caused by the military in the past, those on active military duty are not allowed to vote. Service in the armed forces is voluntary, and Honduras has sought to modernize its defense forces, as influenced heavily by aid and advisers from the United States. The military currently spends much of its energy combating organized crime and drug trafficking. Since the end of the draft, the all-volunteer force has become much smaller and suffers considerable gaps in staffing.

ECONOMY

Honduras is a very poor country, with little infrastructure development or industry. It is still recovering from years of unrest and the \$2 billion in damage wrought by Hurricane Mitch in 1998. The Honduran economy has been based on agriculture, especially the exports of bananas, coffee, beef, and timber, but many of these markets are vulnerable to climate problems and price fluctuations. The coffee industry in particular has been hurt by low global prices, and the banana industry was devastated by Hurricane Mitch. The nation is currently working to diversify its economy by developing a *maquila* industry—assembling garments for sale in other countries—as well as farming nontraditional exports such as shrimp and melons and encouraging tourists to visit. The *maquila* sector is currently the largest source of foreign revenue, but remittances from Hondurans living abroad will soon surpass that sector. The government has begun offering incentives to foreign companies considering locating facilities in Honduras.

Inflation was 7.7 percent in 2003, a vast improvement from the double-digit rates of the late 1990s. Unemployment was a very high 27.5 percent. Honduras is classified as a Heavily Indebted Poor Country (HIPC), which qualifies it for multilateral debt relief, but the International Monetary Fund (IMF) halted that program because of the Honduran government's fiscal problems. In 2004 the IMF and Honduras agreed to a new three-year poverty-reduction plan.

ENVIRONMENT

Honduras suffers from deforestation and soil erosion due to the exploitation of natural resources, as people clear land to grow crops and for timber. At the current rate of deforestation, all of Honduras's native forests could be gone by 2025. Honduras once exported a good amount of mahogany, but now most of its wood exports are pine. The Honduran Forestry Development Corporation frequently clashes with indigenous peoples and other landowners, as it usually favors timber, mining, development, and other activities over the environment. Mining has polluted much of the country's freshwater supply, including Lake Yojoa. These problems made the damaging effects of Hurricane Mitch in 1998 much worse than they otherwise would have been. The urban population is expanding rapidly, and uncontrolled development causes land degradation and soil erosion as well as other infrastructure problems, such as the contamination of water sources with sewage.

LIVING CONDITIONS

The standard of living for most Hondurans is very low. Economic inequality is a major problem, and a large proportion of the people live in abject poverty. Housing is poor, electrical supply is unpredictable, the water supply is contaminated, and job opportunities are few and far between. Few people own automobiles because both cars and gasoline are expensive. People get around on buses or taxis, hitch rides in pick-up trucks, or simply walk.

These poor conditions have resulted in crime waves that make Honduras a relatively dangerous place to live and visit. Drug trafficking is one of the few ways for poor people to make money, so many young men and boys join gangs called *maras*. Residents of Tegucigalpa and other cities avoid walking downtown at night, and they never set foot in areas such as the Comayagüela market. The police are part of the problem, killing young people without provocation and generally adding to the sense of insecurity.

HEALTH

Honduras has very little medical care available to its population. Most citizens cannot afford to pay for drugs or doctors, or even for transportation to clinics. Some people receive publicly subsidized health care; wealthy people usually pay for their own treatment at private facilities. The majority of clinics, doctors, and nurses are located in Tegucigalpa. People in the countryside sometimes visit traditional healers, who treat ailments with herbs and folk remedies.

Hondurans on average are not healthy people. Life expectancy is low and the infant mortality rate high. Many people complain of constant fatigue even if they do not complain of illness; stunted growth from malnutrition is common. A variety of infectious diseases afflict the people, including diarrheal illnesses from contaminated water, tuberculosis, typhoid, influenza, pneumonia, malaria, and dengue fever. Drug addiction and alcoholism are growing increasingly prevalent, and in 2003, 1.8 percent of the population was infected with HIV. Fertility is high; each woman has about four children, which has caused Honduras to have a disproportionately young population: Only one-fourth of Hondurans are over age 30.

FOOD AND NUTRITION

The Honduran diet is based on rice, beans, and corn. People eat these basic ingredients as tortillas, tamales, and beans and rice. Other common foods are plantains, peppers, and cassava. Meat and cheese supplement the basic foodstuffs. Sliced green mangoes are a popular snack. The midday meal is usually the biggest of the day. Many people cannot afford to buy enough food for their families, so they grow vegetables to supplement their diets, occasionally selling surpluses in the market. Pineapples are a ubiquitous crop. Most people make their food from scratch, down to grinding the corn for their tortillas and roasting their own coffee beans.

Adults drink coffee with nearly every meal. Soft drinks are popular, as are drinks that mix milk, fruit juice, and *orchata*, a drink made from rice and seeds. Tap water is unsafe to drink, so many people drink bottled water; those without the means to buy water sometimes drink tap water despite the risks. Alcohol is not drunk daily, but people do enjoy drinking at parties, where they may consume wine, beer, *chichi*, which is brewed from pineapple skin, or *guaro*.

 Amount of Fruits and Vegetables Available per person per year kg: 101.1

STATUS OF WOMEN

The women's movement in Honduras has been active since the 1920s, when women fought for the rights of banana and mining workers. Women have had the right to vote since 1954. The 1984 Family Code gives rights to the children of single mothers and requires fathers to support all their children. Although women have the right to vote, they are not prevalent in high-ranking corporate and government positions, and they earn considerably less than their male counterparts.

Honduran men are still raised in the tradition of machismo, in which they are expected to be assertive and

strong and to be good supporters of their families. Women are still expected to be submissive and put their families ahead of their own aspirations. This has been changing as more women work outside the home, but few Honduran men are willing to help with housework.

Domestic and other types of violence against women are widespread. In 1997 the criminal code was changed so that domestic violence and sexual harassment became crimes. That same year the Assembly passed the Law against Domestic Violence, which strengthened penalties for domestic violence and allowed the government to set up shelters. To date, however, only one shelter is operational. In 1998, 3,000 women sought legal action under the 1997 law. Also in 1998 the military and police academies accepted female students for the first time.

Human trafficking in sex slaves is a major problem. The government has made legal efforts to stop this trade, but it continues nevertheless.

WORK

Over one-quarter of Hondurans of working age either are unable to find any kind of employment or make their money in illegal enterprises such as drug dealing. Of those who work, one-third are employed in agriculture, many of them as seasonal workers. The banana and coffee industries still employ a large number of people, and shrimp, pineapple, and sugarcane are growing in importance. Banana and coffee workers are organized into trade unions, and the wages for those workers are some of the highest in the nation; this is the result of the 1954 Great Banana Strike. Other Hondurans work in factories making garments and other products; these jobs pay somewhat less than coffee and banana work. A few people work in professions such as teaching or medicine. Many women work as domestics. Child labor is quite common.

Employment and Labor

 Unemployment %: 27.5

EDUCATION

The literacy rate is 73 percent. Education is free, universal, and compulsory, in theory, for six years, from the ages of seven to 13. Schooling lasts 11 to 12 years. The academic year runs from February through November. All private schools that meet standards, including those run by the Catholic Church, are subsidized by the government. The main public university is the National Autonomous University, founded in Tegucigalpa in 1847. There are three private universities.

In practice, most children never make it past second or third grade. Many people forget how to read because they never use the skill after leaving school. Rural areas do not have many secondary schools, and schools throughout the country lack supplies and teachers. Only about 10 percent of the population ever attends secondary school, which is where people receive training in trades such as carpentry, computer technology, or teaching.

MEDIA

The Honduran government restricts freedom of the press through strict antidefamation laws, which prevent honest reporting; journalists are required to identify their sources, which limits the amount of material they are willing to publish. Most journalists censor themselves in order to avoid offending politicians and other influential people. Politicians have been known to bribe journalists to receive favorable coverage.

Five daily newspapers are published in Honduras, all in Spanish. The most influential daily is *La prensa*. Other large newspapers include the left-of-center *El tiempo* and the independent *La tribuna*. There are numerous radio and television stations, most of them privately owned.

CULTURE

Honduras has produced many visual artists, especially painters. López Rodezno founded the National School of Arts and Crafts and painted murals. José Antonio Velázquez painted primitive paintings of village life and won the National Prize for Art in 1955. Cruz Bermudez has become famous for his paintings of endangered species. Honduran craftsmen carve animals from wood, form figures and vessels from clay, make jewelry, and weave cloth. Mayan temples still display ancient carvings and ceramics.

There are many Honduran writers, though most Honduran people cannot afford to buy books. Famous authors include Marcos Reyes, Lidia Handal, Ramon Amaya-Amador, and Juan Molina. Lucila Gamero de Medina wrote the first Honduran novel in 1893, at the age of 20.

Honduras has thriving native musical styles. Musicians play drums and wind instruments made of wood, bamboo, or clay as well as instruments made of turtle and conch shells. Unusual instruments include the marimba and the *caramba*.

FOLKLORE AND MYTHOLOGY

The ancient Maya lived in the area that is now Honduras and had an active mythological pantheon, complete with rituals that incorporated torture and human sacrifice. Some Maya still live in Honduras today. Modern Hondurans incorporate folklore into their daily lives, telling stories at festivals; many stories have been passed through multiple generations by the oral tradition. The audience often participates in the telling of stories, singing a chorus at pauses, a tradition that comes from West Africa. People tell tales of a frightening man called a *duende* and another of the day the rooster overslept, so no one got up. A modern folktale based on an actual event is that of the “rain of fish”: sometimes thunderstorms will pick up fish and drop them on the ground in Yoro. This unusual event has become a favorite theme for native paintings. Festivals also include traditional folk dancing; each region has its own distinctive style.

ENTERTAINMENT AND RECREATION

Hondurans like to spend their free time visiting family and friends. Games are a popular pastime; people enjoy chess, checkers, cards, and billiards. Children play games such as marbles, hopscotch, and kick the can and like to fly kites. Girls and women love to dance; they begin taking dancing lessons at a young age. Villages commonly hold dances on holidays and weekend, and the cities have discos where people go to dance.

During holidays people enjoy visiting the beach, where they swim, surf, and have picnics. Families like to visit the national parks to see the native plants and animals. The Bay Islands are a popular destination for scuba divers and whale watchers.

ETIQUETTE

Hondurans are not always punctual, and lateness is not considered cause for offense. When greeting people, it is polite to shake hands and to exchange business cards if the meeting is for business purposes. People always like to

engage in small talk before discussing business. It is polite to address people by their formal or academic titles.

FAMILY LIFE

Hondurans believe family is extremely important; they have close ties to relatives and will help one another in times of need. Relatives share resources. The system helps parents because there are always kin to watch children, allowing many women to leave home to work for money. Grandparents are held in high esteem, and people ask them for advice; few people live to old age, which makes them that much more valuable. Single-parent families are relatively common. Society looks down on men who abandon their families, but it happens occasionally nevertheless. Many couples do not marry in the Catholic Church, preferring to have a civil ceremony or simply to live together without marrying.

PERSONAL APPEARANCE

Professionals in Tegucigalpa dress formally, in suits, but in other cities people tend to dress more casually. People in the countryside dress quite casually and usually do not have very extensive wardrobes.

SPORTS

Soccer is the most popular sport in Honduras and inspires great passion among fans. Both men and boys play. The best soccer players are national heroes. Baseball and basketball also have a number of followers. For the most part girls do not participate in organized sports, preferring to spend their time dancing. Famous Honduran athletes include the women's basketball player Leticia Castro and the soccer player Caneja Cardona.

CHRONOLOGY

- 1944** Demonstrations outside the Presidential Palace initially result in the release of some prisoners but are soon crushed by the military and secret police.
- 1949** After opposition parties boycott the election, PNH candidate Juan Manuel Gálvez becomes president almost unanimously.
United Fruit obtains a 25-year contract with very favorable terms.
- 1954** Guatemalan governmental reform inspires strikes in Honduras.
Honduras works first with the United States to overthrow the Guatemalan government, then with the fruit companies to crush the strikes.

1032 Honduras

- Following an electoral crisis Vice President Lozano Díaz proclaims himself president.
- 1956** Maj. Roberto Gálvez seizes power in a coup and rules the country through a U.S.-trained military junta.
- 1957** Gálvez promulgates a new constitution.
- 1958** Ramón Villeda Morales is elected president.
- 1963** A few weeks before the end of his six-year term, Villeda is ousted by an army coup led by Osvaldo López Arellano.
- 1965** A new constitution is promulgated.
- 1969** Riots sparked by the World Cup soccer match between Honduras and El Salvador lead to a four-day war.
Under the auspices of the Organization of American States (OAS), the two warring nations agree to a compromise settlement.
- 1971** López initiates the Pact of National Unity, under which seats in the National Assembly are to be divided equally between the National and Liberal parties.
López steps down, and Ramón Ernesto Cruz Ucles is elected president.
- 1972** Cruz is deposed, and López returns to power.
The United States acknowledges Honduran sovereignty over the Swan Islands.
- 1974** Hurricane Fifi strikes Honduras, leaving 12,000 dead and 150,000 homeless.
- 1975** United Brands admits paying a “high Honduran official” (by implication, the president) \$1.25 million for a reduction in banana export taxes.
López is overthrown and replaced by Juan Alberto Melgar.
- 1976** Renewed border conflicts with El Salvador lead to OAS intervention.
- 1978** Political parties are legalized.
Melgar is ousted after charges surface that he was associated with a \$30-million drug ring.
- 1980** The Liberal Party, led by Robert Suazo Córdova, wins National Assembly elections, but real power remains in the hands of the military, especially the chief of staff, Gen. Gustavo Alvarez.
- 1982** General Alvarez instigates an amendment to the constitution whereby the president is stripped of his authority as commander in chief.
- 1984** General Alvarez is ousted and sent into exile by a group of junior army officers. General Walter López Reyes is named commander in chief.
- 1985** In national elections José Azcona Hoyo of the Liberal Party is awarded the presidency, although he polled less than 30 percent of the vote, while his rival, Rafael Leonardo Callejas of the National Party, polled 44 percent.
- 1986** Honduras and Nicaragua renew border fighting as Nicaraguan government forces continue to wage war against contra rebels in Honduran territory.
- 1987** Honduras is a signatory to the Central American peace plan for the region.
- 1988** At the government’s request, the United States airlifts 3,200 troops into Honduras to repel Nicaraguan troops.
Amnesty International and the Inter-American Court of Human Rights report human rights violations in Honduras.
- 1989** Honduras and Nicaragua negotiate amnesty terms offered the contras within Honduras.
Rafael Leonardo Callejas wins the presidential election.
- 1994** Carlos Roberto Reina Idiáquez takes office as president.
- 1997** The National Police is placed under civilian, rather than military, leadership.
- 1998** Carlos Roberto Flores Facussé takes office as president.
- 1999** The constitution is amended to provide for civilian control of the military.
Honduras ratifies a treaty (signed in 1986) with Colombia regarding the San Andrés y Providencia islands, prompting Nicaragua to suspend trade with Honduras.
- 2000** Death squads backed by the police murder over 1,000 street children.
- 2001** Ricardo Maduro is elected president. The United Nations calls on the government to prevent the killing of street children.
- 2002** Maduro is inaugurated. Honduras reestablishes diplomatic ties with Cuba.
- 2003** Honduras sends troops to Iraq. Honduras formalizes free-trade agreement with the United States, along with El Salvador, Guatemala, and Nicaragua.
- 2004** Over 100 inmates, many of them gang members, die in a fire at San Pedro Sula prison. Gang members attack a bus in Chamalecon and kill 28 passengers.
- 2005** Manuel Zelaya Rosales is elected president.

Basic Fact Sheet

OFFICIAL NAME

Republic of Hungary (Magyar Köztársaság)

ABBREVIATION

HU

CAPITAL

Budapest

HEAD OF STATE

President László Sólyom (from 2005)

HEAD OF GOVERNMENT

Prime Minister Ferenc Gyurcsány (from 2004)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

10,006,835 (2004)

AREA

93,030 sq km (35,919 sq mi)

ETHNIC MAJORITY

Magyar

LANGUAGE

Hungarian

RELIGIONS

Roman Catholicism, Calvinism, Lutheranism

UNIT OF CURRENCY

Forint

NATIONAL FLAG

Tricolor of red, white, and green horizontal stripes, from top to bottom

NATIONAL EMBLEM

The left side of the coat of arms is divided by four red and three white stripes, known as the “Arpad stripes,” representing the seven Hungarian tribes that arrived in Transylvania in 896 c.e. On the right side are three green hills that symbolize the three main mountains of Hungary: Tatra, Fatra, and Matra. On the middle hilltop sits an open golden crown, from which emerges the apostolic double cross that was awarded by Pope Sylvester II to Saint Stephen I, the first Hungarian king, in 1000 c.e., in recognition of his mission to convert the pagan Hungarians to Christianity.

NATIONAL ANTHEM

“God Bless the Hungarians”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 15 (1848 Revolution), Easter Monday, May 1 (Labor Day), August 20 (Foundation of State/St. Stephen’s Day), October 23 (National Day), All Saints’ Day, Christmas, Boxing Day

DATE OF INDEPENDENCE

November 16, 1918

DATE OF CONSTITUTION

August 20, 1949; revised April 19, 1972, and October 18, 1989; amended 1997

GEOGRAPHICAL FEATURES

Hungary, a landlocked country in the Carpathian Basin of central Europe, has a total area of 93,030 sq km (35,919 sq mi). The country is generally divided into four topographic regions: the Great Hungarian Plain (Nagy Magyar Alföld), more commonly called the Great Alföld; Dunar Túl, the Hungarian name for Transdanubia; the Kis, or Little, Alföld; and the Northern Mountains. The Great Alföld accounts for about half of the total land area and is made up of the lowlands east of the Danube. It has a mean elevation of little more than 91 m (300 ft), with

the largest deviation from the average elevation on the plateau between the Danube and Tisza rivers and in an area in the northeast along the Romanian border. The plateau is about 30–46 m (100–150 ft) higher than the floodplains of the rivers, and the northeastern hills reach approximately 183 m (600 ft).

Transdanubia consists of rolling country, with uplands to the west, at the foothills of the Alps. Lake Balaton, the last remnant of the ancient Pannonian Sea, is roughly in the center of this region. To its east and extending to the Danube is the lowland known as the Mezőföld. To the south are the Somogy, or the Transdanubian, Hills,

Hungary

and the Mecsek and Villány mountains. On the Austrian border the alpine foothills rise to over 914 m (3,000 ft). The Transdanubian Central Mountains extend along the northern side of Lake Balaton. The chain consists of several minor ranges, with elevation between 213 and 762 m (700 and 2,500 ft).

The Little Alföld, bordering Slovakia and Austria, is mostly agricultural land. The Northern Mountains are the lower volcanic fringe of the Carpathian Mountains and extend northeastward from the gorge of the Danube near Esztergom for about 225 km (140 mi). Their highest point, Mount Kékes in the Matra Range, has an elevation of 1,014 m (3,326 ft).

The entire country is in the middle Danube Basin. Local rivers in northern Transdanubia and the Little Alföld flow into the Danube within Hungary, but others drain into the Drava and Tisza tributaries and join the Danube in Serbia. The Tisza is the Danube's second-largest tributary, and it meanders across the Great

Alföld. In contrast to the Danube, its streambed is flat, and it has virtually no valleys. The Drava, slightly smaller than the Tisza, accumulates most of its volume in Austria, flows across the northern tip of Serbia, forms part of the Hungarian-Serbian border for about 129 km (80 mi), and turns back into Yugoslavia again for about 64 km (40 mi) before joining the Danube.

There are three large and well-known lakes in the country. Lake Balaton, about 72 km (45 mi); Neusiedler Lake (Fertő tó), on the northwestern border, is shared with Austria; and Lake Velence, filled artificially to maintain proper depths for fishing and bathing.

CLIMATE AND WEATHER

Hungary experiences three weather systems: continental air masses dominate the weather about 65 percent of the time in winter and 20 percent of the time in summer; maritime, or Atlantic, weather prevails about 30 percent of the time in winter and 65 percent of the time in summer; and subtropical Mediterranean weather prevails for the remainder of the time, about 5 percent in winter and 15 percent in summer.

Geography and topographic relief account for the lesser influences from the maritime and Mediterranean systems. The country is more than 1,126 km (700 mi) from the Atlantic Ocean, from which it is separated by the Alps. It is nearer the Mediterranean but also separated from that body of water by high terrain. On the other hand, clear, dry air from the high-pressure polar and continental air masses, circulating clockwise, enters the country from the southern quadrants. The low hills of the eastern Carpathians provide little resistance to its entry into the Danube Basin, but once there it tends to be trapped and is difficult to dislodge.

Nevertheless, the weather that reaches Hungary from the Atlantic and the Mediterranean is moderating and brings in a great portion of the country's precipitation. Rainfall averages 711 mm (28 in) per year in the western part of the country and 559 mm (22 in) in the eastern part. Even the most arid portions of the Great Alföld receive about 508 mm (20 in). However, the seasonal distribution of rain differs widely and may be higher or lower.

The mean temperature for the country as a whole is about 10°C (50°F). Budapest and the extreme southeastern regions are warmer, and higher elevations cooler, than average. July is the hottest month, with an average

of 21°C (70°F), and January the coldest, with an average of -2°C (29°F). Winters are warmer and summers are cooler in Transdanubia than in the Great Alföld. The highest temperature recorded in the country over a 175-year period was 41°C (106°F) in Pécs in southern Transdanubia in 1950; the lowest, -34°C (-29°F) in Debrecen in 1942. Typical annual extremes are about 35°C (95°F) and -26°C (-15°F).

The surrounding mountains isolate Hungary from strong winds. Over the greater part of the country, winds are most frequently from the north and northwest. East of the Tisza and in the eastern portion of the Northern Mountains, they are most often from the northeast.

The annual average of sunshine is about 5.5 hours per day, or 2,000 hours per year. The range varies from one hour and 15 minutes per day in December to nine hours and 40 minutes per day in August. In general, western regions are slightly less sunny than those in the east, and the plateau between the Danube and the Tisza experiences the most sunshine.

FLORA AND FAUNA

Two-thirds of Hungary is flat, low-lying land, less than 200 meters above sea level. The Great Alföld lies east of the Danube and covers almost half the area of Hungary. Wheat and fruit are grown in this area, which is also used for grazing. The people of the Great Alföld are known for their horses and their riding skills. In the center of the Great Alföld is an area known as the Hortobágy Puszta, a region of flat grassland which has inspired many Hungarian poets and artists. Along the northern border of Hungary rise the Matra Mountains. Some of the mountains in this region are of volcanic origin. To the west of the Danube, in an area known as Transdanubia, the terrain is varied. There are mountainous areas in the south, and in the northwest is the Little Alföld. In the center of Transdanubia is Lake Balaton, Central Europe's largest lake and a popular resort area. Hungary has five national parks and almost 1,000 protected areas. The country is known for its hot springs; Budapest, the capital, has about 80. Hungary's climate is dry and continental. In the south, summers are long and winters mild and wet. The Great Plain has cold, windy winters and hot, dry summers. The long, warm and

sunny autumn, known as *venasszonyok nyara*, or “old ladies’ summer,” helps produce fine fruits and sweet wine grapes. May, June and November are the rainiest months.

ETHNIC COMPOSITION

About 96 percent of the population is Magyar (the proper term for “Hungarian”). This category includes both true Magyars and those who have been assimilated into Magyar culture. The principal national minorities, who constitute about 4 percent, include Germans, Slovaks, Serbs, Croats, Romanians, and Ruthenians. Over two-thirds of each of these minority groups are peasants living in villages dispersed across the country, where rural life offers a better environment for preserving individuality. There is little evidence of interethnic friction, although constitutional provisions for bilingual education for minorities are not entirely enforced.

There are a few thousand Gypsies, or Roma, in Hungary, whom the state does not consider an ethnic minority. Prejudice against Gypsies is long established and strong.

LANGUAGES

Hungarian, or Magyar, is the national language. Written in Latin characters, Magyar belongs to the Finno-Ugric family, a branch of the Ural-Altai language group. Magyar has a heavy admixture of Turkish, Slavic, German, Latin, and French words. Since World War II many Hungarians have learned to speak one or more second languages, such as Russian, German, and English.

RELIGIONS

Roman Catholicism became the official religion of the land in 1001 under Stephen, who was given the title of apostolic king by the pope. Both Stephen and his son were canonized.

Catholics live mostly in Transdanubia, in the area between the Danube and Tisza rivers, and in the mountains of the north. They form the majority in 70 percent of the towns and are particularly strong among such minorities as Croats, Germans, and Slovaks. The church survived the bitter persecutions of the early postwar years under Matyas Rakosi and remains active and influential both in the rural areas and among intellectuals. Masses are well attended, and pilgrimages are frequent. External piety is no longer concealed or engaged in merely as a form of political protest.

Discrimination against Protestant churches officially ended with the Communist takeover. The new government made individual agreements with each body and subsidized the reconstruction of churches extensively damaged during the war. Religious education is subsidized by the state. The Calvinist Reformed Church of Hungary, with about 19 percent of the population, has 2,000 autonomous parishes in four districts or dioceses, two theological seminaries, several institutions of higher learning, and 20 charitable organizations. The Evangelical Lutheran Church, claiming about 4 percent of the population, is divided into two districts, with 500 parishes forming 16 seniorates, and has one theological academy and 18 social service institutions. The largest of the smaller denominations is the Baptist Church, which was established in Hungary in 1846. It has 500 congregations, one theological seminary, and three social service institutions. Methodists entered Hungary in 1900 and now have 55 congregations and one charitable institution.

The Orthodox Church has 10 parishes, serving mostly Serbian and Romanian minorities in Szentendre and Budapest. Hungarian Orthodoxy is under the Moscow Patriarchate.

Church-state relations are governed by the 1972 revision to the constitution of 1949 and by a series of laws regulating religious practice. The constitution guarantees freedom of conscience and freedom of worship.

HISTORICAL BACKGROUND

The Magyars arrived in the Carpathian Basin at the end of the ninth century, and this event generally marks the beginning of the Hungarian nation. The early Magyars were

a seminomadic, pastoral people who lived in the Khazar state north of the Black Sea, to which they had migrated probably from the region between the great bend of the Volga River and the Ural Mountains. The Magyars were one of many warlike, nomadic hordes who swept into Europe from the East, bent on conquest and plunder. They consisted of seven tribes led by a chieftain known as Arpad, and they easily defeated the Slavs and other peoples living in the Carpathian Basin. The successors of Arpad later became kings of Hungary, and the Arpad dynasty lasted until the male line died out at the beginning of the 14th century. In the course of time the Magyars ceased their depredations and became sedentary; in turn, their land was subject to invasions by other marauding armies. Finally, the Magyars were decisively defeated by a coalition of forces of the Holy Roman Empire at Augsburg.

Back in 972 Prince Geza, great-grandson of Arpad, became the leader of the entire Hungarian confederation. To solidify the Western orientation of the country, he caused his son Istvan (Stephen) to be baptized a Roman Catholic. Stephen succeeded to the throne, and through his efforts Hungarians were converted to Roman Catholicism. As a reward Stephen received a crown from the pope (a story doubted by some modern historians but indelibly inscribed in Hungarian legend). Later he was canonized, and as St. Stephen and the first king of Hungary, he is revered as the father of the Hungarian nation, and his crown is considered the symbol of its sovereignty.

During Stephen's reign Transylvania was brought under Hungarian hegemony, and the Latin script was adopted by the Magyar language. Stephen built forts in uninhabited territories between existing settlements, and in time towns grew up around them.

Although Stephen established a unitary state in which the royal authority was supreme and Crown lands extensive, the power of his successors was challenged in 1222, when the small landholders compelled the king to sign the Golden Bull, which has been compared to the Magna Carta. The Golden Bull set limits on the king but did nothing to alleviate the condition of the landless peasants.

The 13th century was one of troubles for the nation. In 1241 the Mongols invaded Hungary, devastating and depopulating the countryside. The death in 1301 of Endre III, the last Arpad in the direct male line, intensified the troubles of the realm. During the next two centuries, until the Turkish invasion, Hungary was ruled by various European royal houses. A Bohemian king gave way to a Bavarian, and he, in turn, to Charles Robert of Anjou. Charles's son Louis the Great enjoyed a successful reign and is remembered for his many financial, administrative, military, and commercial reforms. The next to wear the crown of St. Stephen was Sigismund of Luxembourg, but because he was also the Holy Roman Emperor, his interests were diffused relative to those of Hungary.

Meanwhile, the Ottoman Turks were becoming more menacing around the fringes of the Hungarian domains.

They were turned back at Belgrade, the modern capital of Serbia and Montenegro, in 1456 by Matyas Hunyadi, one of Hungary's great heroes. After Hunyadi's death his son Matyas was elected king. Known to historians as Corvinus Matthias, he gave Hungary a period of prosperity, peace, and national glory from 1458 until 1490. He established a mercenary standing army, restored public finances, and reduced the power of masters over serfs. While keeping the Turks in check, he extended the kingdom over Bohemia, Silesia, Moravia, Lower Austria, and other principalities.

After the death of Matyas, the inevitable power struggle culminated in the election of a weak king. Many of the foreign territories broke away, and the nobles became restive once more. In 1514 a serious serf uprising was suppressed with great loss of life. Under these conditions, in 1526 the Turkish and Hungarian armies met once again, in the Battle of Mohacs, in which the latter was disastrously defeated, signaling the beginning of 150 years of Turkish rule. Hungary was partitioned, with the western and northern sections under Austrian rule, the central area under direct Turkish rule, and Transylvania governed by Hungarian princes under Turkish suzerainty.

When the Turks were finally forced to withdraw from Hungary, the three-way partition was replaced by Hapsburg dominion rather than independence. The economy was in shambles as a result of extortionate Turkish taxation. The population was sharply reduced, and most of the people who survived were in a condition of servitude. Only Transylvania, ruled by a series of able Hungarian princes, was able to maintain the national culture. The principality also enjoyed a measure of religious tolerance unique in Europe at that time.

Although conditions were desperate, the national will to independence survived. Toward the end of the 18th century a national renaissance began to enhance Hungarian pride in native culture and language. Around 1830 a great reform movement began, led by Count Istvan Szechenyi, a moderate, on the one hand and Lajos Kossuth, a landless noble and revolutionary, on the other. These two leaders became the opposite poles of the Hungarian response to the revolutionary ferment of the 19th century. Szechenyi wanted to educate the masses and reform the system, but Kossuth wanted to unleash the masses and topple the system. Szechenyi was led by critical realism, Kossuth by nationalistic idealism.

When repression followed the demand for moderate reforms, Kossuth gained ascendancy. Influenced by the news of revolution in Paris, in 1848 Kossuth demanded the abolition of serfdom, the establishment of popular representation, and the replacement of control from Vienna by a Budapest-based government. These demands were placed before King Ferdinand, who responded favorably by appointing Count Lajos Batthyany as president of a Hungarian council. The Diet was established as a bicameral legislature to be elected for three years, but suffrage was

limited to Hungarian-speakers with certain property and educational qualifications. The king was bound to act as a constitutional monarch through responsible ministers.

The success was short-lived. Austrian reactionaries and Hungarian counterrevolutionaries set national minorities against the Hungarians, and there were violent conflicts between Hungarians on the one hand and Croats, Serbs, Romanians, and Slovaks on the other. King Ferdinand was forced to abdicate, and his successor, Francis Joseph, stated that he was not bound by the concessions of his predecessor. On April 14, 1849, Kossuth declared Hungary's independence and set up a national government. The Austrians, backed by the Russians, then moved with direct military force and crushed the revolt. Kossuth was exiled. Hungary was incorporated into the empire as a province, but some of its historic lands, such as Transylvania and Croatia, were separated from it to destroy its unity and strength.

The next 16 years were characterized by an absolute regime ruling by imperial decree. The period of reaction was dominated by Alexander von Bach, minister of internal affairs and a revolutionary agitator turned tool of absolutism. Repression and persecution fostered the development of intense national patriotism accompanied by the hatred of everything Austrian. The nationalist groups were united in their opposition to Vienna but divided in the methods they espoused. Both the old conservatives and the moderates, the latter led by Ferenc Deak, wanted a return to the constitutional arrangements of 1847–48, while the radicals and emigrants, led by Kossuth, wanted nothing less than the expulsion of Austrians. Meanwhile, Austria's defeat in the wars against Italy, France, and Prussia and its growing isolation, especially from Russia, led it to moderate its own stand and adopt the Compromise of 1867. In effect, it established a dual monarchy with a common king but two governments. Parliamentary bodies functioned in both states, and ministers involved with matters of common concern—finance, defense, and foreign affairs—were responsible to equal delegations from the two parliaments, which sat alternately in the two capitals. Agreements concerning commerce and customs were made subject to periodic revisions every 10 years.

Although the emperor remained loyal to the compromise until his death in 1916, the Austrian officialdom was adamantly obstructive and caused problems for the Hungarian government. Moreover, the problems of minorities remained thorns in the side of Hungary; that involving the Croats was the most critical. The onset of World War I, the subsequent defeat of Austria, and the death of Francis Joseph in 1916 sounded the death knell of the compromise.

In 1918 Count Mihály Károlyi, a leader of the left wing of the Party of Independence, was appointed prime minister and formed a cabinet consisting of Social Democrats, radicals, and members of his own party. He declared Hungary a republic. However, the Allies accepted

Italian, South Slav, Romanian, and Czech territorial demands against Hungary and ordered the country's dismemberment. Gradually, the Karolyi government was infiltrated at all levels by Communists, who had in many instances returned from Russian prisoner-of-war camps, where they were influenced by Leninists. In 1919 Karolyi was forced to step down in favor of Bela Kun, a Communist, who unleashed a reign of terror that lasted for five months, until he was ousted by a reactionary regime led by Admiral Miklós Horthy de Nagybanya, who was declared regent. In 1920 Hungary was forced to accept the dictated war settlement embodied in the Treaty of Trianon. By this treaty, which most Hungarians considered savage and unjust, Hungary lost 72 percent of its territory and 64 percent of its population to the so-called successor states to the dual monarchy.

The interwar years were characterized by reaction and reconstruction. The Depression and the influence of the rise of national socialism in Germany were keenly felt in the evolution of Hungarian political and social institutions. The prime ministers during this period were Count István Bethlen of the Party of Unity, who held office until 1931; Gyula Károli, from 1931 to 1932; General Gyula Gómbós, who held power until 1936; Kálmán Darányi, 1936–38; Bála Imrády, 1938–39; and Count Pál Teleki, 1939–41. Although Teleki was determinedly anti-German, Hungary received from Germany through the first and second Vienna accords 11,917 sq km (4,600 sq mi) of territory from Czechoslovakia and 41,451 sq km (16,000 sq mi) and 2.5 million people from northern Transylvania.

During the Second World War, Hungary became a virtual German satellite. Teleki was driven to suicide, and the next prime minister, László Bárdossy, collaborated with the Nazis in promoting Hungarian participation in the war. Horthy dismissed Bardossy for declaring war against the United States without consent and appointed Miklós Kállay as prime minister. When Kállay began negotiating with the Allies, Hitler occupied Hungary. In 1944 Horthy arranged an armistice and broke off his alliance with the Nazis, for which he was arrested. By Christmas 1944, Soviet troops had occupied Budapest, and the nation's second Communist government in modern history was set up.

After rigging elections in 1947, the Communists were thrust into power in Hungary by the Soviets. The Hungarian people never reconciled themselves to Soviet control, however, and rebelled in 1956. The Soviets crushed the revolution by the use of blunt force. Reacting to the bloodshed, a milder form of Communism was installed in the country under the direction of János Kádár, who remained in power until 1988. Under Kádár the Hungarians practiced a form of consumer-oriented communism. By the mid-1970s Hungary was by far the richest and sociopolitically most liberal of the countries under Soviet influence.

The economic downturn of the 1980s combined with the growing desire for freedom led to the downfall of Com-

munism. In 1989 the country declared itself the Republic of Hungary. The following year Hungary held its first free elections since before World War II. The economy and country initially flourished under its newfound freedom; the pace of economic growth began to decline, however, as foreign investors and Western nations began to more critically evaluate its spending. By 1994 the economy was bad enough that the Socialists came to power in elections. The country continued to move forward despite high unemployment, a growing organized crime syndicate, and the slow conversion of state corporations to private ones. In 1997 Hungary was invited to apply for membership in the North Atlantic Treaty Organisation (NATO). The following year talks began with the European Union. In 1999 Hungary was admitted to NATO.

In August 2000 Ferenc Mádl took office as president. In the summer of 2001 the parliament passed a controversial law that entitled Hungarians living in neighboring nations to take advantage of Hungarian benefits; this law had to be amended in 2003 after complaints from the other nations that it interfered with their sovereignty and from ethnic minorities who claimed that the law discriminated against them. In May 2002 prime minister Péter Medgyessy formed a center-left coalition between the liberal Free Democrats and the Socialists. A month later Medgyessy was accused of working as a counterintelligence officer in the secret service under Soviet authority; he admitted the truth of the accusations but denied ever collaborating with the KGB or acting against Hungary's interests. Medgyessy constantly emphasized his efforts to get Hungary in line with western Europe and the United States and the importance of becoming an EU member.

Hungary joined the European Union in 2004 after a fairly tepid turnout of voters to approve the measure. Medgyessy resigned as prime minister that September and was replaced by sports minister Ferenc Gyurcsány.

LIST OF MODERN RULERS

CONSTITUTION

As the 1980s began, the leadership of Hungary admitted that its constitution was basically a reflection of the 1936 “Stalinist” Soviet constitution and decided that in light of the country's political transformation a new “European-type” constitution must be enacted. Constitutional experts began its preparation in 1982 by studying modern foreign constitutions, including the U.S. document. The first draft, made public on November 30, 1988, reflected a continuation of the one-party Hungarian Socialist Worker's Party (HSWP) system and provoked widespread criticism by reformists—the alternative organizations and associations—who demanded deletion of references to “socialist society” and the leading role of the HSWP.

The second draft, published on January 30, 1989, provided for a parliamentary democracy based on a multiparty system. The following month the HSWP's Cen-

tral Committee agreed to the exclusion of its mention in the constitution. The Central Committee favored the state system's being characterized as "free, democratic, and socialist Hungary," the country's continuing to be a "people's republic," and its flag's reflecting national traditions. At its March 8–10, 1989, session, the National Assembly endorsed the further codification of the second draft, and in 1990 it was adopted by referendum.

On September 19, 1989, the government and opposition parties agreed on a multiparty system. No one party can hold a monopoly of power; the only condition levied on parties is that their goals and activities must be in accord with the constitution. There should be a division of power—that is, power should be shared by the president, the National Assembly, the Council of Ministers (which is responsible to the National Assembly), local governments, independent courts, and a Constitutional Court.

Positive developments toward democratic principles continued to be initiated in preparation for the constitution's formal adoption in 1990. The National Assembly passed a law on economic associations, including those with foreign businesses, to attract foreign capital, and a law extending rights to non-Hungarian investors. Of particular significance was legislation for multiparty democracy and for freedom of association and assembly, permitting the formation of associations by as few as 10 people for any purpose within constitutional limits. Demonstrators were to give notice but required no authorization. Other laws—including the rights to strike and bring forth a motion of no confidence—were enacted, all leading to a more democratic constitution.

The highest organ of state administration is the Council of Ministers (*Miniszter Tanács*), which is elected by and responsible to the National Assembly. According to the constitution the Council of Ministers consists of the prime minister (the head of government), deputies, ministers of state, ministers, and the chairman of the National Planning Office.

Article 35 of the constitution enumerates the Council of Ministers' responsibilities and authority: it safeguards and guarantees the political and social order of the state and the rights of the citizens; enforces laws and decrees; directs and coordinates the work of the ministries and other organs; directs and supervises councils at lower levels; arranges for and implements economic plans; sets policy and provisions for scientific and cultural development; establishes and ensures the functioning of social and health services; concludes and approves international agreements; and performs other functions assigned by law. The Council of Ministers is empowered to organize government committees and to establish special organs to administer any sector of activity. The Council of Ministers or individual ministers may issue decrees in the performance of their duties. The Council of Ministers functions by issuing decrees and passing resolutions.

It has authority to annul or amend measures enacted by subordinate organs deemed infringements of laws or violations of public interest, and ministers direct the subordinate organs to conform to rules of law and resolutions of the Council of Ministers.

Two new institutions have been established by the constitution. They are the Constitutionality Court and the Office of the Ombudsman. The Constitutionality Court oversees the constitutionality of legislation, decrees, and statutes. Its 15 members are elected by the National Assembly but may not belong to any political party. The ombudsman is an officer of the National Assembly, elected by it on the recommendation of the president of the republic.

PARLIAMENT

The Hungarian National Assembly is a unicameral legislative body with 386 members. Only 176 of the members are elected directly by universal suffrage by citizens over the age of 18; the remaining 210 members are chosen from party lists. Voters cast two ballots in each election, one for an individual candidate, and the other for a particular party. It is from the latter that the proportions are set with regard to how many of the 210 each party gets to select.

Two sessions are held annually by the legislators, who are elected for four-year terms. The president of the republic may once during that four-year time frame suspend parliament for 30 days. Legislation may come before parliament from the president, from a committee, or from a single member of parliament. The president holds a conditional veto over legislation, which may be overridden with a simply majority vote in the Assembly.

POLITICAL PARTIES

Hungary's Law on Political Parties came into effect on October 31, 1989. Only political parties that recognize and observe the constitutional order of the Republic of Hungary can operate in the country. The licensing of a political party depends on the fulfillment of four requirements: it must have a distinct program, a membership of at least 10 people, an official leader, and a bank account.

The Law on Political Parties says that parties can be registered with legal continuity only within three months following the promulgation of the law. Out of the 53 parties that have appeared on the Hungarian political scene, 43 were registered by the designated deadline. The largest single group is a coalition made up of the Fidesz-Hungarian Civic Party (MPP, formerly the Federation of Young Democrats) and the center-right Hungarian Democratic Forum. The Hungarian Socialist Party (formerly the Communist Party) and the Alliance of Free Democrats represent the left in Hungarian politics.

LOCAL GOVERNMENT

Hungary is administratively organized into 19 counties (*megye*), 20 urban counties (*megyei varos*), and the capital city (*fovaros*), Budapest. The counties, in turn, are divided into districts (*jaras*) and communes (*kozseg*).

LEGAL SYSTEM

The Hungarian legal system has both civil and common law elements. The civil law system derives from the Civil Code of 1960. The Supreme Court has the power to declare legislative acts unconstitutional.

The judicial system functions under a law promulgated in 1973 that substantially reformed a law of June 1952. The system comprises local courts, labor courts, county courts, the Capital (Metropolitan) Court, five courts of appeal, and the Supreme Court. Among the changes introduced under the 1973 law was an expansion of the jurisdiction of the courts to deal with two categories of essentially economic disputes: those involving individual workers and employers and those between state enterprises. Until 1973 labor disputes had been handled almost exclusively by enterprise arbitration committees in the first instance and by regional committees on appeal, and disputes between enterprises were dealt with by economic arbitration committees. The 1973 law also permits citizens to appeal to the courts the decisions of the state administrative organs and permits the courts to review decisions of these organs on the basis of legality.

The Supreme Court is primarily a court of appeal, but it may also function as a court of first instance in important cases. Its decisions may be appealed to a council of the Supreme Court. When the Supreme Court acts as a court of appeals, it is divided into councils, such as civil, criminal, economic, labor, or military. Appeals from these councils on points of law may be heard by the Presidential Council.

The penal code was amended in 1989 to conform to the democratic nature of the new constitution. No one may be executed for crimes against the state. Amendments to the law on criminal procedure enhance the rights of the suspect and extend the scope of the defense counsel. They also abolished prolonged prison terms for certain recidivists.

In 1990 the National Assembly passed a law amnestying thousands of prisoners in Hungarian jails. All prisoners serving first sentences of less than one year were released. Prison terms of between one and three years were reduced by one-third, and those of over three years by one-quarter. All pregnant women, women with small children, and the terminally ill serving any sentence were also released. Those sentenced for serious offenses, however, such as rape, murder, or terrorism, did not benefit from the amnesty.

The 1997 constitutional amendment altered the three-level judiciary to a four-level system through the introduction of three courts of appeal positioned between the county courts and the Supreme Court. The new appellate courts have no original jurisdiction and function exclusively as appellate courts from the local and county courts.

HUMAN RIGHTS

The government generally respects the human rights and civil liberties of its citizens; however, there are problems in some areas. Although the authorities address problems in specific cases, police continue to use excessive force against suspects. In practice, the authorities do not always ensure due process in all cases. Prosecutors and judges may impose what amounts to unlimited pretrial detention, although the government expanded legal provisions for the right to fair trial. There is still ethnic discrimination against Roma and Jews. Both women and children are the targets of human traffickers dealing in sex slaves.

FOREIGN POLICY

During the Communist period, Hungary followed the Soviet Union's lead with regard to its foreign policy. Since leaving the Warsaw Pact in 1990, Hungary has made regional stability a priority. It primarily wants to be integrated into Western economic and security arrangements and has thus joined NATO and the European Union. It has signed treaties with Romania, Slovakia, and Ukraine renouncing any claims to the territory of those nations. Hungary and the United States have had good relations since 1945, and Hungary has had most-favored-nation status with the United States since 1978. The United States has given Hungary considerable economic assistance to restructure its economy and build up its private sector.

DEFENSE

The armed forces have been making a slow transition from the Warsaw Pact military to a lighter and more versatile modern operation. In 2003 the armed forces were about 47,000 strong, down from 130,000 in 1989. Hungary is an island of stability in an unstable neighborhood, and the nation takes seriously efforts to bring peace to the region. It contributed troops and airbase space to the peacekeeping effort in Kosovo in 1995. Since 1999 Hungary has been working with NATO to keep peace throughout the region, especially in the Balkans, Ukraine, and Russia. Hungarian soldiers are serving in Afghanistan and Iraq.

The president of the republic is the commander in chief of the armed forces. The army provides for border

protection with a small border guard operation. The navy of the landlocked country consists of a small flotilla on the Danube. The air force has been using aging Soviet MiG fighters and fighter-bombers, but the nation has been gradually modernizing its equipment. All men between the ages of 18 and 23 are subject to a nine-month conscription; drafts occur twice a year. Most young men perform their military service between secondary school and university.

ECONOMY

Hungary continues to demonstrate strong economic growth. It joined the European Union in 2004. In 1992 the nation helped build a canal from the Danube River to the Main River in Germany, which allows shipping from the North Sea to the Black Sea. The private sector currently accounts for more than 80 percent of GDP. Foreign firms have invested a great deal of money in Hungary and have provided employment for many citizens. Germany is the country's most important trading partner. Hungary's debt is currently the second-lowest among the Central European transition economies. In 2003 inflation had fallen to 4.7 percent, and unemployment was a steady 6 percent. In order to continue its economic growth, Hungary needs to facilitate the running of businesses and reduce the public-sector deficit.

ENVIRONMENT

Hungary faces many of the familiar problems of eastern European nations. Air and water quality and waste management systems are lacking. The nation had to spend several billion dollars to upgrade its systems of waste management, improve energy efficiency, and repair water, soil, and air pollution in order to enter the European Union. Hungary has five national parks and has protected over 1,000 other plots of land. In February 2000 Hungary suffered an environmental scare when its second-largest river, the Tisza, was contaminated with cyanide waste from a mine in Romania.

LIVING CONDITIONS

Most urban Hungarians live in apartments, though single-family homes are common in rural areas. A large proportion of the Hungarian population lives in the countryside; many work in the cities and commute back and forth. At home they engage in farming part-time to supplement their incomes. Hot springs are common, and many people use them to heat their homes. Many people lost their property under Communist rule, but some have been compensated for their losses since 1991. Public transportation within and between cities is efficient and inexpensive.

HEALTH

Hungary has relatively good health, though the typical fatty diet and high levels of stress and pollution have made the average lifespan relatively low by European standards. Alcohol abuse and tobacco smoking are very common, as is heart disease. The Roma are on average less healthy than other Hungarians, partly due to their poverty. Medical care was free during the Communist days; since 1992 people have had to purchase their own medical insurance. Rates are set in proportion to income, and people usually pay at least 10 percent of their incomes. There is private medical care as well. Many Hungarians choose to treat their ailments with natural remedies such as hot springs, radioactive caves, and the mud from thermal springs near Lake Balaton.

WORK

Hungarian workers have a relatively generous social welfare network. All workers are covered against illness, and women are guaranteed 24 weeks of maternity leave with full pay or three years' leave with 75 percent pay. About two-thirds of Hungary's workforce is employed in services, which includes tourism. About one-quarter work in industry, which includes manufacturing, construction, and mining; in the Communist days industry made up the majority of the workforce, but that sector has become steadily less important since the early 1990s. Hungarian factories still manufacture rubber products, porcelain, automobiles and other large transportation vehicles, electronics, food, and clothing. Less than one-tenth of Hungarian workers are now employed in agriculture, including forestry and fishing. The transformation of the economy has made it difficult for some industrial workers to find jobs because their skills do not translate well into the service sector. Foreign companies have opened branches in Hungary and are employing increasing numbers of workers.

FOOD AND NUTRITION

Paprika is Hungary's national spice and gives the nation's cooking its distinctive color and flavor. It appears in Hungarian goulash, a meat and vegetable stew, and in *tarbonya*, flour dumplings served with meat. Pork, bacon, and lard are extremely important components of the Hungarian diet. Lard is the most commonly used cooking fat. Winter pig killing is a major event in rural areas, where people will spend two days slaughtering pigs and making sausage. For desserts and snacks people like to eat pastries, donuts, and roasted chestnuts. Hungary's sweet wines and fruit brandies are famous around the world.

STATUS OF WOMEN

Women hold equal rights as a matter of law. Generally, women have achieved the same educational levels as men. However, they do lag behind in positions of power; though Hungary legislates equal pay for equal work, women tend to occupy the lower-paid jobs. Most teachers are female, but most school principals are men. Less than 10 percent of the members of the National Assembly are women. Women still do most of the housework and the caring for children and old people. There are free day-care centers for children between the ages of three and six, which helps mothers return to work.

Violence against women, spousal abuse, and sexual harassment in the workplace have all been serious problems. Human traffickers are known to deal in women as sex slaves.

EDUCATION

Schooling is compulsory for 10 years, from ages six to 16. The school year runs from the beginning of September to the end of June. Higher education is similarly organized, with the curricula divided into annual units.

There are no private schools as such, but there are a few Catholic, Calvinist, and Jewish schools. Although enjoying a certain amount of curricular autonomy, they are fully incorporated into the public school system with regard to admissions and certification procedures as well as the financing and appointment of teachers.

The medium of instruction is Hungarian, but there are separate schools for Germans, Slovaks, Yugoslavs, and Romanians living in Hungary. There are no separate schools for the Roma, who are recognized as neither a minority nor a distinct ethnic group.

Kindergartens (*ovodak szama*) enroll preschool children ages three to six. The enrollment rate is as high as 90 percent in certain urban areas, and many classrooms are overcrowded. Kindergartens are also maintained by

factories, companies, and institutions. All children are required to attend the last year of kindergarten in order to prepare for school.

Primary education is eight years long, as divided into four-year lower and four-year upper divisions. The lower division classes are taught by single teachers; in the upper division each subject is taught by a different teacher, generally a specialist. Those who repeat grades have to remain in elementary school until they reach 16. In 1978 a new law made every other Saturday free for students; owing to the 11-day teaching cycle, lesson schedules are not broken down by weeks. Gifted students are placed in intensive courses, where the number of class hours per week is higher. Singing and music begin in the first grade, foreign languages and mathematics in the upper grades. Promotion is automatic if the student attends school regularly.

Secondary education is organized in a series of middle schools, with the general secondary school constituting the academic sector and the technical secondary schools and the trade schools constituting the vocational sector. The general secondary school, or *gimnazium*, is the most traditional type of school in Hungary. It includes training schools and experimental schools that enjoy great prestige. Some secondary schools have divisions for pupils with aptitude in special learning areas. More than half of all secondary students work in study groups, and each year national competitions are held for study group members in subject areas such as history or geography. At the end of four years *gimnazium* students take maturity examinations.

Technical secondary schools are divided into four-year and three-year schools. Workshop practice may take place either at school or in participating factories. The four-year school offers a diploma, which allows students to pursue postsecondary studies. The three-year school trains skilled workers but does not provide full secondary education. Training is provided in 126 trades.

Higher education is run by the state and is not a quasi-independent sector, as in many Western countries. College admission is based on the results of a college entrance examination. The administration of universities is vested in the rectors and deans, who share their powers with university councils and faculty councils. Universities and colleges represent the two stages of a continuum. The former train students for research with greater theoretical input, while the latter train specialists for practical purposes. Female participation in higher education is much higher than that of males because males tend to follow technical opportunities during college-going years. Enrollment is limited not only by the capacity of the institutions but also by forecasts of labor demand by economists. There are too many candidates in the case of certain institutions and faculties. While school education is free, students pay fees for higher education, although 90 percent of students receive scholarships.

SCIENCE AND TECHNOLOGY

Hungary's scientific education facilities are excellent. Elementary-school students study advanced mathematics and sciences such as trigonometry, geometry, physics, and chemistry. Secondary students generally perform extremely well on science tests. Hungary has produced such famous scientists as the Manhattan Project physicist Leó Szilárd, the "father of the hydrogen bomb" Edward Teller, and Dennis Gábor, who invented laser holography and won the Nobel Prize in 1971.

MEDIA

Hungary has numerous daily newspapers, several of which are published in Budapest. Most of the Budapest papers circulate nationally. All major dailies are printed in Hungarian, although the small-circulation *Budapest Daily News/Neustes nachrichten* appears in both English and German. Each of the national minority groups—German, Slovak, Yugoslav, and Romanian—has a publication in its own language; all of these publications are weeklies, except that in Romanian, which appears every two weeks. Unlike in other former Communist countries, the religious press is active, as are provincial newspapers.

In 1990 the Hungarian press underwent a major transformation. Foreign investors now own major shares in three of the country's four major dailies and a number

of provincial newspapers. These investors include Rupert Murdoch, Robert Maxwell and the Springer chain, and the Bertelsmann group of Germany. The most independent major publication is *Datum*, founded in April 1989. Other independent papers include such general-interest publications as the weeklies *Vilag* (Words) and *Beszelo* (Speaker) as well as the satirical biweekly *Magyar narancs* (Hungarian orange) of the Free Democratic Union. The big success story of the press is the lively color tabloid *Reform*, in which Rupert Murdoch purchased a 50 percent interest in 1989.

The media are under the direct control of the Information Bureau (IB), which has overall responsibility for all state information activities. Its head is the principal spokesperson for the government.

Foreign publications are readily available in the country. There is no jamming of foreign broadcasting. Newspapers in western Hungary regularly carry the schedules of Austrian TV programs for the benefit of their readers. Foreign correspondents are allowed to work freely, with few bureaucratic obstacles.

The national news agency is Magyar Tavirati Iroda (MTI), an arm of the Information Bureau. MTI is composed of four major departments: cultural and internal policy, economics, agriculture, and sports. It also publishes the *Budapest Daily News/Neustes nachrichten* and a number of special bulletins. HTI receives the regular services of some 20 foreign agencies but relies heavily on TASS.

Standard radio broadcasting started in Hungary on December 1, 1925. The Hungarian Broadcasting Company, which operated the system, was virtually destroyed in World War II, and its Budapest antenna tower, one of the tallest in Europe, was demolished. Radio Budapest was on the air again in 1945.

The radio network, Magyar Radio, is part of Magyar Radio es Televiz (MRT). Its two principal radio stations are both in Budapest. Radio Kossuth, which transmits Program I, is broadcast on medium wave 24 hours a day. Radio Petofi transmits Program II broadcasts on medium wave during the morning hours and on ultra-shortwave in the evening. In addition, Radio Bartok, a very-high-frequency transmitter, broadcasts musical and literary programs. There are daily broadcasts in English, German, and five other foreign languages and separate programs for Hungarians living abroad. Radio licenses were abolished in 1980.

Television was introduced in 1957. Magyar Televizio has two channels: the first broadcasts about 66 hours a week, the second about 20 hours a week, mostly in color. There are over 100 relay stations.

CULTURE

Hungary has produced a large number of musicians, including Franz Liszt, Bela Bartok, and Zoltán Kodály, all of whom incorporated traditional Magyar folk melodies into their compositions. The conductors Eugene Ormandy and George Szell were both born in Hungary. The Roma traditionally worked as musicians at social events, playing their emotional music on violin and *cimbalom*; today Roma bands still play at some events, though they are not as much in demand. Kalyi Jag is a famous Roma band.

Hungarian pottery is famous and widely exported, especially the Herend and Zsolnay porcelains and the black pottery made from black clay. Hungarian visual arts incorporate baroque, gothic, romanesque, and art nouveau traditions along with folk motifs. Many buildings display elaborate paintings on their ceilings and walls. Hungary's literary style is complex and rich and shaped by historical events; famous writers include Péter Esterházy, György Konrád, Tibor Fischer, Stephen Vizinczey, and Ferenc Molnár.

FOLKLORE AND MYTHOLOGY

Hungarians still treasure their folk traditions. People dance folk dances at festivals and other special occasions, and musicians accompany them with traditional Magyar folk songs played on zithers, lutes, bagpipes, and the native instruments called the *cimbalom* and the *trogato*. Hungary's national dance is the *csardas*. Artists engage in folk arts such as wood and bone carving, lace or pottery making, painting, and a kind of embroidery known as *kalokcsai*, which uses traditional symbols to represent meaning; for example, tulips represent women, carnations represent men, and birds represent freedom.

ENTERTAINMENT AND RECREATION

Hungarians like to go to rivers and lakes to swim, sail, and engage in other aquatic activities; the thermal springs near Lake Balaton are a popular family destination, offering beaches, hiking trails, cafés, and restaurants. People also like to travel to neighboring countries; the government offers special bus rates to Hungarian citizens who want to cross the border to visit other Slavic nations. Hungary's café culture is well developed, and people enjoy spending hours at cafés talking with friends and playing chess.

Hungarian businesses close during national holidays. On March 15 people gather to commemorate Hungary's revolt against Hapsburg rule. August 20, St. Stephen's Day, is an occasion for parades, sporting events, fireworks, and religious processions.

ETIQUETTE

Service charges are not added to bills, so it is appropriate to tip waitstaff at restaurants and other people who perform services, such as chambermaids. Most Hungarians are quite friendly and outgoing. People often address one another by both first and last name. When doing business, Hungarians hand out business cards liberally. It is customary to invite business partners out to lunch or dinner; at meals, a guest should not drink until his or her host has. Eating with the left hand is considered very impolite. Hungarians often use the word *egészségedre* ("to your health") as a toast; English speakers would do well to verify the pronunciation of this word before attempting it, because a mispronunciation has a very rude meaning in Hungarian.

FAMILY LIFE

Until recently children lived with their parents until marriage and then tended to settle near their parents, but this is changing. Hungary is largely Roman Catholic, but many Hungarians today live in common-law unions or have children out of wedlock. People who do marry are required to have civil marriages; Catholics usually have church weddings as well. The two ceremonies can take place as much as a month apart. Roma have two or three times more children than other Hungarians. Roma men often leave their families in the country while they work in the city.

PERSONAL APPEARANCE

Hungarians have always appreciated fashion and dressing with style. They do not like conservative dress styles and prefer to see people dressed with flair.

SPORTS

Soccer is the most popular sport in Hungary. People spend their weekends watching the national teams play in Népstadion stadium or listening to broadcasts of games on the radio. Weekend television is devoted to soccer. Ferenc Puskas is one of the nation's most famous former players. Hungarians are excellent at water sports, including swimming, water polo, sailing, canoeing, and surfing. Swimmer Krisztina Egerszegi has won many gold medals for swimming in recent Olympics; she was the youngest athlete ever to win a gold medal for swimming. Many people enjoy hiking, tennis, cycling, gymnastics, boxing, and running; sports clubs are very popular. The Budapest Marathon is held every May; the course runs along the Danube from Visegrad to Taban Park. Car racing is also popular; the Hungarian Formula 1 Grand Prix has taken place in the second week of August since 1986.

CHRONOLOGY

- 1946** Hungary promulgates a republican constitution.
- 1947** Hungary signs a peace treaty with the Allied powers, giving up all territories acquired after 1937.
- 1948** The Hungarian Workers' Party seizes power under Matyas Rakosi.
- 1949** The constitution of 1946 is replaced by a new constitution, under Communist aegis.
- 1953** Rakosi yields the prime ministership to Imre Nagy, who initiates liberal reforms.
- 1956** Hungary throws off the Soviet yoke in a revolution.
Soviet troops invade Hungary and crush the uprising. Nagy is deposed and later executed.
János Kádár is named to head a Soviet puppet regime.
The Hungarian Workers' Party is renamed the Hungarian Socialist Workers' Party (HSWP).
- 1958** Kádár yields the prime ministership to Ferenc Munnich.
- 1961** Kádár begins his second term as prime minister.
- 1965** Kádár resigns as prime minister in favor of Gyula Kallai but remains first secretary of the HSWP.
- 1967** Jenő Fock replaces Kallai as prime minister.
- 1968** The regime initiates a series of reforms known as the New Economic Mechanism (NEM), decentralizing authority.
- 1972** The constitution of 1949 is revised, and a new constitution is promulgated.
- 1975** György Lazar takes over as prime minister.
- 1985** The 13th Party Congress reelects Kádár as leader, with the new title of general secretary.

- 1987** Karoly Grosz is named prime minister in place of Lazar, who becomes deputy general secretary of the Central Committee.
- 1989** Imre Nagy's body is exhumed and reburied in a massive public ceremony attended by over 250,000 Hungarians, including members of the government.
President George Bush visits Budapest and announces a program of U.S. economic assistance. Hungarian Communist Party is renamed Hungarian Socialist Party.
- 1990** Hungary signs pact with the Soviet Union on pullout of Soviet troops.
Vatican ties are restored.
In first free elections since World War II, the center-right Democratic Forum, together with its allies, the Independent Smallholders' Party and the Christian Democratic People's Party, gains nearly 60 percent of the seats in parliament.
Jozsef Antall, the leader of the Democratic Forum, heads new cabinet as premier.
Soviet military forces begin complete withdrawal from Hungary.
- 1994** Hungary applies for membership in the European Union.
A sluggish economy leads to Socialists winning the majority of seats in the nation's second parliamentary election.
- 1995** President Arpad Goncz is reelected to a second five-year term.
- 1997** Hungary is invited to apply for NATO membership.
- 1998** Viktor Orban, head of the Hungarian Civic Party, is elected prime minister.
- 1999** Hungary joins NATO.
- 2000** Goncz retires. Ferenc Mádl is elected president. The Tisza River is contaminated with cyanide from a mine in Romania.
- 2001** Parliament passes a law allowing Hungarians living in neighboring countries to work or study in Hungary and to use the Hungarian health-care system.
- 2002** Prime Minister Peter Medgyessy forms a coalition with the Free Democrats and the Socialist Party. The European Union invites Hungary to become a member in 2004.

- 2003** Voters approve Hungary's joining the European Union.
- 2004** Hungary gains EU membership. Medgyessy resigns; Ferenc Gyurcsány replaces him as prime minister.

IS

CAPITAL

Reykjavík

HEAD OF STATE

President Ólafur Ragnar Grímsson (from 1996)

HEAD OF GOVERNMENT

Prime Minister Halldór Ásgrímsson (from 2004)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

296,737 (2005)

AREA

103,000 sq km (39,768 sq mi)

ETHNIC MAJORITY

Nordic-Celtic

LANGUAGE

Icelandic

RELIGION

Evangelical Lutheran

UNIT OF CURRENCY

Icelandic krona

NATIONAL FLAG

A red cross, with an extended right horizontal, bordered in white, on a blue field

NATIONAL EMBLEM

A red-tongued silver vulture with gold claws and beak, and a black dragon, also red of tongue and with gold crest and claws and white teeth, sit back to back on top of a shield, on which is the design of the Icelandic flag. A black bull with golden hooves and a glowing eye paws the rocky land to the left of the shield; a white-bearded giant with black and gold belt, black staff, golden sandals, and gold-lined cape stands to the right, with his right hand resting on the shield.

NATIONAL ANTHEM

“O Goth Vors Lands” (O God of our land)

NATIONAL HOLIDAYS

January 1 (New Year’s Day), June 17 (National Day), April 21 (First Day of Summer), May 1 (Labor Day), major Christian festivals

DATE OF INDEPENDENCE

June 17, 1944

DATE OF CONSTITUTION

June 17, 1944

GEOGRAPHICAL FEATURES

The westernmost country of Europe, Iceland is an island in the North Atlantic Ocean just below the arctic circle, 322 km (200 mi) east of Greenland, 1,038 km (645 mi) west of Norway, and 837 km (520 mi) northwest of Scotland. Its area is 103,000 sq km (39,768 sq mi), extending 490 km (304 mi) east to west and 312 km (194 mi) north to south. The total length of the coastline is 4,988 km (3,099 mi). The mainland comprises 102,850 sq km (39,710 sq mi), including 408 sq km (157 sq mi) of lakes. The islands and skerries comprise 150 sq km (58 sq mi).

Iceland’s capital is Reykjavík, located on a bay on the southwestern coast. Only around 20 percent of the land,

near the coast, is considered arable and habitable. Most of the country’s population and agriculture is concentrated in the southwest, between Reykjavík and Vík.

Iceland is a relatively young land mass and is subject to much geological activity. The central volcanic plateau ranges in elevation from 700 to 800 m (2,297 to 2,625 ft) and is ringed by mountains. Volcanoes are frequently active, and earthquakes are common. Iceland is richer in hot springs and other high-temperature geological activity than any other country in the world. Certain areas are characterized by steam vents, mud pools, and precipitation of sulfur. Geysir, in Haukadalur in south Iceland, is the most famous erupting hot spring (and the source of the English word geyser).

Iceland

1052 Iceland

Glaciers, another characteristic of this rough landscape, cover over 11,800 sq km (4,500 sq mi) of the country. The largest glacier cap is Vatnajökull in southeast Iceland (8,400 sq km, 3,240 sq mi), which is equal in size to all the glaciers in mainland Europe. Since the 1980s the glaciers have retreated somewhat, owing to a milder climate.

The landscape is also rich in waterfalls and has numerous lakes, mostly of tectonic origin. Because of the heavy rainfall, Icelandic rivers are many and large, and they are subject to annual turbulent glacial runoff, making navigation nearly impossible.

CLIMATE AND WEATHER

The temperature is cool and oceanic, as influenced by Iceland's location in a zone where two very different air masses, one polar and one tropical, meet. It is also affected by the confluence of two ocean currents. The Gulf Stream flows clockwise around the south and west coasts, and the East Greenland Polar Current curves southeastward around the north and east coasts. A third climatic factor is arctic drift ice, brought by the Polar Current, which occasionally blocks the north and east coasts in late winter and early spring. The advance of drift ice causes a considerable fall in temperature.

Fluctuations in average annual temperature are more pronounced in Iceland than elsewhere, but considering the country's northern location, the climate is warmer than might be expected. The lowest temperature noted in Iceland was -36.2°C (-33.2°F) in Siglufjörður in March 1881; the highest, 30.5°C (86.9°F) at Teigarhorn in June 1939.

Iceland is very windy, due to the frequent passage of depressions. Rainfall is also plentiful, although thunderstorms are rare. Fog is not frequent. The northern lights are often visible, especially in autumn and early winter.

Climate and Weather

Mean Temperature: 39°F
Reykjavík: July 52°F , January 30°F
Average Rainfall
North: 12 to 27 in
South: 50 in
Mountains: 80 in
Southern slopes of Vatnajökull and Myrdalsjökull: 157 in

FLORA AND FAUNA

Iceland has little in the way of vegetation; the volcanic landscape tends to discourage plants from growing. There are a few forests and a number of birch trees, but most of the land is tundra, bog, grassland, or simply rocky desert. The Arctic fox is the only indigenous land mammal. Polar bears sometimes ride ice floes to Iceland from Greenland. Europeans have introduced mice, mink, and reindeer. Many seabirds live in Iceland. The waters surrounding the island are rich in whales, dolphins, and fish. Fish also live in the fresh water of streams, including salmon, trout, Arctic char, and eels.

ETHNIC COMPOSITION

The population is almost entirely Icelandic, as descended from the original settlers, who came chiefly from Norway in the late ninth and early 10th centuries, with admixtures of Scots and Irish. Information on the early settlers is given in the Landnamabok (Book of Settlements), believed to have been compiled in the 12th century. According to this source, the great majority of settlers came from

western Norway, with some from other parts of Scandinavia. A sizable number arrived from the Celtic areas of the British Isles, some of them slaves of free settlers. Blood group investigations show a close similarity between the Irish and Icelandic peoples.

Less than 1 percent of inhabitants are foreign born, most of them coming from Scandinavia and other European countries.

LANGUAGES

Icelandic is the official language. English and Danish, as well as German, are widely spoken and understood.

Because of the country's isolation and strong literary heritage, Icelandic has changed very little from the language spoken by the Norse settlers. It began to evolve separately from Norwegian at the end of the 10th century but did not become markedly different until the 14th century. The only genuine loanwords were Celtic. In the following centuries the advent of Christianity, the Reformation, and the introduction of printing served to modify the language under the influence of Low German and Danish. Many of these later influences were successfully purged during the purist movements of the 18th and 19th centuries. Icelandic today is a remarkably uniform language, although there are geographical dialectal differences.

RELIGIONS

There is complete religious freedom in Iceland. The national church, according to the constitution, is the Evangelical Lutheran Church, which, although claiming the membership of over 90 percent of the population, plays only a muted role in national life.

Iceland was converted to Christianity in the year 1000, when it was adopted by an act of the Althing (parliament) as a result of missionary activity by Norwegian evangelists. Monasteries were established and played an important role in the creation of Iceland's rich medieval literature. This strong literary tradition continued with the new translation of the Icelandic Bible, printed in Iceland by Bishop Guobrandur Porlaksson in 1584.

The practice of regular religious exercises in the rural areas developed in the centuries following the Reformation. Apart from regular church attendance, prayers were said, together with reading and singing, particularly during Lent. The churches of the period were mostly small and made of turf and stone, with interiors decorated with primitive art.

Since the 19th century social, economic, and demographic changes have contributed to the decline of the church as a force in national life. Today the national church comprises congregations grouped into district

assemblies, each supervised by a dean. The supreme authority is the president of the republic, who delegates power to a minister of justice and ecclesiastical affairs.

Religious Affiliations

Evangelical Lutheran	258,500
Other Protestant	12,200
Roman Catholic	5,000
Other	21,100

HISTORICAL BACKGROUND

Iceland's first settler was Ingolfur Arnarson, who sailed from Norway to Iceland in 874 and settled in what is now Reykjavík. Others followed in the succeeding centuries, and in 930 a republic was established under the authority of the Althing. In 1263, torn by civil strife, the Althing decided to submit to the rule of Norway by a treaty that established a purely nominal union under the Norwegian Crown. In 1381 Iceland, together with Norway, passed under the rule of the king of Denmark, and it remained so after Norway was separated from Denmark in 1814. Gradually, Iceland had lost much of its former autonomy. Exclusive trading rights were given in 1602 to a private Danish trading company, and Danes had a complete monopoly of trade with Iceland until 1786. The ensuing economic ruin was compounded by epidemics and volcanic eruptions, particularly that of 1783, which reduced the population to 38,400 by 1786, half of the number before the union. In 1800 the Danish king abolished the Althing.

After a long constitutional struggle, marked by disagreement over the appropriate level of autonomy, the Althing was reestablished as an advisory body in 1843. Limited home rule was granted in 1874, and complete home rule was given in 1903. In 1918 Iceland was declared a free and independent state, linked to the Danish king as head of state and with complete autonomy except in foreign affairs. This agreement quieted the independence movement until the Nazi takeover of Denmark in 1940. Iceland then assumed control over its defense and foreign affairs. In a referendum held in 1944, over 97 percent of those participating voted to end the union with the Crown of Denmark, and Iceland was declared an independent republic in that year.

Iceland became a charter member of the North Atlantic Treaty Organisation (NATO) in 1949. In 1970 it was admitted to the European Free Trade Association. During the 1980s and 1990s Iceland became less culturally isolated, as it strengthened ties to Europe and increased foreign product imports and technology. The service and tourism industries greatly expanded, which served to diversify the economy and culture.

Coalition governments have dominated Icelandic politics, and there have been few single-party govern-

ments in the nation's history. In 1980 Vigdís Finnbogadóttir, a nonpolitical candidate who was favored by the left because of her opposition to the U.S. military base in Keflavík, achieved a narrow victory in the presidential election and became Iceland's first woman president. She was reelected four times and served as president until 1996, when Ólafur Ragnar Grímsson took office.

Because fishing is Iceland's most important industry, the nation extended its territorial limits to within 50 nautical miles of its coast in 1972. British opposition to this extension resulted in three "Cod Wars." In 1976 Iceland temporarily severed diplomatic relations with Britain, the first break in diplomatic relations between two NATO countries. In the same year the two countries reached an agreement resulting in the withdrawal of the British trawler fleet from Icelandic waters. In 1993 there was a similar dispute with Norway in an area of the Barents Sea. In 1991 Iceland withdrew from the International Whaling Commission (IWC), asserting its right to catch whales. The nation applied to rejoin the IWC in 2001 but was only granted observer status because it stated plans to resume whaling in 2006. The IWC admitted Iceland as a full member in 2002 after a narrow vote. In August 2003 Iceland launched its first whale hunt in 15 years, claiming that it needed to do so in order to perform a scientific study of whales' impact on fish stocks.

Grímsson was reelected as president in 2004. The former prime minister, David Oddsson, traded jobs with former foreign minister Halldór Ásgrímsson.

LIST OF MODERN RULERS

President

1944–52	Sveinn Björnsson
1952–68	Ásgeir Ásgeirsson
1968–80	Kristján Eldjárn
1980–96	Vigdís Finnbogadóttir
1996–	Ólafur Ragnar Grímsson

Prime Minister

1944–47	Ólafur Thors
1947–49	Stefán Stefánsson
1949–50	Ólafur Thors
1950–53	Steingrímur Steinthórsson
1953–56	Ólafur Thors
1956–58	Hermann Jónasson
1958–59	Emil Jónsson
1959–63	Ólafur Thors
1963–70	Bjarni Benediktsson
1970–71	Jóhann Hafstein
1971–74	Ólafur Jóhannesson
1974–78	Geir Hallgrímsson
1978–79	Ólafur Jóhannesson
1980–83	Gunnar Thoroddsen
1983–87	Steingrímur Hermannsson

1987–88	Thorsteinn Pálsson
1988–91	Steingrímur Hermannsson
1991–2004	Davíd Oddsson
2004	Halldór Ásgrímsson

CONSTITUTION

According to historical records, a state organization was set up in Iceland around 930 c.e., at the end of the settlement period. In the same year a legal and uniform code was promulgated, and the Althing was established. No king or other dignitary held supreme political or administrative power, which was vested in local leaders. When Iceland passed into Danish rule in 1381, these political and legal institutions were radically altered, and representatives of the Danish king took over the administration. Although the Althing was reestablished in 1845, it was subject to royal veto. The Icelandic Constitution was established in 1920 and was subject to review in 1943, but Icelanders took advantage of their position when Denmark was occupied by the Nazis in 1940. On June 17, 1944, a republic was proclaimed, and a new constitution was approved in a popular referendum.

The present constitution dates from the establishment of the republic in 1944. It has been amended four times, in 1959, 1968, 1984, and 1991. It consists of 81 articles grouped in seven chapters. The first chapter is a preamble; the other six deal with the president and the cabinet, elections, functions of the Althing, the courts, the state Evangelical Lutheran Church, and human rights.

The constitution defines the powers of the president, who is head of state. All laws require the signature of the president and the countersignature of a cabinet member. The president has veto power and the right to issue decrees when the Althing is not in session. The president is elected by direct, popular vote for a term of four years. There is no vice president. When necessary, presidential functions are discharged by a committee of three, consisting of the prime minister, the speaker of the Althing, and the president of the Supreme Court. Despite these powers, the president is expected to play essentially the same limited role as a monarch in a parliamentary democracy.

The constitution also provides for the Council of State, presided over by the president and comprising the prime minister and cabinet members. The administration is headed by the prime minister as the head of government and by a cabinet consisting of 13 ministries. The ministers are formally appointed by the president. There is no election of a new prime minister. As no single political party has held a working majority in the Althing for decades, the country is almost always ruled by coalition governments, and sometimes long negotiations have proven necessary before they could be formed.

The constitution provides for a system of universal suffrage for citizens over the age of 18. Turnout in na-

tional elections is high, typically in the 85–90 percent range.

PARLIAMENT

The national parliament is the Althing, one of the oldest legislatures in the world, dating back to 930 c.e. Iceland's contemporary parliamentary system formally dates from the establishment of independence in 1944. It is a unicameral legislature with 63 members.

Iceland is divided into eight districts, and parliament members are elected by a modified system of proportional representation. A distinctive feature of the representation system is that the districts are skewed against Reykjavík: although the capital holds nearly 60 percent of the nation's citizens, it holds fewer than half the seats. Parliamentary members are elected for terms of four years.

The party groups in the Althing meet regularly—at least twice a week during the sessions, which begin in October and end in April or May.

The cabinet has 12 standing committees. Each political party attempts to place at least one member on each committee and use that individual as a resource regarding the body's issue areas.

POLITICAL PARTIES

Although Iceland is demographically a highly homogeneous country, it supports several political parties with diverse ideologies. The ideological and demographic bases of the parties are not as starkly drawn as in earlier years, and most have had factions break away to form other groups.

The Independence Party (IP) was founded in 1929 when the Conservative and Liberal Parties merged. It is the largest in the country, generally the most conservative in ideology, and best characterized by pragmatism. It formed a coalition with the Progressive Party (PP) in 1995 and has kept a majority in parliament ever since. The left-wing Social Democratic Party (SDA), is the IP's major challenger. It is a coalition party formed in 2000 of three smaller parties, the socialist People's Alliance (PA), the centrist Social Democratic Party (SDP), and the all-female Women's List. The founders of this coalition hoped that it would provide a challenge to the IP, but they were unable to persuade all leftists to join them. Two new splinter parties, the Left Green Movement and the Liberal Party, both took small chunks of votes away from the SDP, leaving the IP in control.

LOCAL GOVERNMENT

Central government control over local authorities is exercised by the minister of social affairs. Iceland is divided

into 23 administrative districts (*sýslur*) and 14 towns or boroughs (*kaupstaðir*), headed by sheriffs (*sýslumadur*) in districts and magistrates (*baufjarfógeti*) in boroughs. In Reykjavík the duties of the magistrate are divided between several officials. Borough magistrates are assisted by town councils made up of one representative from each parish (*breppur*). Each parish also has its own council and administrative officers. Town councils are elected by proportional representation, and rural councils by a majority. The councils elect a town manager or mayor.

The scope of local authority, defined in the Local Government Act, includes activities not handled by the central government. Local authority covers such functions as social welfare, health, education, sanitation, libraries and museums, harbors and fishing, and livestock and farming inspections. Local governments are funded by direct local taxation and by grants from the central government.

LEGAL SYSTEM

The Supreme Court of Iceland was established in 1920 when the government decided to abolish recognition of the power over Iceland of the Supreme Court in Copenhagen. The court has eight judges, appointed for life technically by the president, though in reality by the minister of justice. Ruling on questions of both law and fact, the Supreme Court decides an average of 200 cases per year, mostly on appeal from a complex system of district and special-jurisdiction courts. The principal source of Icelandic law is the written statutes of the Althing, a civil code based on Danish law, but custom, precedent, the constitution, and general legal principles are also recognized as sources of law. The courts have the power to declare acts of parliament unconstitutional, which has happened on a few occasions.

HUMAN RIGHTS

Iceland has an exemplary record in human rights. There is long-standing respect for the autonomy of individuals. Persons detained are brought before judges within 24 hours. Defendants are guaranteed the right to free and competent legal counsel if they are indigent. The independence and fairness of the court system are carefully guarded by the Supreme Court.

There are no restrictions on civil and political rights. One of the few human rights violations referred to the European Commission on Human Rights was that raised by a single Icelander who questioned the practice of having just one traffic official serve as both prosecutor and judge in traffic courts. There have also been reports of trafficking in women and of excessive use of solitary confinement in prisons.

FOREIGN POLICY

Iceland has close ties to the United States, the Scandinavian nations, and most of the other members of NATO, though it has good relations with most of the world. In 1986 Iceland hosted the historic Reagan-Gorbachev summit in Reykjavík. It was the first country to recognize the independence of the Baltic states in the 1990s and is the greatest Nordic contributor per capita to NATO-led troops in Bosnia and Kosovo. Despite its lack of a military, Iceland has participated in many civilian peacekeeping efforts, sending doctors, nurses, lawyers, engineers, journalists, and others to trouble spots in the world.

Most of Iceland's foreign policy difficulties come from its dependence on fishing. It is reluctant to join the European Union for fear of having its fishing policies dictated by outsiders. Iceland left the International Whaling Commission in June 1992 following the IWC's decision to uphold its ban on whaling, establishing its own commission—along with Norway, Greenland, and the Faeroe Islands—for the conservation, management, and study of marine life. Iceland rejoined the IWC in 2002 and immediately resumed catching whales, to much international dismay. Iceland claimed that the hunt in question was a necessary, scientific one that would help establish the effects whales have on the fish stocks that are necessary to the nation's economy.

DEFENSE

Iceland does not maintain a defense force. It joined NATO in 1949 on the understanding that it would never have to contribute military forces to any endeavor. Its sole responsibility is to provide space for NATO forces. The U.S.-manned Icelandic Defense Force (IDF), headquartered at Keflavík, is the largest military presence on the island.

ECONOMY

Iceland has a capitalist economy combined with a Scandinavian-style welfare state. It has very few natural resources aside from the fish in its oceans, and so the economy depends heavily on fishing. Fish stocks and prices for fish-based products are unpredictable, and the government is therefore trying to expand into other areas, including

manufacturing and services. It is making particular efforts in high-tech areas such as software development and in ecotourism. The whales that live in the oceans surrounding Iceland are a particular draw for tourists.

ENVIRONMENT

Current environmental concerns in Iceland include water pollution from fertilizer runoff and inadequate wastewater treatment. Iceland is party to several international environmental agreements, including those concerning air pollution, biodiversity, hazardous wastes, nuclear test bans, ozone-layer protection, and climate change. Whaling, marine conservation, and North Atlantic fishing rights are the areas where Iceland draws criticism from environmental agencies (as well as from countries such as Norway and Russia, who also assert commercial rights in the North Atlantic). Following the 1992 split from the International Whaling Commission, Iceland asserted its right to resume whaling.

The Ministry for the Environment was established in 1990. It is responsible for nature conservation, wildlife management, pollution control and public health, planning and regional matters, land surveying and cartography, environmental research and monitoring, education and public information, international collaboration, and cooperation with other ministries and institutions, including the Ministry of Agriculture.

 Nationally Protected Areas % of total land area: 6
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 7.68

LIVING CONDITIONS

Living conditions in Iceland are very good. The government subsidizes the cost of housing, which is modern and well-heated. Prices for food and everything else are high because the island must import nearly all commodities. Gasoline is extraordinarily expensive. Public transportation is adequate during the summer but sparse in the winter, when airplanes become the only reliable form of transport. There are no trains, and the bus system is inconvenient. People travel around the coast on ferries. Most highways are unpaved. Flights to and from Europe are frequent; it is also possible to travel by ferry to and from Denmark, though the trip takes several days.

HEALTH

The people of Iceland are some of the healthiest in the world. Life expectancy is over 80 years, and the infant mortality rate is extremely low, about 3 deaths per 1,000 births. Each woman has on average slightly fewer than two children. The government subsidizes the health-care system. The biggest health risk is hypothermia brought on by cold and inclement weather.

FOOD AND NUTRITION

Iceland imports most of its food, which is standard northern European fare. Traditional Icelandic cuisine tends to appall foreigners. Specialties include shark that has been buried for six months, pickled ram's testicles pressed into a cake, boiled sheep head, and sheep innards stuffed into a sheep stomach and cooked. People eat local species such as char, puffin, and haddock as well as whale and seal meat. They also eat yogurt. They drink a great deal of coffee, along with beer, wine, and *brennivín*, a caraway-flavored schnapps brewed from potatoes. Vegetables do not feature prominently in Icelandic cuisine.

 Amount of Fruits and Vegetables Available per person per year kg: 167.7

STATUS OF WOMEN

Women enjoy the same legal status and rights as men. In the workforce and in the political arena they have increased their presence in recent years. Vigdís Finnbogadóttir became Iceland's first woman president in 1980. In addition to the Women's List political party, which is restricted to women and specifically pursues their concerns, Iceland's largest political party, the center-right Independence Party, has begun addressing women's issues in response to growing public awareness.

Despite women's visibility, many major businesses and political institutions remain male dominated, and there is around a 20-percent wage gap between men and women working in comparable jobs nationwide. There is a special committee for complaints in the Equal Rights Affairs Office of the Ministry of Social Affairs.

There is increasing awareness of violence against women, including domestic abuse, resulting from extensive media coverage during the past decade. This has resulted in stiffer criminal penalties and enforcement and in training programs for those investigating reported crimes. The problem is particularly bad in couples in which an Icelandic man marries an Asian woman, an increasingly common phenomenon. These Asian women do not always assimilate well into local society and do not know how to find help.

 Seats Held in Parliament by Women %: 30
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 52.5

WORK

Iceland has low unemployment (3.4 percent in 2004), a fairly even distribution of income, and a generous welfare system. Per capita gross domestic product (GDP) in 2004 was \$30,900. About 60 percent of the workforce is employed in services, in areas such as biotechnology, software production, financial services, and the expanding ecotourism industry, which includes whale watching. About 23 percent of the workforce is employed in manufacturing or construction; the remaining workers are employed in agriculture and fishing.

 Agriculture: 5.1
 Fishing and Fish Processing: 11.8
 Manufacturing: 12.9
 Construction: 10.7
 Services: 59.5
 Unemployment %: 3.4

EDUCATION

Literacy has been universal in Iceland since the end of the 18th century. The Central Grammar School, or Gymnasium, at Reykjavík can be traced back to the foundation in 1056 of a cathedral school at Skalholt in south Iceland.

In 1907 the Althing passed legislation making school attendance obligatory for all children ages 10 to 14. In 1946 compulsory school attendance was extended to cover all children ages seven to 16. Local authorities operate preprimary classes for children of age five or six. Students may opt for a four-year secondary-school program following their compulsory studies, choosing a preuniversity track or a comprehensive or vocational program.

The language of instruction is Icelandic. At the secondary level, and even more so at the university level, textbooks in both English and other Scandinavian languages are also used.

The University of Iceland was founded in 1911, although three of its constituents—the Theological Seminary, the School of Medicine, and the Law School—were founded earlier. Departments since added include economics, philosophy and liberal arts, engineering, social sciences, and dentistry.

 Gross Enrollment Ratio: 54.6
 Public Expenditure on Education as % of GDP: 6.2

SCIENCE AND TECHNOLOGY

Iceland has a very educated population and ample financial resources, and as a result it is quite technologically advanced. It is on the forefront of green energy sources; its electricity is produced by entirely renewable sources, and 90 percent of homes are heated with geothermal energy. The nation wants to spread hydrogen technology throughout the world and has thus created a consortium called Icelandic New Energy, which includes DaimlerChrysler and Royal Dutch Shell, in an effort to produce hydrogen-powered ships, cars, and buses. Iceland is also at the forefront of innovations in cellular telephone technology.

Scientists and Engineers in R&D per 1 million people: 6,592
 Expenditures in R&D as % of GDP: 3.1
 High-Tech Exports \$million: 21.7
 Patent Applications by Residents: 71

MEDIA

Iceland has a very well-developed and sophisticated media. In a country with a fairly small population, there are numerous daily newspapers and other periodicals, both publicly and privately owned. Important dailies include *Frettbladid*, *Morgunbladid*, and *DV*. The government guarantees freedom of the press.

Iceland was a country of books even before the invention of printing. Ample Icelandic manuscripts survive to attest to the vitality of book activity in the Middle Ages. The printing press was introduced into the country in the 16th century. Today Iceland is among the top five countries in the world in book publishing, and the general literacy rate is the highest in the world. Icelanders are known for their love of both prose and poetry.

Radio and television stations are limited compared to most countries in mainland Europe, but there has been an expansion in stations and programs since the 1980s. The government funds the Icelandic National Broadcasting Service (RUV), which is required to promote Icelandic language and heritage. The expansion of the Internet during the 1990s has also proved popular, and there has been a proliferation of Iceland-related and Iceland-sponsored Web sites.

CULTURE

Iceland's culture reflects its heritage, with its combination of rugged terrain, isolation, and colonization by Vikings who came to the island from medieval Scandinavia. The literary tradition is extremely important, especially the Icelandic sagas, from 1180–1300 c.e., which tell stories of battles, heroes, and religion and give glimpses into daily life in medieval settlements. Modern authors have continued this literary tradition; one modern writer, Halldór Laxness, won the 1955 Nobel Prize for literature. Traditional Icelandic music is usually maudlin and includes many lullabies, but Iceland has also produced internationally successful popular musicians, such as the singer Björk.

FOLKLORE AND MYTHOLOGY

Iceland has a rich mythological heritage dating from the medieval period. The stories are full of the activities of the Norse gods, such as Odin, Loki, and Thor, and their adventures with various elves, dwarfs, giants, trolls, and monsters. People passed the stories through the centuries by memorizing poems and speaking them aloud as entertainment during the long winter nights. Although the stories were not typically recorded in writing, many Norse myths are known today because Icelandic monks wrote them down and the manuscripts survived; Snorri Sturluson's *Prose edda* is one of these.

ENTERTAINMENT AND RECREATION

Icelanders enjoy indoor recreation such as chess and bridge as well as reading, drinking, and general socializing. Chess is especially significant, and the country has numerous chess clubs and has produced many chess grand masters. Icelandic bridge players also compete at the international level.

There are many festivals during the long summer days. Independence Day, on June 17, is the biggest celebration, with parades, street music, and other festivities. Another June festival is Sjómannadagurinn, which

features swimming contests and other nautical activities to celebrate Iceland's seagoing heritage. On midsummer night people seek out dew so that they can roll in it naked, as it is supposed to cure various illnesses. Other festivals involve bonfires, barbecues, horse racing, camping, dancing, singing, eating, and drinking copious amounts of alcohol.

ETIQUETTE

Icelanders address one another by their first names. It is very uncommon to refer to anyone by their last name, and Icelanders do not have traditional last names anyway. Icelanders do not usually tip servers in restaurants or other places, though an occasional tip for good service is appreciated.

FAMILY LIFE

By law Icelanders must follow the ancient tradition of deriving their last names using the patronymic system. In the patronymic system, a woman creates her last name by combining her father's first name with "dóttir," meaning "daughter;" a man creates his by combining his father's first name with "son." Thus, the former president was named Finnbogadóttir, meaning "daughter of Finnboga" and the current one is named Grímsson, which means "son of Grimm." Occasionally people use their mothers' names instead of their fathers'. Women keep their surnames after they marry. This system results in most family members having different last names; it is impossible to determine the marital status of a person's parents from his or her last name.

PERSONAL APPEARANCE

Icelanders like to dress fashionably and follow the latest European trends. They import most of their clothing. One local fashion is hand-knitted sweaters that use traditional colorful patterns; these are popular in Iceland and have become a profitable product for export.

SPORTS

People in Iceland enjoy a variety of sports, including golf, soccer, basketball, skiing, and a kind of traditional Viking wrestling called *glima*. A favorite sport is swimming, both indoor and outdoor; many pools are heated by natural hot springs, which makes swimming possible in the cold climate. There are many sports clubs that organize sporting activities for young people.

CHRONOLOGY

- 1944** Iceland proclaims itself a sovereign republic with a new constitution.
Independence and Labor Parties coalition under Ólafur Thors forms a government.
- 1947** Labor, Independence, and Progressive parties form a coalition government under Stefán Stefánsson.
- 1949** Iceland joins NATO.
Independence Party forms a minority government under Ólafur Thors.
- 1950** Progressive and Independence parties form a coalition government under Steingrímur Steinthórsson.
- 1951** U.S. base at Keflavík begins operations.
- 1953** Independence and Progressive parties form a coalition government under Ólafur Thors.
- 1956** Progressive, Labor, and Labor Union parties form a coalition government under Hermann Jónasson.
- 1958** Iceland extends territorial limits to 19 km (12 mi), triggering the first Cod War with the United Kingdom.
Labor Party forms a minority government under Emil Jónsson.
- 1959** Independence and Labor Parties form a coalition government under Ólafur Thors.
- 1961** Central Bank of Iceland is founded.
Iceland extends territorial limits to 80 km (50 mi), triggering second Cod War.
- 1963** Ólafur Thors steps down and is replaced by Bjarni Benediktsson.
- 1968** Iceland joins the European Free Trade Association (EFTA).
- 1970** Benediktsson steps down as prime minister in favor of Johann Hafstein.
- 1971** Progressive, Labor Union, and Liberal and Left Alliance parties form a coalition government under Ólafur Jóhannesson.
- 1974** Independence and Progressive parties form a coalition government under Geir Hallgrímsson.
- 1975** Iceland extends territorial limits to 322 km (200 mi), triggering third Cod War.
- 1978** Progressive, Labor, and Labor Union parties form a coalition government under Ólafur Jóhannesson.
- 1979** Labor Party forms a minority government under Benedikt Gröndal.
- 1980** A breakaway group from the Independence Party along with the Progressive and Labor Union Parties form a coalition government under Gunnar Thoroddsen.
- 1983** Progressive and Independence parties form a coalition government under Steingrímur Hermannsson.
- 1987** Hermansson coalition loses election. Thorsteinn Pálsson of the Independence Party forms coalition government.
- 1988** Steingrímur Hermansson returns to office as prime minister.
- 1990** Iceland forms its Ministry for the Environment.
- 1991** Davíð Oddsson becomes prime minister.
- 1992** Iceland quits the International Whaling Commission.
- 1994** Iceland celebrates the 50th anniversary of the modern Icelandic Republic.
The agreement on a European Economic Area (EEA) takes effect, giving Iceland full access to the internal market of the European Union (EU).
- 1995** The Independence and Progressive parties form a coalition government under Davíð Oddsson.
- 1996** After four four-year terms as president, Vigdís Finnbogadóttir chooses not to run for reelection.
Ólafur Grímsson is elected by a comfortable margin.
- 1997** Iceland hosts its first Partnership for Peace exercise, notable for the participation of Russia.
- 1999** The Independence and Progressive parties renew their coalition government.
- 2001** Iceland rejoins the International Whaling Commission as an observer.
- 2002** Iceland joins the International Whaling Commission as a full member.
- 2003** Iceland launches a whale hunt to make a “scientific catch” for research on fish populations.
- 2004** Grímsson is reelected president. Oddsson and foreign minister Halldór Ásgrímsson trade jobs.

INDIA

Basic Fact Sheet

OFFICIAL NAME

Republic of India (Bhāratīya Ganarājya)

ABBREVIATION

IN

CAPITAL

New Delhi

HEAD OF STATE

President Abdul Kalam (from 2002)

HEAD OF GOVERNMENT

Prime Minister Manmohan Singh (from 2004)

NATURE OF GOVERNMENT

Socialist secular parliamentary democracy

POPULATION

1,080,264,388 (2005)

AREA

3,287,590 sq km (1,269,388 sq mi)

ETHNIC MAJORITY

Indo-Aryan

LANGUAGES

Hindi, English, and 14 other official languages

RELIGIONS

Hinduism, Islam, Christianity, Sikhism, Buddhism, Jainism, and Zoroastrianism

UNIT OF CURRENCY

Rupee

NATIONAL FLAG

Tricolor of deep saffron, white, and green horizontal stripes, with a blue dharma chakra (wheel of the law, a Buddhist emblem) in the center of the white stripe. The wheel appears

on the abacus of Asoka's Lion Capitol, built in Sarnath in Uttar Pradesh in 250 B.C.

NATIONAL EMBLEM

Three imperial lions standing back to back, as they appear on the stone pillar erected by Emperor Asoka at Sarnath. On the base is a dharma chakra, flanked by a bull and a horse. Beneath the emblem is the national motto, *Satyameva Jayate* (Truth alone triumphs), in Devanagiri script.

NATIONAL ANTHEM

"Thou Art the Ruler of the Minds of All People," written by the Nobel Prize-winning poet Rabindranath Tagore. Two other songs—"I Bow to Thee, Mother" and "Bankim Chandra Chatterji"—are accorded equal status in public functions.

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 26 (Republic Day), August 15 (Independence Day), October 2 (Mahatma Gandhi's birthday). The festivals of all of India's major religions are observed in the country, many of them nationally and others regionally. The chief of these festivals are the Hindu festivals of Rath Yatra, Janmashtami, Durga Puja, Dussehra, Diwali, Pongal, Holi, Ram Navami, Baisakhi, Raksha Bandan, Ganesh Chaturthi, and Onam; the Islamic festivals of Id-ul-Fitr, Muharram, Id-ul-Zuha, and Id-ul-Milad; the Christian festivals of Christmas and Good Friday; the Sikh festival of Guru Nanak Jayanti; and the Buddha Jayanti (Buddhism), Mahavir Jayanti (Jainism), and Jamshed Navroz (Zoroastrianism).

DATE OF INDEPENDENCE

August 15, 1947

DATE OF CONSTITUTION

January 26, 1950

GEOGRAPHICAL FEATURES

India, the second largest country in Asia, is located in the Indian Subcontinent in South Asia. Including the Andaman and Nicobar Islands in the Bay of Bengal and Lakshadweep (formerly the Laccadive, Minicoy, and Amindivi Islands), the total land area is 3,287,590 sq km

(1,269,388 sq mi). The length of the total coastline on the Bay of Bengal, Arabian Sea, and Indian Ocean is 7,000 km (4,350 mi). India shares international borders with Bangladesh (4,053 km; 2,518 mi), Bhutan (605 km; 376 mi), Myanmar (1,463 km; 909 mi), China (3,380 km; 2,100 mi), Nepal (1,690 km; 1,050 mi), and Pakistan (2,912 km; 1,809 mi).

India

Mainland India comprises four well-defined regions: the northern mountain zone, or the Himalayas; the Indo-Gangetic Plain; the desert region; and the southern region, including a narrow coastal plain

along the Arabian Sea and a broader one along the Bay of Bengal.

The Himalayas (literally, “the abode of snow”) comprise three parallel ranges interspersed with large pla-

teaus and valleys, like the Kashmir and Kulu valleys. The Greater Himalayas, with an average height of 6,700 m (20,000 ft), include such famous peaks as Mount Everest (8,847 m, 29,028 ft), in Nepal, and Mount Kanchenjunga (8,598 m, 28,208 ft). The peaks of the Lesser Himalayas range between 1,500 m (5,000 ft) and 3,650 m (12,000 ft). The Outer Himalayas form a system of low foothills. The high altitude limits travel to a few passes, such as the Jelep La and Natu La, northeast of Darjeeling, and Shipki La in the Sutlej Valley. The mountain wall extends over a distance of 2,400 km (1,490 mi).

The Indo-Gangetic Plain, about 2,400 km (1,500 mi) long and 240–320 km (140–200 mi) broad, is formed by the basins of three river systems: the Ganges, the Indus, and the Brahmaputra. The plain is the product of millenia-long deposits of soil in what was once a gulf between the peninsula and the Himalayas. There is hardly any variation in relief, and between Delhi and the Bay of Bengal there is a drop of only 200 m (656 ft) in elevation.

The desert region is divided into the great desert extending northward from the Rann of Kutch and the little desert extending northward from the Luni River. The absence of surface water makes the region completely infertile.

Separated from the Indo-Gangetic Plain by a mass of mountain ranges and scalped plateaus is the Deccan, or the Indian Peninsula, flanked on one side by the Eastern Ghats, with an average elevation of 610 m (2,000 ft), and on the other by the Western Ghats (910–1,220 m; 2,985–4,000 ft), rising in places to 2,440 m (8,000 ft). The interior plateau between these *ghats* (or mountain ranges), called the Deccan, is actually a series of plateaus intersected by many rivers.

The rivers of India are generally divided into Himalayan rivers and peninsular rivers. Of the Himalayan rivers the longest—and also the holiest—is the Ganges. The Ganges basin receives waters from an area constituting one-quarter of India's total land area. The Ganges has two main headwaters in the Himalayas, the Bhagirathi and the Alaknanda, the former rising from the Gangotri Glacier and the latter from the Alakapuri Glacier. The Ganges enters the plains at the sacred city of Hardwar and joins with its major tributary, the Yamuna, at Allahabad. Throughout the rest of its course the Ganges is joined by a number of other Himalayan rivers, such as the Ghawghara, Gandak, and Kosi, and central Indian rivers, such as the Chambli, Betwa, and Son.

CLIMATE AND WEATHER

India is a tropical country but is subject to a wide range of climates, from subfreezing Himalayan winters to 50°C (122°F) in the shade in the Indo-Gangetic Plain and from the highest annual rainfall in the world (1,096 cm; 428 in) in Cherrapunji in Meghalaya to almost permanent drought in the Thar Desert. Four fairly distinct seasons are common to all regions: a relatively cool winter monsoon season, a hot and rainless transitional season, a rainy monsoon season, and a humid season during the retreating monsoon. Although seasonal duration varies according to the region, the northeast monsoon generally lasts from December to March, the transitional hot weather from April to May, the rainy southwest monsoon from June to September, and the transitional humid season from October to November.

Based on rainfall and temperature India may be divided into seven climatic zones as follows:

The Himalayan region has three temperature levels: 18.3°C (65°F) at 2,150 m (7,000 ft), freezing temperatures at 4,600 m (15,000 ft), and up to 37.8°C (100°F) in the valleys. The eastern Himalayas have from 127 to 233 cm (50 to 80 in) of rainfall and the western Himalayas from 76 to 101 cm (30 to 40 in).

Assam and West Bengal have humid and rainy weather. Assam has torrential rainfall and moderately high temperatures, while West Bengal has rainfall between 127 and 152 cm (50 and 60 in) and an average an-

nual temperature between 18.3°C and 29.4°C (65°F and 85°F).

In the Indo-Gangetic Plain temperatures run as high as 50°C (122°F) and as low as -2.2°C (28°F). The monsoon becomes weaker as it moves north: Patna receives 119 cm (47 in), Delhi 71 cm (28 in), and the Rajasthan deserts less than 25 cm (10 in) per year.

The western coastal region receives high rainfall, ranging from 190 to 305 cm (75 to 120 in) in Mangalore and Bombay to 648 cm (255 in) in Mahabaleshwar. Kerala, in the south, receives heavy rainfall during both the southwest and northeast monsoons. The temperature there is fairly uniform at about 26.7°C (80°F).

The peninsular interior has a high average annual temperature, with maximums reaching 37.8°C (100°F) during April, May, and June. Rainfall varies from 76 cm (30 in) in Madhya Pradesh to between 101 and 152 cm (40 and 60 in) in southern Uttar Pradesh and 101 and 177 cm (40 and 70 in) in Orissa.

The northern Deccan has summer temperature maximums exceeding 37.8°C (100°F) and January minimums below 15.6°C (60°F). Most of the region is in a rain shadow and gets barely 51–101 cm (20–40 in) of rain per year.

The east coast receives 84–127 cm (35–50 in) of rainfall. During the summer temperatures exceed 37.8°C (100°F) on most days.

Because of the erratic nature of the monsoons both droughts and floods are common in most parts of India. The daily temperature range varies from only 2°C to 3°C (4°F to 5°F) in Kerala to 33°C to 39°C (60°F to 70°F) in Rajasthan.

Tropical hurricanes and cyclones strike the coastal areas in most years between April and June and between September and December.

Climate and Weather

Average Temperature

- Himalayan Region: 37.8°F in the valleys to 65°F at higher elevations and 0°F above 15,000 ft
- Assam and West Bengal: 65°F in to 85°F
- Indo-Gangetic Plain: 28°F to 122°F
- Western Coastal region: 80°F
- Peninsular Interior: 85°F to 100°F
- Northern Deccan: 60°F to 100°F
- East Coast: 90°F to 100°F

Average Rainfall

- Eastern Himalayas: 50 in to 80 in
 - Western Himalayas: 30 in to 40 in
 - Assam: 80 in to 100 in
 - West Bengal: 50 in to 60 in
 - Indo-Gangetic Plain Patna: 47 in, Delhi 28 in, Rajasthan 10 in
 - Western Coastal region: 75 in to 120 in
 - Mangalore and Bombay: 255 in
 - Peninsular Interior Madhya Pradesh: 30 in, Uttar Pradesh 40 in to 60 in, Orissa: 40 in to 70 in
 - East Coast: 35 in to 50 in
-

FLORA AND FAUNA

India has about 15,000 species of plants. In the north-east and along the Western Ghats can be found evergreen forests. The plains contain deciduous forests, Bengal and Madhya Pradesh contain swampy marshes, the Himalayan foothills have pine forests, and the southeast is marked by lagoons and estuaries.

India has about 500 species of mammals. The nation is known for its tigers, elephants, and rhinoceroses, but there are also gazelles, antelopes, blue bulls, various species of deer (including the rare swamp deer), buffalo, bison, sloth bears, hyenas, jackals, foxes, and others. Other mammals include mongooses, leopards, panthers, and various species of monkeys, including macaques and langurs. India has 2,000 species and subspecies of birds, including hornbills, peacocks, herons, ibises, storks, cranes, and pelicans. Around 500 species of reptiles and amphibians include cobras, pythons, crocodiles, tortoises, and lizards.

ETHNIC COMPOSITION

Ethnically, India has one of the greatest mixtures in the world; its racial diversity is perhaps the most complex to be found anywhere outside of Africa. The great majority of the population belongs to the Caucasoid family. The Dravidians of South India are believed to be descendants of the alpiners, the Mediterranean branch of the Caucasoids, while most north Indians are believed to be Indo-Nordics. The former constitute 25 percent of the population, and the latter 72 percent.

The aboriginal inhabitants of India have survived in geographic pockets in isolated hilly regions, today constituting 3 percent of the population. These tribes are concentrated in three zones, known as scheduled areas: the northwest (the states of Mizoram, Manipur, Nagaland, Meghalaya, Assam, and Arunachal Pradesh), the hills of central India (Madhya Pradesh and Orissa), and the southern part of the peninsula (Kerala and Tamil Nadu).

The tribes of the northeast are Mongoloid peoples, speaking Sino-Tibetan languages. The tribal people are an estimated 7 percent of the population. The government has met with only modest success in its efforts to improve the positions of these groups.

Every large Indian city has substantial Western communities. For many years India has been a haven for members of the Western counterculture.

LANGUAGES

In India 1,652 languages and dialects are spoken. Of these, 15 are recognized in the constitution as regional languages, and one, Hindi, written in the Devanagiri script, is designated as the official language. Linguistic loyalties run deep, and political boundaries of the 25 states follow, for the most part, linguistic boundaries.

The 15 languages specified in the constitution, spoken by 91 percent of the population, are broadly divided into Indo-European and Dravidian. Almost 75 percent of the population speak one of the Indo-European languages, while 25 percent speak Dravidian languages.

Hindi, together with its numerous dialectal forms, such as Western Hindi, Eastern Hindi, Bihari, and Pahari, is taught as the primary or secondary language throughout India. Through the Central Hindi Directorate, the government runs several programs for the enrichment and spread of Hindi. Some of these measures have met with considerable resistance in Dravidian language areas as well as in Bengal, leading to language riots.

Urdu, the language of urban Muslims, differs from Hindi in that it is written in Arabic-Persian script and also in its large admixture of Arabic and Persian words.

Although English is the mother tongue only of the Anglo-Indians, it is spoken by more than 190 million persons in India with some degree of proficiency. It is accorded the position of an associate official language in the constitution, but for practical purposes it is the official language of India and the principal medium of communication among the educated classes.

RELIGIONS

Almost all the major religions of the world are represented in India, and four of them originated in the country: Bud-

dhism, Jainism, Sikhism, and Hinduism. India has not adopted a state religion, and the constitution guarantees every citizen the right to freedom of worship. Despite pressures from Hindu extremists, there is no discrimination against any faith or creed.

Hindus form the majority of the population in all areas except Jammu and Kashmir (where Muslims are dominant) and Nagaland (where Christians are in the majority). Hinduism is less a monolithic system than a conglomeration of loosely related but interwoven cults and traditions. It has no unifying creed or priesthood, no founder, no ecclesiastical organization, and no concept of heresy. Relatively tolerant, it encompasses differing theologies and spans the religious spectrum from monism to polytheism and from atheism to animism.

Religion is a pervasive influence in India, permeating all aspects of national life. Even political and economic movements have religious overtones; Hinduism particularly serves as the principal unifying force in the country. Hindu-Muslim riots, among the many deplorable features of the Indian religious scene, occur with almost predictable regularity.

Muslims are the largest religious minority, constituting the majority in Jammu and Kashmir and the second-largest religious group in 12 other states.

There are two main groups of Christians in India. The older of these, known variously as the Christians of St. Thomas or Syrian Christians, dates back to the first century, the Indian Christians to the late 16th century.

Buddhism is no longer an active religious force in India, where it is confined to small groups in the Himalayas and scattered converts from the untouchable class. Among the smaller religious minorities are the Jews and Zoroastrians. The latter, who are also known as Parsis, worship the god Ahura Mazda and sacred elements, especially fire.

Religious Affiliations

Hindu	878,000,000
Muslim	129,000,000
Sikh	20,000,000
Christian	25,000,000
Other	53,000,000

HISTORICAL BACKGROUND

Around 2500 B.C.E. the first major Indian civilization, along the Indus River, was established in what is today Pakistan. When Aryan invaders came in successive waves from 1500 to 200 B.C.E., the original Dravidian inhabitants were forced south. During this period both the caste system of the Brahman priests and the rise of Buddhism became critical factors in Indian culture. In the third century Ashoka, the Mauryan emperor, embraced Hinduism.

The Gupta Empire came into power after the fall of the Mauryan Empire in the fourth century. It ruled India for more than 150 years, during which it was established as a powerful and widespread empire, completing the Mauryan design of unity and consolidating the whole of India under the governance of a centralized state. This period, the Gupta period, is often termed the golden age of the arts in ancient India. The Guptas were defeated by the White Huns in the sixth century.

In 1192 Muslims arrived. Within 20 years the Ganges River basin was under Muslim control, which was limited, however, and never fully penetrated the Indian Subcontinent. Two great kingdoms developed in what is now Karnataka: the mighty Hindu kingdom of Vijayanagar and the fragmented Bahmani Muslim kingdom.

During the 16th century the Mughals invaded Punjab, defeating the sultan of Delhi in 1525. The creation of the Mughal Empire marked a renaissance of artistic development. However, the Mughals' control was ceded to the Maratha Empire in the 17th century. The Maratha Empire was able to consolidate the central portion of India under its rule before ultimately being replaced by the British.

The first British settlement was erected in Surat on the west coast in 1612 by the English East India Company, under charter from the Mughal emperor Jahangir. By 1857, when the company's Indian territories were taken over by the Crown, its writ ran from the Himalayas to Cape Comorin and from Burma to Afghanistan. Despite many glaring inadequacies, the British must be credited with the introduction of modern systems of education, public health, public works, railroads and roads, banking and public finance, the judiciary, social welfare, and media. Although reluctant to do so, they also laid the foundations of a parliamentary system of government. Above all they welded hundreds of feudal princedoms into the modern political entity known as India, giving the country a political unity it had never previously possessed within its present borders. Unlike many other former British colonies, India has not turned its back on the principal British legacies, although many of them have been Indianized in form. Much goodwill toward the British seems to survive, and India has retained its membership in the Commonwealth unbroken since independence.

India as a colonial enterprise was not particularly profitable to the British, but it was the jewel in the British Crown, and the fact that a small island nation was able to rule over a large subcontinent of over several hundred million added to the British sense of superiority and their imperial sense of destiny. The British believed that they could continue to rule India indefinitely, but they overlooked the hidden dynamic of nationalism. The English language, which the British introduced, was uniting Indians, and the typically British notions of self-governance and freedom helped to subvert the notion of an empire.

Nationalist sentiments were crystallized by the convergence of two forces: The first was the renaissance of Hinduism, the second the foundation of the Indian National Congress (INC). Led by typical 19th-century liberals who sought extensive social reforms and increasing self-government, such as Gopal Krishna Gokhale and Motilal Nehru (the father of Jawaharlal Nehru), the INC by 1900 had become a loyal opposition that posed absolutely no danger to the empire.

After 1905, however, when Japan defeated Russia, the INC became a mass movement with the slogan *Swaraj* (self-government), shedding much of its moderate stance in favor of a transfer of power to Indian hands. In response to the hardening of Congress policy on nationalist lines and the emergence of a separate Muslim political organization, the British adopted a policy of incremental appeasement without relinquishing control.

It was at this time that a new leader appeared on the scene, Mohandas Karamchand Gandhi, known to millions of his countrymen as Mahatma, or "The Great Soul". From 1919 to 1949 he was at the forefront of the agitation for independence, which included *hartals* (strikes), boycotts, noncooperation, civil disobedience, and passive resistance. He was jailed many times, sometimes provoking the British to arrest him and then using his jail terms to dramatize his cause. He also espoused a number of social reforms, such as support for the *harijan* (literally, the people of God, a euphemism for the untouchables), cottage industry, the promotion of *swadeshi* (literally, economic autarky), and hand spinning. He was a master manipulator of public opinion and a skilled propagandist as well. He sparred with the British at roundtable conferences, winning small concessions each time. One of these concessions was the constitution of 1935, which granted autonomy to the various provinces.

The nationalist movement came to full maturity during World War II. In 1947 the British announced that they would divide the Indian Empire into two states, India and Pakistan—the former primarily Hindu, the latter primarily Muslim—and grant independence to both. India was saved from a civil war, but the partition between India and Pakistan proved bloodier than a civil war might have been; several million perished, and several million more were uprooted. Nevertheless, on the stroke of midnight on August 14, 1947, an independent India, the dream of thousands of Indian nationalists, came into existence.

In 1950 India adopted a constitution that declared the country a republic and a federal union with a parliamentary system of government. Jawaharlal Nehru, the prime minister since independence, remained in that office. Under Nehru the nation pursued policies of non-alignment in foreign affairs and socialism at home. Nehru focused on industrialization to spur development. However, the nation's size, growing population, refugee prob-

lems, and continued tension with Pakistan all hindered economic growth. During Nehru's tenure India constitutionally annexed Jammu and Kashmir into the union in 1957, annexed Goa and other Portuguese possessions in 1961, and fought a limited war with China over disputed border areas in 1962.

Nehru died in 1964 and was succeeded by Lal Bahadur Shastri, who led the nation into another war with Pakistan in 1965 over the disputed regions of Jammu and Kashmir. The war ended without territorial gains for either side. Shastri died in 1966, and Indira Gandhi (Nehru's daughter) became prime minister. India again went to war with Pakistan in 1971, supporting East Pakistan's bid for independence from West Pakistan. The conflict resulted in the creation of Bangladesh.

Gandhi's tenure was marked by a decline in the political ascendancy of the Indian National Congress, the party that had dominated Indian politics since before independence. Foreign policy problems and food shortages contributed to the party's loss of 80 parliamentary seats in the 1967 election. In an effort to maintain her power in the legislature Gandhi moved to form an alliance with the radical wing of the party. The right wing, led by Morarji Desai, opposed the move, and the party split in 1969. In 1975, following food riots, charges of government corruption, and her conviction for election law violations, Gandhi declared a state of emergency. She suspended civil liberties and postponed elections scheduled for 1976. She also sponsored legislation that retroactively cleared her of the election violations.

Gandhi's actions met with widespread disapproval, and when elections were held in 1977, the Congress Party suffered an overwhelming defeat, losing more than half its seats. A new government was formed under Morarji Desai, the compromise choice of the winning five-party Janata coalition. The government failed to develop a coherent set of policies, and the coalition was racked by factionalism. In 1979 Desai resigned as prime minister and was briefly succeeded by Charan Singh.

Gandhi returned to power in 1980, following an overwhelming victory by her newly reorganized Congress-Indira Party. Gandhi's term was marked by an increase in ethnic violence. In 1983 at least 3,000 persons were killed when Hindu mobs in Assam attacked Muslim immigrants. That same year serious unrest developed in the Punjab over Sikh demands for regional autonomy. In an effort to suppress Sikh militants who had organized the murder of political opponents, Gandhi in June 1984 sent the army to assault the holiest of Sikh shrines, the Golden Temple of Amritsar, from which the militants were operating. The militants were routed, but Sikhs were deeply offended by the operation. In October, Gandhi was assassinated by two of her Sikh bodyguards in retaliation. Her death led to a terrible outbreak of violence, in which approximately 2,500 Sikhs were massacred.

The Congress Party chose Gandhi's son, Rajiv, as her successor. He called for elections for December 1984, in which he and the Congress Party won the largest parliamentary victory in India's history. Despite the victory Gandhi's popularity declined dramatically. He was unable to solve the sectarian problems in the Punjab or to cleanse Indian politics of its pervasive corruption. In 1987 Gandhi sent troops to Sri Lanka to disarm the Tamil separatists. The operation proved difficult, and the last of the troops were withdrawn in March 1990.

Elections held in 1989 resulted in the defeat of Gandhi's Congress Party and the victory of the National Front coalition, led by the Janata Dal. V. P. Singh was sworn in as prime minister to head a minority government. Singh's tenure in office was short. In the wake of caste violence and renewed violence between Hindus and Muslims, the Singh government overwhelmingly lost a vote of confidence in November 1990 and immediately resigned. Chandra Shekhar, the head of a dissident faction of the Janata Dal, became prime minister. Shekhar's government was shortlived; in March 1991 he resigned following the withdrawal of support for his minority government by the Congress (I) Party, led by Gandhi. Gandhi was assassinated in 1991 by Tamil extremists during the election campaign that followed. In June of that year, P. V. Narasimha Rao, who had been elected head of Congress (I) following Gandhi's death, was sworn in as prime minister.

During 1994 Prime Minister Rao became increasingly beleaguered by his critics and the resignation or dismissal of many of his cabinet members. In 1995 Congress (I) woes continued with electoral defeats in Maharashtra and Gujarat. In the balloting for the 11th Lok Sabha, Congress (I) suffered a heavy defeat, retaining only 140 seats, against the 167 gained by the Hindu fundamentalist BJP. There followed three years of chaos, during which Rao resigned, to be followed first by Sitaram Kesri of the Congress (I) Party and then by Inder Kumar Gujral of the Janata Dal. New elections were held in 1998 but failed to produce a majority for any of the major national parties. However, BJP and its allies emerged with a plurality parliamentary support of some 225 seats, and BJP's leader, Atal Bihari Vajpayee, was sworn in as prime minister. Meanwhile, Congress Party, facing renewed internal dissension, turned to Rajiv Gandhi's widow, Sonia, for leadership. However, the BJP consolidated its gains throughout India and gained a decisive majority in the 2000 national elections. In December 2001 a suicide squad attacked the parliament in New Delhi, killing several police officers. India blamed two Kashmiri militant groups for the attack and imposed sanctions against Pakistan to force it to take actions against the groups. Pakistan retaliated with similar sanctions, and both countries began to mass troops along the common border amid rising fear of an imminent war. Violence continued in 2003 when a pair of explosions

in Mumbai killed 46 people; the government suspected that Islamic militants and Kashmiri separatists were behind the blasts. In May 2004 Prime Minister Atal Bihari Vajpayee resigned after his party suffered stunning losses in parliamentary elections. Many observers believed that a Gandhi regime would return and that Sonia Gandhi would become prime minister. She declined, however, paving the way for Manmohan Singh to be named prime minister. In late 2004 a devastating Indian Ocean tsunami killed over 200,000 in nations of Southeast Asia, hitting India's Andaman and Nicobar islands.

LIST OF MODERN RULERS

(Note: Excluded are interim prime ministers and those who served less than a year)

1947–64	Jawaharlal Nehru
1964–66	Lal Bahadur Shastri
1966–77	Indira Gandhi
1977–79	Morarji Desai
1980–84	Indira Gandhi
1984–89	Rajiv Gandhi
1991–96	P. V. Narasimha Rao
1998–2004	Atal Bihari Vajpayee
2004–	Manmohan Singh

CONSTITUTION

The Indian constitution of 1950, the longest constitution in the world, consisting of 397 articles and nine schedules, proclaims India a sovereign democratic, socialist, and secular republic with a parliamentary system of government. The constitution is federal in structure with unitary features.

The constitution lays down certain Directive Principles of State Policy to be applied as standards in legislation. Among these are social justice, equitable distribution of ownership and control of material resources to prevent concentration of wealth, and free and compulsory education.

The constitution is flexible in character, and a simple process of amendment has been adopted. The ordinary process requires a two-thirds majority of the members of each house present and voting, a simple majority in terms of total membership, and the president's assent. Numerous amendments have been adopted for the constitution, dealing with various emergency measures, balance between the people and parliament, and the states and the central government.

The division of powers between the union and the states is secured through demarcation of the areas of legislation into three divisions: a Union List, a Concurrent List, and a State List. Union parliament has exclusive

powers to make laws pertaining to defense, foreign affairs, communications, interstate commerce, and transportation. It can also make laws concurrently with state legislatures for 47 subjects on the Concurrent List, including marriage and divorce, trade unions, criminal law and procedure, social security, planning, price controls, factories, and newspapers. In case of conflict between state laws and union laws, the union laws prevail. The State List includes education, public health, local government, land revenues, and irrigation.

The executive consists of a president, a vice president, and a Council of Ministers headed by a prime minister. The president is elected for a renewable term of five years by an electoral college consisting of the elected members of both houses of the union parliament and of the legislative assemblies of the states. He or she may be removed from office by parliament through impeachment. Although vested with broad powers, the president is a largely ceremonial figure acting solely on the advice of the prime minister and the cabinet.

Effective executive power rests with the prime minister and the Council of Ministers. The council comprises ministers who are members of the cabinet, ministers of state, and deputy ministers. The ministers are collectively and individually responsible to the Lok Sabha, the lower chamber of parliament. At the administrative head of each ministry is a secretary.

The governmental machinery of the states closely resembles that of the union. Each state has a governor appointed by the president for a term of five years. The governor acts only on the advice of a Council of Ministers headed by a chief minister.

The seven Union Territories are administered by the president through administrators. Voting is universal at the age of 18.

PARLIAMENT

The Indian parliament is a bicameral body consisting of an indirectly elected upper chamber, the Council of States (Rajya Sabha), and a directly elected lower chamber, the House of the People (Lok Sabha). The Council of States has a maximum membership of 250, all but 12 of whom are elected by state legislatures for six-year terms, with one-third retiring every two years. The 12 nonelected members are appointed by the president on the basis of their intellectual preeminence. The House of the People has 543 elective seats and two seats filled by nominations. Out of the elective seats, 530 are from the states and 13 from the Union Territories. Members are directly elected by universal suffrage for five-year terms, subject to dissolution. The president may nominate additional members if convinced that certain minorities, such as Anglo-Indians, are not adequately represented.

House members have a normal term of five years, unless the House is dissolved earlier.

Legislation requires the consent of both houses of parliament. All financial legislation must be recommended by the president, and the Lok Sabha alone has the power to authorize appropriations and approve proposals for taxation. The president cannot withhold his assent from a money bill, but he may send back other bills to parliament for reconsideration; if both houses pass them again, the president must approve them.

Parliament must meet at intervals of at least six months, and it usually holds three sessions a year.

POLITICAL PARTIES

No fewer than 85 political parties contested India's first general elections in 1952, most of them splinter parties and regional parties. The very multiplicity of parties ensured continued Congress Party successes at the polls until 1977. Parties that poll 3 percent or more of the vote in the previous general elections are classified as all-India parties at the national level and regional parties at the local level. Only these recognized parties are entitled to the exclusive use of certain voting symbols.

The Indian National Congress (INC), founded in 1885 by an Englishman, Allan Octavian Hume, was a monolithic party when it led India to independence. It was the ruling party of India for 30 years, from 1947 to 1977. As an umbrella organization focused on independence, the Congress Party sought to unite disparate ideologies and personalities in the fight for self-rule. With independence, ideological and personal differences loomed larger and led to defections from the party. In 1969 the INC split into two groups, the ruling (Gandhi) faction and the conservative, anti-Gandhi Indian National Congress (Opposition). The latter became the nation's first recognized opposition party. The INC was weakened further in 1977 when dissidents broke away to form the Congress for Democracy. In 1978 Indira Gandhi's faction was expelled from the party, and she and her followers formed a new party, called the Indian National Congress-Indira (INC-I), or Congress-I. In 1981 the party again split when the Indian National Congress-Socialist (Congress-S) was formed. That year the Supreme Court ruled that the INC-I was the real Congress Party. However, by late 1982 the anti-Gandhi Congress (O) had disintegrated. In December 1986 Congress-S split, the majority voting to rejoin Congress-I, while the remaining members decided to continue as Congress-S.

The Janata Party was formed in 1977 as a coalition of the Jana Sangh, the Bharatiya Lok Dal, the Socialists, and the Congress (O). The Congress for Democracy later joined this group. The party ruled India from 1977 to 1979. Although each of these groups was supposed to submerge its separate identity into the new party, the en-

tire period of Janata rule was characterized by factional infighting. After the Janata government collapsed, various elements and individuals left to form or reform separate parties. The Rashtriya Sanjay Manch and the Lok Dal (A) merged with the Janata Party in 1988. The party aimed to achieve a socialist society free from social, political, and economic exploitation.

The Bharatiya Janata Party was founded in 1980 as a breakaway group from the Janata Party. It is a radical right-wing Hindu party.

The Communist Party of India, formed in 1925, worked with the Congress Party for independence in the 1930s but broke with it during World War II. The Communists advocated collaboration with the British in the "antifascist war," while the Congress launched an anti-British noncooperation movement and demanded immediate independence. With the coming of independence, the Communists were divided over the appropriate approach to parliamentary democracy and to the Congress government. In 1964 the party split over this issue, with the moderates advocating opposition to the Congress only on domestic issues and without intent to bring down the government. The radicals, the Communist Party of India (Marxist), argued for implacable opposition to the Congress.

The All-India Anna Dravida Munnetra Kazhagam is a Tamil party founded in 1972 in a break from the Dravida Munnetra Kazhagam, an anti-Brahman regional party dedicated to the promotion of Tamil interests.

LOCAL GOVERNMENT

The Republic of India is a union of 25 states and seven Union Territories. The states and Union Territories are grouped into four zones: Northern, Western, Central, and Southern. Each level has a high-level advisory body known as the Zonal Council. The northeastern states have a Northeastern Council similar to a zonal council. In November 2000 three new states were carved out of existing states, bringing the total number of states to 28: Uttaranchal, from Uttar Pradesh; Chhattisgarh, from Madhya Pradesh; and Jharkhand, from Bihar. Tribal groups that had waged long campaigns for the creation of separate states in the interest of cultural autonomy and regional economic development form the majority of the population in all three states.

The principal subdivision within a state is the district, headed by a district collector. Municipal bodies in smaller towns have less autonomy and fewer financial resources and are more closely controlled by appointed executive officers. Municipal functions include roads, water supply, drainage, public health, education, and parks.

For rural areas there is a three-tier system of *panchayati raj* at the village, block, and district levels. Although there is some variation in the powers and structure of the

panchayats (literally, the councils of five, the traditional village councils), the basic units of the *panchayati raj* and the general framework is the same. Elected directly by and from among villagers, the *panchayats* are responsible for agricultural production, rural industries, medical relief, grazing grounds, village roads, tanks and wells, and sanitation.

LEGAL SYSTEM

The legal system is based on English common law.

The judiciary is completely separate from the executive and is highly esteemed for its independence, competence, and impartiality. It retained its integrity even under the pressures of Indira Gandhi's state of emergency. Judges of the state high courts and the Supreme Court are selected by the law ministry on the recommendations of the chief justice of the Supreme Court. Since 1983 state chief justices are required to be non-state residents.

The judicial system is headed by the federal Supreme Court, consisting of a chief justice and not more than 25 judges. The chief justice is appointed by the president, and the other judges are appointed by the president after consultation with the chief justice. These appointments do not require the concurrence of parliament, but judges may be removed by the president only after a parliamentary impeachment. The Supreme Court has original, appellate, and advisory jurisdiction. It exercises exclusive jurisdiction in disputes between the union and the states and between states and is the ultimate interpreter of the constitution and all laws.

There are 18 state high courts, 17 of which are located in states and one of which is located in Delhi. Each high court is headed by a chief justice, who is appointed by the president in consultation with the governor of the state and the chief justice of India. The number of judges on a high court bench varies from state to state, ranging from a minimum of three to a maximum of 33. High courts are not subject to the control of the state legislatures or executives; judges may be removed only in the same manner as judges of the Supreme Court.

Each state is divided into a number of judicial districts. Under the Code of Criminal Procedure of 1973 there are separate sets of district magistrates for the discharge of executive and judicial functions. Under the district magistrate are first-, second-, and third-class magistrates, who try criminal offenses not triable by sessions courts. At the village level, *nyaya* (justice) *panchayats* try cases involving minor offenses.

The constitution permits the enactment of preventive detention laws against threats to the public welfare and to national security. Such laws provide for limits on the length of detention, generally not to exceed 12 months, and for review of such detention.

The Terrorist Affected Areas Act of 1984 empowers the government to declare any part of the country as "terrorist affected" and set up special courts that can hold trials in camera. The whole of the Punjab was so declared following the unrest in that state.

There is no constitutional guarantee of public trial. The criminal procedure code provides for open trial but permits the judiciary to close the proceedings under relatively narrow circumstances where the evidence would be prejudicial to the state.

HUMAN RIGHTS

India is a multiparty democracy with its external democratic framework still intact after more than 50 years of independence. It exhibits all the characteristics of a sound democracy: an independent judiciary, a nonpolitical military, a free press, regular elections, and unfettered voting rights for all citizens. Some internal strains were visible toward the end of the 1970s, with ethnic and religious conflicts, disharmony between states and between the federal government and the states, and police excesses.

Acts of sabotage and terrorism occurred in the Punjab through the late 1980s. In October 1990 the government, reacting to the continuing violence, extended direct rule in the Punjab for an eighth term. Violence reached an unprecedented level in 1990, with the Indian press reporting about 4,000 deaths in that year. Sikh terrorists killed about 80 people in a train bombing in the Punjab in June 1991. The Punjab remains closed to foreign visitors without special permission to enter.

Incidents of communal violence increased throughout the 1990s. There were clashes both between religious communities (usually Hindu-Muslim) and between castes of different economic levels, particularly attacks on untouchables by higher-caste Hindus.

There is widespread circumstantial evidence that torture by the police does occur. Amnesty International cited reports that third-degree methods were used in many cases of police custody in West Bengal, and there were other reports of police torture in the Punjab, Bihar, and Haryana.

While there are effective legal safeguards to ensure fair trials, the problem of prisoners awaiting trials for months or years severely vitiates the quality of justice.

The freedoms of press and speech are among the strongest characteristics of Indian democracy at work. The Indian press is believed to be among the freest in Asia, and there is no censorship of the printed word. Electronic media, however, are entirely state controlled. Films are subject to a film censorship board, where censors are more concerned with moral content than with politics. Trade unions operate without restrictions on their rights to organize, negotiate and strike.

There is universal adult suffrage, which permits citizens to participate fully in the political processes and in periodic elections at all levels. Elections are free, impartially administered, and supervised by an election commissioner. Every group is free to organize, agitate, publish, recruit, and seek judicial redress in the case of perceived injustice.

FOREIGN POLICY

Although not a major power by world standards, India dominates South Asia in the same way China dominates East Asia and Russia dominates Eastern Europe. However, India has not been able to exercise the kind of leadership in the region to which it would be entitled by virtue of its size or population. India's status among world nations has declined significantly since the death of Prime Minister Nehru, who set the goals of Indian foreign policy in the 1950s. By proposing nonalignment as a viable alternative for developing newly independent nations, Nehru was able to assume the role of spokesman for the third world and to translate, with considerable success, his concepts into instruments of mediatory diplomacy. During the 1950s and 1960s India made important contributions to peacekeeping operations and commissions.

The four most critical areas of Indian foreign policy are its relations with Pakistan, China, the United States, and Russia. (Although its relations have been historically closest with the United Kingdom and Commonwealth countries, they have never loomed large in the sight of Indian foreign policy makers.) In the case of Pakistan there has been a state of permanent conflict that has lasted more than 50 years. The principal bone of contention is Kashmir, the bulk of which remains in Indian hands, although the population is overwhelmingly Muslim and which, if the logic of partition had been followed uniformly, should have been placed within Pakistani borders. But India, as a secular state, has never accepted the religion-based nature of the partition imposed by the British before they left. Since 1947 India and Pakistan have engaged in three wars, in 1947, 1965, and 1971. There have been no open wars since 1971, but the cold war has continued, ranging from verbal duels in international forums to sporadic gunfire across border lines. In 1998 both India and Pakistan acquired nuclear capability, though on a rudimentary scale, making the danger of a nuclear conflict in the subcontinent very real. After an attack on the parliament in New Delhi, allegedly by two Kashmiri militant groups, both India and Pakistan began massing troops along their common border, which led to growing fear of an imminent war. By 2004 diplomatic talks had defused tensions to some degree and the threat of war seemed diminished, but the issue remained unresolved.

China poses an even greater threat to India, according to the Indian defense minister. The border conflict between the two countries, involving 50,500 square miles

of Himalayan territory, escalated into military conflict in 1962 and has never been settled. The two countries greatly distrust each other, and China's support of Pakistan has added to the brew of hostility.

India's strongest ally over the past 50-plus years has been Russia. The two countries are bound by a number of treaties of peace, friendship, and cooperation, the first dating to 1971. Relations with the United States first improved after the end of the East-West cold war, but since then they have suffered as a result of India's nuclear tests in defiance of U.S. wishes. However, in early 2006 the United States and India signed an agreement that gives India access to civilian nuclear technology.

DEFENSE

The Indian defense structure is headed by the president. Responsibility for national defense rests with the parliament and the cabinet. At the cabinet level there is the standing National Defense Council, with the prime minister as chairman. The three chiefs of staff are equal and independent. The army is divided into five commands. The Southern, Eastern, Central, and Western Commands have headquarters at Poona, Calcutta, Lucknow, and Simla, respectively. The fifth command is called Northern, but its headquarters remain undisclosed. The bulk of the army is deployed on the Pakistani and Chinese borders. The navy is organized into three regional commands (Western, Eastern, and Southern) and two fleets (Western and Eastern). The air force is organized into three regional commands (Western, Central, and Eastern) and two operational commands (Training Command and Maintenance Command).

Military manpower is provided by voluntary enlistment. Since the days of the British Raj, the bulk of the recruitment is from the so-called martial races: the Rajputs, Sikhs, Gogras, Marathas, Jats, and Punjabis, as well as the Gurkhas, although the latter are Nepali citizens. Paramilitary forces include the territorial army and the Lok Sahayak Sena, or the national volunteer force.

The total strength of the armed forces is 1.3 million, including a 1.1-million-man army. Military expenditures in 2003 were \$14 billion, 2.4 percent of the nation's gross domestic product (GDP).

ECONOMY

India's economy encompasses traditional village farming, modern agriculture, handicrafts, a wide range of modern industries, and a multitude of support services. More than one-third of the population is too poor to be able to afford an adequate diet. The government has reduced controls on investment and foreign trade, but privatization of output has proceeded slowly. Economic growth has been strong, averaging almost 6 percent between 1999 and 2003 and estimated at 8.3 percent in 2004. This growth has enabled India to reduce the poverty rate by 10 percentage points (though the rate remained high in 2002, at 25 percent). The nation has a large number of well-educated people with strong English-language skills, making the nation a major exporter of software services and workers. The World Bank remains troubled by the size of India's public debt, amounting to nearly 60 percent of GDP.

ENVIRONMENT

Perhaps the single greatest environmental concern for India is its rapidly growing population, which is straining natural resources. The country suffers from increased air pollution, especially in urban areas, caused by automobile emissions and industrial smoke. Deforestation is occurring at an alarming rate, as is soil degradation. All of India's waterways are polluted with industrial and agricultural runoff as well as raw sewage, leaving insufficient supplies of potable water throughout the country.

LIVING CONDITIONS

The income gap in India is huge, with the poorest 10 percent of the population earning just 3.5 percent of the nation's income and the highest 10 percent earning over one-third. Those Indians fortunate enough to be wealthy lead comfortable lives, and a growing middle class is gaining access to modern conveniences. At the same time, huge numbers of people live—and die—in abject poverty on the streets and in the slums of the cities; Kolkata is virtually synonymous with such grinding poverty, largely by virtue of the renown of the work of the Nobel Peace Prize-winner Mother Teresa. Despite the country's huge cities, nearly three-quarters of Indians live in rural areas, making India a nation largely made up of villages—as many as a half million of them. Throughout the nation many people endure poor sanitation, contaminated drinking water, and inadequate nutrition.

HEALTH

Improvements in medical care have raised the life expectancy to 64 years. Among the leading causes of death are parasites and infectious diseases, the result of poor sanitation and contaminated drinking water. In 2001 there were 310,000 deaths from AIDS. Infant mortality is quite high, at nearly 58 deaths per 1,000 live births in 2004, in large part because only 42 percent of babies are born with the aid of medical staff. India has four major health-care systems, each having different historical origins. Three of them take a holistic approach to illness and see it as a result of underlying imbalances. The oldest, Ayurveda, relies on herbal remedies. *Sidda* developed in south India, and its diagnoses depend on careful reading of the pulse. *Unami* is of Islamic origins and also emphasizes holistic treatments. The fourth system is modern Western medicine, taught at about 140 medical colleges in India. A major health issue in India is population growth. Efforts to stem this growth have brought the rate down to 1.6 percent per year—still a large rate of growth in a nation where at least 25 percent of the population lives in poverty. Through the end of the 20th century India's yearly addition to its population was roughly equal to the population of New York State.

FOOD AND NUTRITION

Cooking varies throughout the regions of India, and diet differs by caste and religion. Hindus, for example, do not eat beef, and most are vegetarian. Rice is the staple food item in the south, while grains such as wheat, maize, and millet are staples in the north. The quintessential Indian dish is the curry, a term used by Europeans to describe spicy dishes, but there are many variations of curry depending on the spices used, which include asafetida, cardamom, clove, cinnamon, cumin seeds, coriander, garlic, ginger, turmeric, green/red chilies, aniseed, and various peppers. There are at least 50 varieties of bread. A typical Indian meal consists of five or six dishes served on a tray or plate with several small bowls to hold each dish.

Nutrition varies widely depending on economic status. Because such a large percentage of the population is poor, 18 percent of children ages one through five are regarded as underweight, but figures can vary by state, with an astounding 77 percent of children in this age group in Gujarat underweight. Adult malnutrition is especially common in the states of Karnataka, Gujarat, Madhya Pradesh, and Orissa.

 Amount of Fruits and Vegetables Available per person per year kg: 107.2

STATUS OF WOMEN

Although women are guaranteed equal rights and protection under the law in India, in practice long-standing cultural biases cause women to have fewer educational and career opportunities. While there are no legal barriers to

female candidates, their numbers have remained small since independence.

The 1980s and 1990s saw the deaths under suspicious circumstances of many women whose parents were unable to pay the supplementary dowries demanded by the husbands' families after marriage. Most reported cases of "dowry deaths" have been in northern India, and most are in lower-middle-class urban families. In New Delhi, which is perhaps the worst-affected area, 690 women reportedly died of burns under suspicious circumstances in 1984. That year parliament passed a bill to amend the Dowry Abolition Act of 1961, but many women's organizations maintain that the changes are inadequate.

WORK

India's labor force in 2004 was 472 million, consisting of 60 percent in agriculture, 17 percent in industry, and 23 percent in services. The unemployment rate was 9.5 percent. Per capita GDP was about \$2,900. Most of those working in agriculture are small subsistence farmers. While less than one-fifth of the labor force works in industry, India is a leader in Asia in some industries, including nuclear power production and research and garment production. Efforts have been made in recent years to take advantage of the nation's large number of highly educated people who are fluent in English by luring jobs "outsourced" from the United States, including computer programming and services and customer-service centers.

EDUCATION

Education, in theory, is free, universal, and compulsory (in most states) for five years, from the age of six.

Schooling consists of six years of primary school, three years of lower secondary school, and three years of upper

secondary school, for a total of 12 years. The pattern, however, varies from state to state. A pattern of 12 years of schooling followed by three years of college has been adopted by the majority of the states. The culmination of secondary-school studies is the secondary-school leaving certificate examination, which is both a diploma in itself and a passport to the university. Elementary schools vary widely in curriculum facilities and in quality of instruction. A new pedagogical approach called basic education was introduced in the 1960s. The curriculum of basic schools is activity oriented and correlates teaching with the social and physical environment of the child. The dropout rate is high, particularly in the first grade, where it approaches 26 percent, and most of the dropouts revert to illiteracy.

The academic year runs from April to March. English is the medium of instruction in most private schools; Hindi or the dominant state language is the medium of instruction in primary grades in public schools, but the medium shifts to English either in the upper secondary schools or early in college. Many universities, however, offer examinations in Hindi or regional languages. All students are required to be bilingual, some trilingual (in Hindi, English, and their mother tongue).

A few private schools (called public schools, on the British model) cater to the wealthy. These schools receive no subsidies, but the quality of the teaching staffs is generally high, and the medium of instruction is English. Schools run by religious denominations, both Christian and non-Christian, also operate within the school system.

About 6 percent of the secondary school enrollment is in the vocational stream. Vocational and technical education is provided in junior technical schools and industrial institutes.

Education is funded mainly by state governments and administered by the state ministries of education and the municipal and district school boards. The union government provides and funds support services and educational development schemes, particularly in the areas of vocational education, basic education, adult education, propagation of Hindi, textbook research, and audiovisual education.

Higher education is provided in some 130 universities. Of these, 77 have been established since independence. Most universities have affiliated undergraduate colleges. The most prestigious are the universities of Kolkata, Mumbai, Chennai, and Delhi.

MEDIA

India is by far the world's leader in the number of newspapers. Over 5,200 dailies and over 21,500 nondailies are published in India, with aggregate circulation in 2003 of 72 million. In addition, the periodical press consists of some 10,000 titles. By language, the largest number of newspapers are published in Hindi. There are about 1,000 bilingual newspapers, which have significantly decreased in number since the 1970s. The overwhelming majority (95.5 percent) of the papers have circulations of fewer than 15,000 each. The majority of the newspapers are owned by individuals; the rest are owned by societies and associations and by central and state governments.

The main characteristics of the Indian press are the dominance of the English-language press; the shortage of newsprint, over half of which must be imported annually, at the expense of foreign currency reserves; and the difficulty of adapting Indian scripts other than Bengali, Tamil,

and Hindi to linotype machines. Most Indian-language newspapers are manually composed. In the case of papers in Urdu, for which no typeface has been developed, all texts are handwritten by calligraphers for lithographic reproduction.

The national news agencies are the Press Trust of India, United News of India, Hindustan Samachar, and Samachar Bharati. There are small news-feature agencies, such as Indian News and Feature Alliance, India Press Agency, Eastern India News Agency, and 12 feature agencies, including News Features of India.

All-India Radio is the largest radio network in Asia, with programs covering some 80 percent of the population and about three-fourths of the geographic area. In addition, a self-contained entertainment service, known as Vividh Bharati, broadcasts popular music and commercial advertising. The home service is broadcast in all the principal languages and also in 51 local languages and 82 tribal dialects. The external service programs are broadcast in 16 foreign languages and eight Indian languages. The News Services Division broadcasts bulletins every day in 24 languages and 36 dialects.

Television, introduced in 1959, is now operated by Doordarshan India. To maximize broadcasting coverage, the government installs and maintains radio and television sets in community centers. Some 94 percent of all program hours are produced domestically, dedicated to information, education, and entertainment. In August 1990 a bill was unanimously passed in Lok Sabha granting autonomy to the state-operated national radio and television networks.

CULTURE

Indians today are the inheritors of cultural traditions dating back thousands of years. Some of the world's oldest literature was written in India, including the four *Vedas*, the first of which was written in the second century B.C.E., and the *Upanishads*, written in the eight through the fifth centuries B.C.E. Around 300 B.C.E. one of India's first secular works of literature and the world's longest poem, the *Mahabharata*, was written. A second major epic, the *Ramayana*, was written in about 200 B.C.E. Both of these epics were written in Sanskrit. Another famous Indian work, the *Kama Sutra*, or "Treatise on love," was writ-

ten in the Middle Ages by the poet Vatsyayana. More recently, Rabindranath Tagore (1861–1941), a Bengali, won the Nobel Prize in literature in 1913.

Indian architecture reflects the nation's religious heritage, with magnificent Hindu temples and Buddhist and Muslim religious sites. Graphic-arts traditions date back 4,000 years. A leading form of cultural expression in India is the cinema, and India has the largest movie industry in the world. Centered in Mumbai (formerly Bombay), it has come to be known as "Bollywood." Total cinema attendance in 1998 was 2.86 billion. Some 1,200 feature films were released in 2002.

FOLKLORE AND MYTHOLOGY

The mythological and folk heroes of India are largely associated with religious beliefs or regional cultural traditions. Thus, deities and epic literature provide the source of much Hindu mythology, while Sufi mystics are important to Muslims and martyred Gurus are important to the Sikhs. Throughout the nation each tribe and region has its own folk heroes, but a major figure throughout India is Shivaji, a 17th-century Maratha leader who confronted the power of the Mughals and created the last Hindu empire in India. Modern leaders who opposed the British, including Nehru, Mahatma Gandhi, and Indira Gandhi, are widely considered folk heroes.

ENTERTAINMENT AND RECREATION

India is a poor nation consisting of several thousand castes, tribes, ethnic and linguistic groups, and religions, so it is difficult to generalize regarding entertainment and recreation. Television viewing has become more common, especially with the advent of satellite television. The nation came to a virtual standstill when the television production of the epic *Mahabharata* was being broadcast, and in some locales trains would actually remain stopped in stations so that people could watch the latest episode. India has the world's largest film industry, and theaters are generally packed with viewers interested in the latest melodrama or action film. Indians also enjoy playing

chess, which likely originated in India, as well as badminton, tennis, table tennis, soccer, cricket, and golf.

ETIQUETTE

India's caste system determines proper etiquette when people meet. Among Hindus, the most common greeting is *namaste*, which means "greetings to you." The word is said while joining the hands together in front of the body with the fingers pointing upward. This greeting does not require one person to touch another—particularly to touch a woman or a member of a lower caste. It also allows one to greet another without necessarily knowing the other's caste. However, Western-style handshaking is also common. Among Muslims the common greeting is *salaam alaikum* or just *salaam*), meaning "peace be with you." Among Sikhs it is *Sat Sri Akal*, meaning "God is Truth."

Leather is regarded as unclean, so it is considered polite to remove shoes before entering another's house.

FAMILY LIFE

The nature of family life in India is determined by caste and region. Generally, marriages are arranged by families, and one can only marry someone of the same caste (although this is slowly changing, especially among the middle classes in the cities). Marriages that are not arranged, called "love marriages," are regarded as suspect, being based on passion and impulse. In northern India a man generally may not marry a close blood relative such as a cousin, but in the south the ideal mate for a man is his mother's brother's daughter, though his father's sister's daughter is also acceptable. Marriage partners often barely meet beforehand, and the marriage of girls at a young age is not uncommon. Marriages between uncles and nieces are also common in the south. Joint families are typical throughout India. Families are patriarchal in the north, with two or three generations of males and their dependents living in the same household. In the south the joint family tends to be matriarchal, consisting of the grandmother and her siblings, the mother and her siblings, and one's own brothers and sisters. Marriage is regarded as indispensable for a woman, who does not achieve status until she has children, preferably males.

PERSONAL APPEARANCE

In the cities the norm for men and for the younger generation has become to wear Western-style clothing, but many men—and women—throughout India continue to wear traditional clothing. For men, this consists of the dhoti, which is a long swath of white cotton wrapped around the waist and drawn between the legs. The style of turban of-

ten identifies a person as belonging to a particular ethnic group or region. Also common are the kurta, a long shirt, and pajamas, or baggy pants. For women, traditional dress is the sari, a piece of cotton or silk that is wrapped around the waist with one end thrown over the right shoulder. The *choli* is a bodice that leaves the midriff exposed. The sari is still the preferred form of dress for most Indian women.

SPORTS

India has a long history of traditional games. Among the many that could be cited are *asol aap* and *asol-tale aap*, both common among the Andaman and Nicobar island tribes. The former refers to racing in 110-foot-long canoes. The latter refers to canoe racing on sand, with the "canoe" made of the stem of a coconut tree. India also has a long tradition of martial arts, often combining physical movements with archery and sword fighting. Modern sports include those brought by the British, especially cricket, hockey, and badminton. India has numerous world-class cricket grounds, and the Indian national team has won international competitions.

CHRONOLOGY

- 1947** Under the Independence of India Act, the British Parliament grants full independence to India and Pakistan. Indo-Pakistani borders are delimited under the Cyril Radcliffe Award. Both nations are plunged into communal violence. Amid scenes of carnage 11 to 16 million Hindus, Muslims, and Sikhs flee across the borders. An estimated 1 million die in post-partition violence. Lord Mountbatten, the last Crown representative, becomes the first governor-general of the Dominion of India and Jawaharlal Nehru its first prime minister. Indian armed forces occupy Jungagadh, a Hindu state whose Muslim nawab, or ruler, had acceded to Pakistan. The Hindu maharaja of Jammu and Kashmir, a Muslim state, accedes to India. Pakistani irregulars invade Kashmir and occupy the northwestern portion of the state.
- 1948** Mahatma Gandhi is assassinated by a Hindu fanatic. C. Rajagopalachari is named the first Indian governor-general. India forcibly annexes the state of Hyderabad into the Indian union.
- 1949** The Indian Constitution Act is enacted. A cease-fire is arranged in Jammu and Kashmir under UN auspices.
- 1950** Under the new constitution India proclaims itself a republic within the Commonwealth.

- Rajendra Prasad is named first president of India. The integration of former princely states is completed.
- 1952** India holds first general elections, and Nehru's Congress Party wins predictable victory.
- 1953** Andhra Pradesh is formed as the first linguistic state.
- 1956** Under the States Reorganization Act, state boundaries are redrawn on linguistic bases. France cedes its Indian territories to India.
- 1957** In the nation's second general election Communists win heavily in Kerala and form India's first Communist state government. Decimal coinage is introduced, with the paise replacing the anna.
- 1958** Aid-India Consortium is formed by a number of donor nations.
- 1960** India and Pakistan sign the Indus Waters Agreement under World Bank auspices. The state of Bombay is bifurcated into Maharashtra and Gujarat states.
- 1961** Goa and other Portuguese territories are "liberated" and merged into the Indian union.
- 1962** India holds third general elections. Nagaland is formed as a separate state. Chinese troops occupy disputed border areas in Ladakh (Kashmir) and northeastern India and expel Indian troops. Defense Minister V. K. Krishna Menon resigns in the wake of this defeat.
- 1964** Nehru dies. Lal Bahadur Shastri elected prime minister.
- 1965** Three-week Indo-Pakistani war over disputed areas in the Rann of Kutch ends inconclusively through the Tashkent Accord, signed under Soviet auspices.
- 1966** Shastri dies at Tashkent. Nehru's daughter, Indira Gandhi, elected prime minister.
- 1967** Parliament authorizes continued use of English as the official language, in view of southern opposition to Hindi.
- 1969** Power struggle in the Congress Party breaks out between Indira Gandhi's faction and the old guard. The party splits into the New Congress and the Old Congress.
- 1971** India intervenes in force in the civil war in East Pakistan on the side of the rebels. Indian Army occupies East Pakistan in the third conflict between India and Pakistan in 24 years. The state of Bangladesh is proclaimed. Indira Gandhi wins landslide victory in general elections. Titles and privileges of maharaja abolished. Under the North East Areas Act of 1971, Meghalaya, Manipur, and Tripura become states, and Mizoram and Arunachal Pradesh become Union Territories.
- India and Soviet Union sign the 20-year Peace, Friendship and Cooperation Treaty.
- 1974** India joins the "nuclear club" by exploding a nuclear device in Rajasthan.
- 1975** Following the abolition of the monarchy by the Sikkim Assembly, Sikkim becomes India's 22nd state. Indira Gandhi responds to nationwide unrest against her rule by proclaiming a state of emergency, suspending civil liberties, arresting opposition political leaders, and imposing press censorship. Government launches 20-point economic program.
- 1976** India and China reestablish diplomatic relations after a 14-year lapse.
- 1977** Indira Gandhi calls surprise national elections. Her Congress Party suffers serious election reverses and loses majority in parliament to a coalition of opposition parties known as Janata Party. Janata leader Morarji Desai forms government. Emergency is lifted and civil rights are restored.
- 1978** President Jimmy Carter of the United States visits India. Expelled from the Congress Party, Indira Gandhi forms a new party, also called Congress Party, and her supporters win surprising victories in state elections. Indira Gandhi elected to parliament but is condemned by a parliamentary commission, ousted, and jailed. Five persons are killed in pro-Gandhi riots.
- 1979** Janata coalition begins to break up, as its factions are unable to settle on a unified policy. Desai resigns office of prime minister and as leader of the Janata coalition. Charan Singh, influential Uttar Pradesh leader, is named prime minister but is unable to form government and win parliamentary majority. Mother Teresa of Kolkata wins Nobel Peace Prize.
- 1980** Indira Gandhi leads her Congress Party to victory in parliamentary elections in January and is installed as prime minister. In one of her first official acts, Gandhi recognizes the Vietnamese puppet government of Cambodia. Leonid Brezhnev visits India and promises lavish Soviet military and economic aid. Indira Congress Party wins majority in eight state legislatures. Sanjay Gandhi, Indira Gandhi's son and prospective successor, killed in plane crash.
- 1983** Sikhs restive over the rejection of their separatist demands storm parliament building. New Delhi hosts nonaligned nations conference.

- 1984** U.S. multinational corporation Union Carbide's chemical plant in Bhopal leaks poisonous gas, which kills more than 2,000 people.
Indian cosmonaut joins the Soviet Soyuz.
Indira Gandhi is assassinated by Sikh revanchists.
Her son Rajiv Gandhi is nominated as prime minister.
Rajiv Gandhi's Congress Party wins overwhelming majority in parliamentary elections.
- 1985** India joins other nations of the Indian Subcontinent in forming the South Asia Regional Conference.
- 1986** Mizo National Front signs peace agreement with Prime Minister Rajiv Gandhi.
- 1987** The Union Territories of Arunachal Pradesh, Mizoram, and Goa become states of the Indian Republic.
- 1988** Guidelines for the Eighth Five-Year Plan (1990–95) approved. Four major centrist parties form a coalition National Front to oppose Congress (I) at the next general election.
- 1989** General elections held except in Assam. V. P. Singh sworn in as new prime minister.
- 1990** Widespread violent demonstrations held in many north Indian states to oppose government's stand on increasing quota of reserved jobs for lower castes.
Violent clashes occur between Hindus and Muslims about the disputed site of a 16th-century mosque in the Hindu holy town of Ajodhya.
V. P. Singh loses prime ministership in a vote of no confidence.
- 1991** Chandar Shekhar resigns as prime minister but agrees to head the interim government.
Former prime minister Rajiv Gandhi assassinated.
P. V. Narsimha Rao sworn in as India's ninth prime minister in June.
- 1993** Conflicts in Punjab and Assam wane, but growing tensions in Jammu and Kashmir lead to violence.
- 1996** Congress Party loses elections, and a weak coalition government led by President K. R. Narayanan takes power.
- 1997** In April, Inder Kumar Gujral forms a new government, which lasts only until November.
- 1998** The BJP wins the largest number of seats in elections but falls short of a majority.
Atal Bihari Vajpayee is selected to lead the coalition government.
In May India conducts a nuclear weapons test.
- 2000** The BJP wins decisive majority in Lok Sabha.
- 2001** On January 26 an earthquake measuring 7.7 on the Richter scale strikes the western state of Gujarat, killing about 20,000 people, injuring more than 165,000, and leaving more than 700,000 people homeless.

In December a suicide squad attacks the parliament in New Delhi. India blames two Kashmiri militant groups for the attack, and both India and Pakistan move troops to the common border.

- 2003** Explosions in Mumbai kill 46 people; Islamic militants and Kashmiri separatists are suspected.
- 2004** Prime Minister Atal Bihari Vajpayee resigns after his party loses the general elections for parliament. Sonia Gandhi declines the position of prime minister, which is accepted by Manmohan Singh.
In late December a devastating tsunami occurs in the Indian Ocean, killing over 200,000 people and hitting India's Andaman and Nicobar islands.
- 2005** India and the United States sign an agreement that gives India access to civilian nuclear technology.

Basic Fact Sheet

OFFICIAL NAME

Republic of Indonesia (Republik Indonesia)

ABBREVIATION

ID

CAPITAL

Jakarta

HEAD OF STATE & HEAD OF GOVERNMENT

President Susilo Bambang Yudhoyono (from 2004)

NATURE OF GOVERNMENT

Republic

POPULATION

241,973,879 (2005)

AREA

1,919,440 sq km (741,095 sq mi)

MAJOR ETHNIC GROUPS

Javanese, Sundanese, Madurese, Coastal Malays

LANGUAGE

Bahasa Indonesia (official)

RELIGION

Sunni Islam

UNIT OF CURRENCY

Rupiah

NATIONAL FLAG

Divided horizontally, with the top half red and the bottom half white

NATIONAL EMBLEM

A shield with five symbols: a star (God) in the center field, a golden chain (humanity), a banyan tree (nationalism), a head of a buffalo (democracy), and rice and cotton (social justice). The shield hangs from the neck of an outstretched eagle. Clutched in its talons is a white scroll bearing the national motto in Indonesian in black letters: “Bhinneka tunggal ikai” (“Unity through diversity”).

NATIONAL ANTHEM

“Great Indonesia”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), Good Friday, Ascension, August 17 (Indonesian National Day), Christmas, various Islamic festivals

DATE OF INDEPENDENCE

August 17, 1945

DATE OF CONSTITUTION

August 17, 1945

GEOGRAPHICAL FEATURES

Indonesia, the largest archipelago nation in the world and the third-largest country in Asia, consists of some 17,000 islands; only about 6,000 are inhabited, and not all have names. The total land area is 1,919,440 sq km (741,095 sq mi). Four islands—Java, Sumatra, Celebes (Sulawesi), and Borneo (Kalimantan)—account for 90 percent of the land area. Jakarta is the capital as well as the center of national life.

Rugged mountains covered by dense tropical forests characterize most of the islands. With 100 active volcanoes, Indonesia is the most highly volcanic area in the world.

CLIMATE AND WEATHER

Because of its location straddling the equator, Indonesia has no seasons as they are understood in most of the Northern and Southern Hemispheres. The days and nights are always 12 hours long, the humidity averages 80 percent year-round, and there is a bare two-degree variation between the mean temperatures of the warmest and the coolest months. In the lowland areas the daily maximums and minimums range between 31.1°C and 18.9°C (88°F and 66°F). Rainfall never drops below 965 mm (38 in) a year, even in the driest areas. In the equatorial high-rainfall belt, average annual rainfall exceeds 1,980 mm (78 in), although up to 3,810 mm (150 in) has been recorded in the highlands. Thunderstorms are frequent; the average number of storm days is 100 a year. There are two seasons, wet and dry, as determined by the monsoons, with the dry season lasting from June to September and the wet from November to March.

Climate and Weather

Mean Temperature: 66°F to 88°F

Average Rainfall

Northern Sumatra, southeastern Celebes Moluccas, and Irian Jaya: 78 in to 150 in

Northern Celebes, northern and eastern Java, and Madura: 60 in to 78 in

Nusa Tenggara Islands: 40 in to 60 in

FLORA AND FAUNA

Many kinds of plants and animals live in Indonesia. There are similarities between the species of the archipelago and those of northern Australia, which suggests that the islands were once attached to the larger land mass. The main exception to this is the Lesser Sunda Islands, which have animal and plant species that are seen nowhere else in the world. Indonesia is covered with rain forests, mostly on Irian Jaya, Sumatra, Kalimantan, and Sulawesi, but these forests are rapidly disappearing as people cut them down for fuel, agriculture, and sale. Hardwoods such as sandalwood, teak, ebony, nutmeg, clove, and camphor grow wild. Sumatra is home to the world's largest flower species, *Rafflesia arnoldi*. Animal species include orangutans, the Javanese rhinoceros, miniature deer, giant atlas moths, elephants, tigers, leopards, and birds of paradise. Sea turtles make nests on the beaches of Bali. The rare Komodo dragon lives on its namesake island, which is a national park.

ETHNIC COMPOSITION

Indonesia is home to over 300 ethnic groups speaking almost as many languages. Most of these groups belong to the Malay stock. Major groups include Javanese (45 percent), Sundanese (14 percent), Madurese (7.5 percent), and Coastal Malay (7.5 percent). Some, like the Kalimantan, are primitive tribes with rudimentary material cultures, following animist beliefs and until recently practicing headhunting.

The principal ethnic minority group is the Chinese, who number over 3.5 million. The Chinese are overwhelmingly urban, owing partly to official policies and partly to their mercantile interests. Their conspicuous insularity, wealth, and resistance to assimilation have contributed to widespread resentment of them. During the 1970s they were restricted and harassed. Ethnic aliens also include Arabs and Indian Muslims, who have been assimilated into Indonesian society without difficulty. Most of the Dutch left in 1958.

LANGUAGES

An estimated 25 languages and more than 250 dialects are spoken in Indonesia. These languages belong to three language families: Malayo-Polynesian, North Halmaheran, and Papuan. The Malayo-Polynesian family consists of 17 groups, including nearly 100 dialects. Javanese is spoken by 40–50 percent of the population, Sundanese by 15 percent, Madurese by 5–10 percent, and Malay by 5–10 percent.

The official language is Bahasa Indonesia, derived from trade Malay, or Malay Pasar, which is used as a lingua franca throughout the Indonesian islands. Bahasa Indonesia differs little from standard Malay and is principally distinguished by its large vocabulary of words borrowed from European languages, Arabic, and Sanskrit. Considerable efforts have been made to modernize and standardize its orthography.

Despite centuries of Dutch rule, few Indonesians speak Dutch. English is officially the second language of Indonesia and is taught in schools from the senior secondary level.

RELIGIONS

Almost 90 percent of Indonesians are Muslims; Indonesia has the largest Muslim population in the world. But Indonesian Islam is deeply divided by a cleavage between the *santri* (orthodox) and the *abangan* (nominal) Muslims. The *santri*, who became an organized force with the founding of the Muhammadiyah movement in central Java in 1912, are distinguished by strict observance of the Five Pillars of the Muslim faith and sharia, the Islamic

legal code. The *abangan*, who are in the vast majority, follow an amalgam of animistic, Hindu, and Muslim beliefs, rituals, and institutions.

Christians, a sizable and influential minority in Indonesia, numbered more than 19 million in 2004. The more important Christian ethnic groups are the Bataks in Sumatra, the Minahasaans in Celebes, the Ubans in Kalimantan (on Borneo), and the Moluccans. Smoldering hostility against Christians among *santri* Muslims erupted into anti-Christian riots in 1962, 1964, 1967, and 2001, but both Catholics and Protestants have strong political representation. The other religious minorities include the Hindus of Bali and Buddhists, Taoists, and Confucianists, who are mostly Chinese Indonesians.

There are no legal bars to religious conversion, and conversions between faiths are common. However, a significant event in 1978 was the handing down of government decrees 70 and 77, officially designed to discourage overt proselytizing by any religion. This is partly the result of religious tension in many areas of Indonesia and the government's concern that these tensions could contribute to political and economic instability. Some Christians saw the decrees as powerful measures to curtail their missionary efforts among Indonesians of other faiths, Muslims in particular.

Religious Affiliations

Muslim	212,937,000

Roman Catholic	7,260,000
Hindu	4,840,000
Buddhist	2,420,000
Other	2,420,000

HISTORICAL BACKGROUND

The original inhabitants of Indonesia are a mixture of Chinese who reached the islands through Malaysia and Indians from Southeast Asia. Indian immigrants were most numerous in Java and Sumatra. Indonesia was under Buddhist influence for many centuries. The Indian-Buddhist civilization flourished in the Javanese kingdom of Majapahit, founded in 1299 by King Vijaya. Even before the end of this kingdom, Muslim missionaries from Arabia had converted much of the population to Islam.

About this time the first Europeans arrived on the islands. The Portuguese captured Malacca on the west coast of the Malay Peninsula in 1511 and established control over the archipelago. Dutch ships visited Java in 1596. The United East Indian Company was incorporated in 1602, with a monopoly of shipping and trade and the power to make alliances and treaties. Within a century the company not only drove the Portuguese out

of the archipelago but also brought all native rulers under its control. In 1799 the Dutch government nullified the company's charter and took over what became the Dutch East Indies in 1800. The British occupied the Indies during the Napoleonic Wars from 1811 but returned them to the Dutch in 1816. Dutch rule was relatively benign, and an increasing amount of Dutch capital moved to the colonies.

In the early 20th century the first steps were taken to give Indonesians some participation in their government. A central representative body, the Volksrad, was instituted in 1918. At first it had only advisory powers, but in 1927 it was given legislative powers. An Indonesian nationalist movement began to take shape in the interwar years. The Japanese occupied the islands in World War II, at the end of which a group under the leadership of Sukarno and Mohammad Hatta proclaimed an independent republic on August 17, 1945. After years of intermittent conflict, the Dutch agreed to grant national independence to Indonesia. The terms of independence were settled at a roundtable conference at The Hague in 1949, and full sovereignty was transferred to the new state at the end of the year.

Sukarno, who had been a leader of the nationalist movement since the 1920s, became Indonesia's first president. Originally a federation of 16 regions with limited self-government, the nation emerged as the unitary Republic of Indonesia in August 1950. Sukarno's presidency was marked by extreme nationalism and increasing authoritarianism. In foreign policy the People's Republic of China was a close ally, although the country was active in the nonaligned movement. Inflation and rampant corruption eventually led to open opposition in the form of an abortive military coup in September–October 1965. The Indonesian Communist Party (PKI) was suspected of initiating the attempted takeover, and the mass slaughter of thousands of party members followed. By March 1966 Sukarno conferred emergency executive powers on the military under the command of General Suharto, chief of staff of the army. Suharto outlawed the PKI. In February 1967 Suharto assumed full executive power, and in March, after Sukarno had been dismissed from office by the People's Consultative Assembly and placed under house arrest, Suharto was appointed acting president. He assumed the position of prime minister in October 1967, and in March 1968 he was inaugurated president following election by the assembly.

The first general election since 1955 was held in July 1971. The government-backed Sekretariat Bersama Golongan Karya (Joint Secretariat of Functional Groups), or the Golkar, achieved a majority victory in the House of Representatives, and in 1973 Suharto was reelected to a second term as president. Political power became concentrated in a small group of army officers through the imposition of Suharto's "New Order." This inner circle,

along with the internal security organization, Kopkamtib, suppressed left-wing movements and enforced a liberal economic policy. Despite periods of unrest, Suharto and the Golkar remained in power until 1998.

Provincial problems continued to plague the Indonesian government and to significantly affect its international relations. Western New Guinea, the eastern portion of the island of which is Papua New Guinea, was excluded from the 1949 independence accord. It continued to be governed by the Dutch until October 1962. After briefly being administered by the United Nations, it was transferred to Indonesia in May 1963 and became known as West Irian, or Irian Jaya. Following the outbreak of civil war in 1975, Indonesia directly intervened and set up a provisional government, later integrating the area as Indonesia's 27th province, Irian Jaya.

More critical was the situation of East Timor, a former Portuguese colony that was incorporated into Indonesia by the Suharto government in 1975–76. East Timor is on the island of Timor, southeast of Borneo and east of Java. After years of rebellion and military repression, in October 1999 the National Assembly agreed to accept the results of an August 30 referendum in which 78.5 percent of the 800,000 people of East Timor voted for independence. The vote was followed by a wave of violent bloodshed and destruction by paramilitary forces opposed to independence from Indonesia, which brought an Australian-led UN peacekeeping force to the territory. The agreement led to UN administration of the territory during transition to independent rule. East Timor, also known as Timor Leste, became fully independent in May 2002.

Suharto was replaced by B. J. Habibie in May 1998. Suharto had been accused of corruption, violations of human rights, and the turmoil surrounding East Timor. He and his children reputedly stole billions of dollars and stashed the money overseas. Some believe that these actions crippled the Indonesian economy.

On October 20, 1999, the Electoral Assembly chose Abdurrahman Wahid to be president of Indonesia, representing the first democratic transfer of power in the nation's history. A general election in June had given opposition leader Megawati Sukarnoputri a plurality of parliamentary seats; when Wahid's National Awakening Party placed third in the June elections, he became a supporter of Megawati but broke with her before the assembly vote. When the incumbent president, Habibie, withdrew as a candidate, Wahid defeated Megawati 373 to 313, with 5 abstentions. Wahid became the first cleric to head the world's most populous Muslim nation. He then named Megawati vice president. In 2000 the Wahid administration was accused of two incidents of embezzling funds. In September 2001 the assembly ousted Wahid for alleged incompetence and corruption, and Megawati assumed the presidency, though Wahid initially refused to leave the presidential palace.

Separatist agitation and ethnic violence became a major problem in the early 2000s, with ethnic groups in most of the archipelago demanding recognition. These movements occurred in Aceh, Irian Jaya, East Timor, and Kalimantan, where indigenous Dayaks forced out Madurese migrants. In 2002 the government signed agreements with Irian Jaya, now called Papua, and East Timor, giving both of them more independence. That year parliament passed a law allowing Indonesians to elect their president and vice president. The government seemed to make progress with those in Aceh, but peace talks broke down in May 2003, and the government ended up imposing martial law on the province.

In October 2002 a bomb exploded in a nightclub in Bali, killing over 200 people, most of them foreign tourists; another exploded near the U.S. consulate. A Muslim cleric was arrested in connection with the bombings, which he had performed as part an effort to overthrow the government on behalf of a radical Islamic group called Jemaah Islamiah. Occasional bombings continued to plague the country in 2003 and 2004.

In 2004 the Indonesian people held their first ever direct presidential elections. Former general Susilo Bambang Yudhoyono beat Megawati in a runoff. At the end of the year an enormous undersea earthquake off Sumatra's coast caused a massive tsunami that devastated the nations in the Bay of Bengal; over 220,000 people died or disappeared throughout the region. Aceh was especially hard hit.

LIST OF MODERN RULERS

1945–67	Sukarno
1967–98	Suharto
1998–99	Bacharuddin Jusuf Habibie
1999–2001	Abdurrahman Wahid
2001–04	Megawati Sukarnoputri
2004–	Susilo Bambang Yudhoyono

CONSTITUTION

The government of Indonesia is based on the constitution of 1945, as supplemented by the General Elections Law of 1945. It is a short, broadly phrased document that defines the national ideology, or Pancasila, but does not spell out the details of its application. Pancasila consists of the five principles that form the basis of the Indonesian state: belief in one supreme God, just and civilized humanity, Indonesian unity, democracy, and social justice.

The constitution provides for a strong executive form of government in which the real power is vested in the president, who is both head of state and head of government. The president is the chief executive and the supreme commander of the armed forces. According to the

original constitution, the assembly elected the president, but a law passed in 2002 allows the Indonesian citizenry to elect the president and vice president directly. A president's term lasts five years, and no president may serve more than two terms.. If the president dies or is removed, the vice president becomes president.

The Majelis Permusyawaratan Rakyat (MPR), the People's Consultative Assembly, is the highest authority of the state and since 1987 has had 1,000 members. It includes all members of the Dewan Perwakilan Rakyat (DPR), or House of Representatives, plus regional delegates, members of political organizations, and representatives of other groups. It meets at least once every five years, with its role being to interpret the constitution and make general policy for the state and government. Traditionally, all decisions of the MPR are unanimous.

All citizens 17 and older or who have married may vote in general elections. Voting is indirect and by secret ballot. Candidates must be 21 or older.

PARLIAMENT

The House of Representatives (Dewan Perwakilan Rakyat, DPR), is the legislative body proper and has 550 members. It sits at least once each year and must approve every law. Members may submit draft bills, which must be ratified by the president. The president may enact laws during times of emergency, but these must be ratified by the House of Representatives during the next session or be revoked. The People's Consultative Assembly (Majelis Permusyawaratan Rakyat, MPR) is the country's supreme legislative body. It approves the general outline of government policy, though it does not formulate national policy itself. Its membership consists of 678 representatives, including the 550 members of the House of Representatives and 128 members from the Regional Representative Council, which includes four representatives from each of Indonesia's 32 provinces.

POLITICAL PARTIES

Indonesia has numerous political parties, reflecting its vast population and assortment of ethnic interests. Among the principal parties are the Indonesian Democratic Party of Struggle (PDI-P), led by Megawati Sukarnoputri, daughter of Sukarno, Indonesia's founding president; the National Awakening Party (PKB), led by Abdurrahman Wahid; the National Mandate Party; and Golkar, which was dominant during the Sukarno era. The Golkar won 74.4 percent of the parliamentary election in 1987 and still won the largest portion of seats in 2004, taking 21.6 percent of the vote. Other parties are the United Development Party (PPP), the Prosperous Justice Party (PKS),

the National Mandate Party (PAN), the Democratic Party (PD), and the Crescent Moon and Star Party (PBB).

LOCAL GOVERNMENT

Indonesia is divided into 30 first-level *propinsi* (provinces), two special regions, and one specialty capital city district; each province is headed by a governor. The second tier of government consists of 357 *kabupatens* (regencies), administered by *bupats* (regents), and *kota* (municipalities), administered by *walis* (mayors). The government decentralized in 2001 and made the regencies responsible for providing most governmental services to their inhabitants. The third tier consists of *desa* (villages), administered by *lurabs* (chiefs). Each *desa* is a collection of *dukubans* (hamlets), which are under the charge of *kamituas*. Between the *desa* and the *kabupatens*, there is in some places an intermediate division known as a *ketjamatan* (subdistrict), headed by a *tjamat*. Though there is some popular representation in regional governments, the mayors, regents, and governors are all centrally appointed officials whose primary responsibility is to the central government.

LEGAL SYSTEM

Three systems of law are prevalent in Indonesia: the Criminal Code, based on the Dutch Criminal Code; the Code of Civil Law, which is applied to all non-Indonesians; and customary law, or *bokum adat*, which is uncoded and varies from region to region. Indonesia's legal system combines Dutch and Roman principles with indigenous laws.

The Indonesian court system has four branches: general, religious, military, and administrative. Within the general court structure the court of first instance is the district court (*pengadilan negeri*). Above are the high courts (*pengadilan tinggi*) in at least 14 provinces. At the apex is the Supreme Court (Mahkamah Agung), consisting of a chairman, a vice chairman, and four members. The principle of the independence of the judiciary has been proclaimed in recent years, but in practice the courts are subordinate to the government. In 2002 the nation created a human rights court specifically to try cases involving allegations of national human rights abuses, such as the military's atrocities in East Timor in 1999.

Indonesia's criminal justice system lacks the number of courts, judges, prosecutors, and police needed to cope with increases in crime and civil rioting in recent years. Accordingly, there are sometimes lengthy delays in scheduling trials. Trials are conducted by three-judge panels that hear evidence, decide guilt or innocence, and assess punishment. Although the right of appeal is not absolute, it is observed in some cases. Most court sessions are open, and most defendants have access to counsel.

It is widely believed that political interference and corruption exist in the Indonesian legal system. In criminal proceedings, defendants can sometimes buy their way out of prosecution at various stages of the proceedings. In civil cases, court decisions are sometimes influenced by the payment of bribes. In response to these abuses, the attorney general and the minister of justice have directed that disciplinary action be taken against officials involved in corrupt activities and have sought to increase salaries and benefits for judicial officials, with the aim of reducing the incentives for corruption.

HUMAN RIGHTS

During the Sukarno and Suharto regimes (1955–98), Indonesia, in terms of civil and political rights, could be classified only as a partially free country. The Suharto regime permitted only its own political party, Golkar, and two powerless opposition parties. Martial law had begun in 1957; there were large numbers of political prisoners. The press was carefully controlled, censorship of foreign media took place, and some widely read publications were closed.

When B. J. Habibie became president in May 1998, he began to include, in a political reform program, measures to ensure human rights. A free press was permitted, and amnesty was given to many political prisoners. Free, multiparty elections were held in 1999. Yet ethnic and religious riots brought church and property burning in many parts of Indonesia. The results are a very mixed picture of human rights.

Government security forces have been responsible for human rights violations throughout the archipelago, torturing, imprisoning, and abusing separatists. The government has not protected peaceful protesters or journalists. Prison conditions are harsh, and the judiciary is corrupt. Violence and discrimination against women and children, female genital mutilation, forced child labor, and human trafficking have all been serious problems; the government passed an antitrafficking law in an effort to stop that problem.

FOREIGN POLICY

Domestic developments and conditions have influenced, and have been influenced by, foreign policy from the time of Indonesian independence. In the struggle to win political and economic independence from the Netherlands, the United Nations played a major role. The Sukarno regime attempted to become a leader of the nonaligned nations known as the third world. At the same time Indonesia became a staunch friend of Communist China and also a bitter enemy of emerging Malaysia—even leaving the United Nations to protest UN acceptance of Malaysia.

The Suharto government reversed Sukarno's foreign policy, rejoining the United Nations in 1966, breaking off diplomatic relations with the People's Republic of China in 1967, establishing relations with Malaysia, and restoring friendly relations with the Netherlands. The United States became the principal supplier of military hardware and economic aid. In recent years the thorny problems of East Timor and Western New Guinea (Irian Jaya) led to confrontations with the United Nations, the United States, and Australia, but the Wahid government moved to restore good relations.

Indonesia currently tries to play a role in foreign affairs while avoiding conflicts between major powers. It is an active member of the Association of Southeast Asian Nations (ASEAN) and of the Organization of the Islamic Conference. It tries to balance relations with the Muslim world with a moderate stance toward issues such as Israel. The nation has supported the Asia Pacific Economic Conference (APEC) and is moving forward with plans to implement regional free trade by 2010 for industrialized nations and by 2020 for developing ones.

The United States considers Indonesia a key nation with regard to regional stability because of its position amid several important sea routes. The United States has assisted Indonesia's development of democracy since independence, though it deplores the nation's many human rights violations.

DEFENSE

Indonesia has a sizable armed forces, with almost 500,000 members. The defense structure is headed by the president of the republic, who is also the defense minister and commander of the armed forces. Under him is the minister of defense and security, to whom the chiefs of the army, navy, and air force report as their immediate superior. The armed forces are organized under a territorial system, with four regional commands. Separate from these commands is the Strategic Reserve Command, known as Kostrad. At any given time almost one-third of army personnel are believed to be involved in civil or nonmilitary duties. A selective service system and volunteers provide the manpower for the armed forces.

The military is also deeply involved in the national economy under the *dwifungsi* (double function) principle. Military manpower and managerial skills play a significant role in economic development plans. The military runs a number of enterprises, such as Pertamina, the state-controlled oil company, and is engaged in transportation, road and building construction, rice milling, and timber concessions. It also participates actively in political life through regional leadership councils and through membership in parliament. A *kekaryaan* (civilian) section in the Hankam (Department of Defense and Security) is concerned with placing armed forces personnel in civilian life. The military

has also been involved in peacekeeping during outbreaks of separatist agitation, in which context it has committed numerous human right violations; many offenders have been held accountable for their actions.

The military has traditionally played an important role in government, occupying a number of seats in parliament, and many government officials have come from a military background. As of 2004 the military no longer played a formal political role.

ECONOMY

Indonesia is a country of extensive natural wealth, including the tropical rain forests covering two-thirds of the land surface and minerals such as crude oil, natural gas, metals, and coal. However, because of its large and rapidly growing population, it remains a relatively poor nation.

Agriculture, which includes forestry and fishing, is a significant sector of the economy, contributing roughly 15 percent of gross domestic product (GDP) and employing almost 50 percent of the labor force. Rice is the staple crop, with regard to which the country is almost self-sufficient. Most farming is performed either at the subsistence level or on smallholder or plantation farms. Other crops include sugarcane, cassava, coconuts, and maize. Cannabis is illegally produced for the international drug trade. Indonesia is the world's second-largest producer of rubber, which, along with palm oil, is actively encouraged as a plantation crop, both to create jobs and to expand exports. Timber is an important natural resource, and forest products have accounted for more than 10 percent of total exports in recent years.

Industry, which includes mining, manufacturing, construction, and power, is the most financially significant sector of the economy, contributing 45 percent of GDP. Indonesia's rich natural resources of crude oil, natural gas, metals, and coal provide the basis for the industrial sector.

Indonesia is the main oil producer in the Far East, and the country relies heavily on the oil industry for government revenue. Although sporadic decreases in world oil prices have had adverse effects on export revenues and have led to increased diversification into non-oil and gas products, oil has continued to dominate external trade, providing more than 60 percent of government revenues and over 50 percent of export revenues. Indonesia is also the world's leading exporter of liquefied natural

1090 Indonesia

gas. Other significant industries include textiles, cement, chemical fertilizers, agroprocessing, and rubber processing. Other than petroleum, important mineral resources are nickel, bauxite, copper, manganese, iron, tin, silver, gold, and coal. In general, Indonesia remains primarily a supplier of raw materials to world markets and a major importer of manufactured goods and technology.

In recent years Indonesia has faced severe economic problems, stemming from secessionist movements and the low level of security in the region, the lack of reliable legal recourse in contract disputes, corruption, weaknesses in the banking system, and strained relations with the International Monetary Fund (IMF). Investor confidence remains low. In 2004 Indonesia experienced 4.9 percent growth. Unemployment was 9.2 percent. Income disparity is extreme, with a small percentage of the populace controlling a disproportionate amount of national wealth, while many people live in abject poverty. Foreign investors have been scared away by the threat of terrorism and the frustration of dealing with governmental corruption. The current government wants to reform its economic structures to win back foreign investors and keep the economy growing.

ENVIRONMENT

Indonesia has one of the largest tracts of rain forest in the world, but it has lost millions of acres of virgin forest since independence; the temptation among the people to cut valuable hardwoods and sell them to international markets is too great for environmental regulations to have

much effect. Shrimp ponds and logging concessions are destroying the remaining mangrove forests. Overpopulation has driven migrants to the outer islands, resulting in irreversible deforestation. Erosion, often caused by logging, threatens water transport, irrigation systems, and downstream fisheries. Industrial waste and sewage pollute rivers in port cities, presenting serious health risks to urban dwellers and also killing nearby coral reefs. The air in cities is terribly polluted. Forest fires cause air pollution as well.

LIVING CONDITIONS

Indonesia is a very poor country, and the standard of living for most people is quite low. The water supply is contaminated, and people who drink tap water risk various gastrointestinal ailments. Plumbing is primitive. People bathe by scooping water out of well with bowls and pouring it over themselves. Many homes have no electricity, and people cook over wood or gas fires. Homes are typically small and can be extremely crowded. Different ethnic groups live in different styles of homes; for example, the Dayak people still live in traditional longhouses. Transportation is fairly inexpensive and reliable, but Indonesia's geography complicates travel between many points; some islands have only sporadic boat service to other places.

HEALTH

Indonesia's government provides public hospitals and clinics, including mobile clinics that travel to remote areas. There are also a number of private hospitals and clinics. Poor people receive free medical care, and care for others is subsidized. The health-care system has suffered from recent economic problems, and there is a shortage of supplies and facilities. Wealthy people usually prefer to travel abroad for the treatment of serious illnesses. Many people in the countryside still choose to visit folk doctors and use traditional remedies, particularly herbal treatments. Indonesia's overall health has been improving; infant mortality is about 36 deaths per 1,000 live births, and life expectancy is almost 70 years, both of which statistics have shown improvement in recent years. The nation has been training midwives in an effort to further reduce the infant mortality rate and improve maternal health. Tuberculosis causes thousands of deaths every year. Mosquito-borne illnesses such as malaria and dengue fever are endemic, as are gastrointestinal illnesses.

FOOD AND NUTRITION

Most Indonesians eat rice at almost every meal. They eat rice with vegetables, meat, soy products such as *tabu* and *tempe*, pressed in banana leaves, and fried with vegetables in a dish called *nasi goreng*. Muslims do not eat pork, and Indonesians in general do not eat much red meat. Traditional flavorings are hot pepper, a red chili sauce called *sambal*, and peanut sauce, used to spice up meat skewers called *satay* and vegetable salads called *gado gado*. Typical cooking herbs include lemongrass and basil. Indonesia grows a vast quantity of fruit; popular fruits include durian, rambutan, coconut, mango, papaya, carambola, and salak. People eat these fruits plain or make them into juice; avocado juice is quite popular. Tea and coffee are also popular. On the street, people can buy food at various open-air restaurants and stands as well as at more formal restaurants, where 20-dish meals are not uncommon.

Food and Nutrition

Undernourished % of total population: 5.9
 Daily Available Calories per capita kcal: 2,900
 Amount of Cereal Available per person per year kg: 203.1
 Amount of Fruits and Vegetables Available per person per year kg: 63.9

STATUS OF WOMEN

Indonesian women generally enjoy a high degree of economic and social freedom, and there is significant cultural latitude for women's participation in public life. Women occupy important midlevel positions in the civil service, educational institutions, labor unions, the military, professions, private business, and parliament. Cabinets in recent years have included women, and Megawati Sukarnoputri, whose party had won a plurality of parliamentary seats, was only narrowly defeated in the 1999

election for president and became vice president. She assumed the presidency in 2001, after the assembly ousted President Wahid for alleged incompetence.

Although legislation guarantees women equal treatment, they seldom receive equal pay for equal work. In addition to government-sponsored women's organizations in which membership and participation are mandatory, several voluntary, private groups work to advance women's legal, economic, and political rights. Chief among these is Kowani (Congress of Indonesian Women), an umbrella for some 55 women's groups.

Most Indonesian married women stay home, though some middle- and upper-class women work outside the home. Violence against women is a major problem. In a rare exception to the rule of masculine domination, the Minangkabau people of Sumatra have a matrilineal society, in which women own all the property and men live with their mothers and visit their wives.

WORK

Almost half of Indonesia's labor force is employed in agriculture. Others work in services, such as tourism or the restaurant business, or in manufacturing or construction. Many people do not work for pay at all. Agriculture practices are often primitive, though traditional rice cultivation techniques can produce two or three crops per year without reducing soil fertility. Other agricultural products include nutmeg, cloves, rubber, and coffee as well as valuable hardwoods such as mahogany and ebony. The manufacturing sector produces clothing, automobiles, electrical appliances, automobiles, and airplanes. Tourism is increasing in importance, especially in Bali, but it has been hurt by recent terrorist attacks. In Bali many people run guest houses or shops selling local crafts or lead tours around the island.

EDUCATION

Indonesia has an above-average literacy rate, with almost 88 percent of its population literate (93 percent of males and 83 percent of females).

Schooling is technically free—fees are charged in some areas for uniforms, lunches, and transportation—and compulsory for primary grades. The academic year runs from January to December, and the school year consists of three terms of 13 weeks each. All regular schools are coeducational. The language of instruction is Bahasa Indonesia, with English taught at the senior secondary level. All students study religion and civics. All public schools teach the same curriculum.

There is an extensive private-school system, in which are included Islamic schools, or *madrassas*, Catholic and Protestant schools, and the intensely nationalist *Taman Siswa* school system. Private schools that meet government standards receive state subsidies.

After primary school, students can choose to attend junior high school for three years and senior high school for another three years. Secondary schools teach either academic or vocational subjects; some train students to teach primary school. To enter a university a student must pass a very difficult examination; most of those who attempt the examination do not pass, although they may try again the next year. Indonesia has both state and private universities; the private universities are quite expensive. The largest university is Jakarta's *Universitas Indonesia*. The *Institut Teknologi* in Bandung is the best school for studying technology and engineering. About half of Indonesia's university students are female.

SCIENCE AND TECHNOLOGY

Indonesia has reasonably good technology facilities. The *Institut Teknologi Bandung* is an excellent place to study scientific subjects. The archipelago has had a communications satellite system since 1976, with which it broadcasts television and telephone services throughout the islands. Some 10 million Indonesians were using the Internet in 2003. The government has several bodies devoted to scientific matters, including the Agency for the Assessment and Application of Technology, the Ministry of Environment, the Ministry of Marine Affairs and Fisheries, and the Environmental Impact Management Agency.

MEDIA

Indonesia has numerous daily and weekly newspapers and magazines. Publishing is concentrated in the large cities. Jakarta alone has 26 dailies, with half the total national circulation. All of these are published in Bahasa Indonesia, except for three in English and one in Chinese. The provincial press is poor in quality. Two military newspapers, *Harian umum* and *Berita yuddha*, function as official organs of the administration.

The press is largely privately owned. A 2000 compilation listed a total of 396 daily publications, with a combined circulation of more than 4.7 million. Control of the press is based on the press law of 1966, as since modified, which governs issuance of publishing permits. Though there is no explicit censorship, the government has the right to silence any publication that publishes material contrary to the *Pancasila*. The very vagueness of these restrictions makes them a grave threat to press freedom.

Radio Republik Indonesia (RRI), a government department under the Ministry of Information, operates transmitters, with studios in towns throughout the country. The external broadcasting service, Voice of Indonesia, operates short-wave transmitters. *Televisi Republik Indonesia* (TVRI) is a state-owned service with transmitters covering major portions of the archipelago. *Televisi Pendidikan Indonesia* is a commercial TV station with national access. *Rajawah Citra Indonesia* (RCTI) operates communications satellites that provide radio, telephone, and television links throughout the nation. There are some 10 commercial television networks competing with public television. Radio is widespread, with at least 60 stations in Jakarta alone. There is a huge market in il-

legal broadcasting; in 2003 there were over 2,000 illegal television and radio stations.

The national news agency is Antara (Lembaga Kantor Berita Nasional Antara), which is under the direct control of the president of the republic. Antara has domestic bureaus in all provincial capitals and six foreign bureaus. Kantor Berita Nasional Indonesia is an independent news agency.

Indonesia has a healthy book-publishing industry. It does not adhere to international copyright conventions.

Film distribution and production are in private hands but remain closely regulated by the government through the Film Council. The Film Censor Board is in charge of film censorship.

CULTURE

Among the arts for which Indonesia is internationally famous are puppet shows, or *wayang*, which tell stories from Hindu epics and folk tales. The country has a multiplicity of dance styles, many featuring elaborate and traditional costumes. Dancers in Bali and Java perform to gamelan music, played on gongs, drums, xylophones, flutes, and stringed instruments. Dance techniques include very precise head and hand movements. Dancers begin training as young children. Gamelan orchestras and dancers still play for the *kratons*, or royal courts, in Solo, Yogyakarta, and Cirebon; these courts no longer serve any political function but do play an important role in preserving Indonesia's cultural heritage.

Batik, made almost exclusively in Java, uses a complex wax-resistance process to create intricate and elaborate fabric designs. Each local area has special designs for unique weaving. Bali is noteworthy for preserving—in sculpture, wood carving, and painting—Hindu tradition undisturbed by the spread of Islam. Knife makers in Java produce a special kind of dagger called a *keris*, which is traditionally given by fathers to sons and is believed to have magical powers.

Indonesia also produces more contemporary art forms. Modern authors include Mochtar Lubis and Pramoedya Ananta Toer, who spent nearly 14 years in jail for criticizing the government. The country's best-known contemporary filmmaker is Garin Nugroho, who has won several international awards for his work.

FOLKLORE AND MYTHOLOGY

Indonesia has a wide variety of folkloric traditions. People in far-flung areas still hold animistic beliefs and worship nature spirits of various types. Puppet shows are one of Indonesia's great folkloric events. Bali has Hindu traditions that permeate everyday life; one of the most interesting events is Nyepi, the New Year, during which people leave food for the demons who live at crossroads and then bang gongs to frighten those demons away.

ENTERTAINMENT AND RECREATION

There are many things to do in Indonesia. Bali, Lombok, and other areas have beautiful beaches and offer a variety of water sports. Different ethnic groups celebrate various cultural events, such as the mock battles of Sumba, the whip duels in Flores, funeral feasts in Sulawesi, and various Hindu events in Bali. People enjoy listening to traditional music and watching dances or puppet shows and plays. Tourist areas have nightclubs and restaurants. Most towns have large markets where people go to shop and visit friends. People enjoy visiting family members, during which they may play traditional games such as *congklak*, which involves getting pebbles into the holes in a board.

ETIQUETTE

Indonesians are extremely friendly and gregarious and expect to receive equally enthusiastic greetings in return. Indonesian society is hierarchical; businesses will make it clear who outranks whom, and they expect to be able to discern that information about other businesses quickly. Members of a company will sit down at a meeting in order of importance, with the highest-ranking sitting first. Business cards contain as much information as possible, including facts about the holder's nobility.

At an Indonesian meal, the hostess will place all dishes on the table at once. Everyone sits on the floor around the table. First everyone takes rice, and then a portion of food from each of the other dishes. A guest

should not eat until invited to do so by the host. In some places people eat with their fingers. Indonesian hosts will prepare more food than their guests can possibly eat at a single meal; a guest should never eat all the food on the table because this tells the hosts that there was not enough food.

FAMILY LIFE

Indonesians place great importance on extended family and their local community; they consider duty to the community, village, or workplace almost as important as familial obligations. Children live with their parents until they marry, at which point they become adults; even after marriage, some couples continue to live in the husband's parents' home. Weddings are elaborate festive events. The bride and groom sit on thrones and greet their guests, but they do not mingle with them. Most women stay home after marriage, caring for the home and children. Pregnant women and children are highly valued. Muslim boys officially become men at adolescence, when they are circumcised; this is a major event, and the boys often dress as princes to be paraded through town.

PERSONAL APPEARANCE

Indonesia is very hot, and people dress in light, flowing garments. The sarong is the ubiquitous garment for both sexes. Men and women tie their sarongs differently. Muslim women often cover their heads with scarves. Many people now wear Western clothing.

SPORTS

Indonesia's government encourages all citizens to be involved in sports. September 9 is National Sports Day, in which sporting events occur across the country. Karang Taruna is a state-run sporting organization for youths. Tennis, badminton, and running are popular sports in Indonesia. The Indonesian tennis team has won numerous regional championships. Indonesian badminton players habitually win the Thomas Cup competition, and Rudy Hartono is one of the world's best badminton players. Competitors from around the world come to Bali for its annual Paradise Run. Corporations often sponsor their own professional soccer teams, with employees of the corporations participating. The boxer Ellyas Pical has met with international success. The women's archery team won the gold medal in the Seoul Olympics in 1988; this was Indonesia's first Olympic gold medal.

Traditional games are also common. Boat racing, cockfighting, and bull racing are all popular in various places. In Nias young men participate in stone jumping,

in which they jump over stone walls, sometimes carrying swords. People also participate in martial arts.

CHRONOLOGY

- 1949** The Netherlands recognizes the Republic of the United States of Indonesia and relinquishes sovereignty over all Indonesian territories except West Irian.
- 1950** The country is renamed the Unitary State of Indonesia.
- 1955** In national elections no party achieves a parliamentary majority.
- 1956** President Sukarno initiates his Guided Democracy program, strengthening the powers of the president.
- 1957** Attempted military coups are put down.
- 1958** Dissidents in Sumatra, aided by the United States and Taiwan, proclaim the Revolutionary Government of the Republic of Indonesia but are suppressed.
- 1963** The Netherlands turns West Irian over to Indonesian control.
- 1965** After putting down a coup, led by Lieutenant Colonel Untung of the palace guard, in which six generals are killed, General Suharto becomes acting president. Numerous Muslim groups exterminate Communists throughout the countryside for their alleged involvement in the coup attempt, killing 300,000 to one million.
- 1966** Suharto declares the Communist Party illegal.
- 1968** Suharto is inaugurated as Indonesia's second president, a post he will hold for 32 years.
- 1975** Pertamina, Indonesia's state-owned oil company, declares its inability to make scheduled debt repayments of \$10.5 billion, precipitating a national financial crisis.
- 1976** Indonesia integrates East Timor, formerly a Portuguese possession.
- 1984** Indonesia joins Malaysia, the Philippines, Singapore, and Thailand to form the Association of Southeast Asian Nations (ASEAN).
- 1994** Disaffected members of the military place Megawati Sukarnoputri, a daughter of the country's founding president, at the head of the fast-growing Indonesian Democratic Party.
- 1996** The government removes Megawati as leader of the Indonesian Democratic Party and raids party headquarters, spurring riots in Jakarta. Some 20,000 factory workers in Surabaya march to protest poor wages and working conditions.
- 1997** The Golkar party wins the national election in May with a record 74.4 percent of the vote, claiming 325 of the 425 contested seats in the House of Representatives.

More than 200 people are killed as opposition demonstrations turn into riots.

The Asian financial crisis begins to affect Indonesia.

Runaway forest fires in Indonesia spread smoke to all Southeast Asia, sickening thousands.

- 1998** Military repression of student protests at Jakarta's Triskati University foments massive riots, in which more than 1,000 die.

After thousands of students occupy the parliament building, Suharto's political and military support evaporates on May 21.

The new president, B. J. Habibie, institutes reforms as Indonesia's economic crisis worsens.

- 1999** Some 96 percent of 116 million registered voters cast ballots in the first free multiparty elections since 1955. Muslim leader Abdurrahman Wahid becomes Indonesia's fourth president, and PDI leader Megawati Sukarnoputri its vice president.

UN peacekeeping forces mediate the rampage of the paramilitary forces who oppose the popular 78.5 percent vote favoring East Timor's independence from Indonesia.

- 2001** President Abdurrahman Wahid, charged with corruption, is ousted by the national assembly and Megawati becomes president. Ethnic violence breaks out in Kalimantan. The IMF cuts off funds due to the government's corruption.

- 2002** Irian Jaya and East Timor are given more independence. Parliament passes a law allowing the direct election of the president and vice president. A bomb explodes at a tourist nightclub in Bali, killing 202. The government signs a peace agreement with the Free Aceh Movement.

- 2003** Peace talks with the Aceh separatists break down and the government imposes martial law on the region. A car bomb explodes in Jakarta. The suspects in the Bali bombing are found guilty.

- 2004** Christians and Muslims clash in the Moluccas. Susilo Bambang Yudhoyono is elected president in Indonesia's first direct elections. A car bomb explodes at the Australian embassy in Jakarta. A tsunami sweeps through the Indian Ocean, killing more than 220,000 people in the region.

- 2005** The government signs another peace agreement with the Free Aceh Movement providing for rebel disarmament and the withdrawal of government troops. Disarmament begins in September and troop withdrawal completes in December.

Persian (or Farsi), Turkic, Kurdish, Luri, Balochi, Arabic

RELIGION

Shia Islam

UNIT OF CURRENCY

Iranian rial

NATIONAL FLAG

Three horizontal stripes of green, white, and red, from top to bottom, with the emblem of the Islamic Republic centrally positioned in red, with the words “Allah akbar” (“God is great”) repeated 11 times along each of the green and red stripes.

NATIONAL EMBLEM

The creed of the Revolutionary (Islamic) Government in Persian

NATIONAL ANTHEM

“Upward on the Horizon Flies the Eastern Sun”

NATIONAL HOLIDAYS

February 11 (Victory of the Islamic Republic), March 20 (Oil Nationalization Day), March 21–25 (No Ruz, Iranian New Year), April 1 (Islamic Republic Day), April 2 (Revolution Day), June 5 (Revolution Day).

DATE OF INDEPENDENCE

Islamic Republic of Iran proclaimed on April 1, 1979

DATE OF CONSTITUTION

December 2–3, 1979; revised 1989

GEOGRAPHICAL FEATURES

Iran is located in southwestern Asia between the Persian Gulf and the Caspian Sea and shares borders with Azerbaijan, Armenia, Turkmenistan, Afghanistan, Pakistan, Turkey, and Iraq. The total land area is 1,648,000 sq km (636,296 sq mi), which makes it larger than all of the nine original countries of the European Union combined. The longest distance northwest to southeast is 2,250 km (1,400 mi) and that northeast to southwest is 1,400 km (870 mi).

Iran has four natural geographic regions. The central, interior plateau is a barren, largely uninhabited area occupying a series of closed basins with elevations of 600–900 m (2,000–3,000 ft) and is completely surrounded by

mountains. The plateau is covered partly by salt swamps, known as *kavirs*, and partly by salt flats, called *dashts*. Because of its forbidding nature, this region is known as the “Dead Heart” of Iran. The second region is the Zagros mountain range, which originates in the Armenian Knot near Armenia and extends 965 km (600 mi) along the Persian Gulf and the Gulf of Oman, joining the Makran range near Pakistan. The northwestern part of this region includes the fertile states of East and West Azerbaijan, and in the southern part is the coastal plain of Khuzestan. The highest elevation in this region is 3,960 m (13,000 ft). The third region consists of the Elburz and Talish mountains and the Caspian lowlands. The Elburz Range extends to Afghanistan along the southern side of the

Iran

Turkmenistan border, with elevations between 2,100 and 3,000 m (7,000 and 10,000 ft). The fourth region consists of the eastern mountains along the Pakistani and Afghan borders, with barren ranges, fertile valleys, and elevations between 1,200 and 2,750 m (4,000 and 9,000 ft).

CLIMATE AND WEATHER

The climate of Iran is one of great extremes. Temperatures vary from -27.8°C (-18°F) to 55.6°C (132°F) in parts of the central plateau, where some of the highest temperatures in the world have been recorded. Most of Iran is arid, except the northwest and the Caspian coast, which receive over 2,000 mm (78 in) of rainfall annually and are the most densely populated regions in the country. Generally, rain falls from October to May, with the heaviest concentration from December to March. Desert areas receive less than 50.8 mm (2 in) per year, while the Persian Gulf region receives between 200 and 508 mm (8 and 20 in) per year. In the coastal areas humidity is high throughout the year. Two strong summer winds, the shamal in the northwest and the "Wind of 120 Days" in the southeast, blowing with destructive velocities of up to 160 km per hour (99 mph), intensify the heat and erode the soil.

Climate and Weather

Mean Temperature: 18°F to 132°F
 Average Rainfall
 Desert regions: 2 in
 Persian Gulf region: 8 to 20 in

FLORA AND FAUNA

The area near the Caspian Sea is Iran's most fertile region; it is covered with forests of many types of trees, including

willow, oak, orange, lemon, fig, pomegranate, and date. The northern desert supports cacti and scrub vegetation; the southern desert is completely barren. Kurdistan has many valuable walnut trees.

The forests are home to animals such as wolves, boars, bears, tigers, lynxes, and jackals. Desert mammals include Persian gazelles, Iranian wild asses, Persian squirrels, porcupines, badgers, goats, and sheep such as the Oreal and Alborz varieties. Birds include pheasants, flamingos, partridges, and pelicans. The Caspian Sea is rich in marine animals such as sturgeon, herring, and whitefish.

ETHNIC COMPOSITION

About two-thirds of the Iranian population consists of people of Aryan origin, of whom the Persians, or Farsi, are predominant. The Gilanis and the Mazandarani are closely related to the Persians but speak a different dialect and have lower cultural status. The Kurds, who form the fourth-largest ethnic group in the Middle East, are concentrated in the Zagros Mountains area from Khuzestan to the Russian border. They are distinguished from the Persians by their religion (being mostly Sunni rather than Shia, or Shi'ite, Muslims), physical appearance, ethnic origin, social organization, and language. They retain a tribal type of social structure and are divided into more than 40 tribes.

South of the Kurds live two related ethnic groups, the Lurs and the Bakhtiari, each with nomadic and sedentary branches. Perhaps the poorest and least advanced people of Iran are the Baluchis, numbering about half a million, who are found in greater numbers in Pakistan

and Afghanistan. About one-third of the population consists of various Turkic speakers. Included in any of these ethnic groupings are about 800,000 nomads whose ethnic affiliations have not been established.

There are relatively large Western communities in Tehran, along the Caspian coast, and in the booming oil towns of the south.

LANGUAGES

The official national language is Persian, or Farsi, which is spoken by about 46 percent of the population. Some dialects of Persian, such as Gilani and Mazandarani, are so different from pure Persian as to be virtually unintelligible to a person from Tehran or Shiraz. One-quarter of the population speaks Turkic languages. Other Indo-Iranian languages include Kurdish, itself divided into a number of dialects, Luri, and Baluchi, each spoken by the ethnic group of that name. A small minority of the population speaks Arabic. Most of the languages, including Farsi, Azerbaijani, and Kurdish, are written in the Arabic script with some modifications and additional consonants. An attempt under Reza Shah in the 1930s to romanize written Persian was dropped because of the opposition of religious leaders.

For many decades French, and to some extent German, enjoyed great prestige as the languages of the elite. English, however, has been displacing French in diplomacy and commerce.

RELIGIONS

Iran terms itself an Islamic republic, and religion is closely intertwined with government. Ayatollah Seyyed Ali Khamenei is recognized as the supreme leader, and this position is viewed as holding something akin to divine sanction. The president and many other top officials are mullahs (religious leaders), as are the speaker of the Majlis (the assembly) and roughly half of the Majlis deputies. Some 89 percent of Iranians are Shia, while 9 percent are Sunni Muslims. The Sunnis tend to be located in tribal areas remote from Tehran; their political influence is nearly nil. The constitution declares that “the official religion of Iran is Islam, and the sect followed is Ja’fari Shiism,” but it also states that “other Islamic denominations shall enjoy complete respect.” Although Sunnis have encountered religious discrimination on the local level and in many cases persecution based on ethnic origin, the regime has made efforts to reduce Shia-Sunni antagonism.

The Baha’i religion is not recognized in Iran, and Baha’is have suffered severe persecution since the revolution. This is mainly government directed and aimed at the religious leadership, although there were some earlier

instances of mob action against Baha’is. Baha’i property has been confiscated, shrines demolished, businesses disbanded or confiscated, and known Baha’is denied employment by the government.

There are small Christian, Jewish, and Zoroastrian (the pre-Islamic religion of Iran) populations, concentrated mainly in urban areas. These religions are recognized by the constitution, and they elect representatives to seats reserved for them in the Majlis. They are permitted to practice their religions, to instruct their children, and in some cases to maintain schools. There have been reports of religious persecution of these minorities, particularly in the early stages of the 1979 revolution. They continue to have problems with the regime over religious practice, and some members of all three groups suffer officially sanctioned job discrimination. Jewish groups report fewer such problems because the language spoken in Jewish homes and informally among Jews is Farsi. In parts of Iran, Zoroastrians are reportedly considered “unclean” and are required to warn barbers, launderers, and restaurant owners that their services will be for “unclean” people, so that they can decide whether to serve such clients.

Religious Affiliations

Shia Muslim	60,536,000
Sunni Muslim	6,122,000
Zoroastrian, Jewish, Christian, Baha’i	1,360,000

HISTORICAL BACKGROUND

The history of Iran (known as Persia until 1935) dates from the sixth century B.C.E. The Medes and the Persians were united in 633 B.C.E. by Cyrus the Great, leading to the foundation of the first Persian Empire. The empire was overthrown in 331 B.C.E. by Alexander the Great and upon his death was divided between his generals. The Seleucid Dynasty was in power until 247 B.C.E., followed by the Parthian Empire of the Arsacids, who ruled for 500 years. The last empire of the Sassanids (established in 33 C.E.) was defeated by Muslim Arabs in 637 C.E.

The Arabs converted most of the population to Islam and introduced the new Persian script and Islamic culture. In 1051 the Turks captured control of the empire. For more than 200 years the Turks held on to power, until Genghis Khan destroyed Turkish control early in the 13th century. For the next century and a half the Mongols ruled the region. In the late 14th century they were replaced by the Timurid dynasty.

By the late 16th century, with the rise of the Safavids under Ismail Safavi, Persia reemerged with the same general boundaries that exist today. Shiism was declared the state religion. The Safavids ruled until 1750, and after a

short interregnum under Karim Khan Zand, the Qajar dynasty assumed power, remaining until the beginning of the 20th century. The country adopted its first imperial constitution in 1906. In 1921 Reza Khan, a Cossack officer, staged a military coup and became minister of war. In 1923 he became prime minister, and in 1925 the Majlis (Islamic Consultative Assembly) deposed the shah and handed full power to Reza Khan. He was subsequently elected shah, taking the title Reza Shah Pahlavi. During World War II Reza Shah favored Nazi Germany. British and Soviet forces entered Iran in 1941, forcing the shah to abdicate in favor of his son, Muhammad Reza Pahlavi.

After the war, British and U.S. forces left Iran, although Soviet forces remained in Azerbaijan until 1946. The Majlis approved the nationalization of the petroleum industry in March 1951. The leading advocate of this measure was Dr. Mohammad Mossadegh, leader of the National Front, who became prime minister in April 1951. The shah assumed full control of the government in 1963, when he began a program of land reform and social and economic modernization known as the White Revolution. The period was marked with some success, as party politics functioned, and elections were held in 1967, 1971, and 1975. Opposition to the increasing Westernization and secularization of Iranian society was articulated by Islamic clergy, notably Ayatollah Ruhollah Khomeini, exiled to Turkey and then Iraq after 1964.

In March 1975 the shah introduced a single-party system based on the Iran National Resurgence Party. Opposition grew, however, and during 1977 and 1978 demonstrations against the shah and his secret police (SAVAK) rose to crisis level. The most effective opposition came from Ayatollah Khomeini, who conducted his campaign from France, where he had arrived in October 1978 after 14 years in exile in Iraq. Khomeini demanded a return to the principles of Islam, and the response to this call in Iran was so great that the shah felt compelled to leave the country in January 1979.

Khomeini arrived in Tehran shortly afterward and effectively took power on February 11. A 15-member Islamic Revolutionary Council (IRC) was formed. Khomeini declared Iran an Islamic republic on April 1, 1979, and introduced a constitution that vested supreme authority in the *wali faqih* (religious leader), initially Khomeini. In the immediate aftermath of the revolution, militant students, with the tacit approval of the mullahs, occupied the U.S. embassy and took 66 diplomatic personnel hostage. This action, which was against all accepted international conventions, was condemned by both the United Nations and the International Court of Justice. The hostages were released after 444 days of captivity in 1981, coincident with the inauguration of President Ronald Reagan. A presidential election in January 1980 resulted in a win for Abolhassan Banisadr, who received about 75 percent of the votes. Elections for the 270-seat

Majlis followed and resulted in a clear win for the Islamic Republic Party (IRP).

In June 1981 proceedings on the grounds of incompetence were instituted against Banisadr in the Majlis, and Khomeini ordered his dismissal. He was succeeded by Mohammad Ali Rajai in July 1981. The following month, however, Rajai and his prime minister, Mohammad Javad Bahonar, were the victims of a bomb attack mounted by the Mujahideen e-Khalq, an opposition group. In October, Ali Khamenei was elected president, and Mir-Hossein Mousavi was elected prime minister. Both Ali Khamenei and Mir-Hossein Mousavi were reelected in 1985.

In 1987 Tehran reacted bitterly to a bloody midyear confrontation with Saudi security forces at Mecca's Grand Mosque that resulted in the death of more than 400 Iranian pilgrims. In 1989 relations with the West again plummeted after Khomeini issued a fatwa, or death decree, against Salman Rushdie for his book *Satanic Verses*, considered offensive to Muslims.

From 1980 to 1989 Iran was embroiled in a war with Iraq that proved costly and bloody. In 1980 Iraq abrogated a 1975 accord dividing the Shatt al-Arab along the median line and invaded Iran's Khuzestan Province. Despite early reverses, Iran succeeded in retaining control of most of the larger towns, including Abadan, and by the end of the year the conflict resulted in a stalemate. Iran advanced into Iraqi territory for the first time in 1982 but made only marginal gains on the southern front. A renewal of the Iranian military offensive in late 1987 proved futile as Iraqis drove the Iranians from Basra, and half the Iranian fleet was lost during the fighting. In 1988 the war of the cities commenced, with both countries bombing each other's capitals and large cities. The two countries, faced with a no-win situation, agreed to a cease-fire in 1988, followed by a peace agreement in 1990. The agreement was essentially on Iranian terms and restored the border to its 1975 status.

Ayatollah Khomeini died in June 1989. The Council of Experts elected President Khamenei to succeed Khomeini as the *wali faqih*. In the presidential election of July 1989, Hashemi Rafsanjani commanded 95.9 percent of the votes. He was sworn in as president in August 1989. Over the course of the next eight years the government of Iran slowly moderated its Islamic extremist, separatist position. In 1997 a more moderate government was elected under the leadership of Mohammed Khatami. Khatami's election did not improve relations with the West immediately, but he has had a moderating effect. He has also relaxed some of the Islamic restrictions on women and young people. However, there is tension between Khatami and the more hard-line fundamentalist supporters of Iran's supreme leader Khamenei. Khatami was reelected in 2001.

Iran was outraged in early 2002 when U.S. President George Bush referred to the nation as part of an "axis of evil," along with Iraq and North Korea, and accused

Iran of developing long-range missiles. That September, Iran began construction on a nuclear reactor at Bushehr. The United States and United Nations both kept a close watch on Iran's nuclear weapons program. Iran agreed to suspend its nuclear program in 2003 and allow UN inspectors to visit; the International Atomic Energy Agency (IAEA) found no evidence of nuclear weapons in 2003 but then scolded Iran for lack of cooperation in 2004. In November 2004 the European Union persuaded Iran to suspend its uranium enrichment program.

Iran's government became increasingly conservative in 2004. Conservative representatives gained a large majority in parliament after a controversial election in which the Council of Guardians disqualified most reformist candidates before voting began. In 2005 ultra-conservative Mahmoud Ahmadinejad became president. Under his leadership, Iran resumed its uranium enrichment program. The IAGA consequently reported Iran to the UN Security Council charging violation of the Nuclear Non-Proliferation Treaty.

LIST OF MODERN RULERS

Presidents

1980–81	Abolhassan Banisadr
1981	Mohammad Ali Rajai
1981–89	Ali Khamenei
1989–97	Akbar Hashemi Bahramani (Hashemi Rafsanjani)
1997–2005	Mohammad Khatami
2005	Mahmoud Ahmadinejad

Supreme Leaders

1979–89	Ruhollah Khomeini
1989–	Ali Khamenei

CONSTITUTION

A draft constitution was published in mid-June 1979, and a 75-member Council of Experts was elected to debate the various clauses and propose amendments. The amended constitution was put to a referendum in early December 1979 and easily gained the approval of the electorate. In 1989 the most important amendments to the constitution were the elevation of the president to the government's chief executive and the abolition of the post of prime minister.

The constitution states that the form of government of Iran is that of an Islamic republic and that the spirituality and ethics of Islam are to be the basis for political, social, and economic relations. Persians, Turks, Kurds, Arabs, Baluchis, Turkomans, and others enjoy completely equal rights.

The constitution provides for a popularly elected president with a term of four years and a popularly elected Majlis (Islamic Consultative Assembly) of 270 members

with a term of four years. The number of seats in the Majlis was increased to 290 with the February 2002 elections. Provision is made for the representation of Zoroastrians, Jews, and Christians (but not Baha'is).

All legislation passed by the Majlis must be sent to the Council of Guardians (article 94), which will ensure that it is in accordance with the constitution and Islam. The Council of Guardians consists of six religious lawyers appointed by the *faqih* and six lawyers appointed by the High Council of the Judiciary and approved by the Majlis. Articles 19–42 deal with the basic rights of individuals and provide for equality of men and women before the law and for equal human, political, economic, social, and cultural rights for both sexes. The Committee to Determine the Expediency of the Islamic Order, created in February 1988 and formally adopted into the constitution in July 1989, rules on legal and theological disputes between the Majlis and the Council of Guardians.

The amended constitution provides for a *wali faqih* (religious leader) who, in the absence of the Imam Mehdi (the hidden Twelfth Imam), carries the burden of leadership. According to Article 57 the executive, legislative, and judicial branches of state power are under the authority of the *faqih*. Among the extensive powers reserved to the *faqih* is the right to appoint half the members of the Council of Guardians. He is also supreme commander of the armed forces and can appoint the joint chiefs of staff and the head of the Revolutionary Guard. He appoints four of the seven members of the National Defense Council and, on their recommendation, appoints the senior commanders of the armed forces. He also has power to declare war and make peace on the recommendation of the National Defense Council. The first *faqih* has the right to approve all candidates for the presidency (a right which was exercised by Ayatollah Khomeini). The *faqih* can also dismiss the president on the basis of a Supreme Court decision or a vote of no confidence by the Majlis.

Elections are overseen by election supervisory councils. Suffrage is universal for those over age 15. Those excluded from voting are criminals, converts from Islam, and members of the armed forces and the gendarmerie. In 1963 suffrage was opened to women.

PARLIAMENT

The 1979 Constitution replaced the former bicameral parliament with the unicameral Islamic Consultative Assembly (Majlis-e-Shura-ye-Eslami), with members elected by popular vote for four-year terms. The first election to the assembly, held in two stages in 1979 and 1980, resulted in an absolute majority for the mullah-dominated Islamic Republican Party. The ruling Revolutionary Council's legislative power was transferred to parliament in July when Ayatollah Hashemi Rafsanjani was elected speaker.

Beginning a year after the shah's departure, the revolutionary regime has held elections at fairly regular intervals for president, Majlis deputies, members of the Council of Experts (responsible for choosing Khomeini's successor), and members of local government councils. All candidates must be approved by the Interior Ministry, however, and only those meeting with the approval of the government may run. In practice, only supporters of the theocratic state are accepted. There has, however, been considerable diversity of opinion among candidates on economic and social questions.

The Majlis holds genuine debates and normally broadcasts live on radio on a wide variety of issues. In some cases laws proposed by the government have been voted down. Five cabinet ministers lost their posts in August 1983 when, following heated debate on the performance of the cabinet, they failed to win votes of confidence, and on several occasions during the year the prime minister's nominees to fill ministerial vacancies were rejected. Rejections of bills and officials by the Majlis are accepted by the executive branch.

Iran's constitution provides for a Council of Guardians composed of 12 members, six clerics unilaterally appointed by the *faqih* and six lay members well grounded in Islamic law who are nominated by the head of the Judicial Council, subject to the approval of the Majlis. The Council of Guardians must certify all bills passed by the Majlis as being in accordance with Islamic law and the constitution. If a bill fails to be certified, it is sent back to the Majlis for revision. It cannot become law until the council has certified it. The Council of Guardians has rejected various important bills and portions of bills passed by the Majlis, including legislation on land reform, nationalization of foreign trade, and reform of Iran's civil code.

POLITICAL PARTIES

Iran does not have many formal political parties; the conservative leaders prefer to use political pressure groups. The Second Khordad Front, a loose coalition, won a number of seats in the 2000 election. This coalition includes members from the Islamic Iran Participation Front (IIPF), the Executives of Construction Party (Kargozaran), the Solidarity Party, the Islamic Labor Party, the Mardom Salari Party, the Mujahideen of the Islamic Revolution Organization (MIRO), and the Militant Clerics Society (Ruhaniyun). A new conservative group called the Builders of Islamic Iran won a majority of seats in the February 2004 elections.

Progovernment political pressure groups include Ansar-e Hizballah, Muslim Students Following the Line of the Imam, the Tehran Militant Clergy Association (Ruhaniyat), the Islamic Coalition Party (Motalefeh), and the Islamic Engineers Society. Reformist groups that oppose the government include the Organization for Strengthening Unity; opposition groups include Freedom Move-

ment of Iran, the National Front, Marz-e Por Gohar, and various ethnic and monarchist organizations. There are also a few political groups whose activities have been almost completely repressed by the state, including Komala, the Democratic Party of Iranian Kurdistan, and the Mujahideen e-Khalq Organization (MEK).

LOCAL GOVERNMENT

Iran is divided into 28 *ostans*, or provinces. The provinces are administered by *ostandars*. The powers of provincial councils, called *anjumans*, are gradually being enlarged. The second tier of local government consists of *shabrestans*, or counties, under junior *farmandars*. The third tier is *bakhsbes*, or districts, which are under *bakshadars*. The fourth tier is *dehistans*, or groups of villages, under *dehdars*. At the base are the villages, which are in the charge of *kadkbodas*, or headmen. Towns and cities have municipal governments with mayors and councils either elected or designated by the Ministry of Interior.

LEGAL SYSTEM

In August 1982 the Supreme Court revoked all laws dating from the previous regime that did not conform to Islam. In October 1982 all courts set up prior to the Islamic revolution were abolished. In June 1987 Ayatollah Khomeini ordered the creation of clerical courts to try members of the clergy opposed to government policy. The new Supreme Court has 16 branches.

Islamic codes of correction were introduced in 1983, including the dismembering of a hand for theft, flogging for fornication and violations of the strict dress code for women, and stoning for adultery. Over 100 offenses may be punished by the death penalty.

HUMAN RIGHTS

Iran's human rights record is poor. The state restricts citizens' right to change their government, imprisons people arbitrarily, and uses summary executions, torture, and rape to maintain power. Most freedoms are restricted, including freedoms of speech, association, religion, and the press. Religious minorities such as Baha'is are persecuted. Women are severely disadvantaged. Child labor and human trafficking are persistent problems. The government does not allow human rights groups to enter the country.

FOREIGN POLICY

Iran's foreign policy since the 1979 revolution has undergone two phases, both of which have been guided

by two goals: unremitting hostility to the United States (“The Great Satan”) in particular and the West in general, and the export of militant Islamic radicalism to other Muslim countries in the Middle East. The main events during the first phase, which lasted about two decades, included taking members of the U.S. embassy in Tehran hostage, sponsoring Hezbollah radicals and terrorists in Lebanon and Palestine, seizing Abu Musa, a small island in the Persian Gulf that belonged to the United Arab Emirates, orchestrating a bloody confrontation with Shia Saudi Arabia at Mecca’s Grand Mosque, and the issue of a fatwa against the Indian-born writer Salman Rushdie. The bloody Iran-Iraq War, which cost billions of dollars and thousands of lives, chastened the more radical elements among Iran’s ruling mullahs.

The election of moderate president Khatami in 1997 proved a turning point in Iran’s foreign relations and showed that Iran wanted to emerge from its isolation and rid itself of its outlaw image. In 1998 Khatami proposed cultural exchanges with the United States and dissociated himself from the fatwa against Rushdie, a decision that prompted the reestablishment of full relations with the United Kingdom. President Khatami’s charm offensive toward Europe included a visit to the Vatican. Khatami has also called for a “dialogue of civilizations” with the West and has attempted to convince neighboring states that Iran has no interest in establishing regional dominance. Iran’s supreme religious leader, Ayatollah Ali Khamenei, continues to lash out at the United States, however, revealing deep internal divisions in Iranian leadership.

Iran’s current “Islamic foreign policy” consists of opposition to the United States and Israel, support for Islamic efforts in other countries, the elimination of all outside influences, and support for developing countries, especially Islamic ones. Iran has been negotiating with the European Union over the matter of nuclear weapons; the United States has refused to cooperate in these dealings, so in early 2005 relations between the United States and Iran were still extremely tense.

DEFENSE

Iran’s military includes a ground army, a navy, an air force, and a Revolutionary Guard Corps. There are also paramilitary groups called Basijis and vigilante gangs called Ansar-e Hezbollah, who intimidate and attack anyone who they suspect of opposing the government, often at the behest of the religious leadership. The defense structure is headed by the *faqih*, Ayatollah Khamenei, who, as the supreme commander of the armed forces, exercises operational control through a joint staff organization. Soon after the outbreak of the war with Iraq, Ayatollah Khomeini handed over his military powers to then president Banisadr. The minister of war is outside the actual chain of command.

Much of Iran’s military might has disintegrated following the Islamic revolution. Because of a U.S. embargo, Iran’s sophisticated but old U.S.-supplied military equipment lacks parts and maintenance. The war with Iraq and the early reverses suffered in that war reduced both the inventory and the morale of the troops to their lowest levels in decades. Iran is currently working to modernize its military. It wants to have nuclear capabilities and has already initiated work on a nuclear facility, though UN pressure has so far kept it from developing weapons of mass destruction.

Conscription provides the main source of military manpower. Every Iranian citizen becomes eligible for military service at the age of 18 for a period of 18 months. During the war with Iraq the army recruited boys as young as 9 years old. There is no organized reserve. The strength of the armed forces is 580,000.

The principal training institutions are the Military College, the Army Staff College, the War Academy, and the National Defense University.

ECONOMY

Iran’s economy is a mixture of central planning, state ownership of oil and other large enterprises, village agriculture, and small-scale private trading and service ventures. Governmental corruption and inefficiency make what could be a very wealthy country into a relatively poor one. Iran depends above all on revenues from oil exports. Currently, all large-scale industry is publicly owned and state operated. Charitable groups called *bonyads* control the businesses formerly owned by the shah’s family; these groups, which are closely connected to the government, do not pay taxes on their considerable revenues.

President Khatami has continued to follow the market reform plans of former President Rafsanjani and has indicated that he will pursue the diversification of Iran’s oil-reliant economy, although he has made little progress toward that goal. The strong oil market in 1996 helped ease financial pressures on Iran and allowed for Tehran’s timely debt-service payments. Iran’s financial situation tightened in 1997 and deteriorated further in 1998 because of lower oil prices. High oil prices in the early 2000s furnished Iran with substantial income but did not solve the nation’s economic problems. The nation subsidizes food and fuel, but poverty is still a major problem; 40 percent of the population lives below the poverty line.

Most private sector enterprises are small-scale farms and workshops. Unemployment is high, at around 11 percent, and inflation has been hovering around 15 percent. Unemployment in particular is a major problem because it leaves a large number of young men at loose ends, which foments violence and Islamic extremism.

ENVIRONMENT

Iran suffers from a number of environmental concerns. There is growing air pollution in urban areas due to increased emissions from automobiles and industrial smoke. Unrestricted industrial and urban development and rapid population growth have damaged the land around the Persian Gulf and Caspian Sea and on the southern part of the Alborz range. The country suffers from growing desertification caused by overgrazing and deforestation. Oil operations in the Persian Gulf have caused some environmental concerns, as spills occur regularly. Like most of its Middle East neighbors, the country suffers from a lack of potable water for its growing population.

LIVING CONDITIONS

Iran's cities are very crowded and have terrible traffic. Cities have many modern amenities, including fast-food

restaurants and shopping malls as well as outdoor bazaars. Gasoline is cheap, but driving is dangerous. There is ample and inexpensive public transportation, both buses and trains.

HEALTH

The government provides health care for all citizens, including vaccinations, paid maternity leave, and subsidized prescription drugs. Most modern medical facilities are located in Tehran and other large cities. Many doctors emigrated during the revolution, but the government has encouraged students to attend medical training, so there are now more health workers. People in the countryside still rely on traditional midwives and healers. The infant mortality rate is quite high, at almost 42 deaths per 1,000 live births. Iran has a poor water and sewage system, so waterborne diseases and parasites are common. Malaria, schistosomiasis, and cholera all occur with some frequency.

FOOD AND NUTRITION

Iranian cuisine uses many vegetables, herbs, nuts, and fruit. Seasonings include saffron, cinnamon, turmeric, sumac, pomegranate juice, and dried limes. Rice and bread are the main starches. Mutton and lamb are the most common meats, though meat is usually just a flavoring, not the main ingredient in a dish. Muslims do not eat pork. People occasionally eat beef, camel, goat, and buffalo. Breakfast foods include bread, butter, honey, eggs, and feta cheese. The largest meal is served in the middle of the day and is almost always structured around rice and flat naan bread. Iranians eat many salads of fresh greens and herbs and also like to stuff green leaves with rice and meat. Kebabs, pieces of meat grilled on a skewer, make a popular meal. The evening meal often features omelets or sandwiches.

People drink *chai*, or tea, constantly; they serve it strong and sweet. Fresh fruit juices, yogurt drinks, and milkshakes are popular, but alcohol is forbidden. Snacks include cherries, pomegranates, plums, melons, berries, cookies, pastries, and nuts, such as pistachios.

 Amount of Fruits and Vegetables Available per person per year kg: 329.7

STATUS OF WOMEN

Ultraconservative dress, entirely hiding the hair and all of the body except the face and hands, is now an absolute requirement for all women, regardless of their religion, national origin, citizenship, or diplomatic status. Women are harassed, detained, or physically attacked if they appear in public in clothing that official or self-appointed guardians of public morality deem insufficiently modest or if they wear makeup. There have also been incidents in which men have been attacked on the streets of Tehran for dressing in "un-Islamic" fashion, such as for wearing short-sleeved shirts or failing to button all their shirt buttons.

Employment opportunities for women are more restricted than they were under the shah. Women are legally barred from being judges. Although there are cultural barriers making employment in professional-level positions difficult to obtain and maintain, women do work as lawyers, physicians, and statisticians and in other professions in both the public and private sectors. Several women serve as deputies in the Majlis. In 2003 the Islamic rulers issued a decree allowing women to lead all-female congregations.

WORK

Before the revolution Iran had a number of professionals of both sexes, but in the past 25 years conditions have changed. Unemployment is fairly troublesome, as 10 percent of the workforce cannot find jobs. Women are discouraged from working outside the home, though some must in order to support their families or to fill needs such as providing medical care to female patients. Some 30 percent of the workforce is employed in agriculture.

Industry employs about 25 percent of the workforce; factories produce clothing, pharmaceuticals, automobiles, and carpets. The workplace tends to be hierarchical, and employees must respect their bosses. Family members typically help one another with business matters.

EDUCATION

Education is officially compulsory for eight years, between six and 14 years of age, but this has not been fully implemented in rural areas. Primary education, which is free, begins at the age of six and lasts for five years. Secondary education, from the age of 11, lasts up to seven years. Religious instruction is required. Iranian schoolchildren are assigned large amounts of written homework and material to memorize. Students choose a specialty while in high school, either academic, vocational, or science-math.

The academic year runs from September to June. The language of instruction is Persian, but both English and French are taught as second languages. There is an acute shortage of teachers at both the primary and secondary levels. Teaching staffs in primary schools are supplemented by the Literacy Corps.

Educational administration, modeled on the French system, is highly centralized under the Ministry of Education. The ministry establishes curricula, hires and trains teachers, administers examinations, and prepares textbooks. The state encourages private schools and subsidizes equipment and salaries. Christian and secular French private schools attract the best students.

Iran has 74 state-run universities. University education is free to students who pass the entrance examinations, though universities do not admit students who do not please the authorities; these include women and members of ethnic minorities or political opposition groups. Women's enrollment has dropped since the revolution, but women continue to study and are some of the best students at the universities.

SCIENCE AND TECHNOLOGY

Iran has advanced scientific and technological resources. The Iran University of Science and Technology and several other universities have excellent engineering and scientific programs. The Iran Secretariat for the Advancement of Science and Technology leads the nation's efforts in this area. The nation is rapidly modernizing its telephone system. Some 4.3 million people were using the Internet in 2003.

MEDIA

Tehran dominates the press scene, as many of the daily papers are published there, and the biweekly, weekly, and less frequent publications in the provinces generally depend on the major metropolitan dailies as sources of news.

The constitution states that prepublication censorship is forbidden and that no publications may be banned without a court order. The press law of 1979 governs the legal status of the press. Khatami's government has fought to keep the press free, but the conservatives have fought back; they have succeeded in shutting down many reformist publications and jailing reformist writers and editors. Khatami and his parliament have done little to intervene.

The official national news agency is the IRNA (Islamic Republic News Agency), operated by the Ministry of Information's General Department of Publications.

Broadcasting is a state activity operated by Voice of the Islamic Republic of Iran, an administratively indepen-

dent body under the Ministry of Information. Broadcast media are more restricted than newspapers. Some satellite television stations are allowed to operate and are believed to have played a role in the 2003 student protests. Iran broadcasts Islamic programming to Iraq and the Middle East on the al-Alam and Sahar television networks. Most Iranians watch some television; the youth channel is the most popular.

Radio is also widely broadcast. Islamic radio broadcasts 24 hours a day. Iranians also listen to foreign stations, such as the youth-oriented Radio Farda.

CULTURE

Iran has a very ancient culture. It was home to the Persian empire in the first millennium B.C.E., and the ruins of Persepolis are still visible today. The Persian tradition of carpet-weaving dates to the fifth century B.C.E., and Persian carpets continue to be an important part of local festivals as well as a profitable export. Persians were creating art long before the Arabs arrived; today Iranian art combines the two traditions and is largely nonrepresentational. Persian calligraphy and poetry are famous. Most traditional music in Iran is played by ethnic minorities, such as the Turkmen and Kurds. Iran has begun producing original films; Mohsen Makhmalbaf is the most famous modern filmmaker.

FOLKLORE AND MYTHOLOGY

The ancient Persians had a complex pantheon of deities. Ahura Mazda was the supreme creator god. Ahurani was

the goddess of water and health and Ahura Mazda's wife. Various other deities cared for the moon, sponsored warfare, or accepted sacrifices. Zoroastrians who follow the ancient pre-Islamic religion still live in Iran. One of their notable customs is that they do not bury their dead, instead leaving them out to be consumed by vultures.

ENTERTAINMENT AND RECREATION

Much of Iranian social life is segregated by sex. Men enjoy meeting their friends at cafés, while women like to entertain female friends and relatives at home. Many people like to smoke water pipes at cafés, but those were banned in June 2004. Families commonly go visiting friends and relatives several times a week. The adults talk and the children play; before the revolution adults would play games such as chess or cards, but these are now forbidden. Iranians tend to become very close to their neighbors, and children grow up accustomed to playing with neighboring children in their local street. Girls like to play with dolls and make clothes for them, and adult women enjoy embroidery. During the summer families go on all-day picnics in the shady hills of Shemiran. The Caspian Sea is a popular spot for vacations.

ETIQUETTE

Iranians are very hospitable and enjoy entertaining guests. Hosts always offer their visitors tea, fruits, and sweets, while guests always bring some small gift for their hosts. Iranians must always be conscious of religious rules of behavior; men may not touch women who are not related to them, and women must always take care with their attire. The sexes are segregated in mosques.

FAMILY LIFE

As a rule, Iranians consider their patriarchal families the most important social structure in their lives and usually choose to live near and interact with their relatives. Families are headed by males, with the oldest having the most authority. Children are taught to respect their elders. Iranians often marry very young, before the age of twenty. Shia Muslims are technically allowed to have up to four wives, but polygamy is rare in practice.

Before the revolution upper-class women had moved out of their homes and into the labor force; they were often well educated and worked in highly respected professions. Since Khomeini came to power, women of all classes have had more restrictions imposed on them, and sexual segregation has become the rule in all aspects of life.

PERSONAL APPEARANCE

Iranians dress extremely modestly. Men and women both cover their entire bodies, including arms and legs. Additionally, women must cover their heads. They wear either a headscarf along with pants and a long coat or the chador, a black cloak that covers their entire bodies. Women who violate Islamic dress codes run the risk of being arrested.

SPORTS

Iran's most popular sport is soccer. Iranian professional soccer players play on European teams, and the Iranian national team qualified for the World Cup in 1998. Men play soccer and other sports such as basketball, volleyball, swimming, fencing, wrestling, and horseback riding. They conduct some sports in a building called a *zurkhaneh*, a "house of power and strength," where they dance, wrestle, and perform feats of strength to a drum accompaniment. Boys spend their summers playing soccer with their friends. Girls and women do not participate in organized sports nearly as much. A few girls play soccer and other sports in special enclosed areas, while wearing their headscarves. Some adult women compete internationally in sports such as archery, shooting, and fencing.

CHRONOLOGY

- 1945** Iran joins the United Nations.
- 1946** British and Russian occupation troops leave Iran. Ahmad Qavam al-Sultaneh becomes prime minister. Azerbaijani dissidents establish independent republic. Iranian troops move into the province and put an end to the republic. Nationalist Kurds rebel with Soviet encouragement. Kurdish republic of Mahabad is proclaimed. Republic is suppressed by Iranian troops.
- 1947** Qavam resigns; Ibrahim Hakimi is appointed premier.
- 1948** Hakimi is succeeded by Abdul Hussein Hajir as premier; Hajir cabinet falls within months; Mohammad Maragheh Said is named premier.
- 1949** Constituent Assembly meets and ratifies amendment to the constitution.
- 1950** Gen. Ali Razmara becomes premier; Kurds revolt again.
- 1951** Razmara is assassinated; Hossein Ala becomes premier; Ala yields to Mohammad Mossadegh, who enjoys Communist and right-wing support.
- 1952** Anglo-Iranian Oil Company is nationalized; relations with Great Britain are broken; Mohammad Reza Shah Pahlavi dismisses Mossadegh.

- and replaces him with Qavam; the shah is forced to reinstate Mossadegh; Mossadegh assumes absolute control over government.
- 1953** Mossadegh attempts to suppress political opposition, adopting increasingly repressive measures; Mossadegh loses support in the Majlis and calls for referendum to abolish Majlis; Mossadegh is dismissed by the shah but defies dismissal and announces deposition of the shah, who flees the country; in a counter coup Gen. Fazlollah Zahedi rallies army behind the shah, arrests Mossadegh and supporters, and assumes premiership; the shah returns to capital; Mossadegh is sentenced to three years of solitary confinement for treason.
- 1954** New oil agreement is reached with a consortium of Western oil companies.
- 1955** Iran joins Central Treaty Organization; Zahedi resigns; Hossein Ala becomes new premier.
- 1957** Hossein Ala yields office to Manuchehr Eghbal.
- 1958** Television is introduced.
- 1960** Jafar Sharif-Imami is named new premier; Israel is recognized; Egypt breaks diplomatic relations over recognition.
- 1961** Imami resigns, and Ali Amini becomes premier; Pahlavi Foundation is established.
- 1962** Amini steps down, and Asadollah Alam becomes premier.
- 1963** Shah launches "White Revolution"; land reforms are approved by nationwide referendum; women are granted suffrage; Literacy Corps is organized.
- 1964** Iran joins the Regional Cooperation for Development (RCD), with Pakistan and Turkey as comembers.; Hasan Ali Mansour becomes premier.
- 1965** Mansour is assassinated, and Amir Abbas Hoveyda becomes premier; Majlis confers title of *aryamehr* on the shah.
- 1967** Coronation of the shah held in Tehran.
- 1969** Dispute with Iraq over Shatt al-Arab erupts into open conflict.
- 1970** Iran accepts UN mediation on claim to Bahrain.
- 1971** Persian monarchy's 2,500th anniversary is celebrated with pomp and splendor at Persepolis.
- 1973** Oil industry is nationalized; agreement with the Anglo-Iranian Consortium is renegotiated to provide full ownership; Iran joins Organization of Petroleum Exporting Countries (OPEC) oil price hike.
- 1975** Rial's link with the dollar is broken: exchange rate is tied to the International Monetary Fund (IMF) Special Drawing Right; Iran is declared a one-party state, with the Restakhiz as the sole political party.
- 1976** Police gunfights with purported Marxist terrorists and guerrillas during the year result in the deaths of at least 25 guerrillas and the capture of many others.
- 1977** Premier Hoveyda resigns at shah's request and is replaced by Jamshid Amuzegar; Maj. Gen. Ahmed Moqarreb is executed after being convicted of spying for the USSR.
- 1978** Nationwide anti-shah demonstrations and strikes, inspired by the exiled Ayatollah Khomeini, paralyze the country; shah names Shapur Baktiar as prime minister to conciliate the dissidents.
- 1979** Shah leaves the country. Khomeini returns from exile as Baktiar is ousted. An Islamic republic is proclaimed, with Mehdi Bazargan as prime minister but Ayatollah Khomeini as the strongman. Hundreds of pro-shah officials and soldiers are executed by firing squads under orders of summary Islamic Revolutionary Courts. Banks, insurance companies, and key industries are nationalized. Secessionist movements in Azerbaijan and Kurdish provinces are suppressed. National referendum approves new constitution, establishing an Islamic government with Ayatollah Khomeini as *faqih* and with the president and prime minister as head of state and government, respectively. Council of Guardians is established to monitor the Koranic acceptability of legislation. Islamic militants take over the U.S. embassy in Tehran and hold nearly 60 diplomatic personnel captive. Iranian government sides with the militants. United States retaliates by freezing Iranian assets.
- 1980** Abolhassan Banisadr is elected president under the new constitution. In a two-stage election to parliament, the hard-line Islamic Republic Party gains absolute majority; Mohammed Ali Rajai is named prime minister. The Revolutionary Council disbands itself as the Banisadr cabinet takes office. The former shah dies in Cairo after a long bout with cancer. Iraq revokes the Shatt al-Arab agreements concluded with the former imperial government of Iran and sends in troops to occupy territory that it had renounced under that agreement. Iran suffers early reversals and loses Khorramshahr to Iraq. U.S. attempt to rescue the hostages through a secret commando-style mission fails.

- 1981** The Muslim clergy accuse President Banisadr of inept leadership. Following long and torturous negotiations, Iran releases U.S. embassy personnel in return for release of frozen Iranian assets in the United States. Banisadr is ousted as president. Ayatollah Mohammad Hosseini Beheshti, four government ministers, six deputy ministers, 27 Majlis members, and 34 others are killed in bomb explosion at Islamic Republican Party headquarters. Prime Minister Mohammad Ali Rajai is named president and Mohammad Javad Bahonar prime minister. Rajai and Bahonar are killed in bomb blast. Seyyed Ali Khomeini is named president, Mohammad Reza Mahdavi-Kani prime minister. Madhavi-Kani resigns and is succeeded in office by Mir-Hosein Musavi.
- 1983** Communist (Tudeh) Party is banned.
- 1984** In parliamentary elections the clerical party retains control of the Islamic Consultative Assembly.
- 1985** Ali Khamenei is reelected president; Hussein Ali Montazeri is chosen as eventual successor to Ayatollah Khomeini.
- 1986** Iran begins the Wal-Fajr (Dawn) 8 offensive; the United States is reported to have been selling arms to Iran in exchange for Iranian assistance in releasing American hostages in Lebanon.
- 1987** The UN Security Council adopts Resolution 598, urging an immediate cease-fire between Iran and Iraq.
- 1988** Iran Air Airbus A300B is accidentally shot down by the USS *Vincennes* over the Strait of Hormuz; Iran announces its acceptance of UN Resolution 598.
- 1989** Ayatollah Khomeini dies. Then president Ali Khamenei is elected as Khomeini's successor; Rafsanjani is elected president.
- 1990** Iran and the United Kingdom restore diplomatic relations; the United States ends ban on imports of Iranian petroleum.
- 1991** Khamenei expresses hope for "an Islamic and truly popular government" in Iraq.
- 1992** More moderate supporters of Rafsanjani win elections over more fundamentalist forces.
- 1995** Iran urges the United Nations to end sanctions against its neighbor and adversary Iraq.
- 1997** A moderate reformer, Mohammed Khatami, wins the presidential election.
- 1999** Reformers win control of a majority of local seats in Iran's first municipal elections; some 1,400 are arrested for participating in prodemocracy demonstrations in Tehran.
- 2000** Reformers receive 70 percent of the vote and conservatives 30 percent in Consultative Assembly elections. Iran reportedly test-fires missiles. United States imposes sanctions on Iran for accepting missiles and related technology from other countries. Hard-liners shut down Iran's last reformist newspaper. Violence erupts as police shut down a pro-reform student rally at Khorramabad. Clerics issue a decree allowing women to lead female congregations.
- 2001** Mohammed Khatami is reelected president, winning 78 percent of the vote. Iran and Saudi Arabia sign an accord against terrorism, organized crime, and drug trafficking.
- 2002** George Bush offends Iran by describing it as part of the "axis of evil," along with Iraq and North Korea. Iran begins building a nuclear reactor at Bushehr.
- 2003** Students in Tehran protest the religious government. Shirin Ebadi wins the Nobel Peace Prize. Iran announces that it will suspend its uranium enrichment program and allow UN inspections of nuclear facilities. An earthquake destroys the city of Bam.
- 2004** Conservatives take over parliament after disqualifying most reformist candidates.
- 2005** Conservative Mahmoud Ahmadinejad is elected president. The IAGA reports Iran to the UN Security Council over its nuclear activities after Iran resumes its uranium enrichment program.

Basic Fact Sheet

OFFICIAL NAME

Republic of Iraq (Al-Jumhuriyah al-Iraqiyah)

ABBREVIATION

IQ

CAPITAL

Baghdad

HEAD OF STATE

President Jalal Talabani (from 2005)

HEAD OF GOVERNMENT

Prime Minister Ibrahim al-Ashaiqir al-Jaafari (from 2005)

NATURE OF GOVERNMENT

Transitional democracy

POPULATION

26,074,906 (2005)

AREA

437,072 sq km (168,753 sq mi)

MAJOR ETHNIC GROUPS

Arabs, Kurds

LANGUAGES

Arabic, Kurdish

RELIGION

Islam

UNIT OF CURRENCY

New Iraqi dinar

NATIONAL FLAG

Tricolor of, from top to bottom, red, white, and black horizontal stripes, with three five-pointed stars in green in the center of the white stripe; the phrase "Allahu Akbar" ("God is great") is printed between the stars in Arabic script.

NATIONAL EMBLEM

An Arab eagle with a shield engraved on its breast, with the motif of the flag on the shield. The eagle stands on a base on which is written, in Kufi Arabic script, "Republic of Iraq."

NATIONAL ANTHEM

"Hymn of the Republic"

NATIONAL HOLIDAYS

January 1 (New Year's Day), January 6 (Army Day), February 24 (Ramadan Revolution), March 21 (Nau Roy), May 1 (Labor Day), July 14 (National Day, Republic Day), July 17 (Ba'ath Revolution Day), various Islamic festivals

DATE OF INDEPENDENCE

October 3, 1932; on June 28, 2004, the Coalition Provisional Authority transferred sovereignty to the Iraqi Interim Government

DATE OF CONSTITUTION

March 8, 2004 (interim)

GEOGRAPHICAL FEATURES

Iraq, situated in the Fertile Crescent of West Asia, has an area of 437,072 sq km (168,753 sq mi). The coastline on the Persian Gulf runs 19 km (12 mi). Iraq has international boundaries with six countries, with a total length of 3,650 km (2,268 mi), of which the longest is with Iran (1,458 km; 905 mi). The other boundaries are with Turkey (352 km; 219 mi), Kuwait (240 km; 149 mi), Saudi Arabia (814 km; 505 mi), Jordan (181 km; 112 mi), and Syria (605 km; 376 mi).

The country is divided into four main topographical regions. The northeastern highlands are dominated by the Zagros Mountains, rising to 3,650 m (12,000

ft) near the Iranian and Turkish borders. This region is the homeland of the Iraqi Kurds and the site of the major oil fields. The upland between the Tigris River north of Samarra and the Euphrates River north of Hit is known as Al-Jazirah. Much of this region is desert. Southeast of Baghdad the Euphrates and the Tigris meander through a broad, flat delta interlaced by numerous irrigation channels and shallow lakes fed by the rivers in flood. A large area just above the confluence of the two rivers at Al-Qurna is a permanent marshland. Barren sandy and rocky deserts cover the south (Al-Hajara) and the west (part of the Syrian Desert). These extensive regions constitute 38 percent of the total land area.

Iraq

© Infobase Publishing

Both the Euphrates and the Tigris have defined the location and growth of human settlements in Iraq. The Euphrates (2,350 km; 1,460 mi) rises in Turkey, flows through Syria, and enters Iraq in the northwest. The Tigris (1,850 km; 1,150 mi) also rises in Turkey and is joined by numerous large tributaries, among them the Khabur, Great Zab, Little Zab, and Uzaym, before joining the Euphrates at Al-Qurna to form the Shatt al-Arab, which flows 185 km (115 mi) into the Persian Gulf. In many places the streambeds, being higher than the surrounding floodplains, must be contained by levees. Both rivers change their courses often.

Navigation is difficult in the middle and upper reaches, and the rivers are not significant traffic routes.

CLIMATE AND WEATHER

Iraq has hot, dry summers lasting from May to October and cold winters from December to March. Temperatures in the summer often exceed 40°C (120°F), especially during July and August. The mean minimum temperatures in the summer range from 22°C (72°F) to 28°C (82°F), with the lower end of the scale prevailing in Mosul and the upper end in Basra. Mean minimum temperatures in the winter range from -14°C (6°F) at Rutba in the western desert to 4.4°C (40°F) in the plains, while mean winter maximums range from 10°C (50°F) in the west and northeast to 15.6°C (60°F) in the south.

Most of the rainfall occurs from December through March. Mean annual rainfall ranges between 102 mm (4 in) and 178 mm (7 in) in the cultivable areas of the south. Rainfall is more abundant in the mountains, where it may reach 1,000 mm (40 in) annually. The foothills and steppes receive no more than 380 mm (15 in) per year.

The prevailing winds are the northwesterly *shamal*, a dry, cool wind, and the southeasterly *sharqi*, or sirocco, a dry, dusty wind that may last for several days and is often accompanied by dust storms.

Climate and Weather

Mean Temperature
Summer: 72°F to 82°F
Winter: 8°F to 60°F
Average Rainfall
South: 4 in to 7 in
Mountains: 40 in
Foothills: 15 in

FLORA AND FAUNA

Iraq has a variety of terrains and thus supports many different plant and animal species. The Zagros Mountains are covered with forests of oak, hawthorn, maple, and pistachio trees and various alpine plants. To the west and southwest are deserts with plants such as storksbill, rock-rose, and catchfly. The central plain is covered with grass. The southeast is marshy; plants there include rushes, reeds, buttercups, and saltbush. Iraq's animal population has been reduced by millennia of human settlement, but there are still gazelles, wildcats, hyenas, and boars in some areas as well as birds such as buzzards, vultures, geese, ducks, and partridges. Reptiles live in the deserts.

ETHNIC COMPOSITION

Arabs constitute about 80 percent of the population. Within the Arab group are two relatively unassimilated ethnic groups: the Bedouins, the nomads of the desert, and the sedentary Marsh Arabs of the lower Tigris and Euphrates Delta. The Kurds, the largest ethnic minority, constitute at least 15 percent of the population and live in the northern mountains, where they retain their tribal organization. Intermittent efforts by Kurds to wrest some measure of autonomy from the central government in Baghdad resulted in inconclusive civil wars followed by truces. The 1958 constitution declared that Iraq was composed of two nationalities, Arab and Kurd, and Kurdish was made a co-official language and medium of instruction in Kurdish areas. Iraqi Kurds are divided into three groups: the Badinan, the Suran, and the Baban. Al-

though nomads by tradition, the majority of the Kurds are now settled agriculturalists or herdsmen, but increasing numbers have moved to cities, such as Mosul, Kirkuk, Sulaimanya, and Baghdad.

Smaller ethnic minorities account for less than 5 percent of the population. They include Turkomans, Persians, Lurs, Assyrians, Armenians, Yazidis (sometimes called devil worshippers), Shabaks, Sabaeans (or Mandaeans), and Sarliyahs. The once-prosperous Jewish community, numbering over 100,000 in the 1930s, has now dwindled to around 2,500.

LANGUAGES

Arabic is the official language of Iraq and the mother tongue of about four-fifths of the people. As in other Middle Eastern countries, Arabic exists in three forms. The classical Arabic is used for religious purposes; Modern Standard Arabic is used for writing and in the media, political communication, and education; and spoken Arabic, described as the Mesopotamian dialect, with its two subdialects, Qeltu and Gelet, is used by the common people. As part of its general Arabization policies, Saddam Hussein's government favored the use of Arabic to the exclusion of all other languages.

Kurdish, an official language in Kurdish regions since 1966, is spoken by 19 percent of the population, including Kurds, Shabaks, Sarliyahs, and Yezidis. Kurdish exists in two dialects: Kurdi and Kermanji. Aramaic, the pre-Islamic language of Mesopotamia, still survives in speech islands among the Assyrians and as the liturgical language of the Chaldeans and the Jacobites. An Aramaic dialect is the sacred language of the Mandaeans. Some of the smaller ethnic groups retain their own vernaculars, although using Arabic for intergroup communication. These vernaculars include Turkoman, Lur, Persian, and Armenian.

English is the most common European language used by the educated elite and is employed in institutions of higher learning and in scientific publications.

RELIGIONS

Islam is the state religion, adhered to by about 97 percent of the population, including Arabs, Kurds, Lurs, and Turkomans. But Islam, far from being a monolithic structure, is deeply divided between the Sunni and the Shia (also known as Shiite). Iraq is the only Arab country in which Shia form a majority of the population. With the addition of non-Arabs such as Turkomans, Iranians, and others, the Shia constitute about 63 percent of the total population and from two-thirds to three-fourths of the Arab population. The Sunni, with a higher literacy rate than the Shia, historically dominated the government

and the bureaucracy; however, with the introduction of democratic elections, the Shia majority look to have a substantial measure of control. Almost all the members of the revolutionary governments since 1958 were Sunni. The non-Arab Kurds are also Sunni, although their religious practices differ in some respects from those of the Arab Sunni.

The position of the non-Muslim minorities has always been a precarious one. Many non-Muslims, principally Jews and Christians, left Iraq under previous regimes. Members of religious minorities have expressed fear that they would again face persecution if Iran were to impose an Islamic regime in Baghdad.

Christians constitute about 3 percent of the population. Their freedom of worship in churches of established denominations is legally protected, but they are not permitted to proselytize or to hold meetings outside church premises. Convents and monasteries exist, and some new churches are constructed, in some cases with government financial support. Although Christians sometimes allege discrimination in education and jobs, adherence to their religion, for many, has not prevented them from obtaining wealth and professional advancement.

Though insignificant in numbers, three other religious groups add to the religious diversity of the country. The Yazidis are a Kurdish-speaking group calling themselves *Dasnayi*. They have achieved some notoriety as devil worshippers since their rites propitiate Satan in the form of a peacock. The Sabaeans or Mandaeans, also known as Christians of St. John, follow an eclectic creed borrowed from many religions. Since their tenets stress regular immersion in water, they always dwell near riverbanks. They also have a reputation as silversmiths. The Jews, who once dominated the professions and commerce, have all but disappeared under the pressures of the Arab-Israeli conflict.

Religious Affiliations

Shia Muslim	16,300,000
Sunni Muslim	9,000,000
Christian or Other	780,000

HISTORICAL BACKGROUND

Iraq is the home of some of the world's most ancient civilizations. Known as Mesopotamia, the Land between the Two Rivers, it is identified with Ur of the Chaldees, where Abraham lived in biblical times. Recorded history began with the Sumerians, who flourished around the third millennium B.C.E. Sumerians were followed by the Akkadians (2400 B.C.E.) and the Semitic Babylonians (2000 B.C.E.) and Assyrians (1800 B.C.E.). The zenith of Babylonian culture is represented by Hammurabi (1792–

1749 B.C.E.), whose name is associated with the world's first legal code. Under the Assyrian rulers, with the fabled Nineveh as their capital, the empire encompassed all of the Middle East, including Egypt.

Assyrian power was destroyed by the Scythians in 606 B.C.E. Nebuchadnezzar rebuilt the city-state of Babylon in the seventh century B.C.E., but it fell to Cyrus the Achaemenian (Persian) in 539 B.C.E. Persian power in turn was destroyed by the Greeks under Alexander the Great, who himself died at Babylon in 323 B.C.E. The Seleucids, the Greek rulers who followed Alexander, built their capital, Seleucia, on the Tigris south of modern Baghdad. They were overthrown by the Parthians in 138 B.C.E.

Parthian rule lasted until the Arab conquest in 637 C.E. Under the Umayyid caliphs, Mesopotamia was a province of the Islamic empire, but the Abbasids, who followed them, made Baghdad their capital. Under Caliph Harun al-Rashid and his son Ma'mun, Baghdad became wealthy and powerful. In the 13th and 14th centuries the country was laid waste by the Mongols and Tamerlane, and it never recovered. In 1534 the Turkish sultan Süleyman the Magnificent captured Baghdad, and except for a brief period of Persian control Iran remained an Ottoman province until the end of World War I.

England established a consulate in Baghdad in 1802 and wielded considerable influence throughout the 19th century. In World War I, when the Ottoman Empire sided with Germany, the British occupied much of southern Iraq, including Basra and Baghdad. A nationalist movement blossomed during and after the war, but the San Remo Conference of 1920 made Iraq a British mandate, with virtual colonial status. In August 1921 Amir Faisal ibn Ausayn, son of a Mecca royal figure, became king of Iraq. Over nationalist opposition an Anglo-Iraqi treaty was signed in October 1922 and renewed in 1930. In 1932 the mandate ended, and Iraq entered the League of Nations.

Relations with England deteriorated in the 1930s, largely because of what was perceived as Britain's pro-Zionist position. German influence increased, notably through the fascist officers' group Golden Square. A military coup in 1941 led to a brief pro-Nazi regime, but English forces occupied Basra and Baghdad in May 1941, holding those areas until the end of the war. Cooperating with the Allies, Iraq declared war on the Axis powers in 1943.

Iraq's post-World War II history has been marked by nationalism, pan-Arabism, efforts to expand territorially, and a variety of domestic factors. These include almost constant conflict between the central government and the Kurds in the north; attempts to secure and enlarge petroleum exports, the mainstay of the economy; and autocratic, centralized governments. Nuri as-Said, a corrupt, pro-British prime minister, governed sporadically from 1945 to 1958. He was swept aside by a growing educated,

nationalist elite component. Nuri and the royal family were assassinated in July 1958.

The new government was headed by the Free Officers under Gen. Abd al-Karim al-Qasim, but a split arose between nationalists, who backed the Egyptian leader Gamal Nasser's Pan-Arabism, and Communists, who opposed it. In a February 1963 coup nationalists and Pan-Arab Baathists took control and violently purged the left. They also undertook a five-year campaign against Kurdish separatists. Another coup in July 1968 by Baathist officers led by Ahmed Hassan al-Bakr turned toward the Soviet Union, owing partly to U.S. support for Israel in 1967.

The Kurds, under Gen. Mustafa al-Barzani, resisted most Baghdad governments from 1945 to 1965 and, with Iranian help, were intermittently in revolt from 1961 to 1975. A 1970 settlement that included Kurdish autonomy broke down over the distribution of petroleum revenues and the exclusion of Kirkuk from Kurdistan.

In July 1979 al-Bakr resigned from both party and government offices. He was succeeded by Saddam Hussein, who had generally been considered the strongman of the regime. Hussein launched an invasion of Iran in September 1980, beginning a war that dominated Iraqi life through 1988. Among the reasons for the conflict were the climate of confusion in Tehran in the wake of the Islamic revolution and the perceived weakness in Iran's recently purged army. Iraq also attacked as a response to Iran's announced goal of exporting its revolution.

The war was intended as a short campaign that would wrest territory from Iran, giving Iraq, among other things, increased access to the Persian Gulf. It became a devastating eight-year conflict, however, causing about one million casualties on each side. Early Iraqi incursions were halted, and Iran was on the offensive for most of the war. By 1988 Iraq regained the momentum, and in the summer of that year Iran agreed to a UN cease-fire, although permanent peace was not established until 1991. In the end Iraq gained no territory and was left with a \$60-billion war debt.

Within the Arab world Jordan, Kuwait, and eventually Egypt were Iraq's chief allies and suppliers in the war. Beginning in 1984 the United States and Soviet Union, both officially neutral, began supporting Iraq. By late 1987 the Soviets had given Iraq an estimated \$10 billion in military aid.

Domestically, the war hurt Iraq in several ways. The disruption in Gulf oil exports reversed the economic upsurge started in the 1970s, which had been due largely to petroleum sales. To retain some exporting capacity, the government undertook such projects as expanding an existing oil pipeline through Turkey and constructing two pipelines through Saudi Arabia. Austerity measures were enacted, and much expenditure was channeled to war costs.

Iraq invaded and conquered Kuwait on August 2, 1990, touching off a series of events that would have major ramifications for the country. Eventually, these would include the large-scale destruction of the Iraqi infrastructure, revolts by both the Kurds in the north and the Shia in the south, and the surprising survival of the Hussein regime.

The invasion of the tiny emirate seems to have been motivated by an array of factors, which in retrospect included miscalculations of international response. President Hussein was angry at Kuwait's refusal to forgive the multibillion-dollar debt Iraq ran up during the Iranian war. He also apparently hoped to turn Iraq into a regional superpower with the economic might to match its military clout: Iraq and Kuwait together would control 20 percent of the world's oil supply.

Led by the United States, much of the world community, under the aegis of the United Nations, responded quickly to the invasion. Originally intended as a defense against a possible Iraqi move on the oil fields of Saudi Arabia, by January 1991 the Allies had an offensive force of about 500,000 troops and 2,000 tanks stationed in the region. While the United States accounted for the bulk of the force, 28 countries participated in the Persian Gulf War as U.S. allies. These included the major Western nations and Egypt, Syria, Morocco, Saudi Arabia, Bahrain, and the United Arab Emirates.

On August 8 Hussein decreed the annexation of Kuwait as Iraq's 19th province and stationed large portions of the army there. He also used Western citizens trapped in Iraq and Kuwait as hostages against possible Allied attacks. Perhaps 2,000 such people were held as "human shields" at vital installations, although all foreigners were permitted to leave by December. Hussein's effort to link occupation of Kuwait with Israeli occupation of the West Bank and Gaza drew some support in the Arab world, notably in Jordan. Diplomatic efforts to solve the crisis floundered, mostly because Iraq would not leave Kuwait.

From August to November 1990 the United Nations, at the behest of the United States, passed a series of resolutions aimed at achieving the withdrawal of Iraqi forces from Kuwait. Among these were strict economic sanctions against the Baghdad regime. On November 29 the Security Council authorized the use of force after January 15, 1991, to evict Iraqi forces from Kuwait.

The Allies launched the Persian Gulf War, primarily an air war, against Iraq and occupied Kuwait on January 16–17. Before the war ended on February 28, about 110,000 missions were flown, dropping 88,500 tons of munitions. Among the types of facilities destroyed were military, petroleum, industrial, transportation, communications, power, and water.

The Iraqi military was overwhelmed. Its major response was Scud surface-to-surface missile attacks against Saudi Arabia and Israel, launched at the latter in an attempt to pry the Arab members away from the coal-

tion. While Iraq launched a total of 72 Scuds, most were destroyed by American antimissiles, and those that fell caused little damage. They also failed to draw Israel into the conflict.

From February 24 to 28 the Allies launched a major ground offensive, which succeeded in forcing Iraqi troops to retreat from Kuwait. The Allies also drove deep into central Iraq and destroyed several divisions of the Republican Guard, the elite units. On April 6 Iraq accepted formal UN peace terms. These included the payment of reparations to Kuwait and the Allies as well as supervised destruction of chemical, biological, and nuclear weapons. A UN survey conducted in the immediate aftermath of the war called the damage in Iraq "near apocalyptic." It was estimated that it would take 15 years and billions of dollars to rebuild the Iraqi infrastructure. There were also thousands of civilian casualties.

Uprisings by Kurds and Shia began within days of the Allied victory. In the south Shia fighters had the initial edge in Basra, An-Najaf, and Karbala, but troops loyal to Hussein crushed the rebellion by mid-March. Kurdish guerrillas claimed by March 13 that they controlled three-fourths of Kurdistan with 90,000 soldiers. Government forces successfully counterattacked, however, and by early April hundreds of thousands of Kurds fled to Turkey and Iran. The Allies and then the United Nations set up "safe zones" for Kurds in the north. By early June 1991, despite much friction, the refugees seemed to be returning.

Internally, Hussein made certain moves following the defeat by the Allies to preserve the regime. These included promises of democratic reforms and the appointment as premier of Saddam Hammadi, a Shia who had served as foreign minister from 1974 to 1981. Beyond that the president fell back on his usual policy of placing relatives in key posts. His cousin Ali Hassan al-Majid was made interior minister, and Hussein Kamal al-Majid, the president's son-in-law, took over as minister of defense.

Threats to Hussein's power, it seemed, might come only from outside. The rebuilding process following the Gulf War was enormous. Damaged relationships with former creditors, especially Kuwait and Saudi Arabia, made it difficult to secure loans for reconstruction. The economic crisis in Iraq worsened in 1995 and 1996. Although the prewar sanctions remained in place, in April 1995 the UN Security Council voted unanimously to allow Iraq to sell \$2 billion worth of oil in order to buy medicine and food on the international markets. That amount was increased in 1998 to \$5.2 billion. Meanwhile, Iraq's interference with UN weapons inspectors prompted intermittent air strikes by the United States and Britain. In 1999 Hussein announced that Iraq would no longer comply with UN inspection regulations. Through 2001 Iraq challenged the aircraft patrolling the "no-fly zones" over southern Iraq, and British and U.S. planes struck Iraqi missile launch sites and other targets. That May, Sad-

dam's son Qusay was elected leader of the ruling Baath Party in what appeared to be an effort to groom him as Saddam's successor.

In April 2002 Iraq suspended oil exports for 30 days to protest Israeli incursions into Palestinian territories; it resumed exports when other Arab countries failed to suspend their own exports. That September, George W. Bush, citing both suspected Iraqi possession of weapons of mass destruction (WMDs) and alleged connections between the Hussein regime and al-Qaeda, the group responsible for the September 11 terrorist attacks in the United States, told the United Nations that Iraq presented a grave danger and that the United States would take preemptive military action whether or not the international community approved. Weapons inspectors led by Hans Blix returned to Iraq that November to resume their search for WMDs, which the Bush administration was convinced existed in spite of a lack of supporting evidence. Likewise, no evidence ever suggested that al-Qaeda and Saddam Hussein had any connections. Blix claimed that Iraq was cooperating and that his team needed more time to complete inspections, but the inspectors were forced to evacuate on March 17, 2003, after Bush gave Saddam and his sons 48 hours to leave Iraq. They did not leave, and on March 20 U.S. forces began bombing Iraq.

By April 9, 2003, U.S. forces had captured Baghdad, and fighting and looting were occurring all over the country. In May the United States began developing an administration for the country and lifting economic sanctions, declaring the war over. It abolished the Baath Party and ousted all former leaders. Saddam's two sons were killed in July. Violence continued throughout the country as insurgents fought against the U.S.-led coalition forces. The situation deteriorated through the fall, with U.S. soldiers killed constantly and the Iraqi death toll—military and civilian alike—also rising. On December 14, U.S. soldiers captured Saddam Hussein, who had been hiding for months.

Fighting continued through 2004, with Shia militias led by the radical Islamic cleric Muqtada al-Sadr fighting to oust the coalition forces. U.S. forces besieged the city of Fallujah for a month; hundreds were killed. In June the United States handed leadership over to an interim government under prime minister Iyad Allawi. Saddam was transferred to Iraqi custody and was tried on charges of crimes against humanity beginning in October 2005. U.S. soldiers, meanwhile, continued fighting against militia in Fallujah and Najaf.

On January 30, 2005, eight million Iraqis voted in elections to choose a Transitional National Assembly, an important step on the way to establishing a new government. Earlier that month U.S. military courts began trying American soldiers accused of torturing Iraqi prisoners at Abu Ghraib Prison; several soldiers were found guilty. The Shia-led United Iraqi Alliance won parliamentary election in December.

LIST OF MODERN RULERS

President	
1958–63	Muhammad Najib ar-Ruba'i
1963–66	Abd as-Salam Arif
1966	Abd ar-Rahman al-Bazzaz (acting)
1966–68	Abd ar-Rahman Arif
1968–79	Ahmed Hassan al-Bakr
1979–2003	Saddam Hussein
2003–04	Interim nine-member collective (rotating) presidency
2004–05	Ghazi Mashal Ajil al-Yawer
2005–	Jalal Talibani
Prime Minister	
2004–05	Iyad Allawi
2005–	Ibrahim al-Jaafari

CONSTITUTION

Until 2003 the basis of Iraqi government was the constitution of 1958, as amended in 1964, 1968, and 1972. The constitution defined Iraq as a popular, democratic, and Islamic state founded on socialism. The supreme authority in the state was vested in the Revolutionary Command Council (RCC), which legislated by decree. In early 1991 the council, chaired by Saddam Hussein, had eight members.

Under Saddam Hussein the presidency became the locus of power, with all the principal state offices held by him. Since taking power in 1979 Hussein usually held the posts of president and head of state, prime minister, defense minister, commander in chief, chairman of the RCC, and secretary-general of the ruling Baath Party.

The responsibility for the formulation and implementation of executive policies was vested in the Council of Ministers. Each ministry consisted of a number of directorates-general subdivided into sections. In theory, legislative power was shared between the RCC and the National Assembly. However, the assembly had no real power. The real source of stability in Iraq was not so much ideology—although Pan-Arabism was officially touted as one—but an alliance formed between officers and civilians who were linked by ties of blood or locality.

The transitional government signed an interim constitution, the Transitional Administrative Law, on March 8, 2004. The Iraqi Interim Government (IIG) drafted a new constitution that was approved by voters in October 2005. The IIG consisted of a president, two deputy presidents, a Council of Ministers, an Interim National Council, and the Judicial Authority.

PARLIAMENT

Under Saddam's regime, the National Assembly (Majlis al-Umma) was a 250-member body (with 30 seats re-

served for the Kurdish region remaining vacant) elected by universal suffrage for four-year terms. The Kurdish National Assembly was a 115-member regional assembly representing the northern autonomous regions of Erbil, D'hok, and Sulaimaniya and elected by proportional representation. A total of 100 seats were reserved for Kurds, five for Assyrians, and 10 for Turkmen.

As of early 2005 the Iraqi Interim National Council was serving as a legislative branch, pending the creation of a new constitution.

POLITICAL PARTIES

While a 1991 law permitted the formation of political parties not based upon religion, race, or ethnicity, Iraq was fundamentally a one-party state under Saddam Hussein, with the Arab Baath Socialist Party, founded in 1947, as the dominant political institution. Baathist ideology was a mixture of socialism and ultra-Arab nationalism; its power base was the minority Sunni community. Its limited membership reflected the elitist character of the movement. The United States banned the Baath party in 2003.

The outlawed, Iranian-supported Da'wa (Islamic Call) Party was a major target of persecution. It claimed responsibility for violent acts against the government in Iraq and abroad. Since 2003 over 300 political parties have appeared in Iraq. The largest and most coherent are the Supreme Council for the Islamic Revolution in Iraq, the Da'wa Party, the Patriotic Union of Kurdistan, the Kurdistan Democratic Party, and the Iraqi Islamic Party.

LOCAL GOVERNMENT

The country is divided into 18 governorates (*liwa* or *muhafazat*), each administered by a governor (*mutasarrif*) assisted by a Provincial Council. The desert areas are divided into three separate districts, or territories, each under a director: the Jazirah Desert (Al-Badiyah al-Jazirah), the Northern Desert (Al-Badiyah al-Shamaliyah), and the Southern Desert (Al-Badiyah al-Janubiyah).

Each province is divided into a number of districts (*aqdiya*), each under a deputy governor or district officer (*qaimmaqam*). They are further subdivided into subdistricts, or *nawabin*, each administered by a subdistrict officer, or *mudir*. Though the *mudir* is the lowest official in local government, the final link is provided by the *mukhtar*, the leader of a village (*qarya*) or town quarter (*maballa*).

Cities and towns (*madina* or *balad*) are administered by municipal councils (*baladiyah*), each presided over by a mayor (*rais al-baladiyah*), who is an official appointed by the Ministry of Interior. The cities and towns are divided into five classes: superior (Basra, Mosul, and Kirkuk), first, second, third, and fourth. Baghdad enjoys special status as the national capital and is administered by an authority known as governorate of the capital (*amanat al-*

asimah), presided over by a mayor known as the guardian of the capital (*amin al-asimah*). Unlike territorial units, municipalities levy their own taxes.

LEGAL SYSTEM

The legal system under Hussein was based on the Baghdad Penal Codes, formulated by the British but drawing on Ottoman and French sources. These codes were amended but never superseded. Iraqi courts have typically used a moderate interpretation of Islamic law, giving women equal rights in divorce, land ownership, and suffrage. Under the Iraqi Interim Government, the judiciary has based its decisions on civil and Islamic law and the Transitional Administrative Law.

HUMAN RIGHTS

Under Hussein, Iraq was a not-free state. The government was authoritarian, the press was severely restricted, all forms of dissent were considered threats to the state, and there was no freedom of religion or assembly. Religious and ethnic minorities were severely persecuted. Political parties opposed to the leading Baathists were not tolerated. The government was known to execute prisoners en masse and to assassinate opponents of the state. Since the war began, some accusations of human rights violations have been directed at foreigners, such as the American soldiers who abused Iraqi prisoners at Abu Ghraib.

FOREIGN POLICY

The Iraqi Interim Government has resumed Iraq's interaction with the international community, rejoining the United Nations, the Arab League, OPEC, and the Organization of the Islamic Conference (OIC). It has reestablished full diplomatic relations with the United States and other nations. The United States has promised to help Iraq establish a stable democratic state, reconstruct the infrastructure, and help train its security forces.

DEFENSE

Most of the Iraqi military's equipment was destroyed or looted in 2003 and 2004. The Coalition Provisional Authority began recruiting a New Iraqi Army (NIA) to defend the nation, with no provisions for aggressive warfare. The Iraqi Interim Government created a new Ministry of Defense in March 2004; they renamed the NIA the Iraqi Armed Force—Army. They planned to form a new Army Air Corps and a Coastal Defense Force. The Iraqi Civil Defense Corps was made subordinate to the Ministry of Defense and the Iraqi Armed Forces and renamed the Iraqi National Guard. The

new army's mission is to stop domestic counterinsurgency and protect the nation from external threats.

ECONOMY

Iraq has historically made the vast majority of its income from oil. It has ample land and water, but nevertheless has long imported most of its food. Iraq's invasion of Kuwait in 1990 and subsequent sanctions imposed by the international community reduced revenues to the point that the United Nations began an Oil for Food program in 1996 to help average Iraqis. Under this program Iraq was allowed to export enough oil to buy food, medicine, and the necessary supplies for its infrastructure. The government, however, continued to funnel most of the nation's resources into the military and the pockets of a few influential families, leaving most Iraqis desperately poor.

The war seriously damaged Iraq's economy. Most of the nation's central economic administration was shut down in 2003. Gross domestic product (GDP) growth that year was negative 21.8 percent; however, growth was 52.3 percent in 2004. That year the interim government began rebuilding the oil industry, but the United Nations predicted that Iraq would need some \$55 billion between 2004 and 2007 to fully rebuild the nation's facilities. International donors have pledged much of this sum.

ENVIRONMENT

Iraq suffers from growing air and water pollution, especially in urban areas, where emissions are a growing concern. While Iraq would seem to have a sufficient water supply, the country has a lack of potable water. Deforestation, soil erosion, desertification, and degradation caused by salinization are also problems. In southern Iraq, as a result of the Second Persian Gulf War, the release of enormous volumes of smoke and other pollutants into the atmosphere and the contamination of soil due to destruction of oil wells, oil storage facilities, refineries, petrochemical industries, and electric power stations took place. The government has drained the inhabited marshes near An-Nāsiriyyah, displacing Marsh Arabs and threatening native wildlife. Iraq wants to develop the Tigris and Euphrates river system, but activity must be negotiated with Turkey, which holds the upstream portions of those rivers.

LIVING CONDITIONS

Living conditions have deteriorated since the Second Gulf War began, and many people have lost their homes to bombing. Stone and concrete are the main building materials. Stone walls surround many houses; flat roofs are common. In the summer, many people sleep on the roofs of their houses. Women use roofs to dry their laundry. Iraqi cities have become crowded, and many people live in apartments. Most cities and towns are located next to rivers to supply water. Before the war started, Iraq had good transportation infrastructure, with excellent roads and ample bus services. Because the weather is often quite hot, many people get up early in the morning to start work and then take a nap in midafternoon after their work is finished.

HEALTH

Iraq's government provides a health-care system that furnishes care free of charge; there are also private facilities for citizens who want to pay for them. Facilities were good until the First Gulf War and the subsequent sanctions; the national vaccination program had reduced the incidence of measles, diphtheria, and tuberculosis. Iraqis also received paid maternity leave and sick leave. Since the early 1990s, however, Iraq's health-care system has lacked supplies and personnel, which has resulted in a resurgence of infectious diseases. Typhoid, cholera, dysentery, and tuberculosis are once again common. The infant mortality rate had risen to over 50 deaths per 1,000 births in 2005. Food shortages have caused malnutrition. In the absence of medical facilities, people in the countryside and the cities have continued using folk remedies, such as chamomile to calm nerves and orange blossom water to prevent heart attacks.

FOOD AND NUTRITION

Iraqi cuisine follows the Arabic tradition, using exotic spices and many vegetables along with rice, lamb, goat, mutton, chicken, and occasionally beef. Cooks use oil or gas stoves, though microwaves have become common in the cities. Main dishes include kebabs, stuffed lamb, and tripe. Flat bread accompanies most meals. Iraqis make many pastries and puddings, and they also enjoy fruit. Muslims do not drink alcohol. They do drink copious amounts of sweet tea and strong black coffee; soft drinks are common.

Since the early 1990s Iraq has had difficulty feeding its people. Food has been rationed since economic sanctions began in 1991, and in some places the food supply has been grossly inadequate, despite international assistance. The war did not improve this situation.

STATUS OF WOMEN

Since its founding outside Iraq in 1947, the Baath Party was committed to the equality of the sexes. The Baath Party's Ninth Party Congress report of 1983 reiterated that the emancipation of women is a "natural and human right" and an "essential condition for economic, social, and cultural development." A series of laws since the Baath Party came to power in 1968 steadily improved the status of women. Such laws protected women from exploitation in the workplace; granted subsidized maternity leave; permitted women to join the regular army, Popular Army, and police forces; and equalized women's rights on divorce, land ownership, taxation, suffrage, and election to the National Assembly. In the 1970s the government imposed legal penalties on families who opposed sending their women to literacy schools and on men who were seen harassing women.

The General Federation of Iraqi Women (GFIW) was established in 1969, the Baath regime's first year in power, to promote the government's policies toward women. Membership in the GFIW did not require affiliation with the Baath Party. The GFIW has organized conferences on women's issues, established training courses for women, implemented programs to eradicate illiteracy, undertaken civilian war relief activities, and administered nurseries. It drew up a four-year plan (1983–86) to encourage women to work outside the home and has opened four employment offices in Baghdad for woman graduates.

In the 1984 elections for the National Assembly, 32 percent of the seats were won by female candidates. The war with Iran from 1980–88 accelerated the government's drive to elevate the status of women, and some Iraqis believe that it permanently broke cultural barriers to acceptance of women in traditional male roles. With official encouragement, women became increasingly visible as architects, construction engineers, oil engineers, air traffic controllers, factory and farm managers, and air force pilots. In 1999 women represented about 19 percent of the total workforce. About 39 percent of the female labor force was employed in agriculture, about 52 percent in the service industry. They accounted for about one-third of the professionals in education and health care.

Despite these achievements, women are still supposed to be meek and quiet when out with their husbands.

WORK

The war disrupted the world of Iraqi work. As of early 2005 there were no figures available on unemployment or employment by sector. Before the war many Iraqis worked in factories, making clothing or electronics. Professionals worked in medicine, teaching, or engineering. The government encouraged women to work outside the home, especially as doctors or teachers. The army employed a large number of people.

The oil industry has historically employed many citizens, and in the 1980s it lured many Iraqis away from their traditional rural occupations of farming and herding. Since the institution of sanctions in the early 1990s, many of those same people returned to the land, where they at least had the possibility of growing food to feed their own families. Farmers grow dates, wheat, barley, rice, vegetables, nuts, and fruits such as apricots, pomegranates, and figs. Herders raise sheep and goats for milk, meat, wool, and skin. Some Iraqis breed Arabian horses.

EDUCATION

Education in Iraq is compulsory for children ages six to 12 and free for citizens between the ages of six and 18; university education is also free. Schooling consists of 12 years, as divided into six years of primary school and six years of secondary school, which consists of a three-year intermediate course and a three-year college preparatory course. Primary schools are coeducational, while secondary schools are segregated by sex.

The majority of the schools are run by the government, but despite the reforms of the mid-1970s, private schools continue to function at both primary and secondary levels. Most of the private primary schools are operated by Muslim religious organizations; their share of primary-school enrollment was 1 percent in 1983. Private secondary schools, on the other hand, most maintained

by Christian denominations, had a 24 percent share of secondary-school enrollment. The private-school curricula conform to government standards. Some subjects are required to be taught by teachers appointed by the Ministry of Education.

Female education has made rapid strides in recent years, and in 1985, the most recent year for which data is available, girls accounted for 45 percent of the enrollment at the first level and 35 percent at the second level.

Educational administration is centralized in the Ministry of Education. The ministry's eight departments, each headed by a director-general, are concerned with general education, research, inspection, vocational education, administration, cultural relations, Kurdish studies, and physical education. The Council on Social and Educational Development functions as a consultative body within the ministry. The country is divided into 15 educational districts, each under a director. Construction and maintenance of schools are the responsibilities of the provincial governors.

Higher education is provided by eight universities and numerous vocational and technical colleges.

School enrollment fell in the early 1990s, and by 2003 only 40 percent of the population was literate. The war closed many schools and made it impossible for children to attend the ones that remained.

SCIENCE AND TECHNOLOGY

As of early 2005 Iraq did not have a well-developed technological infrastructure. Telecommunications equipment was severely damaged during the war in 2003, and there was little or no telephone service, either ground lines or cellular. Very few people have computers or use the Internet.

MEDIA

The media has been vigorous and free since Hussein was ousted. In early 2005 there were more than 100 newspapers and magazines published in Baghdad, and there were numerous television and radio stations. The new Iraqi Public Broadcasting Service took control of broadcasting. Numerous foreign stations were broadcasting in Iraq; in 2004 there were approximately 80 private radio stations on the air. Iraqis who can afford them have bought satellite dishes, which were banned under Hussein. Al-Jazeera and Al-Arabiya are popular stations among satellite viewers. The various rival factions all run their own radio stations, broadcasting content that espouses particular political or religious views. There have been some cases of journalists being attacked by insurgents or the coalition forces.

CULTURE

Iraq has produced artists for thousands of years. Assyrian and Babylonian artists were decorating temples and making statues as early as 2000 B.C.E. Ancient artworks were housed in the Iraqi Museum in Baghdad, though they suffered damage during the war. The ruins of the city of Babylon still exist and have been the site of a yearly art festival. Islamic visual art prohibits the use of human figures, so contemporary and classical Iraqi artists employ floral and geometric designs and calligraphy to create images.

The Arabs have maintained their poetic traditions; poetry is still esteemed as an art form, among Kurds as well as Arabs. Popular poets include Lamia Abbas Amara, Muhammad Mehdi El Jawahiri, and the Kurds Mawlawi and Goran. The novelist Dhu al-Nun has written innovative modern works. People still listen to folk music on traditional instruments, which include the *oud*, a kind of

lute, the *def*, a tambourine, and the *rebaba*, a bowed string instrument.

Iraqis celebrate religious festivals throughout the year. Ramadan is the month of fasting and is marked by elaborate dinners after dark during the month itself and then a large celebration at the end. Id al-Adha, the Feast of the Sacrifice, is observed by sacrificing lambs and giving the meat to the poor. Shia Muslims celebrate the birthdays and deaths of important religious leaders. Kurds have their own festival called Nau Roy, which marks the first day of spring and is celebrated with bonfires, poetry, picnics, parades, singing, and dancing.

FOLKLORE AND MYTHOLOGY

The Sumerian epic *Gilgamesh* and tales from Babylon and Assyria predate the Bible. *Gilgamesh* was written around 3000 B.C.E. It tells the story of the hero Gilgamesh creating a civilization and fighting off gods and monsters; it includes a flood story similar to the one told in the book of Genesis. Arabs introduced poetry to Iraq when they arrived in the seventh century C.E.; the *Book of One Thousand and One Nights*, or simply *Arabian Nights*, a collection of folktales, was compiled between 1000 and 1500.

ENTERTAINMENT AND RECREATION

Iraqis spend much of their free time visiting family and friends. At home they watch television, listen to music on the radio, and read voraciously; most people own many books by Iraqi and Arabic writers as well as translations of Western books. Girls and women sew and embroider. Chess is a popular game; Eman al-Rufei is a chess grand master and has competed in the World Chess Olympiad.

ETIQUETTE

Iraqis often visit one another unannounced and expect their friends and relatives to do the same. Wives almost

always cook extra food in case someone drops by; if a guest is expected, the hosts will prepare elaborate dishes for the occasion. People eat their evening meal around eight o'clock. At celebrations Iraqis show their appreciation for singers by hugging and kissing them and placing banknotes on the singer's hands or head.

FAMILY LIFE

Iraqis organize their lives around family unity and try to preserve family honor at all costs. Men consider themselves superior to women, but women make most decisions involving the house and children. More women have been working outside the home in recent years. Young people usually live with their parents until they marry. Traditionally, extended families lived together in the countryside; though that still occurs, most urban Iraqis live in nuclear family units.

Most Iraqis marry after they finish school or university; arranged marriages are common, though couples usually meet one another before weddings. A groom gives his bride a dowry of money, jewelry, and furniture. Wives keep their own family names. Iraqis like children, and many have large families, though couples in the cities are having fewer children. Extended family members and neighbor adults consider it their responsibility to correct all children's behavior.

PERSONAL APPEARANCE

Iraqis dress modestly, covering most of their bodies. Most women cover their hair. For festive occasions, such as the end of Ramadan, most people dress in new clothes, and women will decorate their hands with henna. When a family member dies, Iraqis spend 40 days dressed in black to mark their mourning. Kurdish women dress in a distinctive costume of a long dress with tied sleeves worn over loose pants and topped with a tight jacket.

SPORTS

Soccer is the most popular sport in Iraq. Men and boys play the game in their neighborhoods, and nearly everyone watches Iraq's national team compete on television or live in Baghdad stadium. Girls and women have also begun to play soccer. Hussein Saeed and Ahmad Al Rahdi were popular players in the early 2000s. Other common sports are basketball, weightlifting, boxing, swimming, and horseback riding for men and tennis and volleyball for women. Men also like hunting. Iraq lacks sporting facilities, which hampers efforts to train international athletes.

CHRONOLOGY

- 1945 Iraq joins the Arab League and the United Nations.
- 1946 Tawfiq al-Suwaidi, Arshad al-Umari, and Nuri as-Said head brief governments.
- 1947 Saleh Jabr forms new cabinet. British forces are withdrawn from Iraq.
- 1948 Mohammed as-Sadr and Muzahim al-Bajaji head brief governments.
- 1949 Nuri as-Said and Ali Jawdat al-Aiyubi head brief governments. Forced emigration of Jews from Iraq begins.
- 1950 Tawfiq al-Suwaidi and Nuri as-Said head brief governments.
- 1952 Mustafa Mahmud al-Umari and Nureddin Mahmud head brief governments.
- 1953 Faisal II ascends the throne. Jamil al-Midfai and Muhammad Fadhel al-Jamali head brief governments.
- 1955 Iraq joins the Baghdad Pact.
- 1957 Ali Jawdat al-Aiyubi and Abd al-Wahhab Marjan head brief governments.
- 1958 Ahmed Mukhtar Baban heads new cabinet. Iraq and Jordan unite to form the Arab Federation. In swift army coup Abdul al-Karim al-Qasim, Abd as-Salam Arif, and other army officers seize power. Faisal II, Crown Prince Abdul Ilah, and Nuri as-Said are executed. Arif is later dismissed from post as prime minister and arrested. Agrarian reform law is passed. New constitution is promulgated.
- 1959 Iraq withdraws from the Baghdad Pact and the Arab Federation. Revolt by a military contingent in Mosul is suppressed.
- 1961 Kurds launch revolt under Mustafa al-Barzani.
- 1963 al-Qasim is overthrown and executed in a Baathist-inspired coup led by Ab as-Salam Arif and Ahmed Hassan al-Bakr. National Council of Revolutionary Command is formed as supreme state body. Baathists are ousted from government after an internal power struggle.
- 1964 New provisional constitution is promulgated. An uncertain cease-fire is arranged with the Kurds. Iraqi Arab Socialist Union is formed as the country's sole political party. All banks and major industries are nationalized.
- 1965 Arif Abd ar-Razzaq is named premier and is later replaced by ar-Rahman al-Bazzaz. ar-Razzaq stages two pro-Nasser coups, both unsuccessful.
- 1966 Arif is killed in helicopter crash with 10 aides. His brother, Abd ar-Rahman Mohammad Arif, is chosen to succeed to the presidency.
- 1967 Iraq breaks with the United States and the United Kingdom following Arab-Israeli War.

- Television is introduced. Tahir Yahya is named premier.
- 1968** Ahmed Hassan al-Bakr topples Arif regime and forms new Baathist-dominated government. Arif is exiled, and Yahya is imprisoned.
- 1970** Iraq and Iran come to the brink of war following Iran's demand for a revision of the Shatt al-Arab border between the two countries.
- 1973** The national Progressive Front is formed, with the Baath Party and the Communist Party as partners in a ruling coalition. Security chief Nazim Kazzar leads abortive coup.
- 1975** Iraq nationalizes the Iraq Petroleum Company and its subsidiaries.
- 1976** Kurds in fresh uprisings against the government call for more autonomy. Iran and Iraq sign treaty of reconciliation resolving the border dispute.
- 1977** The Revolutionary Command Council is expanded from five members to 22.
- 1978** The Communist Party, accused of subversion, is withdrawn from the National Progressive Front. A total of 21 Communists are executed for engaging in political activities with the armed forces.
- 1979** President Ahmed Hassan al-Bakr steps down for reasons of health and is succeeded in office by his second-in-command, Gen. Saddam bin Hussein al-Majid al-Takriti. Five high-ranking members of the Revolutionary Command Council are arrested and executed for plotting against the Hussein regime. Syria is identified as the foreign power behind the plotters. Iraq and the Soviet Union fall out over Soviet policies toward Ethiopia and Israel.
- 1980** Iraq revokes agreement with Iran over the Shatt al-Arab and launches all-out attack against its Shiite neighbor. In swift thrust Iraq captures Khorramshahr and establishes credible military supremacy in the region.
- 1981** Iran retakes Khorramshahr. Relations with Syria and Libya are broken over their support for Iran in the Iran-Iraq War.
- 1983** Kurds renew their insurgency under the leadership of the sons of Mullah Barzani.
- 1984** Iraq restores diplomatic ties with the United States after 17 years. Elections are held for the National Assembly. Iran crosses border and takes oil rich Magnoon Island. Iraq retaliates with attacks on Khârk Island oil terminal and gulf shipping. Iraq enters into agreement with Turkey and Saudi Arabia for new pipeline projects that will bypass the gulf.
- 1986** At Baath congress Saddam Hussein strengthens position as party leader.
- 1987** At an Arab League meeting, Iraq and other Arab countries reestablish relations with Egypt.
- 1988** Iraq regains the offensive initiative in Iranian war—taking Faw Peninsula, Shalamchek area, and Magnoon Island—and expels Iranian troops from Kurdistan. Iran accepts UN cease-fire terms in August. Iraq puts down a Kurdish revolt, forcing thousands to flee to Turkey and Iran.
- 1989** Talks with Iran on a permanent peace are stalled over disputes on the border and on the Shatt al-Arab waterway. Elections for National Assembly draw 75 percent voter turnout. Ruling National Progressive Patriotic Front, three-party coalition led by Baath, takes all 250 seats. Explosion at Iraqi defense industry complex, presumably a missile development site, focuses Western concern on Iraq's military buildup.
- 1990** Permanent peace concluded with Iran in mid-August. Iraq accepts all Iranian terms, including dividing Shatt al-Arab. Iraq invades and conquers Kuwait on August 2, declaring the tiny emirate annexed as Iraq's 19th province on August 8. Led by United States, a multinational coalition under the aegis of the United Nations responds diplomatically and militarily to Iraqi invasion. United Nations passes resolutions calling on Iraq to withdraw, imposing economic sanctions and authorizing member states to evict Iraqi forces from the occupied emirate.
- 1991** A 30-member coalition, led by United States, defeats Iraq and forces it to withdraw from Kuwait, through air and ground military assaults from mid-January to late February. Allied bombing campaign inflicts massive damage on all parts of the Iraqi infrastructure. Iraq accepts UN peace terms, calling for billions in reparation payments. Regime of Saddam Hussein puts down revolts by Shia in southern Iraq and by Kurds in the north, undertaken in aftermath of defeat in Gulf War.
- 1992** United States, United Kingdom, and France enforce no-fly zone in southern Iraq.
- 1993** After an attempt on President George Bush's life while visiting Kuwait, U.S. forces attack an intelligence center in Baghdad.
- 1994** Iraq officially recognizes the borders with Kuwait.
- 1995** Saddam Hussein is reelected with 99.96 percent of the vote in a presidential referendum.
- 1996** Iraq is allowed to sell \$2 billion of oil in order to buy food and medicine on the international markets.
- 1997** Iraq refuses to allow UN arms inspectors entry into a number of locations. After several failed negotiations, the United Nations ends its inspections and warns Iraq of the consequences.
- 1999** United Nations authorizes Iraq to sell as much oil as needed on the international market as part of the Oil for Food program.

- 2000** Baghdad airport is reopened, and domestic passenger flights are resumed for the first time since the Persian Gulf War in 1991. Deputy Prime Minister Tariq Aziz rejects proposals for weapons inspection.
- 2001** Despite minimal international support, the United States and Britain conduct bombing raids to try to disable Iraq's air defense network. Qusay Hussein is elected leader of Baath Party. Iraq briefly suspends oil exports to protest Israeli incursions into Palestinian territories.
- 2002** The United Kingdom publishes a dossier summarizing Iraq's military capabilities. U.S. President Bush tells United Nations that United States will be taking action against Iraq. UN weapons inspectors enter Iraq.
- 2003** Bush declares that Hussein is hiding weapons of mass destruction. The weapons inspectors evacuate in March. U.S. forces begin bombing Baghdad on March 20 and take the city on April 9. The United States temporarily administers the country, though the United Nations insists that it transfer control to Iraqis as soon as possible. American and Iraqi death tolls climb as violence continues. Saddam Hussein is captured on December 14.
- 2004** Fighting continues as Shia militia attack coalition forces, especially in Fallujah. Photographs appear of American soldiers abusing Iraqi prisoners. The United States hands over sovereignty to an interim government headed by Iyad Alawi in June.
- 2005** Eight million Iraqis vote in elections for a Transitional National Assembly on January 30. In December the Shia-lead United Iraqi Alliance wins parliamentary elections.
- 2006** The National Assembly meets to form a full-term government.

GEOGRAPHICAL FEATURES

Located on an island in the eastern part of the North Atlantic, Ireland, called Éire in Gaelic, covers an area of 27,135 sq mi (70,280 sq km). The island’s length is 302 mi (486 km) north to south, and its width is 171 mi (275 km) east to west. It is bounded on the northeast by Northern Ireland; on the east and southeast by the Irish Sea and Saint George’s Channel; and on the north, west, and south by the Atlantic Ocean.

The capital is Dublin, located on the Irish Sea at the termini of the Grand and Royal canals, which connect the port with the Shannon River, which runs down through the middle of the island and turns west to enter the Atlantic. Dublin’s population was just under half a million in the 2002 census.

Ireland has been compared to a saucer, built of a limestone plateau rimmed by coastal highlands. The central plain area is characterized by many lakes, bogs, and scattered low ridges. The principal mountain ranges are the Mourne Mountains in the northeast, the Wicklow Mountains in the east, and the Macgillicuddy’s Reeks in the southwest.

The Central Lowland is the heart of Ireland. Easy passageways along valley and lowland corridors lead from there to every Irish shore. Around the lowland are several types of landscapes. The southwestern area between Galway Bay and Killarney lies off the main commercial and tourist routes. To the northwest the lowland is replaced by bogs or towering mountains in west Connacht. In Connacht’s Lower Moy Basin, the limestone lowland is separated from the center of the country by the Ox

Ireland

Mountains. The finest plateau lies northeast of there between Curlew Hills and Donegal Bay.

The rivers of Ireland have courses of considerable length and are among the most attractive features of the scenery. They cross the Central Lowlands as slow-moving streams, frequently surrounded by bogs and marshes. The most important rivers of the lowland are the Shannon, which is the British Isles' longest, the Boyne, and the Barrow. Other Irish rivers include the Slaney, Lagan, Foyle, Erne, Moy, and Corrib.

The Irish coast, with its striking cliffs, is among the most impressive in Europe. In the south and west the coast is heavily indented where ranges of the Counties Donegal and Mayo and of Munster Province end in bold headlands and rocky islands. For nearly 50 miles (80 km) south of Dundalk, the Irish Sea coastline is a smooth stretch of cliff broken only by the inlets of small streams.

Bogs remain the most significant feature of the Irish landscape, occurring on all mountains and covering large areas of the lowlands.

CLIMATE AND WEATHER

The weather of Ireland is described as "mild, moist, and changeable." The seasons generally grade imperceptibly into one another, with rain as the only common element throughout the year. Monthly winter temperatures in the west are 44°F to 45°F (6°C to 7°C) from December to March, in the east 41°F to 43°F (5°C to 6°C) from November to March. The western valleys, such as those around Killarney, have luxuriant woods, and the evergreens rarely experience any check to growth through the cold. The mean summer temperatures range from 60°F to 61°F (15°C to 16°C) in the south and on the coasts of Donegal, in the far northwest.

Ireland has excessive rainfall. About three-fifths of the country has a mean annual rainfall of between

30 and 50 in (762 and 1,270 mm). The highest precipitation is recorded in the western region, from Kerry to western Connacht, and in the Muilrea Mountains area. The average number of rain days per year ranges from 175 in the extreme southeast to between 200 and 250 on the western coast. Ireland is not so much a country of perpetual rain as one in which frequent showers alternate with sunny days.

Climate and Weather

Mean Temperature:	50°F
West Winter:	44°F to 45°F
East Winter:	41°F to 43°F
South Summer:	60°F to 61°F

Central Lowland:	30 in
Northeast:	30 to 40 in

FLORA AND FAUNA

In ancient times Ireland was covered with oak forests, virtually none of which remain today; the land has been inhabited for such a long time and farmed so intensively that almost none of its native vegetation has survived. Today most forests are tree farms growing pines. Ireland's natural bogs are disappearing, though environmentalists are trying to preserve some of them. Bogs support unusual ecosystems with unique plants, including some carnivorous ones that eat insects. The bogs are home to many animals, especially birds. The landscape also harbors foxes, badgers, hares, hedgehogs, bats, red deer, and the occasional otter or pine marten. Migratory birds stop in Ireland on their way north and south. Ireland's rivers are full of salmon and trout, and the oceans are home to dolphins, seals, sea lions, mackerel, and pollock. The only reptile in Ireland is a kind of lizard. There are no snakes there; legend credits Saint Patrick with removing them.

ETHNIC COMPOSITION

The basic ethnic stock is Celtic, with an admixture of Norse, French, Norman, and English. There are no significant ethnic minorities. Historically, Ireland has been free of ethnic conflicts because of its racial homogeneity.

LANGUAGES

The official languages of Ireland are English and Irish (or Gaelic). Irish is the favored language of Irish nationalists, who wish to preserve the cultural separateness of Ireland from Britain. Since the establishment of the Irish Free State in 1921, the government has been committed to a policy of teaching and fostering Irish. However, the use of Irish as a commercial and administrative language (as distinct from a literary language) has been steadily declining over the years.

RELIGIONS

Ireland is one of the most Catholic countries in Europe, and Roman Catholicism is an integral, pervasive influence on national life and culture. Although there is no legal or constitutional relationship between church and state, the status of the Catholic Church was safeguarded in the 1937 constitution. The state does not subsidize the churches, nor is there a government department in charge of religious affairs. Both civil and religious marriages are permitted by law.

The Anglican Church of Ireland, disestablished in 1867, is the largest non-Catholic denomination. Anglicans compose 3 percent of the Irish population. Like other Protestant denominations, Anglicans never laid down deep roots in the country. Despite the Catholic

predominance, there is very little religious discrimination against non-Catholics.

HISTORICAL BACKGROUND

The history of Ireland began with the arrival of the Celts around the fourth century B.C.E. and their establishment of a flourishing Gaelic civilization. By the third century C.E. there were five permanent kingdoms on the island. The arrival of Saint Patrick in 432 was perhaps the most important event in Irish history, transforming the island into a center of learning and Christian culture.

Toward the end of the eighth century the Viking invasions began, destroying the monasteries and laying waste to the land. Around the 10th century the Anglo-Saxons followed and gradually gained control of the island. The English Crown never subjugated the Irish as they did the Welsh and the Scots, despite harsh measures such as the confiscation of lands and the large-scale colonization by English settlers. From the time of Henry VIII, when England seceded from the Roman Church, there were successive waves of bitter persecutions, particularly under Elizabeth I, Oliver Cromwell, and William of Orange. The treatment of the Irish reached its nadir in the 18th century when penal laws deprived Catholics and Dissenters (others not conforming to the Church of England) of all legal rights.

By the end of the 18th century many of the English settlers in the provinces outside Northern Ireland began to identify with the Gaels and joined in demanding greater self-government. In response, Britain granted them an independent Irish Parliament in 1783, but it was abolished by the Act of Union of 1800, which gave Ireland direct representation in the British Parliament. Catholic emancipation was finally achieved in 1829 through the efforts of Daniel O'Connell. The tragic condition of Ireland was highlighted by the Great Famine of 1840, however, which decimated the population and forced over a million people to emigrate to England and North America.

Irish nationalism became stronger and even more violent in the early decades of the 20th century, climaxing in the Easter Uprising of 1916, in which an Irish Republic was proclaimed. Bowing to the inevitable, in 1921 the British signed the Anglo-Irish Treaty, establishing an Irish Free State having dominion status and a Protestant-dominated North Ireland with a separate government. Violent opposition to the treaty by ultranationalists precipitated a civil war that lasted over a year. The Free State

survived, but the Irish Republican Army (IRA) remained as a powerful force in Irish politics.

Under Eamon de Valera, who took office as prime minister in 1932, Ireland kept out of World War II to demonstrate its continued displeasure with Britain. In 1937, under a new constitution, the governor-general was replaced by an elected president, and the name of the country was officially changed to Ireland (Éire in Gaelic). In 1948 Ireland voted itself out of the Commonwealth and on April 18, 1949, declared itself a republic. In the republic's first election the Fianna Fáil became the majority party, and its leader, de Valera, was chosen as prime minister; as of 1949 the prime minister has the Gaelic title of *taoiseach*.

During the 1950s Ireland developed as a moderate welfare state, and by the end of the decade, a new generation came to power politically. The nationalist movement, led by the Irish Republican Army (IRA), increased its efforts for unification of Ireland and Northern Ireland. During the 1960s those favoring unification brought increased pressures on the governments in both parts of the island. In Ireland protest marches and demonstrations grew with the passing years, and in Northern Ireland the IRA stepped up guerrilla activity and violence. During the 1970s this sectarian terrorism in Northern Ireland cost more than 2,500 lives. As a result, in the 1980s the British government signed an agreement giving Ireland a consultative role in Northern Irish disputes.

In 1987 the Fianna Fáil leader Charles Haughey became prime minister of Ireland, but a sharp economic downturn in the early 1990s, with inflation and high unemployment, brought to office a coalition government led by Charles Reynolds. Reynolds negotiated with the British government in an attempt to end the escalating violence in Northern Ireland. The British insisted the IRA must disarm, while the IRA insisted that Britain withdraw its forces from Northern Ireland. In 1996 the IRA announced a cease-fire in its attempt to expel British troops from Northern Ireland. However, for two more years isolated terrorist attacks by extremist Irish nationalists continued. Conditions improved in Northern Ireland when a peace agreement was signed in 1998 and ratified by Irish voters.

In December 1999 the British Parliament formally transferred a wide range of powers to the Northern Ireland government, while the Irish government gave up its territorial claim on Northern Ireland. However, the unresolved conflict over the pace of IRA disarmament triggered a series of crises, and by September 2001 the British government had suspended the Northern Ireland legislature three times. In a historic breakthrough, the IRA decided to begin disarmament in October, thereby preserving the power-sharing government.

In the 2002 elections the dominant Fianna Fáil returned to power, along with its coalition partner, the

Progressive Democrats. Mary McAleese was reelected president in October 2004. Earlier that year Irish voters had participated in European and local elections, in which they approved a measure that would end Ireland's granting of Irish citizenship to any child born in Ireland.

LIST OF MODERN RULERS

Prime Ministers

1919	Cathal Brugha
1919–21	Eamon de Valera
1922	Michael Collins
1922–32	W. T. Cosgrave
1932–48	Eamon de Valera
1948–51	John A. Costello
1951–54	Eamon de Valera
1954–57	John A. Costello
1957–59	Eamon de Valera
1959–66	Sean Lemass
1966–73	Jack Lynch
1973–77	Liam Cosgrave
1977–79	Jack Lynch
1979–81	Charles J. Haughey
1981–82	Garret FitzGerald
1982	Charles J. Haughey
1982–87	Garret FitzGerald
1987–92	Charles J. Haughey
1992–94	Albert Reynolds
1994–97	John Bruton
1997–	Bertie Ahern

Presidents

1938–45	Douglas Hyde
1945–59	Seán T. O'Kelly
1959–73	Eamon de Valera
1973–74	Erskine Hamilton Childers
1974–76	Cearbhall Ó Dálaigh
1976–90	Patrick Hillery
1990–97	Mary Robinson
1997–	Mary McAleese

CONSTITUTION

Ireland is a parliamentary republic and a unitary state under the 1937 constitution. Suffrage is universal at age 18.

The ceremonial head of state is the president, who is elected by direct suffrage for a term of seven years. The president summons or dissolves parliament (the *Oireachtas*), signs and promulgates laws passed by parliament, appoints as prime minister the leader of the majority party in parliament, and appoints judges selected by the prime minister.

Article 13 of the constitution provides that the president shall appoint the prime minister (or *taoiseach*) on

nomination of the Dáil (House of Representatives). The prime minister holds office during the life of parliament or until he or she loses support of the majority in the Dáil.

The government's responsibility in the Dáil is collective, and it is required to meet and act as a collective authority. Irish governments are rarely defeated by parliamentary vote and dissolution. This feature of the Irish parliamentary system is due to party solidarity and loyalty.

Over the years since de Valera's terms of leadership, the office of the prime minister has grown in power and authority vis-à-vis that of the president. As head of government, the prime minister is answerable only to the Dáil and is required only to keep the president "generally informed on matters of domestic and international policy."

The Supreme Court is the highest body in the judicial branch. The chief justice and six other justices are appointed by the president on the advice of the prime minister. It is the highest court and the ultimate court of appeal. The Supreme Court also decides the constitutionality of laws if the president asks for an opinion. The judicial hierarchy also includes district courts, circuit courts, a high court, and the court of criminal appeals.

PARLIAMENT

The national parliament (Oireachtas) is a bicameral body comprising the House of Representatives (Dáil Éireann) and the Senate (Seanad Éireann). Parliament has the sole power to make laws. The Dáil has 166 members, who are elected by popular vote on the basis of proportional representation for five-year terms. A member of the Dáil is called a Teachta Dála (TD). The Seanad has 60 members, 11 of whom are named by the prime minister and 49 of whom are elected by the universities and from candidates put forward by five vocational panels.

The powers of the Seanad are, in general, less than those of the Dáil. The Seanad has complementary powers with the Dáil in broad areas, such as the removal from office of a president or judge, the declaration of a state of emergency, and the initiation of bills other than money bills. The Seanad has prior or exclusive powers in other areas.

Of the three branches of government, parliament is perhaps the weakest. Although vested with far-reaching powers by the constitution to make or break governments, parliament's authority is wielded by the prime minister and the majority party. The prime minister has a virtual monopoly on new legislation. Almost all bills are proposed by the government, and the national legislative program is determined at cabinet meetings.

POLITICAL PARTIES

Modern Irish history is dominated by two parties that have vied for and alternated in power since independence. The older of the two parties is Fianna Fáil (Soldiers of Destiny), founded in 1926 by Eamon de Valera. It has stood for a united Ireland and is slightly more nationalistic than other parties. It has held power for nearly 50 of the past 68 years. Its rival is the Fine Gael (Family of the Irish), formed in 1933 through an amalgamation of parties that accepted the 1921 partition, although it advocates ultimate reunion with Northern Ireland.

The smaller parties play only a fringe role in Irish politics. They are the Thatcherite Progressive Democrats, founded in 1985; the Labour Party, founded in 1912; the Green Party, founded in 1981; and Sinn Féin, an arm of the Irish Republican Army. In the 2002 general elections 14 Dáil members were elected as independents, with no party affiliation.

LOCAL GOVERNMENT

The system of local government includes the administration of towns, cities, and counties. The principal unit is the county council or county borough corporation. The members of the various local authorities are elected by a system of proportional representation for periods of five years. Local authorities are responsible for housing and building programs, roads and traffic, water supply and sanitation, land development, environmental protection, waste disposal, fire protection, recreation, and local tax collection.

County government is administered by the county councils and the county managers. There are 26 counties. Most authority, however, resides with the national government.

LEGAL SYSTEM

Irish law is based on English common law, as modified by legislation and the 1937 constitution. Judges are appointed by the president and can be removed from office only by the resolution of both houses of parliament and only for incapacity or misbehavior.

The court of summary justice is the district court, which is presided over by a district justice sitting without a jury. It tries minor criminal offenses and handles minor civil cases. More serious cases are tried by the country's eight circuit courts, each presided over by a judge sitting with a jury. Circuit courts try all criminal cases except murder, treason, piracy, and allied offenses. They also act as appeals courts from district courts. The high court has original jurisdiction in all matters of law, civil and criminal, and also hears appeals from circuit courts in civil cases. It is presided over by a judge sitting with a jury.

The Supreme Court is the court of final appeal, consisting of a chief justice and six other justices. It can decide if any legislation of parliament violates the constitution. In addition, it may declare existing laws to be unconstitutional.

HUMAN RIGHTS

Human rights and civil liberties are guaranteed by the 1937 constitution. In recent decades human rights problems have arisen primarily from prison overcrowding and special arrest and detention authority.

The major human rights problem has been the spillover of violence from Northern Ireland. Terrorist activities there of the militant wing of the Irish Republican Army (IRA) led to government crackdowns on extremists in the Irish Republic in the 1980s and 1990s. Nevertheless, the government used great restraint in dealing with acts of terrorism. Although a cease-fire was signed by the IRA leader Gerry Adams in 1994, bombings and other violence by Irish militants continued to test the government's moderate policies. However, in 1997 the IRA renewed its pledge to end violence, and the peace settlement signed by Ireland and Northern Ireland and approved by Irish voters in 1998 offered hope for the future. The IRA began disarmament in October 2001.

FOREIGN POLICY

Since independence Ireland has adhered to a policy of neutrality and nonalignment, remaining neutral during World War II and avoiding membership in the North Atlantic Treaty Organisation (NATO) or any other postwar regional security organizations. However, it has been active in the major international forums, first as a member of the League of Nations and since 1955 as a member of the United Nations. It has also contributed personnel to UN peacekeeping units in the Middle East, New Guinea, Congo, Cyprus, Lebanon, and Afghanistan, as well as to Kuwait during the Persian Gulf War of 1991.

Since Ireland joined the European Community, now the European Union, in 1973, its foreign policy has shifted from a concentration on relations with the United Kingdom to relations with European countries in general. Nevertheless, Northern Ireland and Britain continue to occupy the attention of Irish foreign policy makers. Although still committed to the goal of a united Ireland, the Irish government has cooperated with Britain on security matters since the 1970s. However, Anglo-Irish relations underwent severe strains because of IRA bombings and terrorist violence in Northern Ireland in the 1980s and 1990s. In 2003 and 2004 the British and Irish continued to work to achieve resolution, though without much success.

Ireland's relations with the United States have grown stronger in the past decade, as American businesses invest in the Irish economy. Irish citizens have a long history of migration to the United States, though that trend reversed itself in the 1990s. Many Irish people still spend a time in the United States working or studying before returning home to establish families and careers.

As of 2004 Ireland was involved in a territorial dispute with Iceland, Denmark, and the United Kingdom over the continental shelf boundary around the Faeroe Islands. Ireland has become a transshipment point for drug dealers moving narcotics and hashish between North Africa and Europe, who also use the nation for money-laundering purposes.

DEFENSE

Ireland has historically been a neutral country, and Irish defense forces have never engaged in a war. There is no compulsory military service, with all recruitment voluntary. Persons between ages 17 and 32 may enroll in the armed forces. The minimum period of service is three years.

The main divisions of Irish military forces are the army, navy, and air corps. In 2001 Ireland spent less than 1 percent of gross domestic product (GDP) on the military.

ECONOMY

Ireland was nicknamed the "Celtic Tiger" in the 1990s because of its rapid economic growth, much of which was spurred by growth in the information-technology sector and in exports. Industry and services now account for nearly all of the nation's GDP; agriculture was traditionally the most important sector but now brings in only about 5 percent of GDP. The government has reduced taxes to encourage foreign investment, reduced government spending, and implemented programs to slow inflation. Growth slowed in 2002–03 but increased again in 2004. International companies find Ireland attractive because of its well-educated workforce and good infrastructure. In 2004 over 570 U.S. subsidiaries employed about 90,000 people in Ireland.

ENVIRONMENT

Ireland faces environmental issues arising from both increasing industrialization and the consolidation of agriculture. Rapid growth of industry has increased the pollution of Ireland's waters and air, particularly in urban areas. Many of Ireland's lakes are terribly polluted.

As farmland is consolidated into larger holdings, the use of fertilizers and pesticides has rapidly increased. Larger agricultural holdings have meant the loss of the country's hedgerows—about 14 percent since the 1970s—endangering wildlife and plant diversity. Ireland's turf bogs, a unique resource with important household and industrial resources, are rapidly being cleared to meet energy needs. The use of these cleared bog lands may pose environmental challenges in the future.

LIVING CONDITIONS

Ireland's standard of living has increased tremendously since 1990. More than 70 percent of households live in homes that they own, and nearly every household owns a television set. About half of the people of driving age own cars, but the public transportation system is good enough that cars are usually unnecessary. The majority of the population lives in or near the bigger cities in modern housing. People still live in the traditional thatched-

roof stone cottages in the countryside, though these are gradually being replaced with new buildings.

HEALTH

Ireland's national health-care system is administered by the Ministry of Health and eight regional boards. There are both public and private hospitals and clinics. Health examinations and tuberculosis treatment are available free of charge. Children below 16 receive free examinations and hospitalization. People pay a small fee, determined by income, for other services. Heart disease and lung disorders are the most common serious illnesses, owing largely to the nation's habits of smoking and eating fatty food. Breast cancer has increased in recent years, and the government has instituted a national screening program to give women mammograms every two years.

FOOD AND NUTRITION

Irish food is fairly heavy and is based on foods that are readily available in its climate. Potatoes appear at nearly every meal, fried, boiled, mashed, made into pancakes or bread, or distilled into a strong alcoholic beverage called *poitin*. Potatoes are quite nutritious and easy to grow, and many poor Irish depended on them for nearly all their calories in the early 1800s. When potato blight destroyed the potato crops in 1845, it was especially devastating because the poor had absolutely nothing else to eat.

Other common vegetables are onions, carrots, and cabbage. People eat a great deal of meat, especially pork and mutton or lamb. The typical breakfast includes porridge, eggs, and bacon. Near the ocean seafood is popular. Dairy products such as butter, cream, and cheese appear on the table daily. Traditional Irish soda bread uses soda

instead of yeast as a rising agent (people saved the yeast for making whiskey). Tea is a national habit, and people drink it throughout the day. Alcoholic beverages include beer, especially Guinness, cider, and whiskey.

STATUS OF WOMEN

Although the Constitution of 1937 recognized the woman's role primarily in terms of her "life within the home," the women's movement led to significant changes in the status of women in the 1980s and 1990s. Abortion remained illegal, but in 1995 the government passed legislation permitting Irish doctors to provide information about foreign abortion providers. Abortion is now legal in very limited circumstances. Contraception gradually became legal starting in the 1960s and 1970s. Irish women used to be notorious for having many children close together, but fertility in 2004 was a mere 1.87 children per woman. Divorce became legal in 1996, and the legislature also overturned a 1937 constitutional ban on remarriage after divorce.

Discrimination against women in the workplace is unlawful, but inequalities in salaries and promotions continue. In 1997 the hourly industrial wage for women was about 70 percent of that earned by men, and the weekly earnings of women averaged 70 percent of those for men. Women account for only 36 percent of the public sector workforce, and they are further underrepresented in managerial positions. Working women are also often hampered by inadequate child-care facilities. However, legislation in 1994 provided women with 14 weeks of paid maternity leave and the right to return to their jobs after giving birth. Middle- and low-income women receive maternity care free of charge.

WORK

Ireland has a highly skilled workforce that has been getting larger as women gain employment, Irish emigrants

return home, and the young Irish grow up. The nation's low taxes make it attractive to foreign companies, so many Irish people work for foreign firms, manufacturing electronics, software, food, chemicals, and clothing. High-tech jobs are expanding, and increasing numbers of Irish are working in information technology, telemarketing, and pharmaceuticals. Tourism employs a number of people. Agriculture still employs about 8 percent of the workforce, many of whom continue to work on family farms producing livestock and dairy products or growing oats, potatoes, and other products for export.

Irish unions are very strong and vocal, and over half the workforce belongs to them. The nation's social welfare system provides unemployment benefits and subsidies for low-income families.

 Unemployment %: 4.3

EDUCATION

Schooling is compulsory for all children between the ages of six and 15. The chief language of instruction is English, but Gaelic is compulsory for all students in state-aided schools. Public education is divided into primary and secondary schools, with preprimary classes available in private schools. More than 95 percent of primary schoolchildren attend national schools, of which 20 percent are run by Catholic orders. All primary schoolchildren receive free medical treatment, and needy children receive free lunches. Most secondary schools are also funded by the state; about half are run by the Catholic Church.

The Department of Education exercises enormous control over all aspects of education. In the primary sector it draws up the curriculum, sanctions textbooks, and monitors teaching performance. At the secondary level it also administers three public examinations.

Ireland's oldest university, founded in 1591, is the University of Dublin, of which Trinity College is a famed constituent. The National University, established in 1908, is a federal institution with constituent colleges at Cork, Dublin, and Galway.

 Students: 176,296
 Gross Enrollment Ratio: 49.9

Public Expenditure on Education as % of GDP: 4.4

SCIENCE AND TECHNOLOGY

Ireland has been focusing development on its high-tech industries. Information technology was responsible for much of its spectacular economic growth in the late 1990s and early 2000s. The telemarketing, computer, and pharmaceutical industries have done well. The nation's technological infrastructure is quite modern and efficient; telephone and television signals are ubiquitous, and over one million people were using the Internet in 2003.

Science and Technology

Scientists and Engineers in R&D per 1 million people: 2,190
 Expenditures in R&D as % of GDP: 1.13
 High-Tech Exports \$billion: 27.6
 Patent Applications by Residents: 1,255

MEDIA

The Irish media operate freely. The Department of Communications regulates broadcasting, and the Competition Authority prevents unfair competition. The *Irish Times* is the country's most influential daily newspaper, although it has less than half the circulation of the *Irish Independent*, the popular daily founded in 1905, which is the nation's circulation leader. While press competition is spirited in Dublin, fewer than 10 Irish cities have competing newspapers. All Irish newspapers are privately owned. Ireland has no national news agency.

Irish television began service in 1961, and much of programming is domestic, including Irish and bilingual programs. Satellite broadcasting service became available to Irish viewers in 1986; much of the programming viewed in Ireland comes from England via satellite. The national public broadcasting company, Radio Telefís Éireann (RTÉ) is the largest broadcaster of both radio and television. TV3, which began broadcasting in 1998, is Ireland's only commercial television station. Many households have cable.

CULTURE

Ireland has a rich background of Celtic and medieval Christian culture. The Celts left art and artifacts that display their obvious skill at metalworking and stone carving. The monks of the medieval period compiled numerous manuscripts of sacred and secular texts, many of them elaborately decorated; the Book of Kells and the Book of Durrow are famous examples of medieval manuscripts. These monks preserved many ancient documents that otherwise would have been lost. Ancient and medieval Irish people loved language and poetry and whiled away long evenings listening to bards sing epic poems.

Poetry and language have remained popular in more recent times, and Ireland has produced more than its share of writers, including Jonathan Swift, Oscar Wilde, George Bernard Shaw, John Millington-Synge, William Butler Yeats, James Joyce, Seamus Heaney, Roddy Doyle, and Frank and Malachy McCourt.

Irish music has long played a central role in daily life. Traditional music has recently had a resurgence in popularity, with groups such as the Chieftains taking an old form and making it new again. The musical *Riverdance* made Irish music and dancing popular the world over. Ireland has also produced a number of modern rock musicians, including U2, Van Morrison, Clannad, Sinead O'Connor, and the Pogues.

FOLKLORE AND MYTHOLOGY

Ireland has a tradition of mythology that goes back to about 350 B.C.E., when the Celts moved to the island. Many stories center around the heroes Cuchulain and

Finn McCool. The *Táin Bó Cuailnge* (pronounced “toyn boe cooley”) is one of the classics of Irish mythology; it describes the battles and negotiations surrounding a cattle raid. The traditional seat of Irish kings was at Tara. Slightly more recent tales concern Saint Patrick, Ireland’s patron saint, and the activities of fairies who roam the world and cause mischief.

ENTERTAINMENT AND RECREATION

The pub is the epicenter of Irish social life. Many people go to their local pub every day to drink beer or whiskey and chat with friends. The legal drinking age is 18, but the age to enter pubs is 14. The Irish love music, and most villages have a pub where people can go to hear traditional Irish music played. Customers sometimes join the band on an instrument or singing. In the outdoors people enjoy golf, sailing, windsurfing, and fishing for salmon or trout.

ETIQUETTE

Hospitality is a key Irish virtue. The Irish have traditionally been kind to strangers and generous to those in need. It is courteous for people to offer visitors a cup of tea or to buy drinks for companions at a pub. Tipping is becoming more common, but it is not necessary if a restaurant adds a service charge.

FAMILY LIFE

The family is very important to Irish people. People tend to be close to their parents, siblings, and grandparents. Children usually stay with their parents until they marry. The government supports families by providing benefits to old people, children, and single parents. Friendship and loyalty to friends are nearly as important as family.

Divorce was illegal until 1996. Now couples are allowed to divorce after three years of separation, and the courts currently have a large backlog of divorce applications waiting to be processed.

Women have traditionally stayed home to care for their usually large families; the Catholic Church has banned birth control for many years, and as a result many Catholic Irish had a great many children. Today, more women are entering the workforce, and families have become smaller. Contraception is now legal, as is abortion if the mother’s life is in danger.

PERSONAL APPEARANCE

The Irish live in a cold climate with many sheep, so traditionally most of their clothes have been made from wool.

Irish fishermen’s sweaters, with their intricate knitting and thick warm wool, are still popular. Most modern Irish dress in typical Western fashions, though raincoats and umbrellas are ubiquitous accessories.

SPORTS

Irish love soccer, and Irish teams compete in international events all over the world. Rugby and cricket are also popular. Irish athletes have won medals at the Olympics and elsewhere in swimming, boxing, running, rowing, and cycling.

Ireland has several unique sports. Hurling, a 4,000-year-old game, is similar to hockey; players hit a leather ball with curved sticks called *hurleys*. When women play the game, it is called *camogie*. Gaelic football is similar to hurling but without the sticks. Both sports are popular with children and attract enough players for national championships to be held every year. Road bowling is another traditional game; players try to roll a metal ball down a two- or three-mile course in as few throws as possible.

Horse racing, show jumping, and other equestrian sports are popular everywhere. The form of horse racing known as steeplechase was invented in Ireland.

CHRONOLOGY

- 1937** In a plebiscite voters adopt a new constitution replacing the Irish Free State with the “sovereign independent democratic state” of Éire.
- 1938** British troops withdraw from three Irish naval bases.
- 1941** Dublin endures German air raids.
- 1943** Prime Minister Eamon de Valera and his Fianna Fáil party are reelected.
- 1945** World War II ends, Éire having successfully maintained neutrality throughout.
- 1948** John Aloysius Costello leads a coalition of parties defeating de Valera and Fianna Fáil in the Dáil Éirann.
- 1949** On Monday, April 16, 1949, the anniversary of the Easter Rebellion of 1916, Éire leaves the Commonwealth and becomes the Republic of Ireland.
- 1955** Ireland becomes a member of the United Nations.
- 1957** As continued guerrilla attacks by the Irish Republican Army against British targets strain Irish-British relations, doing damage to both the Irish economy and the prospects for a unified Ireland, Prime Minister Costello calls for forceful action against the IRA.
- 1958** The government initiates a five-year plan of economic development, offering tax incentives to foreign investors.

- 1959** De Valera retires as prime minister and is elected to the first of two seven-year terms as president. Sean Lemass of Fianna Fáil becomes prime minister.
- 1962** The IRA announces it has abandoned violence.
- 1963** The five-year plan exceeds its goals, achieving 4 percent growth rather than the planned-for 2 percent.
The rate of emigration from Ireland, high for more than 100 years, begins to decline.
- 1965** Prime Minister Sean Lemass of Ireland and Prime Minister Terence O'Neill of Northern Ireland exchange visits in an effort to defuse tensions between the territories.
- 1966** Elections bring to power Jack Lynch and Fianna Fáil.
- 1972** The government calls for a surrender of all firearms.
- 1973** Ireland joins the European Economic Community.
A referendum approved by 83 percent of voters amends the constitution to terminate the special status of the Catholic Church.
A Fine Gael-Labour Party coalition comes to power, led by Liam Cosgrave.
Ireland, Northern Ireland, and Britain accept the Sunningdale Agreement, which states that a change in the political status of Northern Ireland must be approved by a majority of its citizens.
- 1974** The Sunningdale Agreement is abandoned.
- 1976** The British ambassador to Ireland is assassinated in Dublin.
- 1977** The Fianna Fáil returns to power under Jack Lynch and proposes an aggressive economic policy based on tax cuts and the cultivation of new, foreign-financed industries.
- 1979** Charles Haughey succeeds Lynch as prime minister.
- 1982** National debt and unemployment continue to increase.
In the third election in less than two years, Garret FitzGerald of the Fine Gael-Labour Party coalition takes power with a clear majority.
- 1985** The Anglo-Irish Agreement gives the Republic of Ireland a consultative role in the government of Northern Ireland and affirms that a change in the political status of Northern Ireland must be approved by a majority of its citizens.
- 1986** Sinn Féin, the political arm of the Provisional IRA, breaks its 63-year boycott of elections and stands for office, but it wins no seats.
- 1987** A constitutional referendum ratifies the Single European Act, which permits Ireland's participation in the European Community.
- 1990** Mary Robinson becomes the first woman president of Ireland.
- 1991** Having been granted a clause preserving its strict antiabortion laws, Ireland signs the Maastricht treaty to join the European Union.
- 1992** Albert Reynolds succeeds Charles Haughey as leader of Fianna Fáil and prime minister.
In a referendum, voters loosen restrictions on abortion.
- 1993** The prime ministers of Britain and Ireland issue the Downing Street Declaration, which offers to support Anglo-Irish peace talks between groups that have renounced violence.
The Supreme Court strikes down the prior year's relaxations of abortion policy.
- 1994** Catholic and Protestant paramilitaries in Northern Ireland announce a cease-fire.
Following elections, John Bruton of the Fine Gael leads a coalition government with Labour and the Democratic Left.
- 1995** John Bruton and Prime Minister John Major of Britain adumbrate a framework for negotiating the status of Northern Ireland, providing for its self-determination and the possibility of administrative collaboration with the Republic of Ireland.
A national referendum legalizes divorce by a narrow margin, effective in 1997.
- 1996** The IRA resumes terrorist activities in February.
- 1997** Fianna Fáil leader Bertie Ahern becomes prime minister.
The immensely popular President Robinson resigns to become High Commissioner for Human Rights at the United Nations, and Mary McAleese of Fianna Fáil is elected president.
- 1998** On April 10 peace talks between Prime Minister Bertie Ahern of Ireland, Prime Minister Tony Blair of Britain, and other delegates, moderated by U.S. senator George Mitchell, establish the historic Good Friday Agreement, whose provisions include Ireland's renunciation of territorial claims to Northern Ireland, the founding of an assembly of Northern Ireland, and the establishment of a North-South Ministerial Council composed of ministers of both Irish governments.
Voter referenda in both Ireland and Northern Ireland approve the agreement.
- 1999** The European Union introduces the euro as a common currency for financial institutions in member states, including Ireland.
The Good Friday Agreement becomes effective, but actual power sharing between Catholics and Protestants still appears remote.
- 2001** In October the IRA begins disarmament. Ireland rejects the Nice Treaty, aimed at allowing the

1142 Ireland

European Union to expand to include 12 eastern European nations.

- 2002** The euro becomes the sole currency for EU member states. Voters reject government's attempt to tighten antiabortion laws. Fianna Fail's Ahern remains prime minister. Irish voters endorse the Nice Treaty.
- 2004** Ireland, the then EU president, hosts ceremonies welcoming 10 new nations to the European Union.

ISRAEL

Basic Fact Sheet

OFFICIAL NAME

State of Israel (Medinat Yisra'el)

ABBREVIATION

IL

CAPITAL

Jerusalem/Tel Aviv

Note: The United Nations and most governments do not recognize Jerusalem as the capital of Israel.

HEAD OF STATE

President Moshe Katsav (from 2000)

HEAD OF GOVERNMENT

Prime Minister Ariel Sharon (from 2001)

Acting Prime Minister Ehud Olmert (from 2006)

NATURE OF GOVERNMENT

Parliamentary democracy

POPULATION

6,276,883 (2005; includes about 206,000 Israeli settlers in the West Bank, about 20,000 in the Israeli-occupied Golan Heights, more than 6,400 in the Gaza Strip, and approximately 170,000 in East Jerusalem)

AREA

20,770 sq km (8,019 sq mi), excluding the West Bank, the Gaza Strip, and East Jerusalem

MAJOR ETHNIC GROUPS

Jews, Arabs

LANGUAGES

Hebrew, Arabic, English

RELIGIONS

Judaism, Islam, Christianity

UNIT OF CURRENCY

New Israeli shekel

NATIONAL FLAG

The blue six-pointed Star of David (Magen David) centered between two blue horizontal stripes on a white field, representing a Jewish prayer shawl

NATIONAL EMBLEM

A white-rimmed blue shield displaying a white menorah, the seven-branched candelabra from the Temple of Jerusalem, flanked by white olive branches. Blue and white, the national colors, are inspired by the tallit, the Jewish prayer shawl. The text at the bottom reads "Israel" in Hebrew.

NATIONAL ANTHEM

"Hatikvah" (The Hope)

NATIONAL HOLIDAYS

Independence day and all major Jewish festivals, including Yom Kippur, Succot, Simchat Torah, Chanukkah, Purim, Pesach (Passover), and Shavuot (Pentecost). Because Israel observes the complex Jewish luni-solar calendar to determine these holidays, they fall on different dates each year on the Gregorian calendar.

DATE OF INDEPENDENCE

May 14, 1948

DATE OF CONSTITUTION

No formal constitution

GEOGRAPHICAL FEATURES

Israel, located in southwestern Asia along the eastern end of the Mediterranean Sea, has an area of 20,770 sq km (8,019 sq mi). The nation extends 322 km (200 mi) north to south and 111 km (69 mi) east to west. At its narrowest point, north of Tel Aviv, it is only 19 km (12 mi) across. Israel also administers territory taken from Syria and Jordan in the Six-Day War of 1967, including the Golan Heights (1,710 sq km; 660 sq mi) and the West Bank of Judea (5,878 sq km; 2,270 sq mi). The nation's total

boundary extends some 1,017 km (632 mi) and borders Lebanon, Jordan, Syria, and Egypt. The Mediterranean coast runs 273 km (170 mi), including the Gaza Strip. Outstanding territorial disputes were settled with Egypt in the 1979 Camp David Accords and with Jordan in the 1994 Israel-Jordan Treaty. Boundary disputes continue with Syria and with representatives of the Palestinian Authority. Israel has no de jure rights to territory in the Golan Heights, the Gaza Strip, or the West Bank. Since 1995 the Gaza Strip and West Bank have been partly administered by the Palestinian Authority.

Israel

The official capital is Jerusalem (including East Jerusalem), close to the northern end of the Dead Sea. The United Nations and most countries do not recognize Jerusalem as the capital of Israel, however, and most embassies are located in Tel Aviv. The other major cities are Haifa, Holon, Petach-Tikva, Ramat-Gan, Beersheba, and Bene Baraq.

Topographically, Israel has four distinct divisions: coastal plains, mountains, valleys, and deserts. Nearly two-thirds of the population is concentrated along a narrow strip of Mediterranean coastal plain, including the three urban zones of Acre-Haifa, Tel Aviv-Jaffa, and Ashkelon-Ashdod as well as the occupied Gaza Strip.

The largest topographical division comprises mountains, softstone or dolomite in the north, pierced by natural caves and intersected by wadis (mostly dry riverbeds) and lofty granite peaks in the south. Mount Hermon in the north, with several peaks rising up to over 2,000 m (6,600 ft), towers over the basalt plateau of the Golan Heights. The mountains of Upper Galilee rise to 1,208 m (3,962 ft) at Meron, while Lower Galilee is about half as high. Parts of Samaria are 960 m (3,149 ft) above sea level. The Judean Hills are a compact range 80 km (50 mi) long and 14–19 km (9–12 mi) across, with an average altitude of 750 m (2,460 ft).

Descending eastward to the Dead Sea, the Judean Hills turn into the Judean Desert. The Negev Desert makes up two-thirds of the land area but contains only 6 percent of the population. The northern Negev region consists of low sandstone hills, steppes, and fertile plains abounding in canyons and wadis. In the central Negev, to the south, the mountains are higher and the climate drier. The Arava, an extremely parched stretch of desert between the Dead Sea and the Red Sea, has annual rainfall of less than 25 mm (1 in). To the south lie the Jordan Valley, the Jezreel, and the Hula.

Israel's only permanent rivers are the Jordan, Yarkon, Na'aman, Kishon, Taninim, Alexander, and Ga'aton. Except for the Jordan, all of the rivers flow into the Mediterranean. The Jordan is the largest river and the major source of water. It flows some 254 km (158 mi), at one point crossing the lowest point on earth at 701 m (2,300 ft) below sea level. The nation's major lakes are the Sea of Galilee, Lake Hula, and the Dead Sea.

CLIMATE AND WEATHER

Israel has a Mediterranean climate, as characterized by long, hot, dry summers and short, cool, rainy winters. In general, the temperature is higher and rainfall lower as one moves from north to south.

January is the coldest month and August the hottest. The average temperature in Jerusalem ranges from 5–12°C (41–51°F), that in Tel Aviv from 11–20°C (52–68°F). About 70 percent of rainfall occurs between November and February. Rainfall tends to occur in violent storms, often causing flooding. Little rain falls in the Negev Desert. Snowfall is not uncommon in the higher elevations in January and February.

Climate and Weather

Temperature Range

Upper Galilee: January 36°F to 37°, August 64°F to 82°F

Hula Valley: January 46°F to 70°F, August 64°F to 93°F

Tel Aviv and Coastal Plain: January 52°F to 68°F, August 72°F to 86°F

Jerusalem and Judean Hills: January 41°F to 54°F, August 66°F to 82°F

Northern Negev: January 46°F to 68°F, August 68°F to 86°F

Gulf of Eliat: January 52°F to 73°F, August 68°F to 92°F

Average Rainfall

Upper Galilee: 42.5 in

Eliat: 0.8 in

FLORA AND FAUNA

Israel is located at the convergence of three geographic zones, which makes it hospitable to a wide variety of plant and animal types. The southern part of the country is desert. Plants there include date palms, wild tulips, and irises. The east is subtropical. In the north, Galilee is fertile, wet, and mountainous, covered in olive trees and laurel forests. Animals include otters, sheep, goats, and a huge number of migratory birds who stop in Israel on their way to points north or south; Israel is the second-largest migratory bird flyway in the world. Israel has about 300 national parks, covering 20 percent of its territory, and these parks nurture plants and animals that have been endangered for centuries.

ETHNIC COMPOSITION

Israel is a very homogeneous nation, with some 80 percent of the population belonging to the Semitic race. However, ethnoreligious differences have led to major divisions within Israeli society.

Israeli Jews are among the most ethnocentric people in the world; the culture, politics, society, language, and religion revolve around their identity as a separate ethnic group. However, even within the Jewish community there are major distinctions. The major split in Israel is between the European Ashkenazim and the Sephardim, also known as Oriental Jews, along with the Edot HaMizrata, or Black Jews. The Sephardim constitute the majority, but the Europeans are politically and economically dominant. There is a vast social and economic gulf between the two groups. The income of the Sephardim is only half that of the Europeans, and only 13 percent of the population has attended college. Furthermore, since many Sephardim subgroups, including the Falasha of Ethiopia and Bene Israel of India, emigrated en masse from developing nations, economic, linguistic, and cultural differences emerged. Religious strife also exists, as many outside groups integrated customs from their native lands and Orthodox Jews view any religious deviations as heresy.

Two other Jewish subgroups include the Karaites and the Samaritans. The Karaites date back to the ninth century. They accept only the five books of Moses (the Torah) and reject the rabbinical tradition. Although officially regarded as Jews, they are not permitted by the Rabbinical Council to marry other Jews. Samaritans date back to biblical times and believe that Mount Gerizim is

the site of the true temple. They speak Arabic. There are two main Samaritan Jewish communities—one in Holon and the other at Shechem.

The Arab population of Israel is also divided religiously. There are three main groups: Sunni Muslims (73 percent), Christians (11 percent), and Druze. Although granted the same rights on paper, Arabs are in fact second-class citizens subject to considerable restrictions in every area of public life. The Arab population has one of the highest birthrates in the world. This, combined with the prevalence of low-skill and low-wage jobs, has created considerable poverty among the Arabs, especially when compared with the Jewish population. Unemployment is common and is exacerbated by discrimination. Urban Arabs live mainly in the Arab cities of Nazareth and Ahafa Amr. Rural Arabs live in 104 Arab villages, most of them in Galilee and the Jerusalem area. Although quiescent until the 1980s, the Arab population of Israel has become radicalized, and the government has responded with brutal and repressive tactics. Human rights abuses are common, especially detention, restrictions on movement, and torture.

In addition to Arab Muslims and Christians, there are non-Arab Muslims and Christians in smaller numbers. Among the former is the Circassian community, concentrated mainly in two Galilean villages.

LANGUAGES

The official languages are Hebrew and Arabic, but English is used extensively in government, commerce, and education.

Hebrew is the language of the Old Testament. It has an alphabet of 22 letters and is written from right to left. After lying dormant since the beginning of the Christian era, Hebrew was revived in the 19th century, primarily through the efforts of Eliezer Ben-Yehuda (1858–1922). Upon immigrating to Palestine in 1881, he pioneered the use of Hebrew in homes and schools and the coining of new Hebrew words, established the first Hebrew periodical in 1884, cofounded the Hebrew Language Committee in 1890, and compiled the first Hebrew dictionary. Hebrew became an official language of Palestine under the British Mandate. The Academy of the Hebrew Language, established in 1953, guides the development of the language.

Arabic is used mainly by the Druze and Palestinian populations. However, as the Arab population has grown, so has the language. State documents are printed in both Arabic and Hebrew.

RELIGIONS

Israel is one of two modern states (the other being Pakistan) expressly founded as a homeland for a religious

group. Zionism and Judaism are inextricably linked, and it is difficult to conceive of Israel without its religious underpinnings.

Israel implies an exclusion from its polity of the other two monotheistic religions that claim their origins, partly or wholly, within the country. Efforts to Judaize society invariably conflict with the traditions of non-Jews and relegate them to the status of second-class citizens. Jews who convert to other religions cease to be Jewish in the eyes of the law. Religious education is compulsory in elementary and secondary education. On the Sabbath and religious holidays, particularly in Orthodox communities, public activity ceases. There are no civil marriages, divorces, or funerals, and even atheists must submit to religious authorities.

Certain religions are recognized by the state. These include Orthodox Judaism, Islam, Druze, Baha'i, and seven Christian sects: Greek Orthodox, Melkite, Latin, Maronite, Armenian, Coptic, and Anglican. Evangelical Christian churches have no legal status. Children under the age of 18 are not allowed to be converted.

The religious-political establishment includes the Chief Rabbinate and its Council, the Ministry of Religious Affairs, and local religious councils. All recognized religious communities are under the jurisdiction of the same ministry, which since 1956 has been headed by a member of the National Religious Party. The ministry maintains the courts of the various religious communities and provides funds for the construction and maintenance of religious buildings. The rabbinical courts are maintained by the ministry's Department for Jewish Religious Affairs. They include the Supreme Rabbinical Council and district rabbinical courts in nine cities.

Although Judaism is nondenominational, there are cleavages that may properly be called trends within the body. The three main trends are the Orthodox, the Messorati (Traditional/Conservative), and the Reform/Progressive. The Orthodox branch has a virtual monopoly over synagogues, courts, education, and marriages. The Orthodox branch is itself divided into two branches. The Ultraorthodox branch observes every nuance of Jewish law, with no concessions to modernity; among this group are the Hassidim. Moderate Orthodox groups include the Mafdal.

Officially, neither Reform nor Conservative Judaism is recognized by the state. Rabbis belonging to these branches may not perform marriages or divorces, conduct services in immigration absorption centers, supervise kashruth, or receive financial support from local religious councils. Relations between Reform and Orthodox branches are so hostile that the latter consider the former a separate non-Jewish sect.

The great majority of Christians are Palestinian Arabs. However, the Christian community is shrinking as a result of emigration.

A special religious problem concerns holy places. Within a radius of 1 km (0.6 mi) in Jerusalem are the sacred sites of three monotheistic religions: the Wailing Wall; two mosques; and numerous Christian shrines, including the Church of the Holy Sepulchre, the site of the Last Supper, the Tomb of the Virgin, and the Chapel of the Ascension.

Christian	131,800
Other	200,900

HISTORICAL BACKGROUND

Palestine (now Israel) was under foreign rule continuously from the year 70, when Emperor Titus's legions marched into Jerusalem, to 1948, when the modern state of Israel was founded. Palestine was ruled by the Romans, Byzantines, Arabs, Christian crusaders, Ottoman Turks, and British.

In 1838 the first proposal for a Jewish state was put forward by Moses Montefiore. This was followed by efforts to start new Jewish settlements outside Jerusalem. In 1861 the first Jewish agricultural settlement was built at Mishkenot Sha'ananim. The Jewish pioneers were joined by members of the Hovevei Zion (Lovers of Zion) from Eastern Europe. In 1882 the first large-scale aliyah, or Jewish immigration into modern Israel, began from Russia, Romania, and Yemen, followed five years later with the founding of Zichron Yaacov by Baron Edmond de Rothschild. The Dreyfuss affair in France led to the formation of political Zionism. In 1897 the World Zionist Congress founded the World Zionist Organization to establish a homeland in Palestine. In 1903 the World Zionist Organization rejected a British proposal to found a Jewish state in Uganda.

The next year the second aliyah began in the wake of pogroms in Poland and Russia. The first kibbutz, or communal settlement, was founded in 1909 at Degania, and the Jewish city of Tel Aviv was established north of Jaffa. In 1917 the Balfour Declaration pledged British support for the establishment of a Jewish national home in Palestine. That same year British troops entered Jerusalem, ending 400 years of Ottoman rule. In 1919 the third aliyah began.

In 1920 the League of Nations granted Great Britain a mandate over Palestine and Trans-Jordan. In the same year the Histadrut, a Jewish labor federation, and Hagannah, a clandestine defense organization, were founded. The fourth and fifth aliyahs took place in 1924 and 1933. After the end of World War II, the United Nations proposed a partition of Palestine that was rejected by the

Arabs. The Haganah initiated a terrorist war against the British. When the British Mandate ended in 1948, the Jewish communities in Palestine were transformed into the State of Israel. In 1949 the first elections for the legislature (the Knesset) were held.

Immediately after the departure of British troops the new nation found itself under attack from five surrounding Arab nations. Israeli forces were able to defeat the invading troops, and a UN-sponsored armistice was negotiated. Israel was recognized by the United States and the USSR and in 1949 became a member of the United Nations. Efforts to seek accountability for the Holocaust reached a dramatic climax in 1960, when Israeli operatives kidnapped Nazi Adolf Eichmann from Argentina. Eichmann was subsequently tried and hanged for his actions during the Holocaust.

In 1955 Israeli forces were able to expel Egyptian troops from the al-Auja neutral zone. Following escalating tensions, in 1967 the Israelis won a stunning military victory during the Six-Day War. In the aftermath of the victory Israel occupied the West Bank and the Gaza Strip and annexed the Old City section of Jerusalem. In 1970 the United States brokered a cease-fire between Israel, Egypt, and Jordan.

The Knesset enacted legislation that allowed Jews who were overseas to claim Israeli citizenship in addition to their own in 1971. The next year the world was stunned as Palestinian terrorists killed 11 Israeli athletes at the Olympic Games in Munich. Israel retaliated with air strikes against Palestine Liberation Organization (PLO) bases in Syria and Lebanon. In 1973 Egypt and Syria launched attacks that were repulsed by Israeli forces in what became known as the Yom Kippur War.

Tensions in the Middle East were greatly reduced in 1979 when U.S. president Jimmy Carter was able to negotiate the Camp David Accords between the Israeli prime minister Menachem Begin and the Egyptian president Anwar Sadat. The accords called for the Israeli withdrawal from the Sinai Peninsula in exchange for Egyptian recognition of Israel. However, following terrorist attacks from Lebanon, Israel invaded that nation in 1982 and occupied Beirut. After the arrival of a multinational peace-keeping force, the Israelis withdrew to a so-called security zone in the south of Lebanon.

Economic problems in 1985 led to the implementation of austerity measures, including wage freezes. Meanwhile, the nation airlifted Ethiopian Jews out of that nation and to Israel. Economic and political problems led to the intifada, an Arab uprising against Israel in predominantly Palestinian areas.

In 1991 the Middle East peace process was relaunched through the Madrid Conference. This ultimately led to the 1994 signing of a peace treaty between Israel and Jordan. In addition, the Palestinians were granted limited self-government in the West Bank and the Gaza Strip following the Interim Agreement between the two parties. In 1995 Prime Minister Yitzhak

Rabin was assassinated by an extremist for his role in the peace process. Nonetheless, the peace process continued, and in 1997 Israel and the Palestinian Authority signed the Hebron Agreement, which detailed the steps for the implementation of the Interim Agreement. This was followed by the Wye River Agreement in 1998. In 2000 Israel removed its troops from the security zone in south Lebanon. U.S. President Bill Clinton hosted a summit at Camp David that attempted to resolve the issues between Israel and Palestine, but the talks broke down and violence broke out in Israel, Gaza, and the West Bank that September.

In April 2001 the Sharm el-Sheikh Fact Finding Committee, chaired by former U.S. Senator George Mitchell, submitted a report calling for an immediate end to violence and the resumption of peace negotiations. Despite these efforts, violence continued. In September 2000 Prime Minister Ariel Sharon toured the al-Aqsa Temple Mount complex in Jerusalem, offending Arabs and prompting Palestinian demonstrations that quickly developed into what became known as the al-Aqsa intifada (also called the second intifada). The United States kept working to broker peace and implement the Mitchell plan. In April 2003 the United States, United Nations, European Union, and Russian Federation ("the Quartet") announced a roadmap for peace that posited two separate states. Both Israel and Palestine claimed to be committed to the plan, but violence continued on both sides. Arab terrorists and Ultraorthodox Jewish settlers continued to attack one another, and the leadership of Sharon and Arafat did not help.

In the winter of 2003–04 Sharon proposed a plan for disengaging from Gaza, which was endorsed by the Quartet. Yasser Arafat's death in November 2004 gave renewed hope to those seeking peace. The new Palestinian prime minister, Mahmoud Abbas, was widely regarded as a moderate more likely to negotiate with Israel than had been his predecessor. In January 2006 Sharon suffered a stroke and Ehud Olmert stepped in as acting prime minister. Shortly thereafter Hamas won elections to the Palestinian Legislative Council, making peace negotiations again unlikely.

LIST OF MODERN RULERS

Prime Ministers

1948–54	David Ben-Gurion
1954–55	Moshe Sharett
1955–63	David Ben-Gurion
1964–69	Levi Eshkol
1969–74	Golda Meir
1974–77	Yitzhak Rabin
1977–83	Menachem Begin
1983–64	Yitzhak Shamir
1984–86	Shimon Peres
1986–92	Yitzhak Shamir
1992–95	Yitzhak Rabin
1995–96	Shimon Peres

1996–99 Benjamin Netanyahu
 1999–01 Ehud Barak
 2001– Ariel Sharon
 2006– Ehud Olmert (acting)

CONSTITUTION

Israel has no formal constitution. The Declaration of the State of Israel called for the promulgation of a constitution in 1948, but political differences prevented this, and in 1950 the Israeli parliament, the Knesset, passed a compromise resolution calling for the passage of basic laws that would form the basis of the national constitution. By 1978 six basic laws had been enacted. These acts cover topics that range from the Knesset and the presidency to the economy and the army.

In addition to the basic laws, there are a number of ordinary laws that deal with the structure of state institutions, including the Equal Rights for Women Law (1951), the Nationality Law (1952), the State Education Law (1953), and the Knesset Elections Law (1959). In the absence of a constitution, the courts are the principal guardians of civil rights and liberties. There is also no standard against which the Knesset acts can be judged or their legality tested.

The president is elected by the Knesset for a five-year term but may not serve for more than two terms. There is no vice president, and if the president is killed or incapacitated, the speaker of the Knesset exercises presidential functions. The president has no veto power but appoints major officials and is important in the formation of the cabinet. The executive is the prime minister and the cabinet. The cabinet consists of 15 ministers in addition to the prime minister. The president selects the prime minister, choosing the party leader he believes most capable of forming a government. The Israeli people voted for prime minister from 1996 until 2001, when the Knesset rescinded the law allowing direct election and the choice reverted to the president.

PARLIAMENT

The Israeli parliament, or Knesset, is a 120-member body whose members are elected by universal suffrage for four-year terms under a system of proportional representation; voters vote for parties, and the parties choose members on the basis of their party rank. The functions and structure of the Knesset are delineated in the traditional laws, as amended by later legislation. Every Israeli over the age of 21, regardless of gender or race, may be elected to the Knesset. The parliament is elected by a proportional party-list system in which the entire country forms one constituency. Parties receiving at least 1 percent of the votes are entitled to seats in the Knesset. Women and Arabs are underrepresented.

Within the constraints of party and group discipline, Knesset members have substantial freedom of action. The interests of their constituencies take precedence over

party discipline. Members often vote against their parties. There is no quorum requirement, which leaves members free to be absent for long periods. The narrow government coalitions that have characterized Israeli politics have reinforced the power of the individual member. In relation to the executive, the Knesset is far more powerful than its Western counterparts. With a simple vote of no confidence, the Knesset can topple the government. Legislation by the Knesset is not open to challenge in a court and may not be vetoed by the president.

All legislative work is done in committees. Standing committees deal with constitution, law, justice, economics, finance, foreign affairs, security, education, culture, immigration, internal affairs, environment, labor welfare, and state control. The committees do much of their work through subcommittees.

POLITICAL PARTIES

Israel has historically been governed by coalitions formed among multiple parties. Labor led the government from independence through 1977, when the Likud bloc rose to power. In 1984 Labor and Likud were forced to form a unity government that lasted until 1990. Likud held power from 1990 to 1992, when Labor, led by Yitzhak Rabin, formed a coalition with Meretz, Shas, and two Arab-majority parties. Shas promptly left the coalition, and Rabin was assassinated in 1995. Likud took power in 1996, Labor reclaimed the majority in 1999, and Likud again took dominance in 2001, under Ariel Sharon. Sharon formed a coalition with Labor, but the unity government collapsed in 2002, and the 2003 elections resulted in another coalition formed with Likud, the National Religious Party, the National Union Party, and the centrist Shinui. In 2004 this coalition was once again on the verge of collapse.

Major parties include the Geshet, a center-right party formed from dissident Likud members; the Labor Party, center-left; the Likud Party, center-right; the Meretz, a center-left party that supports the peace process; the National Religious Party, a center-right religious party that promotes Zionism; the Shas, a conservative Talmudic party; the Third Way, formed from defectors from the Labor Party, which opposes “land for peace”; the Tsomet, a center-right party; the United Arab List, a far-left party that represents Arab interests; the United Torah Judaism, an ultraconservative Orthodox party; and Yisrael Ba’aliya, a party that supports immigrant rights. There are a number of other minor and religious parties.

LOCAL GOVERNMENT

Israel is a highly centralized state, and local government is relatively limited in power. The nation is divided into six administrative districts and 14 subdistricts under the charge of district commissioners and district officers, re-

spectively. These officers are appointed by and responsible to the minister of the interior.

Local self-government consists of elected municipal, local, and regional councils. Councillors are elected by secret, universal, direct, and proportional voting. Mayors and chairpersons are elected by the councils. Larger urban areas are classified as municipalities, and local councils are classified as Class A or Class B, depending upon population. Regional councils are elected by settlements such as *kibbutzim* and *moshavim*.

The *kibbutz* and *moshav* are institutions peculiar to Israel. The *kibbutz* is a cooperative, egalitarian, and economically independent community. Members own no property and receive no salaries. Needs are provided by the community, and all members participate equally in decision making.

In the *moshav* each family maintains its own household and farms its own land, but major economic and social services are provided cooperatively. The *moshav's* cooperative provides marketing, supply, educational, and medical services through its central governing body.

LEGAL SYSTEM

Israeli legal codes and judicial procedures are derived from a variety of sources. Laws applicable to Israeli Jews in matters of personal status are based on the Torah. There are also Ottoman influences, and British law provides the basis for the court procedure, criminal law, and civil code. Provisions for civil liberties and rights bear the imprint of U.S. models.

The judiciary comprises three main kinds of courts—secular, religious, and military—each under a separate ministry. The secular courts are under the Ministry of Justice, the religious courts are under the Ministry for Religious Affairs, and the military courts are under the Ministry of Defense. Secular judges are appointed by the president on the recommendation of a broadly constituted nomination committee. The judges of the religious courts are appointed by the president on the advice of a committee chaired by the minister of religious affairs. Judges serve for life or until age 70.

At the top of the court hierarchy is the Supreme Court, which is composed of a number of justices determined by the Knesset, currently 12. The court has both appellate and original jurisdiction. Although the court is the supreme guardian of fundamental rights, it does not have the power of judicial review and cannot invalidate Knesset legislation.

There are also five district courts, which form the second tier of the civil court structure. These courts have original jurisdiction over cases not within the jurisdiction of the lower courts. They also have an appellate function. The lowest tier of courts is the magistrate courts, which include traffic, juvenile, labor, and military courts.

The highest court in the Jewish religious court structure is the High Rabbinical Court of Appeal, also known as the Rabbinical Supreme Court. The court hears appeals from the eight district rabbinical courts. For Muslim, Druze, and Christian religious courts, the legal authority is not their respective religious traditions but the secular laws of the state.

HUMAN RIGHTS

Human rights in Israel present a mixed picture. Israel is a parliamentary democracy that guarantees civil, political, and religious rights to all citizens irrespective of race, religion, and gender. However, in the occupied territories there is a large and hostile minority group that is underrepresented in government and whose only outlets for grievances have been demonstrations and terrorism at home and abroad. There is a cycle of violence and repression in the country, with the Jewish majority not shunning the most brutal means to subdue the Arabs and the latter in turn resorting to indiscriminate terrorism to make their voice heard around the world.

In these circumstances, the quality of human rights as well as the guarantees of civil, political, and religious liberties have suffered. In 1987 a special judicial commission issued a report condemning the Israeli security agency. Under the state of emergency initiated in the wake of security cases, freedoms of speech, press, and movement are limited. Arabs may be confined by administrative orders to their neighborhoods or villages.

Since 1987 there has been a significant increase in violence, including acts of terrorism by Jewish settlers and the PLO and other Palestinian groups. International human rights organizations have complained of the frequent and systematic mistreatment of Arab prisoners in Israel. Armed suspects may be held in custody without charges for up to 18 days. Persons held for security reasons are not allowed bail, and there is often no notification of their arrest. Security policy may impose curfews and close off areas. Homes of suspects may be destroyed. Persons arrested for security reasons are tried by military court. In the occupied territories political rights are almost entirely absent. No political party is permitted to function, and public gatherings of more than 10 people require official permits, which are routinely denied. Several labor unions have been disbanded, and registrations for new unions are denied.

The September 1993 Israeli-Palestinian Declaration of Principles and the Interim Agreement on the West Bank and the Gaza Strip in 1995 marked the beginnings of an effort at reconciliation and the establishment of a Palestinian self-governing authority. The agreements called for the transfer of civil authority to the Palestinians. The 1997 Hebron Agreement established arrangements for the redeployment of Israeli forces. The beginning of the

second intifada in September 2000 brought about a new wave of suicide bombings aimed at Israeli civilians, with the Israeli military responding with frequent retaliatory acts. In 2002 the Israeli government began constructing a highly controversial “wall of separation” around the West Bank in an attempt to stem the tide of suicide bombers coming from the West Bank.

FOREIGN POLICY

Since the nation was founded, Israel has been under constant military threat. As such, its foreign and defense policies are inexorably intertwined. Israel has concentrated on military strength and preparedness to ensure its survival. While the United States is its only firm and consistent ally, Israel has had substantial economic and political support from Jewish groups around the world.

Despite decisive military victories in three wars—the War of Independence in 1948–49, the Six-Day War in 1967, and the Yom Kippur War in 1973—Israel has only recently made progress toward a sustainable peace settlement with its neighbors. Compounding Israel’s problems have been the invasion and occupation of southern Lebanon and the consistent opposition of the United Nations toward Israeli occupation of the Gaza Strip and the West Bank.

The 1979 Camp David Accords marked the beginning of the Middle East Peace Process, but real progress on this front has come only recently. The accord restored to Egypt its pre-1973 borders and led to diplomatic relations between the two nations. This was followed by the restoration of diplomatic ties with Jordan in 1994 and the establishment of the Palestinian Authority (consisting of the West Bank and the Gaza Strip) in 1995. Disagreements over Israeli troop withdrawals and the amount of land to be turned over to the Palestinians have slowed the peace process and led to domestic political problems for Israel. Other major disputes continue with Syria over the status of the Golan Heights and the continuing Israeli occupation of southern Lebanon.

A visit to the Temple Mount (the Dome of the Rock) in Jerusalem, a site considered traditionally off limits to non-Arabs, by Ariel Sharon, the Likud leader, led to a deadly escalation of violence that began toward the end of 2000 with the second intifada. By September 2004 the death toll was estimated at more than 2,400 Arabs and 1,000 Jews. The election of Sharon as prime minister in 2001 only contributed to a worsening of the situation.

Yasser Arafat died in November 2004. His death has given Israelis and Palestinians new hope for peaceful reconciliation. A shaky truce between the Israelis and Palestinians in February 2005 was also grounds for hope of a peaceful resolution to the violence.

DEFENSE

In few countries of the world does national security play as pervasive a role in society as it does in Israel. The country devotes more human and economic resources per capita to defense than any other nation; in 2002 the nation spent 8.7 percent of its gross domestic product (GDP) on the military. The Israel Defense Force (IDF) has no commander in chief; instead, the main elements of command are the Ministry of Defense, the chief of staff, and the director general of the ministry. Unlike other defense forces in Western democracies, parliamentary control over the IDF is weak, although cabinet control is strong. The United States and Israel have collaborated on military planning and weapons development since establishing the Joint Political Military Group in 1983. The United States supplies Israel about \$2 billion annually in security assistance.

The IDF has a ground corps, a navy, and an air force. Most Israelis must serve in the military when they turn 18; men serve for three years and women for 21 months. Women do not serve in combat branches. Ultraorthodox Jews and Christians are not subject to conscription but may volunteer. Arabs do not ordinarily serve in the military.

ECONOMY

Israel has a free-market economy with a dominant private sector but substantial government involvement. It is dependent on the importation of oil, raw materials, and military equipment. The major industries include food processing, textiles, chemicals, transport equipment, high-technology electronics, metal products, and tourism. Nearly one-third of the population is employed in public services, one-fifth in manufacturing.

Israel’s main exports include machinery and equipment, chemicals, textiles and apparel, agricultural products, and metals. Its main imports are raw materials, military equipment, investment goods, oil, and consumer goods. The nation’s major trade partners are the United States, Belgium, Germany, the United Kingdom, Italy, Japan, and the Netherlands. During the 1980s the economy was hampered by high inflation and unemployment, and unemployment continues at high levels among the Arab population. However, in the 1990s the economy rebounded as exports increased. In addition, the normalization of relations with

Jordan opened new markets. The economy grew at a rate of 1.3 percent in 2003 as tourism and foreign direct investment improved over the previous two years. It grew another 2.7 percent in 2004 as a result of greater consumer confidence and increased demand for Israeli exports.

The nation has achieved self-sufficiency in fruits, vegetables, poultry, eggs, and dairy products but still imports a substantial portion of its requirements for meat and vegetable oil and about half its grain needs. Agriculture has a historic prominence in Israeli life greater than its economic contribution. It had a central place in Zionist ideology and played a dominant role in the settlement of the country, particularly the kibbutzim and the moshavim. Freshwater is a scarce resource in Israel, as it is in most of the Middle East. The success of Israeli agriculture is partly the result of the extensive development of this scarce resource through an integrated national water system. Some 90 percent of the nation's water resources are being used.

ENVIRONMENT

The limited amount of arable land and water in Israel has led to concerns over resource use. Intensive farming has also led to serious depletion of water and soil and to desertification. Air pollution from industrial plants and auto emissions is a problem in urban areas, as is ground-water pollution from fertilizers, industrial discharge, and chemicals. The government is well aware of its environmental problems, and the Ministry of the Environment has developed strategies for confronting them.

 CO2 Emissions per capita ton: 10.03

LIVING CONDITIONS

Over 90 percent of Israelis live in cities, mostly in modern apartments. Some people live in detached houses called *villas*; villas have been built all over the hillsides of the small nation, some of them supported on stilts. Houses are painted light colors and are floored with stone tiles to be as cool as possible; shutters keep out the bright sunlight.

Transportation in and out of the country can be expensive and complicated; anyone with an Israeli stamp in his or her passport is not allowed to enter Lebanon or Syria. Bus transportation is cheap and efficient, though many buses do not run on Saturday, the Sabbath. Many people use shared taxis, which do run on Saturdays.

HEALTH

Israel's National Health Insurance Law provides that all residents receive medical care. There are many doctors and clinics. People who do not wish to use the excellent national facilities may pay for their choice of private medical caregivers. Israelis are quite healthy, with high life expectancies and a low infant mortality rate. There are special mother and child-care facilities specifically to handle pregnancy and early childhood. The government spends money promoting healthy lifestyles and preventative care. The Dead Sea area attracts patients who believe that the waters and air will cure their psoriasis, asthma, and other conditions.

Health

 Access to Improved Water Source %: 100

FOOD AND NUTRITION

Many of Israel's dietary traditions are dictated by religion. Neither Jews nor Muslims eat pork. Jews do not mix meat and milk and avoid certain unclean animals, such as shrimp. Jews do not cook on Saturday, the Sabbath, and so they usually cook a stew called *cholent* the day before

and eat it cold. People eat food that originated in eastern Europe, such as gefilte fish, borscht, blintzes, schnitzel, and goulash, and in Yemen, such as stuffed vegetables. There is also a variety of traditional Arab food, such as hummus, falafel, pita bread, and salads. Sandwiches made of pita bread and hummus or falafel are popular fast foods. Nuts and corn on the cob are popular snacks. Muslims do not drink alcohol but do consume a great deal of coffee and tea. People make juice from almonds, tamarinds, and dates. Meat is scarce and expensive, while vegetables are abundant. Many early Israeli settlers were vegetarian, and vegetarianism is still common.

Food and Nutrition

Undernourished % of total population: —

 Amount of Cereal Available per person per year kg: 153.7
 Amount of Fruits and Vegetables Available per person per year kg: 336.4

STATUS OF WOMEN

Violence against women is a problem in Israel, in both the Hebrew and Arab communities. There are discrepancies in pay, despite the fact that legislation passed in 1996 provides for legal remedies for inequities in pay. Women are also underrepresented in government and the higher levels of industry. Religious law is more restrictive for women, especially Muslims. For instance, Islamic courts have held that Muslim women may not request a divorce. Ultraorthodox Jews tend to rank women well below men, and Ultraorthodox women often have very many children—perhaps ten or more.

Women

Women-headed Households %: —
 Seats Held in Parliament by Women %: 15
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 48.9

WORK

The vast majority of Israel's workforce is employed in service, manufacturing, and the public sector. Factory workers make products such as electronics, computer hardware and software, and chemicals. Some people work in the diamond industry, cutting and polishing rough diamonds for export. Most workers belong to trade unions. Many Palestinians work in Israel, commuting across the border daily; they are employed on farms, in construction, and in the garment industry. When the border is sealed during tense periods, these workers cannot reach

their jobs, which causes problems for them and their employers. A few Israelis work as farmers, using complex irrigation techniques to produce their crops.

 Finance and Business: 13.1
 Personal and Other Services: 6.4
 Public Services: 31.2
 Unemployment %: 10.7

EDUCATION

The legal foundation of education is found in the Compulsory Education Law of 1949 and the State Education Law of 1953. These laws made Hebrew or Arabic the language of instruction. Hebrew-language schools are divided into two tracks: state and state-religious. Higher education is controlled by the Law on the Council for Higher Education of 1958.

Education is free and compulsory for children ages six to 16. Primary education lasts six years. The structure of secondary education is based on European models. It has three tracks: academic, technological, and agricultural. The first leads to the university and the other two to technical careers. There are seven universities in Israel, an Open University program, and several regional colleges. About 75 percent of university funds come from the state, the rest from tuition fees, grants, gifts, and endowments.

Education

MEDIA

Israelis are passionately interested in the news. Almost all adults read at least one newspaper a week, and nearly everyone listens to daily news on the radio or watches reports on television. Because of its small size, Israel has only national newspapers. The major dailies are published in Hebrew, but there are also newspapers in English, Arabic, French, German, Yiddish, Russian, and Hungarian. All dailies are privately owned. Since most dailies are organs of political or religious groups, they are heavily subsidized by their parent organizations. There are two major television networks, but most households subscribe to satellite or cable services. The first commercial radio station opened in 1995. In 2003 there were about 150 pirate radio stations, many of them illegally broadcasting Ultraorthodox programming.

The media are monitored by two state agencies: the Central Office of Information and the Government Press Office; however, there is little *de jure* censorship. The Arab press is treated as hostile and subversive and is subject to onerous restrictions. In the early 2000s there were numerous violations of freedom of the press; almost all of them were carried out by Israelis against Arab journalists.

CULTURE

Israeli culture is a mix of several distinct traditions, including Arab, Jewish, and Druze; in addition, within each of these groups there are distinct subcultures. In the dominant Jewish culture there is a continuing debate between the secular and religious communities over the place and role of Orthodox law and tradition. In many ways Israeli culture is very cosmopolitan and Western, yet these trends exist side by side with traditional communities that shun modern popular culture. There also exist conflicts between native-born Israelis and newer Jewish immigrants over issues such as education and language.

Israel's well-educated and cosmopolitan population supports a variety of artistic endeavors, which are supported with government funds. There are several professional dance companies, the Israeli Philharmonic Orchestra, the New Israel Opera, and the Jerusalem Symphony as well as numerous smaller orchestras and ensembles in cities and towns. Many Israeli musicians come from the former Soviet Union. There are three large theater repertory companies, including Habimeh, founded in 1917. Israeli audiences watch performances of the full range of dramas in translated works and in original works by Israeli playwrights. There are artists' colonies in Ein Hod, Jaffa, and Safed. The Israel Museum in Jerusalem displays a collection of regional artworks, including Jewish folk exhibits and the Dead Sea Scrolls.

FOLKLORE AND MYTHOLOGY

Folk dancing is popular; folk groups perform the dances of the various ethnic groups that form Israel's population. The University of Haifa has a program in folklore studies that examines Israeli folk culture and beliefs. The Old Testament is full of myths, such as the two versions of the creation of humans and the tale of the flood that destroyed all of humanity.

ENTERTAINMENT AND RECREATION

Because Israel has a warm, dry climate, people spend a great deal of time outdoors. They like to sit at sidewalk

cafés in the afternoons, where they may talk with friends or read newspapers; stores close during the afternoon, so many people are free then. People love to go to the cinema; most films are subtitled in Hebrew, English, or French. Water sports are wildly popular on the Mediterranean, Red Sea, and Sea of Galilee coastlines, and people engage in swimming, waterskiing, parasailing, sailing, surfing, scuba diving, and snorkeling. One attraction for scuba divers is the ruins of Caesarea, Herod's city. Hiking and horseback riding are also popular.

ETIQUETTE

Israelis often come across as blunt or even rude. They consider it appropriate to interrupt speakers, to ask personal questions, or to answer questions addressed to other people, preferring directness to ambiguous subtleties. Israelis often stand closer to their conversational partners than Americans, and men engage in physical contact while talking. People gesture constantly, but pointing is rude.

There is a wide range of behaviors considered acceptable, depending on ethnic group. For example, Ultraorthodox Jewish men do not introduce their wives to strangers, and it is not appropriate to ask to be introduced to women. Men do not offer to shake hands with women and vice versa.

Food and meals are a central part of Israeli social life for both Jews and Arabs. When guests arrive, they will be served food. Arabs use only their right hands for eating and consider it rude to eat food with the left.

FAMILY LIFE

Most Israelis have small nuclear families with one or two children. The exception to this is the Ultraorthodox Jews, who marry young and have many children, sometimes well over ten. People usually wait to marry until they have completed their military service at the age of 20 or 21. Most urban women now work outside the home, leaving their children in preschool or day care. Families make a point of eating together. The early Jewish settlers in Palestine established kibbutzim, where all adults worked and shared the income and all children were raised together in day care; the importance of kibbutzim has declined. Arabs in Israel mostly live in small villages in the north and in East Jerusalem; villages usually house extended families.

PERSONAL APPEARANCE

Israelis typically dress casually; businessmen rarely wear ties and sometimes wear short-sleeve shirts. They usu-

ally dress formally, however, when meeting business partners for the first time. Women are expected to dress modestly in religious areas, and devout women dress quite conservatively at all times. They wear long sleeves, high necks, and long, loose skirts or pants. In especially religious areas, women in revealing attire may be verbally attacked by both Ultraorthodox Jews and Muslims. Nevertheless, most Israelis dress according to modern European fashions.

SPORTS

Soccer and basketball are both wildly popular. The City Hall in Tel Aviv owns huge television screens that it uses to broadcast coverage of championships in the town square for the benefit of crowds that gather there. Tennis and swimming are also popular sports. Thousands of people participate every year in the Jerusalem March.

CHRONOLOGY

- 1948** Great Britain relinquishes its Palestinian Mandate and withdraws from territory. Arab military forces invade Palestine but are repelled by Jewish resistance. Under UN auspices Israel enters into armistice with its Arab neighbors. United States and Soviet Union recognize the new state of Israel.
- 1949** Israel is admitted to United Nations. First Knesset election is held.
- 1955** Israel invades al-Auja neutral zone to expel Egyptians and retaliates against Syrian attacks.
- 1960** Nazi Adolf Eichmann is kidnapped from Argentina, tried, found guilty, and hanged.
- 1967** Clashes with Syria and Egypt escalate. Egypt initiates a blockade. Israeli aircraft launch attacks that destroy over 400 Arab aircraft, ensuring an Israeli victory in the Six-Day War. Israel occupies the West Bank and the Gaza Strip and annexes the Old City part of Jerusalem.
- 1970** Egypt, Israel, and Jordan accept a U.S.-proposed 90-day cease-fire.
- 1971** Knesset enacts new citizenship law enabling overseas Jews to claim Jewish citizenship in addition to their own.
- 1972** At the Olympic Games in Munich, Palestinian terrorists kill 11 Israeli athletes. Israel retaliates with air strikes against PLO bases in Syria and Lebanon.
- 1973** Egypt and Syria launch attacks across the 1967 cease-fire line on Yom Kippur.

- Israeli forces drive the Syrians back to within artillery distance of Damascus and cross the Suez Canal into Egypt, before a cease-fire is agreed upon.
- 1979** Through the mediation of U.S. president Jimmy Carter, Egyptian president Anwar Sadat and Israeli prime minister Menachem Begin sign the Camp David Accords in Washington, D.C., under which Israel withdrew from the Sinai Peninsula and Egypt recognized Israel.
- 1982** Israel invades Lebanon and occupies Beirut. Following the arrival of a multinational peace-keeping force, Israel begins phased withdrawal.
- 1985** As economy falters and inflation soars, the government launches an emergency austerity plan restraining wages and public spending. Ethiopian Jews are airlifted to Israel from Ethiopia through Sudan.
- 1987** Arab riots and demonstrations prompt Israel to counter with repressive measures.
- 1991** The peace process is reinvigorated by the Madrid Conference.
- 1994** Peace treaty with Jordan signed.
- 1995** Israel and Palestinians sign Interim Agreement on the West Bank and Gaza Strip, which calls for the establishment of self-government for the Palestinians and the redeployment of Israeli security forces. Prime Minister Yitzhak Rabin is assassinated.
- 1997** Israel and the PLO sign the Hebron Agreement, which details the Israeli withdrawal and outlines the steps for the implementation of the Interim Agreement.
- 1998** Wye River Agreement facilitates continuation of process initiated by the Interim Agreement.
- 2000** Israeli forces withdraw from South Lebanon. Talks at Camp David attempt to engineer a peaceful resolution to the conflicts between Israel and Palestine but ultimately fail. The second intifada begins.
- 2001** Ariel Sharon is elected prime minister. Escalating death toll in Arab-Israeli conflict is estimated at more than 1,000.
- 2002** Israel begins building a controversial "wall of separation" through the West Bank in an effort to reduce the onslaught of suicide bombers.
- 2003** The United States, United Nations, European Union, and Russian Federation offer Israel and Palestine another peace plan. Violence continues.
- 2004** Sharon suggests a plan for removing Israelis from Gaza. Yasser Arafat dies in November.
- 2005** Mahmoud Abbas is elected Palestinian prime minister. A tentative truce is announced between the

Israelis and Palestinians, offering hope of an end to the second intifada.

- 2006** Sharon suffers a stroke and Ehud Olmert becomes acting prime minister. Hamas wins Palestinian elections.

DATE OF CONSTITUTION

January 1, 1948

GEOGRAPHICAL FEATURES

A peninsula jutting out from southern Europe, Italy covers a land area of 116,275 sq mi (301,230 sq km). The boot-shaped Italian peninsula is 736 miles (1,185 km) in length, and its greatest width is 391 mi (630 km). Italy is surrounded by the Ligurian, Tyrrhenian, Ionian, and Adriatic seas, all arms of the Mediterranean Sea. Besides Sardinia and Sicily, the nation's territory includes many islands and archipelagoes. Italy's coastline runs for 4,722 mi (7,600 km).

The capital and largest city is Rome, situated on the banks of the Tiber River.

Italy is predominantly mountainous, and plains compose less than one-third of its area. The two principal mountain ranges are the Alps and the Apennines. The Alps in northern Italy are made up of a series of massifs and chains running almost parallel to each other. The Apennines, running north to south in the interior of the peninsula, are formed of softer rocks and are less elevated than the Alps. Italy's topography is marked by several active volcanoes, including Vesuvius near Naples, Etna in Sicily, and Stromboli and Vulcano in the Lipari Islands.

The Po Plain, flanked by the Alps and the northern Apennines, is a major landform. Other plains are small in

Italy

1160 Italy

area. The Po River is Italy's largest river, 399 mi (642 km) in length and navigable almost its entire length. Other rivers are the Adige, Reno, Bradano, Rota, Tiber, and Arno.

Verona	258,115

CLIMATE AND WEATHER

Italy has a temperate climate with a wide variety of regional characteristics. The principal climatic factors are the peninsula's length from north to south, the length of the coastline, and the presence of the Alps and the Apennines.

The alpine region is characterized by harsh winters and moderately warm summers. Precipitation, often in the form of snow, is abundant there. The Po Plain has a semicontinental climate, with harsh winters, long pe-

riods of subfreezing temperatures, and warm summers. High humidity makes summer sultry and creates frequent heavy fog in winter. The Ligurian and Tyrrhenian regions enjoy exceptionally mild winters and moderately warm summers. In the Adriatic region, coastal temperatures are lower in the winter, and summers are hotter. In the Apennine region, climatic conditions vary along the two opposing seaboard but are generally continental, with extremely mild winters and hot summers.

Climate and Weather

Mean Temperature: 52°F to 66°F
Po Valley: 55°F
Sicily: 64°F
Coastal Lowlands: 58°F
Average Rainfall
Southeastern Coast, Sicily, and Sardinia: 20 in
Alps: 80 in

FLORA AND FAUNA

Italy's plants are Mediterranean. Olive trees and cypress are everywhere, as are pines, cork trees, and ilex. Herbs such as rosemary, thyme, and lavender grow wild. There are many shrubs, including heather, juniper, and gorse, and flowering plants such as irises, gladioli, and orchids. Prickly pear cacti cover much of the southern part of the country. Wild animals are rare, though there are still a few wolves, bears, foxes, marmots, wildcats, deer, sheep, chamois, and wild boar. Birds of prey include golden eagles, falcons, and hawks.

ETHNIC COMPOSITION

Ethnically, Italians are an amalgam of the various peoples to whom Italy has been home for centuries: Lombards and Goths in the north; Greeks, Spaniards, and Saracens in Sicily; Latins in and around Rome; and Etruscans and others in central Italy. Regional loyalties remain strong, but they are being gradually erased and replaced by socioeconomic differences.

Non-Italian minorities form less than 2 percent of the population and are concentrated in provinces close to France, Austria, Croatia, and Slovenia.

LANGUAGES

The national and official language is Italian. While each region has its own dialect, Tuscan, the dialect of Tuscany, is the standard. Regions are permitted to have official second languages, and under this provision French is the official second language in Valle d' Aosta, German in Alto-Adige, and Ladin (related to the Romansch language of Switzerland) and Slovene in the northern Venetian region. Sard, the dialect of Sardinia, is sometimes considered a distinct Romance language.

RELIGIONS

The Roman Catholic Church occupies a special place in the history of Italy. As the home of the papacy, Italy's religion, culture, and politics have long been intertwined with the Catholic Church. Roman Catholicism remains the religion of the vast majority, with one-tenth or so of the people classified as nonreligious. Islam and other religions are practiced by some 5 percent of the population.

Relations between church and state are governed by the Lateran Agreements of 1929, which confirmed the existence of Vatican City as the sovereign papal territory within Rome and recognized the preeminence of the Catholic Church in the nation's religious affairs.

The Catholic Church played an important role in politics in the two decades following World War II through its strong, acknowledged support of the Christian Democratic Party, which controlled the Italian government. During the reign of Pope John XXIII (1958–63), the church relaxed its political efforts, as the danger that the Communist Party would come to power became less serious. Since the 1970s the church has for the most part remained out of the nation's politics.

HISTORICAL BACKGROUND

Although Italy is relatively young as a nation-state, the name Italy is an ancient name used to identify the boot-shaped peninsula that juts from the Alps into the Mediterranean. The name was coined by the Greeks, for whom it meant a country good for grazing cattle. The Latins and other Italic tribes are reported to have settled in the land by 2000 B.C.E. Around 1200 B.C.E. the Etruscans appeared to challenge the early settlers as well as the Greeks. The first Greek colonies were planted in southern Italy in the eighth century B.C.E. Thus, at the time when Rome was founded, around 756 B.C.E., the peninsula was the home of the Etruscans, the Latins and other Italic tribes, and Greeks.

The origins of Rome are shrouded in legend, according to which Latin villagers sought safety from attackers behind the wooden palisades constructed on the Palatine Hill, overlooking the Tiber. They took as their first king Romulus, a descendant of Aeneas the Trojan and after whom the city is named. A hereditary Etruscan monarchy was overthrown around 510 B.C.E., and a republic was set up. Within a few centuries Rome was transformed from a city-state into an empire, but it developed haphazardly, not from preconceived strategy. Victories against Carthage in the Punic Wars of the third century B.C.E. gave Rome mastery of the Mediterranean and put Italy at the center of an empire that stretched from the British Isles to the Euphrates by the beginning of the common era.

Although the republic was a sacred institution for the early Romans, the state evolved through military and political pressures toward a monarchical system. Octavian, Julius Caesar's nephew, concentrated all power in his hands, and having been given the title *princeps* (first citizen) and the name Augustus by the Senate, began the reign of the Roman emperors in 17 B.C.E. From a military perspective the empire went on the defensive in the first century C.E., and by the third it was in full retreat. Sacked by the Visigoths in 410 C.E., Rome was prey thereafter to attacks by marauding Germans. In 476 a palace coup forced the abdication of the last Western emperor, a puppet of his German advisers.

In 488 Theodoric, king of the Goths and also a Roman patrician, set about to restore Italy and rebuild Rome. In 526 Justinian, the Byzantine emperor best remembered for his compilation of Roman law, known as *Corpus Juris Civilis*, turned on the Goths and revived direct imperial control over Italy. In removing his Gothic allies, however, Justinian left Italy open to invasion by Germanic Lombards, who established kingdoms throughout the peninsula. Although some portions of Italy, including Rome, remained in Byzantine hands, the creation of Lombard kingdoms meant the end of political unity for Italy for 1,400 years.

Christianity was brought to Italy by Greek-speaking Jews in the first century. Although severely persecuted at

first, it spread like wildfire through all provinces of the empire and was granted official recognition by Emperor Constantine in 321. By the fourth century the Christian bishops of Rome, who claimed succession from the apostle Peter, had assumed a position of primacy in the western, or Latin, church and bore the titles of pope and Pontifex Maximus. With the transfer of the imperial capital to Constantinople, temporal jurisdiction over the city of Rome passed on to the pope. As the papacy grew more independent, papal historians argued that fullness of power rested in the Vatican and that civil power was merely derived from the power of the church. This enabled the pope to assume a wide range of civil, diplomatic, and military responsibilities in Italy in the absence of the emperor.

In 754 the pope called on Pepin, king of the Franks, to expel the troublesome Lombards from Roman lands. Pepin did so and restored to the pope these territories, which thereafter came to be known as the Papal States. In 800 Pope Leo III recreated the Western Roman Empire by conferring the imperial crown on the Frankish king, Charlemagne. By this step he linked the future of Italy to Germany and northern Europe and separated it from Byzantium. The Holy Roman Empire stood for another 1,000 years, until modern times.

Only Sicily and southern Italy remained in Byzantine hands, and even there the Byzantine hold was weak. In 1053 Robert Guiscard united all Norman territories in southern Italy. His kingdom lasted until the time of Napoleon.

The Middle Ages in Italy were marked by the rise of the communes, or city-states, such as the maritime republics of Venice, Genoa, and Pisa. Although their political institutions developed independently, the city-states exhibited some common characteristics. Oligarchies composed of merchant families dominated political life through guilds. The guilds were riven by factions, many of them highly radical. Emperor Frederick of Hohenstaufen (called Barbarossa in Italy) tried to bring these communes under his control, but they united into the Lombard League. At Legnano in 1176 the league defeated the emperor's forces and forced him to recognize its liberties. Barbarossa's grandson, Frederick II, the king of Naples and Sicily, also failed to subdue the communes of Lombardy and Tuscany.

The 15th century was a time of war, famine, and plague, but it was also a time of consolidation for the communes, many of which became lordships, or seignories. The dynasties of these lordships, such as the Visconti of Milan, Gonzaga of Mantua, d'Este of Ferrara, and Scaligeri of Verona, ranked equal in power and wealth to the royal houses of Europe. The five principal city-states—Naples, the Papal States, Venice, Milan, and Florence—were fully sovereign by the 15th century. The Italian League, a formal alliance of these states forged in

1455, kept the peace in Italy for the 40 years that coincided with the intellectual and cultural flowering of the High Renaissance. The linchpin of the alliance was Florence, then controlled by the Medicis, who held no office and took no title.

The Italian League collapsed in 1494, and for the next 300 years Italy was the arena in which Spain, France, and the Hapsburgs fought out their rivalries. For nearly 200 years the Hapsburgs were dominant. The era culminated in the Italian campaigns of Napoleon Bonaparte, as a result of which France annexed large portions of Italy, including Rome, Piedmont, and Naples.

This was the setting for the Risorgimento, the 19th-century movement for political unity in Italy. It was not a mass movement and was promoted chiefly by an elite of middle-class liberals who organized it around a core of secret societies. Later in the century three figures, Giuseppe Mazzini, Giuseppe Garibaldi, and Camillo di Cavour, emerged as its leaders. By 1870 all of Italy had been brought under Victor Emmanuel II as king. Cavour convened a national parliament, and the constitution of Piedmont became the basic law of the new kingdom. Parliament enacted the Law of Guarantees in 1871, establishing the Vatican as an independent papal territory within the city of Rome and according the pope the status of a sovereign. Pope Pius IX rejected the offer out of hand and proclaimed himself the "prisoner of the Vatican." The pope excommunicated King Victor Emmanuel II, refused to recognize the legality of the Italian state, and condemned the occupation of Rome. For the next quarter century the government was left to the anticlericals, and Catholic leadership was cut off from the political life of the nation. Italy wanted to gain status as a major European power, so it tried to seize Ethiopia, but its imperialist dreams were crushed by its defeat at the Battle of Adowa in 1896.

Italy entered World War I on the side of the Allies. More than 600,000 Italians died in the war, but the nation's case was poorly presented at the Versailles Conference, and it gained only minor territories. The resulting sense of frustration and betrayal, combined with severe postwar economic depression, created great social unrest and eventually led to the rise to power of Benito Mussolini in 1922. In 1929 he sought to placate the church with the Lateran Pact, which consisted of a treaty between the Italian state and the Holy See and a concordat regulating the relations between the two. It created the independent Vatican City and recognized the pope as its sovereign. The church was restored to its role in Italian education and allowed the unencumbered operation of its press and communication facilities.

Mussolini established a Fascist dictatorship, a corporate state, and sought to regain Italy's imperial past by conquering Ethiopia (1935–36). In 1936 he agreed to the Rome-Berlin Axis, and the next year Italy joined

Germany and Japan in the Anti-Comintern Pact. By 1939 Italy had become a virtual Nazi satellite. Mussolini aided Franco in Spain during the Spanish Civil War, and his support was crucial in ensuring Franco's victory. However, Italy was unprepared for World War II, which it joined on the side of Germany. A series of early fiascos, including a disastrous invasion of Greece, was followed by the Allied invasion of Italy in 1943.

In a palace coup the Fascist Grand Council forced Mussolini's resignation, had him arrested, and called on Marshal Pietro Badoglio to become prime minister. The government declared war on Germany, but the Germans were in control of most of the country. A new government of national unity was formed to direct Italian resistance in German-occupied areas. Mussolini was rescued by German commandoes, and he set up a rival government in the German-occupied region, with headquarters at Salo. Rome was liberated by the Allies in 1944. Partisans captured and executed Mussolini as he tried to escape to Switzerland.

Two years of shelling and bombing and reprisals by the Germans and the Fascists had taken a heavy toll. The economy was disrupted, large parts of the country lay in ruins, and hundreds of thousands were left homeless. Following a provisional government in 1945, the monarchy was abolished in 1946, and a republican constitution went into effect in 1946. For the next 16 years Italy was ruled by a series of center-right coalitions led by the Christian Democrats.

The first change came in 1962, with the formation of a center-left government under Amintore Fanfani under a policy of *apertura a sinistra* (an opening to the left). In 1981 Giovanni Spadolini became the first non-Christian Democrat to head a government. In the 1983 elections the Christian Democrats suffered their worst setback, while the Communists also lost seats. The beneficiaries were the smaller parties, most notably the Republicans. In 1994 a coalition government led by the media magnate Silvio Berlusconi ended when Berlusconi resigned in the face of charges of tax evasion. In 1995 emerged a new coalition called the Olive Tree, a loose alliance of center-left parties, whose leader, Romano Prodi, remained in power from 1996 until 1998. He was followed by Massimo d'Alema, leader of the Democrats of the Left, who then formed Italy's 56th cabinet. In 2001 Berlusconi led his revived center-right Forza Italia to victory in national elections and became Italy's 58th post-World War II prime minister. His victory represented a further blow to Italy's traditional parties. He quickly formed a coalition government incorporating the leaders of the right-wing National Alliance and Northern League and a pro-European foreign minister, Renato Ruggiero, though Ruggiero resigned early in 2002 in protest of the "Euroskeptical" views of the other cabinet members.

Berlusconi spent most of 2002 and 2003 involved in a corruption trial stemming from his business activities in the 1980s. He claimed that he was the victim of a politically motivated conspiracy by the judiciary. He was granted a brief reprieve in June 2003, when parliament passed a law granting him immunity from prosecution, but the Constitutional Court invalidated that law in January 2004, and the trial resumed. He was finally acquitted in December of that year, after four years of trial.

LIST OF MODERN RULERS

1981–82	Giovanni Spadolini
1982–83	Amintore Fanfani
1983–87	Bettino Craxi
1987	Amintore Fanfani
1987–88	Giovanni Gorla
1988–89	Ciriaco de Mita
1989–92	Giulio Andreotti
1992–93	Giuliano Amato
1993–94	Carlo Azeglio Ciampi
1994	Silvio Berlusconi
1995–96	Lamberto Dini
1996–98	Romano Prodi
1998–2000	Massimo D'Alema
2000–01	Giuliano Amato
2001–	Silvio Berlusconi

CONSTITUTION

The Constitution of the Italian Republic, after approval by the Constituent Assembly, came into force on January 1, 1948. It establishes a democratic republic and guarantees the rights and freedom of the people. Universal suffrage at age 18 forms the basis of Italy's representative democracy. Turnout in most elections is generally high—rarely less than 90 percent of eligible voters.

The head of state is the president, who is elected by a two-thirds vote of the parliament for a seven-year term. The president's power is based not so much on the constitution as on the dynamics of Italian political processes, which has made him a mediator and moderator of the political coalitions that have led the government since the late 1960s. The major restraint on the powers of the president is the constitution's requirement that before they become law, all acts must be countersigned by the ministers who propose them.

The executive branch—often referred to as the government—is composed of the prime minister, who is the head of government, and the Council of Ministers, or the cabinet. Italian prime ministers and cabinets have been so numerous since the founding of the republic that they resemble a revolving-door government. The average life of a prime minister and cabinet is about 10 months.

However, this governmental instability can be misleading. Behind the facade of continuous cabinet crises is a significant continuity of party, persons, and posts involving permutations and combinations among the same partners. The average Italian minister has a long, active political career. Leaders such as Fanfani, Aldo Moro, Andreotti, Emilio Colombo, and Mariano Rumor were in office continuously for over 20 years.

Nevertheless, cabinet instability remains a persistent and chronic problem and has grown worse in the 1980s and 1990s. All prime ministers, in fact, are caretakers of the government as long as a coalition holds together. The size of the Council of Ministers varies slightly; it includes the prime minister, 19 department ministers, as many as six ministers without portfolio, and one or more deputy prime ministers.

In 2001 Italians voted on the first constitutional referendum since 1946, choosing to transfer more autonomy to regional governments in matters of education, taxes, and environmental policy.

PARLIAMENT

The constitution provides for a bicameral system with equality of powers between the two legislative bodies. The national legislature is composed of the Senate and the Chamber of Deputies, with 315 and 630 members, respectively, elected for five-year terms, but it may be dissolved before the elected term expires. Deputies are elected by universal suffrage, senators on a regional basis. Over the years the Chamber of Deputies has gained the edge in influence through its selection of the prime minister and important ministers from that body.

Like most European parliaments, the Italian parliament is characterized by a preponderance of lawyers, the underrepresentation of women, and the overrepresentation of the middle and upper classes. Other significant traits are the prominence of professional politicians. Few business leaders pursue political careers.

Normal sessions of parliament are long, and it sits almost continuously, with short breaks at Christmas and Easter and a summer recess. Each house is organized into standing committees for legislative work, and a party's committee membership is proportional to its size in that house. The most significant feature of parliamentary activity is the prodigious output of laws—up to 2,300 bills per legislative term. Most of this legislation, however, is minor, and nearly one-third of the total are often private member bills. Nearly 90 percent of all laws are passed unanimously, indicating a great deal of agreement among members of all political views, despite the often violent ideological clashes in parliament.

Parliamentary control over the executive is exercised primarily through three means: votes of confidence, budget votes, and members' floor questions to the executive.

However, these controls have seldom caused cabinets to fall when party discipline is tight. Further, changes in cabinets are often changes in name only, and new cabinets may contain old faces in slightly different orders.

POLITICAL PARTIES

The Italian political landscape has been dominated since the 1990s by the second generation of political parties. For more than four decades after World War II, the battle lines in politics were clearly drawn between the Christian Democrats (CD) on the center-right and the Italian Communist Party (PCI) on the left. The CD was in power continuously from 1945 to 1994, either by itself or in alliance with other center-right, reformist, or moderate socialist parties. The PCI, although shut out of power during this period, remained the largest Communist party in Western Europe and by far the largest opposition party. The far right, constitutionally ostracized after World War II, nevertheless participated in politics under disguised names.

The established postwar party structure came under increasing challenge in the 1980s, before effectively disintegrating in the 1990s. On the left the PCI responded to the collapse of Communism by morphing into a democratic socialist party. The change was not merely in name but represented a genuine shift in positions; most Italian Communists are now hardly distinguishable from moderate socialists. On the right increasing popular discontent with political corruption in Rome gave rise to various regional movements, especially in the north, threatening Italy's unity. On the center-left the main casualty was the venerable CD, which became mired in the worst scandals in any European country in modern times. Its conversion into the Italian Popular Party (PPI) did not prevent a hemorrhage of support. It was forced to seek alliances with assorted parties, including the Communist Party.

As a result of all of these developments, the Italian political scene is a kaleidoscope of shifting ideologies, alignments, and alliances. The center-right Freedom House coalition consists of Forza Italia (Berlusconi's party), National Alliance, the Whiteflower Alliance, and the Northern League. The center-left Olive Tree coalition consists of the Democrats of the Left, the Daisy Alliance, the Sunflower Alliance, and the Italian Communist Party. Each of the "alliances" consists of a number of smaller parties. There are also several minor parties that do not belong to alliances or coalitions.

LOCAL GOVERNMENT

The basic unit of local government is the commune, typically a city, town, or village. There are some 8,000 communes in all, varying from Rome, Milan, and Naples to

small hamlets of less than 500. Municipal self-government at the commune level is carried out through a communal council elected every four years. The voting system and number of councillors vary with population size. Few large councils have stable administrations, and their politics, as in the national government, are characterized by infighting and shifting alliances. The council approves the junta, a collegiate body of two to 14 councillors, and the mayor.

Communes' powers are limited, though law and order is a central responsibility. They levy and collect a variety of local taxes, but revenues are usually inadequate to provide even basic services, and municipalities, including Rome, are chronically in debt. Communes are thus forced to borrow from special government credit institutions or banks.

The powers of the governments of the 92 provinces are equally limited. They may legislate and perform administrative functions only in a few fields, such as highway construction, public assistance, public health, and conservation of fish and game. Their finances are wholly dependent on the national treasury, from which they received a share of certain national taxes.

The prefect is the national government's representative in the provinces. This career civil servant is appointed by the president of the republic on the advice of the Council of Ministers. The prefect exercises substantial powers of control over local administration in the provinces as well as in the communes.

Regional government is carried out by a unicameral legislature called the regional council, which has authority over local police, health and hospital services, museums and libraries, and regional roads. Regional government is financed by regional taxes, particularly land and property taxes, as well as road and traffic taxes. The national government supervises regional government through a commissioner residing in the regional capital, who is assisted by a control commission. Despite this elaborate formal structure of government, regional autonomy is limited, and Italy remains an essentially unitary state. As a result, relations between the national government and the regions have ranged from uneasy to bitter contests for ascendancy. Regional governments did manage to secure more power for themselves in a 2001 constitutional referendum.

LEGAL SYSTEM

Roman law, as modified by the Napoleonic Code, is the basis of the Italian judicial system.

Italy has a unified national court system. There are no regional, provincial, or municipal courts. At the bottom of the court structure are the justices of the peace (*conciliatori*), who hear only civil disputes involving small amounts of money. The lowest-salaried magistrates are the *pretori*, with jurisdiction over civil cases involving greater amounts of money and criminal cases involving

a maximum penalty of three years' imprisonment. The court above the *pretori* is the tribunal (*tribunale*), in which three judges sit on a panel hearing cases outside the competence of the lower magistrates and criminal cases that do not exceed a maximum of seven years' imprisonment. Serious criminal cases are heard by the courts of assizes (*corti d'assise*), which are specialized sections of the tribunals. Civil and criminal appeals from the tribunals and courts of assizes may be taken to the court of appeal (*corte d'appello*), composed of five judges.

The highest court is the Court of Cassation (Corte di Cassazione), which either sustains or quashes lower court decisions.

The Italian judicial system is characterized by its slow pace and general inefficiency. The tradition of judicial review did not exist in Italy before the republic, but this function is now exercised by the Constitutional Court, composed of 15 members, each appointed for a nine-year, nonrenewable term. The court has no power to enforce its decisions, but it has successfully protected civil liberties, such as freedom of speech, freedom of religion, and freedom of the press.

HUMAN RIGHTS

All basic human rights are guaranteed by the constitution and respected in practice.

In the 1970s and early 1980s the major human rights problem was terrorism. The decline and near-disappearance of terrorist activities since then has seen a corresponding decrease in complaints of ill treatment of suspected activists and unlawful detention of offenders pending trial.

The Civil Code provides a limit of 60 days for trials, but this does not preclude some trials from lasting an inordinately long time. Organized crime also presents challenges to human rights, as law enforcement officials adopt extraordinary means to dragnet members of the Mafia. However, there is no evidence of any systematic flouting of legal procedures by authorities who are engaged in combating organized crime. Searches and electronic monitoring are carried out only under judicial warrant and in carefully defined circumstances. Prisons are overcrowded.

Ethnic violence against immigrants was a problem, as were child labor, particularly with immigrant children. There was also some trafficking in women and girls for prostitution.

FOREIGN POLICY

The conclusion of World War II ended Italy's ambitions of maintaining an Italian empire abroad. The balance of power shifted, as the cold war rivalry between the United

States and the Soviet Union took the center of the world stage. Italy found itself relegated to a minor role in post-war international politics, and it has generally been content with this status.

Italy has aligned itself with the nations of the North Atlantic Treaty Organisation (NATO) and was a founding member of the European Community (now renamed the European Union). Italy joined the United Nations in 1955. It has remained a member in good standing of those organizations for many decades. At the same time, it has tried to align its policies with those of its Western allies in both NATO and the European Union, although Italy's domestic instability and economic problems have reduced its influence on their programs and policies. The presence of Italy's large and powerful Communist Party and the influence of the Catholic Church have also reinforced Italy's historic identification with western European nations.

Italy's firm commitment to the United Nations has led it to strongly support that body's efforts to promote international peace. This was evidenced in Italy's active participation in UN peacekeeping missions to Mozambique and Cambodia in the 1980s and Somalia in the early 1990s. In the mid-1990s Italian forces took an active role in NATO and UN operations in Bosnia. In the early 2000s Italy sent troops and humanitarian workers to Afghanistan and Iraq.

In 1998 Italy achieved a major foreign policy goal when it qualified to enter the European Monetary Union and agreed to participate in the new single European currency, the euro. The euro became Italy's national currency in 2002.

DEFENSE

Italy's armed forces are under civilian control. The president of Italy is the titular head of the armed forces, but actual control is exercised by the cabinet through the Ministry of Defense. A parallel policy-making agency, the Supreme Defense Council, is composed of the president, the prime minister, the minister of foreign affairs, the minister of defense, the heads of several other ministries, and the chief of the Defense General Staff. The Ministry of Defense and Ministry of the Interior control the military security force, called the Carabinieri.

Italy is a full member of NATO and is committed to maintaining land forces of 12 divisions. No Italian force is stationed outside national territory, and the armed forces are sometimes used for providing emergency relief as well as for fighting organized crime.

The constitution imposes the duty of military service on all fit male Italians at age 18. The term of service is 12 months in the army and air force and 18 months in the navy from the age of 21. Reservists remain in the reserve until age 45.

The army is the largest of the three military branches, and it maintains 20 major schools, including a military preparatory school and officer training schools. The navy emphasizes antisubmarine warfare and its personnel include two battalions of marines. The air force, which was rebuilt in 1951 with United States assistance, has an electronic surveillance system and integrated air defense system. Italy spent \$28.2 billion, or about 1.8 percent of gross domestic product (GDP), on the military in 2004.

ECONOMY

Italy's economy has been transformed in the decades since the end of World War II, from one with an agricultural base to that of an advanced industrial nation. The fact that Italy achieved a GDP of \$1.212 trillion in 1999, equal to that of Great Britain or France, is evidence of its truly remarkable economic achievement. However, Italy's traditional political divide between the northern and southern parts of the country is also clearly reflected in its economic development. Southern Italy (particularly Sicily) remains a less developed region still largely dominated by farming. It also has widespread unemployment, estimated at nearly 20 percent. By contrast, northern Italy is heavily industrialized, with large and small business enterprises, including multinational corporations.

The major sectors of Italy's industrial economy are machinery, iron and steel, chemicals, textiles, motor vehicles, clothing, footwear, and ceramics. Tourism is an important factor in Italy's economy. The main agricultural products include grapes, other fruits, vegetables, potatoes, sugar beets, soybeans, grain, and olives.

Since 1992 Italy has adopted budgets compliant with the requirements of the European Monetary Union (EMU); wage moderation agreements by representatives of government, labor, and employers have helped to bring Italy's inflation into conformity with EMU requirements. Italy's economic performance, however, has lagged behind that of its EU partners, and it must work to stimulate employment, promote labor flexibility, reform its expensive pension system, reduce its high taxes, and tackle the informal economy. Labor unions have resisted most attempts at change.

Italian exports totaled \$336.4 billion in 2004 and imports \$329.3 billion, in a favorable balance of trade. More than 40 percent of Italy's exports were sent to members

of the European Union, while the United States received 8.5 percent. The same nations were the major producers of the goods Italy imported.

ENVIRONMENT

Italy's rapid industrialization in the decades after World War II resulted in many threats to the environment, especially pollution of the air and water. In the 1950s, 1960s, and much of the 1970s, however, environmental issues were put on the shelf, as economic development took priority in a nation that had emerged from the war impoverished.

Pollution from Italy's industries, power plants, motor vehicles, mechanized agriculture, and the tourist industry became serious threats. For example, the Modena area, which produces 70 percent of the world's ceramic tile, became severely blighted, and heavy industries, such as petrochemicals, polluted coastal waters near those sites. As the number of vehicles in Italy rapidly increased, air pollution caused by traffic and noise levels also became major concerns.

Italy's environmental legislation began in 1966 with a law reducing the sulfur content of fuels to limit urban air pollution. Despite this legislation, the implementation of early environmental law was ineffective. In the 1960s and 1970s environmental issues were largely ignored by the public and businesses alike. In the mid-1970s this attitude began to change, and in 1977 a law was enacted to limit the pollutants in industrial and residential waste.

The real turning point in Italy's environmental policy was the creation of the Ministry of Environment in 1986. In the late 1980s parliament enacted tougher laws designed to reduce air emissions and soil and landscape erosion as well as to protect the nation's parks. It also earmarked more funds for tackling problems of the environment. As a result, by the late 1980s the local, regional, and national governments were spending about \$7.5 billion on environmental issues, an amount that increased annually in the 1990s.

Legislation in 1993 required that all automobiles must have catalytic converters to retard their emissions. Moreover, Rome, Milan, Florence, Bologna, and other cities have limited traffic in historical areas, where air pollution poses an ongoing threat to ancient monuments and priceless artifacts.

Rapid urbanization has cost Italy much of its farmland, including the rich agricultural areas of the Po Valley, and much of the remaining land has deteriorated, with soil erosion and water pollution from the growing use of agrochemicals a growing reality. Increased mining and excessive timber cutting have also contributed to soil erosion in many parts of the nation. Moreover, the rapid growth of tourism has brought massive construction along the coasts, particularly the Adriatic, which suffers extensive beach erosion.

 CO2 Emissions per capita ton: 7.42

LIVING CONDITIONS

The standard of living in Italy is quite high. Per capita GDP was \$27,700 in 2004. Most people live in modern apartments or houses, and many families have one or two automobiles. Traffic can be bad in the cities, and parking is a perennial problem, but public transportation is widespread, cheap, and efficient. About three-quarters of the Italian population live in urban areas.

HEALTH

The Italian government provides health care to all citizens. Italy has more doctors per person than any other European country. Italians are quite healthy, and life expectancy is almost 80 years. The Catholic Church still runs many hospitals and clinics, which are covered by the state insurance scheme. The national health plan even covers visits to spas on occasion. Italy has the lowest birth

rate in Europe, at 1.28 children per woman in 2005, and its population has actually been dropping. The government, fearing an economic depression in the near future, has been encouraging people to have more children.

FOOD AND NUTRITION

Italians love food, and Italy has produced a dizzying array of culinary styles and delicacies. Each region has its own cooking traditions. People everywhere eat pasta, but they make it in different ways in different places. Cheese, tomatoes, eggplants, olives, basil, veal, and sausage are all common ingredients. Pizza has become ubiquitous. Sicily makes excellent dessert, many of them featuring almond flavoring. Italian wine is world famous, and each region has its own varieties. People drink a great deal of coffee, both with milk at breakfast, as cappuccino, and plain later in the day, as espresso.

 Amount of Cereal Available per person per year kg: 161.9
 Amount of Fruits and Vegetables Available per person per year kg: 282.2

STATUS OF WOMEN

Italian women generally play a less visible role outside the home than their counterparts in northern Europe. Although women achieved equality with men in the constitution of 1947, their position changed little during the next 30 years. Since 1977 broader social forces have helped them gain a more clearly defined status, despite opposition from male strongholds in southern Italy. Although the process has been slow, since the 1980s a job outside the home and economic independence is becoming

the norm in northern Italy and, increasingly, in the south.

Several major laws affecting women have been passed, including the legalization of abortion within 90 days of pregnancy and a strengthened law on rape.

Italian law guarantees women equal pay for equal work, but in practice women's wages are lower than those of men. Women are still often the first to be fired, and they have to work harder than men to win promotions. Women continue to be forced to combine housework and jobs outside the home because many Italian men consider it demeaning to do housework. Many women choose to stay home with their children, although it is also common for grandparents to watch children while mothers go to work.

Maternity leave is generous, equal to five months—two before and three after birth—with 80 percent wages paid in the private sector and 100 percent in the public sector. There is also a supplementary optional leave for a maximum of six months. Leave for looking after sick children is the longest in Europe: up to three years.

New family laws have expanded the scope of women's rights. Divorce has been made legal, and adultery is no longer a cause for separation. When separation or divorce occurs, property is divided between husband and wife, and the woman can administer her own. Parental authority is divided between parents, and when spouses are separated young children are generally assigned to the mother. Women have the right to keep their surnames and bequeath them to their children. Women also may contract for mortgages and other loans.

 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 41.2

WORK

Italy's unemployment rate was 8.6 percent in 2003. Almost two-thirds of the Italian workforce is employed in services, including tourism and government work. Almost one-third work in industry, especially in the north, where manufacturing is the mainstay of the economy. Products include automobiles, computers, high fashion clothing, furniture, and appliances. Only 5 percent of the workforce is still employed in agriculture.

The Italian workday is typically split into two portions, divided by a break between 1 and 4 p.m.; workers go home for lunch and take a short nap before returning to work until late in the evening. The workweek averages 36 hours.

Employment and Labor

Labor Force Total: 24,270,000
 Female Participation Rate %: 39.0
 Labor by Sector %:
 Agriculture: 5
 Industry: 32
 Services: 63
 Unemployment %: 8.6

EDUCATION

Education is free and compulsory for all children ages six to 13.

Traditional central control of education in the national government has gradually been weakening. Local authorities, particularly the communes, not only have authority in construction and maintenance of school buildings but are also responsible for operating schools. School districts within communes are designed to make schools and educators more responsive to the needs of the people. Nevertheless, the Ministry of Public Education dominates Italian education and administers public instruction, determining the standards, curriculum, diplomas, and regulations for grading and promotion.

In recent years school enrollment has expanded dramatically, effecting a consequent drop in illiteracy among the general population. Regional disparities continue, however, to the disadvantage of the south. Grade repetition and dropout rates have declined considerably. Higher enrollments have influenced the social composition of the student population by providing access to higher education to young people from less privileged classes of society and by improving sex equality. Unlike many other industrialized societies, Italy has little difficulty in recruiting teachers.

The number of pupils in private institutions is comparatively small. Private institutions do not receive state aid, and enrollment in private schools, particularly Catholic schools, has dropped sharply since the 1970s as a result of the growing secularization of society.

Most Italian cities have universities. The University of Rome has one of the largest student bodies in the world. Most universities are state run, and they are required by law to admit every eligible candidate; as a result, they are overcrowded and there is little contact between students and professors. There is no division of studies into graduate and undergraduate, and all studies are technically graduate programs.

SCIENCE AND TECHNOLOGY

Italy is technologically quite advanced. Its universities have excellent programs in the sciences, math, engineering, and medicine. In the early 2000s the government increased funding for scientific research and development in an effort to bring Italy in line with European norms; particular topics of research include space, climate change, and public health. The north is well known for its high-tech factories. Telecommunications are highly advanced, and in 2003, 18.5 million Italians were using the Internet.

MEDIA

Italy has some of the oldest newspapers in Europe, such as *La nazione* (1859), *La stampa* (1868), *Il corriere della sera* (1876), and *Il messaggero* (1878). However, in terms of circulation, Italy ranks well below most European nations. The Italian press is highly politicized and regionalized. A large number of dailies and magazines are printed in Milan. The Catholic viewpoint is represented by the Vatican's *L'Osservatore Romano*. The Christian Democrat voice is *Il popolo*. The principal Communist Party organ is *L'Unita*, and socialism is represented in the pages of *Avanti*.

Radio and television stations that operated as state monopolies in the past are now for the most part privately owned and run. There are about 2,500 commercial radio stations sharing airspace with the public broadcaster Rai. Rupert Murdoch's News Corporation launched Sky Italia in 2003 and quickly cornered the market on pay television. Parliament passed a law in 2004 that would partly privatize Rai and create new digital television channels; critics claimed this was an attempt to strengthen Berlusconi's control of the media.

The Italian film industry is one of the best organized and also the largest in Europe, and Italian movies, their directors, and their stars have become world famous.

CULTURE

Italy has long been one of the world's cultural centers. It has produced artists such as Leonardo da Vinci and Michelangelo, musicians such as Giuseppe Verdi, and writers such as Petrarch, Boccaccio, and Dante. Millions of tourists descend on Italy every year to visit the Sistine Chapel, Saint Peter's Church in the Vatican, and the Roman Forum in Rome as well as the myriad attractions of Florence, Venice, and other cities. Italian high fashion and film have become famous in modern times.

FOLKLORE AND MYTHOLOGY

Italy was the home of the ancient Romans, who had a complex system of mythology adapted from the Greek version. Romans also incorporated mythical traditions from other cultures, such as Mithras from Persia and various beliefs from the Etruscans who lived on the peninsula before the Romans took over. Romans had their own foundation myths, such as the tale of the rape of the Sabine women and the *Aeneid*.

ENTERTAINMENT AND RECREATION

Italians love to spend hours having meals with relatives, either at home or at restaurants. Bars, restaurants, and

discos are ubiquitous. Many people enjoy going for an evening walk, called a *passeggiata*. At home they watch television, play cards, and read books. Italy celebrates numerous national and regional festivals, which are usually an occasion for a holiday from work or school. Most people take vacation for most or all of the month of August.

ETIQUETTE

Good manners, decorum, and proper self-presentation are very important to Italians. When Italians meet people, they like to get to know them and cultivate a sense of trust before engaging in negotiations or business. When presenting gifts or materials, they like them to look good. Organizations tend to be hierarchical, with the oldest members receiving the most respect. Italians consider their family extremely important and take seriously any insults to family honor.

FAMILY LIFE

Though Italians still love children, the most noticeable change in the Italian family in recent years is that it has become much smaller. A generation or two ago, many Italians had several children, but now most parents have only one or very occasionally two. Extended family is still important, and grandparents often care for children while their parents go out to work; day care for young children is uncommon. It is still common for grown children to work in their family's business.

PERSONAL APPEARANCE

Italians dress quite well. They appreciate fashionable clothes and value a neat appearance, which is part of their emphasis on presentation. Clothing reflects social status. Men often wear expensive well-cut suits for business; women dress simply and elegantly, often using accessories to accent their outfits.

SPORTS

Soccer, called *calcio*, permeates Italian culture. Every village has a soccer field, children and adults play the game, and many people spend Sunday afternoons watching league games live or on television. The Italian soccer team has won the World Cup three times. Road bicycling is also extremely popular; the Giro d'Italia is the most important race, attracting competitors from all over the world. Boccie, or lawn bowling, is a traditional sport played mostly by men in parks.

CHRONOLOGY

- 1939** Prime Minister Benito Mussolini of Italy and Chancellor Adolf Hitler of Germany sign a military assistance pact.
Italy invades and captures Albania.
- 1940** Italian forces occupy British Somaliland but are repelled from Greece.
Mussolini requests German military aid.
- 1941** Italian military endeavors meet with repeated failure.
Allies blockade Italy.
The Italo-German Balkan campaign is successful.
Italy declares war on the Soviet Union and the United States.
- 1942** British forces reclaim Italian and German gains in Africa.
British air raids devastate industrial cities and strategic sites throughout Italy.
- 1943** Allied bombings intensify.
Allies invade Italy.
King Victor Emmanuel III arrests Mussolini and names Marshal Pietro Badoglio prime minister.
Italy surrenders to the Allies and on September 3 signs an armistice declaring war on Germany.
German soldiers rescue Mussolini, who establishes a government-in-exile in the north.
- 1944** Allies liberate Rome on June 4.
King Victor Emmanuel steps down in favor of his son Humbert.
King Humbert II appoints Ivanoe Bonomi as prime minister.
- 1945** Allies liberate Italy.
Mussolini is executed, and hundreds of his supporters are killed, in anti-Fascist reprisals.
World War II ends.
Acting as parliament, the Committee of National Liberation names as prime minister Alcide de Gasperi of the Christian Democratic Party.
- 1946** Food shortages persist.
Voters approve a referendum to abolish the monarchy and make Italy a republic.
King Humbert abdicates and leaves Italy.
Christian Democrats win Constituent Assembly elections and confirm Prime Minister Gasperi.
- 1947** The Paris Peace Conference produces a rigorous treaty that strips Italy of all colonies and imposes reparations of \$360 million.
The Constituent Assembly ratifies the treaty, and Allied occupation forces withdraw.
A new constitution is promulgated.
The pro-Communist faction of the Socialist Party breaks away as the Social Democratic Party.
Political dissent escalates to violence as rightists attack Communists, who in turn attempt to bring down the Gasperi government via massive demonstrations and strikes.
- 1948** The new constitution is adopted, granting women the franchise.
Bitter political campaigns nearly propel Italy into civil war.
The first parliamentary election since 1923 gives an overwhelming majority to Alcide de Gasperi's Christian Democratic Party, beginning 40 years of Christian Democrat domination of Italian politics.
CD candidate Luigi Einaudi is elected president.
After the leader of the Communist Party, Palmiro Togliatti, is assassinated, the government dispatches 300,000 military and police personnel to quell riots throughout Italy.
Industrial production achieves prewar levels.
- 1949** Italy joins NATO.
The UN General Assembly settles the disposition of Italian Somaliland, Libya, and Eritrea.
- 1950** The Southern Development Fund is set up to finance the building of roads, schools, and electricity and water systems in central and southern Italy, while a concurrent program of land reform attempts to redistribute the region's farmland.
Nonetheless, high rates of emigration continue to depopulate these regions.
- 1952** Italy joins the European Coal and Steel Community.
- 1953** An electoral reform bill grants 65 percent of seats in the Chamber of Deputies to any party or coalition polling at least 50 percent of the popular vote.
- 1954** Italy and Yugoslavia resolve their territorial dispute over Trieste.
- 1955** Italy joins the United Nations.
- 1957** The European Coal and Steel Community evolves into the European Economic Community, with Italy as a charter member.
- 1962** Local elections show diminishing Communist support among the electorate.
- 1963** Pietro Nenni's Social Democrats join the government to form the first center-left coalition since 1947, with Aldo Moro of the Christian Democratic Party as prime minister.
- 1964** An economic downturn begins to set in.
- 1967** The Southern Development Fund is expanded to finance industrial development in the south via tax incentives.
- 1968** Police suppress student demonstrations for educational reforms.
Strikers demand social security reform.
- 1969** During the "hot autumn" protesters stage strikes, factory sit-ins, and mass demonstrations across northern Italy.

- 1970** Parliament passes a bill permitting civil divorce, the most controversial legislation in the history of the republic.
Fifteen ordinary regions are established with limited autonomy.
A “Statute of the Workers” forces employers to grant 15-percent pay raises and other improvements.
The rate of emigration declines markedly.
- 1972** Christian Democrat Giulio Andreotti becomes prime minister, a post he will hold seven times over the next 20 years.
- 1974** Recession sets in as world oil prices and Italy’s deficit soar.
Referendum confirms the civil divorce law.
- 1975** In regional elections Communists increase their share of the vote to 33 percent.
Legislation applies index linking to most pay scales, requiring employers to adjust wages for inflation quarterly.
- 1976** Winning 35 percent of the vote in parliamentary elections, compared with a 39 percent pull by the long-ruling Christian Democrats, the Italian Communist Party issues a “historic compromise” plan for cooperation with non-Communist parties and receives several cabinet posts under Prime Minister Andreotti.
Broadcasting operations are privatized.
- 1977** Unemployment is rampant, especially among the young, with one million Italians under age 24 jobless.
- 1978** Former prime minister Aldo Moro is kidnapped and murdered by Red Brigade terrorists.
Abortion legislation passes parliament.
Numerous central powers are allocated to regional governments.
- 1979** Communists go into opposition.
Andreotti resigns.
The world oil crisis abates.
- 1980** Right-wing extremists bomb Bologna Station, killing 84.
Parliament grants the police special powers to counteract terrorism.
- 1981** Republican Party leader Giovanni Spadolini becomes the first non-Christian Democratic prime minister in postwar history.
Referendum confirms the legality of abortion.
- 1982** The lira’s value against the dollar suffers a 60 percent loss since 1973.
Economic growth begins to revive.
- 1983** Bettino Craxi takes office as Italy’s first Socialist prime minister.
- 1984** A new concordat replaces the Lateran Treaty of 1929, eliminating the status of Roman Catholicism as the state religion.
- Having failed to industrialize southern Italy despite investing some \$20 billion since 1950, the Southern Development Fund is abolished.
- 1985** Referendum reduces the index-linking of wages.
- 1987** Christian Democrats recapture the prime ministership with Giovanni Gorla.
- 1988** CD leader Ciriaco de Mita heads the government.
- 1989** CD leader Giulio Andreotti becomes prime minister.
- 1991** The collapse of Communism in Eastern Europe ushers in a decade of short-lived Italian governments.
The Communist Party renames itself the Democratic Party of the Left and emphasizes the environment, feminism, and Italy’s north-south economic disparity. The Socialist Party bills itself the Party of Socialist Unity.
- 1992** Top anti-Mafia prosecutor Giovanni Falcone, his wife, and three bodyguards are killed in a car bomb attack.
Voter displeasure with established parties brings to parliament an unprecedented number of candidates from new parties, including the Northern League, a populist party with support among northern separatists.
The lira fails to qualify for the European Monetary System and is withdrawn.
- 1993** Exposure of government corruption and Mafia links triggers a political crisis. By midyear more than 200 officials are under investigation, including Bettino Craxi, Giulio Andreotti, and five other former ministers.
The Christian Democratic Party is renamed the Italian Popular Party.
Italian voters approve a host of governmental reforms.
- 1994** The right-wing Freedom Alliance coalition forms a government under media magnate Silvio Berlusconi, leader of the new Forza Italia Party.
Facing charges including the bribing of tax police, Berlusconi resigns as prime minister.
- 1995** Lamberto Dini’s caretaker government enacts austerity measures to counteract Italy’s runaway deficit and devalued lira.
- 1996** The center-left Olive Tree coalition takes power under Romano Prodi of the Democratic Party of the Left.
Parliament approves an austerity budget designed to qualify Italy for the European Union’s common currency plan.
- 1997** Two earthquakes strike the Umbria region.
The separatist Northern League stages an election for its self-styled Parliament of Padania.
- 1998** Berlusconi is convicted of bribery and corruption.

More than 150 people die in mudslides near the city of Sarno.

Massimo d'Alema succeeds Prodi as prime minister, leading a broad center-left coalition.

- 1999** The euro is introduced.
Italy participates in NATO action against Serbia. Alema resigns, and Giuliano Amato leads Italy's 58th government since World War II.
- 2000** Torrential rainstorms flood the regions surrounding Turin and Milan.
- 2001** Silvio Berlusconi leads Forza Italia to victory in national elections and is named prime minister. Italians vote to give greater autonomy to regional governments.
- 2002** The euro replaces the lira as Italy's currency.
- 2003** Berlusconi is tried on corruption charges; the trial ends when parliament passes a law granting him immunity from prosecution.
- 2004** The Constitutional Court throws out the law granting Berlusconi immunity and his trial resumes; he is acquitted. Italy expels hundreds of African asylum seekers from the island of Lampedusa.
- 2005** Parliament ratifies proposed EU constitution.

CAPITAL

Kingston

HEAD OF STATE

Queen Elizabeth II, represented by Governor-General Sir Howard Cooke (from 1991)

HEAD OF GOVERNMENT

Prime Minister Portia Simpson Miller (from 2006)

NATURE OF GOVERNMENT

Constitutional parliamentary democracy

POPULATION

2,731,832 (2005)

AREA

10,991 sq km (4,244 sq mi)

ETHNIC MAJORITY

Black

LANGUAGE

English, patois English

RELIGION

Christianity

UNIT OF CURRENCY

Jamaican dollar

NATIONAL FLAG

Two diagonal yellow gold bars forming a saltire divide the flag into four triangular panels, the top and bottom green and the two sides black.

NATIONAL EMBLEM

A male Amerindian stands to the right and a female Amerindian stands to the left of a shield that bears a red cross with five golden pineapples superimposed on it. The crest is a Jamaican crocodile surmounting the royal helmet and mantling. On a scroll beneath the device appears the national motto, "Out of many, one people," a translation of the Latin motto *Indus uterque serviet uni* in the original armorial bearings granted to the island in 1662.

NATIONAL ANTHEM

"Jamaica, Land We Love"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 23 (Labor Day), June 2 (Queen's Birthday), First Monday in August (Independence Day, National Day), various Christian festivals, including Ash Wednesday, Good Friday, Easter Monday, Christmas, and Boxing Day (the feast day of Saint Stephen)

DATE OF INDEPENDENCE

August 6, 1962

DATE OF CONSTITUTION

August 6, 1962

GEOGRAPHICAL FEATURES

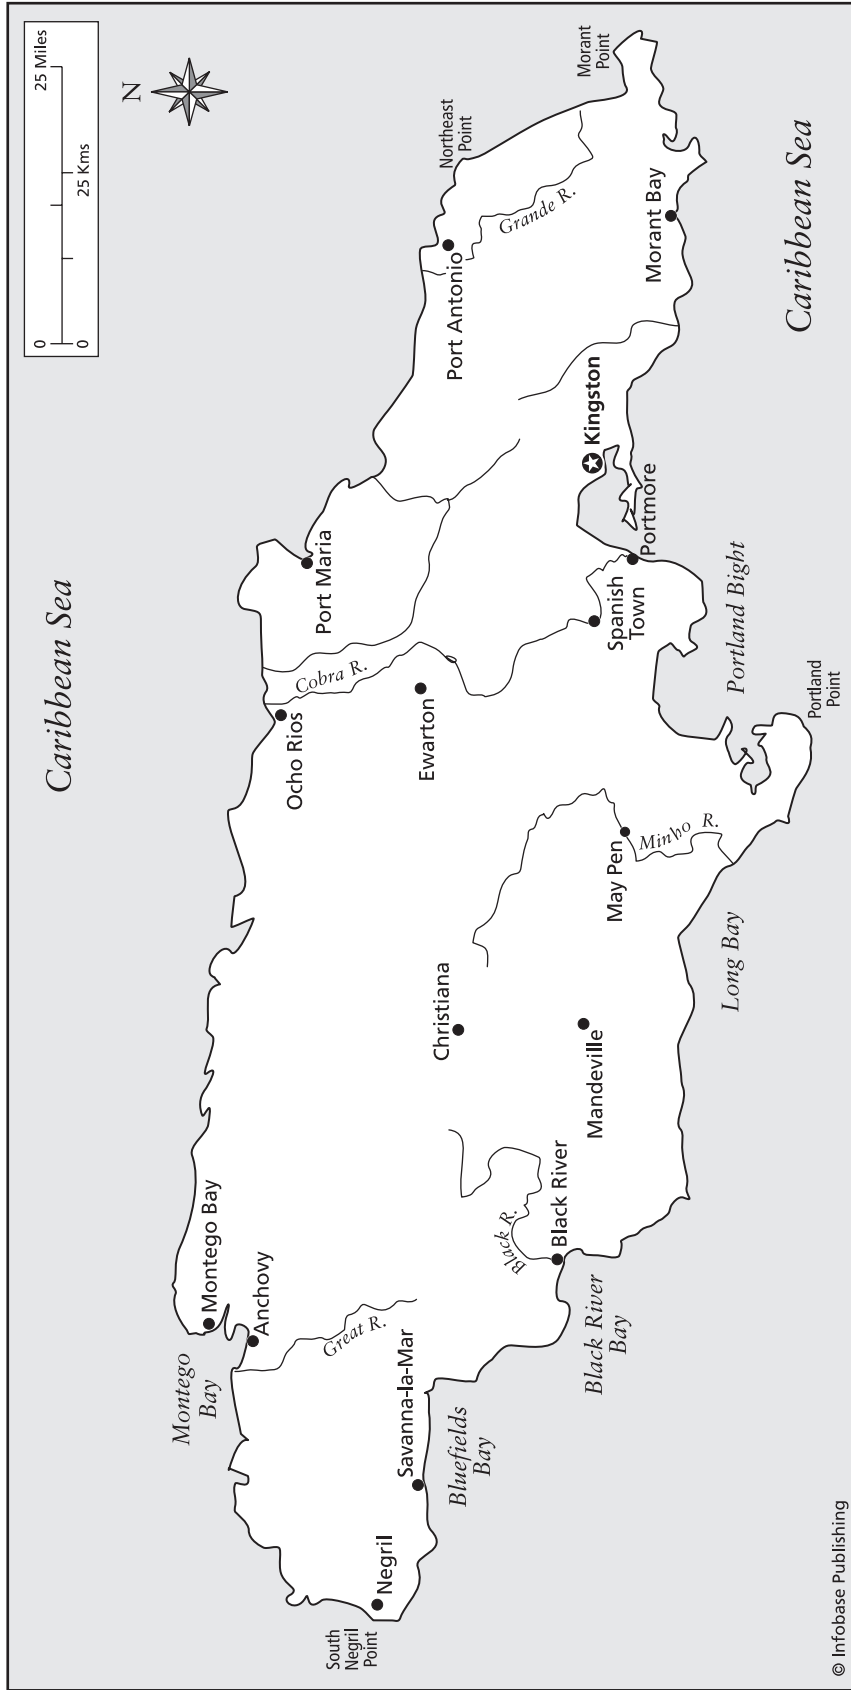

Jamaica, an island in the Caribbean Sea 90 mi (145 km) South of Cuba, has a total land area of 4,244 sq mi (10,991 sq km) and extends 146 mi (235 km) north to south and 51 mi (82 km) east to west. Its coastline stretches 635 mi (1,022 km).

The capital of Jamaica is Kingston. The other major urban centers are Spanish Town, Portmore, and Montego Bay.

The topography consists mainly of coastal plains around the island divided by the Blue Mountains to the east and limestone plateaus in the central and western areas of the interior. The Blue Mountains have an average elevation of 6,000 ft (1,800 m), with Blue Mountain Peak reaching 7,402 ft (2,256 m).

There are numerous rivers, many of which rise only a few miles from the coast. The Black River is the most navigable river on the island.

CLIMATE AND WEATHER

Jamaica has a tropical climate at sea level and a temperate climate in the uplands. The four seasons are distinguished mainly by differences in rainfall; there are two rainy seasons, from May to June and from September to November, and two dry seasons, from July to August and from December to April. The winter mean temperature is about 75°F (24°C), the summer mean temperature 80°F (27°C). The temperature maximums are 91°F (32.8°C) at Kingston, on the coast, and 80°F (26.7°C) in the highlands.

The annual average precipitation is 77 in (1,950 mm), with the highest rainfall, 200 in (5,030 mm), occurring on the northeastern coast and on Blue Mountain. The lowest, 33 in (840 mm), occurs around Kingston, in the southwest,

The island is subject to hurricanes from late August to November.

Climate and Weather

Mean Temperature
 Summer: 80°F
 Winter: 75°F
 Average Rainfall: 77 in
 Highest recorded rainfall: 200 in on the northeastern coast

FLORA AND FAUNA

Jamaica is covered with lush vegetation and is inhabited by hundreds of animal species; Jamaicans say that “even the fence posts grow.” Native plants include hundreds of types of ferns, 30 species of orchids, bougainvillea, allamanda, and hibiscus. The Arawak Indians planted sweet potato, cassava, tobacco, cocoa, and corn. Africans imported the ackee tree, which produces Jamaica’s national

fruit. East Indian slaves and indentured servants brought marijuana, locally called ganja. Spanish settlers brought sugarcane, pineapple, coconut, banana, oranges, and lemons. The British imported breadfruit. The island does not support any large mammals, but it does have over 250 species of birds and wide varieties of insects, amphibians, reptiles, and tropical fish in the surrounding waters. Notable birds include egrets, hummingbirds (especially the swallowtail hummingbird, which lives only in Jamaica), the patoo owl, and the kling-kling.

POPULATION

ETHNIC COMPOSITION

About 98 percent of the Jamaican population is of African descent. Of this ethnic majority, 7.3 percent are of mixed black and white origin. Of the minorities, Chinese and Afro-Chinese constitute 0.2 percent, East Indians and Afro-East Indians 1.3 percent, whites 0.2 percent, and others 0.1 percent. Africans were originally imported to work as slaves on the island plantations. When the slave trade was abolished in 1834, East Indians and Chinese were imported to replace black laborers.

LANGUAGES

The official language is English. British English is the received standard, but recent decades have seen the growth of a patois known as Jamaican English. Its main characteristics are the incorporation of archaic English and African words and certain peculiarities of word order and pronunciation.

RELIGIONS

There is no established church in Jamaica, but Christianity is the religion of the majority. Protestant denominations are the largest group (61 percent), mainly composed of Church of God, Anglicans, Pentecostals, Seventh-day Adventists, and Baptists. Roman Catholics total 4 percent. About 35 percent of the population belongs to non-Christian groups, including Jews, Hindus, and followers of an African folk religion called Pocomania. Jamaica is also the home of Rastafarianism, a religious movement that venerates the former Ethiopian emperor Haile Selassie I.

Religious Affiliations

Protestant	1,674,600
Roman Catholic	109,300
Other	947,900

HISTORICAL BACKGROUND

Jamaica was discovered by Christopher Columbus in 1494 and was settled by the Spanish in the 16th century. The indigenous Arawak Indians were exterminated by the 17th century, when the Spanish themselves were expelled by the British. The island was formally ceded by Spain to England in 1670. The English developed a flourishing plantation economy with slave labor brought from West Africa, but the abolition of the slave trade in 1834, the Civil War in the United States, and the removal of British tariff protection for Jamaican products destroyed the economy and led to a black uprising in Morant Bay in 1865. The British Parliament established a Crown colony government in Jamaica in 1866, and the administration and the economy were gradually rebuilt.

From 1866 Jamaica was a Crown colony ruled by a governor. New programs led to the development of banana cultivation, internal transportation, and educational and public health facilities. However, the depression of the 1930s, coupled with a blight on the banana crop and a large population increase, led to serious unrest. A royal commission investigated the island's economic, social, and political conditions, and its report led to the constitution of 1944, granting Jamaica a wide degree of internal self-government. Jamaica joined other British Caribbean colonies in 1958 to form the Federation of the West Indies but withdrew in 1961.

Jamaica became an independent nation in 1962. In the decades prior to independence, Jamaica developed a stable two-party system under the leadership of Norman W. Manley, founder of the People's National Party (PNP), and Sir Alexander Bustamante, founder of the

Jamaican Labour Party (JLP). Upon Jamaica's independence in 1962, the JLP became the governing party, with Bustamante assuming the post of prime minister. Bustamante retired in 1967; Hugh L. Shearer, who became prime minister several months after Bustamante's retirement, continued in office until 1972, when the PNP became the majority party. Michael Norman Manley, the son of the party's founder, an advocate of democratic socialism, headed a government that emphasized economic independence and social reform.

The 1970s were a period of political unrest generated by a declining economy and high unemployment. Street violence and gang warfare erupted in 1976, prompting the government to declare a state of emergency that lasted for six months. Violence again erupted in 1979.

The JLP was returned to power in 1980 in the bloodiest election campaign in Jamaica's history. Led by Edward Seaga, the JLP governed the country until 1989. Civil unrest continued throughout the 1980s, fueled by government economic policies that withdrew food subsidies and devalued the currency. Crime, particularly drug-related violence, increased rapidly. In this atmosphere elections were held in early 1989, and Manley was returned to office. The PNP also won control of 12 of the 13 municipal councils in 1990.

Back in office Manley modified his socialist policies and allowed private sector businesses a greater role in the nation's economic development. Percival James Patterson succeeded Manley as prime minister, and the PNP won a landslide victory in the 1993 election. Although Jamaica's economy continued to face serious problems, the PNP continued to dominate the legislature and local government. In September 1997 it won control of all 13 municipal councils, and in December 1997 Patterson was reelected by the voters. The PNP majority won a third term in the 1998 elections and a fourth in 2002.

The economy deteriorated in 1998 and 1999, and fuel prices rose, sparking increases in crime and violent protests. The government ordered the army to begin patrolling the streets of Kingston, but crime linked to the drug business and gangs continued. In July 2001 three days of violent protests and unrest killed at least 27 people, and armored vehicles rolled into the city to restore order. Terrible crime continued through 2004, when an estimated 1,145 people were murdered, mostly as the result of street gang activity.

Prime Minister Patterson announced in 2003 that he intended for Jamaica to be an independent republic by 2007, when he planned to leave office after his third term. Jamaica granted asylum to ousted Haitian president Jean-Bertrand Aristide in 2004, angering Haiti. That September, Hurricane Ivan devastated the island, leaving thousands homeless.

LIST OF MODERN RULERS

1962–67	Alexander Bustamante
1967	Donald Sangster
1967–72	Hugh L. Shearer
1972–80	Michael Norman Manley
1980–89	Edward Seaga
1989–92	Michael Norman Manley
1992–2006	Percival James Patterson
2006–	Portia Simpson Miller

CONSTITUTION

Under the 1962 constitution, Jamaica is a titular monarchy, with the queen of England as the head of state, represented on the island by a governor-general appointed by the monarch on the recommendation of the prime minister. The executive consists of a prime minister, who is the head of government, and at least 11 cabinet ministers appointed by the governor-general. All cabinet members, excluding the justice minister, must be members of Parliament. The leader of the party that wins the majority in a parliamentary election becomes prime minister. The governor-general is assisted by the Privy Council, whose six members are appointed on the advice of the prime minister.

Legislative power is vested in a bicameral Parliament, with an appointed upper house, the Senate, and an elected lower house, the House of Representatives. The judicial system is composed of the Supreme Court, with both original and appellate jurisdiction, a court of appeals, and minor courts.

PARLIAMENT

Under the constitution the bicameral Parliament consists of the Senate and the House of Representatives. The Senate has 21 members, appointed by the governor-general. A total of 13 senators are appointed on the advice of the prime minister, eight on the advice of the leader of the opposition party. The House of Representatives consists of 60 members, elected for five-year terms by popular vote.

Bills may originate in either body of Parliament. The Senate is also the reviewing body for legislation sent up by the House. On the British model, the governor-general appoints as leader of the opposition the member of the House of Representatives best able to command the support of the majority of members opposed to the government.

The Seaga government began a reform of the electoral system through the compilation of new electoral rolls in 1985. However, before the new rolls were completed, the government called for an early election, allowing only four days for nominating candidates. The PNP boycot-

ted the elections as a result, and the JLP won all the seats in the House of Representatives. After the JLP returned to power under Prime Minister Patterson, it instituted a major reform in the electoral system by requiring voter identification cards with photographs in 1997.

Suffrage is universal over age 18. Parliamentary elections are held every five years and are free and open. Voter participation is generally high.

POLITICAL PARTIES

The social-democratic PNP has been in power since 1990; it has historically been linked with the National Workers' Union. The other major party, the conservative JLP has been associated with the Bustamante Industrial Trade Union. Two more recent (and somewhat marginal) parties are the center-right National Democratic Movement, established in 1995, and the populist United Peoples Party, established in 2001.

LOCAL GOVERNMENT

For purposes of local government, Jamaica is divided into three counties and 14 parishes. The County of Cornwall consists of the parishes of Hanover, Saint James, Trelawney, Westmoreland, and Saint Elizabeth. The County of Middlesex has the parishes of Saint Ann, Saint Mary, Manchester, Clarendon, and Saint Catherine. The County of Surrey includes the parishes of Portland, Kingston, Saint Andrew, and Saint Thomas.

Of the 14 parishes, two—Kingston and Saint Andrew—are amalgamated and administered by the Kingston and Saint Andrew Corporation. In the other parishes, local affairs are administered by parish councils consisting of 13 to 21 members, elected every three years by universal adult suffrage beginning at age 18. The chairman of the parish council is known as the mayor, and each parish has a chief magistrate. Parish revenues are derived from central government loans and taxes.

LEGAL SYSTEM

Jamaica's legal system is based on English common law. The highest courts are the Supreme Court, composed of a chief justice, one senior puisne judge, and 15 puisne judges, and the Court of Appeal, with a president and six judges. The chief justice of the Supreme Court and the president of the Court of Appeal are appointed by the governor-general after consultation with the prime minister and the leader of the opposition; other judges are appointed by the governor-general on the advice of the Judicial Service Commission. Subordinate courts are the resident magis-

trates' courts, petty session courts, traffic courts, and juvenile courts. Britain's Privy Council is the final court of appeals for Jamaica as well as other former colonies.

The Department of Prisons takes care of the island's five prisons. In 2002 Britain's Privy Council announced that it would no longer carry out capital punishment in some Caribbean countries, to the dismay of Prime Minister Patterson; many in Jamaica consider execution an important deterrent to violent crime.

HUMAN RIGHTS

Jamaica continues to function as a parliamentary democracy despite highly partisan and sometimes violent elections. Free elections were strengthened in 1997 when voter identification cards with photographs were introduced in the general election. The legal system, following British common law, provides for fair trials and protects the rights of defendants.

There is no press censorship, and although some of the media are government owned, the privately owned paper the *Daily Gleaner*, which has been highly critical of present and past governments, has strengthened freedom of the press.

Jamaica has a strong organized labor movement. In fact, the major political parties are offshoots of two of Jamaica's major unions, the Bustamante Industrial Trade Union and the National Workers' Union.

Police brutality and arbitrary arrests became serious problems in the early 2000s, as the government attempted to suppress gang violence. Prison conditions were poor, and long waits for trials were common.

FOREIGN POLICY

Jamaica is a member of the British Commonwealth of Nations. Historically, Jamaica has maintained close ties with Great Britain, though now its trade and financial relations are primarily with the United States. In 2003 the United Kingdom announced that Jamaicans would need visas to enter the country, as part of an effort to stop a tide of illegal immigration.

Jamaica has diplomatic relations with most nations and is a member of the United Nations and the Organization of American States (OAS). It plays a prominent role in the Caribbean, as seen in its contributing to the multinational UN force that returned Haiti's elected government to power in 1994.

DEFENSE

Although the queen of England is titular head of the defense forces, the prime minister, in his role as minister of defense, acts as the political and operational head. There

is a British training mission for the three services: the army, coast guard, and air force.

Military manpower is provided by voluntary enlistment.

ECONOMY

Jamaica's economy has faced troubled times in recent decades. Under the Jamaican Labour Party (JLP), government regulation of the island's business and industry resulted in widespread unemployment, devaluation of the currency, and huge foreign debts. During the 1970s continued deterioration of the economy led to continual internal unrest. The reforms required by the International Monetary Fund (IMF) for its loans to Jamaica were not properly implemented. For much of the 1980s economic difficulties continued, and labor, unrest, and crime hurt tourism, a major pillar of the economy.

In the 1990s Jamaica's economic development remained stalled. Its foreign debt was nearly \$3.2 billion in 1998, and interest on the debt consumed 22.4 percent of the budget. In the late 1990s many Jamaican banks failed and had to be taken over by the government. Much of its managerial, technical, and entrepreneurial personnel continued to emigrate to the United States and Canada.

Agriculture, mining, and tourism remain the major sectors of the economy. Sugarcane and bauxite are the main exports. In 1998 Jamaica earned more than \$1 billion from foreign visitors. Depressed economic conditions in 1999–2000 led to increased civil unrest, including a mounting crime rate. The economy began to grow again in 2000, and inflation dropped to less alarming levels than the 25 percent of 1995, but the Jamaican dollar continued to slip and the slow world economy of 2001 stunted growth. While 2003 was one of the best tourism years on record, the economy still only grew at a rate of 1.9 percent. The nation faces serious long-term problems, such as a high ratio of debt to GDP, double-digit inflation, massive unemployment, and civil unrest. Almost 20 percent of the population lives below the poverty line.

ENVIRONMENT

Increases in the population have created environmental challenges. Tourism and rapid growth in mining have combined to degrade the island's watersheds and cause serious groundwater and surface water pollution. Tropical forests are disappearing and covered only 25 percent of Jamaica's land area by the late 1990s. Hillside farming in rural areas contributes to the problem of soil erosion.

To meet these environmental problems, the government established the National Resource Conservation Authority in 1991. In 1995 a plan was developed to deal with land use and watershed management, soil erosion, water pollution from untreated sewage, and pollution from bauxite mining. The government's efforts in implementing this plan are being aided by environmental specialists at the University of the West Indies in Kingston.

One environmental problem the government cannot solve is Jamaica's vulnerability to hurricanes. Hurricane Ivan in 2004 was particularly devastating.

LIVING CONDITIONS

Most Jamaicans are quite poor; per capita GDP was about \$4,100 in 2004. Crime is a terrible problem, especially in

Kingston, and people are murdered on an almost daily basis. Many people in the cities live in crowded conditions, sometimes in slum structures made of corrugated metal. About 60 percent of the population lives in rural areas in small, flimsy homes that fall down in storms. Many Jamaicans have abandoned their homeland and emigrated to the United States, Canada, or the United Kingdom, where their prospects are better.

HEALTH

Jamaica's government established a national health service in 1966, and as a result Jamaicans are quite healthy, with a life expectancy of 76 years. The government pays for vaccinations and family planning services; in 2004 the average Jamaican woman had less than two children. The nation's medical schools are quite good, and Jamaican doctors and nurses have found work in many other countries. Since the 1980s, however, the health service has become increasingly underfunded, and so now many people either pay for their own care at private clinics or simply go without, which has undone some of the benefits of the earlier years of good care. Many Jamaicans use traditional herbal remedies to treat themselves. HIV infection is a growing problem.

FOOD AND NUTRITION

Jamaican cuisine combines cooking practices from the various ethnic groups that have settled on the island, including African, Spanish, Arawak Indian, East Indian, Chinese, and British. One common dish is jerk, meat marinated and barbecued over pimento wood. People eat a great deal of fish and other seafood cooked in various ways. Goat, chicken, and pork are also popular meats. These meats are served with rice and beans or cooked into pie. The national fruit is ackee, which is poisonous unless prepared correctly and which looks like scrambled

eggs when cooked; one popular dish is ackee with salted dried cod. Vegetables include plantains, yam, breadfruit, peppers, and onions. People drink coffee, tea, cocoa, rum, and beer as well as the juice of the many local fruits.

Food and Nutrition

Undernourished % of total population: 9.7
 Daily Available Calories per capita kcal: 2,680
 Amount of Cereal Available per person per year kg: 101.0
 Amount of Fruits and Vegetables Available per person per year kg: 224.2

STATUS OF WOMEN

Jamaican women are accorded full equality under the constitution. The Employment Act of 1975 guarantees women equal pay for equal work. The legal status of women is reflected in their influential positions in the civil service and government. Nevertheless, cultural and social values often cause women to suffer job discrimination. Many are denied access to higher-paying jobs, and they are often confined to service jobs, such as teaching, health-care, office, and commercial work. Pay disparity continues despite the 1975 law, and unemployment is higher for women than for men.

Primary health clinics provide pre- and postnatal care for mothers and their children. The National Planning Board organizes education in family planning and family life, and it makes available oral contraceptives and condoms. Jamaica's birthrate is quite low for a developing nation.

Domestic violence is a continuing problem, as is human trafficking.

Women

 Seats Held in Parliament by Women %: 12
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.07
 Women's Share of Wage Employment Non-agricultural %: 48.0

WORK

Unemployment was estimated to be about 15 percent in 2004. A number of young men find employment of a sort in the drug trade. About 20 percent of the legitimate workforce is employed in agriculture, growing food either for themselves or for large plantations; all agricultural workers are vulnerable to price fluctuations and storms. Another 17 percent work in industry, such as bauxite mining and clothing manufacture. A full 63 percent of workers are employed in services, including tourism. Women dominate jobs in schools, hospitals, and offices. The government is the largest single employer in Jamaica. Job security is poor for nearly everyone.

Employment and Labor

 Female Participation Rate %: 47.6
 Labor by Sector %:
 Agriculture: 20.1
 Industry: 16.6
 Services: 63.4
 Unemployment %: 15.0

EDUCATION

Education is free, universal, and compulsory for children from ages six to 15. Schooling is divided into six years of primary school, three years of lower secondary school, and four years of upper secondary school. High school poses a problem for many parents because they must buy books, supplies, and uniforms for children who attend. Some students receive scholarships to a government-subsidized secondary school, and wealthier parents manage to pay for private schools, but about one-third of Jamaican teenagers do not attend high school at all.

The academic year runs from September to July. English is the medium of instruction in all grades. The shortage of trained teachers is the most serious education problem. Both public and private education is controlled by the Ministry of Education.

Higher education is provided at the University of the West Indies or at one of several other specialized postsecondary institutions, such as the University of Arts, Science, and Technology or the School of Agriculture. Only about 5 percent of Jamaicans obtain higher education.

Literacy remains a modest problem, with 88 percent of the population over age 15 literate as of 2003; government programs in adult education have had limited success.

SCIENCE AND TECHNOLOGY

Jamaica has a University of Arts, Science, and Technology, where students can specialize in scientific subjects. The University of the West Indies also has good scientific facilities, notably an excellent faculty of medicine. Jamaica's Ministry for Commerce, Science, and Technology has been working to increase fiber-optic networks to link Jamaica with other nations and to negotiate contracts for the exploration of oil and gas on and around the island. The nation as a whole has a good domestic telephone network. In 2002 about 600,000 people were using the Internet.

MEDIA

Three daily newspapers, the *Star*, *Daily Gleaner*, and *Jamaica Observer*, are published in Kingston, while two weeklies are published in Montego Bay. The press is noted for its vigor and freedom from political suppression, despite its regular criticism of the government. Jampress is the government-run news agency. Although relatively few titles are printed annually, the island is home to several book publishers.

Broadcasting organizations include the privately owned Television Jamaica Limited (TVJ), the privately owned CVM Television, the religiously oriented Love TV, Radio Jamaica, and Island Broadcasting, commercially run stations, and several other stations. The BBC World Service and Caribbean Service are available on FM radio.

CULTURE

Jamaicans listen to and dance to music all the time; ska, rock steady, calypso, soca, and reggae are popular styles, and Jamaican musicians are constantly creating new

forms, many of which attract international notice. Bob Marley remains the most recognized Jamaican musician. Jamaica has produced many excellent visual artists, starting with the Arawak Indians who decorated the walls of caves. During the mid-twentieth century Edna Manley, the mother of Prime Minister Michael Manley, worked to create a unique Jamaican art style; she herself was a sculptor, and she encouraged other artists to explore native artistic principles. Primitive, or "intuitive," art became popular under her oversight, and Jamaican artists now commonly employ historical and cultural motifs such as Rastafarians, animals, African myths, and religious symbols. Jamaica underwent a literary renaissance after independence and has produced famous authors such as Kwame Dawes and Velma Pollard; others write dub poetry, performed to reggae music.

FOLKLORE AND MYTHOLOGY

Jamaican folklore combines elements from the folk traditions of the various ethnic groups that make up its population. Anancy the trickster is a popular character in folk tales; Anancy is a spider-man who originated in East Africa and is known for his quick wits and ability to survive any eventuality. The indigenous doctor bird, or swallow-tail hummingbird, appears in many local legends.

ENTERTAINMENT AND RECREATION

Jamaicans love to go out to listen to music and dance at discos, where they may drink rum, beer, or other alcoholic beverages. At home people watch television or listen to the radio. The beach and the mountains are popular destinations for day trips. Many people enjoy reading, and libraries are well used; museums are also popular.

ETIQUETTE

Jamaican rules of etiquette are virtually identical to those of Western nations. Many Jamaicans are somewhat aggressive when trying to sell goods and services, especially

to Western tourists, who appear quite wealthy compared with the average islanders.

FAMILY LIFE

Women have been the heads of Jamaican families since the days of slavery, when slaves could not marry and so children lived with their mothers alone. Women still raise their children without help from male partners; many couples do not marry until their children are grown up. Women love to have children, and many bear their first child in their teens. Women and men both typically have children with multiple partners. Grandmothers often make up for the lack of two parents, helping to raise the children of their sons or daughters.

PERSONAL APPEARANCE

Jamaicans dress in typical Western fashion. They wear suits or dresses on formal occasions and otherwise dress in light casual clothing.

SPORTS

Soccer and cricket are the most popular sports in Jamaica. Jamaica's national soccer team, the Reggae Boyz, was the first team from an English-speaking Caribbean nation to qualify for the World Cup finals. Jamaican cricket players often captain the West Indies cricket team. Jamaicans also participate in sports such as field hockey, cycling, boxing, weightlifting, and track and field. In 1988 the island sent a bobsled team to the Olympics for the first time; though that first attempt was not particularly successful, subsequent teams have performed increasingly well.

CHRONOLOGY

- 1944** Universal suffrage is introduced. Jamaica's first constitution is adopted, granting the island a degree of self-government under a popularly elected House of Representatives, an appointed Legislative Council as the upper house, and an Executive Council.
- 1945** Following World War II Britain launches the Colonial Development and Welfare Act, which stimulates economic growth in Jamaica.
- 1947** A branch of the University of the West Indies is established in Kingston.
- 1951** A severe hurricane kills 150 and destroys crops in Jamaica.
- 1953** The constitution is amended to make seats of the Legislative Council elected offices.
- 1958** Jamaica joins the British-sponsored Federation of the West Indies.
- 1960** Opposition leader Alexander Bustamante of the Jamaica Labour Party calls for the dissolution of the Federation of the West Indies owing to Jamaica's limited influence on policy making.
- 1961** In a national referendum voters withdraw Jamaica from the Federation of the West Indies.
- 1962** Jamaica achieves full independence within the Commonwealth, with Alexander Bustamante of the center-right JLP as prime minister. The Federation of the West Indies is dissolved.
- 1963** Jamaica joins the IMF.
- 1965** Donald Sangster acts as prime minister during Bustamante's prolonged illness.
- 1966** Queen Elizabeth II pays a state visit to Jamaica.
- 1967** Jamaica's first general election since independence is marked by violence, as are most elections in the next three decades. The JLP holds its ruling position under Donald Sangster. Upon Sangster's death Hugh Shearer becomes prime minister.
- 1968** Jamaica becomes a founding member of the Caribbean Free Trade Area.
- 1969** Jamaica becomes the 24th member of the Organization of American States.
- 1972** The socialist PNP takes power, led by Michael N. Manley, son of PNP founder Norman W. Manley. Prime Minister Manley acts on his campaign promise of establishing "politics of participation" and social justice by initiating social reforms, including an end to censorship, improved civil liberties, and pro-literacy programs, but he also strengthens ties to Cuba's Communist dictator Fidel Castro, inspiring widespread criticism.
- 1976** Manley and the PNP are reelected, but polling is violent.
- 1977** The government nationalizes foreign-owned bauxite mines.
- 1980** About 800 die during Jamaica's bloodiest campaign season to date. Elections restore the conservative JLP to power, with Edward Seaga as prime minister.
- 1981** Seaga breaks ties with Cuba, establishes friendship with the United States, and attempts to stimulate foreign investment in Jamaican enterprises. Jamaica becomes a major recipient of U.S. aid.
- 1983** The JLP wins all 60 seats in national elections.
- 1986** In the midst of a steadily declining economy, the JLP posts poor returns in local elections.
- 1988** Hurricane Gilbert devastates Jamaica, inflicting \$8 billion worth of damage and leaving 500,000 homeless.

- 1989** PNP wins a landslide victory, with Manley returning as prime minister. Embarking on a program of free-market reforms, Manley cooperates with IMF recommendations, floats the Jamaican dollar, and deregulates the financial sector.
- 1992** Manley retires owing to poor health and is succeeded by Percival J. Patterson. Patterson imposes austerity measures to stabilize the economy.
- 1993** The PNP and Patterson are reelected.
- 1995** A faction of the JLP splits off to form the National Democratic Movement. GDP growth falls to 0.5 percent, down from 1.5 percent in 1992.
- 1996** GDP posts negative growth of 1.4 percent.
- 1997** Patterson leads the PNP to an unprecedented third consecutive term as governing party in elections judged by international observers as among the least violent in Jamaica's recent history. The rate of violent crime increases substantially, however.
- 1999** Jamaica's economy stagnates in crisis mode, with negative GDP, high unemployment, a widening trade deficit, and growing government debt. Violent protests take place in response to a 30 percent increase in fuel prices. In July the army restores order in Kingston after three days of unrest leave at least 27 people dead.
- 2001** More than 1,100 people are murdered in Jamaica in the year 2001, an increase of nearly 30 percent over the previous 12 months and the highest number ever recorded in a single year. The army drives into Kingston in armored vehicles to restore order after three days of unrest in July.
- 2002** The PNP and Patterson win the general elections in October.
- 2003** The British government announces that Jamaicans entering the United Kingdom will be required to hold visas. Patterson announces plans to transform Jamaica into a republic by 2007.
- 2004** Former Haitian president Jean-Bertrand Aristide is given asylum in Jamaica. Hurricane Ivan devastates the island in September.
- 2005** Jamaican police blame street gangs for the 1,145 murders that occurred in 2004.
- 2006** Portia Simpson Miller becomes Jamaica's first female prime minister.

GEOGRAPHICAL FEATURES

Japan is an archipelago off the eastern coast of Asia consisting of four principal islands—Hokkaido, Honshu, Shikoku, and Kyushu—and over 3,000 small adjacent islands. The total area of Japan is 145,881 sq mi (377,835 sq km). No point in Japan is more than 93 mi (150 km) from the sea. The distance between Japan and the Asian mainland, of which the Korean Peninsula is the nearest point, is about 124 mi (200 km).

The capital is Tokyo, formerly known as Edo, on the northwestern shore of the Bay of Tokyo in southeastern Honshu. Tokyo itself had a population of 12,459,115 in 2004. The Greater Tokyo area, which includes Kana-

gawa, Saitama, and Chiba prefectures, is the world’s largest metropolitan area; it had a total population of 33,418,366 in 2000. There are 11 other Japanese cities with populations over one million: Yokohama, Osaka, Nagoya, Sapporo, Kyoto, Kobe, Fukuoka, Kawasaki, Hiroshima, Sendai, and Kitakyushu.

The Japanese islands are the summits of mountain ridges uplifted near the outer edge of the Asian continental shelf. Consequently, the country is extremely mountainous, and plains and intermontane basins make up only 25 percent of Japan. A long series of mountain ranges runs down the middle of the archipelago, dividing it in half, with the “front” facing the Pacific Ocean and the “back” facing the Sea of Japan. Three ranges converge

Japan

in central Japan to form the Japanese Alps (Hida Mountains), which contain about 15 peaks that exceed 10,000 ft (3,048 m). The highest point in the country is Mount Fuji, a dormant volcano that rises 12,389 ft (3,776 m).

Most of Japan's plains are along the coast, including the Kanto Plain, the country's largest, where Tokyo is located. Wide riverbeds lined by high banks cut across these lowlands.

Topographically, Japan is divided into eight regions, of which the islands of Hokkaido, Shikoku, and Kyushu each form one, while the island of Honshu has five. The Tohoku region in the northeastern part of Honshu is a dry, bright area with well-drained alluvial plains. The central zone, corresponding to the widest parts of the archipelago, includes the Kanto, Chubu, and Chugoku regions. Kanto, the country's most industrialized area, includes the Tokyo-Yokohama industrial complex. The Chubu region, west of Kanto, is characterized by the greater height and ruggedness of its mountains and comprises three districts: Hokuriku, a coastal strip on the Sea of Japan; Tosan, the central highlands; and Tokai, a narrow corridor along the Pacific coast.

The Shikoku region is divided by mountains into a narrow northern zone fronting the Sea of Japan and a wider southern zone that faces the Pacific. Most of the population lives in the northern zone; the southern zone is mostly mountainous and sparsely populated. Kyushu, the southernmost of the main islands, is divided into northern and southern parts by the Kyushu Mountains. The northern part is one of Japan's most industrialized areas and includes the Kitakyushu industrial zone. The Ryukyu Islands include over 200 islands in a chain extending southward from the Tokara Strait to within 120 mi (193 km) of Taiwan.

Japan has 10 percent of the world's volcanoes, about 265 in all, of which 20 have been active in the past century. They are particularly numerous in Hokkaido, Kyushu, and the Fassa Magna. Among the great eruptions of modern times were those of Mount Bandai in 1888 and Mount Aso in 1953 and 1958.

Japan is also subject to periodic earthquakes, with over 1,500 recorded annually. Major earthquakes are rarer but can result in thousands of deaths, as with the Kanto earthquake of 1923, in which 130,000 people were killed. Undersea earthquakes also expose the Japanese coastline to danger from tsunamis. An equally great hazard is posed by movements of the earth that shake loose entire mountainsides. These landslides are especially numerous on Hokuriku on the Sea of Japan coast.

Japan is perhaps the only country to suffer from both typhoons and snow. Typhoons cause an average of 1,500 deaths and destroy 20,000 dwellings each year. Southern Shikoku is particularly vulnerable. Winter monsoons, laden with snow, are a destructive force in regions bordering the Sea of Japan.

Although Japan is exceptionally well watered, the absence of large plains precludes the formation of a good river system. Rivers tend to be steep and swift and hence unsuitable for navigation. The country's landscape is speckled with lakes of every size, the largest of which is Biwa, which fills a large fault basin east of Kyoto.

CLIMATE AND WEATHER

Japan's climate is of two major types: marine and continental. The mainland Asian climate regulates temperatures and precipitation. There are two periods of heavy rains, one in June, called the "plum rains," and the other in September. Between these two periods the archipelago is hot, humid, and rainless. From the end of summer through October still more violent atmospheric disturbances occur, resulting in typhoons.

The seasonal temperatures in Japan are lower than those at similar latitudes on the Asian mainland, owing

to the country's insularity. Cold winds from the mainland prevail for four months of the year. The annual average temperature for Sapporo is 44°F (6.8°C). Hakodate averages 27°F (2.9°C) in January and 72°F (22.2°C) in July. The mean temperature in Tokyo in January is 36°F (2.4°C); even the most southerly regions of Japan have several weeks of frost each year. In general, summer heat and humidity vary little across Japan. The July average is 79°F (26°C) in Kagoshima in the south and 72°F (22°C) in Sapporo in the north.

Japan has two well-watered zones: one between Kanazawa and Niigata on the Sea of Japan coast and another between the Kii Peninsula and Kyushu on the Pacific coast. Between these two zones lie the dry inland regions, where droughts are common. The central basin of the Inland Sea receives barely 24 in (610 mm) of precipitation between May and September.

The cycle of seasons is quite distinct for each region. The main difference is the drop in temperature from the southwest to the northeast. The difference is illustrated by the dates on which cherry trees bloom, marking the beginning of spring: March 25 in Kyushu, April 10 in Kansai and southern Hokuriku, April 20 in Tokyo, April 30 in northern Tohoku, and May 10 in Hakodate, in southern Hokkaido. The summers and winters vary in length on the four main islands. Summer lasts for four months in the central region, three months in Tohoku and Hokkaido, and five months in the regions of Shikoku and Kyushu. Even though the duration varies, summer tends to be hot and humid in all regions.

Climate and Weather

Mean Temperature

Tokyo: 36°F

Sapporo: 44°F in January and 72°F in July

Hakodate: 27°F in January and 72°F in July

Kagoshima: July 79°F

Average Rainfall: 40 to 100 in

Central Basin: 24 in

FLORA AND FAUNA

Japan is home to a wide variety of plants and animals. The climate ranges from subtropical in the southern islands to near arctic in the north, and the flora and fauna are accordingly diverse.

Until the 20th century, much of central Japan was covered in deciduous forests. The country now suffers from deforestation, as timber is cut down for development and acid rain and pollution kill trees, but two-thirds of the country is still forested. Many of the plants now common in Japan are not indigenous to the islands but were imported from Europe and the Americas during and

after the Meiji period (1868–1912). Common Japanese plants include the *sakura* (cherry) tree, Japanese plum, Japanese maple, pine trees, and bamboo.

Many of Japan's animals are similar to animals from Korea and China. Animals unique to Japan include the Japanese macaque, also known as the snow monkey, the Japanese giant salamander, and the Iriomote cat. Other animals typically associated with Japan include the crane, fox, deer, and tanuki, or raccoon dog. Japan has two kinds of bear, the large brown bear and the smaller Asiatic brown bear; these bears are Japan's largest carnivorous mammals. Many of Japan's animal species are in danger of extinction from loss of habitat.

ETHNIC COMPOSITION

Japan is one of the most ethnically homogeneous nations in the world. Its members are unified not only by a common language, history, and culture but also by a common body of concepts about social order. The Japanese people compose 99.4 percent of the population.

Koreans are the largest minority group. Although they have lived in Japan for centuries, Koreans are treated as inferior and are subject to discrimination in the realms of education, marriage, and employment. The *burakumin*, although ethnically and culturally Japanese, are an outcast group heavily discriminated against in national life. The Ainu, who number about 16,000, are confined to a small area of the island of Hokkaido and the Kuril Islands, where they were forced to move after 1878.

LANGUAGES

The official and sole national language is Japanese. Written Japanese originally used only adapted Chinese characters (kanji), to which phonetic characters (kana) were added in the eighth century. Since 1945 both types of characters have been simplified, their number reduced, and romanized writing introduced.

English is taught as a second language in school, and most educated Japanese have a working knowledge of English, though most are much more comfortable reading English than speaking it.

RELIGIONS

Japanese society is highly secular. This secularism reflects the profound impact of Confucian ethical concepts. The Japanese approach to religion is eclectic and tolerant. No conflict is felt in simultaneously holding beliefs drawn from Shintoism and Buddhism—the predominant religions—and even Christianity.

Shintoism is the ancestral religion of the country. It came under the influence of Confucianism in the fifth century, then was eclipsed by Buddhism from the seventh to the ninth centuries, before its revival in the 19th century during the Meiji era. It then became a national cult to which all citizens had to submit. State Shintoism ended in 1945 with the emperor's declaration that he was no longer divine. However, this renunciation gave rise to a large number of heterogeneous sects of Shinto inspiration. Most of these sects are now incorporated within the Association of Shinto Shrines (Jinja-honcho). As a rule, Shintoism includes all groups that revere the Japanese gods (*kami*) and is a collective more than an individual religion.

Buddhism was introduced into Japan in the sixth century and has been the country's principal religion since the seventh century. Its evolution has been marked by the rise and spread of over 13 sects (*shu*) and 56 denominations. Buddhism has also had a profound effect on Japanese culture, including the arts, gardens, and the tea ceremony.

A variety of "new religions" developed in the 19th century, many of them not discrete religions but only renewals or new movements or sects within Shintoism or Buddhism. The new religions share some common beliefs: promise of salvation, miracles, and the practice of magic, shamanism, authoritarianism, and community morale.

Christianity is the religion of a tiny minority and is viewed by the majority of the Japanese as a Western institution. The first Catholic missionary to Japan was Saint Francis Xavier, who founded the first mission, in Kogoshima, in 1549. Authorities banned Christianity in 1613, and severe persecution followed. Foreign missionaries were not permitted to return until 1858.

HISTORICAL BACKGROUND

Human settlements in Japan date from as early as 50,000 B.C.E. After the Paleolithic period ended in about 11,000 B.C.E., three cultural eras developed. The Jomon (Rope Pattern), from 11,000 to 300 B.C.E., was followed by the Yayoi, lasting until about 300 C.E., during which waves of people from China and Korea introduced wet rice cultivation and the use of bronze and iron weapons. The Tomb culture lasted from 300 to 600. By the fifth century a centralized, clan-based authority had been firmly established in the fertile Yamato Plain in west-central Honshu. The most powerful of these clans was the Yamato, whose authority extended as far as Korea. During this formative period through the eighth century China was the principal source of cultural borrowing. In the fifth century Confucian texts and Chinese characters were brought to Japan by Korean scholars. Buddhism came in the sixth century, again through Korea, and became the vehicle for the transmission of Chinese civilization to Japan.

Between 645 and 702 a centralized bureaucracy was organized, modeled on China's, and in 710 a national capital was set up at Nara. Japan was divided into provinces and districts headed by governors appointed by the emperor. Real power, however, had fallen into the hands of the Fujiwara clan, which had become dominant through marriage with the Yamato family.

In 784 the capital was moved to Nagaoka, and then to Heian, or modern Kyoto, where it remained until 1868. The Heian (Kyoto) period, from 794 to 1185, saw the flowering of Japanese classical culture, with great literary works produced, the most famous of which was *Genji monogatari* (*The Tale of Genji*), written about 1100 by Lady Shikibu Murasaki. The Fujiwara wielded such immense power that the three centuries to 1160 are sometimes called the Fujiwara period.

After the 10th century Fujiwara power began to wane as wealthier local groups (the forerunners of the samurai) organized private governments. Rivalry between these local military clans continued until two great clans, Genji and Heike, emerged. The struggle between these two clans ended in Genji victory in 1185, ushering in Japan's feudal period.

Japan's 700-year period of rule by military overlords began in 1192, when Minamoto Yoritomo assumed the title of shogun, relegating the emperor to a merely titular role. Yoritomo established his military government at Kamakura, near modern Tokyo. As shogun he appointed the provincial military governors (daimyo), who collected all taxes. The military, or samurai, class that crystallized during this period comprised armored nobles and foot

soldiers. The samurai became the ruling class responsible for both civil and military affairs while maintaining the fiction of imperial rule.

From the death of Yoromito to 1568 Japan was torn by constant domestic strife. In the 13th century the country suffered two Mongol invasions, in 1274 and 1281. Continual warfare between the dominant clans undermined the power of the shogunate, particularly after the War of Imperial Succession (1467–77). By the mid-16th century the country had fallen into the hands of some 200 daimyo, who wielded absolute power within their fiefs. Many of the new daimyo were not of aristocratic samurai origins but seized power through their military prowess. Peasant revolts, often led by impoverished samurai, were common.

In 1582 Toyotomi Hideyoshi reduced the warfare among the daimyo and began to unify the country. He then launched two invasions of Korea, which were cut short by his death in 1598. Hideyoshi was succeeded by Tokugawa Ieyasu, who in 1603 was appointed shogun by the emperor and established his military government at Edo, modern Tokyo. Ieyasu consolidated his power by stripping the daimyo of their autonomy. The samurai class was transformed into a hereditary, privileged warrior bureaucratic group prohibited from intermarrying with peasants.

Lasting political stability characterized the Tokugawa period (1603–1853), with a rigid class structure and a policy of national seclusion. Official edicts prescribed the functions and standards of behavior of each class. Derived from both samurai and Confucian ideals, they stressed absolute loyalty to the ruler and filial piety to family heads. Confucian ethics, with emphases on status distinctions, paternalism, and lord-vassal relationships, strengthened the shogunate and brought domestic peace to Japan. In the course of time, internal commerce developed, urban centers sprang up, and a new merchant class came into being.

The collapse of the Tokugawa shogunate came not from within but from without. In 1853 U.S. warships led by Commodore Matthew Perry arrived with demands that included the establishment of facilities for trade. Unable to offer resistance, the shogun signed treaties with the United States in 1854 and soon after with other Western powers. After a decade of turmoil and confusion, the 15th, and last, Tokugawa shogun laid down his office.

Imperial rule was formally restored on January 3, 1868, to Emperor Matsuhito, who took the reign title of Meiji (Enlightened Rule), signaling the start of Japan's modern era. In 1869 the imperial capital was moved to Tokyo. The Meiji period lasted until 1912, the nucleus of Meiji power consisting of some 100 young samurai leaders and a few court nobles. As part of the new order, the Meiji government agreed to open Japan to Western knowledge. The Meiji Constitution, promulgated in 1889 as an imperial gift to the people, was patterned on the Prussian model. Its effect was to sanction the power already exercised by the military, vesting sovereignty in a divine emperor who nevertheless remained a figurehead. A bicameral legisla-

ture, the Imperial Diet, had two houses. A civilian cabinet, headed by a prime minister, was responsible only to the emperor. Suffrage was limited to male property owners, who constituted 1 percent of the population. The Meiji leaders laid the foundations of the country's modern industry and finance. The first family business, industrial, and banking conglomerates, known as *zaibatsu*, were founded in this period. The Bank of Japan was established in 1882 as the country's central bank.

Not surprisingly, military modernization was given top priority by the Meiji government, and by the 1880s it accounted for one-third of the national budget. Japan became engaged in several conflicts in the late 19th century in an effort to enhance its stature as a world power. In 1894 Japan won a quick victory over China, in the 1895 Treaty of Shimonoseki gaining Taiwan, the Pescadores Islands, and the Liaodong Peninsula in southern Manchuria. In 1904 Japan attacked Russian positions at Port Arthur on the Liaodong Peninsula. The Treaty of Portsmouth in 1905 sealed Japan's victory with grants of territory in Korea and Manchuria. In 1910 Korea was annexed as an integral part of the Japanese Empire. By 1912, when the Meiji period ended, Japan was the dominant power in East Asia.

The Taisho period, from 1912 to 1926, saw the beginning of political party rule in parliament. It witnessed Japan's role as one of the Big Five powers at the Versailles Peace Conference and as a leading naval power at the Washington Naval Conference in 1922.

By 1926 the Showa reign began with the accession of Emperor Hirohito. By then Japan had fallen under the control of right-wing leaders whose goal was to make China a Japanese satellite. They believed that the Japanese people had a divine mission to conquer Asia and that the Japanese were racially superior. In 1931 a railroad explosion at Mukden started a series of events that culminated in army control of political power in Japan. Japan occupied Manchuria in 1932 and soon began its effort to conquer China, culminating in the capture of Canton in 1937 and control of most of the Chinese seacoast by 1938.

Early German successes in World War II led the Japanese government of General Hideki Tojo to sign the Triple Alliance with Germany and Italy. On December 7, 1941, Japan attacked the U.S. fleet at Pearl Harbor, and by mid-1942 Japan was poised for a sweep of the Pacific. However, the tide of war turned in January 1943 with the loss of Guadalcanal, followed by the Battle of Midway and then the loss of Saipan in 1944. Despite these losses, Japan refused the Allies' call for unconditional surrender, and in early August 1945 the United States dropped the only atomic bombs ever used in warfare on Hiroshima and Nagasaki. Japan formally surrendered on August 14, 1945.

After Japan's defeat General Douglas MacArthur and American military forces took control of the country. The role of the emperor was drastically redefined in 1946; he became a largely symbolic figure, no longer a divine ruler. In 1947 the MacArthur Constitution became the new ba-

sis of Japan's governmental system. Japan renounced the right to wage war and maintain military forces. The *zai-batsu*, the industrial-financial conglomerates, were broken up. In 1948 Japan regained some of its sovereignty; its position was strengthened when it served as an American military base of operations during the Korean War, from 1950 to 1953. Aiding the American war effort also greatly spurred the revival of Japan's postwar economy.

Japan built vast new industries and businesses in the postwar decades, devoting the nation's budget and resources entirely to economic growth. By the 1980s its booming enterprises were admired as an "economic miracle," and Japan ranked second only to the United States among the world's economies. The Japanese people enjoyed one of the highest living standards in the world.

During nearly all the postwar years Japan's government was controlled by the Liberal Democratic Party (LDP) and its leaders. This political stability helped reinforce Japan's remarkable economic growth and expanding overseas trade. However, by the late 1980s the LDP, weakened by revelations of widespread corruption and bribery, saw its parliamentary majority reduced. In 1993 the LDP was forced to form coalition governments with the Socialist Party, but it returned to sole power during the remainder of the 1990s, though with reduced majorities.

The Japanese economy suffered a prolonged slump in the 1990s, and the country's vaunted prosperity was seriously threatened. The government's efforts to use fiscal and monetary measures to stimulate the economy met with little success and contributed to political instability among the LDP leadership and Japan's other political parties. However, in the early 2000s the economy showed some signs of improvement, and the LDP was able to maintain its strength in the parliament.

LIST OF MODERN RULERS

Emperors

1867–1912	Emperor Mutsuhito (referred to as the "Meiji emperor")
1912–26	Emperor Yoshihito (referred to as the "Taishō emperor")
1926–89	Emperor Hirohito
1989–	Emperor Akihito

Prime Ministers

1945–46	Kijuro Shidehara
1946–47	Shigeru Yoshida
1947–48	Tetsu Katayama
1948	Hitoshi Ashida
1948–54	Shigeru Yoshida
1954–56	Ichiro Hatoyama
1956–57	Tanzan Ishibashi
1957–60	Nobusuke Kishi
1960–64	Hayato Ikeda
1964–72	Eisaku Sata

1972–74	Kakuei Tanaka
1974–76	Takeo Miki
1976–78	Takeo Fukuda
1978–80	Masayoshi Ohira
1980–82	Zenko Suzuki
1982–87	Yasuhiro Nakasone
1987–89	Noboru Takeshita
1989	Sosuki Uno
1989–91	Toshiki Kaifu
1991–93	Kiichi Miyazawa
1993–94	Morihiro Hosokawa
1994	Tsutomu Hata
1994–96	Tomiichi Murayama
1996–98	Ryutaro Hashimoto
1998–2000	Keizo Obuchi
2000–01	Yoshiro Mori
2001–	Junichiro Koizumi

CONSTITUTION

The MacArthur Constitution of 1947 made a clean break with the basic provisions of the Meiji Constitution. The ideological bases of the new constitution were popular sovereignty, human rights, and the renunciation of war. The emperor now assumed a largely ceremonial role in government and society, with no political power.

A prominent feature of the constitution is a comprehensive listing of the rights and duties of citizens. These rights include freedom of religion, freedom of speech, and freedom of association as well as the rights to a fair trial, to serve in public office, and to own private property.

The explicit renunciation of war in the constitution was one of its most striking and controversial features. It clearly reflected the origin of the document and pressure from the U.S. government. In fact, many Japanese at first viewed the constitution as a purely American document. However, this document and its philosophical basis have been reinforced by postwar social trends. Its relevance is attested to by the inability of opposition parties to revise it to make it more authentic. In part this inability is also due to the fact that amendments to the constitution require a two-thirds vote in the two houses of the Diet.

The MacArthur Constitution vested the executive power solely in the prime minister and the cabinet. The prime minister is the head of government, not simply first among equals. To guard against military resurgence, all cabinet members must be civilians and members of the Diet. The prime minister and the cabinet also select the chief justice and other judges of the Supreme Court.

The constitution clearly establishes cabinet responsibility to the Diet. The prime minister is elected by the Diet, and the lower house plays a dominant role in this process. The lower house may pass a motion of no confidence in the government, which requires the prime minister and the cabinet to resign and call an election.

Postwar government in Japan has witnessed the growing power of the prime minister, the office held by skilled politicians with commanding positions in the ruling Liberal Democratic Party. Cabinet turnover has been very high in postwar Japan, with cabinets changing or reforming an average of once per year.

PARLIAMENT

The Japanese Diet is a bicameral legislature, with a lower house called the House of Representatives (Shugi-in) and an upper house called the House of Councillors (Sangi-in). The lower house consists of 500 members elected by popular vote every four years. The upper house consists of 252 members elected by popular vote for six-year terms; one-half of the body is elected every three years. The House of Representatives has the greater power of the two houses, in contrast to the prewar system, in which they were coequal bodies.

The Diet is the highest authority of government. It has the power to make laws, elect the prime minister, approve the national budget, investigate government policies, draft amendments to the constitution, and impeach judges. The structure and purpose of the Diet are defined in the constitution, the Diet Law of 1947, and the rules of each house.

Much of the legislative work of the Diet is done in committees. There are 16 standing committees for each house, with identical names and areas of authority, such as commerce and industry, budget, social and labor affairs, and foreign affairs. According to the Diet Law, each member must serve on at least one and not more than three standing committees. Selection of committee chairmen is based on party strength, not seniority, and thus all are usually headed by Liberal Democratic Party members. Committees maintain absolute control over the flow of all bills. The Diet Law also provides for the establishment of special committees to focus the Diet's attention on particularly pressing problems or to remove issues from the influence of standing committees that may be unduly responsive to the vested interests involved.

POLITICAL PARTIES

Throughout the postwar era Japan's political system was characterized by the predominance of a single party, the conservative Liberal Democratic Party, over an anemic opposition comprising assorted parties in the middle and left. The LDP attached more importance to organization and financial power than to ideology. It was particularly strong in rural areas and favorable to private enterprise and the Japan-U.S. alliance. Buffeted by a series of major scandals, the LDP lost its parliamentary majority for the first time in 1993. After yielding to two successive fragile coalitions of former opposition parties, it returned

to power in 1994 as the largest party in a coalition with Social Democrats and the New Party Harbinger.

In 1994 nine opposition groups united as the New Frontier Party (or Shinshinto). In addition to five dissident LDP groups, the Shinshinto brought together the Japan New Party, the Japan Renewal Party, the Clean Government Party, and the Democratic Socialist Party. The Shinshinto never coalesced into a viable alternative to the LDP and by 1996 had lost momentum, although it remained the largest opposition group, with 156 seats in the House of Representatives. In 1997 the Shinshinto was dissolved, with many of its elements re-forming as new parties in 1998. A number of these groups, including the Sun Party, joined the Democratic Party, which emerged as the largest opposition grouping. Another Shinshinto successor, the Liberal Party, founded by Ichiro Ozawa and Tsutomu Hata in 1994 as Shinseitō (Japan Renewal Party), left the opposition and formed a governing coalition with the LDP in 1999.

In 2004 the second-most powerful party was the newly formed Minshuto, or Democratic Party of Japan, which won one more seat than the LDP in the July 2004 elections. The LDP was still the ruling party thanks to its alliance with the Komeito, or Clean Government Party. The Socialist Party had completely disintegrated, the Communist Party still retained its usual 3 to 5 percent of seats, and the Liberal Party and Social Democratic Party each had small presences in the Diet.

LOCAL GOVERNMENT

Japan is divided into 47 prefectures—43 rural (*ken*); two urban (*fu*), Kyoto and Osaka; one district, Hokkaido; and one metropolitan district (*to*), Tokyo. These jurisdictions are subdivided into cities, towns, and villages. Tokyo, Osaka, Kyoto, and other large cities are subdivided into wards (*ku*), which are further split into precincts (*machi* or *cho*). All municipalities are collectively known as *shichoson*. Below them are towns, built-up villages (*mura* or *son*), and hamlets (*buraku*).

Each prefecture or district has a governor and a unicameral assembly, both elected by popular vote for four-year terms. Cities, like prefectures and districts, are self-governing units administered independently of the larger units of which they are a part. City government is headed by a mayor elected by popular vote for a four-year term. A city assembly, with representatives according to population, is elected at the same time.

Popular control over local government is exercised by the assemblies at the various levels. Assembly members are elected for four-year terms but may be recalled by the voters. Increasingly, local assemblies express their wishes to the central government in the form of resolutions, not only on local issues but on national and international issues as well.

Local government finances have historically suffered from inadequate resources and growing expenditures. All local taxes are prescribed by national laws, which set standard rates and exemptions.

LEGAL SYSTEM

Article 76 of the MacArthur Constitution assigns the “whole judicial power” to the Supreme Court and various inferior courts. The Supreme Court alone determines the procedures, practices, and administration of all courts. The chief judge of the court is designated by the cabinet, as are its 14 other judges. The Supreme Court is the court of last resort for civil and administrative cases. It also has the power of judicial review—it can declare laws, unofficial acts, and administrative rules unconstitutional, although it rarely does so.

The high courts, with three to five judges, are courts of appeal in civil and criminal cases and have original jurisdiction in election cases. District courts have original jurisdiction in all civil and criminal cases except for petty offenses. Summary courts try minor civil and criminal cases and issue warrants for arrest, search, and seizure. Family courts have original jurisdiction in matters concerning inheritance, divorce, and juvenile delinquency.

Japan’s criminal justice system changed dramatically with the 1949 Code of Criminal Procedure. That code guarantees the fundamental rights of citizens and favors the defendant over the accuser. Most significantly, it abolished the feudal concept of the family as the basic social unit and established substantial equality of the sexes. Equally important were reforms in civil procedure whereby parties examine evidence in place of preliminary investigation by the court.

Nevertheless, Japanese courts have retained many traditional features. Thus, the trial judge tends to play an active role in judicial procedures. There are frequent informal discussions between the judge and counsel. The constitution does not provide for a jury system.

HUMAN RIGHTS

All civil and political rights are guaranteed by the constitution. There are no restrictions on political, religious, or trade union activities. However, resident aliens, particularly Koreans, have suffered from entrenched social prejudice. Social exclusion is also practiced against the economically deprived *burakumin*, who number over two million. Both groups have restricted access to public housing, employment, and education. In an attempt to remedy these situations, the government has extended public benefits, such as housing loans, social security pensions, and public employment rights, to Koreans and has provided funds to help assimilate the *burakumin* into mainstream society.

FOREIGN POLICY

Throughout the postwar period Japan’s economic growth was the central factor in domestic affairs and foreign policy. As a result Japan avoided a major role in world affairs and followed a policy of close and flexible accommodation to the regional and global policies of the United States. Japan’s renunciation of war in the 1947 constitution allowed it to devote its national budget and resources to rebuilding the country’s economy.

Close military and political ties with the United States, formally embodied in the 1960 mutual defense treaty, remain the cornerstone of Japan’s foreign policy. Trade relations between the two nations grew in importance as Japan’s economy strengthened dramatically during the 1970s and 1980s, making it the world’s second-mightiest economic power. Japan and the United States, together accounting for more than 42 percent of the world’s gross domestic product (GDP), also became keen competitors in world trade.

Japan’s militarism and policy of conquest had culminated in World War II; acknowledgment of this forced the defeated nation to limit its postwar role in Asian affairs. Until 1960 Japan had no political or commercial relations with China, the legacy of its policy of aggression against that country in the 1930s. In 1972 relations between the two nations improved significantly when Japan recognized the Communist regime as the sole legal government of China, with Taiwan as an inalienable part of China. Japanese investments in China and trade with that nation vastly increased in the following decades. Japan’s relations with Korea followed a similar pattern, with the two formerly bitter enemies establishing close financial and trade relations, which greatly benefited both their economies.

Japan became a member of the United Nations in 1956 and has supported UN peacekeeping efforts in various parts of the world. In 1966 Japan also helped found the Asian Development Bank to assist emerging Asian countries in developing their economic resources.

Japan has long disputed several island territories with its neighbors; Russia and Japan both claim the Kuril Islands north of Hokkaido, and China and Taiwan are disputing Japan’s claim to the Senkaku Islands. Japan’s relations with Korea have historically been delicate. Japan occupied Korea from 1910 to 1945, which has caused some resentment by older Koreans, but currently has fairly amicable relations with the government of South Korea. Japan considers North Korea a major threat because of its proximity and its nuclear weapons.

DEFENSE

Japan’s Self-Defense Forces (SDF), as the armed services are called, are the smallest among all the major industrialized nations. The size and structure of the armed forces is

limited by the MacArthur Constitution of 1947, which required Japan to renounce war and the use of force. The SDF has never been deployed outside Japan, and it is prohibited from possessing nuclear weapons or any arms with offensive capabilities. Because the SDF is small and only minimally equipped, it confines its activities to UN peacekeeping efforts, disaster relief, earthquake disaster prevention, disposal of old weaponry, and various public works projects.

National security policy is based on the 1960 mutual defense treaty with the United States. The Japanese people have approved this strategic cooperation with the United States, which protects the nation and at the same time allows Japan to concentrate its resources on economic development.

The largest of the three forces in the SDF is the army, called the Ground Self-Defense Force, consisting of about three-fifths of all military personnel. The Ground Self-Defense Force is divided into five regional armies, each containing two to four divisions, an engineering brigade, anti-aircraft artillery units, and support units. The navy, called the Marine Self-Defense Force, has an authorized strength of around 45,000. The Marine Self-Defense Force includes a self-defense fleet, five regional district commands, an air-training squadron, and various support units. The air force, called the Air Self-Defense Force, has an authorized strength of around 47,000. The Air Self-Defense Force maintains an integrated network of radar installations and air defense direction centers.

Recruitment to all three military services is by voluntary enlistment, with recruits eligible at age 18. The defense forces are equipped almost entirely by domestic manufacturers.

In 2004 Japan spent about \$45.8 billion, or 1 percent of GDP, on the military.

ECONOMY

Japan is the world's second-richest economy, with a GDP of \$3.745 trillion in 2004 and a per capita GDP of \$29,400. The country's economy grew at an unprecedented rate in the postwar period, a remarkable achievement for a densely populated nation in a small national territory with few natural resources. For three decades Japan's economic growth was spectacular, averaging an annual rate of 10 percent in the 1960s, 5 percent in the 1970s, and 4 percent in the 1980s.

In the early 1990s Japan's economic boom ended in a recession triggered by real estate speculation, overinvestment by financial institutions, and certain national fiscal and monetary policies. The government, led by the LDP, itself mired in scandals involving bribery and corruption, responded with a series of measures designed to stimulate the economy. However, these measures proved contradictory and ineffectual. By 1997–98 Japan was in a deep recession, which had a severely adverse impact on the banking system, industrial production and exports, and the labor market. Government efforts to revive economic growth met with little success and were further hampered in late 2000 by the slowing of the U.S. and Asian economies. In 2004 the economy grew at the rate of 2.7 percent.

Japan's advance to being the second-most-powerful economy in the world was based on government-industry cooperation, a strong shared work ethic, and a mastery of high technology. Another strong factor has been the *keiretsu*, the networks of manufacturers, suppliers, and distributors in the nation's leading industries. In addition, Japan's military forces consumed less than 1 percent of the GDP, freeing capital for investment and economic expansion.

Japanese industry is a world leader in the production of iron and steel, automobiles, computers, and electronics, especially robotics. Yet its industry is heavily dependent on imported raw materials and fuel. Japan produces nearly all the rice it consumes, but agriculture is heavily protected and subsidized by the government, since half the country's requirements of grain and fodder crops must be imported. Japan's fishing fleet is one of the largest in the world and accounts for 15 percent of the total catch. In addition, the crowding of habitable land and the aging of the population are expected to cause long-term economic problems.

ENVIRONMENT

Japan is one of the most efficient users of energy among the industrialized nations. However, it remains a major contributor to the world's greenhouse gas emissions. Air

pollution increased steadily in Japan's major urban areas during the postwar era of rapid industrialization. Concentrations of sulfur dioxide and other contaminants posed serious health threats to the people of Tokyo, Osaka, Yokohama, and other major manufacturing centers.

During the 1980s, however, Japan increased its efforts to combat these problems by tightening air-quality regulations for business and industry. Governmental action plans have also substantially reduced sulfur dioxide and nitrogen oxide emissions from power plants. Despite these government programs, acid rain remains a problem in many parts of Japan and continues to degrade the water quality in many lakes and reservoirs.

Japan's fishing fleet continues to engage in overfishing in its home waters as well as in many other parts of the world. This practice, combined with increasing levels of pollution in Japanese coastal waters, poses a threat to many commercial species of fish. The use of drift-net fishing by Japanese commercial fleets indiscriminately kills large numbers of fish and sea mammals. Protests by the United States and other nations have led Japanese fishers to restrict these operations in international waters.

 Nationally Protected Areas % of total land area: 9
 Emissions of Organic Water Pollutants kg per day: 1,279,287
 CO2 Emissions per capita ton: 9.34

LIVING CONDITIONS

Japan has a large population and a relatively small amount of habitable land, which means Japanese living conditions are crowded. The population density is 350 people per square kilometer. Many families live in very small apartments, especially in Tokyo and other big cities. Housing is very expensive, and it is difficult to obtain a loan from a bank, so many people rent instead of buying homes.

Japanese people usually remove their shoes upon entering a house or apartment, out of tradition and because many homes are floored with tatami, mats woven from reeds. Traditionally, Japanese people have sat and slept on the floor, using the same room for both purposes. During the day they sit at a low table called a *kotatsu*, which usually has some form of heater underneath. At night they sleep on the floor on thick quilts called futons. In the morning, they fold the futons and place them in a closet to free up the floor for daytime living. Many people now have Western-style furniture in their homes.

Japan manufactures a plethora of electronic products, and most Japanese people own many electronic devices, including cellular telephones, televisions and video players, and stereo equipment.

Public transportation in Japan is excellent and widespread, though it is also expensive and extremely crowded in major cities. Gasoline and automobiles are very expensive, and traffic on Japanese roads can be extremely bad, especially on holidays.

HEALTH

The Japanese people are some of the healthiest in the world. Life expectancy for women is 84.6 years, among the world's highest; life expectancy for men is 77.8 years. Medical facilities are widely available, and all citizens are covered by the national health-insurance system. Japanese doctors tend to hospitalize their patients readily and usually keep them in the hospital four times as long as do U.S. doctors.

FOOD AND NUTRITION

Many experts believe that the secret to Japan's high life expectancy is its diet, which is based on rice, vegetables, and seafood. Rice especially is the dietary mainstay and has traditionally appeared at every meal. Other ubiquitous foods include miso (soybean paste used in soup), pickled vegetables, seaweed, tofu, and green tea. More elaborate foods include tempura, sushi, sashimi, and fish and meat cooked with teriyaki sauce. Noodles are also common, such as ramen noodles from China and soba noodles made from buckwheat flour. Japanese restaurants and home cooks prepare many communal dishes such as *shabu-shabu*, *sukiyaki*, and *nabe*, all forms of hot soup or stew cooked on the table. Traditional Japanese sweets often feature sweet red bean paste or sweet rice dough.

Many Western foods became popular in Japan during the 20th century, and it is now easy to find bread, pizza, hamburgers, coffee, and other European or American foods. Fast food restaurants are common and popular.

STATUS OF WOMEN

The constitution of 1947 prohibits discrimination against women and ensures the essential equality of the sexes. However, long-standing cultural mores and customs continue to adversely affect women's status in society. Recent legislation, such as the 1997 laws banning discrimination against women by employers and ensuring women's rights on the job, remain largely ineffectual.

The traditional male-female division of labor in Japanese families continues little changed, placing a disproportionate burden on working women. In 1997 government surveys reported that women do 90 percent of the housework and child rearing, while men do 10 percent. These statistics applied nearly equally to women who were wives with jobs and those who did not work outside the home.

The same discrimination is prevalent in the educational system. Though female students perform at least as well as males in high school, the vast majority of spots in the top-ranking universities go to men, and women tend to choose two-year colleges where they major in subjects considered useful for wives and mothers, such as child psychology.

In 2004 about 40 percent of Japanese women worked outside the home, but women held only 9 percent of managerial positions. Many of the jobs available to women are support positions, where they are expected to greet clients, make tea, and perform other similar tasks that do not prepare them to climb the corporate ladder. The Japanese workplace is regimented and requires very long hours from its workers, and women find it difficult to ask for flexible schedules or other accommodations that would make it possible for them to combine work and motherhood. Some experts believe that the lack of women in the workforce may be costing Japan future economic growth.

Though Japan is generally a very safe place for women, sexism is overt. Women riding public transportation often find themselves fondled by strangers, and it is common to see men on trains or buses reading explicitly pornographic books and magazines. Television shows typically have a male spokesman accompanied by a beautiful young woman whose job is to agree with everything he says.

As of 2004 Japan's crown prince, Naruhito, had only one child, his daughter Aiko, and he and his wife Masako appeared unlikely to have any more. This has ignited debate in Japan as to whether a woman might take the throne as empress; current law prohibits female rule, but many Japanese people want to change this law and allow a woman to accede to the throne.

Women

 Seats Held in Parliament by Women %: 7
 Female Administrators and Managers %: —
 Ratio of Literate Women to Men Age 15 to 24: 1.0
 Women's Share of Wage Employment Non-agricultural %: 40.8

WORK

Japanese workers put in some of the longest working hours in the world. Japanese "salarymen," or male office workers, are expected to devote their lives to their jobs, often working well into the evening. Japanese work habits have even led to a new word, *karoshi*, which means "death from overwork." Nevertheless, work hours have been dropping steadily since the 1980s, when the Japanese economic miracle was in full force. In 1980 the average Japanese worked 2,121 hours per year; by 1995 this number had dropped to 1,889.

Work is also an important part of a Japanese person's social life. Workers are expected to show loyalty to their companies and their working teams, and after-work socializing is an essential part of any job. Lifetime employment with a company was considered the norm during the 20th century, but economic upheavals in the 1990s called into question the loyalty of a company to its workers and vice versa.

Japanese companies often pay their workers monthly salaries supplemented with bonuses once or twice a year. These bonuses are not usually related to performance and are considered a normal part of compensation.

EDUCATION

Education is free and compulsory for nine years, with all children ages six to 15 enrolled in school. Students attend primary school for six years, then secondary school, which consists of three compulsory years in lower secondary school (*chugakko*) and three noncompulsory years in upper secondary school (*kotogakko*). The central role of education in Japanese society is symbolized by the nation's literacy rate of nearly 100 percent.

Higher education is highly prized in Japanese society, and admission to the country's top universities is extremely competitive. Several hundred privately run preparatory

1200 Japan

schools (*yobiko*) provide rigorous training and preparation for passing university admissions examinations.

Tokyo University, founded in 1877, is Japan's oldest university and was long the capstone of the educational system. In the years before World War II six more public imperial universities were established: Kyoto, Tohoku, Kyushu, Hokkaido, Osaka, and Nagoya. The top-ranked private universities include Hosei, Keio, Nihon, and Waseda Universities in Tokyo; Doshisha University in Kyoto; and Kansai University in Osaka.

In the postwar decades many other universities were founded, including specialized universities and institutions for advanced research. Two-year junior colleges were established in 1948, offering courses in home economics, liberal arts, and teacher training. In the 1990s nearly three million students were enrolled in institutions of higher education.

SCIENCE AND TECHNOLOGY

Japan's government has lavished attention and money on science and technology development since the mid-20th century, seeing science as one of the keys to economic development. The Ministry of Education, Culture, Sports, Science and Technology and its Science and Technology Policy Bureau plan and implement the nation's basic science and technology policies. The Science and Technology Policy Bureau promotes and formulates research programs, trains researchers and technicians, determines Japan's policy on international research exchange, and promotes regional education in science and technology. The Ministry of International Trade and Industry oversees the Agency of Industrial Science and Technology. The Agency of Industrial Science and Technology supervises 15 laboratories in eight cities in Japan, each of which engages in research

and development of new technologies. Japan is especially known for its automobile technology and its high-quality consumer electronics products, especially cameras.

MEDIA

Freedom of the press is guaranteed by the 1947 constitution. Japanese newspapers have a huge collective circulation of roughly 72 million copies daily. This circulation is concentrated in 110 dailies, with only one newspaper published in most prefectures. Press ownership is often family based. The three leading newspapers, each with audiences of more than four million, are *Yomiuri shimbun*, *Asahi shimbun*, and *Mainichi shimbun*. Japan has two main news agencies, the Kyodo News Service and the Jiji Press.

Commercial broadcasting in Japan includes more than 100 television companies and 34 radio companies. Nippon Hoso Kyokai (NHK), the only noncommercial broadcaster, operates two television and three radio networks.

CULTURE

The Japanese people have a clearly defined sense of their own culture and their uniqueness as a people. Japanese traditional culture is still readily apparent, even though most Japanese live modern daily lives. Many Japanese people enjoy wearing traditional kimonos (robes) on special occasions. Japanese cities are filled with temples and shrines from old religious traditions, and the Japanese regularly attend local religious festivals. Modern Japanese practice traditional art forms such as calligraphy and flower arranging, and tea ceremonies are popular at special events. The Japanese people love music, ranging from traditional tunes on ancient instruments such as *shamisen* to modern pop music sung along with karaoke machines.

Traditional dramatic forms include Kabuki and Noh plays, both of which are highly stylized and difficult for modern people to understand. Japanese literature has existed since the eighth century, when authors began imitating the Chinese writing style. Many early Japanese works of literature, such as *The Tale of Genji*, were written by women. The poetic form called the haiku came out of the samurai and Zen Buddhist traditions of the 17th century.

FOLKLORE AND MYTHOLOGY

Japanese mythology and folklore reflect the Japanese peoples' sense of their own uniqueness while incorporating foreign traditions, such as Buddhism, Confucianism, and Taoism, imported from China and Korea. Much of Japanese myth comes from an eighth century document called the *Kojiki*, or Record of Ancient Matters. The creation story tells of gods dropping globs of mud from the tip of a spear to create the many islands of Japan and then of the creation of the main Japanese deities. The most important of these was the sun goddess, Amaterasu, who was considered the direct ancestor of the imperial family until after World War II, when the emperor declared that he was no longer divine.

Shinto is the only organized system of beliefs that arose in Japan independently, probably around 500 B.C.E. Shinto teaches that gods, called *kami*, are found everywhere in nature and that family and group harmony are very important. The importance of family extends to dead ancestors, who the Japanese believe come to visit them during the summer festival O-Bon. Shinto shrines are found throughout Japan, and Japanese people often visit them to pray and buy charms that offer protection against various misfortunes.

ENTERTAINMENT AND RECREATION

Going out with groups of friends or coworkers is an important part of Japanese social life. An evening out will usually involve drinking beer, sake, or other alcoholic beverages and eating snacks, perhaps followed by a couple of hours at a karaoke box, a small room with a karaoke machine where everyone takes turns performing their favorite songs.

Japanese people enjoy traveling, and their strong currency makes international travel inexpensive. Travel within Japan is also popular, especially to Kyoto and Nara. Most schools bring their students on trips during the school year, either to visit cultural sites or to engage in an activity such as skiing.

ETIQUETTE

Japanese society emphasizes harmony within the group, if necessary at the expense of individual desires. Japanese people value courtesy and proper social behavior. The Japanese language allows for variation in levels of respect, and Japanese people vary their language depending on situations and conversational partners. Japanese people bow when meeting one another, and the depth of a bow also reflects the social standing of the individuals bowing to one another. Directness in speech is considered vulgar, and Japanese people prefer instead to hint at or otherwise suggest their opinions and desires indirectly.

FAMILY LIFE

Family is very important to Japanese people. Many Japanese marriages originate through a practice called *omiai*, or an arranged introduction; if the introduced parties like one another, they will continue courtship and perhaps marry, but they are not obligated to do so. Women usually take their husband's names when they marry, though sometimes a man marrying an only daughter will take his wife's family's name. An older mother will often move in with the family of her oldest son. At the end of the 20th century fewer and fewer Japanese women were choosing to marry, citing the burdens placed on them by family obligations and the economic freedom they could achieve by continuing to work.

Japanese parents indulge their very young children, but by the age of three or four a child is expected to begin preparing for school and a future career. Many Japanese families bathe together and sleep together in the same room, which complicates matters for married couples seeking privacy. The birthrate in Japan has dropped precipitously in recent years, leading to fears that the population will become disproportionately elderly. Parents claim that children are too expensive, and many women do not want to have to give up work when they have children.

PERSONAL APPEARANCE

Appearance is very important to the Japanese. Most Japanese people dress neatly in clean, fashionable clothes.

Wealthy people often choose to wear expensive designer clothes. Many schools require their students to wear uniforms. Some teenagers rebel against social rules by bleaching their hair or wearing outrageous fashions. *Yakuza*, members of organized crime groups, often perm their hair and tattoo their bodies.

SPORTS

Japanese people love sports, both playing and watching. Golf is extremely popular and extremely expensive, as is alpine skiing. Professional baseball and soccer are favorite spectator sports. People also enjoy practicing and watching traditional sports such as karate, judo, kendo (Japanese fencing), and sumo. Many schoolchildren play sports at school, often choosing one sport and specializing in it year-round.

CHRONOLOGY

- 1945** United States drops atomic bombs on Hiroshima and Nagasaki.
Japan surrenders.
U.S. general Douglas MacArthur heads the Allied occupation administration.
A new cabinet is formed under Kijuro Shidehara.
- 1946** The occupation administration completes demobilization and demilitarization of Japan and embarks on extensive civil reforms, including universal suffrage, land reform, and the dissolution of large business conglomerates known as *zaibatsu*.
Emperor Hirohito formally renounces divinity.
The Liberal Party forms the first government under the conservative Shigeru Yoshida.
An 11-nation War Crimes Tribunal is set up in Tokyo under the Potsdam Declaration.
- 1947** A new constitution prepared by U.S. advisers, which includes a provision renouncing war, replaces the Meiji Constitution.
The New Police Law creates a decentralized police administration under the National Public Safety Commission.
The first elections are held under the new constitution, which calls for a British-style parliamentary form of government, with a bicameral Imperial Diet led by an elected lower house.
Socialists form the first ministry under Tetsu Katayama.
- 1948** The War Crimes Tribunal sentences 25 war criminals to death or life imprisonment and debars 202,000 from public life.
Hitoshi Ashida serves for eight months as Democratic Party prime minister, followed by the Liberal Party's Shigeru Yoshida.
- 1950** The United Nations uses Japan as a logistical base for its operations in the Korean War through 1953.
- 1951** The San Francisco Peace Conference negotiates a treaty of peace with Japan, which ends the state of war and the occupation and restores full sovereignty to Japan by April 1952. The treaty entrusts the Ryukyu Islands to the United States, which develops military bases on the island of Okinawa. The Soviet Union abstains from the treaty and retains control of the Habomai group and three other islands claimed by Japan.
- 1952** Occupation forces withdraw.
Japan and the United States sign a security treaty endorsed by conservatives but opposed by liberals, who call for Japan to maintain neutrality in the cold war.
The National Police Reserve is transformed into the National Safety Forces, which later become the Self-Defense Forces.
- 1954** Ichiro Hatoyama of the Democratic Party replaces Yoshida as prime minister.
- 1955** Japan's socialist parties unite to form the Japan Socialist Party. The Liberal Party and the Democratic Party merge to form the conservative Liberal Democratic Party (LDP), which goes on to dominate Japanese politics for the next half century.
Japan achieves a robust gross national product of 9 percent, a rate it maintains for 18 years.
- 1956** The Soviet Union and Japan agree to terminate their technical state of war and establish diplomatic relations but do not conclude a formal treaty or resolve the status of the disputed islands.
Tanzan Ishibashi begins a two-month term as prime minister.
Japan is admitted to the United Nations.
- 1957** Nobusuke Kishi begins a three-year term in office as prime minister.
- 1960** As parliament debates a revised Japan-U.S. security treaty, antitreaty demonstrations reach fever pitch, forcing Kishi to resign. Hayato Ikeda begins a four-year term as prime minister.
- 1964** Eisaku Sato, brother of Kishi, begins an eight-year term as prime minister.
Tokyo becomes the first city in the world with a population of 10 million.
Japan hosts the Olympic Games.
- 1965** Japan and South Korea establish relations for the first time since World War II.
- 1968** Japan boasts the world's third-largest economy.
- 1971** The United States allows its foreign exchange rates, fixed since World War II, to float. The value of the yen rises, and Japanese exports decline.

- 1972** Japan restores full diplomatic relations with China and withdraws recognition of Taiwan. Sato yields office to Kakuei Tanaka, who heads government for the next two years. Japan regains the Ryukyu Islands except for the U.S. military bases on Okinawa.
- 1973** World oil prices rise steeply. Japan's gross domestic product declines to 4 percent.
- 1974** Tanaka is implicated in the Lockheed scandal and is forced to step down in favor of Takeo Miki.
- 1975** Japan is one of the "Big Five" nations to participate in the first world economic summit.
- 1976** Takeo Fukuda begins a two-year tenure as prime minister.
- 1978** Masayoshi Ohira begins a two-year term as prime minister.
- 1980** Zenko Suzuki begins a two-year term as prime minister.
- 1982** Yasuhiro Nakasone begins a five-year term as prime minister.
- 1985** A sudden rise in the value of the yen leads to widespread speculation and the beginning of a bubble economy.
- 1989** Implicated in an influence-peddling scandal, Noboru Takeshita steps down as prime minister and is replaced by Sosuke Uno. Uno is forced to resign in the wake of a sex scandal, and Toshiki Kaifu is named prime minister. Emperor Hirohito dies and is succeeded by his son Akihito.
- 1990** The government raises interest rates in an effort to diminish investor speculation. A long economic slowdown begins.
- 1991** Kiichi Miyazawa succeeds Kaifu as prime minister.
- 1992** Japan provides funds for the UN military action in the Gulf War but sends no troops. The Diet passes legislation permitting Japanese military participation in UN peacekeeping operations on a case-by-case basis.
- 1993** Factions of the LDP break away to form new parties. A coalition of eight opposition parties forms a government under Morihiro Hosokawa, depriving the LDP of its long rule. Japan provides humanitarian aid to Russia, although the World War II-era territorial dispute remains unresolved. Crown Prince Naruhito marries Princess Masako.
- 1994** Having abandoned its opposition to the U.S. security treaty and the SDF in favor of a centrist philosophy, the Social Democratic Party of Japan (SDPJ, formerly the Japan Socialist Party) forms a coalition with the LDP under Tomiichi Murayama, who becomes Japan's first socialist prime minister since 1948.
- 1995** An earthquake devastates Kobe.
- 1996** Murayama's coalition collapses. LDP leader Ryutaro Hashimoto forms a government with the SDPJ and Sakigake, a progressive conservative party.
- 1997** The fiscal crisis in Southeast Asia further dampens Japan's economy, which is enduring the longest recession in its postwar history. A new security treaty with the United States commits Japan to support U.S. forces in Pacific Rim conflicts.
- 1998** After the LDP loses power in the upper house, Hashimoto resigns. Keizo Obuchi forms another LDP-led coalition.
- 2000** Obuchi falls ill, and Yoshiro Mori takes his place as prime minister and leader of the LDP.
- 2001** Junichiro Koizumi becomes prime minister. Princess Masako gives birth to a daughter, Aiko, on December 1.
- 2003** LDP's majority in parliament decreases. Japan's economy appears to be improving.
- 2004** Japan applies for a seat on the UN Security Council.
- 2005** Koizumi wins a second term as prime minister.

JORDAN

Basic Fact Sheet

OFFICIAL NAME

The Hashemite Kingdom of Jordan (Al-Mamlakah al-Urdunyah al-Hashemiyah)

ABBREVIATION

JO

CAPITAL

Amman

HEAD OF STATE

King Abdullah II ibn al-Hussein (from 1999)

HEAD OF GOVERNMENT

Prime Minister Marouf Al-Bakhit (from 2005)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

5,759,732 (2005)

AREA

92,300 sq km (35,637 sq mi), excluding the West Bank

ETHNIC MAJORITY

Arab

LANGUAGE

Arabic

RELIGION

Sunni Islam

UNIT OF CURRENCY

Jordanian dinar

NATIONAL FLAG

Three horizontal stripes of black, white, and green (from top to bottom) are joined at the hoist by a red triangle with a seven-pointed white star at its center.

NATIONAL EMBLEM

The emblem is displayed against a canopy on the top of which rests a gold and red crown. A brown eagle with outstretched wings stands on a gold globe that is partially obscured by a round gold ceremonial shield. On the globe and shield are planted black, white, green, and red flags, three to a side, and pairs of gold-hilted swords and gold bows with fixed arrows. Beneath the design three ears of wheat and a palm branch are placed over a badge of the Muslim Order of Resurrection and a green ribbon carrying the king's name and his prayer, "Allah may bring happiness and help."

NATIONAL ANTHEM

"The Royal Salute" (or "Long Live the King")

NATIONAL HOLIDAYS

January 15 (Tree Day), March 22 (Arab League Day), May 1 (Labor Day), May 25 (National Day, Independence Day), June 10 (Arab Revolt and Army Day), August 11 (King Hussein's Accession), November 14 (King Hussein's Birthday), various Islamic festivals

DATE OF INDEPENDENCE

May 25, 1946

DATE OF CONSTITUTION

January 8, 1952

GEOGRAPHICAL FEATURES

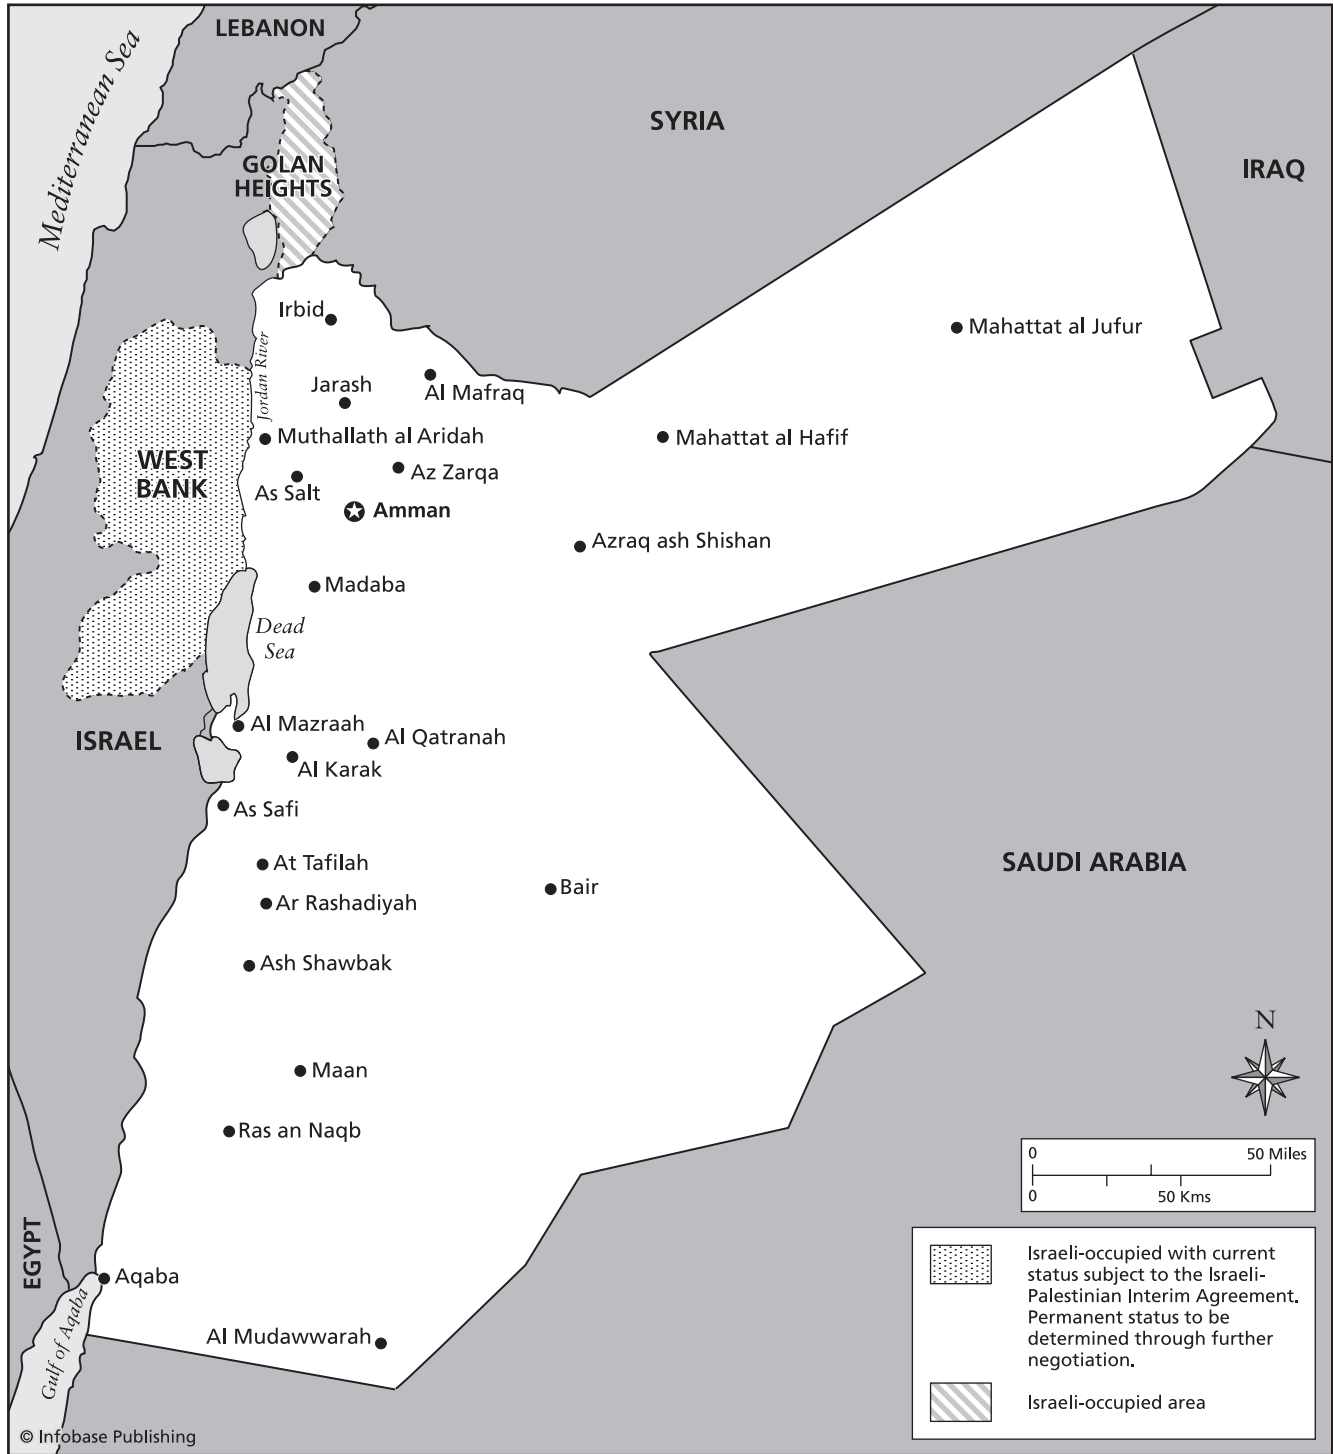

Jordan is in southwestern Asia and occupies an area of 92,300 sq km (35,637 sq mi), excluding the West Bank, which has been under Israeli occupation since 1967. Jordan extends 562 km (349 mi) northeast to southwest and 349 km (217 mi) southeast to northwest.

Jordan shares its total international land boundary of 1,635 km (1,016 mi) with four countries, in addition to the West Bank: Syria (375 km; 232 mi), Iraq (181 km;

112 mi), Saudi Arabia (744 km; 462 mi), and Israel (238 km; 147 mi).

Jordan consists of a tilted plateau region in the northwestern corner of the Great Arabian Plateau. To the west the edge of the plateau is abruptly marked by the major rift system of the Dead Sea lowlands, which include the lowest point on earth, more than 400 m (1,312 ft) below sea level. Relatively featureless desert plains occupy the east and the south. The country is landlocked except at its southern extremity, where 26

Jordan

km (16 mi) of coastline along the Gulf of Aqaba provide access to the sea. There are no natural features to the borders with Syria, Iraq, or Saudi Arabia. The average elevation is 500 m (1,650 ft), with summits occasionally reaching 1,200 m (4,000 ft) in the north and 1,500 m (5,000 ft) in the south.

CLIMATE AND WEATHER

Jordan has a modified Mediterranean climate, with hot, dry summers and cool, damp winters. August is the hottest month and January the coolest. Daytime temperatures reach 38°C (100°F) in the summer, and they fall to -4°C (25°F) in the winter. The climate is modified by the hot khamsin, a sirocco-like wind accompanied by dust clouds, and the dry shamal, which blows for days at a time. Average rainfall is 300 mm (12 in) per year. Rainfall is variable, and sudden cloudbursts are often followed by protracted dry periods.

Climate and Weather

Mean Temperature: 25°F to 100°F
Average Rainfall: 12 in

FLORA AND FAUNA

Jordan is very dry, and much of the land is desert. Around the Dead Sea nothing grows. The desert is home to desert plants and a few animals that can survive in arid conditions, such as desert foxes, sand rats, camels, jerboas, and hares. The northern hills are covered in pine trees and inhabited by goats, badgers, and boars. Cedars, eucalyptus, and olive trees grow in the Jordan River Valley. Gazelles and oryx, once common but now rare, have been reintroduced in the Saumari Wildlife Reserve. The Gulf of Aqaba has a profusion of aquatic plants and animals, including stunning coral reefs and tropical fish.

POPULATION

Population Indicators

Total Population 2005: 5,759,732

ETHNIC COMPOSITION

The original Emirate of Transjordan was dominated by Arab Bedouin tribal groups, but as a result of the acquisition of Palestine (the West Bank) in 1948, Palestinian Arabs became a large and relatively unassimilated element in the population. Palestinians constituted 40 percent of the nation in 1973, but their economic and cultural influence far surpassed their numbers. Bedouins form 5 percent of the population and are looked after by the Office of Tribal Affairs. There is long-standing cultural hostility between Bedouins and non-Bedouins.

Members of the minority ethnic groups, both non-Arab and non-Muslim, live in the cities and towns, where they occupy a disproportionate share of posts in government, business, and the professions. Arab Christians dominate banking and commerce, but their numbers are diminishing through emigration. The Circassians, non-Arab Muslims from the Caucasus, number about 12,000 and are prominent in landowning, commerce, and industry. They are concentrated in Amman, where their loyalty to the royal family ensures their representation in the cabinet.

Western communities are concentrated in Amman.

LANGUAGES

The official language is Arabic, which is, like Islam, a unifying force in the country. Jordanians speak a dialect of Arabic that is common to Syria, Lebanon, and parts of Iraq. It is spoken by the ethnic minorities, who also employ their own languages in their everyday lives. There are differences between the languages of the towns and of the countryside and between those of the East Bank and the West Bank. English is taught in the schools as a second language.

RELIGIONS

The official religion of Jordan is the Sunni sect of Islam. Sunnis constitute 92 percent of the population. The Druze form the largest Muslim minority sect, with less than 2 percent.

The largest religious minority group, Christians, constitutes 6 percent of the population and are divided into Greek Orthodox, Greek Catholic, Roman Catholic, Protestant, and Armenian churches. Instances of religious persecution or intolerance are rare. Nevertheless, Jordanian Christians have been emigrating in large numbers.

Other	115,000

HISTORICAL BACKGROUND

Jordan has a rich past, dating back to 6000 B.C.E. City-states were well developed in the Bronze Age (3200–2100 B.C.E.). In the 10th century B.C.E. the western part of Jordan formed part of the dominion of David and his son Solomon; subsequently, the West Bank became part of the Kingdom of Judah. The Jewish states fell prey to the Babylonians and the Persians. The area was conquered by Alexander the Great in 331 B.C.E., beginning a period of intermittent rule by European powers.

In the first century B.C.E. the region came under Rome. In southern Jordan the Nabatean kingdom, a native Arab state in alliance with Rome, developed a distinctive culture, as evidenced in the ruins of Petra. With the annexation of Nabatea by Trajan in the second century C.E., both Palestine and Transjordan came under Roman rule. Christianity became the dominant rule for the next four centuries, until the Arab conquest in the seventh century. The region saw some of the fighting during the Crusades in the 12th century. In Ottoman times Jordan formed part of the Damascus *vilayet*, while the West Bank formed part of the *sanjak* of Jerusalem within the *vilayet* of Beirut.

Ottoman rule came to an end with the famous Arab Revolt, between 1915 and 1918. Jordan, then known as Transjordan, was placed under British mandate in 1921. In the same year Abdullah, son of Sharyf Husayn, was installed by the British as the emir of Transjordan. In 1923 the kingdom became independent under British tutelage. British control was partially relaxed in 1928, and a cabinet government was introduced in 1939. British penetration was never deep, and Britain's only legacy was the legendary Arab Legion.

Transjordan achieved full independence in 1946; in May of that year Abdullah bin Husayn was proclaimed king of the Hashemite Kingdom of Transjordan. Following the Arab-Israeli war of 1948, King Abdullah I annexed the West Bank, an area of Palestine bordering Jordan that

contained many Arab refugees from Israeli-held areas. In 1950 an act of union joined the West Bank and Transjordan to form the Hashemite Kingdom of Jordan. King Abdullah was assassinated in Jerusalem in July 1951 by a Palestinian Arab, and his eldest son, Talal, was proclaimed king. Because of mental illness, however, King Talal was declared unfit to rule. Succession passed to his son Hussein, then 16 years of age. King Hussein was formally enthroned in May 1953. In an effort to ensure the survival of the state, Hussein attempted to steer a middle course in international affairs. Despite internal and foreign opposition, the king maintained close relations with Great Britain, whose troops and military subsidies helped protect the regime. Hussein was forced to negotiate an end to Jordan's treaty with Britain following Anglo-French intervention at Suez in 1956. The king then formed a federation with Iraq in 1958, which lasted until the assassination of his cousin, King Faisal of Iraq, a few months later. Hussein again turned to the West for support.

The early 1960s were a period of relative calm. Hussein steadied relations with other Arab states while retaining Western ties and establishing relations with the Soviet Union. Jordan lost the West Bank and East Jerusalem in the 1967 Arab-Israeli war but received still further Palestinian refugees. Efforts to incorporate the Palestinians into the Jordanian political system failed, and the refugee camps became centers of Palestinian nationalism. By 1970 organized Palestinian groups had become a threat to the Jordanian government, and over the course of a year, the Jordanian military was used to expel the Palestinian guerrilla groups.

Jordan played a minor role in the 1973 Arab-Israeli war. Hussein reluctantly endorsed the Arab League's declaration in 1974 that the Palestine Liberation Organization (PLO) was the sole legitimate representative of the Palestinians. Jordan joined other Arab states in condemning the 1979 Egyptian-Israeli Peace Treaty but resumed relations with Egypt and Israel in 1984 to form a moderate Arab block against Syria and Libya.

During the 1980s Jordan played a key role in attempts to deal with the Palestinian question. Initially, Jordan and the PLO agreed to work with each other toward settling the question, but in 1987 the agreement to do so was scrapped. In 1988, following the outbreak of the intifada on the West Bank, Hussein declared unconditional support for the intifada and insisted that the PLO was the sole representative of the Palestinians. In accordance with agreements reached during a summit of Arab leaders, he severed all legal and administrative links with the West Bank in preparation for turning administration over to the PLO. The PLO proclaimed the establishment of an independent state of Palestine in November 1988.

From the mid-1980s onward Jordan faced severe economic difficulties, with riots occurring in response to austerity measures. The most serious rioting disturbances occurred in 1989 following government-imposed

price rises in basic goods and services. In elections held in November, opposition groups won the majority of seats in the House of Representatives.

Jordan was deeply affected by the Gulf crisis of 1990–91. Although King Hussein condemned the invasion of Kuwait, he was slow to do so and spent the fall of 1990 attempting to negotiate an “Arab solution” to the crisis. He criticized what he called the Allies’ “total war” and urged a cease-fire. The crisis crippled the Jordanian economy; Iraq was Jordan’s chief trading partner and the source of most of its petroleum. Following the Allied victory over Iraq, Jordan was politically ostracized by coalition members.

Hussein quickly returned to a more moderate position, calling for regional reconciliation. He further reversed his position in 1993 when he expressed his opposition to Saddam Hussein’s continued rule and called for the installation of a democratic regime. In 1994 and 1995 he granted asylum to Saddam Hussein’s opponents and renegade family members. Jordan’s new stance was welcomed by Saudi Arabia and the Gulf states, with all of whom normal relations were reestablished. After 1996 Hussein’s declining health precluded him from taking an active role in internal or international affairs. His death in 1999 was not followed, as feared, by a struggle over succession. His eldest son, Abdullah, assumed the throne on February 7, 1999, with the promise to continue the work of Hussein in maintaining a stable Jordan.

Abdullah spent the early years of his reign in facilitating joint ventures with Jordan’s neighbors, including linking the electrical grids of Jordan, Syria, and Egypt, building a joint dam with Syria, and collaborating with Israel on a desert research center and a plan to pipe water from the full Red Sea to the shrinking Dead Sea.

Jordan’s government spent the early 2000s struggling to balance Islamic interests against the desire for a peaceful and prosperous place in the world community. In 2000 a military court sentenced six men to death for plotting terrorist attacks against Israeli and U.S. targets, and in 2004 the court sentenced another eight men to death for the assassination of an American diplomat in Amman. In 2002 Jordan broke off relations with Qatar and shut down Al-Jazeera broadcasts after the station supposedly insulted the Jordanian royal family on a television program. Jordan’s embassy in Baghdad was the target of a bomb attack in August 2003. In 2004 Jordanian police caught several men they claimed were linked with al-Qaeda and planning chemical bomb attacks in Amman. In November 2005, 56 people, mostly Jordanians, were killed in suicide attacks on three international hotels in Amman linked to al-Qaeda.

LIST OF MODERN RULERS

- 1921–51 King Abdullah I
1951–52 King Talal

- 1952–99 King Hussein
1999– King Abdullah II

CONSTITUTION

The kingdom is a limited constitutional monarchy in name but an absolute monarchy in fact. The basis of government is the constitution of 1952, which provides for a royal executive and a bicameral legislature. Executive power is vested in the king and cabinet, but the monarch, the head of state, has the power to appoint and dismiss the prime minister and cabinet ministers. His power over the legislature is reinforced by his right to appoint senators, dissolve the House of Representatives, veto bills passed by the legislature, and issue royal decrees with the consent of the prime minister and at least four members of the cabinet. He is also the commander in chief of the army and head of the judicial system. The throne devolves by inheritance in the dynasty of ibn al-Hussein by direct line through male heirs.

Legislative power is vested in a bicameral National Assembly with a 30-member Senate appointed by the king and an 80-member House of Representatives elected by universal suffrage. The assembly, in joint session, can override the king’s veto of legislation.

The Jordanian cabinet members are usually chosen from among members of the royal family, the palace staff, former army officers, and representatives of noble tribes, such as the Majali. The cabinet always includes one Circassian and one Christian. The cabinet formed in 2003 contained an unprecedented three female ministers.

PARLIAMENT

Under the constitution the National Assembly is a bicameral body consisting of two chambers. The upper house is the Senate, with a membership of 30 appointed by the king for four-year terms. The lower house is the House of Representatives, with a membership of 80 elected for four-year terms. Under a proportional representation system, 10 of the seats in the House of Representatives are allotted to Christians. There are also seats reserved for ethnic groups and six seats reserved for women.

Legislative proposals are placed before the House of Representatives and then referred to the Senate. If both chambers accept a bill, it is sent to the king for confirmation.

The king is allowed to dissolve parliament if he so chooses. The National Assembly was dissolved in 1974 after having become moribund in the wake of the 1967 war with Israel. From 1978 to 1984 the king ruled with the advice of the National Consultative Council, a 60-member appointive body he established for the purpose. In an effort to strengthen his hand in dealing with the

Palestinian issue, King Hussein reconvened the House of Representatives in 1984. By-elections were held at that time for eight vacant seats. King Abdullah dissolved parliament in 2001 and again in 2003. Parliament has become the main forum for expressing dissident political views, particularly by political Islamists.

POLITICAL PARTIES

All political parties were banned in 1957. In 1971 Hussein announced the formation of the Jordanian National Union as Jordan's sole political party. In 1972 the party was renamed the Arab National Union. Hussein was its president and his brother Hasan, the crown prince, its vice president. In 1976 the union was abolished, leaving Jordan without any legal political party or group. King Hussein showed a commitment to democratization, most importantly by ending martial law in 1991 and legalizing political parties in 1992. However, in the 1993 elections more than 90 percent of the candidates ran as independents.

Since the accession of Abdullah II, political parties have reappeared. Parties that emerged in the early 2000s include Al-Ahed Party, Al-Ajyal, the Ba'th Arab Progressive Party, Al-Umma (Nation) Party, the Arab Land Party, the Communist Party, the Constitutional Front, the Democratic Arab Islamic Movement, the Green Party, the Jordanian Democratic Left Party, the Jordanian Democratic Popular Unity Party, the Jordanian Progressive Party, the Jordanian People's Democratic (Hashd) Party, the Islamic Action Front, the Muslim Centrist Party, the National Action (Haqq) Party, the National Constitutional Party, the (Arab) Socialist Ba'th Party, and the Pan-Arab (Democratic) Movement.

LOCAL GOVERNMENT

For purposes of local administration Jordan is divided into 12 governorates, each headed by a governor appointed by the king. These governorates are divided into cities, towns, districts, and subdistricts. A governorate is the sole authority for all developmental projects within its territory.

LEGAL SYSTEM

The sharia, the Islamic legal code, is the dominant legal system, but as a result of the British occupation of Palestine from 1917 to 1948, much of English common law has been adopted either by statute or by case law. There are three categories of courts: civil, special, and religious.

The civil court system has four tiers. At the apex is the Court of Cassation, with seven judges; it is both the

supreme court of appeal and the high court in matters of habeas corpus, mandamus, and certiorari. Below are two courts of appeal and seven courts of first instance. At the bottom are 14 magistrate's courts. Special courts include the Supreme Council, which interprets the constitution; the Special Council, which interprets the constitutionality of laws; three special civil courts; tribal courts; and land settlement courts. There are two types of religious courts whose jurisdiction extends to all personal matters: the sharia courts for Muslims and ecclesiastical courts for Christians of each of three denominations, Melkite, Catholic, and Armenian.

HUMAN RIGHTS

Jordan's human rights record is uneven, and significant problems remain, including restrictions on the citizens' right to change their government. Citizens may participate in the political system through their elected representatives in parliament; however, the king has the discretionary authority to appoint and dismiss the prime minister and cabinet, to dissolve parliament, and to establish public policy. Other human rights problems include extrajudicial killings by members of the security forces; police abuse and mistreatment of detainees; allegations of torture; arbitrary arrest and detention; lack of transparent investigations and accountability within the security services; prolonged detention without charge; lack of due process of law and interference in the judicial process; infringements on citizens' privacy rights; harassment of members of opposition political parties and the press; and significant restrictions on freedom of speech, press, assembly, and association.

The 1999 Press and Publications Law reduced somewhat the restrictions outlined in previous legislation on the ability of journalists and publications to function and report freely; however, significant restrictions remain in effect. The government imposes some limits on freedom of religion, and there is official and societal discrimination against adherents of unrecognized religions. The law still allows for reduced punishments for violent "honor crimes" against women for alleged immoral acts. Child abuse remains a problem, and discrimination against Palestinians persists. The abuse of foreign servants is a problem.

FOREIGN POLICY

Jordan has long had a pro-Western foreign policy and close relations with the United States and the United Kingdom. These were somewhat harmed by Jordan's support for Iraq in the 1991 war, but its subsequent participation in sanctions against Iraq restored good relations.

Representatives from 75 countries (including 50 heads of state) attended the funeral of King Hussein in 1999, underscoring the widespread respect he had gained for his peacekeeping efforts. Hussein was one of Israel's best friends in the region.

Jordan maintains a moderate stance in the Middle East and wants to see stability restored to the region. One of King Abdullah II's first statements reiterated his commitment to the peace process with Israel, although the policy has been far from popular with Arabs. Since 2000 Jordan has functioned as an intermediary between Israel and Palestine. Abdullah faces the challenge both of remaining in the good graces of radical Arab states, such as Syria, and maintaining cordial relations with the United States, Israel, and other Western nations.

DEFENSE

The defense structure is headed by the king, who exercises his command in a personal and direct manner. The king is the supreme commander of the armed forces, with the constitutional right to declare war, conclude peace, and sign treaties. The country ended military conscription in 1999, though all males under 37 are still required to register with the military. Jordan spends a huge amount of money on its military: almost \$1.5 billion in 2004. Jordan is very much an army-run state, and the loyalty of the troops to the Hashemite dynasty makes any possibility of an international coup or subversion remote. The country has not experienced serious civil disturbances since 1971, when the PLO was expelled.

ECONOMY

Jordan suffers from debt, poverty, and unemployment. It lacks necessities such as water, and it has no notable oil reserves, unlike many of its Arab neighbors. The Persian Gulf crisis, which began in August 1990, exacerbated Jordan's already serious economic problems, forcing the government to shelve an International Monetary Fund (IMF) program, stop most debt payments, and suspend rescheduling negotiations. Aid from Gulf Arab states, worker remittances, and trade all contracted, and refugees flooded the country, producing serious balance-of-

payments problems, stunting gross domestic product (GDP) growth, and straining government resources. The economy rebounded in 1992, largely owing to the influx of capital repatriated by workers returning from the Gulf. After averaging 9 percent in 1992–95, GDP growth averaged only 2 percent in 1996–99.

In an attempt to spur growth, King Abdullah has undertaken limited economic reform, which has involved the partial privatization of some state-owned enterprises and Jordan's entry in January 2000 into the World Trade Organization (WTO). Jordan has also entered into free-trade agreements with the United States and the United Kingdom, which has increased foreign investment. Until 2003 Jordan depended on Iraq for discounted oil, but the U.S. invasion put a stop to that, causing a major economic blow. Jordan is currently receiving foreign aid to help with fuel costs, and the government has promised to deal with the problem itself when the aid expires by raising fuel prices and increasing the sales tax. The government is also working to encourage more investment in the hope of creating jobs, reducing the budget deficit, and attracting tourism.

ENVIRONMENT

Jordan's most pressing environmental problem is water shortage. Contributing to the problem are limited rainfall and a high rate of evaporation as well as inefficient usage and poor conservation measures. A good 90 percent of the water supply is used for agriculture. Drinking water is tainted by industrial toxins and untreated sewage.

Cultivable land area is rapidly decreasing because of the exploding population, deforestation, desertification,

and severe erosion. The government has introduced a tree-planting program in an effort to preserve the land.

Environment

Forest Area % of total land area: 1.0

 CO2 Emissions per capita ton: 3.18

LIVING CONDITIONS

Most people in cities live in apartments, which they usually own. The very wealthy might have large houses and hired help. In the countryside most people live in one- or two-room houses, usually with electricity and running water. A few Bedouin live in goat-hair tents that they move around the desert. Public transportation is good, though traffic in the cities is terrible. Street crime is virtually nonexistent.

HEALTH

The Jordanian health-care system provides medical care to everyone; most people pay a small portion of their medical care costs, but free care is available for the poorest. The national insurance program includes eye care and dentistry. The cities have excellent hospitals. The Noor al-Hussein Foundation runs the Institute for Child Health and Development, which handles the health of children throughout Jordan. It also helps women with family planning, provides homes for orphans, and helps rural people with general health. Jordan is a relatively healthy country, though dysentery, typhoid, and hepatitis are problems, and cancer and heart disease have been increasing. A high birthrate is the nation's biggest health problem; the government encourages the use of contraception, but religious leaders discourage it.

FOOD AND NUTRITION

Jordanian cuisine features a great deal of rice, bulgur, flat bread, lamb, chicken, yogurt, lentils, chickpeas, fava beans, eggplant, and tomatoes, flavored with garlic or mint. Most meals contain a selection of appetizers called *mezzeh*. Popular dishes include shish kebab (skewers threaded with chunks of meat and vegetables and grilled), *magluba* (a casserole of rice, meat, and vegetables served inverted onto a plate), and *mansaf* (a whole lamb cooked in yogurt and served over rice). Street food includes *shawarma* and falafel. People eat olives with nearly every meal. Lunch is usually the biggest and most social meal of the day, except during Ramadan. Coffee and tea are common beverages; both are served very sweet.

 Amount of Fruits and Vegetables Available per person per year kg: 169.5

STATUS OF WOMEN

Women in Jordan, as in other Islamic states of the region, are traditionally disfavored economically and, to a lesser extent, educationally. The status of women is heavily influenced by traditional social values, which fix women in the role of housewives and mothers. For example, women are still required to have the written permission of the family's eldest male to travel.

This pattern, however, is changing. The government encourages more female participation in the labor force. Women work in managerial, professional, and clerical positions in the public sector, the military, and the police, albeit in much lower numbers and at a generally lower level than men. Women are steadily increasing their numbers in the workplace. Women have the right to initiate divorce under limited circumstances, they have the right to own and inherit property, and they have priority "rule of first right" for the custody of minor children. In 2003 six parliamentary seats were expressly reserved for women. King Abdullah's 2003 cabinet contained three female ministers.

Men and women often eat separately. In rural areas women are not allowed to eat at restaurants without a male relative; this is no longer the case in cities. Some restaurants have "family" rooms, where women and children are allowed to eat.

WORK

A sizable minority of Jordanian adults cannot find work; though unemployment officially runs at about 15 percent, the true rate has been estimated at 30 percent. The problem is especially bad for professionals, many of whom have had to leave Jordan to find jobs. More than 80 percent of the workforce is employed in services. The nation is particularly trying to promote tourism at Aqaba and among the ancient ruins at Petra and Jerash. Most women who work are employed in schools, hospitals, and in offices. Industry and construction employ about 13 percent of the workforce, particularly in the production of phosphate and potash. The remainder work in agriculture, using ingenious techniques to water crops, and nomads still raise sheep and goats.

 Industry: 12.5
 Services: 82.5
 Unemployment %: 30

EDUCATION

Schooling is free and compulsory for nine years, from ages six to 15. The educational ladder consists of six years of primary schooling and six years of junior and senior secondary schooling. The academic year runs from September to June. The medium of instruction is Arabic, but English is taught from the fifth grade on. Education is financed and administered by the Ministry of Education, while the National Council for Planning Human Resources makes broad policy decisions. About 70 percent of Jordan's children attend public schools; the rest attend private or religious institutions. Schools teach Islamic values, which the government considers important for citizens.

The nation's universities are the University of Jordan, at Jubaiha, near Amman; Yarmuk University, at Irbid; Mut'ah University, in the Karak governorate in southern Jordan; and the University of Jordan for Science and Technology. These universities are considered some of the best in the Arab world. During the 1970s several polytechnic and community colleges were established. About half of all Jordan's college and university students are female. Wealthy families often send their children abroad for university.

SCIENCE AND TECHNOLOGY

The government has been encouraging investors to use Jordan's young and highly educated workforce for technological jobs. The Higher Council for Science and Technology exists to build a national scientific base to support economic development in the kingdom; key areas include education, optimizing land and mineral resources, and creating research centers. Telephone services are available, but not to the entire population. Jordan has recently added digital switching equipment to its telephone system, but access is still inadequate. In 2003 about 460,000 people were using the Internet.

MEDIA

The Jordanian state controls most of the media. The government passed laws in 2001 adding restrictions to the press; journalists can go to prison for criticizing the king, insulting the country, or reporting anything determined to be "false." Foreign broadcasters are reluctant to locate in Jordan for fear of censorship. Nonetheless, there are several daily newspapers published in Jordan, two of them in English. The state runs Jordan Radio and Television, the primary source of broadcast information. Its television offerings include a sports network, a film network, and a satellite channel. It broadcasts radio programming in Arabic, French, and English. There is also an FM radio station run by the army, called Radio Fann. BBC broadcasts are available in some areas. The state-run news agency is called Petra; it is operated by the Information Ministry.

CULTURE

Poetry and literature are considered the most important kinds of art; Jordanians admire writers. Contemporary writing covers topics such as love, war, daily life, the lives of women, and the struggles of the Palestinian people. Some modern writers have written in Arabic dialects, but this is controversial because many Muslims believe that the language of the Koran is the language of God and the only language suitable for writing. Traditional Arabic music often accompanies performances of poems; musicians often improvise. Young people like Western popular music.

Jordanians create various arts and crafts. For centuries women have woven rugs and embroidered cloth. Women like to wear intricately crafted jewelry of gold or silver. Some artists practice the craft of packing colored sand into bottles to make patterns.

FOLKLORE AND MYTHOLOGY

Jordan has been inhabited for thousands of years and is home to numerous folkloric traditions, including Middle Eastern, Greek, and Roman. The Jordan Folklore Museum in Amman has a thorough display of items from the traditional lives of local people.

ENTERTAINMENT AND RECREATION

People love to eat meals with their families; a festive mid-day meal can last several hours. Men spend much of their

free time in coffeehouses, drinking tiny cups of coffee, smoking water pipes, and playing backgammon, which has been popular in the country for thousands of years. The Dead Sea is a popular tourist attraction; people like to float on the extremely buoyant water. Scuba diving, water skiing, and snorkeling are good at resorts around Aqaba, and the Wadi Rum is a popular location for rock climbing. Jordan also has many ancient sites to visit, such as the rock city Petra, Roman ruins, and castles from the days of the Crusaders.

ETIQUETTE

Jordanians are very hospitable and love to entertain visitors. A host will serve a guest coffee in a tiny cup, and it is polite for the guest to drink several refills. Giving gifts is an important part of social interaction. When Jordanians meet one another, they immediately try to find out which mutual friends and acquaintances they share. Punctuality is not as important in Jordan as it is in the West.

FAMILY LIFE

Most Jordanian adults are either married or want to be. Having a family is extremely important to Jordanians, and many people consider it tragic to remain unmarried. Most Jordanians do not like to be alone, and a family is a constant source of company. Arranged marriages still occur frequently. Divorce is uncommon. Jordanians tend to have many children; almost half of all Jordanians are currently 20 years or younger. The government is encouraging smaller families. Children are taught to respect adults. Traditionally, the father is the decision maker and the mother is the homemaker, though many women are now working outside the home.

PERSONAL APPEARANCE

Jordanians combine Western and Arab styles. Though many people wear typical Western clothing, both men and women wear head coverings; men's head coverings are called *kaffiyeh*. Most Jordanian women do not wear veils.

SPORTS

Jordanians love soccer, playing it and watching it live or on television. Groups of friends will gather to watch soccer games together. Many people practice martial arts such as karate and tae kwon do. The government recently built a sports complex called Al-Hussein Youth City to offer families facilities to play sports, swim, and work out.

Jordanians also enjoy watching various kinds of races, from cars to horses to camels. The Koran forbids betting on races.

CHRONOLOGY

- 1946** Kingdom of Transjordan is established, with Abdullah as king.
- 1948** Jordan invades Palestine in Arab-Israeli war and captures Old Jerusalem and the West Bank. A truce with Israel is reached under auspices of UN Truce Supervisory Organization—Palestine.
Jordan annexes West Bank.
- 1949** Transjordan is renamed Jordan.
United States recognizes government.
UN admission is vetoed by USSR.
- 1950** Administration headed by Prime Minister Tawfik Abu al-Huda yields to Prime Minister Said Pasha al-Mufti, who later is succeeded by Samir Pasha al-Rifai.
- 1951** Abdullah is assassinated. His son Talal is named king.
Tawfik Abu al-Huda is appointed prime minister. New elections are held.
- 1952** Talal is deposed in favor of his son Hussein, who is declared king.
- 1955** al-Mufti forms a government for a few months. Other brief governments follow, headed by Hazza al-Majali and Ibrahim Hashim.
Jordan is admitted to the United Nations.
- 1957** Prime Minister Sulayman al-Nabulsi, after a conflict with the king over radical and pro-Soviet policies, is ousted and replaced by Hussein al-Jalidi
Nationalists and Communists organize a general strike.
Army Chief Abu Nuwar attempts a coup and is ousted and exiled.
Hussein rides out the crisis with the help of a loyal army.
All political parties are banned. Abdelhalim al-Nimr and Hashim head new cabinets.
- 1958** Samir al-Rifai is named prime minister.
Relations with the United Arab Republic are broken.
- 1959** Hazza al-Majali replaces al-Rifai as prime minister.
Ties with United Arab Republic are resumed.
- 1960** al-Majali is assassinated. Bahjat al-Talhouni becomes prime minister.
- 1965** Hassan is named crown prince.
- 1966** Hussein ibn Nassar becomes prime minister.
- 1967** Arab-Israeli war results in loss of the West Bank to Israel.
Hussein takes personal control of the army.
- New Council of Representatives is elected.
Saad Jumaa and Bahjat al Talhouni serve as prime ministers.
- 1970** Civil war with the Palestinian guerrillas erupts. Guerrillas are suppressed as fighting ends following Hussein–Yasser Arafat truce.
- 1971** Fighting with Palestinian commandos resumes. Jordanian forces crush the Palestinians after days of heavy fighting.
Prime Minister Wasfi al-Tal is assassinated in Cairo and is replaced by Ahmad al-Lawzi.
Jordanian National Union is founded as the country's sole political party.
- 1974** National Assembly is dissolved.
Hussein relinquishes right to the West Bank at Rabat Conference.
- 1976** Arab National Union is dissolved.
al-Rifai resigns and is succeeded briefly by Mudar Badran.
- 1977** Queen Alia and Health Minister Muhammad al-Bashir die in helicopter crash after inspecting hospital at Tafleh.
- 1978** Hussein creates National Consultative Council of 60 appointed members.
Jordan rejects Egyptian-Israeli peace initiatives.
Hussein meets with Arafat to demonstrate solid front against Egypt.
- 1979** Prime Minister Mudar Badran resigns and is replaced by Abdelhamid Sharaf. Sharaf cabinet includes six West Bank Palestinians and, for the first time in Jordanian history, a woman.
Egypt breaks diplomatic relations with Jordan.
Hussein accuses the Carter administration of “arm-twisting” to try to gain Jordan’s support for the Egyptian-Israeli Peace Treaty.
- 1980** Prime Minister Sharaf dies of a heart attack. Hussein names Kassim al-Rimawi as interim prime minister.
On the latter’s resignation Hussein brings back Mudar Badran, a former prime minister, to head the cabinet.
Jordan lends active aid to Iraq in Iran–Iraq war.
Jordan and Syria come to the brink of armed conflict but are restrained by Saudi Arabia.
- 1986** King Hussein severs political links with the PLO.
- 1987** King Hussein arranges the first summit meeting of the Arab League in eight years.
- 1988** King Hussein declares unconditional support for the intifada and insists that the PLO is the sole representative of the Palestinians. Jordan severs all legal and administrative links with the West Bank and recognizes the independent state of Palestine.
- 1990** King Hussein is slow in condemning the Iraqi invasion of Kuwait and works through the fall for an “Arab solution” to the problem.

- Jordan is overwhelmed by refugees fleeing occupied Kuwait.
Frequent public demonstrations occur in support of Iraq.
- 1991** King Hussein condemns the UN ground offensive to liberate Kuwait and appeals for a ceasefire.
- 1994** King Hussein signs a peace treaty with Israel.
- 1999** King Hussein dies and is succeeded by his son Abdullah II.
- 2000** A military court convicts six men of planning attacks against U.S. and Israeli targets.
- 2001** Jordan, Syria, and Egypt build an electricity line linking the grids of all three nations.
- 2002** Jordan recalls its ambassador to Qatar and shuts down its Al-Jazeera office after a television program allegedly insulted the royal family. Jordan and Israel formulate an \$800 million plan to pipe water from the Red Sea to the Dead Sea. U.S. diplomat Laurence Foley is assassinated in Amman.
- 2003** Politicians loyal to King Abdullah II win two-thirds of the parliamentary seats. A bomb explodes at the Jordanian embassy in Baghdad. Prime Minister Ali Abu al-Ragheb resigns, and Faisal al-Fayez replaces him.
- 2004** Jordan and Syria agree to build the Wahdah Dam. Israel and Jordan agree to build a desert science center.
- 2005** Fifty-six people die in suicide attacks on three international hotels in Amman linked to al-Qaeda.

DATE OF INDEPENDENCE

December 16, 1991

DATE OF CONSTITUTION

August 30, 1995

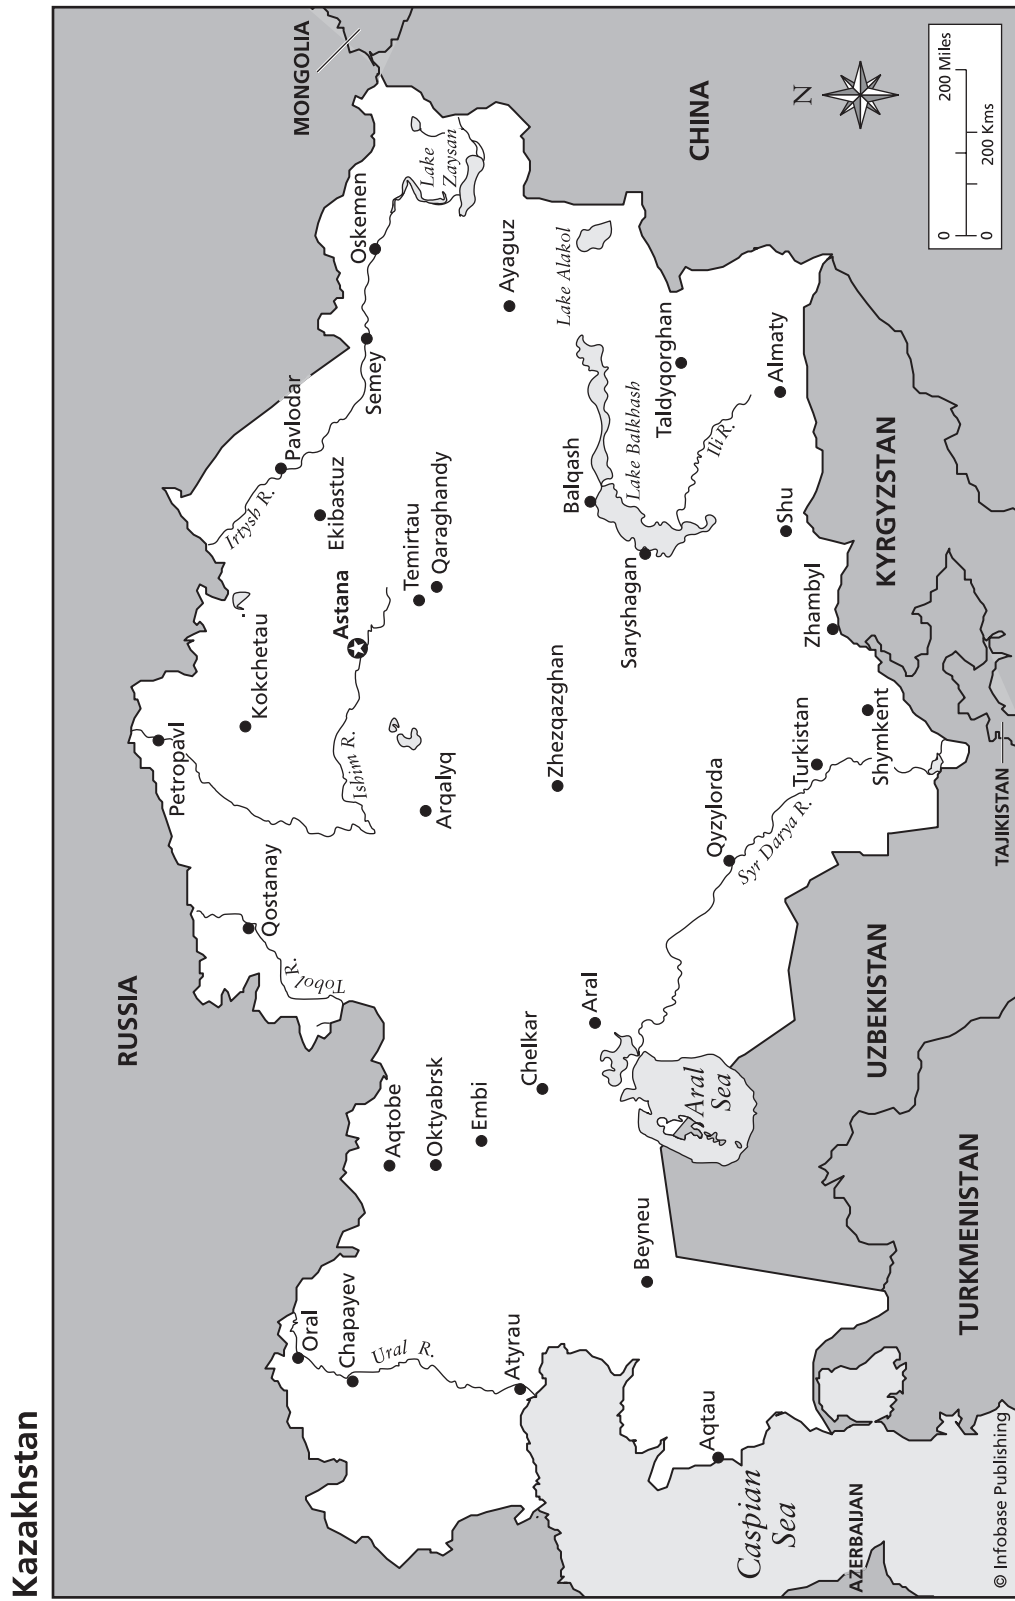

GEOGRAPHICAL FEATURES

Kazakhstan easily covers the largest territory of the five Central Asian states, 2,717,300 sq km (1,049,150 sq mi), making it the ninth-largest nation in the world. It measures 1,900 km (1,200 mi) from east to west and 1,300 km (800 mi) from north to south. It has an extensive border with European and Siberian Russia of 6,846 km (4,254 mi), one of the longest international boundaries in the world, on the north and northwest. To the southeast lies the Chinese region of Xinjiang, with a boundary 1,533 km (953 mi) long, and Kazakhstan’s southern boundary is shared by three other Central Asian states, Kyrgyzstan (1,051 km; 653 mi), Uzbekistan (2,203 km;

1,377 mi), and Turkmenistan (379 km; 236 mi). On the west is the Caspian Sea. Approximately half of the Aral Sea lies within Kazakhstan. One other lake of substantial size lies within the country’s borders, Lake Balkhash. All told, Kazakhstan has more than 48,000 lakes, mostly quite small and in the better-watered north.

The capital is Astana, previously called Akmola and before that Tselinograd. The largest city is the former capital, Almaty, formerly Alma-Ata.

Taking Kazakhstan’s large size into account, it is not surprising that its topography varies considerably from region to region. Much of the country is mountainous, yet there are plateaus, vast plains, and depressions, some of these lying below sea level. The northwestern

1220 Kazakhstan

part of the country is a plateau, rising to the Mugodzhar uplands, representing the southernmost extent of the Ural Mountain chain. Farther south, the Caspian Depression is a wide, flat expanse. The lowlands are watered by the Ural River as it empties into the Caspian, and they extend westward to the edge of the Volga Delta. The west-central portion of the country is marked by the Turgai Trough, also known as the Turanian Depression, which spreads out southward into the basin of the Aral Sea, an area that coincides with the Kyzylkum Desert.

East of the Turgai Trough, Kazakhstan's natural features fall into several bands running east-west: the northerly steppe region known as the Virgin Lands, which serves as the nation's granary; the central-eastern semiarid uplands rising to the foothills of the Altai Mountains in the east; and the south, much of which is the very arid and sandy Betpak Dala Desert but which is also watered by rivers flowing out of mountains lying to the east (in China) and south, primarily the Ili, emptying into Lake Balkhash, and the Syr Darya, draining into the Aral Sea. The southeastern marches of the country are defined by the Tien Shan Mountains, rising to 6,995 m (22,949 ft) at the Khan Tengri massif. Through the northeast flows the Irtysh River; it is dammed to form a large reservoir, Lake Zaysan.

Kazakhstan has more than 2,700 glaciers, covering about 2,000 sq km (more than 800 sq mi), primarily in the Tien Shan, Dzungarian Alatau, and Altai ranges.

The mountainous areas of the country are subject to seismic activity, particularly in the region around Almaty. The city suffered a severe earthquake in 1911. An elaborate system of dams and barriers has been built to protect Almaty from mudflows and avalanches spilling out of the nearby mountains.

CLIMATE AND WEATHER

Kazakhstan, far from any ocean, has a continental climate whose extremes are for the most part not tempered by the presence of large inland bodies of water. Mean January temperatures range from -18°C (0°F) in the north to -3°C (27°F) in the southern basins, while mean July temperatures vary from 19°C (66°F) in the north to as much as 30°C (86°F) in the deserts of the south. The infiltration of arctic air in the winter can drive temperatures down to -35°C (-31°F), even in the southern regions. In general, summers are long and dry on the plains and much shorter in the mountains.

Precipitation in Kazakhstan tends to rise the farther north one ventures. In the far north there is enough rainfall (annually, 300–400 mm; 12–16 in) to support forests. The band of steppes receives 250 mm (10 in) per year, mostly in summer. Semidesert and desert areas receive anywhere from 100 to 200 mm (4 to 8 in) per year, though parts of the Kyzylkum Desert get even less than 100 mm a year, and what little there is falls mainly in early spring. The foothills and mountains are wetter than elsewhere in the country, with anywhere from 400 to 1,600 mm (16 to 63 in) of precipitation a year.

Kazakhstan is subject to high winds at any time of year; these can create major dust and salt storms. The dry wind known as the *sukhovey*, when it occurs in spring or summer, can be very destructive to crops by kicking up dust.

Climate and Weather

Mean Temperature
July: 81°F
January: 23°F
Average Rainfall: 15 in

FLORA AND FAUNA

Much of Kazakhstan is devoid of plants and animals, owing to ecological disasters during the Soviet era. The central plain is flat and treeless, covered with grasses in some parts. Cannabis, or marijuana, grows wild in many places, as do tulips and poppies. Farmers grow wheat on the northern steppe and cotton, fruits, vegetables, tobacco, and rice on the southern part. Herd animals include goats, sheep, horses, camels, and cattle. In the wild there are eagles, rooks, roe deer, lynx, wolves, badgers, foxes, brown bears, wild boars, and antelopes. The rare snow leopard also lives in Kazakhstan.

ETHNIC COMPOSITION

Ethnic Kazakhs are barely a majority within their own state; they represent the largest population group at 53 percent. Previously only a plurality, they became a majority because of two trends: natural increase among the Kazakhs and continued out-migration by people of European stock. Russians constitute some 30 percent of the population, down from 40 percent at independence. Other minorities of significance are Ukrainians, Germans, and Uzbeks. Various other minorities (Belarusians, Uighurs, Koreans, and Azeris) make up the remaining portion of the population. Although more than half a million Russians departed in the years following independence, the in-migration of Russians from other Central Asian states in the same period has tempered the flow somewhat. Nearly as many ethnic Germans as Russians left Kazakhstan in the 1990s. The remaining Russian population is concentrated in a band across the north, adjacent to southern Russia and Siberia, raising concerns about the potential for secession. Kazakhs, traditionally nomadic, are decidedly a minority (at less than 15 percent) in the composition of most major cities and make up less than one-quarter of Almaty's residents.

LANGUAGES

Kazakhstan is divided roughly equally between speakers of Kazakh, a Turkic language with some Mongol influences, similar to the languages spoken in most of the other Central Asian states, and speakers of Russian. Kazakh is the official language, but the language of business, science,

and technology is Russian, and Russian still predominates in education despite official efforts to support Kazakh-language schools. A provision of the 1995 Constitution made Russian a semiofficial language alongside Kazakh.

Kazakh is written in a modified form of the Cyrillic alphabet. Originally, Arabic script was used. The government has shown a desire on several occasions to move to the Latin alphabet, but the costs of such a transition are daunting.

RELIGIONS

Kazakhs are overwhelmingly Muslims of the Sunni branch, while Russians and other Slavs are generally Russian Orthodox. In 1999 Muslims made up 47 percent of the population, while the Russian Orthodox followers constituted 44 percent. Protestants constituted some 2 percent, and proselytizing by various Protestant missions has upset some in the government and led to the subtle harassment of Adventist and other churches. There are small numbers of Catholics and Jews, and since 1991 the country has had a single Roman Catholic diocese.

Islam, its religious practices suppressed under Soviet rule, has made a comeback, as encouraged by the efforts of foreign partners; Saudi Arabia, Egypt, and Turkey in particular have aided the construction of mosques and religious schools. Unlike in Uzbekistan or Tajikistan, Islamic fundamentalism has made little headway, but the question of the relationship between Islam and the state is still a sensitive one. Since 1990 the nation has had its own Muslim religious authority headed by a mufti appointed by the president. Given the strength of Kazakh ethnic nationalism and religion's fundamental place in the makeup of Kazakh identity, the influence of Islam is likely to increase.

The 1995 constitution specifies that Kazakhstan is a secular state. It forbids religious parties and organizations seen as fomenting religious or racial strife, and foreign religious groups operate under governmental restrictions.

Religious Affiliations

Muslim	7,137,000
Russian Orthodox	6,682,000
Protestant	304,000
Other	1,063,000

HISTORICAL BACKGROUND

It is difficult to distinguish Kazakh history prior to modern times from more general Central Asian history, and attention to the latter focuses mainly on the great cities of the south, now located in Uzbekistan. Most of Central Asia was unified briefly under the Mongols and Genghis

Khan in the early 13th century, but Genghis Khan divided the region between two sons, with the area that is now Kazakhstan forming a part of the Golden Horde, a Mongol state making up most of Russia founded in the mid-13th century. For centuries after the Mongol Empire crumbled, the people who would slowly come to identify themselves as Kazakhs ran livestock freely across the southern steppe. Kazakh culture and nomadic life-style centered on the flocks they tended.

From the 17th century onward Russian expansionism slowly began to constrain this freedom. The Cossacks reached the Ural River in the first half of the 17th century. They continued to move eastward in the 18th century, setting down fortifications in Kazakh lands now in southern Siberia (Orsk, Omsk) and northern Kazakhstan (Pavlodar, Petropavl, Öskemen). Pressure from the opposite direction—invading Mongols referred to as Oirots or Kalmyks—compelled first the khan of the Lesser Horde in 1731 and then the khan of the Middle Horde in 1740 to seek Russian protection and to swear loyalty to the czar. This sealed the fate of the khanates' political power, as the Russians moved to expand their control.

By the middle of the 19th century the northern reaches of what is now Kazakhstan were sufficiently Russified that the upper classes sent their sons to Russia for education and missionaries, first Tatar Muslims, then Russian Orthodox, came to “civilize” the nomads. Russian administrators brought the agriculturally valuable parts of the country into Russia's economic orbit, growing wheat in the north and cotton in the south, and extended the rail network as far as Tashkent.

The large-scale migration of Russian peasants starting in the 1890s provoked Kazakh violence; these farmers were seizing prime grazing lands. Kazakh uprisings toward the end of the 19th century and again in 1916 were put down with much bloodshed. Beyond the Cossacks, who numbered half a million by 1917, more than one million Russian families put down roots in the region, and a fresh wave followed in the 1920s and 1930s following Stalin's dispossession of lands in Russia for collective farms.

With the Russian Revolution, Central Asia became part of the Soviet Union in 1918. The Kazakh lands were originally an “autonomous” part of the Russian Soviet Federated Socialist Republic. Not until 1936, when a new Soviet constitution came into force, was there a full-blown Kazakh Soviet Socialist Republic. The Kazakhs were Europeanized culturally, and their economic structures and political practices were reshaped along Communist lines. Islam was suppressed; women were educated and encouraged to join the workforce. Heavy industry and large-scale agriculture were introduced.

World War II prompted a shift of industries and academic centers east of the Urals to escape the German ad-

vance. There was also a new bout of migration, this time by peoples accused of collaborating with the enemy and forced to go to Central Asia: Crimean Tatars, Meskhetian Turks, Chechens, Ingush, Volga Germans, Greeks, and Koreans.

Nikita Khrushchev's Virgin Lands policy—to take into cultivation large areas of grazing land in northern Kazakhstan—brought yet another wave of Slav settlers to grow grain on the Kazakh steppes in the late 1950s and early 1960s. With a new push for industrialization in the cities of the north and east and with space exploration (following the creation of the Baikonur space launching facility), tens of thousands more Russian technicians arrived. The Russians' percentage of the total population rose from less than 20 percent in 1926 to a peak of 42.7 percent in 1959.

In spite of Kazakhstan's continual absorption of fresh generations of Slavic migrants, from the 1960s onward ethnic Kazakhs began to replace Russian speakers in positions of power in the republic. A stirring of Kazakh nationalism led to riots in Almaty when Mikhail Gorbachev replaced, on grounds of corruption, the populist Kazakh Communist Party secretary Dinmukhamed Kunayev with a Russian, Gennadi Kolbin, in 1986. Kolbin cleaned house during his three-year tenure, but when he was transferred back to a Moscow posting in 1989, another ethnic Kazakh, Nursultan Nazarbayev, took his place. Nazarbayev supported Gorbachev's policies of greater openness and economic reforms and extended their logic to a revamping of the Kazakh Republic's institutions. A Supreme Soviet was established on a permanent basis as a legislature, multicandidate elections (at least in theory) were implemented, and Kazakh was declared the official language. The Supreme Soviet showed its nationalist spirit by asserting the Kazakh Republic's control over its own natural resources and economic development.

When the Soviet Union began to break up into its constituent republics, Kazakhstan was the last of the 15 to declare independence, on December 16, 1991. The new state joined the Russian-led Commonwealth of Independent States. Its policies at home, however, were seen by Slavs and other minorities as favoring ethnic Kazakhs at their expense. A new constitution in 1993 enshrined Kazakh as the official language and relegated Russian to secondary status. Kazakhs were winning political and legislative posts out of all proportion to their actual strength in the population, leaving others feeling excluded. Between 1992 and 1997 the number of those with European ancestry leaving Kazakhstan was reported to be 1,652,700, and many of these were among the most skilled workers and professionals.

In 1994 fresh elections were held. Kazakhs won a majority of the seats in the legislature, now called the Supreme Kenges, and President Nazarbayev's support-

ers, purged of their Communist elements and reconstituted as the People's Unity Party, won the largest share. Their triumph was cut short in 1995 by a Constitutional Court ruling that the election had violated the principle of one person, one vote. The legislature disbanded, leaving Nazarbayev to rule by decree, pending a new vote. He used this opportunity to push through a referendum extending his term to the year 2000 and to propose a new constitution that expanded his own power and replaced the Kenges with a weaker bicameral legislature.

Kazakhstan's severe economic difficulties in the mid-1990s prompted Nazarbayev to name a committed reformer, Akezhan Kazhegeldin, as prime minister. His economic austerity program was broadly unpopular with workers, yet Kazhegeldin's team was able to impose macroeconomic stability and halt the devastating decline in yearly production. The more Kazhegeldin seemed to be acquiring his own power base, however, the more Nazarbayev felt threatened. After being tarred with accusations of corruption and reports of onetime links to the KGB, the prime minister was compelled to resign in 1997 and was replaced by Nurlan Balgymbayev.

Although Kazakhstan remained more liberal than most Central Asian states, opposition leaders were sometimes jailed, and when the legislature, having rejected a package of proposed constitutional reforms, voted to move up the presidential election to 1999, Kazhegeldin and other prominent figures were prohibited from contesting it. The 1999 election returned Nazarbayev to power with a large majority, but outside observers were at best skeptical about the fairness of the vote.

Kazakhstan spent the early 2000s working to beef up its economy and stop ethnic violence. Islamic militants began entering the country from Kyrgyzstan and Uzbekistan in 2000, prompting the government to increase border security. Uighurs were involved in fighting in Almaty, and the government cracked down on those responsible. In 2001 Kazakhstan opened the first oil pipeline from the Caspian Sea to the Black Sea. That year Kazakhstan joined the Shanghai Cooperation Organization in an effort to end ethnic violence and promote trade in the region. Nazarbayev met with George W. Bush to discuss a long-term partnership.

Nazarbayev's government experienced some turmoil, as prime ministers came and went, and opposition leaders were purged from the cabinet or put in jail. In 2003 the legislature passed a bill allowing private land ownership, and the country abolished the death penalty. In 2004 Kazakhstan and China signed an agreement to construct an oil pipeline to the Chinese border. Nazarbayev's party retained control of the lower house of parliament in the September and October elections, which international observers believed to be unfair. In January 2005 the opposition party Democratic Choice was ordered to dissolve for protesting the elections.

LIST OF MODERN RULERS

1990– Nursultan Abishuly Nazarbayev

CONSTITUTION

Kazakhstan is functioning under the constitution of 1995, which is less liberal than its predecessor, passed by the old Supreme Soviet in 1993. The 1995 constitution, approved by a referendum whose precise returns were disputed, extends the powers of the president at the expense of the legislature. Only the president can initiate constitutional amendments, dissolve parliament, appoint or dismiss the government, and appoint regional governors. Human rights guarantees are less salient than previously; the president is specified as the guarantor of citizens' rights. There is now a bicameral parliament of 114 members. There is a Cabinet of Ministers led by a prime minister, who is chosen by the president with parliament's approval. There is universal suffrage for those age 18 and over. In principle, the president is elected by popular vote for a seven-year term; in practice, elections have occurred off schedule, and the president used a 1995 referendum to extend his first term until 2000. Nazarbayev also unilaterally decided to move the capital from Almaty to Astana in 1998.

PARLIAMENT

Kazakhstan has a parliament consisting of two chambers: the 77-member Mazhilis, or assembly, with members elected for five-year terms, and the 39-member Senate, of which seven members are appointed by the president and the others are elected to six-year terms by regional legislatures. The legislature is weak, since the president has vast powers of decree: The president can declare a bill "urgent," and if the two chambers then fail to pass it within 30 days, he can put it into force by decree. The legislature does not exercise power over the national budget or even the shape of its own legislative program, and its only check on the executive is that it can remove the president in extreme circumstances—disability or treason. Currently, parliament is dominated by the president's party, Otan, and its allies. Several major opposition parties refused to take part in the 1999 parliamentary elections.

POLITICAL PARTIES

Kazakhstan is, for all practical purposes, a single-party state. The Otan Party, founded in 1999, is Nazarbayev's personal political vehicle; it won the vast majority of seats in the 2004 parliamentary elections. Two other parties also won seats in

2004: the agrarian-industrial party AIST, and Nazarbayev's daughter's party, Asar. Though nine opposition parties ran candidates, only one seat was won by an opposition candidate. Independent candidates won 18 seats, though almost all of them were affiliated with progovernment institutions or were otherwise aligned with the president.

LOCAL GOVERNMENT

Kazakhstan is divided into 14 regions called oblasts, whose regional legislatures are called *maslikhats*, plus the cities of Almaty and Astana. Governors in charge of regional executive bodies are *akims*; they are appointed by the president. The regions have little independent authority or revenue-raising capability and exist to carry out the laws and directives of the central government. The one exception is the city of Leninsk, serving the Baikonur space facility; by treaty it is under Russian jurisdiction until 2015. The regions do retain some rights to the development of local resources, except for those deemed strategic.

LEGAL SYSTEM

There are three levels of courts in Kazakhstan. At the top is the Supreme Court, which advises in the appointment of senior judges. The 44-member Supreme Court is elected by the Senate for an unspecified term of office at the behest of the president, based on the recommendation of the Highest Judicial Council of the Republic. In fact, the court is completely subservient to Nazarbayev. The Supreme Court oversees the lower courts, the oblast courts and their equivalents. Oblast-level courts deal with serious crimes, while local courts handle petty crime and minor disputes.

The constitution guarantees legal representation for a person accused of a crime, but this guarantee remains theoretical in all too many instances. Pretrial detention for up to three days is allowed, and an individual may be held for up to a year in jail between being charged and being brought to trial. There is no bail.

Until 1995 there was a Constitutional Court. This was replaced by a seven-member Constitutional Council whose rulings are subject to presidential veto. The president appoints the council's chair and two other members, while the Senate and the assembly each select two members. The council decides on the manner and timing of elections, examines international treaties, and vets legislation for accordance with the constitution.

HUMAN RIGHTS

Kazakhstan has a poor human rights record. The nation has set up a Presidential Human Rights Commission to respond to external criticism of its record, but with minimal cooperation from officials, a tiny budget, and a purely

advisory capacity, it has not been able to make much of an impact. Citizens are essentially denied the right to assemble peaceably; a presidential decree from 1995 restricts the conduct of unsanctioned demonstrations. Unions are permitted, but strikes are not. The courts are corrupt, as influenced by money and by clans and other networks. The security forces arbitrarily imprison people, and they torture, abuse, and execute prisoners and detainees.

The media are quite constrained, and there are taboo subjects, such as the president and his family, ethnic strife, and certain aspects of economic management and external relations. Outside the major cities, newspapers, television, and radio serve largely at the behest of local governors, who are like presidential prefects. The main state television channel is controlled by Nazarbayev's daughter. Private television began in 1990, but a 1996 law greatly limited its freedom to operate through a variety of measures.

Violence against women and ethnic minorities were serious problems, as was trafficking in teenage girls. Ethnic tensions stem from the government's policy of favoring ethnic Kazakhs, who are grossly overrepresented in government at all levels, education, housing, and business. The biggest bone of contention is the language law designed to make the use of Kazakh mandatory in government by a certain date (which has been postponed several times following objections by Russian speakers) and to guarantee that at least half of all radio and television broadcasting be in the Kazakh language.

There is broad religious freedom in Kazakhstan, though some Christian groups have reported incidents of harassment. Islam, predominant among Kazakhs, has no official status.

FOREIGN POLICY

Kazakhstan enjoys cordial relationships with all its neighbors. It has joined in partnerships with China, Russia, Uzbekistan, Tajikistan, and Kyrgyzstan in the Shanghai Cooperation Organization to improve trade and ethnic matters in the region. In 2000 the nation joined with Russia, Belarus, Kyrgyzstan, and Tajikistan in the Eurasian Economic Community to create a free-trade zone. Kazakhstan is working with China to control illegal migration and trade across their mutual border and is working out border disputes with Russia, Turkmenistan, and Uzbekistan as well as seabed boundary questions with Turkmenistan, Azerbaijan, and Russia. Kazakhstan is a transit point for narcotics traffickers, which is an issue the government plans to confront.

DEFENSE

In principle, Kazakhstan has a military with ground forces, air forces, a naval force, and a republican guard; in practice,

the nation does not allocate very much money to the military and still depends on Russia for defense. The nucleus of Kazakhstan's defense force is what used to be the Soviet Fortieth Army, "nationalized" by Nazarbayev in 1992. The president of the republic is commander in chief and chairman of the National Security Council. The armed forces report to the chief of general staff and through that office to the minister of defense. The officer corps had been dominated by Slavs; after many transferred elsewhere in the Commonwealth of Independent States, a new and relatively untrained cadre of ethnic Kazakhs had to be called upon to replace them. Russian troops still help guard the country's extensive borders, especially the Chinese border, guarding against smuggling and illegal immigration. The Kazakh armed forces fill their ranks through two-year conscription obligations. Morale is low and desertions are common.

Kazakhstan renounced nuclear weapons in 1993 and by 2000 had gotten rid of all its uranium and had sealed up its last nuclear test tunnels.

ECONOMY

Kazakhstan's economy has done relatively well for a former Soviet republic. It had repaid all of its debt to the International Monetary Fund by 2000, seven years ahead of schedule. In 2002 the U.S. Department of Commerce classified Kazakhstan as a market economy; that same year it became the first Soviet nation to receive an investment-grade credit rating from an international credit-rating agency. Foreign debt was only 14 percent of gross domestic product (GDP) in 2003. Inflation has been slightly higher than forecast, at 6.9 percent in 2004.

Almost all of Kazakhstan's economic growth has come from its oil and gas industries. The nation has tremendous deposits of fossil fuels and minerals, including coal, iron, uranium, gold, copper, and zinc, which have attracted a good deal of foreign investment. In 2003 Kazakhstan exported more than \$7 billion worth of oil. Agriculture accounted for only 7.4 percent of GDP in 2004.

ENVIRONMENT

The worst environmental problem Kazakhstan faces is the alarming shrinkage of the Aral Sea. The world's fourth-largest lake before it was disturbed for large-scale agriculture in the 1960s, the Aral has been reduced to a small fraction of its original volume and surface area, with greatly increased salinity and greater concentrations of man-made pollutants, because its two feeder rivers, the Amu Darya and the Syr Darya, have been diverted for irrigation. Not only is the Aral an ecological dead zone but also the disappearance of so much water has drastically affected the stability of the local climate and shortened the growing season.

Because Kazakhstan had a high concentration of particularly dirty industries under the Soviet Union, it has one of the worst rates of air pollution in the region. It was also used as a testing ground for Soviet nuclear weapons between 1949 and 1989. There have been industrial accidents at times, notably the escape of poisonous beryllium oxide from a factory in Ulba, contaminating an area around the city of Öskemen in 1990, which spurred protests concerning nuclear waste sites in the oblasts of East Kazakhstan and Semey. There are no longer any nuclear weapons testings or facilities in Kazakhstan, but those living nearby still contend with radioactive contamination.

Water pollution has mostly involved localized agricultural runoff of fertilizer and pesticides; in this area there seems to have been some modest improvement in recent years. Still, the Ural and Irtysh rivers and Lake Balkhash are seriously tainted from industrial discharges.

Kazakhstan has one national park of 50,852 hectares (125,660 acres), Bayanaulskiy, created in 1985. There are also seven nature reserves scattered about the northern steppe, the foothills of the mountains to the east and south, and the shores of the Caspian and Aral seas to the west.

 Nationally Protected Areas % of total land area: 3
 Emissions of Organic Water Pollutants kg per day: —
 CO2 Emissions per capita ton: 8.05

LIVING CONDITIONS

Housing is in short supply. About half the population lives in cities, most of them crammed into small apartments. In rural areas many people have homes made of brick; they usually have electricity, but they may not have running water. Kazakhstan's remaining nomadic herders live in felt tents called yurts. Nomads can assemble or disassemble these tents in an hour. Travel can be difficult, owing to the vast distances between destinations. Trains are cheap, slow, dirty, and dangerous. Buses are also cheap and likely to break down. Airplanes and helicopters are the fastest way of traveling, but they as well are unsafe.

HEALTH

Kazakhstan's government provides free public health care, but the public system lacks supplies and equipment, particularly in rural areas. Doctors and nurses are not paid very well, and there are few dentists. Children receive vaccinations for free, and there are special clinics for children. Some older people live in nursing homes, but most of them are cared for by family members. Those who can afford to do so usually choose to pay for private doctors and clinics, where the care is better.

On the whole, health is not very good. The pollution from fertilizers and dust from the dried-up Aral Sea bed causes health problems for people living in the area. People who live near former nuclear test sites have high rates of cancer; the government has compensated some victims. Smoking and alcoholism are problems, to the point that the government has encouraged people to become devout Muslims so that they will stop drinking. Tuberculosis, typhoid, diphtheria, and hepatitis are all common, as is undulant fever, caused by drinking unpasteurized milk. Many people believe they can improve their health by toughening their bodies, such as by pouring cold water over themselves outdoors.

 Access to Improved Water Source %: 86

FOOD AND NUTRITION

Kazakh cuisine combines Mediterranean, Middle Eastern, Russian, and nomadic eating traditions. People eat a great deal of vegetables, beans and nuts, yogurt, cheese, rice, and grilled meat, especially mutton, including all innards. *Pulau*, or pilaf, is a dish of rice with fruit, nuts, and spices. Apples are famous throughout the region. (*Almaty* means "father of apples.") In Russian areas, people eat potatoes, dumplings, noodles, and meat, including horse. Yogurt is often used in stews and sauces. For dessert, people eat raisins, nuts, fruit, cookies, and halvah. People always begin a meal with tea, called *chai*, and usually breads and nuts. Russians and Kazakhs drink vodka, and Kazakhs also drink alcoholic beverages made from fermented mare's or camel's milk.

STATUS OF WOMEN

Kazakh women are relatively liberated for Central Asian women. Islam has never caught on as a key force in the nomadic lifestyle, and as a result women have not suffered the restrictions imposed on them in more devout countries. Women participate in sports such as the wild boy-girl horse chases, and though men consider it appropriate to "steal" women to be their brides, there is often a certain degree of collusion on the part of the stolen women. The 1995 constitution prohibits discrimination based on sex and reaffirms the right of all to employment. Since the Soviet days urban women have worked outside the home and have held some of the country's top posts; Nazarbayev's daughter is one of the most influential people in the nation. With Soviet mores fading and traditional and Islamic ones taking their place, however, there is social pressure on women to stay home and raise children. As unemployment increases, women are often the first to lose jobs.

Family planning has made little headway in Kazakhstan. Kazakh nationalists, concerned about their near submajority status in the republic, have inveighed against birth control and abortions for ethnic Kazakh women. Though the number of births per woman is high, so is the number of abortions, and in 1992 the latter actually exceeded the former. This is attributed to the difficulty of obtaining contraceptives since independence. The birth-rate overall is declining. The maternal mortality rate is 210 per 100,000 births, with the countryside having a much more severe problem than the cities.

Domestic violence is a serious problem in the country. Kazakhstan is also notorious for trafficking in women, especially teenage girls, who are sold as sex slaves, often with the collusion of border officials.

WORK

In 2004 the unemployment rate was 8 percent, marking an improvement over the early 1990s, when unemployment soared after the end of Soviet rule. More than one-quarter of Kazakhstan's population lives below the poverty line; the wealthiest 10 percent of the population hold almost 27 percent of the nation's wealth. The biggest source of wealth is the oil and mineral industries, which employ some 30 percent of the population. One-fifth of the population works as farmers and herders; these include the nomads, who produce all their own essentials. About half the population works in services.

Employment and Labor

Labor Force Total: 7,950,000
 Female Participation Rate %: 47.3
 Labor by Sector %:
 Agriculture: 20
 Industry: 30
 Services: 50
 Unemployment %: 8.0

EDUCATION

Primary and secondary education is compulsory and state provided. Primary education begins at age seven and lasts four years. Secondary education is divided into a five-year first cycle and a two-year second cycle. Most children at-

tend school, and literacy is near universal. Classes are large, and many students attend for half days. Secondary school comes in several varieties, depending on the student's plans for higher education. There are two universities and several technical colleges and arts schools. Distance education is available for students who live in remote areas.

Although Kazakh is the official state language, a 1997 law mandated that instruction be provided in both Kazakh and Russian in secondary and vocational schools and institutions of higher learning. Parents are allowed to choose the language of their children's instruction, and more and more schools are teaching in Kazakh. Some Muslim parents send their children to madrassas, where they learn about Islam. Most university courses are still conducted in Russian, despite the fact that 64 percent of higher education students are ethnic Kazakhs—many Russian speakers choose to go elsewhere for university—as the Kazakh language has not developed a sufficiently modern or technological vocabulary.

SCIENCE AND TECHNOLOGY

Kazakhstan has long been home to the Russian space program, which is based at the Baikonur Cosmodrome in the central part of the country. From this base the Russians launched their first satellites, first astronauts (a man in 1961 and a woman in 1963), and space station. Russia now rents the Baikonur site from Kazakhstan and still uses it for the space program. Otherwise, basic technological infrastructure is antiquated; there are few telephone lines and Internet hosts for the population, and service is poor. Most people use cellular telephones instead of land-based lines.

 Expenditures in R&D as % of GDP: —
 High-Tech Exports \$million: 199.8
 Patent Applications by Residents: 1,610

MEDIA

The press in Kazakhstan is fairly constrained, despite the fact that the constitution supposedly guarantees press freedom. As of 2004 the government was increasingly intimidating to the media, particularly to privately owned and opposition concerns. Journalists who insult the president or mention his private life risk going to jail. In early 2003 an opposition journalist, Sergey Duvanov, was convicted of raping a minor, but critics claimed that the trial was in fact an attempt to silence a media critic. The government controls radio, television, and most printing facilities. The president's daughter Dariga Nazarbayeva and her husband run the Khabar Agency, which controls several television channels, along with two major newspapers and three important radio stations.

CULTURE

Kazakhstan has been home to numerous writers and poets. Abai Kunanbaev transformed Kazakh into a written language in the 19th century, encouraged Kazakhs to preserve their native culture, and translated numerous Russian works into Kazakh. Fyodor Dostoevsky spent some years in Kazakhstan in the 1850s, where he became acquainted with the writer and artist Chokan Valikhanov, who recorded his experiences traveling in Central Asia and was the first person to transcribe the oral poetry of the nomadic bards, or *agin*. The modern poet Olzhas Suleimenov wrote antinuclear works toward the end of the Soviet era.

Kazakhstan has been renowned for its carpets for centuries. Carpet designs incorporate influences from China, Mongolia, and Russia and are covered with geometric and floral patterns in bright colors. The Scythian people lived on the steppes in ancient times, and their gold artifacts can be seen in Kazakhstan today.

FOLKLORE AND MYTHOLOGY

Kazakhs traditionally told stories in long musical poems during nights around fires in nomadic camps. Singers called *agins* still travel the countryside performing from memory and improvising verses. They compete in events called *aitysy*, in which different poets spend days reciting stories; the winner may win a prize such as a horse. Kazakh people also enjoy listening to folk music played on bagpipes, stringed instruments called *dombira* and *gobiz*, and harps and horns made of wood. Mukan Tulebayev is a famous folk musician.

ENTERTAINMENT AND RECREATION

Kazakhs enjoy visiting one another to eat and drink; vodka is a popular beverage. They like to visit public baths where they can eat, drink, and submerge themselves in hot water. Almaty has some pleasant parks and museums. In the summer people like to go camping, mountain climbing, trekking, and fishing for carp or trout in rivers. Horseback riding is perennially popular among nomads. The town of Medeu near Almaty has one of the largest skating rinks in the world.

ETIQUETTE

Kazakhs value hospitality highly. They enjoy entertaining guests and providing ample food, and they either entertain or visit friends and relatives nearly every night of the week. A guest in a nomad's yurt will be seated next to the fire in the warmest and most comfortable place.

FAMILY LIFE

Kazakhs take genealogy very seriously, and many of them can list several generations of ancestors. The Kazakh population is divided into three large clans, and clan identification is one of the first pieces of information people learn about one another. Because of the housing shortage, many young couples must live with relatives during their

first years of marriage. Families typically live in fairly crowded conditions. Traditionally, the youngest son of a family is expected to care for his parents, and he and his wife will often live with or near them. A wife is expected to treat her in-laws with respect. Live-in grandmothers help with housework and children and are considered an important part of the social fabric. Most women in the cities work outside the home, many of them in very important positions. Rural women work with their husbands on the farms, and the children pitch in when they get big enough.

Kazakhs still practice the tradition of “wife stealing,” in which a man who wants to marry a woman will kidnap her—usually with her cooperation—after which their parents must formalize the marriage with a bride-price.

PERSONAL APPEARANCE

Traditional Kazakh clothes make great use of furs and animal skins and elaborate embroidery and beading. Until recently women wore elaborate gold headdresses called *saukele* when they married. Most Kazakhs now dress in typical Western clothes, usually dressing warmly against the harsh weather of the steppes.

SPORTS

Kazakhstan has several sports that were invented by nomads. One of the most dramatic is *kokbar*, a form of polo in which enormous teams of horsemen (up to 1,000 men) will try to drag a goat carcass into the opposing team’s goal. Girls and boys play a game called *kыз куу*, in which the girl races away from the boy and strikes at him with a whip when he gets too close; if she wins the race, she gets to whip him further, while if he wins, he gets to kiss her. Horsemen also play *kumis alu*, in which a rider tries to pick up a coin from the ground, and *audaryspak*, or wrestling on horseback. Kazakhs also wrestle on the ground in a sport similar to sumo. Some people enjoy falconry.

Kazakhs also play more conventional sports, such as soccer, basketball, gymnastics, volleyball, skating, cross-country skiing, and hockey. Aleksandr Parygin won the modern pentathlon at the 1996 Olympics.

CHRONOLOGY

- 1936** Kazakh (Autonomous Soviet Socialist Republic, ASSR) achieves status as full republic of the Soviet Union.
- 1930s** More than one million in Kazakhstan die in Stalin’s campaign of forced collectivization. Deportees from other parts of Soviet Union are settled in the republic.

- 1953–64** “Virgin Lands” policy of Khrushchev brings more European settlers to cultivate former grazing lands.
- 1955** Baikonur launch site at Turatam for Soviet rockets is selected, and construction begins.
- 1986** Protests are sparked by forced resignation of local Communist Party secretary Dinmukhamed Kunayev and his replacement by a Russian bureaucrat, Gennadi Kolbin.
- 1989** Kazakhstan Supreme Soviet establishes Kazakh as official language of republic.
- 1990** Nursultan Nazarbayev becomes president.
- 1991** With the fall of Soviet Union, Kazakhstan achieves independence.
- 1992** Supreme Kenges (Kazakh legislature) ratifies START I Treaty.
- 1993** New constitution adopted. Kazakhstan ratifies Nuclear Non-Proliferation Treaty.
- 1994** Pro-Nazarbayev forces win majority in Kenges. Vote of no confidence in government brings in an economic reformer, Akezhan Kazhegeldin, as prime minister. Kazakhstan, Kyrgyzstan, and Uzbekistan agree to form Central Asian Union.
- 1995** Constitutional crisis occurs after Constitutional Court declares 1994 elections void, suspending parliament. Nazarbayev rules by decree, obtains referendum approval extending his term to 2000, and pushes through a new constitution giving himself greater powers and replacing Kenges with a new bicameral legislature. Last of the nuclear warheads in Kazakhstan are transferred to Russia.
- 1997** Kazhegeldin, compelled to resign following accusations of corruption and previous ties to the KGB, is replaced by Nurlan Balgymbaev, formerly head of the state oil company, Kazakhoil. Capital is moved from Almaty to Aqmola, which was renamed Astana.
- 1999** Nazarbayev wins 81.7 percent of the votes for presidency in an election whose conduct is denounced by Organization for Security and Cooperation in Europe.
- 2000** Kazakhstan adopts an economic reform plan for the next 10 years. Islamic militants encroach from Kyrgyzstan and Uzbekistan, prompting Kazakhstan to increase security.
- 2001** The first major pipeline for transporting oil from the region to world markets connects the Tengiz oil field in western Kazakhstan to the Russian Black Sea port of Novorossiysk. Kazakhstan joins the Shanghai Co-

- operation Organization (SCO). Pope John Paul II visits. Nazarbayev and U.S. President Bush declare long-term partnership.
- 2002** Nazarbayev replaces his prime minister and jails opposition leaders.
- 2003** Private land ownership is made legal. The death penalty is abolished.
- 2004** Kazakhstan and China agree to construct an oil pipeline to the Chinese border. The Otan party wins a majority of seats in the parliamentary elections, which observers criticize as unfair.
- 2005** Kazakhstan's court orders the dissolution of the opposition party Democratic Choice.

KE

CAPITAL

Nairobi

HEAD OF STATE & HEAD OF GOVERNMENT

President Mwai Kibaki (from 2002)

NATURE OF GOVERNMENT

Republic

POPULATION

33,829,590 (2005)

AREA

582,650 sq km (224,961 sq mi)

MAJOR ETHNIC GROUPS

Kikuyu, Luhya, Luo, Kalenjin, Kamba, Kisii, Meru

LANGUAGES

English, Kiswahili

RELIGIONS

Protestantism, Roman Catholicism, animism, Islam

UNIT OF CURRENCY

Kenyan shilling

NATIONAL FLAG

Black, red, and green horizontal stripes in descending order, separated by narrow white bands. In the center are a warrior's shield and crossed spears.

NATIONAL EMBLEM

The principal elements of the national coat of arms are two gold lions rampant holding two crossed spears; an oval shield with the colors of the national flag; a white cockerel holding an ax; and the national motto, *Harambee* (Let us pull together), at the bottom.

NATIONAL ANTHEM

"O God of All Creation"

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), June 1 (Madaraka [Self-Government] Day), October 10 (Moi Day), October 20 (Kenyatta Day), December 12 (National Day, Independence Day), December 25 (Christmas), December 26 (Boxing Day), various Christian festivals

DATE OF INDEPENDENCE

December 12, 1963

DATE OF CONSTITUTION

1963; amended 1979, 1983, 1986, 1991, 1992, 1997, and 2001

GEOGRAPHICAL FEATURES

Kenya lies astride the equator in eastern Africa between the Indian Ocean and Lake Victoria. Its total area of 582,650 sq km (224,961 sq mi) includes 13,393 sq km (5,171 sq mi) of Lake Turkana (Lake Rudolf) and Lake Victoria. The total length of its Indian Ocean coastline is 536 km (333 mi). It shares international land borders totaling 3,477 km (2,161 mi) with five countries: Sudan (232 km; 144 mi), Ethiopia (861 km; 535 mi), and Somalia to the north (682 km; 424 mi); Tanzania to the south (769 km; 478 mi); and Uganda to the west (933 km, 579 mi).

Nairobi, the capital, sits atop a vast plateau at the entrance to the Rift Valley. The other major urban cen-

ters are Mombasa, the country's main Indian Ocean port; Kisumu; Nakuru; and Eldoret.

Topographically, the country is divided into seven regions. Beyond the coastal strip the country rises in well-defined steps to a featureless plain known as Nyika. The inland plains give way to the Eastern Plateau region, which includes the game-rich lands of the Amboseli, Serengeti, and Aruba plains. The Rift Valley bisects the country near Nairobi. The remaining areas are the Northern Plains; the Kenya Highlands, also known as the White Highlands, which include Mount Kenya (5,199 m; 17,058 feet); and the Western Plateau region. The country's two largest rivers, the Tana and the Galana (also known as the Athi or Sabaki), flow into the Indian Ocean.

Mombasa	665,018
Nairobi	2,143,254
Nakuru	219,366

CLIMATE AND WEATHER

Despite being on the equator, Kenya has a varied climate, with seasons distinguished by the duration of rainfall rather than changes in temperature. In the Western Plateau and highlands, rain falls in one long season, while east of the Rift Valley, there are four distinct seasons: the long rains from March to May, the short rains from September to October, and two dry seasons in the intervening periods. Over 70 percent of the country is arid or semiarid, receiving less than 51 cm (20 in) of rain a year. The highlands have a cool, bracing climate with a mean annual maximum of 26.1°C (79°F) and a mean annual minimum of 10°C (50°F). The highest temperatures prevail in the Northern Plains, where the mean maximum is 34°C (93°F). The hottest months are January through March, while June and July are the coldest.

Climate and Weather

Mean Temperature: 50°F to 79°F
 Nairobi: 67°F
 Eastern Plateau: 57°F to 84°F
 Lower Plateau: 64°F to 93°F
 Coastal Areas: 70°F to 82°F
 Average Rainfall
 Coast and the Highlands: 40 in
 Western Plateau: 70 in

FLORA AND FAUNA

Kenya has an extremely wide variety of flora and fauna, which are popular with visitors who come for safaris. The

northern plateau and the southern part of the country are dry and covered with shrubs and dry grasses that can survive with little water; plants include baobab trees, thorn bushes, and acacias. The highlands are wetter; plants there include bamboo, the groundsel tree, and giant lobelias. Coconut palms grow on the Indian Ocean coast. Kenya is home to many well-known large mammals, such as elephants, rhinoceroses, hippopotamuses, water buffaloes, giraffes, lions, leopards, and cheetahs; many of these animals are endangered, but the nation has established sanctuaries to protect them.

POPULATION

Population Indicators

Total Population 2005: 33,829,590
 World Rank: 34th
 Density per sq km: 56.1
 % of annual growth (1999-2003): 2.1

 Average Size of Households: 6.2
 Induced Abortions: —

ETHNIC COMPOSITION

No ethnic group is numerically dominant in Kenya. The largest group, the Kikuyu, constitutes about 22 percent of the population; the five largest ethnic groups—Kikuyu, Luhya (14 percent), Luo (13 percent), Kalenjin (12 percent), and Kamba (11 percent)—together constitute 72 percent of the population. Language is a primary factor in ethnic identity. Only about 1 percent of the population is of non-African extraction (Asian, European, and Arab). The principal ethnic minorities are Asians (descendants of Indian and Pakistani settlers) and Arabs. Because of the Asian community's closed nature and its prosperity through control of small-scale trade and retail outlets, it has consistently been the target of African hostility.

LANGUAGES

The official languages of Kenya are English and Swahili, with the latter declared the co-official language in 1974.

It is a Bantu language modified by contact with Arabic and incorporates words from Arabic, Hindi, Persian, and English. Seven dialects and three subdialects of Swahili are spoken in Kenya, but the preferred standard for spoken Swahili is Kiunguja, the dialect of Mombasa, commonly referred to as Kiswahili. Written Swahili uses a Latin alphabet. English is the language of big business, higher education, and government.

RELIGION

As of 2004 the vast majority of Kenyans were Christians (45 percent Protestant, 33 percent Catholic), with 10 percent practicing indigenous faiths and another 10 percent being Muslim. Numbers, however, fail to reflect the persistence and pervasiveness of indigenous and traditional beliefs, even among those professing Christianity or Islam. The Roman Catholic Church is organized in 12 dioceses under the archbishop of Nairobi. The Protestant churches are linked together by the National Christian Council of Kenya. Of the Kenyan Muslims, more than half are ethnic Somalis.

Religious Affiliations

Protestant	15,223,000
Roman Catholic	11,164,000
Muslim	3,383,000
Indigenous Beliefs	3,383,000
Other	677,000

HISTORICAL BACKGROUND

Africa's eastern coast underwent profound change near the end of the first millennium c.e. Bantu speakers migrated from the interior and settled along the coast from Kenya to South Africa. At the same time traders from India and the Middle East began calling and building settlements in the region known in Arabic as al-Zanj, or "the Blacks." The Swahili language and culture was born as a mix between Arabic and Bantu nations. The Kenyan town of Mombasa grew into an important city-state and trading center.

Kenya's contacts with the West began with an exploratory visit to East Africa in 1448 by Vasco da Gama, who initiated 200 years of Portuguese rule. The Portuguese showed no particular interest in colonization, and their presence was virtually eliminated after Fort Jesus, in Mombasa, fell to Omani forces in 1699. European influence was renewed in 1888 when the privately financed Imperial British East Africa Company was granted a royal charter to administer the territories of Uganda and Kenya, assigned to Britain under the Anglo-German Agreement of 1886. The British Crown took over the company

in 1895 and established the East Africa Protectorate under the charge of a commissioner.

Continuing resentment among the Kikuyu to European appropriation of land led to the emergence in 1952 of the secret society known as Mau Mau. As the Mau Mau movement spread that year, a state of emergency was declared. By the time the emergency was lifted in 1959, more than 79,000 Africans, including Jomo Kenyatta—the journalist and teacher turned revolutionary leader who would eventually become Kenya's first postindependence president—had been detained, and nearly 3,000 civilians had been killed.

Meanwhile, significant constitutional progress had been made in introducing black majority rule in the country. The Lyttleton Constitution of 1954, the Lennox-Boyd Constitution of 1957, and the MacLeod Constitution of 1960 brought the Kenyans to the verge of self-government. The final step toward independence was a constitutional conference in London in 1962, under which a national government was formed, incorporating representatives of all political parties. Power was transferred in 1963 to a largely pro-British elite, who have helped to preserve the chief legacies of British rule: the legal, administrative, and educational systems and the English language.

In June 1963 Kenyatta was appointed prime minister, and in December 1964 Kenya became an independent republic, with Kenyatta as its first president. His ruling party was the Kenya African National Union (KANU). Under Kenyatta's rule the country prospered economically, growing to become an important regional manufacturing and transportation hub, despite corruption in both the public and private sectors.

In 1966 emerged a socialist opposition group, the Kenya People's Union (KPU), under the leftist Ajuma Oginga Odinga. Fearing this opposition, Kenyatta used newly instituted security laws against KPU supporters, and in December 1966, in order to strengthen his parliamentary position, he merged the legislature into the single-chamber National Assembly. Nevertheless, the KPU won limited seats in that year's parliamentary elections.

Unrest was also fomented by intra-ethnic rivalries that led to the uneven government disbursement of lands as well as to Kenyans outside of the Kikuyu tribe being given lesser government positions. Conflict within KANU between Kikuyus and non-Kikuyus is believed to be the primary cause for the assassination in July 1969 of Tom Mboya, an opposition leader of the Luo clan. This led to the banning of the KPU prior to the 1970 elections and the solidifying of Kenyatta's power base. At this point the National Assembly was, to a great extent, under Kenyatta's private control. Corruption among those in power was criticized by the unofficial leader of the parliamentary opposition, Josiah Mwangi Kariuki, and was probably the cause for his assassination in March 1975.

President Kenyatta died in August 1978 and was replaced by Vice President Daniel arap Moi. In the November 1979 elections Moi was the only candidate. Odinga was allowed back into KANU, but his outspoken positions on Kenyatta's rule and corruption in the government disallowed his taking part in parliamentary elections and precipitated his expulsion from the party in early 1982. In June of that year the National Assembly declared KANU to be the only legal party.

An increase in press censorship and political detentions were the immediate causes of an attempted coup in August 1982 by the Kenyan air force. The University of Nairobi was closed, and Moi disbanded the air force; about 650 air force members were convicted of mutiny. Odinga was connected with the coup and put under house arrest.

In September 1983, with only 48 percent of the electorate in attendance, Moi was reelected unopposed for a second term. The country then entered a period of relative stability, with Moi attempting in 1984 to cut inefficiency and root out corruption in the government.

Following the mass arrests of so-called illegal aliens in March 1987 and the continued detention of dissidents, Kenya was accused of human rights violations by Amnesty International, and the police officers said to be responsible for brutality were dismissed. Elijah Mwangale, minister of foreign affairs, was forced out of office for not being strong enough in defending Kenya's record on human rights. Soon afterward it was announced that only members of KANU could vote. Former vice president (under Kenyatta) Oginga Odinga denounced the government and called for a multiparty system. In October riots among Muslims and student arrests led to a reclosing of the University of Nairobi. Anticipating the national elections in March 1988, Moi dissolved the National Assembly in February, and 10 political prisoners were released; one, Raila Odinga, son of the former vice president, was rearrested in August 1988. In February 1988 Moi dismissed the formality of a public election and was summarily reelected president.

Constitutional amendments in July 1988 made it possible for the president to dismiss senior judges. In addition, detention without trial was allowed to be increased to 14 days from a previous 24 hours. Opposition to Moi's one-party rule grew during 1990. At the beginning of the year a loose coalition of politicians, churchmen, lawyers, and human rights activists, citing the examples of Eastern Europe and growing prodemocracy activism in other African nations, called for political pluralism and accused the Moi government of repression, corruption, and election rigging. In the months that followed Moi allowed some public debate on the multiparty issue, but in June he announced that the debate was over and that the Kenyan people had unanimously backed KANU as the country's sole party. Security police cracked down on the opposition in July and suppressed the rioting that followed.

In 1991, as popular unrest and international criticism grew, a multiparty democracy was finally restored by constitutional amendment. Amid accusations of vote rigging and corruption, Moi won a fourth term as president in 1992 with 36.3 percent of the vote, ahead of Ken Matiba's 26 percent and Mwai Kibaki's 19.5 percent. KANU captured 100 of the 188 parliamentary seats up for grabs. In 1997, in the second election since the restoration of a multiparty democracy, KANU captured 107 of the 210 parliamentary seats available, and Moi secured a fifth term as president, winning 40.64 percent of the vote, compared to the 31.39 percent for his closest rival, Mwai Kibaki.

The Kenyan government was perpetually seen as corrupt, despite the government's attempts to fight corruption under the leadership of the parliament member and conservationist Richard Leakey; Leakey himself was accused of corruption in 2001. The International Monetary Fund (IMF) stopped lending money to Kenya in 2001, claiming corruption to be too profound. In 2002 the Kenyan people finally had a chance to remove the KANU party from the presidency, and they did so with a vengeance, electing the opposition candidate Mwai Kibaki in a landslide victory over the KANU candidate Uhuru Kenyatta, son of Jomo Kenyatta. The government immediately set about prosecuting those guilty of the worst corruption, though they promised Moi immunity. The IMF resumed lending in 2003. Kenya continued to be troubled by ethnic violence and the occasional terrorist bomb, and in the summer of 2004 the country suffered a severe famine caused by crop failures and drought. That year the government completed a draft of a new constitution that would have weakened the president and created a vice president, but parliament failed to enact the legislation on time.

LIST OF MODERN RULERS

1963–78	Jomo Kenyatta
1978–2002	Daniel arap Moi
2002–	Mwai Kibaki

CONSTITUTION

The basis of the government of Kenya is the constitution of 1963, which has been amended several times, most recently in 2001. The amendment of 1964, called the Republican Constitution, established a republican form of government with a strong executive and a strong central government. There are 13 sections of the constitution, known as the Bill of Rights, that protect the fundamental rights and freedoms of the individual, including property rights. The National Assembly is the supreme state organ in theory, as the president has no powers of veto.

The president is the head of state, the head of government (as prime minister), and commander in chief of the armed forces. He must command a majority vote in the National Assembly, and if he loses a vote of confidence, he must either resign or dissolve the assembly and call for new elections within 90 days. The president is elected by popular vote in general elections for a term of five years. The winning candidate must receive at least 25 percent of the votes in five of Kenya's seven provinces and one area. He also must be an elected member of the National Assembly. The legal voting age in Kenya is 18.

Following the failed coup in 1982, Kenya became a *de jure* one-party state. The constitution was amended in December 1991 to permit the reestablishment of a multi-party state. In September 1997 the constitution was again amended, granting fair and equal access to the media for all political parties. An amendment written in 2004 would have created a prime minister and decreased the president's power, but it was not enacted.

PARLIAMENT

The unicameral National Assembly, which sits in Nairobi, consists of 224 members serving five-year terms, including 210 directly elected representatives, 12 members nominated by the president but selected by the parties in proportion to their parliamentary vote totals, and two *ex-officio* members (the attorney general and the speaker).

POLITICAL PARTIES

Most of the country's political parties are ethnic or regionally based with vaguely defined agendas. The ruling party for Kenya's first 40 years was the KANU, which still holds over one-quarter of the seats in parliament. Its support lies primarily with the Kalenjin ethnic groups, though Moi has attempted to be inclusive of other groups. The new ruling coalition party is the National Rainbow Coalition. The only other party with significant numbers of parliamentary seats is the Forum for the Restoration of Democracy–People, which has a large Luo ethnic base.

LOCAL GOVERNMENT

Kenya is divided for administrative purposes into seven provinces and one area. The provinces are Coast, North-eastern, Eastern, Central, Rift Valley, Nyanza, and Western; the area is Nairobi. Provinces are governed by provincial commissioners who are directly responsible to the president. The next level is the district; there are 69 districts, each headed by a presidentially appointed commissioner. Each district contains a varying number of divisions, each headed by a district officer. In the smallest

units, called locations or sublocations, the government is represented by chiefs or subchiefs.

LEGAL SYSTEM

The main sources of Kenyan jurisprudence are English common law, African customary law, legislative acts of the British Parliament before independence and of the National Assembly after independence, and judicial precedent, as reported in *East African Law Reports*. The Kenya Court of Appeals is the final court of appeal for all civil and criminal cases. The High Court includes the chief justice and at least 30 other High Court judges. The subordinate district magistrate's courts are divided into three classes. At the third-class level are the six *qadi* courts, which have jurisdiction over Muslims in cases relating to personal status. At the village level, bodies of elders settle disputes related to African traditional law. Kenya retains the death penalty for violent crimes and treason.

HUMAN RIGHTS

In terms of civil and political rights, Kenya is ranked as a partially free country. The government's overall human rights record is generally poor, though there have been improvements, especially in the latter part of the 1990s, following allegations by Amnesty International of the systematic torture of criminal suspects and opposition political activists. The new administration is devoted to amending some of the nation's human rights problems.

Individual privacy rights are virtually nonexistent, and freedom of assembly is restricted. Freedom of speech and press are accepted in principle but are restricted under various sections of the penal code, and police have at times harassed, beaten, and arrested journalists who were blatantly critical of the government and its policies. Although the trade union movement is relatively free, strikes are always illegal, and trade unions may be deregistered if they attempt to pursue a strike against government advice. Police and security forces have abused civilians with torture, illegal imprisonment, and execution. Child labor, child prostitution, violence against women, and female genital mutilation are all problems.

FOREIGN POLICY

Despite wars, ethnic unrest, and political chaos in neighboring Somalia, Sudan, and Ethiopia, Kenya continued to maintain relatively cordial, if at times tense, relations with these nations throughout the 1990s. In 1997 Kenya protested to the Ethiopian government following a clash between the countries' security forces that left 16 Kenyans dead. The crisis was resolved when the two coun-

tries agreed to reinforce border security to prevent cattle rustling and illegal arms shipments. The border between Kenya and Sudan continued to be an issue throughout the 1990s, but relations remain good because of Kenya's mediation efforts to end the fighting between Sudan's Islamic government and the Christian and animist rebels in southern Sudan. In 2005 Kenya was host to the commission signing the Sudan North-South Comprehensive Peace Accord.

Relations with Uganda and Tanzania have greatly improved with the movement to revive the defunct East African Economic Community, consisting of Kenya, Uganda, and Tanzania.

In an effort to repair its tarnished human rights reputation, Kenya finally cooperated with international authorities in 1996 in the arrest of Rwandan Hutu rebels suspected of genocide in the civil war in that country. Despite strong international condemnation, the Moi government had refused to cooperate with the international tribunal investigating war crimes in Rwanda or hand over suspects who had fled to Kenya.

While Kenya has traditionally enjoyed good relations with Western nations, strains began to show in those relationships in the 1990s, with Western donors suspending aid because of Kenya's refusal to follow IMF and World Bank restructuring programs and to act against internal corruption. Moi frequently blamed Western nations for the political and economic instability that characterized his last decade in office. By the late 1990s Kenya was again back in the good graces of the IMF and World Bank, and aid once again began to flow to the country; international support improved further with the election of the opposition leader Mwai Kibaki in 2002, who pledged to root out corruption. Relations with the United States became strained in 1999 when the Kenyan High Court refused to extradite a suspect accused in the bombing of the U.S. embassy in Nairobi a year earlier, which left 254 people dead—mostly Kenyans—and more than 5,000 injured. Nevertheless, the U.S. has cordial relations with Kenya; thousands of U.S. citizens visit or live in Kenya every year; the majority of these Americans are missionaries or volunteers.

Also in 1999 Turkish secret police operating in Kenya captured the leader of the Kurdistan Workers' Party, Abdullah Öcalan, in a raid apparently planned in conjunction with Kenyan forces. Relations with Greece became strained as a result, since Öcalan had been hiding in the Greek embassy in Nairobi, and Kurdish activists occupied several Kenyan diplomatic missions in Europe in protest.

DEFENSE

The president is the commander in chief of the Kenyan Defense Forces. The minister of defense presides over

the Defense Council, while the Defense Headquarters is headed by the chief of defense staff, who is also commander of the army. The right to declare war is vested in the National Assembly. There is no draft, and manpower is provided by voluntary enlistment. Kenya has a small national defense force consisting of an army, an air force, and a navy. The military exerts little influence on national affairs.

ECONOMY

Kenya has a per capita income of \$1,100 and remains one of the world's low-income countries; half its population lives in poverty. Relative to the rest of Africa, Kenya has a reasonably diversified economy, with agriculture contributing about 19 percent of gross domestic product (GDP), industry 19 percent, and services 62 percent. Unemployment remained endemic through the 1990s, with fully 40 percent of the workforce jobless in 2001.

After independence Kenya, with its free market economy, was considered one of the most prosperous nations in Africa, promoting strong growth through public investment and incentives for both local and international private investment. Growth rates above 6 percent were common. However, between 1974 and 1990 the country's economic performance began a steep decline, as the government reversed course and launched a massive intrusion into the private sector.

From 1991 to 1993 the country experienced its worst economic performance since independence. GDP growth stagnated, and inflation reached 100 percent per year. The budget deficit was over 10 percent of GDP, and government corruption took its toll on the private sector. Not only did foreign investment dry up, but international aid donors, disgusted with the government's failure to reform, suspended aid.

Since 1993 the government has implemented a program of economic liberalization and reform, including the removal of price controls and import-licensing restrictions. Exchange and interest rates are now fully determined by market forces. After years of uneasy relations with the World Bank and IMF, the end of the 1990s saw a renewal of government cooperation and a reversal of the decline, with growth rates topping 4 percent and inflation falling to under 3 percent annually by 1998. By then

the government had managed to meet crucial economic benchmarks, especially the budget deficit target of 1.7 percent of GDP.

Long-term obstacles to development include power and electricity shortages, the government's continued interference in the private sector, corruption, and the relatively high population growth rate. One promising sign is the revival of the East African Economic Community. By 1999 Kenyan companies were playing a key role in privatization in Uganda and Tanzania.

Severe drought in 1999 and 2000 caused water and energy rationing and reduced agricultural sector productivity. A new economic team was put in place in 1999 to revitalize the reform effort, strengthen the civil service, and curb corruption. The IMF and World Bank renewed their support to Kenya in mid-2000, but a number of setbacks to the economic reform program in late 2000 renewed donor and private-sector concern about the government's commitment to sound governance. Growth continued to lag in the early 2000s, as the IMF once again cut off loans to the nation because of governmental corruption. The election of the new government in 2002 brought about slight improvements; the IMF resumed loans, and GDP grew 1.7 percent in 2003. A famine in 2004, however, did nothing to help the economy and forced the government to ask for international assistance. Tourism has slackened owing to fears of terrorism.

ENVIRONMENT

Kenya faces a multitude of environmental concerns, many of them stemming from its population growth rate and urbanization. There are few environmental regulations, and enforcement of the few laws is virtually nonexistent. One of the chief concerns is the deterioration of the freshwater supply, which is polluted from urban and industrial waste. Water quality is also decreasing because of the uncontrolled use of pesticides and fertilizers. Soil erosion, desertification, and deforestation are major problems. Lake Victoria has become infested with water hyacinth, which have drastically changed environmental conditions and limited access to the lake's natural resources. The poaching of endangered species has caused populations of some animals to continue to drop, despite laws protecting them. Kenya is party to several major international conventions to protect the environment, including treaties on biodiversity, desertification, endangered species, the Law of the Sea, marine dumping, whaling, and ozone layer protection as well as the Nuclear Test Ban accord.

LIVING CONDITIONS

Living conditions in cities have deteriorated in recent years. Nairobi is a cosmopolitan city with many modern amenities, but it also suffers from terrible crime, and people have become hesitant to venture out at night for fear of muggings. Housing has become very crowded as more people move into the city. Most people live in small apartments or haphazardly constructed shelters. There is electricity but not necessarily running water. The wealthiest Kenyans live in large houses called villas; Kenya's rural pastoralists, meanwhile, still live in traditional houses and produce all their own food. The Masai have started settling down and farming, as land for grazing their cattle has become scarce. Women must collect firewood and water daily. In the country, huts are made of earthen bricks or mud with thatched roofs and dirt or concrete floors; they are lit with oil lamps. Electricity is scarce. The village market is often the main social gathering area. Traffic everywhere is terrible, and buses are dangerous, in terms of both accidents and robberies.

HEALTH

Kenya's government provides free health care to all citizens at government clinics available throughout the coun-

try; patients must pay for their own drugs and bandages, however. There are also private, church-run and volunteer clinics and hospitals. The best hospital is Kenyatta National Hospital, which serves as a teaching hospital for the medical school. Doctors and nurses are underpaid and overworked, and there are few supplies. There is also a Flying Doctor service for emergency cases in remote areas. Most Kenyans see doctors rarely and instead treat their ailments with herbal remedies. Most babies are delivered by midwives.

HIV and AIDS have become a terrible problem in Kenya. In 2004, 6.7 percent of the population was infected with HIV. Other common illnesses include malaria, typhoid fever, cholera, yellow fever, hepatitis, meningococcal meningitis, and schistosomiasis.

FOOD AND NUTRITION

Many Kenyans do not have enough to eat, and malnutrition is a serious problem. Kenyan cuisine is basic, consisting of a starch such as boiled maize meal (called *ugali*), rice, or potatoes, supplemented with a sauce made of beans or meat and perhaps flavored with curry. Goat is a common meat, and goat shish kebabs are commonly served to guests. People eat fish on the coast. Fruits are widely available, including bananas, papayas, custard apples, mangoes, and passion fruit. Tea, or *chai*, is ubiquitous, usually served mixed with milk, sugar, and ginger. People also like to drink beer.

 85.1

STATUS OF WOMEN

While the constitution offers equal rights and freedoms to men and women, the country has few specific prohibitions against sex discrimination. Despite some gains, women remain vastly underrepresented in both business and politics, mainly because of traditional views of the female role as subservient to the male's. Women are seriously underrepresented at decision-making levels in the government, with only eight female members of parliament (four elected, four nominated) in the 1997 National Assembly. The Women's Political Caucus, formed in 1997, continues to lobby over women's issues. A parliamentary proposal to reserve up to one-third of all National Assembly seats for women was overwhelmingly defeated in 1997.

The constitution continues to discriminate against women by allowing the transfer of citizenship through the male bloodline only. Monthly average income for working women is 37 percent below that of men, and fewer than 5 percent of land titles are in women's names. Men outnumber women by a 2 to 1 ratio in higher educational institutions, and 70 percent of illiterate persons in the country are women. Female genital mutilation is still widespread, despite a law banning it in children. Men can still have more than one wife. Domestic violence is common, as is prostitution of both children and adults.

 Women's Share of Wage Employment Non-agricultural %: 38.5

WORK

Most Kenyans work as subsistence farmers and herders, raising the food they need to feed their own families. Some 75 percent of workers are employed in agriculture; some of them work on large-scale farms producing cash crops such as coffee and tea. Subsistence farmers sell surplus vegetables and other products when they can. The amount of arable land is decreasing, as the population is growing rapidly, putting intense pressure on the land and making it increasingly difficult for farmers to make ends meet. The remainder of the workforce is mostly employed in tourism and industry; many of these workers are farmers who could not support their families and so moved to the cities to find paying work. Many people make crafts and sell them in the markets. Child labor occurs but is becoming less common as people value education more.

EDUCATION

The government-run education system consists of eight years of primary school, four of secondary school, and four years of university. Primary school education, which begins at age six, is compulsory and provided free of charge. However, free primary schooling was introduced abruptly by the Kibaki administration, and as a result there have not been enough schools and teachers to support the school-age population. Families must supply their own books and uniforms, which puts financial pressure on many parents. Children and communities all help building and maintaining school buildings. Students must pass a difficult examination at the end of primary school in order to continue their education. About 67 percent of primary-school-age children are enrolled in classes; that rate falls to less than 25 percent in the secondary-school years. The country has seven universities, four state universities and three under private charter. The University of Nairobi is considered one of the best institutions of higher learning in Africa and has a renowned school of veterinary medicine. About 15 percent of the country's adult population is considered to be illiterate.

SCIENCE AND TECHNOLOGY

Kenya's Ministry of Education, Science, and Technology has set ambitious goals for the improvement of science

education in Kenya. In particular, it wants to develop a comprehensive system of technical training by the year 2010. In the meantime, Kenya is not very technologically advanced. Electrical supply is uneven, the telephone system is unreliable, and in 2002 only 400,000 people were using the Internet.

Science and Technology

MEDIA

Kenya has a thriving media industry, especially by African standards. There is no official censorship, though all newspapers and magazines are required by law to register and secure a publishing license. The Kibaki administration promised to liberalize the media, but so far that has not happened, and in 2003 the government cracked down on "alternative" newspapers. Two publications, the *Nation* and the *Standard*, dominate the print media and also run broadcasting enterprises. Kenya also has one of the largest book-publishing industries in Africa.

The government maintains a virtual monopoly over the electronic broadcast media. It controls the Kenya Broadcasting Corporation, which operates the main radio stations and six broadcast television and cable television stations and networks in the country. Concerns friendly to the government control the two other television broadcast outlets, Kenya Television Network and Stellavision. The BBC, Voice of America, and Radio France Internationale all broadcast within Kenya.

CULTURE

Kenyans love music and dance. Traditional songs tell stories about tribal history or celebrate weddings and other occasions. Native instruments include the *nyatiti*, a kind of harp, and the *udi*, similar to an Indian sitar. Dancers and musicians tie cans full of beans to their ankles to

make a rattling noise. Kenyans of all ages enjoy dancing and enacting tribal dramas, and schools sponsor dramatic competitions in which members of different tribes enact their own cultural performances. Kenyan craftsmen make carvings of ebony or soapstone, fashion jewelry out of gold, brass, shells, and beads, and weave baskets and rugs of sisal. Weavers decorate cloth with batik patterns. Famous Kenyan authors include Ngugi Wa Thiong'o, Meja Mwangi, and Ali Mazrui.

FOLKLORE AND MYTHOLOGY

Folktales are still popular in Kenya, especially in rural areas, where tribal elders tell stories around the fire at night. People also like traditional proverbs. Each ethnic group has its own folk tales and myths. Masai and Kikuyu legends often feature stories about cattle, which they believe were given to them by a god. Stories about tricksters, such as the hare or the tortoise, are popular. Ogres often appear as villains.

ENTERTAINMENT AND RECREATION

Kenyans love to go to movies. In rural areas, there are mobile movie theatres that travel around bringing movies to the people. They also enjoy going out to dance and listen to music, especially to the popular *benga* style. Children like playing traditional games such as *kodi*, similar to jacks, and *putano*, similar to marbles. Adults play checkers and cards.

Kenya offers a wealth of outdoor recreational possibilities, including swimming, scuba diving, windsurfing, game fishing, and white-water rafting. Hiking and trekking are extremely popular with tourists, as are safaris to the nation's game preserves.

ETIQUETTE

Etiquette varies by tribe and ethnic group, but observing standards of behavior typical of the United Kingdom is usually acceptable for anyone. People are usually punc-

tual for meetings, both business and social. Most people are quite friendly and appreciate courtesies such as smiles and handshakes. It is considered rude to chew with one's mouth open.

FAMILY LIFE

For Kenyans, tribe is the most important facet of identity. There are more than 70 tribes in Kenya, and though ethnic distinctions are becoming blurred, most Kenyans still want to know first and foremost which tribe someone belongs to. People will sacrifice individual desires for the good of the group, and tribes always take care of their sick and elderly members.

Rural people often live in small villages of relatives. Men may have several wives, each of whom may have four to six children. Children live with their mothers and sometimes their fathers; girls remain at home until they marry, but older boys often go to live in separate houses with their grandparents. Women do most of the housework, building houses, farming, collecting water and wood, and caring for children. AIDS has created a crisis in Kenyan families. Children have become orphaned, and many families have lost the young, strong adults to whom they looked for support.

PERSONAL APPEARANCE

People in the countryside typically still wear traditional garments, which are often made of colorfully woven and dyed cloth. Ethnic groups and tribes each have their own styles. Western attire has become more common in the cities, but there has been a movement back to traditional African styles. In 2004 the Kenyan government announced the creation of a new national dress, based on traditional colorful African robes. This was part of a movement to rid the nation of vestiges of colonialism, which remained in the requirement that members of parliament dress in suits and ties.

SPORTS

Kenya has had a national sports program since 1951, when it formed the Amateur Athletic Association. Since then, schools and villages have been facilitating athletic events, and as a result Kenya has produced some internationally recognized athletes. It is especially known for its distance runners; some of the most famous runners include Mike Boit, Paul Ereng Kipchoge Keino, Peter Koech, and Henry Rono. Kenyan track and field athletes won eight medals at the 1996 Olympics. Soccer is also extremely popular; the Harambee Stars are the national soccer team. Other common sports are volleyball, field

hockey, cricket, and golf. The annual Safari Rally is one of the most difficult automobile races in the world.

CHRONOLOGY

- 1963** In pre-independence elections, the leader of the ethnic Luo- and Kikuyu-backed KANU, Jomo Kenyatta, is elected prime minister under the constitutional monarchy.
Kenya achieves independence from Great Britain.
- 1964** Kenya declares itself a republic. Kenyatta assumes the presidency.
- 1965** Kenyatta initiates a program of land reform.
- 1966** Vice President Oginga Odinga resigns from the government and forms the KPU, an opposition party drawing ethnic Luo support, which the House of Representatives effectively keeps out of office.
- 1969** Cabinet member Tom Mboya is assassinated, further eroding Luo support for Kenyatta's government.
The KPU is banned and its leaders detained.
- 1974** Kenyatta is elected unopposed to a third term as president.
- 1978** Kenyatta dies. Vice President Daniel arap Moi, an ethnic Kalenjin, becomes president.
- 1982** Moi alters the constitution to illegalize all parties but KANU.
Air force personnel attempt a coup that proves unsuccessful.
Odinga is arrested under suspicion of instigating the coup.
- 1983** Moi accuses Charles Njono, Kenya's minister of constitutional affairs, of conspiring with foreign agencies to supplant Moi and compels Njono to resign his post.
Moi is elected to a second term as president.
- 1986** The government arrests numerous members of parliament for allegedly cooperating with the nascent left-wing opposition group, Mwakenya.
The constitution is amended to eliminate voters' right to a secret ballot.
- 1988** Moi dissolves the National Assembly in February.
In March, Moi is reelected to a third term as president amid cries of foul play.
- 1991** Kenya restores multiparty democracy by constitutional amendment.
- 1992** In multiparty elections Moi wins fourth term as president.
More than 2,000 people are killed in ethnic tribal clashes in western Kenya. All political rallies are outlawed "to quell ethnic unrest," according to the government.
- 1993** The Central Organization of Trade Unions stages a general strike.
The British Commonwealth gives the 1992 Kenyan general election a clean bill of health.
- 1994** Oginga Odinga, one of Moi's chief rivals for power and the chairman of FORD, dies of natural causes.
- 1995** Kenya refuses to cooperate with an international tribunal investigating genocide in Rwanda.
Roman Catholic bishops in Kenya publish a pastoral letter critical of government's human rights record.
- 1996** At their first regional meeting, presidents Moi, Yoweri Museveni of Uganda, and Benjamin Mkapa of Tanzania formally inaugurate the Permanent Tripartite Commission for East African Cooperation.
Succumbing to international pressure, Kenya arrests Hutu rebels charged with genocide in Rwanda.
- 1997** Moi wins another term with a plurality of the vote in multiparty elections.
Amnesty International publishes a report condemning widespread use of torture by Kenyan authorities.
- 1998** A car bomb explodes at the U.S. embassy in downtown Nairobi, killing 254 people and injuring 5,000 others.
The 270,000-strong Kenyan National Union of Teachers organizes an unsuccessful strike against the Moi government to demand back pay.
- 1999** Kenya refuses to extradite to the United States a Pakistani suspected of involvement in the U.S. embassy bombing. Turkish agents capture Kurdish leader Abdullah Öcalan in Nairobi, triggering worldwide protests against Kenya and occupation of Kenyan diplomatic missions in Europe by Kurdish activists.
- 1999** Richard Leakey is appointed head of anticorruption effort.
- 2001** Circumcision of girls under 17 is banned. Leakey is accused of abusing power. Ethnic violence breaks out in Nairobi.
- 2002** The British Ministry of Defense compensates Masai and Samburu tribespeople injured by British army explosives. An Israeli-owned hotel in Mombasa is blown up by a car bomb. Mwai Kibaki wins the presidential election.
- 2003** The government appoints John Githongo anticorruption head. The IMF resumes lending money to Kenya because of its anticorruption efforts.

- 2004 Parliament misses the deadline to approve a new constitution. A famine strikes rural Kenyans. Female ecologist Wangari Maathai wins the Nobel Peace Prize.
- 2005 Violence breaks out over land and water rights.

On a red background, a frigate bird in flight above a sun rising over alternating wavy lines of blue and white

NATIONAL EMBLEM

The motif of the national flag on a shield; at the bottom, in black lettering on a gold and red scroll, is the motto *Te mauri te raoi ao te tabomoa* (Health, peace, and prosperity).

NATIONAL ANTHEM

“Stand Up, Kiribati”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), July 12 (Independence Day), August 4 (Youth Day), Christmas, Boxing Day, Good Friday, Easter Monday, Queen’s Birthday, Prince of Wales’s Birthday, other Christian holidays

DATE OF INDEPENDENCE

July 12, 1979

DATE OF CONSTITUTION

July 12, 1979

GEOGRAPHICAL FEATURES

Kiribati is made up of three island groups of 32 low atolls and Banaba, or Ocean Island, a raised atoll to the west. The total land area is 811 sq km (313 sq mi). The three island groups are dispersed over an area of 3 million sq km (1.1 million sq mi) in the mid-Pacific: the Gilbert Islands to the west, the Phoenix Islands along the equator, and the Line Islands to the north and south of the equator. The country extends 3,870 km (2,400 mi) from east to west and 2,050 km (1,275 mi) from north to south. The total coastline is 1,143 km (778 mi).

PHOENIX IS.

TUVALU

Cook Islands (N.Z.)

1248 Kiribati

tinuous breezes from the sea. There are no true seasonal changes, in the conventional sense of the term. Rather, the year is divided into periods of greater or lesser rainfall, with a season of northwesterly trade winds from March to October and a season of gales and rains from October to March. Average annual rainfall varies from 3,000 mm (118 in) in the northern islands to 1,500 mm (59 in) at Tarawa and 700 mm (28 in) in the southern Line Islands. Daytime temperatures vary between 28°C (79°F) and 32°C (90°F). Drought conditions are common on many atolls.

Climate and Weather

Mean Temperature: 79°F to 90°F
Average Rainfall
Northern Islands: 118 in
Tarawa: 59 in
Line Islands: 28 in

FLORA AND FAUNA

Kiribati cannot support much vegetation because it lacks soil and fresh water. There are many coconut trees planted by humans; native plants include mangroves, scrub bushes, pandanus, ferns, and epiphytes. On the islands themselves, the only animals are Polynesian rats, sea birds, and lizards. Christmas Island is home to many kinds of birds, including petrels, frigate birds, noddies, and the Christmas Island warbler, which is found nowhere else in the world. The oceans, on the other hand, are home to stunningly beautiful coral reefs, reef fishes, and other forms of aquatic plants and animals. Fish species include grouper, sailfish, tuna, bonefish, trevally, wahoo, shark, and milkfish. There are nature reserves on Starbuck Island, Malden Island, and Phoenix Island. The rise in sea levels is causing fresh water on the islands to become salty, which endangers all terrestrial plant and animal life.

POPULATION

Population Indicators

ETHNIC COMPOSITION

The population is overwhelmingly Micronesian. In appearance residents bear a striking resemblance to Indonesians. There is some evidence of intermingling with Polynesians, who constitute the largest minority group. A scattering of Europeans and Chinese complete the ethnic mosaic.

LANGUAGES

English is the official language, but the language of the people is I-Kiribati (formerly Gilbertese), a Micronesian language derived from the Austronesian linguistic family. The local alphabet has only 13 letters; “ti” functions as the letter “s,” such that the country’s name is pronounced “kee-ree-bahs.”

RELIGIONS

Nearly 94 percent of Kiribatians are Christians, of whom 52 percent are Roman Catholic and 40 percent are Protestants. The evangelization of the Northern Gilbert Islands began in 1856 through the efforts of Hiram Bingham, who opened the first American Board of Commissioners for Foreign Missions station. Catholics are under the Diocese of Tarawa, Nauru, and Funafuti.

Religious Affiliations

Roman Catholic	53,600
Protestant	41,200
Other	8,200

HISTORICAL BACKGROUND

There is growing archaeological and linguistic evidence that the original inhabitants of Kiribati were present on the islands more than 3,000 years ago. The origin of these migrants was Southeast Asia. More recent immigration came from Samoa 500 to 600 years ago.

The European discovery of the islands occurred between 1764 and 1824 by the British navy. In 1892 they became a British protectorate under the name Gilbert and Ellice Islands, and they remained so until becoming a col-

ony in 1915. They were under the jurisdiction of the British high commissioner for the western Pacific until 1972, when they were placed under a governor directly appointed from London. In 1978 the Ellice Islands became the independent nation of Tuvalu. Despite demands by the people of Ocean Island (Banaba) for separation and independence, the Gilbert Islands were granted internal self-government in 1977. In 1979 the islands became an independent republic within the Commonwealth under the name Kiribati.

Upon independence in 1979 Ieremia T. Tabai, the former chief minister, assumed the presidency. He was returned to office in 1982. Later that year his government fell following a dispute over salary raises for several public officials. As provided by the constitution, the Council of State assumed interim administration. Tabai was reelected in 1983 and then again in 1987 despite others' assertions that he would be violating a constitutional provision limiting the president to three terms. Tabai contended that he had not served three full terms, since his second government was in power for less than a year.

In 1991 Teatao Teannaki won the presidency, but he was forced to resign in 1994 when he lost a no-confidence motion brought by the opposition. In 1994 Teburoro Tito of the Christian Democratic Unity Party won the presidential election, and he was reelected in 1998. In 1999 Kiribati was admitted to the United Nations. Also that year a severe drought led to the imposition of a state of emergency on March 3.

Tito was ousted in a vote of no confidence in March 2003. Anote and Harry Tong, two brothers, ran against one another in the presidential elections in July of that year, and Anote won. Anote Tong faces major economic problems stemming from a lack of jobs and a growing population as well as the losses by the state-owned Kiribati Air.

One perennial problem for the Kiribati government is Banaba Island, the residents of which have long petitioned the government to let them secede and join Fiji. The residents of Banaba have lived in Fiji since the 1940s, when their island was devastated by phosphate mining. They have full Fiji citizenship. The government of Kiribati has responded by giving Banabans special treatment in the legislature.

LIST OF MODERN RULERS

1979–91	Ieremia T. Tabai
1991–94	Teatao Teannaki
1994–2003	Teburoro Tito
2003–	Anote Tong

CONSTITUTION

Kiribati is a sovereign democratic republic under the constitution that came into force on independence in 1979.

The president, or *beretitenti*, is both head of state and head of government and presides over the cabinet, which consists of the *beretitenti*, the *kauoman-ni-beretitenti*, or vice president, the attorney general, and not more than eight ministers. Presidents are limited to three terms of office, regardless of the length of any of the terms. After each general election the House of Assembly, or Maneaba ni Maungatabu, nominates three or four members to stand as candidates for president, and the citizenry elect the president from these candidates.

The constitution makes special provisions for Banaba, guaranteeing the Banabans' inalienable right to enter and reside in Banaba (from which they had been evacuated because of the adverse effects of the open-cast mining of phosphates) and their right to the land upon the completion of phosphate extraction. The constitution also provides for a Banaba Island Council.

The constitution provides for a Council of State composed of the chairman of the Public Services Commission, the chief justice, and the speaker of the Maneaba ni Maungatabu. The council serves as an interim government when the president no longer enjoys the confidence of the legislature.

Elections are held on the basis of universal adult suffrage beginning at age 18. The constitution provides for a judicial system composed of the High Court, the Court of Appeals, and local magistrates' courts.

PARLIAMENT

The national legislature is the Maneaba ni Maungatabu (House of Assembly), comprising 42 members: 40 members elected for four-year terms, one nominated member from Banaba, and the attorney general as ex officio member. The cabinet is directly responsible to the Maneaba ni Maungatabu. The Maneaba can depose a president by majority vote.

POLITICAL PARTIES

There are no formally organized political parties, only ad hoc groupings that become extinct after a few months or years. Among them are the Mouth of the Kiribati People, Christian People's Party, National Progressive Party (Boutokaan Te Koaua), Kiribati United Party, and Christian Democratic Party (Maneaban Te Mauri). Most candidates for public office run as independents.

LOCAL GOVERNMENT

Under the Local Government Ordinance of 1966, elected councils function in each of the inhabited islands with the authority to enact local bylaws and oversee social ser-

1250 Kiribati

vices. Administrative government is divided into three units—the Gilbert Islands, Line Islands, and Phoenix Islands—and six districts: Tarawa, North Gilbert, South Gilbert, Central Gilbert, Banaba, and the Line Islands. The districts have retained much autonomy due to the geographic layout of the nation. There are also 21 island councils, one for each of the inhabited islands: Abaiang, Abemama, Aranuka, Arorae, Banaba, Beru, Butaritari, Kanton, Kiritimati, Kuria, Maiana, Makin, Marakei, Nikunau, Nonouti, Onotoa, Tabiteuea, Tabuaeran, Tamana, Tarawa, Teraina. Council powers include taxation and independent budget planning.

LEGAL SYSTEM

The judiciary consists of the High Court, a Court of Appeals, and magistrates' courts. The High Court and Court of Appeals are superior courts of record, presided over by the chief justice, who is appointed by the *beretitenti*, and local magistrates' courts, representing a consolidation of former land and other subordinate courts.

The only prison, on Tarawa, accommodates all prisoners sentenced to terms of two months or more; those given shorter terms are not confined but serve their sentences in their homes. Prison conditions are generous, the diet is good, and the discipline is not onerous or harsh. Prisoners generally must work on public projects. Prison officials may reduce sentences of more than a month by as much as one-third for good behavior. Imprisonment rarely carries any social stigma.

HUMAN RIGHTS

A traditional society with a constitutional democracy, Kiribati has no significant human rights problem. All human rights are respected.

FOREIGN POLICY

Kiribati's international contacts are quite limited except for its membership in the Commonwealth and diplomatic relations with the United Kingdom, United States, New Zealand, Australia, and neighboring Pacific islands. It has been working to establish itself as a state in the world community. Under a 1979 treaty the United States relinquished all claims to the Phoenix and Line Island groups. Kiribati suspended diplomatic relations with France in 1999 to protest French nuclear weapons testing at Mururoa Atoll in French Polynesia. In 1992 Kiribati asked Japan for compensation for war damages, and Japan finally agreed to discuss the matter in 2000. Kiribati joined the United Nations in 1999. The following year Kiribati and

its neighbors Tuvalu and the Maldives announced that they were taking legal action against the United States because of its refusal to sign the Kyoto Protocol. In November 2003 Kiribati established diplomatic relations with Taiwan; China retaliated by severing diplomatic ties with Kiribati and removing its satellite tracking system from the main island.

DEFENSE

No military force is maintained. A police force enforces the law and carries out paramilitary functions. Defense assistance is provided by Australia and New Zealand.

ECONOMY

The economy of Kiribati was based, until 1979, on the production of phosphates on the island of Banaba. Production ended in 1979, which devastated the economy; phosphate exports had accounted for about 80 percent of total export earnings. Per capita gross domestic product (GDP) fell from \$750 in 1979 to \$370 in 1987. Kiribati has yet to find an adequate replacement industry.

The nation has very few resources, and poor soil limits the production of agricultural commodities. It must import all essentials, including most of its food. It sustains itself through a trust fund financed by phosphate earnings and has shepherded its reserve fund well.

The economy is currently dependent on tuna fish and copra (dried coconut meat) exports, tourism, and foreign aid from the United Kingdom, Australia, and international organizations. Copra brings in about two-thirds of export revenues but is dependent on the world demand for coconut oil. Fishing licenses bring in some money, but the nation's maritime area is so vast that it is impossible for the government to force all vessels in its waters to pay for the right to fish there, and thus the nation loses millions of dollars every year from unlicensed fishing. About 5,000 tourists visit annually to see World War II battle sites, fish, and scuba dive; Millennium Island, the closest land mass to the International Date Line, attracts some visitors. Kiribati also exports some pet fish, shark fins, and seaweed, primarily to Japan and Australia.

ENVIRONMENT

For generations Kiribati's natural resources were used in moderation. However, with growing urbanization and westernization, environmental problems have resulted in unmanaged waste disposal, inefficient sewage services leading to contaminated groundwater and lagoons, the emergence of land-poor squatter areas, and the loss of terrestrial and coastal vegetation. Kiribati is extremely concerned about global warming, which has a very real and noticeable effect on its landscape. As sea levels have risen, some of Kiribati's land has disappeared, and its freshwater supply is in danger of saline contamination.

LIVING CONDITIONS

Kiribati has a fairly poor population, with a per capita income of about \$800 a year. Because almost all consumer goods must be imported, they are in short supply and can be expensive. Transportation is difficult. Air Kiribati flies small aircraft to most of the populated atolls in the Gilberts. Small ships with irregular schedules run between outlying islands. In order to travel between the Gilbert Islands and the Line Islands, a traveler must first go to Hawaii and either Fiji or the Marshall Islands. Traditional island homes are made of wood frames with thatched roofs and woven mats for sides. They can be quickly opened or shut for ventilation or to keep out rain. They fall apart easily but can also be easily rebuilt.

HEALTH

Despite a short life expectancy of 62 years as of 2004, Kiribati's biggest health problem is its rapidly growing population, which is outstripping the nation's resources. Each woman bears an average of 4.2 children. The infant mortality rate is high, at almost 50 deaths per 1,000 births, but the birthrate is much greater than the death rate. Modern health care is scarce, especially on the outer islands; the land masses are too far apart for adequate medical coverage to be provided.

FOOD AND NUTRITION

Traditionally, the people in Kiribati produced all their own food, growing coconuts, taro, sweet potato, and other vegetables, and catching fish and other sources of protein in the sea. Today, imported food is more common and is seen as more prestigious than the indigenous diet and has thus been displacing native food. The most popular local alcoholic beverage is a sour toddy, which is brewed from coconut palm.

STATUS OF WOMEN

Violence against women is not a major concern in Kiribati society. Communal pressures are brought to bear on those who transgress the laws in this respect. Women have full rights of ownership and inheritance of property and have full and equal access to education. Married women have

always been considered the equals of their husbands—though unmarried women are not respected at all.

WORK

Most islanders are subsistence farmers and fishermen, growing food crops such as bananas, breadfruit, and papaya for their own consumption. These workers are not included in the official tally of the labor force. Some work in the coconut industry; the nation has plans to build a co-pra-processing plant in Tarawa. Tourism employs a small number of people. The unemployment rate is quite low, officially at 2 percent, but the government estimates that 70 percent of the working population is underemployed. Many of Kiribati's people have chosen to work abroad, sending home over \$7.5 million annually.

 Unemployment %: 2

EDUCATION

Every atoll has at least one primary school. Traditionally, primary education was dominated by mission schools, but in the 1980s the government began to take control. The education system, operated by the Ministry of Education, embraces the Overseas Scholarship Programme, three local tertiary institutions (Tarawa Teachers College in Bikenibeu and Tarawa Technical Institute and the Marine Training School in Betio), the secondary and primary schools, the School Broadcasting Service, the Curriculum Development Unit, and the National Library and Archives.

Schooling is free, universal, and compulsory for nine years. Schooling lasts for 12 years, as divided into six years of primary school, three years of middle school, and three years of secondary school. Kiribati participates in the Kiribati Extension Center of the University of South Pacific, based in Fiji.

SCIENCE AND TECHNOLOGY

Kiribati lacks a technological infrastructure. Telecommunications between islands are expensive and unreliable. In 2002 there were about 4,500 telephone lines and 500 cellular telephones in service. There is only one Internet service provider on Tarawa, and it is extremely expensive. There is no broadband service. In 2002 only about 2,000 islanders were using the Internet.

MEDIA

The media is generally allowed the freedom to express differing viewpoints. The government runs a weekly newspaper called *Te uekera*, and there is also a new private weekly paper called *Kiribati New Star*. The Catholic and Protestant churches both publish newsletters and magazines, which are a major source of information for many islanders.

The government-owned Radio Kiribati broadcasts on medium-wave and shortwave transmitters. The programs are in English and I-Kiribati. President Ieremia Tabai attempted to set up a private radio station, Newair FM 101, in 2000 but was prevented from doing so when the station's directors were fined for operating an unlicensed station. There is no domestic television.

The National Library and Archives has a collection of 40,000 volumes.

CULTURE

Religion is an important part of Kiribati's culture. People take the Sabbath very seriously, and no one does anything that could be considered work on Sundays. The local people make some handicrafts, such as carvings. The war canoe is a spectacular traditional art form. People also treasure those who know how to construct a rectangular *maneaba*, or council house, which forms the center of most villages. One traditional art form is a cappella chanting; between one and four singers perform chants for ceremonial events, such as initiations or weddings.

FOLKLORE AND MYTHOLOGY

The people of Kiribati have long been isolated from the rest of the world and from one another, and their traditional folk beliefs have thus survived. People believe in ghosts called *anti* and in magic. They erect small shrines in the outdoors to communicate with spirits and ancestors.

ENTERTAINMENT AND RECREATION

Kiribati is a fairly quiet place without much organized recreation. The scuba diving and game fishing are excellent, as are the beaches. Traditional activities such as dancing and making shapes out of string are popular local activities.

ETIQUETTE

The people of Kiribati follow strict rules of etiquette; old men are the ones who remember all the rules. It is rude

to turn one's back to people, to interrupt old people, or to act out of turn during a ceremony. When sharing food, people observe strict rules of priority. They consider it very insulting to have their heads touched, which caused a great deal of misunderstanding when the first missionaries arrived.

FAMILY LIFE

The clan is the fundamental unit of Kiribati family life. Every clan has a *maneaba*, or meeting house, which is used by a council of older men who lead the clan. Within the family, married women are considered the equals of men. Families do not look on women as servants but as valuable members with their own wealth. Traditionally, however, an unmarried woman is considered worthless. Polygamy has occurred but is very rare. Divorce is uncommon. The adoption of other people's children is very common.

PERSONAL APPEARANCE

The islanders typically dress in casual light clothing. Men wear loose shirts and shorts made of cotton, and women usually wear wraparound garments called *lavalava*. People are quite modest, especially in the outer islands, where women never appear in shorts or short skirts. Local people do not wear revealing bathing suits; bikinis are considered inappropriate for both sexes.

SPORTS

Canoe racing is a popular sport among islanders. People also like playing and watching soccer and volleyball. Some people practice an indigenous martial art form.

CHRONOLOGY

- 1979** Kiribati becomes an independent republic within the Commonwealth of Great Britain, with Ieremia T. Tabai as president. Kiribati and the United States sign an agreement under which the United States relinquishes all claims to territory in the Phoenix and Line island groups, including Canton, Enderbury, and Hull.
- 1982** President Tabai is defeated in a vote of no confidence by the Maneaba ni Maungatabu and resigns.
- 1983** President Tabai is reelected in legislative balloting and resumes office as president.
- 1987** Tabai is reelected after a constitutional debate over the legitimacy of a fourth term in office.

- 1990** Kiribati's economy suffers. The value of exports is little more than one-quarter of imports. Britain provides economic assistance to small-scale industries in an effort to help Kiribati reduce its imports.
- 1992** Kiribati asks Japan for compensation for war damages.
- 1994** Teburoro Tito is elected president.
- 1995** Kiribati moves the International Dateline east of its easternmost island, Caroline Island, to ensure that the whole country is on the same date.
- 1998** Tito is reelected president with 52 percent of popular vote, and his Maneaban Te Mauri party claims 14 of 39 seats in the House of Assembly.
- 1999** Two of Kiribati's uninhabited islands, Tebua Tarawa and Abanuea, disappear beneath the waves as global climate changes raise sea levels to new heights. Caroline Island is renamed Millennium Island.
Prolonged drought leads to the declaration of a state of emergency on March 3. Kiribati joins the United Nations.
- 2000** Japan agrees to discuss compensation of victims of World War II. A mass grave containing 20 U.S. marines is found; the remains are sent back to the United States.
- 2002** Kiribati, Tuvalu, and the Maldives agree to take legal action against the United States for refusing to sign the Kyoto Protocol.
- 2003** President Teburoro Tito is ousted by a vote of no confidence. Anote Tong wins the presidency. Kiribati establishes diplomatic relations with Taiwan, and China severs its own relations with Kiribati.

NATIONAL FLAG

Two blue horizontal stripes at the top and bottom separated from a broad red center band by two narrow white stripes. The left half of the red stripe contains a red five-pointed star within a white circular field.

NATIONAL EMBLEM

The principal elements of the national coat of arms are two sheaves of rice, a five-pointed star, Mount Paektu, a dam, an electric power station and line, and a factory. Under the device is the name of the country in Korean, "Democratic People's Republic of Korea."

NATIONAL ANTHEM

"Morning Sun, Shine over the Rivers and Mountains"

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 16 (Kim Il-sung's birthday), April 15 (Kim Jong-il's birthday), May 1 (May Day), August 15 (Liberation Day), September 9 (Founding of the Democratic People's Republic, National Day)

DATE OF INDEPENDENCE

August 15, 1945

DATE OF CONSTITUTION

1948; completely revised December 17, 1972; revised 1992, 1998

GEOGRAPHICAL FEATURES

North Korea is in the northern part of the Korean peninsula in East Asia and occupies a total land area of 120,540 sq km (46,540 sq mi), extending 719 km (447 mi) north-northeast to south-southeast and 371 km (231 mi) east-southeast to west-northwest. Its coastlines on the Sea of Japan and the Yellow Sea run 2,495 km (1,550 mi).

North Korea shares its total international boundary of 1,673 km (1,040 mi) with three countries: China (1,416 km, 880 mi), Russia (19 km, 12 mi), and South Korea (238 km; 148 mi). The northern border with China follows the Yalu River for part of its course, according to

an 1875 agreement, and the Tumen River for part of its course, according to a 1909 agreement. The border with South Korea is the Military Demarcation Line of 1953, which has not been formally accepted by either North or South Korea.

Mountains cover four-fifths of the Korean peninsula. The major mountain ranges crisscross the country in northwest-to-southeast and northeast-to-southwest patterns. Almost the whole of north-central Korea is dominated by six mountain ranges: Machol-lyong, Hamgyong, Pujol-lyong, Nangnim, Myohyang, and Choguryong.

The plains constitute only one-fifth of the land area but contain most of the farmlands and human settlements.

Wonsan	347,300

CLIMATE AND WEATHER

North Korea is subject to severe winters because it is exposed to cold winds from Siberia. Winter temperatures, however, are subject to great variations, from far below freezing in five of the winter months in the northern provinces to -3.9°C (25°F) at Wonsan, to the south. Summer temperatures are more uniform throughout the north, with average temperatures ranging from 24.4°C (76°F) in Pyongyang to 21°C (70°F) on the relatively cool northeastern coast.

Annual rainfall ranges from 560 to 1,520 mm (22 to 60 in), with the Tumen and lower Taedong river valleys receiving the least and the Imjin River basin and the upper Chongchon River valley receiving the most. Up to 85 percent of rainfall is concentrated in the summer months, especially from June to early August. Heavy downpours during the rainy season can cause floods and widespread damage to crops.

Climate and Weather

Mean Temperature: Jan–Jun 70°F to 76°F
 Average Rainfall: 22 in to 60 in

FLORA AND FAUNA

Most of North Korea is densely forested; the mountainous areas in particular are still covered with hardwoods and conifers such as pine, beech, and fir, as the terrain would be too difficult to farm. Some areas were damaged by bombing in the 1950s, while some forests were cut down by the Japanese before and during World War II. There are also some marshlands with aquatic plants and animals. Migratory birds stop in North Korea on their trips north and south. There are some large animals such as deer and black bear in the more remote forests.

ETHNIC COMPOSITION

North Korea, along with South Korea, ranks first in the world in ethnic homogeneity, with 100 percent of the population being Korean. There are no racial or linguistic minorities. The total non-Korean resident population is probably about 50,000, nearly all of them Chinese.

The racial origins of Koreans are obscure, but the primary stock is believed to be Tungusic—that is, related to the Mongols with some Chinese admixture.

LANGUAGES

The national language is Korean (officially known as Choson Muntcha), using the hangul script. Korean is generally considered to be a member of the Altaic family. The alphabet consists of 14 basic consonants and 10 simple vowels. The letters are combined into syllables by clustering, as in Chinese. Chinese loanwords form roughly half the vocabulary.

English is the principal second language and is taught in all secondary schools.

RELIGIONS

The Communist government actively discourages the practice of religion. The government sponsors some religious groups to promote the appearance of religious freedom. Historically, North Koreans have subscribed to a variety of religious beliefs, none of which currently wields any significant national influence; Buddhism and Confucianism, both tempered by persistent shamanist and animist beliefs, have filled the role of national religions. Chondogyo (Religion of the Heavenly Way), a native eclectic sect, was introduced in the latter half of the 19th century. Christianity, the last of

the major religions to penetrate North Korea, has the fewest adherents.

HISTORICAL BACKGROUND

According to archaeologists, the first inhabitants of the Korean peninsula arrived around 30,000 B.C.E. The region was under constant pressure from China, which encouraged the formation of the first kingdom around the first century. By the eighth century the Silla Kingdom had become a major cultural force itself. In the 13th century the Mongols destroyed the kingdom.

When the Mongol Empire collapsed, the Choson dynasty arose. It was during this period that Korean script was developed. Independence proved short-lived, as Japan invaded in 1592. Shortly thereafter the Chinese followed, and the Manchu dynasty then ruled the country. Japan took control of Korea prior to World War II, when it invaded China. Japanese control of Korea ended with its defeat in World War II.

The desire of the Allies at the Cairo Conference in 1943 was to restore an independent Korea, but the need to accomplish a prompt arrangement of the Japanese surrender led to a division of the country. The Soviets occupied the northern section, whose industry had been developed by the Japanese, and the southern, more agrarian sector of the country was occupied by U.S. forces. In 1947 the problem of unifying Korea was referred to the UN General Assembly on U.S. initiative. A UN-observed election was held only in the southern part of Korea in May 1948, soon followed by the establishment there of the Republic of Korea (RK), or South Korea. The northern half, controlled by a Communist government, established itself as the Democratic People's Republic of Korea (DPRK), or North Korea, on September 9. The United Nations recognized only the Republic of Korea as the legitimate government of Korea.

U.S. and Soviet troops subsequently withdrew from the area, but on June 25, 1950, Democratic People's Republic of Korea troops invaded the Republic of Korea in an attempt to unify the two Koreas. U.S. military forces immediately aided South Korea. Subsequently, 16 other UN countries, along with the United States, made up the UN Unified Command, headed initially by Gen. Douglas MacArthur. In late 1950 some 300,000 Chinese troops came to the aid of the North Korean side, causing a stalemate. An armistice agreement was eventually signed on July 27, 1953, at Panmunjom. A four-kilometer-wide demilitarized zone was established, bisecting Korea at the 38th parallel.

In 1949 a merger of Communists in the north and south had created the Korean Workers' Party (KWP), led by Kim Il-sung, who was the head of North Korea until his death in 1994. Kim gradually consolidated his power, liquidating rival factions within the KWP, until by 1958 his power was absolute. Kim's long period of rule was charac-

terized by the development of an extraordinary personality cult as linked to his personal interpretation of Marxism-Leninism. His ideology, known as Juche, rests on the principles of the primacy of the party, self-sufficiency, and self-defense.

Kim groomed his son, Kim Jong-il, as his successor, and in 1984 Radio Pyongyang referred to Kim Jong-il as the "sole successor" to his father. Yet there was still a question of whether he had the support within the party and the army to continue his father's rule. Reports of a November 1986 coup and the assassination of Kim Il-sung were proven untrue. In the same month elections were held for the North Korean legislature, the Supreme People's Assembly, in which all candidates ran unopposed, and Kim Il-sung was re-elected president.

Despite the fall of the Soviet Union and the death of Kim Il-sung in 1994, Korea remained a committed Communist country. Kim Il-sung was succeeded by his son, Kim Jong-il, who many thought would not be up to leading the isolated country. A recluse, Kim Jong-il did not meet foreign heads of state and remained largely out of sight. Raised to the second highest post of chairman of the National Defense Commission in 1998 at a ceremony in which his dead father was given the title eternal president, Kim Jong-il continued to preside over a country whose economy and food supplies were failing. In June 2000 Kim Jong-il broke out of his isolationist past by announcing a meeting between South Korean President Kim Dae-jung and himself. The meeting was followed by an emotional reunion between North and South Korean families who had not met since the partition of the two countries in 1945.

The European Union sent a delegation in 2001 to help with the reconciliation process between the two Koreas, and that summer Kim Jong-il traveled to Moscow for the first time. This hopeful attempt at peace came to an end in 2002, when U.S. President Bush accused North Korea of keeping nuclear weapons and included it in an "axis of evil" along with Iraq and Iran. The North Korean government considered this tantamount to a declaration of war by the United States. Also in 2002 North and South Korean navy ships engaged in a skirmish in the Yellow Sea that left 34 people dead. At the end of the year North Korea ousted nuclear inspectors and reactivated the Yongbyon reactor. In January 2003 the nation withdrew from the Nuclear Non-Proliferation Treaty (NPT).

In 2003 and early 2004 several countries, including the United States and China, met with North Korean representatives in Beijing in an effort to stave off a nuclear crisis. These talks ended in June 2004 with North Korea's decision to end negotiations. During this time the nation is believed to have produced enough plutonium and fuel rods to make six nuclear bombs. In September 2005 North Korea agreed to give up its nuclear weapons in return for aid and security guarantees.

LIST OF MODERN RULERS

1948–57	Kim Doo-bong
1957–72	Choi Yong-kun
1972–94	Kim Il-sung
1994–	Kim Jong-il

CONSTITUTION

The constitutional basis of the North Korean government is the constitution of 1972, which replaced the constitution of 1948. The 1972 constitution defined North Korea as an “independent, socialist state that represents the interests of all the Korean peoples.” The constitution has 11 chapters and 149 articles. The first three chapters set forth the directive principles of the state. The ideological basis of the state is defined as the *Juche*, or *chuche sasang*, the ideology of self-reliance, along with Marxism-Leninism. The ideology is also known as Kim Il-sungism, *hyongmyong sasang* (revolutionary ideology), and *yuil sasang* (the one and only ideology). The constitution reaffirms the national desire to achieve the unification of the Korean Peninsula and to protect the legitimate rights of overseas Koreans.

Under the 1972 constitution real decision-making power rests with the Korean Workers’ Party and its Political Committee. Government agencies are only the executors of party policies and the administrative links between the party and the people. Through its extensive network of cadres within the organs of power, the party oversees administration and ensures compliance with party directives.

The underlying principle of government is defined as “democratic centralism,” which means that all representative or democratic bodies are elected by lower-level bodies and that they in turn elect the executives at their level. The highest legislative body and the highest organ of power is the Supreme People’s Assembly (SPA).

Constitutional changes adopted in 1998 included the abolition of the state presidency. Although the SPA remains the highest state organ, its authority to determine questions of war and peace passed on to the 10-member National Defense Committee, whose chairman now serves as head of state. The Central People’s Committee and the Standing Committee were abolished, with most of their duties and powers being assigned to a newly created SPA Presidium, which ranks as the highest organ of state power between full SPA sessions. The Presidium also assumed responsibility for diplomatic functions, including ratifying and abrogating treaties. The Presidium’s president, the second highest North Korean official, represents the state and receives credentials of foreign diplomats. The Administration Council was replaced by a smaller cabinet that not only functions as the SPA’s administrative and executive body but also has additional authority

for governmental management. Judges are elected by the SPA. The premier is assisted by two vice premiers.

The constitution provides for national elections every five years. Suffrage is universal, direct, and equal over age 17, and voting is by secret ballot. The Korean Workers’ Party approves a single list of candidates, who are elected without opposition. Every election since 1962 has resulted in a 100 percent voter turnout and a 100 percent affirmative vote for the official slate.

PARLIAMENT

The national legislature is the unicameral Supreme People’s Assembly (SPA), consisting of 655 members, all of whom belong to the Korean Workers’ Party. The SPA is described in the constitution as the highest organ of state power. Its chief functions are the adoption and amendment of constitutional enactments; the election of the president of the country, the premier, the president of the Central Court, and other legal officials; approval of the state plan and budget; and declarations of war and peace. Though its normal term is four years, the 1982 election was the first since 1972. The SPA meets twice a year in sessions that last only a few days. The spring session meets in March or April, and the fall session in November or December. Extraordinary sessions may be held at the request of at least one-third of the deputies. Bills may be introduced by the deputies or by the president. When the SPA is not in session, its functions are carried out by the Presidium, which consists of 19 members elected by SPA members from among themselves.

Though the SPA is nominally the highest organ of state power, it in fact has no autonomy and exists only to ratify decisions made by the Korean Workers’ Party, the actual source of government.

POLITICAL PARTIES

The ruling party in North Korea since 1949 has been the Korean Workers’ Party (KWP), founded through the merger of the Communist Party and the New People’s Party. The Korean Workers’ Party is a Marxist-Leninist party with an estimated membership of three million, representing a cross section of the population and divided into four categories: peasants, intellectuals, workers, and military personnel. The party is a well-disciplined organization that controls every aspect of national life, including the army.

Political activity is also carried out through a number of front organizations, some of which are used solely for propaganda, while others are designed to mobilize special-interest groups. These include the Socialist Working Youth League, the General Federation of Korean Trade Unions, the Korean Democratic Party, the Korean Dem-

ocratic Women's Union, the Friends (or Chongu) Party, and the Democratic Front for the Reunification of the Fatherland.

LOCAL GOVERNMENT

North Korea has a relatively elaborate system of local government, consisting of nine levels of administration. Of these, five are recognized in the constitution, but the four bottom tiers have no constitutional status. The five principal divisions are provinces, cities with provincial status, ordinary cities, urban districts, and counties. There are nine provinces and four cities with provincial status. The provinces are subdivided into ordinary cities (*si*), counties (*kun*), and districts (*kuyok*). The four bottom tiers include towns (*up*) serving as administrative headquarters for the counties, villages (*ri*), urban blocks (*tong*), and workers' districts and industrial settlements (*non-dongjaku*). Workers' districts are established in any industrial suburb with more than 400 workers, miners, or fishermen.

The permanent executives and administrative organs at the local level are the People's Committees and Administrative Committees. The functions of the People's Committees, elected by the People's Assemblies, include supervision of local elections, implementation of decisions of People's Assemblies and higher state organs, and general control over all state institutions. The Administrative Committees are concerned with day-to-day affairs.

LEGAL SYSTEM

The judiciary is a three-tiered system consisting of the Central Court at the apex, provincial courts in each province, municipal courts in each municipality at the intermediate level, and people's courts in cities, counties, and urban districts. Trials in the subordinate courts are held with one to three judges and two people's assessors. The judges and people's assessors of the Central Court are elected every four years by the Standing Committee of the Supreme People's Assembly, while at the local levels they are elected by the People's Assemblies for terms of four years in the provincial and municipal courts and terms of two years for the county and city people's courts. The terms of the Central Court judges are concurrent with those of SPA members.

The judiciary is subordinate to the party, and all judicial activities are guided and controlled by party committees. There is no judicial review of legislative acts. The courts and the prosecuting authorities are defined as "powerful weapons for proletarian dictatorship." The penal system has also been combined with political reeducation and indoctrination. Most judges are party members, and judicial decisions are subject to scrutiny for their conformity to party policies and directives. North Korea's

laws come from the German civil law system as combined with Japanese and Communist influences.

HUMAN RIGHTS

In terms of political and civil rights, North Korea is ranked as a not-free country.

North Korea is perhaps the most highly regimented and controlled society in the world today. Controls are enforced by two security organizations. Persons who fail to cooperate with the regime face imprisonment, confiscation of property, or enforced removal to remote villages. Observation by informers is so prevalent that suspicion has become a national characteristic. The constitution requires citizens to follow the socialist norms of life and to have a collective spirit. The government attempts to shape the citizens' consciousness by requiring both children and adults to participate in daily indoctrination sessions and to recite party maxims by rote.

Despite claims to being a socialist and classless society, ideological considerations and control mechanisms have come to differentiate North Koreans into highly stratified classes, with the governing minority perched clearly on the top and having privileges associated in the past with royalty. Security ratings are awarded to each citizen, and these ratings determine access to better schools, positions, and stores. Individuals with relatives or close family associates in South Korea are regarded as suspect.

North Koreans do not enjoy any of the freedoms of speech, press, or assembly. Censorship of the media is strictly enforced. Virtually no outside information, other than that approved and disseminated by North Korean authorities, is allowed to reach the public. Listening to foreign broadcasts is prohibited, and violators are subject to severe punishment. The government has developed a pervasive network of spies and informers to enforce these laws.

Internal travel is strictly controlled. Movement from one area to another requires documentary permission. To monitor internal travel more effectively, the government discourages travel by automobiles and even bicycles, thus forcing travelers to depend on the more easily controlled buses. The government has put many citizens in prison camps, where they have been forced to work and where forced abortions and infanticide have occurred.

FOREIGN POLICY

For the more than four decades of its existence, the two pillars of North Korean foreign policy were its strong links with the Soviet Union and China on the one hand and the goal of the reunification of the peninsula on the other. The first pillar collapsed with the end of the Soviet Union, and the second has been virtually abandoned.

The death of Kim Il-sung in 1994 and the election of his son, Kim Jung-il, marked a transition between the ideological phase of North Korean foreign relations and a more pragmatic one. In an abrupt reversal of policy, North Korea sought to reestablish relations with Japan after a formal apology from Japan for the many decades of Japanese misrule of the Korean Peninsula. In 1991 North Korea and South Korea were both admitted to the United Nations, thus giving North Korea a semblance of legitimacy. Relations with South Korea entered a new phase when South Korean President Kim Dae-jung visited North Korea for the first time in 1999. Relations with Japan remained cool in the early 2000s, after attempts to reconcile the two nations were thwarted by Japan's insistence that North Korea still harbored Japanese captives originally kidnapped in the 1970s and 1980s.

A major hurdle to U.S.–North Korean relations is North Korea's noncompliance with the Nuclear Non-Proliferation Treaty. In early 2005 North Korea announced its intention to build more nuclear weapons and to withdraw from any international negotiations on the subject, citing U.S. hostility toward its government. North Korea has become the world's leading exporter of rockets and related technology, posing a threat to the containment of global terrorism.

DEFENSE

The defense structure is headed by the president, who is also the supreme commander of the armed forces and the chairman of the National Defense Commission. Ultimate political control is vested in the Military Committee of the Korean Workers' Party. Operational control is under the Ministry of People's Armed Forces, with three principal divisions: the General Staff, the General Political Bureau, and the General Bureau of Rear Services.

Military manpower is provided through a system of conscription. The age of conscription is 17 for all able-bodied males. The term of service is three years in the army and four years in the navy and air force.

North Korea no longer possesses the overwhelming military superiority it had in 1950. It does, however, possess what appears to be a moderate nuclear weapons arsenal and in 2005 was actively increasing its nuclear weaponry. In 2003 it was estimated to have spent 22.9 percent of gross domestic product (GDP) on the military. While the government continues to spend untold millions on weapons technology, more than seven million North Koreans were reported to be on the verge of starvation. The nation's most serious strategic problems are the vulnerability of its transportation system, hydroelectric plants, and population centers to air strikes.

ECONOMY

North Korea has suffered terrible economic conditions for years. Before the widespread fall of Communism it traded with the Soviet Union and Eastern Europe, but the nation now has no real trading partners or foreign investors. In 2004 it was in its seventh straight year of food shortages caused by drought and the lack of fuel and fertilizer. The nation depends on food aid from international donors, but in 2003 donor nations were showing signs of cutting off aid due to political disagreements and general fatigue with the nation's perennial problems. North Korea spends nearly one-quarter of its GDP on its military at the expense of food for the citizenry. There is a thriving black market, which many people use to buy necessary items, but its high prices have put much out of reach for the elderly and the unemployed. In the early 2000s North Korea was making a nominal effort to attract foreign investment, but the nation has nevertheless shown no signs of reforming the market or relinquishing control over national assets. In 2003 the nation relaxed some restrictions on farmers' market activities. North Korea has vast mineral resources, but they are almost entirely untapped.

ENVIRONMENT

North Korea suffers from the common problems associated with developing nations. Among the most severe is growing air pollution due to a lack of industrial controls on emissions. In addition, the country suffers from a lack of potable water and continues to pollute that which it currently has.

Environment

LIVING CONDITIONS

North Korea's living conditions are poor. There is a general lack of food, and malnutrition is a problem throughout the country. All basic consumer items are in short supply. GDP per capita is about \$1,300. There is little public transportation, and almost no private citizens own either automobiles or even bicycles. Most people travel on foot. On the other hand, North Korea has no traffic problems. Pyongyang, the capital, is a large, clean city with wide boulevards and numerous monuments; only people in good health with the proper political credentials are allowed to live there, and anyone with a disability is excluded—including the elderly and pregnant women. Tens of thousands of North Koreans have fled the country in recent years, most of them entering China, in the hope of escaping famine and repression.

HEALTH

North Korea's health-care system suffers from a lack of all basic supplies, including heat and water. Some people treat their ailments with traditional remedies such as moxibustion or acupuncture. Life expectancy is high, at 71 years on average, while the infant mortality rate is about 25 deaths per 1,000 live births. Malnutrition is the most significant health problem; almost two-thirds of the population suffers chronic malnutrition, which causes babies to be born underweight and children to grow up stunted.

FOOD AND NUTRITION

Korea does not have enough food to feed its people. Malnutrition is a major problem, despite the food aid the nation receives from donor countries.

Where there is food, people eat the typical Korean diet, which includes rice, vegetables, and a spicy cabbage dish called kimchi. Many people like to drink ginseng tea, which supposedly has health benefits. Alcoholic beverages include *insam-ju*, which is vodka infused with ginseng, and locally brewed beer.

 Amount of Fruits and Vegetables Available per person per year kg: 210.9

STATUS OF WOMEN

The constitution states that "women hold equal social status and rights as men." Despite this provision, no women reach high levels of the ruling Korean Workers' Party or the government. Women are represented proportionally in the labor force, and personnel in small factories are predominately women. Reportedly, women are often paid less than men for similar work. Two women are revered: the mother of Kim Il-sung and the mother of Kim Jong-il.

EDUCATION

Education is free, universal, and compulsory for 11 years, from ages four to 15. Schooling is divided into five years of primary school, four years of middle school, and two years of high school. The curriculum emphasizes the ideologies of Marxism-Leninism and *chuche sasang*, and party teachings are built into the content of every course. Adulation of Kim Il-sung is taught from nursery school onward. All students are encouraged to acquire some technical skills, and practical knowledge is stressed over general knowledge.

In addition, there is a special category known as revolutionary schools for children destined to become national leaders. Enrollment in these schools favors children of party cadres.

The academic year runs from September to August. The medium of instruction is Korean. Both English and Russian are taught as second languages from the middle grades on.

Technical training is provided by two-year vocational schools and three-year higher technical schools. Students who wish to continue their technical education may go on to one of 15 technical colleges, seven medical colleges, one pharmaceutical college, or 40 "factory colleges," where work and training are combined. Adult-education programs are designed not only to reduce illiteracy but also to provide ideological orientation and technical training.

Paralleling the national education system is the party school system. Units of the party school system are the county party schools, provincial Communist colleges, and the Kim Il-sung Higher Party School. In addition to regular training there, instruction is provided in ideology, party history, and organization.

MEDIA

The government controls the press and the broadcast media. North Korea holds the honor of committing the worst violations of freedom of the press in the world. All newspapers and broadcasters produce a steady stream of propaganda praising the government; they never report economic difficulties or famines. It is impossible to get accurate news reports. The largest daily newspaper is *Rodong simmun* (Labor daily), the organ of the Central Committee of the KWP. The official government organ is *Minju Choson*. The Korean Central Broadcasting Station and Korean Central Television Station operate radio and television stations throughout the country. North Koreans do not usually read or listen to news from foreign sources; those who get caught doing so risk being sent to forced labor camps.

The principal agency concerned with the media is the Propaganda and Agitation Department of the KWP. The official news agency is the Korean Central News Agency (KCNA).

CULTURE

The North Korean government has spent a great deal of money and energy promoting traditional Korean arts and culture, decorating the cities and subways and constantly informing the people that they are culturally superior and live in the best country in the world. Kim Jong-il considers himself an artist; he is reported to have composed six operas in two years and to have designed the Juche tower in Pyongyang. The state funds artistic companies who perform traditional music and dances. North Korean artists are highly skilled at Chinese brush calligraphy and Buddhist sculpture. Many people think that North Korean art is more “genuinely Korean” than South Korean.

FOLKLORE AND MYTHOLOGY

Though the government supports the study and practice of traditional art forms, its current mythology is all focused on the modern rulers and their regime. Kim Il-sung cultivated a cult of his own personality, erecting statues of himself throughout the country and disseminating stories about his deeds. He went by the name “Great Leader,” and his son, Kim Jong-il, uses the title “Dear Leader.” Indeed, almost all North Koreans believe in the tremendous wisdom of their leaders. During the days of Kim Il-sung, most people wore pins with his picture on them, and Kim Jong-il has also cultivated this kind of adulation. He was supposedly born in a log cabin on the country’s highest mountain, under a bright star and a double rainbow.

ENTERTAINMENT AND RECREATION

The biggest celebrations in North Korea are May Day, Liberation Day, and the birthday celebrations for Kim Il-sung and Kim Jong-il, which are marked with giant military parades and massive gymnastic displays. Possible outdoor activities include mountaineering, hiking, golf, and hunting, though there are many restrictions on freedom of movement, and most North Koreans cannot afford recreation.

ETIQUETTE

The most important aspect of North Korean etiquette is the absolute necessity of respecting the government, especially Kim Jong-il and his relatives. North Koreans are extremely careful to do nothing that could be construed as critical of the state because of their very real fear of being sent to prison camps. People are careful not to engage in immoral acts, such as making physical contact with someone of the opposite sex in public.

FAMILY LIFE

North Koreans have traditionally based their family relations on the principles of Confucianism, which emphasizes respect for authority. Today, families tend to be small and to include only two generations. Most people marry in their late 20s or early 30s; small weddings are the rule. Most women put their babies in state-run day-care centers, which are both free and perform the important role of beginning the process of political indoctrination. Families still value sons to carry on the family name, and a husband is allowed to divorce a wife if she cannot bear him a son. Parents of grown children usually live with their youngest son and his wife. Though mothers-in-law were traditionally known for dominating and tormenting their sons’ wives, that has changed in modern times, and the two usually have fairly amicable, or at least equal, relations.

PERSONAL APPEARANCE

North Koreans do not have access to the world of fashionable clothes. The government insists that people dress neatly and have clean shoes. The government launched a campaign in 2005 to induce men to cut their hair short and listed a selection of acceptable hairstyles, claiming that short hair and tidy clothing are linked to mental ability.

SPORTS

North Koreans love soccer and they have a long-standing rivalry with South Korea’s soccer team. In 2005 the

team performed quite well in a match against Japan. Many North Koreans practice gymnastics when they are at school in order to participate in massive gymnastics demonstrations on public holidays.

CHRONOLOGY

- 1945** Following Japanese surrender, Soviet occupation forces reach Pyongyang.
Power is transferred to a Communist-dominated coalition named the People's Political Committee and later to the North Korean Five-Province Administrative Bureau.
North Korean Communist Party is founded.
- 1946** The Five-Province Administrative Bureau is reorganized as the North Korean Provisional People's Committee.
Sweeping social and economic reforms are introduced, including expropriation of farms over 5 hectares and nationalization of basic industries, banks, and transportation.
North Korean Democratic National United Front is formed, composed of 13 parties, including the Communist Party.
- 1947** Convention of the People's Committee elects the North Korean People's Assembly, which in turn elects the North Korean People's Committee, headed by Kim Il-sung.
- 1948** North Korea declines to participate in elections under UN auspices.
Constituent Committee of the People's Assembly promulgates new constitution, establishing Democratic People's Republic of Korea, with Kim Il-sung as prime minister.
Soviet occupation forces withdraw from North Korea.
- 1949** Korean Workers' Party (KWP) is founded through merger of Communist Party and New Democratic Party. Kim Il-sung is named chairman
- 1950** North Korea launches full-scale invasion of the South. UN Security Council brands North Korea an aggressor.
President Truman orders U.S. forces into battle under a multinational UN command.
South Korean forces cross the border, take Pyongyang, and reach several points on the Yalu River.
Chinese "volunteers" enter the fighting and force UN troops into a pell-mell retreat; North Korea is regained by combined Communist forces.
- 1951** Seoul is taken by Communists then regained by UN forces.
Battle lines are stabilized along the 38th parallel.
- 1953** Armistice is signed at Panmunjom, providing for military demarcation line, Demilitarized Zone, Military Armistice Commission, and neutralization Supervisory Commission.
- 1956** KWP holds Third Party Congress. Kim Il-sung faces and survives challenges from the Yen-an and Soviet factions in the party.
Relations with the Soviet Union cool following Khrushchev's denunciation of Stalin.
- 1959** The new won is introduced, replacing the old currency.
- 1961** Mutual Defense Assistance treaties are signed with Moscow and Beijing.
- 1964** Following Premier Kosygin's visit to North Korea, relations between North Korea and the Soviet Union are renormalized.
- 1967** Kim Il-sung is denounced by the Red Guards during the Chinese Cultural Revolution.
- 1968** North Korea seizes USS *Pueblo* off Wonsan.
North Korean guerrilla teams land in South Korea.
- 1969** North Korea downs a U.S. reconnaissance aircraft over international waters.
- 1970** KWP holds Fifth Party Congress.
- 1972** Kim Il-sung promulgates new constitution, under which he becomes president.
- 1976** Park Sung Chul is named prime minister.
North Korea apologizes for the killing of two U.S. servicemen at Panmunjom.
North Korea defaults on its international debt payments.
- 1977** Kim appoints Li Jong Ok as prime minister, replacing Park Sung Chul.
Kim announces new seven-year plan, for 1978–84.
- 1979** Reunification talks are deadlocked despite mediation of UN secretary-general Kurt Waldheim.
- 1980** KWP Congress elevates Kim Jong-il as general secretary in place of his father, Kim Il-sung.
- 1983** North Korea is implicated in terrorist attack on South Korean delegation in Rangoon.
Burma suspends diplomatic ties with North Korea.
- 1984** Kim Il-sung visits the Soviet Union, Eastern Europe, and China to gather support for his son's succession to the North Korean leadership.
- 1985** Negotiations between North and South Korea are held to discuss cooperation but are soon suspended due to annual South Korean–U.S. military maneuvers.
- 1986** False reports of Kim Il-sung's assassination are quickly dispelled.
Kim Il-sung is reelected president. Li Gun Mo becomes premier.
- 1987** The DPRK government objects to South Korea's intention of hosting of the 1988 Olympic Games.

- The United States reduces economic and diplomatic restrictions on North Korea.
Speculations of weakened relations with China are proven false when Kim Il-sung visits Beijing.
North Korea is blamed when a South Korean aircraft is destroyed.
- 1988** Japan imposes economic and diplomatic sanctions on North Korea following the South Korean airliner attack.
North Korea boycotts the Olympic Games.
A meeting of legislators from North and South Korea proves inconclusive.
Premier Li Gun Mo resigns, reportedly due to ill health, and is replaced by Yong Hyong Muk.
- 1990** The premiers of North and South Korea meet in a series of three conferences to try to improve relations but reach no agreement on the issues dividing the two nations.
- 1991** North Korea calls off talks with the South because of U.S. South Korean military exercises.
- 1994** Kim Il-sung, head of state since 1948, dies and is succeeded by his son, Kim Jong-il.
- 1995** North Korea agrees to dismantle a nuclear facility in return for aid to build two new reactors from which it is difficult to extract weapons-grade plutonium.
- 1996** Severe floods destroy most of the rice crop, and widespread famine and homelessness result.
- 1997** Peace talks between North Korea, South Korea, the United States, and China initially break down over North Korea's negotiation precondition of food aid.
- 1998** North Korea blames the United States for the failure of another round of negotiations involving the two nations as well as South Korea and China. United States sends aid to help famine victims.
- 2000** In the first meeting between leaders of North and South Korea since 1945, Kim Jong-il and South Korean president Kim Dae-jung agree in principle to promote reconciliation and economic cooperation between the two countries.
- 2001** An EU delegation visits North Korea to help the reconciliation process. Kim Jong-il visits Moscow. A drought strikes the countryside.
- 2002** President George W. Bush names North Korea as a member of the "axis of evil," with Iran and Iraq; North Korea is offended. North and South Korean navy ships fight in a gun battle in the Yellow Sea. Japanese Prime Minister Junichiro Koizumi visits; Kim Jong-il apologizes for abducting Japanese citizens in the 1970s and 1980s. The United States accuses North Korea of having a secret nuclear weapons program; North Korea throws out international inspectors.

- 2003** North Korea withdraws from the Nuclear Non-Proliferation Treaty and claims it has enough plutonium to make bombs and has engaged in production.
- 2004** International talks on the nuclear crisis end without resolution.
- 2005** North Korea agrees to abandon its nuclear weapons in exchange for aid and security guarantees. It insists on continuing its civilian nuclear program.

KOREA, SOUTH

Basic Fact Sheet

OFFICIAL NAME

Republic of Korea (Daehan Minguk)

ABBREVIATION

KR

CAPITAL

Seoul

HEAD OF STATE

President Roh Moo-hyun (from 2003)

HEAD OF GOVERNMENT

Prime Minister Lee Hae-chan (from 2004)

NATURE OF GOVERNMENT

Democratic republic

POPULATION

48,422,644 (2005)

AREA

98,480 sq km (38,023 sq mi)

ETHNIC MAJORITY

Korean

LANGUAGE

Korean

RELIGIONS

Christianity, Buddhism

UNIT OF CURRENCY

South Korean Won

NATIONAL FLAG

The *taegukki*, consisting of a disc divided in the shape of the yin and yang symbols, with red above and deep blue below

in the center of a white field. In the four corners of the flag are black divination bars from the *I Ching*, in sets of three, representing heaven (in the upper hoist), water (in the upper fly), fire (in the lower hoist), and earth (in the lower fly). All three bars are unbroken in the upper hoist and halved in the lower fly. The two outer bars are halved in the upper fly, and the center bar is halved in the bottom hoist.

NATIONAL EMBLEM

The yin and yang symbol is centered within a lotus, with the name of the country beneath, on a scroll.

NATIONAL ANTHEM

“Till Paektu Mountain Wears Away, Until the Eastern Sea Is Drained”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 1 (Independence Movement Day), May 5 (Children’s Day), June 6 (Memorial Day), July 17 (Constitution Day), August 15 (Independence Day), September 27 (Thanksgiving Day), October 1 (Armed Forces Day), October 3 (National Foundation Day), October 9 (Anniversary of the Proclamation of the Korean Alphabet), December 25 (Christmas), various Buddhist and Confucian festivals

DATE OF INDEPENDENCE

August 15, 1945

DATE OF CONSTITUTION

July 17, 1948; revised 1987

GEOGRAPHICAL FEATURES

South Korea, on the southern part of the Korean peninsula, in East Asia, has a total land area of 38,023 sq mi (98,480 sq km). The greatest distance north-northeast to south-southeast is 399 mi (642 km); that east-southeast to west-northwest, 271 mi (436 km). The coastline along the Sea of Japan and the Yellow Sea runs for 1,499 mi (2,413 km). South Korea shares its entire international

land boundary of 148 mi (238 km) with the Democratic People’s Republic of Korea, commonly referred to as North Korea. This border, just north of the 38th parallel, was created in 1953 at the end of the Korean War and includes a demilitarized zone.

The capital is Seoul. There are six other large cities: Pusan, Taegu, Inch’on, Kwangju, Taejon, and Ulsan.

South Korea is a rugged, mountainous country. Only 15 percent of its land is made up of plains, and these are

South Korea

mainly along the coast. The major topographical feature is a chain of mountains, with the Taebaek Range at its core, running parallel to the eastern coast.

The four largest rivers within South Korea are the Han, with a length of 320 mi (514 km); Kum, 249 mi (400 km); Naktong, 326 mi (524 km); and Somjin, 132

mi (212 km). These rivers are subject to floods in the summer.

CLIMATE AND WEATHER

South Korea has a continental climate, with dry, cold winters and hot, humid summers. Even though winters are less severe than in North Korea, snowfall is not uncommon in South Korea. The average January temperature varies

from -5°F (-20.5°C) at Chungcheong to 28.4°F (-2°C) at Seoul. Summer temperatures are more uniform.

No region receives less than 30 in (762 mm) of rainfall annually, though serious droughts periodically occur. In most areas yearly rainfall is over 40 in (1,016 mm). Rainfall is concentrated in the April-to-September rainy season, sometimes causing damaging floods. Typhoons occur at least twice a year, damaging crops and bringing torrential rains.

Climate and Weather

Mean Temperature
 Winter Chungcheong: 25°F
 Seoul: 23°F
 Busan: 28.4°F
 Jeju Island: 40°F
 Summer South: 77°F to 80°F
 Northeastern coast: 70°F
 Average Rainfall
 30 in to 60 in

FLORA AND FAUNA

Most of South Korea's native forests were cut down during the Japanese occupation. The nation has been working to replace its forests. Vegetation in the south and in coastal areas is typical of temperate climates; ginseng grows in this area. The northern part of the country is covered with forests of conifers, such as fir, beech, and pine. Black bears and deer sometimes appear in this area. South Korea has 20 national parks.

ETHNIC COMPOSITION

Along with North Korea, South Korea is the most ethnically and linguistically homogeneous nation in the world. Virtually the entire population is of Korean origin, and there is no evidence of non-Mongoloid admixture. There is no national ethnic minority. The total resident, non-Korean population is estimated at no more than 20,000, mainly Chinese.

LANGUAGES

The national and official language is Korean, a member of the Altaic family of languages. Korean is written in a largely phonetic alphabet called hangul, consisting of 14 basic consonants and 10 simple vowels. The American presence in South Korea since the 1950s has stimulated the growth of English as the most important foreign language. English is taught in all secondary schools.

RELIGIONS

South Korea has no state religion, and freedom of worship and conscience are guaranteed in the constitution. Buddhism claims the most adherents, but Christianity is the most influential organized religion. South Korean Buddhism has 18 denominations, of which the Chogye-Jong is the largest order, with almost half the total believers. Christianity was introduced into South Korea in the late 16th century. Christian missionaries were more successful in Korea than in most other Asian nations. Christianity became acceptable to Koreans as a harbinger of Western learning, or *sobak*. In the 1970s and 1980s the government sometimes cracked down against Christian social activists for opposing governmental attempts at regimentation and for pressing for economic and political reforms. By the 1990s Christians once more reclaimed their status as the most influential religious group.

Religious Affiliations

Christian	12,500,000
Confucian	500,000
Other	500,000

HISTORICAL BACKGROUND

The earliest Korean peoples are believed to have been migrants and invaders from present-day Manchuria, northern China, and Mongolia, of either Tungusic or Mongoloid origin. According to legend, the Korean state

was founded in 2333 B.C.E. by a mythical figure called Tangun in what is now the lower Taedong River basin in the northwestern region of the peninsula. Another legend of Chinese origin ascribes the origin of the country to a Chinese prince named Chi-tzu (Kija in Korean), who flourished around 1123 B.C.E.

Ancient Korea, known as Choson, developed into a league of tribal groups in northern Korea around the 4th century B.C.E. In the third century an indigenous Han tribal family ruled the region; this reign was overthrown in 194 B.C.E. by Wiman, a tribal chieftain of Korean or Chinese origin. The deposed Han family migrated south to the Han River basin, and three branches of the family—Ma Han, Chin Han, and Pyon Han—then ruled the southern half of the peninsula. In 108 B.C.E. the Chinese emperor Wu Ti of the Han Dynasty destroyed the Wiman state in the north and annexed it.

By the fourth century C.E., however, the Han settlements in the north had been wiped out. By the late fourth to the mid-seventh century, three Korean kingdoms competed for hegemony: Koguryo in the north, Paekche in the southwest, and Silla in the southeast. During this period Buddhism was introduced into Korea. Ultimately, the Silla crushed the other two kingdoms and united all but the northernmost part of the peninsula. Korea emerged as a unified entity in 676 under the Silla.

The century that followed is known as the golden age of Korea. The Koryo dynasty (from which the name Korea is derived) was established in 935 by Wong Kon, a general during the last days of Silla. The end of the Koryo dynasty around 1392 was marked by coups, rebellions, and a state of anarchy. The last 160 years of the kingdom were especially turbulent, as punctuated by waves of Mongol invasions. Koryo capitulated to the Mongols in 1259, and the northern part of the country was incorporated into the Mongol Empire, soon to be known as Yuan.

Koryo regained its national freedom in 1368 when General Yi Song Gye seized control of the government and moved his capital from Kaesong to Seoul, then called Hanyang. The Yi dynasty, which lasted for the next 500 years, adopted the ancient name of Choson and Confucianism as the official state doctrine. The Yi era is known for its brilliant cultural achievements, including the casting of the world's first movable type in 1403, the invention of the rain gauge, and the invention in 1443 of the phonetic vernacular writing system known as hangul. Around 1500 Yi Choson was riven by bitter internecine conflicts and, battered by successive Japanese (1592–98) and Manchu (1627 and 1636) invasions, was forced to become a tributary of the Ching Manchu Empire.

In the 18th century the nation of Korea recovered somewhat under two kings, Yongjo (1724–76) and Chongjo (1776–1800). In the 19th century Korea responded to growing external dangers by adopting a policy

of isolationism and thereby became known as the hermit nation. Internally, as part of this policy, 13,000 Roman Catholic converts were executed in 1866.

The Japanese were the first to succeed in penetrating Korea's isolation. After warlike provocation in 1875 and the failure of China to come to Korea's aid, the Japanese forced the unequal Kanghwa treaty on Korea in 1876, giving Japanese nationals extraterritorial rights and opening three Korean ports to Japanese trade. During the last quarter of the 19th century Japan and China competed for dominance in Korea. During 1894 and 1895 Japan seized upon a peasant uprising in Korea's southern provinces, called the Tonghak Rebellion, to destroy Chinese power in Korea.

In 1910, after the Russo-Japanese War, Korea became a Japanese protectorate and later a Japanese colony under the Treaty of Annexation. Korea was under Japanese occupation from 1910, when the Yi dynasty was abolished, to 1945, when the country was liberated by U.S. and Soviet forces, with the Soviets then holding sway over a northern Communist government and the United States backing a democratic southern government. Although Japanese rule was accompanied by some economic development, those years represented systematic national humiliation. The Japanese openly aimed to eradicate Korean national identity, even banning the use of the Korean language. Few Japanese legacies have survived, though relations between the two countries were normalized in 1965.

South Korea became the independent Republic of Korea on August 15, 1948. In June 1950 North Korea invaded South Korea in an attempt to unify the two nations under Communist rule. The Korean War lasted until a truce was signed in July 1953, creating a demilitarized zone just north of the 38th parallel. The war devastated much of South Korea's economy and caused enormous suffering and hardships for its people.

Between 1948 and 1960 the nation was ruled by Dr. Rhee Syng-man, head of the Liberal Party. Increasingly authoritarian, and unable to deal with economic problems, Rhee was forced to resign in May 1960. His eventual successor, Yun Bo-seon of the Democratic Party, was forced from office by a military coup in May 1961 led by Gen. Park Chung-hee. Park's military junta ended constitutional government and ruled by decree until 1963. That year Park created the Democratic Republican Party as a step toward civilian government.

In the fall a new constitution was adopted, and Park easily won election as president. Park subsequently won presidential elections in 1967 and 1971, though by narrow margins, against New Democratic Party candidates. During the 1970s Park established dictatorial rule; he dissolved the National Assembly, proclaimed martial law, and drew up a new constitution vastly increasing his powers as president, giving him the power to declare

martial law and dissolve the Assembly during "emergencies." Popular opposition led Park to enact emergency measures in 1975, strengthening his control over the nation.

Park was assassinated in 1979, and civilian rule was briefly reestablished. However, struggles within the political parties, strikes by workers for higher wages and better working conditions, and widespread student unrest gave the military an opportunity to reestablish control in 1980. Gen. Chun Doo-hwan proclaimed martial law in May 1980, banning all political parties, outlawing strikes, and muzzling the press.

Martial law was lifted in January 1981, and Chun was elected president in February. Chun's Democratic Justice Party (DJP) won a majority in the Assembly. Under Chun's rule South Korea enjoyed stability and continuity at the price of civil and political rights. Chun also stifled dissent at home and among South Koreans abroad through a ruthless secret service.

A new opposition party, the New Korea Democratic Party (NKDP), was formed in January 1985, making impressive gains in February elections, though the DJP retained its majority. The NKDP tried unsuccessfully to limit presidential powers, and unrest spread, as led by student riots. Violent clashes on the eve of the 1988 Olympic Games in Seoul forced President Chun to step down in July 1987. A new constitution was promulgated on October 29. The Reunification Democratic Party, headed by Kim Young-sam, was formed by a faction in the NKDP. In December Roh Tae-woo of the DJP was elected president of South Korea; the split in the opposition also enabled the DJP to win a slim majority in the Assembly in the April 1988 elections.

Student demonstrations against corruption and authoritarian rule continued throughout 1988. In addition to President Chun, many high-ranking former government officials were replaced. The end of the decade saw both peaceful and violent demands for reunification with North Korea and for the removal of U.S. troops from South Korea.

In a dramatic move in February 1990, the DJP merged with two opposition parties to create the Democratic Liberal Party (DLP). That year South Korea and North Korea agreed to work for reunification, though little immediate progress was achieved.

In 1992 Kim Young-sam, as head of the DLP Party, won election as president of South Korea, becoming the first civil head of state since 1961. President Kim's effectiveness, however, was compromised by continuing revelations of corruption and scandals in the DLP. Both former presidents Chun and Roh were sentenced to prison terms by the courts. Other prominent members of the DLP were jailed for corruption. Some progress in political reform was finally seen in the June 1995 elections; for the first time in more than 30 years, direct elections

for local government were carried out, with open voting for mayors, governors, and chiefs of wards and counties.

In December 1997 the opposition leader Kim Dae-jung of the National Congress for New Politics was elected president, marking the first time in the nation's history that an opposition party gained the presidency. The nation was soon forced to turn its attention away from politics, as South Korea faced serious threats to the stability of its economy in 1997–98. Aid in the form of a \$57-billion loan from the International Monetary Fund (IMF) helped South Koreans to deal with this crisis. In 2001 South Korea's economic problems remained a central concern, though business and industry began to recover. In 2000 Kim Dae-jung won the Nobel Peace Prize for his efforts at improving relationships between North and South Korea. In an emotional reunion between South and North Korean families, relatives were able to meet for the first time since the partition of the country in 1945.

Generally, however, relations between the two countries remained tense. In 2002, 25 North Koreans defected to South Korea by way of the Spanish embassy in Beijing, drawing attention to the tens of thousands of North Koreans who, having fled repression and famine, were hiding in China. That June, naval vessels from the two Koreas fought a battle over the disputed sea border, leaving over 40 people dead. Kim's regime proved tainted with corruption, and two of the president's sons went to jail for graft. In December 2002 the governing Millennium Democratic Party's candidate for president, Roh Moo-hyun, managed to win a very close election.

Roh Moo-hyun suffered from his own allegations of corruption and was suspended between March and May 2002 after parliament voted to impeach him for incompetence and breaching election rules. He was reinstated after the Constitutional Court overturned the suspension.

In June 2004 the United States proposed reducing its troop presence in Korea by one-third; the opposition forces opposed this move, fearing attacks if American forces were to leave. The government decided to build a new capital city, Yeongi-Kongju, to replace Seoul by 2030. The United Nations rebuked South Korea that fall for its experiments in enriching uranium but decided not to call on the Security Council to discipline the nation.

LIST OF MODERN RULERS

1948–60	Rhee Syng-man
1960–62	Yun Bo-seon
1963–79	Park Chung-hee
1979–80	Choi Kyu-ha
1980–88	Chun Doo-hwan
1988–93	Roh Tae-woo
1993–98	Kim Young-sam
1998–2003	Kim Dae-jung
2003–	Roh Moo-hyun

CONSTITUTION

The constitution of the Sixth Republic, approved in October 1987, rescinded many of the presidential powers allowed by the constitution of 1972. This earlier constitution, with its authoritarian and antidemocratic provisions, had represented a break with earlier constitutions. The 1987 constitution provides for the direct election of the president by universal suffrage to a five-year, nonrenewable term. It restricts the president's emergency powers and gives the National Assembly the power to end martial law.

The State Council, which functions as the cabinet, is made up of the president, the prime minister, and 15 to 20 other members appointed by the president. No active member of the military may be a member of the council.

Legislative power is vested in the unicameral National Assembly, popularly elected for four-year terms. The judiciary is headed by the Supreme Court, whose chief justice is appointed for a five-year term with the approval of the National Assembly.

National elections and referendums are held and supervised by the Central Election Management Committee. This independent, nonpartisan body has nine members, three of whom are appointed by the president, three by the National Assembly, and three by the Supreme Court. Election of members of the National Assembly is by universal, direct, and secret vote. The voting age is 20.

PARLIAMENT

The national legislature is the National Assembly (Huk Hoe), a unicameral body consisting of 299 members elected by popular vote for four-year terms. Amendments to the constitution in 1988 provide for direct election to all but 75 seats. Half of those seats are awarded to the party receiving the most votes, with the rest distributed proportionately to the other parties.

The party makeup in the National Assembly changed dramatically in 1990, when the ruling Democratic Justice Party merged with two opposition parties to form the Democratic Liberal Party.

Traditionally, the South Korean voting system was weighted in favor of the ruling party, making that party virtually certain to retain its majority in the National Assembly. The constitution of 1987 eliminated the ruling party's advantage by replacing vote by electoral college with direct popular vote. Nevertheless, the DLP, renamed the New Korea Party in 1992, retained power in the assembly because of divisions in the opposition parties. Even after the election of Kim Dae-jung, leader of the National Congress for New Politics in 1997, the New Korea Party held a majority of seats in the assembly.

POLITICAL PARTIES

South Korea has a near two-party system. The presidential coalition consists of the Millennium Democratic Party (MDP) and the United Liberal Democrats (ULD). The former was founded by Kim Dae-jung in 1995 as a centrist party, initially called the National Congress for New Politics. The conservative ULD was formed by Kim Jong-pil. The main opposition parties are the Grand National Party (GNP), formed in 1997 by the merger of the New Korea Party and the Democratic Party, and the New Party by the People (NPP), also founded in 1997. There is also the Uri Party/Our Open Party (UP).

LOCAL GOVERNMENT

For purposes of local administration, South Korea is divided into nine provinces—Gyeonggi, Gangwon, North Chungcheong, South Chungcheong, North Jeolla, South Jeolla, North Gyeongsang, South Gyeongsang, and Jeju Island—and seven separate cities—Seoul, Busan, Incheon, Daegu, Gwangju, Ulsan, and Daejeon. The cities are divided into wards, or *ku*, each headed by a *kuchongjang*; the wards are further divided into blocks, or *dong*. There are no representative institutions at the local level.

LEGAL SYSTEM

The judicial system is headed by the Supreme Court, which consists of a chief justice and no more than 14 other justices. The justices are appointed to six-year terms by the president, with the consent of the National Assembly. The Supreme Court hears appeals from the appellate courts and also has jurisdiction over military tribunals. Constitutionality of laws is decided by the nine-member Constitution Court, three of whose members are selected by the president, three by the Assembly, and three by the chief justice.

Appellate courts, district courts, and family courts make up the lower court system. The appellate courts hear appeals in civil and criminal cases. District courts, in Seoul and the provincial capitals, have original jurisdiction over civil and criminal cases. Thirty-six branch courts are found in other principal cities. There is also a family court sitting in Seoul.

The constitution guarantees many rights to defendants: the presumption of innocence and protection against self-incrimination, ex post facto laws, and double jeopardy; the right to a speedy trial; and the right to legal counsel. Though these rights were sometimes not observed in the past, they are now the rule. Trials are usually open to the public, and charges against defendants are clearly stated.

The police normally wait several days, and sometimes more than 40 days, the maximum under Korean law, to notify an arrested person's family. The constitution guarantees the right of prompt legal assistance and the right to request court review in case of arrest. Habeas corpus, although not traditional in Korean law, is now part of the legal system.

HUMAN RIGHTS

South Korea's record on civil and human rights has been mixed. During the 1990s the government generally respected the freedoms guaranteed to all citizens in the constitution of 1987, which includes provisions concerning the freedoms of speech and the press, for example. In earlier years the human rights picture was often marked by press censorship and the suppression of political activity, particularly among college students. Student riots in Seoul and Gwangju in 1980, for example, led the government to declare martial law, arrest political dissidents, and dissolve the National Assembly. In 1984 the government relaxed these policies by restoring the civil rights of many of those imprisoned after the 1980 unrest.

FOREIGN POLICY

South Korea's foreign policy is geared toward four major goals: national security, economic development, the unification of North and South Korea, and the enhancement of the country's international stature.

Maintaining its 1954 Mutual Defense Treaty with the United States is of central importance to South Korea. The force of 37,000 American soldiers stationed in the demilitarized zone (DMZ) separating North and South Korea is vital to the nation's security. South Korea has also sought American backing in its efforts to improve relations with North Korea.

After years of bitter relations following the end of the Korean War, in 1972 South Korea and North Korea agreed in principle to work toward normalizing relations. South Korea hoped that an end to hostility with the North could lead to the eventual reunification of Korea. The goal of reunification proved elusive almost from the beginning, however; tensions between the two nations both continued and increased in the 1980s and 1990s. North Korea built up its armed forces and took provocative actions that escalated at times into isolated clashes along the DMZ. In time North Korea's Communist government secretly developed nuclear weapons and missiles, posing ever greater danger to South Korea. South Korea responded by undertaking a nuclear weapons development program in the 1990s. Tensions grew when North Korea launched a test missile into the Sea of Japan in August

1998. Relations with North Korea entered a new phase when President Kim Dae-jung visited North Korea for the first time in 1999; he won the Nobel Peace Prize for his efforts at reconciliation. Despite those efforts, relations have remained tense, and there was sporadic fighting between the two Koreas in the early 2000s.

South Korea achieved recognition from the world community when, along with North Korea, it was admitted to the United Nations in 1991. Its international stature was also enhanced by Seoul's hosting the 1988 Olympic Games.

DEFENSE

The defense structure is headed by the president as commander in chief of the armed forces. The president, the chairman of the joint chiefs of staff, the chiefs of staff, and other ministers serve on the National Security Council, which oversees national defense. Military manpower for the army and part of the marine corps is provided by conscription, while the air force and navy depend on voluntary enlistment. All male citizens are liable for compulsory military service at age 20, though they can volunteer at 18. They serve between 24 and 28 months, depending on the branch of service.

The Korean Peninsula is one of the world's most heavily armed regions. The combined North and South Korean armed forces total some 1.4 million. The South Korean army is virtually the creation of the post-World War II U.S. military government in Korea. This relationship was cemented by the 1954 Mutual Defense Treaty between the two nations. South Korea's armed forces personnel were estimated to total 665,000 in 1999. The nation spent \$14.5 billion on military preparedness in 2003, or 2.7 percent of its gross domestic product (GDP).

The U.S. has kept troops in South Korea since the late 1940s. In 2004 the U.S. proposed reducing its troop strength by one-third, a suggestion that was not received with universal enthusiasm. South Korea itself admitted to experimenting with nuclear weapons in 2000.

Military Indicators

Total Active Duty Personnel: 665,000
 Military Manpower Availability: 14,233,895
 Military Expenditures \$billion: 14.522
 as % of GDP: 2.7
 as % of central government expenditures: —
 Arms Imports \$million: 229
 Arms Exports \$million: 22

ECONOMY

South Korea's economy has undergone a dramatic transformation since the early 1950s. In 1954 it was an improv-

erished nation largely dependent on agriculture; today it is a modern industrial power, with a generally skilled workforce of over 20 million, as well as a leading nation in world trade. South Korea's remarkable economic growth can be seen in the increase in its GDP in recent decades: From 1963 to 1978 the annual GDP growth rate was 10 percent, one of the highest in the world. In 1963 per capita GDP was \$100; in 2000 per capita GDP was \$16,100.

South Korea enjoys a leading role in trade among the nations of the world. Its major exports include electronic and electrical equipment, machinery, steel, automobiles, ships, clothing, and textiles. South Korea's leading trade partners are the United States, which purchases 17.8 percent of these goods, and Japan, which buys 18.2 percent.

The economic crisis that afflicted Asian nations in 1997–98 became a serious threat in South Korea. The nation's currency and banking system was weakened by massive credit problems and foreign debt. Government efforts to help South Korean industries and banks were unable to resolve the crisis. The intervention of the IMF in 1997 helped to bolster South Korea's economy with a \$57 billion loan. By enabling the government and the private sector to work together to implement economic reforms, this loan helped the nation to begin recovery in 1999.

Growth was strong in the early 2000s, and in 2003 GDP grew at a rate of 3.1 percent; this was a reduction from 2002, as brought about by rising household debt and other external factors. Per capita GDP in 2003 was a high \$17,800. Trade with North Korea increased, with South Korea shipping its neighbor humanitarian supplies in exchange for metal products. However, economists fear that South Korea's growth years may be over, due to its aging population and rigid market structures.

ENVIRONMENT

Only a little more than half the Korean population has piped water because of a dearth of storage and purification facilities. A lack of sewage treatment and direct discharges of industrial plants contaminate many water supplies. The overuse of pesticides and fertilizers on farmland has led to the runoff of these chemicals into rivers, adding to the pollutant burden.

Rapid industrial growth has brought an increase in the use of low-grade coal both for heating and industrial purposes. Untreated emissions result in high levels of pollution, which is exacerbated by the growing number of automobiles. More than 100 species of animals have disappeared from rural areas because of the destruction of their habitat and the use of chemical fertilizers. Of particular concern is the Naktong River delta, the winter home of thousands of birds.

South Korea has made great efforts to clean up industrial pollution, with some notable success. Air pollution, however, is growing rapidly as more and more people drive automobiles.

Environment

Forest Area % of total land area: 63.3
 Forest Change (1990-2000) hectares 000: -5
 Nationally Protected Areas % of total land area: 4
 Emissions of Organic Water Pollutants kg per day: 303,091
 CO2 Emissions per capita ton: 9.08

LIVING CONDITIONS

Living conditions are quite good in South Korea. Housing is modern and well heated through systems of pipes under floors. Traditional houses are one-story structures shaped like Ls or Us. Rooms serve multiple functions; people typically eat and sleep on the floor; though many people also use Western-style furnishings. Furniture is elaborately decorated. Public transportation is cheap and efficient, though it can be extremely crowded; traffic jams make driving inconvenient.

HEALTH

The government supplies health care to all citizens; workers pay small portions of their paychecks to cover health insurance, which includes dental care. An oldest son can cover his parents on his health insurance policy. Drugs such as antibiotics are readily available without prescriptions. National insurance also covers traditional remedies such as acupuncture, moxibustion, massage, baths, and herbal treatments such as ginseng.

Health

Number of Physicians: 84,611

FOOD AND NUTRITION

Korean food features rice and soup at nearly every meal, along with many vegetables, stews made of meat and vegetables, and spicy pickled cabbage called kimchi. Most food is extremely spicy. A fancy dish is *pulgogi*, meat that is grilled on the table and then wrapped in lettuce leaves. Ginseng, ginger, and green tea are all popular drinks.

Food and Nutrition

Undernourished % of total population: 1.6
 Daily Available Calories per capita kcal: 3,060
 Amount of Cereal Available per person per year kg: 151.7
 Amount of Fruits and Vegetables Available per person per year kg: 276.0

STATUS OF WOMEN

Violence against women remains a problem, and some women's rights groups maintain that such violence, including spousal abuse, has worsened with the recent decline of the economy. A 1997 survey found that 31.4 percent of households had experienced incidents of domestic violence. In July 1998 the government enacted the Prevention of Domestic Violence and Victim Protection Act, which defines domestic violence as a serious crime.

Enacted to combat sexual harassment in the workplace, a new sexual harassment law went into effect in July 1998. Under the law, companies can be fined up to \$2,500 (3 million won) for failing to take steps to prevent sexual harassment in the workplace or for failing to punish an offender. The law also requires companies to establish in-house sexual harassment complaint centers and forbids firms from punishing employees for taking their complaints to outside organizations.

The amended Family Law, which went into effect in 1991, permits women to head a household, recognizes a wife's right to a portion of the couple's property, and al-

lows a woman to maintain greater contact with her offspring after a divorce.

In January 1998 the National Assembly revised the 1987 Equal Employment Act to include tougher penalties to be imposed on companies found to discriminate against women in hiring and promotions.

Women have full access to education, and social mores and attitudes are gradually changing. For example, the major political parties are making more efforts to recruit women; the Ministry of Women's Affairs continued its efforts to expand employment opportunities; and the military and service academies continued to expand opportunities for women.

 Women's Share of Wage Employment Non-agricultural %: 41.2

WORK

South Koreans have worked very hard in the days since the Second World War, transforming their once poverty-stricken nation into an economic powerhouse. Electronics and technology, manufacturing, and services dominate the economy. There are many jobs for skilled workers. Women make up about 42 percent of the workforce, typically holding traditionally female jobs, as teachers, nurses, secretaries, and tour guides, for example. Confucian standards of behavior apply in the workplace, and junior employees are expected to respect their elders. In 2003 the National Assembly passed a law reducing the workweek from six to five days.

 Female Participation Rate %: 42.0
 Labor by Sector %:
 Agriculture: 8.8
 Industry: 19.1
 Services: 72.1
 Unemployment %: 3.4

EDUCATION

The national literacy rate was 98 percent in 1998. Education is compulsory, free, and universal from ages six to 12. Schooling consists of 12 years, as divided into six years of primary school, three years of middle school, and three years of secondary school. The curriculum was standard-

ized in 1954 but has since been modified many times. The academic year runs from September through June. The medium of instruction is Korean, but English is taught as a compulsory subject from the secondary grades on. Private schools function as an integral part of the national school system, with enrollment in private schools rising to 45 percent at the middle-school level.

Control of education is vested in the Ministry of Education, but the public school system is under the administrative direction of city, county, and provincial school boards. Only higher educational institutions are directly under the Ministry of Education; these include two- and four-year public colleges as well as private institutions, such as Ewha Women's University in Seoul.

Education

Literacy Rate %: 97.9

 Public Expenditure on Education as % of GDP: 4.3

SCIENCE AND TECHNOLOGY

South Korea's scientific infrastructure developed with dazzling speed between 1960 and 2000. Initially, firms worked on reverse engineering, imitating—and occasionally pirating—existing products, but by the 1990s the nation was engaging in legitimate scientific research and development in its own right. South Korea has about 100 research centers, scientific and engineering centers at universities, and private research concerns. In 1998 the nation spent about \$1.35 billion on science and technology. There are excellent telecommunications facilities. Nearly 30 million Koreans were using the Internet in 2003.

Science and Technology

Scientists and Engineers in R&D per 1 million people: 2,238
 Expenditures in R&D as % of GDP: 2.6
 High-Tech Exports \$billion: 46.4
 Patent Applications by Residents: 74,001

MEDIA

More than 100 daily newspapers are published, including several in English. The periodicals press consists of more than one thousand titles. The most influential newspapers and periodicals are privately owned by wealthy individuals or families with direct or indirect ties to the government or to one of Korea's large industrial conglomerates; they have been subject to government censorship in past years, though they were seldom forced to close, as were many independent newspapers. Freedom of the press is greatly respected, and the press regularly criticizes the government.

South Korea has a large book-publishing industry, with over 75 major publishers.

The electronic media are subject to government regulation, but there is no government monopoly. The government-owned Korean Broadcasting System (KBS) exists alongside private radio networks. In the field of television, government and private networks compete in the same manner. KBS has a television station in Seoul, as does the private Munhwa Broadcasting Network. Most Koreans have cable television, and satellite services have become increasingly popular since their introduction in 2002.

South Korea has a strong film-production industry, which produces many feature films and short films each year. Films are subject to regulations set out by the Ministry of Culture and Information and to the censorship standards of an advisory council.

Since Kim Dae-Jung met with Kim Jong-il in 2000, the South Korean press has been kinder in its coverage of North Korea, though there have been cases in which South Korean journalists have been criticized for making favorable comments about the nation's northern neighbor.

CULTURE

South Korea has maintained its traditional art forms, such as dance, drama, and painting. Most types of performing arts come in two varieties: one for the nobility and one for the common people. Korean ceramics are world famous; vases may be glazed in celadon green or depict scenes from nature. There is a Ceramic Art Village

in Incheon that employs potters who make traditional works. Korean literature came from an oral tradition influenced by Buddhism, Confucianism, and shamanism. Some of the earliest written literature are poems called *hyangga*, written in Chinese characters that sounded like phonetic Korean. Modern writers explore themes such as industrialization and social justice. Young people enjoy European and American popular music.

Cultural Indicators

 Annual Attendance: 54,700,000

FOLKLORE AND MYTHOLOGY

South Koreans are interested in their country's traditional culture, occasionally wearing traditional costumes and attending performances of folk dances and music. The government has actively encouraged the revival of traditional dances, considering them important cultural properties. The Korean Folk Village in Suwon is an entire village constructed in the traditional style and filled with employees dressed as old-time Koreans. Some Koreans still observe the customs of shamanism, a kind of nature worship, and perform acts such as leaving offerings at shrines or hanging chilies and pine needles over the doors of houses where sons have been born.

ENTERTAINMENT AND RECREATION

South Korea has all the entertainment possibilities of a modern country, with nightclubs, restaurants, shopping, and bathhouses. People enjoy outdoor activities such as hiking, skiing, and skating.

ETIQUETTE

Koreans do not address older people by first names, only by title. A younger Korean will not look an older person in the eye. Bowing is fairly common. Koreans find politeness extremely important and do not like direct confrontation or criticism. When a group of people go out to dinner, one person pays the bill for the entire group; it is rude to offer to help. In social settings, men and women typically socialize separately, in different rooms if possible.

FAMILY LIFE

Confucian traditions inform Koreans' attitudes toward the family. Everyone knows his or her place and is expected to respect all superiors; all parents encourage their children to respect their elders and to have a sense of obligation to the family. Most people can trace their family trees back several generations. While in the old days extended families often lived together, modern family units are smaller, though people still take care of their elderly parents. Most women choose to stay home after marrying and having children; it is customary for a husband to turn over his entire pay package to his wife, who uses it for household expenses and gives her husband an allowance for his needs.

PERSONAL APPEARANCE

South Koreans dress conservatively, in typical Western styles. Men wear dark suits for business, and women wear modest suits or dresses.

SPORTS

South Koreans have substantial disposable income and spend much of it on leisure activities. Martial arts such as taekwon do are very popular; *ssireum* is another martial art and is similar to sumo. People also enjoy Western sports such as soccer, basketball, and skiing. Korean athletes have done very well in international competitions in sports such as archery, wrestling, handball, volleyball, and swimming.

CHRONOLOGY

- 1945** Soviet Union invades Korea and occupies the half north of the 38th parallel. U.S. forces occupy the southern half of the peninsula.
- 1948** Communist north becomes the Democratic Republic of Korea, with Kim Il-sung as president, and the democratic south the Republic of Korea, with Rhee Syng-man as president.
- 1950** North Korea invades South Korea. United States, backed by UN forces, pushes back the aggressors. China intervenes and drives UN forces back to the 38th parallel.
- 1953** Korean War ends with no peace treaty, but each side accepts the 38th parallel as the dividing line between the warring countries. U.S. troops remain in the country to guarantee peace.
- 1960** Rhee resigns as president following student-led protests.
- 1961** Military coup brings Gen. Park Chung-hee to power.
- 1972** Martial law is imposed, and presidential powers are augmented.
- 1979** President Park is assassinated. Interim government of President Choi Kyu-ha introduces liberalizing reforms.
- 1979** Gen. Chun Doo-hwan assumes power after anti-government riots.
- 1987** Constitutional reforms are introduced to placate liberal critics. Democratic Justice Party candidate Roh Tae-woo is elected president.
- 1988** Olympic Games are held in Seoul.
- 1991** South Korea joins United Nations.
- 1992** South Korea establishes diplomatic relations with China. Kim Young-sam is elected president.
- 1996** South Korea is admitted to Organization for Economic Cooperation and Development. Former presidents Roh Tae-woo and Chun Doo-hwan are convicted for corruption.
- 1998** Kim Dae-jung is elected president, the first from an opposition party.
- 2000** President Kim Dae-jung meets with Kim Jong-il of North Korea and allows some South Koreans to meet their North Korean relatives; he receives the Nobel Peace Prize for his role in fostering better relations between North and South Korea. Pak Tae-chun becomes prime minister.
- 2001** Incheon International Airport opens.
- 2002** Some 25 North Koreans defect to South Korea. South and North Korean naval vessels fight a battle in the Yellow Sea over the disputed sea border. Roh Moo-hyun of the Millennium Democratic Party wins the presidential election.
- 2003** Hundreds of South Koreans travel to Pyongyang for a celebration opening a gymnasium funded by Hyundai.
- 2004** South Korea sends 3,000 troops to Iraq. President Roh Moo-hyun is suspended from March 12 to May 14. Yeongi-Kongju is selected as a site for a new capital city, to replace Seoul by 2030. The government admits to carrying out nuclear experiments in 2000.

Basic Fact Sheet

OFFICIAL NAME

State of Kuwait (Dawlat al-Kuwayt)

ABBREVIATION

KW

CAPITAL

Kuwait City

HEAD OF STATE

Emir Sabah al-Ahmad al-Jabir al-Sabah (from 2005)

HEAD OF GOVERNMENT

Prime Minister Sheikh Nasser Muhammad al-Ahmed al-Saban (from 2006)

NATURE OF GOVERNMENT

Constitutional hereditary emirate

POPULATION

2,335,648 (2005)

AREA

17,820 sq km (6,880 sq mi)

MAJOR ETHNIC GROUPS

Arab, South Asian, Iranian

LANGUAGES

Arabic, English

RELIGION

Islam

UNIT OF CURRENCY

Kuwaiti dinar

NATIONAL FLAG

Three horizontal stripes of equal height—from top to bottom, green, white, and red—with a black trapezoid based on the hoist. The trapezoid's shorter base is equal to the height of the white stripe.

NATIONAL EMBLEM

A circular badge on which a dhow, a white-sailed craft, appears on a blue-and-white sea against a blue sky and white clouds. At the crest appears the name of the country in Arabic, and at the base appears a brown falcon, under which the Kuwaiti shield is shown, which bears the motif of the flag hung vertically.

NATIONAL ANTHEM

Unnamed instrumental melody

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 25 (National Day), February 26 (Kuwait Liberation Day), various Islamic festivals, including Islamic New Year's Day

DATE OF INDEPENDENCE

June 19, 1961

DATE OF CONSTITUTION

November 11, 1962

GEOGRAPHICAL FEATURES

Kuwait, located in the northeastern corner of the Arabian Peninsula at the western head of the Persian Gulf, is one of the world's smallest countries. It is roughly rectangular in shape, extending 205 km (127 mi) southeast to northwest and 176 km (109 mi) northeast to southwest. Outlying islands include Bubiyan, Miskan, Auha, Warbah, Kubbar, Umm al-Maradim, Umm an-Namil, Qaruh, and Failaka, of which only the last is inhabited. The total land area, estimated at 17,820 sq km (6,880 sq mi), includes the Kuwaiti section of the Neutral Zone (5,700 sq km; 2,201 sq mi),

jointly owned by Kuwait and Saudi Arabia from 1922 to 1966. The length of the coastline is 499 km (310 mi).

The borders of Kuwait have never been precisely surveyed, but their length is estimated at 462 km (287 mi), of which the border with Saudi Arabia constitutes 222 km (138 mi) long, that with Iraq 240 km (149 mi).

The terrain is an almost flat desert except for the Jal az-Zor scarp to the west of Kuwait Bay. The central part of the country is separated from the narrow coastal plain by the Ahmadi ridge, 120 m (395 ft) high, which runs north to south.

There are no streams or rivers in the country.

CLIMATE AND WEATHER

Kuwait has an arid, subtropical climate. Summer, which lasts from May to October, is extremely hot, with temperatures ranging from 43°C (113°F) to 54°C (130°F). Winter, lasting from November to April, is generally pleasant,

with night temperatures in December and January occasionally touching the freezing point. Annual rainfall varies between 30 mm (1 in) and 220 mm (9 in), mainly between November and April. Sand and dust storms are frequent in the summer, when the *shamal*, a strong northeasterly wind, blows from the gulf.

Climate and Weather

Temperature Range: 34°F to 130°F
Average Rainfall: 1 in to 9 in

FLORA AND FAUNA

Kuwait does not have many plants or animals; conditions are too hot and dry to support much life. There are a few desert flowers and shrubs that bloom during the rainy season. The most common plant is a short shrub called *arfaj*. Camels, sheep, and goats are the main animals, along with a few desert creatures such as rats and foxes.

POPULATION

Population Indicators

Total Population 2005: 2,335,648
World Rank: 137th
Density per sq km: 133.7
% of annual growth (1999-2003): 3.2
Male %: 60.3
Female %: 39.7
Urban %: 96.2

Marriage Rate per 1,000: 5.3
Divorce Rate per 1,000: 1.7
Average Size of Households: 7.4
Induced Abortions: —

ETHNIC COMPOSITION

The majority of indigenous Kuwaitis are descendants of Arabs of the Aniza tribe, who immigrated from Njed, in Saudi Arabia, in the 18th century. Among the early settlers was the al-Sabah family, which became the ruling dynasty.

The traditional Kuwaiti minorities are descendants of African slaves and Iranians, who have their own quarter in Kuwait City. About 55 percent of the population

consists of foreign workers who have immigrated from other Arab countries as well as India, Pakistan, Bangladesh, Sri Lanka, and the Philippines.

LANGUAGES

Arabic is the official language of the country. English is the second language taught in schools and is the medium of commercial communication.

RELIGIONS

Islam is the official religion of the emirate. Muslims, both Shia and Sunni, make up 85 percent of the population, and Christians, Hindus, Parsis, and adherents to other creeds constitute the other 15 percent. About 70 percent of Muslims are Sunni, the remainder Shia.

Modern Kuwait is relatively tolerant of other faiths, but the construction of Hindu, Sikh, or Buddhist temples is prohibited, and proselytizing of Muslims by non-Muslims is prohibited. In 1986 the National Assembly approved legislation barring citizenship to non-Muslim applicants.

Religious Affiliations

HISTORICAL BACKGROUND

In 1716 several clans of the tribe of Aniza migrated from the interior of the Arabian Desert to a tiny gulf coastal locality later called Kuwait, derived from the Arabic word *kut*, meaning "fort." In 1756 the tribes chose as their ruler a sheikh from the al-Sabah family. During the reign of Sheikh Abdallah al-Sabah (1866-92) a dynastic battle raged in Arabia between the rival houses of al-Rashid and al-Saud. The Turks, who supported al-Rashid, wanted to extend their control over the coastal area south of Kuwait, which was by then a semiautonomous Ottoman province. Fearing his territory would be annexed, Sheikh Mubarak al-Sabah asked to be taken under British protection. Increasing British involvement in India beginning in the late 18th century quickened British interest in the gulf region as a means of protecting the sea routes to India. Through an 1899 treaty, Kuwait ceded its external sovereignty to Britain in exchange for financial subsidies and military support.

The strategic importance of the Persian Gulf became increasingly apparent as the oil industry developed in the 20th century. Sheikh Amed, who ruled Kuwait from

1921 to 1950, was responsible for the development of the Kuwaiti oil industry. He was succeeded by his cousin, Sheikh Abdallah al-Salim al-Sabah, who, using petroleum revenues, developed an extensive welfare system for his people.

Kuwait achieved full independence in June 1961, when the United Kingdom terminated the 1899 treaty. The ruler assumed the title of emir. A National Assembly replaced the Constituent Assembly upon the inauguration of the constitution in 1962. The emir died in 1965 and was succeeded by the prime minister and heir apparent, Sheikh Sabah al-Salem al-Sabah. His cousin, Sheikh Jabir al-Ahmed al-Sabah, was named prime minister and heir apparent.

The emir dissolved the National Assembly in 1976 on the grounds that it was acting against the state's interest by criticizing the government. He also suspended the constitutional provision that elections be held within two months and instituted severe restrictions on the press. Constitutional government returned in 1981 with elections for the National Assembly. However, following a series of confrontations over fiscal and internal security issues, Emir Saad al-Abdallah al-Salim al-Sabah, who had succeeded in 1978, dissolved the assembly in 1986. As had his predecessor, the emir postponed elections and imposed strict press controls. The emir has since ruled by decree.

The war with Iraq of 1990–91 was an important juncture in Kuwait's modern history in several ways. The event demonstrated the nation's military weakness and drew it into a close alliance with major Western powers, especially the United States. Iraq's destruction of Kuwait's petroleum industry significantly impaired the economy for years. Finally, in the aftermath of liberation, the emirate confronted serious questions about democracy and the presence of large numbers of non-Kuwaitis.

In late July 1990, before a meeting of the Organization of Petroleum Exporting Countries (OPEC), Iraq made several demands of and threats against Kuwait. Iraq called for a waiver of the large debt to Kuwait accumulated during the Iranian war and accused the emirate of violating the common border to steal Iraqi oil reserves. The Iraqi president Saddam Hussein also threatened to take military action against countries that ignored OPEC quotas and placed two armored divisions on the border with Kuwait. An OPEC meeting on July 25 appeared to calm the situation; prices were raised \$3 a barrel to \$21, and Kuwait agreed to limit production. The two nations were also talking about disputed territory, mostly the islands of Bubiyan and Warbah.

The border negotiations broke off August 1, however, and the following day Iraq invaded and easily conquered the emirate. Kuwait's army of 20,000 troops and 275 tanks was no match for Iraq's invading force of 100,000, although defending soldiers offered some resistance at the emir's palace, after the ruler had fled

to Saudi Arabia by helicopter. Fighting also occurred around military barracks outside the capital. Perhaps 200 Kuwaitis were killed in the assault. Little evidence supported Hussein's claim that Iraq invaded to support domestic anti-emir insurgents.

On August 8 Hussein announced the annexation of Kuwait as Iraq's 19th province, soon renaming the capital Kadhima, the city's name under the Ottoman Empire. The Iraqi occupation was brutal, especially after Ali Hassan Majid, Hussein's cousin, was made military governor in mid-September. Majid had organized the repression of Kurdistan in 1988; he gave orders to crush all Kuwaiti resistance, partly due to frustration over the refusal of the conquered to return to work and join a revolutionary government under Iraq.

The occupier's policy of killing six Kuwaitis for each Iraqi slain led to diminished resistance, but defiant groups continued sporadic night hit-and-run raids against Iraqi installations. These groups received weapons smuggled from Saudi Arabia and also probably received help from the American Central Intelligence Agency. The Iraqis engaged in looting, torture, and summary executions and, among other insults, killed and ate edible animals at the national zoo. About 7,000 Kuwaitis were killed and 17,000 detained during the occupation.

The Kuwaiti government-in-exile operated from a hotel in the western Saudi city of Taif. Although the emir was present, most affairs were handled by the crown prince, Premier Sheik Saad al-Abdallah al-Sabah. The ruler was reportedly emotionally distraught over the invasion and occupation. In September 1990 the government pledged \$5 billion to aid U.S. military operations and nations affected economically by the crisis. Kuwait's ambassador to the United States, Saud Masir al-Sabah, who had called for American help on the day of the invasion, was a key figure throughout the ordeal.

Led by the United States under the aegis of the United Nations, the international community responded vigorously to the Iraqi invasion. The United Nations declared the annexation of Kuwait null and void, demanded Iraqi withdrawal, and eventually authorized the use of force to evict the occupiers. By January 1991 the U.S.-led alliance had more than 500,000 troops in the region.

In a two-stage campaign from mid-January to late February 1991, the allies defeated and forced the Iraqis to leave the emirate. The first stage was a massive air war against installations and troops in Kuwait and southern Iraq; some Kuwaiti pilots participated in these bombing missions. The second stage was the ground campaign of February 24–28. As part of the allied invasion force, Kuwaiti soldiers led the march into the capital February 27, although resistance forces claimed to have controlled the city a day earlier.

Liberation, however, was a mixed blessing. Early estimates of the cost of reconstructing the emirate were

\$100 billion. Much of Kuwait City was in ruins, with many large buildings set afire just before the Iraqi retreat. Damage to the nation's petroleum industry was extensive. Of 1,080 oil wells, Iraq rendered more than 800 completely inoperable, including 535 fractured or set ablaze with explosives. Hundreds of wells were still burning months after the Iraqi departure. Also destroyed were half of the petroleum-gathering centers and all above-ground oil storage facilities.

The Gulf War created a siege mentality in Kuwait, which henceforth remained prepared to meet another invasion from Iraq. Indeed, in 1994 Iraq once again deployed troops near the Kuwaiti border, withdrawing them only after Western warnings. Thereafter, Iraq dropped its long-standing territorial claim against Kuwait by formally recognizing Kuwait's sovereignty and accepting the border as demarcated by the United Nations.

Internally, the major postliberation questions confronting Kuwait were how to handle the expatriate issue and to what degree the nation's political system might be democratized. Tensions existed between resistance fighters and those who had taken refuge abroad during occupation. The energized opposition demanded elections for a new parliament and a free press. In national elections held in 1992 and 1996, government critics won a substantial number of seats. The ruling family of Kuwait since became more responsive to complaints by its people about the lack of democratic institutions. In 1999 Sheikh Jabir al-Ahmed al-Sabah issued a decree giving women the right to vote, but the move was defeated in the National Assembly by 32 to 30 votes. Additionally, the government began a savings plan to ensure the country's continued wealth after oil reserves are depleted. The emir suspended the National Assembly after a dispute over misprints in the state edition of the Koran; in the elections to replace the dismissed Assembly, liberals and Islamists took the majority of seats, though liberals lost most of these seats again in the 2003 elections.

Kuwait has been keenly interested in restoring good relations with Iraq. In 2002 representatives from Kuwait and Iraq met in Beirut to discuss normalizing relations, and Iraq promised not to invade Kuwait again. The following year, Kuwait donated troops, land and money to the U.S.-led military campaign against the Hussein regime. Also in 2003, the emir appointed a new prime minister, for the first time separating that office from the position of crown prince.

In 2004 the government began preparing numerous indictments against Saddam Hussein and his aides for war crimes committed during the occupation of 1990–91. At the same time, the government made known that it would consider waiving a large portion of Iraq's debt. In 2005 legislation was approved granting women full political rights. Emir Jabir al-Ahmad died in January 2006 and Sheikh Sabah al-Ahmad was sworn in as emir.

LIST OF MODERN RULERS

1950–65	Sheikh Abdallah al-Salim al-Sabah
1965–77	Sheikh Sabah al-Salim al-Sabah
1977–2006	Sheikh Jabir al-Ahmad al-Jabir al-Sabah
2006–	Sheikh Sabah al-Ahmad al-Jabir al-Sabah

CONSTITUTION

The constitution of 1962 established a constitutional monarchy based on Arab traditions. Islam is declared the religion of the state, Islamic law the source of legislation. The constitution also contains a bill of rights.

Executive power is vested in the emir, the head of state, who is also the supreme commander of the armed forces, with the power to declare "defensive war" ("offensive war" is prohibited by the constitution). Succession to the emirate is confined to the heirs of Sheikh Mubarak al-Sabah. The emir exercises his executive powers through the Council of Ministers, which is headed by the prime minister, the chief of the government, who is appointed by the emir after traditional consultations. Though the prime minister was traditionally the crown prince, in 2003 the emir separated the two offices and appointed a new prime minister.

Ministers, appointed on the recommendations of the prime minister, need not be members of the National Assembly, although all ministers assume *ex officio* membership in the assembly for the duration of the office. The assembly may pass a vote of no confidence in a minister, in which case he must resign, but a vote of no confidence in the prime minister is not permitted. Many members of the cabinet, including the prime minister and deputy prime minister, are princes of the al-Sabah royal family.

The country is divided into 25 electoral districts. Voters must be literate, over 21, and not members of the armed forces. The voting community constitutes only 10 percent of the total population. Women are not allowed to vote or hold office.

Kuwait has a very stable government. Power is closely held in the al-Sabah family, and little or no opposition has been allowed to develop.

PARLIAMENT

The National Assembly, or *Majlis al-Umma*, is a unicameral legislature with a 50 members who are elected for four-year terms by native-born, literate males over 21. There are 25 electoral districts, each of which returns two members. The 25 appointed members serve *ex officio* as cabinet ministers. At one time a "grandfather clause" effectively limited suffrage to adult males who resided in Kuwait before 1920 and maintained a residence there

until 1959 and to their descendants. This limitation was broadened in 1992 to include all sons of naturalized persons since 1992.

The Assembly sits for at least eight months in a year. When in session it meets once or twice a week in four-hour sessions. Most of the legislative work is done in committees.

Legislation may be initiated by a minister or by any member of the assembly. If a law is passed by a two-thirds majority, the emir signs it and promulgates it as law; if the law is passed by a simple majority vote, the emir can withhold his signature until the next session if he so chooses. The emir may also issue decrees with the force of law when the Assembly is not in session, but the decrees must be submitted to the Assembly for approval when it again convenes.

The emir has the right to dissolve the Assembly. This right was exercised for the first time in 1976 in the wake of alleged "unjust attacks and denunciations against ministers" by members of the Assembly. The National Assembly was dissolved again in 1986, when the emir announced that he would henceforth rule by decree. He also suspended the constitutional provision requiring elections within two months. In the aftermath of the Persian Gulf War, elections were held in 1992, 1996, 1999, and 2003.

POLITICAL PARTIES

Kuwait's government has banned political parties. All candidates for election to the National Assembly run as independents. Some de facto coalitions do form along ideological lines; these include groups of Bedouins, Sunni or Shia Muslims, merchants, and secular leftists.

LOCAL GOVERNMENT

For purposes of local government, Kuwait is divided into six governorates—Al-Kuwayt (Kuwait City), Al-Ahmadi, Al-Farwaniyah, Al-Jahra, Hawalli, and Mubarak al-Kabeer—each under a governor.

LEGAL SYSTEM

The judicial system, revised in 1959, is based on the Egyptian model. Its family, land, and inheritance laws are derived from the sharia (Islamic law), but the Law of Commerce incorporates Western legal concepts.

The courts of first degree include criminal, assizes, magistrates, civil, domestic, and commercial courts, as well as the Misdemeanors Court of Appeal. The Domestic Court is subdivided into separate chambers for Shiites, Sunnis, and non-Muslims. Civil appeal is to the High

Court of Appeal and, in matters concerning personal status, to the Court of Cassation.

HUMAN RIGHTS

Until the 1990–91 Iraqi occupation, Kuwait's human rights situation had been stable. As a traditional emirate, it could afford to ignore political civil rights because of a number of unusual considerations: the oil wealth acted as a cushion against dissent, blunting tensions and rivalries; the majority of the population was expatriate, excluded from political power and depending on the goodwill of the government for continued residence; and the patriarchal system of Bedouin social life not merely assented to but also demanded an authoritarian government.

Although the government does not encourage torture, third-degree methods are employed by the police on occasion to extract confessions. Capital punishment by hanging is rarely sanctioned. Flogging is used, but with decreasing frequency. Arbitrary arrest most commonly occurs during roadblocks or spot checks of outdoor gatherings of foreign expatriates to locate illegal immigrants. Expatriate troublemakers may be summarily expelled. Legally, a person may be held without charges for no more than four days. Thereafter the suspect must be either released or turned over to a public prosecutor, who may authorize detention for up to an additional 21 days. Further detention may be authorized by a judge, pending trial.

Kuwait's legal system is independent and provides for public trials, the right of appeal, and representation by an attorney of one's choice. Secret trials are carried out by the State Security Court. There is no appeal of this court's decisions.

Since 1986 the press has been subject to prepublication censorship. All printed material must be approved by the government or rewritten, if not excised altogether. Under the Press Law, newspapers may be closed or suspended for violations of public morality or criticism of the ruling family or for any but the mildest comments on government policies and high-level officials. Editors are criminally liable for attacking leaders of friendly Arab states and for inciting sectarian strife. Although foreign publications are available freely, they are subject to censorship and cannot clear customs without permission from the Ministry of the Interior. Censorship has become rigid since 1986. The State Security Court has sentenced citizens to prison for illegally printing politically oriented literature. Academic freedom is restricted by the same measures used to censor the press.

Any group of more than three people desiring to meet for public discussion (or to meet privately but issue a public statement) must receive explicit and prior permission from the Ministry of the Interior. *Diwaniyyas*, or traditional gatherings, are exempt from this rule. The

establishment of trade unions is officially permitted, but non-Kuwaitis are barred from membership for five years and may not hold union office.

FOREIGN POLICY

The Gulf War was the central event in modern Kuwaiti foreign policy. Since the end of the Gulf War, Kuwait has become a firm ally of the United States, United Kingdom, and other allied participants in the war, and the nation was also an unrelenting opponent of Saddam Hussein's Iraq. Kuwait signed a 10-year military cooperation agreement with the United States and, in addition, agreed to the permanent stationing on its territory of a squadron of U.S. airplanes. In 1993 Kuwait also signed a 10-year defense cooperation agreement with Russia, and in 1995 it signed a military cooperation pact with China, thus completely isolating Iraq. In 2002–03 Kuwait participated in the execution of Operation Iraqi Freedom by donating \$350 million and 60 percent of its land for the use of coalition forces. In October 2003 Kuwait pledged \$1.5 billion for the reconstruction of Iraq.

Although a member of the Arab League, Kuwait downgraded its relations with six Arab countries that supported Saddam Hussein during the First Gulf War: Algeria, Jordan, Mauritania, Sudan, Tunisia, and Yemen.

DEFENSE

The defense structure, consisting of an army, navy, air force, and coast guard, is headed by the emir, who is also the commander in chief. The line of command runs through the army chief of staff and the deputy chief of staff, both of whom are princes of the al-Sabah royal family. A national service was introduced in 1975. All males between 18 and 30 are required to enlist for military service of 18 months. In 2003 Kuwait spent more than \$2.5 billion on its military.

Following the First Gulf War, a review of Kuwaiti armed forces was undertaken by a Defense Review Group, which began a 10-year development plan to retrain and equip Kuwaiti armed forces. Mutual defense agreements are a key element in Kuwait's defense strategy; the most significant agreements are with Great Britain and the United States.

ECONOMY

Kuwait is quite rich for its size. It possesses about 10 percent of the world's oil reserves—in the neighborhood of 98 billion barrels; only Saudi Arabia and Iraq have larger known reserves. Petroleum is the source of three-quarters of the government's income and nearly half of GDP. The main oil producer is the Kuwait Oil Company, which is jointly owned by British Petroleum and Gulf Oil. The Kuwaiti Oil Tankers Company is the largest tanker company in any OPEC nation. The land is too arid for agriculture, and so the nation must import almost all its food, except for locally caught fish. Kuwait has essentially no freshwater, so it must import water or purify seawater. In the early 2000s the government was negotiating with foreign oil companies about opening oil fields in the northern part of the country.

ENVIRONMENT

Kuwait suffered from a number of environmental problems prior to the First Gulf War, including a lack of sufficient quantities of potable water and pollution associated with emissions and oil production. The nation currently gets most of its water from desalination plants that remove salt from seawater. The war had serious effects on the environment of Kuwait. Extensive crop and soil destruction occurred as a result of the soot and oil mist produced by burning wells. Oil spills killed off wildlife, and

some oil lakes formed, destroying the underlying land. In addition, bombing, mining, and other military activities destroyed much of the country's limited farmable land. The long-term environmental effects of the war have proven tremendous; changes in the country's biodiversity mix, for example, may persist for decades.

LIVING CONDITIONS

The Kuwaiti government provides its people with extensive welfare benefits, including free education, health care, pensions, subsidized food, and low-interest housing loans, which are sometimes forgiven completely. Non-Kuwaitis living in the country also obtain some of these benefits. Kuwait has no sales or income taxes. Public transportation is cheap, efficient, and thorough. The cost of living is high.

HEALTH

Kuwait's government provides high quality health care to all residents free of charge, though noncitizens must pay for their own drugs. Many of the country's doctors and nurses come from other countries, enticed by good pay, but Kuwait is gradually training its own people in these jobs. About one-third of Kuwaiti doctors are women, who have succeeded in this field in large part because most women prefer to be treated by females. Overall health is quite good, and life expectancy averages almost 77 years. Fertility is relatively high, with slightly more than three children born per woman in 2004, and infant mortality quite low, such that Kuwait's population continues to grow.

FOOD AND NUTRITION

The staples of Kuwaiti cuisine are rice, chickpeas, fava beans, garlic, lemon, vegetables, and flat bread. People eat a great deal of *fuul* (fava bean paste), falafel (deep-fried balls of chickpea paste), and hummus (chickpea paste with tahini, garlic, and lemon). The standard flat bread is called *aish*. Chicken and lamb are common meats. There are some Indian and Western restaurants in the cities. Coffeehouses are common gathering places, and people serve a great deal of sweet coffee at home. No one drinks alcohol, which is banned from the country.

Amount of Fruits and Vegetables Available per person per year kg: 179.4

STATUS OF WOMEN

Kuwaiti women are allotted a subordinate role by statute and practice. Denied suffrage, women are also limited by tradition from freely choosing their places in society, though less so than in some other Islamic countries. Nevertheless, some Kuwaiti women are outspoken in their demands for broader societal roles. In contrast to the practices of some neighboring nations, Kuwaiti women are permitted to drive cars and wear Western dress in public and outside the country. Legal challenges against the government led Sheikh Jabir al-Ahmad al-Sabah to announce full political rights for women in 1999. However, the move was defeated in the National Assembly. The cabinet once again proposed legislation in 2004 that would give women the rights to vote and to run for parliament and the constitutional amendment was approved in 2005.

Although women have yet to join the workforce in large numbers, they are able to compete for government and corporate employment and have the right to litigate against men, such as in child custody suits. Women have primarily occupied positions in health care, education, and domestic service, though a few have risen to high ranks within the government. Many women have accumulated substantial personal wealth. However, the government has restricted women from being assigned abroad in Kuwait's diplomatic service.

Some prominent, educated women are wary of current fundamentalist trends, which they fear may lead the government to restrict their freedoms as a price for fundamentalist restraint on other issues.

WORK

Kuwait is a wonderful place to work—so much so that 80 percent of its workforce comes from other countries; at least one-third of those employed in the oil industry are non-Kuwaitis. Indeed, there are not nearly enough skilled Kuwaitis to fill positions in various areas, from petroleum processing to social welfare to tourism, and high wages attract skilled workers from other Arab nations and from Asia. Unemployment in 2003 was 2.1 percent. The work day is slow and gentle, and most Kuwaiti businesses take a four-hour break at midday, when the air is hottest.

EDUCATION

Kuwait has one of the most developed educational systems in the world; in the past 50 years, oil money has allowed the country to transform itself from a land of mostly illiterate nomads to a nation where nearly everyone can read, though some elders remain illiterate. Education is compulsory between the ages of six and 14 and free from kindergarten (for Kuwaitis—from first grade for non-Kuwaitis) to the university level. Students are also offered free food, books, stationery, clothing, and transportation. Enrollment at the secondary level includes a substantial proportion of foreign students attracted by Kuwait's subsidized and free education.

The academic year runs from September to May. The medium of instruction is Arabic, with English taught as a second language. Schooling consists of 12 years, as divided into primary (four years), intermediate (four years),

and secondary (four years) cycles. School curricula are based on Arab League standards. Schools are segregated by sex until the university level.

A high proportion of Kuwaiti teachers are foreigners, mostly Egyptians and Jordanians. Indigenous Kuwaitis constitute less than 2 percent of teaching staffs.

Private schools include a variety of institutions, such as the International School, run by the U.S. community; English schools, run by missionaries; and Indo-Pakistani schools. Private school enrollment is 40 percent at the kindergarten level and 20 percent at the primary level.

Kuwait University, founded in 1966, has become a major institution of higher learning in the Middle East; almost one-quarter of its students are non-Kuwaitis. New petroleum-engineering and medical colleges were opened in 1977. Kuwaiti students who complete their secondary-school science courses in the upper 80 percent and liberal arts courses in the upper 70 percent are eligible to study abroad at the government's expense, provided they pursue courses not offered at Kuwait University

SCIENCE AND TECHNOLOGY

Kuwait is technologically advanced. It has a modern efficient telephone system with advanced wiring, pay telephones nearly everywhere, and near-universal cellular telephone coverage. In 2003, 567,000 Kuwaitis were using the Internet. Kuwait's government has emphasized scientific and technological training in order to create an advanced society that can work with other developed nations in the global economy. Several scientific bodies work on this project, including the Kuwait Institute of Scientific Research, the Kuwait Foundation for the Advancement of Science, and the Scientific Club.

MEDIA

Kuwaiti journalists enjoy a great deal of freedom and are known for their outspoken criticism of the government. They do, however, hesitate to criticize the emir and other members of the royal family. Journalists can go to jail for insulting God or Mohammed. The Ministry of Information licenses all newspaper publishers and censors all print publications for morally offensive content.

The national news agency is the Kuwait News Agency (KUNA). The state owns most of the television stations and all radio stations. The state-owned Kuwait Broadcasting Service has 20 transmitters and broadcasts programs in Arabic, Farsi, English, and Urdu. Kuwaiti Television, a state-owned corporation, operates five main and two auxiliary transmitters and one experimental transmitter; it is on the air for 114 hours a week, with over 60 percent of programs of local origin. Many Kuwaitis have satellite dishes, such that they can watch international programs. The BBC World Service broadcasts in Kuwait City.

CULTURE

Kuwaitis, like most Arabs, love poetry and the artistic use of language. Bedouin artistic styles are prevalent in poetry, music, jewelry, and textiles, which are woven from sheep wool. One spectacular art form is the sword dance called the *ardab*, in which men dance to drum and tambourine music. Songs about the sea, boats, and pearl diving are also well known.

FOLKLORE AND MYTHOLOGY

Much of Kuwait's mythology comes from Bedouin traditions. Arab hospitality is a favorite theme; for example, there is a story about a Bedouin who killed his horse to feed an unexpected guest, having no other food to offer the visitor. Kuwait established a Folklore Preservation Center in 1956 to record and classify native legends.

ENTERTAINMENT AND RECREATION

The most common way Kuwaitis spend free time is socializing with friends and families. Men spend time with one another in *diwaniyya*, a room separate from a main house that has an atmosphere similar to that of a social club, where visitors eat refreshments, discuss family and politics, watch television, play cards, or just sit. Many Kuwaitis belong to sea clubs, where they can swim, play on the beach, windsurf, water-ski, dive, and sail around in boats. The cities offer a variety of nightlife, especially in Salmiya and the area around the Gulf Road, where there are many shopping areas, restaurants, and coffee shops, though no bars.

ETIQUETTE

Hospitality is highly valued by Kuwaitis. They love to have visitors and will always offer their guests the best they have; in return, guests are expected to consume what they are offered and show appropriate gratitude.

FAMILY LIFE

The family is the building block of Kuwaiti society. Until recently, most Kuwaitis lived with their extended families, in large houses if they could afford them. Nowadays people most commonly live in nuclear family units, but they still live near relatives if they can. Men and women used to be completely segregated from one another, and homes were built to accommodate what were essentially two separate households. Gender roles have become more flexible, however, and women have been working outside the home. People still usually consult their parents before marrying. Kuwaitis value large families and like to have many children, which is easier to do when living with many relatives; most people have between three and five

children, which is less than in the past. Many Kuwaitis hire foreign nannies and maids to help in the home.

PERSONAL APPEARANCE

Men and women both typically dress in Western fashions, and shopping malls contains many stores selling brand names from Europe and the United States. Many men still wear traditional clothes; the typical outfit is a dish-dasha, a long-sleeved coat that falls to the ankles, over loose pants. They wear head coverings that consist of a *gabfiya*, a round knit cloth, covered with a large white- or red-checked *kbitra*, tied on with a circular *igal*. Fewer women wear traditional clothing, but some still wear a loose dress called a *dara'a*. Women are not required to wear veils or head coverings, although some choose to do so.

SPORTS

Soccer is the most popular sport in Kuwait. Every school and town has soccer teams, and the small country has over 120 soccer fields. Almost all citizens follow the fortunes of the national team. Kuwait also has many other top-quality sporting facilities, and Kuwaitis can participate in nearly any sport that interests them. Karate, swimming, and other water sports are all popular. People also engage in falconry and horse racing.

CHRONOLOGY

- 1961** Kuwait becomes a fully independent state upon the termination of the 1899 agreement with the United Kingdom, under which Kuwait was a British military protectorate. Sheikh Abdallah takes the title of emir. Kuwait is admitted to the Arab League. Iraq claims sovereignty over Kuwait and threatens invasion. British troops land in Kuwait in response to the emir's appeal for assistance. The Arab League intervenes in the dispute. An Arab League contingent replaces British troops as a guarantee of Kuwait's independence. The Kuwaiti dinar replaces the Persian Gulf Indian rupee as the unit of currency. Kuwait founds the Kuwait Fund for Arab Economic Development. Elections are held for the National Assembly.
- 1962** New constitution is promulgated.
- 1963** First session of the National Assembly is held. Sheikh Sabah al-Salim al-Sabah is named prime minister. Iraq recognizes the Kuwaiti govern-

ment and renounces territorial claims. A new trade and economic agreement with Iraq is concluded.

Kuwait is admitted to the United Nations.

- 1965** Emir Abdallah dies. Sheikh Sabah is named new emir, and Sheikh Jabir al-Ahmed becomes prime minister.
- 1966** Kuwait University is founded.
- 1969** The Neutral Zone is partitioned between Saudi Arabia and Kuwait.
- 1971** British withdraw all troops from the Gulf region. In new elections radicals register some gains.
- 1973** Iraqi troops occupy the Kuwaiti outpost at Samtah.
- 1975** Kuwait nationalizes Kuwait Oil Company. The Kuwaiti dinar is floated.
- 1976** Emir Sabah dissolves the National Assembly in the wake of a constitutional crisis. A constitutional provision calling for new elections within two months of the dissolution is suspended. Censorship is imposed on the media.
- 1977** Kuwait agrees to buy sophisticated military equipment from the Soviet Union. Kuwait mediates Egypt-Libya dispute. Emir Sabah dies and Sheikh Jabir al-Ahmed becomes emir.
- 1979** Kuwait expels Ayatollah Khomeini's envoy amid Shiite protests.
- 1981** Gulf Cooperation Council is formed with six founding members, including Kuwait.
- 1983** U.S. and French embassies in Kuwait City are bombed by Arab terrorists. Government retaliates with mass arrests of Shiite extremists.
- 1984** Kuwait Airways airliner is hijacked to Iran. Kuwait concludes an arms purchase agreement with the Soviet Union.
- 1985** Terrorists attempt to assassinate the emir.
- 1986** The emir dissolves the National Assembly and imposes new restrictions on the press.
- 1990** Iraq invades and overruns the emirate, forcing the emir and most of the royal family to flee to Saudi Arabia, beginning a six-month Iraqi occupation of Kuwait, which entails considerable destruction of property and hostility toward Kuwaiti residents. About 400,000 Kuwaitis take refuge in other countries during the occupation. A resistance force continues to harass the Iraqis. President Saddam Hussein annexes Kuwait as Iraq's 19th province and later renames the capital Kadhima, Kuwait City's name under the Ottoman Empire. United Nations passes resolutions demanding Iraqi withdrawal from Kuwait and authorizing use of force to evict Iraqi troops.

- Multinational force, led by the United States, assembles in region with intent to liberate Kuwait. Force includes troops from Syria, Egypt, Saudi Arabia, and Kuwait as well as most Western nations.
- 1991** From mid-January to the end of February Allied forces stage air, sea, and ground campaign that defeats Iraqi forces and liberates Kuwait. Al-Sabah family rulers return and retain firm hold on power. New cabinet in April retains Crown Prince Saad as premier. Emir promises parliamentary elections for 1992. Government and Kuwaiti citizens crack down on Palestinians accused of siding with Iraq during the occupation. Emirate begins massive reconstruction effort, estimated to cost \$100 billion. Following devastation to petroleum industry caused by retreating Iraqis, efforts to return Kuwait's oil-based economy to prewar levels expected to take years.
- 1992** In elections for parliament the opposition wins 30 of the 50 elected seats. Prepublication censorship ends.
- 1994** A brief assembly of Iraqi troops on the border ends peacefully. Iraq recognizes the borders of Kuwait.
- 1996** Elections are once again held for parliament.
- 1999** Parliamentary elections are held in July; liberals and Islamists take most of the seats. In May, Sheikh al-Sabah decrees that women can vote in the next elections, to be held in 2003. Parliament rejects this proposal in November.
- 2002** Kuwait and Iraq begin to normalize relations at a summit in Beirut.
- 2003** Kuwaiti soldiers march into Iraq to join American campaign to oust Saddam Hussein. The emir appoints Sheikh Sabah al-Ahmad al-Sabah prime minister. Liberals lose most of their seats in parliament.
- 2004** Kuwait prepares indictments for war crimes against Saddam Hussein and his aides.
- 2005** The cabinet approves legislation to allow women to vote and stand for parliament. The first woman cabinet minister, Massouma al-Mubarak, is appointed.

- 2006** Emir Jabir al-Ahmad dies. Sheik Sabah al-Ahmad becomes emir.

RELIGIONS

Islam, Russian Orthodox

UNIT OF CURRENCY

Kyrgyzstani som

NATIONAL FLAG

Red field with a yellow sun in the center having 40 rays, representing the 40 Kyrgyz tribes; in the center of the sun is a red ring crossed by two sets of three curved lines, a stylized representation of the roof of the traditional Kyrgyz yurt.

NATIONAL EMBLEM

Within a blue circle are, from top to bottom, a sun with rays extending outward, mountains, and an eagle with wings outspread; the name of the republic in Kyrgyz appears in the border of the seal.

NATIONAL ANTHEM

“High Mountains, Valleys, and Fields”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), January 7 (Russian Orthodox Christmas), March 8 (Women’s Day), May 1 (Labor Day), May 5 (Constitution Day), May 9 (Victory Day), May 29 (Armed Forces Day), August 31 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

August 31, 1991

DATE OF CONSTITUTION

May 5, 1993; amended 1996, 1998, 2003

GEOGRAPHICAL FEATURES

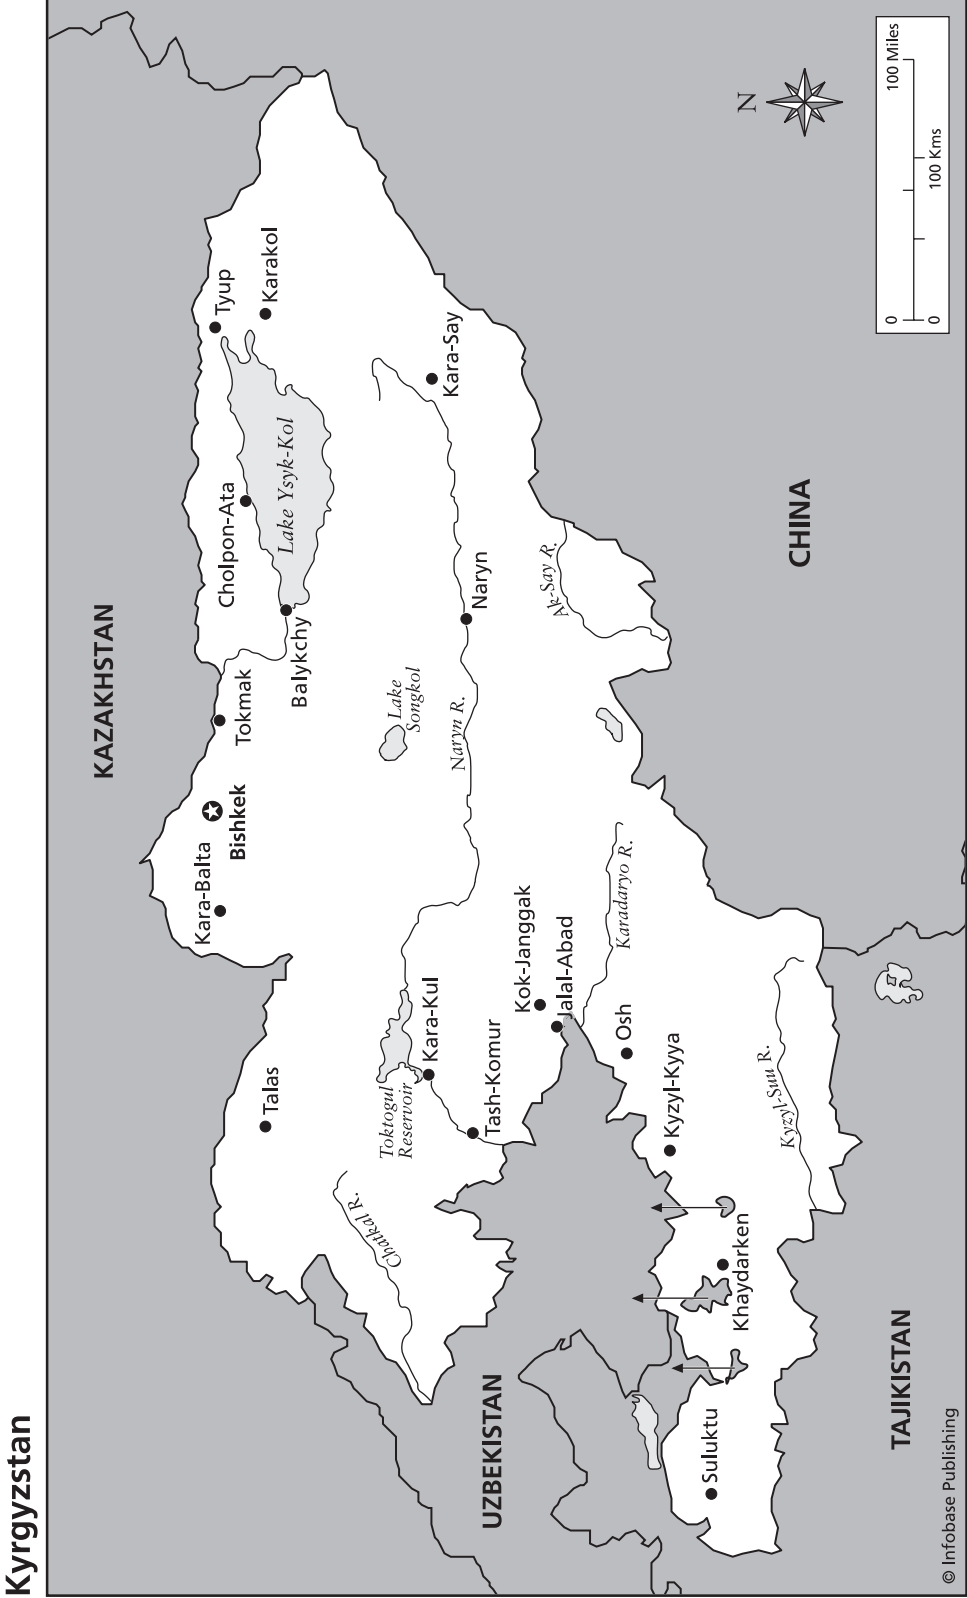

Kyrgyzstan is the second smallest of the Central Asian republics, at 198,500 sq km (76,642 sq mi). It shares a long boundary of 1,051 km (653 mi) with Kazakhstan to the north. To the southeast lies the Xinjiang region of China; the border here is 858 km (536 mi) in length. To the south and west are Tajikistan and Uzbekistan; the Tajikistan border is 870 km (544 mi) in length, the Uzbekistan border 1,099 km (687 mi). In addition, Tajikistan and Uzbekistan each control tiny enclaves completely surrounded by the territory of Kyrgyzstan.

Three-quarters of the landscape is dominated by two east-west mountain ranges. The northern part of the re-

public, which constitutes the bulk of the country’s land area, lies mostly amid the Tien Shan Mountains; the small southern section consists mainly of the Pamir-Alai mountain system (comprising the Turkestan, Alai, and Trans-Alai ranges). There is no place in the country that lies below 500 m (1,640 ft), and about one-third of the republic has an elevation between 3,000 and 4,000 m (9,842 and 13,123 ft).

Kyrgyzstan lies in a region of considerable seismic activity, with several major faults and tectonic depressions. Avalanches on high mountain slopes are common.

The river systems of the republic spill into three basins: the Aral, the Tarim, and the Issyk Kul. The most important rivers are the Naryn (616 km, 385 mi), which

1298 Kyrgyzstan

flows east to west from the Petrov Glacier toward the Ferghana Valley and becomes the Syr Darya; the Talas, in the northwest (294 km, 184 mi); the Chu (221 km, 138 mi); and the Kyzyl-Suu, in the Alai Valley of the extreme south. There are approximately 3,000 lakes, most quite small; the largest by far is Ysyk-Kol (Hot Lake), one of the world's largest high-mountain lakes, which covers 12 percent of Kyrgyzstan's surface area.

The capital is Bishkek (called Frunze when it was part of the Soviet Union). Kyrgyzstan's other sizable city is Osh. Smaller cities are Naryn, Jalal-Abad, Uzgen, Karabalta, Karakol (Przhevalsk), Kyzyl-Kyya, Mayli-Say, Tokmak, Talas, and Ysyk-Kol (Rybach'ye).

Vegetative zones include wide areas of desert and semiarid basins; steppe; shrub-steppe; forests of birch, maple, and aspen on lower mountain slopes; coniferous forests higher up; and alpine meadows and tundra surrounding the summits of ranges.

CLIMATE AND WEATHER

Kyrgyzstan has a high-elevation continental climate, with wide extremes of temperature and moderate rainfall. Microclimates vary from dry subtropical to tundra. Summer-time temperatures have reached as high as 43°C (109°F) in the Chu and Ferghana valleys, but 20–27°C (68–81°F) is more typical. The middle elevations experience summer temperatures averaging 15–17°C (59–63°F), while the high mountain areas may not even reach 5°C (41°F). The average January temperatures range from –8 to –1.5°C (17 to 29°F) in the low-lying valleys and from –20 to –8°C (–4 to 17°F) in the higher ones and dip to around –27.7°C (–18°F) in the high Aksai Valley, where the coldest temperature on record is –53.6°C (–64°F). Bishkek has gotten as cold as –34.4°C (–30°F) at its bitterest.

The highest precipitation is recorded on mountain slopes facing directly into the prevailing winds: as

much as 900–1,000 mm (36–39 in) per year on the southwestern edge of the Ferghana Range and 750–770 mm (29.5–30 in) on the northern fringe of the Kyrgyz Range, but only 200–250 mm (8–10 in) on the opposite sides of these mountains. The Chu Valley receives 300–400 mm (12–16 in) per year. The western portion of the Issyk Kul Basin is arid, with just 100 mm (4 in) of annual precipitation; this rises to 500 mm (20 in) in the eastern portion. The rainiest season is early spring in the lowland valleys, May on the slopes of the western-facing mountains, and late spring or early summer in the interior basins.

Glaciers cover 6,578 sq km (2,540 sq mi), mostly in the far east but also in the southern ranges. The largest, Inyl'chek in the Khan-Tengri Massif, measures 583 sq km (225 sq mi). The depressions between mountain ranges are largely snow free and used for pasture in winter.

Climate and Weather

Mean Temperature

January: 25°F

July: 82°F

Average Rainfall: 12.2 in

FLORA AND FAUNA

Kyrgyzstan is mountainous and undeveloped, and a number of plant and animal species still exist there despite a certain amount of environmental devastation. The mountains are covered with grassy meadows and forests of juniper, larch, and Tian Shan spruce. In the spring and summer, wildflowers bloom in profusion. *Cannabis indica*, or marijuana, grows wild. Animals include lynx, brown bear, wild boar, wolf, antelope, and rare snow leopards. Wild birds such as eagles and lammergeiers also inhabit the mountains.

POPULATION

 Average Size of Households: 4.2
 Induced Abortions: 18,690

ETHNIC COMPOSITION

Kyrgyz constitute a tenuous majority as the “titular nationality” of the Republic of Kyrgyzstan, at 65 percent (up from 52 percent at independence). Kyrgyz are closely related to both Kazakhs and Uzbeks and, in a land where notions of nationality were fluid prior to the 20th century, are frequently lumped with one or the other.

Ethnic Russians constitute some 12.5 percent of the population (down from 21 percent at independence), while Uzbeks make up around 13.8 percent, found almost entirely in the Ferghana Valley. Osh, the largest city in the south, is more than 40 percent Uzbek in composition. The capital city, with a slight Kyrgyz majority, has by far the largest concentrations of Europeans in the country. The total Russian population was 920,000 at the last Soviet census. Other nationalities of significance are Ukrainians (1 percent in 1999), Germans, Tatars, Kazakhs, Dungans, Uighurs, Tajiks, Koreans, and Jews.

LANGUAGES

Kyrgyz is a Turkic language very similar to Kazakh; they are classified in the same linguistic subgroup (Kipchak), and both have considerable Mongolian influences, though Kyrgyz has borrowed more Mongol elements. Kyrgyz had no written form until the 1920s, when Arabic script was adopted. This was replaced by Latin script in 1928 and then Cyrillic in 1940.

The immediate postindependence years saw a drive to entrench the Kyrgyz language, culminating in the declaration in the 1993 Constitution that Kyrgyz was the sole official language. However, protests by Slavs and by the Russian government forced the regime to soften, and in 2001 Russian was made a second official language. About 17 percent of the population speaks Russian as a first language. Other languages used are Uzbek, Tajik, Ukrainian, Kazakh, German, Korean, and Uighur.

RELIGIONS

Islam has been the religion of most people in Kyrgyzstan since the 19th century, although the state is secular by the terms of the constitution. Islamic traditions, originally weak among the ethnic Kyrgyz, were severely repressed under Soviet rule. Since independence there has been an Islamic revival, particularly in the Ferghana Valley among that region’s more than half million Uzbeks, who fled religious repression in Uzbekistan. The Kyrgyz have in-

clined toward a more syncretistic worship incorporating animistic and shamanistic rituals and beliefs from their nomadic heritage, especially in the northern part of the country. Both Kyrgyz and Uzbeks are overwhelmingly Sunni Muslims.

Most Slavs in Kyrgyzstan are either Eastern Orthodox or atheist. The president of the republic has taken pains to reassure Russians and others that Islam’s resurgence is not coming at their expense.

Religious Affiliations

Muslim	3,860,000
Russian Orthodox	1,030,000
Other	260,000

HISTORICAL BACKGROUND

Although experts disagree about the origin of the Kyrgyz people, it is generally thought that the Kyrgyz tribes migrated south from Siberia during medieval times. The Kyrgyz were nomads for most of their history and intermingled extensively, so modern Kyrgyz show evidence of Turkic, Kipchak, and Mongol ancestry. The land that is today Kyrgyzstan was inhabited by Scythian tribes in ancient times. The Kyrgyz appeared (or reappeared) in the region in the sixth century and established their own khanate, which achieved its pinnacle with the conquest of the Uighur khanate in western Mongolia in 840 c.e.

Not numerous enough to maintain control of such a vast region, the Kyrgyz lost territory to rivals throughout the succeeding centuries, retaining only small areas along the western fringes of Mongolia. The Mongol invasion of the 14th century ended any semblance of a Kyrgyz khanate, and for centuries afterward the fragmented Kyrgyz tribes were dominated by various foreign powers: the Mongols under Dzhuchi, son of Genghis Khan; the Oirots in the 15th century; the Kalmyks in the 17th century, following a period free of outside rule in the 16th and early 17th centuries; the Manchu dynasty in the mid-18th century; and the Uzbeks of the Kokand khanate in the early 19th century. Despite requesting the protection of the Russian czar against the Kokand forces in 1785, the Kyrgyz suffered a series of military defeats at the hands of the Uzbeks in the middle of the 19th century.

The expansion of the Russian Empire brought the khanate of Kokand to an end in 1876 and ushered in more than a century of rule from St. Petersburg and Moscow. Nonetheless, small, independent Kyrgyz khanates have survived into modern times. Russians and Ukrainians began settling in northern Kyrgyzstan in the 1890s. However, Russian rule inspired fierce resistance, culminating in a 1916 rebellion against both land confiscation and conscription into the czar’s army; imperial retaliation was

harsh, and an estimated one-third of the Kyrgyz fled into China.

The Russians drastically reoriented the Kyrgyz way of life, putting severe bounds on nomadic ways and bringing in settled agriculture and modern infrastructure. Although the Kyrgyz suffered greatly, the general standards of living and education rose sharply, at least through the early years of the Soviet regime. Forced collectivization under Stalin caused thousands of deaths and large losses to livestock herds. Much of the post-Stalin era saw the republic under the command of the Communist Party first secretary Turdakan Usubaliyev, who hewed closely to Moscow's line. Usubaliyev remained in charge until Mikhail Gorbachev became first party secretary in Moscow. Although Kyrgyzstan made only weak attempts to implement glasnost and perestroika, reform made sufficient inroads to allow some dissent to be expressed in the media and some pluralist political movements to organize.

The sense of Kyrgyz nationality was sharpened in June 1990 when riots broke out between Kyrgyz and ethnic Uzbeks over scarce land and housing in the Osh region, leaving several hundred dead between the two communities. In the subsequent national power struggle, a lesser-known reform-minded candidate, Askar Akayev, gained control. When the Soviet Union broke apart in 1991, Akayev quickly declared Kyrgyzstan's independence and distanced himself from the Communist Party. In October of that year he organized a presidential election in which he ran unopposed and won 95 percent of the vote.

Akayev empowered local leaders throughout the country to initiate reform, but local corruption and nepotism hobbled his efforts. The country's relative isolation was deepened by its decision to leave the ruble zone and set up its own currency and monetary system in 1993 and by the failure of the Russian-led Commonwealth of Independent States to gain much traction. Large numbers of Russians left Kyrgyzstan, depriving the country of some of its most highly skilled workers, and other ethnic minorities accused Akayev of promoting democracy merely to disguise his true intention of advancing Kyrgyz interests. To secure good relations with its neighbors, Kyrgyzstan joined Kazakhstan and Uzbekistan in forming the Central Asian Union in 1994.

President Akayev followed up his reelection in 1995 with fresh constitutional changes that greatly enhanced his own powers. Reports of the official suppression of independent media and the jailing of opposition leaders surfaced more frequently in the late 1990s.

Resolution of the civil war in neighboring Tajikistan did not immunize Kyrgyzstan from that country's continued unrest. Drug trafficking and smuggling continued, and in both 1999 and 2000 Muslim fundamentalist forces invaded Kyrgyzstani territory, further threatening the stability of the entire region.

President Akayev succeeded in getting popular approval for a round of constitutional reforms in 1998, allowing him to run for a third term, which he won in 2000. The citizenry became increasingly disillusioned with their supposedly democratic government, which led to major protests in 2002 over a deal giving Kyrgyz territory to China and over the jailing of opposition leaders Feliks Kulov and Azimbek Beknazarov. The government has gone out of its way to silence opposition voices. Meanwhile, the nation has suffered from increasing ethnic tension between the Uzbek and Kyrgyz communities, as exacerbated by economic hardships, as well as an exodus of skilled Russian workers. In 2004, in the hope of changing the nation's fortunes, a group of opposition leaders formed a coalition to run in the 2005 elections. For his part, Akayev made public statements that he would not run for president in 2005. Regardless, runoff parliamentary elections in early 2005 were seen as fraudulent, leading to mass demands for the resignation of the incumbent government. By late March protesters had succeeded in taking control of the presidential administrative building, ousting Akayev, whose whereabouts soon after were undisclosed. The former prime minister Kurmanbek Baliyev was then installed as acting president and prime minister by the upper house of parliament.

LIST OF MODERN RULERS

1990–2005 Askar Akayev
2005– Kurmanbek Bakiyev

CONSTITUTION

Independent Kyrgyzstan adopted its current constitution in May 1993 and has amended it regularly since then. The 1993 constitution set up a presidential system with a 105-member unicameral legislature, the Zhogorku Kenesh. Kyrgyzstan is officially a secular state that acknowledges its Muslim heritage in the constitution's preamble. Through an amendment process that itself contravened the constitution, in 1994 President Akayev pushed through changes that split the legislature into two chambers, the lower 35-member Legislative Assembly and the upper 70-member People's Assembly, and reduced its powers overall in favor of the executive branch. The locus of domestic and foreign policy making became the executive branch, and the legislature lost its control over cabinet appointments, retaining only the right to approve the president's choice of prime minister and high court judges. A further round of amendments in 1996 gave the president greater powers to veto legislation and dissolve parliament and made him more difficult to impeach; it also clarified the roles of the two parliamentary chambers, which had been a bone of contention between

them. Later amendments in 1998 and 2003 rearranged the legislative chambers so that the Legislative Assembly increased in size to 70 members, while the People's Assembly, the upper chamber, representing the regions, was reduced to 35; amendments also limited parliamentary immunity, legalized private ownership of land, and prohibited any restriction on freedom of speech or the media. The amendments of 2003 made the president much more powerful and the legislature weaker.

The president is head of state and commander in chief of the armed forces and is elected to serve a five-year term. His position stands apart from the three branches of government, and he acts to supervise the doings of all three. He names the prime minister, subject to parliamentary approval, and the Council of Ministers. The Council of Ministers has authority over routine government affairs and policy; in practice, however, the office of the president has been ultimately decisive in policy making. The president retains broad powers to initiate legislation and to dissolve the legislature. The prime minister heads the government (council) and also has the power to appoint and dismiss ministers and department heads.

Kyrgyzstan has universal suffrage. The voting age is 18.

PARLIAMENT

Kyrgyzstan's two-chamber parliament is known as the Supreme Assembly, or Zhogorku Kenesh. Its form has changed several times over the first decade of the country's independence (the constitution originally called for a unicameral assembly), but in the early 2000s it consisted of a 70-member lower house, the People's Assembly, and a 35-member upper house, the Legislative Assembly. Members of both houses were elected to five-year terms by popular vote. The Legislative Assembly had lawmaking powers and was responsible for the approval of the budget proposed by the government, while the People's Assembly was a forum for mediating regional interests. The constitutional amendments of 2003 stated that the parliament would become a single 75-member house in January 2005.

The various changes instituted by referendum at the president's behest have worked to steadily erode the powers of the legislature. According to the constitution, the legislature organizes referendums, ratifies international agreements, and can declare war and peace, but these prerogatives have mostly been taken over by the president. The legislature has retained enough genuine independence to have overridden presidential vetoes on several occasions, and it refused to pass some legislation on economic reforms and nationalities that President Akayev strongly supported. It also refused Akayev an extension of his term in office in 1995, forcing an election. The party system is not well developed, which hampers the opposition's effectiveness in parliament.

POLITICAL PARTIES

Political parties have not had time to develop, in either ideological or organizational terms, and they have been hindered by state control of the means of mass communication. It is significant that President Akayev managed to realize so much of his agenda without resorting to identification with any particular party; his prime minister came from the Unity Party, whose platform is outward-looking and opposed to narrow nationalism. In the early years Akayev was associated with the Democratic Movement of Kyrgyzstan (DMK), in opposition to the Communists. The DMK still exists as an umbrella movement, but with reduced influence as compared to the early days of independence, when it served to unite the forces of reform. The Communist Party still provides the strongest opposition, having won nearly one-quarter of the votes in 1995 for its presidential candidate, Absamat Masaliyev, who had been Akayev's predecessor as party secretary under Soviet rule. Most other parties were disqualified from contesting the presidency.

A number of other parties have been banned and their leaders jailed. The government has refused registration to parties advocating Uighur autonomy (such as Ittifak), parties promoting a distinct southern identity (the abortive South Party), or parties with a religious basis. These restrictions, as added to the overrepresentation of ethnic Kyrgyz in parliament, have effectively left minority ethnic groups, the Uzbeks of the Ferghana Valley most of all, feeling disfranchised. Other small ethnic groups, such as Germans and Koreans, have cultural associations that have adopted some of the functions of political parties.

LOCAL GOVERNMENT

Kyrgyzstan is divided into seven provinces (called *dubans*, or oblasts in Russian)—Batken, Chuy, Jalal-Abad, Naryn, Osh, Talas, and Issyk Kul—plus the city of Bishkek, which is the capital of both the country and Chuy Province. The president appoints the governor, or *akim*, for each province, and that appointee controls tax collection and the distribution of pension and other state benefits. There is a legislature for each province, but real power resides with the governor.

At one time the replacement of local governors in the southern provinces of Osh and Jalal-Abad by Akayev associates from the capital exacerbated north-south tensions in the state.

LEGAL SYSTEM

Judges are chosen by the president of the republic, subject in the case of the highest judicial offices to the approval of the Supreme Assembly. The constitution provides

for a Constitutional Court composed of a chairperson, deputies, and seven judges, appointed for 15-year terms. President Akayev was opposed to this provision, and the court did not take shape until several years after its legal inception. Supreme Court justices are appointed for 10-year terms, as are judges of the State Arbitration Court. The Supreme Court is the “highest organ of judicial power in the sphere of civil, criminal and administrative justice.” The State Arbitration Court looks into jurisdictional conflicts between government departments and settles financial disputes between government agencies or between government and private business. Under the Supreme Court is a network of regional courts.

The state has had problems staffing all its judicial positions with qualified officials and establishing the rule of law on a consistent basis. This has frustrated those trying to start business enterprises or invest in existing ones. The Soviet legacy does not provide much in the way of useful precedents. The government has used libel and slander laws in criminal courts to harass its opposition.

HUMAN RIGHTS

Kyrgyzstan has derived considerable goodwill from its characterization by Westerners as the freest and most democratic of the five Central Asian states, a reputation that it only partially merits. It is true that elections have been fairer and that media have operated with far more leeway than in Uzbekistan or Kazakhstan; however, it is also the case that President Akayev initially ran unopposed and that his regime disqualified a number of opposition party candidates (though not all) from challenging his successful 1995 reelection bid. Even though much legislative power has been usurped by the executive branch, there have been bureaucratic interference, intimidation, vote buying, and fraud in parliamentary campaigns.

Opposition leaders—notably the chairman of the Erkin Kyrgyzstan Party, Topchubek Torgunaliyev—have been jailed on spurious charges from time to time. The constitution honors freedom of assembly, but that has not stopped the state police from breaking up large demonstrations and bringing charges against organizers. The Supreme Assembly, in which ethnic Kyrgyz enjoy representation beyond their proportion of the population, has denied dual citizenship for ethnic minorities, including Russians. These violations have disturbed U.S.-Kyrgyzstan relations.

There is, generally speaking, freedom of religion. Occasionally, the police and the State Commission on Religious Affairs have shown hostility toward Protestant sects that proselytize and have carefully monitored the activities of fundamentalist Muslim groups, whose influence has grown among the Uzbek community.

As in the Soviet era, the law permits pretrial detention of up to a year. Human rights organizations have

generally given Kyrgyzstan good marks in terms of the absence of political arrest, disappearances, beatings, and torture. Activists have been subject to wiretapping and surveillance. The country has not created an ombudsman position for human rights and has been slow to staff its official human rights institute, set up in 1997. A number of nongovernmental organizations concerned with human rights conduct programs throughout the country.

FOREIGN POLICY

Kyrgyzstan’s small size, landlocked position at the heart of Asia, and energy dependence make it vulnerable and reliant on its neighbors. It has close relations with Russia and Kazakhstan and still depends on Russian military protection. In an effort to improve ethnic tensions between Russians and Kyrgyz, the constitution was amended in 2001 to make Russian an official national language. On the other hand, in 2004 the parliament adopted a law making non-Kyrgyz speakers ineligible for certain governmental positions. Kyrgyzstan had some tension with Kazakhstan and Uzbekistan in the mid-1990s, around the time that Kyrgyzstan abruptly withdrew from the ruble economy in 1993. Kyrgyzstan has attempted to increase economic and military cooperation within Central Asia, signing an economic union agreement with Uzbekistan and Kazakhstan in 1994, but the nation has been hampered by the unilateral barriers erected by its neighbors; it supplies them with water, and they supply it with oil and gas. Kyrgyzstan participated in negotiating peace within Tajikistan during its civil war, but relations there have been tenuous, partly because of the steady influx of narcotics from the Tajik border. Kyrgyzstan is also cultivating relations with Turkey, with which it shares cultural and ethnic characteristics. China has made overtures of friendship, which have been met with some ambivalence by Kyrgyzstan, which remembers China’s historical domination of the region. The United States has been providing humanitarian, economic, and political assistance, as well as some nonlethal military aid, but has been reluctant to deepen relations with a Kyrgyzstan that has logged a dubious record on democracy and human rights.

DEFENSE

Immediately after independence Kyrgyzstan made few plans for its own defense, investing its hopes in collective security from the Commonwealth of Independent States (CIS). Russia opted not to support a CIS-wide system, however, so in 1992 the Akayev regime simply “nationalized” all troops remaining locally, about 15,000 in all. Many of these troops and their officers,

who were mostly ethnic Russians, refused to swear loyalty to Kyrgyzstan and resigned to return to Russia or simply deserted. This loss was only partially offset by the repatriation of about 2,000 Kyrgyz troops who had been stationed elsewhere in the Soviet Union. To stanch the outflow, the Akayev regime signed an accord with Moscow stipulating that it would pay for housing and relocation costs for Russian officers agreeing to serve through 1999.

The government tacitly acknowledged that Kyrgyzstan could not adequately defend itself when it agreed to allow Russian Army border troops to patrol along its frontier with China. It also asked Russia to reclaim the old Soviet airbases on its soil, which had fallen into disuse, an offer the Russians declined. In 1994 Kyrgyzstan joined the Partnership for Peace within the North Atlantic Treaty Organisation (NATO).

The president is the commander in chief of the army and appoints and dismisses senior officers. Military policy is made by the seven-member National Security Council, while operations are under the command of the minister of defense. The chief of staff coordinates the functions of the National Security Council, the state's intelligence unit, the border troops, and the civil defense. Cadets and noncommissioned officers receive training at the Bishkek Military School; some are sent abroad for training. Higher-ranking officers are trained in Moscow. The country's small air force unit is trained mostly at the Bishkek Aviation School. The nation maintains an army, an air force, security forces, and border troops. Military service is compulsory for 18-year-old males.

ECONOMY

The Kirghiz Soviet Socialist Republic briefly enjoyed one of the highest republic economic growth rates in the Soviet Union's waning years, benefiting from demand for its livestock products, metals, and hydroelectric power. Once independence was achieved, however, Kyrgyzstan suffered one of the severest declines of any post-Soviet state, with per capita consumption dropping an estimated 40 percent in 1991 and 1992 alone. The country remains a poor and primarily agrarian economy, reliant on the foreign aid it

receives in larger amounts per capita than any former Soviet state other than the Baltic nations.

Considered a leader among former Soviet states in economic reform and privatization, Kyrgyzstan sold off about half of all state property upon independence, including retail, industrial, construction, and transport enterprises. But management skills remain scarce, in no small part because of emigration by ethnic Europeans, and the country's financial and transportation infrastructures remain primitive.

Following a bout of hyperinflation that affected all countries using the ruble, Kyrgyzstan adopted its own currency, the som, in May 1993. After contracting steadily through the first half of the 1990s, the economy gained steadily starting in 1996, growing by 6 percent in 2003. Despite the Akayev regime's success in taming inflation, controlling government budgets, and attracting some foreign investment, general prosperity has eluded most Kyrgyzstanis: unemployment was well above the officially stated level of 3.1 percent in January 1998, industries are chronically unable to pay their employees, privatization largely benefited only a few wealthy investors, and foreign investment has been minimal beyond the mining sector. Only Russia has invested in Kyrgyzstan's industries, particularly its defense manufacturing plants, in part because it could make acquisitions by canceling debt.

Kyrgyzstan belongs to the Economic Cooperation Organization, set up by several large Muslim states in Central Asia; the Asian Development Bank; and the European Bank for Reconstruction and Development. In 1998 it became the first CIS state to gain admission to the World Trade Organization.

Manufacturing made up 23 percent of Kyrgyzstan's GDP in 2003 and occupied 15 percent of the workforce. Heavy industry—primarily metal processing and machine building for agriculture—constitutes nearly half of overall industrial production. Light industry, however, has increased its share of manufacturing. This has largely consisted of wool, leather, and food processing, but the country also has modest industries in textiles, clothing, and shoes.

The processing of nonferrous minerals accounted for 11.2 percent of GDP in 1996 and employed just 0.5 percent of the population. Kyrgyzstan has commercially valuable deposits of gold as well as coal, tin, mercury, molybdenum, antimony, zinc, tungsten, and uranium. It imports slightly more coal than it produces. Its considerable hydroelectric generating capacity is enough to meet a little more than one-quarter of its energy needs; 40 percent of energy resources must be imported, primarily in the form of oil or gas from its neighbors.

Kyrgyzstan's service sector amounted to 38 percent of GDP in 2000; almost one-third of the working population was engaged in this sector.

ENVIRONMENT

Inefficient irrigation has reduced the amount of water reaching the Syr Darya River as it makes its way to Uzbekistan and Kazakhstan and ultimately to the much-depleted Aral Sea. Poor water management has also caused the level of the lake of Issyk Kul to drop, leaving deposits of salt in the soil. Banned in 1972, DDT still contaminates 32 percent of the soil in the Chu Valley, and chemical fertilizers, herbicides, and pesticides taint both soil and water. Mine tailings and industrial runoff have added to the contamination of the country's rivers with oil, copper, ammonia, and nitrites.

Although Kyrgyzstan has never had a great deal of industry, its smelters and other metallurgical plants have created enough air pollution to make Bishkek and Osh among the most polluted cities of the former Soviet Union, with particulates, sulfur dioxide, carbon monoxide, nitrous oxide, and other by-products of fossil-fuel combustion all present at hazardous levels. Mining and smelting have released mercury, arsenic, lead, and antimony, as well.

Biodiversity is affected primarily by excessive concentrations of livestock, to a lesser extent by commercial hunting and poaching. Herds and flocks have been expanded and moved to ever-higher grazing grounds in the mountains, as lower pastures are exhausted, depleting the wild grasses that indigenous grazing mammals depend on. Land under protected status in Kyrgyzstan amounts to 4 percent of the republic's territory; protected areas include the 19,400-hectare (47,939-acre) Ala-Archa national park, four nature reserves, and 66 nature preserves.

The republic devised its first National Environmental Action Plan in 1994, which addresses critical problems

such as management of mining and refining wastes, water management, land degradation, and habitat loss.

LIVING CONDITIONS

Most Kyrgyz are relatively poor. Winters are bitterly cold, and summers are extremely hot. Few people own cars, traveling mostly on foot or by bus. Trains are cheap but slow and unreliable. In the winter, airplanes and helicopters can be the only available forms of transportation. There are some restaurants and shops, but they are not always open, and people do most of their shopping at open-air markets. People pay for almost everything with cash, not checks or credit cards. Fuel is expensive, roads are in bad condition, the general infrastructure has fallen into disrepair, and crime is ubiquitous. There are landmines in some areas. Nomads still live in tents called yurts, which they can assemble or disassemble in about an hour.

HEALTH

Life expectancy in Kyrgyzstan is fairly low, at not quite 68 years. Infant mortality is also high, at nearly 37 deaths per 1,000 live births. Each woman had an average of 2.7 children in 2004. The Soviet health-care system has fallen into disrepair, and there are not nearly enough medical facilities, supplies, or personnel to service the population. Infectious diseases such as hepatitis, tuberculosis, undulant fever, and diphtheria are endemic. There is little information or education about contraception.

FOOD AND NUTRITION

Kyrgyz cuisine is similar to that of neighboring countries and blends Middle Eastern, nomadic, Russian, and Mediterranean traditions. The main ingredients are rice, beans, vegetables, yogurt, and grilled meat. Sheep are common meat animals, the fatter the better. Many dishes are extremely spicy. Nomads typically use every part of their herd animals, including entrails. People drink tea with nearly every meal; they usually drink it without milk. Most Kyrgyz drink alcohol, especially when entertaining. Popular alcoholic beverages include Russian vodka, *kumys* (fermented mare's milk), and *bozo* (fermented millet).

STATUS OF WOMEN

Sex equity is one area in which Kyrgyzstan has regressed since the demise of the Soviet Union, which took pains to educate women to the same standards as men and set minimum quotas to ensure their participation in functions of the state, society, and economy. Such quotas have been abolished, and many professional women have lost their government jobs. There are few women in parliament or cabinet-level positions and fewer still in high-level administrative positions. Average wages paid to women in 1993 were 23 percent lower than those paid to men. Women make up the bulk of the unemployed.

The Women's Democratic Party was founded to counter these trends. A number of female professionals have become more involved in nongovernmental organizations (NGOs) focused on a variety of issues, most prominently the Women's Congress of Kyrgyzstan. Among other activities, the Women's Congress has created a women's business education center in Bishkek and has helped rural women to set up their own home-based businesses. It has successfully pressured the government to adopt several international conventions on women's issues. Matters of special concern are working conditions for women in industry and agriculture and the rise of domestic abuse as social support systems break down.

Rural women are a world apart from the urban professionals running the NGOs. In these patriarchal settings women are more subservient and less educated. Until the 19th century the Kyrgyz were a nomadic society that depended as much on female as male labor, so Kyrgyz women traditionally enjoyed higher status than

their counterparts elsewhere in Central Asia. Though women have assigned roles in traditional society, only the most religious are sequestered and veiled, mostly among Uzbeks in the south, where the Islamic revival is strongest.

Family planning is regarded as taboo in Muslim culture; therefore, in the southern part of Kyrgyzstan family-planning efforts have had little impact. In the country as a whole, one-quarter of women of reproductive age were using one or another method of contraception, and the state was following World Health Organization guidelines for the provision of family planning services. Most Kyrgyz people believe that it is necessary to limit births both to preserve the health of children and mothers and for economic reasons. In 2004 Kyrgyz women bore 2.7 children on average, a drop from 4.1 in 1980, but the birthrate is considerably higher in rural areas and among the less educated.

WORK

Unemployment in Kyrgyzstan is high, and half the population lives in poverty. During the Soviet era many people were employed in factories producing goods for trade throughout the Soviet Union, but most of those factories sit idle now. As of 2000, 55 percent of the population worked in agriculture; many of them are subsistence farmers and herders who live nomadic lives. Sheep are a common herd animal; herders raise them for meat and wool, which is important during the cold winters. About 15 percent of the workforce is employed in industry, especially the oil industry and metallurgy; the remaining 30 percent work in services, some of them just scraping by. Many older people, especially women, have no income and are virtually worthless, and they live by growing food for themselves and selling any surplus. Many people have returned to a barter economy.

 Unemployment %: 7.2

EDUCATION

All children are supposed to attend school from ages six to 15, and most do; literacy is near universal. The course of study is divided into four years of primary school and five of lower secondary school. Students can opt to attend ordinary secondary schools for two years, specialized secondary schools for two to four years, or technical or vocational schools for varying durations. The curriculum has shifted since Soviet times, replacing Marxist ideology with cultural studies geared to the school's prevailing ethnic group and allowing for electives. As the population has grown, textbook and teacher shortages have increased, and class sizes have increased, especially in rural areas.

Language issues in schools have been much debated. The primary language of instruction is Kyrgyz (in 63.6 percent of schools in 1993–94). Kyrgyzstan's continued use of the Cyrillic alphabet has caused a crisis in Uzbek-language schools (12.7 percent), whose textbooks are printed only in Uzbekistan, which has returned to using the Latin alphabet. Russian and other Slavic children continue to be educated in Russian (23.4 percent), and a few schools teach in Tajik (0.3 percent).

Kyrgyzstan has numerous institutions of higher education, including a branch of the American University.

MEDIA

Journalists are free to practice their profession in Kyrgyzstan—within limits. If journalists have sometimes been irresponsible in serving up charges of corruption, the government has not hesitated to bring criminal slander and libel suits against them. Worse, reporters and editors have periodically been subject to extrajudicial punishment, threats, and beatings. On occasion, the Akayev regime resorted to closing newspapers. In recent years the press came under increasing pressure to toe the government line, and journalists became increasingly likely to censor their own content.

Nevertheless, Kyrgyzstan's environment for publications is still the most liberal in Central Asia. The privately owned Russian-language *Vechernii Bishkek* is the largest and the most respected publication; it has a definite progovernment slant. There are well over 100 weekly and other periodicals. There are two domestic news agencies: the official Kyrgyzkabar and the independent Belyi Parokhod. Foreign news bureaus include ITAR-TASS, Interfax, and RIA-Vesti.

Television and radio are still mostly state owned. Broadcasters tend to be cautious about challenging the official line, and there have been no instances of crackdowns by the regime on radio or television stations. Bishkek is well served by television and radio; more remote areas are not. The south gets its broadcasting from Uzbekistan, which accentuates the split identity of the country's two parts. Russian television is relayed from Moscow despite occasional government attempts to reduce Russian programming. Radio is provided by the official Kyrgyz Radio and by several small, privately owned stations.

There are a few publishing houses in Bishkek.

CULTURE

Though nominally an Islamic country, Kyrgyzstan has never taken on a truly Islamic character; the nation is rich with musical and poetic traditions that come from its nomads. Folk music is still popular; people play a variety of stringed, wind, and percussive instruments. The nation's most famous modern authors are Chinghiz Aitmatov and Kazat Akmatov. Visual arts include handicrafts and elaborate metal jewelry as well as embroidery depicting mountain patterns.

FOLKLORE AND MYTHOLOGY

Kyrgyzstan, like its neighbor Kazakhstan, has long been a haven for traveling bards and poets called *akyn*. These people still travel the countryside performing long oral poems and songs that tell traditional stories and occasionally participating in competitions. The Kyrgyz are especially known for a long epic cycle about a hero called Manas. This hero came to be associated with Kyrgyzstan because Soviet scholars gave him to the nation in an effort to instill the republic with its own native culture and oral history.

ENTERTAINMENT AND RECREATION

Until recently many entertainment facilities were only available to political bigwigs, but they have now opened up to the masses; however, the facilities are typically substandard, and the masses do not have much money to spend on beaches or nightclubs, so the entertainment in question is often not very entertaining. There are some good areas for hiking and trekking, especially Ala-Archa Canyon. Lake Issyk-Kul has good thermal springs, health spas, hiking trails, and trout fishing. There are excellent mountains for those interested in mountaineering, but access can be difficult.

ETIQUETTE

People greet one another the first time they meet in a day, using formal greetings with people they do not know very

well; they do not greet one another again during subsequent meetings that same day. They do not thank one another as frequently as do Westerners, and they do not smile frequently. Tipping is not customary and may even offend some Muslims, who believe it their duty to offer superb hospitality. Prices in markets and bazaars are open to negotiation. Kyrgyz do not have a strict sense of time and are often late for appointments.

FAMILY LIFE

Kyrgyz people tend to have traditional attitudes toward gender roles in marriage; they believe men should be older than women when they marry for the first time, and that women should be primarily concerned with being homemakers and mothers. People still often want from three to five children, but the reality has been changing because of the poor economic. Rural people are more likely than urban people to want large families.

PERSONAL APPEARANCE

Traditionally, Kyrgyz people wore different costumes depending on region and clan, with wool and sheepskin common materials used to make clothing. Today, most people wear more modern clothing, especially in the cities. Most people dress rather formally for work, though they may dress casually for other formal occasions. During the summer, people dress in light clothing to suit the hot climate. It is considered acceptable to wear the same outfit several days in a row.

SPORTS

Kyrgyz play a number of sports involving galloping horses, such as wrestling on horseback, picking up a coin from the ground while racing on horseback, and *ulak tartysh*, a form of polo that uses a dead goat instead of a ball. Young men and women still play a traditional game in which the boy pursues the girl on horseback, trying to catch her and kiss her; if he fails, she can hit him with her whip.

CHRONOLOGY

- 1936** Kyrgyz SSR is granted full republic status.
- 1980** Sultan Ibrahimov, chairman of Kyrgyz Council of Ministers, is murdered.
- 1985** Mikhail Gorbachev's rise in Moscow leads to resignation of longtime Kyrgyz Communist Party secretary Turdakan Usubaliyev.
- 1990** The conflict over land between Uzbeks and Kyrgyz in Osh region explodes into rioting, killing at least 320 on both sides.

- 1991** Kyrgyzstan asserts its independence on August 31 in the wake of Soviet Union's disintegration. Askar Akayev is confirmed in October as president of the new republic, which joins Commonwealth of Independent States.
- 1993** A new constitution is passed in May. First deputy prime minister German Kuznetsov, the highest-ranking Russian official, announces his resignation, expressing doubt about future of Slavic peoples in independent Kyrgyzstan. Persistent accusations of corruption lead to the resignation of Vice President Feliks Kulov and the dismissal of the government. Apas Jumagulov takes over as prime minister.
- 1994** Kyrgyzstan becomes a founding member of the Central Asian Union with Kazakhstan and Uzbekistan, joins NATO's Partnership for Peace, and allows Russian troops to patrol its border with China.
- 1995** Elections are held for a new bicameral legislature. The Supreme Assembly vetoes Akayev's proposal to extend his term to 2001, forcing a presidential election in December, which Akayev wins.
- 1996** A second constitutional referendum further heightens the president's powers. The Russian language is given official status in areas with large Slavic populations and in specialized fields. Kyrgyzstan joins a common market with Russia, Belarus, and Kazakhstan. Several high officials step down following corruption inquiries.
- 1997** Kyrgyzstan signs an agreement on joint border security with Russia, China, Kazakhstan, and Tajikistan. Human rights groups report increasing instances of government repression and jailing of journalists and opposition figures.
- 1998** Jumagulov announces retirement. A new government is formed under Prime Minister Kuvachbek Jumaliyev. Kyrgyzstan admitted to the World Trade Organization. A fresh set of constitutional amendments are passed by referendum, reshaping Supreme Assembly, restricting parliamentary immunity, and allowing for private land ownership.
- 1999** Kyrgyzstani territory is invaded by Muslim fundamentalists from the south, who take hostages, releasing them only after returning to Tajikistan.
- 2000** Parliamentary elections result in a plurality for the Communist Party, but a "centrist" coalition is formed to work closely with the president. Akayev is elected president for the next five years in what observers called a flawed election. Muslim fundamentalists stage a second invasion of southern Kyrgyzstan.
- 2001** Kyrgyzstan joins the Shanghai Cooperation Organization (SCO).
- 2002** There is unrest surrounding the detention of opposition leader Azimbek Baknazarov. Kyrgyzstan and China stage a joint military exercise. Opposition forces demand the president's resignation. A terrorist bomb explodes in Bishkek.
- 2003** Russia opens a military base in Kyrgyzstan. Akayev passes laws consolidating his power.
- 2004** Opposition parties form a coalition to challenge the government in 2005.
- 2005** After parliamentary elections perceived to be fraudulent, protesters seize presidential administrative building, ousting Akayev. Kurmanbek Bakiyev is instated as acting president and prime minister.

NATIONAL FLAG

Three horizontal stripes of red, dark blue, and red—the dark blue stripe twice the height of each of the red stripes—with a white disc representing the full moon in the center

NATIONAL EMBLEM

Two sheaves of grain enclosing a cityscape, the Mekong River, a cogwheel, and a farmstead

NATIONAL ANTHEM

“Hymn of the Lao People”

NATIONAL HOLIDAYS

July 19 (Independence Day, National Day), May 1 (Labor Day), various Buddhist festivals

DATE OF INDEPENDENCE

July 19, 1949

DATE OF CONSTITUTION

August 24, 1991

GEOGRAPHICAL FEATURES

Laos, a landlocked nation located in the heart of the Indochinese peninsula, has an area of 236,800 sq km (91,428 sq mi), extending 1,162 km (722 mi) south-southeast to north-northeast and 478 km (297 mi) east-northeast to west-southwest. Laos's international border is shared with five countries: China, Vietnam, Cambodia, Thailand, and Myanmar.

Laos is divided topographically into the northern mountains, composing two-fifths of the country, and the southern panhandle. The mountains of the northwest are characterized by steep slopes and sharp crests, with a number of peaks rising over 1,800 m (6,000 ft). Laos's

highest mountain, Phou Bia (2,817 m; 9,240 ft), is in this region in the province of Xieng Khouang. Another major feature is the Plain of Jars, on the Tran Ninh Plateau, between 1,014 and 1,219 m (3,330 and 4,000 ft) above sea level, so named from the prehistoric stone jars found in the area. The panhandle is bounded on the east by the Annam Cordillera, a continuous range with peaks rising to 2,350 m (8,000 ft), effectively cutting off Laos from Vietnam. West of the divide the range is buttressed by a series of plateaus, such as the Khammouane and the Boloven plateaus.

The Mekong River is the lifeline of Laos. It is the major transportation artery and the major source of irrigation. Its waters supply fish, a staple of the diet.

Vientiane	716,000

CLIMATE AND WEATHER

Laos has two seasons: a wet season during the southwest monsoons, from May to October, and a dry season during the northeast monsoons, from November to April. July and August are the months of maximum precipitation, while November is almost dry.

The annual mean rainfall over all of Laos ranges from 1,270 to 2,290 mm (50 to 90 in). The lowest average rainfall is recorded in the region around Luang Prabang in the north, while the highest rainfall—more than 4,060 mm (160 in)—is recorded on the Boloven Plateau. Rainfall occurs at least 100 days a year throughout the country and in some areas as many as 150 days a year.

Temperatures are never extreme but vary from tropical to subtropical with altitude, latitude, and the monsoons. The hottest months are March and April, just before the southwest monsoon rains, when temperatures climb to around 35°C (95°F). Absolute highs of well over 37.8°C (100°F) have been recorded. During the rainy season the temperatures fall to an average of 26.7°C (80°F). During the cooler part of the dry season, from December to February, the temperatures hover between 14 and 28.4°C (57 and 83°F). Below-freezing temperatures have occasionally been recorded in Xieng Khouang.

Climate and Weather

Mean Temperature
 Winter: 57°F to 83°F
 Summer: 90°F to 100°F
 Average Rainfall: 50 in to 90 in
 Highest: 160 in the Boloven Plateau

FLORA AND FAUNA

Over half of the country is covered in dense forests, including tropical rain forests and monsoon forests. Vegetation includes broad-leaved evergreens as well as hardwoods such as teak. Though much of the forest is now second growth, there are some protected areas of original-growth rain forest. Bamboo, small trees, rattan, palms, and various grasses are found under the thick forest canopy.

The forests are home to an assortment of wild animals, from the panther to the elephant, the national symbol of Laos. However, numbers of elephants, as well as tigers and leopards, are declining rapidly as deforestation progresses throughout the country. Other significant mammals include deer, bears, monkeys, and wild oxen. Numerous colorful birds are found in the forests, as are reptiles such as cobras and crocodiles. Laos also boasts a wide variety of butterflies.

ETHNIC COMPOSITION

The ethnic configuration of Laos is characterized by limited diversity. Three main ethnic groups are officially listed: Lao Loum, Lao Theung, and Lao Soung. All of these groups are ethnically related to the Tai, or Thai, people.

The Lao Loum (lowland Lao) are the dominant ethnic group, constituting some two-thirds of the population. Historically, the Lao Loum have imposed their social values, religion, language, and political system on the other peoples.

Around one-fifth of the population is made up of the Lao Theung (upland Lao), who were until recently also known as Kha (slaves). The Lao Theung, believed to be the original inhabitants of the land, are distinguished by features suggesting a possible ancestral connection with Negrito races.

The name Lao Soung (mountain Lao) is principally applied to two groups: the Miao (Hmong) and the Mien (Yao). They are believed to be the most recent migrants from China, appearing in Laos as recently as 1850. The Miao are a proud people with a reputation as valiant fighters. They have been generally successful in maintaining their identity, owing partly to their more highly developed social organization. The Lao Soung groups make up 10 percent of the population.

LANGUAGES

The official language of Laos is Lao, the language of the Lao Loum ethnic group. French is still used as a logical and convenient language for diplomatic communication and is spoken by most of the Lao elite. Most official publications continue to be issued in French. The American presence in Laos during the 1960s led to the adoption of English by many educated Laotians, but with the growing isolation of Laos since 1975, the status of English is in doubt.

The minority languages of Laos are for the most part unwritten and used only locally. The more important of these are the Mon-Khmer languages, spoken by the Lao Theung people; the Tibeto-Burman languages, spoken by the Lolo, Akha, and Lahu; and the Miao-Yao languages, spoken by the Miao and the Mien.

RELIGIONS

Until a secular state was established in 1975, Theravada, or Hinayana, Buddhism was the official faith of Laos. The pervasive influence of Buddhism is attested to by the thousands of pagodas that dot the towns and the countryside—Vientiane and Luang Prabang have been called “cities of a thousand temples.” Most of the Lao and a smaller number of the non-Lao regard themselves as Buddhists. However, coexisting with orthodox Buddhism is a cult of Phi, or spirit worship, which regulates a large part of the daily activities of the average Lao. Most non-Lao adhere to tribal religions in which spirit worship is the major element, as modified in some cases by Buddhist or Confucian beliefs.

Christian missionary activity in Laos has not been rewarded with many converts, and in the 1960s there were only 50,000 Christians in the country. There are three Roman Catholic vicars apostolic, in Vientiane, Pakse, and Khammouane.

HISTORICAL BACKGROUND

Laos has been occupied by its neighbors for much of its history. The first independent principalities were created in the 13th century following invasions by Kublai Khan. In the mid-14th century Fa Ngum formed a kingdom, Lan Xang. This kingdom prospered, but it split in the 17th century into three warring kingdoms. By the end of the 18th century most of the country was under the control of the Siamese.

With the Europeans came European control. Laos was under French rule from 1893 to 1953, except for a five-year Japanese occupation from 1940 to 1945. On the whole, French rule rested lightly. Patterns of local government under the French were not greatly changed, and local customs and traditions were respected when they were not incompatible with larger French objectives. The French *résident supérieur* exercised only indirect rule over Luang Prabang, though administration of the eight provinces outside that kingdom was more direct.

The Japanese pressured King Sisavang Vong to declare Laos independent in 1945, but following the Japanese surrender he reaffirmed France's protectorate role. Free Lao forces deposed the king shortly thereafter. However, France regained Laos in early 1946 and reinstated the monarch. In 1949 Laos was granted limited self-government as an Associated State within the French Community. The royalist government was led by Prince Souvanna Phouma, who served as prime minister from 1951 to 1954. Anti-French forces coalesced in 1950 to form the Pathet Lao, led by pro-Communist Prince Souphanouvong, Souvanna Phouma's half-brother.

Laos was granted full independence from France in 1953. Except for a short period in 1957–58, when Souvanna Phouma and Souphanouvong formed a coalition government, Laos was ruled by a series of pro-Western conservative regimes from 1954 to 1960. During the 1950s the Pathet Lao gradually gained control of the northern portion of the country with the assistance of Vietnamese Communist forces. By 1965 the country was de facto partitioned into a Communist north and “neutralist” government under Souvanna Phouma in the south. The two sides signed a cease-fire agreement in 1973, and the following year a coalition government led by Souvanna Phouma and Souphanouvong was formed. In the wake of the Communist victory in Vietnam, the Pathet Lao gradually established control of administration.

In December 1975 the monarchy was abolished, the coalition government dissolved, and the People's Demo-

cratic Republic of Laos declared. Within two years the new regime had consolidated its power and given the country its first stable government since 1953. With a disciplined army and party as its power base, the government liquidated all opposition and began a process of national "reeducation," or indoctrination. Private industry was nationalized and agriculture collectivized. Faced with an economy near collapse and strong resistance to collectivization, the government slowed the pace of socialization during the 1980s and announced a limited return to free enterprise and private landownership.

In March 1989 Laos held its first national elections since the Communists came to power in 1975. A total of 121 candidates vied for 70 seats in the Laos Supreme People's Assembly. Western news reports indicated that only 7 percent of the electorate participated in the voting. Since that election, there began a movement toward a market economy. Laos joined the Association of Southeast Asian Nations (ASEAN) in July 1997. In 1998 the former prime minister Khamtai Siphandon became president, and he was reelected in 2002. The country began talks to join the World Trade Organization in 2001 and hosted the ASEAN summit in 2004. Despite the nation's efforts to normalize relations with its neighbors and the international community, Laos demonstrated its authoritarian character in 2003 with the arrest and conviction of two international journalists covering the Hmong insurgency. Though the journalists were later released, their Laotian guides were not. President Siphandon stepped down as leader of the Communist party in 2006 and was replaced by Choummaly Sayasone.

LIST OF MODERN RULERS

Prime Minister

1945–46	Prince Phaya Khammao
1946–47	Prince Kindavong
1947–48	Prince Suvannarat
1948–50	Prince Boun Oum na Champasak
1950–51	Phoui Sananikon
1951–54	Prince Souvanna Phouma
1954–56	Katay Don Sasorith
1956–58	Prince Souvanna Phouma
1958–59	Phoui Sananikon
1959–60	Sunthon Patthamavong
1960	Kouprasith Abhay
1960	Prince Tiami Sovanith
1960	Prince Souvanna Phouma
1960	Quinim Pholsena
1960–62	Prince Boun Oum na Champasak
1962–75	Prince Souvanna Phouma
1975–91	Kaysone Phomvihane
1991–98	Khamtai Siphandon
1998–2001	Sisavat Keobounphan
2001–	Boungnang Vorachith

President

1975–1986	Prince Souphanouvong
1986–1991	Phoumi Vongvichit
1991–92	Kaysone Phomvihane
1992–98	Nouhak Phoumsavan
1998–	Khamtai Siphandon

CONSTITUTION

In 1991 the National Assembly adopted a new constitution, whereby the assembly elects the president of the country. In addition to the dependent executive, the constitution recognizes only the Lao People's Revolutionary Party as the central organ. That party has a central committee, or politburo, that consists of nine members, including the country's president. The constitution also calls for an independent judiciary.

PARLIAMENT

The National Assembly of Laos is the legislative organ of the government. Its 109 members are elected for terms of five years by universal adult suffrage at the age of 18. The assembly has the power to elect or to remove the president and vice president, to make or abrogate laws, and to amend the constitution. The president in turn appoints a prime minister, with assembly approval. Both the president and the prime minister serve five-year terms.

POLITICAL PARTIES

The sole legal political party in the country is the Lao People's Revolutionary Party (Phak Pasason Pativat Lao, or PPPL), formerly the People's Party of Laos. The PPPL is the Marxist core of the Lao Patriotic Front (Neo Lao Hak Xat, or NLHX), the political wing of the former Pathet Lao, later the Lao People's Liberation Army. In the 2002 elections one non-Communist candidate was, in fact, elected to the National Assembly; he was officially approved by the government.

LOCAL GOVERNMENT

For purposes of regional administration Laos is divided into 16 provinces and one municipality. The provinces (*khoueng*) are subdivided into districts (*muong*), the districts into cantons (*tasseng*), and the cantons into villages (*ban*). Each province is headed by a governor, or *chao khoueng*; each district is headed by a *chao muong*; and each village is headed by a chief, called *pho ban* in the south and *nai ban* in the tribal areas and in the north. The Miao and Kha tribes have chieftains who occupy administra-

tive posts called *naikong lao theung*, corresponding to the office of *chao muong*. Vientiane and a few other cities and towns are each administered as a *muong* by a *chao muong*. All units of local administration are subject to close central government control.

LEGAL SYSTEM

The highest Laotian court is the Central Supreme Court in Vientiane. Under its jurisdiction are a court of appeals, in Vientiane; three criminal courts, in Vientiane, Pakse, and Luang Prabang; one provincial tribunal for each provincial capital; and 37 district justices of the peace. At the village level, justice is usually dispensed by village headmen in the presence of village elders.

No fully codified law exists in Laos, and there is no guaranteed due process. The government has promulgated interim rules and regulations for the arrest and trial of those accused of specific crimes, including armed resistance to the government. Although the regulations allow an accused person to make a statement presenting his side of the case, they provide no real opportunity for the accused to defend himself and do not permit bail or the use of an attorney. Rather, the government has issued instructions on how to investigate, prosecute, and punish wrongdoers. These instructions are applied capriciously and inconsistently. People can be arrested on the accusations of others and detained while the accusations are investigated. Those arrested are not always informed of the charges against them, and investigations often take long periods of time, unless family members and friends take strong interest in the cases. Influential government officials and their families can easily affect the judgments reached. There are some provisions for appeal, but important political cases tried by "people's courts" are without appeal.

HUMAN RIGHTS

In terms of civil and political rights, Laos is classified as an unfree country. Citizens do not have the right to change their government. Prison conditions are harsh, and police use arbitrary arrest and detention. Lengthy pretrial detention is a problem. The judiciary is subject to executive influence, suffers from corruption, and does not ensure citizens due process. The government infringes on citizens' privacy rights, restricting freedom of speech, assembly, and association. The government closely monitors the press. The government restricts freedom of religion; at least 40 Christians and animists were arrested and detained in 1998. Some societal discrimination against women and minorities persists. The government restricts some worker rights. However, the state has permitted increased access to the foreign press and the Internet and has actively supported a policy encouraging greater rights

for women and minorities. There is increased participation by women in government and a new focus on the problem of trafficking in women and children.

An organized Hmong insurgent group was responsible for the killing of 16 civilians in three incidents in Vientiane and Xieng Khouang provinces in 1998. These incidents appeared to be acts of deliberate terror against those not supporting resistance to the government. The Hmong continued to battle government forces into the new millennium. Two foreign journalists covering that story brought about an international stir in 2003 when they were arrested and sentenced to 15 years imprisonment. International pressure later forced Vientiane to release them.

FOREIGN POLICY

During the Southeast Asian crises of the 1970s and 1980s, Laos was firmly positioned in the Soviet camp, supporting Vietnam in every move against Thailand, Cambodia, and China. Laos remains very much Communist, like Vietnam; with the collapse of the Soviet Union, Laos made the necessary readjustments in foreign policy. In 1991 it concluded a border security and cooperation agreement with Thailand, providing for the repatriation of 60,000 Laotian refugees from Thailand. In 1994 the first bridge across the lower Mekong was opened, providing a major link between the two countries. A year later Cambodia and Vietnam joined Laos and Thailand in establishing the Mekong River Commission.

Relations with the United States, suspended from 1975 until 1992, were bogged down by two problems: narcotics trafficking in Laos and the search for several hundred U.S. servicemen listed as missing in action in Laos during the Vietnam War. Vientiane's cooperation on these issues led the way to the normalization of relations. In 1997 Laos became a member of ASEAN and in 2004 hosted the tenth ASEAN summit. The country has continued to normalize relations with its neighbors and with China.

DEFENSE

After 1975 the Pathet Lao, or the Lao People's Liberation Army, was transformed into the national army, and the former royalist forces were disbanded. As of the early 2000s, military service was compulsory for 18 months.

The Laotian armed forces consist of tough, seasoned personnel exposed to warfare for much of their adult lives. Though rated as inferior to the Vietnamese in fighting quality, their combat-worthiness is estimated by most military observers as higher than that of comparable Asian troops.

In 2002 the Laotian armed forces numbered over 129,000 active personnel. In 2004 defense spending ac-

counted for 0.5 percent of gross domestic product (GDP), or \$10.7 million, down from \$55 million in 1998.

ECONOMY

Laos is a landlocked country with a primitive infrastructure. It has no railroads, a rudimentary road system, and limited external and internal telecommunications. Electricity is available only in a few urban areas. Agriculture, primarily subsistence, accounts for half of GDP and provides 80 percent of total employment. The predominant crop is glutinous rice. Although Laos is self-sufficient overall with respect to food, each year floods, pests, and localized droughts cause shortages.

The nation moved away from a command economy throughout the 1990s, decentralizing control and encouraging enterprise. As a result, GDP growth averaged 7 percent from 1988 to 1997. Because Laos depends heavily on trade with Thailand, it was damaged by the regional financial crisis beginning in 1997; reform efforts subsequently slowed, and GDP growth dropped an average of 3 percentage points annually. Government mismanagement deepened the crisis, and from June 1997 to June 1999 the Laotian kip lost 87 percent of its value. Laos's foreign-exchange problems peaked in September 1999 when the kip fell from 3,500 kip to the dollar to 9,000 kip to the dollar in a matter of weeks. The currency eventually stabilized, at which point the government seemed content to let the extant situation, however substandard, persist.

The early 2000s witnessed GDP growth rates of between 5 and 6 percent. Major setbacks to the economy in 2003 were a downturn in tourism as well as the failure of the Nam Theun-2 hydroelectric power plant project when its largest shareholder, Édf International, a subsidiary of state-owned Électricité de France, pulled out at the last minute. Laos relies on cash infusions from the International Monetary Fund and international investors in food processing and mining. The country is planning to join the World Trade Organization.

ENVIRONMENT

Laos continues to suffer from deforestation, as timber is cut for fuel as well as cleared for agricultural expansion. Deforestation and rudimentary farming techniques have resulted in soil erosion. There is also a significant amount of unexploded ordnance, including landmines, scattered across the countryside. Perhaps the country's most pressing environmental problem is the fact that most of its citizens do not have sufficient access to potable water.

LIVING CONDITIONS

In its 2004 Human Development Index, the United Nations ranked Laos 135th out of 177 nations in terms of quality of life. The index focuses on three measurable dimensions of human development: life expectancy, education, and standard of living. Life expectancy in Laos in 2004 was 55 years. The literacy rate in 2002 was 66.4 percent, with just 59 percent of eligible students enrolled in primary, secondary, and tertiary schools. Laos's GDP per capita in 2004 was \$1,900, making the nation one of the poorest in Asia.

Much of life in the country is carried on without the benefit of modern infrastructure or tools. Three-fourths of the population is rural, and villages seldom have running water or electricity. Farming is still done by ox and plow. Village life lacks privacy. Wooden or bamboo houses are built on stilts to avoid flooding and are close together, with roofs made of corrugated metal or thatch. Furnishing is minimal; much of the living is done on mats

on the floors of huts. Transportation is problematic, with few paved roads and much of farmers' produce shipped by ox-drawn cart.

In the cities and towns conditions are somewhat better. There is better access to proper sanitation and water supplies, and the availability of electricity is higher. However, there are acute housing shortages in urban areas, and many existing buildings are substandard. According to the United Nations, the urban population growth rate for 2000–05 was 4.9 percent.

HEALTH

Laos is very much a developing country in terms of its health-care system. Malaria, with 759 cases per 100,000 of population in 2000, is still the leading cause of death; diarrhea is the second-highest cause of childhood mortality. Other major health risks are leprosy, measles, dysentery, yaws, and tuberculosis. HIV/AIDS, a scourge in many other Asian countries, has yet to have a large impact in Laos; in 2003, 1,700 people were estimated to be living with HIV/AIDS, and fewer than 200 deaths occurred from the disease.

The lack of proper sanitation and safe drinking water remains a major problem. As of 2002, only 24 percent of the population had access to adequate sanitation facilities, while only 43 percent had access to safe drinking water. Childhood immunization rates are also low. In 2002, 65 percent of one-year-olds were fully immunized against tuberculosis. Of children under five, 40 percent were undernourished as of 2002; 22 percent of the full population was undernourished as of 2001. The infant mortality rate in 2005 was 85 deaths per 1,000 live births. The overall death rate in the country was 12 deaths per 1,000 population.

There have been improvements in health care with the introduction of Western medicine. Diseases such as malaria and smallpox have become more controlled than they once were, although with only 59 physicians per 100,000 people, much of the population is still underserved medically. In 1999 there were a mere 2.6 hospital beds per 1,000 people.

FOOD AND NUTRITION

Sticky rice is a major agricultural crop and the staple food of the country, served three times a day. Eaten with the fingers, such rice can be shaped into balls and then dipped into a variety of sauces. Most often, such sauces are spicy concoctions of fish, chili, garlic, and lime. Meat and fish are both salted, and beef is often deep-fried. Noodles are sometimes substituted for rice.

A common Lao dish is *laap*, a mixture of meat or fish and lime juice, garlic, rice, green onions, mint, and chilis. Laotians also enjoy salads made with shredded green papaya and seasoned with *padek*, a fermented fish paste, and chilis. Other favorite fruits include bananas, oranges, and berries. Peanuts are also widely eaten.

Food is often served on a bamboo tray placed in the middle of a circle of people sitting cross-legged on the floor. At meal times the sexes are generally separated: men sit on one side of the room and women on the other. Tea leaves and coffee beans, both of which grow in Laos, produce favorite drinks. People also drink a rice whiskey called *lao lao* and a rice wine called *kbao kam*.

Lack of nutrition remains a problem in the country. Of children under five, 40 percent were undernourished as of 2002; 22 percent of the general population was undernourished as of 2001.

Amount of Fruits and Vegetables Available per person per year kg: 187.9

STATUS OF WOMEN

The role of women in Laotian society has traditionally been subservient to that of men, but discrimination is not highly pronounced. The government-controlled Lao Women's Federation states as one of its goals the achievement of rights for women "equal" to those of men. Laotian women are encouraged to increasingly take part in economic and state-controlled political activity.

As a result of such politicized efforts, many Laotian women have come to hold key positions in the civil service as well as in the private sector. However, few represent the people in government. An estimated 15,000 to 20,000 Laotian women and girls, mainly highland eth-

nic minorities, are trafficked each year for prostitution, mostly to Thailand.

WORK

As of 2001 there were an estimated 2.6 million Laotians in the work force, 80 percent of whom were estimated to be engaged in agriculture. The primary farming product is wet rice, which depends on the flooding of fields by seasonal rains. Other agricultural products include sweet potatoes, vegetables, corn, coffee, sugarcane, tobacco, cotton, tea, and peanuts, as well as water buffalo, pigs, cattle, and poultry. Most agriculture is subsistence. Public-sector employment and industry occupy the rest of the labor force. Industries include tin and gypsum mining, timber, electric power, agricultural processing, construction, garments, and tourism. As of 1997 the unemployment rate was 5.7 percent.

The government controls union activity. The Federation of Lao Trade Unions is an arm of the PPPL and the only union in the country; it has about 80,000 members, mostly in the public sector. There is no right to strike or to bargain collectively. The minimum work age is 15, and the maximum workweek is 48 hours; the daily minimum wage was \$0.53 in 2002. However, as most of the population is engaged in agriculture, which is not controlled by such laws, such restrictions are largely meaningless.

EDUCATION

Education is, in principle, universal, compulsory, and free for five years, for children between the ages of seven and 12. More than one-third of those who enter the primary cycle do not finish, however. Total schooling consists of 11 years, as divided into five years of primary education and six years of secondary education. Primary education is divided into two cycles of three and two years each. There are four types of schools at this level: district group

elementary schools, which offer the full five-year course, and village primary schools, elementary schools, and rural centers of community education, all of which offer courses lasting less than five years. The educational system has two primary functions: to indoctrinate the student in the values of a radical society and to meet the manpower needs of the state.

The academic year runs from September to May. The medium of instruction is Lao, but French is taught as a second language from the primary grades onward. English and Vietnamese are taught as additional languages in secondary schools.

Sisavongvong University in Vientiane is the country's main university. A total of 10 other smaller colleges for teacher training and agriculture were merged in 1995 to form the National University of Laos. The government has made a commitment to educate the populace. In 2002 public expenditures on education were 2.8 percent, or 11 percent of total public expenditures. Some 85 percent of eligible students were enrolled in primary schools. Of those, 64 percent made it to the fifth grade, with, from there, a 79 percent transition rate to secondary schools. The literacy rate in 2002 was 66.4 percent, as improved from the 1990 level of 56.5 percent.

Many Laotians go abroad for higher education.

SCIENCE AND TECHNOLOGY

Laos depends on foreign assistance and foreign technicians for much of its research in science and technology. Sisavongvong University, in Vientiane, has faculties of agriculture, forestry, and irrigation and of medicine; the university also comprises a technical college and a polytechnic. There are regional technical colleges in Luang Prabang, Savannakhét, and Champasak. Between 1987

and 1997 science and engineering students accounted for 20 percent of college and university enrollments.

The National Agricultural Research Center pursues research into crop propagation and pest resistance, while the National University of Laos has several agricultural and forestry faculties and colleges that also conduct research into crops, livestock, and the forests.

In 2004 the Asian Institute of Technology and the Laos Ministry of Education signed a memorandum of understanding to continue the strengthening of cooperation in education and research in the fields of technology, planning and management. The accord—effective until 2006—aimed to provide higher education opportunities to increasing numbers of Laotian students.

MEDIA

All existing newspapers were suspended upon the establishment of the People's Republic and replaced by one daily, *Vientiane may*, the organ of the Party Committee. By 1996, three dailies were in existence.

The national news agency is Khao San Pathet Lao, which publishes a government organ of the same name in French and Lao. Novosti and the Vietnam News Agency maintain bureaus in Vientiane.

The official broadcasting organization, Lao National Radio, operates one shortwave and three medium-wave transmitters, broadcasting in Lao, French, and Vietnamese. The Voice of Peaceful Laos and the Voice of Pathet Lao are also broadcast to both domestic and foreign listeners.

Television was introduced in 1983 and is run by Lao National Television. Though there are foreign-language broadcasts via satellite, these are also strictly controlled and censored by the government.

The Laotian media is state controlled. The law authorizes jail terms for journalists who overstep what the government deems to be proper press conduct. Most criticism of the state or the ruling party is considered a criminal offense. As underlined this stance, two European journalists and their Hmong-American interpreter were arrested in June 2003 while covering the Hmong insurgency. Though the journalists were released several weeks later, having first been sentenced to 15-year prison terms for the killing of a village guard, the incident served as a warning to domestic and international journalists alike.

The government controls all domestic Internet servers, and authorities at times block access to Web sites that

they consider pornographic or that are critical of the government. In its 2004 rankings, Reporters without Borders ranked Laos 153rd out of 167 countries worldwide in terms of freedom of the press.

In 2002 there were 55,200 mobile cellular telephone users and 15,000 Internet users.

CULTURE

Religion plays a major role in Laotian culture. Buddhism is the primary religion; images of the Buddha and his life and teachings are found carved on temples and other religious sites throughout the country. An indigenous Asian overlay is placed on such religious and spiritual artifacts; for example, the snake, an animist symbol of water (from the shape of a river through the jungle), is often found represented on temples.

The traditions of dance, music, and drama are all combined in what is called *mohlam*, performed by a man and a woman who both dance and sing. The content of this minidrama and comedy usually regards courting. Dance movements are handed down from generation to generation, as are the contents of each tale, though improvisation is appreciated. Such dance and song is accompanied by the wind instrument known as the *khene*, or *khaen*, which is made of a group of bamboo pipes of different lengths. Other dance performances have classical Indian themes and stem from that country's epics. For such classical performances, only men dance, with younger boys playing female roles.

In literature, most writing displays a Buddhist tradition. However, there are also more secular tales, such as the Lao epic *Sin xay*, from the 16th and 17th centuries, as adapted from Hindu epic poems.

The Ministry of Information and Culture is responsible for cultural policy. Archaeological museums include Wat Prakeo and That Luang, the former Royal Palace Museum in Luang Prabang. There is also the National School for Dance and Music in Vientiane. Additionally, Laos is engaged in a project to preserve its store of priceless palm-leaf manuscripts. These dried leaves were etched with a stylus; scribes wrote the folk literature of the region on such treated leaves long before the advent of paper.

FOLKLORE AND MYTHOLOGY

Laos has a rich tradition of folklore, both oral and written. Lao folk narratives include fictional tales, such as myths, legends, folk epics, and folktales, and nonfiction works, including historical chronicles and treatises on folk medicine and folk law.

Lao myths generally deal with spiritual topics or creation tales; they include *Phya Kbankhaak, the Toad King*, the myth of the Great Gourd of Heaven; *Khua Khao Kad, the Giant Creeper*; and *Phuen Khun Boromrajathirat*, or *The Myth of Lord Boromrajathirat*. Legends, on the other hand, are considered secular. In the Lao tradition, these can relate to how things happen or deal with the history of a place and how it obtained its name. Examples of these are *The Blacksmith, Crow and Peacock, Dog and Pig, Chakacan (The Cicada), Maeng Nguan (The Singing Cricket)*, and *The Dog's Habit*. Folk epics are usually composed in verse and were originally passed along in the oral tradition. Later, they may have been written down on palm-leaf manuscripts. *Thao Hung Khun Bulom*, or *Khun Bulomrajathirat (Lord Bulom, or Lord Bulomrajathirat)*, *Thao Cheuang (King Hung and King Cheuang)*, and *Phadaeng Nang Ai (King Phadaeng and Princess Aikham)* are three examples of folk epics.

Folktales are stories passed on by word of mouth from generation to generation. Some Lao folktales had been recorded on palm-leaf manuscripts. These could be related in either prose or verse. There are numerous types of folktales, including tales of the Bodhisattva or Jataka tales, trickster tales featuring the clever and deceitful character Xiangmiang, riddles, and stories in which animals take on human characteristics, though humans usually get the upper hand. There are also plentiful tales of ghosts and magic in Lao folklore. Proverbs are popular, both as entertainment and as teaching tools. An example of such a proverb is "To judge an elephant, look at its tail; to judge a girl, look at her mother."

ENTERTAINMENT AND RECREATION

Though government controlled, radio and television provide major sources of entertainment for Laotians. For

those living along the borders and in cities, Thai radio and television is available and is much more popular than local media, which tends to be propagandistic in content. In Vientiane and other urban areas, Western influences can be found in modern music performances and in dance clubs. Movies, mostly imported, are also strictly censored for content by the government.

In rural areas the population finds entertainment around the major Buddhist festival days and ceremonies such as marriage. Food is a major ingredient of such entertainment. However, with most of the population engaged in subsistence agriculture, there is little leisure time.

ETIQUETTE

The *nop* is the usual form of greeting. This gesture involves placing the hands together as if praying, with deference shown by the level of the hands: the higher the hands, the more respect shown. The nose is the upper limit to such signs of respect. This gesture is accompanied by a bow for those of greater age or higher status. The *nop* can also be used to show thanks, regret, or farewell. With Westerners, Laotians will also shake hands.

As is typical in many Asian cultures, the top of the head and bottom of the feet have special significance. As the soles are considered the lowliest part, it is rude to show them by crossing one's leg at the knee, for example. The top of the head is considered sacred and it is impolite to touch it, even to pat an infant's head.

Displays of public affection are not considered good etiquette. Shoes are taken off before entering homes or religious buildings.

FAMILY LIFE

Most Laotians live in rural areas, and the traditions of rural life persist despite changes in government. Families tend to be large, with children helping in the rice paddies. The fertility rate per woman in 2004 was just under five children per woman. Taking into account high infant and child mortality rates, families typically number between six and eight, including parents. Western-style dating does not exist; instead, groups of young men will go to homes with eligible daughters to meet prospective brides. The groom will pay a bride price, and the couple will live with the bride's family for a time before setting up their own home nearby. Generally, the youngest daughter is responsible for the care of aging parents and thus also inherits the family house and rice paddy.

Domestic work is the concern of women. This includes fetching water and processing rice. The men work in the fields, but if there is a smaller kitchen garden, that is also the responsibility of the woman.

Polygamy, once legal, was banned by the PPPL; however, many men have mistresses. Divorce may be initiated by either party. If a couple encounters domestic difficulties, the two families usually talk about the problem first. If necessary, village elders join the attempt to resolve the couple's differences and achieve reconciliation. If none of this works, the couple can divorce, after which both husband and wife may return to their families of birth, unless either can make a living other than from farming. Children of divorce may remain with either parent. In the case of a spouse's death, the widow or widower may return to their birth household, but more commonly he or she maintains an independent household or remarries.

PERSONAL APPEARANCE

Traditional Laotian clothing includes the *sin* for women and the *phakhawma* for men. The *sin* is a practical garment in tropical Laos—basically a tube of cloth fixed with a belt at the waist. It can be worn either at waist level, with a blouse on top, or above the breasts as a one-piece covering. At home many Laotian men wear the long length of cloth called the *phakhawma* wrapped like a skirt or into shorts. They also wear Western-style shirts and pants. Jeans and other blatantly Western clothing were initially banned by the Communist government, but that is no longer the case. In cities, Western dress is typical.

Laotians have rich collections of regional traditional costumes, such as brightly colored silk wraps with embroidery, which are only worn on special occasions in modern times.

SPORTS

Popular sports include soccer, volleyball, badminton, and *takraw*, a Southeast Asian sport in which players keep a rattan ball in the air using only the feet and head, as in soccer. The Laotian national soccer team was formed in 1951 and has competed in the South East Asian Games every year since 1993. The team also competes for the Asian trophy known as the Tiger Cup.

Martial arts, including *muay thai* (Thai kickboxing), are also popular, particularly as spectator sports. Top spinning is another popular sport, using large wooden tops. People compete to see how long they can keep their tops in motion. Sometimes competitors use their tops to knock out their opponents' tops.

CHRONOLOGY

1949 Laos becomes a nominally independent state within the French Community, with Prince Boun Oum as prime minister.

- 1950** Phoui Sananikon replaces Boun Oum as prime minister.
The Lao Patriotic Front (Neo Lao Hak Xat, NLHX) is founded, with Prince Souphanouvong as leader.
- 1951** Prince Souvanna Phouma forms his first ministry.
- 1953** Viet Minh troops, with support from Pathet Lao troops, cross into northern Laos and establish a resistance government in the province of Houa Phan.
Laos is granted complete independence by France.
- 1954** Souvanna Phouma yields post of prime minister to Katay Don Sasorith.
Geneva Conference reaches a settlement for Laos under which the two northern provinces, Phong Saly and Houa Phan, are granted to the Pathet Lao, and the International Commission for Supervision and Control is set up, with India, Canada, and Poland as members.
- 1955** General elections are held.
- 1956** Souvanna Phouma resumes position of prime minister.
- 1957** Under the Vientiane Agreement a coalition government is formed, with the Pathet Lao as one group, as a first step toward the front's reintegration into the kingdom.
- 1958** The NLHX and its allies win 13 of 21 seats in supplementary national elections.
The United States suspends aid.
The Government of National Union falls, and its successor, headed by Phoui Sananikon, excludes the Pathet Lao from the government.
Committee for the Defense of National Interests gains upper hand in the leadership.
Prince Souphanouvong is jailed but manages to escape and renew revolt.
- 1959** Prince Savang Vatthana ascends the throne as king.
- 1960** Kouprasith Abhay and Prince Tiarni Sovanith hold office of prime minister briefly.
Young paratroop commander Kong Le seizes Vientiane in a coup and installs new government, with Souvanna Phouma as prime minister.
Rightist general Phoumi Nosavan leads counter-coup, retakes the capital, and expels Kong Le and Souvanna Phouma.
Neutralists and Pathet Lao join forces.
- 1961** Combined leftist and neutralist forces regain initiative.
Two governments prevail in Laos: Prince Boun Oum's royalist government in the capital and Souvanna Phouma's neutralist government at Khang Khay.
Boun Oum calls for a cease-fire.
International conference at Geneva guarantees cease-fire. Parties sign agreement on the neutrality and independence of Laos and the evacuation of all foreign forces.

- Government of National Union is formed, with Souvanna Phouma as prime minister and Gen. Phoumi Nosavan and Prince Souphanouvong as deputy prime ministers.
- 1963** Kong Le's forces and the Pathet Lao split. The NLHX withdraws from the government, although the fiction of a coalition is maintained.
- 1964** Souvanna Phouma is briefly overthrown by a rightist coup but is almost immediately reinstated. Pathet Lao resume fighting.
- 1965** Rightist general Phoumi Nosavan leads an abortive coup and is forced to flee to Thailand, where he is granted asylum. The NLHX boycotts elections.
- 1967** National elections are again boycotted by the NLHX.
- 1974** In the aftermath of U.S. withdrawal from Vietnam, a third coalition government is formed, with the NLHX as the dominant partner. The Pathet Lao are believed to control three-fourths of the national territory.
- 1975** The Pathet Lao launch final drive to achieve complete political and military supremacy. United States closes Agency for International Development mission in capital. Rightists flee country in thousands. United States ends two decades of military presence in Laos. People's Democratic Republic of Laos is proclaimed. King Savang Vatthana abdicates throne. People's Congress is convened, which in turn appoints 45-member People's Supreme Council. A new government is named, with Prince Souphanouvong as president and Kaysone Phomvihane as prime minister. Thai border is closed to stem flight of refugees.
- 1976** As the exchange value of the kip plummets to 14,000 to the dollar, the government introduces the new kip as the national currency.
- 1977** Border clashes with Cambodia are reported. Ex-king Vatthana is arrested. Laos and Vietnam conclude 25-year Treaty of Friendship and Cooperation.
- 1978** Diplomatic relations with France are broken over French support for Miao rebels.
- 1979** The Lao Patriotic Front is replaced by the Lao Front for National Construction. Laos backs Vietnam in conflict with Cambodia. Laotian troops are deployed against the Khmer Rouge. Souphanouvong visits Phnom Penh and joins the Heng Samrin government and Vietnam in a call for the mutual defense of Indochina. Laos accuses China of massing troops on the Laotian border and orders withdrawal of Chinese road builders in northern Laos. China complies with Laotian demand and closes embassy in Vientiane.
- Thai prime minister Kriangsak Chomanan visits Vientiane, and Kaysone Phomvihane returns the visit as the two nations make an effort to reduce tensions. The new kip is replaced by a revised version of the new kip and devalued by 75 percent.
- 1982** Diplomatic relations with France are restored.
- 1983** Third Congress of the Lao People's Revolutionary Party is held.
- 1984** Border dispute erupts with Thailand over three villages.
- 1986** Souphanouvong suffers a stroke in September and is replaced by Phoumi Vongvichit.
- 1989** Supreme People's Assembly is elected to consider a new constitution.
- 1991** A new constitution is approved by the assembly.
- 1992** Kaysone dies. The Lao People's Revolutionary Party wins the first "free" elections under the new constitution, with Nouhak Phoumsavan as state president, Khamtai Siphandon as party president and prime minister, and Sisavat Keobounphan as vice president.
- 1995** Laos is a signatory to a water rights treaty with Cambodia, Thailand, and Vietnam.
- 1997** Laos is admitted to ASEAN. The Asian fiscal crisis abruptly slows the economy, with the kip losing 87 percent of its value from June 1997 to June 1999.
- 1998** Khamtai Siphandon is elected president, and Sisavat Keobounphan is appointed prime minister.
- 1999** After the kip's value reaches a low of 9,000 kip to the dollar in September, the economy begins to stabilize. Vice President Oudom Khattiya dies.
- 2000** A series of explosions in the first half of the year threatens tourism, with no group taking responsibility for the bombs. Laos suffers from record flooding of the Mekong River basin in September. A small anti-Communist force called the Neutral Justice and Democratic Party attacks customs and immigration offices at the town of Pakse and then flees across the Thai border.
- 2001** Khamtai Siphandon is reelected party chairman of the Lao People's Revolutionary Party. The National Assembly chooses Finance Minister Bounngang Vorachith to replace Sisavat Keobounphan as prime minister. Laos and Thailand sign an agreement to construct a second bridge over the Mekong River at Savannakhet.

- 2002** In elections for the National Assembly, one non-Communist candidate is elected. Khamtai Siphandon is reelected president for another five years.
- 2003** A Belgian photographer and a French journalist are sentenced to 15 years' imprisonment amidst their investigation of the conditions of the Hmong ethnic minority. International pressure later forces their release.
- A series of bus attacks dampers tourism.
- 2004** Vientiane hosts tenth ASEAN summit.
- 2006** President Siphandon steps down as the leader of the PPPL and is replaced by Vice-President Choummaly Sayasone.

NATIONAL FLAG

Three horizontal bands of maroon (top), white (half width), and maroon (bottom)

NATIONAL EMBLEM

A shield is divided into three parts: In the top center is a rising sun on a blue field, symbolizing Latvian national statehood; at the bottom are a red lion rampant on a silver background on the left and a silver griffin rampant on a red background on the right, facing each other. Above the shield are three golden stars, to the left and right are a red lion and a silver griffin, respectively.

NATIONAL ANTHEM

“Dievs Svēti Latviju” (Bless Latvia, O God)

NATIONAL HOLIDAY

November 18 (Independence Day)

DATE OF INDEPENDENCE

November 18, 1991

DATE OF CONSTITUTION

1991

GEOGRAPHICAL FEATURES

Latvia is located in northeastern Europe on the Baltic Sea. The nation is bordered by Estonia to the north, Lithuania to the south, and Russia and Belarus to the east. Latvia has a total area of 64,589 sq km (24,938 sq mi). It has 531 km (332 mi) of coastline, and its total land borders run 1,150 km (719 mi). From north to south the country runs 210 km (131 mi), from east to west 450 km (281 mi). The coastal plain in the west is mainly flat, but in the interior the land becomes hilly and marked by rolling forests and lakes. Approximately 47 percent of the nation is covered by forests.

While there are over 2,256 lakes in the country, only 16 have areas larger than 10 sq km (3.9 sq mi). The larg-

est lake in Latvia is Lubans, with an area of 82 sq km (32 sq mi). In addition, there are 777 rivers whose lengths exceed 10 km (6.2 mi). The longest river is Daugava, which runs for 1,020 km (638 mi), although only 357 km (223 mi) are in Latvia. In all, some 10 percent of the territory is marshland.

The highest point is Gaizinkalns, at 312 m (1,023 ft). In western Latvia the elevation varies from 40 to 150 m (131 to 492 ft), in the eastern areas 50 to 250 m (131 to 820 ft).

The nation's main natural resources include amber, limestone, and dolomite. Latvia's capital and largest city is Riga, with a population around 750,000. Other major cities include Daugavpils, Liepāja, and Jelgava.

Riga	747,157

CLIMATE AND WEATHER

The Latvian climate is dominated by maritime influences that create moderate, wet winters, with the temperature averaging 0°C (32°F). In summer the temperature averages between 20 and 28°C (68 and 82°F). The ports of Riga, Liepāja, and Ventspils remain ice free during the winter.

Climate and Weather

Mean Temperature
 July: 62°F to 64°F
 January: 20°F to 27°F
 Average Rainfall: 24 in to 26 in

FLORA AND FAUNA

Latvia's woodlands and forests cover almost 50 percent of the country's land mass. More than half of such forests are coniferous, with pine, spruce, and fir predominating. Deciduous trees include alder, birch, and aspen. About 10 percent of the forest areas are harvested commercially. Meadowland is found mainly along the country's numerous river valleys and in the hills.

These forests and woodlands are home to 14,000 species of animals, including rabbits, badgers, squirrels, wild boar, rabbits, and foxes. Less common, but gaining in number following the introduction of modern preservation methods and game management techniques, are the brown bear, beaver, deer, and elk. Fish are plentiful in the country's thousands of lakes. Lying along migratory routes to the Black Sea, Latvia is also a part-time home to storks and herons, which make their homes in marshes, and to numerous other birds, such as the lark, quail, finch, partridge, grouse, owl, nightingale, oriole, blackbird, and woodpecker.

POPULATION

Population Indicators

Total Population 2005: 2,290,237

 Divorce Rate per 1,000: 2.6
 Average Size of Households: 3.1
 Induced Abortions: 14,685

ETHNIC COMPOSITION

Latvia has two main ethnic groups. The largest group is the Latvians, who make up 56.5 percent of the population, and the second largest is the Russians, with 30.4 percent. There are significant minorities of Belarusians (4.3 percent), Ukrainians (2.8 percent), and Poles (2.6 percent). There are also minor communities of Estonians, Jews, Gypsies, and Germans. Some three-quarters percent of the population are Latvian citizens, and national law guarantees equal rights for all ethnic groups, regardless of citizenship. Of the noncitizens, 65 percent are Russian. Most of the minority ethnic groups live in urban areas, and in seven of the eight largest cities non-Latvians constitute the majority of the populace.

LANGUAGES

The official language is Latvian, spoken by most citizens. The language has three main dialects based on regional variations: West Latvian, Central Latvian, and East, or High, Latvian. Central Latvian is the basis for literary Latvian; Tamian is a subdialect of Central Latvian. High Latvian is the basis for Latgalian, which essentially died out in the 1980s but has undergone a literary revival. Livonian, Romani, and Yiddish are spoken by small communities. Russian is widely spoken by the ethnic Russian community, and as a legacy of the occupation, it is the prevailing language of several state monopolies. Lithuanian, Polish, German, Estonian, and Ukrainian are also spoken among ethnic minorities.

Latvia has a language law requiring Latvian to be used in government and private enterprise. Noncitizens must also be proficient in Latvian in order to gain citizenship. While Russian and eight other languages are still used in public schools where students are primarily non-Latvian speakers, the government is slowly scaling back non-Latvian language use in schools. As of 2004, 60 percent of all subjects in secondary schools were taught in Latvian. In the 2004–05 school year 75 percent of all first-graders began their studies in Latvian. Students must also speak Latvian in order to gain entrance into universities.

RELIGIONS

The constitution mandates freedom of religion. Religious groups are not required to register with the government, but under the 1995 Law on Religious Organizations, they gain certain privileges if they do. Under this act some 800 religious congregations have registered. The government has rejected the Church of Scientology and the Latvian Free Orthodox Church but has permitted such sects as the Mormons and the Jehovah's Witnesses to register. Most Latvians are Lutheran; the next largest Christian denominations are Roman Catholic and Russian Orthodox.

HISTORICAL BACKGROUND

The first human settlements in Latvia date back to approximately 10,000 B.C.E. In about 2000 B.C.E. Baltic tribes came into the area and displaced the Finno-Urgic tribes who had settled there. These Balts were first recorded by the Romans in 100 B.C.E. In the 12th century C.E. German crusaders arrived in the region in an effort to spread Christianity. The present capital, Riga, was founded in 1201. By 1280 the Germans had established a union of feudal territories conquered by the Livonian order of knights. The union became known as Livonia, and regular trade and cultural ties emerged between the area and the German states. In 1282 Riga became part of the Hanseatic League. Feudal control by the Germans eventually led to the establishment of a single language, Latvian, among the indigenous tribes.

Russian efforts to gain access to the Baltic Sea led to the Livonian Wars of 1558–83, after which Livonia was divided between Sweden and the Polish-Lithuanian state. Russia gained sovereignty over the northern provinces of Latvia as a result of the Great Northern War in 1700–21, and the partition of Poland in the late 18th century brought the remainder of Latvia under Russian control. While Saint Petersburg was nominally in charge of Latvia, the German aristocracy retained significant power and autonomy through the feudal system.

The movement toward Latvian self-determination began in the mid-19th century. The first Latvian language

newspapers were published, and intellectuals loosely known as the Young Latvians revived Latvian as a literary language and rebelled against both German and Russian influences. The Russians responded with a sweeping program of Russification in the 1880s.

The first major rebellion against Russian control took place in 1905 and was led by the Latvian Social Democratic Labor Party. The revolution spread quickly but was brutally suppressed by the Russian army. During World War I the German army occupied about one-half of Latvian territory. After the collapse of the czarist government in Russia, Latvian political parties formed military units to fight both the Russians and the Germans. In 1918 a coalition of parties, calling itself the Democratic Block, formed the National Council and on November 18 proclaimed independence. Nonetheless, fighting continued between the Latvians and both Russian and German forces until 1920.

In April 1920 the first elections were held, and a constitution was promulgated. Latvia was recognized by the international community and joined the League of Nations in 1922. The government carried out a number of reforms, including land redistribution and privatization, and Latvia became a fairly prosperous state during the 1920s, but the economic crisis of the 1930s led to a coup, whereby Prime Minister Kārlis Ulmanis dissolved parliament.

In 1939 the Ribbentrop-Molotov Pact divided Europe between Adolf Hitler and Joseph Stalin, and Latvia was placed in the Soviet sphere of influence. The Soviets occupied Latvia in 1940 and annexed the nation as part of the greater Soviet Union. Thousands of prominent Latvians were executed, and thousands more were sent to Siberia. In July 1941 Latvia was occupied by the Germans, who were initially greeted as liberators from Soviet domination. However, the Nazis executed or deported almost the entire Latvian Jewish community. Still, Latvian troops fought with the Germans against the Russians until the very end of World War II. Most intellectuals and political leaders and many citizens, about 130,000 in all, fled during the Soviet advance; the nation lost some one-third of its population during the war. Latvian resistance against the Soviets continued until 1957, as led by a group known as the Green Resistance, which carried out a guerrilla campaign from the forest areas of the nation.

In 1946 the Soviets began formal collectivization and Russification programs. By 1949 some 43,000 Latvians had been deported. Although relations gradually improved in the 1950s, the Soviet leader Nikita Khrushchev ordered new purges in 1959. Efforts to make Latvia dependent on the Soviet Union culminated in the 1960s with the construction of large industrial plants.

In 1987 mass demonstrations against Soviet rule were held, followed two years later by more protests. In 1990 the pro-independence United Front received two-

thirds of the vote in popular elections, and the Latvian Supreme Soviet declared independence. In response, Soviet troops were dispatched, and a brief civil war ensued. After the failed coup against the Soviet leader Mikhail Gorbachev, Latvia gained independence, and the 1922 constitution was restored and supplemented by later legislation.

Guntis Ulmanis was elected the nation's first post-independence president in 1993. In 1994 Latvia joined the Partnership for Peace program, under the auspices of the North Atlantic Treaty Organisation (NATO), and in 1998 the nation was admitted to the World Trade Organization (WTO). In 1999 Vaira Vīke-Freiberga, a former Canadian citizen, was elected president. When Andris Šķēle, who had been prime minister since July 1999, resigned in a dispute over privatization of the economy, Andris Bērziņš was appointed prime minister. His four-party coalition lasted until the elections of 2002, at which time his Latvian Way (Latvijas Ceļš, LC) party, which had been in government since independence, was voted out of parliament. Einārs Repše's New Era Party (Jaunais Laiks, JL), which ran on an anticorruption platform, gained the most seats, and Repše then headed a four-party coalition government for two years, to be replaced by Indulis Emsis in 2004. Emsis was in turn replaced that same year by a center-right coalition led by Aigars Kalvītis, Latvia's 12th government since the restoration of independence in 1991. In 2004 Latvia became a full member of NATO and also joined the European Union.

LIST OF MODERN RULERS

President

1993–99	Guntis Ulmanis
1999–	Vaira Vīke-Freiberga

2000–02	Andris Bērziņš
2002–04	Einārs Repše
2004	Indulis Emsis
2004–	Aigars Kalvītis

CONSTITUTION

Latvia is a parliamentary democracy. The Latvian constitution (Satversme) was adopted on February 15, 1922. After the end of the Soviet occupation, the Declaration of the Renewal of Independence, dated May 4, 1990,

proclaimed the authority of the original Satversme and those articles of the constitution of the Soviet Republic of Latvia that did not contradict the Satversme. This was followed in 1991 by a constitutional law which provided for the civil rights and liberties of the Latvian people. In October 1998 further amendments were added to the constitution in order to bring Latvia's laws into compliance with the citizenship laws of the European Union. Suffrage is universal for all citizens over the age of 18.

The Satversme established a unicameral parliament (Saeima) consisting of 100 members elected for four-year terms. The Saeima is the highest legislative body in the nation. The president is the head of state and serves a four-year term. Parliament elects the president, who in turn appoints the prime minister. The president must receive an absolute majority of 52 votes and cannot serve for more than two terms. The president is the commander in chief of the military and can call for the dissolution of parliament, which must then be approved by a referendum. The prime minister is the chief executive and head of government. The constitution also provides for an independent judiciary, with judges who are confirmed by parliament.

PARLIAMENT

The Latvian parliament (Saeima) is a unicameral chamber made up of 100 deputies who are elected for four-year terms. The parliamentary elections are proportional, and parties must gain at least 5 percent of the vote in order to be represented in the Saeima. Candidates for parliament must be at least 21 years old. Members of the body may serve concurrently in the government. The leader of the majority faction in the Saeima is usually appointed prime minister by the president.

The Saeima elects the president and judiciary and approves legislation. The Saeima also elects its Board, which consists of the president, two deputies, and secretaries. The Board of the Saeima remains in session throughout the legislative calendar and may propose legislation or advise the parliament. The presiding officer of the Saeima is the speaker, and the leadership of the body is known as the Presidium. The Presidium consists of the speaker, two deputy speakers, a secretary, and a deputy secretary. There are 16 standing committees in the parliament. In addition, there are nine factions that represent specific interests, similar to caucuses in the U.S. Congress.

The Sixth Saeima (1995–98) held 197 plenary sessions and debated some 1,335 draft laws. During this session the length of tenure in the parliament was increased from three to four years. The body also amended the constitution to include a chapter on human rights. The Seventh Saeima (1998–2001) reviewed 1,442 draft laws and adopted 917 laws. The Eighth Saeima began sessions in 2002; women constitute 21 percent of its members.

POLITICAL PARTIES

In the 1993 elections eight political parties passed the 5 percent threshold to enter parliament. These were led by the liberal LC, which joined with the Latvian Farmers' Union to form a center-right coalition. Over the next decade more parties were formed, including the People's Party and the reformist JL. Other political parties in the country include the Fatherland and Freedom Union, nationalist and conservative; the Latvian Christian-Democratic Union, center-right; Latvian Green Party; Latvian Social Democratic Union; Latvian Unity Party; Democratic Party; Worker's Party; Popular Concord Party; Latvia First Party (LPP); and Union of Greens and Farmers (ZZS).

In the 2002 parliamentary elections a center-right coalition was formed with Einõrs Repše's JL having the largest number of seats. The LC failed to retain any seats in parliament. In 2004 the ZZS and LPP formed the government only briefly, to be replaced by Aigars Kalvõtis of the conservative People's Party in coalition with the JL, LPP, and ZZS.

LOCAL GOVERNMENT

The nation is divided into 26 counties and seven independent municipalities. The local governments have control over various police and budgetary matters.

LEGAL SYSTEM

The nation's legal system is based on civil law. A defendant has the right to hire an attorney, confront accusers, and call witnesses. However, there is no sheriff or bailiff system in place to enforce court decisions, and some trials may still be closed to the public. Also, many judges have inadequate legal training.

Latvia has an independent judicial system divided into three broad levels. Original trial courts exist at the district and city levels; these courts are usually presided over by a single judge, although some civil and criminal courts have a professional judge and two lay judges. Regional courts both hear original cases and act as appeals courts for the lower courts. The highest legal body in Latvia is the Supreme Court. All judges within the general court system are nominated by the minister of justice and appointed by the parliament.

There is also a Constitutional Court, which exists outside of the general court system. This court reviews whether laws comply with the constitution. It is made up of seven judges; three are appointed by parliament, two by the government, and two by the Supreme Court.

In 1995 the government launched broad reforms of the legal system in order to end widespread corrup-

tion. These reforms included the appointment of lay judges and the establishment of regional courts. In 1999 the death penalty was rescinded in preparation for EU membership. There are severe backlogs in the court system, which have led to lengthy delays in reviewing cases. Detainees awaiting trial spend an average of two years in prison before their cases are heard. Prisons and other incarceration facilities remain severely overcrowded, and cases of excessive force by guards have been reported.

HUMAN RIGHTS

The constitution establishes the nation's basic rights, including the freedoms of speech, the press, religion, assembly, and movement and the right to a trial by jury. It also prohibits discrimination based on race, sex, religion, language, or disability. The constitution also provides for an independent judiciary, but the courts must rely on the Ministry of Justice for administrative support and enforcement.

The 1998 Latvian Citizenship Law includes requirements for citizenship, such as language proficiency, that make it difficult for the nation's minority groups to become citizens. It is also difficult for noncitizens to acquire land. Discrimination and human rights concerns are investigated by a government agency, the National Human Rights Office.

Up to one-quarter of Latvia's population are noncitizens, who cannot vote, hold office, or hold certain civil service positions. Professional careers as lawyers and notaries are also off-limits for noncitizens. The government has made attempts to make the attainment of citizenship easier by reducing the cost of application. Moscow continues to accuse Riga of discriminating against the country's 700,000 Russian language speakers, mostly ethnic Russians.

FOREIGN POLICY

Since independence Latvia has pursued a Western orientation in its foreign policy. The two main goals of Latvian policy have been admission into NATO and the European Union. Latvia joined NATO's Partnership for Peace initiative in 1994 and has sought close military cooperation with the West.

Latvia is a member of the Council of Baltic Sea States, which promotes regional cooperation in the Baltics. Latvia supported the creation of a common market among the Baltic states as a precursor to entrance to the European Union. Latvia was the first Baltic nation to join the WTO.

Latvia has ongoing border disputes with both Russia and Lithuania. The dispute with Russia is based on Latvian claims to the Abrene and Pytalovo, which Russia forced

the nation to cede to Moscow in the aftermath of World War II. The dispute with Lithuania is over oil exploration claims. Latvia's 2004 accession to the European Union and NATO further worsened relations with Russia.

DEFENSE

Latvia has received significant foreign military aid from Western nations, including Germany, Sweden, Denmark, and the United States. In 2003 the total armed forces for the country numbered about 8,000, including several thousand paramilitary troops serving as border guards. Conscription is mandatory for all males 19 and older; the length of service is 12 months. Latvia plans to phase out conscription, however, moving to an all-professional force by 2007.

The army consists of 1,500 troops. One company of the army is part of the Baltic Peacekeeping Battalion, and the nation participates in several other regional defense organizations, including the Baltic Naval Squadron. The navy has 1,000 personnel, while the air force has just 150. There is also a small coast guard, which operates 12 small patrol and rescue vessels. The reserves are made up of some 18,000 troops organized into a home guard.

Defense spending in 2003 was \$170 million, almost double the 2001 level of \$88 million. In 2002 the defense budget equaled 1.8 percent of gross domestic product (GDP).

ECONOMY

Latvia has endeavored to make a complete transformation into an open, free-market economy. The nation has pursued strict monetary and fiscal policies and has attempted to attract foreign investment. Latvia was the beneficiary of more than \$100 million in economic aid from the West in 2003.

The major economic sector is services, although manufacturing ranks a close second; agriculture and forestry together constitute the third main area of business. The nation's major industries involve transportation equipment, synthetic fibers, agricultural equipment, fertilizers, chemicals, textiles, and processed food. The nation has maintained a large trade deficit, with a heavy reliance on imports, such as fuels, machinery, and chemicals. The na-

tion's main exports are wood and wood products, textiles, and foodstuffs. Latvia's main trading partners are Russia, Finland, Germany, Sweden, and the United Kingdom.

In the agricultural sector, privatization efforts have been largely successful, and most farms are now privately owned. Unemployment fell to 8.6 percent in 2004, down from 9.6 percent in 1999. Privatization of large state-owned utilities and the shipping industry faced more delays in 2000, and political instability has continued to delay the privatization process. Healthy growth in the economy continued to take place in 2002 and 2003, despite bad grain harvests and a dispute with Moscow that led to the stoppage of the importation of Russian petroleum to the Latvian port of Ventspils for transshipment abroad. With its 2004 membership in the European Union, Latvia became part of a large trading block projected to help to improve its privatized economy.

ENVIRONMENT

Many of Latvia's environmental problems stem from its Soviet-era development, when ecological concerns took second place to production. Rivers and lakes were used as dumps for industrial waste, and even the Baltic Sea became toxic. With farm collectivization and imposed quotas, pesticides and fertilizers were used indiscriminately and leached into water supplies.

Latvia's extensive forests have received some damage from acid rain, which results from sulfur dioxide emissions from industrial plants in Latvia as well as in neighboring countries. The lack of waste treatment centers

has contributed to both air and water pollution. Both the Gulf of Riga and the Daugava River are contaminated by industrial discharge.

The most pressing environmental problems stem from the contamination of soil and groundwater at and near former Soviet military bases. This contamination is the result of decades of chemical and petroleum discharges and runoff from poorly stored chemicals.

LIVING CONDITIONS

The UN Human Development Index (HDI) ranks Latvia 50th among 177 nations in quality of life. The HDI focuses on three measurable dimensions of human development: life expectancy, education, and standard of living. In 2004 life expectancy in Latvia was nearly 71 years. The literacy rate in 2003 was nearly 100 percent. Per capita GDP for Latvians in 2004 was \$11,500.

In 2001 an estimated 69 percent of Latvians were urban dwellers, living in one of the 75 or so urban areas throughout the country. Population has declined since independence, largely as a result of the repatriation of many Russians who had been living in Latvia. Housing, once largely state owned, has been over 80 percent privatized. Most Latvians live in apartment houses; the rural population tends to live in single-family dwellings. As in the other Baltic republics, the standard of living is lower than in the rest of western Europe; however, with EU membership this is expected to improve.

Free time is valued, but work takes precedence. As elsewhere in Europe, however, Latvians look forward to their summer vacations, when they go to the countryside or seacoast to enjoy periods of paid leave that usually last a month. As Latvia's economy has improved, more and more Latvians have been taking vacations abroad as well. Throughout the summer, those Riga residents who have summerhouses or family in rural areas make a point of spending every weekend they can near a lake, river, forest, or seashore.

There is an extensive network of roads and highways, and the rail system also provides thorough and efficient transport for passengers as well as goods and services throughout the country and abroad. There are 10 ports in the country.

HEALTH

Health care in Latvia is organized by the State Compulsory Health Care Agency. All citizens and legal residents

of the Republic of Latvia receive guaranteed medical assistance by the state. All members of the state insurance system have a primary-care physician or family doctor. Primary care is delivered in a fourfold system, through urban health centers, emergency and hospital facilities, private practices, and rural clinics, the last of which are often staffed by nurses and midwives.

Smoking—as of 2000, 49 percent of the male population smoked—and a diet heavy in fats has led to a high rate of mortality due to cardiovascular disease. Waterborne diseases, including cholera, are also episodically a problem, as is diphtheria. Tickborne encephalitis, a viral infection of the central nervous system, occurs in central and western Europe. Ticks are found in forests and wooded areas. There were 83 cases of tuberculosis per 100,000 population in 2002. There were fewer than 500 deaths from HIV/AIDS in 2003, with an estimated 7,600 people living with the disease.

Public expenditure on health care in 2002 was 3.3 percent of GDP, with health expenditures per capita totaling \$203. As of 2004 there were 291 physicians for every 100,000 people. Immunization rates for one-year-olds are near 100 percent for polio, DPT, measles, and tuberculosis. Routine vaccinations are fully financed by the government.

Many Latvians go to mineral spas as a form of medical therapy. There they drink local mineral water and take mud baths. One of the most famous of such spas is in Kemeris, near Riga.

FOOD AND NUTRITION

Latvian food is often referred to as farmer's food, or peasant food, relying as it does on cheap ingredients, such as dried black peas and bacon, and being heavy in calories for outdoor workers. Potatoes, cabbage, onions, eggs, wheat, and barley form staples of the diet, as do smoked fish, such as herring, flounder, and eel. In general, Lat-

vian food bears many similarities to German, Russian, Polish, and Swedish cuisine, all of whose traditions have come into play in Latvia.

A specialty in Latvia, as in other eastern and central European countries, are *priagi*, crescent-shaped or square dumplings made of unleavened flour and stuffed with fillings ranging from sauerkraut to cheese to mashed potatoes or even fruit. In Latvia the filling tends to be bacon and onions. Other national dishes are cabbage soup, buckwheat soup, beet soup, and gray or black peas with bacon rind. Also popular are *rasols*, or potato salad; *zemieku brokastis*, or "peasant's breakfast," a large potato-and-mushroom omelet; *maizes zupe ar putukrejumu*, or cornbread soup with whipped cream; and, for fancy occasions, *aukstais galds*, a Latvian variation of the smorgasbord. Desserts include the *kringel*, which is similar to a coffee cake; *manna*, a cold, creamy dessert served with a cranberry sauce topping; and the Latvian apple loaf.

Latvia's major beer is Aldaris. Riga Black Balsam is a potent (45-proof) stout, deep black in color, that has been a Latvian specialty since 1755.

Nutritionally speaking, Latvians are well off, though they rely on large amounts of carbohydrates. Between 1995 and 2003 only 5 percent of infants had low birth weight; 3.5 percent of the general population was estimated to be undernourished as of 2001.

Food and Nutrition

Undernourished % of total population: 3.5
 Daily Available Calories per capita kcal: 2,880
 Amount of Cereal Available per person per year kg: 111.3
 Amount of Fruits and Vegetables Available per person per year kg: 153.4

STATUS OF WOMEN

Although women enjoy the same legal protections as men, they face discrimination on a number of fronts. The most significant inequalities occur in the workplace, where women face unequal wages and various forms of sexual harassment. Domestic violence is also a problem, and there are no shelters for battered or abused women. The government has attempted to address these problems by sponsoring dialogues and by establishing the National Human Rights Office to hear and investigate complaints.

In the 2002 parliamentary election, 21 women were elected to the 100-member Saeima.

WORK

A 2004 estimate put the Latvian labor force at nearly 1.2 million, with an 8.8 percent unemployment rate. Services accounted for 60 percent of employment, industry 25 percent, and agriculture 15 percent. Industrial products include buses, vans, street and railroad cars, synthetic fibers, agricultural machinery, fertilizers, washing machines, radios, electronics, pharmaceuticals, processed foods, and textiles, while agricultural products include grain, sugar beets, potatoes, vegetables, beef, pork, milk, and eggs. The fishing industry is also an important employer.

The postindependence transition to a market economy has been a challenge to Latvian workers. Under Soviet rule there was little profit incentive; neither was there unemployment. With the changeover to a market economy and privatization, there has been considerable job dislocation, with unemployment rates approaching 10 percent in the 1990s.

Latvian workers have the right to establish unions, strike, and engage in collective bargaining. About 20 percent of the labor force, mainly in the service sector, was unionized as of 2002. The minimum work age is 15, and the maximum workweek is 40 hours. Among other worker benefits is an annual four-week vacation. As of 2004 the minimum wage was about \$160 per month.

 Unemployment %: 8.8

EDUCATION

Basic education in Latvia lasts nine years, including four years of primary school plus five years of lower secondary education. After a student's basic school is complete, there are three educational paths: general secondary education, vocational secondary education, and specialized secondary education. General secondary education can be at a middle school or through the more prestigious gymnasium. Either school offers a curriculum designed to prepare students for university. There are a variety of vocational programs, which range from one- or two-year apprenticeships to four-year programs that also include general secondary education. Specialized schools offer programs in music or art, nursing, or other technical fields. The nation's main institution of higher learning is the University of Latvia; there are also 16 more specialized institutions.

Education is widespread and publicly financed. Instruction is in Latvian and other minority languages, including Russian, which was once the primary language of instruction. Attempts to decrease the percentage of classes taught in Russian led to widespread protests in 2003 and 2004, when a law went into effect mandating 60 percent of the curriculum of secondary schools be taught in Latvian.

In 2001, 88 percent of eligible pupils were enrolled in primary schools, which had a collective pupil-to-teacher ratio of 14 to 1. Of these students, 98 percent reached fifth grade, and there was a 99 percent transition rate to secondary schools. Public expenditure on education in 2001 was 5.5 percent of GDP. There is virtually 100 percent literacy in Latvia.

SCIENCE AND TECHNOLOGY

Much of Latvian research and development is geared toward agricultural and forestry projects. The Ministry of Agriculture directs numerous institutes that research topics ranging from seed propagation to animal husbandry to reforestation methods. The Latvian University of Agriculture operates research institutes in similar areas as well as in food processing.

The Latvian Academy of Sciences has departments of biological sciences, chemical sciences, physical sciences, and technical sciences. Over a dozen research institutes operate through the academy, pursuing medical, scientific, and technical research.

Numerous universities and technical schools offer classes in the sciences and also pursue research. Among these are the University of Latvia, with its mathematics, physics, biology, and chemistry departments, the engineering faculty of Riga Technical University, the Latvian Academy of Medicine, and the Riga Aviation University,

all in Riga. Since the mid-1990s Latvia has focused on technology, with numerous firms setting up business in biotechnology and bioengineering, information technology, electronics and mechanics, energetics, medicine, and pharmacology.

Between 1994 and 1997, 29 percent of students in tertiary schools were enrolled in math, engineering, or science programs. As of 2001 there were 1,078 researchers involved in research and development per 1,000,000 inhabitants, and research expenditures totaled 0.4 percent of GDP. In 2001 there were 124 patents applied for by residents.

MEDIA

Latvia has a free and open press. There are 25 radio broadcast stations and 30 television stations. The television market is dominated by LNT, a commercial channel; two public TV channels operated by LTV; TV3 Latvia, a commercial station; and major channels broadcast from Russia. The government supports limited programming in languages other than Latvian through subsidies. A variety of daily and weekly papers are published, and many Latvians have access to Western media and broadcast outlets.

Since the end of Soviet occupation, efforts to revive Latvian culture have been ongoing, including a renewal of Latvian literature and music. However, the continued presence of ethnic Russians and the carryover from intensive efforts at Russification during the cold war era have slowed such initiatives.

The press and the broadcast media in Latvia generally operate freely, with few legal restrictions. A law does provide for prison terms for libel and the incitement of racial hatred. Reporters without Borders ranked Latvia 10th out of 167 nations in its 2004 world press freedom survey. A wide range of political viewpoints are represented by some 26 daily newspapers. Major publications include *Diena*, a daily, and its business tabloid, *Dienas biznes*, as well as by *Telegraf*, the major Russian-language daily. Latvia had 1,219,600 cellular telephone users and 936,000 Internet users in 2003.

CULTURE

Occupied for so many centuries by Germany and then by Russia, Latvia has struggled to maintain a truly Latvian culture. A cornerstone of national culture are the four-line couplets known as *dainas*, which reflect the daily life, mores, and ethics of ancient Latvians. As collected in the 19th century, there are some 1.4 million folk lyrics written in *dainas*, accompanied by about 30,000 different identified folk melodies. In the modern world these songs are preserved in the tradition of the song festival *Dziesmu Svetki*, held every four years since the late 19th century. These festivals draw crowds in the hundreds of thousands, with upwards of 20,000 performers, and in 2003 they were included on the world cultural heritage list by the UN Educational, Scientific, and Cultural Organization. Folk dance is also a part of such festivals; singing is often accompanied by the zither-like instrument known as the *kokle*.

Literature, aside from the rich tradition of haiku-like *dainas*, is a relatively recent innovation. The national epic is the 19th-century epic poem *Lacplesis* (The bear slayer), written by Andrejs Pumpurs and based on folktales. Jānis Rainis is generally considered the most important Latvian writer. A poet and dramatist vital to the nationalist resurgence of the early 20th century, Rainis died in 1929.

In the visual arts, Jānis Rozentals, who painted scenes of peasant life and portraits in the early 20th century, is one of the first truly Latvian artists. Vilhelms Purvītis and Jānis Valters were the outstanding landscape artists of the time. In contemporary music, noted Latvian composers include Jurjānu Andrejs, Alfrēds Kalniņš, Pēteris Vasks, Romualds Kalsons, Jāzeps Medinš, Jānis Medinš, and Emīlis Melngailis. Latvia also has a growing film industry, producing feature films, documentaries, and animated features.

FOLKLORE AND MYTHOLOGY

Much of the folk wisdom of Latvia has been preserved in some 1.4 million four-line couplets known as *dainas*. These poems cover the gamut of the Latvian human experience over many centuries, dealing with topics from nature to military invasion and from love and marriage to death. It is thought that these *dainas* might have originally stemmed from magical incantations; with growing urbanization in medieval times, there were clear divisions between town *dainas* and rural *dainas*.

Latvian myths go back to the times of the Baltic tribes before the advent of the Romans. Some of the major figures of Latvian mythology are Dekla, deity of fortune and destiny; Dewing Uschinge, god of horses; Karta, goddess of fate and destiny; and Mara, protective deity of cattle. Another key figure in Latvian myth is Lacplesis, the bear slayer, who could force bears to pull his plow. The powerful Lacplesis was finally undone by a three-headed ogre. In the 19th century the writer Andrejs Pumpurs turned the legends and myths about Lacplesis into an epic poem.

ENTERTAINMENT AND RECREATION

Television is at the center of entertainment activities for Latvians. Average daily viewing jumped from 23 minutes in 2001 to 207 minutes in 2003. Cinemas are also popular. With nearly 100 percent literacy, the country is also a nation of free-time readers. There were over 500,000 registered users of Latvian national libraries in 1999; that same year saw 2,178 books published in the country. The average circulation of the daily press in 2001 was 135 per 1,000 people.

In the urban areas nightclubs and discos are popular with young people, while theater is popular across a wide spectrum of the population. The Riga Opera-Theater has been going strong for over two centuries. Dramas and musicals are popular forms of theater productions. Circuses are well attended; Riga has had a permanent circus for over a century.

A pastime shared by most of urban Latvia is communing with nature, at the seashore or by one of the thousands of lakes in the country.

ETIQUETTE

In general, the usual European courtesies and manners are observed in Latvia. Handshakes are appropriate for greetings; eating is continental style, with knife and fork used simultaneously; the use of first names is reserved for friends; formalities are observed in public; and punctuality is appreciated. Low-keyed, Latvians find ostentatious displays of wealth in bad taste.

FAMILY LIFE

Latvia is a multicultural state, and marriage between different ethnic groups is relatively common. Latvian family traditions have led to strong bonds between grandparents, children, and grandchildren. In most families where both parents are forced to work, the grandmother assumes the most responsibility for maintaining the household and looking after the children. Latvian families rarely have more than two children, a holdover from the Soviet period when housing was tight. Most Latvian families tend to be closely knit and spend holidays—such as Midsummer's Night, Christmas, and Easter—anniversaries, birthdays, and name days together.

More pressures have been put on the family unit as a result of the changeover to a market economy and resulting insecurities. One of the fallouts of this situation is an alarmingly high rate of marital separation: Almost two-thirds of all Latvian marriages end in divorce.

PERSONAL APPEARANCE

Latvians are Nordic in physical appearance and European in style of dress. Folk costumes, such as large, pleated skirts with white blouses and round hats for women, are worn only for special ceremonies and folk dancing.

SPORTS

Soccer, ice hockey, basketball, and volleyball are the most popular team sports in Latvia both for participation and as spectator sports. Numerous sports clubs and associations organize athletics on the local level. The Latvian Sports Administration was founded in 1993 to oversee the country's professional sports teams. In 2003 the national soccer team qualified for their first European Championships final, while the following year the national hockey team qualified for the 2006 Olympics. Other popular sports include bobsledding and Formula One auto racing.

The Latvian Sports Museum, in Riga, houses a rich collection of materials about Latvian sporting activities abroad as well as in Latvia, including an exhibit of Latvian Olympic medal winners.

CHRONOLOGY

- 1918** Independence is declared.
Fighting breaks out between Latvians, Germans, and Russians.
- 1920** Latvian independence is recognized.
- 1939** German-Soviet Non-Aggression Pact places Latvia in Soviet sphere.

- 1940** Soviets invade and annex Latvia. They execute some 35,000 Latvians and exile many more to Siberia.
- 1941** Germans invade and conquer Latvia.
- 1944** Soviets reconquer Latvia.
- 1945–57** Fighting continues against Soviet occupation.
- 1946** Soviets formally begin mass collectivization and Russification campaign.
- 1949** Some 43,000 people are deported in new round of purges.
- 1959** Following a brief “thaw” in Latvian relations with the Soviet Union, Nikita Khrushchev orders a new round of deportations in response to efforts to gain more autonomy by Latvian Supreme Soviet.
- 1964** Under Soviet leader Leonid Brezhnev, a massive program of building large industrial plants is begun in order to increase interdependence between Soviet satellites.
- 1987** Mass demonstrations against Soviet rule occur.
- 1989** Latvian population has declined to 51 percent of total of nation as a result of Russification policies.
New round of anti-Soviet demonstrations occurs.
- 1990** In elections, two-thirds of population vote for the United Front, which advocates freedom for Latvia.
Independence is declared by the Latvian Supreme Council.
- 1991** The Soviets respond to Latvian independence by sending in troops, and a brief civil war ensues.
During a coup attempt in Moscow, the Latvians again declare independence, which is recognized following the restoration of Mikhail Gorbachev to power.
The 1922 Constitution is renewed and supplemented by the Constitutional Law.
- 1993** Guntis Ulmanis is elected Latvia's first president.
- 1994** Latvia joins NATO's Partnership for Peace initiative.
- 1998** Latvia joins the WTO.
- 1999** Parliament elects Vaira Vīķe-Freiberga president.
- 2000** Andris Bērziņš becomes prime minister after Andris Šķēle resigns over privatization issues.
- 2001** Latvians celebrate Riga's 800th anniversary in the summer.
Latvian and Russian presidents meet in February, but no progress is made toward easing relations between the two countries.
- 2002** Parliamentary elections in October lead to the formation of a four-party center-right coalition government, headed by Einārs Repše.

- 2003** Two-thirds of the Latvian electorate endorse EU membership.
Language reform is instituted in secondary schools, whereby 60 percent of the curriculum will be taught in Latvian.
Vaira Vīke-Freiberga is reelected to another four-year term as president.
- 2004** Latvia becomes a full member of NATO and joins the European Union.
A no-confidence vote in parliament leads to the formation of a center-right coalition led by Aigars Kalvītis.
- 2005** Riga and Moscow continue a war of words over the signing of a border treaty between the two countries, which had been pending since 1997.

A green and brown cedar tree in the center of a white stripe flanked by two red stripes, each of which is half as wide as the white stripe

NATIONAL EMBLEM

A red heraldic shield with a white stripe running diagonally from the bottom left to the upper right, with a cedar tree in the center

NATIONAL ANTHEM

“All of Us for the Country, Glory, Flag”

NATIONAL HOLIDAYS

January 1 (New Year’s Day), March 22 (Arab League Anniversary), November 22 (Independence Day), December 31 (Evacuation Day), various Christian festivals observed according to the Gregorian and Julian calendars, various Muslim festivals

DATE OF INDEPENDENCE

November 22, 1941 (proclaimed; independence granted by France on January 1, 1944)

DATE OF CONSTITUTION

May 23, 1926

GEOGRAPHICAL FEATURES

Lebanon is located on the eastern coast of the Mediterranean Sea, with a total land area of 10,400 sq km (4,015 sq mi). It extends 217 km (135 mi) northeast to southwest and 56 km (35 mi) southeast to northwest. Its Mediterranean coastline stretches 225 km (140 mi). Lebanon’s total international land boundary of 454 km (282 mi) is shared with two countries: Syria (375 km; 233 mi) and Israel (79 km; 49 mi).

Topographically, Lebanon is divided into four regions: the coastal plain, the coastal mountain range, the central plateau, and the eastern mountain range. The plain, a narrow strip about 12 km (8 mi) wide in the north,

sometimes disappears, where the mountains reach the sea. The mountain range, called the Lebanon Mountains, is a series of imposing crests and ridges, the highest peaks of which are the Qurnat as-Sawda’ (3,088 m; 10,129 ft) and Jabal Sannin (2,608 m; 8,557 ft). To the east the land drops to a broad, troughlike valley known as the Bekaa, which opens onto the Syrian Plain at Homs. The Bekaa Valley, which is about 900 m (3,000 ft) above sea level, is 8–13 km (5–8 mi) wide. To the east of the Bekaa Valley rise the Anti-Lebanon Mountains (Jabal ash-Sharqi) and their southern extension, Mount Hermon (Jabal ash-Shaikh), which form the eastern boundary with Syria. With its superb mountain scenery, Lebanon is perhaps the most attractive region in the Middle East.

Lebanon

1342 Lebanon

Two rivers rise in the Bekaa: the Orontes, which flows northward into Syria and Turkey, and the Litani, or Leontes, which flows southward and, at a short distance from the Israeli border, bends westward to reach the Mediterranean through a deep gorge.

Tripoli	500,000

CLIMATE AND WEATHER

Lebanon has, in general, a Mediterranean climate, but with a wide variety in climatic conditions. The coastal lowlands are moderately hot in summer and warm in winter. In the coastal mountains about 16 km (10 mi) away there is heavy winter snowfall, and the higher peaks are covered with snow from December to May. The Bekaa has a moderately cold winter and a distinctly hot summer, as it is cut off from sea winds.

Rainfall, abundant on the whole, decreases rapidly toward the east, so the Bekaa and the Anti-Lebanon are drier than the west. Annual rainfall on the coast is between 760 and 1,010 mm (30 and 40 in), with up to 1,270 mm (50 in) in the mountains but only 380 mm (15 in) in the Bekaa. Almost all the rain falls between October and April, and the three summer months are completely dry. The average mean temperature in Beirut is 20.5°C (69°F). Average temperatures in the winter range from 13°C (55°F) on the coast to 10°C (50°F) inland, while temperatures in the summer range from 29°C (84°F) on the coast to 30°C (86°F) inland.

The prevailing wind is the khamsin, a hot wind blowing from the Egyptian desert, and the severely cold north winter wind.

Climate and Weather

Mean Temperature
Winter: 55°F on the coast to 50°F inland
Summer: 84°F on the coast to 86°F inland

Average Rainfall
Coast: 30 in to 40 in
Mountains: 50 in
Bekaa Valley: 15 in

FLORA AND FAUNA

The mythical "Cedars of Lebanon" are largely that in the contemporary world: myth. The country's forests, including its cedar, were cut and exported long ago, leaving a typical Mediterranean mix of low brush and trees, which include carobs, firs, junipers, cypresses, pines, and oaks. The few cedars left are found at higher elevations; in low-lying areas the olive and fig tree predominate, as do grapevines. Lebanon is home to about 3,000 species of plant life.

Of wild animals, the larger mammals have largely been killed off, though jackals can still be found in the less settled areas of the nation. The Arabian gazelle is extinct, though other gazelle species are found in the south. The leopard is also extinct. Smaller animals include deer, rabbit, wildcats, hedgehogs, squirrels, mice, gerbils, and martens. There are also numerous varieties of lizards and snakes. Migratory birds, such as flamingos, pelicans, ducks, and herons, can be seen in marshland. At higher elevations hawks, eagles, falcons, and buzzards can be found. Thrushes and songbirds are common, as are owls, woodpeckers, and cuckoos.

Divorce Rate per 1,000: 1.2
Average Size of Households: 5.3
Induced Abortions: —

ETHNIC COMPOSITION

Arabs constitute the dominant ethnic group in the country, with 93 percent of the population. Armenians are the

largest ethnic minority group, followed by Assyrians and Kurds. The few thousand Jews are officially regarded as a separate religious community and not as an ethnic group.

Broadly speaking, the term *Arab* is applied in the Middle East to anyone who speaks Arabic as his or her mother tongue and shares Arab culture. However, in common usage *Muslim* and *Arab* are used interchangeably; therefore, Christian Lebanese are not always eager to identify themselves as Arabs. The Armenians, who constitute roughly 6 percent of the population, are the country's largest unassimilated group. They inhabit separate quarters in the cities and proudly regard themselves as sojourners waiting for the day when Turkish Armenia will become independent. The Assyrians, who constitute less than 1 percent of the population, are properly Nestorian Christians (whose relationship to the ancient Assyrians is disputed). They fled from Iraq after World War I and from Syria in the 1950s, and some of them are still stateless. The Muslim Kurds, who also constitute less than 1 percent of the population, have been almost completely absorbed into the Arab mainstream. None of these minorities poses any threat to the Arab majority, and as such interethnic relations are harmonious.

LANGUAGES

The official language is Arabic, which is used in both the classical and modern standard forms. (The coexistence of classical and colloquial forms of the same language is called *diglossia* by linguists.) A third language is used in mass communications, incorporating elements from both classical and colloquial Arabic. In the central plateau and eastern mountain ranges a number of Arabic dialects are spoken, but few have written forms, and they vary from place to place and from group to group.

Minority languages include Armenian, Kurdish, Assyrian, and Syriac, the last a purely liturgical language. Though French has no official status, government publications appear in French as well as Arabic and nearly all Lebanese have some knowledge of French. The Lebanese dialect of Beirut is heavily interlarded with French words, and modern Arabic literary style has been influenced by French authors. English has made considerable headway since World War II and now competes with French as a working language in education and business. English is believed to be spoken by about 15 percent of the population, compared to the 24 percent who reportedly speak French.

RELIGIONS

Religious affiliations in Lebanon transcend purely personal beliefs and form the basis of the state itself. Every

Lebanese adult carries an identity card that shows his religious community, regardless of his personal convictions. Every Lebanese is primarily a member of his own *millet* (a term used in Ottoman law to mean "religious community"), to which his loyalty is due in both a religious and political sense. Each religious community has its own hierarchical structure, with its own *zaim* (professional political leader), schools, hospitals, charitable institutions, and newspapers. The relative proportion of communities within a district determines the composition of electoral slates for public office.

A total of 17 different religious communities are officially recognized in Lebanon: 11 Christian sects, five Muslim ones, and the Jews. The 11 Christian sects are Maronite, Greek Orthodox, Greek Catholic, Armenian Orthodox, Armenian Catholic, Protestant, Syrian Orthodox, Syrian Catholic, Roman Catholic, Chaldean, and Nestorian. The five Muslim sects are Shia, Sunni, Druze, Alawite, and Ismailian. The religious balance in the Lebanese state is based on the census of 1932, which established a Christian majority, with six Christians for every five Muslims. The subsequent agreement, known as the National Covenant, reflected the strength of the competing religious groups on this basis. In the twenty-first century, the population is approximately 70 percent Muslim, 30 percent Christian.

Lebanon's small Jewish community completes the religious mosaic of the country. Though there is no overt persecution, they make themselves as inconspicuous as possible so as not to attract the attention of Muslims.

Muslim	2,284,000
Christian	1,492,000
Other	50,000

HISTORICAL BACKGROUND

The original inhabitants of Lebanon were a Semitic people, called Canaanites by the Hebrews and Phoenicians (because of the purple dye they sold) by the Greeks. They lived in coastal cities, such as Tyre and Sidon, and engaged in mercantile trade. Between the 17th and 14th centuries B.C.E. they were part of the Egyptian Empire. The territory regained its independence in the 12th century, and for the next three centuries the people prospered. The Phoenicians invented the alphabet; mastered the arts of navigation; founded colonies in Cyprus, Rhodes, Crete, and Carthage; and carried on extensive trade.

From 875 B.C.E. the Phoenicians suffered under a number of imperial powers: first the Assyrians (875–608 B.C.E.), whose kings Sargon and Esarhaddon destroyed and erased their cities; later the Babylonians (608–536 B.C.E.); next the Persians (536–333 B.C.E.); and finally the

Greeks under Alexander the Great. All of these conquerors laid waste to the land and overburdened the people with heavy tributes. After Alexander the Phoenicians adopted Greek culture and flourished under the Seleucids. Seleucid rule ended in 64 B.C.E., when the Roman general Pompey added Syria and Lebanon to the Roman Empire. As part of the Pax Romana, Lebanon, as the land was by then known, prospered, and the cities of Byblos, Tyre, and Sidon recovered. Beirut became known for its law school and university. In the sixth century C.E. an earthquake destroyed the city of Beirut, killing about 30,000 inhabitants.

Within a century the Arabs conquered all of the Middle East, and they remained Lebanon's new masters for over a millennium. Islam generally spread by forced conversion, but the country remained predominantly Christian. In the 11th century the Druze established themselves in the south. Parts of Lebanon temporarily fell to the Crusaders. Along with Syria and Mesopotamia, Lebanon suffered heavily from the Mongol invasions and from the bitter conflicts between the various regional and racial groups. From the 13th to 16th centuries, the Mamluks, a dynasty founded by Turkoman slaves, gained control of Egypt, Syria, and Lebanon.

In 1516 the Ottoman sultan, Salim I, invaded Syria and conquered the empire of the Mamluks. During this conflict the emirs of Lebanon sided with the Ottomans and, as a result, were granted semiautonomous status. The Ottomans ruled the country through two great feudal families, first the Maans and then the Shihabs. The Druze Maans were in power until 1697, when the Shihab family displaced them. From 1788 to 1840, except for a few intervals, Mount Lebanon was ruled by Bashir II of the Shihab family. In 1840 the Ottoman sultan proclaimed Bashir III the prince of Mount Lebanon. Under the new prince, bitter conflicts developed between the Druze and the Christians. At the request of the European powers, the Ottoman sultan partitioned Lebanon between the Christians and Druze, the north under a Christian and the south under a Druze.

The partition only intensified interreligious conflict. In 1860 there were large-scale massacres of the Maronite Christians by the Druze, offering France an opportunity to intervene for the purpose of restoring order. An international commission was formed in 1860 by five European powers—France, Great Britain, Russia, Austria, and Prussia—which recommended ending the partition of Lebanon and bringing about its reunion under a Christian governor appointed by the sultan. From 1861 to 1915 Lebanon was ruled by Christian governors.

With the outbreak of World War I, Lebanon's precarious semiautonomous status was abolished, and direct Turkish rule was restored. The new Turkish governor massacred hundreds of Christians and established a blockade around the country, leading to the death of

thousands more from famine and plague. Relief came in 1918 when the British general Edmund Allenby's forces occupied Syria and Lebanon. At the conclusion of World War I, Allies at the San Remo Conference in Italy in 1920 placed Syria and Lebanon under French mandate.

Lebanon achieved independence early in 1944. French penetration of Lebanon was facilitated by the pro-Western attitudes of the dominant Christian community. Lebanon owes its position as the most culturally, educationally, and economically advanced nation in the Middle East to its acceptance of French legacies and progressive assimilation of Western ideas.

At independence the various Christian and Muslim groups agreed on a delicate balance of power in order to avoid hostilities. The so-called National Pact of 1943 allocated executive and legislative functions throughout government among religious groups. The country survived a revolt by Muslim leftists in 1958, when the government called in U.S. Marines to restore state authority, but the delicate balance between groups was increasingly disturbed by influxes of Palestinian Arabs fleeing Arab-Israeli wars.

Tensions mounted in the early 1970s when the Palestine Liberation Organization (PLO), expelled from Jordan, moved to Lebanon and became the target of Israeli retaliatory raids. An alliance between the PLO and Lebanese Muslim leftists further alarmed the Lebanese Christians. A series of clashes between the PLO and the Christian militia, the Phalange, led to civil war in 1975. The civil war was not so much a breakdown of the constitutional system as a renewal of the age-old hostility between Christians and Muslims that has existed since the time of the Crusades, fueled this time by new elements. The Christian community had a disproportionate share of the wealth and important positions in the civil service and armed forces. It was generally more conservative by Arab standards and had taken a more moderate position toward Israel. The less privileged Arab majority had been in favor of both domestic reform and a more militant posture toward Israel. In the Palestinians the Muslims found a useful ally with the appropriate ideological stance and military resources.

The political situation became more confused in 1978 when Israeli forces invaded southern Lebanon in an effort to root out terrorist bases. A month later the United Nations authorized the dispatch of an Interim Force in Lebanon (UNIFIL). During the deployment of UNIFIL troops, fighting again broke out between Christian militiamen and the Arab Deterrent Force (ADF). The 30,000-strong ADF, heavily Syrian in composition, had become pro-Muslim and pro-PLO for all intents and purposes and was deterred from wiping out the Christian forces only because of a fear of Israeli retaliation. Backed up by Israel, the Christians were in no mood to make deals either with the ADF or with the Lebanese

government, and they were in the process of carving out a Christian enclave in the south.

However, the situation was quite different in the north, where a series of clashes between Christians and Syrian troops had escalated into open warfare, with the use of tanks, mortars, heavy artillery, and rockets. While the Syrians suffered over 1,000 casualties in the period of a year, Christian losses were negligible. A French plan for ending the conflict was rejected by both parties, and France withdrew its 800-strong contingent from the UNIFIL force. However, a cease-fire was arranged by the Saudis at a conference held at Beit Eddine, under the terms of which Saudi troops replaced the Syrians in East Beirut and took the heat out of the situation. Meanwhile, intrarightist conflict erupted at Beirut, during which supporters of the former president Suleiman Franjiya were eliminated.

In 1982 the National Assembly chose a successor to President Elias Sarkis. The election, boycotted by most of the assembly's Muslim members, was won by Bachir Gemayel, the youngest son of Pierre Gemayel, leader of the Phalangist Party. The president-elect was assassinated on September 14. His brother, Amine, was then elected in his place. Shafiq al-Wazzan continued as prime minister, with a cabinet of 10 ministers drawn from outside the assembly.

In the spring of 1982 infringements of the cease-fire imposed the previous July became more frequent, and in June 1982 Israeli forces moved into Lebanon under Operation Peace for Galilee. Its initial limited objective was enlarged to an effort to crush the PLO. Israeli forces surrounded West Beirut, trapping more than 6,000 Palestinian fighters. In late August Philip Habib, President Ronald Reagan's special envoy, secured an agreement that brought about the dispersal of PLO fighters from Beirut to various Arab countries and the arrival of a multinational peacekeeping force. In September the inhabitants of the Shatila and Sabra Palestinian refugee camps were massacred by the right-wing Phalangists. The *de facto* complicity of Israel's authorities in this massacre generated widespread condemnation from abroad.

During late 1982 and early 1983 the presence of the 5,700-strong multinational force (2,000 French, 2,000 Italians, 1,600 Americans, and 100 Britons) helped to stabilize the situation, although the force came under increasing attack from Muslim militiamen. In two grisly incidents, 241 U.S. and 58 French marines were killed in suicide bombings carried out by Muslim fanatics on October 23, 1983.

From September 1983 onward the fight for control of Fatah, the military arm of the PLO, between the forces of Yasser Arafat and those of the Syrian-backed rebels under Abu Musa and Abu Saleh, was concentrated in Arafat's last stronghold, the northern Lebanese port of Tripoli.

After months of fighting, a truce allowed Arafat to leave Tripoli in December with about 4,000 of his supporters. Aboard five Greek ships and under UN protection, they dispersed to Algeria, Tunisia, and Yemen.

Talks between Israel and Lebanon, begun in December 1982, had culminated in the signing on May 17, 1983, of a 12-article agreement, formulated by the U.S. secretary of state George Shultz, declaring an end to hostilities and calling for the withdrawal of all foreign forces from Lebanon within three months. Syria refused to recognize the agreement (which was never ratified by President Gemayel) and kept 40,000 of its troops and 7,000 PLO men encamped in the Bekaa Valley and northern Lebanon. Israel consequently refused to withdraw its own forces from the south, deploying its 30,000 troops (reduced to 10,000 by the end of the year) south of Beirut, along the Awali River. Members of Major Saad Haddad's South Lebanon Army policed the Israeli-controlled south, thus effectively partitioning the country. Soon a full-scale war flared up between the Druze and Phalangist militias in the Chuf Mountains. Within months the Druze forced the Christians out of the region, establishing a Druze ministate, with its own local administration and executive council.

In Beirut interfactional fighting continued, as punctuated by numerous cease-fires. The Conference of National Reconciliation held in Geneva from October 31 to November 4, 1983, was attended by the Shiite Amal militia, led by Nabih Berri; the Syrian-backed National Salvation Front, led by the Druze leader Walid Jumbalatt; and the former prime minister Rashid Karami. The conference foundered upon President Gemayel's refusal to abrogate the May 1983 pact. By February 1984 fighting flared up again on a more intense level, as the Muslim members of the army defected en masse to the militias, the Druze and Shiites joined forces, and the multinational force was withdrawn. In March 1984, bowing to Syrian president Hafez al-Assad's pressures, Amine Gemayel abrogated the May 17 agreement with Israel in return for Syrian guarantees. A week later the National Reconciliation Conference was reconvened in Geneva. It failed to produce a compromise and witnessed the disintegration of the National Salvation Front. Ex-president Suleiman Franjiya vetoed Syrian plans, which called for a diminution of presidential powers.

In April 1984 President Gemayel formed a government of national unity, with Rashid Karami as prime minister heading a cabinet of five Christians and five Muslims. Franjiya boycotted the government, and his Greek Orthodox son-in-law, Abdullah al-Rassi, the interior minister, refused to attend cabinet meetings. The goals of the new government were to end Israeli occupation of the south, reorganize the army, disengage rival militias, and reform the constitution to provide more equitable representation for the Muslims. A Syrian-backed

security plan was put into operation in July 1984, leading to the reopening of the port and seaport of Beirut and the clearing of the Green Line separating Christian and Muslim sectors in Beirut.

In 1984 Israel pledged itself to a withdrawal from Lebanon and entered into talks with the Lebanese government on the conditions of such a move. When the talks failed, Israel elected to vacate the territory unilaterally in three phases. By mid-1985 the Israeli forces had withdrawn completely, although they remained in effective control of the border area and watchful of both the Syrian ADF forces and the resumed presence in Lebanon of the PLO.

Thereafter, the fundamental Christian-Muslim divide became overlaid by more immediate conflicts between rival factions within the two broad camps. On the Christian side a Syrian-sponsored peace plan proposed in 1985 was backed by one Phalangist faction but opposed by President Gemayel and his followers. On the Muslim side the pro-Syrian Amal movement and the Iranian-backed Hezbollah vied for support within the Shiite community, and both came into conflict with the Druze, Sunni militia, and the PLO from 1986 to 1988. Moreover, militant Muslim groups resorted to the kidnapping of Western nationals, amid a total breakdown of government authority and the inexorable destruction of the economic infrastructure.

Upon the expiration of Gemayel's six-year term in September 1988, the election of a successor proved impossible, such that Gemayel's final presidential act was to appoint a transitional military government headed by General Michel Aoun, the Maronite army commander. However, the Muslim nominees refused to serve under General Aoun and declared their support for the government of Selim al-Hoss (appointed prime minister in June 1987), from which Christian support had been withdrawn earlier. Aoun launched a "war of liberation" against Syria in March 1989, thereby initiating a new round in Lebanon's bloody conflict. Intervention by the Arab League to halt the ensuing fighting resulted in the drawing up of an "accord for national reconciliation," which was approved on October 22 by a majority of Lebanese MPs meeting in Taif, Saudi Arabia. Aoun vehemently rejected the accord on the grounds that it failed to provide for an immediate Syrian withdrawal. Under the terms of the Taif accord, the MPs elected a new president, René Moawad, on November 5. Moawad was brutally assassinated 17 days later and was replaced on November 24 by Elias Hrawi.

Aoun condemned Hrawi as a Syrian puppet and considered himself the country's rightful ruler, refusing to vacate the bunker he occupied beneath the presidential palace in Baabda, an east Beirut suburb. As a result, Hrawi's government controlled only those areas occupied by Syrian soldiers. A decisive event occurred on April 3, 1990, when Lebanese forces and the Phalange military leader Samir Geagea declared their allegiance to Hrawi.

The Lebanese parliament met on August 21 in Beirut and approved the constitutional changes called for in the Taif accord that gave the Muslim majority greater political power. The amendments expanded the National Assembly to 128 seats from 99 and divided them equally between Christians and Muslims. It allowed for the Christians to retain their traditional hold on the presidency but diluted the powers of that office by giving more authority to the Muslim prime minister and his cabinet. The next day Aoun reiterated his opposition to the Taif accord. Nevertheless, Hrawi signed the constitutional changes into law on September 21, 1990, and warned Aoun to join the peace process.

The violent eviction of General Aoun from the presidential palace at Baabda finally occurred on October 13, removing the biggest single obstacle to the reunification of Lebanon and fostering an immediate improvement in confidence both at home and abroad. Having lived through 750 days of Aoun's occupation of the palace, President Hrawi and his ministers were faced with the task of rebuilding the country.

On December 19, 1990, Prime Minister Selim al-Hoss resigned to make way for a government of national unity and was succeeded by Omar Karami, the brother of the late prime minister Rashid Karami, who, like Hoss, was a Sunni Muslim. The new cabinet, apparently formed with Syrian backing, included the leaders of seven militias, among them Samir Geagea, Elie Hobeika, the Druze leader Walid Jumblatt, and Nabih Berri of the Shiite Amal. The pro-Iranian Hezbollah rejected the new government.

In September 1991 Lebanon and Syria signed a formal peace agreement. The first parliamentary elections in 20 years were held in August 1992 but were boycotted by the Christian opposition. As a result, Muslim fundamentalists won the largest number of seats in parliament. In October, the Syria-backed billionaire Rafiq al-Hariri was appointed prime minister. His attempts at stabilizing the economy and building confidence within the country were hampered by continued fighting between Hezbollah and the South Lebanon Army. Both Syrian and Israeli forces maintained their presence in Lebanon. In 1995 Rafiq al-Hariri won a second term. In 1996 fighting between Israel and the Hezbollah continued to escalate, provoking Israel to launch a heavy air and missile campaign in southern Lebanon. The air raids led to civilian casualties, resulting in international criticism. A U.S.-brokered cease-fire was never signed. In September 1996 the second postwar elections were again boycotted by the Christian opposition. In October 1998 parliament elected as president Émile Lahoud, who named the veteran politician Selim al-Hoss prime minister after Hariri, citing irregularities in the selection process, withdrew his name from the running. Peace talks between Israel and Syria resumed in December 1999. After talks broke down the following month, Israel announced that it would unilaterally withdraw its troops from southern Lebanon.

The withdrawal was completed on May 24, 2000. In June 2001 Syria withdrew its troops from Beirut and the surrounding area, but an estimated 20,000 troops remained in Lebanon. In parliamentary elections held in September 2000, with few reports of irregularities, the opposition won a decisive victory, and Selim al-Hoss lost his seat in parliament. Rafiq al-Hariri was appointed prime minister in October 2000.

In February 2003 the Syrian army withdrew from northern Lebanon, still leaving, however, a contingent of 16,000 troops in the Bekaa Valley, fueling Lebanese groups opposed to Syria's continued military presence. Meanwhile, Israel and Hezbollah continued to exchange fire over a contested region known as the Shabaa Farms, which was captured by Israel during the 1967 war.

The refugee situation in Lebanon has remained problematic; as of 2003 there were 350,000 to 400,000 Palestinians in Lebanon. Renewed hope for a settlement of the entire Lebanese conflict came in late 2004 when the United Nations passed a resolution calling for Syria to remove the last of its troops and end its interference in Lebanese affairs. Syria refused, citing the Taif accord and noting that all its provisions had not been fulfilled. That same year Hariri resigned his post as prime minister in protest over the extension of the presidential term of Lahoud. In February 2005 al-Hariri was assassinated by a car bomb, an action that drew worldwide condemnation, incited further calls for Syrian withdrawal, and led to the toppling of the pro-Syrian Lebanese government headed by Omar Karami. In elections that year the anti-Syrian alliance led by Saad al-Hariri won a majority and al-Hariri's ally Fouad Siniora became prime minister.

LIST OF MODERN RULERS

Presidents

1976–82	Elias Sarkis
1982–88	Amine Pierre Gemayel
1989	René Anis Moawad
1989–98	Elias Khalil Hrawi
1998–	Émile Geamil Lahoud

Prime Minister

1976–80	Selim al-Hoss
1980	Takieddin as-Solh
1980–84	Shafiq al-Wazzan
1984–87	Rashid Karami
1987–90	Selim al-Hoss
1990–92	Omar Karami
1992	Rashid as-Solh
1992–98	Rafiq al-Hariri
1998–2000	Selim al-Hoss
2000–04	Rafiq al-Hariri
2004–05	Omar Karami
2005	Najib Mikati
2005–	Fouad Siniora

CONSTITUTION

The constitutional basis of the Lebanese government is the largely unwritten and unique system of compromise and adjustment known as the National Covenant (*al-Mithaq al-Watani*), which was superimposed on the constitution of 1926. The 1926 constitution, as amended in 1927, 1929, 1944, and 1947, established a centralized parliamentary republic in which executive power was shared by a strong president and a prime minister who headed a cabinet. Legislative functions are performed by a unicameral Chamber of Deputies, which was renamed the National Assembly in March 1979. The constitution is predominantly French in character, but it is the National Covenant rather than the constitution that determines the specific political organization of the country. The National Covenant is based on Article 95 of the constitution, which provides for the distribution of all political and legislative positions according to a confessional system in proportion to the numerical strength of religious communities at the time of the 1932 census. The president, ministers, and deputies act as members and representatives of their respective religious groups rather than as national or regional leaders. By custom the president of the republic is a Maronite Christian, the prime minister a Sunni Muslim, the foreign minister Greek Orthodox, and so on. This system of government, known as confessionalism, worked satisfactorily until the civil war of 1975.

Under the terms of the Taif peace accord, ratified by the National Assembly in 1990, executive powers have been transferred from the presidency to a cabinet, with portfolios divided equally between Muslims and Christians. The president appoints the prime minister in consultation with the members and president of the National Assembly; the approval of the cabinet is required before he dismisses a minister or ratifies an international treaty. The number of seats in the National Assembly has increased from 99 to 128, divided equally between Christian and Muslim deputies. Constitutional provisions which remain unchanged are as follows: the president of the republic is elected for a term of six years and is not immediately reeligible. Legislative power is exercised by one house, the National Assembly. A quorum of two-thirds and a majority vote is required in the assembly for constitutional issues.

Suffrage is compulsory for all Lebanese males over 21 and authorized for all females over 21 with an elementary education. The country is divided into six governorates, which are subdivided into 26 electoral districts, in each of which seats are allocated to the different religious communities in proportion to their numerical strength. Although candidates are chosen on the basis of confessionalism, they are elected by voters of all communities by direct and secret ballot and thus represent the district as a whole.

PARLIAMENT

The national legislature is the National Assembly, formerly the Chamber of Deputies, a unicameral body of 128 members elected by universal, direct suffrage for four-year terms. The number of seats in the National Assembly is divided equally between Christian and Muslim deputies.

Deputies are considered representatives of the whole nation and are not bound to follow directives from their constituencies. The assembly holds two sessions annually, from March to May and from October to December. Membership in the assembly is open to all Lebanese citizens 25 years of age or older. The president of the assembly is, by custom, a Shiite Muslim.

The assembly's substantial powers include controlling the national budget, interrogating cabinet members and voting no confidence on the cabinet, and recommending constitutional amendments. The assembly can also transform itself into a judicial body in order to arraign the president or members of the cabinet in cases of high treason or violation of the constitution.

POLITICAL PARTIES

Political activity is organized along largely sectarian lines; numerous political groupings exist, consisting of individual political figures and followers motivated by religious, clan, and economic considerations. A welter of parties exists as a result, representing both Christian and Muslim viewpoints as well as a variety of political viewpoints. The mainly Christian groups, especially the Maronites, favor an independent course for Lebanon, with close ties to Europe, and are represented by the National Liberal Party and the Phalangist Party. Muslim groups favor closer ties with Arab states and are represented by Amal and the more militant Hezbollah. There are also various parties of the left, including the Progressive Socialist Party (of mostly Druze membership), the Ba'ath Party, and the Lebanese Communist Party. Christian parties largely boycotted elections in the 1990s, decreasing their role in parliament.

Other major parties that emerged in the 2000 parliamentary elections include Resistance and Development, which took 23 parliamentary seats; al-Karamah (Dignity), 18; Baalbeck-Hermel al-I'tilafiah (Baalbeck-Hermel Coalition), nine; al-Jabhar al-Nidal al-Watani (National Defense Front), eight; Wahdal al-Jabal (Mountain Union), seven; I'tilafiah (Coalition) and al-Karal (Decision), six each; al-Kitla al-Chaabi-Elias Shaft (People's Front-Elias Shaft), al-Wifah al-Matni (Metn Accord), and al-Karamah wah Tajdid (Dignity and Renewal), five apiece; and numerous other parties with three or fewer seats. Nonpartisans took 20 seats in the 2000 elections.

LOCAL GOVERNMENT

For purposes of regional administration Lebanon is divided into six governorates, or *muhafazaa*. Each division is headed by a governor, or *muhafez*, the district by a district chief, or *qaim maqam*. The six governorates are subdivided into 26 districts.

The governor is assisted by the provincial council, or Mjlis al-Muhafazat, whose members include the district chiefs and two nominated representatives from each district. There are no organs of self-government at the district level.

Some towns have municipal councils, but only in Beirut do the councils and the mayor run the local government. Membership in the council is based on the size of the urban population, but the minimum number is eight.

LEGAL SYSTEM

Lebanon follows France in terms of jurisprudence and the judicial system. The court hierarchy consists of three tiers. At the bottom are 56 courts of first instance, presided over by single judges, who deal with both civil and criminal cases. Appeals from these courts go to 11 courts of appeal, each presided over by three judges. At the apex are four courts of cassation, three of which deal with civil and commercial cases, the fourth with criminal cases. In addition, there are two special courts: the Council of State, which serves as an administrative court of last resort, and the High Court, which may meet only to try the president of the republic upon indictment by the National Assembly for high treason or violation of the constitution. Matters relating to personal status are handled by religious courts.

Under the constitution there is complete separation between the judiciary and the executive. Judges are appointed by the president, but they may be transferred only with the approval of the Higher Council of the Magistracy, which functions as a watchdog of judicial integrity.

Human rights groups argue that the Lebanese judiciary is strongly influenced by Syrian political pressure, which affects the appointments of key prosecutors and investigating magistrates. Moreover, the judicial system consists of civilian courts, a military court, and a judicial council. International standards of criminal procedure are not observed in the military court, which consists largely of military officers with no legal training. Cases in the military court are often tried in a matter of minutes.

HUMAN RIGHTS

In terms of civil and political rights, Lebanon ranks as a partly free country.

The major violations of human rights in Lebanon are committed not by the government but by armed groups and by Syrian and PLO troops. These include torture, mutilation, murder, abduction, mass execution, arbitrary arrest and imprisonment, and wanton destruction of private and public property. Because of the collapse of the public security system, judges are unwilling to pass sentences for fear of personal reprisal. However, arbitrary arrests by security forces, both Lebanese and Syrian, have continued since official hostilities ended in the early 1990s and appear to be officially sanctioned. The use of torture and beatings to extract confessions is practiced. Human rights groups also claim that Syria monitors the telephone activity of both cabinet ministers and political dissidents. In 2003 numerous Islamic militants were arrested by security forces on national security grounds; many political prisoners remain in custody in substandard and overcrowded jails and prisons.

Although the civil war officially ended in 1990, decades of violence have severely weakened the Lebanese tradition of respect for the rights of others. Not only have civilians been endangered unintentionally by opposing groups that have fought major battles in densely populated areas, but noncombatants far removed from battlefronts have also been the deliberate targets of indiscriminate violence, such as terrorist bombings, random shellings, and abductions. Civilians have also been the targets of indiscriminate terrorist violence. On several occasions car bombs have exploded in crowded streets, killing and wounding large numbers of passersby. In most instances these explosions have occurred in neighborhoods in which one confessional group predominates and have thus appeared to be attacks against those groups' members.

Violence has had a devastating effect on Lebanon's once-prosperous economy. The division of the country into zones controlled by militias and foreign armies has disrupted trade and led to serious economic hardship in some areas. Business confidence has evaporated, new investment has dried up, and remittances from overseas Lebanese—a major source of foreign exchange—have dropped sharply.

Hundreds of thousands of Palestinian refugees in Lebanon still live in overcrowded refugee camps, struggling to fulfill basic human needs. They do not have the right to work in dozens of professions or to receive social security, nor do they have the right to own or inherit property.

FOREIGN POLICY

A member of the United Nations as well as a member with special status (because it is partly Christian) of the Arab League, Lebanon is a bridge between the Muslim world and the West. It has maintained good relations

with the West while following a policy of comparative restraint with respect to Israel. The principal aim of its foreign policy is to safeguard its own independence while maintaining a broad commitment to Arab nationalism.

Lebanon was the scene of one of the worst civil wars in modern history and at the end of the fighting found itself under Syrian occupation, which was partly beneficial because it neutralized much of the residual extremist violence generated by the civil war. At the same time, it restricted Lebanon's autonomy in external affairs, since Lebanon had to clear all major moves with Damascus. In 1999 Israel withdrew its forces from southern Lebanon, thus ending a serious concern for Arab militants. Syria maintained 16,000 troops in the country until 2005, when they were finally withdrawn.

DEFENSE

The Lebanese defense structure is headed by the president of the republic. Since the start of the civil war, little information was available on the structure and organization of the armed forces. Troops were divided up along religious lines, with the Christian officers fighting on the Phalangist side, and the Muslim ranks on the leftist, Palestinian side. With the cessation of hostilities, the armed forces regrouped. By 2003 the army numbered some 80,000, with a navy and air force of about 1,000 each, neither of which was well equipped. There were also 40,000 reserves in the People's Militia. Military manpower is provided through selective 12-month service, which is compulsory for Lebanese males between the ages of 18 and 30. In 2002 the government spent \$541 million on defense.

ECONOMY

The 1975–91 civil war seriously damaged Lebanon's economic infrastructure, cut national output by half, and all but ended Lebanon's position as a Middle Eastern entrepôt and banking hub. Peace enabled the central government to restore control in Beirut, collect taxes, and regain access to key port and government facilities. Economic recovery was helped by a financially sound banking system and resilient small- and medium-scale

1350 Lebanon

manufacturers, with family remittances, banking services, manufactured and farm exports, and international aid as the main sources of foreign exchange.

Lebanon's economy made impressive gains following the launch of Horizon 2000, the government's \$20-billion reconstruction program, in 1993. Real gross domestic product (GDP) grew between 4 and 8 percent from 1994 to 1997, but slowed to an average of less than 1 percent between 1998 and 2003. Through the 1990s annual inflation fell from more than 100 percent to almost 0 percent, and foreign exchange reserves jumped from \$1.4 billion to more than \$6 billion. Burgeoning capital inflows generated foreign payments surpluses, and the Lebanese pound remained relatively stable.

Progress was also made in rebuilding Lebanon's war-torn physical and financial infrastructure. Solidere, a \$2-billion firm, took over the management of the reconstruction of Beirut's central business district, the stock market reopened in January 1996, and international banks and insurance companies started returning.

The government nonetheless faces serious challenges in the economic arena. It has had to fund reconstruction by tapping foreign exchange reserves and boosting borrowing. The Hariri government's policies failed to address the ever-increasing budgetary deficits and national debt burden. The gap between rich and poor widened in the 1990s, resulting in grassroots dissatisfaction over the skewed distribution of reconstruction's benefits.

In order to reduce escalating national debt, the government began an economic austerity program, reducing government expenditures, increasing revenue collection, and privatizing state enterprises. The privatization of state-owned enterprises, begun in 2002, has resulted in large amounts flowing in from donor nations to help stabilize government finances.

LIVING CONDITIONS

Despite the official end of the civil war in 1991, indiscriminate violence still punctuates the daily life of Lebanese and informs many other aspects of society; rebuilding is still underway to counteract the 15 years of destruction. The United Nations Human Development Index (HDI) ranks Lebanon 80th among 177 nations in terms of quality of life. The HDI focuses on three measurable dimensions of human development: life expectancy, education, and standard of living. In 2004 life expectancy in Lebanon was over 72 years. The literacy rate in 2003 was over 87 percent, while combined gross enrollment at primary, secondary, and tertiary schools in 2001–02 was 78 percent. Per capita GDP in 2004 was \$5,000.

In 2001 around 90 percent of Lebanese were dwelling in urban areas, with almost half the population in Beirut alone, with a population of around 1.8 million. Other major cities include Tripoli, Sidon, and Tyre. With half of Lebanon's real estate damaged or destroyed in the civil war, there is still an acute housing shortage.

HEALTH

Lebanon has a national medical-insurance program that is financed through contributions made by employers, employees, and the government. The program partially compensates patients for medical care, and people make up the difference with copayments.

Violence was the leading cause of death in the late 1980s. There were over 144,000 war-related deaths that decade, and thousands more were injured, all of which heavily affected, and to some extent still affects, the nation's health-care system. Crippling injuries and posttrau-

matic stress syndrome affect large numbers of Lebanese, both young and old. Major health problem and leading causes of death as of 2000 included hypertension, cardiovascular disease, diabetes, and asthma. With much of infrastructure restored by 2002, 100 percent of the population had access to safe drinking water and 98 percent to adequate sanitation.

As of 2002 there were 325 physicians per 100,000 people, and the government spent 3.5 percent of GDP on health care, reflecting gains made in the health-care system. The infant mortality rate and under-five mortality rate have steadily declined. As of 2005 the infant mortality rate was just under 25 deaths per 1,000 live births. The government pays for immunizations; the 2003 immunization rates for children up to one year old for diphtheria, pertussis, tetanus, measles, and polio were all over 90 percent. There have been no cases of polio recorded since 1994. Nearly all pregnant women have access to prenatal care and trained attendants during childbirth.

In 2003 there were 2,800 Lebanese living with HIV/AIDS; less than 200 people died of the disease that year. In 2002, there were 15 cases of tuberculosis per 100,000 people. Smoking is a significant health hazard for Lebanese; as of 2000, 46 percent of men and 35 percent of women smoked.

FOOD AND NUTRITION

Lebanese cuisine is a blend of Turkish and Arabic cooking, with a Mediterranean/French influence. A typical Lebanese breakfast dish is *manakish*, a pastry baked with thyme, olive oil, spices and sesame seed. *Kishk* is made from bulgur wheat soaked in yogurt and fried with onions and garlic.

Lunch or dinner usually begins with appetizers of meze dishes, which include food ranging from stuffed vine leaves to spinach pies to hummus to baba ghanoush, an eggplant and sesame puree. Mutton is a usual meat for the main course, as is fish. The national dish is kibbe, a finely

minced paste of lamb and bulgur wheat, sometimes served raw but more often fried or baked into a pie. Bulgur wheat is also used in the salad called tabbouleh. Bread is served with most meals. Lebanese bread is pita style; two types are called *khub* and *marqouq*. Rice is another popular grain. Baklava, a walnut paste-stuffed pastry, is a typical dessert.

Other popular ingredients in Lebanese cooking include allspice, anise, cinnamon, cloves, coriander, cumin, lentils, mint, nutmeg, olive oil, oregano, parsley, pine nuts, pistachios, sesame seeds, and sesame paste.

Coffee is drunk strong. Arrack is a potent alcohol with a licorice flavor. Wine is also popular, having been cultivated in the region for millennia.

Between 1995 and 2003 only 3 percent of children under five were moderately to severely underweight; only 3 percent of the general population was considered undernourished as of 2001.

STATUS OF WOMEN

Women enjoy equality of civil rights and attend institutions of higher learning in large numbers, but they are still limited by religion and custom. The prevailing atmosphere, replete with insecurity and economic hardship, makes it difficult for women to expand their participation in society. The women's organizations that do exist are for the most part subordinate arms of political groups and work to advance the interests of the parent party rather than of women in general. Moreover, continuing turbulence has spawned Islamic religious movements that advocate confining women to traditional roles and "modest" dress—that is, chadors and veils.

Muslim women in Lebanon are subject to discriminatory laws governing marriage, divorce, inheritance, and child custody. Women are underrepresented in politics, holding only three parliamentary seats and no cabinet positions, and do not receive equal social security provisions and other benefits. Men convicted of so-called honor crimes against women—such as revenge for an extramarital affair—usually receive lenient sentences.

WORK

In 2001 the Lebanese workforce totaled some 2.6 million. To this, however, would be added approximately one million foreign laborers, many of them Palestinian refugees. As of 1995, one-sixth of the labor force was engaged in agriculture, producing citrus, grapes, tomatoes, apples, vegetables, potatoes, olives, tobacco, sheep, and goats. Another quarter of the workforce was employed in industry; industrial products include processed food, jewelry, cement, textiles, mineral and chemical products, wood and furniture products, refined oil, and fabricated metal. The remaining nearly two-thirds of workers were involved in the service sector. Official numbers put unemployment around 18 percent, with 30–35 percent unemployment among young people. Many of the country's skilled workers go abroad for work or remain underemployed or unemployed in Lebanon.

Lebanese workers have the right to unionize and strike; however, with high unemployment and jobs at a premium, organized labor has little bargaining power. As of 2001, about 42 percent of the labor force was unionized in 160 different unions. The largest single organization is the General Confederation of Workers, with 22 unions representing 200,000 workers. The standard workweek is 48 hours, and in 2002 a minimum wage of \$200 per month was in place. The minimum work age is 14, but this is not enforced. Child labor is a major social problem. In 2000 the UN Children's Fund estimated that 45.3 percent of Lebanese children ages six to 14 were working.

EDUCATION

While free, universal, and compulsory education has not been introduced at all levels, primary education is nominally free. Schooling consists of five years of primary school and four years of primary-complementary school or seven years of secondary school, for a total of nine or 12 years. During the fifth and sixth years of secondary school, students may elect to follow a general humanistic or a technical program. At the end of the sixth year students take a comprehensive public examination known as Baccalaureate I, and at the end of the seventh year they complete their schooling with a stiffer examination known as Baccalaureate II.

The academic year runs from October to June. The medium of instruction is French in private schools and Arabic and French in public schools. However, English is stressed from the primary grades onward. The school system is characterized by the predominance of private schools at both the primary and secondary levels. The administration of public education, formulation and implementation of educational policies, and budget planning are the responsibility of the director general of education.

Lebanon has 12 institutions of higher learning, including five universities.

Despite legislation mandating free, compulsory primary education, the average annual cost per student for primary education in 1997 was 271,000 Lebanese pounds, or about \$176. Economically disadvantaged families, especially refugees, are often unable to afford tuition costs and are compelled to withdraw them from school and send them to work.

On paper, Lebanon enjoys one of the most advanced educational systems in the Arab world in terms of quality and gender parity. Literacy rates are the highest in the Middle East, and in 2002 the net primary enrollment rate was a healthy 90.6 percent. However, attendance rates are not available, such that while enrollment rates indicate a level of commitment to education, they do not necessarily reflect children's participation. As of 2002 public expenditure on education was 2.7 percent of GDP, or 12.3 percent of total government expenditures.

SCIENCE AND TECHNOLOGY

Lebanon's research and development projects include both agriculture technology and oil refining research. While the latter is taken care of largely by international oil companies operating in Lebanon, agricultural re-

search is sponsored by several institutions. The Ministry of Agriculture's Lebanese Agricultural Research Institute pursues research into field crops, horticulture, crop protection, livestock, animal health, and food technology, while the Faculty of Agricultural Sciences at the Lebanese University, Beirut, is also involved in diverse agricultural research. Oceanographic and fishery research is conducted by the National Council for Scientific Research's National Center for Marine Sciences.

The National Council for Scientific Research also establishes national science policies and fosters research in fundamental and applied research. Seven colleges and universities in Beirut offer degrees in basic and applied sciences. Between 1994 and 1997, science, math, and engineering students accounted for 17 percent of college and university enrollments.

MEDIA

Lebanon leads Middle Eastern countries in newspapers per capita, with a dozen daily newspapers in print. Other publications include political and nonpolitical weeklies and monthlies, nearly all published in Beirut. Most dailies are printed in Arabic; a few are printed in Armenian and French. Lebanese newspapers and periodicals are sold in substantial numbers in other Arab countries. The principal dailies are *an-Nabhar*, *al-Anwar*, *al-Amal*, *al-Hayat*, *Lisan ul Hal*, *L'orient le jour*, *al-Liwa'*, and *at-Tayyar*, several of which have an online presence.

The national news agency is Wakalat al-Anbaa al-Wataniyah, with two foreign bureaus, in Paris and Cairo. Foreign news bureaus in Beirut include UPI, AP, AFP, Reuters, ITAR-TASS, ADP, and MENA. Beirut is the most important base in the Middle East for foreign correspondents.

The official Lebanese broadcasting service, Radio Lebanon, broadcasts in Arabic, English, French, and Armenian. An FM station transmits mainly music. Domestic programs are all of domestic origin. The foreign service broadcasts in Arabic and European languages, with the signature Voice of Lebanon.

Television, introduced in 1959, is operated by the commercial service Television Lebanon. Tele-Liban is the state TV service and broadcasts a large proportion of domestically produced programming. Cable and satellite TV are also widespread. In its first steps toward privatization in 2000, the government laid off all the employees of the official television network.

The constitution provides for freedom of the press. However, the government controls content to some extent through a law prohibiting attacks on the dignity of the head of state. Still, criticism of officials and policies is carried daily in dozens of newspapers and hundreds of periodicals. In its 2004 report, Reporters without Borders ranked Lebanon 87th out of 167 nations in its freedom of press index.

In 2001 there were 36 radio stations and 7 television stations. The government owns one radio and one television station, and the rest are privately owned. As of 2000 there were 182 radios and 355 television sets for every 1,000 people. In 2002 there were 400,000 Internet subscribers and 775,100 cellular telephone users.

CULTURE

Lebanon has a long cultural history, stretching from Phoenician times through Greek and Arab dominance. Moreover, its ties to Europe, through the Crusader states in medieval times and more recently as a French protectorate, made the country a beachhead for European culture in the Middle East. Before the civil war Beirut was called "the Paris of the Middle East," with a cosmopolitan air to it. Ballet, opera, theater, and classical music were all available. Following the civil war, Lebanon has taken on more of the trappings of Arab and Levantine culture. Resurgences in folk art, music, and dance have occurred. The line dance known as the *dabke* has become the national dance. Traditional Arab music, with its complex rhythms and many-layered voice parts, has become more popular as the population has shifted to a Muslim rather than a Christian majority. The *Baalbeck International Festival* is a popular annual event. Musical instruments that accompany traditional music include the oval-shaped stringed *oud*, the drumlike *tabla*, the single-reed wind instrument called the *nay*, and the *qanun*, a flat stringed instrument. Belly dancing is also a popular cultural form.

In literature perhaps the most famous native son is Khalil Gibran, the 19th-century poet and artist. Other notable writers include Michel Chiha, Amin Maalouf, Emily Nasrallah, and Hanan al-Shaykh. Before these people gained international repute, there was a long tradition of Lebanese folk poetry, called *zajal*.

Contemporary Lebanon is also home to a burgeoning film and publishing industry.

FOLKLORE AND MYTHOLOGY

Lebanon, ancient home of the Canaanites and location of Phoenicia, has a folkloric tradition and mythology that is a blend of Greek, Christian, and Arab cultures. From Phoenician times comes the cult of Anat, the fertility goddess. Anat was regarded as a just and benevolent goddess of beauty, sexuality, and the fertility of crops, animals, and men. In her more martial aspect she slays the enemies of Baal Biq'ah, the west Semitic weather god and "Lord of the Plains" in Lebanon. The city of Baalbeck is named after him.

In Hellenistic times Baal became a sun and sky god, and the Greeks identified him with their Helios. The story of Adonis and Aphrodite took place in Byblos, Lebanon, and is also a holdover of the Greek epoch. From the Christian era comes the story of Saint George and the Dragon. Saint George reputedly lived in Lebanon and fought the legendary sea dragon near Beirut. Crusaders later took the tale home with them, making him the patron saint of England.

From Arab folklore come such popular figures as Jeha the Fool and also the tale of the lovers Antar, poet and slave, and Ablah, daughter of a chief.

In addition to such folklore and mythology, Lebanese have a rich storehouse of proverbs, which not only provide folk wisdom but also give modern readers insight into the mind and culture of the Lebanese. For example, the proverb "The son of a son is dear, the son of a daughter a stranger" tells volumes about marriage rights and the place of women in Lebanese society in ancient times. Other proverbs demonstrate earthy humor ("When the wolf comes for the sheep, the dog goes to defecate") or clear-headed logic ("Lower your voice and strengthen your argument").

ENTERTAINMENT AND RECREATION

Television is a major source of entertainment for Lebanese. Many Lebanese have cable, which allows them to receive such disparate programming as CNN, the BBC,

Al-Jazeera and numerous movie and other specialized channels. In addition, there are dozens of local television stations, both commercial and public.

Cinema, both imported and domestic, is also popular. As of 1999 there were 10.9 cinema seats per 1,000 Lebanese, and annual attendance per inhabitant was 3. With high literacy, Lebanese also enjoy free-time reading. In 1999, 289 books were published in the nation, and the average circulation of the daily press was 63 per 1,000 inhabitants.

Card games, board games, and backgammon, or *tawleh*, are also popular forms of entertainment. Lebanon's beaches attract many inhabitants, and family picnics and outings are a typical form of recreation.

ETIQUETTE

A mixture of cultures, Lebanon has a corresponding smorgasbord of customs when it comes to politesse. Lebanese Muslims have many of the same social taboos as other Muslims, such as removing the shoes before entering a home or mosque, refraining from showing the soles of one's feet, never eating with the left hand, and observing prohibitions against alcohol and pork. The role of women in Islam is significantly different than in other religions, such that, for example, a Muslim man might not introduce his wife to another man when introductions are being made.

Handshakes are customary in Lebanon, but those who know each other well may exchange kisses on the cheek, including men. In the marketplace, or *souq*, it is considered bad manners not to bargain with merchants. Public displays of affection are frowned upon.

Deference is shown to the elderly. Gestures are also important in Lebanese life. For example, "no" is often gestured by a backward nod of the head and verbalized "tsk, tsk."

FAMILY LIFE

Highly urban, Lebanese tend to have small families of one to two children who live with their parents until they marry. In traditional times, the extended family living under one roof was the rule; in modern times, with small apartments, such living arrangements are no longer feasible. Children tend to move into nearby neighborhoods after marriage, and family members often help support each other and the parents.

In rural areas larger families are typical, in order to ensure help with farm work. Whether urban or rural, men usually assume the role of head of the family, though women hold much of the power in domestic matters. With more women entering the workforce, the traditional male-dominated model is changing, especially among non-Muslims.

Lebanese usually marry within their own religious and ethnic groups. Though parents often influence the choice of marriage partner, marriages are not strictly arranged in Lebanon.

PERSONAL APPEARANCE

Most Lebanese wear modern Western-style clothing. For men this is modified somewhat with the Arab headscarf, the *keffiyah*. Lebanese Muslim women may also wear headscarves or other prescribed clothing such as chadors and veils, though they are less likely to do so than Arab women in other locales, such as in Kuwait.

Villagers may still wear more traditional clothing. This includes mainly dark clothing: long dresses for women and pants that are baggy in the thigh and resemble jodhpurs for men. Men's jackets might have brightly colored embroidered trim. Also, village men might still wear the cone-shaped felt hat instead of the *keffiyah*.

SPORTS

Soccer is the national sport and is both played and watched by most men and many women. Another popular sport is basketball. Lebanon has hosted both the Asian and Arab League basketball cups. Volleyball is another widely played team sport. Horseracing draws large crowds at the Beirut hippodrome. Ping-pong, swimming, cross-country running, pigeon shooting, and martial arts are other popular sports. One does not usually associate skiing with the Mediterranean climate of Lebanon, but the country has six ski resorts and regularly sends a ski team to the Olympics.

CHRONOLOGY

- 1945** British and French troops withdraw from Lebanon.
Lebanon joins the Arab League.
- 1946** Lebanon achieves full independence, with Béchara el-Khoury as president.
- 1947** Riad as-Sohl is named premier.
- 1948** Israeli troops capture Maroun er Rass in Lebanon but later withdraw.
Palestinian refugees flee to southern Lebanon.
- 1949** Khoury is reelected president.
- 1952** Khoury is forced to step down in the face of mounting unrest. Camille Chamoun is elected president, with Khaled Chehab as premier.
- 1953** Saeb Salam is named premier but is later replaced by Abdallah al-Yafi.
- 1956** Rashid Karami and Abdallah al-Yafi form brief governments.
Sami as-Solh forms cabinet.
- 1958** U.S. Marines land in Lebanon in response to President Chamoun's appeal to avert possible takeover by radical elements.
Chamoun leaves the presidency at end of term.
Fouad Chehab, former commander in chief and a compromise candidate acceptable to the Muslims, is elected president. Rashid Karami is named premier.
Strength of the Chamber of Deputies is raised to 99.
- 1959** Television is introduced.
- 1961** Saeb Salam is premier briefly but is replaced by Rashid Karami.
- 1964** Charles Hélou is elected president, with Hussein al-Oweini as premier.
- 1966** Rashid Karami resigns as premier and is succeeded in office by Abdallah Yafi.
Karami returns to office when Yafi cabinet falls.
The failure of Intra Bank, the largest Lebanese bank, sends shock waves through the Beirut financial community.
- 1968** Karami resigns, and Yafi assumes the premiership.
- 1969** Syria closes Lebanese border.
Yafi resigns, and Karami heads cabinet.
Lebanese army moves against Palestinian guerrillas.
Truce is arranged in Cairo between Emile Bustani, commander in chief of Lebanese Army, and Yasser Arafat, the PLO leader.
- 1970** Suleiman Franjiyeh is elected president with rightist and center support. Saeb Salem is named premier.
- 1972** National elections are held.
Five-year preferential trade agreement is signed with the European Economic Community.
- 1973** Syria again closes border.
Amin al-Hafez, Takeddin as-Solh, and Rashid as-Solh form brief governments.
Lebanon plays virtually no role in October war against Israel.
- 1974** Israel begins retaliatory strikes against Lebanon for guerrilla incursions and terrorism.
- 1975** Civil war erupts between Christians and Muslims. Prime ministers Nureddin Rifai and Rashid Karami fail in efforts to arrange cease-fire.
- 1976** Fighting escalates into civil war.
Tal Zataar, guerrilla stronghold, falls to Christian Phalangists.
Syria intervenes in force, initially in support of moderate Christian forces. Arab League sends 30,000-man peacekeeping force.
Elias Sarkis, a moderate, is elected president, with Syrian support. Selim al-Hoss is named prime minister.
- 1977** Kamal Jumblatt, the Druze leader, is slain.
Israeli aid to Phalangists is reported.
Banks reopen as fighting subsides.

- 1978** Israel attacks PLO bases in south Lebanon. UN Interim Force in Lebanon is dispatched to enforce truce in the disputed area. Major Saad Haddad's Lebanese forces in the south carve out an autonomous Christian enclave near the Israeli border. The pro-Syrian Suleiman Franjiya quits the National Front of Christian right-wing groups.
- 1979** The Chamber of Deputies changes its name to National Assembly.
- 1980** Prime Minister Selim al-Hoss, in office since 1976 (despite resigning several times), finally steps down and is succeeded in office by Shafiq al-Wazzan.
- 1982** Bachir Gemayel, youngest son of Pierre Gemayel, the Phalangist leader, is elected president but is assassinated before assuming office. Bachir's older brother, Amin, is elected in his place and sworn in. Prime Minister Shafiq al-Wazzan continues as head of government. Israeli forces move into Lebanon under Operation Peace for Galilee and surround Beirut, trapping more than 6,000 Palestinian fighters. Philip Habib, the U.S. special envoy, secures agreement under which PLO fighters are dispersed to various Arab countries. Multinational peacekeeping force arrives in Beirut. Right-wing Phalangists, with Israeli complicity, massacre refugees in Chatila and Sabra camps.
- 1983** Muslim suicide bombers attack U.S. and French military headquarters, killing 241 U.S. and 58 French marines. Fighting breaks out in Tripoli between PLO factions, in which Yasser Arafat's group is beaten. Arafat and his followers leave Tripoli for Algeria, Tunisia, and Yemen under UN protection. Israel and Lebanon sign peace agreement calling for withdrawal of all foreign forces from Lebanon within three months. Syria condemns agreement and takes over the Bekaa Valley and northern Lebanon, while Israel continues to occupy southern Lebanon. Full-scale war flares up between Druze and Phalangist forces in the Chuf Mountains. The Druze push Christians out of the region. Conference of National Reconciliation is held in Geneva but founders.
- 1984** Multinational forces are withdrawn from Beirut. Bowing to Syrian pressures, President Gemayel abrogates the Israeli peace treaty. A second conference at Geneva fails to produce compromise and results in the disintegration of the National Salvation Front. President Gemayel forms a government of national unity. Syrian-backed security plan leads to the reopening of the port and airport of Beirut and the clearing of the Green Line separating Christian and Muslim Beirut. Israel announces unilateral withdrawal from southern Lebanon in three phases.
- 1985** Israeli troops withdraw completely, except for a 10 km deep security zone north of its border with Lebanon. A peace agreement is signed by leaders of the Druze, Amal, and Christian Lebanese forces to end the civil war, although clashes erupt again in Beirut later that year.
- 1986** Fighting erupts between Palestinian guerrillas and Shiite Amal militiamen for control of refugee camps in the south of Beirut. Lebanese and Syrian troops are deployed to impose cease-fire.
- 1987** Amal forces besiege Palestinian refugee camps near Beirut, Tyre, and Sidon. Infighting between Muslims erupts in Beirut. Syrian troops are again called to restore peace. Israeli air attacks on Palestinian targets in southern Lebanon resume and continue through 1990. Prime Minister Rashid Karami is assassinated. President Gemayel appoints Selim al-Hoss in his place.
- 1988** Nabih Berri, the leader of Amal, announces the ending of the siege of Palestinian refugee camps in Beirut and southern Lebanon. As no successor is elected, outgoing President Gemayel appoints a transitional military government headed by Gen. Michel Aoun. Prime Minister Selim al-Hoss refuses to recognize this government. Christians and Muslims renew fighting in Beirut for control.
- 1989** General Aoun launches a "war of liberation" against Syria, killing thousands. Aoun later consents to an internationally sponsored cease-fire. A charter of national reconciliation is proposed by the Lebanese National Assembly, meeting in Taif, Saudi Arabia, providing for the expansion of the assembly from 99 to 108 seats, to be divided equally between Christians and Muslims. René Moawad is elected president in November and is assassinated 17 days later. Elias Hrawi is elected president on November 24. General Aoun refuses to vacate the presidential palace.
- 1990** Samir Geagea, leader of the Phalangist militia, pledges his allegiance to President Hrawi. The Lebanese National Assembly approves constitutional changes, which are drafted in the Taif

- peace accord. Hrawi signs the constitutional changes into law.
General Aoun is violently evicted from the palace but escapes.
President Hrawi begins to consolidate control over Beirut by ordering the departure of rival militias from the city.
Prime Minister Selim al-Hoss resigns to make way for a government of national unity and is succeeded by Omar Karami.
- 1991** PLO guerrillas trade military blows with Israeli forces in southern Lebanon.
Clashes in south end with Lebanese government troops moving into the area.
- 1992** The government of Christian prime minister Omar Karami collapses after riots over economic troubles.
- 1994** Israeli-Hezbollah skirmishes on the border continue.
- 1995** Syrian-backed premier Rafiq al-Hariri wins a second term.
- 1996** Fighting between the Israelis and the Hezbollah continues to escalate, with the Israelis conducting extensive air raids and launching artillery barrages into southern Lebanon.
United States brokers an unsigned cease-fire.
- 1997** The United States lifts its official ban on travel to Lebanon.
Twelve Israeli commandos are ambushed in southern Lebanon and killed.
- 1998** Émile Lahoud is elected president. Selim al-Hoss is appointed prime minister for the third time.
- 1999** After talks with Syria break down, Israel declares that it will withdraw its troops from southern Lebanon.
- 2000** Israel completes withdrawal of its troops from southern Lebanon. Rafiq al-Hariri is appointed prime minister.
- 2001** Syria begins withdrawal of troops from Beirut and the surrounding area.
- 2002** A row with Israel ensues over Lebanon's plan to divert water from the Wazzani River, a major source of Israel's water supply.
Lebanon serves as host to the Arab League Summit for the first time in more than 35 years.
- 2003** Car bomb in Beirut kills a member of Lebanon's militant Hezbollah group.
Prime Minister al-Hariri strongly opposes an extension of President Lahoud's term in office.
- 2004** UN Security Council adopts a resolution aimed at Syria demanding that foreign troops leave Lebanon.
Parliament votes to extend President Lahoud's term by three years. al-Hariri resigns in protest.
- 2005** Former prime minister Rafiq al-Hariri killed in a massive car bomb attack in Beirut in February.

Pro-Syrian Lebanese government led by Omar Karami is dissolved as protests mount over al-Hariri's killing. Syrian troops finally evacuate Lebanon
Anti-Syrian alliance wins parliamentary elections. Fouad Siniora becomes prime minister.

Basic Fact Sheet

OFFICIAL NAME

Kingdom of Lesotho (Mmuso wa Lesotho)

ABBREVIATION

LS

CAPITAL

Maseru

HEAD OF STATE

King Letsie III (from 1990)

HEAD OF GOVERNMENT

Prime Minister Pakalitha Bethuel Mosisili (from 1998)

NATURE OF GOVERNMENT

Constitutional monarchy

POPULATION

1,867,035 (2005)

AREA

30,355 sq km (11,720 sq mi)

ETHNIC MAJORITY

Basotho

LANGUAGES

English (official), Sesotho, Zulu, Xhosa

RELIGIONS

Christianity, animism

UNIT OF CURRENCY

Loti

NATIONAL FLAG

Divided diagonally from the lower hoist side corner; the upper half is white, bearing the brown silhouette of a large shield with an ostrich plume, crossed spear, and club; the lower half is a diagonal blue band with a green triangle in the corner.

NATIONAL EMBLEM

The principal element of the coat of arms is a yellow native warrior's shield displaying a crocodile flanked by two heraldic horses, with the legend *Khotso, pula, nala* (Peace, rain, abundance) beneath. Behind the shield are an ostrich plume, a crossed spear (*assegai*), and a club (*knobkerrie*).

NATIONAL ANTHEM

"Lesotho, the Country of Our Fathers"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 12 (Moshoeshoe's Day), May 3 (King's Birthday), June 13 (Commonwealth Day), August 5 (Arbor Day), October 1 (National Sports Day), October 4 (Independence Day, National Day), various Christian festivals, including Good Friday, Easter Monday, Ascension Day, and Christmas, and Boxing Day (Saint Stephen's Day, the day after Christmas)

DATE OF INDEPENDENCE

October 4, 1966 (unification July 2, 1976)

DATE OF CONSTITUTION

April 2, 1993

GEOGRAPHICAL FEATURES

Lesotho, an enclave within the east-central part of South Africa, is the only country in the world entirely surrounded by another. It occupies an area of 30,355 sq km (11,720 sq mi), extending 248 km (154 mi) north-northeast to south-southwest and 181 km (112 mi) east-southeast to west-northwest.

Lesotho has three distinct geographical regions extending longitudinally across the country. The western lowlands, between the Caledon River and the Cave Sandstone foothills, cover approximately one-quarter of

the country's land area. They consist of undulating basins and plains ranging in width from 10 km (6 mi) to 64 km (40 mi), with altitudes averaging between 1,520 and 1,820 m (5,000 and 6,000 ft). The Cave Sandstone Terrace is an intermediate region between the highlands and the lowlands, with an average altitude of more than 1,820 m (6,000 ft). The Maluti Mountains, spurs of the main Drakensberg, with some peaks over 3,000 m (10,000 ft) high, mark the western edge of the eastern highlands, which are South Africa's main watershed. In this high plateau is Lesotho's highest point, Thabana Ntlenyana (3,482 m; 11,425 ft).

Lesotho

Lesotho is drained by tributaries of the Orange and Caledon rivers and by the Tugela River.

CLIMATE AND WEATHER

Lesotho's climate is dry and rigorous, with extremes of heat and cold. Mean annual temperatures in the lowlands range from 90°F in the summer to 20°F in the winter. Mean temperatures in the highlands range from 60°F to as low as 0°F. Hail and snow are frequent in the mountains, while the lowlands may have snow occasionally in winter. Most areas have an average annual rainfall of 635 mm (25 in), with the highest precipitation in the highlands and the lowest in the western lowlands and the Orange River valley. Rainfall is concentrated in October and April, and showers generally tend to be short and heavy. Thunderstorms are common in the rainy season.

Lowlands: 20°F to 90°F

Highlands: 0°F to 60°F

Average Rainfall: 25 in

FLORA AND FAUNA

The animal and plant life of Lesotho are determined both by geography and by the incursions of humans. At least a mile high in elevation throughout, the country is almost treeless, and the grass that covers the landscape has been drastically altered by erosion consequent to overuse and overgrazing. The few trees that exist include Cape willows and wild olives. White poplars have been introduced to the country, but attempts at reforestation have not been successful. Grasses include red oat grass. Aloe is also found in wetter regions.

Few large mammals now exist in the wild in Lesotho, as they have been eliminated by hunting and deforestation, though antelope and hare are still found. The bearded vulture, also called the African lammergeier, and the bald ibis both make Lesotho their home; both are near extinction. Raptors and larger mammals such as the leopard are protected in the Sehlabathebe National Park. The Maloti minnow, once prevalent in the streams and rivers of the county, has lost 90 percent of its original population as a result of the introduction of trout for recreational fishing. The construction of the Lesotho Highlands Water Project has placed further pressure on remaining populations, as the dams act as a source of alien predatory fish.

ETHNIC COMPOSITION

Apart from an estimated 2,000 Europeans and a few hundred Asians and *coforeds* (persons of mixed race), the population is entirely of Basotho stock. The Zulu-speaking Nguni, who constitute about 15 percent of the population, are sometimes classified as a separate group. The Basotho and the Nguni comprise a number of distinct groups, each with its own chief and totem. Belonging to the Nguni family are the Bathepu (or Zizi), Baphuthi, Maphetla, and Baroa. The principal divisions of the Basotho are the Bafokeng, Basia, Bataung, and Batlokoa.

LANGUAGES

The official languages of Lesotho are English and Sesotho. Sesotho is spoken by virtually all Basotho. Also called Sotho and Suto, it is a member of the Bantu family of languages. Zulu and Xhosa are also spoken.

RELIGIONS

Christianity is the religion of the majority of the Basotho; it is followed by some 80 percent of the population. The Catholic Church, under the archbishop of Maseru, is the dominant religious force in the country, with some 410,000 adherents. The Catholic Church operates several teacher-training colleges, high schools, secondary schools, and vocational schools, besides hospitals, seminaries, convents, and the famous Mazenod Institute. The largest Protestant denomination is the Church of Leso-

tho, founded by the Paris Evangelical Missionary Society and claiming 22 percent of the population as followers. The smaller Anglican Church lies administratively under the Church of the Province of South Africa. About 20 percent of the population follow traditional African religions and cults.

Religious Affiliations

Indigenous Beliefs	373,000

HISTORICAL BACKGROUND

The Sotho people have lived in southern Africa since the 10th century c.e. However, it was not until the 16th century that they arrived in the area known as Lesotho. When they arrived, they found the land already inhabited by the Khoisans, with whom they intermarried.

By the early 18th century the people of Lesotho had established contact with white traders followed by Voortrekkers (Boer pioneers). In addition to the growing white population, the land was coveted by the Zulu, who were attempting to expand their power and territory. The Basotho people came together around 1820 when Moshoeshe the Great established a stronghold against the Zulu near present-day Maseru. With more than 40,000 followers by 1840, Moshoeshe the Great was also concerned about the Boers and sought the support of the British. However, the British decided to attack the Basotho. When the British were defeated, the Boers launched their own attack, leading to the 1858 Free State–Basotho War, which was won by the Basotho. Seven years later, however, the Basotho lost to the Boers. Under continued pressure the Basotho placed themselves under the protection of the British in 1868.

Lesotho, known until independence as Basutoland, was under British rule as a Crown protectorate from 1868 to 1871 and from 1884 to 1966. British colonial policy toward Basutoland was characterized by parsimony and indifference. Actual governance was left to the numerous chieftains, who opposed all attempts to centralize and modernize the administration. The only condition of the protectorate agreement that was strictly observed by the British was the proviso that no white would be allowed to acquire land in Basutoland and that the land tenure system would remain unchanged. Much of the social and educational modernization of Lesotho is due to the work of Christian missionaries rather than the British Colonial Office. Britain guided the country to independence in 1966, and the British departure was peaceful.

At independence Lesotho became a constitutional monarchy. Moshoeshe II, the paramount chief, became king, and Leabua Jonathan became prime minister. Jonathan was head of the Basotho National Party (BNP), which

had won a parliamentary majority in the pre-independence elections. Through alliances with powerful chieftains, Jonathan gradually consolidated his power at the expense of the king, who was left with primarily ceremonial duties.

In 1970, when the opposition Basutoland Congress Party (BCP) seemed likely to win the parliamentary elections, Jonathan declared a state of emergency, suspended the constitution, and had opposition leaders arrested. The leaders were released the following year but forbidden to take part in politics. The state of emergency was eventually lifted in 1973, but clashes between the police and guerilla groups allegedly aligned with the BCP prompted Jonathan to impose strict security measures in 1974. Outside funding of political groups was forbidden, and the government was permitted to detain individuals for two months without legal aid. Jonathan also established a BNP militia, which harassed political opponents.

Dissatisfaction with Jonathan's rule grew, and in 1984 a general meeting of the BNP ordered him to call legislative elections. After opposition parties refused to participate because of registration irregularities, Jonathan declared all BNP candidates elected. In 1986 Jonathan was toppled in a coup led by the commander in chief of the army, General Justin M. Lekhanya. Government was established under the king, who was given legislative and executive powers. He ruled along with the six-man Military Council, led by Lekhanya, which effectively exercised power. Although it stated its commitment to democracy, the Military Council banned all political activity pending a new constitution, and no movement was made toward drafting the document.

The military regime that seized power in 1986 faced its first major crisis in 1990, when three members of the Military Council, two of whom were cousins of the king, were dismissed and arrested. In the ensuing dispute between the king and General Lekhanya, the king was dethroned, and his son, David Mohato Bereng Seeiso, was sworn in as King Letsie III. The accession of the new monarch was approved by an assembly of 22 traditional chiefs. Leaders of all seven registered political parties appealed to Lekhanya to repeal an order banning political activity and urged him to halt plans to make the National Assembly only an advisory body to the Military Council. On April 30, 1991, General Lekhanya was overthrown in a bloodless coup and replaced as chairman of the ruling Military Council by council member Colonel Elias Phisoana Ramaema. In 1992 the former king Moshoeshe returned from a sabbatical in Great Britain, not as monarch but as head of the royal family.

In 1993 general elections were held, in which the previously outlawed BCP swept all 65 assembly seats and the BCP leader Ntsu Mokhehle was named prime minister. In 1994 King Letsie dismissed the Mokhehle government, but nationwide protests forced the king to abdicate in favor of his father and also reinstate Mokhehle. King Moshoeshe was killed in an automobile accident in 1996,

and Crown Prince Letsie ascended the throne for the second time. In 1997 the aged and ailing Mokhehle bolted the BCP after much intraparty squabbling and formed a new party, the Lesotho Congress for Democracy (LCD). He resigned as prime minister in 1998.

In the elections that followed, the LCD captured 78 of 80 seats, and its leader, Pakalitha Bethuel Mosisili, was named prime minister. Violent opposition demonstrations against the new government led to Mosisili inviting the South African Development Community to send a multinational force to restore peace. In 1999 an Interim Political Authority was sworn in to organize new elections.

Elections were held in May 2002 under a new electoral system designed to increase opposition representation in the parliament. The LCD again won the elections, and Mosisili was once more named prime minister.

Politicians have done little to solve the real problems of Lesotho, one of the poorest countries in Africa. The majority of its population lives below the poverty line, eking out a living in subsistence farming. The effects of a three-year drought led Prime Minister Mosisili to appeal for international food aid in early 2004. The rural population, with no livelihood and little food, is migrating to the cities, where there is also extreme poverty.

In 2004 the first phase of the Lesotho Highlands Development Authority, a huge and scandal-ridden five-dam hydroelectric and water project, was initiated, providing water for South Africa and badly needed revenues for Lesotho.

LIST OF MODERN RULERS

- 1965–86** Joseph Leabua Jonathan (prime minister)
- 1986–91** Justin Metsing Lekhanya (chairman of the military council)
- 1991–93** Elias Phisoana Ramaema (chairman of the military council)
- 1993–94** Ntsu Mokhehle (prime minister)
- 1994** Hae Phoofolo (prime minister, interim)
- 1994–98** Ntsu Mokhehle (prime minister)
- 1998–** Pakalitha Bethuel Mosisili (prime minister)

CONSTITUTION

Under the constitution the paramount chief, or *motlotlebi*, is the sovereign, but his powers are subject to the constitutional guarantees of human rights and freedoms and to the legislative authority exercised by the king, who is the head of state, through a cabinet consisting of a prime minister, who is the head of government, and not less than seven other ministers, who together are known as the king's government. The king acts only on ministerial advice, except in some minor matters where he has absolute discretion. He is advised by the Privy Council, which consists of the

prime minister and two other members. The constitution specifically provides that all land in Lesotho is owned by the nation and is administered in trust for the nation by the king. The constitution also makes proviso for an impartial, four-member Public Service Commission.

The bicameral legislature consists of a 120-member elected National Assembly and a Senate composed of 22 principal chiefs and 11 members nominated by the king.

The High Court, the Court of Appeals, and subordinate courts compose the judicial system. Members of the High and Appeals Courts are appointed by the king on the advice of the government. Some 63 lower courts administer customary law for Africans.

By the terms of the 1993 constitution, the king became purely a figurehead with no executive or legislative powers. However, the elected government is still limited in exercising its constitutionally granted powers by three opposing forces: the autonomous military, the royal family, and traditional clan structures.

PARLIAMENT

Under the constitution the national legislature is the bicameral Parliament, consisting of the Senate and the National Assembly. The National Assembly consists of 120 members elected for five-year terms, 80 by direct vote from single-member constituencies by universal adult suffrage beginning at age 18, 40 by proportional representation. The Senate consists of 33 members, of whom 22 are chiefs and 11 are appointed by the chief of state.

POLITICAL PARTIES

Various political parties are allowed, and many have stood for election. The BCP won all of the seats in the first free parliamentary election in 1993. In the 1998 elections a new opposition party became the ruling majority; the LCD defeated the BCP, winning a majority of single-member 80 seats.

In 2002 parliamentary elections the LCD won 54.9 percent of the vote, retaining 79 of the 80 constituency-based seats, while the BCP won only 2.6 percent of the votes. The BNP came in second, with 22.4 percent of the vote, receiving 21 seats of the 40 chosen by proportional representation. Other active political parties in the 2002 election included the Lesotho People's Congress, National Independent Party, and Basutoland (or Basotho) African Congress.

LOCAL GOVERNMENT

For purposes of local government Lesotho is divided into 10 districts. Since 1970 each district has been adminis-

tered by a commissioner appointed by the central government. The districts are divided into a total of 22 wards headed by ward chiefs.

LEGAL SYSTEM

The High Court, headed by the chief justice, is the superior court of record, with unlimited original jurisdiction and appellate jurisdiction to hear appeals and reviews from subordinate courts. There is also a Court of Appeals of five judges. The subordinate courts consist of judicial commissioners' courts; first-, second-, and third-class resident magistrates' courts in each of the nine districts; 58 local courts; and 13 central courts. Customary laws are administered by paramount chiefs within their own tribal jurisdictions.

The judiciary in Lesotho is independent and has acted to limit police or military infringements of law and procedure on a number of occasions. Court decisions and rulings are respected and obeyed by the authorities. Civil suits alleging maltreatment are accepted and adjudicated. Verdicts of civil courts may be appealed to the High Court. In military cases, decisions may be appealed to officers of higher rank, including the Lesotho paramilitary force commander, but not to civilian courts. Under the system of Roman-Dutch law applied in Lesotho, there is no trial by jury. Habeas corpus applies to ordinary arrests, and few prisoners are held outside legal norms. Habeas corpus does not apply to those detained under the Internal Security (General) Act of 1984.

Though the courts are guaranteed by the constitution to be independent, the higher courts are sometimes subject to outside influence. Additionally, a large backlog of cases leads to lengthy delays in trials.

HUMAN RIGHTS

The government of Lesotho generally respects the human rights of its citizens. However, in 2000 there were unconfirmed allegations of torture by security forces and credible reports that the police, at times, used excessive force against detainees. Prison conditions are poor, and lengthy pretrial detention is a problem. Domestic violence is common, and women's rights continue to be severely restricted. Societal discrimination against the disabled is common. Some workers' rights are restricted. Government enforcement of prohibitions against child labor improved in 2000 in commercial enterprises that involve hazardous working conditions. The government generally respects the freedoms of religion and assembly; several nongovernmental organizations operate openly.

FOREIGN POLICY

As an enclave within South Africa, Lesotho's principal link to the outside world is through Pretoria. From 1976, however, until the collapse of apartheid and white minority rule in South Africa, relations between the two countries were strained, as Lesotho was accused of harboring African National Congress militants. Pretoria was involved in the overthrow of Chief Jonathan; the military government that took over was more favorable to Pretoria. South African troops were called in to help quell unrest in 1998, and friendly relations have ensued between the two countries. Lesotho is an active member of the Southern African Development Community.

DEFENSE

Prior to 1986 Lesotho had a paramilitary force of about 1,000 in addition to the BNP militia of 4,000. Following the 1986 coup the paramilitary forces were reorganized as the Royal Lesotho Defense Force, now called the Lesotho Defense Force, which includes an army and an air wing of an estimated 2,000 members. The nation has no navy, and its air units consist of support craft. It has received military assistance from Great Britain, South Africa, and Israel.

The prime minister also holds the title of minister of defense and internal security. In 2004 the country spent \$32.3 million on defense, 2.3 percent of gross domestic product (GDP).

ECONOMY

Small, landlocked, and mountainous, Lesotho's only important natural resource is water. Although drought has decreased agricultural activity over the past few years, the completion of a major hydropower facility in January 1998 permitted the sale of water to South Africa, generating an important source of income for Lesotho.

The Lesotho economy is based on subsistence agriculture, livestock, and remittances from miners employed in South Africa. The number of such mine workers has declined steadily over the past several years. In 1996 their remittances added about 33 percent to GDP, compared to the addition of roughly 67 percent in 1990. A small manufacturing base depends largely on farm products that support the milling, canning, leather, and jute in-

dustries. Agricultural products are exported primarily to South Africa. Proceeds from membership in a common customs union with South Africa form the majority of government revenue. The pace of parastatal privatization has increased in recent years.

Civil disorder in September 1998 destroyed 80 percent of the commercial infrastructure in Maseru and two other major towns. Most firms were not covered by insurance, and the rebuilding of small and medium business proved a significant challenge in terms of both economic growth and employment levels. Output dropped 10 percent in 1998 and recovered slowly in 1999.

A rapidly growing textile and apparel industry bolstered the country's economy from 2000 to 2004; that industry provides 43 percent of all foreign exchange. However, by 2005 there was a downturn in the textile industry as a result of global quota changes. Extreme inequality of income and high unemployment rates continue to plague the country.

ENVIRONMENT

Lesotho's growing population is straining the resources of the land. Overgrazing, severe soil erosion, and soil exhaustion continue to limit the productivity of agricultural lands. While the country has water resources in the highlands, much of these are diverted to South Africa.

LIVING CONDITIONS

The United Nations Human Development Index (HDI) ranked Lesotho 145th among 177 nations with regard to life expectancy, education, and standard of living. In 2005 life expectancy in Lesotho was only 36.7 years, partly as a result of the HIV/AIDS epidemic, which has infected almost a third of the population. The literacy rate in 2003 was 85 percent, while combined gross enrollment at primary, secondary, and tertiary schools in 2001–02 was 65 percent of eligible students. Per capita GDP for residents of Lesotho in 2004 was \$3,200; the Basotho in particular are among the poorest people in the world. Half the population lives below the poverty line.

Basic services are unavailable to most of the population, about 70 percent of whom live in rural areas. Most of the population lives in the lowlands, where it is possible to farm, but the soil has been so overgrazed and overcultivated that even subsistence farming is difficult. Village life revolves around agriculture. Women are responsible for the domestic chores, while the husbands work in the fields or as herders. In addition to domestic responsibilities, women often do craftwork, such as grass weaving. Housing in rural areas is simple, built of whatever materials are close at hand, be they stones, bricks, or cinder blocks, though not wood. The government is encouraging more private ownership through the Land Policy Review Commission and the Lesotho Building Corporation.

In general, the people remain loyal to the system of chieftaincy and institutions such as initiation schools, which perpetuate traditional values, although these are declining in importance. Transport in the countryside is by bus or minivan taxis.

Urban life is a blend of traditional and Western cultures. In Maseru there are shops and markets that offer regional crafts and goods. There are also modern Western-style hotels, restaurants, and nightclubs, though many of these were either burned or damaged by looting following the general election in 1998. Other large towns are Leribe, Berea, and Mafeteng. The urban population growth rate for 2000–05 was 4.6 percent.

HEALTH

Any discussion of health-care issues in Lesotho in the new millennium begin with HIV/AIDS. As of 2003 the prevalence of the disease was 31 percent, one of the highest rates in the world. That year there were 29,000 deaths from AIDS, and 320,000 people were living with the disease; an estimated 100,000 children were orphaned by AIDS. All of this puts an enormous strain not only on the already hard-pressed health-care system but also on the economy and society as a whole. Homeless children live on the streets of Maseru and other large cities, as orphan-

ages are too few. Families are destroyed as mothers join the risky sex trade simply to feed their hungry children.

Other major health problems include pellagra and kwashiorkor, which stem from poor nutrition and inadequate hygiene. Between 1995 and 2002, 46 percent of children under five years of age were considered undernourished, while 12 percent of the total population was undernourished as of 2001. Poor harvests, rising costs of food, and several years of drought exacerbated the food situation to the point where the prime minister declared a state of emergency in 2004. Neither are sanitary conditions improving. In 2002 only 37 percent of the population had access to adequate sanitation, 76 percent to safe drinking water.

Tuberculosis is another serious health problem. There were an estimated 449 cases of tuberculosis per 100,000 people in 2002; 87 percent of one-year-olds were vaccinated for tuberculosis that year. Lack of iodine in the diet has also led to a high prevalence of goiter: 43 percent of children suffered from it in 1996.

The government spent 5.3 percent of GDP on health in 2002, yet there were only 5.4 doctors for every 100,000 people as of 2004. In 1999, between 80 and 95 percent of the population had access to affordable essential drugs.

FOOD AND NUTRITION

Scarcity largely affects the Sotho diet. The country's cuisine is similar to that of South Africa in that it is heavily reliant on maize, which can be eaten either as cornbread or as a thick paste. Meats, when available, include chicken, mutton, and beef. Milk and milk products, especially sour milk, are also popular

Lesotho is a water-rich country and sells water to South Africa, but large numbers of its own people have poor access to water and must fetch it from miles away. Sorghum beer is often home-brewed. Most Sotho skip lunch, the main mealtimes being breakfast and dinner.

Nutrition in the country is generally poor. Diseases caused by bad nutrition are common and widespread. Deficiencies in niacin and iodine, for example, cause pellagra and goiter, respectively, at high rates. As of 2001, 12 percent of the population was undernourished. Periodic droughts worsen this situation.

Food and Nutrition

Undernourished % of total population: 12.2
 Daily Available Calories per capita kcal: 2,300
 Amount of Cereal Available per person per year kg: 244.5
 Amount of Fruits and Vegetables Available per person per year kg: 26.4

STATUS OF WOMEN

All Basotho have fairly equal opportunities within the confines imposed by political reality, although in the areas of property and contracts the rights of married women independent of their husbands are limited by custom and laws. For example, married women cannot apply for loans without their husband's written consent. Lesotho's constitution perpetuates the minority status of Basotho women who are married under customary law: A woman is considered a legal minor while her husband is alive.

Nevertheless, women in Basotho society have traditionally been a stabilizing force, due to the absence of the hundreds of thousands of men working in South Africa. The fuller use of women's abilities will depend on progress in providing education, health, and other social services to rural areas.

Domestic violence is reportedly widespread but is becoming increasingly socially unacceptable. Women's rights organizations have highlighted the importance of women's participation in the democratic process as part of a broader effort to educate women about their rights under both customary and common law. A total of 14 of the members of the parliament elected in 2002 are women.

WORK

As of 2000 the labor force was estimated at 838,000; 86 percent of the larger population is involved in subsistence agriculture, producing corn, wheat, pulses, sorghum, barley, and livestock. Meanwhile, as much as 35 percent of male workers are not employed in Lesotho; rather, they find work in South Africa, in the mines or in agriculture.

The official unemployment rate in 2002 was estimated at 45 percent, but other estimates put it higher, especially among the young. Industry in the country includes food, beverages, textiles, apparel assembly, handicrafts, construction, and tourism. By 2004 the textile industry was Lesotho's biggest employer, with more than 50,000 workers supplying garments to international companies such as Wal-Mart. Many of these firms, it has been claimed, operate under sweatshop conditions. Changing textile quotas threatened this industry in 2005.

The constitution recognizes the right to form unions, bargain collectively, and strike (except for civil servants), yet only about 10 percent of the country's labor force is unionized. Of the remainder, most are engaged in subsistence agriculture or employment in South African mines. As the textile industry has become increasingly important to the economy, the government has shown a tendency to crackdown on deviant activity in this vital industry; in 2003 two striking textile workers were shot and killed by police. Unions include the Lesotho Clothing and Allied Workers' Union and the Factory Workers' Union. The Congress of Lesotho Trade Unions, the Lesotho Federation of Democratic Unions, and the Lesotho Trade Union Congress are small federations of unions. While 14 is the minimum work age, \$73 per month is the minimum wage, and a 45-hour workweek is the law, such labor legislation is seldom obeyed.

EDUCATION

Education is one of Lesotho's success stories, a holdover from missionary activity during the 19th and 20th centuries. Education is free, universal, and compulsory for seven years, from ages six to 13. Schooling consists of 12 years total, as divided into seven years of primary school, three years of middle school, and two years of secondary school. The final two-year course leads to the Cambridge Overseas School Certificate. Until the early 1970s primary and secondary education was almost entirely in the hands of Evangelical, Roman Catholic, and Anglican missions, but the public school system is gradually gaining ground.

The academic year runs from January to December. The medium of instruction is English, but Sesotho is taught as the vernacular from the primary grades on.

Teacher training is provided in seven institutions. Vocational training is provided at nine vocational schools.

Adult education is provided at an adult-education center in Maseru.

The National University of Lesotho was founded in 1975, with the former Roma campus of the University of Lesotho, Botswana, and Swaziland as its nucleus. The Lesotho Agricultural College, in Maseru, was founded in 1955. In 1997 all higher-level institutions had 6,108 pupils and 545 teaching staff.

In 2002 net primary-school enrollment was 86 percent, while only 23 percent of eligible students attended secondary schools. The student-to-teacher ratio in primary schools approaches 50 to 1. Public expenditures on education in 2001 were 10.4 percent of GDP, and the country has a relatively high literacy rate, around 85 percent.

SCIENCE AND TECHNOLOGY

The Lesotho Ministry of Agriculture directs research in crops, livestock, and agronomy through the Agricultural Research Division of its Department of Field Services and in forestry through its Department of Conservation and Forestry. Additionally, the National University of Lesotho conducts research through its Faculty of Agriculture. Both the Geological Survey and Lesotho Agricultural College are in Maseru.

Little other research and development is done in the country. Between 1994 and 1997, 13 percent of students in colleges and universities were studying science, math, or engineering courses. Some students go abroad for higher technical training.

MEDIA

Lesotho has several daily and nondaily newspapers, including the official weekly publication *Mochochonono*. South African daily newspapers also circulate within the country. Other weeklies include one owned by a Catholic mission and one by the Basotho National Party. The national news agency is LENA, founded in 1983 with UN Educational, Scientific, and Cultural Organization aid. Reuters maintains a bureau in Maseru.

Though the constitution provides for freedom of speech and the press, the government does use coercion and harassment to discourage opposition voices. A favorite target is *MoAfrika*, both a newspaper and a radio station, against which the government has repeatedly issued heavy fines. Public support inside Lesotho, however, has kept oppositions voice alive. Reporters without Borders ranked Lesotho 99th out of 167 nations in its 2004 survey of world press freedom.

Radio Lesotho is under the administrative control of the Lesotho National Broadcasting Service. The Catholic School Secretariat operates the radio station 7PA22, which broadcasts educational programs with a shortwave transmitter. Lesotho has three television transmitters and 16 sets for every 1,000 people, by a 1999 estimate. There are four private radio stations in all, but radio and television broadcasts from South Africa easily reach Lesotho.

In 2002 there were an estimated 21,000 Internet users and 92,000 cellular phone users.

CULTURE

Intensely tribal, Lesotho culture places value on agrarian pursuits and on its history, a cornerstone of southern African history. The legacy of King Moshoeshe, founder of the nation, still influences modern Lesotho, as does its agrarian and village society.

Music is perhaps the strongest single element of Lesotho culture. The passage of the seasons, the importance of cattle, and the rites of passage in the life of farming families are celebrated in song, which employs group singing and chanting, and in dance. Song is accompanied by a variety of instruments. Herders play a traditional instrument called the *letsiba*, made from a pole, with a feather as

the reed. Other instruments include the stringed *thomo*, a female instrument; the *setolo-tolo*, a stringed instrument played by men with the mouth; drums; accordions; and guitars. Dances use high stepping and kicking and are accompanied by much hand clapping. Some typical dances are the “gum-boot dance” and the *lefela*, both of which are influenced by the Sotho tradition of going to work in South Africa’s mines. Songs also display this migrant worker tradition; the *difela* has lyrics telling of the travels, loves, and viewpoints of the migrant workers.

Written literature began appearing in the 19th century, the product mostly of missionary schools and converts to Christianity. *Chaka*, one of the first books about southern Africa, was written in Sesotho by Thomas Mofolo in the early years of the 20th century. Journalism is also a proud tradition in Lesotho; the newspaper *Leselinyana la Lesotho* began publishing in the late 19th century.

Museums include the Lesotho National Museum, in Maseru, which has collections of ethnography, geology, and archaeology. Similar collections can be found at the Morija Museum. Significant library collections are found at the Lesotho National Library, in Maseru, and the National University of Lesotho. Craftwork is still practiced in the villages and includes pottery and grass weaving, notably of traditional Sotho hats, which are sold at shops in Maseru.

FOLKLORE AND MYTHOLOGY

One of the earliest myths of the Sotho or Lesotho is that of Kholomodumo, a mythical monster who, at the beginning of time, ate all of the human race except for an old woman. This woman subsequently gave birth to twins, who killed the monster, disgorging all the humans. Along this line, one of the best known of Lesotho folktales is about a boy named Sankatana who saves the world from a giant monster. Another creation myth involves the first human, who emerged from an immense lake of reeds.

Rituals often involve attempts at warding off bad luck. A rainmaking ritual has a group of young women and girls stealing a wooden spoon.

Folktales, or *distsono*, and so-called praise poems, or *diboko*, also form rich folkloric traditions in Lesotho. Audience participation is often used in the telling of these.

Praise poems often relate actual historic deeds, and King Moshoeshoe figures in more than one.

As in much of African culture, proverbs are a potent teaching tool and index to ancient times. Some Lesotho proverbs include "A person is a person because of other persons," "He that digs up a grave for his enemy may be digging it for himself," "Peace, rain, prosperity," and "Peace is prosperity."

ENTERTAINMENT AND RECREATION

Village life revolves around seasonal celebrations and those that mark rites of passage, including marriages and coming of age. Such events are celebrated with song and dance, both traditional and more modern.

Throughout Lesotho the radio is a vital source of entertainment and a link to the outside world. Sotho people listen to music on their local channels as well as on ones received from South Africa and from the BBC, which built a radio transmitter in the country.

In larger towns and cities, television, videos, and cinemas are also popular. Such entertainment content often comes from South Africa, but movies may also be imported from other countries.

ETIQUETTE

As a system of respect figures largely in the chieftain culture of the Sotho, children in Lesotho are instilled at an early age with a sense of deference and reverence for their elders. Such respect is built into the very greetings and responses that children give adults. The Sesotho words for father, *ntate*, and for mother, *mme*, are added to the person's name or title, so that the proper address ends as "my father" or "my mother." It is also proper to greet people with both hands.

Hospitality and generosity are also virtues taught at an early age. In a country where scarcity is the norm, it is considered polite to share food with visitors.

FAMILY LIFE

Traditional family life for the Sotho was built strongly along clan lines. Marriages were arranged, and after the bride price was paid, the woman would move in with the husband's family. Patriarchal in structure, the family was ruled by the man yet held together by the woman, who took on all the domestic chores as well as craftwork. Inheritance was through the male line only; women had few rights of inheritance.

Much of this traditional way of life is breaking down under the pressures of the modern world, especially with

the Sotho tradition of migrant labor, in which the man of the house might be missing for long periods of time working in South Africa or elsewhere, sending back remittances to his family. Much more of the burden of head of household falls on the women in such cases.

Traditional family ties and structures are also breaking down as families move to urban areas in search of a better future. Women are gaining more rights as a result, though by law they are still considered minors while their husbands are alive.

PERSONAL APPEARANCE

Dress in Lesotho is similar to that of South Africa, with an emphasis on Western styles. The traditional costumes of colorful small skirts for men, with tassels around the ankles, are only worn for special dance events. Otherwise, apparel is strictly functional. Women usually wear dresses and cover their hair with hats or headscarves. Colorful blankets are worn by many rural people in Lesotho in place of coats. Traditional grass-woven hats are also worn by men and women.

SPORTS

Soccer is the most popular sport in the country; it is played by school children and professionals alike. The country has amateur teams and a 16-team premier league. However, as most of Lesotho's top players play for South African teams, where the pay is higher, the country does not compete well internationally.

Other popular sports include judo, tae kwon do, boxing, long-distance running, tennis, and horseracing. Lesotho sent two runners and one tae kwon do competitor to the 2004 Olympics. Skiing is new to the country, with at least one village in the Maluti Mountains providing skiing opportunities four months a year.

CHRONOLOGY

- 1966** Lesotho is granted independence under the Independence Constitution. Moshoeshoe II is proclaimed king. In a trial of strength between the king and Prime Minister Leabua Jonathan, the king is forced to yield.
- 1967** Lesotho National Development Corporation is founded.
- 1969** Lesotho, Botswana, and Swaziland renegotiate customs union agreement with South Africa.
- 1970** Lesotho holds first national elections. When the electoral defeat of his Basotho National Party appears imminent, Prime Minister Jonathan

- proclaims an emergency and suspends the constitution.
Opposition leaders are arrested. The king is placed under house arrest and is later exiled for nine months.
- 1971** All political prisoners are released under a general amnesty.
- 1973** An interim National Assembly is constituted with nominated members.
- 1974** Alleging an attempted coup by the opposition, Prime Minister Jonathan launches brutal reprisals against his enemies.
Lesotho demands the return of Basotho territories conquered by South Africa in the 19th century.
- 1975** National University of Lesotho is established by nationalizing the Roma campus of the University of Botswana, Lesotho, and Swaziland.
- 1976** In a move toward political reconciliation, Prime Minister Jonathan appoints two members of the opposition to his cabinet.
Lesotho requests a special UN Security Council meeting to consider its charges of South African aggression for closing the Transkei border.
- 1979** Chief Jonathan announces the imminent establishment of a regular army drawn from paramilitary police units.
- 1980** Lesotho introduces a new currency called the loti to replace the South African rand. However, Lesotho remains within the Rand Monetary Area.
- 1982** South African forces raid Maseru in pursuit of African National Congress (ANC) dissidents.
- 1983** South Africa blockades Lesotho to punish Prime Minister Jonathan's regime for granting asylum to ANC dissidents.
- 1986** Jonathan is ousted in a pro-South African coup led by Gen. Justin Lekhanya, who is sworn in as head of government.
- 1987** Charles Mofeli, leader of the opposition United Democratic Party, is detained for a week after petitioning the king for a return to parliamentary democracy.
- 1988** Five opposition parties appeal to the Organization of African Unity and the Commonwealth to use their influence to restore civilian government.
- 1990** Lekhanya strips King Moshoeshoe II of his power and sends him into exile. Moshoeshoe's son, Prince Mohato, is sworn in as King Letsie III.
- 1991** Lekhanya is ousted by rebel army officers in bloodless coup and replaced by Colonel Elias P. Ramaema.
- 1993** The Military Council is dissolved, and a democratic constitution is announced. BCP comes to power in parliamentary elections.
- 1995** King Moshoeshoe II is restored to the throne but dies in a car accident and is again replaced by his son Letsie III.
- 1998** The new LCD wins all but one of the seats in the assembly. Pakalitha Mosisili becomes prime minister.
The opposition stages protests against the election, and the government calls in help from South Africa to restore order.
- 1999** South African and Botswanan troops withdraw from Lesotho.
- 2000** King Letsie III's marriage draws huge crowds.
- 2001** Political parties agree on a new election plan in February, expanding the National Assembly to 120 members, 40 of whom are to be elected by proportional representation.
Unemployment in Lesotho reaches 50 percent.
- 2002** LCD wins majority of seats in the expanded National Assembly.
Former chief executive of Highlands Development Authority, Masupha Sole, found guilty of accepting bribes.
- 2003** Harsh winter drought cuts cereal production by 60 percent.
- 2004** The third year of drought forces Prime Minister Mosisili to declare state of emergency.
The multibillion dollar Highlands Water Project opens.
- 2005** One of the six textile factories that closed down in 2004 reopens, raising hopes that Lesotho's garment industry is recovering.
Independent studies show that more than 70 percent of the Lesotho labor force is unemployed.

LIBERIA

Basic Fact Sheet

OFFICIAL NAME

Republic of Liberia

ABBREVIATION

LR

CAPITAL

Monrovia

HEAD OF STATE & HEAD OF GOVERNMENT

President Ellen Johnson-Sirleaf (from 2006)

NATURE OF GOVERNMENT

Republic

POPULATION

3,482,211 (2005)

AREA

111,370 sq km (43,000 sq mi)

MAJOR ETHNIC GROUPS

Kpelle, Bassa, Gio, Kru, Grego, Mano, Krahn, Gola

LANGUAGES

English (official), more than 20 regional dialects

RELIGIONS

Animism, Islam, Christianity

UNIT OF CURRENCY

Liberian dollar

NATIONAL FLAG

A variation of the U.S. flag, with 11 horizontal stripes, alternately red (six) and white (five), and a five-pointed

white star in a blue square, five stripes high, in the upper left corner

NATIONAL EMBLEM

A heraldic shield depicting a dove of peace carrying an open scroll, the sun rising over a sea on which there is a ship under full sail, and, on the land in the foreground, a palm tree, a plow, and a spade; below the crest is the name of the republic, above is the national motto, "The Love of Liberty Brought Us Here."

NATIONAL ANTHEM

"All Hail, Liberia, Hail"

NATIONAL HOLIDAYS

January 1 (New Year's Day), February 11 (Armed Forces Day), second Wednesday in March (Decoration Day), March 15 (J. J. Roberts's Birthday), May 14 (Unification Day), July 26 (Independence Day), August 24 (Flag Day), first Thursday in November (Thanksgiving Day), November 12 (National Memorial Day), November 29 (William Tubman's Birthday), various Christian festivals

DATE OF INDEPENDENCE

July 26, 1847

DATE OF CONSTITUTION

July 3, 1984

GEOGRAPHICAL FEATURES

Liberia is a few degrees north of the equator on the southern coast of West Africa. It extends 548 km (341 mi) east-southeast to west-northwest and 274 km (170 mi) north-northeast to south-southwest, with a total area of 111,370 sq km (43,000 sq mi). Its Atlantic Ocean coastline is 579 km (359 mi) long. Liberia's international land boundary of 1,585 km (945 mi) is shared with three countries: Guinea, Côte d'Ivoire, and Sierra Leone.

Topographically, Liberia is divided into three regions. The coastal region is a belt of gently rolling plains 30 to 55 km (19 to 31 mi) wide, with tidal creeks, shallow lagoons, and swamps. The plains rise slowly to a plateau, with elevations varying from 183 to 610 m (600 to 2,000 ft). The eastern section of the country is rugged and covered with forest, while the far northern region has densely forested, mountainous terrain culminating in Mount Wuteve (1,380 m; 4,528 ft). Other prominent features are the Nimba Mountains and the Wologisi Range.

Liberia

The country's seven major rivers all flow perpendicular to the coast and are spaced at regular intervals. Sandbars obstruct the mouths of all rivers, making their entrances hazardous. Floods are common in the rainy season.

Elevation Extremes meters:
 Lowest: Atlantic Ocean 0
 Highest: Mount Wuteve 1,380

----------	---------

CLIMATE AND WEATHER

Liberia has two rainy seasons in the southeast and one rainy season, from May to October, in the rest of the country. From Monrovia, with annual average rainfall of 4,650 mm (183 in), precipitation decreases toward the southeast and north, decreasing to 2,240 mm (88 in) at Ganta. Although there are wide variations in precipitation patterns, most of the rainfall comes as heavy downpours that may last several hours or several days.

Temperatures are uniformly warm throughout the country, with only small daily variations. The average mean temperature is about 28°C (82°F), and the maximum rarely exceeds 38°C (100°F). In the north temperatures may rise to 44°C (111°F) in March and fall to 9°C (48°F) in December or January.

Climate and Weather

Mean Temperature: 82°F
 Temperature Range in the North: 48°F to 111°F
 Average Rainfall
 Monrovia: 183 in
 Ganta: 88 in

FLORA AND FAUNA

Liberia and its neighbors Côte d'Ivoire and Sierra Leone together contain one of the largest evergreen forests on the African continent. Trees such as mahogany, cotton, teak, oil palm, kola, ironwood, and rubber are all indigenous in quantities great enough to allow for commercial use. However, as these grow alongside other noncommercial trees, harvesting them is not easy. In total there are some 235 species of trees. Commercial rubber comes from the *Hevea brasiliensis*. Coffee plantations are found throughout Liberia, and cotton, cacao, cassava, and rice are also cultivated. Fruit trees include mango, pineapple, papaya, avocado, and numerous citrus varieties.

The dense forest is home to monkeys, chimpanzees, antelope, and anteaters. Fewer in number, and some endangered if not almost extinct, are the elephant, pygmy hippopotamus, leopard, and short-horned buffalo. Most of the 15 species of snakes found in Liberia are poisonous. There are also three types of crocodile and many species of lizards. Bats and scorpions are also common, as are wild pigs and porcupines in areas with little human habitation. The avian population includes woodpeckers, flamingos, cowbird, and wild guinea. Numerous fish are found in the waters of Liberia, and insects include the tsetse fly, mosquitoes, and termites.

ETHNIC COMPOSITION

The principal ethnic cleavage is between Americo-Liberians, described as the descendants of the early settlers, and the tribal and indigenous peoples, described as aborigines. Few of those classified as Americo-Liberians are the actual descendants of original slaves from America. Their ranks include over 4,000 Congos, whose ancestors were freed from captured slave ships, and detribalized people of indigenous origin. Therefore, the group's members are usually called "civilized" or "lettered" people. The aboriginal people, who make up 95 percent of the population, are themselves divided into nearly 28 tribes, though only 16 are recognized as major tribes by the government.

The constitution does not permit nonblacks to become citizens. The non-Liberian resident population is estimated at 30,000, of whom five alien groups are numerically significant: Ghanaians, Lebanese, Americans, Spaniards, and Dutch. Ghanaians and Lebanese are generally permanent residents who regard Liberia as their home country. Most Ghanaians are Fanti fishermen, while most Lebanese are merchants and can be found in almost every town. Most of the Europeans and Americans are engaged in private or government-sponsored enterprises, and they remain in the country for limited periods only. Germans, Swedes, British, and Italians are also represented in the country.

LANGUAGES

The official language is English, although less than one-third of the population can speak it, and less than one-quarter can read and write it.

The native languages of Liberia fall into three subgroups of the Niger-Congo family of languages: the western and eastern branches of Mande, the southern branch of the West Atlantic, and the Kru branch of Kwa.

Multilingualism is common, and intertribal communications are usually carried on in pidgin English or through the more prestigious of the lingua francas, such as Vai and Mandingo.

RELIGIONS

Liberia is often referred to in official documents as a Christian state, and Christians once made up at least 71 percent of the population. However, according to 2002 estimates only 40 percent of the population was Christian, while another 40 percent practiced traditional animist beliefs. Islam was also gaining importance in the country, claiming about 20 percent of the population. The constitution provides for the free exercise of religion and stipulates that no denomination be given preference by the state and that no religious tests be laid down for entry into civil offices or for the exercise of civil rights. However, discrimination has been reported against the Muslim community.

Despite their minority status, Protestants—particularly Methodists, Baptists, and Episcopalians—constitute the social and political elite; they have formed virtually a ruling class since 1847. Almost all Protestant denominations are represented in the country, some by more than one missionary organization. The Roman Catholic Church is organized under the vicar-apostolic of Monrovia.

Indigenous Beliefs	1,393,000
Muslim	696,000

HISTORICAL BACKGROUND

The indigenous peoples of Liberia migrated there from the north and east between the 12th and 16th centuries. Portuguese explorers visited the coast in 1461, and Europeans traded with the local tribes during the next three centuries.

Liberia was settled in 1822 by freed black slaves from the United States repatriated to Africa under the auspices of the American Colonization Society and six other philanthropic organizations. Black emigration from the United States continued until 1892, and these settlers were augmented by Africans freed from slaving vessels by the British and American navies. Each society established its own independent territory, such as Mississippi in Africa, at Greenville, and Maryland in Liberia, around Harper. The first governors were agents appointed by the American Colonization Society, and only in 1847 was the independent Republic of Liberia established, with a U.S.-type constitution.

Liberia was never an actual colony of the United States, and relations between the two countries were not very close until the mid-1920s. Liberia received annual subsidies from the various colonization societies until 1847, but after the establishment of the republic American assistance was suspended. To avert a financial breakdown, Liberia—whose budget in 1847 was only \$8,000—turned to Europe. The period from 1891 until 1925 is known as the “European period” of Liberian history, and it was Europe, rather than the United States, that helped the new republic establish itself as a viable nation. Links with the United States were renewed in 1926 with the arrival of the Firestone Tire and Rubber Company in Liberia.

During the presidency of William Tubman, after World War II, other foreign interests were encouraged, and the influence of the United States gradually diminished. On his death in 1971, Tubman was succeeded by his vice president, William Tolbert. Tolbert maintained Liberia’s ties with the West but also developed relations with the Eastern Bloc and with Liberia’s neighbors. Tolbert’s domestic performance was less than distinguished, as characterized by a series of lackluster campaigns to galvanize Liberians economically and politically.

On April 12, 1980, Tolbert was assassinated in a military coup led by Sgt. Samuel K. Doe, who took over as chairman of the People’s Redemption Council (PRC), suspending the constitution and banning all political parties. Opposition to and divisions within the PRC gave rise to a series of upheavals, alleged coup attempts, and resignations by or dismissals of military and civilian members of the government in the early 1980s.

At the end of 1981 Doe undertook to return the country to civilian rule by April 1985. A new constitution, similar to the precoup document, was drafted and in July 1984 was approved by a national referendum. The ban on political activity was lifted, and a period of intense political turbulence followed. Elections were held in October 1985, and amid widespread allegations of flagrant irregularities Doe was elected president.

In November 1985 another coup was attempted and failed. On January 6, 1986, Doe was sworn in as elected president. The cabinet was reshuffled several times in 1987, and Liberia went through another period of political turbulence early in 1988. A coup plot was discovered in March, and another was attempted and put down in July.

On December 24, 1989, an armed insurrection began, led by Charles Taylor of the rebel National Patriotic Force (NPF). For a time it seemed no more than a regional revolt in the northeast, but by June 1990 rebels were on the outskirts of Monrovia, and President Doe and his supporters became besieged in the presidential mansion. The conflict was fueled by tribal differences. Doe’s followers were mostly Krahn or Mandingo tribesmen, while Taylor’s were mostly members of the Gio and

Mano tribes. Doe's army slaughtered thousands of Gio and Mano noncombatants, for which the NPF retaliated by killing Krahn and Mandingo civilians. The army abuses angered many Liberians, who then joined Taylor's original force of about 150 men, bringing the total number to more than 4,000 well-motivated fighters. By contrast, Doe's army of some 5,000 men, many of them forcibly conscripted, shrunk through mass desertions.

By July 1990 the NPF had split into two rival factions, one led by Taylor and the other led by Prince Johnson (whose first name is a common one in Liberia and not an indication of royalty). In August the Economic Community of West African States (ECOWAS) landed a peacekeeping force in Monrovia and set up an interim government headed by Amos Sawyer.

On September 9, 1990, when Doe went to ECOWAS headquarters to plan his escape, he and his men were intercepted by Johnson. By the next day Doe had been mutilated and killed. On September 21 Taylor announced a cease-fire, which lasted less than a week. ECOWAS later sponsored a peace agreement, which was signed on November 28, 1990, by Taylor, Johnson, and Major Wilmott Diggs, who then represented the remaining followers of Doe. However, even though he signed the truce, Taylor refused to accept the interim government of Amos Sawyer, who had been sworn in as president on November 22, and a stalemate followed.

A final cease-fire was signed on February 13, 1991, ending the stalemate, and an agreement was made by all three parties to take steps to form an interim government. The cease-fire was signed by Taylor, Johnson, and General Hezekiah Bowen, the commander of the remnants of Doe's army. The accord stated that until a new government was chosen, the provisional administration headed by Amos Sawyer would remain in power. Despite the cease fire, fighting continued, spilling over into Sierra Leone. In 1996 the fighting was so intense in Monrovia that 3,000 deaths occurred and almost all the capital's buildings were either damaged or destroyed. Nevertheless, with the aid of peacekeepers and international observers, free and open presidential and legislative elections were held on July 19, 1997, during which the former faction leader Charles Ghankay Taylor and his NPP overwhelmingly won, with 75.3 percent of the vote, defeating 14 other political parties. After seven years of civil war, the situation remained volatile, with occasional outbreaks of fighting. The Taylor government reacted by consolidating its power and curtailing political opposition.

All told, over 200,000 were dead and 700,000 displaced as a result of the civil war, and the nation's infrastructure was in shambles. There was hardly any health-care system, and the capital was without electricity and running water. Further, the Taylor regime proved corrupt. He and his family managed to loot the resources of Liberia and leave the nation destitute. Taylor supported Sierra Leone's Revolutionary United Front, earning diamonds

for his efforts; as a consequence, the United Nations imposed sanctions.

In 2002 a rebel group called Liberians United for Reconciliation and Democracy (LURD) began a vigorous campaign to oust Taylor. A year later rebels, including the LURD, controlled two-thirds of the country. On August 11, 2003, Taylor stepped down and went into exile in Nigeria. Gyude Bryant, a businessman seen as a coalition builder, was selected as interim president, or chairman, and it became his task to prepare the nation for elections in 2005. Taylor, it was discovered, had stolen some \$100 million in public funds, leaving Liberia the world's poorest nation. In 2006 Liberia asked Nigeria to extradite Taylor. Ellen Johnson-Sirleaf was elected president in 2005, the first woman to be elected as an African head of state.

LIST OF MODERN RULERS

1944–71	William V. S. Tubman (president)
1971–80	William Richard Tolbert (president)
1980–84	Samuel Kanyon Doe (chairman of the People's Redemption Council)
1984–90	Samuel Kanyon Doe (president)
1990–94	Amos Claudius Sawyer (president of the Interim Government of National Unity)
1994–95	David D. Kpormakpor (chairman of the Council of State)
1995–96	Wilton G. S. Sankawulo (chairman of the Council of State)
1996–97	Ruth Sando Perry (chairman of the Council of State)
1997–2003	Charles Ghankay Taylor (president)
2003	Moses Zeh Blah (interim president)
2003–06	Charles Gyude Bryant (chairman of the National Transitional Government)
2006–	Ellen Johnson-Sirleaf (president)

CONSTITUTION

In 1984 a new constitution was drafted by the Constitutional Commission, approved by the PRC, submitted to a national referendum, and approved by 78.3 percent of registered voters. The constitution provides for a multiparty system; the formation of a one-party state, the dissolution of the legislature, and the suspension of the judiciary are prohibited. A two-thirds majority in both houses of the National Assembly is required to amend the constitution.

The new constitution does not differ significantly from its predecessor, providing for the division of the government into the executive, legislature, and judiciary. Executive powers are vested in the president, elected for a six-year term by universal adult suffrage; he is head of state, head of government, and commander in chief of the armed

forces. The legislature is a two-chamber National Assembly comprising the Senate (26 members) and the House of Representatives (64 members), both directly elected.

The constitution provides for the establishment of the Supreme Court, which consists of a chief justice and four associate justices, to be appointed by the president from a panel recommended by the Judicial Service Commission. The consent of the Senate is required for these appointments and for the confirmation of lower court judges, to which a similar procedure applies.

PARLIAMENT

Liberia has a bicameral legislature. The lower body, the House of Representatives, consists of 64 members who are directly elected by universal suffrage and serve six years. The upper house, the Senate, has 26 members who serve for nine years.

POLITICAL PARTIES

The ruling party of the country is the NPP, formerly known as the National Patriotic Front. Dozens of small factions oppose the NPP. The most successful in terms of representation is the Unity Party, which has seven seats to the NPP's 49. Other parties that took part in the 1997 election were the All Liberia Coalition Party, with three seats; the Alliance of Political Parties and the United People's Party, with two seats each; and the Liberian People's Party, with one seat.

New elections are to be held in 2005. Meanwhile, a transitional parliament was established after President Taylor was forced into exile in 2003. Posts in that body were given to the former ruling NPP, two rebel groups—LURD and Movement for Democracy in Liberia (MODEL)—and other political parties and civic groups. Together the NPP, LURD, and MODEL chose a 21-member cabinet to aid in the transitional government.

LOCAL GOVERNMENT

For purposes of regional administration, Liberia is divided into 13 counties, two territories, and the federal district of Monrovia. The chief administrative official in each county is a county superintendent. Monrovia, the national capital, is governed directly by the central government. The territories are headed by territorial superintendents appointed by the president.

LEGAL SYSTEM

The judicial system is headed by the Supreme Court, which consists of a chief justice and four associate jus-

tices, all appointed by the president from a panel recommended by the Judicial Service Commission; the consent of the Senate is required for these appointments. Immediately below the Supreme Court are the circuit courts of assize, one in each county and two in Monrovia. Inferior courts include magistrate's courts and justice-of-the-peace courts. Though nominally independent, the judicial system has been subject to pressure and direct influence by the executive branch.

A parallel tribal court system dispenses justice according to tribal law. The key court under this system is the court of the paramount chief, which is superior to the court of the clan chief. Appeals from these courts are heard by the court of the district commissioner and the court of the county commissioner. The district commissioner and the paramount chief sometimes hold a joint court to settle disputes falling within their dual competence. Trial by ordeal is an accepted procedure in tribal courts.

HUMAN RIGHTS

In terms of political and civil rights, Liberia is classified as a country that is not free. On Christmas Eve 1989 rebel forces invaded Liberia, and rival factions continued to fight for power until 1996. The long ordeal came to an end after what is known as April 6th: a final, few bloody months of terror as factions fought for power in the capital Monrovia.

It was a brutal civil war that forced nearly 700,000 to flee their country, left more than one million displaced, and claimed the lives of more than 200,000 people. Charles Taylor, the former leader of the National Patriotic Front of Liberia, one of the main rebel factions, was elected president in democratic elections in July 1997, but Taylor's regime proved to be as brutal as his predecessor's and brought about further civil unrest. In 2003 Taylor was forced into exile by two rebel groups, and a transitional government was set up. With international peacekeeping forces in place, it is hoped that rampant human rights abuses, including torture and rape, will be curtailed.

FOREIGN POLICY

The watershed in Liberian foreign relations was the 1980 coup, in which the pro-American Liberian elite were ousted and Doe instituted a military government. Doe himself was assassinated in 1990, leading to a civil war, in which Charles Taylor, the eventual winner, was supported by Burkina Faso, Libya, and Côte d'Ivoire, among other countries, and opposed by Guinea, Ghana, Nigeria, and others. The United States maintained official neutrality in the conflict.

Subsequently, Taylor himself was actively involved in supporting the rebels in the Sierra Leone civil war. The Taylor government fell to rebel forces in 2003, and a transitional government was established. It was hoped that there would be a regional solution to the tribal grievances in Liberia, which in the past spilled over into neighboring countries.

DEFENSE

Prior to the civil war, the Armed Forces of Liberia (AFL) consisted of around 6,000 soldiers. This army, however, was basically destroyed, either by desertion or death, during the rebellion launched by Charles Taylor in 1989. Following the 1996 peace accord, a new national army was supposed to have been installed, but Taylor relied instead on his personal militia. In 2003 UN peacekeepers disarmed the supporters of Taylor as well as the two main rebel groups, MODEL and LURD.

In 2005 the United States pledged \$200 million to train a new defense force; the nation's military personnel now total 15,000. A new Liberian police force was due to reach its full strength of 3,500 officers in 2006.

ECONOMY

The civil war of 1989–96 destroyed much of Liberia's economy, especially the infrastructure in and around Monrovia. Many businessmen fled the country, taking capital and expertise with them. Some returned during 1997, but many stayed away. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a significant producer and exporter of basic products, while local manufacturing, mainly foreign owned, has been small in scope.

The democratically elected government installed in August 1997 inherited massive international debts and relied on revenues from its maritime registry to provide the bulk of its foreign exchange earnings. The restoration of the infrastructure and the raising of incomes in the ravaged economy depended on the implementation of sound macro- and microeconomic policies by the new government, including the encouragement of foreign investment.

The Taylor regime, however, proved to be corrupt. Taylor embezzled over \$100 million in public funds, leaving the country nearly bankrupt when he fled in 2003. The establishment of a more inclusive transitional government was a positive sign for both society and the economy.

ENVIRONMENT

Liberia's lush rain forests suffer from increasing deforestation as well as loss of biodiversity. Meanwhile, the coastal waters are being polluted by oil residue and the dumping of raw sewage. After 14 years of civil war, much of the country has been degraded.

LIVING CONDITIONS

Even before the recent fighting, Liberia's people were among the worst off in the world. According to the United Nations' 2002 Human Development Index, Liberia ranked 158th out of 174 countries. This index incorporates measurements of life expectancy, education, and income. Life expectancy was almost 48 years in 2004, thanks to the cessation of most of the hostilities in the country. In 2003 the adult literacy rate was 58 percent,

while combined gross enrollment for primary, secondary, and tertiary schools in 2001–02 was 61 percent. In reality, however, less than 50 percent of children 6 to 18 were in schools full time. Gross domestic product (GDP) per capita in 2004 was about \$900; Liberians rank among the poorest in the world.

Much of the housing in cities such as Monrovia have historically been corrugated iron structures. These were in the process of being replaced with more modern structures when the civil war disrupted such development. Large tracts of Monrovia and other cities were damaged or destroyed during the war, and infrastructure remains badly in need of repair.

The typical housing for the tribal people of Liberia is the *rondavel*, a circular, one-room hut made of mud and wattle, with a thatch roof, low door, and no windows. Many of these are being replaced by larger rectangular huts, also made of mud and wattle. These newer structures have two or more rooms and also windows.

Transportation in the countryside is by bike, scooter, bus, shared taxi, oxcart, or foot.

In 2002 an estimated 47 percent of the population lived in urban areas. Monrovia has a population nearing one million, and more than one-third of the population lives within 50 miles of the capital. Other major towns and cities are Buchanan, Harper, and Greenville on the coast and Gbarnga, Kakata, Sanniquellie, Zorzor, and Ghanpa in the interior. The urban population growth rate for 2000–05 was 4.9 percent.

HEALTH

People in Liberia pay for their own medical costs. Non-governmental organizations run clinics, which provide cheap medical treatment for the sick, but they are not widespread. Many people seek natural remedies before approaching doctors.

Deaths and injuries from the years of civil war put a huge strain on the country's health-care system. As of 1999 there were an estimated 0.02 physicians and 1.6 hospital beds per 1,000 people—hardly adequate to deal with war's carnage. Even with the virtual end to hostilities in 2003, the usual endemic illnesses and diseases remained. Major causes of death are malaria and gastrointestinal disease, both attributable in part to poor sanitation. In 2000 there was a 27 percent incidence rate of malaria, and in 2002 there were 501 tuberculosis cases per 100,000 population. That year only 26 percent of the population had access to proper sanitation, 62 percent to safe drinking water.

The 2004 death rate was almost 18 deaths per 1,000 population; the infant mortality rate was almost 130 deaths per 1,000 live births. The mortality rate for children less than five years old in 2002 was 235 per 1,000 live births. Immunization rates for children under one have improved: In 1994, 44 percent were immunized for

measles; in 2003, 53 percent. Other immunization rates are less positive. The 2003 rate of tuberculosis immunization for one-year-olds was 43 percent, down from 84 percent in 1994. Polio vaccination was at 39 percent, DPT 38 percent.

Female genital mutilation is a severe problem in Liberia, affecting 60 percent of the female population.

HIV/AIDS has also made inroads in Liberia. Adult prevalence of the disease was 5.9 percent in 2003 by official estimates, though other estimates put the rate much higher. In 2003, an estimated 100,000 Liberians were living with HIV/AIDS, and there were 7,200 deaths from the disease.

FOOD AND NUTRITION

Cooking in Liberia is traditionally done in pots over a charcoal fire. In the cities the population has access to electric or gas ranges. Eating is done either with the hands or with utensils, Western style.

The staple of the Liberian diet is rice, generally eaten at every meal. Other carbohydrates include potatoes, yams, cocoyams, farina, cassava, couscous, and *fufu*, a sticky concoction of yams and plantains dipped in sauce. Meats and fish are often smoked. Other common ingredients include eggplants, spicy peppers, collard greens, fresh ginger, palm butter, peanuts, peas, beans, onions, and coconut. Many tropical fruits are available.

Typical dishes include cabbage cooked with bacon and pigs' feet, sweet potato leaves with fish, palm nuts with shrimp in a fish or chicken stock, rice and okra, and goat soup. Desserts include sweet potato pie, coconut pie, and rice bread with mashed bananas. Ginger beer and palm wine are popular drinks for non-Muslims. Coffee is also popular.

After 14 years of fighting, the country was left in ruins, and food supplies were minimal. Starvation was widespread and malnutrition common among adults and

children alike. International agencies distributed food to hundreds of thousands of displaced Liberians. Between 1995 and 2003, 26 percent of children under five in Liberia suffered from mild to severe undernourishment. As of 2001, 46 percent of the general population was considered undernourished.

STATUS OF WOMEN

In urban areas along the seacoast, where settler dominance was strongest, a modern sector has evolved, with a free-enterprise economy, substantial political and economic equality for men and women, and Anglo-American judicial procedures based on English common law, as transmitted and modified by the American experience. Land is plotted, deeded, and held in fee simple, and women can inherit equally. There is no formal discrimination in property ownership, educational opportunity, or participation in economic and political processes. Women in Liberia have held ministerial and ambassadorial positions and are represented in the professions and throughout the modern economy.

In rural areas, however, inhabitants practice subsistence agriculture and follow a traditional culture in which men's and women's roles are more strictly defined. Most land is held communally among the related families of clans, and women provide most of the labor in food production and distribution, both for household consumption and market sale. As opposed to statutory marriage, seen as a contract between individuals, customary marriage is an agreement between families. With the payment of dowry under the customary marriage system, a woman is considered the property of her husband and family. Upon the husband's death, the marital contract continues with the family, which has certain obligations and responsibilities to the widow, or more commonly widows, if they remain with the family as wives to other relatives. In the traditional sector women are usually not entitled to inherit from their husbands or to administer their estates. In addition, in many indigenous ethnic groups, women are informally excluded from chieftaincies or membership in the councils of elders that direct the affairs of the community. In practice, especially in newly urban areas, many women use both the customary and statutory legal systems.

Many women continue to suffer from physical abuse and traditional societal discrimination, despite constitutionally guaranteed equality. Rape, including gang rape,

was rampant during the civil war. Women and girls were often abducted as laborers and sex slaves, while others joined rebel groups or militias to protect themselves. According to Amnesty International, between 60 and 70 percent of women have undergone genital circumcision. The practice is carried out only in some parts of the country and not by all ethnic groups. Although the Liberian government has published policy opposing female genital mutation, no law currently prohibits its use.

WORK

The most startling fact about work in Liberia is that an estimated 85 percent of the nation was unemployed as of 2003. As of 2000 about 70 percent of workers were engaged in agriculture; agricultural products include rubber, coffee, cocoa, rice, cassava (tapioca), palm oil, sugarcane, bananas, sheep, goats, and timber. The service sector employed 22 percent of the workforce, and the remaining 8 percent were engaged in industry, such as rubber processing, palm-oil processing, timber, and diamonds. The indigenous people of the interior, the bulk of the population, are mostly engaged in subsistence agriculture; there has been a distinct shortage in skilled and trained workers in the country.

Firestone was one of the main private employers before the outbreak of hostilities. In 2005 that company was given additional years of use of its million-acre concession by the transitional government, much to the dismay of local activists who criticize Firestone for its colonial policies and for what they term underpayment to its employees.

The right to strike, organize, and bargain collectively is permitted by law, but there is little union activity because of the lack of economic activity. The Liberian Federation of Labor Unions covers some 60,000 workers, but most are unemployed, and the unions have little power. Labor laws regarding minimum wage and working age are largely ignored. Child labor is widespread; so ubiquitous is the use of children in the labor force that many were impressed into various militias during the civil war.

EDUCATION

Education is free, universal, and compulsory, in principle, for 10 years, from ages six to 16. Nevertheless, school enrollment ratios are very low. Schooling consists of 12 years, as divided into six years of primary school, three years of junior high school, and three years of senior high school. There is a high dropout rate at the primary level, and only about 15 percent of those who enter primary school complete it. Fewer attend secondary schools because of commuting difficulties. As of 1999 the net primary enrollment was 70 percent, while secondary enrollment was only 18 percent. In all, less than half of Liberian children ages six to 18 attend school. Many well-to-do students attend secondary schools in Europe, the United States, or nearer to home, in Ghana or Nigeria. The literacy rate in Liberia as of 2004 was just 57.5 percent.

In principle, teachers have to be certified annually by the Department of Education, but this requirement is rarely enforced, and some 85 percent of teachers lack minimum professional qualifications. A serious shortage of teachers is compounded by poor salaries and consequent loss of prestige. In 1999 the pupil-to-teacher ratio in primary schools was 38 to 1. The school system relies heavily on foreign, particularly U.S. Peace Corps, teachers. Teacher training is provided through a number of institutions, of which the best known are the Tubman Teachers' College and Our Lady of Fatima College.

Private schools, run by Christian missions and foreign concessions, account for almost 35 percent of primary enrollment and 43 percent of secondary enrollment. Some schools are run by tribal authorities, where the training for boys is known as *poro* and the training for girls is known as *sande*.

A number of high schools offer exclusively vocational secondary-education programs. Of these the best known is the Booker T. Washington Agricultural and Industrial Institute, in Kakata. Other schools offer limited numbers of vocational courses.

The school system is under the direct control of the Department of Education. Foreign aid for educational programs and projects is received from the United States, Germany, and Sweden.

The principal institution of higher learning is the University of Liberia, in Monrovia. There are two smaller denominational colleges: the Episcopalian Cuttington University College and the Roman Catholic Our Lady of Fatima College. There are also a number of scientific, vocational, and technical training institutions.

SCIENCE AND TECHNOLOGY

The Ministry of Agriculture, through its Central Agricultural Research Institute, Forestry Development Authority, Liberia Rubber Research Institute, and Division of Fisheries pursues various research projects in areas ranging from plant breeding to forestry management. Another major institution that carries out research and development in the country is the University of Liberia's College of Agriculture and Forestry. Research into rubber technology is carried out by the Firestone Plantations Company, which maintains a Botanical Research Department as well as a Chemical Research Department.

Monrovia is home to a geological, mining, and metallurgical society. Other institutions of higher education with research and/or science divisions are Cuttington University College, William V. S. Tubman College of Technology, and the Liberian Institute for Biomedical Research, all in Monrovia. Agricultural and industrial courses are offered at the Booker T. Washington Institute.

MEDIA

Liberia's official newspaper is the *New Liberian*. Among the seven other newspapers are the *Daily Observer* and the *Mirror*, which produce five editions a week.

The national news agency is the Liberian News Agency (LINA). Foreign news agencies represented in Monrovia include UPI.

The official Liberian Broadcasting Corporation operates one medium-wave and two shortwave transmitters at Monrovia and one medium-wave transmitter at Harper. A second broadcasting service is the private ELWA, operated by the Sudan Interior Mission. The Voice of America's shortwave relay station in Monrovia, with six 250 kw transmitters and two 50 kw transmitters, is the most powerful on the continent. Another private station is owned by a mining company at Nimba.

The Liberian Broadcasting Corporation's television service, ELTV, covers 20 percent of the country, with a transmitter at Monrovia and relays at Buchanan and Bomi Hills.

Press freedom, assured by the constitution, was at a premium during the civil war years. Journalists and others in the media mainly exercised self-censorship to stay in business. Journalists were targeted by the militia on both sides during the 2003 fighting around Monrovia. Many media outlets were damaged or destroyed during the years of fighting. Reporters without Borders ranked Liberia 123rd among 167 nations in its 2004 press freedom index.

As of 2001 there were seven FM radio stations. In 2000 there were 274 radios and 26 television sets for every 1,000 people. That same year there were 2,000 cellular phone users, and in 2002 there were about 1,000 Internet users, though that number has grown significantly since the end of hostilities in 2003.

CULTURE

The cultural heritage of Liberia is an amalgam of it numerous ethnic and indigenous people, with a thin veneer of Western culture from the returning American slaves that founded the country in the 19th century. Music, dance, storytelling, and crafts such as bronze casting and wood carving in Liberia are similar to those in other countries of West Africa. Dance is accompanied by huge drums carved out of tree trunks; dancers often wear masks of varying sizes that put them in touch with their spirit brothers from other ages. Huge, carved wooden doors are produced for the lodges of chiefs.

With Liberia entering the modern world and with the disruptions of the civil war, much of this tradition is dying

out. Dance and music and the recitations of praise singers occur on special religious or sacred occasions; animist beliefs predominate among the population, giving rise to numerous such ceremonies. Many of the traditional crafts are no longer as prevalent as they once were. The carving work of the Dan people, for example, is world famous, yet more and more difficult to find as older artists die off. Prior to the civil war, the government promoted ethnic culture through the work of the National Museum and National History Museum of the University of Liberia, in Monrovia; the Tubman Center for African Culture, in Robertsport; the William V. S. Tubman Library-Museum, in Harper; the National Cultural Center, in Kendeja; and the Africana Museum of Cuttington University College. Unfortunately, the collections of these various institutions suffered badly during the war years. The 3,000-artifact collection at Cuttington, for example, was largely destroyed; hungry refugees, in desperation, even stripped the goatskins off all the drums in the museum to boil for sustenance. Still, much of Liberia's cultural heritage has been immortalized in the famous epic poem *Sonjara*, sung by minstrels since the 13th century and still extant.

Modern culture in cities like Monrovia is strongly affected by Western influences. Liberian and African music are popular, as are hip-hop, rhythm and blues, reggae, calypso, jazz, country and western, and gospel music. Television and movies come from Europe and the United States.

FOLKLORE AND MYTHOLOGY

Myth, folktales, epic poetry, and proverbs all are part of Liberian folklore traditions. Though many myths and tales differ between ethnic groups, some have universal West African dominance. One popular creation myth tells of Sno-Nysoa, the creator god who sent his four sons to the world. When he called them back to heaven, they did not wish to return; the Earth, too, wanted to keep the four and made efforts to retain them. Sno-Nysoa used his powers to bring them back, but in the morning they did not awaken. Earth retained their bodies, while the creator god had their souls. Ever since that time, Sno-Nysoa has used his powers to take humankind from Earth. This

myth goes on to include a legend similar to the Christian Fall, in which a clever cat that tries to outwit a medicine man brings death to humans.

Roving minstrels called praise singers, or *griots*, are known throughout West Africa, including in Liberia. For centuries they have kept the story of the early Mali Empire alive through the epic poem *Sonjara*, a 3,000-line poem dealing with the exploits of the leader Sonjara at the beginning of the 13th century.

Proverbs form another rich source of Liberian folklore. Examples of Liberian proverbs are “Do not look where you fell but where you slipped,” “If the townspeople are happy, look for the chief,” and “If the walls were adamant, gold would take the town.”

ENTERTAINMENT AND RECREATION

Liberians in cities have access to television and cinema, both of which are popular forms of entertainment. Music is popular throughout the country; people both listen to it on the radio and make music together, especially in the interior. Western and African music are equally popular. Urban Liberians, before the civil war, enjoyed going to soccer, volleyball, or basketball matches; to bars or clubs to dance; or to the beach.

In rural areas, where there is little access to electricity, television is a rarity. If one exists in a village, the entire population gathers to watch it, and it is a prized possession. Recreation is simpler in the villages. Children might play soccer (with homemade balls), the rhythm game called *nan fo* (literally, “nine foot”), or marbles. Generally, even in the villages people have access to radios, so they can at least listen to music.

Throughout the country *woaley*, a board game similar to backgammon, is a major pastime. The rectangular *woaley* board has twelve indentations to hold beans and two larger indentations at the ends to hold the captured beans. Spectators and players of all ages enjoy *woaley* matches.

ETIQUETTE

An interesting holdover from Liberia’s past, as it was founded by returning slaves from the United States, is the Liberians’ manner of greeting one another: When shaking hands one grasps the middle finger of his friend’s right hand between his own thumb and third finger and brings it up quickly with a snap. Slave owners often broke the fingers of their slaves to show ownership; when freed, former slaves used this hand gesture as a sign of their newly won freedom. People of the opposite sex do not shake hands with one another, and public displays of affection are not acceptable.

As in much of African culture, sharing is important. Guests who drop by are expected to share in meals. The taboo against using the left hand for receiving or giving, or for eating, is in force in Liberia, as throughout much of Africa. While one usually uses the hand to eat, the fingers should not touch the mouth. It is polite to remove one’s shoes before entering a house, or, in the case of Muslims, before entering a mosque. Also, one should never expose the bottom of the feet to a Muslim, as that is considered the basest part of the body.

FAMILY LIFE

Families tend to be large in Liberia. In 2004 over six children were born per woman. In some tribal groups, the larger the family, the more status it has. Men rule families and make important decisions, though women do have certain power in the home. Polygamy is found among some ethnic groups and among the Muslim population; up to four wives can be taken. However, as the bride price must still be paid, only the best off among Liberians can afford the practice. Two types of marriage are available in Liberia, according to the constitution and law: traditional marriages, which are valid until the death of a mate or divorce and allow multiple marriages, and statutory marriages, which do not allow multiple marriages. One cannot marry under both systems at the same time. Though unemployment is high, women are seldom idle, for domestic chores are their responsibility.

Some ethnic groups in Liberia have rigid caste systems, and people of different castes seldom marry, just as people seldom marry outside of their ethnic group. The legal marriage age is 18, but many girls are reserved or spoken for long before that time in arranged marriages that take place once the bride reaches 18—or as early as 14 in some rural areas. Family groups include the extended family; in villages, families live in houses and huts they build themselves. The entire community is seen as a broader family in Liberia, such that it is not uncommon for children to be disciplined by adults other than their parents. Physical punishment is common for children. Women also suffer physical abuse by their husbands, and though divorce is legal, not many resort to it.

PERSONAL APPEARANCE

Liberians living in urban areas wear mostly Western-style clothes. Women still wear brightly colored cotton skirts with bandanas wrapped loosely around their heads, a holdover from more traditional apparel.

Different ethnic groups had different styles of traditional clothing, most of which were adapted to deal with the region’s hot weather; clothing was mostly loose and made of cotton. In the villages traditional clothing

can still be seen: scoop-necked smocks over wraparound skirts for women, with matching bandanas worn over the hair. Cloth is dyed in colorful patterns or decorated with woodblock prints. Many men wear loose-fitting, home-made pajama-like pants and tops. Formal occasions bring out what is called the *grand boubou*: embroidered dresses for women and long robes over pants and shirt for men.

SPORTS

Popular sports include soccer, volleyball, and basketball. Soccer in particular draws large crowds at two stadiums in Monrovia. Not only a spectator sport, soccer is the national pastime for children throughout the country. Make-shift fields and homemade balls are used in the villages. National games are broadcast on radio and television, and soccer players attain the rank of celebrities. Such was the case with the Liberian George Weah, who played for AC Milan, in Italy, and in 1995 was selected as world player of the year by the soccer governing body FIFA.

CHRONOLOGY

- 1947 By the seventh amendment to the constitution, representation in Congress is given to the tribes of the hinterland provinces. By the eighth amendment suffrage is extended to all Liberians, including women.
- 1952 Liberia pays off the notorious Firestone Loan 15 years before maturity. A monument is erected in Monrovia to commemorate this event.
- 1961 Monrovia Group is formed by Liberia and seven other African countries to counter the Casablanca Group, led by Ghana.
- 1962 Liberia holds its first national census.
- 1963 Hinterland provinces are abolished in extensive reorganization of local administration. Liberia is divided into nine counties and six territories. President Tubman launches Operation Production.
- 1968 Henry Fahnbullah is arrested and convicted in the so-called Red China Plot.
- 1971 President William Tubman dies. Vice President William Tolbert succeeds to the presidency.
- 1972 Tolbert establishes first Liberian mission in Moscow.
- 1973 Liberia joins the Mano River Union (with Sierra Leone) and the Economic Community of West African States.
- 1975 Constitution is amended to restrict presidential term to eight years.
Liberia signs the Lome Convention.
- 1976 Tolbert is elected unopposed to an eight-year term.
- 1977 Liberia establishes diplomatic links with China.
- 1978 U.S. president Jimmy Carter receives warm welcome on brief visit.
- 1979 The main opposition group, Progressive Alliance of Liberia, holds first conference.
A proposal to increase the price of rice is followed by riots, bloodshed, and looting.
- 1980 A group of disgruntled noncommissioned officers, led by Sgt. Samuel Doe, leads successful coup in which President Tolbert is killed. Doe sets up the People's Redemption Council, with full legislative and executive powers. The national constitution is suspended along with parliament.
Thirteen prominent officials of the former regime are arrested and executed.
- 1981 Five members of the PRC, including Thomas Weh Syen, are executed for plotting against Doe. Government adopts strong measures to put down dock strike in Monrovia.
- 1983 Brigadier General Thomas Quiwonkpa, the strongman of the regime, is dismissed and forced to flee the country.
Diplomatic relations with Libya are suspended.
- 1984 Doe submits draft constitution, formulated by the constitutional commission, to the electorate, who approve it in a national referendum.
- 1985 Political parties are legitimized, and 13 new parties announce their intention to contest the elections. Doe announces the formation of the Liberian Democratic Party, with himself as leader.
In national elections Doe is elected president, and his LDP wins strong majority. Diplomatic relations with Soviet Union are suspended.
- 1986 Teachers' strikes and student demonstrations are brutally suppressed by the army.
The Liberian Unification Party, the Liberian Action Party, and the Unity Party form a united front as the Liberia Grand Coalition, led by William Kpolleh. The three parties of the Grand Coalition boycott by-elections.
- 1988 Kpolleh is among 10 people arrested in March on charges of plotting to overthrow the government.
Kpolleh is later sentenced to 10 years' imprisonment for treason.
Another attempted coup, led by Nichola Podier, is put down in July.
- 1989 Armed insurrection, led by Charles Taylor of the NPF, begins in the northeast.
- 1990 Fighting degenerates into a civil war between Doe's ethnic group, the Krahn, and the local Gio and Mano tribes.
The NPF divides into two rival factions, one led by Taylor and the other led by Prince Johnson.

The Economic Community of West African States sends in a peacekeeping force and sets up an interim government headed by Amos Sawyer.

Doe is killed by followers of Johnson.

- 1991** A cease-fire is signed in February.
- 1993** A peace agreement is signed in Geneva.
- 1994** Groups excluded from forming the transitional government reject peace and resume violence.
- 1995** The 11th peace treaty is signed to bring an end to the civil war.
- 1996** Fighting resumes in April, but another cease-fire is in place by August.
- 1997** Charles Taylor is elected president by a large majority.
- 1999** Ghana and Nigeria accuse Liberia of supporting rebels in Sierra Leone, while President Taylor accuses Guinea of supporting Liberian rebels in the north.
- 2001** UN Security Council charges Taylor with trading weapons for diamonds from rebels in Sierra Leone and reinstalls weapons embargo.
- 2002** Taylor declares state of emergency in February.
- 2003** Two main rebel groups, LURD and MODEL, force Taylor to leave Liberia for Nigerian exile. A transitional government is established headed by Gyude Bryant.
- 2004** International donors pledge more than \$500 million in reconstruction aid.
Renewed violence breaks out in Monrovia.
- 2005** The United States hires a private company to train a new Liberian army.
Refugees begin returning to Liberia after the 14 years of civil war.
- 2006** Ellen Johnson-Sirleaf becomes the first woman to be elected as an African head of state.

LIBYA

Basic Fact Sheet

OFFICIAL NAME

Socialist People's Libyan Arab Jamahiriya (Al-Jamāhīrīyah al-'Arabīya al-Lībīyah al-Sha'bīyah al-Ishtirākīyah)

ABBREVIATION

LY

CAPITAL

Tripoli

HEAD OF STATE

Leader of the Revolution Muammar Abu Minyar al-Qaddafi (from 1969)

HEAD OF GOVERNMENT

General Secretary of the People's Committee Shukri Mohammed Ghanem (from 2003)

NATURE OF GOVERNMENT

Military dictatorship

POPULATION

5,765,563 (2005)

AREA

1,759,540 sq km (679,360 sq mi)

ETHNIC MAJORITY

Arab

LANGUAGE

Arabic

RELIGION

Sunni Islam

UNIT OF CURRENCY

Libyan dinar

NATIONAL FLAG

A solid green field, green being the traditional color of Islam

NATIONAL EMBLEM

A black-and-white eagle with a shield on its breast on a green circular field. At the eagle's base is the nation's name in Arabic.

NATIONAL ANTHEM

"Almighty God"

NATIONAL HOLIDAYS

March 28 (British Evacuation Day), June 11 (Evacuation Day), July 23 (Revolution Day), September 1 (National Day), October 7 (Italian Evacuation Day), December 24 (Independence Day), various Islamic festivals

DATE OF INDEPENDENCE

December 24, 1951

DATE OF CONSTITUTION

December 11, 1969

GEOGRAPHICAL FEATURES

Libya, on the central Mediterranean coast of North Africa, extends 1,502 km (933 mi) from the coast to the north-central highlands of the Sahara and 1,989 km (1,236 mi) from the Egyptian border to the east to the Algerian border to the west. Libya's total area of 1,759,540 sq km (679,360 sq mi) makes it the fourth-largest country in Africa. The country shares land borders with six nations: Egypt, Sudan, Chad, Niger, Algeria, and Tunisia. Libya claims about 19,400 sq km in northern Niger and part of southeastern Algeria.

The capital of Libya is Tripoli (2004 population estimated at 1,111,900), but in September 1988 it was announced that all but two of the secretariats of the General People's Committee were to be relocated from Tripoli to Sirte, the birthplace of the Libyan leader Colonel Muammar al-Qaddafi; to Benghazi, the country's other major urban center (pop. 635,800); and to the town of Kufra.

The major topographical areas are Tripolitania (Western Muqataa), a series of terraces rising toward the south; Cyrenaica (Eastern Muqataa), consisting of al-Marj Plain, which rises in two narrow steps to an upland plateau called Jabal al-Akhdar, or Green Mountain;

Libya

and Fezzan (Southern Muqataa), a series of depressions with a few oases. The rest of the country consists of the Libyan Desert; the pebble plain of Sarir Calanscio; and the huge sand seas of Marzuq, Awbari, and Rabyanah.

Benghazi	650,000
Tripoli	1,115,000

CLIMATE AND WEATHER

Because of few natural barriers, the Libyan climate is greatly influenced by the desert to the south and the Mediterranean Sea to the north. The coastal regions have a Mediterranean climate, with moderate temperatures and enough rain during the winter months for grain farming. Winter is fairly cold in the north, with sleet and snow on the hills. Average mean summer temperatures are 40.6 to 46°C (105 to 115°F) along the Tripolitanian coast, and 26.7 to 32°C (80 to 90°F) in northern Cyrenaica. A scorching wind called the *ghibli*, a hot, very dry, sand-laden wind, can raise the temperatures in a matter of hours to between 40 and 50°C, occasionally blowing into the usually humid coastal towns.

Climate and Weather

Mean Temperature

Summer Tripolitanian Coast: 105°F to 115°F

Northern Cyrenaica: 80°F to 90°F

Tobruk: 79°F

Average Rainfall

Coastal Strip: 8 in to 16 in

Tripolitania and Cyrenaica: 12 in to 14 in

Northern Highlands: 2 in to 24 in

Pre-desert and Desert: 0 in

FLORA AND FAUNA

Vegetation in Libya varies according to region. The northern Green Mountains support a low forest of junipers and mastic trees, while the coastal plain is covered by annual grasses and vegetation in years of plentiful rainfall. Grass species such as rye, brome, and bluegrass are found. South of the mountains plant life is less common, and in the vast Libyan Desert such vegetation is restricted mainly to date palms in the oases. Cultivated plants include millions of olive trees and date palms.

Hyenas, desert hares, foxes, jackals, gazelles, and wildcats are among the wild animals in the country. Various reptiles make the oases their home, while bird life includes eagles, hawks, vultures, larks, prairie hens, and partridges. Domesticated animals include goat, cattle, sheep, and camels.

ETHNIC COMPOSITION

Libya has a highly homogeneous population, with Arab Muslims of mixed Arab-Berber ancestry constituting some 90 percent. The principal ethnic minorities are Berbers, Tuaregs, Tebus, and black Africans. Berbers, defined as native speakers of a Berber dialect, account for about 1 percent of the population. The Tuaregs, black Africans, and Tebus constitute about 1 percent of the population. Arabic-speaking black Africans are known as *barratins*. Hostility toward all foreigners, particularly Westerners, has been a significant element of Libya's revolutionary ideology.

LANGUAGES

Arabic has been the official language of Libya since 1969. Its use in official communications, street signs, private letterheads, and even passports of visiting foreigners is mandatory. The spoken dialects of Tripolitania and Fezzan belong to the Magurebi group, used in the Maghreb countries (Morocco, Algeria, and Tunisia), while the dialects of Cyrenaica are related to those used in Egypt and the central Middle East. Minority languages include Berber, a Semitic language distantly related to Arabic, and the Tamahek dialect of Berber used by the Tuaregs.

RELIGIONS

Sunni Islam is the religion of almost all Libyans. Since 1969 the military regime has converted religion into a keystone of state domestic and foreign policy by re-aligning Islamic values and establishing literal Koranic practice in national life at home and propagating Islam abroad. The Constitutional Declaration of 1969, while guaranteeing the freedom to practice religious rites to all religious groups, declared Islam to be the state religion. Any Islamic group in variance with the state teaching of Islam is prohibited.

Nevertheless, members of some minority religions are permitted to conduct services. There are 50,000 Christians in Libya, and in 1997 the Vatican reestablished diplomatic relations with the nation, noting that new steps had been taken to protect religious freedom for non-Muslims.

Religious Affiliations

Sunni Muslim	5,593,000
Other	173,000

HISTORICAL BACKGROUND

Archaeological finds show that from at least the eighth millennium B.C.E. Libya's coastal area shared in a Neolithic culture, with tribespeople domesticating cattle and cultivating crops. Inscriptions found in Egypt dating from 2700–2200 B.C.E. are the first known mention of Libya's Berber tribes.

Libya was colonized first in the 12th century B.C.E. by the Phoenicians, then later in the sixth century B.C.E. by the Carthaginians. Rome took control in the second century B.C.E., holding on for more than 600 years. An Arab invasion of Libya in 643 C.E. marked the beginning of Arab and Islamic influence. Throughout the 16th century Libya became a battleground between the Hapsburg and Ottoman empires for control of the North African trade routes.

Libya was under Italian rule from 1912 until 1942, at which time British and French troops occupied the country. The United Kingdom governed Cyrenaica and Tripolitania, while France administered Fezzan until independence. Libyan territory was the scene of several key battles between Allied and Nazi forces during World War II.

A UN resolution in 1949 led to Libyan independence as the United Kingdom of Libya in 1951. The postindependence period can be divided into two distinct phases. The first, under King Idris, was a time of internal political stability and economic growth, which, as a result of oil discoveries, permitted the nation to end its dependence on Western funds. Idris's reign was also a period of good relations with the Arab world and with the West, although by the mid-1960s Libya had become an outspoken critic of Israel and South Africa.

A bloodless revolution in 1969 brought about a complete change in government and the establishment of the Libyan Arab Republic, with Colonel Muammar al-Qaddafi (also spelled Qadhafi or Gadhafi) as chairman of the Revolutionary Command Council (RCC), which functioned as the executive. Qaddafi dissolved the legislature and declared the Socialist People's Libyan Arab Jamahiriya. Over the next five years he began a series

of reforms that transformed every aspect of society. He nationalized banks and forced oil companies to sell 51 percent of their holdings to the Libyan government. In foreign affairs he moved to the left, supporting the Palestine Liberation Organization (PLO) and Syria. In 1973 he initiated his "cultural revolution," later set forth in his *Green Book*. It was an attempt to eliminate all foreign ideologies and to blend Arab socialism and Islamic fundamentalism in the administration of the country. The Koran was declared the social code of the country.

During the 1970s and 1980s Qaddafi indiscriminately backed terrorism, providing arms, money, and asylum for any revolutionary cause he supported without regard for the issues behind the movements. Libyan funds went to Ulster, Chad, Sudan, Morocco, Uganda, and Zimbabwe, as well as the more extreme wings of the PLO.

In the mid-1970s rumors of rich uranium deposits led Libya to annex the Aozou Strip in Chad. Libya then became an active participant in that nation's civil war, opposing the forces of Chadian President Hissène Habré. Qaddafi was humiliated in 1987 when his militarily superior forces were resoundingly defeated. In 1990 the two countries finally agreed to take their dispute to the International Court of Justice, which ruled in early 1994 that the Aozou Strip belonged to Chad.

In foreign affairs Qaddafi attempted to forge alliances with other Arab states, many of which were deterred by his volatile leadership style. Libya's support of terrorism and repression of dissent angered many Western nations. In 1984 Great Britain severed diplomatic relations following a series of bomb attacks in Britain aimed at Libyan dissidents. Conflict with the United States, which began in the late 1970s, came to a head in 1986, when the United States bombed Tripoli and Benghazi in response to Libyan missile attacks on U.S. planes and terrorist attacks on U.S. personnel in Europe.

Power has remained securely in the hands of Qaddafi and the General People's Committee. That there is internal dissent is indicated by the occurrence of at least six coup attempts since 1969: one led by Adam Said Hawwaz and Musa Aumad in 1969, a tribal uprising in 1970, a coup led by Omar Miheishi in 1975, a coup attempt in 1978, a series of commando attacks in 1984 by members of the National Front for the Salvation of Libya, and a failed coup in 1993 by members of the Warfalla tribe.

In 1980 Qaddafi launched a drive against both domestic and foreign opposition, warning exiles to return to Libya or be "liquidated." Within Libya more than 2,000 persons were reported to be under arrest, while anti-Qaddafi exiles were shot and killed by hit squads in London, Paris, and Rome.

The late 1980s and 1990s were marked by Libya's ostracism from international politics following its alleged involvement in terrorist acts. In 1988 two Libyan intelligence agents allegedly planted an ex-

plosive device in Malta on the flight connecting with Pan Am flight 103 in Germany, which later exploded over Lockerbie, Scotland, killing 259 passengers and crew and 11 people on the ground. In September 1989 Libya allegedly masterminded the bombing of French airline UTA flight 772 over Niger, killing all 171 persons aboard. In March 1999 a French court convicted in absentia and sentenced to life in prison six Libyan intelligence agents, one of them the brother-in-law of Qaddafi, in the UTA bombing.

In 1999 Libya began moderating its stance in world politics and its support of extremism. Qaddafi agreed to cease his financial support of terrorists and extradited two suspects in the Lockerbie bombing. In 2001, one Libyan defendant was convicted in the Lockerbie trial held in the Netherlands, while a second was acquitted. As a result of Libya's cooperation, UN sanctions that had been imposed in 1992 were first suspended and then fully lifted, in 2003. Sanctions by the United States, however, remained in place. In 2003 Libya agreed to a \$2.7 billion settlement with the families of the Lockerbie tragedy and also worked out settlements regarding the UTA bombing and other terrorist actions. In December 2003 Qaddafi, whose change of course was prompted by the failure of many of his earlier policies, announced that Libya would cease its nuclear, chemical, and biological weapons programs and submit to international inspections. In 2004 Libya made public its stockpiles of chemical weapons. Relations with European nations and the United States finally began to normalize; world leaders visited Libya, and Qaddafi made his first trip to western Europe in 15 years when he visited Brussels in 2004. That year the United States ended most of its sanctions and resumed diplomatic relations with Libya.

LIST OF MODERN RULERS

1951–69 King Idris I
1969– Muammar Abu Minyar al-Qaddafi

CONSTITUTION

Libya is in theory a *jamahiriyah* (state of the masses), governed by the people through local revolutionary councils and people's committees. In 1975 a 1,112-member General National Congress was established, consisting of the members of the RCC, leaders of the existing people's congresses, trade unions, and professional organizations. In late 1976 the congress renamed itself the General People's Congress (GPC, Mutamar al-Sha'ah Al'Am). Direct people's authority was set forth as the basis of Libyan political order in the form of people's congresses and popular committees. Members of the unicameral General People's Congress are elected indirectly through the hi-

erarchy of people's committees. However, in reality the government remains a dictatorship.

PARLIAMENT

The legislature, which has limited legislative powers, is unicameral. The sole chamber, the GPC has between 750 and 1,000 members (though some sources report double that number), appointed by local "basic people's congresses" for three-year terms. Nominally, the GPC has executive power, and its general secretary is often listed as head of government. However, real power lies in the hands of Qaddafi, who holds no office and has been the self-styled "Leader of the Revolution" since 1979.

POLITICAL PARTIES

Political parties are prohibited. One of the tasks of the RCC was to create an organization for mass mobilization without legalizing political parties. The answer was the Arab Socialist Union, which was founded in 1971. The Arab Socialist Union is not described as a party in government circles but as a "popular revolutionary alliance of the working forces."

LOCAL GOVERNMENT

From 1951 to 1963 Libya was divided into three autonomous provinces—Cyrenaica, Tripolitania, and Fezzan—corresponding to historical and topographical regions. In 1963 the kingdom was divided into 10 *mohafadas*, or governorates, each under a *mohaafiz*, or governor. The governorates were divided into *mutasarrifiyaat*, or districts, each under a *mutasarrif*, or district chief. The districts in turn were subdivided into *mudiriyyat*, each headed by a *mudir*, or chief. Municipalities, such as Tripoli and Benghazi, were divided into *aqsam*, or wards, each under a *mukhtar*, or headman, who was invariably a tribal sheikh. This form of local government was retained when Libya became a republic in 1969.

All local government officials are appointed by the RCC, and at least half the governors are members of the police or armed forces. Municipal and local councils, where they function, have only nominal and advisory powers.

In 1974 all *mohafadas* were abolished, and the administrative structures and departments of the local governments were transferred to the central ministries. Control offices were established in the major municipalities. The towns themselves were divided into quarters, each quarter having its own basic people's committee incorporating local trade unions and vocational syndicates. A total of 25 municipalities, or *baladiyat*, were established as local government units; these may have later been replaced by 13 regional administrative divisions.

LEGAL SYSTEM

With the acceptance of the primacy of Islamic law, the dual religious-secular court structure became unnecessary. In November 1973 the religious judicial system of *qadi* courts was abolished. The secular court system was retained to administer justice, but its jurisdiction came to include religious matters. Secular jurisprudence had to conform to Islamic sharia, or religious law. There are four levels of courts: summary courts, which try petty offenses; the courts of first instance, which try more serious crimes; the court of appeals; and the Supreme Court, which is the court of final appeal.

Special revolutionary courts were set up in 1980 to try political offenses. These courts usually meet in secret. Security forces also have the right to pass sentence without trial in the case of political cases.

In 1997 the Charter of Honor was instituted, imposing stiff penalties on anyone opposing the regime.

HUMAN RIGHTS

Libya has a poor human rights record. Sharp restrictions on freedom of the press, speech, assembly and association, and religion are in place. All political activities not officially approved are banned and subject to harsh penalties. Citizens do not have the right to change their government; any activity "opposed to the revolution" is punishable by death. The security forces arbitrarily detain citizens, who also do not have the right to be represented by legal counsel or receive a fair trial. Amnesty International has frequently criticized the government, accusing it of systematic torture and cruelty toward political dissidents.

Despite Libya's changed posture in the international community since the late 1990s, little has changed domestically in terms of human rights. Freedoms of the press, of speech, of assembly, and to change the government are either nonexistent or severely restricted. The judiciary is not independent, security forces have the power to pass sentences without a trial, and the government has used summary judicial proceedings to suppress domestic dissent. Political trials are held in secret with no due process considerations. Arbitrary arrest and torture are commonplace.

FOREIGN POLICY

Since taking power in 1969, Qaddafi determined Libya's foreign policy based on a series of goals, including Arab and African unity, the elimination of the state of Israel, the advancement of Islam, and an end to Western influence in the Middle East and Africa. In the early 1990s Libyan terrorism continued to target anti-Qaddafi dissi-

dents abroad, and Libyan agents were suspected in the disappearance of the prominent Libyan dissident Mansour Kikhya from Cairo in December 1993.

Libya, which sided with Iraq during the Persian Gulf War, spent much of the 1990s battling its international pariah status, with limited success. On April 5, 1999, more than 10 years after the 1988 bombing of Pan Am flight 103, Libya finally extradited two men suspected in the attack. In response the United Nations suspended the economic sanctions that had been in place since April 1992. These sanctions, expanded in November 1993, had included a freeze on Libyan funds overseas, a ban on the sale of oil equipment for oil and gas export terminals and refineries, and restrictions on civil aviation and the supply of arms. Although UN sanctions were suspended, some U.S. sanctions, which covered foreign companies making new investments of \$40 million or more over 12-month periods in Libya's oil or gas sectors, remained in place into the 2000s.

On a regional basis, Libya's relations with Sudan are troubled over accusations that Sudan has harbored anti-Qaddafi Islamic dissidents. Libya expelled more than 150,000 Sudanese guest workers between 1996 and 1999. In 2002 Libya and the United States held talks for the first time after years of hostility over Libya's sponsorship of terrorism. In 2003 UN sanctions were fully lifted after Libya made reparations for terrorist acts, including the downing of the Pan American flight over Lockerbie, Scotland. In late 2003 Libya renounced its program to develop weapons of mass destruction, an action which normalized relations with Western Europe and with the United States.

DEFENSE

The Libyan defense structure is headed by Qaddafi as commander in chief of the armed forces. Senior ranks have been purged on several occasions because of suspected or actual coup plots. Compulsory military service was introduced in 1975. The draft age is 17, and the conscription service period is two years. Both men and women are eligible. As of 2003 the total strength of the armed forces, consisting of the army, air force, and navy, was 76,500 members. In 1999 defense spending was \$1.3 billion, or 3.9 percent of gross domestic product (GDP).

ECONOMY

According to official Libyan figures, the UN sanctions in place from 1992 to 1999 cost Libya more than \$24 billion, the hardest-hit sector being the oil industry, with an estimated \$5 billion in lost revenues. The government dominates the economy through the complete control of the country's oil resources, which account for virtually all of Libya's export earnings and about one-third of GDP. Libya has three domestic refineries, with a combined capacity of approximately 348,000 barrels per day, nearly twice the volume of domestic oil consumption. Indeed, the combination of vast oil revenues and a small population gives Libya one of the highest per capita GDPs in Africa. However, much of the country's income has been wasted through mismanagement. This has led to high levels of inflation and overall declining living standards, as the government has been forced to cut back on public expenditures. Import restrictions and inefficient resource allocations have led to periodic shortages of basic goods and foodstuffs. A wage freeze for government jobs, imposed in 1981, lasted into the late 1990s. Largely due to international sanctions and reduced oil export revenues, Libya's economy averaged virtually 0 percent growth in the latter half of the 1990s. In efforts to diversify, such non-oil sectors as manufacturing and construction, which account for about 25 percent of GDP, expanded to include the production and refining of petrochemicals, iron, steel, and aluminum.

In general, the heavy socialist flavor of the economy has stifled entrepreneurialism. The 1994 Purge Laws, which allow for the confiscation of private assets above a nominal amount (describing wealth in excess of such an undetermined amount "the fruits of exploitation and corruption"), have been a death knell for private enterprise.

Nevertheless, at least with respect to oil, Libya's future looks bright. As of 1999 Libya had 12 oil fields with reserves of one billion barrels or more and two others with reserves of 500 million to one billion barrels. Higher oil prices in 1999 and 2000 led to increases in export revenues, which improved macroeconomic balances and helped to stimulate the economy. Following the easing of UN and U.S. sanctions, Libya tried to increase its attractiveness to foreign investors, and several foreign companies have sought contracts. GDP growth was estimated at 6.5 percent in 2000. Additionally, Libya has taken small steps toward a more liberal economic structure, applying for World Trade Organization membership, ending some subsidies, and beginning the privatization of some industries.

ENVIRONMENT

Libya's major environmental issues focus almost exclusively on the availability of freshwater. The falling water tables in the country's best agricultural lands, caused by too much irrigation, pose severe long-term ecological threats to agriculture, as does desertification.

Libya is party to several international environmental treaties, including those regarding desertification, marine dumping, nuclear testing, ozone-layer protection, and maritime law.

LIVING CONDITIONS

The United Nations Human Development Index for 2002 ranked Libya 58th among 177 nations in terms of life expectancy, education, and standard of living. In 2004 life expectancy in Libya was 76.5 years. The literacy rate in 2003 was 82.6 percent, while combined gross enrollment at primary, secondary, and tertiary schools in 2002 was 97 percent. Per capita GDP for Libyans in 2004 was \$6,700.

Social welfare networks in Libya have vastly improved since the 1969 coup. The retirement, social-security, health-care, educational, and transportation systems were all upgraded to serve more people. Adequate housing has been a more difficult problem. Most urban Libyans live in government-subsidized housing, and while the early years of the regime saw an increase of some 300,000 such units, the last two decades of the 20th century witnessed little new investment in housing. In 2001 about 89 percent of the population lived in cities, and urban growth is con-

tinuing. Added to this is the high fertility rate of almost 3.5 children per woman in 2004. These factors together have amplified housing shortages and led to the creation of shantytowns on the outskirts of cities. Apartment living is the norm for the middle classes. Most families own a television, while only 10 percent own cars.

The small percentage of the population living in rural areas makes their living from agriculture or as shepherds.

Islam is central to the Libyan way of life, which revolves around the five daily prayers Muslims are required to recite. Many Libyan men attend the mosque regularly, in keeping with the five prayer times; Libyan women predominantly pray in the home. Friday is Libya's holy day, and that day's noon prayer is almost always attended at the local mosque.

HEALTH

Medical care is free in Libya, as part of the social services provided by the government. Enormous improvements in the health-care system came about following the 1969 takeover by Qaddafi. In 1960 the infant mortality rate was a staggering 159 out of every 1,000 live births; by 2005 that number had dropped to 25 per 1,000 live births. Life expectancy increased 15 years in the same time period. Between 1970 and 1985 the number of health-care providers increased sevenfold. As of 2004 there were 129 physicians for every 100,000 people. Access to safe drinking water and proper sanitation has also improved: In 2002, 97 percent of people had access to proper sanitation, 72 percent to safe drinking water. Immunization rates for children one year of age are also high: 99 percent for tuberculosis, 93 percent for DPT and polio, and 91 percent for measles in 2003.

Serious illnesses in Libya include infectious hepatitis and typhoid. Malaria has been eradicated from the country, and together with the World Health Organization the government has engaged in a campaign of polio eradication. HIV/AIDS, though not the major health concern it is in sub-Saharan Africa, is still a menace, with 10,000 Libyans living with the virus as of 2003. Most of the transmission of the disease comes through drug use; thus, education is an important factor in fighting its spread. In September 2002 the Libyan government launched a National AIDS Program. In 2002 public expenditures on health care were 1.6 percent of GDP.

FOOD AND NUTRITION

A Muslim country, Libya has the dietary restrictions of that religion; alcoholic drinks and pork are forbidden. The semolina wheat known as couscous is popular in Libya, as it is throughout North Africa. The grain is consumed for lunch or dinner, as accompanied by meat (usually lamb) or vegetables in a sauce or served with milk and honey for breakfast. Another source of carbohydrates is the flat bread known as *kasrah*, which is eaten with most meals, often with dips, such as the mashed eggplant and sesame seed dish known as baba ghanoush.

Grown widely in Libya, dates are a popular snack food, as are olives. The date palm is a versatile food, eaten dried or fresh or squeezed for its juice. Other drinks include coffee and mint tea.

In general, nutrition in Libya is adequate. Between 1995 and 2003, for example, only 5 percent of children under five were diagnosed as moderately to severely underweight. In the same time frame, 90 percent of households were using iodized salt.

Food and Nutrition

 Amount of Fruits and Vegetables Available per person per year kg: 276.0

STATUS OF WOMEN

Although the 1969 constitution grants women total equality, the country's cultural attitudes and Islamic society still restrict women's rights. For example, a woman must have her husband's permission to travel abroad, and rural women often do not attend school.

Qaddafi has taken a leadership role in efforts to change the status of women and expand their access to educational and employment opportunities. However, there is still minimal female representation in government.

Female genital mutilation is still practiced in remote rural areas. Violence against women also continues to be a problem.

WORK

As of 2004 there were some 1.6 million people in the Libyan labor force. As of 1997 the service sector was the biggest employer, with 54 percent of workers; industry employs 29 percent. The oil industry, next to the government itself, is the largest single employer. Industrial workers are also engaged in food processing, textiles, handicrafts, cement, appliances, and construction equipment. Agriculture accounts for the remaining 17 percent of the workforce; wheat, barley, olives, dates, citrus, vegetables, peanuts, soybeans, sheep, and cattle are all raised. Fishermen catch mullet, sardines, and tuna in the waters off of Tripoli. The 2004 unemployment rate was 30 percent. Much of Libya's workforce is made up of foreign workers, who do the unskilled tasks Libyans look down on, or foreign technicians, who advise on petroleum extraction and design and construct irrigation projects.

There are no independent labor unions in Libya. All unions must be authorized by the government and belong to the National Trade Unions' Federation. All workers are required to join a union, though they have no right to collective bargaining or to strike, and labor laws are basically imposed top to bottom by the government. The minimum work age is 18, the maximum workweek 48 hours.

EDUCATION

Education is compulsory from the ages of six to 15, the duration of primary education in Libya. Secondary education is for three years or to the age of 18. As of 2003, 82.6 percent of the population was literate.

Institutions of higher education include Al-Fatah University (formerly the University of Libya at Tripoli), the University of Garyounis (formerly the University of Libya at Benghazi), and the Bright Star University of Technology, at Marsa al-Brega. There are also two higher

institutes of technology and one of mechanical and electrical engineering. Education is one area in which the status of women in Libya is improving. Approximately 46 percent of postsecondary students are female, up from 25 percent in 1980.

Libya is emphasizing higher education, with over half of public revenues spent on tertiary education in 1999 to 2001. Total enrollment at all higher-level institutions was 375,028 in 2002. Public expenditures on education in 1999 totaled 2.7 percent of GDP.

SCIENCE AND TECHNOLOGY

Libya pursues research in fields from agriculture to nuclear power to petroleum engineering and electronics. Numerous universities and public ministries oversee such research. Al-Fatah University has faculties in science, medicine, nuclear engineering, and agriculture. Faculties of science and engineering are also found at the University of Garyounis and at Bright Star University. Al-Arab Medical University and Sebha University focus on medicine, while Sebha also has agricultural and engineering faculties.

The Secretariat of Agriculture, through its Agricultural Research Center, pursues research in field crops, horticulture, plant protection, livestock, forestry, and natural resources. The Secretariat of Training and Habilitation, through its Nuclear Research Center and its Libyan Center for Remote Sensing and Space Sciences, pursues research in those topics. Other government secretariats sponsor research in fisheries and livestock.

As of 2001 Libya had 361 technicians involved in research and development per million people. Many of these research positions were filled by foreign scientists and technicians.

MEDIA

There are no independent media in the country. There is the popular daily newspaper *al-Fajr al-Jadid*, and local revolutionary committees publish smaller newspapers. Two other dailies are *al-Jihad* and *Libyan Press Review*. The official news agency, JANA, is government run. While foreign publications are allowed to be imported into the country, they are routinely censored, and the government frequently bans the entry of individual issues.

All 23 radio and 12 television outlets are state controlled. Libya also runs the Voice of Africa radio service, which broadcasts across Africa in Arabic, French, and English. Satellite television is available, though its content is also censored. Internet access is limited; in 2003 there were an estimated 160,000 Internet users. The same year there were 100,000 cellular phone users.

With the government owning and controlling all print and broadcast media outlets, Libya cannot be said to have a free and open media. Reporters without Borders ranked the country 155th out of 167 countries in its 2004 world press freedom index.

CULTURE

Libyan culture is strongly influenced by Islam in its teachings and art. The country was once known for its traditional weaving, embroidery, metal engraving, and leatherwork. Such artwork seldom depicts people or animals, as this runs counter to Islamic tradition. Instead, Muslim and Libyan artists developed the arabesque, in which designs are complex, geometric, and abstract. This style can be seen in carpets, engraving, and the ornamentation of mosques, such as the Karamanli and Gurgi in Tripoli. These geometric designs are often ornamented with words from the Koran. The Qaddafi regime, with its nationalization of business, has inadvertently discouraged the work of artisans.

Folk dance and folk music are also important parts of the Libyan cultural scene. Popular and very physical line dances might be accompanied by such traditional instruments as the lyre; the *'ud*, or windpipe made of cane; the *tablah*, or hand-beaten drum; violins; and tambourines. Other folk traditions include horse races and festivals.

The Qaddafi regime has discouraged such folk arts insofar as they might represent the influence of old tribal life; the government wants to reduce such influence in order to create a Pan-Arab state. Otherwise, the arts are supported by the government through the Ministry of Information, the Ministry of Education and National Guidance, and the Al-Fikr Society, a group of intellectuals and professionals.

Libraries include the government library and archives in Tripoli, the public library in Benghazi, and university libraries. The government strongly controls the content of printed matter, and such collections contain more religious writing than contemporary works.

Numerous museums preserve Libya's cultural heritage. The Department of Antiquities is responsible for the Archaeological Museum, the Leptis Magna Museum of Antiquities, the Natural History Museum, and the Sabratha Museum of Antiquities, all in the western region, and the archaeological sites of Ptolemais and Appolonia in the eastern region. The Sebha Museum contains exhibits of ancient remains of the former Fezzan region.

FOLKLORE AND MYTHOLOGY

Libya is rich in ancient myth. The very name of the country comes from a woman beloved by Poseidon, whose name was given to all of then-known Africa. Other mythological connections have to do with the Argonauts. Euphemus was the son of Poseidon and Europa and was the helmsman of the Argonauts. Medea predicted that he would one day rule over Libya, and the prophecy became true when Battus, one of Euphemus's descendants, came to Libya and founded Cyrene.

Legends and folktales are important parts of Libyan folklore. The country's legends mostly deal with historical figures, such as Muslim leaders who fought the Crusaders or the Italian invaders. Often from religious backgrounds, these leaders were thought to be holy men and to possess

a grace that allowed them to perform miracles. The graves of such holy men, or *marabouts*, have become pilgrimage destinations.

Folktales in Libya also take on a religious significance, many of them relating stories of the prophet Muhammad. Evil spirits are also a feature of Libyan and Arab folklore in general. These spirits, or *jinn*, are able to take on human form and need to be warded off by different methods, both religious and animistic.

ENTERTAINMENT AND RECREATION

In cities, towns, and villages, sidewalk cafés are where mostly men gather to socialize, play chess or dominoes, and drink tea and coffee. There are no nightclubs or bars in this Muslim country. Evening entertainment consists of visits to the cinema or time at home. Attending camel races and soccer matches is another popular form of public entertainment.

Listening to the radio or watching television, though the content of both is strictly controlled by the government, is a popular form of entertainment. In 2000 there were 273 radios and 139 television sets for every 1,000 people.

Along the coast, outings to the beach are popular, as are water sports such as swimming and scuba diving.

ETIQUETTE

The primary factor in the social life of Libya is its status as an Islamic state. While it is not fundamentalist, religion rules not only social conventions but also codes of etiquette. The typical Libyan greeting is the Islamic *as-salamu'alaykum* ("Peace be with you"), answered by *wa'alaykum as-salam* ("And peace be with you as well"). God, or Allah, is continually referred to in polite conversation, as in *in-sha' Allah*, or "If God wills it." Handshakes are also typical forms of greeting between men and with some women.

Islam has numerous taboos, most prominently in food and drink. Neither alcohol nor pork is allowed. Bread is considered sacred, and bread crumbs should not be brushed off the table onto the floor. Shoes are removed before entering a home or mosque, and the soles of neither shoes nor feet are shown to others. The left hand is considered unclean; therefore, it is considered rude to gesture, accept or take things, or eat with the left hand. The thumbs-up gesture common in North America is rude in Muslim countries. The role of the female in Muslim society is very subservient, and it is considered impolite to ask about female members of a family if the topic is not brought up by the male head of the household himself.

The nation's desert location determines other forms of etiquette. For example, a Libyan always greets guests with a cup of coffee or tea, and desert tradition requires that a guest be offered food. Such hospitality is part of the Libyan code of honor. It is considered disrespectful to openly criticize anyone, and courtesy must always be shown when in public. Children are taught to respect adults. Titles rather than first names are normally used in public address. Libyans of tribal background give great importance to tribal loyalty.

FAMILY LIFE

Most Libyan marriages are arranged; even ones that are based on love must have the approval of parents, and the terms of the marriage contract are negotiated by the parents. The wedding ceremony is officiated by a prayer leader, or imam, and usually takes place in the mosque or at the bride's home. The Libyan family is patrilineal. A father's sons and their wives traditionally lived with him, as did any unmarried daughters and the grandparents. Upon the death of the father, the sons establish their own homes and repeat the same process.

With the 1969 coup, some of the established traditions of Libyan life changed, including the role of women. The new regime wanted to include women in the power base and thus encouraged them to vote, gain an education, and obtain work. To this end, day-care centers were established for working mothers, and a retirement age of 55 was set. However, traditions die hard, and women are still underrepresented in higher-paying positions despite their near parity in education.

PERSONAL APPEARANCE

Both Western attire and traditional clothing can be found in modern Libya. In urban areas the dress tends to be Western but modest in style. Women wear head coverings in traditional Muslim fashion. Jeans are typical for young men and boys in cities, while dresses are usual for women.

Some urban men still wear the traditional clothing of a long white gown over shirt and pants, with a Muslim cap. More traditional women will wear the long, dark gowns that cover both body and hair. Such attire is the norm in rural areas.

A special style of traditional clothing is worn by the Tuareg tribe in the Libyan Desert. Both men and women cover their heads with blue veils, leaving only their eyes visible, a protection against both sun and blowing sand.

SPORTS

Soccer is the most popular spectator and participatory sport in the nation. The top national league includes 15

teams; Tripoli and Benghazi are both home to four clubs. Al-Ahly and Al-Etihad of Tripoli are the main teams and have won most national league championships. Libya's national soccer team competes against Arab and African teams.

Basketball and track and field are also popular. More traditional are camel-racing and horse-racing events. Libya's athletes first took part in the Olympics in 1968 but did not compete again until 1992. Since then the country has regularly sent small contingents in track and field and martial arts.

CHRONOLOGY

- 1949** United Nations resolves to grant Libya independence.
- 1951** Libya achieves independence as the United Kingdom of Libya, with Emir Sayid Idris al-Sanusi as King Idris I.
- 1953** Libya joins the Arab League.
- 1955** Libya becomes a member of the United Nations.
- 1956** Libya establishes diplomatic relations with the USSR.
U.S. oil companies are granted drilling rights in Libya.
- 1961** A 100-mile pipeline links Libyan oil to Mediterranean ports.
Royal decree increases the government's share of oil profits from 50 to 70 percent.
- 1963** Women are granted the right to vote.
- 1964** Britain and the United States begin negotiations with Libya to shut down their Libyan air bases.
- 1967** After the Six-Day War between Israel and neighboring Arab countries, Libya assists Jordan and Egypt and distances itself from Israel.
- 1969** A bloodless revolution establishes the Libyan Arab Republic, led by Col. Muammar al-Qaddafi, chairman of the RCC.
Qaddafi quells a coup attempt.
- 1970** A tribal coup attempt is put down.
Withdrawal of British and U.S. troops is completed.
- 1973** Qaddafi promulgates his "cultural revolution," an attempt to turn away from all foreign ideologies and embrace Arab socialism and Islamic fundamentalism as the guiding principles of Libya.
Banks are nationalized and oil companies brought under government control.
- 1975** Omar Miheishi leads a failed coup attempt.
- 1976** At Qaddafi's behest, the GPC proclaims the Socialist People's Libyan Arab Jamahiriya, intended to be a bureaucracy-free style of government.
- 1978** Dissidents unsuccessfully attempt a coup.
- 1979** Qaddafi relinquishes his duties as general secretary of the GPC but remains supreme commander of the armed forces.
- 1980** Qaddafi commands exiles to return to Libya or be "liquidated."
Numerous anti-Qaddafi Libyans in London, Paris, and Rome are subsequently assassinated. Libya intervenes in Chad's civil war, opposing the forces of Hissène Habré.
- 1981** U.S. Navy shoots down two Libyan fighter planes over the Gulf of Sidra.
- 1982** United States imposes an embargo on Libyan oil imports.
- 1984** After suffering a series of bombings aimed at Libyan dissidents, Great Britain cuts off diplomatic relations with Libya.
Members of the National Front for the Salvation of Libya launch a series of commando attacks against the government.
- 1986** United States retaliates against Libyan attacks on U.S. personnel and airplanes by destroying two Libyan ships and bombing Tripoli and Benghazi.
- 1987** Qaddafi's forces are routed in Chad.
- 1988** Libya is suspected when Pan Am flight 103 explodes over Lockerbie, Scotland, killing 270.
- 1989** Libya is suspected when Flight 772 of UTA, a French airline, explodes over Chad, killing 171.
- 1990** Libya and Chad agree to allow the International Court of Justice to arbitrate their dispute over the Aozou Strip.
- 1992** United Nations imposes sanctions on Libya for its refusal to extradite two Libyans suspected of bombing Pan Am flight 103.
- 1993** Libyan agents are suspected in the disappearance of prominent Libyan dissident Mansour Kikhya from Cairo.
A failed army-led coup attempt against Qaddafi leads to mass arrests and a shakeup of army command.
The UN toughens sanctions over Libya's continued refusal to extradite Lockerbie bombing suspects.
Members of the Warfalla tribe unsuccessfully attempt a coup against the government.
- 1994** International Court of Justice rules against Libyan claims to the Aozou Strip in Chad. Libyan troops are withdrawn from the region under UN supervision.
- 1995** Faced with economic problems, Qaddafi initiates a policy of expelling foreign workers from Libya to provide employment for Libyans.
- 1996** Still frustrated with Libyan refusal to extradite Lockerbie suspects, the United States imposes

- “secondary” sanctions penalizing any company operating in U.S. markets that invests more than \$40 million in Libya.
- 1997** South African leader Nelson Mandela visits Libya, signaling a break in the country’s isolation. The Vatican resists U.S. pressure and reestablishes diplomatic relations with Libya.
- 1998** Qaddafi announces Libya’s plan to be more closely aligned with Africa than the Arab world, signaling a seminal change in country’s foreign policy focus.
- 1999** Libya hands over two suspects in the Lockerbie bombing to the Scottish court. UN Security Council suspends economic sanctions. Britain reestablishes diplomatic relations with Libya. French court finds six Libyans guilty in absentia for bombing of UTA flight over Chad in 1989.
- 2001** The Lockerbie trial concludes, convicting one Libyan defendant and acquitting the other.
- 2002** In January, Libya and the United States begin talks to improve relations. The Libyan convicted in the Lockerbie trial loses his appeal and begins serving a life sentence.
- 2003** The United Nations lifts sanctions against Libya after Qaddafi agrees to a \$2.7 billion settlement with the families of victims of the Lockerbie bombing. Qaddafi renounces Libya’s program to build weapons of mass destruction.
- 2004** Libya pays compensation to the families of victims of the UTA and La Belle disco bombings. Qaddafi visits western Europe for the first time in 15 years. Most U.S. economic sanctions on Libya are terminated.
- 2005** Libya apologizes to Mauritania for allegedly supporting rebels who tried to overthrow President Maaouya Ould Taya in 2004.

DATE OF CONSTITUTION

October 5, 1921

GEOGRAPHICAL FEATURES

The fourth-smallest country in Europe, Liechtenstein is landlocked and roughly triangular in shape. It is located in the Rhine River valley. It has a total area of 160 sq km (61.8 sq mi), extending 28 km (17.4 mi) north to south and 11.3 km (7 mi) east to west. Its total boundary length of 76 km (47.2 mi) is shared with Austria (34.9 km, 21.7 mi) and Switzerland (41.1 km, 25.5 mi).

One-third of the country lies in the upper Rhine valley, occupying a narrow slice of land. The remainder of the country is in a part of the Alps range that runs

east to west through Switzerland. The greatest elevation is Grauspitz (2,599 m; 8,525 ft), in a spur of the Rhaetian Alps.

CLIMATE AND WEATHER

Liechtenstein has an alpine climate with mild winters. The climate is less severe than might be expected from its inland location and elevation because of the warm, south-western winter wind called the *Föhn*, which hastens the coming of spring. The annual lowland temperature average is about 9°C (47°F). Annual precipitation, including some 35 days of snow, is about 1,143 mm (45 in), concentrated from June to August.

Climate and Weather

Mean Temperature: 47°F
Average Rainfall: 45 in

FLORA AND FAUNA

Partly Alpine and partly low-lying land washed by the Rhine, Liechtenstein displays a wide variety of flora and fauna consistent with such varied geography. Plant life includes trees such as conifers, beech, alder, maple, and larch, while at higher elevations Alpine flora such as the edelweiss, gentian, and Alpine rose are typical. Orchids are even found at lower elevations, a result of the hot-house effects of the *Föhn*.

Animal life is also affected by varying elevations as well as by the prevalence of humans. Chamois are found in the mountains, while mammals at lower elevations include the badger, fox, and deer. Avian life is particularly rich, with over 120 species, including eagles, ravens, and falcons, present in the small country.

ETHNIC COMPOSITION

The population is mainly of German stock, descended from the Alemannic tribes who settled between the Main and Danube rivers in the early centuries of the Common Era. About one-third of the population is foreign.

LANGUAGES

The official language is German. The common vernacular is Alemannic.

RELIGIONS

The state religion is Roman Catholicism. The principality forms a single deanery within the Diocese of Chur in Switzerland. The major Protestant body is the Evangelical Church.

Roman Catholic	25,700
Protestant	2,400
Other	5,700

HISTORICAL BACKGROUND

The principality of Liechtenstein comprises the counties of Vaduz and Schellenberg, ruled by various families in the Middle Ages, including the von Hohenems. When the von Hohenems succumbed to financial pressures, the principality was purchased by Prince Johann Adam between 1699 and 1712 through an act of Holy Roman Emperor Charles VI. The emperor made Liechtenstein a direct fief of the Crown and confirmed the rule of Prince Anton-Florian, Johann Adam's successor. During the Napoleonic Wars and following the 1806 Treaty of Pressburg, Liechtenstein joined the Confederation of the Rhine, which made the principality a sovereign state. In 1815, following Napoleon's downfall, Liechtenstein joined the German Confederation; this connection lasted until the Prussian victory over Austria in 1866. From 1852 until the end of World War I in 1918, Liechtenstein was closely tied to Austria, but in 1923 the nation forged new economic and political links with Switzerland that have lasted to this day.

From 1938 until 1997 Liechtenstein's government was a coalition of the Progressive Citizens' Party (FBP) and the Fatherland Union (now the Patriotic Union). The former was the senior coalition partner from 1938 to 1970, 1974 to 1978, and May to October 1993. In 1997 the FBP announced that it was leaving the coalition to become an opposition party. In 2001 the FBP won parliamentary elections, and the party leader Otmar Hasler became prime minister. Women were granted suffrage for the first time in 1984. Prince Franz Josef II died in 1989 after a 51-year reign that had made him the world's most durable monarch at the time, and he was immediately succeeded by 44-year-old Prince Hans-Adam II.

In 2000 the country was rocked with international charges of money laundering for Latin American drug cartels and the Russian mafia. Subsequent investigations led to the arrests of eight high-profile Liechtensteiners, including a brother of the country's highest-ranking judge.

Prince Hans-Adam II came to fight with parliament to increase his powers in government. In the 2001

elections the FBP won the majority of seats, and Otmar Hasler became prime minister. In 2003, under allegations of functioning as a tax haven, Liechtenstein signed a treaty allowing U.S. investigators access to bank records when tracking terrorists. Meanwhile, Hans-Adam continued to press for more power for the head of state; in 2003 voters approved a number of constitutional amendments demanded by the prince, including giving him the right to veto parliament, dismiss the government, and approve judicial nominees. In 2004 Hans-Adam transferred the official duties of the ruling prince to his son, Alois, but kept the official title of head of state for himself.

CONSTITUTION

Liechtenstein is a constitutional monarchy ruled by the hereditary princes of the House of Liechtenstein. The current constitution was adopted in 1921. The chief of government (Regierungschef) is appointed by the sovereign. The government, which is responsible to both the sovereign and the Landtag (Diet), also includes a deputy chief (Regierungschef-Stellvertreter), appointed by the sovereign from the minority party in the Diet, and three government councilors (Regierungsräte), elected by the Diet. The term of office of these officials is four years. In 2003 a referendum amended the constitution to give the prince sweeping new powers to veto laws passed by and dissolve parliament.

PARLIAMENT

The Landtag is a unicameral body of 25 members directly elected for four-year terms on the basis of universal suffrage by all adults over 18. (Before 1984 suffrage was limited to men.) The voting system is based on proportional representation.

All legislation must have the concurrence of the prince, who also has the right to dissolve the Landtag.

The constitution permits any group of 600 citizens or three communes to propose legislation. Bills passed by the Landtag may be submitted to popular referendum.

POLITICAL PARTIES

There are three political parties in Liechtenstein. The conservative FBP currently holds 13 of the 25 seats in the Landtag. The Free List Party, an ecological party founded in 1985, holds one seat. The Patriotic Union, a conservative-centrist party founded in 1938, holds 11 seats.

LOCAL GOVERNMENT

For administrative purposes the principality is divided into two districts and 11 communes, or Gemeinde.

LEGAL SYSTEM

Liechtenstein has its own civil and penal codes. The lowest court is the county court (Landgericht), which decides minor civil cases and summary criminal offenses. The criminal court (Kriminalgericht) is for major crimes, and the court of assizes is for misdemeanors. The superior court (Obergericht) and Supreme Court (Oberster Gerichtshof) are courts of appeal for civil and criminal cases, respectively. An administrative court of appeal hears appeals against government actions, and the State Court determines the constitutionality of laws.

A backlog of cases in the criminal courts means that many cases go untried for a number of years. Liechtenstein abolished the death penalty in 1987.

HUMAN RIGHTS

Liechtenstein is a constitutional monarchy and parliamentary democracy with no serious human rights problems. The independent judiciary is effective in dealing with individual instances of abuse. The constitution guarantees freedom of religion, speech, and press. The sole local human rights organization, Justitia et Pax, is an informal group that monitors prison conditions and assists foreign workers with immigration matters.

The sweeping constitutional changes of 2003 put European organizations on the alert for a possible rollback of Liechtenstein's democracy. However, to date there is no evidence that the monarchy has abused its new powers.

FOREIGN POLICY

Liechtenstein maintains an embassy in Bern, Switzerland, but is represented elsewhere by Swiss embassies and consulates through a 1919 agreement. The principality became

1406 Liechtenstein

a member of the United Nations in 1989 and a member of the European Free Trade Association (EFTA) in 1991. Liechtenstein acceded to the European Economic Area in 1995 but is not part of the European Union.

DEFENSE

Since 1868 Liechtenstein has not maintained a standing army, although the constitution provides for obligatory military service for all able-bodied men up to age 60. The defense of the country is the responsibility of Switzerland.

ECONOMY

In terms of per capita gross domestic product (GDP), Liechtenstein is one of the richest nations in the world, a phenomenon that reflects the principality's rapid transition from a largely agricultural economy at the end of World War II to a highly industrialized and financially innovative nation. Some industries are owned and managed by Swiss interests, but Liechtenstein-based companies are active in exports and undertake substantial production abroad through subsidiaries.

In addition to manufacturing, two other sectors undergird the economy. The financial sector consists of a great number of foreign corporations and holding companies with nominal offices in Vaduz that are subject to virtually no regulation and pay no taxes on income or sales. In other words, the principality is one of the world's favorite tax havens. Though the country passed banking reform laws in 2000 that allow for greater transparency, its low taxes still make it an attractive location for so-called letterbox companies. Such companies provide 30 percent of state revenues. The third major sector is one it shares with all minicountries: income from the sale of postage stamps, tourism, and related activities.

The country participates in a customs union with Switzerland and uses the Swiss franc as its national currency. It imports more than 90 percent of its energy requirements. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between the EFTA and European Union) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe.

LIVING CONDITIONS

A modern industrialized nation, Liechtenstein enjoys one of the world's highest standards of living. In 1999 per capita GDP was a robust \$25,000. Life expectancy is high, at just under 80 years, and the literacy rate stands at 100 percent.

Single-family dwellings are the norm, though with demographic changes that include a shift from rural to urban areas (22 percent of the population lived in towns as of 2003), apartment life is also common. The typical house in the countryside is similar to those found in the mountainous areas of Austria and Switzerland: It generally has a ridged roof with wide, overhanging eaves and a balcony or veranda with bright flowers such as geraniums in the summer months. These picturesque wooden and stucco structures give way in Vaduz to multistory apartment buildings. The country does not suffer from a housing shortage.

Most Liechtensteiners get about by private car, though there is also a good mass-transit system, including postal buses that take people to out-of-the-way destinations. The country's one rail line is operated by Austria.

HEALTH

Liechtenstein has a national medical-insurance system that provides free medical care to all residents as well as those employed in Liechtenstein. As of 2005 the crude birth rate and overall mortality rate were estimated at

10.4 and 7.1 per 1,000 people, respectively. The infant mortality rate was an estimated 4.7 per 1,000 births. There were an estimated 1.5 physicians and 3 nurses per 1,000 people as of 2004. Preventive medicine is built into the health-care system, with series of regular examinations scheduled for all children up to age 10. Immunization rates are correspondingly high. With few hospitals, Liechtenstein has agreements allowing its citizens to use those in Switzerland and Austria.

The population has access to safe drinking water and proper sanitation. Goiter was long a problem in this Alpine land, as it was in others before iodized salt was added to the diet. As throughout much of western and central Europe, tickborne encephalitis, a viral infection of the central nervous system, is prevalent. Ticks can be found in the woods, especially under certain pine trees, and in tall grass.

FOOD AND NUTRITION

Liechtenstein takes its culinary traditions from both Switzerland and Austria. Heavy in meat and potatoes, the cuisine is a holdover from times of hard physical labor and life without central heating. The fried shredded potatoes called *rösti* in Switzerland as well as pork in its many forms, especially as sausage or wurst, are popular. Soups and cheese also form a large part of the diet.

Lunch is typically the big meal of the day. Breakfast is simply coffee or cocoa and rolls or bread with jam. A light meal of cheese and cold cuts with bread is often served for dinner. Lunch, however, comes in several courses, including soup, salad, a main course, and dessert.

Typical dishes are *Käsknöfle*, baked noodles with grated cheese and onions; *Hafaläb*, or fried cornmeal; and *Törkarebl*, a dessert dumpling made from corn flour served with elderberry jam. Liechtenstein wines are served with most meals. In general, food is plentiful, and nutrition is

adequate, though the diet is generally heavy in fats and carbohydrates.

Food and Nutrition

 Daily Available Calories per capita kcal: —
 Amount of Cereal Available per person per year kg: —
 Amount of Fruits and Vegetables Available per person per year kg: —

STATUS OF WOMEN

There are no constitutional barriers to full participation by women in society. Women often play more traditional roles in the family, however, in large part due to the historic stability of Liechtenstein's society. This deference to tradition helps explain why women were not granted the vote until the early 1980s.

A Catholic country, Liechtenstein has a restrictive abortion law, allowing the procedure only when the life or health (including mental health) of the woman is threatened.

An equal opportunity law deals with workplace discrimination and sexual harassment. Domestic violence is an increasingly serious problem. The 2001 Law on Protection against Violence governs the right to expel perpetrators from and prohibit reentry into the home. Since 2001 marital rape has been a punishable offense. The government ratified the UN Convention of the Elimination of all Forms of Discrimination against Women.

WORK

The 2002 labor force of Liechtenstein was 29,000, which included 19,000 foreign workers. Of these, 13,000 commuted daily from Switzerland, Germany, and Austria. Unemployment in 2002 was just 1.3 percent, which accounts for the large foreign labor force; though in the main highly skilled, the native Liechtenstein population is not large enough to meet industrial demand.

Since World War II Liechtenstein transformed itself from an agrarian nation into an industrial one with one of the highest per capita GDPs in the world. Once a mainstay of the economy, agriculture had shrunk to just 1.3 percent of the labor force by 2001; agriculture produces wheat, barley, corn, potatoes, livestock, and dairy

products. The service sector accounted for 51.3 percent of the labor force, with many involved in banking and government work. Industry employed 47.4 percent. The industrial sector includes electronics, metal manufacturing, dental products, ceramics, pharmaceuticals, food products, precision instruments, and optical instruments.

The constitution provides for the right of association; Liechtenstein's one union has 13 percent of the labor force enrolled. Though strikes are permitted, they are rarely resorted to. The legal workweek is set at 48 hours in nonindustrial businesses, 45 hours in industry. The minimum work age is 16. With one of the world's highest average wage rates, there has been no need to set a minimum. Health and safety measures on the job are strictly enforced.

EDUCATION

Compulsory education begins at age seven. Basic instruction follows in a primary school for five years, after which a pupil may transfer to a lower or upper secondary school for four years or to a gymnasium school for eight years. Such gymnasium education is intended to lead to a college education. The Roman Catholic influence is strong in the curriculum and pedagogic philosophy. Liechtensteiners traditionally go to Switzerland, Germany, or Austria for higher education, though there are institutes of higher education within the country, including Hochschule Liechtenstein, (the University of Applied Sciences), the University of Human Sciences, the International Academy of Philosophy, and the Liechtenstein Institute.

The adult literacy rate in Liechtenstein is 100 percent.

SCIENCE AND TECHNOLOGY

Liechtenstein industry depends on research and development to maintain an edge on competition. To that end, the Advisory Council for Research and Technology was founded in 1989 to provide research for both the government and the Liechtenstein Chamber of Commerce and Industry (LCCI). In 2003, LCCI industrial companies invested around 292 million Swiss francs in research and development, corresponding to over 8,000 Swiss francs per capita. Overall, approximately 5 percent of the country's revenue is invested in research and development. Total research and development spending in 2000 rose by 20.7 percent to approximately \$149 million.

Liechtenstein is one of the financial supporters of the Interstate University of Applied Sciences of Technology Buchs, in Switzerland, which offers systems engineering degrees. Liechtenstein research institutes include the Liechtenstein University of Applied Sciences, with projects in market and product research, and the University of Human Sciences, with projects in neuroscience.

MEDIA

Two daily papers are published in Liechtenstein: *Liechtensteiner Vaterland*, founded in 1913 and an organ of the Fatherland Union, and *Liechtensteiner Volksblatt*, founded in 1878 and an organ of the FBP. In 2002 they had circulations of 9,800 and 8,200, respectively, while *Liechtensteiner Wochenzeitung*, a weekly, had a circulation of 14,000.

The principality's news agency is Presse und Informationsamt.

Liechtenstein has one state-run and one private television station and one private radio station. The country also receives programming from Switzerland and Austria. As of 2004 there were 3,727 Internet hosts, and almost two-thirds of the population were Internet users. In 2002 there were 11,400 cellular telephone users.

The media in Liechtenstein is independent, and freedom of the press is guaranteed.

CULTURE

Liechtenstein's relics from the Stone Age, Bronze Age, Iron Age, Roman epoch, and Middle Ages are on display at the National Museum in Vaduz. The art collection of the princes of Liechtenstein, second only to that of Britain's royal family as the largest private art collection in the world, can be seen at the Engländerhaus, also in the capital. This collection includes the works of the 17th-century Dutch and Flemish painters Breughel the Elder, Rembrandt, and Peter Paul Rubens and many other famous artists, as well as sculptures, tapestries, silver, and porcelain, though little of local production.

Stamps, one of the mainstays of the Liechtenstein economy, often reproduce some of the princes' masterpieces. Several hundred framed originals of stamps are on display at Vaduz's Postage Stamp Museum.

The country has a strong musical tradition, which includes brass bands and vocal ensembles in rural areas. Vaduz has a popular operetta company.

Folk crafts included basket weaving, barrel making, clog carving, and rake making. Woodcarving is still practiced in Liechtenstein, but ceramics and sculpture have taken the place of more rustic earlier crafts.

FOLKLORE AND MYTHOLOGY

Witches figure prominently in Liechtenstein folklore; in the 17th century the principality was wracked by witch

hunts. One legend tells of a fiddler named Hans Jöri who unknowingly plays at a party thrown by a group of witches. Another tale deals with a farmer who thinks his cow's milk is prevented from thickening into butter by a witch's spell. Such traditions are maintained in the contemporary festival Funkensonntag, or Spark Sunday, just before Easter, when straw witches are burned in giant bonfires. The size of the bonfires provides a form of competition between villages.

Other legends and folktales in this largely Catholic country deal with the lives of saints.

ENTERTAINMENT AND RECREATION

Outdoor activities are popular forms of recreation for Liechtensteiners. In winter there are downhill and cross-country skiing, while in warmer months a well-maintained system of footpaths provides excellent hiking opportunities.

Many of the musically minded take part in local bands and choruses. Television and radio are also popular forms of entertainment, as throughout Western Europe. Most television programming comes from Switzerland, Germany, and Austria.

In rural areas, Catholic holidays provide other opportunities for socializing and communal dining.

ETIQUETTE

Greetings are made with a firm handshake and verbally with *Grüss Gott* (literally, "Greetings from God"), a salutation that is also popular in Austria and Switzerland. A shortening of this is *Grüzi*. Such greetings are made at close distance rather than shouted down the street or across a room, for example. As with Austrian etiquette, first names are used by friends, while titles and last names are normally used in formal settings. The informal *du* is reserved for close friends, though younger people are generally less formal.

Dining is continental style, with fork and knife used simultaneously. Liechtenstein is fairly conservative; public displays of affection are not considered polite.

FAMILY LIFE

Small nuclear families are the norm in Liechtenstein. The 2004 fertility rate was 1.5 children per woman.

Couples marry in their late twenties, and it is not unusual for couples to live together before or instead of marrying. Rural weddings still engage in old customs of "bribing," in which village children might bar the way of the newly married couple until they pay a passage fee, or

friends of the groom might stage a mock kidnapping of the bride, such that he must pay a fee for her release.

With the rapid changeover from an agrarian economy to an industrial one, marriage roles are in flux. With more and more women working outside of the home (38 percent of the workforce is female), the old male-dominated union is giving way to a partnership. Divorce is legal; 92 occurred in 2001. Marriages numbered 253 that year.

PERSONAL APPEARANCE

Dress in Liechtenstein is modern and Western, with a bit more formality and conservativeness than in other countries of Western Europe. Traditional costumes known as *Trachten* are worn for special occasions, while men in rural areas still sport lederhosen, or leather knee breeches, and perhaps loden-style wool hunting jackets with piping and bone or antler buttons. For women the traditional dress is the dirndl, a full skirt gathered at the waste with an embroidered blouse and an often colorful apron. Men also wear flat black hats with their outfits. Such clothing can be found in Austria and Switzerland as well.

SPORTS

Soccer and skiing are the major sports in Liechtenstein. The soccer teams play in the Swiss leagues; FC Vaduz is perhaps the most successful team in the nation, competing in the second level of Swiss soccer, the Swiss Challenge League. One Liechtenstein team per year is eligible to play in the UEFA Cup, for the European leagues championship. In 2004 the Liechtenstein national team, usually a sure loser, stunned competitors by qualifying for the 2006 World Cup.

Skiing draws much national attention. Hanni Wenzel won two Olympic titles in 1980, and the country generally has strong skiers in international competition. Malbun and Steg are the two principal ski resorts, with world-class downhill and toboggan runs. Steg also has a cross-country ski course.

CHRONOLOGY

- 1970** Fatherland Union replaces the FBP as the majority party in the Landtag.
- 1978** Liechtenstein joins the Council of Europe.
- 1981–84** Prince Franz Josef hands over most of his executive powers to his son Hans-Adam.
- 1984** Women are granted the franchise.
- 1989** Prince Hans-Adam II becomes the head of state.
- 1990** The United Nations grants membership to Liechtenstein.

- 1991** Liechtenstein joins the EFTA.
- 1993** Mario Frick is elected prime minister, becoming the youngest prime minister in the world, at age 28.
- 1995** Liechtenstein becomes a member of the European Economic Area.
- 1997** Frick begins a second term as prime minister.
The FBP severs its 60-year coalition with Frick's Fatherland Union to become an official opposition party.
- 2001** The Conservative FBP wins the parliamentary election, and Otmar Hasler becomes prime minister
- 2003** Prince Hans-Adam wins sweeping new powers in a constitutional amendment referendum.
- 2004** Hans-Adam turns over many of the powers of his office to his son Alois but retains the title of head of state.
- 2005** A long-standing Liechtenstein claim for damages from Germany for property confiscated during World War II is rejected by the International Court of Justice.

RELIGION

Roman Catholic

UNIT OF CURRENCY

Litas

NATIONAL FLAG

Three equal horizontal bands of yellow (top), green, and red.

NATIONAL EMBLEM

A heraldic shield features a red field with an armored knight mounted on a silver horse and holding a silver sword in his right hand above his head. A blue shield with a double gold cross on it hangs on the left shoulder of the charging knight. The horse's saddle, straps, and belts are blue. The hilt of the sword and the fastening of the sheath, the knight's spurs, the curb bits of the bridle, the horseshoes, and the decoration of the harness are gold.

NATIONAL ANTHEM

"Lithuania, Land of Heroes"

NATIONAL HOLIDAY

February 16 (Day of Reestablishment of the State of Lithuania), March 11 (Day of Restitution of Independence), July 6 (Statehood Day), all major Christian festivals

DATE OF INDEPENDENCE

September 6, 1991

DATE OF CONSTITUTION

October 26, 1992

GEOGRAPHICAL FEATURES

Lithuania is part of the Baltic region of northeastern Europe, which also includes Estonia and Latvia. It is the largest of the three Baltic states. The nation has 99 km (62 mi) of coastline, and its land borders stretch 1,273 km (796 mi), touching Belarus, Latvia, Poland, and the Kaliningrad enclave of Russia. Its total land area is 65,200 sq km (25,174 sq mi). From north to south the nation extends 276 km (173 mi), from east to west 373 km (233 mi). Lithuania is part of the great east European plain. There are two main topographical divisions in the

nation: lowland plains, collectively known as Samogitia, or Žemaitija, and uplands marked by rolling hills, the Aukštaitija. The three main lowland plains include the Pajuris Lowlands, the Middle Lowlands, and the Eastern Lowlands. Juozapines Hill, at 292 m (958 ft), is the highest point in Lithuania. In the south the Courland Lagoon is separated from the Baltic Sea by the Courland Spit.

The terrain is dominated by small lakes (there are more than 3,000), which constitute 1.5 percent of Lithuania's total area. However, only 25 lakes have areas greater than 10 sq km (3.9 sq mi). Most of the lakes are in the Aukstaiciai Uplands. There are also 722 riv-

Lithuania

ers that are more than 10 km (6.2 mi) in length, of which 21 are more than 100 km (62 mi) long. Many of these rivers flow across the Middle Lowlands. The soil is rich, and almost one-third of the nation is covered by woodlands.

Vilnius is the capital and largest city, with a population of 541,000. The second-largest city is Kaunas, with 364,000 inhabitants. Other major cities include Klaipėda,

Šiauliai, and Panevėžys. Over two-thirds of the population live in urban areas.

Lithuania has several border disputes. There is an ongoing dispute with Latvia over oil-exploration rights, and continuing talks are under way with Belarus over boundary demarcation. The nation was able to negotiate a border agreement with Russia in 1997, but the concord has not been ratified.

Vilnius	541,291

CLIMATE AND WEATHER

Lithuania's climate is influenced by both continental and maritime weather. In the coastal region the weather is dominated by relatively mild maritime influences, while in the eastern areas of the nation the harsher continental climate prevails. There are four distinct seasons, marked by significant temperature changes. The springs and summers are mild or moderately warm, while the autumns and winters are relatively long and cold. The average temperature in Vilnius is 6.3°C (43°F), although the high temperature in the coastal regions is 31°C (88°F), and the low is -28.8°C (-19.8°F). Average humidity throughout the nation is around 80 percent, and the average precipitation is 665 mm (26 in). The Middle Lowlands receive the least precipitation, at 540 mm (21 in), and the southwestern slopes of the Aukštaitija receive the most, at 930 mm (37 in).

Climate and Weather

Mean Temperature
 January: 33°F
 July: 63°F
 Average Rainfall: 21 in to 37 in

FLORA AND FAUNA

Almost one-third of Lithuania is covered in forest of one type or another: pine by the coast; oak, aspen, black alder, and birch in the center; and pine in the south. Another 20 percent of the nation is meadowland, and 7 percent is swamp and marshland. The dunes along the coast are home to wild rye and small, bushy plants of various types.

Animal life is surprisingly varied. Among the nearly 70 species of mammals are rabbit, wolf, fox, deer, otter,

beaver, mink, wild boar, raccoon, elk, lynx, and wild boar. Almost 300 bird species are found in the country, including herons, hawks, geese, ducks, grouse, partridge, and, along the coast, cormorants. Numerous species of fish and amphibians make their homes in and near the country's several thousand small lakes. The fish species include perch, ruff, and bream.

POPULATION

Population Indicators

Total Population 2005: 3,596,617
 World Rank: 125th
 Density per sq km: 55.1

 Divorce Rate per 1,000: 3.1
 Average Size of Households: 3.2
 Induced Abortions: 12,495

ETHNIC COMPOSITION

Some 81 percent of the nation's population are ethnic Lithuanians. The dominant minority groups are the Russians, with 8.5 percent of the population, and the Poles, with 7 percent. There are also Belarusians, Ukrainians, Germans, Gypsies, and Jews. The minority groups live mainly in the urban areas, and the Polish population is concentrated in the southeast corner of the nation.

LANGUAGES

The official language of the nation is Lithuanian. Lithuanian belongs to the Indo-European family of languages. It is the oldest of the continuing Baltic tongues, dating from the fifth century, and as such a number of dialects and regional versions of the language have evolved. The government requires that public employees have a functional knowledge of Lithuanian, and language proficiency is required for citizenship.

In addition to Lithuanian, Russian and Polish are widely spoken among ethnic groups. There is a Polish-language radio station in Vilnius. English is growing as a second language.

RELIGIONS

Roman Catholicism dominates Lithuanian religious life; more than 80 percent of the people identify themselves as Catholic. Otherwise, there are 47 different religious denominations in the nation. There are 684 Catholic parishes and 58 Russian Old Believer and 41 Russian Orthodox congregations. In addition, there are a number of Lutheran denominations. Evangelical Lutherans are concentrated in the north of the country and have 53 congregations, while the Reformed Lutheran Church has 11 in the south of Lithuania. There are five Jewish congregations and a growing number of evangelical Protestant sects.

HISTORICAL BACKGROUND

Lithuanians are a Baltic people who originally settled in the region around 200 B.C.E. The first reference to the Lithuanian people is in the medieval Prussian manuscript *Annales Quedlinburgenses* in 1009 C.E. During the 13th century the various tribes of Lithuania were united in a confederation. In 1230 Grand Duke Mindaugas established the first Lithuanian state. Lithuania was able to defeat the German Teutonic Knights through two centuries of warfare and invasion. In the mid-1300s the Jogailans established a dynasty of grand dukes that greatly expanded the Lithuanian Empire, which included Belarus and western Ukraine.

A marriage between the grand duke of Lithuania and the queen of Poland led to the Christian conversion of the nation in 1387 and the beginning of the Polish-Lithuanian state, which lasted from 1386 to 1795. Lithuania reached its zenith under Grand Duke Vytautas the Great (1392–1430), who extended the empire to the Black Sea. The combined armies of the state decisively defeated the Teutonic Knights in 1410. Lithuania also served as the main bulwark against the Tatar invasions of eastern Europe. At the Union of Lublin in 1569, the Polish-Lithuanian kingdom formally became a commonwealth, headed by a monarch. In 1579 the Jesuits established Vilnius University, the oldest university in the Baltic region.

The divisions of Poland in the 1700s led to the absorption of Lithuania into the Russian Empire. Although the Russians carried out an intensive Russification campaign, the Lithuanians resisted fiercely, staging revolts against the various czars in 1812, 1831, 1863, and 1905. The Russians closed Vilnius University and banned books in Lithuanian. Thousands of Lithuanians fled this oppression and emigrated. Nonetheless, Lithuania experienced a cultural revival in the 19th century.

During World War I the German army occupied most of Lithuania, but as the war ended, the Lithuanians rose in revolt again and declared independence. There followed a brief struggle against the new Soviet government and Poland. By 1920 most countries had recognized Lithuania as an independent state. In 1922 a constitution was promulgated and a parliament elected. Clashes between liberal and conservative elements in the country led to a coup in 1926. The parliament was overthrown by nationalists and the army, led by Antanas Smetona, who subsequently became president. In 1940, following the division of Poland between the Germans and Soviets, Lithuania was annexed by the Soviet Union, although most nations refused to recognize the occupation. Lithuanians rose in revolt against the Soviets when the Germans invaded the nation in 1941 but soon turned against the new occupying force. The Nazis exterminated almost the entire Lithuanian Jewish community during the war; in all some 200,000 Lithuanians were killed during World War II.

The Soviets reconquered Lithuania in 1944 and reincorporated the nation into the USSR. The Soviet invasion was marked by purges, and some 350,000 Lithuanians were deported to labor camps in Siberia. These mass purges continued through 1946. In 1949 the Soviets initiated programs to suppress religion, including the closing of churches. Another intensive Russification campaign began in 1956, with further deportations and the resettlement of large numbers of Poles and Russians.

Meanwhile, the Lithuanian exile community began the publication of the first complete national encyclopedia in 1953. Within Lithuania dissent was marked by the publication of underground journals and newspapers. In 1990 the Sajudis Coalition, or the Lithuanian Movement for Reconstruction, led an effort that resulted in a declaration of independence. The Soviets countered with a harsh military crackdown, which resulted in the deaths of numerous civilians. After the failed coup against Mikhail Gorbachev in 1991, however, the nation was granted independence, and the last Soviet troops left in 1993.

Following elections in 1992 a new constitution was promulgated. Efforts to integrate into western Europe culminated in Lithuania's joining the Partnership for Peace program, under the auspices of the North Atlantic Treaty Organisation (NATO), in 1994 and becoming an associate member of the European Union. The transition to a free-market economy was difficult, and in 1995 a major banking scandal resulted in the closure of two of the nation's largest banks. A year later the prime minister was ousted over corruption charges. In 1998 Valdas Adamkus, a Lithuanian American ecologist, was elected president. The former Communist leader and popular ex-president Algirdas Brazauskas became prime minister in July 2001 after the previous center-right government fell amid disagreement over privatization.

Lithuania was formally invited to join NATO and the European Union in 2002. The following year Ro-

landas Paksas was elected president, and in a referendum the country voted overwhelmingly in favor of EU membership. Allegations of a link between Russian organized crime and the office of President Paksas brought about the impeachment of Paksas in 2004, which was followed by the reelection of Adamkus as president. That same year the country joined NATO and became an official member of the European Union. More political scandal followed in 2005, when it was revealed that the minister of finance had been a KGB officer.

LIST OF MODERN RULERS

Presidents

1993–98	Algirdas Brazauskas
1998–2003	Valdas Adamkus
2003–04	Rolandas Paksas
2004	Artūras Paulauskas (acting)
2004–	Valdas Adamkus

Prime Minister

1990–91	Kazimiera Prunskienė

1999	Rolandas Paksas
1999–2000	Andrius Kubilius
2000–01	Rolandas Paksas
2001–	Algirdas Brazauskas

CONSTITUTION

Lithuania is a parliamentary democracy. The nation's constitution, known as the Fundamental Law, was established on October 25, 1992. The chief of state is the president, who is elected for a five-year term in a direct election. The president directs foreign affairs and appoints various governmental officials, including the prime minister and members of the government. The nation's parliament, known as the Seimas, is the supreme legislative body. The Seimas has the power to consider legislation and to amend the Fundamental Law. It consists of 141 members who serve four-year terms. The government consists of the prime minister and the cabinet. There is also an independent judiciary, with the Supreme Court as the highest legal authority. Suffrage in Lithuania is universal for all citizens 18 years and older.

PARLIAMENT

The nation's parliament is a unicameral body known as the Seimas. Deputies are elected to the Seimas through a com-

bination of direct and proportional elections. Of the 141 members of the chamber, 71 are directly elected, while 70 are elected by proportional voting in which the political parties must gain at least 5 percent of the total vote in order to be represented. Members serve four-year terms.

The Seimas considers and decides on all legislation, including constitutional amendments. In addition, the body appoints judges to the Supreme Court and the Court of Appeals. Budgetary responsibility is also the domain of the parliament. The leader of the majority faction is usually appointed prime minister by the president, as subject to approval by the Seimas. The legislature must also approve the appointment of all government ministers. The leader of the parliament is known as the chairman.

POLITICAL PARTIES

The two major political parties are the populist Darbo Partij, or the Labor Party, and For a Working Lithuania, a coalition of the Lithuanian Social Democratic Party and New Union, both center-left liberal parties. In the 2004 parliamentary elections the Darbo Partij took 39 seats in the 141-member Seimas, while the For a Working Lithuania coalition took 31. The conservative Homeland Union took 25 seats, the Liberal Center Union 18. A coalition of the Liberal Democratic Party and Lithuanian People's Union for a Fair Lithuania, running on a theme of order and justice, won 11 seats, while a coalition of farmers and the liberal New Democratic Party took 10. Other smaller parties include the Christian Conservative Social Union and the Lithuanian Christian Democratic Party, both center-right parties.

LOCAL GOVERNMENT

Lithuania's 10 provinces are divided into 44 districts. These districts in turn contain 423 local governmental units known as *apylinkes*, which are the smallest administrative divisions. There are also 11 independent cities. In total there are 92 cities, including the 11 independent municipalities and 22 other urban communities. There is an ongoing effort to reorganize the nation's system of local government and reapportion districts.

LEGAL SYSTEM

There are three main components in the postindependence Lithuanian legal system. At the lowest level are district courts, which hear original civil and criminal cases. The Supreme Court is the nation's highest judicial body and the main appellate court. Finally, a constitutional court has sole domain over constitutional issues. Prosecutorial power rests with the prosecutor general, who oversees a network of local prosecutors. There is no sys-

tem of public defenders, although defendants do have the right to representation in court. The president appoints all judges, though the judiciary does act independently of the executive branch. There is a lack of trained judges, creating a backlog of cases in the court system.

In 1995 the Court Reform Law was enacted in an effort to increase the efficiency of the judicial system. The law created two new types of courts: local district courts, which operate at the level of the local municipality, and appellate courts intended to oversee the decisions of the district courts and reduce the caseload of the Supreme Court. There is an ongoing reform effort to bring the nation's laws into compliance with the European Convention on Human Rights and Freedoms.

In 1997 an arbitration system was established by the Chamber of Commerce. This led to the abolition of the Economic Court, so that business or commercial cases must now either be arbitrated or be heard by general district courts.

HUMAN RIGHTS

The Fundamental Law established the nation's basic civil rights and liberties. These include freedom of speech, of the press, and of movement within and without the country. Discrimination based on race, sex, disability, or ethnicity is forbidden. After becoming a member of the European Council in 1993, the government ordered the Ministry of Justice to initiate a broad series of reforms to bring the nation in line with the provisions of the European Convention on Basic Human Rights and Freedoms.

The nation has liberal citizenship laws that extend the right of citizenship to all persons who were born in the nation or who were citizens prior to 1940. More than 90 percent of Lithuania's ethnic minorities are citizens of the republic.

No significant human rights abuses have been reported in independent Lithuania, though there have been credible reports of police abuse of suspects and detainees. Prison overcrowding and pretrial detention remain serious problems. In 2003 Lithuania abolished capital punishment in all cases.

FOREIGN POLICY

In 1993 Lithuania became the first of the Baltic republics to witness a complete withdrawal of Russian military personnel. The nation has subsequently endeavored to end ongoing border disputes with Russia and Belarus. There is also a dispute with Latvia over oil-exploration rights.

Since gaining independence from Russia, Lithuania has pursued a pro-Western foreign policy marked by efforts to join the major institutions of the West, including the North Atlantic Treaty Organisation (NATO) and

the European Union. In 1994 Lithuania joined NATO's Partnership for Peace initiative. That same year Lithuania participated in NATO exercises in Poland in the first joint military operations between NATO and the former Warsaw Pact nations. In 1993 Lithuania became a member of the Council of Europe. In the meantime, the nation has signed free-trade agreements with a number of regional states, including its sister Baltic republics and such states as the Ukraine. Other examples of regional cooperation are Lithuania's participation in the Baltic peacekeeping battalion, BALTBAT, and the combined Baltic naval force, BALTRON.

In 2004 Lithuania became a full member of both NATO and the European Union.

DEFENSE

The Lithuanian National Defense Volunteer Forces include ground forces, a navy, and an air force. In 2003 military personnel totaled 27,300, with over 300,000 reserves. The army had the bulk of these forces, with about 1,000 in each of the navy and the air force and between 4,000 and 5,000 border guards. There is also a home-guard, reservist force of 12,000. Military service is mandatory for all males ages 18 and older. The length of service is one year. Army forces include a company of troops attached to BALTBAT. The navy has two small former-Soviet frigates and 10 patrol craft. The air force has a number of training aircraft and helicopters but no combat aircraft.

In 1994 Lithuania joined NATO's Partnership for Peace program, and Lithuanian troops formed part of the NATO-led peacekeeping force in the former Yugoslavia. In its efforts to join NATO, the nation acquired Western equipment and participated in various NATO military exercises. Since independence Lithuania has received military aid from Germany, Denmark, and several other Nordic nations. Lithuania supported the U.S.-led war in Iraq in 2003, sending a small contingent.

In 2001 military expenditures were \$230.8 million, or 1.9 percent of gross domestic product (GDP).

ECONOMY

Lithuania has adopted market reforms and pursued strict monetary and fiscal policies in order to constrain inflation and meet criteria imposed by the International Monetary

Fund. In 1997 the nation became the first Baltic state to have more than \$1 billion in direct foreign investment. However, imports of energy products have fueled a growing trade deficit. A large number of workers remain employed by state enterprises, though the country has completed over 80 percent of privatization of the economy.

The nation's main exports are agricultural products, mineral products, textiles, and machinery. Lithuania also has a significant fishing industry. Its main imports are fuel sources, transport equipment, chemicals, and foodstuffs. The nation's major trade partners are Russia, Germany, Poland, Belarus, Latvia, Ukraine, and Italy.

As the Baltic state that has conducted the most trade with Russia, Lithuania has been slowly rebounding from the 1998 Russian financial crisis. High unemployment and weak consumption have held back recovery. GDP growth for 2000—estimated at 2.9 percent—fell behind that of Estonia and Latvia, and unemployment was estimated at 8 percent in 2004. In early 2001 the Lithuanian government announced that it would peg its currency, the litas, to the euro; the litas was formerly pegged to the dollar. Lithuania ratified 25 agreements along with other legal documents and obligations to gain World Trade Organization membership in 2001. Lithuania was invited to the Helsinki summit in December 1999 and began EU accession talks in early 2000. Privatization of the large, state-owned utilities, particularly in the energy sector, has almost been completed. Lithuania gained EU membership in 2004, and the Lithuanian economy picked up in 2003, with a 9 percent real growth rate.

LIVING CONDITIONS

The UN Human Development Report ranks Lithuania 41st out of 177 countries in terms of life expectancy, education, and standard of living. Lithuanian life expectancy in 2004 was 74 years, literacy stood at 99.6 percent, with 90 percent of eligible students enrolled in primary, secondary, and tertiary schools, and the GDP per capita was \$12,500.

Much of the housing in Lithuanian towns was destroyed during World War II, and subsequent rebuilding was conducted with prefabricated materials that have not stood the test of time. Thus, housing has become a problem in the country. However, demographics have helped in some respects: The country has a declining population, with a 2004 decrease of 0.33 percent. This shift is partly a result of the trend toward smaller families. The birth rate for 2004 was 8.6 per 1,000, while the death rate that same year was 10.9 per 1,000 people. The declining population is also the result of Russians returning to their own country. The net out-migration rate for 2004 was 0.7 persons per 1,000 population. It was estimated that 68 percent of the population lived in urban areas in 2001, with the urban growth currently at a standstill. As of 2001 there were 356 housing units per 1,000 people. About 97 percent of such units are privately owned.

Infrastructure throughout the country is badly in need of repair, although in their extent, roads, airports, and ports are thorough and well developed.

HEALTH

The vast majority of health care is provided by nonprofit public institutions run by councils, counties, or the Ministry of Health. The main health-care institutions are financed by the Compulsory Health Insurance Fund, which covers citizens and residents of Lithuania. In 2004 there were 14,031 physicians—or 4 per 1,000 people—2,490 dentists, and 191 hospitals, with 33,160 beds.

Cardiovascular disease is one of the major health problems in the country. Other health issues include tuberculosis and cancer. In 2002 there were 2,272 new cases of tuberculosis and over 15,000 new cases of can-

cer. HIV/AIDS has not yet made a large impact on the population; in 2003 there were 1,300 people living with HIV/AIDS, and fewer than 200 died of the disease.

In 1994 the Public Health Surveillance Service was established to oversee control of communicable diseases, environmental and occupational health, and other areas. As of 2002 total public health-care expenditures were estimated at 4.3 percent of GDP. The infant mortality rate was only 6.9 deaths per 1,000 live births.

FOOD AND NUTRITION

Bread, dairy products, and potatoes are staples of the Lithuanian diet, and pancakes are particularly popular. Poultry, meat, fish, and vegetables are also important ingredients. In the nation's cold northern climate, root crops are particularly prevalent; these include beets, carrots, parsnips, radishes, turnips, and onions. Other hearty vegetables include cabbage, celery, cucumbers, and leeks.

Another vital ingredient of the diet is sour cream, used as a topping for many dishes or in soups, Russian style. A dry cottage cheese called *vaske* is used as a stuffing in many dishes.

A traditional meal is *cepelinai*, a dumpling of potato dough stuffed with cheese, meat, or mushrooms and topped with a sauce made from onions, butter, sour cream, and crumbled bacon. Smaller dumplings are called *virtinukai*. Pork in many varieties is more popular than beef.

Pickled foods are also popular, including herring, pickles, and mushrooms. Open-faced sandwiches make traditional appetizers. A cold soup for summertime eating is made from sour cream, beets, green onions, and cucumber.

Sakotis is a tall, tiered cake generally served at weddings, while dinner on Christmas Eve consists of 12 different vegetarian dishes. There are several brands of beer in the country, while other popular alcoholic beverages

include *midus*, or mead, which can be as potent as 60 proof, and *stakliskes*, another honey liqueur.

In general, nutrition is adequate in Lithuania. Only 4 percent of infants born between 1998 and 2003 had low birth weight.

Food and Nutrition

Undernourished % of total population: 0.8
 Daily Available Calories per capita kcal: 3,010
 Amount of Cereal Available per person per year kg: 161.5
 Amount of Fruits and Vegetables Available per person per year kg: 152.1

STATUS OF WOMEN

Spousal abuse is reportedly common in Lithuania, and institutional mechanisms for deterring such abuse are not yet in place. There is a woman's shelter founded in part with Norwegian assistance. In a 1997 survey, 20 percent of women reported experiencing an attempted rape, while another 33 percent reported having been beaten at least once in their lives.

Women also face discrimination in the workplace. The Law on Realization of Equal Rights and Opportunities for Women and Men came into effect in 1999, establishing the Office of the Ombudsman for Equal Opportunities for Women and Men to oversee complaints concerning sex discrimination and sexual harassment. Women are significantly underrepresented in some businesses, especially at the management level, in some professions, and in the government.

Trafficking in women and girls for forced prostitution is a major problem. Many women from Belarus, Russia, Latvia, and the Lithuanian countryside are trafficked to Western Europe. Most trafficking is undertaken by organized crime figures, who lure women with deceptive offers of work abroad as models, bar dancers, and waitresses.

WORK

The labor force in 2004 totaled over 1.6 million. Of laborers, 20 percent were involved in agriculture, 30 percent in industry, and 50 percent in service. Agricultural products include grain, potatoes, sugar beets, flax, vegetables, beef, milk, eggs, and fish, while industry produces metal-cutting

1422 Lithuania

machine tools, electric motors, television sets, refrigerators and freezers, refined petroleum, small ships, furniture, textiles, processed food, fertilizer, agricultural machinery, optical equipment, electronic components, computers, and amber. Unemployment in 2004 stood at 8 percent.

The freedoms of assembly and association are generally respected. Workers have the right to form and join trade unions, to strike, and to engage in collective bargaining. However, ongoing problems include inadequate or employer-biased legislation and management discrimination against union members. About 13 percent of the workforce are represented by four unions.

The minimum work age in Lithuania is 16, and the standard workweek is 40 hours. As of 2004 the minimum monthly wage was \$190, or \$1.12 per hour. About 18 percent of all wage earners and about 10 percent of full-time employees are paid at or below the minimum wage.

The postindependence transition to a private-enterprise market economy has been difficult, with many workers losing their jobs as national industries became privatized.

EDUCATION

Education is mandatory for 12 years in Lithuania. Students follow a typical European program that gives them the choice of pursuing either a general education in preparation for university or a technical degree for the trades. Since 2000 a shift to a ten-year secondary education, called lower secondary education, has been made. As of 2002 the nation spent approximately 6 percent of GDP on education.

Lithuania has over 2,000 educational establishments, both private and public, including 21 universities, 15 colleges, and 83 vocational schools. Combined gross enrollment in primary, secondary, and tertiary schools in 2002 was 90 percent of eligible students. In 2003, 14,700 students earned a bachelor's degree or the equivalent. Some 40 percent of all students go on to higher education. The government funds about 75 percent of the costs of an individual's college fees.

SCIENCE AND TECHNOLOGY

Much of the research in the country is carried out under the aegis of the Lithuanian Academy of Science. Some 10 institutes attached to the academy, all located in Vilnius, pursue research in medicine, technology, and natural science. Additionally, four other research institutes conduct research in agriculture and forestry. The Ministry of Agriculture also has 11 departments researching fields ranging from fishery activity to seed propagation to food technology. Numerous universities and colleges offer degrees in the sciences. Between 1987 and 1997 science and engineering students made up 31 percent of university enrollment. Expenditures on research and development in 2003 were \$145 million, or 0.68 percent of GDP. Of the almost 15,000 people involved in research and development in 2003, 5,399 were researchers with scientific degrees.

MEDIA

The constitution calls for a free and open press, and censorship is limited. Reporters without Borders ranked Lithuania 16th out of 167 countries in its 2004 world press freedom index. There are over 300 newspapers and periodicals published in the country, including 22 dailies with a collective daily circulation of 108,000 copies. The national media scene is dominated by two dailies, *Lietuvos rytas* and *Respublika*. All major daily papers are owned by a group of local shareholders. In 1995 the government passed legislation calling upon private broadcasters and media to establish an ombudsman to investigate libel and slander charges.

The government sponsors a state-controlled radio station and a television service. As of 2001 there were 142 FM stations, 29 AM stations, and 27 television stations operating in Lithuania. In 2000 there were about 524 radios and 422 television sets for every 1,000 people. Lithuanians have access to a wide variety of programming from other European states through satellites and cable television. In 2003 there were 2.17 million cellular telephone users and almost 700,000 Internet users.

Since independence there have been widespread efforts to revive traditional Lithuanian culture and counter the intensive Russification programs of the cold war. The government has enacted legislation to promote the Lithuanian language and given support for traditional folk arts. In addition, the nation has embraced many elements of the popular culture of western Europe, including modern music and theater.

CULTURE

Lithuanian culture has maintained its own unique blend of folk and high art, despite long occupation by various powers and the determined Russification of the Soviet period. The language and culture of Lithuania is one of the oldest in Europe. In addition to rich and varied folklore of fairy tales, riddles, and proverbs, there is also the tradition of folk songs called *dainos*, which were sung during the Middle Ages by Lithuanian women. These songs were performed solo or as accompanied by various instruments, including *skrabalai*, or cow bells; the *dambrelis*, or jaw harp; the *kankles*, or zither; the *smuikas*, or fiddle; the *skuduciai*, or panpipe; the *lamzdelis*, or recorder; the *ragas*, or horn; and the *birbyne*, a type of folk clarinet. Choral singing is still an important part of cultural festivals. One such festival, held every five years in Vilnius, has a stage large enough to hold thousands of performers at a time, all dressed in traditional costumes and performing folk music and dances. Lithuanian folk arts are also a strong cultural tradition, including ceramics, leatherwork, wood carving, and textiles, all decorated with subtle coloring and geometric or floral patterns.

More contemporary arts, such as painting and drawing, also flourish. The Vilnius drawing school was

founded in 1866 and has continued to be a major influence on fine arts in Lithuania. One well-known painter and composer was Mikalojus Ciurlionis, who died in the early 20th century.

Lithuanian literature is also an important part of the country's cultural heritage. The first book published in the area was 1547's *Catechisma Prasty Szadei* (Simple Words of the Catechism); Kristijonas Donelaitis, considered the first truly Lithuanian author, wrote an epic poem about the lives of struggling serfs. Antanas Baranuskas was a famous poet of the mid-19th century. His romantic poem *Anykšciu öilelis* (The Forest of Anykšciai) is one of the seminal works in Lithuanian literature. During the 19th and 20th century Lithuanian literature promoted the nationalistic movement, despite repression by the Russian occupiers.

Theater has also long been a major component of Lithuanian culture, and amateur acting companies abound in towns and villages, as do highly regarded professional ones in Vilnius. Lithuania currently has 13 professional theaters, several orchestras, and 53 museums.

FOLKLORE AND MYTHOLOGY

Lithuanian folklore has a rich tradition, including songs, fairy tales, legends, riddles, proverbs, and aphorisms that all have their roots deep in the language. The medieval songs known as *dainos* were generally created by women to celebrate various rites of passage, such as weddings and departures. These songs, 80,000 of which have been written down, have been adapted by modern composers, with their words putting listeners in touch with a bygone age.

The first recorded Lithuanian folk tales date from the 16th century and have much in common with such tales in Russia. One popular tale deals with Egle, queen of the grass snakes, who turns her children into the oak, ash, and birch tree out of grief for the loss of her husband.

Myths include stories of the ancient Lithuanian thunder god Perkõnas as well as many tales venerating Mother Earth and the origin of fire.

Riddles are another folkloric element in Lithuania. Thousands of these test children's reasoning abilities.

ENTERTAINMENT AND RECREATION

Song and dance continue to be favorite forms of recreation and entertainment for Lithuanians. Many are involved in folk groups, performing at song contests or dance festivals. Modern dancing is also popular with urban residents in nightclubs and discos. Going to cafés and dining out are also popular forms of urban entertainment. Lithuanians spend an average of 4.3 percent of their annual income on entertainment, including concerts, theaters, and museums.

With a 99.6 percent literacy rate and over 4,000 books published annually, and with 23 million books in libraries in 2003, reading is clearly one of the major forms of entertainment in Lithuania. Watching television and going to the movies are also popular.

Outdoor activities are common. In the summer the beaches of the Baltic coast are packed, as are its resorts. Camping is popular, and with thousands of small lakes, fishing and camping vacations are typical, as are visits to spas and health resorts. Other forms of entertainment focus on Christian celebrations, such as Christmas and Easter.

ETIQUETTE

In general, the usual European courtesies and manners are observed in Lithuania. Firm handshakes are appropriate for greetings, sometimes accompanied with a nod of the head; eating is continental style, with knife and fork used simultaneously; use of first names is reserved for friends; formalities are observed in public; and punctuality is appreciated. An archaic greeting is still used in some rural areas: *Garbe Kristui* ("Praise Christ"), with a reply of *Per amžius amen* ("Forever amen"). Hospitality is a hallmark of Lithuanian life.

FAMILY LIFE

Traditionally, the Lithuanian family was large, with upward of a dozen children. In modern Lithuania, however, this has drastically changed. Families are small, with one to two children; the fertility rate was under 1.2 children per woman in 2004. Marriage takes place at a later age than it once did, as couples need to save to be able to afford their own place to live.

Some traditions still hold. Even though women make up over one-third of the workforce, the family continues to be male dominated. Women end up doing double duty, working both outside and inside the home. Abortion is legal, as is divorce, in this Catholic country. The total number of divorces was 10,579 in 2002; about 41 percent of all marriages end in divorce. The number of single-parent families is on the rise.

PERSONAL APPEARANCE

Dress in Lithuania is modern and Western. Traditional costumes made of homespun fabric are worn only for special folk festivals of singing and dancing. Such apparel was common until the late 19th century. Although traditional dress for women varies by region, the predominant look was a high-collared shirt over long woolen skirts with shorter aprons. Bronze pins and embroidery decorated such clothing, while a woolen shawl provided warmth. For men, the traditional costume includes an embroidered shirt, trousers, vest, lightweight coat, cape, sheepskin coat, and head dress. Men's shirts usually had long sleeves and were made of thick linen. Colors were darker for winter than for spring and summer. Wooden shoes, or clogs, were worn by both genders.

SPORTS

Of the dozens of sports played in Lithuania, basketball is the most popular; it was introduced to the country after World War I by a returning Lithuanian American. During the Soviet era Lithuanian players constituted much of the Soviet national team. Two Lithuanian players, Arvydas Sabonis and Sarunas Marciulionis, made careers in the American National Basketball Association and led their country to Olympic bronze medals in 1992 and 1996.

Soccer is also popular in Lithuania, as are cycling, track and field, table tennis, tennis, and canoeing. A traditional game called *ripkos* is similar to baseball, with a wooden disk to hit instead of a ball. Baseball, too, is becoming more popular.

The country boasts a large number of athletic institutions. Vilnius, Klaipėda, and Kaunas have the largest of the country's 41 stadiums. There are also about 2,000 basketball and volleyball courts and over 100 tennis courts, as well as about 1,000 gymnasiums and soccer fields.

CHRONOLOGY

- 1918–20** War for independence against Germany, followed by struggle against Soviet Union. International recognition of independent Lithuanian state.
- 1922** New constitution.
- 1926** Coup overthrows elected government.
- 1940** Soviet invasion.
- 1941** German invasion.
- 1944** Soviets reconquer Lithuania and begin widespread purges.
- 1946** Mass purges and deportations continue in the wake of the Soviet occupation.
- 1949** The Soviets close most churches and begin a wave of persecution against religious figures.

- 1953** Exiled Lithuanians begin publication of the first complete national encyclopedia.
- 1956** A Russification campaign results in the deportations of large numbers of Lithuanians and an influx of Russians and Poles into the country.
- 1972** An underground religious journal, the *Chronicle of the Catholic Church in Lithuania*, begins publication.
- 1990** Led by the Sajudis Coalition, or the Lithuanian Movement for Reconstruction, Lithuania declares independence from the Soviet Union, but military force is used by the Soviets to retain the nation. Numerous civilians are killed as a result of the military crackdown.
- 1991** Following the failed coup against Mikhail Gorbachev, Lithuania is granted independence from the Soviet Union.
- 1992** Following parliamentary elections, a new constitution is promulgated.
- 1993** The last Soviet troops leave Lithuania.
- 1994** The nation joins NATO's Partnership for Peace program. Lithuania becomes an associate member of the European Union.
- 1995** Major banking scandal results in the closure of two of the nation's largest commercial banks.
- 1996** Parliament ousts the prime minister over corruption charges.
- 1998** Valdas Adamkus, a Lithuanian American ecologist, is elected president.
- 2000** After parliamentary elections the center-right coalition of the Lithuanian Liberal Union and the New Union form a government.
- 2001** The coalition government collapses, and left-wing former president Algirdas Brazauskas becomes prime minister.
- 2002** Lithuania is formally invited to join NATO and the European Union.
- 2003** Rolandas Paksas is elected president in January. In a referendum Lithuanians vote overwhelmingly in favor of EU membership. Impeachment proceedings begin against President Paksas after an inquiry concludes that alleged links between his office and Russian organized crime pose a threat to national security.
- 2004** Lithuania becomes a member of NATO and the European Union. Parliament impeaches and dismisses President Paksas.

- Valdas Adamkus becomes president again.
- 2005** Foreign Minister Valionis admits in January that he was once an officer in the Soviet KGB reserves.

GEOGRAPHICAL FEATURES

Luxembourg consists of two distinct geographical regions. The rugged uplands of the Ardennes in the north, called Oesling, have elevations ranging from 396 to 559 m (1,300 to 1,800 ft). The fertile lowlands of the south, called Bon Pays, have a mean altitude of 229 m (750 ft). The northern region, constituting one-third of the country, is heavily forested. Along the Moselle River is a very fertile wine-growing region.

CLIMATE AND WEATHER

Luxembourg has a mild, temperate climate, with generally cool summers and mild winters. Mean summer temperatures are about 16.6°C (62°F), while winter temperatures rarely drop below the freezing point. The high peaks of

Luxembourg

1428 Luxembourg

the Ardennes in the north shelter the country from the rigorous north winds, while the prevailing northwesterly winds have a cooling effect. The average annual precipitation is about 762 mm (30 in). The southwest receives the most rainfall.

Climate and Weather

Mean Temperature
Summer: 62°F
Winter: 32°F
Average Rainfall 30 in

FLORA AND FAUNA

Trees are among the most varied flora in the country. The northern, forested region contains pine and spruce as well as hardwoods such as oak, linden, beech, and elm. Numerous shrubs, including wild blueberries, are found in the Ardennes. Ferns are also plentiful. Cultivated plants include fruit trees and vineyards along the Moselle River.

Only a few wild species of animal remain in this long-settled land, such as wild boar and deer. Trout, carp, eel, bream, and perch are found in the country's rivers, and a wide variety of birds can be found.

Luxembourg has established numerous nature parks to preserve what is left of its biodiversity.

ETHNIC COMPOSITION

Luxembourgers consider themselves to be an ethnic group in their own right, although prior to World War

II they viewed themselves as more of a German subgroup than distinct and separate. Due to Luxembourg's central European location, its prominent role in the European Union and the North Atlantic Treaty Organisation (NATO), and the large number of foreign banks, it has an immigrant population of 35.6 percent. The majority of this population comes from other EU countries.

LANGUAGES

The official languages of Luxembourg are Luxembourgish, French, and German. Luxembourgish is the native Germanic dialect, used chiefly in informal discussion and almost never in formal written communication. French is the language most commonly used in administrative and official documentation; German is frequently used in business. English, Portuguese, and Italian are also commonly used languages. With the country's international flavor, it is not uncommon for Luxembourgers to speak four or more languages. Many Luxembourgian families have Italian, Portuguese, French, or German roots and therefore speak the respective language as their native language in conjunction with Luxembourgish; native Luxembourgers, who made up 63.4 percent of the population in 2000, mostly speak Luxembourgish. Whether they also speak German, French, Portuguese, English, Italian, or some other language, and which language they would state as their "native" language, varies from individual to individual.

RELIGIONS

There is no state religion, and the Luxembourgian constitution provides for freedom of religion. As in Belgium, Luxembourg subsidizes recognized religions, which are currently Roman Catholicism (practiced by some 95 percent of the population), Protestantism, and Judaism.

Religious Affiliations

Roman Catholic	407,700
Other	60,900

HISTORICAL BACKGROUND

Luxembourg was founded in 963 by Count Siegfried, who rebuilt a small ruined fortress called Lucilinburhuc (Little Burg) on the site of the present city of Luxembourg. As with many fortresses and castles built in the Middle Ages, Siegfried built his castle upon the ruins of a previous Roman structure. Siegfried's dynasty became powerful under the blind John, count of Luxembourg and king of Bohemia (1310-46), who is the national hero.

In 1443 Luxembourg came under Burgundian rule, and for the succeeding 500 years the state was mostly under foreign control. By the 1867 Treaty of London, Luxembourg was proclaimed an independent state under the protection of the Great Powers but was required to dismantle its fortress. In 1890 the house of Nassau-Weilbourg, through the Grand Duke Adolphe, became the ruling house of Luxembourg. The grand duchy was under German rule from 1914 to 1918 and again from 1940 to 1944. During the Second World War the royal family escaped, but the people of Luxembourg suffered under the Nazi yoke.

Since the war, Luxembourg has benefited from its often turbulent history. Now an independent country, it has exploited its multinational heritage to become a world center of banking and finance as well as the linchpin in many diplomatic efforts. In 1957 it joined an economic union with Belgium and the Netherlands (Benelux), and shortly after it became a founding member of what has become known as the European Union. Today it is one of three official centers for EU activity.

In 2000 Grand Duke Jean, who had headed the royal house since 1964, abdicated in favor of his son Henri. The royal family has limited political power. The integration of the country's economy into that of the European Union progressed in 2002 with adoption of the euro as the country's official currency. The 2004 parliamentary elections secured a center-left government, returning Prime Minister Jean-Claude Juncker, head of government since 1995.

LIST OF MODERN RULERS

Prime Ministers

1937–53	Pierre Dupong
1953–58	Joseph Bech
1958–59	Pierre Frieden
1959–74	Pierre Werner
1974–79	Gaston Thorn
1979–84	Pierre Werner
1984–95	Jacques Santer
1995–	Jean-Claude Juncker

CONSTITUTION

Luxembourg is a constitutional monarchy with a constitution dating back to October 17, 1868. The executive branch of government consists of the grand duke, who is chief of state, and his appointees: the prime minister, vice prime minister, and Council of Ministers, or cabinet. The legislative branch consists of the unicameral 64-member Chamber of Deputies. Members of the Chamber of Deputies are elected to serve five-year terms. The judicial branch consists of the Superior Court and the Adminis-

trative Court. Judges in both courts are appointed by the monarch and serve life terms.

PARLIAMENT

The national legislature is the Chamber of Deputies, with the appointed Council of State exercising some vestigial legislative functions. The Chamber of Deputies consists of 64 members, elected for five-year terms by direct, compulsory voting in a proportional representation system.

POLITICAL PARTIES

Like many European countries, Luxembourg has a multi-party system based on proportional representation. Most coalition governments have been headed by the Christian Social People's Party or the Democratic Party, as allied with each other or with the Socialist Workers' Party. The Christian Social People's Party is centrist, the Socialist Workers' Party socialist, and the Democratic Party somewhere in between, drawing support from the more liberal professional and business groups.

In the 2004 elections the Christian Social People's Party formed the government with the Socialist Worker's Party. Two other single-issue parties, the ecological Green Party and the Action Committee for Democracy and Pension Justice, each took seven seats in parliament. The Democratic Party took 10 seats.

LOCAL GOVERNMENT

Luxembourg is divided into three districts: Luxembourg, Diekirch, and Grevenmacher. These districts are further divided into 126 communes. Districts are headed by commissioners, who are part of the national civil service. Communes are each headed by an elected communal council, which enacts local laws similarly to the way the Chamber of Deputies in the national government enacts laws for the whole country. The grand duke or grand duchess has the right to disband a communal council, however, and when this is done, an election must be held within three months. Communal council members are elected for six years. The method of election depends on the size of the commune. For communes with 3,000 or fewer people, council members are elected by a simple majority vote. For communes with more than 3,000 people, council members must be elected according to a system of proportional representation, the ballot listing the affiliated party of each candidate. (Since Luxembourg does not have a dense population by European standards, fewer than 25 of the 118 communes have proportional representation.)

Each communal council works in conjunction with its respective burgomaster and aldermen, or in some cases the burgomaster alone. The burgomaster runs meetings of the communal council, and he or she, along with the aldermen and council members, is responsible for the day-to-day activities of the commune. Both burgomasters and aldermen are chosen from among the communal council members. All burgomasters are appointed by the grand duke, whereas aldermen are appointed by either the grand duke or the minister of the interior, depending on whether their commune is urban or rural, respectively.

LEGAL SYSTEM

The legal system is based on the Napoleonic Code but has penal and commercial sections similar to those of Belgium. The court structure consists of 13 justices of the peace at the bottom level, two district courts (one in Luxembourg City and one in Diekirch), and the Superior Court of Justice as the court of appeal. Crimes are judged by the court of assizes and appealed to the Superior Court of Justice. There is no jury system. All judges are appointed by the grand duke for life terms; the judiciary remains independent.

HUMAN RIGHTS

Individual human rights are provided for in the constitution. In 1997 the law was expanded, enacting severe penalties for hate crimes based on race, sex, religion, disability, sexual orientation, or trade union or political activity. Luxembourg provides first asylum to refugees and received an estimated 1,300 requests for refugee status in 1999.

The government is largely free from corruption. Transparency International, a corruption watchdog, ranked Luxembourg 11th cleanest of 133 countries surveyed in 2003.

FOREIGN POLICY

Luxembourg is home to the headquarters of the European Parliament and NATO and plays strong roles in both organizations. Luxembourg has especially close relationships with Belgium and the Netherlands and is a strong proponent of greater European integration. It was opposed to the U.S.-led war in Iraq in 2003 and later announced, along with France, Germany, and Belgium, an effort to create a military-planning cell based in the Belgian town of Tervuren.

DEFENSE

Since Luxembourg's history prior to independence is one of intense conflict and domination, the country has

emphasized nonmilitary means of achieving peace with neighbors. Therefore, while a national defense exists, its primary role is to serve in multinational forces as needed and to assist in the event of a civil emergency. Compulsory military service, introduced in 1944, was abolished in 1967. Luxembourg maintains an army of 1,500 volunteers as part of NATO. The 2003 defense budget was equivalent to \$232 million, or 0.9 percent of gross domestic product (GDP).

ECONOMY

Luxembourg has a stable, prosperous economy featuring moderate growth, low inflation, and low unemployment. The small agricultural sector is based on small, family-owned farms. The industrial sector, until recently dominated by steel, has become increasingly diversified; during the past three decades growth in the financial sector has more than compensated for the decline in steel. Services, especially banking, account for a growing proportion of the economy. The number of banks has risen from 13 in 1955 to nearly 200 in 2000, and the financial sector accounts for 22 percent of GDP. Luxembourg participates in an economic union with Belgium on trade and finance and is also closely connected to the Netherlands. As part of the European Union, many its trade policies are determined by the greater European body in Brussels. Luxembourg enjoys a very high standard of living; it has topped the worldwide per capita GDP list several times. Even with the international economic downturn in 2001, Luxembourg maintained moderate growth. Its per capita GDP in 2004 was \$58,900.

ENVIRONMENT

Luxembourg's largest concern is air and water pollution, especially in populated and industrial areas. However, Luxembourg's low population density and long tradition of preservation—one-fifth of the country remains forested—means that it does not suffer from the ill effects of overpopulation. While it has moved away from predominantly relying on polluting industries such as steel and mining, Luxembourg's size means that it cannot enact effective environmental measures in a vacuum; most work regarding the cleanup and preservation of the environment has taken place at the European level.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Luxembourg 15th out of 177 countries in terms of life expectancy, education, and standard of living. Life expectancy in 2004 was 78.7 years, literacy stood at 100 percent—with 75 percent of eligible students enrolled in primary, secondary, and tertiary schools—and per capita GDP was \$58,900.

Over 60 percent of Luxembourgers own their own homes, which range from rustic, thick-walled country cottages to high-rise apartments in Luxembourg City. Detached houses account for 60 percent of all housing units, apartments 36 percent, and farms 4 percent. Geographically small, Luxembourg is well serviced by mass transit; roads and highways cover the nation and connect with major highways throughout Europe. As of 2001, 91 percent of the population lived in urban areas. All the country's towns and cites have populations under 100,000.

Luxembourg has an extensive system of social insurance, which covers employees and their families for sickness, maternity, retirement, disability, and survivors' benefits. Both the employee and employer contribute, and the government also absorbs part of the cost. Birth,

maternity, child, and education allowances are provided to all residents, as are parental leave and child-rearing allowances.

HEALTH

Luxembourg's health-care system is administered by the Ministry of Public Health and provides free care to citizens and residents of the country. Hospitals are operated both by the state and by the Catholic Church. Between 1995 and 2002, 100 percent of births were attended by trained health-care professionals. As of 2004 there were 254 physicians per 100,000 Luxembourgers. Immunization of children younger than two is at a high level: In 2003, 98 percent were immunized for polio and tuberculosis, 91 percent for measles. The infant mortality rate in 2004 was less than 5 deaths per 1,000 live births.

As with many developed nations, leading causes of death include cardiovascular disease, cancer, and automobile accidents. Tuberculosis is almost eradicated; in 2002 there were only 11 cases per 100,000 people. The AIDS prevalence rate in 2002 was just 0.2 percent; in 2003 fewer than 500 Luxembourgers were living with HIV/AIDS, and fewer than 100 died of the disease. Smoking remains a health hazard; the smoking rate was nearly equal for men (32 percent of men over 15) and women (26 percent) in the mid-1990s.

FOOD AND NUTRITION

Luxembourg's culinary culture is influenced by its three bordering neighbors, France, Germany, and Belgium, and in fact blends many of the best traits of each into cuisine with plenty of pork, game, and fish as well as heavier German fare, such as sauerkraut.

Servings tend to be generous, another German influence, and sauces rich and heavy, a French influence.

Typical dishes include Ardennes ham served with beans or smoked pork and sauerkraut. *Cochon de lait en gelée* is a suckling pig done in aspic, while *civet de lièvre* is rabbit in sauce. Of mixed French and German influence is *quenelles de foie de veau*, or liver dumplings. Sausages are also popular, as is tripe. Fish include trout, pike, carp, and crayfish, all from the Moselle and smaller rivers. Desserts include pastries, plum tarts, and cakes.

Moselle wines and hearty beers complement the cuisine.

Nutrition overall is adequate in Luxembourg. No sections of the population have been reported undernourished. Between 1998 and 2003 just 8 percent of infants had low birth weight.

STATUS OF WOMEN

Women and men are provided similar rights. Women are active in political life, including in the Chamber of Deputies, although their presence is disproportionate. Women constitute almost 40 percent of the workforce, where they earn 9 to 25 percent less than men, depending on class and type of work; the government is working to eliminate this discrepancy. The government also provides allowances to women who are at home or working at low-paying jobs and have children younger than two. This money is provided regardless of the woman's marital status or the income of her husband. The government provides funding for domestic violence hotlines, women's shelters, and counseling. Upon the dissolution of marriages, property is divided equally, unless prenuptial agreements state otherwise. Though abortion law does not technically provide for abortion on demand, a woman who has had an abortion while under "distress" is considered not to have violated the law, and "distress" is interpreted liberally.

WORK

Luxembourg's labor force in 2004 numbered almost 300,000, of whom 105,000 were foreign workers. Many

people cross the borders daily from France or Belgium to work in Luxembourg's industries and financial sector. As of 2004 an estimated 86 percent of workers were employed in services, including the government, tourism, and the growing financial sector. Only 13 percent were involved in industry such as iron and steel, food processing, chemicals, metal products, engineering, tires, glass, and aluminum. A mere 1 percent were engaged in the once dominant agricultural sector, with products including barley, oats, potatoes, wheat, fruits, wine grapes, and livestock products. In 2004 there was a 4.5 percent unemployment rate.

Freedom of assembly is protected, and Luxembourgers may organize in trade unions. The right to strike is constitutionally guaranteed, though workers may strike only after their dispute is submitted to the National Conciliation Office and all mediation efforts have failed. Almost 60 percent of the labor force is unionized. The minimum work age is 16, the maximum workweek 40 hours. Minimum wages in 2004 for single workers over the age of 18 were \$1,860 per month for unskilled workers, \$2,230 per month for skilled workers. Occupational health and safety laws are strictly enforced.

EDUCATION

Primary education is compulsory and runs for six years, from ages six through 12. Secondary education lasts an additional six years, three of which are also compulsory. If a child does not attend secondary education, intermediate alternatives are offered in the form of trade and technical schools.

The literacy rate in Luxembourg in 2004 was 100 percent. In 2002, net primary enrollment was 96 percent of eligible children, net secondary enrollment 80 percent, and combined gross enrollment at primary, secondary, and tertiary schools 75 percent. In 2001, 99 percent of primary school students reached grade five.

The Centre Universitaire offers first-year undergraduate courses and various postgraduate courses, but a student must obtain degrees outside of the grand duchy. The government made a decision in 2002 not to build a university, which would keep citizens from going abroad for higher education—most go to Belgium or France—an experience considered invaluable for a citizen of Luxembourg. Public spending on education in 1999 was 3.6 percent of GDP.

SCIENCE AND TECHNOLOGY

The major learned society in the country is the Grand Ducal Institute, with both scientific and medical departments. The natural sciences are sponsored by another learned society, the Society of Luxembourg Naturalists. Public research institutes include two that handle health and applied-sciences projects.

Courses in computer science and engineering are offered at the Higher Institute of Technology, while undergraduate science degrees are offered at the Centre Universitaire. Luxembourgers go abroad for advanced science and technology degrees. Luxembourg has been a European leader in satellite communication. At Betzdorf is located the Société Européenne des Satellites, the control center for the Astra satellite fleet, a group of satellites vital to European broadcasting.

MEDIA

There are five native daily newspapers in Luxembourg, the *Luxembourger wort* being the oldest (1848). Other major dailies include *Tageblatt*, in German and French, and *La républicaine Lorraine*, in French. *Telecran* is a weekly newspaper, and *352* is an English-language weekly that is also available online.

Radio-Télé-Luxembourg, RTL, is almost legendary in radio and television broadcasting in Europe. Genera-

tions of young Europeans and British grew up listening to the pop and rock music programming of Radio Luxembourg long before their domestic radio stations had such programming. RTL and other private stations broadcast to the domestic audience in Luxembourgish, French, German, Dutch, and English. RTL signals also reach eight million people throughout Europe. As of 1999 there were two AM stations, nine FM stations, and five television stations in the country. Radio, television, and newspapers from western Europe are widely digested.

Luxembourg has also taken to new communication technologies. In 2002, 473,000 people were using cellular telephones, and 165,000 were using the Internet.

The law provides for freedom of speech and the press, and the government upholds these provisions in practice. Newspapers represent a broad range of opinion, and Internet access is unrestricted.

CULTURE

As with other aspects of life in Luxembourg, the royal house affects the cultural scene. The Grand Ducal Institute is the country's premier cultural institution, not only carrying out research in science and medicine but also promoting the arts and literature. Luxembourg City is venue to a continual stream of visiting music, dance, and theatrical companies, and the Grand Orchestra of RTL is considered world class. Luxembourg City is also home to the Music Conservatory as well as the National Museum of History and Art, which has collections of fine art and also showcases the history of Luxembourg.

The history of the land can also be seen in local architecture, both secular and ecclesiastical, ranging from ancient Gallo-Roman villas to medieval castles, Gothic and Baroque churches, and contemporary buildings.

Publishing and broadcasting are both vital to the maintenance of Luxembourg culture. Books are published in French, German, and Luxembourgish.

Well-known Luxembourg artists include Daniel Muller, a 17th-century sculptor, and Joseph Kutter, the 20th-century Expressionist painter who was essential in introducing modern art to Luxembourg. Writers include the French-language Felix Thyès and Marcel Noppeney, the German-language Nikolaus Welter, and Michael Ro-

dange and Roger Manderscheid, both of whom wrote in Luxembourgish. Paul Palgen is the country's best-known poet, and Edward Steichen, the acclaimed pioneer in photography, was also a Luxembourg native.

Much of the folk culture and folk music of Luxembourg is similar to that of Belgium, including the making of fiddles from wooden clogs. The folk traditions of the nation are not as strong as those in, for example, the Baltic states.

FOLKLORE AND MYTHOLOGY

Luxembourg has a rich tradition of folklore, much of which deals with the founding of the land that became known as Luxembourg. One of the most famous of all legends is that of Mélusine and Count Siegfried, who in 963 bought a rocky promontory on the river Alzette and called it Lucilinburhuc, the cradle of the modern nation. According to this legend, Siegfried married a maiden named Mélusine but did not realize that she was actually a mermaid. Every Saturday she changed back into a mermaid at a time when she had forbidden her husband to visit her. However, he once broke his promise and discovered the transformation. With this, she disappeared into the walls of Luxembourg City and is said to still be there. However, she changes form every seven years, becoming either a beautiful woman or a serpent. It is also said that Mélusine is spending her long years in the walls knitting a garment that, if ever finished, will mean that Luxembourg will vanish along with her.

Other famous legends involve a ghost in the city walls called the Steirchesgeesch, the dancing witches of the village of Koerich, and a werewolf that lives near the town of Bettembourg.

ENTERTAINMENT AND RECREATION

Favorite forms of entertainment for urban Luxembourgers include dining out or taking afternoon coffee in a café. Musical theater, classical concerts, and choral music all draw regular audiences in the nation's theaters and concert halls. In Luxembourg City, jazz and popular music

are served up in numerous clubs. Cinema is also popular. In 1999 there were 9.6 cinema seats per 1,000 people, and the average attendance per person was 2.8 times per year. Television is also popular, as in all developed countries. Luxembourg broadcasts programs produced in the country and also receives broadcasts from many other European nations. As multilingual, the population has a wide variety of programming to choose from.

Nature outings are also popular with Luxembourgers. There are dozens of nature parks throughout the nation where city dwellers can get in touch with regional flora and fauna. Gardening is another popular recreation, as are various sports, including soccer, tennis, and swimming. The country has 16 national hiking routes as well as numerous other paths and trails, making hiking one of the country's favorite outdoor recreational activities. Favorite winter sports include cross-country skiing and ice skating.

EITQUETTE

Luxembourg's system of etiquette is similar to that of other western European countries. A handshake at greeting is typical for both old and new acquaintances. Women often hug or kiss each other on the cheek three times. *Moien* (Good morning), *Gudden owend* (Good evening), *Wéi geet et?* (How are you?), and *Bonjour* ("Good day" in French) are common greetings. Departures are announced with *Addi* (Goodbye) or the more formal French *Au revoir*. Younger people use the more casual and international *salut* and *ciao*.

First names are used with close friends. Dining is European style, with both fork and knife used simultaneously. Public displays of affection are not considered appropriate. In general, snapping the fingers of both hands, talking with the hands in the pocket, or pointing with the index finger are also considered to be inappropriate.

FAMILY LIFE

Families in Luxembourg, as throughout the developed world, have become smaller in modern times. Typically, the living situation involves a nuclear family with one or two children. The fertility rate in 2004 was 1.8 children per woman. Irrespective of size, family is a cornerstone of Luxembourgian culture; it is even written into law that adult children must take on part of the financial burden of their aging parents. The state also provides a children's allowance to parents.

In general, because of the length of the workweek and the proximity of places of employment to homes, working parents are able to spend a large amount of time with their children. Annual paid vacations and numerous holidays in this predominantly Catholic country also pro-

vide free time for families to be together. Since the 1960s families have adopted orphans from around the world.

In 2002 there was a 51 percent divorce rate in the country.

PERSONAL APPEARANCE

Apparel is modern and Western. Traditional homespun peasant clothing and clogs are only brought out for folklore festivals. Socially conservative, Luxembourgers tend to dress quite well in public. Women wear skirts and dresses more often than slacks; men wear hats with their suits.

SPORTS

Soccer is popular in Luxembourg, as it is throughout much of the rest of the world. The national championships keep people in front of their televisions or in the sports stadiums. The national team regularly participates in the UEFA Cup championships. Other popular sports include jogging, tennis, badminton, and volleyball. Cycling takes center stage annually when part of the route of the world's most famous bicycle race, the Tour de France, passes through the country.

CHRONOLOGY

- 1940** On May 10 Luxembourg is invaded by Nazi Germany. The occupation lasts through 1944; 5,700 people (2 percent of the total population) die in the resistance effort. The grand ducal family remains in exile throughout the Nazi occupation.
- 1944** American troops enter Luxembourg and free the city of Pétange on September 9, Luxembourg City on September 10, and then the rest of the country.
Along with Belgium and the Netherlands, Luxembourg forms the Benelux Economic Union.
- 1945** Hitler, having returned to the Ardennes in December 1944 on his way to the Belgian port of Antwerp, clashes with Allied troops in the Battle of the Bulge. Hitler is driven out on February 12, 1945.
- 1949** Luxembourg participates in the founding of the North Atlantic Treaty Organisation (NATO).
- 1951** Leopold III abdicates the throne.
- 1952** Luxembourg joins, as a founding member, the European Coal and Steel Community.
- 1953** Prime Minister Pierre Dupong resigns, and Joseph Bech is named head of government. Hereditary Grand Duke Jean marries Charlotte, the daughter of the former Belgian king Leopold III and sister of the Belgian king Baudouin.
- 1957** Luxembourg becomes a founding member of the European Community.
- 1958** Prime Minister Bech resigns and is replaced by Pierre Frieden.
- 1959** Pierre Werner succeeds Frieden as prime minister.
- 1963** Luxembourg celebrates the 1,000th anniversary of its founding as an independent state.
- 1964** Grand Duchess Charlotte abdicates in favor of her son, Jean.
- 1974** Werner is ousted by a coalition cabinet headed by Democratic Party leader Gaston Thorn.
- 1979** Werner returns to office following electoral success for the Christian Social People's Party.
- 1981** Hereditary Grand Duke Henri marries Maria Teresa Mestre. Originally from Cuba, she was raised in the United States and Europe.
- 1983** Luxembourg Monetary Institute is founded.
- 1984** Werner steps down, and Jacques Santer is named head of government.
- 1985** Grand Duchess Charlotte dies.
- 1989** Luxembourg celebrates the 150th anniversary of its independence.
- 1994** Luxembourg celebrates the 50th anniversary of its liberation by Allied forces during World War II.
- 1998** Prince Henri, eldest son of Grand Duke Jean, is appointed *lieutenant representant*, a position used in the modern grand duchy as a stepping-stone to becoming grand duke or grand duchess.
- 1999** In his Christmas Eve message, Grand Duke Jean announces he will step down in favor of his son, Henri.
- 2000** Henri becomes grand duke in September.
- 2001** Grand Duke Henri breaks with tradition by officially opening the parliament in person, the first time a royal has done so in 124 years.
- 2002** A large peace march is held in October to protest the potential war with Iraq.
The euro becomes the official currency of Luxembourg.
- 2003** Luxembourg maintains its banking secrecy laws, becoming one of only three of the 15 EU countries not to agree to share information on savings accounts of EU citizens abroad.
- 2004** Jean-Claude Juncker is again invited to form the government after his party wins the general election.
- 2005** Voters approve a proposed EU constitution.

RELIGIONS

Eastern Orthodox, Muslim

UNIT OF CURRENCY

New Macedonian denar

NATIONAL FLAG

A rising yellow sun with eight rays extending to the edges of a red field

NATIONAL EMBLEM

The sun of freedom rising above Shar Mountain and Ohrid Lake, all bounded by wheat and poppy to either side, a red star at the top, and a decorative red banner at the bottom

NATIONAL ANTHEM

“Today over Macedonia”

NATIONAL HOLIDAY

September 8 (National Day)

DATE OF INDEPENDENCE

September 17, 1991

DATE OF CONSTITUTION

November 17, 1991

GEOGRAPHICAL FEATURES

The Former Yugoslav Republic of Macedonia is located in the Balkan region of southeastern Europe. At the center of the Balkans, Macedonia lies at the junction of the major trade and communication routes that connect western and central Europe with the Aegean Sea and northern with southern Europe. The landlocked nation borders Albania, Bulgaria, Greece, and Yugoslavia; in all, Macedonia's border is 766 km (476 mi). This includes 48 km (30 mi) of borders across lakes and 16 km (10 mi) of borders that cross rivers. There is an ongoing

dispute with Yugoslavia over the boundary between the two nations.

The total area of Macedonia is 25,333 sq km (9,781 sq mi). The Vardar River bisects the nation and has the lowest elevation in the country at 50 m (164 ft). The nation has 477 sq km (184 sq mi) of lakes, including the three principal lakes of Dojran, Ohrid, and Prespa. The terrain is mostly mountainous, with high ridges and deep ravines and valleys. The highest point in the country is Golem Korab, at 2,764 m (9,066 ft). The rugged terrain has provided the nation with a number of valuable natural resources, including chromium, lead, zinc, manganese, and nickel.

Skopje	467,257

CLIMATE AND WEATHER

Macedonia's climate is marked by hot, dry summers, but the combination of elevation and mountains also leads to relatively cold winters with heavy snowfall. The Aegean Sea basin and the high mountains create a combination of Mediterranean and continental climates. The average precipitation is between 500 and 700 mm (20 and 28 in) per year, but rainfall patterns vary considerably. Temperatures average 10°C (50°F) but range from summer highs of 40°C (104°F) to winter lows of -30°C (-22°F).

Climate and Weather

Mean Temperature
 July: 70°F to 73°F
 January: 24°F to 32°F
 Average Rainfall: 19 in

FLORA AND FAUNA

A mountainous land, Macedonia is home to conifer forests at higher elevations and deciduous forests at lower elevations. Such forests predominate in the northwest of the country.

Wildlife thrives in these forests; animals include rabbits, deer, boars, wolves, bears, foxes, and lynx. The country is also home to a declining population of European bison. Along waterways are found muskrats, raccoons, turtles, ducks, and frogs. Trout inhabit the lakes and streams. Insect life is also varied, with grasshoppers very common. Many species of lizard also reside in Macedonia.

POPULATION

Population Indicators

Total Population 2005: 2,045,262
 World Rank: 140th

 Marriage Rate per 1,000: 7.1
 Divorce Rate per 1,000: 0.6
 Average Size of Households: 3.8
 Induced Abortions: 12,028

ETHNIC COMPOSITION

Ethnic Macedonians are the largest single group in the country, accounting for some 65 percent of the population. The next largest group is the Albanians, who make up 22 percent of the population. There are also significant Turk, Serb, and Gypsy minorities. The minority groups have been granted limited autonomy, including the ability to establish schools in their own languages. However, ethnic Albanians are underrepresented in both government and the upper economic circles. Poverty and unemployment are also highest among minority groups.

LANGUAGES

Some 71 percent of the population speak Macedonian, which is an official national language. Macedonian is from the Indo-European family of languages and belongs to the South Slav subgroup, which also includes Serbian, Croatian, and Bulgarian. It uses the Cyrillic alphabet. In addition, Albanian is widely spoken and as of 2002 became one of the official national languages. Other widely spoken languages are Turkish and Serbo-Croatian. The government allows education to be delivered in languages other than Macedonian, based on the ethnic concentration of communities.

RELIGIONS

Most Macedonians practice the Eastern Orthodox religion. In 1967 the Macedonian Orthodox Church was re-

stored. In all, some 54 percent of the population identifies itself as Orthodox. There is also a large Muslim community, with one-third of the population adhering to Islam. The constitution guarantees the freedom of religion, but some Protestant denominations have not been allowed to register their churches. Also, the refusal of the Serbian Orthodox Church to recognize the independence of Macedonia has prompted the government to refuse Serbian priests entrance to the country. In 2002 one bishop of the unrecognized Macedonian Orthodox Church decided to break ranks with the Macedonian church hierarchy and accept the canonical authority of the Orthodox Patriarch of Serbia.

Other	20,000

HISTORICAL BACKGROUND

Around 653 B.C.E. King Perdiccas I established the Macedonian kingdom. Under Phillip II (359–336 B.C.E.), Macedonia underwent a period of significant military and political consolidation and reform. Macedonia's golden age occurred during the reign of Alexander the Great (336–323 B.C.E.). Alexander conquered most of the then-known world and established the largest empire the West had seen to that date. However, after his death the empire disintegrated, and Macedonia was conquered by Rome in 167 B.C.E.

In 535 C.E. the town of Justiniana Prima was established near present-day Skopje by the Byzantine Empire. During the sixth and seventh centuries Macedonia was settled by the Slavs. In 886 Macedonia was Christianized by Saint Clement. The medieval Macedonian Empire was founded after a revolt against Bulgarian sovereignty in 969, but that empire was conquered by the Byzantines in 1018. During the period of Byzantine control there were numerous revolts against Constantinople, but the empire's domination was only broken by the Turks, who conquered the region in 1395. Over the next five centuries the population raised a number of major rebellions against Turkish suzerainty.

The Razlovci Uprising of 1876 in eastern Macedonia is generally credited with launching the country's modern liberation movement. In 1903 the Ilinden Revolt briefly established a republic, but it was not until the 1912–13 Balkan Wars that Macedonia was freed from Turkish control, and only then to be partitioned between several states, including Greece. Following the World War I, the Treaty of Versailles sanctioned the partition of Macedonia, most of which then became part of Yugoslavia.

By the 1920s indigenous independence movements had formed. The Yugoslav Communist Party supported the creation of an autonomous Macedonian state and the recovery of lands lost to Greece and Bulgaria. Following the 1941 invasion of the Balkans by German and Italian forces, Macedonia was divided between Bulgaria and Italy. Throughout the war there was active resistance to the occupying forces, and by the end of the war there were 56,000 partisans.

In 1945 the People's Republic of Macedonia was proclaimed as a republic of Yugoslavia, and those areas that had been conquered by Italy were returned to Macedonia. Josip Tito became Yugoslavia's premier. That same year collectivization began, with restrictions on land ownership, and in 1946 the government began nationalizing businesses and corporations. In 1946 Macedonia adopted its first constitution. The following year the Bled Accords ceded Bulgarian Macedonia back to Macedonia, but the accords were rejected after the split between Moscow and Tito's Belgrade. Unlike the other Communist states of Europe, Tito endeavored to develop a policy of nonalignment for Yugoslavia, with ties to neither Moscow nor the West. Tito was elected president of the country in 1953.

Throughout the post-World War II era ethnic tensions persisted between the various groups in Yugoslavia. In an effort to reduce these tensions, the Communist League was formed in 1969. Purges were conducted two years later, with supporters of free-market reforms removed from the government. This was followed by the revision of the constitution in 1974 to establish a collective presidency in order to grant greater power to the individual regions.

The stability that marked Yugoslav history in the post-World War II era began to erode after Tito's death in 1980. In 1991 Macedonia proclaimed independence following a national referendum. After gaining independence, the country now formally called the Former Yugoslav Republic of Macedonia (FYROM) adopted a new constitution. Macedonia became a member of the United Nations in 1993 and of the European Council in 1995. In 1999 North Atlantic Treaty Organisation (NATO) peacekeeping forces were dispatched to Macedonia in response to the conflict in the neighboring Serbian province of Kosovo. As a result of the conflict, 245,000 refugees fled to Macedonia. In 2001 an Albanian group called the National Liberation Army started an insurgency from Kosovo and soon controlled territory in northern and western Macedonia. In August a peace agreement was signed granting ethnic Albanians greater political rights.

The Ohrid Accord, which stopped the fighting, set out several points that would give Albanians greater autonomy in the country. These included making Albanian an official language of Macedonia, which took place in 2002, and redrawing district and community boundaries to give more power to locales with large populations

of Albanians. This latter measure was accomplished in 2004 but sparked off a new series of violence and a referendum attempt (which failed) to repeal these new laws. The road toward Albanian integration has not been easy for Macedonia.

Meanwhile, the country has been hampered by unemployment hovering around 40 percent, allegations of government corruption, and the death of President Boris Trajkovski in a plane crash in 2004. Elections held to replace him resulted in a new government, with the prime minister, Social Democrat Branko Crvenkovski, becoming president and another Social Democrat, Vlado Bučkovski, succeeding Crvenkovski as prime minister. In 2004 Macedonia formally applied for EU membership.

LISTS OF MODERN RULERS

2004–	Vlado Bučkovski

CONSTITUTION

Macedonia is a relatively new democracy. The head of state is the president, who is directly elected for a five-year period but can serve only two terms. In order to run for the presidency, an individual must be at least 40 years old and be nominated by either 10,000 voters or 30 members of parliament. The president is commander in chief of the military and appoints all ambassadors but in other respects is largely ceremonial.

The Macedonian government is based on a parliamentary system. The legislature, a unicameral body known as the Sobranje, has 120 members who serve four-year terms. The executive is led by a prime minister, who, as well as the Council of Ministers, or cabinet, is elected by the parliament. The cabinet is responsible for proposing the budget and other laws. Members of the government may not serve concurrently in parliament.

There is an independent judiciary, with the Supreme Court as the highest legal body. The constitution grants all citizens of the nation the right to form local government bodies.

The acknowledgement of ethnic-Albanian rights was formalized in amendments to the constitution approved by parliament in late 2001.

PARLIAMENT

The nation's parliament is a unicameral body of 120 deputies known as the Sobranje. Deputies are elected in a mixed system whereby 85 of the seats are directly elected and 35 are elected by proportional voting, in which parties must gain at least 5 percent of the total vote in order to be represented. Members of parliament serve four-year terms. The majority party in the Sobranje nominates the prime minister, who is then formally appointed by the president. Suffrage is universal for all citizens 18 and over.

The parliament debates and adopts all laws of the country and has the authority to amend the constitution. It is also responsible for developing the budget and approving all international agreements.

POLITICAL PARTIES

The major political parties in Macedonia as of 2004 were the Social Democratic Union of Macedonia, a center-left party; the center-left Liberal Democratic Party; the Democratic Union for Integration, the Albanian minority party; the Internal Macedonian Revolutionary Organization–Democratic Party of Macedonian National Unity, a conservative party; and the Democratic Alternative. In the 2004 elections the government was formed by a coalition of the Social Democratic Union of Macedonia, the Liberal Democratic Party, and the Democratic Union for Integration. The main opposition party was the Internal Macedonian Revolutionary Organization–Democratic Party of Macedonian National Unity, taking 33 of 120 seats. In addition, there are dozens of minor and regional parties.

LOCAL GOVERNMENT

The constitution guarantees citizens the right to form local governmental units, and a law passed in 1996 established the criteria for the creation of new bodies. The basic unit of local government became the municipality, of which there are 123; these are supported by both their own tax revenues and funds from the central government. Municipalities have considerable control over urban planning, education, social security, and health care. The nation has 34 counties and 1,660 local communities, including some 200 urban areas.

As part of accommodations plans and attempts to better integrate the Albanian minority, the number of municipalities will be reduced to 76 by 2008.

LEGAL SYSTEM

The constitution of Macedonia establishes an independent judiciary. The court system exists at three levels. At the local level are municipal courts; at the regional level

there are district courts, which have an appellate function; and the nation's highest legal authority is the Supreme Court, although there is an independent Constitutional Court that oversees constitutional issues.

In 1997 the government created the Office of People's Ombudsman in order to assist citizens in defending individual and constitutional rights. Judges are appointed by an independent panel known as the Republican Judicial Council and then confirmed by the president. Each trial judge is assisted by two lay judges, but the professional jurist has the final determination.

The judicial system has been criticized for not having a representative ethnic balance among its judges and prosecutors and for having a large backlog of cases. Judicial independence has been questioned, as judges are nominated by parliament in less-than-transparent procedures.

HUMAN RIGHTS

The constitution guarantees the freedoms of religion, expression, press, and protest and forbids discrimination based on race, sex, ethnicity, political persuasion, or social status. Citizens have the right to own and acquire property and to form political groups.

There are tensions between the nation's majority Macedonian ethnic group and the Albanian minority. Albanians are significantly underrepresented in government and industry. Also, Albanians face discrimination when attempting to gain citizenship. The nation's citizenship laws require residency for 15 years.

Such tensions bubbled over into an insurgency in 2001 that was finally brought under control by the international community. The constitutional reforms envisioned by the Ohrid Accords, which ended the fighting, entailed making Albanian an official language, granting more self-government to local municipalities, increasing the number of ethnic Albanians in the police force, devolving some of the powers of the central government from Skopje to local municipalities, and granting amnesty to ethnic Albanian insurgents.

FOREIGN POLICY

Macedonia gained independence through a national referendum and the subsequent adoption of a new constitution on November 17, 1991. Since that date, Macedonia has faced international pressure from the rest of the former Yugoslavia; the nation has sought to avoid the kind of conflict that occurred between Serbia and other breakaway states, such as Croatia and Bosnia.

Macedonia has also faced pressure, including an economic embargo, from Greece, which objects to the nation's name. Some traditionally Macedonian territory and people are part of Greece, and Athens has feared that

the new nation might have territorial ambitions, such as to wrest control of the Greek province of Macedonia. Greece used its membership in the European Union and other regional bodies to block recognition of the new nation. Over time, the two nations began to develop closer relations. In 1995, under pressure from the United States, Greece lifted its trade embargo.

In general, Macedonia has pursued a pro-Western foreign policy. It has sought integration into the institutional framework of Western Europe, and the European Union has provided significant economic and development aid to the country. The deployment of UN peacekeeping troops soon after independence forestalled Serbian aggression, but the nation has had to deal with the impact of the ethnic war in Kosovo, including the immigration of large numbers of refugees. Macedonia supported the Western coalition during the 1999 Kosovo conflict, including allowing the deployment of NATO forces in the nation as a staging base for operations against Serbia.

The country has attempted to use the significant Macedonian minorities in nations such as Australia, Canada, and the United States to promote its interests. As one of the poorest areas of the former Yugoslavia, Macedonia has sought significant foreign aid and assistance.

Macedonia was a proponent of the American-led war against Iraq in 2003 and sent a small contingent to take part in the conflict and subsequent peacekeeping. In 2004 the country applied for EU membership and also sought membership in NATO.

DEFENSE

The Macedonian military numbered about 20,000 troops as of 2003. Most of these are conscripts who serve for six months. Draft age is 18; minimum volunteer age is 17. There is also a small air force of 50 personnel, though no combat aircraft, and a 7,500-person paramilitary police force under the control of the Ministry of the Interior. Macedonia has received limited military aid from the West, including the United States. The military has little equipment—only some outdated tanks, antiaircraft missiles, and artillery pieces that were used by the territorial defense forces. The government plans to develop a substantial reserve force, to number some 100,000. In the 2002 fiscal year defense spending reached \$200 million, or 6 percent of gross domestic product (GDP). By 2003, with an easing of tensions within the country and international peacekeepers on hand, this had been reduced to \$108 million, with a similar reduction in active personnel. The country is in the process of overhauling its defense structure, making it leaner and more responsive to new forms of attack. Such reforms are expected to be completed by 2007, at which time the peacetime structure of the army should include 12,858 soldiers, out of which 70 percent will be professional soldiers, 30 percent conscripts.

ECONOMY

Macedonia is the poorest of the former Yugoslav states but has a substantial agricultural base to provide most basic food needs. However, the nation is dependent on imports of energy and modern machinery. Since the re-opening of trade with Greece, the Macedonian economy has begun to grow. An important component of the economy is remittances from the large Macedonian diaspora around the world. The largest employers in the nation are the mining and manufacturing industries. Services provide the largest share of GDP, followed distantly by industry. Unemployment remains a profound problem, with over one-third of workers without jobs; the minority communities have the highest levels of unemployment. Macedonia's major exports are foodstuffs, beverages, and machinery and equipment, while its main imports include machinery, energy sources, and chemicals. The nation's most important trade partners are the former Yugoslav republics, Bulgaria, Germany, Italy, and Austria. Macedonia joined the World Trade Organization in 2003, and the political situation has stabilized since 2002. However, with unemployment remaining between 35 and 40 percent, much work in the economic arena needs to be completed. The unofficial, or gray, economy is estimated at about 40 percent of GDP.

LIVING CONDITIONS

With 30 percent of the population living below the poverty line in 2002 and an unemployment rate of almost 40 percent, Macedonia is among the poorest countries in Eastern Europe. However, other aspects of life in the country are better; the UN 2004 Human Development Report ranked Macedonia 60th out of 177 countries in terms of life expectancy, education, and standard of living. Life expectancy in 2005 was almost 74 years, gross enrollment of eligible students in primary, secondary, and tertiary schools was 70 percent in 2001, and per capita GDP was \$7,100 in 2004.

Living standards vary widely, from the poverty of some remote mountain villages to the urban lifestyles of inhabitants of cities such as Skopje, where imported consumer goods, including automobiles, TVs, VCRs, refrigerators, washers, and dryers, are widely found. Housing has improved since independence. Banks have made loan terms easier, facilitating buying and building, and many dwellers in urban areas, home to 62 percent of the population, have an apartment and a small country home. As of 1994 there were 3.8 people per household. Overall, while the current living conditions leave much to be desired by blocks of the rural population, the situation is much better than it was under Communism for the majority of people.

HEALTH

Health care is a constitutionally guaranteed universal right for citizens. Contributions to the Health Insurance

Fund (HIF), which provides a package of basic health benefits, are compulsory. However, with high unemployment rates in the country, as much as 40 percent of the population lacks health-insurance coverage.

Health care is delivered through a mixture of public and private clinics and hospitals; as of 2000 there has been movement toward the privatization of the health-care system. As of 2004 there were an estimated 309 physicians per 100,000 population. Between 1995 and 2002, 97 percent of births were attended by skilled health personnel; the infant mortality rate was just over 10 per 1,000 live births in 2005 (down from 54 per 1,000 in 1980). A major problem with health care is inadequate and outdated equipment; many who can afford to do so go to other countries for major surgery and the treatment of other serious illnesses.

Smoking and alcoholism are serious problems. HIV/AIDS was at a less than 0.1 prevalence rate in 2001; in 2003 fewer than 200 people were living with AIDS, and fewer than 100 died of the disease. There were 54 cases of tuberculosis per 100,000 people in 2002. In 2003 the government paid for 90 percent of routine immunizations. Immunization rates for children one year of age, as of 2003, were 95 percent for tuberculosis and 96 percent for DPT, polio, and measles. Public expenditures on health care in 2001 were 5.8 percent of GDP.

FOOD AND NUTRITION

Macedonian food bears a mixture of influences, from Turkish to Greek to Slavic. Breads and roasted or grilled meats are staples of the diet, as are feta cheese and peppers. Fruits and vegetables are plentiful, and wine is becoming a major export. Plum brandy is another Macedonian and Balkan specialty.

Grilled kebabs of minced mutton are typical street food. Yogurt or cheese pies called *burek* make up a breakfast on the run. Other traditional dishes include *gravče na*

tavče (beans in a skillet), Ohrid trout, and stews, typically beef with potatoes, pork with beans, and lamb with rice or spinach. Stews are prepared spicy; thickened with flour, red pepper, and fat; and always consumed with bread. Other favorite dishes are *zelnik*, a flat pastry made up of several layers of sheet dough, filled with cheese, leeks, or spinach, and *kolbasi* (homemade kielbasa), made almost entirely of pork and leeks.

Nutrition is generally adequate, though pockets of poverty and of undernourishment remain. As of 2002, 6 percent of children less than five years old were underweight, while 11 percent of the general population were considered undernourished between 1999 and 2001.

Food and Nutrition

Undernourished % of total population: 10.9
 Daily Available Calories per capita kcal: 2,960
 Amount of Cereal Available per person per year kg: 132.3
 Amount of Fruits and Vegetables Available per person per year kg: 304.6

STATUS OF WOMEN

The constitution provides for equality of all citizens regardless of sex. However, Macedonian society is patriarchal, and women are often confined to limited roles. Women are underrepresented in the higher levels of business and government and are often paid less than men in equal jobs. In the Albanian community there are also restrictions on education and employment available to women.

Violence against women is considered a particular problem within the ethnic Albanian and Roma, or Gypsy, communities. Domestic violence and the trafficking of women from former Soviet republics remain serious problems. In Muslim areas, many women are effectively disenfranchised because proxy voting by male relatives is common.

WORK

The Macedonian labor force was estimated at 855,000 in 2004. The service sector contributed 62.8 percent of GDP, industry 26 percent, and agriculture 11.2 percent. Industries include mining (for coal, metallic chromium, lead, zinc, and ferronickel), textiles, wood, tobacco, buses,

and steel, as well as food processing. Agricultural products include rice, tobacco, wheat, corn, millet, cotton, sesame, mulberry leaves, citrus, vegetables, beef, pork, poultry, and mutton. The gray economy of the country, including illegal small businesses and street vendors of food and cigarettes, provides substantial untaxed income to large portions of the population. In 2004 Macedonia had an unemployment rate of 37.7 percent.

The constitution provides for the right to form and join trade unions, to collectively bargain, and to strike, and the government generally respects these rights in practice. The concept of collective bargaining, though, is new to the country and somewhat ineffectual as a result. The Confederation of Trade Unions of Macedonia is the largest group of unions in the country. More than 50 percent of the legal workforce is unionized, and unions were particularly strong in the garment industry and the public sector. The minimum work age is 15, though many younger children work in the gray economy. The average workweek is 40 hours, and in 2003 the average monthly wage was \$244. Workplace safety is ensured in the constitution, but regulations are seldom enforced. With high unemployment, workers have little power.

EDUCATION

In Macedonia there are eight years of compulsory education. In 2001 there were 1,015 primary schools, with 121,109 students enrolled, while at the secondary level there were 96 schools, with 161,119 enrolled students. In addition to these were about 100 other special institutions, including art schools, schools for students with disabilities, religious secondary schools, and adult schools.

Less than half of the students who attend secondary school attend university. The nation has two universities, Bitola University and the University of Skopje (also known as the University of Cyril and Methodius), where the language of instruction is Macedonian, as well as the Albanian-language Tetovo University and 29 separate colleges. In 2003 there were about 30,000 students enrolled in higher education in Macedonia's University of Cyril and Methodius alone. Combined gross primary, secondary, and tertiary enrollment in 2002 was 70 percent. Education is free, and tuition costs are covered by the state. The government has established a system of adult educa-

tion to retrain workers and provide basic skills. In 2001 the government spent 4.1 percent of GDP on education.

SCIENCE AND TECHNOLOGY

Macedonia's research and development is mainly focused on agricultural and forestry projects. Three main agencies are involved in such research: the Ministry of Agriculture, Forestry, and Water Resource Management; the Association of Sciences and Arts, in Bitola; and the Agriculture University of Cyril and Methodius, in Skopje, which also has faculties in medicine, pharmacy, mechanical engineering, electro-technical engineering, technology and metallurgy, natural and mathematical sciences, and geology and mining. Additionally, the Macedonian Academy of Sciences and Arts, in Skopje, has sections of biological and medical sciences and mathematical and technical sciences. In 2004, 110 students earned master of science degrees, most in technology, and 67 persons gained the title doctor of sciences, mostly in medical science and technology. As of 2001 there were 387 scientific researchers for every one million people.

MEDIA

The constitution calls for a free press, and there is open and free criticism of the government and society. Several

media outlets remain either partially or wholly government owned. There are 29 AM and 20 FM radio broadcast stations in Macedonia, three state-run television channels, and almost 30 private ones, as well as numerous daily and weekly newspapers and journals. The government subsidizes several Albanian- and Turkish-language newspapers. Foreign-owned newspapers and journals must register with the government. In 2003 the German WAZ media group announced that it had purchased majority stakes in three major Macedonian-language daily newspapers. The state-run *Nova Makedonija*, along with *Vecer*, also state subsidized, were the leading newspapers in 2002. Private papers include *Makedonija Denes* and *Dnevnik*. Reporters without Borders, a watchdog media group, ranked Macedonia 49th out of 167 nations in its 2004 press freedom index. In 2002 there were 365,300 cellular telephone users and 100,000 Internet users.

CULTURE

Folk culture is still strong in Macedonia, especially Balkan-flavored music accompanied by the bagpipe, or *gajda*; the lute, or *tambura*; the flute, or *kaval*; the pipes, or *zurla*; and the drum, or *tapan*. Such music often accompanies folk dances, such as the male dance called *teokoto*. Dancers in traditional costumes begin slowly and work to a frenzy in the steps of this dance, which is supposed to symbolize the leave-taking of Macedonia's men for foreign shores. The *sitnoto* is another popular folk dance.

The years of Ottoman occupation and the Islamic culture still prevalent in the country are evidenced in mosques and in structures such as Skopje's clock tower, the oldest Islamic clock tower in Europe.

Modern culture centers are found mostly in Skopje, where museums, concert halls, and theaters are located. The Struga Poetry Festival draws a large international audience. In the 18th century poetry was enriched by the work of the brothers Dimitar and Konstantin Miladinov, and in the 20th century the poetry of Kosta Racin, particularly his collection *Beli mugri* (*White Dawns*), drew international attention. The plays of Goran Stefanovski have reached outside the borders of Macedonia, as have other cultural products, including films. The 1995 Mace-

donian movie *Before the Rain* was a finalist for the Academy Award for best foreign language film.

FOLKLORE AND MYTHOLOGY

Legend, myth, proverbs, fairy tales, and folktales combine in Macedonia's rich folkloric tradition. Legendary heroes such as King Marko, who defied the Turks, are at the center of numerous legends. More humorous in nature are the tales featuring Witty Pejo, who troubled the Ottoman overlords with witty and pithy observations rather than the sword.

Macedonia, along with the northern part of its neighbor Greece, is home to numerous ancient myths, including that of the Striges, winged female demons who preyed on children and drank their blood.

Proverbs and folktales both impart morals or folk wisdom. Examples of Macedonian proverbs are "Falsehoods have short legs," "Begin a task but always have its conclusion in mind," and the famous "In the kingdom of the blind the one-eyed are kings." Folktales include the popular "Justice Never Dies," about a young boy who helps an eagle that cannot fly and is in turn helped by the eagle. Another didactic tale is the one about the ill daughter of the czar who is saved by the inscription put on her ring by an old healer telling her that everything passes.

Some tales and proverbs embody particularly bleak perceptions of powerful women, which are typical of some male-dominated societies, as traditional Macedonia was.

ENTERTAINMENT AND RECREATION

Urban Macedonians have a wide variety of entertainment possibilities at hand. In addition to spending time in cafés playing chess and dining out, there are more than a dozen professional theater groups as well as the Philharmonic Orchestra and numerous chamber ensembles. Folk music, rock, and jazz are also served up in clubs and at festivals. The Skopje International Jazz Festival draws audiences and performers from around the world.

Watching television is a popular form of entertainment, as is going to the cinema. Macedonia imports films and also has a homegrown film industry that is over a century old.

Outings to the countryside and hikes in the woods are also popular activities.

ETIQUETTE

The customary greeting is with a firm handshake with eye contact. Verbal greetings include *Zdravo*, literally, "health." Children show respect for elders by calling all older men "uncle," *striko*, and older women "aunt," *strino*.

Balkan etiquette is similar to that in the rest of Europe in many ways, such as with dining (both fork and knife are used at the same time) and the use of first names (which are reserved for friends). With a large Muslim population, Macedonian etiquette is affected by many of the traditions and prohibitions of that culture. One should never show the sole of the shoe or foot to another or touch the top of another's head, even a baby's. Shoes should be removed before entering a mosque or a private home.

FAMILY LIFE

Marriages are usually determined by the couples themselves rather than being arranged. Dating begins in the early teens, and prolonged dating usually implies to the families that marriage is in the offing. Though families are mainly nuclear, with one to two children, extended families sharing households are common; Macedonia rates among the highest in Europe for the incidence of such family structures. A married couple often sets up house with the groom's parents until they save enough money for their own place. Aged parents often live with their offspring.

The structure of the family is not as overtly patriarchal as in traditional times. Women have more power inside and outside the home, although they still do not fare as well as women in northern Europe. Divorce is legal but frowned upon, especially after the birth of children. In 2002 the divorce rate was only about 10 percent. The age at first marriage has continued to rise; in 2002 the mean age at which women first married was 24 years, while for men it was 27. In 2005 the fertility rate was 1.6 children per woman.

PERSONAL APPEARANCE

Macedonians dress in Western-style clothing and are very conscientious about outward appearances, dressing the part of their social or professional class, unlike in countries such as the United States, for example, where informal dress is common.

Traditional clothing is now only worn for special occasions. Such clothing consists of intricately embroidered garments made of coarse, tightly woven wool yarn. Ornamentation varies from region to region. Men wear vests, white linen shirts, a *pojas*, or wide cummerbund, and jodhpur-like pants. Women wear ankle-length dresses, a long, wide apron that ties just below the chest, a white linen shirt, a *pojas*, and a headscarf that covers the head and back. The predominant color in men's traditional attire is black, while in women's red and white are prominent. For footwear, both sexes wear the curved-toed leather slippers called *opinci*.

SPORTS

Soccer is the most popular professional sport. The national team plays in the Europe zone of the World Cup qualifications and competes in UEFA Cup matches. The game is not only for viewing; children and young adults all over the country play on makeshift fields.

Basketball is another popular spectator sport and is increasingly popular as a participation sport as well, almost as much as in the United States. Tennis and table tennis are other common sporting activities.

CHRONOLOGY

- 1945** Josip Tito becomes premier of liberated Yugoslavia.
Collectivization and mass purges are undertaken by Communist-dominated government.
- 1946** University system is introduced.
Nation's first constitution is adopted.
- 1947** The Bled Accords cede Bulgarian Macedonia back to Macedonia, but the accords are rejected the following year after the split between Moscow and Belgrade.
- 1948** Tito breaks with Moscow and embarks on a policy of nonalignment with either the West or the Eastern Bloc.
- 1953** Tito is elected president of Yugoslavia.
- 1967** The Macedonian Orthodox Church is restored.
- 1969** League of Communists formed in an effort to unite the ethnic and national groups in Yugoslavia.
- 1971** Prominent politicians and public officials are purged for their support of a free market.
- 1974** The constitution is revised to establish a collective presidency.
- 1980** Tito dies.
- 1991** Following a referendum Macedonia proclaims independence and adopts a new constitution.
Kiro Gligorov is elected president, and Branko Crvenkovski becomes prime minister.

- 1992** Gligorov negotiates the peaceful withdrawal of the Yugoslav army, making Macedonia the only Yugoslav republic to achieve independence without war.
- 1993** The nation becomes a member of the United Nations under a temporary name, the Former Yugoslav Republic of Macedonia (FYROM), pending the resolution of Greece's objections.
- 1994** Gligorov is reelected president, and Crvenkovski is again named prime minister. Greece, fearing the FYROM will make territorial claims upon the Greek province also named Macedonia, imposes a trade blockade on the former Yugoslav republic to protest its appropriation of the name and its use of traditionally Greek symbols.
- 1995** The nation becomes a member of the European Council. Greece signs an interim accord with the FYROM and lifts the blockade. Gligorov survives an assassination attempt.
- 1996** The FYROM begins negotiations with Serbia and Montenegro to resolve border disputes. The FYROM and the Republic of Yugoslavia officially recognize one another.
- 1998** Ljubco Georgievski becomes prime minister.
- 1999** Boris Trajkovski is elected president on a second-round ballot. Nearly 250,000 ethnic Albanians from Kosovo seek refuge in the FYROM when NATO begins a campaign of air strikes against Yugoslavia.
- 2001** The Albanian National Liberation Army begins an insurgency from Kosovo, soon controlling territory in the northern and western FYROM. A peace agreement is signed in August.
- 2002** Parliament passes a law making Albanian an official language.
- 2003** With unemployment near 40 percent, Macedonia joins the World Trade Organization.
- 2004** President Boris Trajkovski dies in a plane crash near Mostar in Herzegovina. Macedonia applies for EU membership.
- 2005** Macedonia gains Italy's support in joining the European Union and NATO.

HEAD OF STATE

President Marc Ravalomanana (from 2002)

HEAD OF GOVERNMENT

Prime Minister Jacques Hugues Sylla (from 2002)

NATURE OF GOVERNMENT

Republic

POPULATION

18,040,341 (2005)

AREA

587,040 sq km (226,657 sq mi)

MAJOR ETHNIC GROUPS

Merina, Betsimisaraka, Betsileo, Tsimihety

LANGUAGES

French, Malagasy

RELIGIONS

Animism, Christianity, Islam

UNIT OF CURRENCY

Malagasy franc

NATIONAL FLAG

A white vertical stripe at the hoist with two stripes extending horizontally across the remaining area, red above green

NATIONAL EMBLEM

In a white circle in the center of a yellow circular seal is the geographical image of Madagascar colored red. Above the white circle are stylized rays, below the red head of a zebu. At the top of the yellow seal is the name of the republic in Malagasy, at the base is the motto *Tanindrazana fahafabana fandrosoana* (Fatherland, liberty, justice).

NATIONAL ANTHEM

"Ry Tanindraza Nay Malala O" (O Our Beloved Fatherland)

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 29 (Commemoration of 1947 Rebellion), May 1 (Labor Day), June 26 (National Day, Independence Day), December 30 (Anniversary of the Republic), various Christian festivals, including Assumption, Ascension, All Saints' Day, Easter Monday, Pentecost Monday, and Christmas

DATE OF INDEPENDENCE

June 26, 1960

DATE OF CONSTITUTION

August 19, 1992

GEOGRAPHICAL FEATURES

Madagascar is in the southwestern Indian Ocean, about 400 km (250 mi) off the coast of Africa, from which it is separated by the Mozambique Channel. Madagascar is the fourth-largest island in the world, after Greenland, New Guinea, and Borneo. Madagascar's land area of 587,040 sq km (226,657 sq mi) extends 1,570 km (976 mi) north-northeast to south-southwest and 569 km (354 mi) east-southeast to west-northwest. The coastline stretches 4,828 km (2,998 mi).

Topographically, Madagascar consists of a central highland region rising abruptly from a narrow eastern

coastal strip, then descending gradually to the broad plains on the western coast. There are six topographical regions: the Diego-Suarez region in the north, the northwestern region converging on the port of Majunga, the southwestern coastal plains, the southernmost province, the densely populated eastern coast, and the mountainous hinterland. There are three main groups of mountains of volcanic origin, the highest of which is the Tsaratana, with the peak of Maromokotro (2,876 m; 9,433 ft). The others are the Ankaratra and the Andringitra, both rising over 2,590 m (8,500 ft).

The Mananara and Mangoro rivers flow from the central highlands to the eastern coast, as does the Manin-

Madagascar

gory, which flows from Lake Alaotra. Other rivers flowing east into the Indian Ocean include the Bemarivo, Ivondro, and Mananjary. These rivers tend to be short because the watershed is located close to the east coast. Owing to steep elevations, they flow rapidly, often over spectacular waterfalls. The rivers flowing to the western coast and emptying into the Mozambique Channel tend to be longer and slower due to the more gradual slope of the land. The major rivers on the west coast are the Sambirano, Mahajamba, Betsiboka (with the port of Mahajanga located at the mouth), Mania, North and South Mahavavy, Mangoky, and Onilahy.

The country also includes a number of small coastal reefs and islands, of which only five islands or island groups have more than a handful of inhabitants: Île Sainte-Marie, Île Nossi-Mitsio, Île Nossi-Be, Île Nossi-Fali, and the Îles Barren.

CLIMATE AND WEATHER

Madagascar has a tropical marine climate in which the main influences are altitude, monsoons, and proximity to the sea. The central highlands divide the island into two main climatic zones: a windward zone facing the Indian Ocean and a leeward zone facing the Mozambique Channel. A wet, tropical climate with no completely dry season prevails on the eastern coastal plain and the northern peninsula. The western slope region, which has a larger land area, receives its rainfall from a different wind system and has distinct wet (summer) and dry (winter) seasons. The central highlands constitute a transition zone influenced by both climates. In the extreme south long dry periods occur between irregular rainstorms; droughts are not

common. Among these major zones are at least four ecological subregions and many more microclimates based on altitude and contour. In general, the most healthful and comfortable climate is in the central highlands.

The eastern and northwestern coasts receive their heaviest rainfall during the austral winter (May to September), while the central highlands and the west receive rains from the monsoon winds that blow during the austral summer (October to April). In an average year, the eastern coast receives 2,030–3,250 mm (80–120 in), the maximum being recorded at Toamasina; the northern peninsula, 1,010–1,270 mm (40–50 in); and the northwest and central highlands, 1,010–2,030 mm (40–80 in). Antananarivo, the capital, receives 1,340 mm (53 in), while Toliary, in the southwest, receives only 510 mm (20 in).

Temperatures are also moderated by altitude, with the coastal regions being hotter than the plateau. The mean temperatures in the former regions range from 21 to 26.6°C (70 to 80°F), in the latter region from 13 to 19.4°C (55 to 67°F). Temperatures over 37.8°C (100°F) are uncommon, as are freezing temperatures and snow.

Because of frequent violent clashes of air masses over the island, lightning is a permanent hazard; more than 60 people are killed by it every year. The most dramatic feature of the island's weather is the frequency of tropical storms and cyclones, generally lasting from December to March.

Climate and Weather

Mean Temperature

Coastal Region: 70°F to 80°F

Plateau: 55°F to 67°F

Average Rainfall

Eastern coast: 80 in to 120 in

Northern peninsula: 40 in to 50 in

Northwest and central highlands: 40 in to 80 in

Antananarivo: 53 in

FLORA AND FAUNA

Madagascar, part of the landmass of Africa many millions of years ago, is a petri dish of flora and fauna. Because of its isolation, many of the island's plants and animals have evolved into quite unique forms and give scientists the opportunity to trace evolutionary changes.

Once covered in evergreen and deciduous forest, Madagascar now maintains thick forests only on the eastern escarpment and in isolated patches in the west. Ebony, rosewood, and sandalwood are all present, and their export value has endangered these remaining forests. Most of the country is covered in savanna or prairie grass. The island is home to a wide variety of flowering plants, 80 percent of which are found nowhere else in the world. Drought-resistant plants unique to Madagascar are found in the south of the island. There are also numerous types of singular baobab trees.

Animal life is equally varied and unique to the island, as well as threatened by the incursions of humans. There are 28 species of lemurs indigenous to Madagascar, numerous evolved insectivores, and 32 varieties of chameleons. Birds are numerous; among 202 species, 105 are found nowhere else in the world. There are about 800 species of butterfly, many moths, and a variety of spiders. Crocodiles are the only large, dangerous animal present. The snakes are harmless; 95 percent of them are unique to the island.

Fish life is equally diverse. The island's streams and rivers contain tilapia, rainbow trout, and black bass, while in the coastal waters surrounding the country are found tuna, sharks, sardines, crayfish, crabs, shrimps, mussels, and oysters. The coelacanth, thought to be extinct for millions of years, has also been found in Madagascar's offshore waters.

As of 2001, 46 of Madagascar's mammal species were endangered, as were 28 bird species and 255 plant species. Worldwide trade in endangered and extinct species, a booming industry, has created a market for Madagascar's exotic snakes and tortoises and has led to the destruction of animal habitats.

ETHNIC COMPOSITION

The population of Madagascar may be described as homogeneous because all ethnic groups speak the same language, share the same culture, and also claim the same Afro-Asian origins, although the proportion in which the elements are mixed varies from group to group. In general, it is more accurate to term the ethnic groups clans

rather than tribes, because tribes—in the African sense of peoples of differing origins speaking mutually unintelligible tongues and practicing different social customs—do not truly exist on the island.

The ethnic affiliations and origins of the Malagasy have not been precisely determined and are still subject to considerable speculation. The most commonly accepted theory is that proto-Malagasy were Malayo-Polynesian immigrants who came to the island in successive waves by sailing across the Indian Ocean in primitive craft, in much the same way as Polynesians are supposed to have sailed across the Pacific to South America. To this basic stock were added later arrivals from Africa, resulting in a remarkable blending of Indonesian and African cultures.

There are 18 clans in Madagascar, each with its own territorial niche. Despite common ethnic heritage, inter-clan attitudes are colored by historical rivalries and controversies. The main rivalry is between the highlanders and the people of the plains, known as *cottiers*. This rivalry underlies much of the civil turbulence of recent times. There is also bad blood between the Merina and other clans and between the northerners and the people of the south, called collectively the *Tatsimo*.

The principal alien ethnic groups include the Comorans, Chinese, and Indians. Because Comorans are Muslims speaking a different language, they tend to live apart, and many return to Comoros after a few years; widespread anti-Comoran riots in 1977 led the Comoros government to call for their repatriation. Most of the Chinese came from south China in the early 1930s, and most of the Indians came around 1901 to work on the railroads. Both Chinese and Indians are small merchants.

Of permanent Western residents, the French are the most numerous. Also counted as French are the Creoles from Réunion. There are also scattered Greeks.

LANGUAGES

French and Malagasy are the official languages of the republic. Malagasy belongs to the Malayo-Polynesian family, but its vocabulary has an overlay of African, Sanskrit, Arabic, and European words. Of the many mutually intelligible dialects, Merina, also called Hova, is considered the standard. Malagasy makes use of a Latin script first devised by Christian missionaries in the early 1800s.

RELIGIONS

Nearly 52 percent of the population follows traditional African religions; 41 percent are Christians, evenly divided between Catholic and Protestant churches; and 7 percent are Muslims. Christianity is the dominant religious force in the country and is particularly associated with the elite ruling groups.

Traditional Malagasy religion has no dogma or clergy, but its central concept is belief in the soul and its immortality. Besides the creator of the universe—Zanahary, or Andrianahary—secondary divinities are worshiped, especially ancestors and legendary queens and kings. For this reason burial places have special significance and are in themselves objects of veneration. Tombs are often more splendid structures than the houses of the living. Funerals are elaborate, as accompanied by ritual feasting for which oxen are often sacrificed. Divination is widely practiced.

Christianity was introduced in the early 19th century, and its progress was aided by the conversion of the Merina and their royalty. The earliest missionaries were Anglicans; Protestantism has traditionally been the faith of the upper-class Merina, Catholicism that of the slaves and the *cotiers*. About one-third of Roman Catholic clergy are Malagasy, including the archbishop of Antananarivo. Six Protestant denominations belonging to the Protestant Federation are represented in the country. Most of the Protestant pastors are also Malagasy.

Some 1.2 million people, concentrated mainly on the northwestern coast, are adherents of Islam. Most of the Comoran immigrants are Muslim.

HISTORICAL BACKGROUND

The island of Madagascar was initially settled by Malayo-Polynesian seafarers, who probably arrived by way of eastern Africa and the Comoros around 700 c.e. The ruins of fortifications built by Arab traders as far back as the ninth century underscore Madagascar's historical role as a destination for travelers from the Middle East, Asia, and Africa. Beginning in 1643 several French settlements emerged; the best known of them, Tolagnaro (formerly Faradofay) on the southeast coast, lasted for more than 30 years. The settlement survived in part because the colonists took pains to establish cordial relations with the Antanosy, the ethnic group inhabiting the area. Relations deteriorated later, however, and in 1674 a massacre of nearly all the settlers ended French colonization endeavors for more than a century.

Madagascar became a source of slaves, not only for the neighboring islands of Mauritius and Rodrigues but also for more distant points, including the Western Hemisphere. Madagascar's social and political structure facilitated the slave trade. The most powerful of Madagascar's kingdoms—the one that eventually established hegemony over a great portion of the island—was that developed by the Merina ethnic group. Before the Merina

emerged as the dominant political power on the island in the 19th century, they alternated between periods of political unity and periods in which the kingdom separated into smaller political units. The location of the Merina in the central highlands afforded them some protection from the ravages of warfare that recurred between the coastal kingdoms.

Two monarchs played key roles in establishing Merina political dominance over Madagascar. The first, who ruled under the name of Andrianampoinimerina, seized the throne of one of the Merina kingdoms in 1787. By 1806 he had conquered the remaining three kingdoms and united them within the former boundaries of Imerina, the capital established at the fortified city of Antananarivo. Radama I, an able and forward-looking monarch, succeeded to the throne in 1810 upon the death of his father. By adroitly playing off competing British and French interests in the island, he was able to extend Merina authority over nearly the entire island of Madagascar.

French influence was introduced in Madagascar piecemeal, beginning with a treaty in 1840 with the Merina monarchy. The French later claimed a protectorate over parts of the kingdom; when this claim was disputed, they launched a war, which ended in 1885 with the French gaining control over the kingdom's foreign policy. The Anglo-French Agreement of 1890, which acknowledged Madagascar as a French zone of influence, paved the way for the final annexation of the country in 1896. However, resistance, especially in the south, was not overcome until 1904. In 1946 Madagascar became an overseas territory of France, and the Malagasy became French citizens, although the franchise was extended to a few only. A Territorial Assembly was established, with some control over the budget. In 1947 a rebellion broke out, which was suppressed only after a loss of life estimated as high as 80,000. In 1958 Madagascar voted overwhelmingly for the new French constitution and thus became an autonomous member of the new French Community.

Full independence was achieved in 1960. Since then Madagascar has had a history of political upheaval. No leader has come to power in accordance with the constitutional process. At independence the government was led by President Philibert Tsiranana, who ruled with the support of the Social Democratic Party. His tenure was characterized by general social unrest; ethnic conflict stemmed from Merina opposition to the government's pro-French stance. Economic problems led to a revolt by peasants in Tulear Province in 1971, and a lack of job prospects precipitated a student insurrection in 1972. Unable to govern, Tsiranana resigned, and a military government was formed under the leadership of Gen. Gabriel Ramanantsoa in May 1972. The general was confirmed as leader in a popular referendum that year.

Following a coup attempt by dissident *cotier* officers in 1975, Col. Richard Ratsimandrava replaced Ramanantsoa. Ratsimandrava was assassinated after just six

days in office. Gen. Gilles Andriamahazo then assumed leadership. He in turn was succeeded in June 1975 by Cdr. Didier Ratsiraka. A referendum that year endorsed the Charter of Socialist Revolution, which committed the government to the nationalization of foreign companies, banks, and agriculture. State corporations were set up to coordinate food production, and free health care and education were introduced.

In 1975 Ratsiraka was designated president of the Democratic Republic of Madagascar under a new constitution in which the chief executive had extensive powers. He was returned to office in 1982 with 80 percent of the vote, in an election widely criticized as fraudulent.

During the late 1970s Madagascar's economy declined dramatically. A massive program of public investment in industry and, conversely, a neglect of agriculture resulted in growing foreign debt. French aid declined in the face of the government's leftist programs. Madagascar received aid from the Eastern Bloc, but this was primarily in the form of equipment, not desperately needed foreign currency.

In 1982 the government signed a restructuring agreement with the International Monetary Fund (IMF), which led to the introduction of a free market and a rollback of Ratsiraka's socialist programs. The austerity measures dictated by the IMF had a disastrous impact on the quality of life and generated civil unrest. Nevertheless, Ratsiraka was returned to office in 1989 with over 60 percent of the vote.

Civil unrest continued, however, and in March 1990 Ratsiraka lifted the ban on political parties that had been in effect since 1975. Three new parties immediately registered. In May a group of armed rebels briefly seized control of the national radio headquarters in Antananarivo but were soon put down by security forces. It was estimated that up to 5,000 people died in the failed coup attempt.

With a new constitution in place in 1992, Professor Albert Zafy was elected president. By the latter half of 1994 the heady optimism that accompanied this dramatic transition process had declined somewhat, as the newly elected democratic government found itself confronted with numerous economic and political obstacles. After four years of rule by Zafy, who failed to unite the country or overcome years of bureaucratic misrule, Ratsiraka was voted back into power in 1996, to almost universal surprise. That only 25 percent of the 6.5 million registered voters bothered to cast a ballot indicates that the Malagasy had overwhelmingly lost faith in the political process. As president, Ratsiraka sought to consolidate more power under his control. In 2001 the Senate reopened after 29 years, completing the government framework provided for in the 1992 constitution. In presidential elections in 2001, opposition candidate Marc Ravalomanana charged Ratsiraka with rigging the elections and claimed victory for himself. When mediated talks between Ravalomanana and Ratsiraka deadlocked, Ravalomanana declared him-

self president in February 2002, leading to riots between rival protesters.

Ravalomanana gained control of the capital, but Ratsiraka moved his government to Toamasina and had strong support from much of the army. A recount of the votes in April 2002, negotiated by the Organization of African Unity (OAU) and agreed to by both candidates, found Ravalomanana the winner. Ratsiraka rejected those results, however. As forces supporting Ravalomanana gradually won control of most of the island, Ratsiraka fled Madagascar.

In parliamentary elections held in December 2002 Ravalomanana's I Love Madagascar (TIM) party won a majority. This victory reassured any doubters as to the legitimacy of his government, and the African Union as well as France and the United States recognized the new government. In 2003, Ratsiraka was tried in absentia and convicted on charges of embezzlement, and Ravalomanana further secured his electoral mandate when the TIM did well in local elections. However, he faced a desperate situation economically, with massive foreign debt and over 70 percent of the population living below the poverty line. One positive event occurred in 2004, when the IMF and the World Bank forgave over \$2 billion in debt.

The nation was rocked by natural catastrophes in 2004, with thousands losing their homes when cyclones struck in February and March. More lost homes when the Indian Ocean tsunami struck in December, but no deaths were reported.

LIST OF MODERN RULERS

Head of State

1960–72	Philibert Tsiranana (president)
1972–75	Gabriel Ramanantsoa (military head of government)
1975	Richard Ratsimandrava (military head of government)
1975	Gilles Andriamahazo (chairman of the National Military Leadership Committee)
1975–93	Didier Ratsiraka (chairman of the Supreme Council of Revolution and then president)
1993–96	Albert Zafy (president)
1996–97	Norbert Lala Ratsirahonana (acting president)
1997–2002	Didier Ratsiraka (president)
2002–	Marc Ravalomanana (president)

CONSTITUTION

The Third Republic received its first expression of popular support and legitimacy on August 19, 1992, when the

constitutional framework constructed by the National Conference was approved by more than 75 percent of those voting in a popular referendum (the constitution took effect on September 12). On this date, the people overwhelmingly approved a new constitution consisting of 149 articles that provided for the separation of powers between the executive, legislative, and judicial branches of government; the creation of a multiparty political system; and the protection of individual human rights and freedom of speech.

The power of the executive branch is divided between a president who is elected by universal suffrage and a prime minister from the parliament who is nominated by his or her peers but who must be approved by the president. If the nominee for prime minister does not achieve an absolute majority of support within the parliament, the president may choose a candidate from the parliament who will serve for one year. The president is also the recognized leader of foreign policy and constitutes by far the single most powerful political person within the country. All presidential decrees must be countersigned, however, and the president is bound by the constitutional reality that the prime minister is responsible for the functioning of the government. The president is elected for a five-year period and is limited to two terms in office. In the event that no candidate wins a simple majority of the popular vote, a runoff election is held between the two leading candidates within a period of two months.

The constitution provides for a strong, independent judiciary and a bicameral parliament composed of a Senate and a National Assembly.

PARLIAMENT

The constitution provides for a bicameral parliament composed of a Senate and a National Assembly (Assemblée Nationale). The Senate represents territorial groups and serves as the consultative chamber on social and economic issues. Two-thirds of its members are chosen by an electoral college, and the remaining one-third are chosen by the president. The National Assembly consists of 160 deputies elected by universal suffrage using a proportional representation list system. Both senators and deputies serve for four years. The parliament as a whole operates with a variety of classic parliamentary measures, such as a vote of no confidence, that enable it to serve as a check on the power of the executive.

POLITICAL PARTIES

The creation of a truly free and fair multiparty system is the centerpiece of the new constitutional order. In sharp contrast to the Ratsiraka era, when political parties could exist only under the ideological umbrella

of the Front National pour la Défense de la Révolution, democratization of the political system has led to the proliferation of political parties of all ideological stripes. In the first legislative elections held under the Third Republic in 1993, for example, more than 120 political parties fielded at least 4,000 candidates for a total of 138 legislative seats. Despite constitutional guarantees concerning the rights of citizens to form political parties without fear of government retribution, parties that call for ethnic or religious segregation or demonstrably endanger national unity are subject to being banned.

In the 2002 parliamentary elections, the TIM party of President Marc Ravalomanana took 103 of the 160 seats, while the old socialist Association for the Rebirth of Madagascar (AREMA) won only three, and the National Union, the major opposition party, took 22. Several other smaller parties also took part in the election, and nonpartisans won 22 seats.

LOCAL GOVERNMENT

A new system of local governance under the constitution is known as the Decentralized Territorial Authorities (Collectivités Territoriales Décentralisées). According to the decentralization law adopted by the National Assembly in 1994, six provinces (*faritany*), 28 regions (*faritra*), 148 departments (*fileovana*), and 1,400 communes (*faribobitra*) have been created. At the commune level, there is a further division into more than 11,000 *fokontany*, or neighborhood/village organizations that elect their own councils as well as councils and mayors for the communes. The commune councils in turn vote for the members of the national Senate. Envisioned as regional vehicles for popular input in which members are elected by universal suffrage, these local authorities are still in the process of being implemented. Their exact role in the policy-making process remains ill defined, but it is contemplated that the national government will handle such areas as foreign affairs, defense, public security, justice, currency, and broad economic planning and policy, leaving economic implementation to the decentralized bodies. Provincial council elections were held in 2000. Municipal elections were held in 2003.

LEGAL SYSTEM

The legal system is based on French civil law and customary Malagasy law. The 11-member Supreme Court serves as the highest arbiter of the laws of the land. Other judicial bodies include the Administrative and Financial Constitutional Court, the appeals courts, tribunals, and the High Court of Justice. The creation of this complex system indicates the desire of the constitutional fram-

ers for a society built upon the rule of law. Indeed, the constitution explicitly outlines the fundamental rights of individual citizens and groups (most notably freedom of speech) and guarantees the existence of an independent press free from government control or censorship.

All criminal cases are tried by one of 10 criminal courts without permanent location. The court comprises a magistrate and four assessors (or laymen picked from a list of 18 at the beginning of each court term). The subordinate courts are the tribunals of first instance, located in 25 urban centers, and subprefectural and district courts.

In general, the judiciary is independent of government influence. However, a lack of training, resources, and personnel hampers the courts' effectiveness, and case backlogs are quite large. As of 2003, 20,000 of the people being held in the country's prisons were pretrial detainees.

HUMAN RIGHTS

The government generally respects citizens' human rights in several areas; however, a number of problems remain. Prison conditions are harsh, even life threatening. Some prisoners are used for forced labor; in some prisons women experience physical abuse, including rape. Lengthy pretrial detention remains a major problem, and suspects are often held for periods that exceed the maximum sentence for the alleged offenses. The government has continued with a major effort to reduce the number of preventive detainees. A government crackdown on and arrest of opponents termed "terrorists"—those who supported then President Ratsiraka in the 2001–02 electoral crisis—has elicited criticism from some who say that President Ravalomanana is simply getting rid of his opposition.

State authorities impose summary justice—including executions—in rural areas where the government's presence is weak, although overall, government efforts to bring local authorities under closer regulation and scrutiny have shown results. Women continue to face some societal discrimination. There are reports of trafficking in women and girls.

FOREIGN POLICY

Malagasy foreign policy has undergone frequent shifts. Under Tsiranana, relations with France were very close. This was reversed under the Ramanantsoa government, which withdrew from the franc zone and terminated its membership in the francophone Common African and Malagasy Organization. Agreements with the Republic of South Africa were repudiated, and diplomatic relations were established with the Soviet Bloc and with the Palestine Liberation Organization.

Subsequently, there was a drift toward the West, and diplomatic relations with Washington were restored after

a lapse of more than four years. In the 1990s economic and air links were reestablished with South Africa, and in 1998 Ratsiraka became the first Malagasy head of state to visit South Africa. In 2003 Madagascar rejoined the African Union after dropping out during the 2001–02 election crisis. President Ravalomanana has consciously sought to strengthen relations with anglophone countries as a means of balancing traditionally strong French influence.

DEFENSE

The defense structure is headed by the president. Military manpower is ensured by the conscription of all males between 20 and 50 years of age for 18-month periods. However, it has not been necessary to enforce the conscription law because of a surplus of voluntary enlistees. As of 2003 the Madagascar military had about 21,600 members, with 500 in each the navy and air force and the remainder in the army. In 2004 defense spending was \$44.6 million, or 1.2 percent of gross domestic product (GDP).

ECONOMY

Madagascar faces problems of chronic malnutrition, underfunded health and education facilities, a roughly 3 percent annual population growth rate, and the severe loss of forest cover, which is accompanied by erosion. Agriculture, which includes fishing and forestry, is the mainstay of the economy, accounting for 29 percent of GDP and contributing more than 70 percent to export earnings. Industry features textile manufacturing and the processing of agricultural products.

Growth in output in 1992–97 averaged less than the growth rate of the population. Growth has been held back by antigovernment strikes and demonstrations, a decline in world coffee demand, and the erratic commitment of the government to economic reform. The extent of government reforms, outside financial aid, and foreign investment will be key determinants for future growth. Since the mid-1990s, Madagascar has been following recommendations and directives from the World Bank and IMF to privatize its economy, and such policies are beginning to pay off. Nevertheless, GDP dropped 12 percent in 2002 as a result of the electoral crisis and conflict. In

1460 Madagascar

2003 the real growth rate in GDP was 6 percent, double the population growth.

ENVIRONMENT

Madagascar suffers from a number of environmental problems common to developing nations. Deforestation and soil erosion are among the country's chief concerns because of overgrazing, nomadic agriculture, forest fires, and land clearing. Water contamination from raw sewage and other organic waste threatens drinking and surface water. The country's unique flora and fauna are threatened by these environmental changes as well as by the illegal trade of rare species.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Madagascar 150th out of 177 countries in terms of life expectancy, education, and standard of living. Life expectancy in 2004 was under 57 years; only 45 percent of eligible students were enrolled in primary, secondary, and tertiary schools in 2002; and the country had an adult literacy rate of 68.9 percent in 2003. In terms of economic well being, Madagascar is the world's ninth-poorest country. Some 70 percent of the population struggles to survive on less than a dollar a day. In 2004 per capita GDP was just \$800.

There is a sharp split between the poor and the wealthy; the middle class is new and slowly increasing in number. The wealthy live in guarded compounds, while the poor inhabit shantytowns and hardscrabble rural villages. All the essentials of life, including adequate housing, food, proper water and sanitation, education, and transportation are hard to come by for most citizens of Madagascar.

Malagasy houses are constructed of varying materials in different parts of the island: brick and wood in the plateau, thatch and leaves in the west, and often on stilts in the east. Regardless of the building material, they are generally rectangular and constructed on a north-south axis, with doorways opening to the west. In the central plateau homes are often two stories high and have outside terraces. The housing shortage in cities is acute; in 2000, 26 percent of the population lived in urban areas, which were growing in population by almost 5 percent annually.

HEALTH

Like other features of life in Madagascar, health care is in great need of revamping. With an average of only nine physicians and 42 hospital beds per 100,000 people as of 2003, the country is seriously understaffed medically. Each province has its own hospital as well as clinics and dispensaries, but only 46 percent of births were attended by trained health-care professionals between 1995 and 2002, leading to an infant mortality rate of nearly 77 deaths per 1,000 live births in 2004, among the worst rates in the world.

Nearly 100,000 Malagasy children under age five die each year from preventable diseases, such as malaria, diarrhea, and acute respiratory illnesses. Half of all the nation's children, and 50 percent of the total population, suffer from stunted growth due to chronic malnutrition. Three-quarters of the population live in rural areas, where two out of three residents have no access to safe, clean water.

Indeed, the high incidence of disease in Madagascar is a result of an inadequate diet and insufficient medical care and sanitation practices. Malaria, schistosomiasis, and tuberculosis are common, as are leprosy, bubonic plague, diphtheria, typhoid, venereal infections, tetanus, hepatitis, and gastroenteric parasites. HIV/AIDS is also spreading quickly; as of 2003, 140,000 people were living with HIV/AIDS in Madagascar, with 7,500 deaths from the disease and 30,000 children orphaned as a result.

Immunization rates for infants one year of age are low. In 2003, 72 percent were immunized against tuberculosis, only 55 percent for measles and DPT, and 58 percent for polio. Public expenditures on health care in 2002 were 1.2 percent of GDP.

FOOD AND NUTRITION

Rice, or *vary*, is the staple food in Madagascar, served at least two to three times per day and in quantities large enough to make it the main course.

Meats include chicken, beef, pork, and fish, usually served in small amounts and in stews or curries along with rice. Some typical stews are *ravitoto* (with pork) and *romazava* (with beef and vegetables). Other popular dishes include *akoho sy voanio*, or chicken and coconut; *lsary voatabia*, or tomato and scallion salad; *kitoza*, or beef cut into strips and broiled over a charcoal fire; *vary amin anana*, or rice and greens; and *achard*, a hot vegetable curry. *Sakay*, a hot red pepper, is usually served on the side with all Malagasy dishes. Along the coast seafood is plentiful, and tropical fruit, including bananas, mangos, lychees, and pineapples, are also popular.

Some culinary features are holdovers from French times; this is true with coffee, which is more prevalent than tea. However, the best coffee is produced for export, and the same is true for the vanilla bean, for which the country is famous. Wine is produced locally, as are beer and rum. *Litchel* is an alcoholic drink made from lychees. *Koba* is a ground mixture of peanut, banana, and rice used as a snack food.

Nutrition is less than adequate in Madagascar. Between 1995 and 2002, 33 percent of children younger than five were underweight, while 37 percent of the general population were considered undernourished as of 2001.

STATUS OF WOMEN

Madagascar has what is essentially a matriarchal society, and a highly visible role for women has long been recognized as an integral part of the country's sociological framework. There are no restrictions concerning activities in which women may engage. Women have a lengthy tradition of involvement in high-level political activity, and there are women members of the cabinet, Supreme Revolutionary Council, and National Assembly. Women have prominent positions in the economic life of the country, with many managing or owning businesses or filling management positions in state industries. Women constitute 45 percent of the nation's workforce.

However, women in rural areas and among the poor face a greater degree of hardship. In addition to the responsibilities associated with child rearing and household management, economic necessity forces many of these women to engage in long hours of farm labor or similar activities. These conditions stem more from socio-economic factors than from any discrimination against women in Madagascar society.

WORK

The labor force was 7.3 million in 2000, of which about 80 percent were engaged in agriculture, forestry, and fishing, much of it at the subsistence level. Agricultural products include coffee, vanilla, sugarcane, cloves, cocoa, rice, cassava (tapioca), beans, bananas, peanuts, and livestock. Agriculture accounts for a little less than one-third of GDP. Industry, about 17 percent of GDP, comprises meat processing, soap, breweries, tanneries, sugar, textiles, glassware, cement, automobile assembly, paper, petroleum, and tourism. The service sector brings in over 50 percent of GDP, which stood at over \$14 billion in 2003. In general, the native Malagasy are involved in agriculture, while business is the province of the French, Chinese, Creoles, Indians, and Merina highlanders. Unemployment in 1999 was 5.9 percent. Women make up 45 percent of the workforce; they are often engaged in the planting, cultivating, and processing of crops.

The law provides for the right to unionize, but essential service workers, including police and military personnel, may not form unions. Overall, less than 10 percent of workers are in unions. The minimum work age is 15, but as of 2004 nearly 13 percent of urban children and 36

percent of rural children between the ages of 10 and 14 were intermittently employed, the vast majority on family farms. With the vast majority of the workforce employed in agriculture, unions have little power, and workplace safety and health regulations are seldom enforced. The minimum wage in 2004 was raised to \$23 per month, and the maximum workweek was 40 hours.

EDUCATION

Education is in principle free, universal, and compulsory from ages six to 13 in some areas and from seven to 14 in other areas.

Schooling lasts for 13 years, as divided into six years of primary school and seven years of secondary school. The primary course is itself divided into three cycles of two years each: a preparatory course, an elementary course, and a middle course. Upon completion of primary education, the student is awarded a *certificat d'études primaires élémentaires*. Secondary schools offer two cycles: the short cycle (*enseignement court*) lasts four years, the long cycle (*enseignement long*) three. Upon completion of secondary education, the student receives a baccalaureate.

Vocational training programs in more than 40 specializations are available to Malagasy students with primary education. Four-year programs are offered in technical colleges, seven-year programs in technical institutes. Private schools account for a major share of educational enrollment: 49 percent at the secondary level.

The responsibility for both private and public education is vested in the Ministry of Cultural Affairs. However, primary education is also partly financed by local funds.

Higher education is provided by the University of Madagascar, with campuses in Antananarivo, Antsirana, Fianarantsoa, Mahajanga, Toamasina, and Toliara. In 2001, combined gross enrollment in primary, secondary, and tertiary schools was 45 percent. The literacy rate in 2003 was 68.9 percent, and government spending on education was 2.9 percent of GDP in 2001.

SCIENCE AND TECHNOLOGY

The major research efforts in the country focus on agriculture, forestry, and fisheries, with institutes sponsored by the Ministère de la Recherche Scientifique et Technologique pour le Développement. The National Center of Applied Research in Rural Development, in Antananarivo, also pursues research in agriculture, forestry, fisheries, zoology, and veterinary studies.

The University of Antananarivo at its various campuses has departments of mathematics, physics, chemistry, engineering, computer engineering, oceanography, medicine, and agriculture. Between 1987 and 1997 science and engineering students accounted for 25 percent of college and university enrollments, while research and development expenditures totaled 0.12 percent of GDP, with 37 technicians and 15 scientists and engineers per million people engaged in research and development.

Other technology and research comes from abroad. French institutes study geology, hydrology, tropical forestry, and veterinary medicine.

MEDIA

Five daily newspapers were published in the country as of 1998, with a total circulation of about 68,000. Only one daily is published in both French and Malagasy; others are single-language publications. In 1989 Ratsiraka announced the end of restrictions on press freedom and the permanent abolition of press censorship. During the 2002 presidential election crisis the newspapers and media in general became very partisan, but the atmosphere has seemed to change since then. Major dailies include

the *Madagascar Tribune*, *Midi-Madagasikara*, *L'express*, and *La gazette de la grande île*. With low literacy rates, Malagasy citizens also tend to get their news from radio and television. Reporters without Borders, an international media watchdog, ranked Madagascar 72nd out of 167 nations in its 2004 rankings of press freedom.

The national news agency is Agence Nationale d'Information Taratra, which replaced Agence Madagascar Presse in 1977.

The official broadcasting service, Radiodiffusion Nationale Malgache, operates 24 transmitters (in addition to a relay station at Fenoarivo with eight transmitters), broadcasting two home-service networks. Television, introduced in 1967, covers about 15 percent of the population. As of 2003, only half of Madagascar's households had access to radio broadcasts. Of the scores of private radio and television channels, President Ravalomanana owns one of each; his Malagasy Broadcasting System operates the MBS TV and Radio MBS networks.

In 2003 there were 279,500 cellular phone users and 70,500 Internet users.

CULTURE

The cultural heritage of Madagascar is as blended as is its population. Despite lying so close to Africa, the island's population is primarily related not to the people of that continent but rather to those of Indonesia, from where the first settlers came. However, to say the culture is similar to that of the Pacific islands is not accurate, as other influences have shaped the country, including French rule.

Traditional music is a fusion of rhythms from Indonesia and Kenya. Musical instruments include the harp-like *valiba*, the stringed *lokango voatavo*, and the *kabosy*, which is similar to a ukulele. Other instruments include the tube zither and cone drum, as well as drums and animal horns as wind instruments. Hand clapping accompanies the rhythmic singing style known as *vaky soava*. The church music of modern days has been adapted to typical Malagasy rhythms.

Another traditional art form adapted to the modern world is *kabary*, or public oratory and storytelling. *Kabary* is an integral part of *hira gasy*, popular spectacles that

also include music and dancing. The town of Fianarantsoa has developed into the literary mecca of the country, with several contemporary novelists and writers working there. Wood carving is also practiced by some of the clans of Madagascar.

The government attempts to encourage traditional art forms and promotes both ancient and modern festivals. The major libraries and museums, all located in Antananarivo, include the National Library, the Municipal Library, the National Archive, and various museum collections of Malagasy culture and archaeology.

FOLKLORE AND MYTHOLOGY

Folklore in Madagascar includes myths of the Malagasy belief system, folktales, and proverbs. Zanahary is the supreme god in the Malagasy folk religion, with both male and female aspects. Zanahary's wife is the goddess Andriamanitra, who created the earth and human beings. There is an earthly Zanahary who creates humans from clay or wood, and there is a heavenly Zanahary who breathes life into them. Sometimes, however, these two battle over their creations, and then the heavenly god takes back his vital breath, while the earthly god keeps the bodies. This in part explains the elaborate funerary traditions in Malagasy religion. Family tombs are important, as each year the dead are removed in the ceremony called *famadianana*. Corpses are rewrapped, and offerings are made to them by other family members. For the Malagasy these dead are not divorced from life. Rather, they continue to influence daily activity.

Other beliefs and myths of the Malagasy people include fear of *tromba*, the trance-like state that some spirits of the dead inflict on the living. A divine healer, or *ombiasy*, must be called in to bring the afflicted out of their trance and end their ceaseless dancing. Other typical mythical figures include the *vizimba*, the powerful spirits that lived on Madagascar before humans came, and Rasoalao, goddess of the hunt.

Proverbs make up another vital part of Madagascar folklore, imparting wisdom by using everyday analogy and allusion to farming and other homely pursuits. Some popular proverbs include "You think you are strong like the corn plant, yet the bean vine is already choking you," "Sor-

row is like rice in an attic: You use a little every day and at the end it is all gone,” and “Poverty won’t allow him to lift up his head; dignity won’t allow him to bow it down.”

ENTERTAINMENT AND RECREATION

In urban areas cinemas are available, and families also watch television. Most recreational activities revolve around the family. Extended families get together to dine and share news of distant relations; music, dance, and sports may be part of these gatherings. Church and traditional cultural festivals such as the *bira gasy* are other entertainment outlets, with traditional storytelling, poetry, dance, and music all performed. Cockfighting is still popular with a large segment of the Malagasy population. Children have many unique games played with stones.

ETIQUETTE

Like many tribal people, the Malagasy are warm and friendly in familiar surroundings and with people they know but are more reserved and formal with strangers. In Madagascar, handshakes are used at greeting and leaving-taking. A kiss on the cheek, French style, is also used for close friends. Respect is shown to elders, especially in public situations.

Being made up of many different clans, Madagascar society is full of taboos, many of which change from village to village. One universal taboo is that of refusing food when visiting; in spite of being among the poorest nations on the planet, Madagascar’s citizens are proud of their hospitality. Punctuality is not a top priority with the islanders.

FAMILY LIFE

In traditional Malagasy tribal life kinship and family were the main determiners of activity, and they still hold sway today. One of the difficulties of creating a modern nation-state is that the islanders’ first loyalties are to their extended families, and this loyalty typically extends beyond death. Such kinship identity is called *fibavanana*. The home is often made up of three generations, the oldest male being the head. With the shift to urban living, traditional family paradigms are breaking down somewhat, and women have taken on authoritarian roles as well. Nevertheless, boys are still raised to be providers, while girls are set to work taking care of younger members of the family. In general, women are still expected to take care of domestic matters. Although educational and job opportunities are improving for women, certain traditional male-dominated societal patterns still exist.

Families are large in Madagascar. Traditionally, seven boys and seven girls was the desired number of offspring, but in the modern world the average family has shrunk to four or five children, still large by Western standards. The fertility rate in 2004 was almost six children per woman, but the infant mortality rate was very high, at nearly 77 deaths per 1,000 live births.

In some ethnic groups, marriages can take place only with others of the same ethnic or kinship background. Others demand that marriages take place outside kinship lines so as to strengthen bonds between clans. Polygamy was once common on the island, but this is no longer so outside of the Muslim community. Marriages are both arranged between parents and forged through romantic commitments on the parts of the bride and groom. In both cases, lengthy negotiations precede the ceremony, and a bride price, a *vody ondry*, is usually paid. Divorce is legal in Madagascar; by law, women receive an equal portion of property upon dissolution of the marriage.

PERSONAL APPEARANCE

Attire in Madagascar is a mix of Western and local traditional styles. Typical clothing for women includes the robe- or toga-like cloth wrapping called the *lamba*. This cloth is brightly colored and is sometimes also used as a baby sling. Many men wear the long cotton shirts called *malabar*, made of cotton, with loose trousers. Some wear mixtures of Western and traditional garb at the same time. Materials include cotton, silk, and raffia, some of it still homespun. In the more humid eastern forests men tend to wear shorts rather than trousers.

SPORTS

Soccer is the primary spectator sport in the country. In addition to local teams, Madagascar fields a national team that is part of the Council of South African Football Associations and has been a member of the world governing body of soccer, FIFA, since 1962. The team regularly plays in the COSAFA Castle Cup competition. Soccer matches are held at Mahamsina Municipal Stadium in Antananarivo, which holds 30,000 spectators.

Other common sports include volleyball, basketball, martial arts, boxing, wrestling (called *tolona*), swimming, and tennis.

CHRONOLOGY

1960 Madagascar becomes a sovereign independent republic within the French Community as the Malagasy Republic, with Philibert Tsiranana as president.

1466 Madagascar

- 1971** The Antandroy, an ethnic group in the south, revolt in protest against northern domination. The government takes drastic action to suppress the revolt.
Vice President Andre Resempa is dismissed.
- 1972** In national elections Tsiranana is reelected with 99.72 percent of the votes.
A strike by students at the medical school escalates into nationwide riots.
Amid the clamor for his resignation, Tsiranana hands over all his powers to Gen. Gabriel Ramanantsoa, who forms a government of national unity.
Voters approve a constitutional referendum to abolish all existing parliamentary institutions until 1977 and replace them with the High Council of Institutions (Conseil Supérieur des Institutions).
- 1973** Madagascar leaves the franc zone and the Common African and Malagasy Organization.
- 1975** In a surprise move, Ramanantsoa yields office to Col. Richard Ratsimandrava, who is assassinated within six days.
Power is assumed by an 18-man military directorate headed by Gen. Gilles Andriamahazo.
The directorate is superseded by the Supreme Revolutionary Council, headed by Cdr. Didier Ratsiraka.
The Second Republic is inaugurated, as the electorate approves a new constitution.
Ratsiraka issues the Charter of the Malagasy Socialist Revolution (popularly known as the Little Red Book).
The republic's official designation is changed from the Malagasy Republic to Madagascar.
- 1976** Ratsiraka is sworn in as president for a seven-year term.
The name of the capital is changed from Tananarive to Antananarivo.
Prime Minister Joel Rakotomalala is killed in a plane crash and is replaced by Justin Rakotonina. Hundreds of Comorans are killed in anti-Comoran riots.
- 1977** In a major cabinet reshuffle, Désiré Rakotoarijaona is named prime minister.
- 1982** President Ratsiraka is reelected.
- 1983** AREMA, the "revolutionary association" of the ruling Front National pour la Défense de la Révolution, wins decisively in national legislative elections.
- 1986** Violent demonstrations take place in Toamasina in response to food shortages and the government austerity program. Student protests erupt at the University of Madagascar in Antananarivo.
- 1987** Rioting breaks out. Indian and Pakistani traders are attacked because of resentment at their comparative wealth during a period of increased poverty.
- 1988** Prime Minister Rakotoarijaona resigns and is replaced by Victor Ramahatra.
- 1989** President Ratsiraka is reelected with over 60 percent of the vote.
- 1990** Ratsiraka lifts a 15-year ban on political parties, and several immediately register. Security forces foil a coup attempt.
- 1991** Madagascar defies the OAU ban on South Africa by restoring trade and transportation ties with that country.
In response to numerous antigovernment demonstrations and strikes, Ratsiraka agrees to implement democratic reforms.
- 1992** A new constitution is adopted, recognizing the Third Republic. Its measures include the formal abolition of the single-party rule of the country.
- 1993** Albert Zafy, a doctor, is elected president in the first free elections under the new constitution.
- 1996** In September the National Assembly impeaches President Zafy for failure to renegotiate favorable terms with the IMF.
Zafy steps down in October.
Ratsiraka wins December presidential elections.
- 1997** Ratsiraka is sworn in as president. He focuses on bringing inflation under control and renegotiating the country's growing foreign debt.
- 1998** A swarm of locusts devastates crops in southern Madagascar.
Voters narrowly approve a referendum expanding the powers of the president.
AREMA dominates National Assembly elections. Tantely Andrianarivo is named prime minister.
- 2000** A cholera epidemic breaks out.
Two severe cyclones strike Madagascar, killing 1,300 and leaving 40,000 homeless due to destruction and flooding.
A third cyclone inflicts further damage, including the destruction of more than half the island's vanilla crop.
- 2001** The Senate reconvenes after 29 years.
Opposition candidate Marc Ravalomanana claims victory in presidential elections and charges Ratsiraka with rigging election results.
- 2002** Violence between rival protesters breaks out after Ravalomanana declares himself president. The Constitutional High Court names Ravalomanana as winner of the elections after a recount, but Ratsiraka refuses to accept the verdict.
In parliamentary elections, Ravalomanana's TIM party wins a majority of seats. The United States and France recognize Ravalomanana's victory.
- 2003** Ratsiraka is convicted in absentia of embezzling government funds.

- 2004** Thousands are left homeless when two cyclones hit.
The World Bank and IMF write off \$2 billion of Madagascar's debt.
The December Indian Ocean tsunami hits Madagascar's east coast near the towns of Manakara, Sambava, and Vohemar, destroying infrastructure and leaving close to 1,000 people homeless. No deaths are recorded.
- 2005** Madagascar's Ministry of Justice refuses to yield to demands of striking judges for better pay and working conditions.
Three UN agencies sign an agreement with Madagascar to supply \$101 million to help in efforts to reduce poverty.

NATIONAL FLAG

Tricolor of black (top), red, and green horizontal stripes, with a red rising sun in the center of the black stripe

NATIONAL EMBLEM

A central shield is divided into three horizontal parts. The top contains wavy blue and white lines, the center a gold lion on a red background, and the bottom a golden rising sun on a black field. The shield is flanked by a golden lion and leopard standing on the ranges of Mount Mlanje. Cresting the design is a silver helmet mantled in red and gold, on top of which a fish eagle in gold, brown, and white is outlined against a rising sun. At the bottom appears the national motto, "Unity and Freedom."

NATIONAL ANTHEM

"O God Bless Our Land of Malawi"

NATIONAL HOLIDAYS

January 1 (New Year's Day), March 3 (Martyrs' Day), May 14 (Kamuzu Day), July 6 (National Day, Republic Day), August 1 (bank holiday), October 17 (Mothers' Day), Christmas, Boxing Day, Good Friday, Holy Saturday, Easter Monday

DATE OF INDEPENDENCE

July 6, 1964

DATE OF CONSTITUTION

May 18, 1994

GEOGRAPHICAL FEATURES

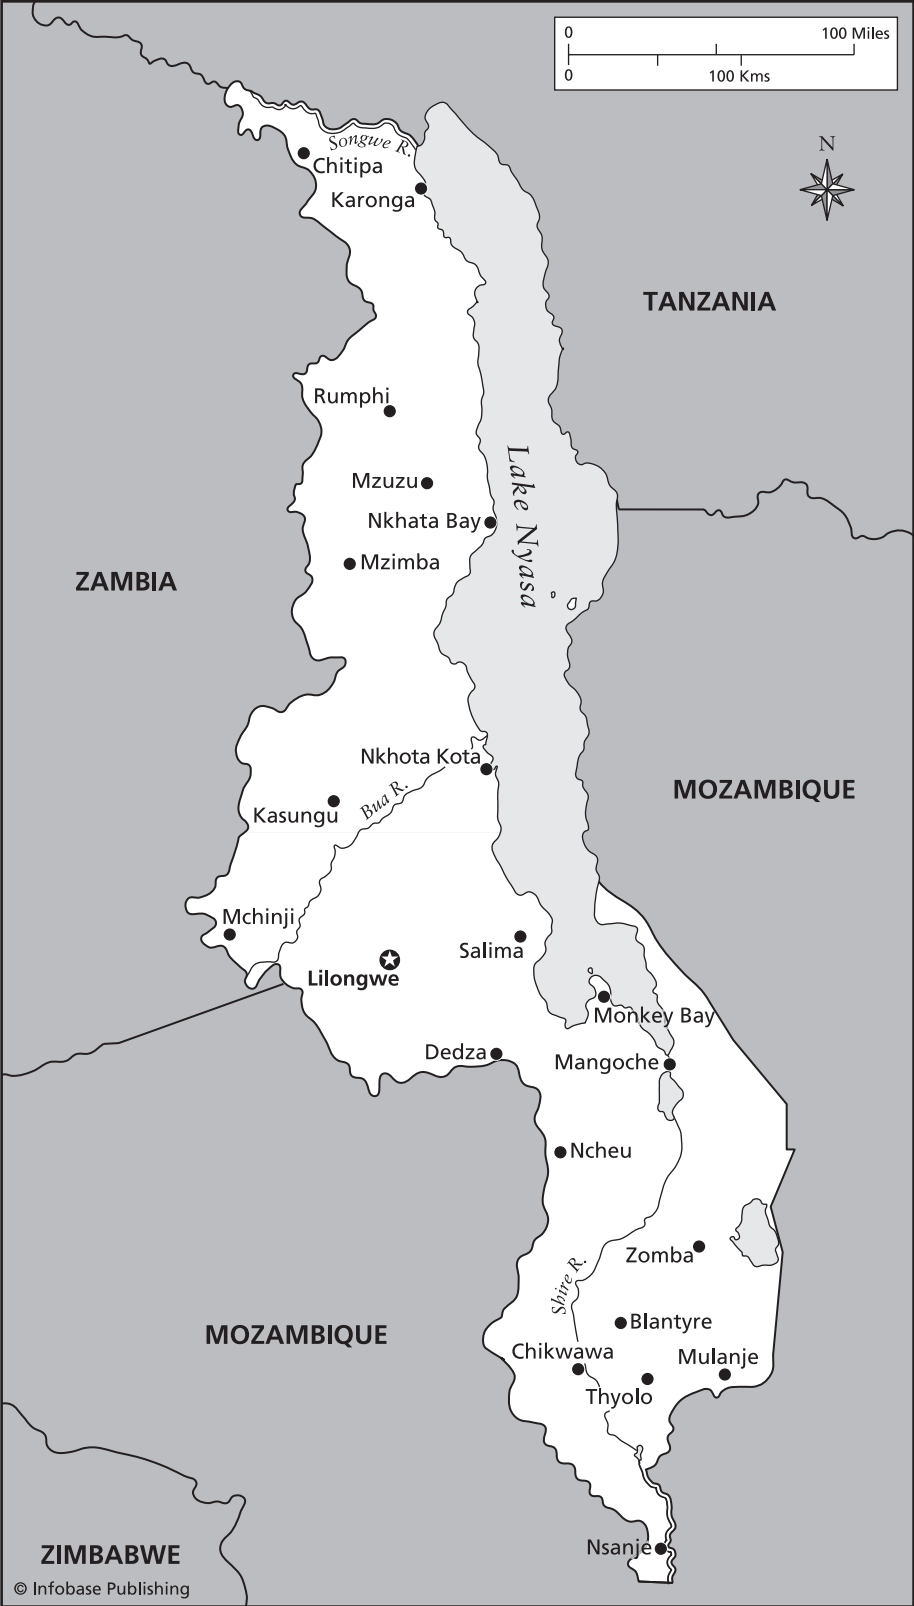

Malawi, a landlocked country in southeastern Africa, has an area of 118,480 sq km (45,745 sq mi), of which the land area is 94,916 sq km (36,647 sq mi). The country extends 853 km (530 mi) north to south and 257 km (160 mi) east to west.

Malawi shares its total international boundary of 2,881 km (1,790 mi) with three neighbors: Tanzania, Mozambique, and Zambia. In 1968 President Hastings Banda made claims to territories in all three neighboring countries, specifically to the land 160 km (100 mi) north of the Songwe River in Tanzania, south to the Zambezi River in Mozambique, west to the Luangwa River in Zambia, and east through Mozambique to the Indian Ocean. The

claims were never pressed. Lilongwe replaced Zomba as the capital in the mid-1970s.

Three-fourths of the land area is covered by plateaus. The best known of these, in the southern region, is the Shire Plateau, covering 7,251 sq km (2,800 sq mi). A much broader plateau in the central region is the Lilongwe Plain. The highest plateau, the Nyika, in the north, covers 23,310 sq km (9,000 sq mi), with average elevations of 2,100–2,500 m (6,900–8,200 ft). There are six other plateaus, some of which are known locally as hills or plains. A few mountains rise above the level of the highest of these plateaus: among them are Dedza Mountain (2,100 m, 6,900 ft) and Mount Mulanje, whose highest peak, Sapitwa, rises to 3,002 m (9,847 ft).

Malawi

The most prominent physical feature of the country is Lake Malawi (formerly Lake Nyasa), which extends north to south for more than 563 km (359 mi), representing an extension of the East African Rift Valley. The lake's surface is about 472 m (1,550 ft) above sea level, while its bottom lies 213 m (699 ft) below sea level. The shoreline of the lake is a flat littoral plain marked by many swamps.

The shallow section of the Rift Valley, continuing from the shoreline of the lake to the southern border, is known as the Shire Valley. Floodplains and riverine swamps cover this area, the largest of which is known as the Elephant March. Two other major valleys join the lower Shire Valley: the Mwanza and the Ruo.

Malawi is part of the Zambezi River basin. Lake Malawi is drained through Lake Malombe by the Shire River, which flows through the Shire Valley before joining the Zambezi in Mozambique. Eight rivers and hundreds of streams carry surface runoff from the plateaus and hills into Lake Malawi, while a few streams in the southeast drain into Lake Chilwa.

Mzuzu	119,592
Zomba	90,325

CLIMATE AND WEATHER

The country's latitudinal extent and great variations in altitude produce a wide range of climatic conditions. In general, the seasons may be divided into cool (May to mid-August), hot (mid-August to November), rainy (November to April), and post-rainy (April to May). The broadest contrasts are between the cooler and wetter highlands and the hot and humid low-lying Rift Valley region.

The country is subject to occasional cyclones from the Indian Ocean, some of which prove destructive.

Climate and Weather

Temperature Range	
Zomba:	45°F to 95°F

Rift Valley:	68°F to 86°F
Average Rainfall:	30 in to 40 in
Northern region:	60 in to 100 in

FLORA AND FAUNA

Vegetation in Malawi is as varied as the landscape. In the lowlands are grassy savannas, while the plateaus, which constitute 75 percent of the country's area, have woodlands with bark cloth trees, baobab, mopane, mahogany, and acacias, and higher elevations are home to evergreen forests. Swampland is also found in the lowlands, though much of this has been drained for farmland. Likewise, much of the woodland has been harvested for lumber, and in the highlands softwood forests have been planted. The country's high population density has altered the natural landscape considerably.

Such alterations are also evident in Malawi's animal life. Big-game animals, such as lions, zebras, rhinoceroses, leopards, elephants, giraffes, and antelope, are generally only found in reserves. Hippopotamuses inhabit the shores of Lake Malawi, and baboons and monkeys also exist in the forests. Avian life is particularly rich, with over 500 species present. Among reptiles are found crocodiles, tortoises, chameleons, lizards, and numerous snake species, including the Egyptian cobra. The waters of Lake Malawi are home to several hundred species of fish, including tilapia, trout, bream, carp, catfish, and bass; however, overfishing has depleted the number and variety of fish. Insect life is also abundant, including flies and mosquitoes of various types.

ETHNIC COMPOSITION

Diverse Africans constitute 99.5 percent of Malawi's population. The closely related Chewa and Nyanja together constitute about half the population. The Chewa are numerically dominant in the central region, the Nyanja in the southern region around Lake Chilwa and in the districts of Zomba and Blantyre.

Ethnicity has declined in importance in the modern era, and interethnic relations are characterized by tolerance and flexibility. National alignments tend to be regional, political, or religious rather than ethnic in character. All whites are classified as Europeans, but they are mostly of British origin; very few have become Malawian citizens. Nearly 65 percent of Europeans live in the urban centers of Blantyre, Zomba, and Lilongwe, where they continue to exercise a disproportionate influence on the country's administration and economy.

Asians, nearly all of them Indians, constitute a still smaller minority. As in other parts of Africa, they play an important role in the economy as small traders, craftsmen, and professionals.

LANGUAGES

Chichewa, or Chinyanja, the mother tongue of the Chewa and the Nyanja (the prefix *chi-* is used before the name of a tribe to mean "the language of"), was declared the national language in 1968. A standardized form of Chichewa is used in the administration, schools, and the media. Chichewa is spoken by over 50 percent of the population as their mother tongue.

The rest speak a number of languages, of which the leading ones are Chilomwe, Chiyao, Chitumbuka, and Chisena. Because the Chewa and Nyanja tribes are concentrated in the central and southern regions, Chichewa is understood by only 2.5 percent of the population in the north. Many Africans are bilingual by necessity. English, the other official language of the country, is spoken by at least 5 percent of the population and is used as a *lingua franca* by educated Africans.

RELIGIONS

An estimated 75 percent of the population are Christians, 20 percent are Muslims, and 3 percent are animists. Traditional African religions have in common a belief in the

life force that permeates everything, a concept generally equated with God or a supreme being (called *mulungu* in Chichewa), but most such religious activities revolve around intermediary spirits called *mizimu* and nature spirits. Sorcery, witchcraft, and other practices are closely related to efforts to win the good favor of these spirits.

Christianity was introduced in the Shire highlands in 1861 by Anglican missionaries and in 1889 by the Roman Catholic White Fathers. In the 1970s there were three Protestants to every two Roman Catholics. There are a number of independent African churches, which broke away from the established churches in protest against white control and racial discrimination. These churches are characterized by their millenarianism, emphasis on rituals, and incorporation of typical African religious beliefs. One of these African-controlled churches was the Watch Tower Bible and Tract Society (more commonly known as Jehovah's Witnesses), an American sect introduced into Malawi in the 1920s. The refusal of Witnesses to join the Malawi Congress Party brought them into conflict with the government; the sect was banned in 1967, and its members were expelled from the country.

Most Muslims belong to the Yao tribe, which derives its faith from Arab slave traders in the 19th century. Because the Yao are largely illiterate, Islam exerts little or no influence on national affairs.

In general, religious freedom is respected. However, Muslims suffered attacks after the 1999 elections when the ruling party and its president, a Muslim, were returned to power.

HISTORICAL BACKGROUND

The original inhabitants of Malawi were the Twa and Fula peoples, who are believed to have settled in the region between 8000 and 2000 B.C.E. They were displaced by Bantu-speaking peoples, who entered the region during the first four centuries of the Common Era. In 1480 the Maravi (from which the name Malawi is derived) Confederacy was founded, encompassing most of central and southern Malawi. Within the next century the Ngonde people founded a kingdom. The last to enter the region were the Swahili-speaking peoples who appeared between 1830 and 1860.

The first white man to explore the territory now known as Malawi was David Livingstone, who discovered Lake Nyasa (now Lake Malawi) in 1859. Livingstone was

instrumental in establishing a series of mission stations in Nyasaland in the 1870s, two named Livingstonia and a third named Blantyre. In 1878 the African Lakes Company was formed by Scottish businessmen to open up the interior and to supply the needs of the missions. By the 1890s over 100 coffee plantations had been established. The expansion of British commercial interests brought them into conflict with both the Arabs and the Portuguese. By the 1890s the boundaries of the British sphere of influence had been defined through Anglo-German and Anglo-Portuguese agreements.

In 1891 the British Foreign Office announced the establishment of the Nyasaland Districts Protectorate (renamed two years later the British Central Africa Protectorate), under a commissioner. In 1907 the territory was again renamed Nyasaland Protectorate, under a governor. From the beginning, Nyasaland had been viewed by the imperial government as a dependency rather than as a settlers' colony. Missionaries and civil servants outnumbered planters in the British community, and British-owned plantations did not dominate agriculture, as they did in Rhodesia. Administration was based on the concept of indirect rule, which permitted African headmen significant roles in the lower echelons of government.

Under these circumstances, nationalism developed early in Nyasaland; it was not inflamed or rebellious but led Africans to seek to expand their opportunities in government. For this reason there was considerable native opposition to union with Northern and Southern Rhodesia (now Zambia and Zimbabwe) in the Central African Federation in 1953. The Malawi Congress Party (MCP) under Dr. Hastings Banda led a successful fight against the federation, and in 1962 the British government accepted Nyasaland's right to secede from the federation.

Nyasaland became an independent dominion in 1964 under the name of Malawi. Two years later it became a republic, with Dr. Banda as president. The republican constitution of 1966 established a one-party system, under which Banda's MCP was accorded a political monopoly. During the first years of independence, Banda consolidated power under a strong presidency. A strict conservative, he established early policies that included the retention of Europeans in the civil service, the espousal of free-enterprise capitalism, and the maintenance of good relations with Rhodesia and South Africa. In 1971 Banda made himself president for life.

The country's first multiparty elections were not held until 1994, when the ailing Banda was replaced by Bakili Muluzi of the opposition United Democratic Front (UDF). Muluzi assembled a coalition government that included the Alliance for Democracy (AFORD). In 1995 Banda and five codefendants were charged with the murder of political opponents but were later acquitted. Nevertheless, Banda himself apologized for the "pain and suffering" he had caused while in office. Muluzi was re-

lected in 1999, but the United Democratic Front failed to secure a majority in parliament, winning 93 of 192 seats. Following the election, AFORD joined the MCP in an unsuccessful court challenge of Muluzi's victory. In 2000 he reorganized his government in response to charges of fraud and corruption.

In 2002 Muluzi began a concerted effort to change the constitution to allow him to run for a third term, but this stirred political and popular opposition, and he abandoned the attempt the following year. In late 2003 AFORD again formed an alliance with the UDF, and as helped by a division in the opposition, the UDF candidate, Bingu wa Mutharika, won the 2004 presidential election. However, Mutharika's party failed to win a plurality in parliament, and the new president was forced to form a majority coalition with independents and the small National Democratic Alliance. Upon taking office, Mutharika began an anticorruption campaign that has led to several high-level arrests but no convictions. Increasing corruption, population growth, increasing pressure on agricultural lands, and HIV/AIDS pose major problems for the country.

LIST OF MODERN RULERS

President

1966–94 Hastings Kamuzu Banda

1994–2004 Elson Bakili Muluzi

2004– Bingu wa Mutharika

CONSTITUTION

Malawi's original constitution was promulgated in 1966. It prescribes a presidential form of government in which the president is both head of state and head of government. He has the right to participate in parliamentary debates. The president is elected for a maximum of two five-year terms by universal adult suffrage in the context of a multiparty political system. Parliament consists of the National Assembly and the president. The National Assembly has 177 elective seats, and an unlimited number of additional members may be nominated by the president. The parliamentary term is normally five years. The assembly may change the constitution by a two-thirds majority.

A new constitution, as proposed by a National Constitutional Conference, was approved by the assembly in 1994 and promulgated in 1995. The new Basic Law approves multiparty elections and also provides for a new constitutional committee and a Human Rights Commission. It also authorized the eventual creation of a senate, and the number of seats in the National Assembly was increased to 192. In 2001 a bill was tabled in the National Assembly to abolish the senate, which existed only

in principle, because it was thought to be too expensive a proposition. Legislators also feared the new body would be too powerful. In 2003 an attempt was made to change the constitution to allow the president to serve for more than two terms, but the effort ultimately failed due to a lack of public support.

PARLIAMENT

All legislative powers are vested in parliament, which comprises the National Assembly and the president as head of state. The constitution states that the National Assembly consists of a number of seats, representing every constituency in Malawi, determined by the Electoral Commission. Provisions of the 1994 constitution allow for the president to be called to parliament to answer questions at such times as may be prescribed by the standing orders of parliament or on motion of the National Assembly. The National Assembly has 192 elective seats. Elections are by universal suffrage in the context of a multiparty system, and additional members may be nominated by the president. Members of the National Assembly have to be a minimum of 21 years of age and are elected to five-year terms.

The speaker is appointed from among the members of the assembly. The assembly may change the constitution by a two-thirds majority on the second and third readings. The president has power to prorogue or dissolve parliament.

POLITICAL PARTIES

There have been three major political parties in Malawi. The UDF is based mainly in the southern region of the country; the MCP represents the central region; and the AFORD represents mostly the northern region. The political parties in Malawi cannot be classified or characterized in terms of ideology; generally, the ideas and styles of the leaders define the parties' philosophies. The MCP is a nationalist party that for 30 years was led by Dr. Hastings Banda, who tended to be authoritarian, and was the only party in Malawi under the one-party constitutional setup. The UDF was basically a split from the MCP; its main thrust was democratic change. The AFORD has tended to be a labor-based party because its leader has been a labor-union leader.

In the 2004 elections new parties made their presences felt. The Republican Party took one-quarter of the votes in the presidential elections and won 15 seats in the National Assembly. The National Democratic Alliance took 9 percent of the presidential votes and won eight seats in the assembly. The presidential party, the UDF, formed a coalition government with these and other small parties in the assembly.

LOCAL GOVERNMENT

For purposes of local government Malawi is divided into three regions, 27 districts, and eight municipalities. Although the district is the lowest unit of local government directly administered by the national government, there are 134 chiefs' areas and 60 subchiefs' areas into which districts are divided on the basis of tribal territoriality. Each region is under a cabinet minister, and each district is under a district commissioner.

LEGAL SYSTEM

Malawi's legal system is based on English common law and African custom. The judiciary consists of two parallel court systems, the traditional and the modern. At the apex of the modern system is the Supreme Court of Appeals, presided over by the chief justice. Cases are heard by three or five judges, all drawn from the High Court. The High Court is composed of the chief justice and four other judges. The lower courts are known as magistrate's courts and are divided into four levels. There are 23 magistrate's courts scattered throughout the country.

The traditional court structure was established in 1969 and parallels the modern sector. At the base are 176 traditional courts divided into four levels. Appeals from these courts go to the regional traditional court of appeal and finally to the national traditional court of appeal. The traditional courts are supervised by the traditional courts commissioner, who functions under the Ministry of Justice. He may alter or set aside sentences.

Those charged with criminal offenses may be tried in either the traditional or modern court system, depending on the nature of the charge. The defendant has the right of access to counsel before and during judicial proceedings in the modern courts. The modern court system is almost totally independent of the executive, notwithstanding the fact that the president appoints the chief justice, who in turn appoints the other justices.

Traditional court justices are appointed directly by the president. Defendants are charged publicly, and the courts are open to the public. Political prisoners are generally brought before traditional court justices; although both traditional and modern courts employ the same procedures, such as the Code of Criminal Procedure and Evidence, the rules of evidence are less strict in the former, the accused need not be represented by a lawyer, and a case may be tried in secret. Traditional judges owe their positions to the ruling party, and the minister of justice has the freedom to assign cases to the judge who, in his opinion, is most likely to favor the government.

Malawi has an unusual form of punishment called forfeiture, under which the government may revoke the property rights of those suspected of economic crimes without recourse to appeal. When the Forfeiture Act is invoked, the individual loses all his or her worldly possessions.

Police brutality remains a human rights issue in the country, as do arbitrary arrests and detentions. Overcrowding in the nation's prisons is so severe that many prisoners die from suffocation.

HUMAN RIGHTS

Malawi held its first democratic multiparty elections since independence in 1994, following 30 years of authoritarian, one-party rule. President Bakili Muluzi and his UDF party came into power on a platform that promised to restore the rule of law and uphold human rights. Under the Muluzi government, the human rights situation in Malawi has improved significantly, although certain problems, such as police misconduct, remain. Bingu wa Mutharika, elected president in 2004, has attempted to clean up corruption and police abuse.

The constitution created three institutions to deal with human rights issues: a Human Rights Commission, an ombudsman, and a National Compensation Tribunal (NCT). The Human Rights Commission was created to protect and investigate violations of rights accorded by the constitution. The ombudsman is mandated to investigate and take legal action against government officials responsible for human rights violations and other abuses. To address past abuses of human rights, the constitution created the NCT to adjudicate claims of criminal and civil liability against the former government and provide financial reparation. Very few of its claims have been settled, however, due to lack of funds; as of February 1999 the NCT had registered more than 8,700 claims, of which approximately 25 percent had been resolved. Similarly, the Human Rights Commission only just began to function at full capacity with the appointment of all commissioners and staff in late 1999; an unduly long wait on the part of the government to pass enabling legislation and a working budget delayed the creation of the commission. Nevertheless, the enabling legislation is regarded as among the best-drafted human rights commission legislation on the African continent. The two commissioners who drafted the enabling legislation have ensured autonomy and strong investigative and remedial powers. It is now up to the commissioners to use this legislative license to ensure greater respect for human rights in Malawi. The commission has taken a proactive role in political life, warning, for example, in November 2003 that political violence was on the rise as party and regional divisions deepened ahead of the 2004 elections.

FOREIGN POLICY

In foreign relations Malawi is one of the most conservative of the most recently independent nations of Africa. From its independence in 1964 to 1994, Malawi's foreign affairs were characterized as "reactionary" under Banda. Malawi outraged the Organization of African Unity with its refusal to condemn apartheid in South Africa and was isolated by most of the African continent. Malawi did not believe that isolation, embargo, or violence would succeed in promoting racial equality in South Africa and as such always maintained full diplomatic relations with Pretoria. In 1971 President Banda paid an official visit to South Africa, the first head of state of a black African nation to do so.

During the 1980s Malawi took steps to improve relations with neighboring states. The change in policy was in part a result of pressure by Zambia and Tanzania; it was also prompted by the need to find alternate trade routes because the civil war in Mozambique had closed traditional routes to the Indian Ocean. Malawi did not support the independence struggle in Mozambique and did not develop close ties with the newly independent government.

In 1980 Malawi joined the Southern African Development Coordination Conference. Five years later the nation reestablished ties with Tanzania, despite suspicions that Tanzania supported opponents of the Banda regime. In the 1990s, especially following the adoption of the new democratic constitution in 1994, Malawi became increasingly integrated into southern Africa.

There is an ongoing dispute with Tanzania over the boundary in Lake Malawi that has remained dormant for many years.

DEFENSE

The defense structure is headed by the president. The armed forces are partially commanded by British officers, and military training assistance and equipment are received from the United Kingdom. Military manpower is provided by voluntary enlistment for a period of four years. The total strength of the armed forces is 6,800.

The Malawian armed forces, known as the Malawian Rifles, have no offensive capability. If faced with an invasion by any of the forces of surrounding states or well-equipped guerrilla forces, the army would not be able to defend more than a few key points or survive for more than a few days. However, there is no probable threat against Malawi from its neighbors. In 2004 military spending amounted to \$11.1 million, or 0.7 percent of gross domestic product (GDP).

ECONOMY

Malawi is one of the lowest-income, least-developed countries in the world. It has a free-market economy in which the dominant sector is private.

Malawi's economy is predominantly agricultural. That sector accounts for 55 percent of GDP and 95 percent of export revenues. Subsistence farming dominates the north, and large estates and cash-crop agriculture are dominant in the south. Tobacco, tea, and sugar are the principal cash crops; tobacco alone makes up 50 percent of exports. Malawi's dependence on agriculture makes it extremely vulnerable to changes in world demand and price fluctuations. Declines in cash-crop prices during the early 1980s contributed significantly to the country's increasing external debt.

Malawi relies heavily on foreign investment and aid, primarily from the World Bank, the European Economic Community, the United Kingdom, and South Africa. Debt service has become an increasing problem; in 2000 external debt service was the equivalent of 25 percent of Malawi's budget.

The Malawian unit of currency is the kwacha, divided into 100 tambala.

The banking sector consists of a central bank, the Reserve Bank of Malawi, and two commercial banks, the Post Office Savings Bank and the Investment and Development Bank of Malawi.

In 2002 the World Bank approved a \$50 million drought-recovery package.

ENVIRONMENT

Malawi's fertile, tropical soil makes it a very productive agricultural region when the country receives good rainfall. Although average rainfall levels are considerably better than in neighboring semiarid Zimbabwe, the rainfall pattern was erratic through the end of the 20th century, with several years of serious drought since 1990. To compound the problem, the country's high population density exerts mounting pressure on the land, with farming in marginal areas and land degradation increasingly becoming problems.

Lake Malawi, covering 20 percent of the country's surface area, is a vital resource. Freshwater fish from the lake provide 70 percent of the animal protein consumed by the population. However, there are signs that the lake is being overfished, as fish production per head has fallen since the mid-1980s. The Department of Fisheries is engaged in several projects to increase fish production in order to sustain the industry, which in 1994 employed 243,000 people.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Malawi 165th out of 177 countries in terms of life expectancy, education, and standard of living. Life expectancy in 2005 was less than 37 years. The country had an adult literacy rate of only 63 percent in 2003, with less than half the female population literate. In terms of economic well being, Malawi is one of the poorest countries in the world. In 2003 per capita GDP was a mere \$600.

These impoverished conditions are manifested in all aspects of life in Malawi. The 1998 census noted that two-thirds of the country still lived in mud huts with thatched roofs; only 16 percent of the population were urban dwellers as of 2003. Rural villages, which support most of the population, rarely have basic services such as sanitation, water, electricity, or health-care facilities.

Generally, villages are compactly built to form protection from predatory animals or rival ethnic groups. Modern bungalows made of brick or cement with corrugated metal roofs are sometimes found in the countryside alongside the more primitive huts. Housing is so inadequate in urban areas such as Lilongwe that most of the population lives in shantytowns far removed from work. Walking is the major form of transportation; in both cities and rural areas people are forced to walk long distances daily, to get to work in the cities and to gather fuel and water in the countryside.

Even in the cities people have little access to proper sanitation and safe drinking water.

HEALTH

The Ministry of Health administers the country's health-care system. Although it is free, and a majority of people have access to some form of care, there is a distinct shortage of physicians in the country, and medical facilities are outdated. As of 1999, there were fewer than 0.01 physicians and 1.3 hospital beds per 1,000 people. In 2002, 67 percent of the population had access to safe drinking water, only 46 percent to adequate sanitation. Few people have plumbing in their homes. Between 1995 and 2002 only 56 percent of births were attended by skilled health-care providers. Frequent droughts as well as tribal taboos lead to serious undernourishment and malnutrition; as of 2001, one-third of the population was undernourished, and one-quarter of children under five were underweight.

These conditions have led to numerous health risks. The infant mortality rate in 2004 was 103 deaths per 1,000 live births. Diseases such as malaria, bilharzia, intestinal worm infections, tuberculosis, measles, and HIV/AIDS contributed to a death rate of over 23 per 1,000 people in 2004. HIV/AIDS is of particular concern in Malawi, where the prevalence in 2003 was 14.2 percent, among the highest rates in Africa. That same year there were 84,000 deaths from HIV/AIDS and an estimated 900,000 people living with the disease. There were half a million AIDS orphans in Malawi in 2003. Malawi has taken an aggressive stand on the AIDS pandemic; in 2004 the government announced it would supply antiviral drugs to AIDS sufferers free of charge.

As of 2002 the government was spending 4.1 percent of GDP on health, and immunization rates among one-year-old children were improving. The immuniza-

tion rate for tuberculosis in 2003 was 91 percent, for DPT 84 percent, for polio 85 percent, and for measles 77 percent.

FOOD AND NUTRITION

Maize flour is a staple in Malawi. The Chewa make a thick porridge from it called *nsima*. This is eaten at every meal and is usually accompanied by another dish, *ndiwo*, that supplies protein from eggs, poultry, meat, or insects and vitamins from leafy vegetables or beans. Generally, there are two main meals, at lunch and dinner; however, in many instances mothers are too busy with chores to prepare a main course for any meal but dinner. Food is commonly cooked over a wood fire and eaten with the hands.

Children often make do with snacks such as roasted cassava, roasted maize, sweet potatoes, sugarcane, wild fruits, or wild insects such as roasted grasshoppers and flying termites.

Frequent droughts have caused food shortages, leading to widespread undernourishment and malnutrition in the population. One-third of the general population was considered undernourished as of 2001. Food shortages are compounded by various dietary taboos among ethnic groups. For example, many men do not eat one of the major vegetable types for fear of losing their virility; pregnant women are forbidden eggs, lest they have a bald-headed baby.

STATUS OF WOMEN

Under Malawi's new constitution women enjoy equal rights with men, but nonlegal impediments based on custom and tradition prevail.

As mothers, women have enjoyed a high degree of access to traditional health services and to extension programs geared toward improving homemaking abilities. Such programs, while beneficial, have failed to recognize the importance of women as agricultural producers in the rural sector—roughly 70 percent of all smallholder farms and over 50 percent of subsistence farms are headed by women—and the potential role women can have in the modern sector. Although men still have a comparative advantage in terms of educational opportunities, the government has initiated sufficiently broad-scale programs to begin to rectify existing discrimination. One-third of the positions in the public education system are reserved for women. Within Malawi's traditional and primarily matrilineal tribal leadership structures, there are several small ethnic groups wherein women possess fewer rights and privileges and where female circumcision is occasionally practiced.

The Malawi Human Rights Commission issued a report in 2003 charging that a sex-slave trade flourishes in remote areas of the north, with young girls sold by their parents to pay off debts. On the other hand, there has been increased attention to domestic violence and a greater effort to improve the rights of widows. Female employees recently won the right to maternity leave.

WORK

The workforce in Malawi in 2001 was 4.5 million strong. Of these workers, 90 percent were employed in agriculture, most at the subsistence level, growing a variety of crops such as the staple maize, beans, sorghum, peanuts, rice, pumpkins, cassava, and tobacco, which is the major cash crop. Industries in Malawi include tobacco, tea, sugar, sawmill products, cement, and consumer goods.

Unions are legal and must register with the Ministry of Labor and Vocational Training; registration is routinely granted. In 2003, 26 unions were registered, all of which are independent of the government, parties, and other political forces. The right to bargain collectively and strike is assured, although strikes can only occur after arbitration. In 2003 the urban minimum wage amounted to approximately \$0.52 per day, while in all other areas it was approximately

\$0.37 per day, neither of which allows a family a decent standard of living. Wage earners tended to supplement their incomes through farming activities. By law the maximum workweek is 48 hours and the minimum work age 14, but in 2000 an estimated 27 percent of children ages five to 14 were working. Worker safety is an issue, with few employers observing health and safety standards on the job.

EDUCATION

In 2003 the adult literacy rate stood at a low 62.7 percent; about three-quarters of the male population were literate, while just less than half of females were. In 2002 the primary school enrollment rate was 81 percent, over half of whom finished fifth grade; however, only 29 percent of eligible students were enrolled in secondary schools. High rates of malnutrition and the long distances walked to schools have resulted in high failure and dropout rates. Malawi's poor educational standards make people ill suited for industrial and manufacturing employment, and surveys have found that the little-educated rural poor are not well equipped to grow crops such as tobacco, which needs intensive tending.

When the government of Bakili Muluzi abolished fees for primary schools in September 1994, primary school enrollment shot up from 1.9 million to 2.9 million. Although providing education for a greater percentage of the population was one of the most salient achievements of the Muluzi government, the swelling numbers of students caused quality indicators to deteriorate, with classroom size and ratios of students to teachers ballooning—the pupil-teacher ratio in primary schools in 2002 was 62 to 1. Enrollment in secondary and higher education also continued to grow through the 1990s. Public expenditures on education in 2002 were 6 percent of GDP.

The University of Malawi, founded in 1965, has campuses at Zomba, Lilongwe, and Blantyre, and a new medical school was recently established in Blantyre. Females are generally underrepresented at all levels of education.

SCIENCE AND TECHNOLOGY

Most research in the country is geared toward agriculture. In 2001 there were seven agencies employing 146 full-time researchers. Research stations for tea, tobacco, and other aspects of agriculture conduct their activities under the auspices of the Ministry of Agriculture, while the Ministry of Forestry and Natural Resources maintains forestry and fishery research units. The Department of Science and Technology, formed in 2004, is intended to improve the capacity of the national systems for science and technology, to intensify the promotion and transfer of science and technologies to key livelihood systems, and to increase investment in research and development.

The country also has a few institutions of higher education that pursue research, including the University of Malawi's Bunda College of Agriculture and Kamuzu College of Nursing, both in Lilongwe; Malawi Polytechnic and the College of Medicine, in Blantyre; and Chancellor College, in Zomba, which has a faculty of science. In 1987–97 science and engineering students accounted for 27 percent of college and university enrollments.

MEDIA

Although Malawi enacted a new constitution and bill of rights in 1994, the new democracy has failed to ensure full press freedom. A 30-year legacy of self-censorship among journalists remains strong, and many preexisting laws remain in conflict with the new democratic provisions. Many hoped that a communications bill passed in 1998 would help turn the situation around. In 2004 the international media watchdog group Reporters without

Borders ranked Malawi 101st out of 167 nations in its worldwide press freedom index.

There are a number of private newspapers in Malawi, including some owned by political parties or openly affiliated with them. A recent ban on state advertising in opposition papers proved a major economic setback for independent newspapers, as the government is the largest advertiser. The ban occurred after the independents *The Daily Times* and *Malawi News* published critical coverage of government mismanagement and corruption. The government did not establish its own paper, the *Weekly News*, until 1996. It mainly uses copy from the official Malawi News Agency. The *Nation* is another newer daily that also has an online presence.

Radio has a much larger audience than print media in Malawi. There are nine AM and five FM channels, including the state-run MBC-II; the “nominally independent” FM 101; one women’s channel; and one religious channel. There are no local independent broadcasters. There is only one television station in the country, the state-controlled Télévision Malawi (TVM), introduced in 1999. Satellite TV, carrying such stations as CNN, BBC, and South Africa’s, Mnet, is available to those who can afford sets, decoders, and satellite dishes. Malawi was the last country in Africa to gain full Internet connectivity. MalawiNet, a joint venture between Malawi’s PTO and a U.S. company, has been the only full-service Internet provider; as of 2003 there were 18 Internet hosts and 36,000 Internet users.

CULTURE

Traditional Malawian culture includes song, dance, and folk crafts. Most tribes have their own tunes and dances. The most notable traditional dance in Malawi is the Chewa tribe’s *gule wa mkulu*, which deals with beliefs in spirits and is also part of the activities of secret tribal societies. Other well-known dances are *ingoma* for men and *chimtali* and *visekese* for women. Songs are another traditional holdover and are sung at initiation rites, other rituals, marriage ceremonies, and post-harvest celebrations. Among the numerous song types are puberty, praise, funeral, work, beer drinking, coronation, and chief songs. Women often sing as they do their daily chores. Musical

instruments accompanying both song and dance include drums such as the hand-held *ulimba*, made from gourd, and large ceremonial drums carved from tree trunks. The *mambilira* is similar to the xylophone. Rattles and shakers called *maseche* are often tied to the legs and arms of dancers.

Malawian folk artists work in wood, stone, and ivory carving as well as in batiks. Some well-known modern artists include Cuthy Mede, Kay Chirombo, Willie Nampeya, and Louis Dimpwa.

The oral storytelling tradition in the country is also rich and has fed the literary scene. Notable Malawian poets include Jack Mapanje, Frank Chipasula, and Steve Chimombo, who wrote the play *The Rainmaker*. Major novelists include Legson Kayira, Paul Zeleza, Sam Mpasu, Chipasula, Rubadiri, and Felix Munthali.

There are two museums in the country: the Museum of Malawi, in Blantyre and a smaller one in Mangochi. Various cultural activities are organized by the Ministry of Youth and Culture and the University of Malawi Traveling Theatre as well as by similar groups in Blantyre.

FOLKLORE AND MYTHOLOGY

The folklore of the Chewa, Malawi's dominant ethnic group, predates the arrival of Europeans. Their songs and stories deal with rural themes about farming and accompanying occurrences, including drought, fire, and rainmaking. The rainmaker Mbona is a major figure in Chewa myth. Ethnographers have noted the similarity of Mbona to Jesus Christ in that he was born to a virgin mother and was ultimately killed by his own people for the miracles he performed—in Mbona's case, bringing rain to a parched land.

The people of Malawi were historically animists, and as such there is an abundance of local gods among the ethnic groups. The Tumbuka, for example, have as their supreme being Chiuta, who doubles as their rain god.

Proverbs are a major aspect of Malawian folklore, as they are throughout much of Africa. Among the more popular proverbs are, *Kabanga mwala*, or "The tortoise looks like a stone," meaning that things are not always what they appear to be; *Chibanga mwala tsosenga nyala*, or "A rolling stone gathers no moss"; and *Mutu imodzi*

tsosenga denga, or "One head cannot support a roof," meaning two heads are better than one.

ENTERTAINMENT AND RECREATION

Urban entertainment includes clubs, bars, and cinemas. The nation has only one television channel, but broadcasts from abroad fill the airwaves and provide entertainment for those with televisions and electricity.

In rural areas, more traditional forms of entertainment, including music and dance, serve as free-time activities. Listening to the radio, especially musical programs with both traditional African and Western pop music, is popular throughout the country.

The most common recreational game in Malawi is *bao*, also spelled *bawo*. It is one variant of the classic African pit-and-pebble game where opponents move pebbles through various holes on a board in an effort to capture their opponent's pebbles. Other variants go by the names *mankala*, *oware*, and *coro*. Young and old alike play this game.

ETIQUETTE

Greetings in Malawi are done with a strong handshake. When a man greets his mother-in-law in this matrilineal country, he keeps his distance. Women, on the other hand, have more cordial relationships with their mothers-in-law.

Respect is shown to elders; it is impolite, for example, for a younger person to look directly in the face of an older person. When introduced to an elder, the younger often bows or even squats down.

Public displays of affection such as hugging and kissing are not acceptable. Numerous taboos hold regarding the relationships between the sexes. Before coming of age or being initiated, boys and girls play together; however, after such initiation ceremonies the sexes are kept separate until marriage.

FAMILY LIFE

The predominant feature of Malawi family life is the matrilineal kinship system, whereby inheritance is passed through the female line. The average age of marriage for girls is 17. While partners make their own marriage choices, these must be approved by maternal uncles. Marriages in villages follow traditional lines, while in urban areas Western-style church weddings and attire are becoming popular. Fathers have no control over their children, as offspring are considered part of the wife's line, and their guidance thus falls to the maternal uncle.

Families tend to be large; the 2004 fertility rate was six children per woman. Large families are traditionally a sign of wealth and serve as insurance for parents against old age. Divorce is common. Polygamy was once common as well, but the practice has declined in recent years.

PERSONAL APPEARANCE

Clothing and attire is a mixture of traditional and Western styles, especially in the cities. Typical dress for women in urban areas is a skirt and blouse or brightly colored dress. Men wear trousers or shorts and shirts. Businessmen dress in suits.

In rural areas the most important article of clothing for a woman is her *chitenje*. A *chitenje* (plural *zitenje*) is a piece of fabric worn over a regular skirt. This outer wrap-around skirt serves as an apron, a basket, a potholder, and a baby-carrier. *Zitenje* are generally brightly colored and bear designs of everything from abstract patterns to portraits of rock stars.

SPORTS

Soccer is the major sport in the urban areas of Lilongwe, Mzuzu, Zomba, and Blantyre. The national team competes in the southern Africa league and has been a major contender in regional championships. Soccer clubs, such as the Bakili Bullets of the Super League, draw large weekend crowds to Civo Stadium in Lilongwe and Chichiri Stadium in Blantyre. In the countryside children play soccer on makeshift fields.

Another sport growing in popularity is basketball. Malawians also play cricket and rugby, holdovers of the country's colonial past.

CHRONOLOGY

- 1964** Nyasaland becomes a fully independent dominion within the Commonwealth under the name of Malawi, with Hasting Banda as prime minister. Six cabinet members, including Kanyama Chiumi, Henry B. M. Chipembere, and Yatuta Chisiza, are dismissed because of their opposition to Banda's domestic and foreign policies, particularly his pro-Western stance and tardiness in Africanizing the civil service.
- 1965** Banda's opposition takes up arms: Chipembere attacks Fort Johnston but is repelled at Liwonde Ferry. The revolt is crushed, and the dissidents flee into exile.
- 1966** Malawi is declared a republic, with Banda as president. A republican constitution is promulgated.
- 1967** A group of 25 rebels led by Chisiza attack Malawi. Chisiza is killed, and 13 other infiltrators are captured, of whom five are sentenced to death. Jehovah's Witnesses are banned as a subversive organization.
- 1968** Tanzania breaks diplomatic ties with Malawi. Malawians are expelled from Zambia. Banda makes territorial claims on Tanzania and Zambia.
- 1970** Banda is made president for life. Peace Corps volunteers are expelled from Malawi. Prime Minister Johannes Vorster of South Africa visits Malawi.
- 1971** Banda visits South Africa, the first black African head of state to do so. The kwacha is introduced as the national currency.
- 1974** The capital is moved from Zomba to Lilongwe. Banda visits Zambia in an attempt to improve relations.
- 1975** Recruitment of Malawian workers for South African mines is temporarily banned following the crash of a plane carrying 75 Malawians from South Africa.
- 1976** The Goan community, comprising immigrants from Goa, a former Portuguese colony in India, is expelled from Malawi.
- 1979** In National Assembly elections more than one official candidate is allowed to contest the results. Foreign reporters are banned following unfavorable comments about Banda by the foreign press.
- 1983** New elections are held for the National Assembly.
- 1987** Malawi stations troops in Mozambique to protect the strategic rail line to the sea.
- 1988** Malawi and Mozambique sign an agreement on the repatriation of Mozambican refugees in Malawi.
- 1990** Malawi exempts itself from a global ban on ivory trading.
- 1991** Malawi Socialist Party is formed.
- 1992** Some 100,000 people demonstrate against Banda's authoritarian rule. Chakufwa Chihana forms the political party (AFORD). The UDF is formed.
- 1993** In a national referendum 67 percent of Malawi's electorate vote to amend the constitution to adopt a multiparty democracy.
- 1994** The new constitution goes into effect. Malawi's first multiparty elections vote into power the UDF, led by Banda's former protégé Bakili Muluzi. The UDF forms a coalition cabinet with AFORD, and Muluzi becomes president.

1482 Malawi

- 1997** Banda dies in South Africa at the age of 99.
1999 Television is introduced in Malawi.
Muluzi is reelected president despite AFORD and MCP opposition.
2000 World Bank agrees to cancel 50 percent of Malawi's debt.
2001 Several officials are arrested for embezzling funds from the Ministry of Education.
2002 Drought in southern Africa destroys large amounts of Malawi's crops.
Rail line between Malawi and the port of Nacal in Mozambique opens.
2003 President Bakili Muluzi gives up attempt to change the constitution to allow him to serve a third term.
2004 Bingu wa Mutharika wins presidential election.
2005 Three ruling party officials are charged with treason.
Mutharika resigns as party head in protest over opposition to his anticorruption campaign.

NATIONAL FLAG

Fourteen red and white stripes of equal width with a yellow 14-point star and a yellow crescent in a dark blue field in the

upper right-hand quarter. The 14 points of the star and the 14 stripes originally represented the 14 states of the federation, including Singapore. The deep blue field symbolizes unity, and the crescent moon and star are symbols of Islam.

NATIONAL EMBLEM

A shield supported by two tigers. At the crest are a 14-point star and a crescent, both yellow. On the red upper third of the shield are superimposed five gold *kris* (swords). The center of the shield has four equal panels of red, black, silver, and yellow. The outer quarters of the lower two-thirds of the shield portray, on the left, three blue feathers on a sky of yellow over blue and white waves and, on the right, a Malacca tree. The lower portion of the shield contains three panels representing Sabah and Sarawak, two of the states of Malaysia, with the national flower, *bungaraya*, or *Hibiscus rosa sinensis*, in the middle. The motto below the shield in black lettering on a yellow banner reads "Unity Is Strength," in romanized script on the left and in Jawi script on the right.

NATIONAL ANTHEM

"Negaru Ku" (My Country)

NATIONAL HOLIDAYS

Chinese New Year (movable), May 1 (Labor Day), Wesak Day (May 2), August 31 (National Day, Independence Day), Deepavali (movable), Hari Raya Pu Haji (movable), Christmas, various Islamic festivals

DATE OF INDEPENDENCE

August 31, 1957

DATE OF CONSTITUTION

August 31, 1957; amended September 16, 1963

GEOGRAPHICAL FEATURES

Malaysia consists of two geographical and political segments: West Malaysia occupies the southern third of the Malay Peninsula in Southeast Asia, while East Malaysia, separated by 644 km (400 mi) of the South China Sea, occupies most of the northern quarter of the island of Borneo. West Malaysia consists of 11 states: Johore, Kedah,

Kelantan, Pahang, Perak, Perlis, Selangor, Trengganu, Negri Sembilan, Melaka, and Pulau Pinang. East Malaysia consists of two states: Sabah and Sarawak. There are two federal territories: Kuala Lumpur and Labuan. The total area is 329,750 sq km (127,316 sq mi), encompassing West Malaysia (131,588 sq km; 50,806 sq mi), Sabah (73,711 sq km; 28,460 sq mi), and Sarawak (124,450 sq km; 48,050 sq mi).

West Malaysia features a range of steep, forest-covered mountains running north to south along the center of the peninsula, flanked on the east and west by coastal plains. The western coastal lowland is 16–80 km (10–50 mi) wide, and the eastern coastal lowland, more irregular and less densely populated, is 8–64 km (5–40 mi) wide. Sarawak has a broad coastal plain, frequently swampy, that merges into jungle-covered hills in the interior. Sabah's narrow coastal plain, 16–32 km (10–20 mi) in width, gives way to a complex series of parallel ranges, culminating in Mount Kinabalu, the highest peak in Malaysia at 4,100 m (13,448 ft), and extending to the Sulu Sea.

The Pahang is the principal river in West Malaysia and the longest, at 458 km (285 mi). The other rivers are the Perak, Kelantan, Trengganu, and Endau, which flow into the South China Sea, and the Muar and Muda, which flow into the Strait of Malacca. Both Sarawak and Sabah have extensive river systems.

CLIMATE AND WEATHER

Both West and East Malaysia lie in the same latitudes and have almost identical climates. The year is divided into two monsoon periods. The northwesterly monsoons pre-

vail from October to the end of February. The southwest-erly monsoons blow from mid-April to October and are milder and less predictable. The latter monsoon period is also one of sudden squalls and thunderstorms.

The mean temperature in the coastal area is 21.1 to 32.2°C (70 to 90°F), in the mountains 12.8 to 26.7°C (55°F to 80°F). Temperatures rarely rise above 35°C (95°F) or drop below 20°C (68°F). Humidity is high throughout the year.

The annual mean rainfall in West Malaysia is just over 2,540 mm (100 in), with maximum precipitation during the southwesterly monsoon period. In East Malaysia the annual mean rainfall is 4,420 mm (150 in), most of which occurs during the northwesterly monsoon season. There are local variations even within these zones, from a low of 1,620 mm (64 in) in Jelebu, in Negeri Sembilan, to over 5,080 mm (200 in) in the Larut Hills, in Perak. The wettest place in Malaysia is Long Akah, in Sarawak, with an annual rainfall of 6,000 mm (236 in).

Climate and Weather

Mean Temperature
 Coastal areas: 70°F to 90°F
 Mountains: 55°F to 80°F
 Average Rainfall
 West Malaysia: 100 in
 East Malaysia: 150 in
 Negeri Sembilan: 64 in
 Larut Hills in Perak: 200 in
 Highest rainfall: Long Akah in Sarawak 236 in

FLORA AND FAUNA

West and East Malaysia have some of the most varied flora in the world. With more than half of peninsular Malaysia and three-fourths of Sarawak and Sabah covered in rain forest, the nation is home to over 2,000 tree species, including camphor, ebony, sandalwood, and teak. One acre of forest may have over 100 species of trees, from hardwoods to semi-hardwoods. Much of the original rainforest has been cleared either by acts of nature or by the work of humans. Over 8,000 species of flowering plants are found just on the peninsula; 800 different orchids and 200 different palms can be found in all of Malaysia. Under the forest canopy are found creepers, shrubs, and epiphytes, or nonparasitic plants that grow on other plants. Sabah and Sarawak also have lowland forests and groves of fig trees as well as flowering species such as violets, buttercups, and valerian at higher elevations.

Peninsular residents of the rain forest include tree shrews, lizards, snakes, crocodiles, wild pigs, the huge Malayan ox, or *seladang*, honey bears, elephants, tigers, monkeys, and civets. Avian life is particularly varied, with over 500 species of breeding birds, and exotic butterflies are found in abundance. Animal life in East Malaysia is

even more varied, with species such as the orangutan, rhinoceros, and proboscis monkey.

ETHNIC COMPOSITION

The ethnic makeup of the population is divided into four broad categories. The first consists of numerous native tribal groups in both East and West Malaysia whose members, descended from the earliest inhabitants of their areas, share some physical characteristics and maintain their own cultural identities. These include the Negrito tribes of the Semang, Senoi, and Jakun, in West Malaysia; the Ibans, or Sea Dayaks (the original headhunters of Borneo), Land Dayaks, Melanaus, Kayans, Kenyahs, Kajangs, Muruts, and Kelabits, of Sarawak; and the Kadazans, Muruts, and Bajans, of Sabah. The Ibans form the largest group in Sarawak, the Kadazans the largest in Sabah, both with 32 percent of the respective populations.

The second category encompasses the Malays. The ethnic identity of the Malays is elusive, and the term is applied arbitrarily to any Muslim for whom Malay is the mother tongue. They form 50 percent of the population in West Malaysia but constitute only the third-largest ethnic group in East Malaysia.

The third group is the Chinese, who not only constitute the second-largest ethnic group but also dominate the economy, monopolizing commerce and trade and providing a large portion of the professional and general labor force. The Chinese remain isolated from Malay society and maintain a closely knit structure based on clans and voluntary benevolent associations.

The fourth major ethnic group consists of Indians, a term loosely used to cover Pakistanis and Sri Lankans as well as Indians proper. Among Indians the Tamils are the most numerous, followed by Malayalees, Andhras, and Punjabis. Indians form 10 percent of the population and work mostly on plantations and as merchants, moneylenders, and white-collar workers.

Ethnic aliens, such as Indonesians and Thais, are also strongly represented in the population. British and Australians are the most numerous among Westerners.

LANGUAGES

Bahasa Melayu is the official language of the country. Bahasa Melayu may be written in Jawi or Rumi (roman) script. It has an extensive vocabulary of loanwords from Sanskrit, Arabic, and English. Five different styles or modes of speech are used: standard, trade (or bazaar), court, traditional literary, and modern literary. The Dewan Bahasa dan Pustaka (State Office for Language and Books) was established in 1959 to develop and enrich the language.

The Chinese speak nine distinct, mutually unintelligible languages: Hakka, Foochow, Cantonese, Hokkien, Tiechiu, Hailam, Henghua, Luichow, and Kwangsi. The Indians speak one of seven languages.

Despite government efforts, English has remained the language of the educated elite and is almost exclusively used in the courts and commerce. English is a compulsory second language in all schools, beginning with the primary grades.

RELIGIONS

Islam is the official religion of Malaysia, and Muslims form 60 percent of the population of the nation as a whole. The interlocking relationship of mosque and state is strengthened by a number of constitutional provisions, especially those that designate the *yand di pertuan agong* (head of state) as the religious head. Sabah and Sarawak are exempt from many of the strictly religious provisions of the constitution, under which only Muslims are considered Malays. Instruction in Islam is provided in all government-assisted schools. Muslims have special obligations as well as special rights under law; they have a separate system of courts and pay special taxes. Each state has a religious affairs department. The National Council of Islamic Affairs coordinates the activities of these religious departments and also administers the National Mosque.

Most of the Chinese follow Confucianism, Buddhism, or Taoism, while most of the Indians are Hindus. The high correlation between race and religion has been a potentially divisive factor in national life. The number

of Christians is estimated at almost 1,500,000. The indigenous tribes of Sarawak and Sabah are mostly animist, but substantial numbers have been converted to Christianity.

Religious Affiliations	
Muslim	14,375,000
Christian	1,500,000
Other	8,075,000

HISTORICAL BACKGROUND

The original inhabitants of the Malay Peninsula were aboriginal Malays (Orang Asli), who came from southwestern China about 10,000 years ago. The peninsula came under the rule of many different empires over the years, including the Cambodian-based Funan, the Sumatran-based Srivijaya, and the Java-based Majapahit empires. The Chinese and Islamic faiths both arrived in the early 15th century.

West Malaysia was under Portuguese rule from around 1511 to 1641, Dutch rule from 1641 to 1795, and British rule from 1795. Sabah became a British territory in 1881, Sarawak in 1888. British colonial rule was relatively brief, largely indirect, and produced less social cleavage than previous colonial regimes.

Malaysia was established as an independent nation within the Commonwealth on September 16, 1963. It was created through the merger of the 11-state Federation of Malaya, which had achieved independence in August 1957; the internally self-governing state of Singapore; and the former British Crown colonies of Sarawak and Sabah. Singapore, because of its largely Chinese population, was seen as a threat to Malay dominance in the country; it left the federation in August 1965.

Tunku Abdul Rahman, as head of the United Malays National Organization (UMNO), served as prime minister from independence until 1970, when serious rioting, resulting from Malay-Chinese tensions over electoral returns, led to his resignation. Tun Abdul Razak assumed the prime ministership and broadened the UMNO-dominated government coalition to establish the Barisan National Front (BNF), which absorbed most former opposition parties. Abdul Razak died in office in 1976 and was succeeded by Deputy Prime Minister Tun Hussein Onn, who also assumed leadership of the BNF. (*Tun* is a nonroyal Malaysian title loosely equivalent to the British *sir*.) In early federal and state elections in July 1978 the BNF firmly established control of the House of Representatives.

Hussein chose not to run for reelection in 1981, and he was succeeded as UMNO president by Tun Dr. Mahathir bin Mohamad. Mahathir was designated prime minister on July 16 and called for an early election on April 22–26. In both that election and the succeeding

election, held August 2–3, 1986, the BNF won impressive victories.

However, issues that had been raised during the 1986 electoral campaign resurfaced in early 1987 and provoked a major crisis in the prime minister's party. Deputy Prime Minister Musa bin Hital accused Mahathir of tolerating corruption, mismanagement, and overspending; Hital supported trade and industry minister Razaleigh Hamzah's candidacy for the party presidency. Although Mahathir managed to defeat Razaleigh by a narrow margin and Encik Abdul Ghaffar by an even narrower one, the party split into two factions. Soon after, Mahathir announced Razaleigh's resignation and the dismissal of several other ministers who had supported him.

Late in the year racial tensions between Chinese and Malays arose over sensitive political issues. In order to prevent riots, the government ordered the detention of more than 100 prominent members of both the BNF and opposition parties. Additionally, the publishing licenses of three major newspapers were revoked. New legislation that took effect in December gave the minister of information the power to monitor television and radio broadcasts as well as to revoke the license of any private broadcasting company not adhering to "Malaysian values." By late January 1989 nearly all detainees had been released, but Lim Kit Siang and his son, both prominent members of the opposition Democratic Action Party (DAP), remained in detention.

In June 1987 dissension within the UMNO led to a suit claiming that since some delegations participating in the UMNO party elections of April 1987 had not been officially registered, the elections should be declared null and void. In February 1988 the High Court of Peninsular Malaysia ruled that there had, in fact, been no legitimate election. Nevertheless, Mahathir claimed that the ruling did not affect the legal status of the government or of the head of state. Former prime ministers Tunku Abdul Rahman and Hussein Onn attempted to effectively assume control of the UMNO by forming a new party, UMNO Malaysia. They were prevented from doing so by Mahathir, who, in his role as minister of home affairs, controlled the office of Registrar of Societies. Instead, Mahathir himself formed a new party, UMNO Baru, and transferred the assets of UMNO to his new party. At the same time he excluded Razaleigh and Hussein Onn from UMNO Baru membership.

Additionally, already existing tension between the executive and the judiciary was exacerbated by new constitutional amendments that restricted the judiciary's power to interpret laws. When Tun Mohammed Salleh, the lord president of the Supreme Court, wrote to the head of state to protest the government's attempts to limit the independence of the judiciary, he was suspended from office. A tribunal set up to investigate the matter rejected Salleh's claims, and he was dismissed from office in August. In November, Tun Abdul Hamid Omar, who had

chaired the tribunal, was confirmed as president of the Supreme Court.

Mahathir's leadership was again contested in two separate by-elections, held in Johore Bahru and Parit Raja. Razaleigh, Musa, and 113 members of parliament left the National Front coalition to form UMNO '46 (after the year UMNO was founded). In a conciliatory move, Mahathir invited his opponents to join UMNO Baru. In December these opponents, led by Musa, drew up the Johore Declaration, stating their terms for joining UMNO Baru, among them the automatic admission of former UMNO members to the new party. UMNO Baru accepted the terms while declaring that they were valid only for the state of Johore. By January 1989 Musa had declared his membership in UMNO Baru.

Mahathir won reelection to a third term in 1990. His ruling party captured 127 seats, enough to maintain the majority needed to pass constitutional amendments; the election was the toughest ever faced by the UMNO. Mahathir was challenged for the first time by his fellow ethnic Malay Razaleigh, who had founded his own party, Spirit of '46 (also named after the year in which UMNO was founded), when he left the UMNO in 1987. His party allied itself with ethnic Chinese and Muslim parties to form a powerful opposition coalition that campaigned on a platform of reforms, which included an end to detention without trial and more aggressive probes of alleged government corruption. The opposition also criticized the government program of privatization. The ruling coalition campaigned on the strength of an economy that had been increasing at a rate of 9 percent after inflation.

Prime Minister Mahathir managed to hold on to power throughout the 1990s, despite these and other challenges. His party, the UMNO, continued to win with significant margins at the polls through exploitation of the racial divides in Malaysian society. In 1993 Finance Minister Anwar bin Ibrahim emerged as Mahathir's likely successor and was named deputy prime minister. Differences between the two surfaced by 1997 during the Asian financial crisis. Mahathir, an economic nationalist, attributed the crisis to foreign currency traders and speculators, accusing them of deliberately devaluing the Malaysian currency, the ringgit, and depressing domestic stocks. Anwar, on the other hand, was a globalist who proposed a series of austerity and financial reform measures; he also advocated a relaxation of Malaysia's notorious racial quotas favoring Muslim Malaysians. The conflict came to a head in 1998, when Mahathir scrapped Anwar's open market and tight monetary policies in favor of currency controls. Anwar was dismissed from his post and charged with the crimes of sodomy and corruption, convicted, and sentenced to six years in prison. In 2000 he was sentenced to an additional nine years. International observers decried his conviction as politically motivated. Despite the contro-

versy, the UMNO-encompassing BNF won the 1999 elections, and Mahathir was reelected prime minister.

Despite his reelection, Mahathir faced renewed criticism from his opponents. In 2001 supporters of Anwar bin Ibrahim were sentenced to prison without trial, bringing out demonstrators against the country's repressive Internal Security Act. A tough new law against illegal foreign workers took effect in 2002, forcing many Indonesians and Filipinos to leave the nation. This strained relations particularly with Indonesia, to which as many as 400,000 returned home. In October 2003 Prime Minister Mahathir finally stepped down and was succeeded by Abdullah Badawi, who had served as his deputy prime minister since 1999.

Mahathir was the longest-serving government leader in Asia, in office from 1981 to 2003. Badawi's BNF coalition won 64 percent of the vote and 90 percent of the seats in parliament in the 2004 elections. The opposition suffered significant losses at the national and state levels.

In 2004 Anwar Ibrahim's conviction on sodomy charges was overturned, and he was released, his corruption sentence having already been reduced. As a result of the Asian tsunami disaster of December 2004, scores of Malaysians were killed, and the deportations of foreign workers, many of them from Indonesia, which was hit hardest by the tsunami, were put on hold.

LIST OF MODERN RULERS

Prime Minister

1957–70	Tunku Abdul Rahman
1970–76	Abdul Razak
1976–81	Hussein Onn
1981–2003	Mahathir bin Mohamad
2003–	Abdullah Ahmad Badawi

CONSTITUTION

The government of Malaysia is based on the constitution of 1957, as amended to accommodate the special interests of Sabah and Sarawak, which joined the federation in 1963. The constitution established a federal system of government under a constitutional monarchy. The head of state is the paramount ruler, the *yang di pertuan agong*, who is chosen by and from among the Conference of Rulers, the *Majlis Raja Raja*, for a period of five years. He performs the duties of a constitutional monarch and is also the supreme head of Islam in Pinang, Melaka, and his own state. He mostly acts on the advice of the prime minister and has limited veto power, but he may refuse to dissolve parliament even against the wishes of the prime minister.

Executive power is vested in the prime minister (the head of government) and the cabinet, who are responsible

to the federal parliament. The administration is strongly centralized.

The constitution also grants to Malays as *bumiputras* (sons of the soil) a special, favored position, with quotas in education and public service (and reservations of land) out of proportion to their actual numbers. Another feature of the constitution is the right of parliament (and when parliament is not in session, of the paramount ruler) to declare a state of emergency, permitting the federal government to deal with national crises with absolute powers.

The Conference of Rulers, the *Majlis Raja Raja*, consists of nine hereditary rulers of the Malay states and governors of the states of Malacca, Penang, Sabah, and Sarawak. The primary duty of the inner conference of hereditary rulers is to elect or remove the *yang di pertuan agong* and to decide matters concerning the preservation of Malay and Muslim privileges and their own status.

The cabinet (*Juma'ah Mentri*) is a council of ministers appointed by the *yang di pertuan agong* to advise him in the administration. It is headed by the prime minister, who must always command the confidence of the majority of the House of Representatives. The powers and privileges of the prime minister and cabinet conform to the British model. A number of assistant ministers and parliamentary secretaries are appointed from among members of parliament. In 1989 there were 24 ministers in the cabinet, including the prime minister.

In 1983 the Mahathir administration pushed through the federal parliament a constitutional amendment that restricted the paramount ruler's power to veto money bills. In other cases the veto could not be invoked after the second reading and a month's delay.

The constitution also provides for certain autonomous bodies under cabinet control: the National Land Council, the National Finance Council, the Election Commission, and the National Council for Local Government. Suffrage is universal over age 21.

PARLIAMENT

The federal parliament is a bicameral body consisting of the Senate and the House of Representatives. The Senate (*Dewan Negara*) is made up of 26 elected members (two from each state) and 43 members appointed by the *yang di pertuan agong*. The elected members are elected by state legislatures; the appointed senators have achieved distinction in public service or the professions or are representatives of minorities. The Senate is never dissolved, new elections being held by the appropriate state legislative assembly as often as there are vacancies. A senator's term of office is six years.

The House of Representatives (*Dewan Rakyat*) has 219 members. The term of the House is five years, subject to dissolution. Voting is weighted in favor of Malay

rural areas, with Chinese urban constituencies having three to four times as many voters as their rural counterparts. National elections are held every five years on the basis of universal adult suffrage over 21. The Election Commission reviews the delimitation of constituencies, conducts elections, and keeps electoral rolls.

Parliament must be summoned at least once every six months. If a parliament is dissolved, a general election must be held within 60 days, and the newly elected parliament must meet within 90 days.

POLITICAL PARTIES

Malaysia is a multiparty state whose parties reflect the diversity of its population and the breadth of the political spectrum. However, politics are dominated by the *Barisan Nasional Front* (a confederation of 14 political parties dominated by the UMNO), which holds, as of the 2004 election, 198 of the 219 seats. Major opposition parties are the *Parti Islam SeMalaysia* (PAS), which took only seven seats in the 2004 election, and the DAP, a social democratic party with 12 seats.

LOCAL GOVERNMENT

The administration of the states (11 in West Malaysia and two in East Malaysia) is carried out by rulers or governors acting on the advice of state executive councils. Each state has its own constitution, flag, anthem, and unicameral legislative assembly, which shares legislative powers with the federal parliament.

Every state has an executive council or cabinet (known in Sarawak as the Supreme Council) headed by a chief minister (in Melaka, Pinang, Sabah, and Sarawak) or a *mentri besar* (in other states). The cabinet is collectively responsible to the state legislature. Cabinet advice is binding for the rulers and governors, but the nine rulers have a wider field of discretionary powers than the governors.

LEGAL SYSTEM

The judiciary is an entirely federal service, while the Muslim religious courts are under the states' jurisdictions. The constitution provides for an independent judiciary, consisting of a federal court with original jurisdiction in constitutional cases and appellate and original jurisdiction in civil and criminal cases; there also are two high courts, one for West Malaysia and one for East Malaysia, with unlimited jurisdiction in civil and criminal cases. The federal court consists of a lord president together with the two chief justices of the high courts and four federal judges. There is a limited right of appeal from

the federal court to the *yang di pertuan agong*, who may refer such appeals to the judicial committee of the Privy Council in the United Kingdom.

Justices are appointed by the paramount ruler on the advice of the prime minister. The Malaysian judiciary is generally regarded by the public and the legal community as committed to the rule of law. Although the courts have rarely challenged legislation, they have not hesitated to rule against government prosecutors in specific cases, both civil and criminal. However, there have been doubts raised internationally about the impartiality of the judiciary. Some high-profile cases in 2000 and 2001 indicated that certain litigants or even lawyers were shown preferential treatment in the courts; the courts initially rejected appeals by the former deputy prime minister Anwar regarding his 15-year prison term.

HUMAN RIGHTS

In terms of civil and political rights, Malaysia is ranked as a partially free country. Malaysia is, and prides itself as, a multiethnic and democratic society, but both these characteristics have been under severe strains and pressures, and the potential for violence and social conflict is ever present in the country. Citing security reasons, including the threat of Communist insurgents and the possibility of renewed communal violence, the Malaysian government maintains legislation that legalizes arrest and detention without trial of persons suspected of subversive activity.

Malaysia's Internal Security Act permits the arrest and detention without trial of persons suspected of subversive activity or other actions contributing to domestic instability. It provides for initial preventive detention for up to two years, extendable indefinitely. A person detained under emergency law has no recourse to the courts but must be told the reason for his or her detention and given an opportunity to challenge the detention order as soon as possible after arrest. Though initiated to combat Communist insurgents, the Internal Security Act has also been used in recent years to jail mainstream politicians, alleged Islamic militants, trade unionists, ordinary criminal suspects, members of Muslim sects called "deviant" by the government, and others. Groups such as Amnesty International complain that the government's secrecy regarding detainees makes it impossible to determine the innocence or guilt of those so incarcerated.

The media are constrained under the Constitution (Amendment) Act of 1971 from discussing certain ethnically sensitive topics, so as not to inflame racial tensions. Mindful of the need for the annual renewal of publishing licenses, the press is circumspect in its criticisms of the government.

In the realm of politics, British traditions continue to have great impact. Elections are held regularly. While

the ruling BNF takes full advantage of its incumbency, even the opposition concedes that votes are cast freely and recorded accurately.

FOREIGN POLICY

Since the 1960s Malaysia has been an ardent supporter of regional cooperation and an active member of the Association of Southeast Asian Nations. Although the country has been threatened by leftist insurgencies during the 1960s and 1970s, Malaysia espoused nonalignment and expanded relations with the Soviet Union, China, Vietnam, and North Korea.

Relations with Indonesia—with which it is linked by religion, language, and race—have not always been cordial. Malaysia opposed Indonesia's Confrontation Policy under Sukarno and also Indonesia's claims to the islands of Sipadan and Kigitan. Relations were further frayed by Malaysia's expulsion of illegal Indonesian workers and the Indonesian president Jusuf Habibie's support of the ousted deputy prime minister of Malaysia, Anwar.

Relations with Singapore have also been described as "sweet and sour." Only after 28 years of independence did a Malaysian head of state visit Singapore. Singapore later condemned joint military exercises by Malaysian and Indonesian military forces in Johore. There are also ongoing disputes over immigration and customs posts and the island of Palau Batu Puteh, off Johore. However, in 2001 Malaysia and Singapore resolved many of their long-standing disputes over issues ranging from water supplies to airspace. The two countries also agreed to build a new bridge and tunnel. In 2005 Malaysia and Singapore reached another agreement over disputed land reclamation work in their border waters.

Relations with the United States have suffered as a result of Malaysia's resentment of U.S. dominance in Southeast Asia. Prime Minister Mahathir was the only head of government not attending the summit of the Asia Pacific Economic Cooperation group in Seattle in 1993. Support for Anwar, Mahathir's sworn enemy, from Vice President Al Gore sparked another round of controversy that soured U.S.-Malaysian relations for over two years. Though supportive of the U.S.-led war on terrorism after the terrorist attacks of 2001, Malaysia was highly critical of the 2003 war in Iraq and of the treatment of Muslims by the United States.

DEFENSE

The defense structure is headed by the *yang di pertuan agong*, though only the parliament has the right to declare war. Actual operational control is exercised by the Armed Forces Council, under the chairmanship of the minister of defense.

Malaysian armed forces are noted for their anti-guerrilla capabilities. Since there are no hostile border areas, the army is deployed mainly in the peninsular region. Military service is voluntary, and those over 18 are eligible. The number of active personnel in the armed forces in 2003 was over 120,000, as divided between several services, including the Malaysian Army, Royal Malaysian Navy, Royal Malaysian Air Force, Royal Malaysian Marine Police, and Sarawak Border Scouts. The military budget that same year was \$1.53 billion, or 1.7 percent of gross domestic product (GDP); by 2002 the budget had grown to \$2.17 billion, or 2.4 percent of GDP.

ECONOMY

Malaysia made a quick economic recovery in 1999 from its worst recession since independence in 1957. GDP grew 5 percent, responding to a dynamic export sector, which grew over 10 percent, and to fiscal stimulus from higher government spending. The large export surplus enabled the country to build up its already substantial financial reserves to \$31 billion by 2000. The stable macroeconomic environment, in which both inflation and unemployment stood at 3 percent or less, made possible the relaxation of most of the capital controls imposed by the government in 1998 to counter the impact of the Asian financial crisis.

Malaysia's GDP grew at 8.6 percent in 2000, mainly on the strength of sustained double-digit export growth and continued government fiscal stimulus. As an oil exporter, Malaysia has also benefited from higher petroleum prices. Higher export revenues allowed the country to register a current account surplus, but foreign exchange reserves declined—from a peak of \$34.5 billion in April 2000 to \$29.7 billion by December—as foreign investors pulled money out of the country. Nevertheless, Kuala Lumpur has proven unlikely to abandon its currency peg. An economic slowdown in key Western markets, especially the United States, and lower world demand for electronics products slowed GDP growth to 0.5 percent in 2001. Growth picked up in 2002 and 2003, mainly from a stimulus package, averaging 4.5 percent. With respect to the long term, Malaysia's failure to make substantial progress on key

reforms in the corporate and financial sectors have clouded prospects for sustained growth and the return of critical foreign investment. As the Malaysian economy is dependent on exports to the United States and Japan, it is subject to downturns when those countries have economic difficulties.

ENVIRONMENT

The biggest environmental problem facing Malaysia is growing air pollution from industrial and vehicular emissions. In addition to these air pollutants in urban areas, many remote areas suffer from smoke and haze from large forest fires, which are contributing to deforestation. The country also needs to address its waste disposal system, as water is being polluted from raw sewage.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Malaysia 59th out of 177 countries in terms of standards of living. Life expectancy in 2004 was over 72 years; literacy stood at nearly 90 percent; 70 percent of eligible students were enrolled in primary, secondary, and tertiary schools;

and per capita GDP was \$9,700. In general, despite the fact that the country is considered only partly free, Malaysia's multiethnic, multicultural population of 24 million has a good standard of living, and the country gives high priority to education, health, and job opportunities for women.

Once heavily rural, with life revolving around the village, or *kampung*, Malaysia is transforming itself into a modern industrial state. As of 2001, 57 percent of the population lived in urban areas, though city dwellers often maintain close ties to the villages whence they came and to where they return regularly for visits.

Housing in *kampungs* is largely wooden and constructed on stilts to prevent flooding in the rainy seasons and to allow for better ventilation. Also, the shaded space beneath the house provides an alternate living space. Urban architecture tends to be of concrete or brick with tile roofing. High-rise apartments are becoming more common in urban areas. With exploding population growth in the cities, there are acute housing shortages, leading to squatters taking up residence in shantytowns.

HEALTH

Malaysia's national health-care plan provides services free or at nominal costs. Access to services, however, can be problematic depending on location. There are only 111 public hospitals but also 197 private ones to service the population. As of 2004 there were 70 physicians per 100,000 people. Primary health-care services consist of immunization, family planning, maternity care, communicable-disease prevention, and accident and emergency services. With 97 percent of births attended by health-care providers, infant mortality is relatively low; as of 2004 it was under 18 deaths per 1,000 live births. Many people in the countryside rely on traditional forms of medicine administered by local shamans rather than on Western medicine. The use of herbs is also widespread.

Access to safe drinking water and adequate sanitation is not a problem in Malaysia. Immunization rates for children under one are high; in 2003, 92 percent were immunized for measles, 96 percent for DPT, 97 percent for polio, and 99 percent for tuberculosis. Public spending on health care in 2001 was 2 percent of GDP.

Two diseases that were once endemic, tuberculosis and yaws, have largely been controlled by public health and immunization measures. Malaria remains a health risk, however, with almost 40,000 cases reported in the mid-1990s. Smoking is another major health hazard. Tobacco use has increased since the mid-1980s; as of 1995 each adult smoked an average of 4.2 lbs of tobacco per year. Between 1970 and 1989 cardiovascular disease death rates more than doubled. Diabetes is also on the rise. In 2003 the HIV/AIDS prevalence rate was 0.4 percent; 52,000 Malaysians were estimated to be living with the disease, while 2,000 died from it.

FOOD AND NUTRITION

The staple of every Malaysian meal is rice, with generous helpings accompanying dishes that include fish, seafood, vegetables, and poultry.

One of the most popular Malaysian dishes is *satay*—bite-sized pieces of beef, mutton, or chicken marinated in spices, then skewered and barbecued. *Satay* is often served with *ketupat* (rice cake) and a raw salad of cucumber, pineapple, and onions. Sweet, spicy peanut sauce accompanies the dish. *Nasi lemak* is a rice dish cooked in coconut milk, served with anchovies, boiled egg, fried peanuts, and cucumber slices. *Roti canai* is a breakfast dish made from wheat-flour dough, with beaten egg and diced onions. *Nasi dagang* is another popular breakfast dish of rice and fish curry. *Nasi goreng* is fried rice, and *rojak* is a salad of pineapple, cucumber, bean curd, prawn fritters, and boiled egg, served with peanut sauce. *Char kway teow* is a dish of flat rice noodles stir-fried with minced garlic, fresh prawns, bean sprouts, cockles, and eggs and seasoned with soy sauce and chili paste. Numerous chicken dishes are popular, including *curry laksa* and chicken rice. "Hotpot," also called steamboat, is a popular mode of eating as well, featuring a sort of Asian fondue.

Fruits are plentiful in Malaysia and include chiku, coconut, durian, guava, jackfruit, mangosteen, pomelo, papaya, rambutan, and starfruit.

Nutrition is generally good in Malaysia. Between 1989 and 1995, 23 percent of children under five years of age were considered malnourished; between 1995 and 2002 that figure dropped to 12 percent.

Food and Nutrition

Undernourished % of total population: 2.4
 Daily Available Calories per capita kcal: 2,930
 Amount of Cereal Available per person per year kg: 156.4
 Amount of Fruits and Vegetables Available per person per year kg: 89.4

STATUS OF WOMEN

There are no restrictions on the political rights of Malaysian women. Government policy supports their full and equal participation in government, education, and the workforce. However, the position of women in society is conditioned by the cultural and religious traditions of the country's major ethnic groups; as a result, women are still underrepresented in the government, professions, and civil service.

With a general resurgence of Islamic piety among Malays in recent years, Malay women have tended toward close conformity to Koranic stipulations on women's roles. Islamic courts do not give equal weight to the testimony of women, and some international organizations as well as local activists claim that women are sometimes subject to discriminatory interpretations of Islamic law in divorce and inheritance matters. The interpretation of Islamic inheritance law varies by state but tends to favor male offspring and relatives.

 Women's Share of Wage Employment Non-agricultural %: 38.0

WORK

In 2003 there were 10.5 million people in the labor force, approximately 20 percent of whom were foreign workers (mostly employed in plantation labor). About half the labor force was involved in the service sector, 36 percent in industry, and 14 percent in agriculture, producing rubber, palm oil, cocoa, rice, timber, pepper, and subsistence crops. Industries include rubber and palm-oil processing and manufacturing, light manufacturing, electronics, tin mining and smelting, logging and timber processing, petroleum production and refining, and agriculture processing. Whereas most people once worked in the rubber or palm-oil industries, the high-tech industry has supplanted such work, necessitating a more educated workforce. The unemployment rate in 2004 was just 3 percent.

Most Malaysian workers can join trade unions. However, the law prevents the formation of broad-based unions spanning multiple industries. In the export-oriented electronics industry, the government discourages national unions in favor of factory-level unions. Labor laws prevent strikes by allowing the government to refer labor disputes to the Industrial Court and prohibiting strikes while disputes are before that court. Thus, workers rarely strike. Unions bargain collectively in many industries, though not in the public sector. Only 8 percent of Malaysian workers are unionized. There is no minimum

wage, but the maximum workweek is 48 hours, and the minimum work age is 14, although younger workers are employed in parts of the country.

EDUCATION

In theory, the state provides free but not universal and compulsory education for seven years, from ages six to 13. The academic year runs from January to November. The medium of instruction is Malay in state schools. Muslim religious instruction is compulsory for all Muslim children, while private Christian schools offer their own religious training. There are also 525 English-language schools, which enjoy the greatest prestige; 1,052 Chinese-language schools, using Guo Yu, or Mandarin; and 617 Tamil-language schools.

Schooling consists of six grades of primary school, three grades of lower secondary school, two grades of upper secondary school, and two years of pre-university classes, consisting of a lower sixth form and an upper sixth form, in the British fashion. There is a critical shortage of trained Malaysian teachers, which has been partially accounted for through the employment of Indonesians and Commonwealth and Peace Corps volunteers. That situation is improving; in 2001 the primary pupil-to-teacher ratio was less than 20 to 1.

The education system is centralized in the federal Ministry of Education, although both Sabah and Sarawak operate their school systems autonomously. Combined gross enrollment at primary, secondary, and tertiary schools in 2001 stood at 70 percent. Public expenditures on education in 2001 were a high 7.9 percent of GDP. The literacy rate in 2002 was 88.7 percent.

There are nine universities in Malaysia, including the National University of Malaysia, the University of Malaya, the Technological University of Malaysia, and the University of Science Malaysia. The MARA Institute of Technology is the largest postsecondary institute in the country. English is gradually being replaced at the university level by Bahasa Melayu.

SCIENCE AND TECHNOLOGY

Science and technology are important elements of the emerging Malaysian economy; the high-tech sector is responsible for over half of the country's export income. Several of the country's universities, such as the National University of Malaysia, the University of Malaya, the University of Agriculture at Selangor Darul Ehsan, and the University of Science at Penang, offer degrees in electronics and engineering. Between 1987 and 1997, science, math, and engineering students accounted for just over half of college and university enrollments.

Agricultural research is another important element in the country's research and development. The Ministry of Agriculture administers the Malaysian Agricultural Research and Development Institute, which carries out research in crops and livestock. The Ministry of Primary Industry has several research agencies involved in research areas from rubber to cocoa to forestry, while the Fisheries Research Institute of the Department of Fisheries deals with that resource. Numerous colleges and universities are also involved in agricultural research, among them the University Putra of Malaysia, the University of Malaya, and the University of Malaysia, Sabah.

As of 2000 there were 276 researchers per one million population; research and development expenditures equaled 0.69 percent of GDP in 2002.

MEDIA

The Malaysian press consists of 31 dailies, about half of which are published in the capital. Around five of these are in each of English, Chinese, and Malay, with around two

in each of Tamil and Punjabi. The most widely distributed and respected daily is the *New Straits Times*. Sabah and Sarawak together have over a dozen dailies, mostly in Chinese, with some in English and other languages.

Control of the press is indirect; outright censorship is rarely imposed. All newspapers and publications are required to register with the Ministry of Information and Broadcasting; they may not be published or distributed without a government permit, which may be revoked or suspended for the publication of material officially termed undesirable. In 2000 government authorities refused to renew the permits of several opposition political weeklies and forced the PAS newspaper, *Harakah*, to reduce its frequency of publication. Officials also denied a license to an opposition DAP paper in East Malaysia to print in the rest of the country. Additionally, the government uses the Sedition Act, the Broadcasting Act, the Official Secrets Act, and criminal defamation laws to curb the press and restrict freedom of expression. The threat of these laws often results in self-censorship on the part of the media. The international media watchdog group Reporters without Borders ranked Malaysia a low 122nd out of 167 countries in its 2004 press freedom index.

The national news agency, Bernama, has one foreign bureau, in Djakarta, Indonesia, and four domestic bureaus. The major foreign news agencies are AP, UPI, AFP, and Reuters.

Broadcasting is a state monopoly operated by Radio Malaysia, with three networks. A television service is operated by Television Malaysia and STMB Network I, with its main station at Kuala Lumpur and regional stations at Johore Bahru, Taiping, Pinang, Ipoh, Melak, Batu Pahat, and Kluang. Of the 27 television stations, 26 are state owned.

In this technology-savvy country, in 2003 there were over 11 million cellular phone users and 8.7 million Internet users. Generally, the government does not attempt to control Internet access.

CULTURE

A blend of Malay, Chinese, Indian, indigenous, and British cultures, in addition to a variety of religious traditions, endows Malaysia with a unique and rich cultural heritage.

Contemporary Malay culture consists of many strands—animistic, early Hindu, early and modern Islamic, and, especially in the cities, Western. The base of the culture, however, is Malay and Muslim. These influences are felt most strongly in Western Malaysia.

A favorite form of theater is the *wayang kilit*, or shadow puppet play, which in the days before television was a typical form of village entertainment. Stories for these plays derive largely from the Hindi epic *Ramayana*.

Music is heavily influenced by the tradition of the *gamelan*, a stringed instrument usually accompanied by drums. Traditional percussion instruments include the double-headed *gendang*, the *geduk*, the *gedombak*, and the *rebana*, a large drum constructed from a hollowed-out log.

Such music often forms the accompaniment for Malay dance, in which participants might hold candles as they perform. The Malaysian martial arts of *silat* is actually a dance form adapted to defense. The *joget* is another traditional dance, adapted from a Portuguese original. In Sarawak the *datum julud* is a traditional dance that deals with the blessing of a grandson. Mak Yong is a dance drama once performed at the sultan's court; it combines romantic stories, operatic singing, and humor.

Examples of Malay decorative arts include batik cloth, silverware, the handmade *kris* (a short sword or heavy dagger with a wavy blade), wood carving, and basketwork.

The Malays also have a rich collection of literature dating to the 16th century. The oldest is *Sejarah Melayu* (The Malay Chronicle), a history of the kingdoms of the Malay Peninsula, with a particular focus on Malacca. Two other works of note include *Hikayat Hang Tuah* (Hang Tuah's Life Story) and *Hikayat Abdullah* (Abdullah's Life Story). These works describe life and society in old Malay times.

FOLKLORE AND MYTHOLOGY

The indigenous people of Malaysia, the Orang Asli, were animists to whom everything in the environment was imbued with spirit. Numerous legends abound of jungle spirits and demons or jinn. The manticore is a half-lion, half-human beast that supposedly inhabits the forests of Malaysia. Even the wavy-bladed *kris* has a spirit that supposedly flies at night to seek out victims and enemies.

Legends also surround various natural features, such as with the dragon princess of Tioman Island. Similarly, the Puteri Gunung Ledang, or the Princess of Mount Ophir, is said to be the immortal wife of the first king of the Malaccan Sultanate. When her husband died, she fled to Mount Ophir in present-day Malaysia.

Malaysian Indian folklore includes numerous legends, one of which is the story behind the celebration of the Festival of Lights, or Deepavali, as a celebration of the death of Nagarasuran, a Hindu tyrant and cruel king. Malaysian Chinese also have numerous myths reflective of Chinese philosophy. According to their creation myth, Pangu created earth and heaven, and humankind is made possible by the complementary opposites, or yin and yang, of these two.

Malaysian folklore is also rich in proverbs. Some typical sayings include “Don't use an ax to embroider,” “Fear to let fall a drop and you will spill a lot,” “Feasting is the physician's harvest,” and “The body pays for a slip of the foot, and gold pays for a slip of the tongue.”

ENTERTAINMENT AND RECREATION

Favorite recreational activities for Malaysians include several unique forms of sport. *Sepak takraw* is one of the most popular, wherein players must keep a small rattan ball in the air using their feet, legs, shoulders, and heads. This sport is similar to and most probably the inspiration for the North American game of hackey-sack. Kite flying and top spinning are also widely enjoyed in the Malay Peninsula. One of the biggest kites is the *wau bulan*, or moon kite, which may be as wide as three meters and can reach an altitude of nearly 500 meters. Flying such a kite was once merely a harvest time entertainment but has now become an international event, attracting competitors from Europe and Asia. Similarly, top spinning was once another harvest-time recreation. The *gasing*, or spinning top, can weigh up to 10 pounds. Some of the best spinners can throw a top that will spin for over two hours. The Malaysian martial art of *silat* is also a major form of recreation.

Television and cinema are popular forms of entertainment for urban dwellers. Nightlife in cities includes a wide variety of activities, reflecting the ethnic and religious mix of the country. Mah-jongg is particularly popular among older Malaysian Chinese, who often gamble on the outcome of the game.

ETIQUETTE

It is typical to shake hands as a form of greeting, though men and women (especially if Muslim) usually do not exchange handshakes. The handshake itself is different

than in the West; people do not actually grasp the hands; rather, one touches the other's outstretched hand with both hands and then brings those hands back to the chest to indicate a heartfelt greeting.

Pointing with the forefinger is generally considered a rude gesture; one uses the thumb of the right hand to point, with the other four fingers folded into the palm. Shoes are removed before entering mosques, and by extension they are also usually removed before entering private homes, Muslim or non-Muslim. The right hand is used for giving and receiving; the left is usually considered "dirty." Public displays of affection are frowned upon.

FAMILY LIFE

Family life in Malaysia is generally reflective of the traditions of each ethnic group. Indians and Chinese maintain family groupings similar to those found in their parent countries, while Malays have many of their own distinctive customs. The family is at the center of Malay life, and families are often extended. Seniority is respected, and family members are even addressed according to their family position, such as First Brother. Children generally live at home until they are married and remain close to their parents after marriage.

Men are the traditional leaders of the family, and women have usually moved to the home of their husband's family. As more and more women enter the workforce, however, such customs and traditions are breaking down. The size of the family is also decreasing; the fertility rate in 2003 was around 3.1 children per woman. Middle class families tend to have two to three children on average.

PERSONAL APPEARANCE

Most Malaysians tend to dress in Western fashion. However, each ethnic group also has its own traditional style of clothing. The cheongsam, a tight-fitting, high-collared, slit-skirted dress, is the traditional Chinese women's dress, while the *yi fu* is the men's dress. For Indians, a sari is the traditional dress for women, while Indian men wear a dhoti.

Traditional Malay dress for men and women is based on a rectangle of batik cloth that is wrapped and worn as a skirt. The women wear the skirt with a long blouse, while the men go shirtless but wear a head cloth. Malays, who are Muslim, have a strict dress code. Women usually wear the *baju kurung*, a loose, long-sleeved blouse worn over an ankle-length skirt, and they cover their heads with a scarf. A married woman may often wear a *baju kebaya*, a close-fitting blouse over an ankle-length skirt. Malay men wear *baju melayu*, a long-sleeved shirt over an ankle-length sarong or pants.

SPORTS

Soccer is one of the most popular spectator sports in Malaysia. The Football Association of Malaya (later Malaysia) was founded in 1933. With its Super League and Premier League teams, soccer draws large crowds. The Malay Cup and FA cup are major national competitions. The national team also competes regionally and internationally. Badminton is almost as popular as soccer, with the country hosting the Malaysia Open in July.

Other popular sports include martial arts such as taekwon do, karate, and *silat* as well as ping-pong, rugby, horse racing, car racing, powerboat racing, cricket, squash, and field hockey.

CHRONOLOGY

- 1957** Malaya becomes an independent nation within the Commonwealth, with Tunku Abdul Rahman as prime minister.
Constitution prepared by the Reid Commission is adopted.
- 1959** First local elections are held in Sarawak.
Last Communist rebels surrender.
Central Bank of Malaya is founded.
- 1960** Emergency is ended.
- 1962** First elections are held in Sabah (known as British North Borneo).
- 1963** Malaya, Singapore, Sarawak, and North Borneo join together as the State of Malaysia.
Confrontation with Indonesia begins over the membership of Sarawak and North Borneo (Sabah) in Malaysia.
- 1965** Singapore leaves the Malaysian federation.
- 1966** Confrontation with Indonesia ends as Sukarno is toppled from power there.
- 1967** Malaysia joins the Association of Southeast Asian Nations as a charter member.
- 1969** Ruling Alliance Party suffers reverses in national elections.
Race riots between Malays and Chinese break out in Kuala Lumpur.
Emergency is declared, the constitution is suspended, and a National Operations Council is set up to direct emergency rule.
- 1970** Emergency is ended.
Prime Minister Tunku Abdul Rahman steps down and is succeeded by Abdul Razak.
- 1973** Malaysia establishes diplomatic relations with Hanoi, North Vietnam.
The Malaysian dollar is allowed to float.
- 1974** Diplomatic relations are established with Communist China.

1498 Malaysia

- The ruling Alliance Party, renamed the Barisan National Front, gains a decisive majority in national elections to the federal parliament.
- Islamic summit conference is held at Kuala Lumpur.
- Kuala Lumpur becomes a federal territory.
- 1976** Hussein Onn becomes prime minister upon death of Abdul Razak.
- The Malaysian dollar is renamed the ringgit.
- 1977** Federal government proclaims emergency in Kelantan State. Four ministers quit in protest.
- 1978** The ruling BNF wins an absolute majority in parliamentary elections.
- 1979** Malaysia admits over 75,000 Vietnamese “boat people” but threatens to “shoot on sight” further arrivals.
- 1981** Prime Minister Hussein Onn steps down and is succeeded in office by Mahathir bin Mohamad. In national elections the BNF routs opposition parties and gains 132 of 154 seats in the House of Representatives.
- Mahathir announces a “Look East” economic policy, stressing increased ties with Japan and Korea.
- 1983** The veto power of the paramount ruler in non-financial bills is curtailed.
- Financial scandal involving loans made by Bank Bumiputra to Hong Kong’s Carrion Group rocks the government.
- 1985** Joseph Pairin Kitingan, a Christian and ethnic Borneo Kadazan, is installed as chief minister in Sabah after his party, Party Bersatu Sabah, wins 25 of the 48 state assembly seats there.
- 1986** Malay nationalism gains victory in elections when the BNF wins 148 seats in the enlarged House of Representatives, now consisting of 177 members. The BNF also retains power in all state assemblies in West Malaysia.
- 1987** Mahathir, whose leadership had been called into question since 1986, wins BNF party presidency by a narrow majority.
- Racial tensions between Chinese and Malays lead to government detention of numerous prominent members of BNF and opposition parties.
- Government revokes publishing licenses of three major newspapers, including the English-language daily *Star*.
- 1988** UMNO is reformed as UMNO Baru by means of much political, legislative, and judicial maneuvering.
- President of the Supreme Court Mohammad Salleh is dismissed from office, along with two Supreme Court judges, as a result of tensions between executive and judiciary.
- In the face of a massive influx of Indochinese refugees, Malaysia announces that they will be treated as illegal immigrants and deported.
- 1990** Mahathir wins reelection to a third term. The UMNO maintains control of parliament in its toughest test since formation.
- 1997** The Asian economic crisis hits Malaysia hard, with both markets and currency failing throughout the year and into 1998.
- 1998** Prime Minister Mahathir dismisses Deputy Prime Minister Anwar Ibrahim on charges of sexual misconduct.
- Mahathir introduces radical new controls on currency and foreign investment to combat Malaysia’s deepening recession.
- 1999** Currency and investment controls are lifted, as Malaysia’s economic health returns. Mahathir is reelected prime minister.
- Anwar Ibrahim sentenced to six years in prison for corruption.
- 2000** Nine years are added to Anwar’s prison term when he is found guilty of sodomy.
- 2001** Government proceeds with construction of the Bakun dam in East Malaysia despite environmental concerns.
- Rioting breaks out between Malays and Indians.
- 2002** Tough illegal-immigrant laws come into effect.
- 2003** Mahathir steps down as prime minister and is replaced by his deputy, Abdullah Ahmad Badawi.
- 2004** Badawi wins general election by a wide margin. Scores are killed and much property damage is sustained when the Asian tsunami strikes Malaysia in December.
- 2005** Malaysia and Singapore come to terms over a border dispute.

CAPITAL

Male

HEAD OF STATE & HEAD OF GOVERNMENT

President Maumoon Abdul Gayoom (from 1978)

NATURE OF GOVERNMENT

Partial democracy

POPULATION

349,106 (2005)

AREA

300 sq km (116 sq mi)

MAJOR ETHNIC GROUPS

Sinhalese, Arab, Dravidian, black

LANGUAGE

Dhivehi

RELIGION

Sunni Islam

UNIT OF CURRENCY

Maldivian rufiyaa

NATIONAL FLAG

Green rectangle bordered by red field; centered in the rectangle is a white crescent.

NATIONAL EMBLEM

A golden five-pointed star surrounded by a golden crescent with horns nearly touching each other. The device is flanked by crossed national flags, with a white scroll at their base carrying the nation's name in Kufic script. Behind the device is a tall palm with green fronds.

NATIONAL ANTHEM

"Gavmii Mi Ekuverikan Matii Tibegen Kuriime Salaam" (In National Unity Do We Salute Our Nation)

NATIONAL HOLIDAYS

July 26 (National Day), November 11 (Republic Day), various Islamic festivals

DATE OF INDEPENDENCE

July 26, 1965

DATE OF CONSTITUTION

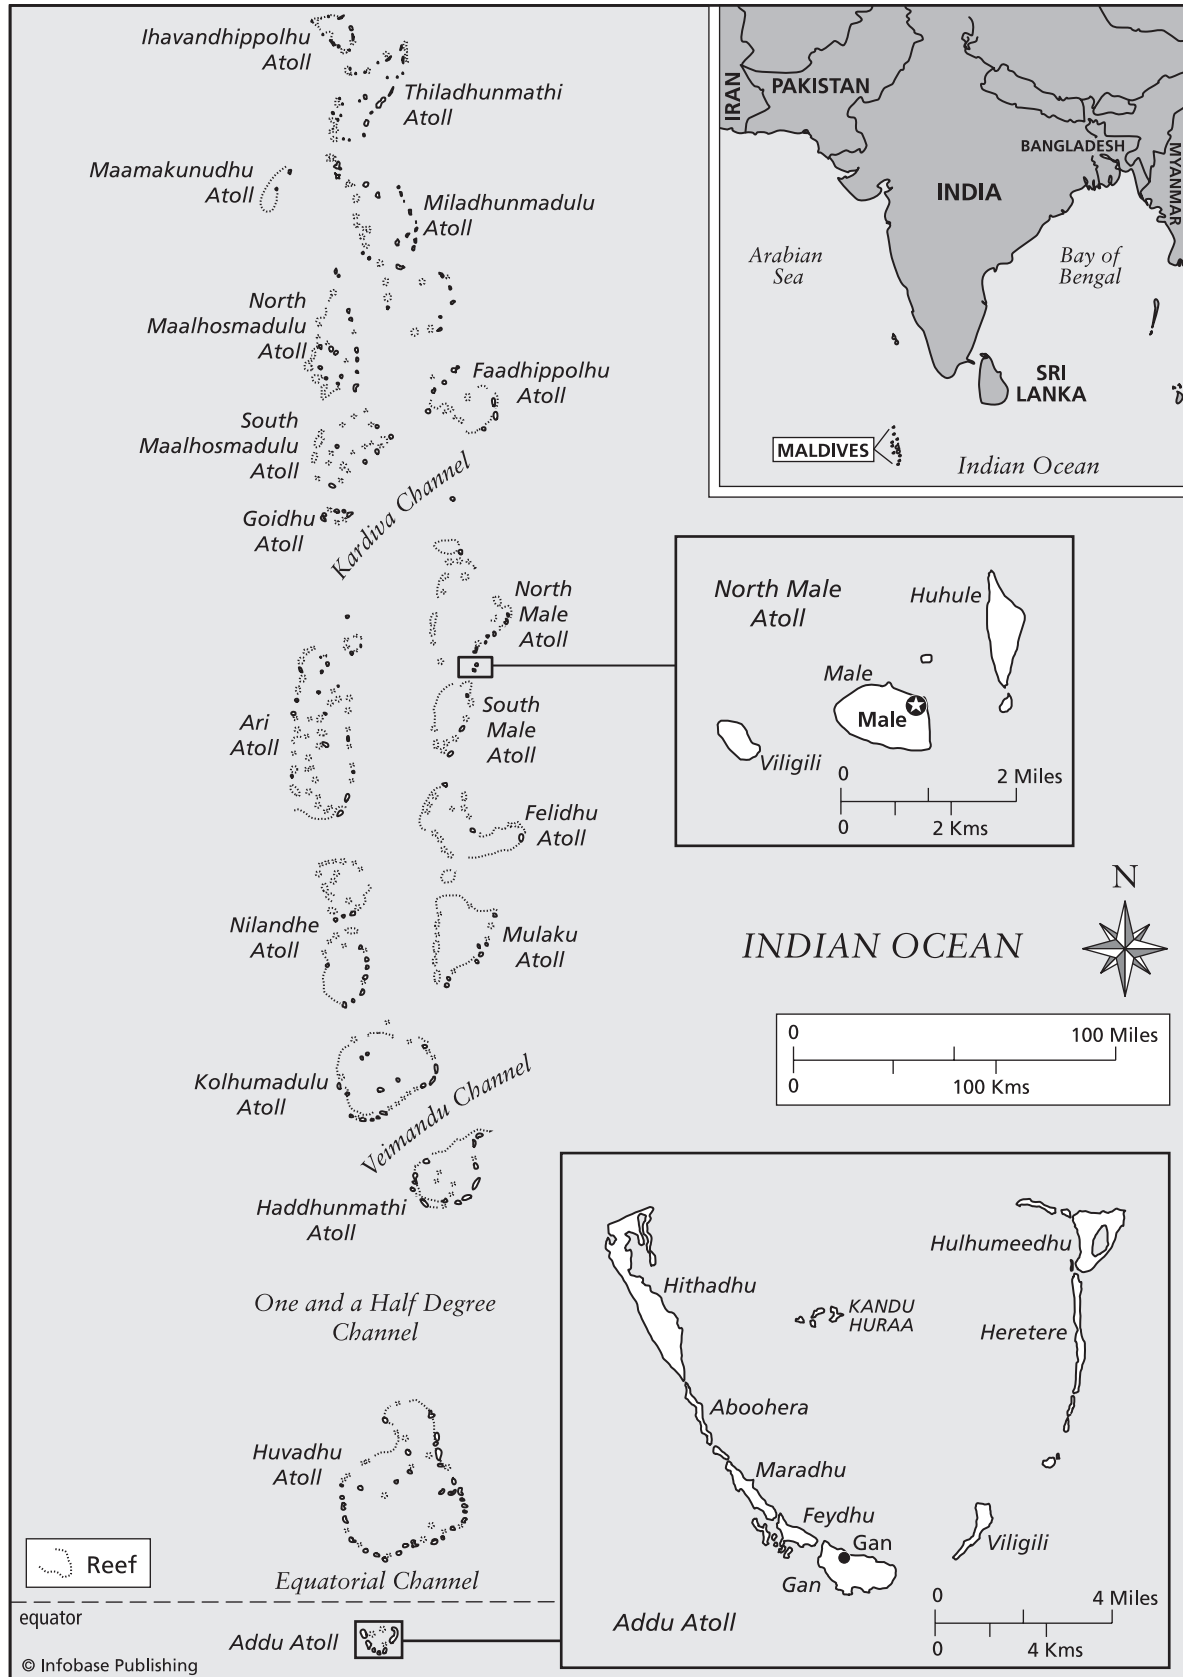

January 1998

GEOGRAPHICAL FEATURES

The Maldives are an archipelago of tropical atolls in the north-central Indian Ocean about 670 km (415 mi) southwest of Sri Lanka and 600 km (372 mi) from the southern tip of India. The islands span an arc 804 km (498 mi) north to south and 159 km (99 mi) east to west, with a total land area of 300 sq km (116 sq mi). The country consists of 1,190 islands, comprising 26 natural atolls (a word derived from Dhivehi, the national language); however, for administrative purposes, the nation is divided into 19 atolls. The total coastline is 644 km (400 mi), and the country's area including sea and land is nearly 90,000 sq km (55,800 sq mi).

Of the 1,190 islands, only 202 are inhabited. The average size of the islands is 0.64 sq km (0.25 sq mi), and none is larger than 13 sq km (5 sq mi). The islands are low, rising only a few feet above sea level, and many of the islands are just tiny banks washed by the ocean. Some disappear over time, while others are formed. Some atolls have encircling reefs, others are made up of many small, ring-shaped reefs. Many contain freshwater lagoons. The inner shores of the islands are frequently marshy. East-west passage through the island chain is facilitated by a number of clear, navigable channels: Kardiva, or Five-Degree Channel (width of 38.6 km; 24 mi); Veimandu, or Kolumadula Channel (24 km; 15 mi); One-and-a-Half-Degree Channel (80 km; 50 mi); and Equatorial Channel (74 km; 46 mi).

CLIMATE AND WEATHER

The climate is hot and humid, with little daily variation. The mean temperature is 27°C (81°F). The temperature ranges from 26.6 to 29°C (80 to 84°F) in December and January and from 29.4 to 32°C (85 to 90°F) in March and April. The islands are subject to southwesterly monsoons from June to August and to northeasterly monsoons from November to March. Annual rainfall averages 2,540 mm (100 in) in the north and 3,810 mm (150 in) in the south. Violent storms are common during the monsoons.

Climate and Weather

Mean Temperature: 81°F
 Temperature Range: Winter 80°F to 84°F
 Summer: 85°F to 90°F
 Average Rainfall: 100 in to 150 in

FLORA AND FAUNA

With sandy, alkaline soil, the islands of the Maldives do not support much natural vegetation aside from breadfruit trees, coconut palms, shrubs, scrub growth, and some wildflowers. The island of Fua Mulaku, higher than other islands in the country and thus experiencing less seawater incursion into its groundwater, is more lush than the other islands. Pineapples and oranges are cultivated there.

Coral reefs consisting of about 70 different species surround the islands. The waters around the Maldives are home to over 700 species of fish, many of which live in the reefs, while others inhabit the open ocean. Among the wide variety of marine life are tuna, including dogtooth tuna, jacks, sweetlips, butterfly fish, wahoo, and fusiliers. Mating octopus can also be found, as well as sharks, turtles, eels, rays, and anemones.

ETHNIC COMPOSITION

The four main ethnic strains in the population are Sinhalese, Dravidian, Arab, and black. These elements each predominate within specific geographical areas. The northern islanders are primarily Dravidians, the middle islanders Arabs, and the southern islanders Sinhalese, the latter two being lighter skinned and taller. Persons of black origin form a separate endogamous subgroup called the Ravare. The original population of the islands is thought to have been Dravidian, but they were displaced in about the ninth century by the Arabs. Malayan and Portuguese influences are also noticeable in the population.

The only ethnic minority is the Indians, who formed a colony in the Maldives in the 17th century. They also constitute a religious and linguistic minority.

LANGUAGES

The national language is Dhivehi, an Indo-European language closely related to Elu, an archaic form of Sinhalese. Dhivehi has numerous loanwords from Arabic, Hindi, and Tamil. Until recently Dhivehi had two alphabets: one an adaptation of Arabic and the other, called Thaana, derived from Sanskrit and Sinhalese scripts but written from right to left with diacritics. In 1977 the government announced that the Dhivehian script would be romanized, but in 1979 the country returned to the Thaana script. English, Sinhalese, and Hindi are the principal foreign languages used in commerce.

RELIGIONS

Islam is the state religion. Almost all Maldivians belong to the Sunni sect, which was introduced into the islands in the ninth century. Religion is a dominant force in national life, and there are numerous mosques.

349,000

HISTORICAL BACKGROUND

The first inhabitants of the islands came from Sri Lanka and southern India before 500 B.C.E. However, many Maldivians believe that their ancestors can be traced back to the Redin people, who were sun worshippers. The country was converted to Islam in 1153 C.E. The first European contact came in the 16th century, when the Portuguese sought to build a fort in Male. In 1558 the Portuguese invaded the islands, then controlling most of the country for the next 15 years, until Chief Mohammed Thakurfaanu led an attack on the main Portuguese garrison and killed them all. The islands remained a stopping point for Europeans on the Indian trade routes throughout the 17th and 18th centuries, when they were both a Dutch and a British protectorate. The Maldives were a British protectorate from 1887 to 1965.

The country was granted internal self-government in 1960 and full independence five years later. The Maldives retained their ancient sultanate during their first three years of independence. After a November 1968 referendum, however, the country became a republic, with a president as head of state and prime minister as head of government. Ibrahim Nasir became the first president. In a 1975 constitutional revision the post of prime minister was abolished, and the president assumed all executive responsibilities.

Nasir did not run for reelection in 1978 due to health concerns. He was succeeded by Maumoon Abdul Gayoom, his minister of transport. On taking office, Gayoom indicated that he would devote himself to the development of the country's impoverished rural areas and maintain the nation's foreign policy of nonalignment.

Nasir departed the Maldives following his resignation, but the government subsequently wanted him to return to the country to be tried on charges of misusing government funds. In 1980 Nasir was implicated in an unsuccessful coup against Gayoom. Nasir denied any involvement, and government efforts to extradite the former president from Singapore, where he lived in exile, failed.

Gayoom was reelected president in 1983 and again in 1988. In both those years there were still other unsuccessful coup attempts against the government. The

1988 attempt was crushed when Indian army commandos arrived to repel an amphibious attack force made up largely of ethnic Tamil mercenaries from Sri Lanka. The coup attempt was believed to have been organized by four prominent political opponents of Gayoom, including Nasir, although he again denied having played any part in the incident. In 1989, 16 people were sentenced to death and another 59 received jail sentences for their involvement in the failed coup attempt. President Gayoom was reelected for a fourth term in 1993, after receiving a 92.8 percent endorsement as the sole candidate, and again in 1998 with 90.9 percent of the vote. In 1998 the country adopted a new constitution.

At the UN World Summit on Sustainable Development held in 2002 in Johannesburg, South Africa, President Gayoom voiced his country's fears of global warming. He warned that his country could be submerged if a rise in sea levels, due to the melting of polar ice caps, continued. Since 2003 the country has experienced occasional antigovernment demonstrations calling for political reforms. Following further riots in the capital, Male, in August 2004, the president and his government pledged to embark upon democratic reforms, including a more representative political system and expanded political freedoms. The December 2004 Indian Ocean tsunami caused severe damage to many of the country's low-lying islands and hurt the important fishing and tourist industries.

LIST OF MODERN RULERS

President of the Republic

1968–78 Ibrahim Nasir Rannabandeyri Kilegefan

1978– Maumoon Abdul Gayoom

CONSTITUTION

The country is governed by the constitution of 1998, which replaced the 1964 constitution drawn up by the British jurist Sir Ivor Jennings. The constitution was written for the short-lived republic of 1953 and was reactivated when the republican system was revived in 1968. Under its provisions the Majlis (Citizens' Assembly) chooses by secret ballot, from as many candidates as are proposed by members of the Majlis, a single nominee for president. The nomination is then confirmed or rejected in a nationwide referendum, also by secret ballot. In order to be elected president, a candidate must win at least a 51 percent majority.

The president appoints and heads the cabinet, whose strength is fixed at nine members. The constitution of 1964 originally provided for a prime minister, but that post was abolished in a 1975 constitutional revision that permitted the president to appoint an unlimited number of vice presidents. This provision was abolished in 1977.

The president functions as both head of state and head of government.

The nation's parliament is the unicameral Majlis. The Maldivian judicial system is based on sharia, Islamic law. Justice is administered through a presidentially appointed body, the Maldives High Court, which was initiated in 1980. There is also a Police Court, a Court of Summary Jurisdiction, and eight additional courts in Male. In addition, there are courts on every populated island in the country. All of the nation's courts fall under the jurisdiction of the Ministry of Justice. The government of the islands is uncomplicated and simple; there is no department of defense, no post office department (although stamps are issued), and no social security administration.

In 1998 the new constitution went into effect. Like its predecessor, the new constitution provided for a unicameral Majlis controlled by an elected majority. The legislature nominates the president for a five-year term, with confirmation required by popular referendum. There were no changes in the legal system, which continues to be based on sharia. Changes introduced by the 1998 constitution included multiparty candidates for the Majlis, parliamentary immunity from prosecution, the expansion of ministerial powers, and greater rights for citizens.

PARLIAMENT

The Majlis, or Citizens' Assembly, is a unicameral body of 50 members, eight of whom are appointed by the president; the other members are elected by universal suffrage on the basis of two from each inhabited atoll, or territorial unit, and two from the capital, Male. Elections to the Majlis are held individually, atoll by atoll. Thus, a representative elected in the middle of a Majlis session continues to hold office into the following session, until he completes the regular parliamentary term of five years. Candidates for the Majlis must be over 25 years of age, Muslim, able to read and write both Arabic and Maldivian script, free of criminal involvement for the past five years, and in good mental and physical condition. Once elected, Majlis representatives are freely approached by citizens or groups with grievances or points of view on proposed legislation. The Majlis meets three times a year.

Since there are no political parties, factions in the Majlis tend to coalesce around individuals or points of view and vary according to issues. Any member may introduce legislation, which, if seconded, must be considered by the Majlis. All laws must be approved by the Majlis. The Majlis can question ministers and call for their removal. In practice, however, the Majlis generally supports the government after carefully discussing and sometimes amending its proposals.

Suffrage is universal over the age of 21. Despite the facade of free elections, the government is closely controlled by vested interests.

POLITICAL PARTIES

There are no political parties in the Maldives, although they are not banned. The last elections were held on January 22, 2005. Only nonpartisans stand for elections, though 18 of those elected were endorsed by the Maldivian Democratic Party, an exile political party in Sri Lanka that opposes Gayoom's rule.

LOCAL GOVERNMENT

The Maldives are divided, for purposes of local government, into 20 atolls, including the capital district. Each atoll is headed by a *verin*, or chief, who is assisted by an elected committee. On each inhabited island there is a *kateeb*, or headman. Both *kateeb* and *verin* are appointed by the president. All populated islands also have assistant headmen and a mosque official called a *mudin*. Male is divided into four administrative wards.

LEGAL SYSTEM

Maldivians follow sharia (Islamic law), and violators are occasionally flogged. However, punishment is usually confined to less physical means: fines, payments of compensation, house arrest, imprisonment, or banishment to sparsely populated islands, where prisoners must earn their daily keep. During trial the accused may defend himself and call witnesses. He may also be assisted by a lawyer, but there are few lawyers, and they are not provided by the courts. The accused is sentenced by the judge; the length and type of sentence are established by law and custom.

There are a High Court and eight lesser courts in Male, each dealing with specific types of cases (such as debt, theft, or property claims). On other islands are courts that deal with all types of cases. Judges who are trained in Islamic law are appointed by the president and serve at his pleasure and thus cannot be considered fully independent. Cases in island courts that present knotty legal points are referred to the appropriate specialized court in Male, whose judge may in turn refer the legal point to four judges attached to the Ministry of Justice for assistance. The High Court acts as a court of appeal and handles political cases, such as the trials of the participants in an attempted coup d'état in 1980 and of four Majlis members found guilty of bribery in 1983. President Gayoom can also review High Court decisions and appoint and dismiss judges, which makes the judiciary less than independent of the executive branch.

HUMAN RIGHTS

The Maldives has an extensive system of prisons; international human rights groups have reported that brutality

and torture are common in these institutions. Common forms of punishment are fines, house arrest, and banishment to thinly inhabited islands, where the person is expected to earn his own living. Violent crimes occur very rarely. The legal system is based on sharia, although the more draconian punishments provided for by the sharia are never administered. Still, violators of the law may be subject to flogging.

All publications must be registered with the government, and journalists are subject to prosecution for contravening any number of laws, such as "arousing ill feelings against a lawfully formed government." The government's National Security Service is responsible for certain human rights violations, such as arresting peaceful protestors and political opponents of President Gayoom. The government did amend its Prevention of Terrorism Act in 1998 to put limits on the police detention of suspected persons. However, though Gayoom promised reforms after riots in 2003 and 2004 protesting his autocratic regime, such reforms have not been forthcoming.

FOREIGN POLICY

The Maldives maintains diplomatic missions only at the United Nations' headquarters in New York, London, and Colombo, Sri Lanka, where most ambassadors accredited to Male are resident, except those from Sri Lanka, Pakistan, and India. The Maldives is a special member of the Commonwealth and also a founding member of the South Asian Association for Regional Cooperation. Maldives has long been an advocate of having the Indian Ocean declared a zone of peace, with foreign military forces and nuclear arms permanently banned from the area.

The Maldives has increasingly opened diplomatic relations with more and more countries, with the tourism industry opening the nation to foreign visitors.

DEFENSE

The internal security forces consist of the *lascreeen* (militia) and a sea patrol. Recruits must be 18 years of age or older. Military expenditures amounted to \$41.1 million in 2004, or 5.5 percent of gross domestic product (GDP).

ECONOMY

Tourism, the Maldives' single largest economic sector, accounts for some 20 percent of GDP and more than 60 percent of foreign exchange receipts. Over 90 percent of government tax revenue comes from import duties and tourism-related taxes; over 560,000 tourists visited the islands in 2002. Fishing is a second leading sector. Agriculture and manufacturing continue to play minor roles in the economy, as constrained by the limited availability of cultivable land and the shortage of domestic labor. Most staple foods are imported. Industry, which consists mainly of garment production, boat building, and handicrafts, accounts for about 18 percent of GDP. Maldivian authorities worry about the impact of erosion and global warming on their low-lying country; 80 percent of the area is one meter or less above sea level.

The Maldivian government began an economic reform program in 1989, initially by lifting import quotas and opening some exports to the private sector. Subsequently, it has liberalized regulations to allow more foreign investment.

The Indian Ocean tsunami of December 2004 caused severe disruption to the country's tourist industry. Many of the islands suffered major damage, and the government announced that the damage set the development of the country back two decades.

ENVIRONMENT

Growing concern in the Maldives in the early 1990s focused not on internal dissent but on how much longer the country could remain above sea level. In two separate international reports, scientists warned that global

warming could cause ocean waters to rise and submerge the Maldives, which on average is only six feet above sea level, within 100 years. Another environmental threat to the tiny country is the continued depletion of freshwater aquifers.

There is also rising concern about coral-reef and marine-life damage because of coral mining (used for building and jewelry making), sand dredging, and solid-waste pollution. The mining of sand and coral have removed the natural coral reefs that protected several important islands, making them highly susceptible to the erosive effects of the sea. Such mining practices have recently been banned. The Asian Brown Cloud, a U.S.-sized area of pollution over the Indian Ocean, has the potential to wreak havoc on the tourism- and fishery-based Maldivian economy.

LIVING CONDITIONS

The UN 2004 Human Development Report ranked Maldives 84th out of 177 countries in terms of standard of living. In 2004 life expectancy was 64 years; literacy stood at 97.2 percent, with 78 percent of eligible students enrolled in primary, secondary, and tertiary schools; and per capita GDP was \$3,900. The Maldives ranked 17th among 95 developing countries on the Human Development Report's poverty index.

As a chain of remote islands with few natural resources, the Maldives relies on imports to meet most basic needs. Most people travel by bicycle or foot. Inter-atoll transportation still depends mostly on local sailing boats, and most islands are not large enough to support automobiles. However, an international airport does bring several hundred thousand visitors to the islands annually.

Maldivians live mainly in detached dwellings made of everything from bricks to sticks. In Male, construction is similar to that found in Colombo, Sri Lanka. Most homes have electricity, but heating and cooking are done with oil or firewood. One-quarter of the population lives in Male; the rest live on islands in small communities.

HEALTH

As of 2004 there was one doctor for every 1,500 Maldivians and a total of 643 hospital beds to serve the en-

tire population; health-care expenditures amounted to 4.7 percent of GDP. The infant mortality rate was over 56 deaths per 1,000 live births. State-of-the-art medical services are available at Male's Indira Gandhi Memorial Hospital, which has 200 beds and a staff of both Maldivian and foreign doctors and specialists.

Malaria and diarrheal diseases have been drastically reduced. Waterborne-disease epidemics have occurred, however, often as caused by the contamination of wells. In 2002, 84 percent of the population had access to safe drinking water, but only 58 percent were using adequate sanitation facilities. Immunizations are provided free of charge by the government, and the rates of immunization for children one year of age were 98 percent for polio, DPT, and tuberculosis and 96 percent for measles. The HIV/AIDS prevalence rate in 2001 was 0.1 percent, and fewer than 100 people were living with the disease.

FOOD AND NUTRITION

Fish and rice are the staple foods of the Maldives, with meat and chicken eaten only on special occasions. National dishes include fried fish, fish curry, and fish soup. The areca nut, an oval nut often chewed with betel leaf, cloves, and lime, is typically taken after a meal. As the national religion is Islam, alcohol is only available in tourist resorts. *Raa* is a sweet drink tapped from the crown of the palm trunk. Apart from coconuts, there are very few fruits and vegetables grown on the islands, so most of the food served at tourist resorts is imported.

Adequate nutrition and a balanced diet are problematic. Between 1995 and 2003, 30 percent of children under five suffered moderate or severe undernourishment. Only 44 percent of households used iodized salt, and a little more than half of households used vitamin A supplements.

STATUS OF WOMEN

Although traditionally women and men have not been given equal political and economic opportunities, Maldivian women have benefited from the current government's efforts to improve such opportunities for them. In 1982 the president appointed a National Women's Committee, which is charged with increasing participation by women in the country. However, by Islamic and Maldivian tradition, women still play lesser roles than do men in public life.

Nevertheless, patterns of behavior and living conditions for women are less restrictive than in some other Islamic countries. For example, women are not required to wear veils, and a growing number of women serve in responsible positions in the government and in professions.

WORK

As of 2000 the Maldivian labor force was 88,000 strong, with negligible unemployment. Almost one-third of these workers were foreign. About 22 percent of workers are involved in agriculture, producing coconuts, corn, sweet potatoes, pineapples, and oranges, while 18 percent are engaged in industry, tourism and fish processing being chief among these. Other industries include shipping, boat building, coconut processing, garments, woven mats, rope, handicrafts, and coral and sand mining. The majority of the workforce is involved in the service sector.

Workers lack the legal rights to form trade unions, stage strikes, or bargain collectively. In practice, no unions exist, although some workers have established informal associations that address labor issues. The minimum work age is 14. There are no legal regulations regarding the length of the workweek or minimum wage.

Employment and Labor

Labor Force Total: 88,000
 Female Participation Rate %: 43.9

EDUCATION

Education is neither free nor compulsory. Schooling lasts 11 years, as divided into five years of primary school and six years of secondary school. Secondary schooling consists of two cycles of three years each. Paralleling the modern school system is the traditional system, consisting of *kuttabs* and madrassas, in which children receive Islamic instruction.

The academic year runs from January to December. The medium of instruction is Dhivehi in secular schools and Arabic in Islamic schools. Government middle schools in Male use English as the medium of instruction.

Government expenditures on education were 18 percent of the budget in 2002. By early 2003 every inhabited island was equipped to provide primary-school education through grade five. In 2002 net primary-school enrollment was 92 percent of eligible students; however only 51 percent of eligible students were enrolled in secondary school. Fewer islands have secondary schools for grades six through 10, and the only high school (for grades 11 and 12) in the Maldives is in Male. Regardless of secondary enrollment, literacy is high; in 2003 the rate was 97.2 percent. The country has seven postsecondary technical-training institutes, but most Maldivians must go abroad for a college education.

The World Bank committed \$17 million for education development in the Maldives in 2000–04, including distance-learning programs. Another \$7 million came from the Asian Development Bank in 2001–03 to support postsecondary education development.

MEDIA

Two daily newspapers are published in Male, in Dhivehi and in English. The national news agency is the Haveeru News Agency. Book-publishing activity is reflected in the average annual title output of three volumes.

The state-owned radio station, Voice of Maldives, operates one medium-wave transmitter and four shortwave transmitters. It broadcasts 4,288 hours annually in English and Dhivehi. Daily news bulletins from Radio Beijing, the BBC, and Radio Australia are also relayed. One of the first acts of the Gayoom government was to stop renting air-time to Christian evangelistic ministries.

A limited television service was begun in 1978. Male has a public library and a public museum.

The law allows authorities to shut down newspapers and sanction journalists for articles containing unfounded criticism of the government. Moreover, regulations make editors responsible for the content of the material they publish. Thus, self-censorship has been practiced by the media during Gayoom's rule. However, after Gayoom was elected for a sixth term in 2003, newspapers as well as the state-run radio and television became more openly critical of government policies. Still, in its 2004 index on international press freedom, the watchdog media group Reporters without Borders ranked Maldives 155th out of 167 countries.

As of 2002 there were about 42,000 cellular telephone users and 15,000 Internet users.

CULTURE

Traditional culture in the Maldives centers on dance performances accompanied by large drums, called *boduberu*. Once part of the life of the islanders, such frenzied dancing is now put on only for tourists. However, modern rock bands in the islands have incorporated some of the rhythms of the *boduberu*. Crafts such as carving and basketry are also still practiced.

Much of the contemporary cultural life of the islands is centered on Islamic tradition and festivals, such as that at the end of Ramadan. Western and South Asian influences have also found their way into the cultural mix in the form of pop music and Hindi movies.

The National Museum in Male has a collection of items of historical and cultural interest from both the pre-Islamic and Islamic eras of Maldivian history. These include various archaeological finds from local excavations.

FOLKLORE AND MYTHOLOGY

Until recently, social life in Maldives was largely determined by *fanditha*—a mixture of folk medicine, charms, and black magic based on ancient beliefs and superstitions, with the addition of Arabic Koranic verses. Magic was often used in political intrigue and courtship and marriage rites as well as for launching new ships, ensuring good fish catches, finding guilty parties when crimes were committed, and treating the sick. *Fanditha* assumed less benign forms when it was employed to weaken or kill enemies.

Though modern Maldivians now find *fanditha* traditions outmoded, many ancient beliefs survive. For example, islanders fear jinn, evil spirits that come from the sea, land, and sky. These are blamed for everything that cannot be explained by religion or science. The Handi is another such holdover from a more primitive belief system. Handi has historically referred to an attractive demon woman, dressed in red, who seduces and slowly

kills any man unlucky enough to marry her. The word is derived from the Sanskrit *Candi*, a name for the Hindu goddess Kali. Handi is now often used by Maldivians to describe any horrifying demon supposedly seen at night or during bouts of tropical fever.

A favorite Maldivian myth is the story of King Koi-mala, who supposedly founded Male. An orphan, this future king was raised by cows. He was then herded and captured by the King of Serendip, whom he so enchanted with tales of his feral life that the King of Serendip gave him his daughter's hand. One day a bird told him to build a small boat and set sail. He landed on Male Atoll and decided to start a kingdom there.

ENTERTAINMENT AND RECREATION

Television and home videos are popular forms of entertainment. Martial arts movies and films from India make up much of the cinematic fare. While fishing is one of the major industries, it also provides recreational opportunities for those not working as fishermen. The thousands of miles of coastline in the Maldives beckon Maldivians, as they do the foreign tourists who flock to the various pristine atolls.

ETIQUETTE

Handshakes are the usual form of greeting but are not used between Muslim men and women. Many of the elements of Maldivian daily life reflect the country's Islamic tradition. Shoes should be removed before entering mosques or private homes. Dress is conservative. Taboos regarding pork and alcohol are maintained for the Islamic population.

FAMILY LIFE

About 80 percent of Maldivian households consist of a single nuclear family, composed of a married couple and their children, rather than an extended family. Families tend to be large by Western standards; the fertility rate in 2004 was five children born per woman. Typically, unmarried adults remain with relatives instead of living alone or with strangers. The man is usually the head of the household, and descent is patrilineal. Women do not accept their husbands' names after marriage, instead maintaining their maiden names. Inheritance of property is through both males and females.

As Muslims, men may have as many as four wives, but polygamy is not widespread. Instead, serial marriage is more usual. Islamic law as practiced in the Maldives makes divorce easy for both men and women, and divorce rates

are among the highest in the world; in the 1970s the divorce rate was estimated to be 85 percent. According to the 1977 census, nearly half of women over the age of thirty had been married four times or more. Half of all women marry by the age of fifteen, while men marry a bit later.

These statistics are changing with modern times. In 1999 the divorce rate had fallen to 33 percent throughout the country, although in Male it was still high, at 64 percent.

PERSONAL APPEARANCE

Western fashions predominate on the streets of Male and on many of the other islands. Traditional clothing is also still worn, however, including the *mundu* for men, a cotton sarong in conservative colors, and saris for women. Clothing is light but conservative, with head coverings often employed by women, according to Muslim tradition.

SPORTS

Soccer is the most popular spectator sport, with the national team competing in the Asian and world championships. The national team's excellent performance in World Cup qualifiers in 2004, upsetting both South Korea and Vietnam, brought a new level of awareness to the game on the part of the islanders.

Water sports, such as scuba diving, are popular with tourists.

CHRONOLOGY

- 1965** The Maldives proclaims formal independence and joins the United Nations. Independence agreement provides for the retention of a British air base in Gan.
- 1968** Following popular referendum the Maldives sultanate is replaced with a republican form of government, with Ibrahim Nasir as president.
- 1972** Ahmed Zaki is named prime minister.
- 1975** Zaki is dismissed and placed under house arrest.
- 1976** United Kingdom withdraws from the Gan air base.
- 1977** Dhivehi script is romanized. All five vice presidents are demoted to the rank of minister.
- 1978** President Nasir steps down for health reasons, and Maumoon Abdul Gayoom is elected president.
- 1979** The Majlis launches an investigation into former president Nasir's administration. Nasir is charged with embezzlement, the collection of illegal taxes, and other violations of the constitution.

- 1980** The Maldivian Monetary Authority is set up as the nation's central bank.
- 1981** The national currency name is changed from rupee to rufiyaa.
- 1982** Maldives joins the Commonwealth as its 47th member.
The Bank of Maldives, the first indigenous commercial bank, is established.
- 1983** President Gayoom is reelected to a five-year term.
- 1986** Accord is signed with India in which New Delhi pledges to give the Maldives about \$17 million toward the building of a hospital at Male, as well as to other projects.
- 1988** President Gayoom is reelected to another five-year term in September.
A coup attempt launched by an amphibious force, composed mostly of ethnic Tamil mercenaries from Sri Lanka, is quashed with the assistance of Indian army commandos.
- 1989** Sixteen people are sentenced to death, and another 59 are jailed, for their involvement in the failed 1988 coup attempt.
- 1990** Two separate international reports warn that global warming could cause the ocean to submerge the Maldives within 100 years.
- 1993** President Gayoom runs unopposed for a fourth five-year term as president.
- 1998** A new constitution is adopted.
President Gayoom is reelected to a fifth term as president.
- 1999** More than 125 nonparty candidates vie for 40 seats in parliamentary elections.
- 2000** Amnesty International accuses the security forces of Maldives of having tortured three opposition candidates for parliament in the 1999 elections.
- 2001** Chinese Premier Zhu Rongji visits the Maldives in May. An agreement on economic and technical cooperation is signed between the two countries.
- 2002** President Gayoom warns of the dangers of global warming at the World Summit on Sustainable Development in Johannesburg, South Africa.
- 2003** Antigovernment riots break out in Male as a result of the deaths of four prisoners.
Gayoom is reelected to a sixth term, taking 90 percent of the vote.
- 2004** Prodemocracy demonstrations are met with a declaration of a state of emergency. Gayoom promises democratic reforms.

In December, nearly 100 are killed and millions of dollars of damage to the country's infrastructure is sustained when the Indian Ocean tsunami strikes.

HEAD OF STATE

President Amadou Toumani Touré (from 2002)

HEAD OF GOVERNMENT

Prime Minister Ousmane Issoufi Maïga (from 2004)

NATURE OF GOVERNMENT

Multiparty democracy

POPULATION

12,291,529 (2005)

AREA

1,240,000 sq km (478,764 sq mi)

MAJOR ETHNIC GROUPS

Bambara, Fulani, Marka, Songha, Malinke, Tuareg, Senufo

LANGUAGES

French (official), Bambara

RELIGIONS

Islam, animism, Christianity

UNIT OF CURRENCY

Communauté financière d'Afrique franc

NATIONAL FLAG

Tricolor of green (left), yellow, and red vertical stripes

NATIONAL EMBLEM

In black and white, a bird hovers above a mosquelike structure, while bows with taut strings and fixed arrows are poised outward; at the bottom is a rising sun with nine rays.

NATIONAL ANTHEM

"Pour l'Afrique et pour toi" (For Africa and for you, Mali)

NATIONAL HOLIDAYS

January 1 (New Year's Day), May 1 (Labor Day), September 22 (National Day, Independence Day), Christmas, various Islamic festivals

DATE OF INDEPENDENCE

September 22, 1960

DATE OF CONSTITUTION

January 12, 1992

GEOGRAPHICAL FEATURES

Mali, a landlocked country located in West Africa, has an area of 1,240,000 sq km (478,764 sq mi), extending 1,852 km (1,151 mi) east-southeast to west-southwest and 1,258 km (782 mi) north-northwest to south-southeast. Mali shares its international border of 7,501 km (4,661 mi) with seven neighbors: Algeria, Niger, Burkina Faso, Côte d'Ivoire, Guinea, Senegal, and Mauritania.

Mali is generally flat, except in the south and the east. In the south the Futa Djallon Highlands and the Manding Mountains provide a barrier separating Mali from Guinea. The eastern region contains two spectacular mountain ranges: the Bandiagara Plateau and the Hombori Mountains, the highest point of which is the Hand of Fatima at Hombori Tondo (1,155 m; 3,788 ft). The Adrar des Iforas is an eroded sandstone plateau in north-

eastern Mali that forms part of the Ahaggar Mountain system. The central part of Mali is filled by the floodplain of the Niger River delta, covering a surface area of some 103,599 sq km (40,000 sq mi). Northern Mali lies within the Sahara. In the extreme north are vast plains known as the Tanezrouft and Taoudenni, covered in many areas by shifting sand dunes known as *ergs*.

CLIMATE AND WEATHER

Mali has three climatic zones: Sudanic, Sahelian, and Saharan. In general, the year is divided into three main seasons: a rainy season from June to October; a cool, dry season from November to February; and a hot, dry season from March to May. The average temperature in the Sahelian region is 30°C (86°F), but in the summer temperatures over 40°C (104°F) are common. The Saharan zone, which constitutes 40 percent of the national territory, receives little or no rain. The Sahelian zone receives 200–400 mm (8–16 in) annually, the Sudanese zone 700–1,000 mm (28–39 in). Rains rarely last for more than a few hours in all regions.

From November through January the *alizé* blows cool air from the northeast. In February the dreaded harmattan begins to blow hot, scorching wind from the Sahara, causing temperatures to rise to 60°C (140°F).

Climate and Weather

Mean Temperature:	86°F to 104°F
Average Rainfall	
Saharan zone:	0 in
Sahelian zone:	8 in to 16 in
Sudanese zone:	28 in to 39 in

FLORA AND FAUNA

Two distinct vegetation zones are found in Mali. The Saharan/Sahelian zone in the north is steppe-like (Sahelian) and also contains fixed dunes (Saharan), while the wetter southern Sudanese zone contains dense forest along with savanna. Trees in the Sudanese zone include the twoball nitta, kapok, mahogany, baobab, and cailcedra. In the drier Sahel are found palmyra and doum palm near the border with the Sudanese zone, while farther north dry-weather vegetation such as acacia, gum trees, and mimosa are found.

Animal life also varies according to zone. In the Saharan zone are found Dorca's gazelle, cheetah, and wild sheep. The Sahelian zone is home to a wide variety of animals, including the oryx, gazelle, giraffe, wart hog, ostrich, bustard,

red monkey, cheetah, lion, jackal, fox, and hyena. In the Sudanese zone are large and small antelope, buffalo, elephant, lion, hare, and monkey. Avian life includes guinea fowl, quail, pigeon, and water birds such as duck, teal, sandpiper, peewee, godwit, and woodcock. Other birds found in the south are pelican, ibis, egret, heron, eagle, and vulture.

ETHNIC COMPOSITION

Mali is ethnically a mosaic of tribes, each with its own language, dominant territory, occupation, and social organization. The vast majority of these tribes are Negroid. The Tuareg, however, are classified as Caucasoid and are probably of Berber origin. The Fulani, or Peul, are of mixed origin. The Fulani are also physically distinct from their neighbors, being thin, tall, and light skinned, with some Caucasian facial features. The main ethnic groups of Mali, however, are the Bamana, Malinke, and Sarakole, accounting for 50 percent of the total population.

The Tuareg, Fulani, and Maure, or Moor, are primarily shepherds; the Bozo and Somono are fishermen; the Sarakole and Dioula are merchants; the others are agriculturists. Because of inhospitable climatic conditions, Mali never had a large Western community, even as a French territory. The number of French in the country is estimated at 4,000.

LANGUAGES

The official language is French, but probably less than 10 percent of the population can speak or write it. Bambara

(or Bambara-ka) qualifies as the lingua franca, and since a large proportion of the educated administrators belong to the Bambara tribe, it tends to replace French as the language of administration in certain situations. In the inland delta, Fulfulde, the vernacular of the Fulani, competes with Bambara as the lingua franca, while in the east and northeast Songhai is widely spoken. Most of these languages belong to the Niger-Congo group.

RELIGIONS

Islam, introduced in the 11th century, is Mali's predominant religion, claiming 90 percent of the population as adherents. Islam is the religion of the Sarakole, Maure, Tuareg, Songhai, Dioula, and Tukulor peoples, as well as of most of the Bamana. The Bozo, Fulani, and Somono are only partially Islamized. Most Muslims belong to the Malekite School of the Sunni sect. Of the many Islamic brotherhoods found in West Africa, both Tijaniya and Qadiriya are represented in Mali. More recently, the Wahhabis, a fundamentalist group originating in Saudi Arabia, have gained many adherents. Djenné and Timbuktu are noted centers of Islamic learning.

Animism is still strong in the south and the west among the Bambara, Malinke, Bobo, and Senufo. Animists constitute about 9 percent of the population, but their numbers are being eroded by vigorous Islamic missionary activity, as supported by petrodollars from Libya and Saudi Arabia.

Christians number just over 120,000, of whom some 10 percent are Catholics. The first Catholic missions were established in the late 19th century by the White Fathers, and by 1895 Catholicism had penetrated the stronghold of Islam in Timbuktu. The Catholic Church is organized in five dioceses—Kayes, Mopti, San, Ségou, and Sikasso—and one archdiocese, at Bamako. The majority of Protestant missionaries are from the United States.

HISTORICAL BACKGROUND

Mali was part of the Empire of Ghana, which was destroyed by Muslim Berbers in the 11th century. By the middle of the 13th century Sundiata Keita had converted the region to Islam and had taken control of the gold and salt mines and trade. As the wealth of the region grew, Djenné and Timbuktu became powerful commercial centers. The Songhai Empire, which was built in the east with Gao as its center, took control of the west. Songhai

dominance lasted about one century, until they were defeated by the Moroccan Berbers.

The French began their conquest of the territory now known as Mali in 1881. Col. Gustave Borgnis Deborderes opened the campaign by seizing Kita and building a fort at Bamako. Later, Marabout Ahmadou and Al Mami Samory Touré, the leaders of the Muslim resistance, were compelled to accept a French protectorate. When they resisted further encroachments, Col. Louis Archinard led a military expedition from 1888 to 1893 that captured Ségou, put Ahmadou to flight, and forced Touré to withdraw to northern Côte d'Ivoire. With the captures of Timbuktu in 1893 and Sikasso in 1899, the conquest of Mali was complete.

Mali remained part of French West Africa until 1958, when it became a part of the Soudan Federation (not to be confused with Sudan in East Africa, although both names are derived from the Arabic term *bilad es sudan*, the "land of the black people"), which also included Senegal, Dahomey, and Upper Volta. The latter two withdrew from the Soudan Federation in 1959, and the surviving union between Senegal and Mali, known as the Mali Federation, expired in 1960, when Senegal withdrew.

Unlike Senegal, Mali was not subjected to systematic Gallicization, and the French influence on the administration, economy, and education were slight. The major French legacy is the French language. Current relations with France are good, although Mali is no longer a member of the French Community.

At independence Mali's government was headed by President Modibo Keita, the leader of the Sudanese Union Party, which won all seats in the 1959 legislative elections. Keita, a Marxist, gradually moved the country to a one-party socialist dictatorship, with all opposition banned. He nationalized major enterprises and attempted to free Mali of French economic domination by moving it out of the franc zone. His attempts at pursuing a socialist development policy failed as a result of inflation, poor government management, and increased taxes.

In 1968 Keita was overthrown in a bloodless coup organized by a group of junior officers, who set up the Military Committee for National Liberation (Comité Militaire pour la Libération Nationale, CMLN), which installed Moussa Traoré as president and Yoro Diakité as head of government. The military regime abrogated the constitution, banned political parties, and reversed the economic collectivization of the previous regime. It pledged a quick return of political and civil rights, but instability within the regime led to further centralization of the military command. In 1969 a total of 20 officers were arrested in an attempted coup; Diakité was removed as prime minister, and Traoré assumed the post. In 1972 Diakité was tried and convicted of plotting to overthrow the government the previous year. He died in prison in 1973.

To placate growing opposition to military rule, in 1974 the government submitted a constitution providing

for return to civilian rule by 1979. The document was approved by a vote of 99 percent. During the period of transition, Traoré announced the formation of the Mali People's Democratic Union (UDPM) as the country's single party. This further exacerbated opposition to the regime by students and politicians barred from political activity. Army resistance to civilian rule led to an attempted coup in 1978.

Civilian rule was formally restored in 1979, with the UDPM as the country's sole political party. Traoré was elected, unopposed, to a five-year term as president. The presidential term was increased to six years in 1982. Running without opposition, Traoré won reelection in 1985, when pro forma legislative balloting was introduced. The office of prime minister was re-created in 1986, with Mamadou Dembelé assuming the post. Traoré abolished the position two years later without explanation.

Bending to prevailing political winds, Traoré agreed in 1990 to allow opposition leaders to speak freely and gave permission for four new independent journals to be published. However, two months later a journalist was arrested for distributing antigovernment literature. Soon after, 175 prominent Malians published an open letter demanding multiparty democracy. In 1991 prodemocracy supporters protested from March 22 to 25, calling for Traoré's resignation. Government troops opened fire on crowds, killing as many as 150 citizens.

The protests culminated in a coup on March 26, when soldiers overthrew Traoré and his government, promising to replace it with a multiparty democracy. The coup leaders formed the National Reconciliation Council, headed by Lt. Col. Amadou Toumani Touré, and dissolved the UDPM. Touré announced plans to establish "social justice and total democracy" for Mali "when the conditions are right."

In 1992 a new basic law (constitution) was approved by 98 percent of voters in a referendum. In the first presidential election held under the new constitution, Alpha Oumar Konaré, leader of the Alliance for Democracy in Mali (ADEMA), defeated his opponent by a 40 percent margin. Konaré's first two prime ministers, Younoussi Touré and Abdoulaye Sékou Sow, had to resign on account of public unrest. They were succeeded by Ibrahim Boubacar Keïta, whose cabinet included 11 ADEMA members and five members of minor parties. In the 1997 presidential election Konaré garnered 96 percent of the vote. In the two rounds of legislative balloting that followed, ADEMA candidates easily dominated the electoral field, which was depleted by an opposition boycott. In 2000 Prime Minister Keïta stepped down unexpectedly and was replaced by Mandé Sidibé. Despite criticisms of corruption and failed economic policies, under Konaré the government became somewhat more representative and responsive to citizens.

In 1999 the former dictator Traoré, his wife, and an associate were sentenced to death for embezzlement, but

their sentences were commuted to life in prison by President Konaré. Presidential elections in 2002 resulted in a victory for the former interim military ruler Amadou Touré, who ran as an independent candidate. Prime Minister Sidibé resigned in 2002 and was replaced by Modibo Keïta, who in turn was replaced by Ahmed Mohamed Ag Hamani. In 2004, Ousmane Issoufi Maïga became the new prime minister. That year almost half of the country's crop was destroyed by locusts.

LIST OF MODERN RULERS

Head of State

1960–68	Modibo Keïta (president)
1968–69	Moussa Traoré (chairman of Military Committee for National Liberation)
1969–79	Moussa Traoré (head of state)
1979–91	Moussa Traoré (president)
1991–92	Amadou Toumani Touré (chairman of transitional committee)
1992–2002	Alpha Oumar Konaré (president)
2002–	Amadou Toumani Touré (president)

CONSTITUTION

The CMLN, which took power in 1968, abrogated the constitution of 1960 and replaced it with the Fundamental Law, under which the Military Committee and the Supreme Court ruled by decree. A new constitution, drafted in 1974 and approved by referendum, took effect in 1979. Under the provisions of this constitution, Mali was to be a single-party state, with the newly formed UDPM as the sole legal party. The president was both head of government and head of state. Under amendments of 1982 and 1985, the president is elected by universal suffrage for an unlimited number of six-year terms.

Following the coup of March 26, 1991, the 1979 constitution was suspended and the UDPM dissolved. The coup leaders, led by Lt. Col. Amadou Toumani Touré, formed the National Reconciliation Council. Upon taking power the National Reconciliation Council promised to lead the country to multiparty democracy. In 1992 a constitutional referendum was passed that indeed established a parliamentary democracy.

PARLIAMENT

The National Assembly consists of 147 members elected by universal suffrage from age 18 and 13 members elected by Malians abroad. Members serve for five-year terms and must be at least 21 years of age. The last elections were held in 2002.

POLITICAL PARTIES

Before the coup of March 1991, the UDPM, formally constituted in 1979, was the country's sole legal political party. It was governed by the 18-member Bureau Exécutif Central, selected from the 100-member National Council. The council served as the party's executive body between congress meetings.

The 1991 coup leaders promised to return the country to a multiparty democracy, and more than a dozen parties formed after the ban on political parties was lifted in 1992. The largest is the ADEMA, which captured 128 of the 147 seats in the National Assembly in 1997. This party was founded by many of the early intellectuals who opposed the Traoré regime. In the 2002 elections ADEMA took 45 seats, while the coalition *Espoir 2002* won 66 seats. The progressive *Alternance et Changement* won 10 seats, nonpartisans six.

LOCAL GOVERNMENT

For purposes of regional government, Mali is divided into the capital district of Bamako and eight regions, then further subdivided into 46 *cercles* (counties). There is no representative institution at the local level, and all units are administered by officials appointed by the national government.

LEGAL SYSTEM

The legal system is based on French civil and customary law. The judiciary is headed by the Supreme Court, with 19 judges sitting in two sections: the judicial section, comprising three civil chambers and one criminal chamber, and the administrative section, consisting of a single chamber. The members of the Supreme Court are nominated by the executive for five-year terms.

The Malian judicial system is based on the French model, so the principle of habeas corpus does not exist. Bail is not legally available, but prisoners are sometimes released on their own recognizance. Prisoners are usually allowed access to a lawyer of their choosing. Administrative backlogs often cause delays in bringing people to trial.

The judiciary is part of the executive branch and therefore potentially subject to interference. Generally, trials are short in duration. Although confessions are not coerced, defendants usually admit guilt, and defense lawyers tend to argue mitigating circumstances. The verdict and the sentence are rendered by a panel of three judges. The appeals process is limited to presidential pardon or a call for a new trial. The National

Assembly can convene the High Court of Justice to hear cases against state ministers.

HUMAN RIGHTS

In terms of political and civil rights, Mali is classified as a country that is not free. In the past, especially under Traoré, there were widespread reports of political imprisonment, the mistreatment of defendants, and the arrests of student protestors. Amnesty International published an extensive report on the failure of Malian officials to comply with internationally recognized standards of trial and detention.

Some advances have been made. The UN Human Rights Committee praised Mali in 2003 for its progress in improving human rights in the country, citing legislative reform and efforts to eradicate child trafficking. However, the committee called on the government to improve the status of women.

FOREIGN POLICY

Reflecting a commitment to "dynamic nonalignment," the Traoré administration improved relations with the West as well as Russia and China. A border dispute with Burkina Faso over the Agacher Strip was settled by a World Court ruling that divided the disputed territory into roughly equal parts.

Relations with Libya have long been frayed over a number of issues, such as the expulsion of 2,500 Malian workers in 1985, Libyan support for Tuareg insurgents, and the expulsion of Libyan diplomats. In 1991 Algeria mediated a truce between Bamako and moderate Tuareg leaders, which led to the repatriation of thousands of Tuareg refugees in Algeria.

President Konaré made a priority of intensifying regional integration. He served as chairman of the West African Economic Community and of the West African Economic and Monetary Union in 1999.

In 2003 there were border closures as a result of the civil war in Côte d'Ivoire

DEFENSE

The Malian armed forces have never been tested in battle, and much of the equipment obtained by former president Keita from the Soviet Union is now obsolete. Military deployment is designed primarily not for protection against neighbors but to ensure the survival of the regime in any potential conflict with internal enemies. The approximately 12,000-man military was supported by a \$22.4 million budget in 2004, about 0.4 percent of gross domestic product (GDP).

Military Indicators

 as % of central government expenditures: —
 Arms Imports \$million: 1
 Arms Exports \$million: —

ECONOMY

Mali is among the poorest countries in the world, with 65 percent of its land area desert or semidesert. Economic activity is largely confined to the riverine area irrigated by the Niger. About 10 percent of the population is nomadic, and some 80 percent of the labor force is engaged in farming and fishing. Industrial activity is concentrated on processing farm commodities. Mali is heavily dependent on foreign aid and is vulnerable to fluctuations in world prices for cotton, its main export. Several multinational corporations increased gold-mining operations in 1996–98, and the government has anticipated Mali's becoming a major sub-Saharan gold exporter. In 1997 the government continued its successful implementation of a structural adjustment program recommended by the International Monetary Fund (IMF), which program is helping the economy grow, diversify, and attract foreign investment. Mali's adherence to economic reform, in addition to the 50 percent devaluation of the CFA franc in January 1994, pushed economic growth to a sturdy 5 percent average in 1996–2002, though growth slowed to just 0.5 percent in 2003, partly owing to poor rainfall and the effects of the civil war in Côte d'Ivoire. Consequently, the World Bank and IMF granted \$675 million in debt relief. Agriculture was particularly hard hit in 2004 when a plague of locusts destroyed 45 percent of crops.

Principal Economic Indicators

Gross Domestic Product (purchasing power parity) \$billion: 11
 GDP per capita (purchasing power parity) \$: 900
 GDP Average Annual Growth Rate (1999–2003) %: 6.5
 GDP per capita Average Annual Growth Rate (1999–2003) %: 4.0
 Origin of Gross Domestic Product %:
 Agriculture: 45
 Industry: 17
 Services: 38
 Gross Domestic Product by Type of Expenditure %:
 Private Consumption: 70
 Government Consumption: 16
 Gross Domestic Investment: —
 Foreign Trade \$billion: Exports: 0.915
 Imports: 0.927
 % of Income Received by Poorest 10%: 1.8
 % of Income Received by Richest 10%: 40.4

CONSUMER PRICE INDEX (1995 = 100)

1999	2000	2001	2002	2003
109.4	108.6	114.3	120.0	118.4

Finance

National Currency: CFA franc (XOF)
 Exchange Rate: \$1 = XOF 581.2
 Money Supply Stock in National Currency billion: 486
 Central Bank Discount Rate %: 4.5
 Total External Debt \$billion: 3.3
 Debt Service Ratio %: 5.78
 Balance of Payments \$million: —
 International Reserves SDRs \$million: 582.4
 Average Annual Rate of Inflation/Consumer Price Index Growth Rate %: 4.5

Official Development Assistance

ODA \$million: 527.6
 per capita \$: 45.30
 Foreign Direct Investment \$million: 129

Central Government Revenues and Expenditures

Fiscal Year: Calendar Year
 Revenues \$million: 764
 Expenditures \$million: 828
 Budget Deficit \$million: 64
 Tax Revenues as % of GDP: —

Agriculture

Agriculture's Share of GDP %: 45
 Average Annual Rate of Growth (1999–2003) %: 5.0
 Number of Tractors per hectare arable land: 0.06
 Irrigation, % of Farms having: 2.9
 Fertilizer Consumption kg/hectare: 9.0
 Total Farmland % of land area: 3.8
 Livestock: Cattle million: 7.5
 Chickens million: 30
 Pigs 000: 68
 Sheep million: 8.36
 Forests: Production of Roundwood cubic meters million: 5.3
 Fisheries: Total Catch tons 000: 101

Manufacturing

Value Added \$million: 114
 Industrial Production Growth Rate %: —

Energy

Commercial Energy Production metric tons of oil equivalent 000: 20
 Commercial Energy Consumption metric tons of oil equivalent 000: 203
 Commercial Energy Consumption per capita kg 000: 17
 Net Energy Imports % of use: —
 Electricity Installed Capacity kW 000: 114
 Production kW-hr billion: 0.48
 Consumption kW-hr billion: 0.45
 Coal Reserves tons billion: —
 Production tons million: —
 Consumption tons million: —

Natural Gas Proven Reserves cubic feet trillion: —
 Production cubic feet billion: —
 Consumption cubic feet billion: —
 Crude Petroleum Reserves barrels billion: —
 Production barrels 000 per day: —
 Consumption barrels 000 per day: 4.1
 Pipelines Length km: —

Foreign Trade

Imports \$billion: 0.927
 Exports \$billion: 0.915
 Export Volume % Annual Growth Rate (1999–2003): 12.5
 Import Volume % Annual Growth Rate (1999–2003): 6.5
 Balance of Trade \$million: —

Major Trading Partners

	IMPORTS	EXPORTS
France %	15.5	—
Senegal %	7.8	—
Côte d'Ivoire %	7.2	—
Thailand %	—	14.2
China %	—	12.3
India %	—	8.0
Italy %	—	7.5
United Kingdom %	—	6.1

Transportation

Roads Total Length km: 15,100
 Paved %: 12.0
 Automobiles: 18,900
 Trucks and Buses: 31,700
 Railroad: Track Length km: 729
 Passenger-km million: —
 Freight-km million: —
 Merchant Marine: No. of Vessels: —
 Total Deadweight Tonnage 000: —
 Airports: 28
 Traffic: Passenger-km 000: 130
 Length of Waterways km: 1,815

Tourism

Number of Tourists to 000: 96
 Number of Tourists from 000: —
 Tourist Receipts \$million: 105
 Tourist Expenditures \$million: 62

Communications

Telephones 000: 56.6
 Cost of Local Calls 3 mins: \$0.07
 Cellular Telephones 000: 250
 Personal Computers 000: 15
 Internet Hosts per million people: 15
